ABOUT THIS ARCHIVE

An archive of the blog **The Power Moves**, as held by TheRedArchive: 1,094 posts published between March 2017 and August 2026.

About The Power Moves. A blog by Lucio Buffalmano about power dynamics, social skills, and personal effectiveness. It analyzes influence, manipulation, negotiation, dating and relationships, and self-development, and is known for in-depth book reviews and breakdowns of social interactions.

About TheRedArchive. TheRedArchive is a free, public archive of the Red Pill community, built so that none of this writing can quietly disappear. It holds **1,738,212 posts** and **40,092,429 comments** from 45 subreddits and 58 blogs. Much of it survives nowhere else — the accounts deleted, the subreddits banned, the websites long offline. All of it is free to read, search and download, and always will be, at www.TheRedArchive.com.

Support the mission. This Red Pill archive is free — no paywall, no account — but keeping it online isn't. I pay for the servers, the storage and the bandwidth myself, so that this valuable knowledge stays online. If you want to support the mission and archive, become one of the people who help keep it online at www.TheRedArchive.com/#help.

Share this file freely, and keep a copy of your own. What sits on one server can be taken down; what sits on a thousand hard drives cannot.

Best regards,

What to Text a Girl Who Doesn't Reply (7 Proven Texts)

Lucio Buffalmano · 17 March 2017 · Archived copy · Original

It's upsetting when a girl doesn't reply to your text, isn't it?

You text her, she replies a few times and then poof… She stops responding altogether. Or maybe she just never replies at all.

It's not uncommon.

But worry not, there are many texts you can send to make her text back.
I share a **system that will give you the highest chances of rekindling your interaction**.

To begin with, remember this: **don't take a few unanswered texts as a personal rejection**.
No matter the looks, skills, or mate value, everybody has been there before. Countless times :).

Now let's start by defining the "she stopped replying" situation:

When Can You Consider Her "Non-Replying"?

I will define a woman as having gone AWOL when:

1. She doesn't answer after two of your texts
2. She doesn't text back after two days

Now there will be plenty of women that will text you back after a few weeks, days… or even months (yep!).

Here's an example:

But as a rule of thumb, use the two above as they will cover 95% of your texting situations.

Why Two Texts Are the Threshold

If two texts go unanswered a third text is a big no-no.
If you send a third text, she will back-rationalize that if she hasn't replied so far it's because she didn't like you (called "sense-making" in *psychology*).

So the rule of thumb is: two unanswered texts and that medium has been "burned." You can't use it anymore.

What do you do, then?

Read on:

Contents

- 1. Drop Texts And Call Her
- 2. Switch Texting Medium
- 3. Send A Value-Giving Text
- 4. "Make Your Move" Text
- 5. Drop It… Then Ping Her
- 6. "I Am Gone" Text (Scarcity Principle)
- 7. "I'm Worried About You" Text
- 8. Text Her 3 Dots
  - Text Example
- 9. Use Some Text Flirting

- #10. Fix Texting With Personality

1. Drop Texts And Call Her

> *Bring back the good vibes*

The call is probably the first thing I'd go for after two unanswered messages.
It does a few great things for you:

Why Calling Works

1. Opens a new channel with a clean slate
2. Shows you're not afraid of calling
3. Brings back the good vibes
4. Some women prefer calls

Here is an example, and notice that one month and a half had passed between our last text:

If I had texted here instead of calling we would have never become lovers

Let's dig deeper:

Voice addresses a common reason why she hasn't replied: dissipation. When you first met there were good feelings, but they dissipated and now you're just a few lines of text on her phone.
The phone call, with your voice and conversation, is exactly what can bring back those good feelings in full force.

The last reason is that some women aren't into texting (mostly older and/or very busy). They consider it a time-wasting and "childlike" medium.
When you call these women they will finally see you as "man enough" to pick up the phone.

If She Picks Up

When she picks up it's a bit like starting from a clean slate.

I've had women propose themselves that we should meet after a good phone call, and the unanswered texts become a thing of the past.

Just to be sure though, avoid writing her again on the "burned" medium after the call.

Few Quick Calling Tips

- Call while walking
- Call in elated states (after workout or accomplishment)
- After a few drinks

- Have a couple of stories at hand
- Keep it brisk/entertaining
- Make sure you end the conversation

2. Switch Texting Medium

> ***Begin with a clean slate***

Of course, the call might go unanswered as well.
Or… let's be honest, you might be too nervous for the call. No shame, brother :).

If you did call, leave a message on voicemail—make it cool and nonchalant, tell her to call you back.
After a few days, if she hasn't called back, then switch medium again with a text.

The best one is going from texts to WhatsApp (or Line or Kakao or whatever is popular).

Why It Works

- She won't notice the old unanswered texts
- Doesn't fully realize you're chasing
- Won't feel guilty for not replying so far
- Apps are free (some gals can be that broke)
- Your nice picture can remind her of positive feelings
- New medium = novelty

Text Example

In the example below, she didn't reply to my last text.

But then, look what a 180-degree turn when I switched medium: she was thinking about inviting me to a movie but was afraid I'd refuse.

Wouldn't it have been simpler scheduling when I asked two weeks earlier?

Yes, but that's what sometimes happens with texts: it doesn't progress, but it does not necessarily mean there's no interest from her side.

And that's when a Text Medium Switch gives you the biggest bang for the buck.

3. Send A Value-Giving Text

> *Give instead of asking: propose something valuable*

We saw in the article on *Social Exchange* that the best way of getting what you want is to *give* people what they want.

Ideally, in romance, you won't provide anything more than being a hot, sexy, and charming man.

But life is rarely ideal. Especially after two unanswered texts, it can be a great strategy to give her something she wants and values.

Why it Works

Right now she perceives you as a guy who's asking and taking.

Providing something of value breaks that dynamic and flips the script. Now you're a giver.

Text Example

The girl from the text message below played and studied a musical instrument.

What could be useful for her?
Some (further) connection in the composing and music industry was a safe bet.

Now we can't AB test that, but I'm pretty sure that after an unanswered WhatsApp, an unanswered call, and an unanswered text this was a dead one.

So I proceeded to invite her to something useful to her.

Notice that exactly one hour later she promptly called me back.

Note:
You don't want to over-provide.
Just give one thing that's useful for her, hint at something more possible, and then close the deal asap.

4. "Make Your Move" Text

> *From chaser to raiser: her turn or that's it*

This is one of the most effective and by far my favorite.

Basically, you send her a message saying you've tried to reach her a few times but you can't keep going after her and… you will not.
If she's not completely against the idea of a coffee, it's her turn now.

If she liked you, this text can be a major wake-up call that she's losing you.
You go from "guy who's chasing indefinitely" to the guy who will stop and *demands* her to make a move instead.

I especially like to combine this one with "switching medium." For example: I'll text twice, call, and if still no answer, then I'll send this one via another messaging app.

Text Example

5. Drop It... Then Ping Her

> *A Blast from the Past*

This has a much lower hit rate.

But your text might land on some perfect timing: a recent breakup, or some long drought period… and you know you can help with those ;).

You can use it as a flooding strategy: when you're in downtime copy and paste the exact same message and send it to all the old unresponsive numbers.

Text Example

You can write you were deleting old numbers; or that you either saw her or someone who looked exactly like her; or that you stumbled by mistake on that old conversation.
Anything that gives you a plausible way to seem like you stumbled on that number/conversation by accident.

6. “I Am Gone” Text (Scarcity Principle)

> *The Allure of the Impossible*

This one works rather well too.

In some instances, it also worked for me without switching medium and after more than 2 unanswered texts (!).

It’s a huge wake-up call for those women who live their dating life passively, expecting a man on a white horse to smash their front door and drag them to a fantasy castle (and there are many of those!).

I’m exaggerating here with the imagery, but in practice, that’s how many women live their dating life.

Why it Works

It works because now you’re not anymore the guy who’s texting and waiting. Now you’re the guy who’s gone. And that’s it.

All of a sudden they remember you were a cool guy, and you become a missed opportunity. Scarcity and the human tendency to value what we can’t have come to your rescue (see *Influence* by Cialdini).

I use it with all the girls I liked but never got around to meeting while traveling. If you want to possibly meet those women when you go back, this text is more powerful than anything else you could write.

The Sneaky Variation

I don't like lying and only used it when I really left. But nothing stops you from using it with women from your same city.

If you do, you can tell her one month later you're back for a few days and then try to make things happen quickly during that time.

Don't worry about the "truth" emerging later. If all goes well she'll be delighted you're actually sticking around.

The Power Move Variation

If she's not very forthcoming it will increase your chances if you further rebalance the relationship.

How do you do that?

When she says yes to meeting up, don't write her anymore. Then write later on, or on some occasion like her birthday, to excuse yourself for not having had the time (see full case study on recovering from a bad date with Facebook).

Power balance restored, and your chances of things happening just increased.

7. "I'm Worried About You" Text

This is another effective one you can use where you pretend you're worried about her for whatever reason.

Why It Works

It positions you as someone who cares, which will warm her to you. And as someone who takes care of the people around him, which is a typical leader behavior—Godfather style.

Bonus points if you do it because you really care.

Notice she hadn't replied to 3 of my messages. I stumbled upon her in person again months later and we agreed for a coffee. She hadn't picked up the phone before.
But after I showed I cared, she was asking questions.

Empathy & Caring as a Screening Tool

It works more effectively with women who are compassionate and empathetic themselves.

And these are the kind of people you want in your life.

More than a woman also used it with me (1, 2 examples), and I cherish and remember these thoughtful check-ins.

8. Text Her 3 Dots

If you were in a conversation, a very effective technique is to simply write her name and three suspension points.

If she likes you and you didn't do anything too wrong, this text works very well in getting a reply and restarting the conversation.

Text Example

Read the whole case study on how to text flaky girls.

9. Use Some Text Flirting

Once you finally brought her to text you back, change the mood of your texts right away.

This is a good video on how to add flirting and good sexual innuendos:

#10. Fix Texting With Personality

Permission to be honest?

Alright then, here it is:

> **Worrying about her replies is a loser's game**.

Don't worry though: we've all been there.

I don't mean it in a mean way. As a matter of fact, I've been there too.

And if you are ready and willing to walk up the mountain, I'm happy to show you the way.

Read around here and make yourself into a man who doesn't have to worry anymore about a couple of silly texts.

Or better yet, accelerate, condense, and take your learning to the next level with **Power University**.

How To Dominate Debates Like Donald Trump (Case Study)

Lucio Buffalmano · 25 March 2017 · Archived copy · Original

Winning debates is an immensely helpful skill to have in life.

Especially if you're planning to get into politics (or academia).

And this article is going to show you how to win a debate… Exactly when winning a debate seems impossible.

Contents

- How to Win The Toughest Debate
  - #1. Strategic Agreement: Take Their Game Away
  - #2. Fight Fire With Fire: Blame Them of Your Weaknesses
  - #3. Be Bold with Your Counterattack
  - #4. Play the Victim
  - #5. Show They Are Cheap: Then Be Generous
  - #6. Recruit Neutrals As Your Allies
  - #7. Reveal Your Opponent's Tricks
  - #8. Let Others Come To You
  - #9. Destroy Their Social Proof
- Summary

How to Win The Toughest Debate

Trumped headed into the second debate that the wheels were coming off of his political campaign.

He faced a sexual assault allegation and one of the biggest uproars a candidate president has ever seen.

Yet, that wasn't a huge change for Trump.
He always painted himself as an outsider and he always played by his own rules.
"His own rules", of course, often meant "outside of the rules.

Trump indeed uses a lot of debate tactics and techniques that could be defined as "unfair".
And this post will show you what those unfair techniques are.

#1. Strategic Agreement: Take Their Game Away

> ***Let Them Charge You… Then Simply Sidestep***

Sometimes a politician will derive most of his power not from his own values and personality, but by positioning themselves *against* you.

When that's the case, you have two options:

1. Shows yourself of being the opposite
2. Agree with them.

When you can show you are the opposite of what they are trying to depict you, they will look silly for attacking a straw man (Straw Man argument fallacy).

And for trying to push an agenda that you are showing not to be true -with facts-, they are basically spending

marketing money to look insincere and harm themselves.

Trump called Clinton “crooked Hillary”, and Hillary tried to do the same by making “dark Trump” stick.
While Clinton tried to frame Trump as dark and divisive she positioned her whole campaign as standing for the opposite of what Trump (supposedly) stood for.

Of course, as soon as the primaries were over, Trump went into overdrive to change that narrative and did so effectively: “dark Trump” never stuck.

This technique is especially effective during campaigns.

But you might be wondering:

How you can use it to win a debate?

The most effective way of using this technique during a debate is right after they have launched a big tirade against you.
Or right after they pitched themselves as being the exact opposite of what you (supposedly) stand for.

In the second presidential debate, Hillary is smart enough not to verbalize that her position is against Trump, but it’s pretty obvious to almost everyone.
Hillary talks about “being great” -VS “make America great again”- of “being good” -as opposed to “we are doing terrible” and “togetherness” -as opposed to Trump’s alleged divisiveness-.

And what does Trump do?

He takes the stage and agrees with everything she said!

When Trump takes the stage and he just agrees with Hillary, he neutralizes her whole (indirect) attack, makes her look terribly silly… and makes himself more palatable to large swathes of moderates.

All in one:

#2. Fight Fire With Fire: Blame Them of Your Weaknesses

> ***Show Chinks in Their Armor And Nobody Will Notice Yours***

You probably remember children quarreling with each other and repeating to themselves “you are”, “no you are”, “no you are”.

It can sound silly when it’s done without any supporting argument but add just a little bit of meat around it, and minimize your faults while you exaggerate your opponent’s faults… And you got an extremely effective weapon to win the argument.

When Trump was accused of sexual assault for his leaked videos talking about “grabbing women’s pu**y”, he resorted to this technique.

He said those were just words, but Bill Clinton has actually assaulted women with facts.
And Hillary Clinton has defended rapists and *laughed* about the victims.

Notice the difference: mine was just locker room talk. They did facts and Clinton even *laughed* about defending rapists.

Trump even brought those women on stage.
And since Hillary didn’t defend from Trump’s accusations, it always remained a lingering doubt in the audience.

This was a very well-structured form of “you are, no you are” game and effectively helped Trump to climb out of the huge hole that the sex assault tape had relegated him in.

#3. Be Bold with Your Counterattack

> ***When All Expect Surrender: Charge***

Trump's whole campaign seemed to be on the verge of disbanding and coming undone.

When you face a similar situation, approaching the situation meekly or with the common "defend and attack" wouldn't be enough.

You need something bigger.
You need to where nobody else would dare to go.

Trump needed something huge as well to even the scores.
The 48 Laws of Power suggest taking action with boldness, and that's exactly what Trump needed.

As we've already mentioned, Trump said Bill Clinton lost his license for sexual assault and says Hillary laughed at rape victims.

But he didn't stop.

He then moves on to the email controversy saying that "lives have been ruined for doing a fifth of what she's done". Trump took a small issue on Hillary's side and effectively managed to make it seem like a huge scandal.

And it eventually culminates with his (in)famous retort:

> Because you would be in jail

#4. Play the Victim

> ***Make Your Enemy Look Like A Bully & Everyone Will Be With You***

We have a strong tendency to sympathize with people whom we feel are being unjustly oppressed.

It doesn't work with people who dislike us deeply, but it works with people who like us and, crucially, with neutral and impartial observers.

If deployed when there's no objective oppression it looks lame, pathetic and you look like you're making excuses. But when you can spin it well, it works wonders.

In the presidential debate, the female moderator did seem slightly against Trump, or at least she was at times rather aggressive towards him, which helped Trump hugely in framing himself as the victim and the moderator as a Clinton supporter.

#5. Show They Are Cheap: Then Be Generous

> ***Your Generosity Pays Double When Your Opponent is Cheap***

Debates can often become confrontations.

When that happens, the party that is able to show the observers that he can preserve a positive and welcoming attitude no matter what stands to gain big time.

Trump does it masterfully.

It's challenging to be the first one to offer the olive branch.

It's challenging because it's difficult to quickly change your state and there's always the risk the other party might NOT reciprocate and use your opening to attack you instead.

Also, the first party is more likely to only take a half step towards you rather than a full step.
And therein lies Trump's Power Move in letting Hillary go first -whether that was intentional or not, we don't know-.

When Hillary goes first her "compliment" looks stilted and avoidant.

That's great for Trump: **the lady who presented herself as the party for unity and the president for everyone was unable to negotiate peace**.

She couldn't even deliver an honest compliment!

Trump takes the stage, looks like a real family man, a proud father, and delivers a sincere and honest compliment to Hillary. Huge point for Trump.

#6. Recruit Neutrals As Your Allies

> ***When Neutrals Side With You, You Must be Right***

When you're in a debate there's a tendency for people to take sides.

Having people on your side support you is great, but it's also expected: They're on your side after all.

But when you can get obviously neutral people to support your cause, that's when you really score big.

In the case of a debate, you will rarely get neutral people openly supporting your view.
But you don't need open support.
You all need to make it *look* like they are supporting you (Obama takes full advantage of that as well here).

Trump does masterfully.

How?

When the moderator asks Hillary about her "too cozy for comfort" relationship with big banks, Trump says "thank you".

That "thank you" draws attention to the question, which is a great way of pre-suading by drawing attention to it (*Pre-Suasion, Cialdini*).
And it makes it sound as if the moderator is now supporting Trump's cause.

The moderator's slight laughter also supports that view and Hillary's big smile -as if she had just been found out- also helps Trump in framing Clinton as the defender of big corporations' interests.

#7. Reveal Your Opponent's Tricks

> ***And Make Them Look Sneaky***

All politicians use very common and standard techniques such as:

- "defend and attack"
- "defend and change topic"

Trump does it almost always, while Clinton does it most of the time (but a few notable times she didn't and left her side open to counter-attacks: watch an example here).

This is a rather standard procedure in political debates.

However, when your opponent is deflecting a major question or when he didn't defend properly, here's a simple technique to bring the spotlights back where you want them: explain to everyone the technique they have just used.

It will give you double the points as it will look like your opponent is using unfair debate techniques to get off the thorny issues.

Watch Trump execute it to perfection and get a major cheer out of it (this is right after the "thank you" move) :

#8. Let Others Come To You

> ***And If There Are Any Doubts To Who's The Winner, Just LOOK Like The Winner***

When there's an audience watching you don't win the debate only *during* the debate.

Everything you do before and *after* is all part of your show.

At the end of the debate, Hillary is the first to move.
She tries to show herself as social and friendly, but she overdoes it and looks a bit like an over-excited schoolgirl meeting the family after her first class.

Trump instead moves slow -we've already spoken about the connection between slow movements and dominance– and, importantly, STAYS on the stage.

Clinton looks like the typical politician shaking hands, taking pictures, and giving away fake smiles -and this is a period people are a bit tired of politicians-.
Trump instead looks like the man at the center of the attention, he keeps getting all the limelight he can and lets others come to him.

#9. Destroy Their Social Proof

> ***If their friends don't like them then… Who would?***

A common strategy to accrue social power and win debates is to appear like you have a lot of support from famous people and people who command a certain respect.

Trump used it more than anyone I remember seeing, and often in a very hyperbolic fashion.

But when Hillary used it against him to increase her support, what does he do?
He attacks and undermines that same social proof.

When Hillary mentions Sanders, Trump reminds everyone how Sanders said Hillary is a crooked politician.

And when Hillary mentions "*my friend Michelle Obama*", Trump says it's no friendship and reminds us all how Michelle wasn't really very amiable towards Hillary in the past.

Most people are likely to remember both Sanders' comments and Michelle Obama's ads, so Hillary now looks like a chess-playing politician with no real friendships.
Such as a fake person, which is one of the biggest issues Hillary had to contend with during her campaign.

Deadly effective.

Summary

If you're here looking for tips on how to win a debate, I'd like to point out that some tips here are not always generalizable.

You will indeed not always be in a situation where you need to attack like a rabid dog.
And when not strictly needed it's an attitude that can backfire.

However, a few of the other tactics like Strategic Agreement and Recruiting Neutrals will serve you well in any situation.

Make sure to check out How to Win a Debate (Part I) and Ben Shapiro's bullying debate techniques for more.

Dirty Debate Tactics (That Win The Presidency)

Lucio Buffalmano · 25 March 2017 · Archived copy · Original

Dirty debate techniques, sadly, can also be extremely effective debate techniques.

And that's why you must absolutely learn all the possible dirty, unfair, shady, and even bullying debating tactics.

It is a tenet of this website that we desperately need good people to learn how to play the game dirty.
So let's delve right on, and learn how to do just that.

Trump Debate Skills: Overview

Some commentators say Trump has weak debate skills.

But not only did he win the election, but he also scored major presidential debate wins against Clinton.

I believe that many people underestimate Trump's debate skills simply because they don't fit the mainstream idea of "great oratory", which includes a large vocabulary, solid content, and good structure.

And yes, Donald Trump deployed simpler vocabulary, not very deep content, and a bit of an erratic structure.
But to hell with that, he used much deadlier techniques.

10 Dirty Debate Tactics

The following dirty debate techniques are based on Trump's analysis of the first presidential debate, but they can be applied to any debate.

#1. Ignore All Valid Criticism

At the beginning of the debate, Hillary tries to frame Trump as the lucky guy who made it thanks to Daddy's money.

She does it extremely well, cushioning it into a bigger topic as if it were not a critic but a fact.
And she doesn't sound critical about it, so as not to estrange richer Americans. But at the same time, she shows that Trump cannot represent the average American.

That's a wonderful move from Clinton.

Now most people here would reply:

> **Poor debater**: "No, that's not true *I* didn't make it thanks to daddy, but bla bla bla".

What's the problem with that?

When you address the criticism you elevate its importance.

Addressing and re-stating the opposing view gives it more air time and cements the question mark in people's minds.
Even if you manage to provide a good answer, your opponent is still going to counterattack or, at least, fail to provide support for your side of the story.
And that leaves lingering doubt.

Look at how Trump does it instead.

Trump just gives his own view of the accounts and does so naturally and smoothly, as if he wasn't even replying to Clinton's accusations.

Good move.

#2. Reframe Weaknesses as Strengths

This is the reinterpretation of an old and effective sales technique

Hillary tried to frame Trump and his wealth as the product of luck and something that puts him out of touch with ordinary people.

Trump reframes his wealth as a sign of business acumen, which will allow him to fix the country's problems.

It's a typical sales tactic to take a weakness and find a way to reframe it as a strength, and a very effective one at that…

#3. Make Her Follow Your Lead

This was the biggest and sneakiest power move of the whole debate.

Trump says:

> **Trump**: In all fairness to secretary Clinton, yes? Is that OK?

He is confident and demanding enough to sound dominant, yet adds enough "sweeteners" to make it more likely Clinton will submit.

"in all fairness" sounds as if Trump was *exempting* Clinton from his critic, a nice gesture.

He points at her with an open palm, a cross-cultural sign of friendliness.
He looks at her with his head tilted down and looking through his forehead -the "forehead bow"-, which is a signal of submission (The Body Language Project).
And he nods his head as if to invite Clinton to do the same.

Now the natural tendency when someone shows friendly signals is to reciprocate (*law of reciprocation*), which Clinton does with both verbals -saying yes- and nonverbal signs -nodding her head and smiling, both submissive signs-.

Now Trump looks like the leader and Hillary like the follower. That's only the first part though:

#4. Make Her Agree. Then Show Her Wrong

Now that Trump has Clinton's blessing and confirmation he then changes tack.

He says:

> **Trump**: good, I want you to be very happy

That's a mix of dominance -dominant people move other people around and "take care" of them- with a demeaning touch.

And then he proceeds to say Clinton did nothing for thirty years.
All with Hillary's implicit blessing.

Prince of Darkness moves.

Still, convinced about the lack of Trump debate skills?

#5. Lure Her In. Then Attack

"Make other people come to you, use bait if necessary", says Robert Greene in The *48 Laws of Power*.

That's what Trump does when he pretends to ask a question to Hillary. The question is extremely loaded, rhetorically asking

> **Trump***:* You've been doing this for 30 years, why are you just thinking of these solutions right now.

Hillary goes to reply, again following Trump's lead.

At that point, Trump strikes again, cutting her off with a dominant "excuse me" as he keeps pushing forward.

The result?

Trump looks dominant, and Hillary looks dominated.

#6. Champion People's Discontent

But Trump doesn't just look dominant, he also looks passionate, angry, and a people's champion.

A truly charismatic leader.

He is successfully positioning himself as the champion of the average Joe mad at the political elites.

Political dark horses around the world often win elections by riding the wave of mass discontent.
Politicians are often slow at changing and tend to cling to the status quo.

When waves of discontent and dissatisfaction ripple through nations the charismatic politicians rise to the top.
These are the ones who look most honest and passionate and the ones who seem to possess hard and definite answers.

In this example, Trump rides that emotional wave.

Clinton attacks the tax cuts for the higher earners.
Defending lower taxes for the rich is a hard sell to the non-rich majority.

This is a thorny argument!
Why risk it with logic?

Trump charges Clinton for being the typical politician with all talk and no action, skirting a thorny topic and at the same time appealing to the disgruntled masses.

Very effective.

Sure, Trump doesn't delight people with lofty rhetoric, but emotions trump logic in many a man's hearts, and that's one of the most effective weapons of Trump's debating tactics.

#7. Speak Over: Seed Doubt in Real Time

Some commentators implied that Trump's speaking over Clinton's time was the perfect example of the baseness of Trump's debate skills -or lack thereof-.

Some others said it was the perfect example of Trump losing his plot and hanging himself.

I disagree.

A few times he went overboard, but it was overall extremely effective.

7.1 Retorts

Some of Trump's retorts have become defining moments of the election.

With one single comeback here he hits Clinton at her most debilitating weakness: the idea that she's crooked and dishonest ("crooked Hillary", another genius Trump move).

If he had politely waited for his time to speak he would have missed on what has become the most famous moment of all televised debates.

7.2 Longer Voice Over

Trump takes any occasion he can to talk on Clinton's speaking time to strengthen his point, weaken her point or muddle the waters to avoid Hillary scoring a point.

A few more accomplishments of Trump's voice-over.
He:

- **Looked like the leader**

Speaking over someone is what dominant people do.

And while it can come across as too overbearing, it's Hillary who made the mistake of making him look legit.

She does it by replying to Trump on HER speaking time, thus acting as a follower and validating his intrusions.

- **Set the agenda by steering the conversation**

Hillary repeatedly falls for Trump's interruptions by talking at length about HER issues.

On the second debate, they spent more time talking about emails -an old topic- than they did about Trump's video on grabbing women's vagina which was the newest, hottest, most lethal issue ever.

- **More exposure for Trump, less for Clinton**

It's a known human tendency that what's repeated more often also seems truer, and that works whether or not we are already informed on the facts.

It's called the "*mere exposure effect*", and works even when we know it's not true (Fazio, 2015)!

By using Hillary's speaking time Trump also makes his point sound truer, all the while robbing Hillary of that same

benefit.

#8. Get in The Last Word

The recency effect tells us that we remember most what comes first and what comes last (Miller and Campbell).

By often insisting on putting in the last word Trump negates the win for Hillary and allows his point to linger on in people's minds.

8.1 Quick Retort

Look at this example where he uses the last word as a defensive mechanism.

Clinton here was the one who made the great pungent retort when she said

> **Clinton**: maybe because you didn't pay any federal income taxes

That could have become a key moment of the debate and gone viral… IF she had paused and IF Trump had let it slip (like Hillary would have).

But not only Hillary wasn't shrewd enough to take advantage of it, but Trump also mitigates it with the last word. His retort was not as powerful as Hillary's, but it was extremely effective in taking the edge off Hillary's zinger.

Note:
Hillary didn't pause because she was hell-bent on making a more complex and logical point, which of course nobody remembered.
If she had paused instead everyone would have remembered Trump is not paying taxes.
In debates, simplicity is the ultimate sophistication.

8.2 Longer Speech

Again here is another defensive usage of getting the last word in, but with a longer speaking time.

Hillary was scoring a major point by making Trump look like he is irrational and making no sense, a very very bad frame for Trump.

But by getting in the last word Trump brings the topic back on a serious tone, re-state his point as valid, and largely negates Hillary a major win.

#9. Attack: Force your Opponent to Defend

This was another extremely powerful debate tactic by Donald.

Faced with seemingly insurmountable odds, he keeps attacking and, accomplice a meek Hillary, forcing her on the defensive.

Watch him in this video using all the last 3 debate techniques combined: interrupt, put in the last word, and keep attacking

Yes, he is reprehended by the moderator and looks slightly too aggressive.

But knowing this was just a few days after the huge scandal of grabbing women by the vagina ask yourself: was he effective in driving Clinton on the defensive?
Was he effective in muddying the water and getting off his huge issue?
Was he effective in shifting the agenda onto Hillary's issue and *keeping* it there?

That's the result of a master debater, not someone lacking in debate skills.

#10. Hide Your Problems Behind Hers

Trump handled well many accusations and issues with his campaigns.

They called him racist, and he quelled it by visiting black churches, they called him dark, and he shrugged it off by being positive and upbeat.

He couldn't shake the accusation of his tax returns though, and it kept nagging him all along.
So what does he do when the conversation turns there?

He says he will release his tax returns *after* Hillary releases her email.

Genius!

When you cannot shake your issues, remember this: misery loves company!
You might not win, but you gotta be strategic: **sometimes not losing is like winning**.

Parting Thoughts

Before you go around thinking that unfair debate techniques will hand you the keys to world power, notice a few things:

- **Techniques Must Suit Personalities**

Some of these tactics would have not worked as well for other politicians. They would have been counterproductive for Hillary, for example.

But Trump was just Trump being Trump. People knew he was brash, so while for some that still was overpowering, it was also genuine and sincere (something Hillary never appeared to be).

- **They can Backfire**

Some of these techniques could have backfired if only Hillary knew how to handle them well.

We'll go over it in a different post, but just as an example: nobody forced her to smile and nod at Trump. And if she had refused, that would have been her point (look at Obama refusing to follow the lead).

- **Learn more**

I write extensively on bullying, persuasion, and manipulation.

How to Flirt With a Girl Over Text (Real Flirting Examples)

Lucio Buffalmano · 26 March 2017 · Archived copy · Original

Are you looking for ways to flirt with a girl over text?

You have come to the right place.

My name is Lucio, and I have sent thousands upon thousands of texts.

This article will explain to you all the best techniques on how to flirt with a girl over text.

Contents

- Flirting Text Messages
  - #1. Imply She's Into Boys
  - #2. Imply She's Into You
  - 3. Imply She's Seducing You
  - #4. Turn Non-Flirty Into Exciting
  - #5. Leave Her Aching for More
  - #6. Hint At Sexuality
  - #7. Hint At Babies Together
  - #8. Move From Text Flirting to Meet
- And Enjoy Text Flirting
  - Bonus: These Ain't Flirting But Cheese
- Summary

Flirting Text Messages

Knowing how to flirt with a girl over text is a great skill to have.

It will make you more desirable, more entertaining and, yes, you'll incidentally also get more dates.

So let's start with the top text flirting guidelines -all real-life flirting examples from my phone or FB-.

#1. Imply She's Into Boys

I bet she does ;)

This is a favorite of mine: great upside and no drawbacks.

Women are smothered by the yoke of having to play "innocent" and feign disinterest in sex and men *(*Madonna-Whore Dichotomy). Implying they're into boys (and sex) liberates them by communicating in a flirty style that you "get them". She lets her hair down, her guard comes down… And maybe later some clothing item will come down too ;).

She doesn't care… Don't let all those "Hahah" fool you :P

#2. Imply She's Into You

Flirt by telling her she's so into you or, even better, that you're worried she is in *danger* of falling for you.

Her mind is running ;).

When in doubt about whether you're interested in her or in her venture, imply she's interested in YOU instead ;).

3. Imply She's Seducing You

Normally, it's the man who chases the woman.

The rule of thumb indeed is that man aggresses and the woman plays coy.

When you don't do it too obviously, sometimes women will try to poke you to get you chasing.

But wouldn't it be better if she was trying to get *you* instead?
Exactly!

And that's what you do with top-notch flirting: you turn the tables.

They're dressing up?
Just right out of the shower?

Don't take the bait, go texty caveman and show your cards (leave that for later): tell her she's using all tricks in the books to seduce you instead ;).

"Can't wait to see it"? Dull as F! She's hellbent to seduce you instead ;)

#4. Turn Non-Flirty Into Exciting

Flirty guys, the lover types, turn negative emotions into more flirtatious vibes. And many women love it.

Sprinkle a few SICs here and there but you get the point :)

#5. Leave Her Aching for More

And just when fireworks are about to get off, and she's turning into a too-hot-to-handle mess… You pull back.

Women love the mystery, the hints. Don't spoil it by trespassing into the obvious and crude, but kiss them good night and tuck them up.. :).

…And guess who they'll be thinking of when waking up? :)

#6. Hint At Sexuality

And here is how you effectively inject sex into the conversation:

She mentioned bondage first: safe play :)
And now the big one. Flirting is *hinting* at sexual. It's (technically) not flirting anymore if you're openly discussing sex.

Rule #1: hints and mystery are sexy, clinical and crude are not.
Rule #2: fully sexual is very risky: proceed with caution.

Exceptions are: she starts it, she sends nudes or she opens up sexually.

Direct sexual flirting works best with:

- Older women (you're the toy boy)
- Online dating (filter in 'down for it', filter out "no ONS")
- Married women (you're the sexy distraction)
- MILFs (got the baby already, no time for games)

#7. Hint At Babies Together

Hinting at the *product* of sex is a unique, flirtatious way of broaching sex as a foregone conclusion between you two.

If you're talking babies, sex obviously is going to happen.

Of course, use it only when it's abundantly obvious you're kidding or it's not flirting but family planning (and not cool :).

Perfect for:

- A Tinder match opening message
- Different “races” where you play the “cute mix card”
- Somehow black girls seem to love it

#8. Move From Text Flirting to Meet

Flirting is the preamble for something better -and real- to possibly happen. Imagine text flirting as the drumroll. Drumrolls glorify your daring entrance, but If all you do is drum rolling and no cigar, then… Then you might as well shoot the football breeze with your pals.

Be a guy who gets the job done instead: flirt a bit and then go for the *date*.

To do just that, consider this guide. (Edit: now it's part of Power University).

And Enjoy Text Flirting

Flirting excites us, makes us smile, and cheers us up.
It's one of life's pleasures: adopt this mentality and you'll flirt better.

I love women who can flirt.
Big grin when she implied her private dance would be "too much for me" :).

From Russia with Dance Moves, what's not to Love :)

Bonus: These Ain't Flirting But Cheese

I took a look around before writing this post and I've noticed there is some terrible advice from the most popular sources.

Read below what to avoid and in blue why they're terrible.

> **I know you're probably thinking of me, so we might as well text**

=I was thinking of you but I'm awkwardly hiding behind a smokescreen.

> **We're breaking up, you're too much trouble**

="Funny" relationship push/pull. Not the worst, but the sexiest flirts usually avoid any early relationship talk.

> **And that makes you my third favorite girl to text to**

=Good if you're a teen. Otherwise, it implies you text a lot. And no, implying you text a lot to girls is still not sexy.

> **You'll never guess what I'm doing right now**

=You're not doing anything obviously. Except for pondering a cheesy way to contact her, that is.

> **Any fun / smart way of asking for nudes**

=What's the nudes' intended use? Because learning how to flirt with a girl over text is about doing stuff *in person.*

Summary

Flirting with a girl is a bit of an art, but follow these guidelines and your text flirting will improve dramatically. And your texts will stand out because any hint at sex is also a *huge attention grabber*.

And if she doesn't text back? Try these techniques or try for the long game.

A parting note: **the in-person impression is paramount for effective flirting**.
Flirting with a girl over text works best when she thinks you are flirt-worthy… In-person.

No excuse for cheese, but at that point, even average stuff becomes strong text flirting.

The Alpha Male Handshake: Eye-opening Defense Tactics

Lucio Buffalmano · 27 May 2017 · Archived copy · Original

The Alpha Male Handshake is a power move that seeks to assert dominance upon first meeting someone.

This post will show you the different types of alpha males handshakes, and what you can do when someone is trying to overpower you.

Contents

- AMOG Handshake
- Alpha Male Handshake at social gatherings
  - #1 One up him socially

- The Alpha Male Handshake in Politics
  - Alpha Male Handshake Contest #1 Trudeau VS Trump
  - Alpha Male Handshake contest #2 Rahmon VS Trump
  - Alpha Male Handshake Contest #3 Macron VS Trump
- Matching = Winning
- Summary

AMOG Handshake

"Alpha Male Handshake" refers to someone purposefully crushing your hand and/or yanking your arm.
It is one of the bluntest Power Moves out there: very basic and purely physical.

In the past, the early pick-up artists used to refer to these men as "AMOG", such as "alpha males of the group" (also read "*The Game*" and "*The Mystery Method*").

Courtesy of Donald Trump, it has recently gone mainstream also into politics and has one of the most infamous Power Moves.

You will mostly see it from aggressive *and* socially uncalibrated individuals.

Aggressiveness is often (but not always) uncalibrated because the rule of thumb is that the most socially savvy a person is, the more subtle the moves become.

People are more likely to give you an Alpha Male Handshake when:

- You're physically smaller and/or he feels physically stronger
- He feels socially powerful and/or "at home"
- There's an audience and you make a good rug for his social climbing
- He "needs" to get territorial (you're a threat to group dominance, connected to testosterone)

> **They see you as a threat but believe they can dominate you**

And notice that being on the receiving end of an Alpha Male Handshake can often mean you're a rather cool cat.
It's because there's nothing to gain in belittling individuals with zero social status.

But at the same time, the Alpha Male Handshaker doesn't think you pose a major opposition or he'd think twice before alpha-ing you.

In either case, **he wants to assert dominance over you.** And if you let him, he will.
But I guess you're not quite cool with that ;).

Ideally, you will see it coming in advance and prepare (see below), but let's start with when you're taken off guard.

Alpha Male Handshake at social gatherings

#1 One up him socially

It was 3 people including me in a semi-circle when the 4th guy, let's call him Smug, joined.

Smug is a buddy-buddy with the organizer and a friend of the guy to my right. With a brisk pace, sunglasses on albeit the sun was long gone, Smug barges in interrupting us all.

He was bigger and taller than all of us -albeit that's no major feat when it comes to me :)- and introduces himself with a bone-crushing handshake.

He doesn't catch my name and now comes the full Alpha Male Handshake: he yanks me in and tells me to repeat my name (what Allan Pease calls "socket wrencher" in *The Definitive Book of Body Language*).

I restate my name -a slight mistake from my side- as I dig in and try to pull him as well, but I'm not very successful.

The exuberantly happy atmosphere we had before he joined makes perfect ground for my counter-move, which comes as soon as we break the handshake.

The counterattack delivery

Oops I didn't see that coming
With a perfectly erect and open posture (posture is correlated to power) I look straight at what ought to be his eyes beyond the shades and say confidently and loudly:

> **Me:** ***"Hey man, I hope you don't wanna take me home or something"***

And I begin to laugh as a queue for everyone to join in, which they did (they'll always do if you have a good standing in the group).

The joke at his expense is a socially shrewd way of saying: I didn't like your move, you don't get away with it, and I'm making it clear for you (and everyone else) to know.

Having the group laughing is important because:

1. Everyone laughs *at* him and on *your* side, and
2. Makes it difficult for him to retort in a serious tone without breaking the mood

The joke worked exceptionally well because it also implied 'interests' that undermine masculine ideals -and me spurning the advance-. Very powerful.

Indeed as we all laugh he replies meekly and deflated:

> ***Him:*** *"No I just wanted to hear your name"*

Note: "just" is a defensive word, and "wanted to hear your name" is a friendly overture.
What a sudden change from the boisterous ahole of just a few seconds earlier :).

THE GREATEST PUNCH you NEVER THREW

If you executed the move well, **you've been a tremendous class act. Now be magnanimous in victory.**

High-quality people add value to their group and going on the offensive would not only make an unnecessary enemy but also bring down everyone's mood.

Treat him neutrally, and if he offers an olive branch later on, which is likely, go on and accept it.

All went well for our hero here.
But what if you can't think of a witty retort on the fly?

#2: Call out the Power Move

If you can't master a pungent retort, then get serious and call him out on his behavior.

It needs some confidence because you will, for a while, break the mood and raise tension.
Don't pull punches though because he went *physical*, so you going strong on the verbal level is a *must*.

Speak slowly and calmly, very matter of factly and say something like:

> **You:** "*hey man, you just yanked my arm like you wanted to harm me or something, (I feel) that's very aggressive and unfriendly*"

If he apologizes and backtracks accept the apology and go back to neutral.

But it's possible that he will hide pretending he was joking, or plainly deny it. Typical cover power move.

But you go on until he admits and repents, or else you let him walk all over you on the physical *and* verbal level.

Force the bully into light

Address his excuse briefly and push forward, like this:

> **You**: hey man, you yanked my arm like you wanted to harm me or something, that's very aggressive"
> **Him**: "dude, are you serious, I didn't hear your name (what's wrong with you)"
> **You**:"I know you didn't hear my name, and it still felt very aggressive, did you really mean it like that or not"
> or
> **Him:** "I'm just joking man, it's a party, we're having fun"
> **You**: "I know you're joking and it's really funny, but that was aggressive, did you mean it like that or not"

Note: By asking "did you, yes or no", you help him save face and make it easy for him to say "no I didn't mean it like that".

At this point, it's possible people in the group will intervene. It's a good thing but do NOT address them, you want *his* apologies, not a group talk show.

Keep insisting a couple of times until he backtracks.
Once he does, add: "cool man, glad to hear" and propose a quick toast so you end the interaction with a leading move.

And if he keeps denying?
This is the time to Meta-frame.

#3: Meta him

Meta-framing is a technique in which you explain, in lay terms, what's happening on the harder-to-grasp socio-dynamics layer.

A full meta-frame in this scenario would be something like this:

> "I'll tell you what you just did. You came in guns blazing interrupting us all. What you were doing was trying to assert your social standing as the alpha male of the group in a very juvenile fashion. I'm not a fan of that behavior, but whatever. Where I *do* draw the line though is when you disrespect people, and you have just done that by yanking my arm.
> I have given you the chance to apologize and start afresh on friendly terms but you keep hiding even though *everyone* here noticed your behavior. You don't want to excuse yourself, bad on you, but don't do that sh*t again with me.

Note: Refer to the group as if they all stand with you. You want them to mentally nod to you as you depict us VS him in the scenario.

Since it's quite long and people's attention span is short, a briefer version is preferable:

> Look man, I don't know if you were trying to show off as the alpha male or whatever rubbish, but what I do know for sure is that you yanked my arm like you wanted to rip it off. Everyone saw it and that's extremely rude. And that's a fact. And instead of apologizing you are hiding yourself. Whatever. But make sure you don't do that shit again with me.

You deliver it sternly but unemotionally. You want to look like you mean it and there's no fucking around, but you can't sound like he got under your skin.
If you deliver it even half properly, it's very powerful.
And then drop the mic.

People will side with you

If he apologizes, great.

You won!

If he still doesn't apologize, you brought his move into broad daylight and the group will be on your side (example where standing up to the bully made Noah the new group leader) because most people resent bullies and gratuitous aggression –parallels can be found in primates as well-.

Indeed science tells us people prefer value-giving leaders to aggressive ones, and when you antagonize the bully you're almost automatically the good leader.

The Alpha Male Handshake in the club

You cannot easily speak in a club or loud environment, so prevention is even more important.

Your best prevention tools will be to:

1. Learn to read body language for prevention
2. Becoming a man people don't want to tool

That wasn't certainly me years back in my first encounter with an Alpha Male Handshake.

I was trying to look all cool against the bar when a girl came over and brought me into her group -don't you just love Eastern European girls, albeit we can't exclude it was all a ploy to make his man jealous :)-.

#1 Body Language & Prevention

Possibly exhausted trying to look cool, and my inebriated mind not helping, I missed the clear signs of an Alpha Male Handshake coming.

Ant's usually not difficult to spot.
In my case, the meathead was not that different from the picture below :).

When an Alpha Male Handshake is in the cards here's a nice trick: don't engage.

Don't shake hands at all.

Just say “hey man” and put two fingers to your forehead.

Or “hey man, nice muscles” and pat him on the back.

And if you fall for it and don’t have the power to match… Boy, that’s gonna stretch your learning curve now :).

#2: Let it be

So here we are, you fell for it. He crushed your hand. And yanked you. A few times. And he’s not letting go.

Unless you do something, you’re kissing goodbye to any shred of good status in *this* group.

This is the key word here, because If you don’t care about the group then you can just leave.
Shake your head with a look of contempt, exhale, and gesture as if to say “how cheap”.

It won’t be easy rebuilding your self-esteem from there, but it’s great training. Mentally, develop yourself to decouple self-esteem from results.

And then let actions do the talking and go get better opportunities: the best revenge is massive success.

#3: Attack

If you care about this group or you know most people around, then you gotta consider your reputation.
And iIt means you gotta consider evening the odds.

I know, I know, you’re not that kind of person, he’s bigger, there are people… I know there are many excuses.

But worry not, you don’t need perfect execution and you don’t even need to “win”.
You simply need to send the message that you won’t allow anyone to walk all over you without returning (some) fire.

The Alpha Male Handshake in Politics

Preparation rules the rooster in politics more than anywhere else. Politicians all prepare, Macron openly admitted

it (not the smartest move, if you ask me).

Here are a few things you can do when facing the possibility of an Alpha Male Handshake:

- Get physically closer: you're not gonna lose your balance
- Place one hand on his shoulder
- Grab his hand with both your hands
- Slip your hand fully into his hand and put more power than you normally would and
- Smile with strong unwavering eye contact

Here are some successful real-life examples:

Alpha Male Handshake Contest #1 Trudeau VS Trump

Trudeau's hand on Trump's shoulder achieves two purposes:

1. Avoids being taken off balance by the yanking and
2. Strikes preemptively entering Trump's personal space.

Alpha Male Handshake contest #2 Rahmon VS Trump

Pure power in play: look how Tajikistan president played ball:

Alpha Male Handshake Contest #3 Macron VS Trump

Macron got burned on his first outing but learned the lesson: on round 2 he slips his hand fully inside Trump's hand, powers his grip, holds longer than expected, and adds strong eye contact to boot:

Read here the full details of Trump VS Macron.

Matching = Winning

When you neutralize a Power Move, YOU end up being on top.

It's because the Power Mover chose to use shenanigans, *not* you. He tried and *failed*, you matched and *succeeded*.

It's like Mohammad Ali famous whispering into his opponent's ear:

> **Ali: That all you got George?**

And, inherent to the power of matching and succeeding: who knows, maybe you had some left to spare in the tank.

Summary

You learned what an Alpha Male Handshake means, that you *have to* match or retaliate, and you learned some effective ways to do so.

A quick recap:

- Prevent it:
  - Radiate "friendly confidence" in a way that people won't wanna mess with you
  - Read body language and when an Alpha Male Handshake is likely to come:
    - match power, put a hand on their shoulder, and close physical distance or
    - don't offer a handshake

- If you get caught out:
  - Match and one-up him socially with a well-placed joke or
  - Call the move out in the open, get a deserved apology, *or* state that you don't accept that behavior
  - If no verbal counter-move is possible, end the handshake

Enjoy standing up for yourself.

Lowballing Psychology for Effective Negotiation (Case Study)

Lucio Buffalmano · 12 June 2017 · Archived copy · Original

The lowball technique can be a fantastic way to get a bargain.

But it's a high-risk crapshoot because it annoys the sellers.

What to do then?

This article will walk you through the steps of a psychology-backed, field-proven lowball technique that works (almost) every time.

Lowballing is risky: if you overdo it you annoy the other party, lose social capital, and can even end the negotiation before it begins

Contents

- The Lowball Technique: A Walkthrough

  - Update: 5 years later

The Lowball Technique: A Walkthrough

This HP Envy on eBay Classifieds was exactly what I wanted to first launch this website.

However, having quit work, I needed to save every single possible Euro.

I will show you now how I used the lowball technique to get it at half the price.

#1: Don't make enemies

Now what most people would do, and would do wrong, is to lowball right away.
Or, only marginally better, lowball after a neutral question that does nothing useful for you (ie. "*is it still available?*").

Let's first understand why it's not the ideal way.

Why you don't lowball

There's much truth in the saying that people don't buy products but they buy *people* (whom they like).

But most are much less careful with the other side of the equation: people also *sell* (to) people (whom they like).

And often we'd rather lose money than sell to people we don't like.

This notion has been scientifically proven in many experiments -most famously the "Ultimatum Game"– and by neuro-science MRI scans showing that lowball offers stimulate the part of the brain associated with disgust.

In a nutshell: **lowball offers disgust people and make them switch to "vendetta" mode.**

No wonder so many low-ball offers end up getting spurned, ignored, or, it happened too, provoking violent reactions.

The great book Never Split the Difference is also based on the principle of not making enemies.

What do you do then?

Enter the psychology of persuasion.

#2. Ask a Trojan Question

Photo by Tama Leaver

To set up the lowball offer ask what I've baptized the "Trojan Question".

A Trojan Question is a question where **you already *know* the answer will highlight defects and problems.**

If you're buying a house that needs renovation, for example, you don't attack by saying "but it needs renovation".

You ask if they *think* it needs renovation.
Defenses go down and when they say yes, you ask how much it could be. And now you're safely hinting at "ask price minus renovation costs".

Similarly, I ask if the computer has SSD memory, which I already know it hasn't:

> *Hello Philipp,*
> *Is the drive SSD or SDRAM?*
> *Many thanks,*
> *Lucio*

And as expected he replies it's not.

NOW, *because* it doesn't have the feature you were looking for and you are already engaged in a conversation -as opposed to starting with a lowball offer-, you won't raise nearly as much hostility.

And on your next message, you build rapport and prepare the ground for a second attack with a Trojan Compliment.

#3. Make a Trojan Compliment

A Trojan Compliment is a compliment hiding another critic.

This is the best way to safely keep criticizing the product by staying friendly.

If you're buying a house, you could say

> **You**: "oh OK, I see, renovations are expensive. Well, I like the location though. And it looks like the traffic noise is barely audible (said it on a Sunday, with traffic being 3x higher during weekdays ;)"

With a Trojan Compliment, you fully focus the seller's mind on the negatives of the product, making it much more likely he'll seriously consider your lowball offer.

In our example, it went like this:

> *OK I understand*
> *.But it's still a good machine, and it looks like it doesn't have any scratches.*
> *I would offer 280 and can meet you this week and pay.*
> *What do you think?*
> *Apologies for my terrible German and best regards,*
> *Lucio*

The passages explained:

- "doesn't have any scratches": Trojan Compliment as I could see a small one
- "ready to move on ASAP": benefit for him to sell it quickly (maybe he already got a new one?)
- "what do you think": makes the seller feel respected and in charge. You just made an offer but *he* is the final decision maker
- "280": even numbers are perceived as bigger and it's slightly more than half, with half being a major psychological threshold
- "Sorry for my terrible German": I'm stretching myself to communicate in your language. Mistakes can be endearing.

#4 Leverage Question & Compliment

He tells me:

- it has a small scratch -exactly what I was angling for- and
- he accepts my offer *if* I go pick it up

Bingo. I use both information for another price reduction, which now seems very fair:

> *Hmmm it's a bit far. But OK.*
> *Is it OK for you if we make 250 because I'll need to take time off from work? I can be there this week, how's your schedule?.*

And he accepts.

NOTE:

- I say it's far before accepting: I'm highlighting its concession, and concession is given calls for concessions back.
- "because" always make your point stronger and more likely to be accepted (even when "because" adds no real information).

Lowball Technique: the result

50% discount on an already fairly priced item + Mouse & Bluetooth dongle gift.

With the next move, sold an old laptop above its value and for 76 Euros moved from an old 2010 clunker running Vista to a sleek All In One touch screen quad-core 64-bit Windows 10 with remote.

All thanks to great lowball technique -and auction sales techniques-.

Edit:
And that was also, BTW, the computer with which I started this website. A website that two years later became a viable business and my main source of income.
Fond memories spring to mind :).

More Negotiation Techniques

Since then I have written a lot on the psychology of negotiation.
Check out these articles:

- **Manipulative negotiation techniques**
- **Negotiating An Unfair Refund Request**
- Best Negotiation Books (+ free summaries)

> 20 Manipulative Negotiation Tactics

SUMMARY

Results will differ from case to case, but you learned the main issues with the lowball technique and you certainly will improve your hit ratio by doing the following:

1. On your 1st message ask a Trojan Question -a question with a negative answer-
2. Make a Trojan Compliment -compliment hiding a critique-, make your lowball offer and be kind

3. Use his reply for further discounts/concessions and tell him you're ready to move

And use with ethics ;)

Update: 5 years later

5 years later and a successful business built later (this was TPM's first article I think) this is what that same PC sold:

For full disclosure, the buyer didn't pay in the end, but it's still telling about the possibility of buying well and selling well while highlighting the advantages.

How to Use FB To Recover From Disastrous First Date

Lucio Buffalmano · 16 June 2017 · Archived copy · Original

Are you just coming from a date with a girl you liked?

And… You know you bombed it?

I know how it feels.
And it's 10x more painful if you liked her… Or if you were close to having sex with her.

Trust me, I know.

In this post, I will show you how to recover from a bad date.

- SUMMARY

Recovering from a bad date

Recovering from a bad date with Facebook is all about keeping yourself in the circle, and mind, of the women you know.
And of the women, you had a poor first date with :).

A bad date is defined by a girl who is not replying or who already told you "no" to meeting again. In these instances you cannot chase for another date: she is not thinking highly of you, and the more you write her the more you'll become "that annoying weirdo who just doesn't let go".
What do you do, then?

Enter Facebook.
Facebook is your best weapon to let her see what a terrible mistake she made in writing you off. And the best part?

You do so *without* any chasing and posturing -well OK, a bit of posturing: always make sure you look good on pictures ;)-.

Advantages of Facebook over text

When the romantic road is bumpy and she's not replying or already said "no", Facebook -or social media in general- is superior to direct messages for a few reasons:

- **It's a low effort medium to "ping"**

You weren't being a stalker on her profile, her post just appeared on your feed and naturally inspired your witty comment.

A text message, on the other hand, is high effort because you intentionally took time for her and that says "I was thinking of you". And when she's *not* thinking of you (yet), that screams "stalk-ey".

- **You can get "gallant points"**

For wishing happy birthday, for example. Or sincerely congratulating her on the new job.
These are also amazing natural conversation starter. "Oh congratulations on the new move, how you feel about it".

- **You showcase your cool life**

She will see you enjoying your life. Or what a great artist you are. Or what adventurous trips you're taking. And she'll notice you *not* contacting her as you enjoy your life. Now get some women in that life and you're hot commodity. Did those women made you forget all about her? ⍰

- **It's border-less**

People move and travel a lot these days. I do too, and deal with women and people moving all the times. Add people on Facebook and never worry again about changing phone numbers or forgetting about each other.

In a nutshell, Facebook is less "you and I" and more social.
Normally you *want* more "you and I", but after a bad date you need more social: you need removing yourself from the "guy who wanted to have sex with me but didn't" and move into the "cool guy I know and might meet again in the future".

Facebook & law of large numbers

Just to be clear: there's no magic bullet to a poor impression. Your best shot is in person the first time out. And if you're can't meet again quickly, your chances plummet.

But, here's the silver lining, they don't go to zero.

And since you can use this strategy with all those unlucky women who don't become your lovers right away, you can effectively play the large numbers' game. Eventually, the number of "somewhat interested" women in your Facebook periphery will grow to the point that you'll have the chance of striking again with *some* of them.

As this was the case.

From bad date to sex : a step by step guide

Recovering from a bad date #1 acknowledge it

You two didn't get along. Or you fucked up.
It happens.

In my case, we had very little words in common but I thought it was clear we were going back to my place.
So you can imagine how happy I was when, almost in front my place, she goes for the metro instead :).
I said she could only stay for a drink, it was just 5 minutes etc. etc. but nothing.

We exchanged contact anyway, albeit I was pretty sure that was going to be it, also because she was leaving town in a few days.

Indeed my two texts went unanswered:

As expected, no biggies.
Keep a learner and outcome independent mindset and.. Plenty of fish in the sea for your rod ;).

But… It's not over until the fat lady sings, as they say.
Follow the process below and you will maximize your chances of recovering from a bad date.

Recovering from a bad date #2: ignore her

Needless to say, you don't write anything anymore after two unanswered messages.
Don't even like any post or, God forbid, any of those sexy pic that got you so incensed for what you missed (mystery about your will feelings help you).

Just forget about her.

#3: ping her

Around 5 months later it's her birthday.

A birthday is a perfect occasion to re-send a message.

Everybody loves a good wish, and it's a natural and caring gesture *without* the kissing up factor -not like you were thinking of her, FB told you-.

Also, it's very likely you'll get a reply from a birthday wish.

Note:
a reply is *very* important. Texting after you already got a reply, even if just a "thanks", represent a positive precedent and puts you in an incredibly stronger position.

Power Move Tip:
If you're in different time zones, send the wishes before it's her birthday in her time zone or the day after, so that it will stand out.
Similarly, if you want to use her reply to restart a conversation and then ask her out, which works especially well if she replies "thank you, how are you", do it the day after, This way your message will not get lost in a barrage of incoming notifications.

Same thing for two years.

These were the first steps towards recovering from the bad first date.

In the meanwhile a couple of back and forth comments on some posts, mostly humorous, and some likes on some posts or picture not showing any skin -the idea is to induce liking by suggesting you are similar after all-.

#4: plan your strike

But you can't stay in the periphery all your life of course.

Your goal is to get her out with you again. The best way is to strike up a convo using a catalyst involving both of you.

Make it seem as if it "just happened", a coincidence, maybe even destiny: women love "just happened" and destiny.

Maybe she liked a picture of yours doing some sport, or she signed up to an event you're also planning to attend.

In my case, two years later, I was traveling to her city.
This is a typical scenario with travelers (and if you're serious about it, note down all women you wanna have another shot at with basic details and residence. Not that *I* do that though.. ⍰

Unluckily she was out of town, but that was our first real conversation since we first met. And it was clear by then she was fully ready to meet again (insert "*sics*" a bit all over :).

Hey, I'll be in [redacted] soon, what about we catch up for a drink

[redacted]

really?
when??
I'm in [redacted] Where are you going??

[redacted] And then we will see.
Weren't you living in [redacted] before?

Yes.I'm lived in [redacted] last year.But I have a lot of friend at [redacted]!!!
Go [redacted] to suit you

Ahaha why, [redacted] is better than [redacted]?

[redacted]

I love [redacted] 😍😍😍

Pleaes talk if there is to be a your help!!!

Note: this was the moment when I completely moved out of the "guy with whom it didn't work out" and entered into a more neutral territory -maybe even a slightly positive one given the bubbly replies-.

We exchange a few more messages and, a few months later… She's in my city.

#5: strike

That immediately gave us a reason to speak again, and now from a position of strength: I am a cool old friend she has a history with and destiny seem to be on our side to finally meet again. You can use some text flirting to your advantage here.

I sent her a message, we exchanged a few pleasantries and agreed on a time and place to meet.

[redacted], did you move to [redacted]?

Hello
Yes!!from last September

Crazazy! 😄
How do you like it

Are you still in Berlin lights???

Yeyyy
I like so much [redacted] ✨✨✨

Of course you do, you are perfect for [redacted] 😄
Let's get a drink/coffe one of these days

Great 👌

How is your schedule, when are you free

Every Sunday is day off.

Tomorrow evening I'm free ,and you??

We went for a beer, then back home. This time no late train to catch, and we closed the circle.

All thanks to (proper use of) Facebook.

Should You Even Try to Fix A Bad Date?

Recovering from a bad date can be such a daunting task that asking yourself if it's even worth it is a fair question.

You could use that time on something else.
And by moving on you might save yourself a lot of heartaches.

Because recovering from a bad date is difficult and, frankly, quite unlikely.

However, sometimes you do can.
This post showed one of the many ways you can do it.

So in the end whether or not you should try to fix a disastrous date, is up to you.

SUMMARY

Recovering from a bad date is a low probability situation (focus on texting right instead).

There's not so much you can do directly as that will come across as chasing.

Recovering from a bad date with Facebook then is all about reversing the odds *indirectly*, by staying in touch and showing your attractive side without chasing.

Like this:

1. Ignore her completely -You're a busy man and moved on-
2. Wish happy bdays and drop a rare, witty comment -You have no hard feelings but you're still around!-
3. Have an interesting profile, have women around highlighting you're in demand -Oops, are they prettier than her?-
4. Find an exciting, sudden event bringing the two of you near again and propose a drink

What To Do When Someone Mispronounces Your Name

Lucio Buffalmano · 20 June 2017 · Archived copy · Original

What to do when someone pronounces your name wrong?

It depends.

But what you do *matters*.

It can make the difference between being a confident, respected individual… Or someone to whom people pay little attention.

This article will teach you how to correct people pronouncing your name wrong in a powerful, confident way.

Contents

- Power Dynamics of Mispronouncing Names
  - Carefree Environment
  - Formal environments
- When Someone Asks YOU to Pronounce Their Name Right
  - Mindset: look at the bigger picture
  - SUMMARY

Power Dynamics of Mispronouncing Names

Some people mean well and mispronouncing your name is simply a mistake.

But some people do not care about your name because they believe you are "inferior".
Some people might even mispronounce your name on purpose, just to show they can slight you because they are more powerful -also read office power moves-.

How to recognize people who are simply making a mistake from those who are doing it as a power move?

Well, one cue is the environment.

People mispronouncing your name after you meet them the first time at a bar is not the same as at a business meeting.
And people who are otherwise friendly are not the same as people who are being socially aggressive.

This gives us four different scenarios:

- Intention of the interlocutor (Warm VS Vicious)
- The environment (Carefree VS Official)

	Carefree	Official
WARM	LET IT GO	EXPLAIN
VICIOUS	TIT FOR THAT	THIS MEANS WAR

Let's see what these mean.

Carefree Environment

Carefree environments are informal places to let one's hair down, socialize, and have a good time. No-follow brief encounters also fall under this category.

Examples are house parties, bars, check-in counters, and cafes where they call your name.

Warm People: Let The Mistake Slip

When your interlocutor mispronounces your name without malice and you're in a carefree environment, it's best to let it slip or, at most, correct it warmly.

If they still get it wrong the second time, your name is either too complex or they just can't do it.
Let it go, it's not that important, really.

Focus on adding value

At bars and parties, until proven otherwise, conversations are fleeting and for a good time's sake.

Getting stuck up on correct pronunciation so early makes you sound very self-centered and with an entitlement mentality.

Your focus should indeed be on adding value, getting to know them, rewarding them, and connecting.

Basically, don't demand correct name pronunciation, but focus on becoming the kind of person that people want to get the name pronounced right.

And here's a nice bonus on not correcting: people like people whose name is easy to pronounce (and Cialdini said the same).

Bottom line:

In a friendly environment and when you have just met someone, don't pretend perfect pronunciation from people

you've just met

Vicious People: Hit Back

A few times you will meet people pronouncing your name wrong on purpose.

This is a "softer" version of an Alpha Male Handshake where your interlocutor is trying to further his social standing by one-upping you.

It's a similar game of pretending to remember your name wrong.
Here's an example from The Aviator with the "cigarette girl":

When people purposefully shun your correct name pronunciation, you must react.
If you don't, you are confirming that yes, they can slight you, that they dominate you, and that you are the subordinate.

Here's what you can do:

- **Do the same with their name**

Human beings have a tendency to kiss up to bullies.

Resist that at all costs!

And as soon as they pronounce your name wrong, do the same with their name.
Just make sure you do it neutrally rather than with a child-like butt-hurt attitude.

- **Ignore and cut them out**

Tell them "nice to meet you" in a very standoffish way. If it's a group, talk to someone else.

If it's just the two of you, try this: ask them a question, act bored as they reply, then leave without replying -or if you really wanna exaggerate, leave while they're speaking-.

Bottom Line:

if someone pronounces your name wrong on purpose, it's a power move and you should hit back.

Formal environments

Formal environments are business meetings, workplace interactions, 'high society', or job interviews.

You still shouldn't care but here's the kicker: in an "official" situation you should correct people pronouncing your name wrong anyway (below is why).
And of course, you will also use this occasion to show your social skills by correcting them warmly and tactfully:

Warm People: Correct Them Warmly

You will correct them in a warm way.
Such as, in a way that is more about explaining rather than fixing their mistake.

For example:

> ***Her:*** *"It's great to meet you, Lusio."*
> ***You:*** *(with warm body language) "Thank you so much. Lucio is the Spanish pronunciation, my name is Lucio, and it's great to meet you!*
> ***Her:*** *"Oh sorry about that!"*
> ***You:*** *"No worries at all! It's good to be here, thank you for inviting me Kate"*

Note: some social skills coach out there advise to correct people indirectly.
Such as, to not correct them directly but to let them understand they've done a mistake by using your own name correctly pronounced.
Like for example "*hello Kate, my name is Lucio*".

That's not good because everyone saw what you did and people might think that you don't have the courage to address issues directly.

That's very passive-aggressive and comes across as sneaky.
Don't hide. Be warm, but direct.

Why You Should Correct People

You correct people mispronouncing your name because of the message it sends about you.

The message is that you are a person who expects to be treated with respect and that, likely, will do the same to others.

Imagine the other way around: an interviewer pronounces your name wrong.
And you let it go.

Later she finds out she's been mispronouncing your name the whole time.

Ouch!

First of all, she feels bad.
And second, it makes her wonder if you didn't have the courage to correct her in the first place.
Or maybe you are just a bit sloppy.

Either case: you come across poorly.

Nip it in the bud, and correct it right away.

Vicious People: Let The (Social) War Start

This category is for bad bosses, terrible neighbors, in-laws, long time frenemies whom you already corrected many

times but still keep mispronouncing your name day in and day out like they couldn't care less.

Note of caution: only a tiny minority of people fit into this category.

So before you start considering people as "enemies" ask yourself:

- Is my name just too complex for them?
- Did I correct them and do they know I care?

If the former, give them more slack. If the latter, make yourself clearer.

But if you made yourself clear and they still snub you, they're basically insulting you every time they mispronounce your name.

And you can't let that happen.

And if you think the below solutions are "too much" because he's your boss, or your in-law, or whatever you have, then it means you are *endorsing* their point of view and you are offending yourself.

Please don't do that yourself and do one of these instead:

- **Issue a last call**

If you've corrected them but were a bit weak, make one last extra clear effort:

> **You**: James, I realize my name is complicated but we've known each other for while now and it makes me feel insulted and demeaned that you keep pronouncing my name wrong. My name is Lucio, not Lusio. Please call me Lucio"

- **Don't reply when they call you**

Do not reply when they call you with the wrong name.

- **Correct them every single time**

Every single time they pronounce your name wrong, you correct them. Not angrily, but coldly. And keep dealing emotionlessly with them.

- **Threaten tit for tat**

Tell them, in private, that if they keep butchering your name you will start doing the same with their names, effective today. If they don't get their act right, start.

- **Implement tit for tat**

if none of the above works and they continue to show disrespect, start mispronouncing their name *every* time you need to speak to them.

- **Cut them out of your life**

You don't need in your life people who can't show you a bare minimum of respect.
Let them slowly but surely disappear from your life.

When Someone Asks YOU to Pronounce Their Name Right

Sometimes it can be you who is pronouncing their name wrong.

In that case, you might end up in a situation where someone gets hung up on you getting their name right.

Consciously or subconsciously, that's a power move. **Avoid trying too hard and repeating their names many times over you get it right.** Unless you're an advanced player, this behavior is too high effort and violates the law of least ocial effort. Such as: the more effort you expend compared to them, the more power you lose.

You have just met, they have no right to demand so much effort from you.

Just look at how Deniro does it in a similar situation:

Mindset: look at the bigger picture

Taking care of getting a name right *does* show respect, and it's what high EQ people do (read: *Emotional Intelligence* and *Emotional Intelligence 2.0*).

But many otherwise good people are not high on EQ.
That does not make me bad, just a bit clueless when it comes to people and building rapport (or emotional connection).

Basically, as yourself this: does he mispronounce your name but he's otherwise kind, respectful, and caring?

Then why are you so hung up on pronunciation?

Your name does not *define* you.

Sure, you care because of the power dynamics and because you have life ambitions and goals.
But you shouldn't care because it hurts your ego.

If someone steals your identity tomorrow they don't steal your soul.
People with an anti-fragile ego and healthy self-esteem shouldn't get hung up on flawless pronunciation.

I'll give you one funny example of never correcting a mispronunciation in an otherwise positive and caring relationship:

We were sitting on a bench - albeit not in an open field :)-. I liked her, and she liked me too.

It was not much after the one-month mark, but it had been passionate. And she was already giving the usual hard time girls give you when they want a more serious commitment.

The funny thing was, she had been pronouncing my name wrong since we first met and I had never corrected her. Never saw the need and, plus, I found the "new name" amusing.

As we have "the conversation", I tell her we'll keep it the way it is until the end of the year because we both feel it's great and then we'll decide. She agrees.

And then I add “and by the way, my name is Lu-cio, you want a relationship and you don’t even know my name”.

Long, speechless pause.
That was a fun one :).

SUMMARY

You learned that how you react to people pronouncing your name wrong depends on their intentions and the situation.

Follow these steps to know what’s the appropriate reaction:

1. Make sure you clear out *your* ego issues first
2. If they’re friendly, let it go in informal scenarios and correct warmly in official settings
3. If they’re Power Moving, mispronounce their name as well or cut them off

Social Intelligence: Summary & Review (Daniel Goleman)

Lucio Buffalmano · 21 June 2017 · Archived copy · Original

In "*Social Intelligence*" (2006) Goleman states that humans are purely social animals, wired to connect, and we can only be happy and successful when we learn to bond and get along with other people

Contents

- Exec Summary
- Summary
- CONS
  - Review

Exec Summary

- For a happy and fulfilled life master the art (and science) of social relationships
- You can control your feelings

Summary

Daniel Goleman is a journalist who contributed for twelve years to The New York Times.

He is most famous for having coined the concept of "Emotional Intelligence", a construct that is controversial in psychology but that has caught on with the general population.

Daniel Goleman is also the author of "*Emotional Intelligence*" and "*Primal Leadership*".

#1. The High & Low Road

Daniel Goleman argues there are two different parts of the brain which he refers to as the low road and the high road.

- **Low Road**

The low road sets his camp in the amygdala and works at a higher speed based on raw feelings we infer from other people.

It is responsible for the "first impressions", which we form unconsciously noticing.
This is similar to what Malcolm Gladwell also discusses in his bestseller "*Blink*".

- **High Road**

The high road, you guessed it, is instead the conscious, thinking part of the brain.
Now the interesting thing is that there's an interplay of these two roads.

Use the High Road to control The Low Road

The low road can unconsciously make us sad or scared. But we can then consciously use the high road to override the low road feelings and sensations with whatever we prefer.

Goleman gives us the example of a woman who was sad after seeing a picture of a funeral, only to switch to happiness when she was told to think it was a wedding instead.

And the greatest the activity in the pre-frontal cortex, the more muted the amygdala was during the appraisal, which means: the higher the high road speaks, the more it takes away the low road mic.

#2. How to erase your fears

Not only we can override the low road, but we can also change it.

Our memories are in part reconstruction: every time we recall them, the brain rewrites them. And *how* our brain rewrites them is correlated to our *current* concerns, understanding, and feelings.

So If when you recall a memory you have a flare-up of the same fear, then that fear will deepen.

But if you put yourself in a calm, confident state, the fear loosens its grip, and the memory is re-encoded with less power over you.

My Note:
this is the same concept Tony Robbins teaches.

#3. How to control the Low Road

This is the essence of exposure therapy: if you relax and then confront your fears and repeat them, you will reach a point where you will overcome your fear.

MEANING: you can get rid of unhelpful feelings!

#4. Mam VS Woman's Brain

Under stress a woman's brain releases more oxytocin, bringing women to seek out people interactions, which in turn releases more oxytocin.

Men are the opposite: under threats, they tend to go alone.

Also, women place positive relationships as the main source of their happiness while for men independence and a sense of personal growth are more important than relationships.

#5. Power & emotional pull

In a relationship, the party with less power will converge emotionally toward the party with more power.

I picture it a bit like a gravitational pull: two celestial bodies will influence each other, but the bigger one will exert a stronger force on the smaller one.

Also, Goleman says, people in the relationship have different power in different realms and there's usually a tacit agreement on who's got more power on which subject.

This is important, and something which you can indeed probably see in your own relationships.

#6. Mimicking does not create rapport

You probably heard the trick of mimicking the other person's body movements and gestures to make them like you, right?

Bet you thought you could do that on your dates and make him/her like you, right? ⍰

Well, Goleman affirms that intentionally mimicking the other person's movements does *not* create rapport by itself and can actually feel off (if you want to get close to someone, you will likely mimic body language unconsciously anyway).

#6. How to create rapport

Goleman then affirms the 3 ingredients to create rapport are:

- Mutual attention ;

- Shared positive feelings;
- A well-coordinated nonverbal duet

CONS

- **A bit basic**

Social Intelligence by Daniel Goleman deals with many topics (read below) without always going as deeply as I had hoped

- **Scatterbrained**

Too many topics for one book.
Ask me a year from now "Have you read *Social Intelligence* by Daniel Goleman" and I'll tell you "yeah, and it was good.. But, honestly… I can't tell you exactly what topics it covers".

- **No new ground broken**

If you are interested in psychology and people, many topics in *"Social Intelligence"* will be either common sense or familiar -Hedonic treadmill; Ultimatum Game-.

Review

Social Intelligence is a good book, I enjoyed it.

I did particularly love the:

- Science to back the importance of human relationships
- How we can influence the low road (subconscious)
- How we can use the high road (conscious) to override unconscious reactions

That's powerful stuff and I actually prefer it to its more famous sibling *Emotional Intelligence*.

If you are looking into *Social Intelligence* I can highly encourage you to take a look around this website which is all about increasing people's social intelligence.

If you find the golden nuggets above insightful, go ahead and **get the whole book here**.

Mindset Summary: The Power of a Growth Mindset. And When to Avoid (Book Review)

Lucio Buffalmano · 23 June 2017 · Archived copy · Original

Mindset (2006) delves into the psychology of a growth mindset. Researcher Carol Dweck explains the difference between a fixed and a growth mindset, why a growth mindset is superior to a fixed one, and provides some pointers on how to develop a growth mindset.

Contents

- Bullet Summary
- Summary
- Criticism
  - CONS
- Review

Bullet Summary

- Fixed Mindset people believe their qualities can't be changed while growth mindset people believe they can improve
- Growth mindset people work harder, embrace challenges and maximize their potential
- Growth mindset people build better relationships, better companies and lead better lives

Summary

About the author:
Carol Dweck is a psychology researcher at Stanford University.

Most of her career research is based on the growth/fixed mindset construct, and at the time of writing much of the research in this field bears her name.

Chapter 1: The Mindsets

Carol Dweck quickly outlines the major theory of the book:

- **Fixed mindset**

Fixed mindset people believe their qualities are set at birth and carved in stone.
You are who you are, and there isn't much you can do about it.

Characteristics such as intelligence, personality, and creativity are fixed traits, and you can't change them or develop them.

- **Growth mindset**

A growth mindset comes from the belief you can cultivate your qualities through effort.
Yes, people differ greatly – in aptitude, talents, interests, or temperaments – but everyone can change and grow through application and experience.

Chapter 2: Inside the Mindsets

The two different mindsets lead to very different experiences and developments in life.

Consequences of a fixed mindset

When you have a fixed mindset, the following will happen to you:

- **You will not grow much over time**

People who believe their qualities are fixed will not grow much because, of course, there is nothing to develop when you believe your qualities are fixed: you either have it, or you don't.

Many people with a fixed mindset believe indeed that high effort equals low ability. Skilled people think, use, and rely on their innate skills and should *not* need to work hard at all.

- **You will mostly be busy defending your ego**

Fixed mindset people do work hard as well though.
They work hard to protect their egos by avoiding challenges and boosting their self-esteem through validation seeking.

This is because your qualities, being fixed, determine who you are.
Thus fixed mindset people often build their ego around their qualities, which makes them horrendously dependent on results and people's judgment.

Performing poorly means you're bad, performing well and receiving compliments means you're great.

Have you ever noticed people battling to be "right?" That's a hallmark of a fixed mindset.
People looking at how many likes their picture got on Facebook? Major fixed mindset component.

The ones plastering their social profiles with "I don't care what people think" and "I'm me, fuck the world"? Mostly a front hiding a fixed mindset.

- **Your results define you (=are a slave to results)**

People who believe in fixed traits also have an urgency to succeed, because there's no "getting better", no "testing yourself". Succeeding means you're good, losing means you're bad.

And when they do succeed, they often feel a sense of superiority, because success means their fixed traits are better than others.

- **You spend all your efforts making excuses**

When people with a fixed mindset lose they try to “repair their self-esteem” rather than learning from their failures.

Failures indeed often take the shape of denying, blaming someone else, looking for those who are worse off, making excuses, or, of course, never competing at all.

Never competing at all feels safe for fixed-mindset people because a great fear for them is that of failing and being left without excuses.

Consequences of a growth mindset

People with a growth mindset are the complete opposite:

- **Major growth over time**

As opposed to a fixed mindset, a growth mindset makes you concerned with improving, which leads to major growth and development over time.

- **Anti-fragile ego**

In the growth mindset, failure can, of course, be a painful experience, but failure does not define you.
Failure is a problem to be faced, learned from, and overcome, which makes you more anti-fragile.

Also read: how to develop an antifragile ego.

- **You become grittier and more determined**

The passion for stretching yourself and sticking to it, even when it’s not going well, is the hallmark of the growth mindset, as well as outlined by Angela Duckworth in *Grit*.

Indeed the growth mindset allows people to love what they’re doing and continue doing so *in the face* of difficulties and struggles.

- **You become more outcome-independent**

While the fixed mindset is all about the outcome -because if you fail you’re a failure- the growth mindset allows people to value what they’re doing regardless of the outcome.

Chapter 3: The Truth About Ability and Accomplishment

Carol Dweck says that fixed mindset people tend to become “scarred” after failures because they interpret failure as a lack of ability.

And since they don’t think they can grow any skill, they will avoid trying again in the future.

A growth mindset person instead is both more open to new challenges and more open to trying again and again after failures.
They enjoy testing themselves and going beyond their limits and, consequently, end up growing their skills and talents.

The author, being a scholar herself, discusses how different mindsets also affect people in school and in their studies.
People with a fixed mindset tend to study with the test in mind, they simply want to do good in the test.

People with a growth mindset instead study with life in mind: they want to learn and take the skills that will make

them successful *outside* of school.

> **Fixed mindset work to prove their abilities and protect their egos, while the growth mindset people work for life**.

Chapter 4: Sports and the Mindset of a Champion

In chapter 4 of *Mindset,* Carol Dweck goes into some famous sports personalities.

I believe one of the keys of this chapter is that many people look at top athletes and think they are extremely talented and were born with and gifted with great genes and skills.

Carol Dweck instead says that the truth, most of the time, is that at the very least that talent was backed by a huge amount of work. And, many times, top athletes didn't even show great talent when they were younger.

Carol Dweck also provides some very interesting examples of some top athletes who failed to reach their full potential because of fixed mindsets (Pedro Martinez and John McEnroe).

Growth mindset athletes instead were able to see failures as opportunities to learn and that allowed them to get closer to their full potential and to bounce back from major losses and setbacks in their careers.

Chapter 5: Business Mindset and Leadership

Carol Dweck then delves into examples of growth and a fixed mindset in business. Skilling for Enron and Iacocca for Chrysler are examples of fixed mindsets.

Skilling used to say that his genius defined and validated the whole company, and created value.
Iacocca would not allow skilled and empowered managers around him to weigh in with their opinions so that he could look -and feel- like the smartest man in the company.

As for many other successful fixed mindset people, Skilling and Iacocca believed their talents made them superior to others by birthright.

The Example of growth mindset CEOs are Jack Welch, author of "Winning", Lou Gerstner from IBM, and Anne Mulcahy from Xerox.

Chapter 6: Relationships and Mindsets in Love

Relationships are another extremely interesting realm to explore how the two different mindsets lead to very different experiences.

Carol Dweck reminds us that **fixed mindset people perceive rejections as a reflection of their flawed personality**.
It's a very painful rejection that hurts them at the core of who they are, so they can lash out when rejected and can sometimes plot revenge.

People with a growth mindset instead are more able to detach themselves from the ebb and flows of relationships and use them as feedback mechanisms to actually improve that relationship.
And when rejected, they are more able to move on.

Also very interestingly, which I have noticed personally, Carol Dweck says that people with a fixed mindset tend to see relationships more as battles and they will try to exploit the mistakes and shortcomings of their partners to feed their own ego.

Chapter 7: Where Do Mindsets Come From?

Carol Dweck says that teachers have a strong influence in shaping whether or not we will grow with a fixed or

growth mindset.

For example, teachers who compliment students for being smart to reinforce a fixed mindset.
And teachers who reward students for doing well because they worked hard help instill a growth mindset.

Also telling pupils they are very fast learners can nudge them towards a fixed mindset as when in other fields they might justify not learning fast enough in other fields with the idea they are not talented enough.

My Note:
These findings have been highly criticized and failed to replicate.

Chapter 8: Changing Mindsets

After having taken on the whole journey of how kick-a** it is to sport a growth mindset, Carol Dweck finally dedicates the last chapter to how you can go from a fixed to a growth mindset.

But unluckily I found the book a bit lacking here, so I will add my own research on it:

1. Hear your fixed mindset voice ;
2. Recognize you have a choice
3. Talk back to the fixed voice with a growth one (a mentor I follow repeats “I can do it” 3 times in his head every time someone says some disempowering BS)
4. Choose the growth mindset.

Also, I found useful:

1. Read and acknowledge brain plasticity: fixed mindset is plainly unscientific
2. Fixed mindset is *fear of looking bad*. Re-enact your worst moments while feeling great. Understand you are stronger *because* of them
3. Change your identity: a great way is by building the habits of the person you want to be
4. It’s all practice: I find it useful to always look at things as practice. Worry not about the final results, it’s all practice

Update: I dedicated a whole post to developing a growth mindset.

Criticism

Mindset has drawn some constructive criticism over time.

You can read more in these two posts:

- Pop-psychology myths
- The replication crisis in psychology

However, in a nutshell, it's this: Carol Dweck might have a bit embellished her results.

Replicating her findings is difficult and instilling a growth mindset in pupils might not be as easy as the book seems to suggest.

Future studies suggested that the benefits of a growth mindset may depend on several factors, and growth mindset interventions seem to produce modest or variable results.

Finally, there is no mention on the advantages of a fixed mindset.
For example, **I had a fixed but positive mindset circa my mental abilities and it served me incredibly well.**

However, I still found *Mindset* incredibly usel both to my self-development, and to better learn and read people.

CONS

- **No information on getting a Growth Mindset?**

The book gives you a fantastic overview of what a fixed and a growth mindset are. And you are itching to become a growth mindset person. But then… It doesn't tell us how.

- **Manicheistic Mindsets?**

Mindset is strong on the dichotomy of fixed/growth. Yet, I doubt most people are fully on the extremes: what about all the mixes? Carol Dweck does say there are mixes, but I would have liked to read more about it.

- **Don't go extreme! Powerful men must defend their competence!**

Some popular self-help gurus profess the adoption of an extreme growth mindset.
In a way, that's good… As long as you don't do so publicly, you lose authority.

Learn more about the law of optimum balance and when to avoid a growth mindset:

Learn here:

- **When NOT to display a growth mindset**

> Growth Mindset Power Dynamics

Review

Mindset is a great book for personal self-development.

For many people with a strong fixed mindset, I'd even say that it's a foundational book and an important step towards a more empowered mind -and life-.

It helped me develop in three important ways:

- **Empowered Life**

It explains how a fixed mindset caps potential and potentially condemn us to a life of ego validation and excuse-making.
And it will show the way out of it with a growth mindset.

- **Psychological Understanding**

Mindset opened a further door to understanding human psychology.
Many of the games of excuses and blaming from fixed-mindset folks made more sense.
It's because they thought that being bad at anything meant *they* were bad.

- **Extraordinary is… Doable**

A growth mindset also takes away top performance from the realm of "out of this world" and "genius", and places it within reach of each one of us (willing to put in the work).

Because here's the secret nobody wants you to know: every single top performer busts his ass. And they're no better than you, and if you put in the work *you* will do just as extraordinarily.

See more great books to read or **get Mindset here**.

And don't forget this important exception for ambitious men:

- **Avoid a growth mindset with these people,** or you lose status, respect, and attraction

Mindset Summary: The Power of a Growth Mindset (Carol Dweck)

A seminal book which will take you to a whole new level.

What To Do When People Pretend They Don’t Know You

Lucio Buffalmano · 24 June 2017 · Archived copy · Original

What do you do when someone pretends they don’t know you or don’t remember you?

Someone not remembering you or you not remembering someone is a common occurrence in social life.
And it’s a crucial moment of social power dynamics that will heavily impact your social value, status, and power.

Get it right, and you’ll take your status to the next level.

By the end of this post, you will know exactly how to deal with these sticky social situations.

Contents

- 1. Don’t Remind Them!
  - Most People Instinctively… Do It Wrong
  - Why you don’t remind them how you met
- 2. Prevent the value loss: let them remember you first
- 3. Move on quickly to avoid any power loss
- 4. Even the score and move on
- 5. Pretend you don’t know them
- Two Different Cases of Forgetfulness
- SUMMARY

1. Don’t Remind Them!

First rule.

No matter if they are pretending not to remember you or they really don’t, you do not remind them.

Not if you care about status, respect, and advancing at life, at least.

Or, actually, even if you don't care.
Just respect yourself a bit more, and handle forgetful people properly.

Most People Instinctively... Do It Wrong

This popular post of an otherwise likable chap is the perfect example of what most do wrong when people don't remember you.

Basically, when his conversation partner doesn't seem to remember him he explains all the details of when, where, and how they met.
Nice way of setting yourself up for a triple crown of failure :).

He even *suspects* some people "forget" him on purpose, and he's *still* playing into their hands and giving all his power away -head-wall banging-.

Explaining all the details is like saying:

> ***Sub-communication**: I remember everything about you because you're so cool and higher value. And I am obviously so insignificant and low value that you don't remember anything about me.*

It's pleading, it makes you look insecure, and it slots you as the lower-value man in that relationship.

Why you don't remind them how you met

The general principles are:

1. Remembering means caring
When someone remembers you well, it's a way of sub-communicating that they liked you. Or that you were important to them and that they cared. Or a mix of all of them.

In either case, it's a positive gesture.

2. *Not* remembering means *not* caring
When someone does *not* remember you they are sub-communicating you were not important enough.

3. The high effort ot reminding disempowers you
All that effort also violates the law of least social effort, which states that the more effort you invest compared to others, the more power you lose.

4. Pretending not to remember means power move
Pretending not to remember instead means they are willingly trying to make you look bad. Or trying to make themselves look superior.

It's social climbing in groups.
Or plain disrespect and the sign of a socially belligerent attitude.

When you keep reminding yourself of how where and when you met you keep caring for someone who doesn't care about you.
Socially, you are *giving* value while they are *taking* value from you. Which is the definition of kissing up.

As an example, take a look at this scene from Play the Game. Who do you think is chasing who here:

Notice that as he reminds her one issue becomes obvious in their relationship: she didn't care enough to remember.
On the other hand, he remembered everything about her, thus communicating it was a big thing for him.
He is heavily invested, she is not.
And now he brought all those issues to the surface, where they are obvious to everyone.
If he had pretended not to remember either, it would have been a neutral interaction instead.

And now the big question is: what do you do then?

2. Prevent the value loss: let them remember you first

If you know someone but they haven't said hi yet, you can approach them warmly and give them time to remember.

For example, imagine you know someone, you see each other… But they don't say "hi".

Then you can make the first move and make it all natural:

> **You** *hey man how you doing*
> **Him**: *hey hi there good, how's your night going*
> **You:** *good good, I think we know each other. Were you at Sarah's party by any chance?*
> **Him**: *yeah I was, I think I remmeber you know…*

And done.
Now it's natural, socially smooth, and nobody loses any power.

Notice that you say "I think".
That's a strategic move.
"I think" implies you barely remember and are not sure, so you don't put him on some pedestal.

Plus, you lower the risk for your social value in case he pretends he doesn't remember.

Or alternatively, you can start with an implied "I think":

> **You:** *hey man you seem like a known face…*

And then let them make the move.

Prevention is a very defensive mindset though and I wouldn't recommend it.

One because you should greet people you know warmly, and second… Are you really gonna pussyfoot afraid someone might not remember you?

Exactly…

3. Move on quickly to avoid any power loss

The principle is:

The faster you move, the less you linger on the power loss, and the smaller the loss.

Example:

> **You**: *Hi, how have you been, I think we've met before*
> **Her**: *hey hi, not sure I remember, I'm really bad with people*
> **You**: *I think some time ago at some party, but it was quick. How are you doing anyway*

Let's analyze it a bit better:

HER
Note here that she is very warm. She'd be in a position to "take advantage of you", but instead she's extending an olive branch. With that "I'm really bad with people" she's indeed slightly demeaning herself and taking the blame. She's socially attuned and possibly "protecting your feelings".

YOU
"I think" is vague and blurry as if you don't remember too well either. And "it was quick" is saying "*That's why you don't remember, not because you have a bad memory* (and.. Not because I'm unremarkable ;).
And then you quickly move on taking pressure off the slightly awkward moment.

You are both playing a very good and mutually helpful game here.

4. Even the score and move on

This one is a bit sneakier.

But sometimes, it's fair.
Plus, you should always defend yourself anyway.

I recommend using this with a poor attitude.

You can't be always sure whether or not it was a Power Move, but the social consequences are the same, so you will even the score (same for intros)

> **You**: Hi, I do know you, how have you been
> **Her**: (haughty attitude) Are you sure we know each other?
> **You**: Hmmm.. Probably I got confused, there are quite a few blondes around here, I'm X anyway

Note: the blond comment serves to even the scores as it hints at the fact she's unremarkable.

"Probably" is there to not completely renege your previous sentence: you're not afraid of telling how it is, you just got little patience for Power Moves.

That's it, you take your friendly overture back and match the mood.
Don't explain how you met, where you met, and keep for yourself you remember her because she was hot :)

And you then move the conversation forward because remember: your goal is building positive relationships. Be more memorable now and next time she won't play any game (or chances are, she will "remember" later on).

5. Pretend you don't know them

This is for when you're damn sure you're dealing with a Power Mover: they know you but are pretending not to.

For whatever reason, they decided to use your warm hello for a good ol' social climb.

And your empowered reaction to that is: on your dead body!

> **You**: *"hey, Samantha right? Good to see you, how have you been*
> **Her**: *"hey, hi, do we know each other?*
> **You**: (look at her quizzically, corrugate your forehead, as if you're trying to remember) *"sorry, I confuse you with someone else. But anyway, how's your night going"*

This way you negate their game by ignoring it (36th law of power). Don't tell your name at all: it would give them a chance to "remember" you and fake that it took them a while.

And of course "sorry" is not a real sorry, it's said neutrally, check how Hashton Kutcher does it.

Then be "friendly cold", tell them it was great meeting them, and end the interaction with a smirk that says "you're quite bad aren't you". And off you go.

Two Different Cases of Forgetfulness

First of all, there are two different cases of people not remembering you:

- They *really* don't remember you
- They are pretending not to remember you (a Power Move)

How you react will depend on which one you are dealing with.
But whichever case you are dealing with, you still never remind them.

SUMMARY

When someone doesn't remember you it says they didn't find you remarkable.

And when someone *pretends* they don't know you they are pulling a social power move on you.

Either way, it's best not to remind them how you met or you devalue yourself in the process.

So you *don't* remind them, but

1. Move on with the interaction quickly
2. Even the scores (back-handed remark) and move on
3. Pretend you got confused and cut the interaction short

The E-Myth Revisited: Summary & Review

Lucio Buffalmano · 27 June 2017 · Archived copy · Original

"*The E-Myth Revisited*" (1995) is *a book for entrepreneurs* who want to grow independently of their own businesses. Gerber, the author, says that most people start a business in search of freedom and self-empowerment, but instead end up being slaves of their own business.
So he teaches entrepreneurs how to build businesses that can run independently from the founders, allowing them to be truly free.[image]

Contents

- Bullet Summary
- Summary
  - Real-Life Applications
  - CONS
- REVIEW

Bullet Summary

- Think systems and replicable results (like a franchise).
- Develop a life vision and make the business a part of that life
- Work ON the business, not IN the business (hire others to do your work)

Summary

About the author: Michael Gerber is an author and an entrepreneur. He runs a business-skills company (and I wonder if it can run independently from him :).

The E-Myth Revisited is divided into three parts:

1. The current state of American small businesses (chapters 1 to 6)
2. A theoretical overview of how things should be (chapters 7 to 9)

3. The practical steps to build an effective business machine that will be independent of you -and eventually make you free and independent (chapters 10 to 18).

Chapter 1: The Entrepreneurial Myth

Michael Gerber says that many people who get into business do so because they don't want a boss. And they believe that because they know what they're doing, then they know how to run their own business.

Chapter 2: Entrepreneur, Manager & Technician

Michael Gerber affirms most small businesses fail because owners are technicians lacking manager and entrepreneur qualities.

Technician
The technician lives in the present and is all about doing the job. He starts a business because after getting tired of working for someone else.

Manager
The manager plans and organizes, he clings to the status quo and craves order.

Entrepreneur
The entrepreneur is the visionary living in the future and moving from idea to idea, often without setting up all the necessary processes for the business to succeed in real life.

Chapter 3: Infancy, The Technician Phase

Most people who start a business are technicians. They know how to do the job and start a company doing what they've been doing before. The owner and the business are exactly the same.
But, says Gerber, if your business depends on you and you do what you've always been doing before, you don't own a business, you own a job.

Chapter 4: Adolescence, Getting Some Help

The moment a business start hiring, it's when the technician moves to the manager phase.

The most common mistake of early managers -and often of managers in general- is that of doing most of the work themselves instead of teaching and delegating.

Chapter 5: Beyond The Comfort Zone

Gerber says that once you start hiring, it gets difficult for most people as they are, for the first time, outside of their comfort zone and have to rely on other people.

Some people shirk from it and, out of fear, they go back to being just by themselves. But, says Gerber, there's no going back after you've started hiring. Going back solo is an implosion, and few businesses survive it.

Grow slowly if you need to grow slowly, but don't go back.

Chapter 6: Maturity and Entrepreneurial Perspective

Gerber says that great businesses don't become great once they mature.
Yes, you must go through Infancy and Adolescence, but **great business started great.**

In the book the example is IBM.
IBM, Gerber says, started that it was all about *building* a business, not *doing* business.

Building a business means putting in place replicable systems that produce results for the customers.

And the secret to starting out a great business is to imagine that business, well defined, as it should be once you're mature. Then go back, map what it takes you to get there, and start building that vision into a reality.

Chapter 7: The Turn-Key Revolution

In a nutshell, Michael Gerber says that a great, self-reliant business is built on systems, not on people.

Chapter 8: The Franchise Prototype

Michael Gerber takes McDonald's to explain how the franchise is the best model -and mentality- for small businesses to succeed.

The franchise has its strongest point in the systems it develops.
The franchise systems allow your business to become independent from you as the owner and founder.

If you get stuck in your business as a technician you will always be a slave of your job.

Chapter 9: Working ON Your Business, Not IN it

Working on your business means starting to put in place all the systems that will make the business work, no matter whether you're there or not.

And no matter whether people leave or you hire new ones because the systems make it easy for everyone to do the work.

The right questions you to ask yourself are:

- How can you get your business to work without you -you're free!-
- How can you make your people independent of you
- How can you build a business you can replicate a hundred times
- How can you set your time to do what you love instead of what you have to

Chapter 10: The Business Development Process

Michael Gerber's advice is not very applicable to artists, writers, or solopreneurs who like to keep control of their creations.

The author says **you should be able to read everything about your business through numbers**.
Quantify everything, and make sure you can easily take your business' pulse by knowing what the key metrics, the ones that really matter, are.

The model that Gerber here describes reminds me a bit of Charlie Chaplin's movie and of Taylor.
He says that your business should be predictable, and to be predictable your employees should have no discretion on their job.

Because if you depend on people, you get chaos and you can't replicate it a hundred times. And if that's the case, ultimately, you don't own the business.

Chapter 11: The Business Development Program

How do you build such a replicable business? The Business Development Program consists of the following steps:

1. Primary Aim
2. Strategic Objective
3. Organizational Strategy
4. Management Strategy

5. People Strategy
6. Marketing Strategy
7. Systems Strategy

Chapter 12: Your Primary Aim

Michael Gerber asks what's your life goal.

Because Business is a part of it, but your primary goal should be bigger than the business itself. Once you know your primary aim, it allows you to bring your business to life AND life into your business.

Chapter 13: Your Strategic Strategic Objective

Your strategic objective tells you how your business fits into your Primary Aim. What does the business have to do so that you can fulfill your life's Primary Aim?

This is not a business plan, it's a life plan.

Chapter 14: Your Organizational Strategy

The organizational strategy ties back to working *on* the business rather than *in* the business.

It means doing strategic work and then hiring technicians -Michael Gerber recommends as lowly skilled as possible- to do tactical work.

Example:
at the very beginning, you sell *in* the position of sales rep. But you start working right away *on* the sales rep position as a VP of marketing by producing manuals and scripts for the technicians that will soon replace you.

Chapter 15: Your Management Strategy

By now you probably understand Michael Gerber and the management strategy is no different. A perfect management strategy, of course, is automated.
A system where managers won't have to make decisions at all. You can't depend on highly skilled and too smart, big-ticket people. They will come with too much power and when they leave it's hard to replace them.

Effective and automated systems for low-skilled workers are the answer and the key to your freedom.

Chapter 16: Your People Strategy

Michael Gerber says that you can't get people to do what you want, but you can create an environment where doing is more important than not doing it.

The author gives the example of a hotel manager training a young employee, explaining the primary aim, and acting as a life mentor.
He teaches concepts such as work as a reflection of ourselves and as an opportunity to be the best person we can be.

It's not clearly stated, but I loved how the chapter highlights that if you want to have great people working for you, you gotta become a great man first.

Chapter 17: Your Marketing Strategy

Michael Gerber says you should learn your market demographics (science telling you who buys) and psychographics (the science of perceived marketplace reality, why they buy something).

How do you find out?

Ask them and give them freebies for their answers. Ask them about their favorite colors, perfumes, and brands.

And see how those brands advertise.

The E-Myth Revisited has examples such as IBM and UPS brand colors, but the book here is more about raising questions than answering them -unluckily-.

Chapter 18: Your System Strategy

Make sure that all the systems work well together and then you're set.

There's a beautiful example of a selling process called "powerpoint presentation method", and it was very good. Definitely worth checking out the book: get **The E-Myth Revisited on Amazon**.

Real-Life Applications

Don't just do the work, think how you can automate the work and replace yourself with a system that doesn't always need you.
Then you'll be free.

CONS

- **Only works for certain businesses and professions**

Gerber's book might work for certain businesses, but certainly not all.

For example, it's certainly not a valid approach for a lifestyle business such as this website, since making the website and its mission independent from me isn't even a goal of mine.

- **Longish**

Michael Gerber uses the popular writing method of "imaginary dialogues" where he speaks with a struggling small business owner.

The dialogue takes quite a bit of space and some simple concepts didn't need that much space.

- **Manuals for perfect systems..?**

The idea of “detailed manuals” to give to low-skilled workers is appealing and it’s an important concept.

But it’s presented a bit simplistically though in what seemed the “external consultant way”. Most manuals I’ve seen gather dust and psychology clearly shows that they *risk demeaning the workforce*.

And my first reaction was that if you’re into reading and acting on it, chances are you wouldn’t be low-skilled

- **People Easily Replaceable?**

The suggestion of hiring low-skilled workers on purpose and building systems around it is, well… Quite a goal that would deserve discussion under the moral and ethical codes.

Also, if you in the process of building a system that uses people like pawns you fail…
It’ll come across as you didn’t really care for the people and at that point, you’ll just have a shi**y company (read more on how to treat people in *Leader Eat Last* by Simon Sinek)

REVIEW

The E-Myth Revisited is a good book if you’re in a more mechanical type of business and want to make the business independent of you.

Three great lessons I will keep from “The E-Myth”:

Make your life bigger than your business
A life vision bigger than the business will help you bring your business to life and bring your life -and passion- to your business.
It’s a key concept for a successful, happy, and balanced life.

Business as a dojo
Michael Gerber introduces us to the concept of business as a dojo: a place to learn about yourself and improve.
That’s an incredibly healthy and productive way of looking at business.

Become a great leader to get great people
And this is true for every other area of your life.

Check the collection of best books or **get the E-Myth on Amazon**.

Drive: An Intro Intrinsc vs. Extrinsic Motivation (Book Review)

Lucio Buffalmano · 29 June 2017 · Archived copy · Original

Drive (2009) explains, in simple terms and with plenty of examples, that rewards and punishments -motivation 2.0- is an old paradigm that doesn't work nearly as well in today's work environments.
Much better instead is to appeal to intrinsic motivation and "higher ideals" -motivation 3.0-.

TPM Strategic Note: An approachable introduction to human motivation
Drive popularized intrinsic motivation, somewhat oversimplifying how power, incentives, and human nature interact, yet providing a valid intro for many.

Contents

- Key Takeaways
- Notes
  - Chapter 1: The Rise and Fall of Motivation 2.0
  - Chapter 2: 7 Reasons Why Carrots and Sticks Don't Work
  - Chapter 3: Type I and Type X
  - Chapter 4: Autonomy
  - Chapter 5: Mastery
  - Chapter 6: Purpose
- How you can apply it
- CONS
- Review

Key Takeaways

- Extrinsic motivation (rewards & punishment) works on mechanical, repetitive tasks (Tylor assembly chain)
- Extrinsic motivation is actually counterproductive in complex tasks
- Intrinsic motivation (already present within us) is far superior for complex tasks and creative work

Notes

About the author:
Daniel Pink is a journalist and a best-selling author.
He is not a psychologist himself, but he does good research.

Chapter 1: The Rise and Fall of Motivation 2.0

Daniel Pink first piques our curiosity by detailing a few well-known stories that shouldn't, theoretically, make sense if we looked at them through the lenses of the typical old economic theories.

Encarta for example, drafted by a team of well-paid writers, lost out to Wikipedia that didn't pay a cent to the curators.

He then sets out to explain why. In the early days of human history, we were driven by our survival needs: eating and, well… Surviving.
For all the survival drives we had, Pink refers to them as "Motivation 1.0".

With the industrial revolution motivation 2.0 emerged, which leverages extrinsic motivation.

Extrinsic motivation is still widely used today but, Pink argues, it's outdated for our modern world and it's time we move to a Motivation 3.0, actually based on Intrinsic Motivation.

Let's see the differences between Extrinsic and Intrinsic Motivation:

- **Extrinsic Motivation**

Extrinsic Motivators are sticks and carrots such as "if you do this, you get that consequence".
The consequence can either be a positive reward or a punishment.
A reward could be a raise, a promotion, a bonus, etc. A punishment could be a reprimand, public shaming, firing, etc.

- **Intrinsic Motivation**

Intrinsic motivation is motivation coming from within.

It's the joy we get from producing something useful (Linux VS Windows), from spreading knowledge (Wikipedia VS Encarta), and from producing art (poetry for a loved one).

Once our basic financial needs are met, intrinsic motivation is far superior in motivating people.

Chapter 2: 7 Reasons Why Carrots and Sticks Don't Work

Albeit most people still stick to carrots and sticks, psychology makes it abundantly clear that they don't work really well.
Here is why:

1. Crowds-out intrinsic motivation

Daniel Pink affirms that extrinsic rewards tend to become the key reason for doing the task and thus they "crowd out" intrinsic motivation and any possible pleasure connected to the task itself.

Example: Giving preschool children a reward for drawing meant they drew *less* than the groups without any reward 2 weeks after the task ended. The group *without* a reward had kept their intrinsic motivation intact and thus kept drawing with gusto.

2. Diminishes performance (esp. long-term)

Studies show that paying people to achieve certain skills leads to lower results compared to *not* paying them.
And the "boost" to performance tends to completely dissipate over time.

3. Can crush creativity

Bonuses can focus action and attention towards a specific result, distracting us from the bigger picture, and thus reducing potential creativity.

For example, a panel judged artists who produced art for art's sake as more creative compared to when working on commission.

4. Can crowd out good behavior
Daniel Pink quotes the famous Richard Titmuss experiment concluding that paying citizens to donate blood led to a *reduction* in donations.

That's because monetary rewards made a socially responsible act of altruism a financially motivated one.

5. Can encourage cheating

By focusing on the end result, extrinsic motivators can encourage cheating.
The examples in Drive are of ENRON and NASA Apollo, but if you've lived through the 2008 financial meltdown,

you are well aware of the flak of critics around outsized bonuses.

Photo by Nathalie Magniez

6. Can become addictive

Study shows that a reward, while it can increase motivation in the short term, can lead to negative effects once it's stopped.
That's because the reward becomes normal, and once it's taken away, it feels like a punishment.
Here's a link to the study.

7. Can foster short-term thinking

Drive presents studies showing how the companies most hell-bent on guiding quarterly earnings deliver significantly lower long-term growth compared to their peers.

Chapter 3: Type I and Type X

Daniel Pink defines two types of people:

- **Type X (Extrinsic)**

Type X personalities are driven by external factors such as fame, status, money, etc. They can often be highly successful but also troubled by an insatiable appetite for more "things".
And we are all aware that the joy of monetary success never fully satisfies us.

- **Type I's (Intrinsic)**

For Type I personalities, motivation comes from within – to accomplish something meaningful-. Success is measured by the task itself and not by a reward.
Type Is have higher self-esteem, better relationships, and are in overall better physical and mental shape.

Type I's will usually outperform a Type X in the long run.

Intrinsic motivation pillars

Daniel Pink delves deep into the pillars that light the intrinsic motivation fire:

- **Autonomy** – the desire to direct our own lives;
- **Mastery** – the urge to get better and better at something that matters;
- **Purpose** – the yearning to do what we do in the service of something larger than ourselves.

Chapter 4: Autonomy

Here's a way to establish autonomy in the workforce: ask for the results and leave the *how-to* them.

Chapter 5: Mastery

The premise of Mastery is that people yearn to get better at what they do (as long as they care about it).

Flow is key to reaching mastery, and you reach flow when the tasks are neither too easy nor too difficult.

That sweet spot of not too easy and neither too difficult is also the point at which we will learn the most and the quickest (for more on peak performance, check *Peak*).

- Mastery is a mindset. You see your abilities as infinitely improvable (check how to develop a growth mindset)
- Mastery is a pain. It demands effort, grit, and deliberate practice.
- Mastery is an asymptote. In a mountain without a peak, there is always room for improvement.

Chapter 6: Purpose

Purpose leverages the human desire of being part of something bigger.
Daniel Pink also cites Viktor Frankl in suggesting that the will for meaning is the basic motivation of human life.

We reach purpose while:

- Doing something that matters;
- Doing it well;
- Doing it in the service of a cause larger than ourselves.

Most companies focus on profit maximization rather than purpose maximization.

Apple is an exception: creating great products is Apple's way of maximizing profits *by* making great products.

How you can apply it

To motivate people from now on:

- Try to do without money or de-link money from results (check Cialdini too)
- Compliment, show appreciation for the behavior you wanna encourage
- Make them feel like they're contributing to something great

- Give a goal, let them find the way

CONS

- **One-sided**

Drive: The Surprising Truth About What Motivates Us" makes no mention of any research that doesn't fully back its central thesis (and yes, there are: here is one showing how men are not swayed by financial reward in donating blood).
While I'm a big supporter of Daniel Pink's conclusions I would have preferred a more balanced view presenting both pros and cons.

- **Shallow representation of Type X**

Type X, the people motivated by extrinsic rewards, sound a bit like a straw man argument for the "greedy, bad guy".
I find it a bit simplistic. We can wish it weren't so, but most human beings *do* share a drive to hoard and get as much as they can. And it's not necessarily a terrible thing.

- **Shortcut to intrinsic**

Daniel Pink suggests intrinsic motivation is the only way to go "as soon as people are paid enough to take the money question off the table".
Well, talking about a big IF :).

And what's "enough"?
Is it the same for everyone? And who is really able to do that?

Review

Drive summarizes a ton of research to make a good case for moving past material rewards.

If you're interested in influencing and psychology, or even if you're a parent or a manager -or planning to be one- you will get a ton of value from Drive.

How to Talk to Anyone: Summary & Review

Lucio Buffalmano · 4 July 2017 · Archived copy · Original

How to Talk to Anyone (1999) is a *social skills book* compiled as a collection of 92 conversations and social skills 'tips' of varying levels of sophistication, but mostly beginner-friendly.

TPM Note: Good 'social lubrication', but we add power to achieve status, respect, and attraction
Leil Lowndes is a master of 'Social Lubrication' and charm. However, 'social polish' and 'liked' is not enough for ambitious men. *Power* skills are needed to achieve goals (see: social vs. power skills). We've audited this list to separate the 'social etiquette' from the 'strategic influence'."

About the Author:
Leil Lowndes is a best-selling author and a well-known figure in the "people's skills" circuit.

Contents

- Body Language
- Conversations
- Emotional Intelligence & Bonding
- Charm & Charisma
- Business Networking
- Power-Aware Tips

- CONS
- Review

Body Language

- **SMILE SLOWLY – WITH A SECOND DELAY**: Don't flash an immediate smile, it cheapens it. Instead, look at their face for a second. Pause. Soak in their persona. And then let a big, warm, responsive smile flood your face and overflow into your eyes. The split-second delay convinces people your flooding smile is genuine and only for them.
- **LOOK AT THE PERSON YOU CARE ABOUT – Epoxy Eyes** You can look at one person even while another person is speaking. This conveys a powerful "I care, I like you" sensation. To soften the edge you can still look at the speaker most of the time but go back to the target when the speaker has just finished a point.
- **BIG BABY PIVOT (ON INTROS)** When you get introduced, turn your body fully towards the new person and smile.
- **'HELLO OLD FRIEND' FRAME**: Treat someone you've just met as an old friend.
  My Note: this is a very good technique and will make your whole body language follow naturally.
- **THINK YOU'RE IMPORTANT:** Visualize and imagine yourself as a very important person. That way all your verbals will fall into place automatically.

These are good tips, but ambitious men need to first understand the fundamentals of body language.
Start here:

- Body language: a primer
- Confident body language
- Masculine body language

Conversations

- **PARROTING**: If a convo is dying and you want to let it continue without much effort, repeat their last words. Example:

> **Her** "and then I went to see match and it was amazing"
> **You** "see the match?"
> **Her** "yes, bla bla bla"

- **ASK ABOUT LAST FEW HOURS**: To get a new acquaintance talking, ask about her day, preferably about the last 5-6h. She'll love it because it's so close to her experience.
- **DON'T ASK WHAT DO YOU DO**: It signals like you're assessing their social worth and it's embarrassing if they're jobless. Ask *"how do you spend most of your time".*
- **LET THEM FINISH**: Don't jump in with "me too" which seems over-excited. Let them finish first instead, and the longer you wait to share your commonality, the more impressive it will sound. **My Note**: This is the opposite of what Vanessa van Edwards suggests. I say it depends. If you want to sound excited or go along with an overly excited mood, jump in. If you want to seem calmer and more powerful, wait.
- **LINK TO WHAT THEY JUST SAID TO CHANGE TOPIC**: Pick up something -thought, phrase, or also a single word- the speaker said. Repeat it or rephrase it and then relate it to what you want to say. Do you want to talk about a recent movie you saw, or about horseback riding but they're talking about the weather? In your first sentence allude to rain and then connect to your desired topic.

> **Her:** *On rainy weekends, I usually go to a movie. In fact, just last week I saw one called..*
> **You***: I sure hope it doesn't rain next Saturday because I have my next horse riding lesson..*
> OR
> **You:** *I pray it does rain next weekend so rather than taking the missus shopping I'll have an excuse to stay home and work on the new rec room..*

- **Comm YOU Nicate with 'YOU' First:** Start every appropriate sentence with "you", it immediately grabs your listener's attention.

Ie:

> ✅ *"you look great in that suit"*

rather than ❌ "*I think that suit looks great".*

Rather than ❌ "*there's this great Italian restaurant, do you wanna try it with me*?" say:

> ✅ *There's this great Italian restaurant, YOU will love it, wanna try it with me this evening?"*.

In an email, ❌"*I really enjoyed myself at the party*" becomes ✅ "You really threw a great party the other night". You save people the step to translate it in their head "hmmm, *he* says it's great, but will I like it?"

These are good tips, but for the foundations of high-power talk that deliver status, respect, and attraction, see:

- **Low-power speaking**: cues of low value and low status
- **Power talk**: cues of high value and high status

> Dominant Conversations: 10 Ways to Speak With Power

Emotional Intelligence & Bonding

- **FULL EMPATHIZERS**: When someone is talking to you don't just nod or say "uhu", use full sentences. Such as "oh that's a lovely thing to say
- **ASK WHAT THEY'D LIKE ON THEIR TOMBSTONE**: Ask what they'd like written on their tombstone (or what they love the most about them) and then tell them you appreciate them for exactly that quality they'd like engraved.
  My Note: it's easy to make this one an awkward moment. You need a bit more rapport and serious talk or it will be 'off'.
- **SOUND CLOSER ON PHONE**: Answer the phone with a neutral tone, and when you realize it's a friend of yours immediately warm up (similar to rewarding them *after* you got to know them). On the phone, it's harder to convey warm feelings, so it's a good idea to use their name as often as possible -"name shower"-
- **ECHO AND MIMICK**: Notice the words they use, and use the same ones. Match their speaking speed and tempo as well.
- **DON'T PAT WHEN HUGGING**: Patting signals distance and 'friendliness only', not closness or attraction
  My Note: I do *not* pat, not even male friends. Not patting is not necessarily sexual and it's much, much warmer. I have noticed indeed that people who pat and/or withdraw very quickly tend to be either homophobes or not very comfortable in their skin. Indeed in my experience patting too obviously sends a message of distance and discomfort.
- **WHEN ACCUSED AVOID DEFENSIVENESS:** Listen calmly until your accuser finishes and then say "I am glad you brought it up". Proceed by saying "you are right" and repeat his accusation word for word. No ifs, buts, and however: those are the prefaces for excuses. Pause. Then, without defensiveness, tell your reasoning. If no rationalization, tell what you have learned. Icing on the cake, thank your accuser for the opportunity to tell him.

Empathizing Example

Lowndes calls this 'emotional prediction', but it's about empathizing

Example 1:
the CEO at the end of a difficult experiment tells the experimenter "*glad that was over, it must have not been easy for you*".
Most people would have said, "That was difficult, I am glad it's over".

Example 2:
In a job interview: "*I hope for you that* this is the last interview; you must have had a grueling, long day". When going out, she added, "*I guess your real work starts now*".

My Note:
This works well in several environments, including in service-oriented contexts. For example, packed restaurant and the waiter is swamped. He finally gets to you with bated breath:

> **Him:** Sorry the delay sir, what would you like to drink?
> **You:** All good, I can see it's super packed, you must be going crazy

Instant bond (and you may have just become his favorite patron).

For a more foundational overview on how to bond and connect, see:

- **How to develop a deep connection**

> How to Build Emotional Connection With Women & Friends

Charm & Charisma

- **SEE NO BLOOPERS HEAR NO BLOOPERS**: Pretend nothing's happened when someone makes a mistake.If coffee is spilled, keep talking while you drain it with a napkin. If a waiter spills your order, make it nothing.
- **WAVE AT PEOPLE WHEN ENTERING A PARTY**: When entering a party in a place where you don't know anybody, just wave at the space between people and smile. Or wave at someone you think you like: people will think you are super popular and will later gravitate around you.
  My Note: Hillary Clinton was using this technique and it often looked very unnatural.
- **SCRAMBLE THERAPY – TRY NEW THINGS:** Just doing something once will give you 80% of the words and stories you need to relate to anyone who's an expert/professional in that field
- **CARRY GOOD NEWS**: As *The 48 Laws of Power* suggests, don't be the bearer of bad news. People associate us with what we say and talk about. Jump on good news and share good news instead
- **KILLER COMPLIMENT**: Search for one attractive and very unique quality they have and, at the end of the conversation, mention their name, look at them in the eyes, and deliver it.

Business Networking

- **GO EARLY**: if you don't know anyone go early and you will be in a small circle of early birds by the time the party swells.
- **TRACKING**: Remember and then refer to people's minor and major events in their lives.
- **CREATE SAFE HAVENS**: Don't mention business when you bump into someone by accident. That's not the right time for that and they will respect you for giving them their space.
- **BUTTERCUP TO SUPERVISORS – for better service**: When there's someone whose service you value, make a compliment, ask who the supervisor is, and then send a letter-mail to the supervisor.
- **LEAD THE LISTENERS – be the first to applaud**: Be the first one to applaud or congratulate the person giving a speech you agree with. Lead the crowd into acceptance.
- **IF YOU'RE LATE – DON'T MAKE EXCUSES walking in**: If you're late to a meeting, don't demean yourself with an excuse as soon as you walk in but find an unflustered way to allude honestly at the problem you had later on. You will come across as sincere and secure and not obsessed with what other people think of you, two important big cats traits.

Power-Aware Tips

This is a collection from all that I've read from Leil Lowndes, including but not exclusively from "*How to Talk to Anyone*":

- **SIT TO THE RIGHT**: Sit on the right side of the most powerful person in the room. Men are uncomfortable sitting where they don't see the door and want "their woman" to be on their right while they put a friend to the left.
- **HIGHEST SEATING**: The highest chair is more important than being at the right of the host. An example of a businessman who used to screw down all the chairs in the meeting room except his, so he'd sit the highest.
- **NOD UP – NOT DOWN**: When you agree with someone you know by lowering your chin. Do the opposite, move your chin upwards instead. But be aware of blending it with warm body gestures or it can come across as

arrogant (see McGregor using the Nod Up).

CONS

- **Wrong about CEOs: it's not 'emotional intelligence' that gives you status and career**

Leil Lowndes describes the CEO as if it were obvious that the top man has the highest emotional intelligence. But that's not true. Data shows that CEOs have lower emotional intelligence. Read 'emotional intelligence lie'

- **All over the place "tricks" format**

Lacking a focused topic it's normal Leil Lowndes "tricks" tend to fall a bit all over the place.
And just as a note, the "little tricks" format can be dangerously misleading: if you want to get good at anything, drop the easy-fix mentality.

- **Mixed bag of value**

There are, of course, quite a few known and common sense "little tricks" in How to Talk to Anyone, but on the other hand, they can serve as a refresher.

Review

Leil Lowndes comes across as a skilled and charming socialite, and "How to Talk to Anyone" is an easy read with plenty of good social skills tips.

Some of the "little tricks" are common sense or not suited for high-value men -ie.: changing your answering machine's message every day-.
Some others are *not* "little tricks" but fundamental elements of human relationships which would require more than a brief 'trick explanation'.

As a matter of fact, the 'tricks' format may be the biggest limitation of this book because **'tricks' don't develop skills**, which in turn don't deliver the outcomes we want for our readership (ie.: status, respect, attraction, and achieving goals).
Read more basics on social power:

- Best social skills books (and courses)
- Advanced social skills books
- Basics of interpersonal power

Conversation Confidence: Summary & Review

Lucio Buffalmano · 4 July 2017 · Archived copy · Original

Conversation Confidence is a collection of tips by Leil Lowndes to improve your social interactions.

Contents

- Exec Summary
- Full Summary
  - Listening
  - Work a room like a politician
  - Body language
  - Different personalities
  - Avoid these
- CONS
- REVIEW

Exec Summary

- Empathizing with your speaker is far more powerful than you being smart or unique. So.. Quit showing off
- Listen at different levels: feel it within you, ask yourself how they're feeling, and why they're telling you
- Scramble therapy: try something different every so often

Full Summary

Touch people

Touching people will make you come across as warmer and more friendly.
Leil Lowndes righteously warns to use with caution, especially with the opposite sex and especially male to woman, but most people touch too little so don't let that deter you :).

Sticky eyes
We quickly move our eyes from what don't like and keep them on what we like. Hence, if you wanna send a message you like someone, keep your gaze longer on them.

Distance
We tend to get closer to people we're comfortable with, and we tend to stay further away from people we believe are of higher status or who intimidate us. So standing far will send the message you're not too confident.
Introverts tend to stand further away than extroverts.

Romantic distance
Studies show an interesting behavior of people first meeting.
When the woman moved forward the man stayed. When the woman moved back, the man did too -probably felt spurned-.

Reassure you're listening
When people talk to you, reassure them you're still listening with a perfunctory "aha", "ok", or "I understand".
Conversation Confidence affirms women need reassurance more than men.

Agree early on
Agree on something early on. "Early on" is the key here. When there's so little of you two out in the open an agreement will be a huge part of what's shared.
On the other hand, if you disagree after you exchanged just 5 sentences they will think you disagree on everything.
If you disagree, hold it off until you're friends and say "that's an interesting way of looking at it" or "tell me more".

Say something positive early on
Same concept as above.

Say yes to compliments
Accept compliments and answer with "oh thank you for noticing".
Saying "no" on the other hand implies a bad judgment on their side.

Moving out of small talk: Cherry Picking
Any anomaly in conversation can be a great topic to expand. If she says "this rain is good for my garden" ask about the garden.
If he says "yes it's been terrible, it feels like a tropical storm" ask if he's ever been to the tropics.
Or "I can't take my dog out", or "it blows leaves in my pool"… You got it, you ask about dogs and pools.

A feeling of empathy
Empathizers are simple short support statements like "*I can understand how you felt about that*" or "*I can appreciate*

you decided to do that.."
If you pick an overriding emotion, empathize with it. Say "I can see that you… " Empathizing is far more important than YOU being unique, interesting or original.
En: 1. Use when you get half-assed "facade replies". Tell them "*you don't seem really convinced*", and you'll get to the bottom of what they really feel.
2. Sometimes people will flaunt what they've done. Reward them and acknowledge it:
"I'm so happy to hear, that's an amazing achievement, congratulations"

What do you do
Only ask "what do you do" if they love their job.
Leil Lowndes brings a cool example of talking about work on a budget cruise for which low-wage workers saved the whole year VS asking "what do you do" to a wealthy people gathering where they live off investments and busy themselves with charities.

Use their names later
Some suggest using their name often but Leil instead suggests to only use it later on when you want to stress a point. For example, after a while that you've been talking, lean in and say "John, what inspired you to get into.. ".
Ed.: It's much more powerful indeed and a similar concept to asking their name pronunciation later.
If you don't remember their names
Similarly, if you don't remember their name wait after you spoke for a while and say "you know, I really want to remember your name, could you tell me again please?"

Conversation layers
A conversation follows an "intimacy level" from:

- Cliches (for strangers) ;
- Facts (for acquaintances);
- Feelings (for friends);
- You and me (for good friends and lovers)

Replacing clichés and facts with feelings and “we speak” is a great way to move forward quicker. For example, after she complained of a tough week you can say “wow we’ve really had a tough week haven’t we”

Captioning
Leil Lowndes suggests creating an inside story that you can use between the two of you.
The inside story should be funny and entertaining, possibly memorable, and involving both of you.

Nicknames
You can use a person’s child’s nickname as a powerful tool in building a personal bond.
Ed.: I experienced this myself when a girl I used to date used an old nickname of mine and it did feel closer.

Scramble therapy
I couldn’t agree more with Leil Lowndes when she recommends doing something different every now and then.
Communication Confidence says that even as a first timer you will get 80% of all you need to know to make you a valued conversation partner

Learn the keywords
Every profession has certain keywords and hot topics. Ask a friend working in that profession to give you the highlights and you’ll fit in with the crowd.

Listening

Righteously so, *Conversation Confidence* by Leil Lowndes expands on listening skills.

Whole body listening
Let yourself be free to experience what you’re hearing. It helps make an imaginary video of your conversation partner’s story.

Shrink Listening
What are they saying? Are they tense, excited, or holding back.. ? look at body language and the underlying emotions

Expected reaction listening
Some will tell you some stories to get a certain kind of reaction from you: ask yourself what that reaction is.
Example: someone is talking to you about a restaurant. Probably he wants you to admire his taste.

Why listening
Ask yourself why are they telling you the story.
Example: maybe he wants you to go with him to that restaurant.

Work a room like a politician

Why the party?
Sharing the rationale of a party is what puts you on the same ground as the heavy hitters.
Is the host looking for a job? Make an intro. Did he just break up? Show up with two girls.

Don't mix food and mingling
Leil Lowndes affirms that just holding the dish in front of you will put a barrier between you and people.

Ask for intro or for Info
If you want to talk to someone ask the host for an intro or ask about some key information about the person and then say "hey, you're John Smith, Susan told me you love to sky, where do you go to the sky around here?"

Entering a group
Stand nearby, listen to the topic, and then when the convo is winding down jump in and say "excuse me, I heard you sky at X, I've been meaning to go there, how is it?". Worry not about the people in the group, they'll be glad for some fresh blood.

Re-approaching someone
Think about your previous conversation and what's something else you can ask or talk about. For example "John, I forgot to ask you, what's a good place to stay in… "

Nutshell resume
Prepare something interesting about your job or where you're from.

Introductory debate
When introducing someone, imagine you are introducing him onto a stage and giving a great intro. For example "this is Mark, he's a top lawyer at X, and he was just telling a fascinating story about… "

Body language

Conversation Confidence by Leil Lowndes also delves into body language.

Full torso

Turn fully towards your conversational partner to give a warm impression. See where the expression “giving the cold shoulder” comes from?

Head/feet/legs/torso direction
if they are turned towards you it’s a good sign, if turned away from you, it’s a negative sign. If sitting, women will turn their legs towards you.

Women looking at you
If a woman looks at you smiling and is interested she’ll look away and return her gaze to you within 45 seconds

Wrist and palms
When she bears her wrist and palms the message is “I submit”. Now go ahead?

Heightened body motion
Her hormones are in action. You got this?

Rubbing
If she’s rubbing herself, it’s a great sign. Especially if rubbing inner parts like the thigh or upper arms.

Lean forward
Leaning forward towards your conversation partner saying “I like you”.
All these signals are better explained in *Undercover Sexual Signals*.

Different personalities

Bullies
There’s a tendency to let things slide with bullies or, worst, kiss up to them. Don’t do it. And don’t try to use subtle psychology.
Instead, let them fizzle out a bit by staying silent. When you begin talking and they’ll try to interrupt you repeat their name over and over again saying “Mr. Wilson, you interrupted me” as you look at them in the eyes until they let you finish.

Snipers
Snipers are people who attack while hiding themselves.
The example from *Conversation Confidence* by Leil Lowndes is a girl back in college. She would accuse without making names but while mostly looking at a particular girl in the group. “*Someone* used my toothpaste here, and I would like to tell that person to please stop and buy her own”.
Your task is to make them come out in the open. Ask openly if they are talking about you.
And if they say you can’t take a joke you keep going *“yeah, it was a great joke, but underneath it all, I sense there was aggressiveness, did you mean it that way?”*
Don’t ask what could be done to improve, that lends them credibility. Instead, once they come out in the open, ask the whole group “anyone else see it that way”?

Man VS Women
Men want to be trusted to be able to get the job done and their greatest fear is being a failure.
Women want to be cared for and women’s greatest fear is being alone.

Avoid these

Conversation Confidence by Leil Lowndes ends with a few interesting and entertaining suggestions on what you should *not* say. Ever.

You look tired
It’s like telling people they look bad. I guess you know why you don’t tell people they look bad :).

I bet you don't remember me
Any smarter way of devaluing yourself? ⍰

I don't drink / I don't smoke
Do take care of yourself, but when offered a cigarette or a Coca Cola don't shove down people's throats how are those habits don't cut it for your high health standards.

Don't tell him I told you this, but…
The subtext is that you can't keep a secret.

You promised to…
Whatever, that was in the past, now they didn't manage or they changed their mind. Allow them to keep their ego.
En.: Also keep in mind they will not only *not* backtrack, but also like you less.

Guess…
When someone asks you a question, reply. And don't play childish guessing games.

CONS

Sometimes Stilted
Conversation Confidence by Leil Lowndes is sometimes laborious and sounds better suited for Blue Blood nobility circles. There's indeed a feeling that in real-life scenarios a bit of inner confidence would serve you better than the proposed "games".
For example asking information before approaching, or pointing at people pretending to know them.
What about just walking up and saying hi, or really getting to know people without pointing at strangers?

REVIEW

Conversation Confidence shares a few similarities with Leil Lowndes' biggest seller "*How To Talk to Anyone*", but I feel Conversation Confidence is actually better and more complete.
If you are reading this summary because you want to get better with people, check out my in-depth Social Mastery Guide.

Absolutely recommended, **get Conversation Confidence here**.

Triggers: Summary & Review

Lucio Buffalmano · 7 July 2017 · Archived copy · Original

Triggers apply principles of direct marketing to the field of personal selling through 30 techniques that Sugarman calls “psychological triggers.”

Contents

- 3 Sentences Summary
- Triggers Summary
  - CONS
- Triggers Review

3 Sentences Summary

- Link your product to a fad, make it go viral, and ride the free publicity to success
- If your product is new, or complex, link it to something simple
- Give complex-sounding explanations, you’ll see an expert and people will yield to you

Triggers Summary

Joseph Sugarman collects 30 different *triggers* to compel customers to take action.
Here I will summarize the ones that seemed most relevant to me.

Emotional Needs

Sugarman says that emotional needs are the most important drivers in determining buying behavior.
Your goal is to find out what emotional needs your target audience has and pander to them.

Objections First

If you know that your product or your prospect is almost certain to raise a certain objection, say it yourself FIRST.

Note: make sure the customer knew or was going to notice about it, otherwise you raise a red flag the customer wasn’t even gonna consider.

Example:
A house with a busy road behind: mention it first and then say for example that it means easy access to the road and safety.

Involvement in the Product (physical or emotional)

Let me the product touch, disassemble, or try the product. He will get more emotionally invested in it.

Authority

Authority is another hugely important aspect of persuasion (also read *Yes! 50 Scientifically Proven Ways to Get to Yes*)

People love to do business with people with authority. Showcase yours. Hang diplomas on the wall, put certificates on your desk, preface your name with a title, etc.

Prove Your Value

People want to know they're making good use of their money. You can make a comparison with similar products with similar prices and showcase your products' advantages.

Credibility

If you give a complicated-sounding explanation people will think you're an expert -a credible person- and will more easily yield to your opinion.

Satisfaction Guaranteed

Offering a guarantee is a powerful way to address last-minute resistance. People will believe your product is really good if you can offer a guarantee of a refund.

Link to Fads

Link your product to fads for free publicity.

Examples:

1. When feminism was a new thing, a ski resort banned women from driving snowmobiles and issued a press release: it went viral. Sales skyrocketed.
2. The Viagra fad made a huge boon of an article humorously talking about the "baby boom". And a huge boon to the sunglasses the author was sold advertising them as "helping with Viagra side effects" (i.e.: blurry vision, blue colors, etc.)

Link to Easy

Link your product to something that is easy to identify for the prospect.
For example, a "smoke detector" when it first came out was presented as an "electronic nose for your safety".

KISS

Keep your offer simple. Only after he's a customer you can pitch complications.

Instill a Sense of Guilt

This leverage Cialdini's principle of reciprocity as explained in *Influence*.

Make the customer feel guilty about the gift, effort spent, paying something, and adding value to his life. The prospect will feel "forced" to give back… By buying your product.

Be specific

Be specific to sound more credible.

Example

If I say, "New dentists everywhere use and recommend CapSnap Toothpaste," it sounds like typical advertising lingo — puffery designed to sell a product.
It's so general that it will probably cause a prospect to discount the statement you have just made and maybe everything else you say.
But if I say, "92% of new dentists use and recommend CapSnap Toothpaste" it's immediately more credible.

Also read: *How to Lie With Statistics*.

Familiarity

People go by default to things and people they are familiar with.
Make your name popular in the industry so that when they need something, they think of you!

Make love to your prospect

You want your prospect to understand and agree with your statements.

Make sure that everything you do and say is in perfect agreement with the prospect as you slowly and almost hypnotically get closer to concluding the sale.
You want your prospects to keep nodding their heads, saying “yes,” all the way through to the final question, “May I have your order?”

CONS

No copy-writing examples
If you were looking for a book to teach you step-by-step copywriting, *Triggers* by Joseph Sugarman is not that kind of book.

Not for Relationship Sales
At times it feels like the author is presenting a collection of tricks on how to manipulate people, media, and the public discourse to sell more. This can be effective for smaller ticket items, but not so much so for more complex sales.

Triggers Review

Joseph Sugarman summarizes many of the basic selling triggers and does so in an entertaining and easy-to-digest way.

It might be more suited for print and copywriting than for professional salespeople, but definitely, there’s a certain overlap between the two.

If you’re into improving your copy skills, Joseph Sugarman is a master copywriter, so you can actually learn simply by reading his stuff.
The last chapter indeed, “make love to your prospect”, is a great example of suspense, and you will remember it for years to come ;).

5 Ways To Turn Down A Date Without Being Awkward

Lucio Buffalmano · 8 July 2017 · Archived copy · Original

How do you refuse a date and keep the friendship?

How can you say no to someone who's so vulnerable laying his heart bare just for you?

It's not as simple as it might sound, right?

Plus, rejecting others can have consequences.
Lots of people have a fragile ego and **they will resent you for making them feel bad**.

That's why it's always good to know how to let people down easily

In this article, you will learn the most socially savvy ways of refusing a date while still keeping the friendship.

Contents

- How to Refuse a Date Gracefully
  - #1: Say Yes And Do Nothing
  - #2: Say "We'll See"
  - #3: Say You Are Seeing Someone
  - #4: Say You Rather Keep It As It Is
  - #5: Say You Are Not Interested
- Never Refuse a Date Like This
  - Why Strategic, Before Assertive
- SUMMARY

How to Refuse a Date Gracefully

The 4 categories are designed to turn down a date in the kindest possible way you can get away with.

They go from kindest to bluntest:

#1: Say Yes And Do Nothing

Allan Pease says that social liars are better liked than people who are always honest.

And it's tough not to see why: social liars, with their smaller fibs, help save people's faces, which is one of Carnegie's main tenets to *win friends and influence people*.

> **Pursuer**: we should get a coffee sometimes
> **You**: Yeah we should do that eventually

And then… Never take any concrete steps to make it happen.

We'll do it. I'm just a bit slammed this week ya know
People who understand social interactions know that words are just endearing filler and *only actions matter*. And they'll understand and appreciate it.

If they don't get it and ask again, say you're busy these days.
If they *still* don't get it, reply with longer and longer delays or move to #2.

Perfect for:

- **Softer asks**

These are indirect, social approaches -i.e. "we should grab a drink one of these days". Very easy and natural to defer into oblivion.

- **Women asking you**

Being rejected is more painful for women but they know how to take a hint. I've done it a few times myself, worked like a charm, and kept a good relationship every time.

- **Your inner circle**

If you see them often -colleagues or friends- a softer approach will help you stay friends (if they are the kind of people who can get a hint, at least).

- **Exes**

Simply the way to go when meeting exes, which can be awkward for some. One proposes a coffee, the other says "for sure", and both know it ain't gonna happen.
Carrie in Sex & The City shows it brilliantly:

#2: Say "We'll See"

This one helps position yourself as the prize of the relationship, and if they are really interested, it encourages them

to chase you.

It's a good way to test them and see how truly interested they are. And it also leaves the door open for you to change your mind.

It's also good with exes, which is exactly what my ex-girlfriend did to me a few months ago when we met.
First, she said "We'll see about that coffee", and gave herself an option to do it. Then she probably thought it was over, asked her sister and her girlfriends, and decided yes:

And if you decide no, it's going to be easier and equally effective to deny the date invitation via text than in person. Why make things more complicated when you can have an easy way out and also help people save face?

#3: Say You Are Seeing Someone

Chances are you probably *are* "kinda" seeing someone or thinking about seeing someone, the fault lines can be blurry when you need them to be ;).

It's a very pain-free way of turning a date request down and you also come across as caring and respectful towards the person you're seeing.

And while "I'm not interested" is often a conversation ender with "I'm (kinda) seeing someone", you can easily keep interacting with your pursuer.
A friendship might blossom, or who knows, maybe you change your mind and suddenly that "someone" was not so serious anymore?

Perfect for:

- **Direct approaches from strangers**

They have no way to know whether it's true or not, and it's enough to stop most socially calibrated people from pushing further.

- **Preventing stalkers**

There are no studies telling us what's most effective to prevent stalking. Some suggest clear and direct "no" while John Moore suggests too direct a no will trigger a hurt ego and, possibly, violence.
Being clear without sub-communicating that *they* are the issue seems a perfect happy medium to me.

#4: Say You Rather Keep It As It Is

It's a firm no, but rather than stating outright you're not interested *in them*, you refer to some rule or situation beyond you.

For example, you don't date in your company, or you have a no-friends rule, or you are focusing all your efforts on your project/studies.

It's strictly business
Perfect for:

- **Friends**

Say you cherish them as friends and want to keep it like that. Chances are he knows about the friend zone, so you might even add "you know how it is with friends".
He protects his ego by blaming the "friend zone rule", you keep a friend without drama.

Win-win.

And of course, he doesn't need to know you wouldn't date him anyway, friend or not.

- **Colleagues**

Dating at work can get thorny. I personally have a rule of not getting involved with colleagues (or anyone too close for that matter).

I also know I'd probably throw that rule away under the right circumstances, and I'd bet it's the same for you.
But you can easily use it for anyone falling short of those right circumstances ;)

#5: Say You Are Not Interested

No means no, young fella
No excuses, no sugar coating.

You won't do it "one day", you don't have any rules of not dating colleagues and, as well, you don't have time to protect someone's ego.

However, you can still be super direct and take steps to make your date refusal easier on the refused.
Rather than "not interested in you (that way)", phrase it this way:

> **You**: Thanks, but I will be honest, you're not my type.

Less biting, but equally effective.

If they ask "*what's your type*", don't go into any description or you might get sucked into a discussion.
Just say "different" or turn the question back to them.

Perfect for:

- **Strangers / Rude People**

Total strangers don't always need the special treatment reserved for friends.
And of course, rude people can -and should- be treated the same way. So "*you really don't want to be rude, but a stinking breath is a bit of a deal breaker for you*" ;).

- **People who don't get it**

You tried to be polite, but they just don't get it and keep bugging you. Fine, you tried, now tell them like it is.

- **People hooked on you**

Before they find some fun way to embarrass you, get clingy (I had a girl dropping gifts in my mailbox and showing up uninvited), or be too dependent, it's time for some tough love.

A good way to help people hooked on you is to cut the time together or to show your uglier sides to help them fall out of love.
Clueless, clingier men are especially good at making women fall out of love.

The opening with:

> Yo!

Should be enough to warn you that you should go with the bluntest option here.
No kindness to aholes.

Never Refuse a Date Like This

Whatever you pick, please avoid these all-too-common ways to say no to a date:

- **You'll find someone eventually**

It's patronizing as F, babying people should not be your default setting.

- **Who knows, maybe in the future…**

You're placing them as second fiddle and you're entertaining the possibility of working both sides of the street.
The former doesn't say good things about them. The latter doesn't say much good about you.

- **You're such a nice guy but / You're such a great girl but**

They are generic and the "but" voids whatever you say before.
If they are great guys and great girls, then say what's so great about them (and no, "nice" is just too hopeless to be spun into anything remotely positive).

Why Strategic, Before Assertive

Why does it even matter how you refuse a date invitation?

After all, we've all heard them:

> "just be honest"

or

> "just say it as it is"

And sure, all your friends swear they'd rather hear the truth, right?

Baloney!

You think I'm fat. Just be honest
Of course, ideally, we'd live in a world where ego-resilient people can take an honest no without repercussions.
And in that world, how to say no to a date never becomes a relevant question.

But guess what, we don't live in an ideal world!

In this world, people get offended and blame you for it.
It's not so uncommon that some of the most idiotic will even try to hurt you -or turn into stalkers!-.

Yes, stalking out of revenge is common.
Says *The Handbook of Relationship Initiation*:

> When rejection leads an obsessive pursuer to abandon pursuit of intimacy, the desire for revenge can perpetuate stalking activity.
> Cupach and Spitzberg (2004a) explained (…) the underlying motivation for stalking transforms from seeking a relationship to salving the wounds of humiliation.

And how about the popular trope of "be assertive"?
Here are the results that delivered:

> Jason et al. (1984) interviewed women who had been harassed after breaking up, and found that the more assertive the women were in attempting to end the relationship, the longer the harassment lasted, the more frequent the harassment was, and the more threatening and disruptive it was.

Of course we're talking about borderline cases but… It still happens.

Plus, why start out assertive, when other options have zero risks, and far bigger upsides?

Knowing how to turn down a date nicely isn't just a defensive strategy. It's part of a strategic approach that makes those around you feel better, and makes you more socially successful.

Some advantages of knowing how to turn down a date politely:

- **It makes you friends**

Social mastery is about getting it your way *without* hurting anyone.
And not hurting people around you allows you to make -or keep- a friend. Good for the world, and good for you.

- **It doesn't make enemies**

On the other hand, a flat-out "not interested in *you*" can easily lead to resentment. It can even lead to more serious issues, like retaliation or stalking.

- **You keep doors open**

Guess what, things can always change.
You might become single, or change your mind about that person. If you don't burn bridges, you will have more options in life (and options equal power).

SUMMARY

How to say no to a date invite is all about letting them down as easily as possible.
It's good for them, and it's good for you.

Go with softer versions first and they'll hopefully take the hint. Otherwise, you're (kinda) seeing someone.

If all else fails, well, you did your part and now you got permission to be blunt.

Man's Search for Meaning: Summary & Analysis

Lucio Buffalmano · 9 July 2017 · Archived copy · Original

"*Man's Search for Meaning*" tells the story of Holocaust survivor Viktor Frankl.
Frankl, a psychologist, reflects on the meaning of life and on the mental differences between those who survived and those who didn't.

Contents

- Main Takeaways
- Overview
  - #1. You choose your attitude (no matter what happens)
  - #2. Happiness and success must ensue
  - #3. He who has a WHY can bear any HOW
  - #4. Mental images
  - #5. What is life asking us
  - #6. Sunday Neuroris: Slow Roasting
  - The Birth of Logotherapy
  - How to Find Meaning
- Real-Life Applications
- CRITICISM
  - It's potentially weak to 'need' a meaning
- CONS
- Review

Main Takeaways

- If you have a strong WHY in your life-a guiding purpose-, you will bear any HOW -any difficulties-
- Success and happiness cannot be pursued. They must *ensue*. Get a goal greater than yourself and success and happiness will ensue.
- You choose your attitude in any set of circumstances

Overview

About the Author:
Viktor Frankl survived five concentration camps and in the holocaust lost his mother, brother, and wife (source).

The most surprising thing in all of this?

In "*Man's Search for Meaning*" there is nothing but hope, beauty, and faith.

That alone would make it a must-read.
Now add potentially life-changing content, great psychology, and deep wisdom, and you get *Man's Search for Meaning*.

#1. You choose your attitude (no matter what happens)

No matter what happens to you, you decide how to react and how to feel about it.

Viktor Frankl details how some men, no matter how desperate their situation, still found the strength to comfort others. Some of them even gave away their last piece of bread.

I can't help but quote him verbatim here because it's too beautiful to paraphrase:

> *They may have been few in number, but they offer sufficient proof that everything can be taken from a man but one thing: the last of human freedoms—to choose one's own attitude in any given set of circumstances—to choose one's own way.*

#2. Happiness and success must *ensue*

Frankl says that happiness is not something we should seek directly.
He defines happiness as a *by-product* of giving ourselves fully into an endeavor.

This is Viktor's number one way to find meaning, and we might call it today "a life goal" or, in today's marketing parlance, a "*WHY*".

#3. He who has a WHY can bear any HOW

This is the most famous sentence from Frankl.

In the book, he tells the story of men going from suicide plans to survivors simply by finding a big reason to live on.
It could have been a child in a foreign country or unfinished work.
Or it might also be surviving to make sure a holocaust would never happen again.

It's the reason to live that pushed people to live and to endure anything.

My Note:
I would add that your WHY must not necessarily be positive.
It can even be one driven by darker motives.

#4. Mental images

I also found it interesting how across all books some of the biggest reliefs from pain came from thoughts and mental images.

Viktor Frankl, for example, had mental images of his wife and the birds nearby became her living embodiment. Interestingly, he even said later on that the mental image wouldn't have changed if he had known his wife had already died.

He also imagined himself after liberation in lecture halls, teaching about what must never happen again -very prophetic as that's exactly what happened-.

Recurrent among other prisoners were also very descriptive and imaginative discussions about the food they were going to enjoy once free.

#5. What is life asking us

Viktor Frankl turns the table on the question of what we expect from life which, he believes, is a terrible question. We must instead find the courage to ask *what life expects of us*.

And sometimes, that answer only reveals the worst suffering.

I quote him:

> *(…) We had to learn ourselves and, furthermore, we had to teach the despairing men, that it did not really matter what we expected from life, but rather what life expected from us. (…) stop asking about the meaning of life, and instead to think of ourselves as those who were being questioned by life. (…) Life ultimately means taking the responsibility to find the right answer to its problems (…)*

#6. Sunday Neuroris: Slow Roasting

Indeed, before reaching full depression, Viktor Frankl says that most people experience 'Sunday neurosis'.

Sunday neurosis is the feeling of dejection at the end of the weekend.

We realize our day-to-day humdrum is empty and meaningless, and instead of going to the root cause we cover up the pain with binge eating, drinking or shopping.

The bad thing is that these compensations, in the short term, might even patch us up. And poison us just like a drug would. And, probably worst of all, they prevent us from looking deeper into ourselves to find meaning.

This part made me think of Henry Thoreau's quote about most people "living a life of quiet desperation".

The Birth of Logotherapy

A chapter of *Man's Search for Meaning* is dedicated to Logotherapy, the psychotherapy school founded by Viktor Frankl.

Contrary to Freud's introspection, Logotherapy takes the person *out* of themselves and puts their life in a broader perspective.
Logotherapy also sees mental health as the tension between who you are and who you could be -or who you wished to be (a concept repeated by Tony Robbins on what he calls "blueprint").

In the logotherapy's perspective, existential distress is *not* a neurosis or mental disease, but a sign that we are internally looking for meaning in our life.
Depression sets in indeed only when the gap between who we are and who we could be becomes so large that we can no longer ignore it.

Thus depression can be a welcome warning if we use it as a wake-up call for some long-due soul-searching.

How to Find Meaning

So, here we are finally, how can you find meaning?

According to Frankl the main sources of meaning are:

1. Give back to the world with your work or creation
2. Experiencing or love
3. The attitude we take to situations and suffering outside our control

The first is what you could call a life purpose or life goal.

I love the second one as it puts experiences and a life of enjoyment as an alternative to achievement. Thus traveling the world or giving yourself fully to your partner can replace a more concrete or materialistic goal.

We get to the third when we learn to look at suffering as an opportunity to find meaning in life. For example, in the direst of consequences, we could take pride in staying humans and helping one another instead of regressing to an animal level.
To me, it can run even deeper. This is about growing and becoming people who are able to *choose* our meaning, no matter the situation we are in.

I leave you indeed with a powerful quote from the book on this subject:

> **When we are no longer able to change a situation, we are challenged to change ourselves**

Real-Life Applications

- **Get a strong WHY for a happier life (and overcome depression)**

If you feel depressed, maybe you don't have an overarching goal that juices you.
It doesn't have to be lofty or grandiose.

You want a kid?
Maybe your goal is "find a man and become the best mother you can be".

You like smoking weed and gaming?
What about a legalization advocate and game tournaments to take kids off the streets?

- **Experience life**

Enjoying what life can offer is a great way of living a meaningful life.

If you are like me and tend to be demanding of yourself and rarely enjoy rewards, start changing that.
Book holidays and plan new activities. Learn to lose yourself in new experiences you will cherish for years and start living life fully. It's a skill you and you can learn it (develop a growth mindset).

- **Love someone**

Or go even further, by loving and cherishing *everyone* close to you.

CRITICISM

It's potentially weak to 'need' a meaning

I believe it's more empowering to endure for the sake of enduring.

Because, if you look deep into it, there is no meaning for the holocaust.
Or for much suffering.

To want to find a meaning at all costs can lead to all sorts of mental self-manipulation that you must constantly keep up.

It's more empowering to pursue a goal, even without assigning a practical meaning to your goal or conditions.

CONS

- **Poor organization**

You have just read a neatly organized summary with all the biggest lessons. But I had to spend some time putting it all together from different parts of the books.

But it's a minor detail really.

You will finish reading Man's Search for Meaning way too quickly and there won't be that many books that can compare.
That's the biggest con I can think of.

Review

Man's Search for Meaning is a classic and one of the most quoted books in the thousands of books that I have read.

And for good reasons: it's a powerful book.

Here are a few more personal reflections:

- **Depression and Meaning**

Depression or existential distress as a wake-up call to search for a deeper meaning was, pun intended, a wake-up concept for me.
It just rang so true with what I've seen around me.
The number of people I admire who overcame depression and/or existential crises just seemed too high to be random.

Viktor Frankl thesis seems the perfect explanation: we experience distress when we're not (yet) where we're supposed to be.
And once we heed those calls and get going on the right track newly found energies and lust for life will all but replace any distress.

- **We're more than basic drives**

While Maslow or Freud would make us believe that we can't see past our basic urges until they're satisfied Viktor Frankl proves the contrary: half-starved men taking care of others show us that we can go beyond any lack of basic needs.
Also, it proves that "higher" drives and ideals also work when our basic urges are not met (ie.: *Intrinsic Motivators work*, even in the most dread scenarios).

- **Generalization are just.. Generalizations**

Viktor Frankl affirms we can make few generalizations about what it means to be human, as *man is that being who invented the gas chambers of Auschwitz (..) and also that being who entered those gas chambers upright.*

And also is man the being comforting others while starving himself.
In the end, it's up to each one of us to uphold the better angels of our nature, beginning with ourselves and projecting them onto others.

I will leave you with one more empowering thought.
Man's Search for Meaning is not a literal translation from the original title, which with "*Trotzdem Ja Zum Leben Sagen*" I found even more befitting and inspiring.

It means:

> **Saying Yes to Life in Spite of Everything**

Emotional Intelligence: Why Ambitious Men Need More (Book Review)

Lucio Buffalmano · 10 July 2017 · Archived copy · Original

"*Emotional Intelligence*" (1995) explores what Emotional Intelligence (EI) is and why it matters more than IQ.[image]
In this book, Goleman famously said that emotional intelligence is the best predictor of life success -even more important than IQ and *power intelligence*-.
The assertion that "EI is a better predictor of life success" than IQ has been contested.

Main Takeaways

- *Emotional Intelligence* is a (much) bigger predictor of success than IQ
- EI is composed of self-awareness; emotional management; self-motivation; empathy; managing others' emotions
- *Emotional Intelligence* skills can be taught and improved

Notes

About The Author:
Daniel Goleman is not a psychologist himself, but a journalist and a best-selling author.
He is most famous for the concept of *Emotional Intelligence*, which is rather contentious among psychologists but nonetheless brought fame to Goleman (who later also started an "*emotional intelligence certification*").

History of EQ: Daniel Goleman says that before 1990 the prominence of IQ as the major determinant of success was out of the question.
But things were just beginning to shift.
"*Emotional Intelligence*" was a term coined as an umbrella catch-all for an array of different findings that were slowly putting IQ more in perspective.

#1: What Are Emotions For?

Daniel Goleman says feelings govern our behavior as much, and often more so, than thoughts.

Thoughts are measured by IQ, while **feelings and emotions are the domain of Emotional Intelligence**.

Since feelings and emotions matter in our decision-making often more than IQ, it concedes that Emotional Intelligence matters more than IQ.

#2: Anatomy of an Emotional Hijacking

Daniel Goleman focuses here on the anatomy of the brain.

The gist is that the cortex is the area of the brain governing rational thoughts while the limbic system governs emotions.

#3: When Smart is Dumb

Daniel Goleman cites a number of studies proving *Emotional Intelligence* is a more significant predictor than IQ in determining "success" in life.

Namely, he mentions and lends credibility to a study concluding that IQ accounts only for 10% to 20% of "success", and implies that EQ accounts for the rest (80%).

My Note:
There has been discussion and criticism of those conclusions (superficial studies, EQ VS IQ?, EQ as a predictor), but I don't doubt it for a second.
IF EQ includes understanding other people's emotions, using emotions in service of your goal, and delaying gratification… Well, those pretty much are the *definition* of success.

Importantly, the author also stresses that **IQ and EQ are NOT antithetic**.
As a matter of fact, high IQ and low EI and vice versa are quite rare. Indeed there is a correlation between IQ and some aspects of IE.

Goleman takes the 5 domains of *Emotional Intelligence* first outlined by Peter Salovey and expands on them.
The general idea is that same for IQ, people have different abilities in each domain.
The basis is neural, but since *the brain is plastic*, these abilities can be changed and improved upon.

The next 5 chapters will cover the 5 Emotional Domains.

Emotional Domain 1: Knowing one's emotions

Knowing one's emotions refers to self-awareness. being conscious of what we're feeling and recognizing which

feeling we are experiencing.

Daniel Goleman says it's more important knowing yourself and your strengths instead of your IQ test and its results (or whatever other test you took).

Emotional Domain 2: Managing Emotions

You can manage your feelings by changing what you focus your attention on.

I especially liked the topics of optimism and hope.
They are highly beneficial and they can both be learned: underpinning both is self-efficacy. Self-efficacy is the belief that one has mastery over life's events and can meet challenges as they come.

Developing a competency of any kind also strengthens the sense of self-efficacy.

Flow & Emotional Emotional Intelligence
Goleman says that Flow could be thought of in many ways as the peak of *emotional intelligence*.
One way to enter flow is to focus greatly on the task at hand.
Flow happens when a task is a bit more challenging than usual but within reach.

Goleman cites the same study in Daniel Pink's *Drive*, in which painters who were after money or afraid of critics weren't able to deliver as original work as their counterparts who freely expressed themselves.

For more on Flow check:

- Deep Work
- Flow: The Psychology of Optimal Experience

Emotional Domain 3: Motivating Oneself

Motivating oneself refers to the ability to use emotions in the service of a goal.
Goleman highlights the importance of emotional traits such as enthusiasm and persistence -also check *Grit* by Angela Duckworth-.

Emotional Domain 4: Recognizing Others' Emotions

This is basically empathy and social awareness.

Daniel Goldman also talks about *emotional intelligence* in relation to gender.
Women, on average, are more empathetic than men. Goleman also suggests that empathy helps with romantic life.

Emotional Domain 5: Handling relationships

This is the ability to manage emotions in others.

EQ is key in relationships because people who are poor at perceiving and sending emotions are poor in their relationships.

#9: Intimate Enemies

Daniel Goleman cites different studies to prove that women can express their emotions better than men.

Men also tend to have a much rosier view of their relationship compared to women.
However, the differences disappeared among top performers executive, meaning that top women are similar to top men (link to the study).

My Note: Take a look at my articles on dating and relationships:

- Biggest mistakes women do in early dating
- Communication mistakes men do to ruin relationships
- How to Fix Combative Relationships

#10: Managing With Heart

Goleman says that how well groups perform a task is determined in good part by their collective IQ.

But **the key to a high group IQ is Emotional Intelligence**: it's Emotional Intelligence indeed that fosters an environment of social harmony.

Research among engineers at Bell's Labs showed how what really made the difference for star performers was the informal network they were able to tap into. Informal networks are formed mostly on the basis of EQ.

Also, many studies proved the **top performers were people who started a task and finished it**.
People low in Emotional Intelligence instead started many tasks at the same time and ended up leaving many of them unfinished.

#11: Mind and Medicine

Goleman discusses many pieces of research showing there's a strong relationship between a positive and optimistic mood and good health.

Especially insidious to bad health are strong emotions like anger.

People high in hostility and prone to anger outbursts are 7 times more likely to die by age 50.
That is a higher predictor than smoking, high blood pressure, or cholesterol.

#12: The Family Crucible

Sadly Goleman points out that emotional imbalances are often transmitted from emotionally unstable families to their children.
Parents who constantly burst out in anger and beat their children often bring their children to lose empathy and behave the same way.

#13: Trauma and Emotional Relearning

Traumas and emotionally tragic experiences can become embedded in people's brains and even smaller events can recall the event and trigger uncontrollable reactions.

However, our brain is malleable and we can re-learn new things and abandon old neurological connections.

#14: Temperament is Not Destiny

The main idea here is that we can all learn emotional intelligence. However, I didn't find any enlightening advice.

#15: The Cost of Emotional Literacy

Daniel Goleman says that some people are paying very highly the cost of not recognizing emotions.

Some, for example, are unable to differentiate between being scared and angry.
Some other people end up hungry in depressing situations and binge eat.

Another example is bullies.
Studies have shown how they can misread neutral acts as aggression and then are able to muster one way to react: lashing out.

Criticism

There is much I need to say here:

1. EQ accounting for 80% of success is sensation-seeking nonsense

The notion that "EQ is 80% of success" has been severely criticized.
And for good reasons.

A few reasons why:

1. There is no study to prove that
2. At the time Goleman wrote there was no good way to measure EI
3. There is still a debate raging on whether we can correctly measure EI
4. How would you even measure "success" and how much "EI accounted for"? Close to impossible…

Just to be sure, Goleman himself says he's appalled people misquote him by saying that "EQ accounts for 80% of success" (note: he removed that page).

And he again criticizes that concept in another article.

Goleman himself criticized that idea.

Yet, the reason why so many quote him as saying that, it's because that's exactly how it feels reading "*Emotional Intelligence*".
It feels like a huge cheerleader for EI, which matters more than anything else.

Even in that second article in which he vehemently denies that EQ account for 80% of success, he ends by saying: "the slow march of research lags far behind the hype of EQ marketers".
The feeling is that the "slow march" of research will eventually prove the point.

In truth, there is plenty of research showing the limited use of EQ as in "empathy" or disproving it outright.

This leads me to the next point:

2. How about Machiavellian EQ? That surely helps!

With Goleman, "*emotional intelligence*" seems to be mostly about empathy, caring, and understanding.

These are all positive emotions.

But the emotional intelligence that gets you promoted can as well be Machiavellian in nature.
See:

- **The Myth of emotional intelligence and Success at Work**

In his overview of Machiavellian literature and research, Bereckzei also notes that Machiavellians score low on emotional intelligence tests because they're poorly designed.
But remove the agreeableness bias, add personal incentives, and add the opportunity for manipulation, and Machiavellians perform better than average.

This is something that Adam Grant also notices. Goleman called Grant's article an "acerbic takedown", but never addressed that crucial point.
Note: there was a link to Goleman's article, but Goleman removed the page.

If you want to have a good career, read here instead:

- How to learn office politics

- 4 prove career strategies
- Career strategies: start here

3. Meta-analysis shows EQ can impede success in non-people-facing jobs

Research shows that in jobs where people don't work with other people, emotional intelligence not only didn't predict performance but negatively correlated with performance (Newman, 2010).

Again, this is something Adam Grant correctly points out in the previous article.
But Goleman focuses his answer on what some random people commented on Grant's post, plus with some more circumstantial evidence -plus accusing Grant of being an ivory tower academic, which in my opinion was low-.

In my opinion, **Ivory Tower is refusing to acknowledge how Machiavellianism can get you to the top as effectively as being an empathic manager can**.
And that's not what Grant is culpable of.

4. Execs have low EQ. CEOs have lowest EQ. How do you explain *that*?

Finally, there is Bradberry.
Bradberry markets emotional intelligence courses, and he'd have all the interest in showing that EI predicts job position.

Instead, these are his results:

So, how would you explain *that*?

Also, read:

- The Truth About EI and Success
- The truth about EI and leadership

5. How About Hyper-Successful of IQ Geniuses & Emotional Idiots?

Finally, there are some extremely high IQs and very low EI.

And they still achieved huge success.
Think of Bill Gates or Mark Zuckerberg.
There is no mention of these personalities in "*Emotional Intelligence*", and they don't really seem to be such rare exceptions among the multi-billionaires.

For examples see these breakdown articles:

- Elon Musk
- Elon Musk got skewed by Talulah Riley because of low EI
- Einstein's letter to his wife

Real-Life Applications

Don't ruminate when you're sad
When you're sad, don't ruminate, but distract yourself. Exercise, complete small tasks, or re-frame the situation.
Also read: Learned Optimism by Martin Seligman.

How do you reduce anger
Emotional Intelligence says when you're angry you should see the issue from the other person's point of view. Or if there's a problem, think about a positive and plausible reason behind it rather than accusing "some idiot's incompetence". And do NOT vent. Contrary to popular belief venting only prolongs your feelings.

Review

"*Emotional Intelligence*" is an important book with some important caveats and potential fallacies that hadn't been addressed.

To begin with, let me tell you this: it is not a “how to” book.
There are some tips in here, but you won’t come out with a list of exercises or things you can do.

But if you want to learn about Emotional Intelligence the topic, and how and why it’s important, then this book provides a broad overview of many studies on the subject.

In my opinion, **“*Emotional Intelligence*” was a much-needed need, but got carried away too far**.
It is biased in the sense that it overstates the case for EI as linked to personal success, but it does not show:

1. EI doesn’t matter so much in certain roles
2. EI can be used for Machiavellian strategies, and then it can be even more effective

On the other hand, it’s great that Goleman got people talking about this important concept because it does make for better lives and relationships -when used for good-.

Daniel Goleman brought “*Emotional Intelligence*” to the general public, and that’s a good thing.
We at The Power Moves tell men that emotional intelligence is crucial for relationships, but not enough to succeed.

Get it on Amazon.

Emotional Intelligence Summary: Why Top-1% Men Need More

EQ accounts for 80% of success when compared to IQ. What does that mean?

Extreme Ownership: Is This A Powerful Mindset? (Book Review)

Lucio Buffalmano · 11 July 2017 · Archived copy · Original

Extreme Ownership (2015) is a leadership book by Jocko Willink and Leif Beibin, two former Navy SEALs who share the leaders' mindsets they learned while serving in the US military.
Later on, the two authors acknowledge with a follow-up book that good leaders are never extreme but must strike an optimum balance between the extremes.

Takeaways

- **Great leaders embrace Extreme Ownership**: you are responsible for everything
- **Leaders believe in the mission** and make sure their team fully understands it
- **The only measure of leadership is: are you winning?**

Willink and Babin make their philosophy clear right from the start: the only meaningful measure for a leader is whether the team succeeds or fails, they say.
Effective leaders lead their teams to accomplish their mission, ineffective leaders do not.
Simple

- **Leaders are humble, take the blame for mistakes and give full credit to the team for the victory**

The best leaders are not driven by ego or personal agendas.
As a matter of fact, humility is paramount. As for leaders, the humility to admit and own mistakes is essential to success.

Getting rid of ego and personal agenda will allow leaders to zero in on the mission.

And while the leader is responsible for failures, he gives the credit and honor of the victory to his subordinates.

About the Authors

Jocko Willink and Leif Babin are two former Navy SEALs who deployed in the Iraq War and later turned business consultants. They coach and write on leadership dynamics.
Their next book is "*The Dichotomy of Leadership*" to fix the misunderstanding about this one.

⍰♂Lucio's Take On Jocko Willink

> **Lucio**: Jocko is a great guy, with common military personnel mindsets that may at times be tribal/jingoist.
> At TPM **we espouse men's empowement as individuals-first**. Global citizens, conquerors, explorers, and seducers without borders.
> Be aware of those potentially limiting drawbacks, and he's a great guy to learn from, and even look up to.

Part I: Winning the War Within

Chapter 1: Extreme Ownership

Extreme Ownership means the leader must accept that he is truly and ultimately responsible for everything.

The leader must own everything in his world and all responsibility for success and failure rests with him. There is no one else to blame.

Total responsibility for failure is difficult to accept, and Extreme Ownership when things go wrong demands humility and courage. Being able to accept Extreme Ownership when things go wrong is an absolute necessity for learning and growing as a leader.

Even when subordinates aren't following up on the plan, or making an expected blunder, leaders exercising Extreme Ownership cannot blame them. Because the leader was responsible to make sure they understood the plan fully and were fully trained for carrying on their tasks flawlessly.

- **Underperformers must go**

The leader must take care that everyone in the team can get the job done.

If there are underperformers, it's your responsibility to bring them up to par. And if the underperformer cannot meet standards, it's your team, so it's up to you to get on board someone who can do the job.
Because at the end of the day, the leader must be loyal to the team and the mission, not to any single individual.

The leaders must look at an organization's problems with the objective in mind and without any emotional attachments.

Chapter 2: Not bad teams, only bad leaders

The precept that there are no bad teams, only bad leaders, is a big recurring theme in *Extreme Ownership* by Jocko Willink.

And when it comes to demanding a high standard of performance, it's not about what you preach, but what you tolerate.

Another key to excellent performance is embedding Extreme Ownership at every level into the team. Everyone must feel Extreme Ownership of their tasks and duties, no matter if people around you fail to deliver their part.

Chapter 3: Believe

A leader must truly fully believe in the mission to convince and inspire his team.

If he doesn't fully believe in the mission, a leader must work within himself to align with the thoughts and vision of the mission.

Aggressive and proactive
Jocko explains that, as a leader, your default setting should be aggressive – proactive rather than reactive. This is critical to the success of any team. Instead of letting the situation dictate our decisions, we must dictate the situation.

Chapter 4: Check the Ego

Ego is a big threat to top performance. And the most challenging ego to deal with is your own. Be confident, not cocky.

> **Be confident, not cocky**

Part II: The Laws of Combat

Chapter 5: Cover and Move

Cover and Move is the most fundamental tactic.
And **cover and move means teamwork**.

All elements within the greater team are fundamental and must mutually support each other and work together to achieve the final goal.

Leaders have the responsibility to link tactical and strategic perspectives.
It's up to leaders to remind and explain how the team fits in the greater strategic mission and what's their part in it to achieve that mission.

Chapter 6: Simple

Simplicity is key to success.

Always simplify as much as possible.
People will not understand complicated plans and orders and complexity compounds issues when things go wrong -and they will-.
Communicate plans and orders simply, clearly, and concisely.

And if your team doesn't get it, again, it's your fault. You must be clear enough to ensure everyone on the team understands.

Chapter 7: Prioritize and Execute

In the fog of war, dealing with too many tasks at a time is impossible and will make you fail.
Take a breath, step back for a second, prioritize and execute. Then deal with the next item on the list.

Prioritize and execute is your guiding principle at any time when the situation is getting overwhelming and out of hand.

Contingency planning can be of great help here to stay a step ahead of real-time problems.
This is because a good contingency plan will force you to look into likely challenges and instead of being caught in the heat of the moment, you will execute a few already thought-through effective responses.

Chapter 8: Decentralized Command

Humans generally cannot manage more than six to ten people, and that's all the truer when things start going wrong. Hence there must a leader for each team of 4 to 5 people.

Expect and empower those leaders both below and around you to make decisions and make a good job (this is the same principle of the *Autonomy Intrinsic Motivation* from Daniel Pink).

Explaining to each tactical operator the overarching tactical goals, and the WHY you're doing something is key: the people who were the least engaged, biggest complainers, and often lowest performers were the ones who didn't take any part in drafting the plan of action.

US VS THEM
That “us versus them” mentality was common to just about every level of every chain of command, whether military unit or civilian corporation. But breaking that mentality was the key to properly leading up the chain of command and radically improving the team’s performance.

My Note:
The authors s talk about “us VS them” but can’t see that **the whole business of war is a huge “us VS them” mind trap**.

Part III: Sustaining Victory

Chapter 9: Plan

A leader must first understand the overall mission, and then prepare a simple enough brief the whole team will understand. The mission must be clear and specific, with a well-defined end result.

Chapter 10: Leading Up and Down

A leader takes responsibility for leading not just his subordinates, but also his superiors.
It means you push up situational awareness to your superior and take care of obtaining all the support you need to enable your team to accomplish the mission.

Two parts I liked:
If someone isn’t doing what you want them to do, look at yourself first and see what you are not doing best.
You should know your job so well that you don’t ask your leader what you should do but you tell them what you are going to do.

> **Don’t ask your leader what you should do but you tell them what you are going to do**

Chapter 11: Decisiveness and Uncertainty

Intelligence and research are important, but you ought to be realistic about it.

Waiting to be 100% sure often leads to indecision and the inability to execute.

Leaders must be prepared to make an educated guess based on previous experience and the intelligence available right now (an interesting example in the book of the last-minute intelligence information which proved to be wrong, so intelligence is not always correct either).

Chapter 12: The Dichotomy of Leadership

The characteristics of a good leader are:

- Confident but not arrogant;
- Brave but not daredevil;
- Strive to win but be gracious in loss
- Detail-oriented but not obsessive;
- A leader but also a follower when needed;
- Quiet but not always silent;
- Logical but not without emotions;
- Close with the soldiers, but nobody is more important than another or the team as a whole;
- Not so chummy they forget who’s the leader;

- Takes Extreme Ownership, and exercises Decentralized Command;
- Has nothing to prove and everything to prove at the same time

Real-Life Applications

- **Get an Extreme Ownership Mindset**

Start getting an Extreme Ownership Mindset.
It will make you not just more effective, but also more positive and optimistic about life.
And it will improve your social skills as well because you won't have that annoying, friendship-destroying temptation of blaming and finger-pointing.

- **Own Up Mistakes**

Not many people are able to own up to their mistakes to themselves and the people around them. Once you will start doing so you will immediately become a higher quality person and get much more respect for it. Both from others *and* from yourself.

- **Take Responsibility for Up & Down The Chain**

The concepts of Extreme Ownership and responsibility up and down the chain of command took a new light for me thanks to Jocko Willink & Leif Babin.

- **Take Blame and Give Credit**

"Take the blame and give credit" really hit me hard as I read Extreme Ownership while I was at a company doing the exact opposite. Taking the blame and giving credit is what all-around high-quality men do.

- **Believe in the mission or change mindset**

The concept that you should change your mindset to align with your mission is an extremely powerful one. It was only briefly touched on in the book, but this is huge for you: you can align your mindset to fit your goals!

Overall, fantastic book, combining an entertaining read with terrific concepts to make you an even more amazing human being.

Criticism

The original title of this post was "*Extreme Ownership* Or Extremely "Following Orders"?

See this article here for the full criticism:

> Great Leadership Is Great Manipulation: Jocko Willlink Case Study

1. Extreme Ignoring: The N.1 Ownership The Authors Ignored

I wish I had seen this *extreme ownership*:

> The war may have been unnecessary.
> It may have caused more poverty, famine, death, maiming, and pain than necessary.
> For decadese we failed to bring peace and install a functioning government.

For a book that calls itself "*extreme ownership*", that ownership falls conveniently short sometimes.

Then, once you're sure war is needed, you do your dominant SEAL thing:

> It is our responsibility as men to only take up arms for valid reasons. But once we have valid reasons, may God have mercy for our enemies.

2. Performance & Doing Your Best Should Be Your Main Focus

I disagree the only measure of success is the final, binary result of victory or failure.

Ray Dalio built a multibillion-dollar empire by NOT judging based on the final result, but based on the quality of the decision-making.
Dalio calls it "judging the swing, rather than the shot".

The final result should *not* be your (sole) yardstick because it's not always in your full control.
When you judge the final result alone, you allow anything and everything outside your control to determine your self-esteem and confidence. By definition, that's giving power away to what you can't control, which is disempowering.
Read here instead of how to build an antifragile ego.

3. Extremes Are Rarely Effective

The law of optimum balance also applies to ownership.

Ownership is great, but not when it goes so far that it blinds you to making proper post-mortem assessments of mistakes -not necessarily to punish, but also to opportunities for improvement (keep on reading)-.

Read more on the law of optimum balance:

> The Law of Optimum Balance

4. Is The Military As An Organization Even Compatible With Extreme Ownership?

This is the main question:

How can you even adopt a mindset of extreme ownership when you're forced to follow orders and execute other people's decisions of who and when to enter the war?

That is incompatible with extreme ownership.

When it comes to the specifics of this book and the Iraq war, then it becomes more personal and some might disagree.

thors seem to assume righteousness based on… Not sure what, but it feels like it's based on belonging to the "right" country.
And calling the other group the "bad guys" simply based on what, in the end, is little more than tribalism.

To me, that mindset falls victim to dark psychology by the elites to enlist and brainwash young men to go fight for far darker motives.

The military ethos is replete with manipulative appeals to higher ideals which, at the core, have this exchange: we give you good feelings including "honor" and a sense of belonging, and you give your limbs or life.

And that's the definition of a sucker's trade.

5. Low-Power Leadership Executes What High-Power Leadership Chooses

The "real" leadership chooses the mission.

They choose:

- Whether or not to even enter a mission
- Which mission to pursue
- Which goals to achieve

The lower-level leaders execute the plan.

They call it "extreme ownership", but they might as well call it "extreme following".

And the executors follow the plan and call it "taking extreme ownership".
But taking extreme ownership of what, exactly? Of invading another country for oil?

That's the real question that the "extreme executioners" never ask.
To me, extreme ownership means asking oneself why and who you are fighting for.
And to refuse to fight for what's not worth fighting for.

Also, read:

- **Enlightened Individualism**

I'll leave you with a sobering thought: we've already heard in the past the "I was just following orders" mantra, haven't we?
I bet those guys were also taking great ownership of their tasks…

> Dark Psychology: 7 Ways to Manipulate People

6. Truth Goes Lost With "Extreme Ownership"

The first victim of war is truth, someone said.

I wonder if that includes the military personnel books that follow every war as certainly as death and taxes do.

In my opinion, not only it includes the above-said books, but it also includes the mindset of Extreme Ownership.

What do I mean by that?

Well, think about it:

Imagine you have an "*extreme ownership*" leader beneath you.
You want to find out what happened to learn from the mistakes and, potentially, distribute punishment or rewards as needed.
And instead of an account of what actually happened, said leader tells you "it's all my fault".

What are you going to do with that?
It's useless to you.
And it's also not very useful for the organization as a whole.
And that includes the mission.

The mission suffers from an extreme ownership mentality because it cannot effectively learn from mistakes.

The mindset of "*extreme ownership*" should at the very least not be so extreme in its application. And it should be suspended any time that a more objective observation of reality is needed.

For example, if I were a general asking Jocko "what happened" and he'd say "it's all my fault", I'd tell him "that's cool of you to say that, but now let's see what actually happened".

> **Enlightened General:** let's review what happened to learn more and prevent similar mistakes in the future
> **Jocko**: it's all my fault
> **Enlightened General:** that's cool of you to say that. But we need to learn what actually happened and who did what. So let's review the facts now.

I'm exaggerating here, of course.
I'm sure Jocko is a smart guy who knows how to draw his lessons learned. Still, the point stands: an exaggerated "*extreme ownership*" mindset can stand in the way of rational and effective analysis.

7. "Owning It" Is A Virtue-Signaling, Self-Serving Power Move (& nothing wrong with that)

Owning your mistake was presented here as a mindset of enlightened leadership.

Yet, when Jocko took the full blame for the mission, it was also a virtue-signaling power move.
Not virtue-signaling in a bad way, mind you.
But it was, in many ways, a self-serving strategy to look leader-like. Once you own it in front of everyone, you empower your superiors to take action against you. But as they feel good about your submissiveness to their power and admire your non-defensive approach, they're more likely to congratulate you and let you off the hook.

It's a great technique.
Yet, I'm doubtful when it's framed as enlightened leadership only when it's also good for the leader himself.

8. No Science of Leadership, Experience Limited to Military Settings

When it comes to actual leadership, there is little science of leadership.

And, besides a few tips, I also find little practical "how to".
For example:

- How do you gain respect?
- How do you gain trust from your team?
- How do you ensure everyone pulls together (higher ideals is one answer, but Jocko doesn't like that level of explanation)?

And personally, I'm not convinced that simply having been in a conflict necessarily makes anyone a better leader or a bigger expert on leadership.

Review

Extreme Ownership is a good book with a foundational mindset for all men who seek effectiveness: taking ownership of their deliverables.

It may take that good idea too far, though, to the point that they had to make a follow-up book on *balance*.

Personally, I see some merit in this extreme ownership mindset, but also some important limitations.
The TPM community discussed it at length, and John made some great points to defend the Extreme Ownership approach:

- **TPM community discusses "Extreme Ownership"**

Besides that, it covers some basics like prioritizing and executing, but it's light on practical details, and I wished for more real-life leadership power dynamics.

Bullet Summary

- To win tomorrow, you gotta become a learner (today)
- Drop the search for "quick fixes" in your quest to become a better person
- For the best and quickest growth stay *inside* your strength and get *outside* your comfort zone

Full Summary

Chapter 1 – Humility: The spirit of learning

Some people bounce back from losses. Others never recover. What's the difference?
John Maxwell says it's humility.

Humility as in the opposite of pride.
Prideful people respond to failure in ways that don't help them move forward, like denying and blaming others.
People with a spirit of humility instead learn from successes *and* losses (Ed note: this is what a *fixed mindset* does).

Here's what humility does for you:

–Gives you perspective: humility doesn't mean you think less of yourself. It means you think of yourself less. And it will allow you to look at the bigger picture.

–Enables you to admit a mistake: and thus to learn and grow.

–Allows to let go of perfectionism: contrary to prideful people, those with a spirit of humility aren't afraid of a mistake.

> **It's not what we have that determines our success. It's how we think**

Chapter 2 – Reality: The Foundation of Learning

John Maxwell says that when we accept that life is hard, we begin to grow.

Successful people don't shy away from difficulties, they learn to face them and move ahead in spite of them. And here's a new perspective for you: what if instead of fearing difficulties, you welcome them as a test of character and use them to rise to the occasion?

Roots author Alex Haley said: *"Either you deal with what is the reality, or you can be sure that the reality is going to deal with you".* Facing reality and accepting the problem will not conquer it, but it's the very first step to overcoming it.

John Maxwell says you should realistically rate the performance independently of whether you win or lose.

And life is definitely harder for those who stop growing and learning. Some people become focused on a specific goal that when they achieve it they relax because they feel they made it. That mindset has the power to unmake them (arrival plateau).

> **What if you treated hardships as a welcome test of characters**

Chapter 3 – Responsibility: The first step of learning

John Maxwell says that nothing happens to advance our potential until we step up and say, "I am responsible." If you don't take responsibility, you give up control of your life (external locus of control). Taking responsibility for your life instead puts you in a place where you are always able to learn and often able to win (internal locus of control).

Lack of responsibility means:

- Victim Mentality;
- Blamestorming activity, which is what John Maxwell designs as the creative process to find a scapegoat
- Giving away control of our lives: if you don't take responsibility for what happens in your life you relinquish ownership of your life
- No growth: and little chance of success-

Taking responsibility means:

- First step in learning: taking responsibility for what you can control and letting go of what you cannot control will accelerate your learning process
- Seeing Things in Proper Perspective: The best learners are people who don't see their losses and failures as permanent (develop a growth mindset)
- Backing Up Our Words With Behavior: Jeff O'Leary wrote "*sign your work at the end of each day. If you can't*

do that, find a new profession." When you can take full responsibility for your work, you reach integrity.

Chapter 4 – Improvement: The Focus of Learning

The Stone Age didn't end because people ran out of stones. It ended because people kept learning and improving.

1. Improving Yourself Is the First Step to Improving Everything Else. Whatever you want to improve in your life, you need to first start with yourself.

2. Improvement Requires Us to Move Out of Our Comfort Zone. Always doing the safe thing will not take you forward. You must surrender security to improve.

3. Improvement Is Not Satisfied with "Quick Fixes". "Everyone is looking for a quick fix, but what they really need is fitness. People who look for fixes stop doing what's right when pressure is relieved. People who pursue fitness do what they should no matter what."

4. Improvement Is a Daily Commitment. If you want to improve, you need to make it a habit. Motivation is nice but short-lived. It's the positive habits you practice consistently that will get you far.

Chapter 5 – Hope: The motivation for learning

By reading this paragraph I had the impression John Maxwell was using the term "hope" for "optimism", but he later says optimism is passive while hope is active.

It takes courage to have hope because it can be disappointing, but Maxwell is convinced it's going to be rewarded.

Hope-filled people are energetic, they welcome life and all that comes with it -including challenges-.
And Maxwell believes it's no coincidence depressed individuals often lack energy. Lack of hope and lack of energy usually go hand in hand.

Hope is your greatest asset against hardships: it looks for lessons rather than leaving us deflated. It sees what can be done rather than what can't be done.

Doing the following three things will help you become hopeful:

1. Realize That Hope Is a Choice. And then choose hope

2. Change Your Thinking. We get what we expect in life. Have positive expectations

3. Win Some Small Victories. Success, even in the form of small wins, will encourage hope. And smaller victories show you that bigger ones are within grasp

Chapter 6 – Teachability: the pathway or learning

If you want to be successful tomorrow, then you must be teachable today.

Teachability is a choice and these are the traits of a Teachable Person:

1. Attitude Conducive to Learning People with a teachable spirit approach each day as an opportunity for learning. They know that success is less about natural talent and more about learning (*Mindset* by Carol Dweck).

2. Teachable People Possess a Beginner's Mindset. It can be difficult, so you have to remind yourself.

3. Teachable People Take Long, Hard Looks in the Mirror. Always ask yourself "am I the cause?" If the answer is yes, then it's time to make changes.

4. Teachable People Encourage Others to Speak into Their Lives. Surround yourself with people who know you well and will tell you the truth. This is even more important as you become more successful.

5. Teachable People Learn Something New Every Day. Any day will make you a little larger or a little smaller.

Strung many days together and you will be a lot larger or a lot smaller

Daily Practices to Become More Teachable

1. Preparation. Every day ask yourself in advance what you're going to learn. You will be amazed by how often you can improve from people and experiences in your daily life.

2. Contemplation. Observe and reflect on your experiences. Stopping and thinking allow us to gain perspective on both the successes and failures so that we can find the lessons within them. Only evaluated experiences teach us.

3. Application. The true value of teachability comes when we take something that we learn and apply it.

Recognizing your contribution in your failings, seeking solutions no matter how painful, and working hard to change for the best is teachability in action.

> **If you want to be successful tomorrow, then you must be teachable today**

Chapter 7 – Adversity: The Catalyst for Learning

Difficulties can be a boost if you face them with the right mindset.

Adversity Brings Profit as Well as Pain If We Expect It and Plan for It Since adversity is going to be there anyway, we might as well plan for it. Gold medalist winners always expect pain.

Adversity Writes Our Story Adversity is unavoidable, and it's your chance to be a hero: if you respond well, it will be a heroic poem. Will adversity be your tombstone or stepping stone?

> **You never win the gold without hurting**

Chapter 8 – Problems: Opportunities for Learning

Problems get better or worse based on what you do or don't do when you face them.

Sometimes You Win Sometimes You Learn delves a bit into problem-solving: interesting and useful, but less foundational when it comes to mindsets.

Chapter 9 – Bad Experiences: The Perspective for Learning

How we think when we lose determines how long it will be until we win.

If you are ambitious a danger for you is that you will quickly move past successes and focus on "what you should have done better". Which way too often means you're focusing on losses and building regret. But you can't build on regrets. And the capacity to manage disappointment and loss is key to living a fulfilling life.

The next time you have a bad experience try this:

1. Accept Your Humanness. We will fail sometimes no matter how hard we try. Why? Because we're human. And that's what makes you special.

2. Learn to Laugh at Yourself and Life. How much easier would your problem appear if you were able to laugh at them?

3. Keep the Right Perspective. Seeing difficulties as experience is a matter of perspective:
Don't Base Your Self-Worth on a Bad Experience You are not your worst moment and you are not defined by your performance.
Don't Feel Sorry for Yourself You are allowed a 24h grace period of feeling sorry for yourself, then pick yourself up (or you might get stuck)

Do Consider Your Failures as a Process to Learn and Improve Look at it like scientists: when it didn't work, they tested a hypothesis.

4. Don't Give Up If you want to succeed in life, you can't give up. Og Mandino said "Your capacity for occasional blunders is inseparable from your capacity to reach your goals. No one wins them all, and your failures are just part of your growth. Shake off your blunders. How will you know your limits without an occasional failure"

> **Mistakes are painful when they happen, but years later a collection of mistakes is what is called experience**

Chapter 10 – Change: The Price of Learning

Some people put the minimum effort to distance themselves from their problems without going to the roots, which of course can often be found in themselves.
And of course, they never grow and never solve those problems permanently.

Entrepreneur Alan Cohen said, "To grow, you must be willing to let your present and future be totally unlike your past. Your history is not your destiny."

Here are a few ways to make positive change:

1. Change Yourself. Quit looking at the environment or people as the issue. In life, if you want more, you must become more.

2. Change Your Attitude Your attitude is fully within your control. Sometimes You Win Sometimes You Learn is all about giving the right attitude.

3. Change Your Non-growing Friends Wise is the person who fortifies his life with the right friendships. And of course, you have probably heard "you are the average of the five people you spend the most time with".

4. Determine to Live Differently than Average People. The question "who am I" is important, but even more critical is "Who am I becoming?". Keep an eye on where you are *and* an eye where you want to be.

5. Unlearn What You Know to Learn What You Don't Know. Before you input new more empowering thoughts in your brain, you have to let go of the ballast you picked up along the way.

> **In life if you want more, you must become more**

Chapter 11 – Maturity: The Value of Learning

Maturity doesn't necessarily come with age.

Here's what results in maturity for John Maxwell:

1. Finding the Benefit in the Loss.

2. Learning to Feed the Right Emotions. "Maturity is doing what you are supposed to do, when you're supposed to do it, no matter how you feel." Action is the key to success. Too often we want to feel our way into acting when instead we need to act our way into feeling. If you take the right actions, you will eventually feel the right feelings.

3. Learning to Develop Good Habits. By acting on our feelings with positive action over a sustained period of time, we will form positive habits. As poet John Dryden put it: "We first make our habits, and then our habits make us." Comes hell or high water, you need to follow through.

4. Learning to Sacrifice Today to Succeed Tomorrow. People are naturally inclined towards behavior that makes them feel good in the short term. Hence you have to cultivate the willingness to sacrifice.

5. Learning to Earn Respect for Yourself and Others. Brian Tracy says: "Self-esteem is the reputation you have with yourself." If you want it to be solid and lasting, it must be earned and confirmed, day by day. Following through no matter what is a great way to earn that respect.

> **Too often we want to feel our way into acting, when instead we need to act our way into feeling**

Chapter 12 – Winning Isn't Everything, But Learning Is

Sometimes You Win Sometimes You Learn ends with another fabulous chapter on the advantages of a learners' mindset:

1. Learning Too Often Decreases as Winning Increases Complacency. Winning may remove some of your hunger. Here's the solution for John Maxwell: keep your hunger to learn instead. Then no matter whether you win or lose, you'll keep getting better.

2. Learning Is Possible Only When Our Thinking Changes. Negative ideas and discouraging thoughts will try to creep in. But Maintaining a consistently positive mental attitude will be your greatest ally in growing and learning. So you stand guard at the gates of your mind. Think positively for long enough, and your positive thoughts will grow stronger and more natural.

3. Real Learning Is Defined as a Change in Behavior. The greatest gap in life is the one between knowing and doing. Remember to apply your learning and translate them into action.

4. Continual Success Is a Result of Continually Failing and Learning. Joseph Sugarman says, "(..) if you're willing to consider failure as a blessing in disguise and bounce back, you've got (..) one of the most powerful success forces." Progress requires risk, but there's an art to managing that risk: be in your strength zone -the things you like and do well- but get out of your comfort zone.

How You Can Apply It

Sometimes You Win Sometimes You Learn is a condensed guide for a learner's mindset. Here are a few distilled ideas on how to make it even more applicable:

Approach your challenges as an opportunity to learn
This will both prepare you to learn and grow *and* at the same time take some pressure off. "It's just an opportunity to learn", you tell yourself, and you will quiet your lizard brain which is so adamant about keeping you in your comfort zone.

Move past the mistake trap
If you are ambitious chances are you are very hard on yourself. The words of Hugh Prather in Sometimes You Win Sometimes You Learn will probably ring true to you: "*I react to a mistake as if I betrayed myself. My fear of making a mistake seems to be based on the hidden assumption that I am potentially perfect and that if I can just be very careful I will not fall from heaven (…)*". Needless to say, this mindset is a straitjacket.
Solution: Realize you're always a work in progress and your goal is not being perfect but getting better (learner mindset). Then fail quickly, forge ahead with a win-or-lose attitude, and base your self-esteem on doing it, rather than doing it perfectly.

Move past regret and losses
I put it here again because I know this is a sticky point for so many. Moving past losses and regret is key to a successful -and happy- life. But it's not our default setting.
Solution: here's what John Maxwell recommends to minimize the damage of losses:

1. Let them go emotionally
2. Remain positive -by feeding positive thoughts and interpretations to your mind-
3. Watch out how you evaluate yourself: be constructive (start with a positive and end with a positive)
4. Radically change the way you look at losses (as a learning opportunity, which is what the book is about)

> **We want success, but we should instead train for losses**

CONS

Life is difficult. Really?
That life is difficult is a message repeated a bit too often in one of the chapters.
Well, life is not *intrinsically* difficult Mr. Maxwell. Life is what you think it is. And I don't think it's educational -or true- repeating on a loop "life is difficult". So here it is for your benefit: no it's not. Life is beautiful.

Some platitudes
A sub-chapter was "Life is More Difficult for Those Who Don't Respond Correctly to Challenges" and then later on "Yet that is exactly what you need to be able to do—make good adjustments". Not exactly earth-shattering, and lacking concrete steps on how to make those suggestions a reality.

Review

Did you really make it thus far?
I applaud you (even if you just skimmed here).

Sometimes You Win Sometimes You Learn is an amazing book that I absolutely recommend you read.

Now for my review:

What I didn't like:

Pride is not bad
I disagree with humility as opposed to pride. You can be humble *and* proud at the same time. As a matter of fact, you *should* be proud. You should just be proud of the right things, of course. Read here how to build a supportive and antifragile ego.

What I warn you about:

Cool VS Wise

John Maxwell says successful people in his circle had an attitude of "been there, done that, got it all figured out". But as he grew older he realized that attitude only got them so far and they plateaued because they weren't growing. He had a continuous learner mindset instead, never getting to a place where it's all figured out.

That makes sense.

Yet the attitude of " been there, done that" is textbook charisma. Most people *admire* that attitude (when earned). Keep it in mind, and maybe keep it in your bag when you need to act up a bit.

What I loved:

All of it, but let's pick a few key ones:

Take responsibility (for what you control)
I loved the idea of taking responsibility for all you can control *and* letting go of all you can't. You can find it even more beautifully elaborated by Ryan *Holiday* and I find it a more empowering stance than feeling responsible for the final result no matter what (as preached, for example, by *Extreme Ownership*).

Sign your work (or don't do it at all)
I loved the idea of signing whatever you do. Or not doing it at all.
You don't like what you're doing at work? Do yourself a pleasure and change.

If you want more, you must *become* more
Before you set out to change the conditions before you look at what others are doing wrong… Take a hard look at yourself. And the best way to improve your condition (the only?) is to improve yourself.
It's not what you have, it's not your past, it's not your friends. It's who you are. And who you're becoming.

If you enjoyed this summary, check out my whole *collection of book summaries.*

And I will leave with a last quote from the book, which John Maxwell says will eventually make you successful:

> I'm not where I'm supposed to be,
> I'm not what I want to be,
> But I'm not what I used to be.
> I haven't learned how to arrive;
> I've just learned how to keep on going

Instant Influence: Summary & Review

Lucio Buffalmano · 16 July 2017 · Archived copy · Original

Instant Influence describes 6 major influence triggers to persuade and influence people.

Contents

  - Influence Trigger VI: Friendship and Liking
- Bonus: what the most skilled do
- REVIEW

Exec Summary

- There are 3 kinds of people in relation to influencing knowledge: ignorant (and miss opportunities); abusers (unethical); appropriate users (men of integrity and long-term success)
- The major triggers of influence are: Reciprocity; Scarcity; Authority; Consensus; Commitment and Consistency; Friendship and Liking

Summary

Pantalon differentiates among three different kinds of people:

- Bunglers of influence: those oblivious to the power of influence. Can't influence even when it's in everyone's interest
- Smuggler of influence: those who know and abuse influence triggers. They are often in bad faith
- Sleuth of influence: use influence triggers appropriately and for win-win outcomes. They're often more successful in the long run

You want to be a sleuth: knowing how to wield influence and using it for good causes.
I agree with that.

Influence Trigger: Reciprocity

Reciprocity is the tendency by which we human beings feel obliged to give back to people who gave to us first.

Extra nudge for the egoists

Some people will not give back, in which case you give them an extra nudge.

Pantalon uses the example of an employee who never wants to cover for his manager, in spite of the manager always giving him a free hour whenever needed.
Instead of stopping doing him a favor which would not help anyone, the next time the employee asks for an hour the manager says:

> **Manager**: *"Sure, glad to let you have 1h for something unexpected because I know ho important it is for me to count on you to give me an extra hour when something unxpected comes up"*

Basically, you clearly show him the proper fairway while still being generous.

My Note:
My own example is when collecting a neighbor's heavy package from the postman. When the neighbor rang my door instead of thanking me looked at me expectantly -as if I now needed to place it in the elevator as well-. I stood there for a couple of seconds and then added "yes, I took it because I was glad to make a favor for a neighbor". After the little nudge, she profusely thanked me.

Avoid reciprocity pitfall

Pantalon gives the example of an employee who has driven his manager after and to work for a whole week. Now it's promotion time but another employee in another department is better suited. How does the manager avoid falling into the trap of feeling obliged to give back?

Pantalon says that you give back *before* the evaluation time comes.
Personal favor should be exchanged for a personal favor.

Claim your reciprocity rights

Some people after a favor they have done would say things like:

- "oh it's no big deal, just part of the job" or
- "don't worry about it, that's what I'm here for right" or
- "oh don't think about it, I'd do it for anyone"

That's terrible because you earned your points fair and square. Don't give it away. And instead, say:

> **You**: Oh don't worry about it, I know you would have done the same for me"

Smugglers of influence

Some people will use the law of reciprocity to trick you. Pantalon discusses the now-famous example of Hare Krishna devotees at the airports. They give you a flower as a gift, not accept it back and then ask for a donation. Most people would feel obliged to give back.

But then, Pantalon adds, in the long run, people learned the trick and the revenues tumbled.

Sleuth of influence

Polite, great service, is a win-win employment of the law of reciprocity. The customer appreciates your extra attention, feels good, and also feels compelled to come back.
Basically, Pantalon says, the best way to get what you want is to give it first.

> **The best way to get what you want is to give it first**

Influence Trigger II: Scarcity

Pantalon cites the example of the "original" Coca-Cola becoming extremely popular once it started being phased out of the market.
People wanted to grab it now because it was soon not going to be available anymore (also read *Blink* and

Brandwashed for more information on this).

Influence Amplifier: Competition

Scarcity is turbo-charged if there's competition for a product.

He cites the famous "cookies experiment" on supply and demand, whereby cookies becoming scarce because of high demand were valued the highest.

The same worked for information scarcity. Telling buyers that the beef was going to be scarce substantially increased sales. Telling people the information was not publicly available (ie.: even the information is scarce) brought a 6 fold increase.

Pantalon also tells the story of his brother profiting from the use of scarcity and competition.
What he did was simple and effective: he scheduled all the viewers for his cars at the same time. Once the second person got there Pantalon would tell him to wait as the first in line had priority. Then a third person would arrive. And suddenly there's a huge demand for the car.

The first person in line feels that if he doesn't get the car right away… Someone else will. And nobody negotiated on the price.

Influence Trigger III: Authority

We are more likely to listen to someone whom we perceive as an authority in the field.
For example, you are more likely to follow recommendations provided by a doctor rather than a physical therapist.

Authority has been shown to have some dark effects as well. The famous Milgram experiment, or airplane pilots' mistakes going unchecked because of people's fear of standing up to authority.

Authority Dark Side

Pantalon says it's most authoritarian leaders who go unchallenged, and you don't want to be an authoritarian leader and have your mistakes go uncorrected.

However, you shouldn't swing in the opposite direction either and always make a note: you have been given authority because, supposedly, you know better.

Here's what you do then: you tell them to always give you their opinion and you'll take them into account.

Influence Amplifier: Credible Authority

Usually, credibility grows over time, but if you don't have time, here's what *Instant Influence* by Pantalon recommends: mention a drawback about your product *first*.
When you mention a negative first, then you become instantly more credible.

Pantalon highlights the example of a restaurant waiter. He would discourage what the client ordered saying it wasn't as fresh as usual and then suggesting instead something slightly less cheaper. Instant credibility for the waiter.

Influence Trigger IV: Consensus

To decide what we like we usually look at what *others* like.

Thus the tendency to visit a restaurant with lots of people rather than the empty one nearby.

Another hideous example of the principle of Consensus is canned laughter in TV shows. Actors hate it, directors hate it… But it works: people do laugh more when hearing recorded laughs (by the way, it works even better when we believe it's people in our group to laugh).

Influence Amplifier: Familiarity and Similarity

The Consensus is much more powerful in swaying our decisions when:

- Unfamiliar with a situation: when we don't know what to do we tend to feel lost and look at what others are doing.
- Consensus is from people like us: For example, seeing our neighbors or colleagues are more influential than completely random people.

Influence Trigger V: Commitment

The force behind Commitment is our will for consistency. We want to feel and show ourselves like people who are consistent with their values and beliefs.

A great influencer indeed will look at what people *already* committed to and then align their offer accordingly.

Indeed people who took a small lapel pin to support cancer research were significantly more likely to donate money to the research compared to people who had not been wearing the pin.
What happened, is that people wearing the pin started seeing themselves as people who supported cancer research, so saying "no" to a donation request felt in-congruent with how they saw themselves.

Influence Amplifier: Active, Public, and Voluntary

Commitment is much more powerful when it's public, voluntary (no coercion), and active (people take action).

Influence Trigger VI: Friendship and Liking

Our friends and the people we like are much more likely to influence us than strangers or people we are neutral to.

Influence Amplifier: similarity, praise, cooperation

We like people who are like ourselves. This goes into all kinds of realms, including age, place of birth, race, religion, politics, and even cigarette smoking habits.

Pantalon also explains how cooperation will make people like each other, as it's obvious to anyone who's played in a team.

Smugglers of influence

Michael Pantalon talks about an insurance company instructing sales reps to like anything prominent in the prospect's house. The author says there are two major downsides:

- People will dislike their job
- You don't influence yourself: Influence works both ways! If you compliment some things you don't like you will miss the opportunity to connect with your prospect, and it will shine through

The solution is simple: look for something you genuinely like when giving praise.

Bonus: what the most skilled do

Instant Influence tells its readers that the most skilled influencers don't spend the most time on structuring the request itself, but on what comes *before* the request (the contrast principle).

REVIEW

Instant Influence borrows heavily from *Influence by* Cialdini. So much so that on my first review years ago, I thought Cialdini was the author (and later corrected this review).

However, it also adds enough information and ideas to make it a more than worthwhile read.

Commonalities more important than differences
Michael Pantalon says that most of the training he attended started by saying how their industry is different and peculiar.
There might be differences indeed, but he believes that the similarities are probably more and more important.
I couldn't agree more.

Honesty is for *yourself* first
I loved how Pantalon mentions one of the main reasons, to be honest, is the effect it has on *your own* self-esteem. Not just for others, not just for long-term success, but simply *for yourself*.
Going through life knowing you're doing the right thing is indeed the basis for a strong, unassailable frame of self-confidence. It's because it takes immense internal strength -and external props often- to resist any environmental force pushing you into the shortcut.

Smugglers, Bumglers, Sleuth
I loved the notion of how people can use influence triggers in an ethical or unethical manner. Or completely miss on any benefit simply by ignoring influencing tools altogether. Incidentally, this is exactly the point of The Power Moves: moving and awakening people from bunglers to smugglers -when strictly needed- and sleuths.

You will only find a cassette for this, so I recommend you **snag Influence on Amazon**.

The Obstacle Is the Way: Summary & Review

Lucio Buffalmano · 16 July 2017 · Archived copy · Original

The Obstacle Is the Way (2014) takes inspiration from ancient stoic philosophy to deliver an empowering treaty on how to perceive, act, and think about obstacles -and life-.

Contents

- Bullet Summary
- Summary
  - Intro
  - Part 1 – Perception
  - Part 2 – Action
  - Part 3 – Will
- Practical Applications
- Review

Bullet Summary

- Look at obstacles positively and coolly: they're an opportunity
- Act on obstacles swiftly. No complaints, no regrets: just effective and persistent action
- Be serene with whatever result. And move on. Positively and coolly

Summary

About The Author: Ryan Holiday is a former marketer and self-styled "*media manipulator*".

But he's also a top-notch, down-to-earth philosopher and a best-selling author.
Holiday has also been of the main influences in reclaiming and rediscovering ancient -yet also very actual- stoic philosophy.

Intro

"*The Obstacle Is The Way* can be divided into three parts"

1. Perception (how to perceive the obstacle)
2. Action (how to deal with the action)
3. Will (how to deal with intractable obstacles).

Part 1 – Perception

Chapter 1: Discipline of Perception

Perception is how we see and understand the world around us. How you perceive the world can be a strength or a weakness for you.

When first faced with an obstacle do the following:

- Stay objective
- Control emotions and keep calm
- Choose to see the Positive
- See things in perspective
- Revert to the present moment
- Focus on what you control

Seeing opportunities in obstacles does not come naturally: it's a skill and an attitude you must train with self-discipline.

Chapter 2: Perspective: Your Power

The event, the obstacle, is neither good nor bad in itself.
It just is.

There are the event and the story we tell ourselves about what it means. It can be positive, negative, or there can be no story at all.

What if you were to consciously *choose* to tell yourself a positive story about the event?
Or what if you could choose an empowering perspective, and let your actions and emotions follow accordingly?

Because you can.

And that's the power of perception.

Chapter 3: Steady Nerves and Control Emotions

Perception is everything, and if your nerves hold, nothing really happened.

When panic rears its ugly head, say "no thank you, I can't afford to panic", and go back to focusing on what you can control.

Ask yourself this:

Does what happened keep you from acting with justice, generosity, self-control, sanity, prudence, honesty,

humility, and straightforwardness?

No?
Then get back to work.

Calm and collected, ready and prepared to throw your best at it.

Chapter 4: Practice Objectivity

Everything's always so crystal clear and simple when you're giving advice to other people, right?

Well, why don't you do yourself a favor and use the same objectivity with yourself.

Do yourself a favor and pretend it's not happening to you.

Chapter 5: Is It Up to You?

You only focus on what matters: all that you can control.

Your emotions, attitude, actions, perspective, decision, determination… These are all up to you.
These are the playing field, where you do whatever you need to.

All the rest, all the things you can't control, are the rules of the game.
Don't waste time and emotions on them.

Chapter 6: Live In the Present Moment

It doesn't matter whether you're in a growing economy or shrinking one, a good job market or a bad one, or your obstacle looms huge.

What matters is that right now is right now.

The implications of our obstacles are theoretical.
What will happen after, how better it was before the obstacle… All useless. They're in the past and the future. *We live in the moment*. And the moment you embrace that, the easier the obstacle.

The Obstacle Is The Way discusses also entrepreneurial mentality and how entrepreneurs live in the present.
They are like animals with no time and ability to think about how things should be or how they'd prefer them to be.
They just live and act in the present.

Chapter 7: Think Differently

Your perception will determine what you are capable or not capable of doing. And if you believe in the obstacle more than you believe in your goal, which one do you think is most likely to manifest?

Exactly.
So be open, to questions, but don't let events and naysayers get to you.

Chapter 8: Finding the Opportunity

It's common for people to have survived adversity or have faced major injuries to bounce back better than before. Some times physically, some other times emotionally.

"That which doesn't kill me makes me stronger" is a fact and it has a name: Post-traumatic growth.

Chapter 9: Prepare to Act

Now that you know how important it is to steady your nerve and look at the positives, it's time to act.

Part 2 – Action

Action is common, the right action is not. Your action must be directed, unrelenting and focused.

Chapter 10: The Discipline of Action

We've all been too busy, overwhelmed, tired, stressed. An then went out partying or slept, or did nothing.

It makes you feel better to pretend and ignore. But it isn't helping you. You've got to act. Starting from now.

It doesn't matter what happens to you or where you come from. It matters what you do with what happens and with what you have. And the only way you'll do something spectacular is by using it all to your advantage.

Chapter 12: Get Moving

Whether you feel ready or not, however, the conditions, get moving.

Chapter 13: Practice Persistence

The people around you have already begun their chorus of doubts, excuses and dejection.
But you ain't buying it.
You look at the problem dead on and say, as Margaret Thatcher famously did: "You turn if you want to. The lady's not for turning."

Too many people believe in the romanticized, yet painfully wrong idea, that great victories come from a flash of insight.
Like Thomas Edison.
No, it was the slow and constant pressure, from all directions, the elimination of hundreds more promising options, that slowly moved the solution to the top of the pile.

The genius, the real genius, was their doggedness, grit and staying power.

And that's the message you gotta send to the world and to yourself: resistance is futile.

> **The genius was unity of purpose, deafness to doubt, and the desire to stay at it**

Chapter 14: Iterate

Listen to the feedback you get from actions.

Doing so in an open, constructive way, is a key element in overturning obstacles.

That feedback is the instruction you need to reach your goal. That's your road map to success: by showing you where not to go, your path to victory becomes clearer and clearer.

> **Failure shows us the way—by showing us what isn't the way.**

Chapter 15: Follow the Process

Huge obstacle?
The Obstacle Is The Way teaches us you don't look at it like it's a monolithic giant.
You break it into smaller units. And do what you need to do right now, do it well, and then move on to the next.

Follow the process, not the prize.

As they say, a journey of a thousand miles starts with a step.
And the step after, and after that. Focus on waking well, not on what might happen after the curve.
Excellence is a matter of step-by-step.
And soon you'll be at the destination before you realize it.

Chapter 16: Do Your Job, Do It Right

Everything you do matters, everything is a chance to do and be your best. Whether that's making smoothies or bartending as you save money for your dream.

I just gotta quote Ryan Holiday here as I love that part: Only self-absorbed assholes think they are too good for whatever their current station requires.

We will be and do many things in our life. Some are prestigious, some won't be, but none are beneath us. Whatever we face, our job is to respond with hard work, honesty and helping others as best as we can. Wherever you are, you owe it to yourself and to the world to do it well. And when action is our priority, vanity falls away.

> **When action is our priority, vanity falls away.**

Chapter 17: What's Right is What Works

Do the best with what you've got.

That's it.
Progress is your goal, not perfection.

Not that you don't aim high, but you start thinking like a radical pragmatist: ambitious, aggressive, and even rooted in ideals, but also practical and grounded on the possible.
Because real artists ship.

Don't think small, but keep in mind the difference between the critical and the extra.

Chapter 18: In Praise of the Flank Attack

Outnumbered, low on money, encircled by powerful competitors… These don't have to be disadvantaged.

they can be your blessing in disguise. You got little chances head-to-head, so you're forced to be creative and more efficient. And to finally put your ego aside.
People or companies who have the size advantage are resting on their laurels. They were able to coast for a long time on size and brute force. And that worked very well for them… Until it doesn't anymore.
Until they met you.

Now you outflank them with swift action, outmaneuver them with speed, or pitch them one against the other.

Remember, a castle can be a scary and impenetrable fortress, or it can be a prison when surrounded.

Chapter 18: Channel Your Energy

Use all the emotions you get.

Our actions can become stronger when loose and bold. So take your frustration, and instead of giving in, use it to power your actions. Now you got physical looseness with mental mastery, and that's powerful.

And you don't disdain to work around the rules.
While others obsess with the rules, you're subtly undermining them and subverting them to your advantage.

You are an unstoppable force, you're a tide: slow and steady, there's nowhere to run for your opponent.
External factors will influence the path, but not the direction: onward and upward.

Chapter 19: Seize The Offensive

In many battles, as in life, you will often reach a point of mutual exhaustion.

Two opposing forces will often reach a point of mutual exhaustion.
It's the one who rises the next morning after a long day of fighting and rallies, instead of retreating who will carry victory home.

The obstacle is now your chance of winning.

Chapter 20: Prepare for None of It to Work

We can do a lot, but we can't control the whole world around us. We might even fail.

Don't let it get to you, your aim is to do your best. Not the impossible, but nothing less than your best.

And when you just can't get through, here comes another opportunity: to learn and practice new virtues, even if that is only acceptance or humility.

You know the kind of person who throws at it everything he's got and whatever the result, he is ready to accept it instantly and move on?

Is it you?

Because it can be.

Part 3 – Will

What is will?

Will is our internal power.
Will can never be affected by the outside world. When all action fails, will is our final trump card.

Chapter 21: The Discipline of Will

Some people think the Will is how badly we want something.

But that's a weakness misguided by ambition. And it won't serve you well under the biggest of obstacles.
Real Will is quiet humility, resilience, and flexibility.

Will is your ability to accept whatever happens. And be at peace with it. Will is wisdom.

Will is what prepares you to face anything you can face in an inherently unpredictable world.
Will is what keeps you going matter what's happening around you.

Will is what allows you to stay calm and collected when everyone else loses their heads.

Chapter 22: Build Your Inner Citadel

Nobody is born a gladiator. Getting great at anything takes practice: you *build* your own Citadel, brick by brick.

Being great with adversity and cultivating Will is no different.

Chapter 23: Anticipation (Thinking Negatively)

Your world is ruled by external factors outside your control.

You'll be vilified, threatened, bullied, lied to, and taken advantage of. You can't be surprised every time it happens or it'll make you miserable.

Be prepared for it instead -The Power Moves is here to for that-.

That's anticipation called anticipation, and it's both mental and practical.

Thanks to the anticipation you understand the range of potential outcomes and you can accommodate yourself to any of them.
You even understand it could go all wrong, and you're OK with it. And now you can get back to work.

Chapter 24: The Art of Acquiescence

If someone took traffic signals personally, we would judge them as insane.

Yet that is exactly what life is telling us when faced with an obstacle.

It tells us the way is blocked and you need a detour. No arguing, no depression, you simply accept it.
Take people and events as they come and move around them: it's only a bump along your road.

Ryan Holiday cites Eisenhower when he said:

> Everything we could think of has been done, the troops are fit and everybody is doing his best. The answer is in the lap of the gods.

And he explains those were not the kind of men to just "hope for the best", but at the end of the day, they understood that what happened would happen, and they'd go from there.

> **The answer is in the lap of the gods.**

Chapter 25: Love Everything That Happens: *Amor Fati*

After you accept that some bad things will likely happen and it might be outside your control, here is the big one: **Love whatever happens to you and face it with unfailing cheerfulness**.

We don't get to choose what happens to us, but we can always choose how we feel about it.
And why would you choose to feel anything but good about it? Don't look back at your expectations, don't think you thought it was going to be different. Face forward, and put a smug little grin.

> **We don't get to choose what happens to us, but we can always choose how we feel about it.**

Chapter 26: Perseverance

Perseverance is more than persisting at your problem.

Persistence is a matter of action, dependent on energy. Perseverance is a matter of Will, and it comes with

endurance.
They work in conjunction.

Perseverance is a long game. Not just round 1. But round 2. and every round after.
It's a belief that, eventually, somehow, you'll get there.

Chapter 26: Something Bigger Than Yourself

Stop thinking of yourself all the time, and putting "I" in front of all the events. "I did very well but..", "I deserve better than this..".

No wonder you take losses so personally!

And stop pretending what you're going through is somehow special or unfair.
Hundreds and thousands before you felt the same and had the same thoughts.
They had no idea that you would exist, and a century from now, someone will be in your exact same position.
Embrace the power of being part of a larger whole, it's an exhilarating thought.

And do something helpful, think instead: if I can't solve it for myself, how can I at least make it better for others?

This new shift in perception will immediately shift your thinking into a new gear. All of a sudden you're thinking like a leader, and you're a person who takes care of others.

Be strong for others, and it will make *you* stronger.

Chapter 27: Meditate on Your Mortality

No matter who you are or what your plans are, someone would kill you for a few dollars or a fix of heroin.
Or a car can hit you in an intersection and that's it. It will be all over.

Today, tomorrow, or someday soon.

Or take the cliché question to ask:
"What would I change about my life if the doctor told me I had cancer"? After our answer, we inevitably comfort ourselves with the same insidious lie: "Well, thank God I don't have cancer".

But we do!
Our destinies are all already written.

And it's not depressing. It's invigorating. And reminding ourselves will help us treat our time and life as a beautiful gift (also read: how to leverage mortality for life).

It will also help create some badly needed urgency when we need to.

> **Instead of denying—or worse, fearing—our mortality, we can embrace it.**

Chapter 28: Prepare to Start Again

Just when think you've successfully overcome an obstacle, another one comes along.

That's how it is. And that's what keeps life interesting. Life is a process of breaking through obstacles, learning, and growing along the way.
And, as you're starting to adopt this mindset, that's what creates opportunities.

One more obstacle and a bit more of the competition give up.
One more, and it's just a few of you left.
One more and one more, until you're the only one left: the best version of you.

Practical Applications

"*The Obstacle Is The Way*" is the ultimate problem-solving book because it deals with mindsets.

Live, practice and internalize these 3 mindsets and you'll reach new heights:

- **Looking at the obstacle mindset**

You will look at the problem as an opportunity. Ask yourself "what can I learn", and "how can it make me a better person". Welcome adversities as a test and a chance to grow. No regrets, not what ifs. Only the present. And you will stay calm and collected.

- **Dealing with the obstacle mindset**

You will do your best no matter what. Not the impossible, *just* your damn best. You will look at all possibilities with a never give up mentality. Piece by piece, you can be slowed down but not stopped. You're an unstoppable force indeed. And you appreciate the struggle, in itself, as a welcome occasion for you to prove yourself.

- **Unsolvable obstacles mindset**

With the first two mindsets of *The Obstacle Is The Way* you will forge ahead like never before.
But even when you'll fail, you are calm and serene: this is an opportunity for you to wholly change direction, regroup or practice acceptance. You've done your best anyway, you don't have regrets. What's next.

Review

The Obstacle Is The Way is a monument to the human spirit and ingenuity. It's a masterpiece of empowering mindsets, applied philosophy and beautifully crafted, uplifting poetry.

Here are a few further comments for you:

Grateful for adversities

It is true that your most glorious moments come after searing defeats. Or when you snatched victory from the jaws of defeat. But also when you don't win immediately, your adversities can make you a better person if you let them to.
I am grateful for many of my darkest days. I did use many of them to become a better person. And I am so proud of that. You can be too.

Entrepreneurial mentality
The Obstacle Is The Way expands also on entrepreneurial mentality. Ryan Holiday talks about how most of us have been taught of thinking "realistically" and how that's a huge disadvantage for building a business.

Get the full book on Amazon.

I leave you with one last quote:

> *See things for what they are.*
> *Do what we can.*
> *Endure and bear what we must.*
>
> *What blocked the path now is a path.*
> *What once impeded action advances action.*
> *The Obstacle is the Way.*

Dominant Body Language Power Move: The Ear Tap

Lucio Buffalmano · 18 July 2017 · Archived copy · Original

For a full overview of dominant body language check out:

- How dominant men speak
- How dominant men move
- Alpha male body language

This article is about a specific gesture, which I call the “ear cup, and it’s a specific example of dominant body language.

Without even touching anyone or saying a single word, it compels people to take action for you (and jump through your hoops).

But don’t worry: by the end of this article you will know how to respond when people try to use this body language of domination against you.

Contents

  - The Story
  - The Less You Move, The More Dominant You Are
  - When The Ear-Cup is Friendly

- Summary

The Story

I had just finished the most important elevator pitch of my life.

My audience was the top conference speakers, the movers and the shakers of the industry.

To a startup sales guy, it’s a dream scenario: get in, make friends, and pitch the heavy hitters as an equal.
Or so I thought.

The pitch was done. I ask my key question:

> **Me**: Could that be interesting for you?

And then I drop the mic.
The heavy hitters say nothing.
I say nothing.

Make your move
And then it comes.

> *"GTFO of Mount Olympus you mere mortal, you're too beneath us"*

he says.
He doesn't actually *say* it of course, but worse.

He slowly raises his hand instead, turns his face, grimaces a bit, and taps his ear.

Boom!

He had just used against me one of the most dominant body languages moves out there: the ear cup.

The Less You Move, The More Dominant You Are

Social interactions have this tendency: the most powerful people make other people move, with less.

Think about, what's the most powerful sign of power? It's the "pollice verso", the idea that an ancient emperor decided upon life and death with a mere hand gesture.

Luckily we don't face similar scenarios often, but the concept is the same: the bigger the difference between the dominant gesture and your reaction, the bigger the social status difference.

And that's why the "Repeat Please" Ear Cup is such a dominant body language gesture: he puts a finger on his ear (low effort nonverbal), you repeat your whole spiel (high effort).

Here's a gangster movie example. Paulie's status as the big boss is conveyed (a bit theatrically) by the fact he doesn't move and doesn't talk.
And who's the one moving the most? The kid, the dead last on the social ladder.

And now let's get to the juicy part: how you react.

#1. Submit... At your own volition

Again on Paulie's intro, have you noticed how one of the top guys responds to Paulie?

He doesn't flash a quick grin, he doesn't nod a hundred times. He waits for a second. And then he nods, slowly, thus mimicking Paulie himself. Paulie is the big boss of course, but he's no fifth wheel either.

This is a great way to submit at your own pace in all situations where you're not well served by throwing down the gauntlet -as in the conference opening story for example-.

So you take a second as if to stress you're not rushing to obey anyone's order.

Then you smile a bit, as in saying "I know what you just did there" and slightly touch his arm. The touch, as a dominant behavior, mitigates your actions.
You say "sorry" slowly (very high rate of speech = low confidence) and neutrally (there's a relation between pitch and perceived confidence).
And then you repeat. Shortly. And this time clearly?

#2. Hit Back

A good option is to reply something like:

> **You**: Yeah, it's a a bit of complex topic, I know.

What you're doing here is implying that it's not you who wasn't clear, but that *he* didn't get it.
Touch his arm as you speak, lower your gaze for a moment, and smile, your expression saying "*sorry, I overestimated you but you're actually a bit slow*".
And then look mostly at the rest of the group as you re-state: you are *not* following his lead, just using the opportunity to speak again.

#3: Recruit Friends

Don't bat alone when you got a pal.

You pause for a bit, then turn around to someone you're closer to in the group and ask:

> **You**: Did you get an idea of what I mean?

If you phrase it that way and ask a friend, you'll likely get a yes. And you'll probably also get a summary of what you just said.
You confirm of course, and keep building on that.

Very leading move: you call into action someone, have him chime in following your lead, and resume talking -and speaking time has a direct correlation to dominance-.

You take the lead, the Ear Cupping Power Mover takes the group's dumb@ß role.

#4: Ignore and forge ahead

And, of course, an evergreen, the *36th law of power*: you ignore.

You almost always win when someone wants to get a rise out of you and you deftly ignore and move along.

You can either do nothing and wait for someone to jump in, or better still, take the lead: turn to someone else in the group and move the conversation along either pretending they got it or changing conversation (and don't worry if nobody got your point, you can repeat to someone else, the key is you don't submit to the nonverbal Ear Cupping).

The Power Mover is left in the dust, his gesture completely spurned, while the group moved to a new topic under your leadership.

Wanna see an example? Look at Mayweather ignoring Conor McGregor (not too good) ear-cupping move.

Note Mayweather could have done even better by smiling a bit: too stiff looks fake and would look much worse in a more natural setting (also note McGregor takes the final social win by turning first, getting the crowd cheering and Mayweather following suit, in a clear display of leader/follower scenario).

When The Ear-Cup is Friendly

Just as a note, the Ear Cupping gesture isn't always an unfriendly body language gesture.
Like most body language it can also be used to convey warmth, depending on the delivery.

You will easily recognize warmth because he/she will:

- Lean toward you
- Accompany the gesture with words
- Possibly lightly touch you to convey closeness
- Maybe add a smile

For your benefit, here's a video example of a friendly *non-dominant* Ear Cupping.

Summary

The "repeat please" Ear Cupping gesture is a very dominant body language expression, that's why you'll often see cops using it.

It's not a good sign when someone does it to you: it means the Power Mover feels so superior that he can issue nonverbal commands and have you comply.

As always, your goal is to find the most socially shrewd way to *not* submit and, possibly, hit back in style.

So you:

- Imply the Power Mover is a bit slow

- Recruit someone else to isolate the Power Mover
- Ignore, forge ahead, and change the topic leaving the Power Mover in his dust

So long, onwards and upwards :),

Linchpin: Summary & Review

Lucio Buffalmano · 20 July 2017 · Archived copy · Original

Linchpin is that much-needed, so-called kick in the butt for artists who are being paralyzed by the fear of failure and the fear of judgment.
This book might give you what you really need to finally start sharing your artwork.

Contents

- Exec Summary
- Linchpin Summary
- Real-Life Application
- CONS
- Linchpin Review

Exec Summary

- Be damned those jobs that clip your wings. We require your art and genius in this world!
- Your lizard brain wants to keep you safe. Be aware of it and learn to overpower it or you'll be stuck in the wheel forever
- Real artists ship

Linchpin Summary

Seth Godin doesn't mince words in flattering us right off the bat.
You are a genius, he says. Chances are you have something great to share with the world, but society squeezes the genius out of you.

Your fear of letting go and doing art stems from two places:

1. You have been brainwashed into believing that your job is to follow instructions (hint: it's not);
2. The resistance -your lizard brain- is the voice keeping you safe -and average-

Linchpin is about removing those obstacles.

Chapter 1: The New World Of Work

The world has changed.

The previous generations of the industrial revolution could have kept their head down, followed orders, and in exchange, they'd get a stable life, a mortgage, and a car.

Read more on the power dynamics of the following orders:

> 10 Ways to Maintain Power When Executing Orders

The goal for the capitalists was to have as many easily replaceable laborers as possible (Michael Gerber *recommends you do so*).
But the con game is finally ending and there's a new bargain now, one that leverages talent and creativity.

Today three thousand dollars (laptop and internet) buys you an entire factory of output. The factories are our

minds, and access to capital and the ability to find partners are no longer a problem.

Enter today's third player: the linchpins. Linchpins are not proles waiting for instructions, nor are they, industry barons. But they leverage something internal to create value.
They are artists who can find new answers, new connections, or a new way of doing things.

> **If you've got something to say, say it, and think well of yourself while you learn to say it better.**

Chapter 2: Thinking About Your Choice

The new American Dream that is being embraced all over the world is this:

- Be remarkable
- Be generous
- Create art
- Make judgment calls
- Connect people and ideas

And if you are an employer: obedient and artistic are antithetic, if you're looking for obedient employees, you'll never employ artists.

Chapter 4: Becoming The Linchpin

These are the characteristics of a *Linchpin*:

- **Run towards fear**

Linchpins *do* feel the fear, acknowledge it, and then proceed anyway.
Seth Godin says he can't tell you how to do it, but it's a prerequisite for success.

- **Knowledge is like opinions**

Linchpins are not just knowledgeable.
Knowledge is worth little in the age of Google. Depth of knowledge with insight instead is worth a lot.
The linchpin can walk into chaos and create order, invent, connect, and make things happen.

- **The limit is the asymptote**

Asymptotic is anything with a ceiling or an upper limit.
Bowling is asymptotic because there's a fixed ceiling (the number of pins). The Six Sigma approach is similar: there's an upper limit.
Organizations and people achieving dramatic success do so in fields *without* asymptotes.

> **If you can't be remarkable, probably you should do nothing until you can.**

- **Don't get a CV**

You are not your CV, you are your work.

And the only way to prove you are a *linchpin*, someone worth moving to the top of the pile and worth hiring, is to show, not tell.

And if they can't get your point, the linchpin says "I don't want a job a non-linchpin could get". Remarkable people deserve remarkable jobs.

If the game is designed for you to lose, don't play that game. Play a different one.

Chapter 5: Is It Possible To Do Hard Work In a Cubicle?

Seth Godin says that in everything you do, it's possible to be an artist.

What is art

Art requires an element of risk and daring: **if it's risk-free it's usually not art**.
And a certain complexity: your art is what you do when no one can tell you exactly how to do it.
The last element that defines art is the gift: you can't do it just for money.

Salaried Wok (=You're Owned)

He says he hates that approach to life as it cheapens us.

First, he asks, are you willing to sell yourself so cheaply?
Do you want to swap an entire, irreplaceable day of your life for a few bucks?

When you sell yourself for money, you're not the artist you could be.
And second, it's a cold, mathematical transaction with no added value (I give you money, you give me time).
At the end of the day, there's no bond: you are owed nothing and I owe you nothing.

The alternative is to use that day as your chance to do art, not available to anyone merely because he's the highest bidder.

Who's your boss?

The artist is supposed to change us.

But when you have a boss too often your job is to please that boss rather than changing him/her or the people around you.

It's OK to have someone you work for. And it's also OK having someone watching over you and paying you. But the moment you treat that person like a boss in charge of your choices and output, then you're not an artist. You're a cog.

> **You can't be an artist when someone owns you**

The myth of project-specific passion

Seth Godin also debunks the idea of "finding your passion".

You don't magically find your passion.
Jeff Bezos wouldn't have been sitting around in the pre-Internet era and Spike Lee wouldn't be an average Joe if he hadn't found a camera.

Passion is not dependent on a particular project or endeavor. It's inside of us.

Perhaps your challenge isn't finding a better project, maybe you need to get in touch with the fire within you and learn to become more passionate.
Because the combination of passion and art will make you a linchpin.

Who is it for?

You will not be able to do art for everyone. As a matter of fact, art for everyone is mediocre.
Your art must be focused.

Gifts VS MBAs

The digitization of work makes MBAs happy.
Today you can measure and put stuff on a spreadsheet, hallelujah!

The problem is that everyone is doing the same. Your competitors are analyzing the same data and using the same spreadsheet.

Similarly to asymptotes, in data-driven environments, there's little room for quantum growth.
The easier it is to quantify, the less it's worth.

The passion to spread

Passion means caring so much about your art that you would do almost anything to spread it.

And it can also mean giving up parts you love in order to spread the rest.

Seth Godin mentions people he knows who write books that don't sell and still refuse to change anything to "stay true to their art".

That way through their art is useless because it's not being consumed.
And if not consumed it's not art, only effort.

> **Swapping your days for a salary. Are you willing to sell yourself so cheaply?**

Chapter 6: The Resistance

The only purpose to start is to finish.

The project we are working on never really finish, but they must ship.
Real artists ship.

Shipping means hitting the publish button, doing the sales pitch, and picking up the phone. Shipping is where your art meets the world.

Seth Godin says that meeting deadlines regularly, without hassle, emergency, or fear, is a rare skill and something that will make you indispensable.

The Lizard Brain

And here we get to the all-important resistance.

What's stopping you from delivering your art?
Seth Godin says it's fear.
It's the fear of being ridiculed, of standing out and standing for something. And we're even afraid of openly talking about this kind of fear.

In ourselves, we have a daemon, which is our artistic genius, and the resistance, which is our lizard brain shackling the daemon.

Indeed, Seth Godin emphatically says: **We don't need more genius, we need less resistance.**

Here are a few ways the lizard brain typically stops you:

- "I don't have any good ideas."
- "I didn't graduate from [*insert brand of some prestigious educational institution here]*"
- "My boss won't let me."

And now please add to that list "and people will laugh at me if I try". Great, now at least you got your real reason in

there.

One way to control is it rationalize what's happening and say it out loud

- "My lizard brain is making me anxious."
- "I'm angry right now because being angry is keeping me from doing my work."

Another way to dominate the resistance is to always head directly into the resistance.
Quit the tasks you're doing out of fear and do the tasks you're afraid of. Once you start doing work that matters, the lizard brain will silence and you will hear the full roar of your daemon.

Seth Godin also recommends you don't set up a judge for your goal. Not having a judge will let you work on your art without alerting the resistance.

Seth Godin says that the difference between a successful artist and a failed one happens after the idea is hatched.

The difference is the race to completion.

Did you finish?

Developing plan B

You will have people coming to you with nice suggestions.

The nice suggestion is often that you should get a backup plan in case things don't go as hoped.

And you know what happens when you get a plan B? You settle for that.
As soon as you say "I'll try my best" rather than "I will", you leave the door ajar for the lizard brain to bust through and re-set camp in your mind.

Anxiety

Anxiety is fear about fear. Basically, a fear that serves nothing.

Fear is often a spiral: it's triggered by something small and immediately takes over.
Seth Godin says you control anxiety by embracing it. Don't assuage it, don't try to force it away. So the next time you're afraid that you got the passport and you already checked, don't check again! And don't get up to check the lights!

> **The difference is the race to completion. Did you finish? " username**

Chapter 7: The Powerful Culture of Gifts

Seth Godin says we evolved based on mutual support and generosity and that we're made to give rather than to receive.

Becoming a *linchpin* is an act of generosity because it will give you the platform for giving gifts and expanding what he calls emotional labor.

Some people see gifts in light of receiving. Some others to get something back (possibly something bigger). The most successful ones give gifts as a demonstration of love, they like giving gifts because it gives them joy. They seek respect, not reciprocity.

Being a *linchpin* is about delivering gifts that can never be adequately paid for.
And don't worry about being left with nothing: gifts signal the world that we have plenty more to share, and the more you have in your cup, the more people are to want a drink.

Friendlies

The Internet has added another layer between friends and business: the friendlies.
These are followers and admirers who might be friends one day. When you focus on friends and friendlies, the business circle (money) will take care of itself.

What art will you do?

And now the big question is: how do you know what kind of artist to become and what gifts to give?

There's no obvious answer and finding the answer will be the key to your success.
You have to find the map.
But here's the news: there's no ready-made map.

Chapter 8: There Is NO Map

But that's also great news.

The reason why art is valuable is precisely that nobody can tell you how to do it. Art is the act of navigating without a map, the ability to forge your own path, to discover a new route.

Seth Godin also refreshes on an important concept all successful author insists upon: the linchpin also accepts the world as it is and doesn't waste any effort on what he can't control.

Chapter 9: Making The Choice

If you are only working for the person on top of you in the org chart you may be scarifying your future.

Unless you are being an artist.
Deep down you probably know the truth. Think about it.

And if you're not doing art, If your agenda is set by someone else and it doesn't lead you where you want to go, why is it your agenda?

Lean in and seek out projects where you can make a difference and don't accept anything below your potential.
And if not possible, if you don't have any room for work that matters, draw your own map and lead.

How to find your passion

And here's Seth Godin answer to people looking for their passion: you don't look for something that matches your passion. You transfer your passion to what you're doing.

How does a linchpin work

In a world where indispensable people are so rare, the linchpin has two options:

1. Hire factory workers. Take advantage of the fact that most people want a map and will surrender their time on the cheap
2. Find a boss who understands the value of a linchpin and rewards you with freedom and respect. Do the work and make a difference.

And if you aren't doing either of those, why are you still there?

Failure and ego

You will fail, and often.

And that's when your lizard brain will rear its ugly head again.
He will highlight the critics, and emphasize your mistakes and missteps.

Successful people learn from failure too, but it's never that you shouldn't have tried in the first place (more key literature on learning: *The Obstacle Is The Way; Sometimes You Win Sometimes You Learn)*

And what about all those people hurting you? They are only getting away with it because you allow them to.
Be open to feedback, but don't let harmful comments get to you (discerning feedback from degrading criticism will take some practice).

Worst kind of attachment outcome

Some people often feel bad and have nostalgia not just for the past, but for the future IF things had gone differently. Ie. if they hadn't been fired, if they were still together with their ex etc.

Seth Godin says that's the worst kind of outcome attachment because, well, we can't control it.

I smile proudly looking at how far I have come from a past when that was exactly me, so I can vouch for the fact you can change that :).

Visionary leaders instead see a future with different rules and move and act to have that kind of different future.

> **If your agenda is set by someone else and it doesn't lead you where you want to go, why is it your agenda?**

Chapter 10: The Culture Of Connection

Linchpins do not succeed alone.

They build a web of connections.
Most psychologists agree there are 5 essential traits for doing well with people, which are also the signs of a linchpin: Openness, Conscientiousness, Extraversion, Agreeableness, and Emotional Stability.

You need to get better at them if you want to become a linchpin.

Chapter 11: The Seven Abilities of a Linchpin

Here's what will make you indispensable:

- *creativity:* original and useful
- *unique creativity:* requires domain knowledge, the creativity must be focused
- *delivering unique creativity:* you must ship!
- Managing a situation or organization of great complexity: when it's impossible to follow manual linchpins step in
- Leading customers
- Inspiring staff
- Providing deep domain knowledge with smart decisions and generous contributions
- Possessing a unique talent: as a linchpin, you need to have a superpower that is difficult to replace. So either get all the other ones or get the best in the world at your unique talent

And of course, you have to be amazing at what you do. If all you can do is the task and you're not in a league of your own at doing the task, you're not indispensable.

Chapter 12: When It Doesn't Work

Word of caution:

before you self-appoint yourself as the artist and go pointing fingers at your boss, know that it's very likely your

boss thinks *you* are not contributing as much as you could.

And it's also true your boss will not give you all the freedom of this world because, well, you gotta *earn* it first. Part of your work is indeed earning that trust first, and selling your plans to those around you and above you (see *Extreme Ownership* for more on leading up the chain of command).

The possibility of failure

Now that we have the freedom to create, we must embrace the fact that not all creations are equal, and some people aren't going to win.

It might happen indeed things don't work out.
And that's ok.

What do you do then?

You do MORE ART, you give more gifts. Learn from what you do and then do more.
People committed to their art never stop giving.

Because the alternative, giving up and becoming an old-school cog is not appealing. So you do more.
Trying and failing is better than merely failing.

And keep in mind what you love, but if you need to make a living with it, then you also have to find a niche where money flows as a consequence of your art.

Real-Life Application

Become an artist
Here's a potentially revolutionary way to apply *Linchpin* by Seth Godin.
Ask yourself: *are you in love with your work? Are you doing art?*
Yes? Great.
No? Do yourself and this world a favor and change it.

Embrace anxiety: it works
I absolutely love the idea of not giving in to anxiety. Take the example of the keys, checking twice before you close the door or making sure they're in your pocket 10 times while you're out. They seem small things, but it's the thoughts behind it which are corrosive.
I did try to embrace the anxiety and *not* check again and it did work, so I absolutely recommend it.

CONS

Fear of not fitting in learned at school?
When I hear of people blaming human behavior on schools, churches, or society, I always need to resist the urge to disqualify them. Humans are complex and pinpointing this or that as a single culprit rarely seems the best explanation (Viktor Frankl *on generalizations*).
I believe indeed the fear of not fitting in is not just learned in school but also a major human innate driver (and I'm not the only one).

Artists and convenient descriptions
Linchpins and artists' descriptions feel a bit like reading the horoscope; most people would be nodding their heads, thinking it's exactly them.
It's very convenient, somehow.
Yet, that's also the beauty of *Linchpin* by Seth Godin: you just love reading it, and it can be helpful: we remember more and are more moved by well-crafted words.
So it's not a con but its greatest asset IF you don't just nod your head but also let it spur you to action.

Linchpin Review

Linchpin by Seth Godin is one of those rare books combining a great reading experience, great insight, and a motivating force to take action.

Two more things I'd like to highlight which are key:

Master Artist
Learning to overcome resistance is indeed critical. Read more on critical identity mindsets to spur you to action.
Just one thing I'd like to add to the puzzle: make sure you also focus on delivering and sharing *great* art.

The Lizard Brain
I was surprised to read Seth Godin stopped writing *Linchpin* a dozen times.

I'd urge you to reflect on that. Here is a world-famous author, rich and experienced. And he was *still* afraid. It goes to tell us that nobody is above and beyond the resistance, not even the people telling you how to overcome it.
So don't worry, it's not just you who's afraid. We all are. It's my struggle, it's your struggle, it's our struggle. But we keep going anyway. Welcome to the club.

Downrating Note:

I demoted it from 5 stars to 4 after realizing it takes most of its ideas from *The War of Art*.

Get Linchpin on Amazon.

Relentless: Summary & Review

Lucio Buffalmano · 20 July 2017 · Archived copy · Original

In *Relentless* (2013) star athlete trainer Tim Grover shares the insights he gained into the psychology and personality of hyper-achievers and super-driven men.

Bullet Summary

- Cleaners are driven by their dark side: get in touch with it rather than hide it
- Find your buttons to enter the Zone. Then use anger for top performance
- When you become amazing at your craft you don't think anymore. That's when you go off instincts
- Don't compete with others. Make *them* sweat to compete with *you*

Relentless Summary

Tim Grover talks about the mentality of the very top performers, the unstoppable ones whom he defines as "Cleaners".

Cleaners are the top of the top, "Closers" are great performers, and "Coolers" are very good performers.

The difference is mostly a mindset.

Let's see:

Don't Think

Tim Grover starts with a powerful one-two when he says:

> from now on your strategy is to make everyone else get on your level.

You're not competing with anyone else, *they* will have to compete with you.

And if you're into that wishy-washy "failing is ok" line of thinking, Tim Grover is not.
He says "the end result is all that matters".

Relentless is about never being content, about driving to be the best and then getting yet again to a whole new level, even if that level doesn't exist yet.
It's about facing your fears and being feared and respected not so much for your physical abilities but for your mental ones.

And worry not if you feel out of sorts at times.
You can always retreat to that secret place of yours where you're always in total control.
A place where there is no external pressure. Just your and your internal pressure to prove yourself, over and over.

Because you want it for yourself, not for anyone else.

> **Proving yourself over and over: you want it for yourself, not for anyone**

The Cleaner You Are The Dirtier It Gets

Tim Grover says *Relentless* means you're never satisfied and you create new higher goals as soon as you reach your personal best.

If you're good you don't stop until you're great and when you're great you don't stop until you're unstoppable.
In Grover's words being *relentless* means becoming a Cleaner.

A Cleaner is not about stardom and bling, it's about winning and winning again and again.
The Cleaner is addicted to success and is driven to do whatever it takes to win. And if that means breaking the

rules, be it, because Cleaners are also rule breakers when they need to.

The author says the Cleaner's attitude is that you own it and control it.
It's not about the actual job you do, it's about the attitude.

Whatever you do, you take responsibility to make things happen because you always put yourself in the position to carry the load for everyone else.

I loved the example Tim Grover has about the Cleaner's bus driver who knows all the passengers and their schedule, is friendly and smiling but silently thinks *"this is my fu**ing bus; it will be clean and on time, and anyone who messes with me or my bus will be back on the street walking".*

Cleaners are calm and collected, never too high or too low, and never too happy or depressed.
A Cleaner doesn't see problems but situations to be resolved and when he knows the solution he doesn't explain it, but simply says "I got this".

Failure is not an option for Cleaners: even if succeeding will take years he will find a way and will not stop until he succeeds.

Sounds great?

Well, being **a Cleaner also has a dark side**, Tim Grover says.

Cleaners also never stop working because it gives them too much time to ponder on their dark side and on what they had to endure and give up to get to where they are.

A Cleaner is also consumed by his addiction which takes center stage above all else in his life.
And that's a conundrum for the Cleaner: he is all about control, so when the addiction is controlling him he'll back off for a while. And then often come back with a renewed appetite.

Cleaners get what they want but pay for it by being alone and rarely understood.

> **You walk in confidently and leave with results.**

Closers

The author says a Closer can handle pressure and he'll get the job done if you tell him what he needs to do.

He will prepare and study all possible scenarios so he can anticipate them. Indeed, a Closer is uncomfortable with unexpected events he didn't prepare for.

Contrary to the Cleaner, a Closer loves and seeks attention and credit and is always paying attention to what others are doing and what they're thinking of him.

Money and fame are not so secondary for Closers, and he would choose financial security over winning.

Coolers

Tim Grover says a Cooler waits for the instructions, waits to see what all the others are doing, and then follows the leader. He doesn't take sides unless he has to and when things get too intense he kicks the problem over to someone else.
A Cooler can make a great play, but he's not ultimately responsible for the outcome. He leaves that to Closers and Cleaners.

Coolers VS Closers VS Cleaners:

Consistency:

- Coolers can have an amazing game.

- Closers can have an amazing season.
- Cleaners have amazing careers.

Competition:

- Coolers worry about the competition and how they measure up.
- Closers study the competition and plan their attack based on the opponent.
- Cleaners make the competition study them; they don't care whom they're facing, they know they can handle anyone.

Internal contentment:

- Coolers let others decide whether they're successful; they do the job and wait to see if you approve.
- Closers feel successful when they get the job done.
- Cleaners never feel as if they've achieved success because there's always more to do.

#1 – You push yourself harder when everyone else has had enough

Tim Grover says the mind comes first. First, you train your mind, then your body will follow.

Every single day you gotta put in the work and push past your fears and laziness and learn to be comfortable doing the uncomfortable.
Cleaners do the hardest thing first and they always focus on the destination, not on the hardship to get there.

How do you do that?

Well, you gotta crave the result so intensely that all that stands in between is just a means to an end.

It's hard not to quote Tim Grover verbatim here because it's just so powerful:

> *Bottom line if you want success of any kind: you have to be comfortable being uncomfortable.*
> *Every time you think you can't, you have to do it anyway.*
> *That last mile, the last set, the last 5 mins on the clock.*
> *When your body is screaming and depleted and telling you "no way, a**hole", you work harder and tell yourself "Do it. Now."*

You have to control your body, not the other way around.

My Note:
this reminds me of what Tony Robbins says: he used to jump out of bed and swim in freezing water to toughen his spirit and mind. His goal was that when his mind said something, the body follows

#2 – You get into a zone and control the uncontrollable

The zone has become a buzzword, but what does it even feel like?

The Zone

Tim Grover says that in the zone you don't hear anything.

Your only emotion is anger.
But it's never bursting out, it's quiet anger, simmering under your skin like a stealth predator waiting in ambush.
The zone is deeply calm, but not peaceful: it's intense focus.

Tim Grover says he can't stand athletes saying they switch on when they're under the spotlight because when you're

in the zone you shouldn't even notice the spotlights -or need them, for that matter-.

> **In the zone your only emotion is anger.**

How to find the zone

Of course, your next question is how to find the zone I suppose :).

The author says we all have triggers for it and it's different for everyone. However, the key is that it always comes from your dark zone.

Start with your past performance first: have you ever been in the zone?

What have you done to get there?
Or maybe you can think about your past, about a wound you still have open.
Or about someone screaming at you, or scathingly criticizing you.

Tim Grover says for some it can be questioning their manhood or ability and for some, it's a physical confrontation.

Sometimes to reconnect his athletes with their instincts Tim Grover would play old music to bring back childhood memories, taking them back to whom they used to be before there was any pressure to be different.

And when he gets it right, the heart rate drops instantly a few beats and there's always a smile.
Then he knows it's working.

Cleaners and emotions

A Cleaner doesn't get emotional but stays cool and calm saving all his energies for when it matters.
The only exception to showing emotions is if it will help him win, not because he lost control.

Tim Grover says that before game time he doesn't want to see players screaming and dancing and building each other up emotionally: it's a flash in the pan and if you start too hot you can only turn cold.

He takes Michael Jordan demeanor as an example and how he'd avoid any physical contact.
Just a fist bump or a subtle high five, very subdued and never making eye contact.

Grover is quite firm in outlining that emotions make you weak.
The fastest way *not* to get into the zone is to let emotions drive your actions. The only notable being exception is anger -the anger you can control and channel-.

Fear and nervousness

Fear and nervousness are also always a big topic when it comes to performance in key moments.

Tim Grover says that Cleaners also get nervous.
Michael Jordan admitted he had butterflies before big games, to which Grover would reply to get them going in the same direction. Butterflies are not going away, but your task is to *use* them to make you better.

Energy instead of emotions.
Big difference.

> **A Cleaner thinks "if I'm feeling nervous, how the f**k are they feeling? They have to deal with me**

Get a routine!

Tim Grover also suggests another great way to deal with fear and butterflies: a routine.

You practice the routine before your performances and it should not vary, whether it's a meaningless friendly game

or a final.

Stick to your routine and never tell people “leave me alone because I got big stuff coming up”.
That’s the worst you can do because you have just become emotional.

What to think before your key moment

Tim Grover says that players always ask him what to think before the free throw.
He says it has to be something personal and ideally if you’re truly in the zone, you think of nothing: it’s just you and the task as if you were alone in the world.
Or he suggests you tell yourself “it’s just a shot, not the end of the world either way”.
Alternatively, if you have to go somewhere in your head, he suggests going somewhere positive, like your kids or anything relaxing and happy.

My note:
The calmness of being in the zone reminds me of the 2006 World Cup final penalty shootout. The World Cup is the biggest sports event and shootouts are the tensest moment.
Look at Pirlo’s expression before shooting. Look at how he breathes out, notice his “think of nothing eyes”. It’s as if he’s forgetting about the external world and only focusing on himself. And how subdued is his celebration afterward?

When People Get Out of The Zone

With his characteristic vivid language, Tim Grover tells us that when a previous Cleaner falls out of the zone it’s as if he went from a silverback to a pussycat.
Interestingly, Grover says it usually happens when the dark side of the Cleaner’s life has been somehow rocked, for example by becoming public through a scandal.

And how do you get back in the zone from there?

Either something catastrophic happens to rebuild the dark side, or you are unapologetic about what happened (Tim Grover says he wished Tiger Woods hadn’t apologized for his scandal).

#3 – You know Exactly Who You Are

We’re all born bad but taught to be good (i.e.: born relentless and taught to relent).

Tim Grover stresses how key it is to trust yourself.
And of course, a big part of trusting yourself comes from hard, constant work.

Grover says you’ll reach a point when your body and mind reflexively know what to do all the time and *then* you can let your instincts take over. *Then* you can trust yourself to dominate any situation.
Then you can stop studying the competition and make the competition study you.

It doesn’t mean you stop learning, the greats learn everything and still never stop learning. But real learning doesn’t mean clinging to the lessons.

The real learning Grover is talking about means absorbing everything you can and then trusting your inner self, instinctively and without thinking.

In typical Tim Grover fashion, he doesn’t resist throwing a jab, and I thought that was so funny I just have to quote him:

> Oprah once said, “Every right decision I’ve ever made has come from my gut, and every wrong decision I’ve ever made was a result of me not listening.”
> Exactly.

> Of course, she also spent twenty-five years doing a show for people who preferred listening to her instead of listening to their own gut, as she told them whom they should believe and what they should do and how they should change.
> Every day, millions of people showed up to hear someone tell them what they were doing wrong, so they could receive instructions on how to live according to someone else's standards.

You gotta love Tim Grover.

Ideas and Actions

Look inside of yourself and ask: how would it feel if you could let go of all the pressure and just be yourself?
External pressure is one of the reasons many people don't start what they finish. And finishing is the most important part.
Anyone can have a great idea, but it's what you do with that idea that defines you.

And here's a completion for the three different personalities:

- A Cooler would talk about his idea (thought-mouth);
- A Closer would think and feel about the idea (thought-heart).
- A Cleaner would put it into immediate action (thought-gut, total confidence in his gut).

> **When you're great, you trust your instincts. When you're unstoppable, your instincts trust you.**

#4 – Your Dark Side Refuses To Be Taught Good

Tim Grover takes the example of Dr. Jekill and Mr. Hyde.

Cleaners in the zone transform into their Mr. Hyde alter ego, dropping all external and internal inhibitions to embrace their dark side and who they really are.
And that's where the ability to perform instinctively comes from.

Tim Grover presents it as a fact that every highly successful or highly driven individual has -without exception, he says- a dark side.

It's that dark side that drives their dominance, and it can be a fire to prove greatness, sexual energy, or even insecurity. It's different for everyone, but it's deep inside where no one else can see it.

The dark side is that part of you refusing to be ordinary, that part that stays raw and untamed. It's that part you keep in the dark, craving things you don't talk about. And you don't care how it comes across because it's who you are and you don't even wanna change it.

My Note:
I find it fascinating Tim Grover also includes insecurity as one of the main drivers to success. It's funny as practically all self-help literature only talks about how to remove your insecurity.
It's been my experience in life that some of the most driven people I have seen were, beyond their rougher external shells, deeply insecure and sometimes troubled individuals.

Cleaners control their dark side

But a Cleaner doesn't give in to these urges -that would be weakness-, he controls them.

When tales from the dark side become public, everyone usually sits in judgment and thinks, "He couldn't control himself. Weak."

But it's Cleaners saying that.

Understand this: **a Cleaner doesn't want to give up the thing you disapprove of**. For him, it's a strength, his choice.
Weakness would mean giving up what he craved because he was afraid of getting caught.

Cleaners often go to a place they call home to detach from the dark side. It's the built-in safety valve. And that's why so many men fight to stay in their marriages: that's their safe sanctuary.

#5 – You're Not Intimidated By Pressure, You Thrive On It

Tim Grover has a nice take on those athletes who "step up when it matters" and says it's not something positive at all. It's like asking where were you in all the other games, why weren't you as good and effective before?

Being relentless means working at all times for that result, not just in the last two seconds when drama is on the line.

Fear of Winning

Tim Grover also has an extremely interesting take on the fear of winning.

e says many are afraid of taking the last-second shot because they might miss it, but because they might make it, and then the expectation is they'll have to keep making it.

Cleaners instead crave that pressure.
They love it keeps them on their toes. They don't want to relax. Relaxing for a Cleaner is what weaker people do.

And now the funny part: put a Cleaner in a situation where they're supposed to relax, like a vacation he didn't want to take or a day off without working out, and he will become more stressed thinking about how he's slacking.

Stress

Tim Grover tells his guys to run towards stress. Stress challenges you and keeps you sharp. You can't have success without stress and your level of success is defined by how you manage stress.

How a Cleaner Reacts to People Putting Pressure

There's an extremely interesting part in which Tim Grover says LeBron is not a Cleaner because he gives in to external pressure.

Another player told the media LeBron can't defend another player. LeBron refuses to comment, but later he *did* comment, and at length.

That was typical Closer says Tim Grover: he thought about it, allowed it to become a distraction, and felt the pressure to prove something.
A cleaner would have put the pressure back on the guy by getting under his skin by not acknowledging him.

Indeed a Cleaner doesn't respond to external pressure. They don't feel external pressure because they are focused on themselves and on their own internal pressure. And they put so much pressure on themselves that anything external barely registers.

#6 – In Emergencies... They're All Looking For You

Tim Grover here says that Cleaners often get the last call, the one coming when the emergency seems unmanageable.

Many have already tried and failed to fix it, and now they're calling for you.

He says it happens to him every time when players arrive out of shape at training camp -thus implying he's a Cleaner-.

He says he will show up prepared and with something to offer, and he is 100% he can have a positive impact on any situation. And if that sounds like showboating, he says, it's fine with him.

The Cleaner job, he says, is often to go in and fix what wasn't working.

Not everybody wants that job, because you always step in at key moments and it leaves you very open and vulnerable to failures, but that's not how a Cleaner thinks because:

> *Nothing feels risky to a Cleaner; whatever happens, he'll know what to do*

Cleaners think *Before*

A cleaner can go with any plan and be ready when things go off plan because his instincts will take over.

It's not about "positive thinking", it's about having done so much hard work beforehand that he knows everything there is to know.

Do your thinking in advance, build your reflexes, and be open to whatever comes.

Cleaners and Mistakes

A Cleaner has no problem admitting he made a mistake and taking the blame. He will look at you and say "I fu**ed up" (taking the blame is also *what great leaders do*). A Cooler will give you excuses. And a Closer will blame someone else.

And Cleaners will also come to you and openly tell you that you fu**ed up. To you it might feel like a sneak attack, to the Cleaner it's just how it works.

Tim Grover says it's a question of confidence: Cleaners have such high confidence they know they can make it right.

I also like how Tim Grover goes into the "owning up" mentality.
He says you should own not just your mistakes, but also all the bad choices you've done.

That's your reputation and if you want your opinions to have value, then you must own up to them in good and bad times.

#7 – You Don't Compete With Anyone

When you're at the top it's up to you to pull everyone else up with you.

Some skilled players will lower their game or slow down so their teammates can feel more confident.
Silly move: the only way you can light the people around you is by being on fire yourself and the only way they can catch up is if you show them how it's done.

Two more things I found interesting in the chapter: Michael Jordan said the team was his supporting cast, which I'm not too sure how well it played in reaching the final goal of success.

And the other one is that a Cleaner, inside, never forgives and never, ever, forgets.

#8 – You Make Decisions, Not Suggestions

Tim Grover chastises big words in the self-help business such as "inner drive", "passion", and "half-full glass".

"Follow your passion" makes no sense, he says, what about "work on your passion" instead, excel at it, demand to become the best at it, and then follow through?

And if you're talking about "glass half full" you're engaging in mental masturbation instead of deciding and getting

down to it.

My note:
this reminded me of *Grit* by Angela Duckworth which explains that you indeed *build* your passions and become a master while you learn to love your discipline.

Tim Grover is very caustic here of pundits who encourage people to "visualize" as visualizing doesn't make it a reality.
My Note:
Tim Grover seems to mock the very hip "Law of Attraction" here, which is basically telling people to visualize things to make them a reality (see Conor McGregor using the Law of Attraction).

A Cleaner doesn't waste time: he makes a decision and sticks with it.
Say Grover: figure out what you do, then do it. And do it better than anyone else.

> **When you're great, you trust your instincts. When you're unstoppable, your instincts trust you.**

#9 – You Don't Love The Work But You're Addicted To Results

It doesn't matter what you have been given or what you were born with. It's what you do after that gives you the privilege of saying you did it.

Of course, the more gifted go to the top faster. And? That's not an excuse for not reaching as high.

I also like how Tim Grover underlines how most people are looking for quick fixes, for the elevators of life rather than the harder stairs. He also says hard work is not a skill, it's what will get you to the top and everyone can do it.

> **When you're great, you trust your instincts. When you're unstoppable, your instincts trust you.**

#10 – You'd Rather Be Feared Than Liked

A Cooler is liked, a Closer is respected and a Cleaner is feared.

You don't need to fit in, it's better to stand out. You're not there to make friends, you're there to be the best, and you're not afraid to show it.

Cleaners view people as tools and are careful in putting them in the right position, which is the position that will allow them to win. Once they have a great team in place, they stay committed to it.

Don't get it wrong though, Grover warns, being feared doesn't mean being a jerk, it means people are in awe of what you do and how you do it.

#11 – You Trust Few People. And They Better Not Let You Down

Cleaners always trust themselves the most. They do have a small circle of people they trust and believe in, and those better not let them down.

Cleaners don't explain

A Cleaner just says no. He doesn't sugarcoat it, doesn't make excuses, and doesn't offer explanations afterward. Explanations are a way of saying you're insecure and you're trying to defend your choice.

How to be respected by a Cleaner

Cleaners are not perfect; sometimes they make mistakes too. If you want to be valuable in his circle, be the guy who looks him straight in the eyes and tells him what all others are afraid to say.

He might hate it and even hate you for saying it, but he will respect you and trust you.

Cleaners keep quiet

I love it when Tim Grover draws parallels between his definition of a Cleaner and the Ultimate Cleaner which is… Can you guess? The Godfather.

Like The Godfather, Cleaners keep it quiet and intimidate their opponent by not saying a word.

When people make big shows of what and how they're going to do, they are actually trying to convince themselves. But the loudest guy in the room is the one with the most to prove.

Here's a full article on the "quiet dominance style of the Godfather".

Photo by labnol

#12 – You Don't Recognize Failure

Cleaners don't stop until they achieve their goal.
Tim Grover says that when people tell you you failed what they really mean is that they, in your shoes, would feel like a failure. Well, you're not that guy, and you stop when *you* say you are done.

Try or DO?

I love when Tim Grover says "fu** try". Trying is how failure starts. It's another way of saying that if you fail it's ok, you tried. And then he asks "did you *try* your best or did you *do* your best?"

Don't try. Do, or don't do. And if you do and it doesn't work, do it again.

> **When you're great, you trust your instincts. When you're unstoppable, your instincts trust you.**

#13 – You Don't Celebrate Because You Always Want More

Coolers and Closers love a celebration.
But Cleaners don't celebrate because they always want more.

Everyone will tell him he did great, but external approval means nothing to a Cleaner because he only heeds his own standards, which are far above anything anyone can possibly set for him.

Even in victory, the Cleaner will think about how he could have done it better, smarter, or in any different way than he actually did. And that's the difference between great and unstoppable: the drive to close the gap between "almost perfect" and "perfect".

Tim Grover says the greatest battles you will ever fight are with yourself, and you must always be your toughest opponent. Always demand more of yourself than others demand of you.

The End

Your dreams are nothing but your instincts. Don't wake up and forget about them. Chase them instead, let them take you where you want to be, and make them happen.

Everything you want can be yours.
Be a cleaner and go get it.
Be relentless.

> **When you're great, you trust your instincts. When you're unstoppable, your instincts trust you.**

Real-Life Applications

Use your dark side
Don't the do-gooders influence you: don't try to repress your dark side. Don't force yourself to forget and forgive, to give the other cheek. Use your anger to fuel you!

Trust your instincts (and know your sh)**
Once you know your stuff, do let go of fear and study the competition and embrace your inner daemon. Let your inner fire drive you to victory.

CONS

Is relentlessness the ideal, or is it not?
You gotta wonder whether being relentless is a good thing for the relentless person, or if it's more like a curse. Read more on the law of balance:

> The Law of Optimum Balance

Tim Grover's gym is doing great. So what?
The author spends too much time attacking the people who criticized him and rumored his gym was a failure. That was a low, low point in the book and very unnecessary. It's a real pity because the rest of the book is spectacular.

People don't change?
Tim Grover says that people don't change. We don't fully agree with that.

Relentless Review

Relentless is an amazing book.

I disagree the end result should be your sole and final yardstick because you should build your self-esteem around something you *fully* control. And that's not always the case for the final result (same as *Extreme Ownership*).
I think insecurity as a dark side is not your best option or at the very least you should keep it very limited and stress, which Grover at times seems to glorify, should be moderate -research shows moderate levels are helpful, too much is not-.

I particularly loved:

Make your competition compete with you
Don't worry too much about your competition. Focus on being unstoppable instead.

Learn everything. And then trust your guts
Powerful concept.

Embrace your dark side
The most powerful concept of the whole book, and it was a huge realization for me since I have grown up with the idea of "forgetting and moving on is superior". It can be, but also harnessing the power of anger and revenge and potentially hitting back can be great options.

Bullet Summary

- Find a WHY -a purpose or belief- for your company and stay consistent with it in all you do
- Find a WHY in your life and never forget about it for true happiness and passion
- People buy WHY (what you stand for), not WHATs (products)

Summary

Simon Sinek says that people and organizations who can inspire us give us a sense of purpose or belonging that has little to do with external incentives and benefits.

These inspired organizations appeal to us at a deeper level (also read *Drive* by Daniel Pink for more on internal motivation).

Learning how to inspire with your WHY is a win-win for everyone.
The more people and organizations communicate correctly, the more we will be fulfilled.
Starting with why, then, is a way to improve lives.

Chapter 1 – Assume You Know

Sinek starts with the example of car manufacturers.

In America, employees apply the final fixes on the doors with a rubber mallet, while in Japan the doors simply fit perfectly.

He says that's also a metaphor for leadership: there are those who decide to manipulate to get to the end result, and there are those who start with the end result in mind and let everything else naturally fall into place.

Also, read:

- Dark psychology manipulation: there is an overview of leadership manipulation

> Manipulation: Techniques, Strategies, & Ethics

Chapter 2 – Carrots and Sticks

Simon Sinek says there are two ways companies attract customers:

1. Inspiring -the carrots-
2. Manipulating -the sticks-.

Manipulations are not actual "sticks" but sales, promotions, customer programs, and similar.

Manipulations *do* work, says the author.

As a matter of fact, when you need behavior to happen once only, then manipulations are the best way to go.
But when you want more than a single transaction, when you want a loyal, lasting relationship, then you are better served with inspiration.

WHATs and Price Wars

When you are defined by WHAT you do, your product becomes a commodity.

At that point, price, quality, service, and features are the primary ways to motivate a purchase decision.

It becomes very hard to differentiate and build loyalty, and that's why most companies resort to what Sinek calls "manipulations": sales, promotions, influencing tricks, etc.

Chapter 3 – The Golden Circle

But how do you inspire? What does "*Start With WHY*" even mean?
Simon Sinek explains it with the Golden Circle.

Photo by Gavin Llewellyn [image]

WHATs, HOWs, And WHYs

- WHAT is what you physically produce or offer as a service
- HOW is the culture and systems in which you produce your WHATs
- WHY is the purpose behind it all, the reason why you get out of bed

Every company knows WHAT they do because everyone can easily describe the products or the function they have within that organization.

HOWs are values and principles guiding how you bring your cause to life. HOW shapes the systems and culture within a company (also read: *The Culture Code*).

Understanding HOW you do things and holding the whole company and workforce accountable gives companies great strength.
For example, it gives companies greater ability to hire people who will thrive in the organization.

HOWs are most effective when they are verbs. So Sinek says it's not "integrity", it's "do the right thing"; It's not "innovation", it's "look at the problem from a different angle"

WHY, says Simon Sinek, is ironically rather simple to discover -WHY do you do what you do?-
However, most companies say WHAT they do, sometimes HOW they do it, but rarely WHY they do what they do.

That's not the case for inspired companies and inspired leaders though. Simon Sinek says that every single inspired company or leader thinks, acts, and communicates from the inside out. They "start from WHY".

That's key to building a following and even selling because, as Sinek stresses many times, people buy WHYs, not WHATs.

Inspired Companies and Leaders

When we start with WHY we go from the inside out of the circle.

WHY is the reason to buy and the WHATs merely represent the tangible products as proof of that belief.
WHATs are the reasons we can point to rationalize why we so much like one company over another?

Simon Sinek heavily cites Apple throughout the book.

He says there is nothing technically special about Apple, it's just a company like another.
There's no real difference from its competitors.

But Apple communicates from the WHY.
Apple's WHY is to challenge the status quo and empower the individual. And their challenging the status quo is a pattern repeating in all they say and do, which is the reason why people perceive Apple as authentic.

Products Represent People

Some marketing professionals will tell you Apple sells a lifestyle.

Well, Simon Sinek disagrees and puts it the other way around: Apple doesn't sell a lifestyle, Apple is simply one of those brands that people with a certain lifestyle are attracted to.

The products they choose become proof of WHY they do the things they do. And they can use Apple's products because Apple's WHY is so clear.

It's the same for other brands that managed to build a following: Harley Davidson fits into a well-defined group and Prada fits the lifestyle of another group.
It is the *cause* that these companies represent that inspires loyalty.

The loyalists and cheerleaders for each brand will tell you they choose them based on features and benefits, but in truth, the bond is deeper: it's about who they are.

Chapter 4 – This is Not Opinion, This is Biology

Simon Sinek says that's not just his opinion but it's rooted in biology and the drive to belong.

We want to be around people -and organizations- who are like us and share our beliefs.

When companies start with WHY, with what they believe, they will tap into our innate drive to include those products as symbols of *our* values and beliefs.
They make us feel special like we belong to something bigger, and we feel a sense of tribe affiliation with all the others buying the same products.

Start With Why Example: Apple VS MAC

Look at the Apple commercial "I'm a MAC and I'm a PC" and you will get an idea of who a Mac user is:

The Mac type is a young guy, dressed casually, relaxed, and with a sense of humor making fun of "the system".

The PC is in a suit and looks grey and boring.

Neither is better, Simon Sinek says, it's about where you feel like you belong.
Are you with the majority or are you a contrarian? Apple defines itself as a contrarian.

And the opposite is true: that same drive to belong also make us feel what does not belong.
It's something deep inside that we can't verbalize often, but it's what makes us queasy about buying an mp3 player from Dell: it doesn't feel right because Dell only belongs to computers.

WHY Talks to Limbic Brain

When organizations and leaders start from why they are talking directly to the part of the brain controlling decisions ("gut decisions").

People make decisions that just "feel right", cannot explain why they did it and will rationalize it and verbalize it with something else.

So, says Sinek, they won't tell you they choose Apple because they see themselves as someone who likes to challenge the status quo and Apple serves him to prove to the world who he is and what he believes in.

That's what actually happened in the non-rational part of the brain that controls behavior, but people don't have a rational understanding of that. So they will tell you they chose Apple because of the screen resolution, or because there are no viruses.

And, funny enough, Simon Sinek adds that if people made only rational decisions, and did all the research before making a purchase, no one would ever buy a Mac :).

WHATs speak to the rational

When organizations and leaders communicate from their WHATs instead they engage the rational part of our brain.

They force us to take the more stressful and laborious route to decision-making.

Rational decisions indeed take longer, and your WHATs will be pitched against a bunch of other WHATs.
It's in these conditions that manipulative strategies leveraging desires, fantasies, or fears work.

Why Companies Focus on WHAT

Companies start with WHATs and HOWs because that's what their customers ask for.
They ask for great quality, low prices, 24h service, and lots of features.
And it's all scientifically sounding because it's based on data.

But Simon Sinek says that's all baloney: the part of the brain controlling decision-making is different from the part of the brain reporting back WHY that decision happened.

So all those focus groups and questionnaires are actually of little value.

And Sinek says there is more evidence that sales don't improve and loyalty is not formed when companies do what their customers *say* they want.

And then Sinek quotes a famous Henry Ford annotation: "*if I had asked people what they wanted they would have said a faster horse*".

> **If I had asked people what they wanted they would have said a faster horse**

Manipulation VS Inspiration

Just to be clear, Simon Sinek says that manipulations also reach the limbic brain when they deploy fear, social

pressure, or aspirational messages.

However, it's only when the message goes deeper that it aligns with our sense of self and our behavior moves from motivated to inspired.
And it's only then that it "feels right" and we are willing to pay a premium.

Chapter 5: Clarity, Discipline & Consistency

Simon Sinek says that a WHY is just a belief, it's not readily touchable and visible. The clarity of your WHY is then more clearly shown through your HOWs and, even more visibly, through your WHATs.

HOWs are the actions you take to realize that belief? And WHATs are the results of those actions –everything you say and do: your products, services…-.

And they all have to prove what you believe. When everything proves your WHY, that's authenticity. You are authentic when your Golden Circle is in balance.

Chapter 6: The Emergency of Trust

Trust, says Simon Sinek, begins to emerge when we see that people and organizations are driven by reasons that go beyond the self-serving.

Aligning WHY, HOWS, and WHATs is a way to build that trust.

WHATs and Differentiation

Simon Sinek says that only companies acting like commodity producers have the constant challenge of differentiating.

And, looking at competitors to add features and benefits, only entrenches the WHAT culture.

In stark contrast companies with a clear sense of WHY tend to ignore their competitors and don't worry about "differentiating". They simply ARE different and don't need to convince anyone about it: everyone knows it.

My Note:
This part reminded me of Tim Grover when he says that unstoppable individuals let the competition study them, not the other way around.

WHY and Flexibility

Since people are inspired and buy WHY you do it, companies that communicate from the WHY have huge flexibility in what they market: a company communicating from the WHY indeed never gets labeled by the WHATs.

Take Apple again, you can buy a computer from Apple of course, but also an mp3 player or a cellphone.

It's not the case for Dell.
Dell defined itself by WHAT they do.

They do computers, so people don't feel comfortable buying anything else from them, like an mp3 player or a PDA.
They tried expanding into different verticals, but quickly retreated to "focus on their core business".

Simon Sinek also calls into question the first mover advantage when WHY is part of the picture.

Creative was more qualified than Apple to produce a digital music product, and they went there first. They marketed it though as a "5GB mp3 player", like a WHAT. Apple marketed the iPod instead as "1.000 songs in your pocket": WHY we needed.

WHY & Hiring

Simon Sinek also expands on the benefit of starting with WHY in the hiring process.

He says that most companies write their job description all about WHAT and not WHY. When you start with WHY instead you exponentially increase your ability to attract people who are passionate about what you stand for.

Sinek mentions Shackleton and his search for crewmen in a dangerous expedition.
His job description ran:

> "*men wanted for hazardous journey. Small wages, bitter cold, long months of complete darkness, constant danger, safe return doubtful. Honour and recognition in case of success.*"

You can rest assured that people applying for such a JD would be ready for anything.

Sinek also says that great companies don't hire skilled people and motivate them, they are motivated people and inspire them.

Steve Jobs didn't come up with any revolutionary idea, but Apple has a strong WHY to attract passionate people. And Apple gives them a purpose around which to develop great ideas. Simon Sinek says Apple employees, similarly to Apple customers, all love a good revolution.

> **Great companies don't hire skilled people and motivate them, they are motivated people and inspire them.**

Chapter 7: How a Tipping Point Tips

Simon Sinek also speaks about the ways new ideas and products spread.

The question, he says, isn't much about how you get influencers to talk about you, but how do you get enough influencers to reach the tipping point?

Sinek then introduces the diffusion curve.
The people waiting for 6h to get the iPhone were all early adopters, on the left of the curve.

The people on the far right instead are never content and never loyal. Sinek says you should know who the people on the far right are so you don't waste money trying to convert them.
After all, these guys will do business with you anyway if you meet their requirements (and will switch at the drop of a hat when you won't).

The goal of a business then is to be crystal clear about their WHY and find people who believe what you believe. Once you get enough of the 15-18% on the left side of the bell curve, they will encourage the rest to follow.

My Note: I invite you to check out The Tipping Point

Chapter 8: Start with Why But Know "How"

Simon Sinek says that energy motivates and can put people in a frenzy. But it's the charisma that inspires, and people with a clear WHY are charismatic people.

His example is Bill Gates as compared to Steve Ballmer.
Sinek says energy is easy to recognize, measure, and even copy. Steve Ballmer was energetic.

Charisma instead is difficult to define, measure and copy.
Bill Gates, in spite of being shy and awkward, is charismatic. Charisma commands loyalty while energy doesn't.

When Steve Ballmer speaks people are energized and maybe excited, but those states tend to dissipate quickly.

When Bill Gates speaks people listen with bated breath and inspire people. They will remember those lessons for weeks, months or years.

For different types of charisma read:

- The Charisma Myth

Energy motivates but charisma inspires

WHY and HOW Types

Simon Sinek says that behind most WHY-type leaders there's a HOW-type who builds the infrastructure which brings the WHY to life.

WHY types are the visionaries with overactive imaginations.
They tend to be optimists who believe that everything they can imagine can be accomplished and they tend to be focused on things most people can't see, like the future.

HOW types are more practical and more realistic and tend to be focused on the things most people can see -and tend to be better at building them-.

Interestingly Simon Sinek says that HOW types can be very successful and make millions but rarely do they build billion-dollar businesses that change the world.
And while HOW types don't need WHY types to do well, WHY types do need HOW types or they'll end up starving visionaries.
And while most successful entrepreneurs fancy themselves as visionaries they're HOW types.

Billion-dollar companies are usually born when a good WHY type meets a good HOW type (example of Walt Disney and Roy).

Vision and Mission Statement

The difference between the WHY and HOW types also introduce the difference between the vision and mission statements in an organization.

The vision is the founder's intent, WHY the company was founded.
The mission is a description of HOW the company will create that future.

When both are clear, it will help the WHY and HOW types to have a clear role in the partnership.

Chapter 9: Know WHY, Know HOW, Then WHAT?

Simon Sinek says that in the early stages of a company, it's easier to keep the Golden Circle working well because the founders make most of the decisions and have the most contact with the outside world.

To keep a healthy Golden Circle as the company grows the leader at the top should represent the emotional limbic brain while WHAT the company says and does represents the rational thought and language of the neocortex. And both have to keep in line at any stage.

Logo, Stories, Symbols & WHY

Simon Sinek then dwells on a very important topic: since the WHY sits deeply in the limbic brain, it can be difficult to clearly articulate it.

Just imagine you had to explain love to someone. It's impossible because the part of the brain controlling feelings is different than the one controlling language.

This is why, Simon Sinek says, we use stories and symbols to create a more tangible expression of our WHY. The

more clear they can be, the better the communication with the outside world.

Chapter 10: Communication is About Listening

Sinek says that symbols mean nothing until we give them meaning.
And it will still have little meaning if it only identifies a company.

But it's when a company's WHY is clear that a logo will start having a life of its own.

A logo can then become a symbol when it will inspire people to use it to say something about who *they* are.

Simon Sinek says that high fashion labels are logos to show status, albeit many are generic in what they symbolize.

Harley Davidson is a more profound example of a significant logo: Harley Davidson embodies the values and lifestyle of the people wearing it.

The Celery Test

What's good for your competitors is not necessarily good for you. What matters is that your WHATs and HOWs are in line with your WHY.

But how do you know that?
Simon Sinek proposes what he calls the "Celery Test".

Imagine if people told you that to grow you need cookies, Nutella, celery, fruits, and ice cream.
Should you get them all?
No, because it's time-consuming, expensive, and scatterbrained.

What you do is filter everything through your WHY.
So if your WHY is to live a healthy life you only pick the fruits and the celery.

When you filter your decisions through your WHY you save money, and time, and most importantly, you stay true to your cause for everyone else to see.

And Simon Sinek adds: sure, you might get some Nutella every once in a while, but you know it's a short-term fix and not part of your WHY.

Chapter 11: When WHY Goes Fuzzy

Simon Sinek here talks about examples of a company that lost their WHY, either in a mishap -Volkswagen- or more seriously in their core values -Walmart-.

Volkswagen for example literally means "car of the people" and its image has always been that of reliable cars for everyone, for the average citizens.

And the most famous Volkswagen model was a hippy symbol of freedom and simple life. So when they introduced a super expensive model, that flew against their own WHY and sold nothing.

Example: Walmart Losing Its WHY

Walmart is a more serious case. It started with the idea of helping people and communities and providing products at low prices.

However, after the death of its founders, the company focused only on low prices, forgetting about helping people and the communities they entered. So it became a cutthroat business towards its suppliers, employees, and the communities it joined.

Walmart got into serious trouble when it lost its initial WHY.

Achievement (WHAT) VS Success (WHY)

Simon Sinek says that achievement comes when you pursue and attain WHAT you want but success only comes when you are clear in pursuit of WHY you want it.

Simon Sinek's wording is just too beautiful that I will quote him verbatim here:

> *Success comes when we wake up every day in that never-ending pursuit of WHY we do WHAT we do.*

This brings me again to Viktor Frankl when he says that success, like happiness, cannot be pursued, it can only ensue. Ensuing from a cause bigger than yourself (your WHY).

Simon Sinek says that of those successful, rich entrepreneurs, few are actually happy. The ones who are, tend to never have lost sight of their WHY.
Simon Sinek also says that gaining clarity of WHY is not the hardest part. The hardest part is the discipline to trust one's gut over outside advice (Steve Jobs' example) and to stay true to your cause or belief.

> **Success comes when we wake up every day in that never-ending pursuit of WHY we do WHAT we do.**

Chapter 12: Split Happens

Simon Sinek says that a company always starts fueled by passion. But for passion to thrive and survive, it also needs structures and HOWs. Most companies fail, says the author, because both HOWs and WHYs need each other.

Chapter 13: The Origin of a WHY

You have probably read that before starting any business endeavor you should do market research, know your customer and find your niche.

No, says Simon Sinek.
The WHY starts within you.

And once you find and know your WHY, the hardest part is to remain authentic to it.

My Note: if you need help in finding your why, I highly recommend taking a look here at *Grit* by Angela Duckworth.

> **WHY starts within you, not with market research**

Chapter 14: The New Competition

Simon Sinek says that when you compete with others, nobody wants to help you, but when you compete with yourself, people take a liking to you.
But what does everyone do?
We're all engaged in racing *against* our competitors.
People with a strong WHY instead aren't interested in competition, they're in a race with themselves.

Real-Life Applications

Find a WHY…
For yourself and for your company.

..Stick to it…
And stick to it, even when other options seem to give you more benefits or revenues. It will pay you in the long run and you'll be more confident, more genuine, and, chances are, happier.

.. And Start with WHY
Always keep in mind all your communication, actions and decisions will Start with WHY and will be filtered by your WHY. Then you will become a genuine man and lead a genuine company.

CONS

- **Repetitive**

The concepts in *Start with WHY* are awe-inspiring and groundbreaking, yet they're also rather simple and the book could have done with fewer repetitions.

- **Dogmatic**

I find Simon Sinek to be quite dogmatic.

He describes things as rather black and white, leaves few doors open to doubts, and seems to deal with the world as if there were one single right answer.

And while that's charismatic for most and it's a skill you should learn to deploy *when needed*, I find it jarring when it becomes a modus operandi (and opposite to a learner's mindset as presented by Maxwell).

- **Naive view of "WHY's" genuineness**

I find Simon Sinek's view that the "WHY" is genuine to be quite either naive or disingenuous.

Most WHYs are built by marketing departments and are nothing but professional corporate manipulations.

Also, read more on naive self-help:

> Naive Self-Help: 10 Most Dangerous BS to Avoid

Review

Start With Why is a fantastic book about the importance of a bigger WHY in life (overarching cause).

While this is not a new concept and we've already seen its power in *Man's Search For Meaning*, Simon Sinek delves into the importance of WHY in the business world.

But make no mistake, this is also psychology and social psychology as it deals with identities and social identities.

With tons of examples and real-life stories Start With Why will most likely open new doors of understanding for you both in psychology and in business.

What I disagree on:

WHY doesn't have to stay the same
Sinek seems to imply that a WHY is fixed for all your life. I strongly disagree with that. Viktor Frankl tells us that *finding* a WHY was the best way to survive in concentration camps and Angela Duckworth explains that we find our passions. And different life events can also change your WHY.

What I loved:

I love the whole book. If I had to pick one single element I believe too often goes unnoticed is this:

- **Differentiating is for mid-pack**

Companies desperate for "differentiating" are entrenching their status as mid-pack, average businesses.

Of course, you should know your competitors, but companies with a strong sense of WHY don't obsess with "being different", they focus on their thing and just *are* different.

Check my book summaries page. and get the book on Amazon.

Pre-Suasion: Summary & Review

Lucio Buffalmano · 25 July 2017 · Archived copy · Original

Pre-Suasion (2016) is Cialdini's prequel to his famous "*Influence*", and explores the psychology of persuasion *before* you even place your question, demand, or call for action

[image]Exec Summary

- The top persuaders focus on what they do and say *before* the request rather than the request itself (i.e.: they focus on priming)
- Pre-Suasion is all about channeling your prospect's attention to favorable aspects of your pitch (or yourself)
- Hold attention to favorable aspects, without any comparison and new information, and you've won half the battle

Summary

About The Author: Robert Cialdini, is almost a household name and he's one of the most well-known experts when it comes to the psychology of persuasion.
His previous book, *Influence*, is the biggest seller in the psychology of persuasion.

About Pre-Suasion: "*Pre-Suasion*" is divided into three parts. Cialdini wrote it after "Influence", yet he says you should probably read "*Pre-suasion*" first.
This a chapter summary of "*Pre-Suasion*"

Pre-Suasion – An Introduction

Robert Cialdini says that the top persuaders spend more time crafting what they do and say *before* the actual request than on the request itself.

To persuade effectively, adds Cialdini, is to Pre-Suade effectively.

How do you do that?
Pre-Suasion explains just that.

Cialdini uses the example of a friend of his in a consulting business.
His friend always felt put in a difficult spot when asked for discounts, but that all changed when he started presuading his target.

Before communicating his fee, he would joke:

> **Pre-Suader**: as you can tell, I'm not gonna be able to charge you a million dollar for this.

With that simple trick, he eliminated almost all challenges to his fees.

And if that doesn't sound surprising to you, here are a few more Pre-Suasion effects:

- drawing a long line instead of a short one raised estimate for a river's length
- listening to a German song made people more likely to buy German products;
- observers' estimates of athletes' performances increased if the jersey's number increased
- the amount of money people were willing to spend on a restaurant went up when the name of the restaurant was Studio97 rather than Studio17.

The Sneaky Presuasion Example:

An alarm system salesman was able to consistently sell more than all his competitors.
His pitch and process were the same in all but one detail

Which one was it?

While the prospects were taking a test in their house as part of the process he would tell them he forgot a piece of important information in his car.
He would ask the couple if they could lend him the keys so he could go out and be back without disturbing them.

The secret is that you only let people you trust in and out of your house on their own.
Now that they had given him the key the sub-communication was that he is a "trusted person".

Chapter 2 – Privileged Moments

Cialdini used to be a palm reader and he has a few funny stories.

He recounts when he told a man he was stubborn.
Later that night, that same man was impressed to hear he was "quite a flexible man".
In both instances, he uttered "absolutely right".

Cialdini says that giving very general traits helps, but that's not the only factor at play.
People usually look for confirmation rather than disconfirmation.

And thus, whatever generic trait you tell someone, they will look in their past for all the times they conformed to your chosen trait.

Pre-suasion and Confirmation Bias

Similarly, a sample of Canadians changed their mood when asked if they were happy or unhappy with their social life.
The people asked if they were 375% more likely to declare themselves unhappy.

For the same reason, you should be wary of surveys employing a single-sided and biased form of questioning (ie. "how are happy are you with.. ").

Your Focus Sways Your Opinion

Cialdini says the dominant model of social influencing is that if you wish to change someone's behavior you first change one of their existing features.

For example:

- If you want them to buy a soft drink they're unfamiliar with, you will change beliefs by reporting it's the fastest-growing new beverage
- To change attitude you will connect it to a well-liked celebrity
- And to change the experience you will offer a sample.

This approach works.

But Cialdini says there's an alternate model of social influence. It's the *Pre-Suasion.*
Prep them by asking:

> **Pre-Suader**: are you adventurous enough to consider a new soft drink?

Or get them to focus on a time in which they did try something different and were happy about it.

This way you only alter what they're focusing on.

Pre-Suading People At The Mall

Another example is researchers surveying random people in a mall.
Only 29% agreed to answer when asked directly.

But prepping them with a pre-suasive opener such as "*do you consider yourself being a helpful person*" changed everything.
Most people answered yes, and now you are in what Cialdini calls a "privileged moment".

As a consequence of the new focus, 77% of people agreed to take part in the survey.

Chapter 3 – The Importance of Attention

Channeled attention leads to persuasion: we tend to overestimate the importance of anything which draws our attention.

So the persuader who draws attention to the best feature of whatever he's offering succeeds first in having the audience consider that feature fully and, more importantly, also in giving exaggerated significance to that feature even before they see it.

It's important to notice that while drawing attention to anything is effective in making that idea or information stand out and be important, it's only a positive influence if the idea is valid.

Agenda Setting

Agenda-Setting theory says that media rarely produces change directly -ie. telling you what you think-, but it's extremely effective in telling us what deserves our attention -ie. what to think about-.

Pre-suading With Background Images

Cialdini gives us an extremely interesting example of how the background image of a website can sway our decisions.

A furniture store selling both quality and cheaper sofas wanted its clients to buy more quality sofas.
When they changed the background image on their website to fluffy clouds customers bought the quality version because the clouds made them focus on comfort.

On the other hand, a background image with pennies had customers buy the cheap version as the image had them focus on savings.

Noises and images in real life also have powerful effects.
Students in schools with train tracks nearby have lower test scores results. And classes with highly decorated walls also produced lower test scores.

Presuade Without Comparison

If you focus your prospect's attention on a positive benefit of your product without mentioning any rivals' equally good option you will likely enhance your product's rating.
Interestingly, your prospect's intention to buy your product will also jump.

For example, if Sony asked you to consider the quality of its smartphone but not the qualities of major rivals, your intention to purchase a Sony will increase.

Chapter 4 – What's Focal is Causal

Channeled attention also leads to the belief in causality.
Meaning that what draws our attention, we believe has the power to make events occur.

For example, when Johnson and Johnson issued a public recall of a dangerous product with serial numbers associated, those numbers ended up being played in local lotteries at unprecedented rates.

The number had become the focus of attention and people assigned special (predictive) power to them.

Presuading With Prominence

We all know that body language speaks the truth, right?
Well, body language is also heavily influenced by what you pay attention to.

An experiment scripted a conversation in such a way that neither speaker contributed more to the discussion.
The observers were arranged in a way that they could see the face of one person at a time and then asked who was the most influential of the two.

Guess what happened?

The observers always picked the person whom they had focused on the most.

Pro Tip: if you find yourself under interrogation find the camera in the room and move your chair in a way that it will record your face *and* the questioner's face equally.
So no judges will be Pre-Suaded you're guilty.

Leaders and Causality

Leaders often receive a disproportionate amount of attention and are often assigned disproportionate credit -or blame- for results.

Pre-Suasion hypothesizes the causality fallacy might be the reason why CEOs are paid so much more than employees.

Chapter 5 – Commanders of Attention I: The Attractors

Sexual and threatening cues catch our attention powerfully because they tie to our innate drive of reproducing and surviving.

However, they can be used in the wrong way and become ineffective or even counterproductive.

Sex and Sales

Using sex only helps to sell if the item is connected to sex in some way. For example, sex for cosmetics, perfume, lipsticks, and form-fitting clothes works.

While soft drinks, laundry detergents, or kitchen appliances do not follow in that category, Cialdini says.

Sex Interest As Breakup Indicators

I found it extremely interesting that the biggest predictor of a future break up was not how much a couple liked each other or what they planned, but how much they were aware of other attractive people around them.

How to Deliver Threatening News for Actions

The most threatening examples of poor health habits work better than mildly threatening ones.

However, Robert Cialdini also says that reducing the fear level works too because very high fear might have people denying the risks.

A great way to convey highly threatening news without raising people's defenses is to give a real and scary warning and *then* present the solutions.

An experiment in The Netherlands showed that a group given the scariest message and then presented with a workshop to reduce risks were 4 times more likely to sign up compared with the non-highly threatening message group.

Threatening, Sexual and Pre-Suasion

When we are exposed to sexual messages we prefer being on our own -to take advantage of the sexual possibilities-.
When we feel threatened instead we'd rather be in a group -for defense power-.

This tendency has far-reaching consequences in influencing.

For example, ads showing how popular your product is won't be effective during a romantic movie.
On the contrary, it will be very effective during a scary movie (or anything which makes people worried).

And showing how unique your product is will work well during a romantic movie (or anything with sexual undertones) and poorly during a scary movie.

To me, this was an incredible finding and it goes to show the far-reaching consequences of Pre-Suasion.

The Investigatory Reflex

If someone enters our environment or if we enter a new environment our focus shifts to the new setting.
This is why we often forget what we were supposed to do when entering a new room.

And it also happened to Pavlov's Dog: the most drooling dog in psychology wouldn't salivate when someone new entered the room.

Unique = Higher Sales

Two sofas pitched against each other were comparable except for the cushioned softness.

Let's call the couches "Hardy" and "Softy".
Most people preferred Hardy. But when 3 other sofas all with a harder cushion were added, Softy became the favorite.

It's because Softy's distinguishing factor drew more attention and it became more important.
Softy became the standout.

Chapter 6 – Commanders of Attention II: the Magnetizers

If you hold the attention your argument is likely to go unchallenged by opposing views.

And some information or format have intrinsic pull and staying power, like:

Self-Relevant Info Prevails

Any information specific to us will catch and hold attention.

Try to take a group's picture and pass the camera around.
Who do you think people will be looking at?
At themselves of course!

If you have a good product, Robert Cialdini also recommends switching the wording of your copy to "you" and to starting with "you".

And if you want someone to listen to you during a meeting you should not speak immediately before them or after them.
Immediately before they will be too focused on what they are going to say. Immediately after they'll be rehashing what they've just said.

Unfinished Arguments Linger On

Unresolved problems and unfinished activities keep holding our attention for quite a while (and spur us to get back to them).

It works even for humdrum advertising of soft drinks and toothpaste: students were better able to recall the details when the researchers stopped the ads 4-5 seconds before their natural end.

Leaving Open Loops in Dating

In another experiment, women participated in an experiment in which attractive men rated them based on their Facebook profiles.

The women were then asked who of the guys who had rated them they preferred.
Surprisingly, it wasn't the guys who had rated them the highest, but it was those whose rating was unknown.

Those men with unknown ratings stayed in the women's minds and made them appear as the most attractive.

Leveraging Open Loops

Here are a few ways you can leverage open loops in your life:

1. Don't finish a task so that you will want to work on it later on
2. Cialdini starts classes with stories he leaves unfinished and uses mysteries rather than questions and explanations. When he challenged students to provide explanations to mysteries their test scores went up.

Counterarguments VS Argument

Cialdini says in persuasion counterarguments are more powerful than arguments.

If you can show your opponent is misinformed on the topic you will undermine him even if you don't have a full-blown point to make.

And it's even more powerful when the counterclaim paints him as an untrustworthy source of information. In this case, you not only win the battle, but you also start with a huge advantage in all successive battles.

Chapter 7 – I Link Therefore I Think

Robert Cialdini says that our brain operation is all about associations. Associations are the building block of thoughts.

Association and words are more powerful than most people think: an experiment shows that people exposed to violent words delivered 48% more intense electric shocks in a successive experiment.

Associations For Political Persuasion

Pre-Suasion details a fantastic example of a politician with policies to catch and cage criminals.
Such a politician should portray crime as a wild beast raging through the city that must be stopped.

Imagine the other candidate wants to tackle the problem by addressing the root causes with education and jobs instead.
This candidate should portray the crime as a virus infecting the city.
It's because to remove a virus it's necessary to remove the unhealthy conditions that allowed it to spread.

And if you think it's too far-fetched an experiment presented two groups of the criminality problem with exactly those wording: wild beast and virus.

The ones presented with the "beast" problem chose the catch-and-cage solution and the opposite was true for the other group.
The size of the change due to a single word was *twice* more significant than gender *and* political party affiliation.

Associations in Sales

A master salesman used metaphors to achieve unparalleled sales in insurance policies.
He wouldn't say people died but they "walked out" of life and the insurance money "walks in".

Personal Associations

And of course, we like anything we can associate with ourselves.

We like more people who come from where we come from, people who look like ourselves, people with the same ideas, and also products with our same initials.

And we also like people whose name is easy for us to pronounce and sounds more familiar (read what to do when people mispronounce your name).

Nonverbal associations

Associations also work non-verbally.

"Heavy" in English is associated with seriousness and importance, so HR people with a CV attached to a heavy clipboard tend to view the candidate as a more serious contender for the job.

And major holding a heavy mock-up for a project tends to ponder the project more deeply.

And people who've been holding a hot cup of coffee feel warmer toward their conversation partner.

Chapter 8 – Persuasive Geographies

Cialdini says that working from home when writing his first book for a general audience produced a better job than when he wrote at University.

It was because at university he had all the scholar cues around him that made it more difficult for him to drop the jargon.
At home instead, he was immersed in the "general population" environment and more befitting words flowed accordingly.

Presuasion Can Help Women & Minority

Women have a negative stereotype of not being good at math.

Anything focusing on reminding them of their gender and focusing attention on that stereotype will lower their test results.

On the other hand, they score better when the teachers in the class are women themselves, or when on the wall there are paintings of famous female scientists.

For female Asian Americans, reminding them of their female gender led to worst performance.
But performed better when reminded of their Asian roots.

Cialdini also says that an effective technique before an exam is to focus on all past academic successes and strengths.

Chapter 9 – The Mechanics of Pre-suasion

The elements in our mind don't just fire when "ready", they fire when "readied". When a concept enters our minds, all the linked concepts enjoy a privileged moment in our minds.

That's the reason why violent games can raise aggressiveness: because they stimulate all connections related to aggressiveness.

The same concept works when we change the background of a product or when we communicate subliminally. Superimposing a brand of mouthwash on pictures of nature scenes made people feel more positive towards the brand immediately and 3 weeks later.

And subliminally exposing thirsty people 8 times to happy faces vs angry faces before tasting a new soft drink led them to consume more beverages and be willing to pay 3 times more for the beverage.

If, When, Then

By using the "if, When, Then formula" you can train yourself to stay on track with your goal.

For example, you can say "when back at home, I take the stairs (instead of the elevator)".

My Note:
For me, a clue to do something productive is always when I'm doing nothing.
My if-then clause is: "If I'm not doing anything, how can I use this time more productively"?
So if I'm riding the underground I listen to audiobooks. If I really feel like laying down, I do it on the floor and train a good posture.

Fatigue and Influencing

Some ads and infomercials run late at night as people don't have the mental strength to resist the buying urges.

The same concept is true for criminal interrogations: while the average questioning time is less than one hour, interrogation leading to false confessions average of 16h.

And similarly, military personnel were more likely to fire on civilians when sleepless and tired.

Chapter 10 – Six Main Roads to Change

Cialdini says that attention should be channeled toward one of the major principles of Influence.

And then he takes a step back from Pre-Suasion and focuses on the principles of his seminal book Influence.

Chapter 11 – Unity 1: Being Together

Cialdini adds another principle of influence: Unity.

Unity comes from coming in the same genealogy or geography.

There's a shortcut to feeling like someone belongs in our family: living under the same roof.
If you want your children to develop altruism as a quality, allow strangers in need in your house and offer them a meal.

Very interestingly, Cialdini says, the majority of people who helped hide Jews during the Holocaust did it after a relative or neighbor asked.
So the helper, often, was saying yes to a neighbor or family member.

How Psychology Can Save Lives

And I loved the example of Jewish persecution in Japan.

Japanese high officials were pondering whether or not to prosecute Jews in Japan and asked two rabbis why the Nazis hated them so much.

One of the rabbi, well versed in history and European affairs, had no explanation.

The other one, well versed in social psychology said: because we are Asians, like *you*.

It implied that the Nazi self-appointed race superiority did not cover Asian people.
And it shifted the Japanese wartime alliance to one based on regional belonging.

Chapter 12 – Unity 2: Acting Together

Working together on a project with its employees will lead a manager to value the output higher than if he hadn't worked on it.

And the more he attributed the success of the project to himself, the more he also attributed the result to the skills of the employees.

This latter finding surprised Cialdini and he explains it as a merging of identity: what applies to one applies to the other.
Working together brings feelings of being part of a bigger unified organism.

Asking for Advice is Good Advice

Asking for advice -not opinion or feedback- will activate a linking of identity between the adviser and the advised, bringing people into a "together state of mind".

Opinion or feedback instead will put people in an introspective state of mind, focusing on themselves.

Rational and Emotional Systems

Cialdini says there are *two systems of thinking*: system one and system two.

1. System one is intuitive, quick, and often emotional
2. System two is slow, deliberate, and rational.

The two systems hardly co-exist at the same time, so rather than going for both a salesman would be wise to recognize the current system and match it.

Even just saying "I *think* this is the right car for you" VS "I *feel* this is the right car for you" will have an influence if correctly matched to the prospect's system.

Music influences system one.
Cialdini funnily says he finally understands why so many women are into the musician type even though the musician's economic and romantic perspectives are often low.
Music does not deal with the rational part of the brain but with the emotional one.

The "music" and romance association has also been proven by research: a man with a guitar asking for a girl's phone number is significantly more successful than men without (more than double the hit rate).

Chapter 13 – Ethical Use

In this chapter, Cialdini says that most of the "tricks" he teaches are used by professionals.
So any book popularizing persuasion tricks is mostly for the benefit of the general population.

I agree with it and I have the same stance for what I teach on this website.

Cialdini also says that in the long run, any unethical action tends to damage companies.

Chapter 14 – Post-Suasion, After Effects

Pre-Suasion can produce dramatic, immediate shifts in people.

But to retain the changes of our persuasions it's important that people will commit to them at a later time in the form of related behavior.

The most effective "confirming" behavior are the ones involving identity.

Post-Suasion To Influence Voting Behavior

For example, people surveyed during the McCain (Republican) VS Obama (Democrat) campaign were divided into two groups.

One saw a small American flag on the top corner of the screen.
The second group didn't see any flags.

The group seeing the American flag espoused Republican causes more strongly and voted in bigger numbers for McCain (*Pre-Suasion*).

The groups were later asked to register online for the survey, thus *committing* to their behavior (Post-Suasion).
They later on then voted for McCain, an even bigger commitment to their identity(Post-Suasion).

And eight months later the Pre-Suasion was still holding.

Locking In PreSuasion For The Long Haul

Another experiment put people in a happy mood and had them rate a panting.
They liked the painting more.

But after five days only those who had submitted the rating still kept the same feelings for the painting.
It's because the people submitting the rating "locked in" their feelings.

CONS

There are really no "cons" here, more like a few notes:

- **Improving the consultant's persuasion**

Remember the consultant presuading his clients to accept his full fees?
He was saying:

> **Presuader**: as you can tell, I'm not gonna be able to charge you a million dollar for this

I don't think that's as effective as it could be.
"Not gonna be able to" sounds predatory (=I'd charge you as much as I can get away with) and demeaning towards your product (=it's not worth that much).

- **No mention of the limitations of priming**

Pre-Suasion was published before the huge replication crisis in psychology.

And what I would caution about is that much of *Pre-Suasion* is based on priming.
And Bargh's original priming experiment has been at the epicenter of that crisis, failing to replicate and giving way to a rather nasty exchange right after.

I will keep it brief here, but priming is real, just not as strong as many were led to believe (also read more in pop-psychology myths).

Review

Pre-Suasion is a classic of the *psychology of persuasion*.
The amount of wisdom that it packs is mind-boggling and a real treasure trove for anyone interested in psychology, people, and influences.

What I particularly loved to learn in "*Pre-Suasion*":

- **Threatening and sexual timing:** you need to take care of using sex with unique USPs and threatening messages with social proof
- **Standing out is better:** put yourself (or your product) among people looking similar to each other and make yourself stand out

Pre-Suasion by Cialdini is a must-read if you're interested in communication, people, and influences.

Daring Greatly: Is Vulnerability Powerful For Men? (Book Review)

Lucio Buffalmano · 31 July 2017 · Archived copy · Original

In *Daring Greatly* author Brene Brown shares her takes on vulnerability, which includes being genuine and having the courage to show up even if it might hurt because, she says, it's the only way to live life to the fullest and develop real, honest, and loving relationships.

TPM Strategic Note: Vulnerability is a tool. Powerful in the right context, costly in the wrong one. Brené Brown is the leading voice for Communion (warmth, connection, and openness; see social skills vs power skills). Her insights are valid for close relationships, NOT for environments governed by agentic goal-pursuit and competitive power dynamics (business, high-stakes negotiations, or hostile social circles). There, **vulnerability is a strategic disadvantage and a cue of weakness**. This review filters Brown's "Wholehearted" philosophy through a lens of Realism, helping you distinguish between "Healthy Openness" and "Tactical Self-Sabotage."

Exec Summary

- Vulnerability makes you authentic and allows you to feel love, belonging, and joy
- To be vulnerable you have to:
  - Internalize that you are worthy (of being loved) and enough the way you are
  - Have the courage to show up and engage, even if it could hurt

Full Summary

What's Vulnerability

Being vulnerable means engaging fully and openly with the world around us.

Vulnerability is the courage of putting ourselves out there.
It's the courage of being open despite knowing it might hurt us.
And once we are able to do that, we will also be able to fully experience all the joyful moments of our lives.

To help you define vulnerability in practical terms, here's how Brene's research subjects described it:

- Sharing an unpopular opinion

- Standing up for myself
- Asking for help
- Saying no
- Starting my own business
- Helping my wife with cancer prepares her will
- Initiating sex with wife or husband
- First date after divorce
- Saying “I love you” first
- Getting fired
- Falling in love
- Trying something new
- Getting pregnant after three miscarriages
- Waiting for the biopsy to come back
- Exercising in public when I’m out of shape
- Admitting I’m afraid
- Laying off employees
- Presenting my product to the world and getting no response
- Standing up for myself and for friends under criticism
- Asking for forgiveness

As you can see and as Brene points out herself, these are all ordinary and common events that are part of our daily life.
Indeed, she says, emotional exposure is not an option, it will happen anyway.

The only question is: will you engage?

When you do, you are daring greatly and you are being vulnerable.

Brene Brown says that the more we protect ourselves from vulnerability, the more we grow fearful and disconnected.

How Does Vulnerability Feel

And these were some of the answers to the question of “how does it feel being vulnerable”:

- It’s taking off the mask and hoping the real me isn’t too disappointing.
- Not sucking it in anymore.
- It’s where courage and fear meet.
- Halfway a tightrope, and moving forward and going back are just as scary.
- Sweaty palms and a racing heart.
- Scary and exciting; terrifying and hopeful.
- Taking off a straitjacket.
- Going out on a limb—a very, very high limb.
- Taking the first step toward what you fear the most.
- Being all in.
- So awkward and scary, but it makes me human and alive.
- Freedom and liberation.

- It feels like fear, every single time.
- I know it's happening when I feel the need to strike first before I'm struck.
- It feels like free-falling.
- Letting go of control.
- Naked.

What Vulnerability Gives You

Brene Brown says that vulnerability is the source of hope and authenticity.

It gives us and allows us to feel the emotions and experiences that we really crave: love, belonging and joy.

Vulnerability and Love

Brene Brown says that we need to be vulnerable to fully appreciate love because while love can make us feel incredible, it also has the power to destroy us emotionally.

Loving someone knowing they might betray us, or that things might not work out… That takes courage. And that's vulnerability: opening our hearts and soul despite the risks.

Narcissism is Shame and Lack of Vulnerability

Brene Brown sees narcissism as the fear of being ordinary, the fear of not being good or extraordinary enough to be loved, to belong, or to build a sense of purpose.

And she says she can see it happening in our society all around.
It's incredibly easy for today's children of reality TV and celebrity culture to feel they're only as good as the number of "likes" they get.

How Brene Realized Shame Inhibits Vulnerability

Brene Brown tells she stumbled upon shame and empathy research rather randomly.

She knew connection is why we are here in this world because human connection is our biggest driver.

So she started studying human connection.
But people in her interviews spoke about their fear of not being worthy of connection more than they spoke about the connection itself.
That fear of not being worthy of connection is based on shame.

She deep-dived into shame, vulnerability, belonging, and worthiness, and she claims that vulnerability was the epicenter of them all.

Brene calls a life not impaired by shame "Wholehearted Living".

Wholehearted Living

Living Wholeheartedly means engaging our lives from a place of worthiness.

It means that at the end of the day, no matter what you manage to do and what you don't, you are enough.
It means that even though you know you are imperfect and sometimes afraid, you are also brave and worthy of love and belonging.

To embrace wholeheartedness and vulnerability develop:

- Authenticity and let go of what people think
- Self-compassion and let go of perfectionism

- Resiliency and let go of numbing and powerlessness
- Gratitude and Joy and let go of scarcity
- Trust and Faith and let go of the need for certainty
- Creativity and let go of comparison
- Play and Rest and let go of "busy" and "stress" as self-worth and status symbol
- Calmness and let go of anxiety
- Meaningful work and let go of what you are "supposed" to do
- Laughter, Song, and Dance and let go of "cool" and "always in control"

From Brene's research **those who love, feel lovable, and experience belonging believe they are *worthy* of love and belonging.**
And, most importantly, she says that a strong belief in our worthiness is cultivated, such as: **we can learn to feel worthy**.

Today's society doesn't exactly help us be vulnerable, though. So Brene says we should start by understanding what we're up against.

Chapter 1: Scarcity, Our Culture of "Never Enough"

We live in a major "never enough" culture, Brene says: never successful enough, never thin enough, never good enough.

Scarcity is dangerous because it makes it harder for us to own our vulnerability and imperfections and to live our life knowing that we are worthy of it.

I found it hilarious and at the same time it rang so true when Brene said that for many of us the very first thought when waking up is "I didn't get enough sleep".

It's something you want to focus on because, Brene says, this "scarcity mindset" is what breeds jealousy, greed, and many of our issues with life.

And of course, as previously stated in the narcissism part, if comparing weren't already bad enough, we often compare our lives to fake, media-driven "ideals" that are completely out of touch with reality.

The Three Components of Scarcity

- **Shame**: Fear of ridicule, finger-pointing, put-downs
- **Comparison**: Comparing and ranking, held to a narrow standard rather than acknowledged for uniqueness
- **Disengagement**: People keep to themselves, nobody shares, and nobody pays attention

The Opposite of Scarcity is Enough

The opposite of scarcity is not abundance because, Brene says, they're two sides of the same coin. The opposite of scarcity instead is enough.

Chapter 2: Debunking the Vulnerability Myths

Daring Greatly proceeds by discussing the main -wrong- myths about vulnerability that are often held in our society:

Myth 1: Vulnerability is a Weakness

Brene asked a room of people if they struggle to be vulnerable because they think of it as a weakness.

Most raised their hands.

Then she asked how many thought it was brave of people to go in front of the audience and be vulnerable. Again most raised their hands.

The point Brene makes is that we love and admire people being fully open, but we are afraid of doing the same. We are afraid of letting people see us as being vulnerable.

The author says being all in and stepping into the arena is not weakness, but courage beyond measure.
And no need for anything bombastic: I loved when Brene says that "*often the result of daring greatly isn't a victory march as much as it is a quiet sense of freedom mixed with a little battle fatigue*".

Myth 2: "I don't do Vulnerability"

Vulnerability is the base upon which all emotions and feelings are built, says Brene Brown.
Vulnerability is a daily encounter.
Closing the door to vulnerability is closing the door to all that makes life meaningful and beautiful.

Not only "not doing vulnerability" would be silly of us, but when we pretend that we can avoid vulnerability we engage in behaviors that are often inconsistent with who we want to be.

Daring Greatly is clear: we will experience vulnerability no matter what, the only choice is *how* we will respond.

Myth 3: Vulnerability is Putting it All Out There

No, vulnerability is not oversharing.

The author says vulnerability is sharing our feelings and experiences with a few inner circle people who have earned the right to enter our inner circle.

Being vulnerable is an integral part of the trust-building process that brings us closer to the ones in our inner circle.

Marbles Trust Jar

How do you know if you can trust someone?
Brene says that you build trust step by step.
The jar represents the trust you have for someone.

When someone does something that erodes that trust, you take some marbles away. When they do something to gain your trust you put the marbles back.

It's a great metaphor because, Brene says, trust is not a big gesture but it's a product of vulnerability that grows over time.

Disengagement is the Worst Betrayal

Brene says there is a more insidious betrayal that usually precedes the "big gestures". And that betrayal is the disengagement from a relationship, to stop caring.

Myth 4: We Go at It Alone

Brebe says that no, we can't go at it alone. We need support.
We need the support of people who truly care about us and will be there no matter what the outcome is.

And vulnerability and going at it together is also about *asking* for help.

Indeed Brene says we can never really give with an open heart until we learn to receive with an open heart.

Brene's greatest personal and professional transformations, she says, happened when she asked herself how her fear of vulnerability was holding her back and when she found the courage to overcome it and ask for help.

People in The Stands

Brene says that the people who matter to us are the ones who are with us in the arena, supporting us and fighting with us.

And the people who are criticizing in the stands, those, well… Those don't matter.

Chapter 3: Understanding and Combating Shame

Brene Brown says the only people who don't have a feeling of shame are sociopaths.
All the rest experience shame, so don't think you can ever completely extirpate shame.

But you need to keep it under control and be able to act in spite of it. Because to be vulnerable is to develop shame resilience.

Daring Greatly teaches us that shame draws its power from being unspeakable. So if we build awareness about shame and speak to it and about it, we can defeat it.

A strong inner circle helps us share our stories with someone who will respond with empathy and understanding to help us beat shame.

Similarly, we should cultivate empathy and self-compassion with ourselves.

The Categories of Shame

1. Appearance and body image
2. Money and work
3. Motherhood/fatherhood
4. Family
5. Parenting
6. Mental and physical health
7. Addiction
8. Sex
9. Aging
10. Religion
11. Surviving trauma
12. Being stereotyped or labeled

How Shame Feels:

- Getting laid off and having to tell my pregnant wife
- Being asked "when are you due?" when I'm not pregnant
- Raging at my children
- Bankruptcy
- My boss called me an idiot in front of the client
- Infertility
- My husband left me for my next-door neighbor
- Telling my fiancé that my dad lives in France when he's in prison
- My wife divorced and telling she wants children but not with me
- Flunking out of school
- Hearing my parents fight through the walls and wondering if I'm the only one who feels this afraid

Vulnerability, Sharing Art, Ego, and Shame

Sharing something you created is a key vulnerability moment in our lives.

Some of us link our self-worth to how our work is received. If people love it, you're amazing, and if not you're worthless.
Shame will often prevent us from releasing our art or lead us to remove the most innovative parts to avoid risks.
And when we do release our work and receive criticism it's a shame telling us that we shouldn't have tried in the first place.

If you attach your self-esteem to what people think AND the people love it, you're worst off.
You'll feel great in the short term and will not realize you willingly and happily opened the doors to shame to hijack your life.

When you master strong shame resilience skills, you still want people to like what you've created, but your self-worth is not on the line.
You know that you are far more than your products. The poor reviews are about your specific effort and not about who you are.

> **You are more than your work**

What People Think: a Tight Rope

Brene says that people's judgment is like a tightrope.

We need to care about what people think or else we lose our capacity for connection.

And at the same time, we can't be defined by what people think or we won't be able to be vulnerable.
Thus learning to discern useful feedback to implement and smearing attacks to discard is an important skill to develop.

> **We need to care about what people think but we can't be defined by it.**

Shame VS Guilt & Self Talk

Brene Brown says that how we experience different emotions comes down to self-talk. The way we talk to ourselves determines how we feel and how vulnerable we can be.

- Guilt is *"I did something bad*"
- Shame is "*I am bad*"

When we experience guilt instead of shame we own up to our mistakes and we are more likely to change for the better. When we experience shame instead we shift blame. And it makes us feel like we aren't able to change.

How to Combat Shame

Brene Brown defines shame resilience as the ability to stay authentic and stick to our values when experiencing shame.
And coming out of the shame experience with more courage, compassion, and connection than we had before.

The final step is then to move from shame to empathy, which is the real antidote to shame.

Brene Brown says indeed that shame is a social emotion, and it needs social healing. To overcome it we need to share the shame story with someone who can listen with empathy.

Self-compassion also plays a major role because it allows us to seek out a connection in the first place.

Here are the four steps to combating shame:

- **Recognizing Shame and Understanding Its Triggers.** Learn to recognize when you're experiencing shame and what triggered it.
- **Critical Awareness.** Check what's driving shame against who you choose to be
- **Reaching Out.** Talk to people who will give you empathy
- **Speaking Shame.** Talk about how you feel and ask for what you need
- **Own Your Story.** Brene doesn't list it, but she stresses you can't "try to forget" shame. Owning it is key to a feeling of worthiness

It's also key to understand that we need to work on our shame resilience because while shame is innate in the limbic system, resilience is a conscious process.

How Brene Brown Does It

Here's an example Brene gave us:

> When the shame attack started she repeats aloud "pain, pain, pain".
>
> She then took a deep breath, told herself it's a shame attack and that she can handle it (never bury the story, don't try to hide it)
>
> She repeats to herself loudly "i*f you own this story you get to write the ending*".
>
> And it's key that while we normally are extremely mean when we talk to ourselves, we must do so in a compassionate way. For example: not "you're such an idiot" but "you made a mistake".

And she then called her husband first and a best friend later to share the story.
The husband and her friend listened and empathized. And then they also shared similar stories.

And shame disappeared as Brene realized what she had just experienced was human and normal and that she wasn't alone.

Shame & Sharing Trauma

Importantly, Brene Brown says that sharing deeply shaming and traumatic experiences is even more important.

Studies show that keeping rape or incest a secret can be more damaging than the actual event. Sharing the stories instead helped improved the victims' health.

Connection, Love and Belonging

Love and belonging are the two most powerful connectors we have.

And people with a strong sense of love and belonging have one thing only in common: the feeling of worthiness. If you want to experience love and belonging, you have to feel like you are worthy of love and belonging.

- **Connection:** We feel connected when we feel heard and valued and when we can give and receive without judgment
- **Belonging:** When we feel part of something bigger than ourselves. Brene says we often try to belong by fitting in and seeking approval, but true belonging only happens when we present our real selves. Thus, our sense of belonging can only be equal to our self-acceptance.
- **Love**: self-love is a prerequisite for loving others. She says you can only love others as much as you love yourself.

Shame in Men and Women

Brene Brown says the primary shame trigger for women is how they look.
But also being nice, modest, caring for children, taking care of her looks, staying sexually faithful, and investing in their relationships.

Basically, says Brene, women should stay small, sweet, and quiet and use their time to look pretty.

For men, shame is about failure and being weak.
It's being "defective", being seen as soft, showing fear, and being criticized or ridiculed. In the end, says Brene, all boils down to "don't be weak".

There's an incredible paragraph in which Brene Brown realizes that women themselves are, in her words, the "patriarchy".
It means that women don't actually want to see men weak and vulnerable, and men know it.

And that's what puts pressure on men to be "masculine".
Masculinity is identified, I quote, with winning, emotional control, risk-taking, violence, dominance, playboy, self-reliance, the primacy of work, power over women, disdain for homosexuality, and pursuit of status.

The author shares the example of a man practicing shame resilience in the face of having to lay off staff.
He says "*while shame would want me to feel bad about being emotional, I don't buy into it. I have worked with these people for years, know them well and I am allowed to care about them*".

> **If you want to experience love and belonging, you have to feel like you are worthy of love and belonging.**

Chapter 4: The Vulnerability Armors

In Chapter 4 of *Daring Greatly* Brene talks about how we try to avoid and protect ourselves from vulnerability.

Most of us use the same techniques, which are:

Foreboding Joy

It feels safer to wallow in a sad or grey state rather than be happy and risk sadness.

While it's true disappointment might be more disappointing if you were happy (see Cialdini), it's not a good strategy because you give up all the joy in your life just to make your downs a little less down.

Antidote: Gratitude for our joyful events and our daily happy moments.

Perfectionism

We use perfectionism as a shield when we -mistakenly- believe that if we can just be perfect we will avoid the painful feeling of shame because we'll only get love and compliments.

But we'll never be perfect, and if we wait we might sacrifice relationships and opportunities that might never come back.

Antidote: Self Compassion and a sense of worthiness no matter what.

Numbing

We numb ourselves in many ways and not just with drug addiction.

A wine before going to sleep, being too busy to think, with prescription pills and with fantasy football too.
Numbing tends to be driven by anxiety, disconnection, and shame.

Brene says she took up smoking and drinking in her teens to look busy, and today many do so with their phones.

Antidote: learn to get in touch with your feelings, stay mindful about your numbing behavior, and learn to deal with the discomfort of hard emotions. And to reduce anxiety learn to say no: we have to believe we are enough to say "no".

Please see:

- **How to effectively say "no"**

> 5 Techniques to Say No (Polite, But Effective)

Viking or Victim (or Win or Lose):

Viking or Victim means to divide humanity into winners and losers.

It's a combative way of engaging with the world.
Brene says it might be a useful mentality when in a battle for life or death, but it's not a mentality leading to a successful life by most people's standards.

TPM's Note: Competitions of winners and non-winners is part of life
Brown views the world as a place for mutual support; Power Dynamics recognizes the world as a place of *also* competition. While 'Viking vs. Victim' is a binary trap, **ignoring the competitive nature of life, including goal-achievers and non-achievers is naive**. Emowered men don't choose between being a Viking or a Victim; they choose to be a **Strategic Player who strives for victory** while staying mentally resilient in defeat.

Floodlighting

Sharing too much too soon in a desperate attempt to connect.

This behavior never leads to connection.
Brene says that most people using a floodlighting deal with the subsequent disconnection by telling themselves they'll never find true connection and they're not good enough for a relationship.

Antidote: Brene suggests only sharing stories you already worked through and not sharing "intimate" stories or fresh wounds.

Smash and grab

Similar to floodlighting but more underpinned by attention-seeking.

Serpentining

Brene Brown uses the term "serpentining" to describe the effort we expend to dodge vulnerability when it would take much less to just face it.

You serpentine when you have to make a call but postpone for made-up reasons.
Or when you need to send an email but leave your draft sitting for days. Serpentining is draining and not a healthy way of living life.

Antidote: When Brene finds herself serpentining she laughs, breaths, and reality-checks her behavior to start engaging with vulnerability.

Cynicism, Criticism, Cool, Cruelty

Brene Brown says that people *daring greatly* make us sometimes feel bad for not being vulnerable ourselves.

We then use cynicism, criticism, cool, and cruelty to put them down.
Being cool is the attitude of “whatever”, “who gives a s***” and labeling people as losers or lame.

The same is also attacking people for their “conformity” and dismissing people for example for selling out or for a “life in a cubicle”.

Criticizing is born out of a fear of not counting, and it’s an attempt to be heard (also read: alpha male posturing).

Antidote: I absolutely loved Brene’s tip on resisting the urge of using shaming criticism. You simply take responsibility for what you say. Dare Greatly and sign all your comments. If you don’t feel comfortable owning a comment, then don’t say it and deal with your issues.

Read more on how to turn cynicism into something positive:

- **Turning cynicism into something positive**

https://thepowermoves.com/positive-cynicism

Chapter 5: Closing the Disengagement Divide

Brene Brown believes that disengagement underpins most of the problems she sees in families, communities, and businesses.

We disengage for two reasons: to protect ourselves and because we feel the people who are supposed to be leading us are not living up to the social contract.
Such as they don’t live up to the preach.

Brene Brown calls the “disengagement divide” the space between our practiced values -what we actually do- and our aspirational values -what we want to do-.

The social contract for Brene Brown means aligning our values with our actions.

Chapter 6: Disruptive Engagement

Daring Greatly then analyzes the way shame permeates our culture in schools and organizations.

She says people in leadership roles bully, criticize and set up rewards systems that belittle, shame, and humiliate employees.

Recognizing a Culture

Brene Brown says that we can tell a lot about how vulnerable a culture is by looking at how often people say things like:

- “I don’t know”
- “I disagree, can we talk about it?”
- “here’s how I feel”
- “can I get your take on this?”
- “I accept responsibility for that”
- “I’m here for you”
- “I want to help”
- “I’m sorry”
- “that means a lot to me”
- “thank you”

Giving Feedback

Brene Brown gives a strikingly beautiful example of feedback she received on a paper of hers.

> Brene's professor got up from her chair and went around the desk to sit next to her.
>
> She put her paper down and said how happy she was that Brene had come in to talk about it.
>
> Brene had done a great job, the professor said, and she loved the conclusion.
> She patted her on the back.
>
> Brene said she had worked reallly hard on it, and the professor confirmed that she could tell.
>
> Then she said where she took some points off, adding that she could submit her paper for publication and she didn't want the formatting to hold her back.
>
> The professor asked her if she needed help with the formatting because it's tricky and it had taken her years to learn.
> And she agreed to review her paper again after the fixes and gave Brene a few tips.
>
> Brene left grateful for her grade and for the teacher.

Also, read "Thanks For The Feedback".

Good feedback starts from a seating position

My Note:

This part made me reflect on Brene Brown's character: going back to the professor and argue for a higher grade.

Chapter 7: Wholehearted Parenting

Our sense of love, belonging, and worthiness are shaped by the family we grew up in, but as a tear-jerking letter in Daring Greatly shows, it's never too late to learn.

Brene says that the best way to teach our children is to be and to show: how we behave and how we engage with the world are much better predictors of how our children will do than all the books we've read about parenting could

teach us.

> **It's not what you know. It's who you are.**

Criticism

Albeit "*Daring Greatly*" can be an important read for many, it remains grounded in little data and evidence.

So my first criticism is:

Psychology-Coated Storytelling

Brown's research is based on "qualitative research methods", particularly grounded theory.

It r**elies on interviews and narrative data to derive theories** -ie.: storytelling risk-.

And that CAN be a valid approach, but… You really need to trust the researcher on that.
And she did not gain my full trust.

Across her books and interviews I've also seen few references to research and it felt more opinions and generalizations.

Character-Dependent Generalizations (Brene's Own Projections?)

Several of Brene's approaches may apply more to certain personalities than to everyone.

Just as an example, take her advice of having a group of close friends to share your shameful moments in order to 'beat shame'.
That's something that didn't connect with me at all.

Naive Self-Help

A book that tells you to be more honest and show your weaknesses without talking about the risks and drawbacks of that is textbook naive self-help.

And a book that advises being honest without mentioning how to recognize and pick good people is naive. In truth, some people are takers and manipulators.

I highly recommend these cures:

- Why vulnerability is NOT power
- Naive self-help: a fundamental read to avoid the trap of being too good or too vulnerable for this world

> Naive Self-Help: 10 Most Dangerous BS to Avoid

Culture Over Nature. Attacks on "Society" Are Misguided

I find it misguided when Brene Brown attacks society for "shaming" men and women into acting "mannish" and "feminine".

It's not all on society, there are innate drives at play there (read more in the review).

And maybe it's not "fair" that society reinforces the idea of men and women being like this or like that, that's a moot point.

Brene herself says that men know women don't wanna see them acting vulnerable and weak.
It's funny she reaches that conclusion for men and yet still can't see that it's the same for women and that people are not just socialized that way, they are *born* that way (also read: *The Blank Slate*).

Diary-Style at Times (Self-Absorbed)

Daring Greatly feels a lot like a diary at times with lots of personal stories, inside references, and even Brene's conversations with her therapist.

Was this book supposed to help the readers or is it supposed to help the author?
Because at times it feels like the latter.

The author talks a lot about narcissism, but at times it's as if you'd like to tell her: "relax, it's not all about you".

Haughty pontification

Brene self-appoints herself as the world expert on vulnerability -and it worked!-.

So now she tells people what vulnerability is and what is not as if she had a checklist to go through.
And she tells everyone how to do "proper" vulnerability which, again, is Brene's own way.

But I didn't see any study or number to back her own, well… Opinions.

TPM Assessment & Warning

Context	ROI of Vulnerability	TPM Strategy
Intimate Relationships	**High:** Builds trust & deep connection.	Be the "Wholehearted" partner.
Leading a Team	**Moderate:** Humanizes you, but can erode authority if overused.	Use "Selective Vulnerability" (share the struggle, not the doubt).

Context	ROI of Vulnerability	TPM Strategy
Salary Negotiation	**Negative:** Signals desperation or lack of leverage.	**Hard Frame.** Hide all vulnerability.

People Loving You Matter What: It's Not True

Some could read in Daring Greatly you should be who you are and people will love you no matter what.

But you shouldn't think that way.
That's an entitlement mentality and the truth is that only your mother will love you no matter what.

Everyone else will love you as long as you love them and care about them. And they'll love you even more if you're an amazing person.

So love first and be amazing, don't expect people will cheer you up "no matter what", that's entitlement BS (read more in The Social Exchange Theory).

> Social Exchange Theory: 5 Laws of Social Success

Don't use it as an excuse to be a slave of your feelings

Daring Greatly talks a lot about the courage of abandoning yourself to feel.

True, but don't use that as an excuse to stay sad or angry when that doesn't benefit you.
It's not brave being hurt or sad all the time. It's not brave to lash out.

So be open to feelings, but remember you *control* them.

Maintain masculine frame

Brene's talk about 'the arena' for what are trivial and mundane stuff can feel like overblowing things.
Making mountains out of molehills isn't masculine.

The vulnerability of big goals

I believe many of us are afraid of setting goals because of the fear of missing those goals.

Thus, albeit Brene Brown does not mention so in *Daring Greatly*, I'd like to add that the courage of setting high standards for yourself is also part of vulnerability.

Don't use vulnerability to lower your standards!

Brene says that embodying all the masculine traits makes you lonely.

I say that's preposterous.

Sure there is such a thing as toxic masculinity, but *only* if you take all of them to the extremes.

While you should discard for example "disdain for homosexuality" as a masculine trait you *do* want emotional control and self-reliance.

Yes, You Can Go Alone. And no, you're not dependent on others

Brene Brown tells us that we *need* caring and support.

She says that "no, you can't go it alone" and that you "need" support from people that "will love you no matter what".

I don't think it's helpful for you to internalize that you *need* external support.

External support is great and very welcome.
But NOT because you *need it*.

PROS

Many of the concepts in Daring Greatly can make you a better human being.

Here are a few key concepts:

Engaging in the arena is courage in itself
Go for it, go for whatever you love. And love yourself for going for it because showing up is courage in itself.

It's not the critics in the stands who count
It's those who take action.

Be the person you want your children to be
It's not what you say, not your results, and not what you know. It's who you are (and who you're becoming). Beautiful concept.

Don't tie your ego to the results
Rene tells us not to tie our ego to results. I'd add: become enamored of the process, not so much of the results, and the results will come.

Ego and Validation
Don't tie your self-esteem to people's feedback *especially* when that feedback is positive.

Review

Daring Greatly is a good book on honest living, accepting and owning our shame and fear, and owning up to our real selves with ourselves, and with the world.

Unluckily, it feels like it promotes vulnerable living to its self-harming extreme, and **it does not deal with the downsides of vulnerability.**

Another important issue with *Daring Greatly* is that Brene Brown passes for generalized truths what to me at times felt more like opinions and concepts that only apply to some people (higher in communion).

Overall, **this book feels more for high-communion women than for high agency men (our readership).** It's not just the topic or the advice, but the frame with which it's presented as well. That's why I can't fully recommend it to ambitious men.
Ambitious men may still learn and benefit from vulnerability, but they also need different skills to achieve their goals. See:

- **When vulnerability is not power**

Influence Book Summary & Review: Cialdini's 7 Principles

Lucio Buffalmano · 1 August 2017 · Archived copy · Original

Influence (1984) was the first book on persuasion from an actual psychologist to go mainstream and top the best-selling charts. In this classic on persuasion, author Robert Cialdini lists 6 principles of influence that make people act.

Contents

- Exec Summary
- Influence Summary

  - 7. Scarcity
  - Epilogue
- Real-Life Applications
- Influence Video-Summary
- Influence Criticism
- Review

Exec Summary

- There are six main principles of influencing: consistency, reciprocation, social proof, authority, and liking.
- The principles leverage innate switches in our mind: they can be difficult to resist and recognize
- The switches in our minds often make our life easier with quicker decisions but they can be exploited

Influence Summary

Cialdini says that while there are thousands of tactics that influence practitioners' use, the majority fall into 6 basic categories.

Each category has a fundamental psychological principle behind it, and "*Influence*" is organized around these six basic categories.

The 6 influencing principles are:

1. reciprocity
2. commitment
3. authority
4. social proof
5. scarcity
6. liking

1. Weapons of Influence

Cialdini opens the book with a few examples of influence and “triggers” of influence.

The now famous copy machine experiments (full PDF here), for example, are based on a single-word trigger: “because”.

Asking:

> *excuse me I have five pages, may I use the machine because I’m in a rush*?

had 94% compliance.

> “E*xcuse me I have five pages, may I use the machine?*“

had 60% of compliance.

You might think the difference is “being in a rush”.
Instead, it was the word “because”.

Asking indeed:

> *“excuse me I have five pages, may I use the machine because I have to make some copies?”*

Had 93% compliance.

Simple Minds For A Complex World

Cialdini also tells us of a jewelry store that was only able to sell unsold merchandise when they *doubled* the price by mistake instead of halving them.

And he tells us of turkeys acting either aggressively or nurturing depending on which chirp was played.
The turkeys don’t act based on all that is real, but only a tiny portion of reality.
In this case, the chirp.

While the stories might seem unconnected, Cialdini says they stem from the same system complexity reduction we deploy.
In many ways, we humans also have pre-programmed tapes.

They usually work to our advantage, but they can be used to dupe us.
The people buying jewelry at double the price, for example, used the shortcut of “price=quality”, even when it was blatantly not the case.

2. Reciprocation

A university professor once tried a little experiment: he sent Christmas cards to perfect strangers.
He didn’t expect many cards back, but they just kept pouring in.

Cialdini says it’s a clear example of Reciprocation.

Reciprocity overwhelms the feeling of liking or not liking someone. We are indeed as much more likely to give back to someone we dislike than to someone we like.

Hare Krishna at airports

Hare Krishna activists used to give travelers a flower as a gift, not accept it back and then ask for a donation.

Most people didn’t want a flower, didn’t like the person, and yet would feel obliged to give back.

It's indeed the obligation to receive that makes the rule so effective and easy to exploit.

The Hare Krishna, for example, got money, which they wanted, for flowers, which travelers didn't want.

Other interesting examples of reciprocation are:

- **Carter's problems as an outsider**

Carter had trouble in passing legislation because he campaigned as an outsider who was indebted to nobody in Capitol Hill.
Well, nobody felt indebted to him either when he got to the office.

- **Free samples**

is another great way for companies to induce us to buy with the law of reciprocation.

- **Buying drinks for dates**

Women often comment on the uncomfortable feeling of indebtedness from men who bought them an expensive present or dinner.

Even a drink can be enough to trigger reciprocity feelings.

Concessions and the Rejection and Retreat Technique

A major consequence of the reciprocity rule is the obligation to make concessions to someone who's given a concession to us.

Cialdini tells us this is often exploited with the "Rejection and Retreat Technique".

The technique works by making a big initial request which will be turned down. Then you make the second request which is the one you really wanted to go for all along.

Your retreat and the smaller second request are perceived as a concession, and the receiver will feel like he should now concede back -by moving from "no" to "yes"-.

The larger the initial request -up to a certain point- the more likely the concession will be.

It is often employed to ask for a referral after a refusal.
For example:

> **Sneaky Salesman**: OK this widget is not right for you at this time but perhaps you could help by giving me the name of some others who could take advantage of our great offer

One might guess that people feel cheated by the Rejection and Retreat Technique and they would back out of the deal.
But the opposite is actually true.
It proved indeed to be more effective in having people carry out the request and in performing future similar requests.

It's because, Cialdini says, people feel more part of the agreement.
They feel like they produced the concessions and influenced the outcome. So they feel more responsible for the outcome.

Reciprocation is a crucial component of social dynamics and effective social strategies, for which we highly recommend this article:

- **The Social Exchange**

> Social Exchange Theory: 5 Laws of Social Success

Preventing Manipulation

Cialdini says the moment you realize there's a trick behind the initial gift you can redefine the gift as a sales tactic and free yourself from the reciprocity rule used as manipulation.

> Manipulation: Techniques, Strategies, & Ethics

3. Commitment and Consistency

The principle of commitment and consistency is that of aligning actions, feelings, values, and beliefs.

When actions and feelings are dis-aligned for example we feel *cognitive dissonance* (Festinger, 1957), which is a sensation of mental discomfort.

In that case, we might change our beliefs to justify our actions, or we will rationalize our actions in a way that will make us feel "good" about ourselves (more on rationalization in *Incognito*).

People who bet on a horse, for example, feel immediately more self-assured that their bet will pay off.
It's because once the commitment has taken place the need for consistency pressures us to bring our feelings and belief in line with the commitment.

Meaning: we convince ourselves we have done the right choice.

The Scrounging Boyfriend

Cialdini also gives us a juicy example of her neighbor Sara.

Sara lived with Tim, a drinking boyfriend who didn't wanna marry.
Sara broke their relationship and got engaged to an ex-boyfriend.

Tim called Sara before her wedding and promised he would change. Sara stopped the wedding and took Tim back. Then proceeded to renege on his promises: didn't stop drinking and still didn't marry her.

But Sara is more devoted to Tim than she ever was and says she did the right choice.

"How Are You" Manipulation

Solicitors asking for donations might ask you "how are you" first to make you admit you're doing fine.

After you state aloud you're good, it's then easier to corner you into aiding those who are not as well as you are. The solicitor would say something like

> **Manipulator**: "*I'm glad to hear you are well, because I'm calling to see if you'd be willing to make a donation for the unfortunate victims of X for whom things are not going too well".*

Research by Daniel Howard showed an 18% agreement among people who asked if they'd be willing to help the hunger relief program.

But after asking "how are you feeling this evening" the percentage jumped to 32%.

The Foot in the Door Technique & Self Image

The foot-in-the-door technique uses the Commitment and Consistency principle by starting small and then asking for more after the initial commitment has been done.

Freedman and Fraser asked homeowners to install a big “drive carefully” billboard on their front lawns. 83% refused.

But when a different group was asked to put up a small 8cm sign and *then* asked for the billboard, 76% agreed.

Astoundingly another group agreed 50% of the time after they had signed a simple petition to “keep California beautiful”.

Why would they accept a huge billboard after having signed a petition which was not even connected to driving safety?

It’s because these people changed the way they looked at themselves: they started viewing themselves as active citizens acting in the public interest.

So when they were asked later to install a huge billboard to (hopefully) help bring down road accidents they complied to stay consistent with their newly formed self-image.

Cialdini says that this finding made him wary of signing any petition because of the potential to influence future behavior and self-image in ways he might not want.

The Low-Ball

The Low-Ball technique exploits the Commitment and Consistency rule by offering a very low price to get an initial commitment.

Later on in the process, the seller would say there was a mistake and the price is now higher.

But by the time the prospect has arranged financing, and filled out the forms, maybe he’s already driven the car, imagined himself owning it, and convinced himself it was the best decision.
The decision stands on so many legs that removing the price leg is not likely to change his mind.

This is the same that happened to Sara in accepting her drinking BF back.

She got a great offer at the beginning and accepted it.
And after Tim didn't marry her and didn't stop drinking Sara had built in her mind so many other advantages about Tim that she was happy anyway.

Actions Only Matter: The Chinese Brainwashing

People look at actions to determine personalities more than words.

The Chinese in their efforts to convert POWs to communism realized that we also look at our own actions to assess who we are.

So the Chinese built up from small actions to bigger and bigger commitments until they'd bring about full conversion to the communist ideology.

The Chinese would also make public what an individual had done, written, or signed.
And since what those around us think is true of us influences our actions and what we think is true, POWs also had social pressure to embrace the communist ideology.

It's a lengthy part of Cialdini's book and I have given you the main and most important gist.

Written Statements Increase Compliance

Written statements are a powerful way of spurring our sense of Commitment and Consistency.

Cialdini tells us that companies employing hard sales critiques experienced high cancellation rates.

And what was their way to reduce cancellations drastically?

Letting their customers write down their own orders.

Now the buyers cared less they have been pushed and cajoled into buying and focused more on their own commitment.
And of course, the effort they had put into writing it also added (a bit of) sunk costs to the interaction.

That's why it's so important to write down our goals.

Effort Increases Commitment

People who spend a lot of effort to obtain something tend to value it more highly than if it had been very easy to obtain it.

Cialdini says that's the reason why so many groups have hazing and initiation procedures: making it difficult to enter a group makes the group more valuable (also read: office power moves).

Indeed, tribes with the most dramatic initiation ceremonies also tended to have the highest group solidarity.

Similarly, you are usually well served in giving small or no incentive for the behavior you want to encourage.
People who had no major incentive feel like *they* chose and will accept more responsibility.

On the same note you don't want to impose threats to direct the behavior of your children, but rather have a reason that will produce the initial desired behavior *and* have the child take personal responsibility for it.

Commitment Makes Us Take More Risks

An experiment on a beach showed the power of Commitment and Consistency even with the possibility of personal harm.

Researcher 1 left his radio near to take a stroll and Researcher 2 stole it pretending it to be a thief.
Only 4 out of 20 people it was tried on to stop him.

But when Researcher 1 asked to “please watch his things” 19 of the 20 people it was tried on became ran after the thief.

Why Commitment and Consistency Works

Cialdini says the Commitment and Consistency principle works because it’s valuable and adaptive.

Consistency is another way to reduce complexity and mental load by offering a shortcut.
You commit to something and don’t have to think about it anymore.

Inconsistency instead raises our mental load and is commonly thought to be an undesirable trait.

Overcoming Commitment and Consistency Tricks

Cialdini says you will likely feel a knot when you’re being tricked with Commitment and Consistency tactics.
What you do then is to tell them exactly what they’re doing to you.

He recounts a brilliantly funny story of a woman in a short skirt who employed the Commitment and Consistency tactic on him.
He fell straight into it and exaggerated how many times he’d go out for restaurants and movie nights to appear like a socialite.

In the end, when the woman told him she had the perfect card to save him money, he had no place to hide. He admitted and committed to his answers; now he had to stay consistent to save face.

Cialdini says that if the same were to happen today he would tell her she was chosen for the job for her physical attractiveness, that men would exaggerate to prove what great swingers they are, and that he would not buy her club membership.

Some other times when our decisions have already grown legs we won’t feel anything in our stomach. In those cases, we ought to ask ourselves this question: “*knowing what I now know, if I could go back in time, would I make the same choice?”*.

Cialdini says that in a split second before our rational mind takes over, we will get a real feeling about our choice.

> **Control your behavior: it determines who you are**

4. Social Proof

Nobody likes canned laughter.

But they work.

Canned laughter makes us laugh longer and harder.
The difference is especially great with poor-quality jokes. Cialdini says it works because we get the feeling other people like it.

That’s social proof.

What other people think and do is one of the ways we use to find out what’s correct.

Cialdini says that since 95% of people are imitators and only 5% of initiators people are swayed more by the action of others than any proof we can offer.

Pluralistic Ignorance and Letting People Die

Cialdini draws attention to a highly publicized instance in which a woman was let die without help, in spite of many having heard her screaming.

It happens for two reasons:

1. “Distributed responsibility”, such as the more people around the less each single one feels responsible
2. We’re not always sure if an emergency is always an emergency and that’s when we look at how other people react to assess the situation.

When nobody reacts it’s a sort of Spiral of Silence situation where everybody is taking everyone’s inaction as a cue they shouldn’t act either. This phenomenon is called Pluralistic Ignorance.

An experiment found indeed that a researcher faking a seizure received help 85% of the time when there was a single bystander and 31% with five bystanders.

Similar experiments have been repeated with similar results.
In Canada, a single bystander provided help 90% of the time and 16% of the time when 3 people were presented and 2 researchers purposefully remained inactive.

Basically, people don’t help when they’re unsure if it’s an emergency and when they’re unsure if it’s their responsibility.

The safety in number then can sometimes be a completely mistaken idea and Cialdini suggests you make sure people know it’s an emergency by shouting for help and pointing at someone.

Social Proof From Those Like Us

Social proof affects us most when the people around us are somewhat similar to us.
When jaywalking we are more likely to follow up with people similarly dressed to us for example

And it works in nefarious ways too: homicide rates have a strong copycat effect.
In highly publicized fight matches when a black fighter lost black homicide victims rose. When it was a white fighter who lost the number of homicide victims increased for white men.

5. Liking

We prefer to say yes to the requests of someone we like.

Cialdini talks about the now (in)famous Tupperware parties as an example.
And he and says that referrals are a way of exploiting the Liking principle.

These are the principles that make us like someone:

Physical Attractiveness

We assign good-looking individuals characteristics such as talent, kindness, honesty, and intelligence.

Attractive people are voted more, receive more money in compensation, get hired more, and are twice as likely to avoid prison sentences.
And, interestingly enough, most people are little nor aware at all that their decisions have been swayed by physical attractiveness.

Similarity Influences People

We like people who are similar to us. People who have similar backgrounds and interests, but also similar names.

And we are also more likely to help those who *dress* like us, and we’re more likely to sign petitions from them without even reading them.

We need to be careful when we feel a bit too close to a salesperson because many sales programs teach us to mirror and underline similarities.

Praise Influences People

We love flattery and albeit we might know the flatterer has second motives we tend to believe praise anyway and we tend to like those who provide them even when the praise is false.

How Associations Influence Us

People have a natural tendency to associate us with the news we bring even when we're not responsible for that news.

Positive news = positive association;
negative news = negative association.

Weather forecast announcers have received death threats when the rain didn't stop or tornadoes threatened to hit.

We are also associated with the crowd we hang out with and people do assume we have the same personality traits as our friends.

Advertisers using models for their cars want to associate beauty and desirability with their cars. And it often does work.
Young men looking at cars with a model nearby rated it as faster, more appealing, and more expensive than the same ad without a model.

Again this is something that works unconsciously, and people weren't aware it was happening.

Similar is the case of linking celebrities to products.
Cialdini says the association doesn't even have to be relevant, just positive.

And Gregory Razran found out what has been named the "Luncheon Technique": people became fonder of what or who they experienced while eating.
Razran presented several political statements while and while not eating. Only the ones shown during eating gained approval.

Association and Sportsfan

Cialdini explains the phenomenon of sports-fan via the association principle.

We associate with a sports club and then want them to win to prove our own superiority. People feel their success will somehow raise their own social prestige.

Research proved indeed that after a team had won the pronoun "we" was used and the same pronoun was instead avoided when the team lost.

What I was even more impressed to hear though was that people who had done well in a test didn't change much the use of the pronoun "we" when discussing their team whether the team had lost or won (24% vs 25%).
But those who had done poorly in a test had a much bigger drive to associate themselves with a winning team (17% vs 41%).

It's indeed **people low on the feeling of personal accomplishment that seek compensation through their teams**.

Cialdini says it's similar for name-droppers and groupies. It's the same drive of seeking accomplishment outside of ourselves.

6. Authority

Cialdini mentions the now-famous Milgram's Obedience Study.

Under the insistence of the researcher -the authority- 65% of participants kept administering excruciatingly painful

electric shocks until the maximum level.

It is widely acknowledged that the reason people kept going is that the authority figure kept insisting.

The Doctor & The Rear

Another example from *Influence* has probably had thousands of people laughing the whole world over.

A typical authority figure is a doctor.

A doctor left a note for the nurse on how to cure a patient's ear infection. A right ear infection, to be precise.
The note said to administer the ear drops in abbreviate form.

Such as: "place in r(right) ear".
The nurse administered the ear drops in the anus. Neither she nor the patient said anything.

Similarly, an experiment showed how nurses followed a doctor's directive via phone and started preparing a dose of medication that would have been lethal.

Very few objected.

If you are incredulous, keep in mind that the behavior and demeanor of the authority figure are other important indicators of the likelihood that people will *execute orders* without reproach.

Why Authority Works

Authority works because, like most other psychological triggers, it has several practical advantages for us.

It made sense to listen to authorities like parents and teachers.
They both knew better and held control of our rewards and punishments.

How Titles Influence Us

The appearance of authority is all it takes: we are as affected by the actual authority as by the *symbols* of authority.
And a title is often all that it takes.

Cialdini says that titles are hence very popular among people short in substance.

Prestigious titles lead people to assess the title holder as taller. In an experiment, the title "professor" instead of "student" lead to an increased height perfection of 2.5 inches (10+ cm).

It's actually a rather general tendency to link size to importance.
We also estimate more expensive cars as bigger. And estimate higher-value coins as larger.

Cialdini says it's one of the reasons why conmen wear lifts in their shoes.

Uniforms Influence Us

Uniforms are another major symbol of authority.

And so are suits.

People jaywalking in a suit are more likely to be followed by bystanders than people dressed in casual clothes.

Status Symbols

Owners of prestigious cars receive special treatment.

People wait significantly longer to honk when it's a luxury car stopping in front of their car.
The opposite was true for cheaper models.

Funny enough, students asked what they would do in such a situation, especially men, who said they'd honk quicker

to luxury cars (again: action matters, words don't).

It's similar to other popular status symbols such as expensive golden jewelry, diamond rings, and furs.

Defending from Authority Influence

We constantly underestimate the power of authority influence.

But Cialdini says that we naturally trust impartial authorities more than the ones who have something to gain from convincing us.

A trick from compliance professionals is to criticize their product on a minor detail to gain our trust and then move to major positive traits. You can be more on the lookout when this technique is used against you.

Cialdini then gives us a great example of a successful waiter using that technique (get the book for the description).

7. Scarcity

We tend to want more of what's scarce.

Scarcity, New Scarcity & Demand Scarcity

A famous experiment of supply and demand on product ratings gave to 200 undergrads a jar with 2 cookies and a jar with 10 cookies.

The cookies from the small jar were rated higher, more pleasurable to eat in the future and even higher estimated value.

A second experiment gave a jar of 10 cookies, a jar of 2 cookies, and a jar of 10 cookies then replaced by a jar of 2.
The swapped 2 cookies jar was the highest rated. Indeed we want most what has become scarcer rather than what has always been scarce.

A third experiment shows that cookies that became scarce because of social demand were rated the highest of all. The sub-communication, in this case, is that we are in competition for a scarce resource.

Salespeople exploit this principle all the time with fabricated demand and competition.
And it's even used in the romantic arena when women (or men) want to make us jealous by showing off pursuers.

Scarcity Explains Revolutions

Cialdini says that revolutions are more like to happen when people have been given a taste of a better life.

Going from high to low, from happy to sad, usually, feel worse than if we had never had the good times.

That means that for despots, it's more dangerous to give and take some away later on than never to give anything at all.

And people are more motivated by the thought of losing something than gaining something.
Homeowners pitched on how much money they're losing without insulation are more likely to get insulation than those told how much money they can make.

Defending from Scarcity

Cialdini says that when we feel the competition urge we should stop, get rational again, assess why and how we really want the item and set a maximum price we are willing to spend.

Epilogue

Cialdini says that in an increasingly complex and fast-paced world, we need shortcuts to make decisions.

And that is exactly why we have the moral obligation to rebel and push back on any attempt to trick us with influence shortcuts.

In a way, The Power Moves is doing exactly what Cialdini is advocating.

Real-Life Applications

The whole book is about practical application, but I wanna tell you one thing which was important in my development:

- **Stop Supporting Anyone to Feel a Winner**

I used to be either furious or ecstatic about any failure or victory of my favorite team or sportsperson.

I had to reprogram myself.

One is because you are giving up control of your feelings.
And two, because you might be compensating for your own lack of self-esteem and success.

Support this or that sportsperson, but don't let it get to you, and don't use it for compensation.

Influence Video-Summary

Influence Criticism

- **Brainwashing Effectiveness**

Some sources criticize the effectiveness of the Brainwashing methods" –Brainwashing was bunk", NYT– but the

techniques certainly can influence people.

In a nutshell: brainwashing works best with people with a confused identity, a sense of guilt and with black and white thinking.

- **Tupperware and Referrals = Like Principle?**

Cialdini lists the Tupperware sales technique and referrals as examples of the Liking principle.

But I think he's wrong there.

These are examples of social obligations.
Cialdini himself tells us of a woman complaining about the invitation to yet another Tupperware party.

She didn't want to go. And at that point, I doubt she liked the host. But she felt the *obligation* to.

- **"Because has no intrinsic persuasive power"**

I was surprised by Cialdini's interpretation of the famous "copy machine" study.

He says that people allowed the researcher to go through because of the power of "because".
And while "because" is indeed a strong and loaded word, it's not the main reason why.

The reason why people let the experimenter go through when she provided a reason is exactly because she provided a reason.
Providing a reason feels respectful of social norms -and of others-.

It's what we call here "power protecting".

ChatGtp agrees:

Review

Influence is a seminal book on soft power and a mandatory book in your quest of becoming a better influencer. [image]

It’s well-researched, well-structured, and well-written.

As a last important note, Cialdini says that none of the weapons of *Influence* is so strong as to work on everyone at all times.

4 High Dominance Body Language Poses For Bars & Clubs

Lucio Buffalmano · 13 August 2017 · Archived copy · Original

High-status body language is one of the main levers for boosting attraction.

Scientific research proves that men who adopt high status and socially dominant are more well-received by women (read the science of how to approach a girl).

So let's explore a few dominant body language poses you can adopt when out in a bar:

Contents

- #1. Taking Up Space
- #2. Drink By Your Side
- #3. Keep The Phone Up
- #4. Sitting Alpha
- Why It's Important
  - Summary

#1. Taking Up Space

Let the women be the months, and the Guardian your fiery mainstay alpha pose.

A few advantages:

- Takes up space and shows confidence in style;
- Shepard position: you are comfortable looking -dominant- and being looked -self-confident-;
- Perfect position to launch a convo: you're centered, they're orbiting around you;

Don’t overdo the “take up space” mantra: it screams overcompensation or social awkwardness and neither is attractive.

#2. Drink By Your Side

Any time you have the chance, put the drink down. When you don’t have the chance, hold it to your side.

Advantages:

- You keep an open body language
- You look confident and in control

PRO TIP: Small drinks are handier, make you look bigger and say you’re confident without liquid confidence.
Couple of wrong ones:

#3. Keep The Phone Up

Unless you're a Belieber teenager checking the latest snap from the latest androgyny popstar, try being a man instead :). Too many times our phones are used as a numbing shield: try not to use it at all.

And for the 3% of the times you actually need to use your phone, do so with an attractive pose:

Holding your phone high is great to keep your gaze and posture up but if you feel too much like "granny reading the

newspaper" it's ok to lower it a bit. Just keep in mind the main rule: BOTS -Brief and On The Side-.

PRO TIP: Only allow yourself to check phone at the urinals

#4. Sitting Alpha

Hollywood movies often depict actors sitting at bars *towards* the bar. And they're bad boys, gangsters, goodfellas..
You name it.

Yes, it is manly.

What they're certainly not, though, is sexy guys out to socialize.

Because sexy guys out to meet new people do *not* give their backs to the ones they wanna meet.
On the contrary, they show themselves openly and proudly.

This one is good if you're sitting at the corner of the bar, turned towards the crowd:

Why It's Important

The real-world feedback of dominant body language poses can be unbelievable for anyone who's not accustomed to it.

I had:

- women catcalling me (a couple of older cougars and a few inebriated girls)
- surreptitiously snapping my pictures
- and even sending their girlfriends over to profess their liking (for full disclosure this last one was in Asia where I enjoyed white-man bonus points).

And… I am super short, skinny, bald.
And far from very attractive.

Summary

The reason why it works is that people -mostly women- will notice the attractive body language *before* you even approach.

That's the equivalent of presuasion in place: you do all the hard work before you even begin your seduction.

They will notice you, think about it, maybe even talk about it with their friends… And then you approach.

This article showed a few basics of alpha male body language that you can start adopting right away.

Captivate: 12 Steps to Succeed With People (Book Review)

Lucio Buffalmano · 14 August 2017 · Archived copy · Original

Captivate (2017) is a *social skills book* in which author Vanessa van Edwards shares strategies for learning social skills, as well as a variety of social tips and insights on how to captivate, gain power and status, and make others like you.

Contents

- Bullet Summary
- Summary
  - #1. Do What You Like
  - #2. Make a Great First Impression
  - #3. Sparks
  - #4. Be Interested
  - #5. Highlighting
  - #6. How to Be Likeable
  - #7. Crack Someone's Personality
  - #8. Appreciate
  - #9. Values
  - #10. How to Lead People
  - #11. How to Deal With Difficult People
  - #12. Engage: How to Turn People On
- CONS
- Review

Bullet Summary

- Learn the 3 layers of personality types and tailor your communication to them
- **Gesticulate as much as possible** when giving a presentation
- **Listen to what people brag and complain** about to find their values

Summary

About the Author:
Vanessa van Edwards holds a Bachelor of Arts (B.A.) degree from Emory University. She began her entrepreneurial journey with children and writing children's books under the pseudonym 'Vanessa van Patten'.
She later moved to teach social skills from her point of view 'recovering awkward person', authoring several books and courses on social skills.
We already reviewed here *Captivate*, *Body Language of Love*, and her main course *People School*.

#1. Do What You Like

Vanessa says that "always say yes" is terrible advice and that you will not be successful following the "fake it until you make it mantra".

She says instead you should develop your own social game plan. Find out what you like socially and make those

your thriving locations.

My note: there is still merit in pushing yourself
fair point, but if you're serious about getting good, you should push yourself.

1. Staying at the edge of your comfort zone helps a lot in improving quickly as explained in
2. You can "force" yourself into something and *still* enjoy it. Often the first few minutes are tough and then it gets fun, as rightfully spotted by Jeanne Martinet in *The Art of Mingling*.

The mindset is: stick through your fears long enough, they will become your addictions.

Social Spots

Vanessa says social events often will have spots highly conducive to positive interactions and other spots that should be avoided.

The entrance should be avoided, for example, while a great spot is right at the exit of the buffet or the bar.
Once people got their food or drink they are often desperate to speak to someone.

#2. Make a Great First Impression

Vanessa says we decide whether or not we like someone long before we first hear them speak.
We quickly try to answer three questions about people we meet.
Are you:

- friend or foe (you answer it with a hands gesture);
- winner or loser (you answer with body language and posture);
- ally or enemy (you answer it with eye contact)?

Hand Gestures: Vanessa says pockets are "murderers of rapport" and you should use hand gestures and show your hands as much as possible.
Body Language: Winners *take up space* (*high power poses*), and Vanessa says you should always keep a good posture and open body language. Also, she reminds us that power poses give us confidence and weaker poses make us feel unconfident. So when checking our phone we should raise it up.
Eye Contact: looking at someone a lot says to that person "I like you". Hold eye contact to produce trust and gaze to build connection. Vanessa van Edwards mentions Brene Brown's TedTalk and how she used eye contact to build a connection with the audience (here's Brene's great book summary).

My note: you answer with your full communication
While it's possible that "you can answer this or that question with specific body parts or movements", you can't truly isolate sommunication. All parts co-exist and co-contribute.
Ie.: Eye contact won't only tell us "ally or enemy", but also if we're "winners or losers".

#3. Sparks

Vanessa talks a lot about "hot buttons" -what people love- and being unique.

My Note:
I'm personally not a big fan of uniqueness though, especially if it's uniqueness for uniqueness' sake.

#4. Be Interested

Captivate says that talking about ourselves releases dopamine and makes us feel good.

Hence, quoting Carnegie with "to be interesting be interested", the gist is that you should talk less and listen more.

#5. Highlighting

Part of the highlighting method:

- celebrate other people's successes
- introduce people with a big explanatory compliment
- let people impress you rather than trying to impress them

#6. How to Be Likeable

Vanessa says we like people who are like us because it's more likely we'll get along well with each other (*similarity principle of liking*). We like people who are dressed like us and think like us.

Captivate righteously reminds us that one of the biggest mistakes people do is to highlight differences rather than similarities.

#7. Crack Someone's Personality

Vaness delves into the Big Five personality traits: Openness, consciousness, extroversion, agreeableness, and neuroticism (OCEAN).

- **Openness**: how open you are to new ideas and trying new things (Variety seeker or routine person).
- **Consciousness** measures your self-discipline. High tend to have to-do lists, low ones find strict schedules constrictive.
- **Extroversion**: high get energy from being with people and tend to be cheerful and talkative; low drain energy from being with people and crave being alone;
- **Agreeableness**: how you work with others, empathy, and forgiveness. High are empathetic and easy to get along with; low is more analytical, like to take decisions without emotions and tend to be more skeptical.
- **Neuroticisms** how warrior you are

Vanessa says that when she started understanding people through the lenses of the Big Five personality traits, her conversation and human interactions started flowing much more smoothly.

#8. Appreciate

Vanessa quotes Gary Chapman's *5 love languages* to explain the different ways people show appreciation for one another:

- **Words of Affirmation:** Show love with words
- **Gifts:** Show love with gifts or with tokens
- **Physical Touch:** Show love with physical touch such as hugs, caressing, cuddling
- **Service:** Show love by helping someone out
- **Quality Time:** Show love by spending time with the people they love

Many issues in a relationship can be explained by the couple having different ways of expressing their love.

#9. Values

Vanessa van Edwards says all interactions are transactions (read the *law of social exchange*).

The major resources being traded are:

- **Love**: gaining acceptance, affection and likability;

- **Service**: support and care;
- **Status**: responsibility, praise and titles to evoke pride;
- **Money**: currency;
- **Goods**: tangible products;
- **Information**: advice, ideas and teaching.

We need all 6 but we take what we need most and give what we have in abundance. For example, people with low self-esteem look for likes on their Facebook pages.

How To Find Out People's Values

Captivate explains that a great way to find out people's values is to look at what they complain about or what they brag about.

#10. How to Lead People

If you want to get buy-in, you have to explain your why.

And to give control and ownership, avoid micromanaging and let people own their tasks.

What I loved most about this chapter is Vanessa's great advice on how to best give tasks: you don't just assign them, but give them to the people with the right skill.

And then… ?

Then tell them they are the best for it because they are the most talented for it.

Also, read:

- **How to be a leader**

> How to Be A Leader: 13 Laws From Social-Psychology

#11. How to Deal With Difficult People

Vanessa van Edwards speaks a bit about the low road and high road and "emotion hijacking" when our fears take us over.

She then goes on with a brilliant dialogue between a man and a woman to point out that when someone complains to us we should resist the urge of going into solution mode and do listen longer instead.

#12. Engage: How to Turn People On

Popular people are more attuned to other people's popularity.

They are more attuned to social signals, social hierarchy, and relationships. Popular people also care more about these topics.

So if you want to be popular, I'm afraid that means you need to be attuned to the game of popularity.
Same for office politics: to be good at office politics, *you need to learn the game of office politics.*

[image] 
CONS

- **Some pop-psychology**

For example, the Myers-Briggs Test introduced as reliable and 'science-backed', is instead debatable.

Say the researchers and authors of the *Handbook of Research Methods in Social & Personality Psychology:*

> Without much evidence for its external, structural, or substantive validity, the MBTI nonetheless became the most popular personality questionnaire in this country.

And personality psychology researcher Keith Campbell strikes even deeper:

> I'm sure you've taken a personality quiz or two—who doesn't love those? Under the Myers-Briggs Type Indicator, you may be an ENTJ or an ISFT. Many variations exist, and chances are, **many of them have little or no grounding in scientific evidence**, especially if they are related to pop culture.
> (…) Quiz takers often encounter what psychologists call the Barnum Effect, who apocryphally said, "**There's a sucker born every minute**." The Barnum Effect works by giving vague, ambiguous feedback that applies to everyone.

- **Lots Upsell**

Captivate has constant invites to check Vanessa's website.

The advertised link did not take me to any resource though but to a sign-up page.
That felt a bit wrong to me.

- **Some Tips Aren't Always Effective**

My opinion is that some tips can be counterproductive, especially for men.

For example, you don't ask a woman if she "can give you her number".

And you won't look socially powerful starting a convo by saying you want to "test a convo starter".

Review

Captivate is a good book on interpersonal skills for beginners.

As for any book on a large and complex topic such as interpersonal skills it cannot cover everything, and Vanessa focused more on 'standing out' and 'being unique'.

While that's certainly valid for many people in many situations, I find its validity contextual.

Seeking uniqueness is not an inherently high-quality trait.
By its very nature, it defines social climbing because high-status people are already getting the attention they want.

Get the book on Amazon or check:

Hands in Pockets: Body Language Meanings & Confidence Tips

Lucio Buffalmano · 15 August 2017 · Archived copy · Original

Curious about what hands in pockets really mean in body language?
This gesture can signal a variety of things—from confidence and coolness to anxiety and defensiveness, depending on how it's done and the context.
While many body language experts warn that hands in pockets can make you seem unconfident or untrustworthy, it can also be a powerful tool when used correctly.
In this article, we'll explore the different meanings behind hands in pockets, show you how to interpret them, and even teach you how to use this gesture to project confidence, sex appeal, or a laid-back vibe.

Hands in Pockets: Body Language Meaning

Hands in pockets when standing is a no-no in the *body language literature*.

Vanessa van Edwards says that hands in your pocket *murders rapport*, makes you come across as unconfident, and is associated with lying and defensiveness.

And she's right.

Mark Bowden author of "*Winning Body Language*" says that showing our hands is one of the most crucial aspects of building trust with the people around us.

But Lucio Buffalmano says that, as for most things people-related, big generalizations are almost always wrong.

And yes, you can also make hands-in pockets work.

Can Hands in Pockets Be Sexy?

Sometimes you don't want rapport.

Sometimes you don't want trust.

Sometimes you just want to look cool.
Or sexy.

That also works :).

And hands in pockets can be inherently sexy by drawing attention to your nether regions.

2 Types of Hands in Pockets

Three variables will determine how confident or unconfident your hands in your pockets will be:

1. **Visibility**: how deep in the pockets? Do they have a thumb or fingers sticking out? The rule of thumb -pun intended- is: the more visible your hands and thumb are, the more sexy/confident;
2. **Body Language**: how's the rest of the body language? The overall frame will determine if your hands in pockets are sexy, weak, or even strategically deployed to, for example, spice up a bland outfit or offset an otherwise too-imposing frame;
3. **Quantity**: both hands in pockets or just one? Usually, only one hand in your pocket is sexier and more confident.

Both Hands In Pocket – Fingers Out

Hoodlum warning!

Both hands with fingers out is probably the most sexually aggressive hands-in-pockets pose you can have.

The fingers outside conspicuously draw attention to your genitalia, making it a very gaudy, obvious pose.

If used while talking to a woman it will also give your game away.

Great For:

- Hyper mannish cowboy style
- Younger guys
- For "play poses"

Bad For:

- Most anyone outside cowboys, juvenile rebels, and gay party posters :)

The problem with the cowboy pose is that it's too obvious. It's the equivalent of a woman biting and licking the rim of a glass as she looks at you. Yes, many men would happily take that lay, but most women prefer a bit more subtlety –*Undercover Sex Signals* and *The Art of Seduction* both agree too much and obviously a display of masculinity is a turn-off-.

Both Hands In Pocket – Thumbs Out

This is the less extreme version of drawing attention to your nether regions with both hands: thumbs are less obvious and conspicuous and it's considered a *confident and authoritative position*.

Great For:

- When you're posing for a shot,
- When you're cold and hence have a real reason to hide your hands.
- With slim-fit clothing or hipster styles to get some more mannish edge.
- Overcoats, so more mature or "serious" looking men can use them while looking professional and… Authoritative

Also works well with the shoulder shrug. The thumbs out -confidence- Coupled with the defensive "*head duck*" (I don't know), communicates with endearing cuteness -but still a mannish side- that you either don't have much influence on the result or that you got found out. As if to say "Well… You know how it is".

She: “who’s this girl texting you?” You: *shoulder shrug*

Bad For:

- Interacting with people: you’re better off using hand gestures and possibly touching your conversation partner;
- As your main resting position -Martin Sheen doing it for the whole Badlands movie looked like a rebel, but in a non-powerful, juvenile fashion.

One Hand In Pocket – Fingers Out

We’re starting to get now to more “usable” daily poses.

One hand in the pocket with fingers sticking out is sexually allusive without being too showy. You will still rarely see mature men in this position though.

Great For:

- Holding with one hand onto a rail or bar
- Impressing a strong sexual vibe on the interaction (imagine yourself reclining against the bar as you speak to her)

Bad For:

- Getting to know people (unless you're playing the cool guy)

Note: try to keep your fingers together because open fingers are perceived as less powerful (*Pease and Pease*).

One Hand in Pocket – Thumb Out

Hand in the pocket with one thumb out is great all seasons.

This is a common resting position of mine: it's allusive in a great, slight "under the radar" way.

Great For:

- Your go-to resting position
- When reclining against the bar

Bad For

- Whenever it's not comfortable (i.e.: you can barely fit your hand in the pocket)

One Hand In Pocket – All In

With one hand fully in the pocket we start going further down the "blandness" side of the curve.

Great For:

- With a suit and a nice watch, as embodied by James Bond
- When holding a drink to look casual or…
- When holding a gun to take the edge off (remember this one next time you're out at the bar :)

Both Hands In Pockets – All In

Both hands in pockets are at the highest risk of looking unconfident and shifty because we hide our palms when we want to hide something *(Pease and Pease*).
But it can still work if you couple it with great posture and a relaxed look because hands in pockets are also non-commital as if to say "whatever", which can be sexy in a comfortable, soothing way. The secret to making it work is the expression on your face: relaxed and chill.

Great For:

- Laid back, hippie types (picture below would have been better with a pendant and a couple of brown wristbands)
- When you want to give an aura of "whatever"
- Comfortable, casual look

Chill babe, the world ain't gonna end

Bad For:

- When feeling down (it contributes to down-spiraling)
- When you tend to slouch (both hands in pockets will make you slouch more)
- With any other negative signs such as low gaze, slouched shoulders, downward lips, and hips drawn back (i.e.: moving genitals away rather than forward)

Bonus: Hand-in-Pocket Move

And don't forget the actual movement. Slow. With a slight smirk for social situations sexiness and a deadpan face for edgy sexiness. But don't take my word for it and look at who did it much better than I have.
Note: here's an example where the movement gave away nervousness in a "hide my hand" way more than a "look at my crotch" move.

Alpha Male Poses at the Bar

Think and Grow Rich: OK Advice, But With Unmasculine Woo-Woo

Lucio Buffalmano · 20 August 2017 · Archived copy · Original

Think and Grow Rich (1937) is one of the best-selling self-help books in which author *Napoleon Hill* shares his "secrets" and methods for getting rich and, more in general, for getting what you want in life.

Contents

- Overview
- Notes
  - #Chapter 1: Desire
  - #Chapter 2: Faith
  - #Chapter 3: Auto-Suggestion
  - #Chapter 4: Specialized Knowledge
  - #Chapter 5: Imagination
  - #Chapter 6: Organized Planning
  - #Chapter 7: Decision
  - #Chapter 8: Persistence
  - #Chapter 9: The Master Mind
  - #Chapter 10: Sex Transmutation
  - #Chapter 11: The Subconscious Mind
  - #Chapter 12: The Brain
  - #Chapter 13: The Sixth Sense
  - #Chapter 14: How To Outwit Fear
  - Real-Life Applications
- Criticism
- Review

Overview

- **Develop a deep Desire to achieve your goals**
- **Have Faith** that you will achieve them
- **Reach decisions quickly and stick to them** (it's a habit)
- **Visualize** yourself as already having reached those goals (law of attraction)

Notes

Napoleon Hill starts the introduction while covertly hyping up what's about to come.

He says the "secret" of each chapter will manifest to you IF YOU ARE READY FOR IT.

When it does manifest, you should have a toast because that will be the most important turning point of your life.

My Note: This is a power move on the readers

On my first read, I found the introduction note and capitalization condescending and irritating.
I was looking for information and for wisdom, not for big hyperbole -the CAPS are straight from the author-.
And I want the info presented to me as clearly as possible, and not through some hide-and-seek game that already

felt manipulative to me.
That said, let's get straight into this *Think and Grow Rich* book summary.

Update:

Hill's introduction is basically an extreme *teachers' frame power move.*

Call it, if you wish, a "guru frame", which is very popular among gurus and… Charlatans -up to you to tell which from which, and the difference, if any-.

I then saw this video by Coffeezilla and he does a great job at telling you who Napoleon Hill truly was (heads up: a scammer).

#Chapter 1: Desire

The first quality you should possess to THINK AND GROW RICH is the DESIRE for riches.

Here are the 6 practical steps of desire:

1. Fix in your mind the exact amount you desire
2. Determine exactly what you will give in return
3. Establish a definite date
4. Create a definite plan and start with it whether you are or not
5. Write down all the previous steps
6. Read your statement aloud before sleeping and right after waking up. See, feel, and believe you're already in possession of the money.

Napoleon Hill says that no one is ready to acquire riches until he believes he can acquire them.
The state of mind indeed must be BELIEF, not hope or wish.

And he adds that nothing is impossible for the person who backs DESIRE with enduring FAITH.

#Chapter 2: Faith

When you mix FAITH with thought, the subconscious mind picks up the vibration, translates it into spiritual equivalent, and transmits to "Infinite Intelligence", like in prayer.

Napoleon Hill says you can become faithful with an affirmation or repeated instructions to the subconscious mind via auto-suggestion.

My Note:
Modern psychology has debunked the self-help myth of affirmation and shown that, in many cases, it can actually be counterproductive.

Hill says that any emotionalized thought -any thought charged up with emotion- which is mixed with faith will begin to immediately translate into the physical equivalent.

Our subconscious will ONLY recognize and act upon thoughts that have been well-mixed with emotions or feelings.
Thus, you must mix DESIRE with BELIEF, or FAITH.

Why Thinking Positive Is Key

Our mind takes the nature of what is most present in it.

That is why you should think positively and eradicate negative emotions.
And a mind imbibed with positive emotions provides the right breeding ground for FAITH to blossom.

My Note:
Positive thinking is good up to a certain point.
Too much positive thinking is harmful, also read "pop-psychology myths".

Self-Confidence Formula

1. Know you have the ability to achieve the object of your Definite Purpose, so DEMAND of yourself continuous action and promise right now to keep acting
2. Realize that what you focus on will eventually come true, so focus thirty minutes a day on the person you intend to become
3. Spend 10 minutes a day demanding yourself the development of SELF CONFIDENCE
4. Clearly write down a description of your DEFINITE CHIEF AIM in life
5. Understand that no wealth can endure unless built upon trust and justice. So engage in no transaction that does not benefit all parties; induce others to serve you by serving others, eliminate hatred, envy, jealousy, *selfishness and cynicism* by developing a love for all humanity.

Repeat this formula aloud once a day with full FAITH that it will gradually influence your THOUGHTS and ACTIONS so that you will become a self-reliant and successful person.

#Chapter 3: Auto-Suggestion

Auto-suggestion is what we'd call today visualization.

When visualizing the money you intend to accumulate, close your eyes and see yourself rendering the service, or delivering the merchandise you intend to give in return for this money.

You auto-suggest with the following process:

1. Go to a quiet place, close your eyes, and repeat aloud the written statement of the amount of money you intend to accumulate, the time limit, and the description of how you will do so.
   Most importantly, SEE YOURSELF ALREADY IN POSSESSION OF THE MONEY. I quote Napoleon Hill on what he recommends you tell yourself
2. Repeat night and morning until you can vividly imagine the money you want to accumulate.
3. Place a copy of the written statement where you can see it night and morning and read it until it's been memorized.

This is what you should repeat yourself:

> I believe that I will have this money in my possession.
> My faith is so strong that I can now see this money before my eyes.
> I can touch it with my hands. It is now awaiting transfer to me at the time, and in the proportion that I deliver the service I intend to render in return for it.
> I am awaiting a plan by which to accumulate this money, and I will follow that plan, when it is received."

Napoleon Hill says that *skepticism* is normal in human beings with all new ideas, but if you keep following the instructions, then belief and ABSOLUTE FAITH will soon take root.

At that point, you'll be able to say you are the true master of your faith and the captain of your soul.

My Note:
Studies have shown that visualization can also be harmful if it replaces action and if it provides enough good feelings that you will not want to work hard to make it happen in real life.

#Chapter 4: Specialized Knowledge

You will need specialized knowledge -as opposed to useless general knowledge- of the service, merchandise, or profession you intend to pursue in return for riches.

#Chapter 5: Imagination

Imagination is what you will use to create plans.

Napoleon Hill says that imagination only works when the subconscious mind is vibrating at a super rapid rate when, for example, stimulated with strong desire.

And imagination becomes more developed through USE.

The ideas you develop will then be transmuted into cash through the power of definite purpose in conjunction with definite plans.

I absolutely love when Napoleon Hill says:

> God seems to throw Himself on the side of the man who knows exactly what he wants, if he is determined to get JUST THAT!

And I love when he says that an idea, as crazy as it may sound at the beginning when coaxed, nursed, and enticed to remain alive, will gradually become a giant.
That idea will eventually acquire power and it will then drive you.

> **God seems to throw Himself on the side of the man who knows exactly what he wants**

#Chapter 6: Organized Planning

Napoleon Hill recommends you get your plans checked and approved by the member of your Master Mind.

And if the first plan you adopt does not work, replace it. And keep replacing all plans until you find one which DOES WORK.

The Attributes of Leadership

1. UNWAVERING COURAGE: nobody likes a leader who lacks self-confidence and courage.
2. SELF-CONTROL: He who cannot control himself cannot control others.
3. A KEEN SENSE OF JUSTICE
4. DEFINITENESS OF DECISION: wavering is not a leader-like quality.
5. DEFINITENESS OF PLANS: without a plan, you're like a ship without a rudder.
6. THE HABIT OF DOING MORE THAN PAID FOR: a leader will do more than he requires his followers to do
7. A PLEASING PERSONALITY
8. SYMPATHY AND UNDERSTANDING: a leader has sympathy for his followers and he understands them
9. MASTERY OF DETAIL
10. WILLINGNESS TO ASSUME FULL RESPONSIBILITY: a leader must *take full responsibility* for the mistakes and shortcomings of his followers. If he shifts responsibility, he won't be a leader for long
11. COOPERATION: Leadership calls for POWER, and power calls for COOPERATION.

> **He who cannot control himself cannot control others**

#Chapter 7: Decision

Napoleon Hill says that LACK OF DECISION -or procrastination- is one of the main causes of failure.

The habit of reaching decisions promptly and changing them slowly is one of the main common traits among people who accumulated riches.

#Chapter 8: Persistence

Persistence differentiates the poor from the rich.

1. Persistence in applying the rules of this book
2. Persistence in the face of misfortune

That's what will make you rich -or at least that's what Hill says-.

As a matter of fact, persistence alone will give success even to people with little qualities.

Here are a few ways to develop persistence:

1. Definite purpose spurred by a burning desire
2. A definite plan continuously put into action
3. Positive mindset insulated against all negative influences
4. Alliance with one or more people pushing us to follow through

> **The habit of persistence is the best insurance against failure**

#Chapter 9: The Master Mind

The "Master Mind" is the coordination of knowledge and effort, between two or more people for the attainment of a definite purpose."

A Master Mind built in a spirit of harmony among its members will amplify the power of each mind to give birth to an entity that is more powerful than the sum of its components.

#Chapter 10: Sex Transmutation

Sex is the most powerful creative energy.

Napoleon Hill says that there is no great leader without the driving force of sex: sex energy is indeed the creative energy of all genii.

But sex energy must be transmuted from the desire for actual sex into a different form of desire and action. Then, and only then, it can be the driving force of a genius.

Why do most people succeed only in their 40s or 50s?

Hill says it's because they waste sexual energy in the overindulgence of the sex, rather than harnessing it and putting it to different and higher uses.

Romance + Sex = Genius

Adding romance to sex puts us closer to Infinite Intelligence. When sex is coupled with romance, then a genius is born.

#Chapter 11: The Subconscious Mind

The subconscious mind receives and files any impressions from the senses or thoughts, regardless of their nature.

That means that if you fail to plant DESIRES and the right thoughts in your subconscious, you will leave your destiny to chance.

To imprint your subconscious with the thoughts of your choice, you must plant your thoughts through the imagination, and mix them with faith.

#Chapter 12: The Brain

Chapter 12 of Think and Grow Rich describes the brain.

But you're not going to learn neurobiology from a book written when neurobiology didn't even exist.

#Chapter 13: The Sixth Sense

Napoleon Hill had a council of advisers.

Except that they were all in his imagination.
Napoleon Hill describes the imaginary meetings he had with the members of his council.

The meetings started becoming more and more real, with the people in the room taking on different habits.
It was becoming so real that he started getting worried.

The sixth sense, as Think and Growth Rich explains, comes with mastery and continuous application of all the other principles outlined.

#Chapter 14: How To Outwit Fear

The enemies you must steer clear of are indecision, doubt, and fear.

The three, Napoleon says, are closely related. Indecision breeds doubt, and the two together give birth to fear.

Getting rid of fear is imperative or our mind will manifest physically exactly what our fears dictate.

Napoleon Hill ends by reminding us we have absolute control of our thoughts. And by controlling our thoughts, we control our destiny.

My Note:
In this chapter, Hill suggests "drowning our worries" by being too busy to be annoyed by them.
This is a terrible strategy that you probably shouldn't follow (read Carnegie and Brene Brown).

[image] 
Real-Life Applications

Some of the lessons in *Think and Grow Rich* are timeless and can benefit you, such as:

- Visualize
- Keep your thoughts positive
- Develop a deep desire for achieving your goals
- Have faith you can reach your goal

Criticism

There is plenty of criticism that any critical thinker has to move to *Think and Grow Rich.*

Dogmatic & Religious-like, Often Unscientific

Napoleon Hill lays out dogmas without citing any research or opening any door to doubt.

I feel there's a huge spiral of silence around this book: everyone says it's great so nobody has the guts to call out the BS in it.

But to me, it was jarring.
I prefer authors such as Ray Dalio who attribute their success to "knowing they don't know" and always cross-checking their conclusions (instead of "forcing yourself into belief and conviction").

Napoleon Hill says for example that when someone DESIRES something so deeply that he can bet his entire future on a single shot, he is then sure to win.
I hope nobody is ever too sure to win the lottery, albeit I'm afraid there are plenty of people who lost everything chasing their deep desires.

All Or Nothing Extremes

Extremes are appealing to people and help sell.

And *Think and Grow Rich* is packed with extremes, from desiring riches like a man stranded in the desert desires shade and water, to the unwavering faith of your ultimate victory.

More often than not instead, balance across many concomitant actions and pursuits is more effective and more conducive to goal achievements than extremes.
Read more on the law of optimum balance here:

> The Law of Optimum Balance

Paternalistic. And ignores psychology, human nature, and power dynamics

The author says that laborers will certainly receive more money (when?) and will be led by better leaders (very paternalistic to imply they will be happy being led, with just a bit more money), BUT:

> But first, they must give more to their employer, and stop this bickering and bargaining by force, at the expense of the public.

I appreciate a lot that Hill talks up collaboration since collaboration is also one of the tenets of this website.

But what he suggests is a ***naive collaboration*** (and he sides with the owners, too).

First of all, you can't give much more screwing bolts in a plant.
And if you only give more without making sure you have some leverage and negotiation power, then you are hoping the employer will be nice.
And you risk that the employer will likely take the lion's share and give you the crumbs. Or, also possibly give you *nothing* and get a cheaper laborer as soon as he's got the chance.

Also, read about "*enlightened collaboration*"

> Life Strategy: The Enlightened Collaborator

The “Secret for Succes” Format Feels Like Hyped-Up Marketing BS

Says Hill:

> “preparing myself to take it to the world, to men and women who, without the secret, might go through life as failures”

There is no secret formula to follow that ensures success.
And I personally don’t like that nasty power move and *manipulative technique* of framing those who don’t follow his formula as “failures”.

Getting Too Busy to Beat Worry Is Wrong

The strategy of being too busy to worry, the same suggestion as in *Stop Worrying and Start Living*, is plainly wrong. I’d recommend you don’t follow it.

Success Equals Money?

If your whole life’s meaning revolves around getting rich… I’d suggest you think twice about it.
I’m not necessarily saying that you’re wrong or that it’s an unworthy goal, but to truly reflect how important it is to you.

Law of Attraction Is Unproven & Unfounded At Best

Hill says that:

> thoughts are things, and when they are mixed with definiteness of purpose, persistence, and a BURNING DESIRE they will translate into riches.

This was the beginning of the biggest lie in the self-help literature: the law of attraction.

Conor McGregor has been quoted saying he manifests his thoughts into reality.
Until he lost.

Tony Robbins talks about a couple who willed into their life two different lottery wins by believing they would win and acting as if they had already won it.
In the meanwhile, thousands lost everything gambling.

I highly recommend the articles on this website on *self-help myths*, pop psychology *myths,* and *naive self-help:*

> Naive Self-Help: 10 Most Dangerous BS to Avoid

Review

Think and Grow Rich has some great wisdom and some nonsense BS packaged with a mystic and mythic aura.

The fact that it’s one of the biggest sellers of self-help literature together with *How to Win Friends* and *The 7 Habits of Highly Effective People* doesn’t mean it’s great or that you should read it.

Some passages and advice are unscientific, and also unscientific are some central tenets of the books -ie.: willing things into life-.

But many other tenets such as action, meditation, deciding, and persisting are timeless and you are well advised to put them into practice.

Be Careful of The Law of Attraction

I advise you to be cautious around unscientific recommendations.

The “law” of attraction is now a law at all.

It’s useful in focusing you on the positives and in giving you confidence in taking the necessary steps.
But don’t expect the law of attraction to bring anything into your life without you putting in the work.

Check out my full Book Summaries Section.

Think and Grow Rich: Lucio's Take

Think and Grow Rich is the grandfather of all self help book. Many of its principles are timeless and you will do well by learning and applying them.

Bold: Book Summary & Review

Lucio Buffalmano · 20 August 2017 · Archived copy · Original

Bold is a book on entrepreneurial mindset in which author Peter Diamandis shares his “aggressively optimistic” recipe for entrepreneurs who wants to change the world.

Contents

- Bullet Summary
- Bold Summary
  - Part One – Bold Technology
  - Part Two – Bold Mindset
  - Part Three – Bold Crowd
- CONS
- Bold Review

Bullet Summary

- **Many disruptive technologies start relatively unnoticed** as they “brew” for a while before hitting suddenly
- **This is the best time ever** for you to take opportunities and change the world
- **Go for Moonshots**: huge goals are better at motivating you and better at changing the world

Bold Summary

Part One – Bold Technology

In part one Peter Diamandis discussed the trends in technologies that are changing the world.

I found particularly interesting the 6 Ds of exponentials, analyzing how digital revolutions work.

Deception
The first period of digitization goes unnoticed. It’s because when a trend starts, even if it grows exponentially, it still won’t impact lives.

Disruption
As the trend approaches a critical mass and starts having some visible effect… It will then quickly grow from “visible effect” to “disruption” at lightning speed as it keeps growing exponentially.

Demonetization
As a business becomes digital, money matters less. Peter Diamandis talks about Kodak: film quickly became useless with Megapixels.

Dematerialization
Anything that becomes digitalized also becomes dematerialized.

Democratization
As prices tumble and technology is more and more accessible to the masses, a democratization of opportunities takes place.

The Hype Cycle

Peter Diamandis talks about the Hype Cycle, which postulates that people tend to over-hype and overestimate the

impact of new technology only to be disappointed when said technology takes longer than expected to deliver the hyped-up results.
We then have another sort of “negative hype”, where people are *too* pessimistic about the new technology.
Peter then says that for entrepreneurs it’s critical to understand when a technology is exiting its trough and starts rising up the enlightenment curve.

Disruptive Technologies

Peter then delves into 3D printing, robotics, AI, the Internet Of Things, and the land of opportunities that the Internet is going to be.

He gives an overview of the huge changes in optimistic, contagiously upbeat fashion. The content is not disruptive, to stay on topic, and it changes so quickly that going into the details is not worth it and I invite you to read the book for it.
However, the overarching message is this: the world is changing, is changing fast and deep, and it’s an opportunity feast for us all.

Part Two – Bold Mindset

Bold by Peter Diamandis dedicates the second part to looking for what gives us an edge mentally.

He mentions that setting goals makes us more productive and that big goals outperform small and medium ones. Goals are best when they align the desired outcomes with the individual values.

Peter Diamandis then talks about Google, Moonshots -huge goals between audacious projects and science fiction-, 10x and motivation -where he recaps Drive by Daniel Pink-.

Google’s Eight Innovation Principles

1. **Focus on the User.**
2. **Share Everything**: In a hyperconnected world,d it’s critical to be open, allow people to help you innovate, and build on each other’s ideas.
3. **Look for Ideas Everywhere:**
4. **Think Big but Start Small:** you can start a company on day one that affects a small group but aim to positively impact a billion people within a decade.
5. **Never Fail to Fail:** Fail frequently, fail fast, and fail forward.
6. **Spark with Imagination, Fuel with Data.**
7. **Be a Platform**: the most successful companies -Airbnb, Uber, Instagram- are all platforms
8. **Have a Mission That Matters**: perhaps most important, does your company have a massively transformative purpose? Passion is key to progress

Flow

There are triggers or preconditions to help us achieve *flow*:

- High-pressure work: we have to be willing to take risks;
- An environment rich in novelty, uncertainty, and complexity
- Clear goals: it’s a shortcut to the *now*. *Y*ou know what you’re aiming at, so you can focus on the task
- Immediate feedback: another shortcut to the *now*
- Challenge to skills ratio: complex enough not to be boring, easy enough we can solve it
- (groups) Familiarity: for groups, everyone is on the same page
- (groups) Blending ego: no social climbers elbowing for the limelight

- Autonomy and Mastery (Intrinsic Motivators)
- (groups) Additive interactions: adding value to each other rather than confronting each other
- Thinking differently

The skunk methodology relies heavily on the flow state to reach outcomes quickly.
For more on flow read "*Flow: The Psychology of Optimal Performance*".

Peter's rules

Some of Peter's rules I liked most:

1. If anything can go wrong, fix it! (To hell with Murphy!)
2. When given a choice—take both!
3. Multiple projects lead to multiple successes.
4. Start at the top, then work your way up.
5. Do it by the book . . . but be the author!
6. When forced to compromise, ask for more.
7. If you can't win, change the rules.
8. If you can't change the rules, then ignore them.
9. No simply means begin one level higher.
10. Don't walk when you can run.
11. When in doubt: THINK!
12. Patience is a virtue, but persistence to the point of success is a blessing.
13. The faster you move, the slower time passes, the longer you live.
14. The best way to predict the future is to create it yourself!
15. You get what you incentivize.
16. If you think it is impossible, then it is for you.
17. An expert is someone who can tell you exactly how something can't be done.
18. The day before something is a breakthrough, it's a crazy idea.
19. If it was easy, it would have been done already.
20. Without a target, you'll miss it every time.
21. Fail early, fail often, fail forward
22. If you can't measure it, you can't improve it.
23. The world's most precious resource is the persistent and passionate human mind.
24. Bureaucracy is an obstacle to be conquered with persistence, confidence, and a bulldozer when necessary.

Elon Musk, Jeff Bezos & Richard Branson

Bold by Peter Diamandis then goes on to analyze the exploits and different styles of Elon Musk, Bezos, and Branson.

What I love the most about this section is the differentiation between missionary and mercenary. Missionary is someone who loves the product and the customers, the mercenary is money-driven. Long term, usually the missionary makes more money than the mercenary.

Part Three – Bold Crowd

Bold by Peter Diamandis goes into the power of crowdfunding and community building and community

power.[image]

CONS

- **Symposium-style**

I was surprised to find *Bold* takes a lot of time to discuss the current state of affairs of different technologies and current services.
Luckily Peter Diamandis can do it well and lightly and manages to add value, but on the other hand, I think it was too long.

- **Won't age well because of the lengthy descriptions of current technology**

The symposium parts in which Peter Diamandis reviews the current state of technology and the next disruptors will not age well.
10 years from now this book will be 70% outdated.

- Geek-measuring approach to self-development

Diamandis is a typical Silicon Valley type of guy.
That's generally a great thing, but it comes with some downsides. Including the tendency to fall for the trap of going extreme on "data", "measurements", "hacks", latest trends and fads, etc. etc.

See a good review here:

- **Living forever pipe dream**

Diamandis is often associated with the "life extension" or "living forever" goal (obsession?).

I'm not too sold on that and I tend to agree with Robert Greene: accepting death may be a better approach.

Bold Review

Bold is an interesting book on Silicon Valley thinking and can be helpful for those who struggle with "glass half-empty" type of thinking.

It may also help humanity by encouraging many entrepreneurs to risk big.
Almost all will fail, but those who succeed may truly help humanity move forward.

In a way, the biggest gift of *Bold* is Peter Diamandis' mindset, which is:

- Positivity
- Opportunities mindset (as opposed to threats)
- Moonshot thinking

On the con side, ***Bold* does not provide a recipe to maximize your odds of success**, which most likely you maximize in *proven* industries and learning and applying the basics of entrepreneurship to proven business models that have much higher odds of success (vs very unlikely "moonshots").
See our review of Alex Hormozi and his book for more.

How McGregor Displays Social Dominance: Breakdown

Lucio Buffalmano · 21 August 2017 · Archived copy · Original

If you are interested in how to dominate socially -or if you are interested in Conor McGregor-, you came to the right page.

In analyzing Conor McGregor's public interactions, I came across a few interesting traits and moves that he plays to position himself as the most dominant man in the room.

Contents

- Intro
  - #1. Stand Out
  - #2. Lead – And Follow Shrewdly
  - #3. Dominant Body Language
  - #4. Ask For Investment
  - #5. Avoid Investment
  - #6. Impose Your Will
  - #7. Be The Center of Attention
- Summary
  - Try Hard Warning

Intro

Conor McGregor always makes a point to be seen as a socially dominant man, and that makes him a good subject for a case study.

Let's begin:

#1. Stand Out

Court attention at all costs says the *48 Laws of Power*.
You won't be dominant at anything being the social wallflower of the situation.

You don't want to exaggerate and come across as a narcissist hogging attention to feed a little ego. That's weak. But you do want to stand out in a positive way.

Great posture, above-average grooming, taking up space, looking comfortable, nice fitting clothes, and speaking up are all positive elements of standing out. Conor McGregor uses all of them.

#2. Lead – And Follow Shrewdly

Dominance, authority positions, and leadership are not the same thing, but there's a certain overlap.

Here's the thing though: nobody can lead or dominate all the time, and while "leading" is an abundantly discussed topic, "following" astutely is probably even more important and much less understood.

Holding your own when someone tries to dominate you or when you have no other choice but to follow or yield territory is what differentiates the very top-value men from the rest.

Usually, you do it by assessing quickly whether or not you can avoid following, avoid obeying, or can successfully negotiate a better outcome.

When you can't, the focus is minimizing the social impact of being a follower while keeping your composure.
A few guidelines for doing so effectively:

- **Beat Him To The Punch**: do what you're supposed to do *before* being asked to-;
- **Lead Back:** Lead in another smaller area. The waiter was rough telling you to move out of the way so he can serve the drinks. Move and then chaperone him with a hand on his arm while saying "*this way please*"
- **Remain cold and detached**, don't say sorry, look at him in the eyes, and never smile -McGregor does it in the video below-
- **Thank Him:** Might seem counterintuitive, but "thank you" is a powerful way of framing the interaction as if he's done a pleasure for you. The cop made you walk all the way back because you crossed the crime scene? "Thank you for keeping our streets safe for us"

Note: These tactics are situational and meant for status-testing or dominance dynamics, not everyday polite or cooperative interactions.

#3. Dominant Body Language

Dominance is largely conveyed by nonverbals. Here are two examples from Conor McGregor's video:

Nod Up, Not Down

Nodding down, what most people do, *is a sign of submissiveness.*

Do nod down when you want to show yourself as non-threatening -ie.: meeting a woman at night-.
But don't over-nod down in neutral situations where there's no need for submissiveness and never in the presence of anyone trying to intimidate you.

Example:

Splayed Legs & Arms Swinging

Splayed legs and arms swinging are popular signs of confidence (Joe Navarro, 2009).

Conor McGregor does it a bit too theatrically.
James Bond has a less showy and more purposeful-looking walk.

Preview from our Power University-only videos:

#4. Ask For Investment

High power people get others do things for them.
It's a fundamental law of social power, tied to Social ROI.

It does not have to be done aggressively, but tasking others is the strongest signal of higher status.

If you never do, try asking more from the people around you.
As a guy who was in the habit of "always doing things on his own," I can tell you it's very likely you will find many who are glad to do something more for you.

Once you develop yourself to a position of value and power, then Machiavelli's quote applies:

> **Don't do yourself what you can let others do for you**

#5. Avoid Investment

By the same token, you should avoid any unreasonable investment that others demand of you.

For example, some weeks ago at a bar, a woman sitting with a man motioned me to go over to their table. What did she want?

It looked like she wanted me to join them for a drink. I was curious, but at the same time, beckoning someone you don't know is a major request to make.
Those kinds of requests, you never comply with because they are a form of *social shit tests:*

> **Girls**: (gesturing to go over) Can you please take our pictures?"
> **You:** (smirking) I wish I could but my hand shakes

Here is The Power Moves version of Machiavelli's rule:

> **Never do what others can do for themselves.**

#6. Impose Your Will

Dominance entails the possibility of imposing one's will over the environment and the people around, and it's divided into three categories:

- **Actual Power**
  Actual Power doesn't mean you will impose on others no matter what but it does mean you *could* impose your will. An enlightened monarch is as dominant -if not more- than an unjust despot. But the enlightened one can equally impose his will, or he wouldn't be a monarch.
- **Behavioral Power**
  You might not overpower your opponent but you *behave* as if you can always have your say and you're not afraid of getting your hands dirty. Even at the risk of losing out. It's actually more impressive when a weaker party steps up to the plate.
- **Mental Power**
  We human beings tend to act dominantly when we've got people on our side and when we feel our opinions will be accepted. But real domination starts within yourself. And it means you've got the mental power of sticking to your values and standing for what you believe is right, no matter the environment around you.

The actual power of imposing one's will can be the dark side, which gives the noun "dominance" a bad reputation.

It's then up to each one of us to dominate for good.

#7. Be The Center of Attention

You don't (necessarily) seek attention, but people seek *your* attention because your opinion matters.

Summary

Becoming more dominant is as much a matter of nonverbal cues as it's a matter of the beliefs and confidence underpinning those signals.

Dominance can be used for having a positive and net value impact on the world, or it can be used to dominate people out of selfishness.

The latter is when you should step in and stand up. And the more you learn about Power Moves, the more you'll be able to.

Try Hard Warning

McGregor's way of dominance is often a bit juvenile (also see: *the archetypes of dominance*).

Overplaying all these traits can easily make you come across as trying hard and a bit childish.

A stronger, more powerful way of showing dominance is that of the Godfather, for example. See here the *quieter dominance style: The Godfather*.

How to Look Dominant: 7 Moves From The Godfather

Lucio Buffalmano · 22 August 2017 · Archived copy · Original

Are you looking for power moves to assert dominance?

You have come to the right place.

This article deep dives into one of the most dominant men on record and tells you exactly what makes him the most feared, respected, and revered man in the room.

Make sure to read until the end because I explain the different styles of dominance.

And now, here are the 7 power moves and body language cues The Godfather uses to assert dominance.

Contents

- Intro
  - 1. Slow Moves
  - 2. Cut People Off (With a Gesture)
  - 3. Pregnant Pauses
  - 4. Subtal Signals of No Respect
  - 5. Highlight Their Submission
  - 6. Touch Others
  - 7. Dominate With Intensity
- Showy Dominance VS Quiet Dominance
  - Showy Dominance
  - Quiet Dominance
  - Learn More
- Godfather Psychology

Intro

Dominant social moves refer to verbal and nonverbal cues that convey high status, high confidence, and

1. Slow Moves

Slow moves are a cornerstone of dominant men.

Robert Greene *The 48 Laws of Power* says that hurrying betrays a lack of control over yourself, and over time, being at the mercy of events outside your control. But dominant people are not at the mercy of anything, they are the masters of their own world. Hence, they don't rush but move slowly.

I pick a scene from The Goodfellas because it makes it crystal clear why dominant men move slowly: because they don't have to move for anybody.

> Paulie might have moved slow.
> But it was only because Paulie didn't have to move for anybody.

And right there and then, in just two words, lies the power of quiet dominance.

And it's exactly why quiet dominance, at the end of the day, always garners more respect and fear than the showy

type of dominance.

2. Cut People Off (With a Gesture)

Listening to someone intently without interrupting is a sign of respect.

Cutting people off is instead a sign of dominance and higher status. When you cut people off *without* even addressing them, you show total dominance.

The Godfather does it with Sonny in the movie.

3. Pregnant Pauses

The Godfather uses plenty of pauses between sentences.
And his pregnant pauses serve two functions:

1. Show that he's not hurried
2. Give more weight to what he's saying.

Notice how deeper it sinks in as he waits a full 2-3 seconds before finishing the sentence with "ever".

> Never take side against the family… Ever

4. Subtal Signals of No Respect

Disrespecting someone with impunity can be one of the dark ways of showing dominance.

The Godfather does it mostly in a subtle way. If giving full attention to someone is indeed a sign of respect, taking that attention away is a sign of disrespect -and dominance-.

For example:

1. Show Disattention

Interacting with someone while doing something else is a sign of disrespect.

Here the Godfather feels Bonasera is beneath him.
He shows it by playing with the cat while talking to him, thus *not* gifting him with undivided attention.

Vito will later move to higher forms of dominance such as finger-pointing, submission requests (hand-kissing) and then finally escorting him out.

2. Give Them Your Back

Giving someone our full frontal body is a sign we're intensely focused on them and can be a sign of respect.

On the other hand, giving them our back is the complete opposite: a sign we're not interested. And if they're talking to us and we're listening, it's a sign of disrespect.

The Godfather uses it a few times during the movie.

Here he is showing Fredo with his body language that he is disrespecting him and punishing him. And dishing out punishments with impunity is a sign of dominance.

Note:
this position can also be used to void the height advantage taller people might try to use on you when they want to dominate you (Pease & Pease).

3. Don't look at them

Similarly, you will also notice the Godfather often looks away.
While looking away can be a sign of shyness, it can also be a sign of dominance.

Looking at someone a lot builds indeed rapport and says "I like you". But looking at people less says *they* need to make the hard work of showing liking.

Joe Navarro says that while subordinates are supposed to look, dominant men can look wherever they want.
Thus, deciding where to look is a way of showing dominance and freely decide *not* to communicate liking.

Also, looking at people's eyes less often allows you to deliver stronger statements once you DO fixate your eyes on them. Add pregnant pauses, and you get to Godfather's intensity level:

> **Godfather**: Senator… (long pause before delivering his high-power line)

⚠⚠ Reminder for context: These behaviors are highly contextual, and they often damage relationships in normal social or professional environments.

5. Highlight Their Submission

This is a core concept of frame control: the more you 'thread expand' favorable dynamics, the more impact they have.

And the Godfather makes sure the people around him *do* act dominated in very obvious ways.
Most notably, the hand-kissing -"baciamo le mani"-.

Another major advantage of having obvious signs of submissiveness from the people around you is that we humans are major social creatures, which means that seeing someone submitting makes it much more likely we'll do the same (this is *the social proof principle*).

6. Touch Others

Quiet dominance doesn't mean passive or unassertive.

It means the intensity is restrained and under control, but it can always burst through when the situation calls for it. In real-world professional or social settings, physical escalation is most often inappropriate. But in certain settings it functions as a more obvious display of dominance, a phenomenon related to a dominance-approach to social status, and to bullying.

For example, the Godfather intervenes to 'shake up' Johnny Fontane when he breaks down and loses masculine respect.

7. Dominate With Intensity

Beneath the quiet surface, another dominant trait of the Godfather is his supreme Intensity.

As noticed by Nassim Taleb in *Antifragile* a man unleashing strong emotions when he's otherwise mostly calm and

controlled is all the more impressive.

Since most people live in a grey, repressed zone most of the time, raw intensity can scare many people off. This is not to be used randomly, but if properly calibrated to the situation, it can be appropriate and effective.
It's a 'dark side' of dominance (Machiavelli said that being feared is better than being liked by a king).

Here's an example: the intensity of Michael Corleone giving the kiss of death to his brother will give you the chills. Almost as much as it gave Fredo the chills in the famous 'kiss of death scene':

> You Broke My Heart. You Broke My Heart

Showy Dominance VS Quiet Dominance

You see, if you are looking for how to be dominant, you probably shouldn't just copy someone else's style but you should find something more akin to your current personality.

The Godfather has a calm and collected way of showing dominance.

And before starting let's highlight the difference between "showy dominance" –McGregor style for example- and quiet dominance, the Godfather style.

Showy Dominance

The showy form of dominance is brash, loud, and with hints of physical aggression -or actual physical aggression-.

This is the greener-in-the-tooth form of dominance.

It's usually -albeit not always- associated with younger age and more temperamental and impulsive behavior.
It's more likely to end up in trouble, to fall head over heels into traps, and even more likely to die.

In The Godfather, this is Sonny and, later, Vincent.

The aggressive style is often less powerful because it is more often associated with people who are not (yet) at the top or just recently got to the top.
Tim Grover puts it very nicely when he says that the loudest man in the room is the one with the most to prove.

> **The loudest man in the room is the one with the most to prove**

Quiet Dominance

The calmer way of showing dominance is more often associated with people who've been at the top for a while. Aside from natural temperament, it comes from 4 traits:

- **Little to Prove:** Most people know who's at the top, so they've got little to prove
- **Little to Gain:** Once at the top you have little incentives in rocking the boat
- **Experience:** The "been there done that" effect. It makes you calmer. And it's also sexy
- **Social Understanding**: A rational or intuitive grasp of the body language of power and dominance

In The Godfather, of course, this is Vito Corleone -Marlon Brando- and Michael Corleone -Al Pacino-.

For more information, read:

- **The archetypes of dominance**

- Alpha male body language
- Alpha male personality

Godfather Psychology

The Handbook of Psychopathy used Michael Corleone as an example of a 'successful psychopath' based on the subclinical model of successful psychopathy.

Benning, Venables, and Hall write:

> Having been raised in a family of individuals with salient psychopathic tendencies, Michael acquires a sense of structure and focus by joining the military during World War II despite his father's obtaining draft deferrals for him. As a consequence, Michael is organized and goal-oriented, yet emotionally detached and possessed of a deviously aggressive mind. His psychopathic tendencies are not expressed in a salient antisocial manner until he learns of an assassination attempt on his father, which prods him into a methodical campaign of murderous retribution.

The Godfather shows dominance in a multitude of ways.

Exec Summary

- **Use body language signs to be liked** (warm smile, head tilt, eyebrow flash)
- **Compliment and save people's faces** (use their own info to build a compliment; ask for clarification rather than highlighting mistakes; give options)
- **Use empathic statements to connect and dispel anger** (ie.: "I can see you're busy" / "you're upset because.. ")

Summary

About The Author:
Jack Schafer is a psychologist and former FBI special agent.
He is not one of those people who write only out of personal experience or only out of academic research: he's got a Ph.D. as well, so he leverages both knowledge and experience.

The Friend's Formula

Jack Schafer starts by telling us the golden formula to friendship, which is:

- **Friendship = proximity + frequency + duration + intensity**

He also tells us a story of how it's been used in history by secret agents who pretended to "bump into" their victim until they could eventually become friends.

My Note:
Albeit the stories are interesting, I find them not so useful to most people in normal life.
Planning "random meets" to be liked is similar to Robert Greene's approach in "*The Art of Seduction*".

Interesting, but impractical.

Most likely you won't have the time to plant yourself in someone's vicinity and "randomly bump into them" every day, day after day.

Urban Scowl

Some people have difficulty making friends because they wear the "urban scowl" on their faces.
This is especially true for people from big cities and/or rough neighborhoods.

Focus On The Enemies When Presenting

Jack Schafer tells us that we usually tend to look at, and address, people we already know.

While he was giving a presentation he noticed there were many who were not bought into his message because they weren't nodding or leaning in.

He resisted the temptation of addressing and looking at his pals who were already on board and focused instead on winning over the less friendly faces in the audience.

Territory Defense

People will leave a parking spot earlier if nobody's waiting.
But if there is someone else waiting, they must linger on purpose, just to show they are not giving in.

Eye Contact

Staring is a little bit like invading someone's space.

And holding eye contact for too long is considered threatening, but you can use this technique to intensify eye contact :

1. gaze for a second
2. then start turning your head giving the impression you're breaking eye contact
3. but keep locking eyes instead for one more second.

You should then end the stare with a smile. And if a smile is returned, that's *an indicator of interest.*

And if the receiver looks away (best down) and then looks at you again, you can safely approach.

Also, read:

- Cold approach VS warm approach

> Cold Approach VS Social Circle (VS Tinder): Strategies

How to Approach Groups

At a gathering, look at people who are talking to each other with their feet pointed at the outside.

If their feet are eschewed they are instead willing to accept someone new.

It's the same for bigger groups: if the people's feet point at the center of the group it's a closed group.

If they are open in a wider circle with their feet pointing to an open space they want to accept new people.

If that's the case, then enter the group confidently: confident people are more liked.
Nod as other people are speaking, and then feel free to weigh in and say something during a pause: nobody likes interrupters.

And a little trick to look like old friends: when you see a person as part of a group you joined, later on, you can resume the conversation from where you left off and it'll feel like you know each other for a long time.

Also, read:

- How to approach women

> How to Approach a Girl: 9 Science-Based Steps

Empathic statements

Empathic statements show that you appreciate the situation of the people you are dealing with.

A good start for such an empathizer is usually "*so you..*".

Here's an example delivered to a waiter at a busy restaurant:

> **You**: you're super busy today, I don't know how you handle it

Or to your rebel teenager: "*you look like something is bothering you*" and if they aren't forthcoming add *"you don't wanna talk about it right now, when you feel the time is right, lemme know and we can talk"*.

Schafer also recommends not saying *"I know how you feel"* because it's likely to raise their walls.
It's indeed likely the other person will feel you're forcing a connection and/or push back by saying "*no you don't because you're not me*".

My Note:
I want to add here that it can actually be great to say "*I know how you feel*" *as long* you first dig deeper to make sure you *do* know how they feel. Then add "(I think) I know how you feel", and then tell your personal story of when you felt exactly the same. If you can do that, you have an extremely powerful connection there.

Building and testing for rapport

Jack Schafer shares a few indicators to test for rapport.

The idea is that you use them, and then test the reaction to gauge at what point you are in the relationship:

- Holding gaze
- Touching (the most non-intimate you can touch a woman is the small of her back and if no jerking reaction it's progressing well)
- Preening (doing it by yourself is a negative indicator if done for prolonged periods of time)
- Hair flip: when done without gaze or with broken gaze is a strong negative signal of lack of rapport (the bitch flip)
- Leaning: leaning backward (disinterest) VS forward (interest)
- Pacing and leading
- Open VS closed posture: palms open, uncrossed legs and arms, high rate of movement, head nodding, and head tilt are all positive

- Torso orientation (if they're looking at you but your torso and feet are pointing away they're not fully engaged)
- Barriers: placing barriers or removing them (example: placing a bag on her lap is a bad sign)
- Blinks: higher blink rate says uneasiness
- Eye closing: shutting eyes for 1-2 secs sub-communicates they don't wanna see you

Also notice that when someone starts aligning their body towards you the head turns first, then the shoulders, then the torso.

Signs of liars

If you ask someone a yes or no question and they start their reply with "*well…* " they are probably lying.

If you ask "*why should I believe you*" and they don't reply with "because it's the truth / because I did" or a version thereof, they're probably lying

Friend signals

Jack Schafer says the following are ways to signal you're friendly:

- **Eyebrow flash**

It lasts a split second, and you should do it before meeting someone. Make sure it's brief though, if it takes longer it's weird, there's a reason why it's called a "flash".

- **Head tilt (on the side)**

Jack Schafer says that the head tilt on the side is an indicator of friendliness. People who tilt their heads toward the speaker are perceived as more friendly, warm, and honest.

And he says you should use it more often when *approaching women* for the first time.

And if you are wondering if it's not too friendly, The Like Switch points out that it's mostly in business situations that you appear more powerful and *don't* tilt your head. But when making friends, do tilt your head :).

- **Smile**

Do smile when meeting someone first and learn to recognize and give a real smile. A real smile involves the muscles around the eyes. Without muscles around the eyes and without wrinkles, it's probably a fake smile.

Recognize an introvert/extrovert

Pause the middle sentence and the extrovert will jump in while the introvert will wait.

But when the introvert has rapport, he will also jump in.

Introverts are also uncomfortable with rush decisions: they can't be pressured into buying without making them uncomfortable.

Also, read:

- Quiet: The Power of Introverts

Save people's face

As a salesman don't say your product is better: it implies bad judgment from the customer.

By the same token, don't build "right or wrong situations".
Ask for advice instead and make them feel part of the decision-making process, which will make them feel good.

So if you found a mistake in your boss' work don't go there all happy and giddy thinking you can show how good you are.

Go there and say: *"I was reviewing your latest policy and noticed something. I'd like your advice on the matter*"

Give the impression of choice

When you are in the position to have to ask for something you can more easily avoid an escalation by giving the impression of choice.

Schafer tells us an amazing example.

He was on a plane and, as an FBI agent, was asked to offload a passenger from a plane.
He goes to sit next to the passenger and speaks slowly to him so that nobody else can hear.
And he gives him the impression he actually has two choices when he says:

> *The end game is you're getting off this plane.*
> *Now you have two options: I'm going to arrest you, handcuff you, and forcibly take you off the plane.*
> *Then you go to court, pay a lawyer, maybe even end up in prison.*
> *Or you can keep your dignity, go out by yourself, file a complaint and get on the next plane.*
> *Sir, I will allow you to make this decision. Take a few seconds to think about it.*
> *What do you want?*

Pure genius :).

Elicitation techniques

Jack Schaefer says the following are good techniques to get people to reveal information:

- **Statements to be corrected**

Asking many questions to someone you just met can seem nosy and invasive: so just blurt statements instead and they'll feel the need to correct you.

- **Quid pro quo**

Tell them where you work if you wanna know where they work.

- **3rd party perspective**

Rather than asking direct questions, say something happened to someone else and what they think about it.

My Note:
For example, you might ask your possible future girlfriend to gauge her fidelity habits:

> **You:** "Vanessa cheated on Mark the other night, crazy story eh?"
> **Her:** Oh that's terrible. Maybe she was drunk. Bad things can happen if you're drunk
> **You:** (thinking) How should I go about telling her I don't intend to settle down with her..

Compliments

Compliments are a well-known technique to influence people.
Here's how to use them:

At the beginning

Jack Schafer says that if it's very early in the interaction it's safer to let them set the stage for the compliment or you will sound insincere.

> **You**: "then you've been really busy lately"
> **Her**: "yeah I work 60h a week last month"
> **You**: "it takes a lot of dedication and determination to commit a project of that magnitude"
> **Her**: (thinking) "I sacrificed a lot to get that megaproject done and I did a good job if I may say so myself"

Now she's complimenting herself AND proving herself: a genius!

Note the guy didn't tell her she's dedicated and determined, which is dangerous at the beginning also because she might not think of herself like that.
Set up this way instead the comment didn't make any damage if she doesn't think of herself as determined and committed, but if she does, it furthered the relationship.

Elevate with a compliment

You can tell someone they remind you of someone famous/important (example: telling the Republican politician his ideas and passion reminded him of Ronald Reagan).

Lip purse: act before they speak

If you are telling something to someone and you see them pursuing their lips it means they disagree.

And you should act BEFORE they have a chance to voice their concerns, ESPECIALLY if it's in public.
If they speak, it becomes your idea against their idea.
But If you change their mind before they speak, you are still in time to avoid that dynamic.

Example:
Jack Schafer is giving a presentation and sees the boss pursing his lips.
He says

> boss, I bet you're thinking this idea isn't going to work, but lemme explain to you why it will

Anger management

If someone is fuming, begin with an empathic statement to let them vent. Your goal is to get to the root cause of the issue.

Continue constructing empathic statements until the anger is dissipated, like so:

> **Boss**:*"I expected you to have the report by this morning, your behavior is unacceptable"*
> **You**:*"I couldn't complete the report because I didn't receive the data from the sales team, they said they'd provide it within an hour"*
> **Boss**: *"that's no excuse, you should have gone there and get it, you knew how important it was, I have a meeting with the client this afternoon" (reject the explanation)*
> **You**: *"you're upset because the client is expecting the report this afternoon"* (empathic statement)
> **Boss**: *"yeah, it makes me look bad"*
> **You**: *"you're disappointed because you expected me to have the report done this morning"*
> **Boss**: *"exactly, that's an understatement" (vented completed, now starts being more manageable)*
> **You**:*"I will get the report now and get it to you before the meeting"*
> **Boss**; *"ok, see what you can do"*

Notice these statements sound patronizing to not angry people, but angry people are in fight or flight mode and won't notice them as so.

Another example:

Jack Schafer goes home and expects a warm hug and a kiss but the wife instead starts venting.

> **Wife**: *"it's about time you got home, we're going crazy because you haven't been here to help with the kids"*
> A simple empathic statement would have been "so you're angry" but he used a sophisticated one to address the root cause:
> **Jack**: "*you feel overwhelmed because I haven't been home to help with the kids"*
> **Wife**: *"I used to go every Wednesday night with my friend to take a break and talk to some adults for a change"*
> A simple empathic statement would have been "you miss going out with your friends", but better:
> **Jack**: *"you value the time you spend with your friends because it gives you a chance to take a break from the kids"*

MOVING TO PRESUMPTIVE STATEMENTS

> **Jack**: *"why don't I take the kids to my mom and we go to a nice restaurant, you deserve it"* (this is the presumptive statement)
> **Wife**: "you're not getting off that easy mister" (rejecting the presumptive statement)

BACK TO EMPATHIC TO BREAK ANGER CYCLE – she isn't done venting

> **Jack:** *"so you think one night out is not enough to make up for the work you did while I was gone"?* (empathic statement, re-entering breaking the anger cycle)

[image]

Real-Life Applications

I would say the best takeaways for you are:

- **Empathic statements –** make these part of your normal repertoire: guaranteed liking
- **Save People Face –** this is HUGE. It's a hallmark of weak egos to use others' mistakes to raise their value. We call this smart approach "*power protecting*" on TPM
- **Build and Test Rapport –** start assessing where you stand and your interpersonal skills will skyrocket

CONS

Great book, but since it's all about being liked, this note is mandatory:

- **Don't Become People Pleasing**

The Like Switch is all about being a more likable person (similar to *How to Win Friends*).
And that's a HUUUGE skill to have.
Just don't make the mistake of going overboard with it and becoming a people pleaser.
People don't respect too much people-pleasers, and they can easily come across as fake, too.

- **The "I know you would do the same for me" game**

When you do someone a favor and they thank you for it, the author recommends telling them that "you know they would do the same for you".
I think that's a bit gamey and it can be quite annoying.

We discussed this in the TPM's community, see it here:

- **Why "I know you'd do the same for me is gamey"**

Review

"*The Like Switch*" is a good book on social skills and techniques.

It doesn't have much research and it's built to deliver status, respect, or attraction like our material is.
But it's written by a guy who's experienced with people, and we tend to trust experience as much as we trust good research.

Overall, great book.

Get The Like Switch on Amazon.

25 Ways To Win With People by John Maxwell: Summary

Lucio Buffalmano · 24 August 2017 · Archived copy · Original

25 Ways to Win With People by John Maxwell teaches readers how to build rapport, uplift others, and make people feel valued.

TPM Strategic Note: good starting point, but you must add power & strategy to achieve advanced results
Maxwell's 25 "ways" are effective because they leverage fundamental human psychological needs. While Maxwell presents these as "being a good person," at TPM, we recognize these as **Social Lubricants** (communion), more about making friends and gaining acceptance than gaining status, power, or attraction (agency). So use these to bond, but remember to add power and strategy to achieve goals (see: power vs. social skills).

Exec Summary

- **Start With Yourself**: to help greatly, become a high-quality man first
- **Listen to their dreams**, encourage their dreams, and help them with their dreams
- **Share a secret** -or personal details- with someone you trust to bond more closely **<— ⍰⍰♂ TPM Note:** don't over-share or share a vulnerability that can be used against you before you first know they're trustworthy!

Full Summary

About the Author:
John Maxwell is a pastor, public speaker, and best-selling author.

He sold millions of books and among his most popular are leadership texts such as "*The 21 Irrefutable Laws of Leadership*"

Start With Yourself

I love that John Maxwell leads with "start with yourself".

You can't give what you don't have and your relationships will only be as healthy as you are. So to make the people around you feel great, become a great human being first.
This is basically one of the overarching tenets of my life.

John Maxwell suggests solving as many problems in your life first and looking for improvement areas in yourself first.

> **Your relationships will only be as healthy as you are**

The 30-Second Rule

In the first 30 seconds you're in a conversation with someone, tell them something encouraging.

Once it becomes a habit for you people will light up when you walk into any room.

And here's a nice way to make it a habit: open your calendar every day, look at the people you will meet during the day, and plan something encouraging to say.

It can be something they've done for you that you thought was great or amazing, or that you are really thankful for it.
Or something they have recently done well, or something they achieved.

Let People Know You Need Them

People like to feel needed and helpful.

Think right now in your life who could be able to help you, and go tell them how much it would mean for you.

Create a Memory and Revisit It Often

Make something memorable with the people around you to create memories. Then immortalize those moments with pics, show them the pictures, and give them the pictures.

Then relive those stories together, talk about them, and laugh about them. And ask them to tell those stories.

Compliment In Front Of Other People

A compliment is fantastic to make people feel great, but a compliment in front of others is even more powerful. And it's super helpful so that people keep behaving in line with that compliment, ie.: uphold that compliment:

Give Reputation to Uphold

Giving a reputation to uphold leverages the commitment and consistency principle (Cialdini) and what in psychology is called the '**Pygmalion Effect**'.

For example, by publicly labeling someone as 'the most reliable person on the team,' you provide the motivation to work twice as hard to maintain that identity. It is a powerful tool for behavior modification.

John Maxwell says that a great way to do it is to actually find a nickname for the person that will embody a quality they possess.

And then use that nickname or repeat their quality often so that it will get associated with them.

Encourage their Dreams

Ask people to share their dreams with you, ask what challenges they'll need to overcome and at that point offer your help or give some helpful tips.

My note:
I find this extremely powerful indeed.
If you do it well it's a strong connection guaranteed and people will love you. Only do it though with the ones you really wanna connect deeply. It's also a good technique for men to use with women.

Pass the Credit on to Others

Contrary to Robert Greene's 'laws' on 'taking credit', Maxwell recommends *giving* credit.

We agree with Maxwell here: to bond with others, especially if outside of competitive settings, it's better to *give* than to take. This is especially true for leaders who want to encourage the team to go the extra mile.

Share a Secret With Someone

When you share a secret with someone it will make them feel special and closer to you.

You can make it even more powerful if you add that you only shared your secret because you trust them.

Do For Others What They Can't Do For Themselves

Helping others reach their goals will cement your relationship.

And if you do so in a way they couldn't have done by themselves, they will be even more thankful to you.

Find the Keys to Their Hearts

What do they dream, fear, love, or believe in?

Find out and establish some common ground on those key values.

Be the First to Help

Serving someone first in their time of need will make you remembered forever.

And I fully support this one: guaranteed you will never forget the people who tendered their hand when nobody else did.

Remember a Person's Story

Asking a person's story says "you could be special", remembering says "you are special", reminding him the story says "you are special to me", and repeating to someone else says "you should be special to them".

The result?

You become special to the person sharing the story with you.

I do keep a Word file with notes on important people in my life.

Point Out People's Strengths

Everyone has some special ability.

Find it and point it out to them.

Real-Life Application

The two major takeaways from "*25 Ways to Win With People*" for me are:

- Start With Yourself: become a great human being to help greatly
- Care About People: If you care about people, most of all the "rules" will come natural

CONS

Doesn't cover crucial areas for both success and self-defense, including:

- **Positive dominance**, combining both dominance and warmth to secure leadership, status, or attraction
- **'Darker' aspects of socialization** necessary for self-defense, like manipulation, dark psychology, or Machiavellianism. These are crucial areas to succeed
- **Effective cooperation**, setting up relationships for win-win, ensuring you also gain and don't just give (you don't want to be a sucker giving while others just take)

Review

25 Ways to Win With People is an easy, pleasant, and useful read with several valid concepts to help readers become more effective at making friends and developing connections.

It's 'sanitized though', not acknowledging that not everyone is good, that relationships are give and take and not just giving, and that 'winning with people' sometimes also means achieving goals that require strategy, confidence, and power.
In that sense, it's a good book, but part of naive self-help.

Get Anyone to Do Anything: Summary & Review

Lucio Buffalmano · 25 August 2017 · Archived copy · Original

Get Anyone to Do Anything is a book on social skills that teaches readers the "laws of interpersonal relationships" that will help them to influence people.

TPM Take: Poor title, but some good insights
Lieberman is a classic example of the **Best-Seller Quality Tradeoff™**. He bundles high-level strategic insights (like his power-restoration model for forgiveness) with entry-level pop-psychology 'laws model' to ensure the book appeals to the mass market. At TPM, we strip the filler to focus on the 20% of his work that actually provides a tactical edge

Bullet Summary

- To make people forgive you, give them back power saying you accept their decision over you
- When someone's being rude keep it about them. *They* are having a bad day, don't give them power over you
- Tell people a piece of false news to see if they're lying: quick answer, they're honest; delayed answer, lying

Summary

David Lieberman says that the core of each relationship, and the core of getting people to do something for you, is getting them to like you.

It doesn't happen randomly whether people like you or not, but there are 9 laws that make it happen.

1. The Strategic Floor: 8 Laws of Basic Liking

In *Get Anyone to Do Anything*, Lieberman uses the popular 'laws format' like Robert Greene does in *The 48 Laws of Power* and outlines several "laws" of attraction.
While these are foundational for social beginners, for the TPM strategist, they represent the baseline of social exchange:

- **Law of Association:** People link your presence to their current emotional state. To win, anchor yourself to their peaks (vacations, wins) and minimize presence during their troughs (illness, stress).

- **Law of Repeat Exposure:** Familiarity breeds comfort. Consistent, non-threatening interaction naturally lowers defensive barriers, provided the initial impression wasn't "red-level" negative.
- **Law of Reciprocal Affection:** Humans are socially "lazy"; we tend to like people who have already done the work of liking us first. Signaling respect often triggers a mirror response.
- **Law of Similarity:** We possess an evolutionary bias toward the familiar. We trust those who share our background, values, or niche interests.
- **Law of Appearances (Mirroring):** This is the physical extension of similarity. Subtly matching gestures, tempo, and posture creates a "subconscious echo" that builds rapid rapport.
- **Law of Favors (The Benjamin Franklin Effect):** Counter-intuitively, asking for a small favor can make someone like you *more* than if you did one for them. It forces them to justify their effort by deciding you must be worth the help.
- **Law of Self-Deprecating Vulnerability:** Perfection is intimidating and socially isolating. High-status individuals use a "sprinkling" of clumsiness or admitting small flaws to appear human and relatable.
- **Law of Positivity:** While "misery loves company," winners follow the light. People will wallow with miserable friends but will pivot to follow anyone who provides an exit strategy through a positive frame.

TPM Note: Remember to add power and strategy
If you rely solely on these, you risk becoming a "people pleaser." True social success that gives you status, respect and attraction requires you to balance and calibrate these laws with positive dominance, strong body language, and good strategy.

See:

- Social skills vs. Power skills

> Social Skills vs Power Skills: Why Likability Alone Won't Get You Ahead

2. How to get people to find you attractive

David Lieberman also goes into seduction:

1. Do emotionally arousing activities

When our bodies produce adrenaline attraction and sexual desire skyrocket.

scary movies, amusement parks, or even physical exercise release adrenaline which will be passed on to the people around.

Very interestingly David Lieberman says that in couples where one of the two is visibly more handsome, chances are they met in circumstances where arousal was high.

2. Appear young

Appearing young boosts mate value.

TPM Note: This tactic really depends on age and context
Young folks who look young may not need to behave young, and this approach generally works more for women than for men.

3. Gaze into people's eyes

Holding eye contact helps to build rapport and liking.

4. Low self-esteem is a risk factor

Very interestingly, David Lieberman says that if someone's self-esteem is temporarily low they'll find you more attractive.

My Note: PUA techniques are based on this, it may work, but it comes from a lower value frame
Early pick-up artists use tactics like 'the neg' to try and lower women's self-esteem (see "The Game" and "The Mystery Method"). But, just like 'passing shit-test mindset', it comes from the frame of a man who is lower value, instead of a high-value man's frame.

3. Spot the lies

David Lieberman says that to recognize lies we can create a conundrum for them.

For example, ask them if they have been to the movies.

Once they say "yes", tell them "I heard the traffic was all backed up because of a car crash".

Now they're in a conundrum: they weren't really at the movies, should they confirm or deny?

If they hesitate, they're likely lying. And they'll probably agree with what you said.

TPM Note: It's a good tactic, but NOT a surefire way to spot a lie
Research suggests that there is no single surefire way to spot a liar. Reading characters is a foundational skill for ambitious men, but it needs more than a few tells and cues.

4. Take control of the interaction

To get people to do what you want:

1. Lead and expect others will follow

People will do what you expect them to do. Example: start walking expecting they'll come

2. Break down your requests into smaller steps

The things we like, we internalize them in one or two steps.

Hence to encourage you to do something, make the steps smaller. To encourage not to do something, make it a long list.

3. Confirm their decision

To make it more likely someone will follow up on what you decided and confirm the decision.

For example, if they say they'll come Saturday, first get them to repeat it by saying

> "*you really mean it, are you serious*",

then move to a time frame similar to:

> "*great, what time, how long might it take*".

Finally, you might add you'll change your plans to accommodate them, and add how helpful it'll be.

For example:

> *awesome, I will cance my other appointment and I will see you Thursday then*

My Note: this is 'frame cementing', but it must be calibrated
I wouldn't do this early in dating as it signals that they are already a high priority for you and you might not want to show all your cards too soon.

Learn more:

- Frame control: an overview
- Frame control techniques

5. Regain trust and make others forgive you

You need to follow different techniques depending on whether you were responsible or not.

- **Misdeeds outside of your control:**

Show people it was outside of your control AND add you took steps but it was just too much.

Example:

> *I did leave early as I knew it was important for you and there might have been traffic, but the traffic was waaaay worst than it usually is and I could have anticipated*

Make your apology sincere and specific and you'll be fine.

- **Misdeed within your control:**

David Lieberman says that the key to forgiveness lies in restoring balance in the relationship

if you hurt someone's feelings by your own volition "sorry" is not enough because it doesn't give back dignity. Indeed you need to give the person their power back and bring them back to the psychological level existing before your misdeed took place.

so you do:

1. Apologies, responsibility, and sincerity. apologize and take full responsibility: shifting blame will make you look weak and will exasperate things. Also, if you shift blame, only the person to blame will have the power back to your partner: not good, because *you* want to be the one who will fix this.
2. Apologies for your behavior clearly. Just say: "I am sorry"
3. Make sure your sincerity shines through
4. Remorse. You give the power back by giving your partner the authority of punishment. "*I know what I did was wrong, you have every right to be angry and I'm willing to accept responsibility for my actions*"
5. Explain how the circumstances which happened will never happen again, a total anomaly. This is the WHY, a plausible explanation.

BUT don't defend yourself:

6. Say it was fear "*I feared because things were going so well*" or "*I feared that you would fire me*" or *"I lied because I feared you would hate me if you found out the truth*"
7. Show that your actions didn't produce anything good. "*I felt guilty*" "*the sex was lousy, I felt so miserable and filled with guilt afterward*"

This is a valuable insight into interpersonal power dynamics and it's based on the re-empowering principle of respecting others ('power protecting' in TPM's sytem).

6. When someone's being rude stick with 'you'

Don't react right away annoyed like "how dare you talk to me like that".

When you do that, you are giving a lot of power to him to make you feel angry and you are taking over his problem.

And if you use the word "I" it becomes a problem between you two. By using the word "you", you keep the issue in his court.

Try saying:

> "*you seem to be having a rough day*"

or

> "*this seems to have upset you*".

Some more reading for you on the topic:

- When someone makes you wait
- When someone pretends they don't remember you
- Dealing with a bad boss

Or watch:

Power-protect to give strong criticism

David Lieberman says that the key to giving criticism is to protect your ego.

Here's how you do it:

- Give the criticism while you are removed from the environment (example: don't criticize love-making right after making love)
- Mix it with a compliment
- You criticize the *act*, *not* the person
- Approach it as if they're not doing it willingly: don't assume or insinuate they're doing it on purpose
- Share your responsibility if you can (you and him against this thing) example "I should have been more specific when.. "

Also, read:

- **How to power protect**

My note:
Ideally, you want to surround yourself with people who can take the harshest criticism because they decoupled their ego from being good. Then, as Ray Dalio recommends, you can experience full transparency.

Find out how values are met

Once you find out the value of people always ask "how do you know when you are X?" "how do you when you have achieved Y?"

It will give you a much bigger understanding of the person.

Broaden definitions

To make someone do something they never did before, broaden the definition of what's permissible. People believe things in context, not in isolation, so re-frame the whole "permissible" field.

For example, a threesome can become something she does for you to make you happy and at no cost to her.

[image] 
Real-Life Applications

Get Anyone to Do Anything is all about practical applications. I think two things that can add the most value to you are:

- Give people the power to make them forgive when you've done something wrong
- "giving power back" when you did something wrong is critical in romantic relationships
- When someone is being rude don't get involved in "I VS You" but keep it about them, otherwise you give them power over you

Review

Despite the gimmicky title, "*Get Anyone to Do Anything*" shares valid foundational principles of social skills and mixes several more advanced insights and tips.

The 5 Essential People Skills: Summary & Review

Lucio Buffalmano · 25 August 2017 · Archived copy · Original

"*The 5 Essential People Skills*" states that *assertiveness* is the meta-skill of all communication skills, and helps readers develop their assertiveness through examples and exercises.

Contents

- Exec Summary
- Summary
  - Assertiveness (the meta-skill)
  - Assertive curiosity
  - Rewards
  - CONS
- Review

Exec Summary

- 5 essential people skills are:
  - rapport building
  - curiosity
  - communication
  - ambition
  - conflict resolution
- Assertiveness is the core skill that fuels all positive interpersonal relationships

Summary

About The Author: The Dale Carnegie training is an institution focused on delivering personal and corporate training on communication and interpersonal skills.

Assertiveness (the meta-skill)

Dale Carnegie Training says that assertiveness is the ability to have people respond attentively and positively, and it is at the core of the five essential people skills.

Assertiveness consists of being able to:

- Resist the dominance attempts of aggressive people
- Stand up for one's beliefs
- Maintain control when it matters

Once you will master assertiveness you will be both less stressed and freer.

3-part assertion message

The 5 Essential People Skills teaches us that an assertive message contains 3 major parts:

1. describe and summarize the fact of the situation
2. express your thoughts and feelings

3. clearly state your want and needs (including benefits to the other party)

This formula allows you to express your concerns without being personally aggressive.
It's simple but it takes practice and self-control.

Ask yourself: how can you express your message more clearly, be more specific and avoid being drawn off course?

Example scenario 1

A designer in your team is not keeping the deadline and it's causing some issues with the client.

> **You**: I remember talking about how long it would take to accomplish the logo design. We agreed it would take one week. It's now two weeks and the job is not yet done

Notice how the sentence is all about objective facts. There are no worries mentioned or accusations, which will come in the second part:

> **You**: when we are this late on a project it creates problems with the customer and that also translates into stress for us. I got concerned and I had to communicate that concern to you

In the third part, the changes that need to take place are highlighted.

> **You**: I want to make it very clear that when we set a deadline that deadline has to be met. I think that you set unrealistic timelines for yourself.
> Maybe you've done to give me the impression you are a really fast worker.
> But that's not what I'm going to be thinking if the deadline is impossible to meet

So far the talk was only about the problem that needs to be solved. Remember whenever possible in any assertive dialogue it's important to include benefits for the person you're speaking with.

> **You**: In the future when we talk about deadlines it will be better to give yourself a little bit more time rather than less. I'm sure that will make your life easier.
> And then when you complete the work in time, or maybe even earlier, the client will be happy and I will be happy.

Notice that when the manager talks about her feelings they are work-related. She doesn't say "you're trying to annoy me" or "I'm really angry about this".

Going down the personal feeling route would have opened the door for the employee to start verbalizing his own emotional responses or to start thinking about them and taking the whole conversation off course.

And if the employee disagreed:

If they are being inflexible, do the same and repeat your message over and over:

"I didn't create an unrealistic deadline"
"in the future, I want you to give yourself more time"

"tell the client to calm down"
"in the future, I want you to give yourself more time"

Example scenario 2:

Imagine you just finished a project at work, everyone made a good job, including you and the project went well.

You find out Jack, a team member who had done a good job but nothing more than anyone else was singled out by your boss and invited for a special reward.

How would you feel?

An aggressive person would feel hostility towards the boss and Jack. There would be angry feelings and possibly harsh words.
A passive person would refuse that anything questionable had taken place and would not do anything.

Here's the thing though, extremes are child-like, and in business, the person who acts the most grown-up comes out best.

The assertive response is then between the two extremes.

The first step is knowing how you really feel and knowing how to express those feelings in an adult, constructive way.

If you bring up your feelings by saying "*I did just as much work and now Jack gets all the credit*" you sound like you're whining. Even if you are actually hurt it sounds like you're whining.

An assertive approach when speaking to your boss would sound more like this:

> **You**: I understand you're happy with Jack's work and I'm glad about it because he delivered some important parts.
> But there's one thing concerning me, and that's this was a group effort and all of us taking part devoted a significant amount of time and did a good job, including me.
> When the time comes for my performance review, I want to make sure I get the same recognition that Jack did.

Example scenario 3

To an under-performing worker:

> **You**: Last months you did some amazing work, but lately things seem to have slow down a little.
> I know how that can happen as it happens to me too.
> Can you think of anything that might have caused those changes?

It starts with a compliment, then it creates empathy. And the emphasis is on what happened rather than an underlying issue.

Example 4: Questions rather than orders

If one says "*I wanna see a list of all the calls you make before noon every day"* the defenses will go up, normally.

A more assertive way would be:

> **You**: In my work I noticed that a good time management really increases goes hand in hand with my productivity.
> And when I track how I'm using my time I tend to get much better results.
> Did you try keeping a log of how you're using your time?
> Why don't you try that for a couple days. If you want, we can look over at it together and see what it tells us.

This is assertiveness in action. There's an implied reprimand BUT it's surrounded by empathy and encouragement.

Instead of feeling threated people will feel

Follow up with praise on any improvement. Now they have a reputation to live up to.

End positive

Don't ever allow a discussion to end on a negative note. Especially if the criticism was well justified!

Always allow people to save face and give them a way to retreat.

Bring the issue to the surface

Always bring the issue to the surface!

If someone is angry and wants to push back they pretend all is good, they will spread wildfire around you rather than in your face.

So you always have to bring the issue to the surface, no matter how harsh that might sound. Your challenge then is not being drawn into it, but never avoid bringing the issue up because you're afraid of high emotions.

If people push back

The Dale Carnegie Training says that if someone cries, be sympathetic but don't back down.

If they deny everything they are saying, say something like this:

> **You**: I told you how things look to me, if I'm wrong, I'm sorry, but if my perception is accurate I stand by what I said

When people apologize incessantly say that apologies are not necessary, at least not more than once.
And then reassert what you already said.

Personality types: alpha dogs (hard drivers)

The Dale Carnegie Training goes a bit into personality types as well.

The Alpha Dogs see the world as a zero-sum game, the business relationship as a hierarchy that they are determined to climb and do their best to be one rung above you on the corporate ladder.

Every occasion is an opportunity for dominance and intimidation.

It's not easy building rapport with them especially if they are at the same level or above.
Alpha dogs are based on ego needs.

They either believe they're inferior or they sincerely believe in their superiority.
So you basically play their ego by making them feel important. The hard part is keeping *your* ego needs out of the encounters.

The 5 Essential People Skills then details a fantastic example of how a CEO will smoothly put an alpha dog back in his place and I invite you to get the book to check it out.

Personality types: secret agents

They don't want the top post but they like maneuvering from behind the curtains.

They don't talk much because they want to keep all the information for themselves to maximize their power.

The approach is to draw them out and create enough trust and ask questions making sure that you want to aim for the top and will depend on him.

Also, check out:

- **The archetypes of office politics players**

Assertive curiosity

Assertive listening means empathy: feeling what they are feeling.

The Dale Carnegie Training gives a great tip: don't guess when someone is talking to you, but plainly listen.

If they are saying "I like working here" stop yourself from thinking they're lying and are trying to cover up: that's guesswork, not listening.

Assertive listening also means asserting curiosity to *yourself*.
It's normal losing attention, but assertive listeners get back on track and ask clarifying questions and make sure both parties are on the same page.

Rewards

The 5 Essential People Skills then goes into intrinsic motivation and external rewards, which is basically the main theory standing behind Drive by Daniel Pink.

The basic idea is that rewards can kill intrinsic motivation and lower the quality of the output, especially in the long run and especially for creative work

The difference between "*I'm giving you this reward because I personally appreciate your work"* and *"you're getting this reward because you've met certain standards*" is that the former is personal and human interaction.

It's an example of assertive people skills.
It ignites a certain ambition in both the speaker and the receiver. The second is a type of reward that can destroy motivation.

The negative drawbacks of rewards to motivation can be had by playing down the significance of these rewards and not using them in a controlling way.

What I found interesting though is that praise works exactly the same way.

Praise

The Dale Carnegie Training says that praise is similar to financial rewards when it feels controlling.

People who were told "good job you're doing just what you're supposed to be doing" were no more motivated than those who received just quantitative feedback.

[image]

CONS

Random Self-Improvement Book
The 5 Essential Skills are not even the most important skills you should have and the book ends up talking more about assertiveness than anything else. It feels like a random title applied to a generic “self-improvement” book.

Review

I would not recommend *The 5 Essential People Skills* because of the 5 skills it talks about. I *do* recommend the book though if you’re lacking in assertiveness as it will add value for you in two ways:

- The focus is on assertiveness. Assertiveness really is a key quality for an empowered life
- The examples. We don’t learn so much with descriptions. We learn with pictures and examples. And the dialogue examples are very powerful

How to Make Someone Love You Forever in 90 Minutes or Less: Summary

Lucio Buffalmano · 25 August 2017 · Archived copy · Original

"*How to Make Someone Love You Forever in 90 Minutes Or Less*" is a *dating book for men* teaching readers how to get women to fall in love with them.

Exec Summary

- Love is about emotional progression
- Find out as many "me too" moments at the beginning of the conversation as possible

Summary

About The Author: Nicholas Boothman is an author of people skills books. He seems to focus on super fast connection as his next title is "How to Make Someone Love in 90 Seconds or Less"

I guess if he writes another book we will all learn how to make people love us without even saying hi :).

Get early "me too moments"

Nicholas Boothman says that love is an emotional progression.

Early on it's important to find out the commonalities and letting your speaking partner open up.

Once people open up and you underline the commonalities with a sprinkling of "me too" moments -which the author suggests to actually blurt it out, then people will get the impression of being soulmates.

My note:
If you're a man "me too" will slot you as the follower.
If you're a woman, it might indeed make the man feel connected and can help speed up the romance progression.
Don't exaggerate though or you come across as insincerely forcing a connection and a bit too easy to get.

Also, read:

- **How to bond and connect**

> How to Build Deep Emotional Connection

Approach example

The approach example was one of my favorite moments in the book.

A man who later recounted the story to the author was on a train when he heard two women speaking.

He wanted to approach one of them. He goes to the seat next to them and with a calm voice tells the friend of the woman he likes:

> ***Him**: "hi, excuse me"*
> then starts addressing the woman he's interested in with a "you and I" gesture as he speaks
> ***Him**: "hello, do you mind if I say something, something personal"*
> ***Her**: "I'm not sure"*
> ***Him**: "as we've been riding in the train the last half hour and you were chatting with your friend I couldn't help but overhearing you"*
> (pause for attention).
> ***Him**: "And I wanted to say, you have the most beautiful voice"*
> ***Her**: "Thank you"*
> ***Him**: "I find it very attractive"*
> (pause)
> ***Him**: "I was wondering what you would say if I invited you out for lunch"* (nodding)
> ***Her**: "I don't think so but I'm very flattered"* (seemed genuinely amused)
> ***Him**: "I'll tell you what, here's my business card, I'm going back to NY on Wednesday (…) think about it and when it's appropriate give me a call, or if you change your mind you can email me tonight and maybe we can pencil a lunch tomorrow, your choice"*
> Smiled, turned to the journalist and said "thanks".
> Then got up and left the train

Nicholas Boothman says that what was good about the approach is that he paced the ongoing reality to make her feel relaxed, drawing attention to 3 obvious true things you agree with. i.e.:

- they were on a train
- moving along for 30 mins
- was lost in conversation

He used subtle body language nodding his head.

When suggesting she should call him once ready, he was giving suggestions, and the secret is to let those parts stand out from the rest of the conversation by changing the tone of voice and body language.

He also kept looking at her eyes while being physically still, so she could *fully focus on his voice*.

Also, read:

- **How to approach a girl**
- **Cold approach VS social circle**[image]

> Cold Approach VS Social Circle (VS Tinder): Strategies

CONS

Little Practical Application
I didn't find that many recommendations that I would personally put to use

Basic
How to "Make Someone Love You Forever in 90 Minutes" or Less seems more targeted to the social beginners

Click Bait Title
I find the clickbait title quite a bit annoying.
Unluckily, it's very popular and it even seems to work. Take for example *Fuck Him, The Power of The Pussy* or *The Subtle Art of Not Giving A Fuck*.

Review

"How to Make Someone Love You in 90 Minutes or Less" sets very high expectations with that title. Whether or not it delivers, it's a different question.

The Art of Mingling: Summary & Review

Lucio Buffalmano · 26 August 2017 · Archived copy · Original

The Art of Mingling (2006) teaches readers how to mingle effective, sharing some (Machiavellian) tips to join groups, dropping a boring speaking partner, or talk to the host of the party you've just crashed.

TPM Strategic Audit: This text is audited as a manual on Social Maneuvering
While "mingling" can seem trivial and more communal than agentic, the author shares valuable strategies to control conversational flow, neutralize arrogant social climbers, and exit low-value interactions. It also shares the mindsets of 'not so genuine' minglers and social climbers to help you spot quality men and women. These are important aspects of Social Power Intelligence.

Contents

- Quick Tips
- Summary
  - Some Mingling Tips
  - Dealing With Arrogant People
  - Interviewing mode for the shy ones
  - Changing the subject

- CONS
- Review

Quick Tips

- Have fun: mingling is its own reward
- Keep moving
- Top minglers are great at managing the conversational flow (and have no hang-ups about white-lying)

Summary

Jeanne Martinet says, first of all, don't worry if you're anxious: many people in the room feel as lost as you are as soon as they walk in.

And she has some top suggestions on how to carry on in spite of the awkwardness:

- Enter the room, smile, and say: "I'm gonna fake it until I make it"
- Imagine your best friend is there with you in the room
- Imagine you are a famous actor you like
- Start talking with the wallflowers. Or pick someone who's very similar to you
- Start with a target who's obviously open to receiving you

Note:
I very much like her advice to push yourself and "fake it till you make it" compared to Vanessa Edwards' one of staying in your comfort zone.

Some Mingling Tips

Here are some quick wins you can start adopting right away:

- **When you're lost open with "excuse me but I don't know anyone here"**

You can start your conversation by being very honest and saying *"excuse me, but I don't know anyone here*".

And you should smile, but not in full power: they also need to deserve your full smile.

- **10 to 15 mins per conversation**

Jeanne Martinet advises an optimal conversation is around 10 to 15 minutes per person and then move on.

- **Don't talk about the stuff you managed to finally remember**

I'm sure it happened to you:

you wanted to say something about a certain topic but just couldn't remember.

Then it dawned on you but the conversation moved along.
But it's so cool you say it anyway!

Wrong!

Most of the time that's anticlimax and won't do anything good for the conversation or for you.
As a matter of fact, don't even waste energy trying to remember things you can't remember: it's much more important to be engrossed in *this* convo.

- **If you're heavily distracted: don't mingle**

If your girlfriend seems a bit too engrossed in conversation with that stud she's chatting with, tell your speaking partner you need to take a break from the conversation.

It's much better than pretending you're interested and spending all your time glancing away.

Oh, and read this guide *if someone is hitting on your girlfriend* and this other *if someone is hitting on your boyfriend*.

- **Link questions to replies**

Your questions are better if consequential and dependent on the reply you get.
And watch their faces: when it lights up you found a great topic

- **Enjoy not being in a convo**

Once you can enjoy also not being in a conversation, then you're hitting your stride and you become one with the party

- **Carry the convo when entering a group**

Jeanne Martinet says that when you enter a group it's then your duty to carry the conversation.

The attention is on you, and you should get the conversation going back again.
So ideally you've prepared something cool or fun to say.

- **Drop bad apples pretending something got your attention**

When you're stuck with some bad apple, Jeanne Martinet advises you to take control of the interactions, then (pretend to) notice something in the room, nudge at him, smile, and say "excuse me".

Jeanne Martinet adds that the guy is probably used to being ignored and by pretending something got your attention

you leave him hanging to dry in a warm way.

My note:
I don't personally feel this is warm at all.

Taking control of the interaction is key indeed, but a good old "going to the bathroom" is much better.
This is because pointing at "something" in the room and exiting with an "excuse me" gives no real reason to exit.
Such behavior says that anything happening around is more important than your speaking partner.

That's not "warm".

Going to the bathroom instead at least uses the excuse of a physiological need.
He/She knows it can be fake of course, but if you fake something, it's better to at least pretend it's something important

Dealing With Arrogant People

Jeanne Martinet says that when you meet truly arrogant people the temptation in many of us is to flatter them.

But flattering is a sign of weakness to the truly arrogant and it gives even more power to someone who's already assuming superiority.

My Note:
So true.
Great social analysis from the author here.

Jeanne Martinet then says that you should tease them, and communicate the way they communicate so to show that you speak their language.

For example, you could tell them you hear something terrible about them, or that you never heard about them.
Basically, show yourself as tough as they think they are and don't care whether they like it or not.

When they drop the arrogance, then you can go back to normal: the rules only apply until they exhibit arrogant behavior.

Interviewing mode for the shy ones

The Art of Mingling says that a conversation shod be like a volleyball game with lots of back and forth.

But if your conversation partner is very shy lots of questions can help draw him out.

Jeanne Martinet says that the best interviewers counter any reticence by couching the question between examples.

Ie. if you find out he just moved to a new place you could say:

> **You**: oh cool, the last time I moved for was about a year ago.
> Funny enough I've always around Wittembergplatz but just on the opposite side.
> I didn't move far but it took me a while to get used and find the best restaurants, dry cleaner and all the stuff, but once I learned the neighborhood I just loved the new location.
> How's the move been for you?

Changing the subject

Changing the subject is a bit like having to go from one side of the river to the other.

The key is to find the material to build that bridge.

Example:

Your group consists of an architect, her husband, and another person.
You want to talk about the architect's building as you love them. The husband though is talking about his garden.

Everyone else is passive or making innocuous comments like "oh nice" "those flowers are beautiful".

Your start building your bridge by thinking of all possible connections between the two subjects.
Then you turn to the architect and say

> **You**: planting houses in a community is a bit like planting a garden in a way isn't it?

or

> **You**: do you work closely with the landscapers on the gardens and lawns in your buildings?

The architect will answer and you'll be able to continue in your chosen course of conversation.

My Note:
This was a valuable insight.

Free Association

The Art of Mingling suggests yet another option if someone chatters away about flowers, and that is to take the word flowers and let it lead you to another topic.

Here you don't have in mind a destination topic, you simply want to move away from a certain topic, either because it's boring or because you want to take control of the dialogue.

Example: flower-bee.

Ask if bees pollinate all flowers or just some.
You can then add you have an uncommon fear of bees or that you're allergic or that if they also think how fair it is that after a bee stings you, they die,

From this last one can branch out to a topic of aggression and justice, which can be more interesting than flowers and fertilizers.

Jeanne Martinet says that free association is more flexible and open-ended than bridge building.
With free associations you can simply move away from point A, but you don't necessarily need point B.

Pole Volting Power Move

Another great technique from *The Art of Mingling* is Pole Volting.

Pole Volting makes a quick comment about the topic and then suddenly changes.

Example:

> **You**: yeah, there so many different kinds of flowers it's crazy, I can never tell one from another. But hey, before I forget to ask, how old do you think this bar is, some people say it just started but the reviews went back many years.

Or

> **You**:Yeah, all this talking about flowers made me think about honey and man, am I starving at the moment. Anyone else here is hungry and would like to share something?

Without a wrap up would be “have you heard Trump is getting a divorce?”

You might interrupt with an abrupt non sequitur if someone is entering a dangerous topic, like your ex-wife in front of your GF: “wait, I’m having a deja-vu”.

And then you change the topic.

[image]

Real-Life Applications

- The technique for faking until you make it, such as thinking of yourself as a famous actor and starting with the easier targets can be gold.
- The topic-changing techniques are also fabulous and do give them a try soon

CONS

- **“Take your scalp tips”**

I don’t know Jeanne Martinet but my guess reading the book is that she’s a driver and a rather dominant personality.

It gives me the idea she makes friends as much as she can easily make enemies -in the sense of people who dislike her-.

I believe you have to go for what you want, but you can do it with some classier moves.

Review

Funny, biting, irreverent, and *Machiavellian, The Art of Mingling* shares good tips and mindsets about mingling, as well as helping honorable men tell apart the social climbers from the quality individuals.

One tip you must be aware of: dropping the “need for truth”.
Mingling is about good feelings, and truth and reality are not always conducive to optimal interpersonal

relationships.
When that's the case, find something better than the truth.

How To Deal With Men Hitting on Your Girlfriend

Lucio Buffalmano · 28 August 2017 · Archived copy · Original

Have you ever experienced the sight of some guys hitting on your girlfriend?

If so you know that it is a highly emotional experience.

This article will teach you how to deal with guys hitting on your girlfriend.

Read it until the end, **and you will learn how to come out of the interactions with more love and devotion**.

You can always count on her to defend that guy :)

Contents

  - #1. Focus On Yourself First & Foremost
  - #2. Ultimate Power Is Making Her Want It
  - #3. You're The High-Value Giver
  - #4. She Strays, She Goes. No Stressing
  - Be Less Jealous Than She Is

Intro

Getting jealous or worried is normal, and research literature tells us it's part of men's inborn psychology.

However, over-reacting makes you look fearful and lower value.
That's why you must be strategic about it.

So we'll now teach you how to deal with a man hitting on your woman, and we'll assume that:

- The man hitting on your girlfriend is not annoying her
- You're in a social setting
- The two of them are having a pleasurable conversation -just a bit too flirty and upbeat-

Let's start:

#1. Do Nothing And Relax

For sure, *flirting* is a sexually charged way of communicating.

But it's *not* sex per se nor is it in any way a strong indicator of "willingness to have sex" and, even less so, "willingness to switch partners".

People in a relationship flirt and tease as well.
As a matter of fact, you'd be well advised to keep flirting with girls even when you're in a relationship.

But that means that you should grant that benefit to your girlfriend as well.

So enjoy the party, talk to other women, enjoy the party and don't obsess about what your girlfriend is doing.

What matters is the end result.
And the bottom line is this: **she's coming home with you**.
So chill out.

Oh, if you're not chatting with others, make sure to *pick a conspicuously attractive poseyou* and *learn how powerful body language looks*.

#2. Flirt With Another Girl

We want and like what's scarce and in demand (Cialdini, 1984).

And if she learns that nobody wants you, chances are that she will also want you less.

Needless to say, that's not what you want.
Ideally, you want a relationship where she's slightly more apprehensive about you than you are about her.

And that's not going to happen if guys are hitting on your girlfriend while you don't flirt or chat with any other girl.

So to restore the balance of power, you do this: **while a guy is hitting on her, you go find an attractive girl to engage in a nice and lively conversation**.

And with this new girl on your side looking a bit too happy talking to you she might just be reminded why she's with you in the first place ;).

Note: *jealousy can help seduction* and it can even relationships in small doses.
Just don't let this become a war to who makes who more jealous: that's a lose-lose game.

#3. Lead A Group

Women love leaders.

Pick a group, and breath some new life into it.
Have people laugh at your jokes and add their own jokes as they look for your approval.

As the group grows louder, she'll be drawn more and more to your crowd.
Now introduce her as your girlfriend, make the women in the group jealous and she'll soon be reminded what a great catch she's got.

Note: just make sure you don't overdo it and become the clown of a group.

#4. Bust The 'Dominant Power Move'

No women around to talk to?
No groups to enter?
You're getting more and more worried?

Then it might be time to pull a power move.

Go there, sleap her behind, and say:

> **You**: Look at you, how popular you are tonight!

This move says "this is MY girlfriend, which is not as good as her proudly claiming you are HER boyfriend.
But it is so sexually dominant that it can work wonders if executed well.

The guy who was hitting on her just with chit-chat will look outgunned and tame by comparison.
At that point, you can honestly befriend him like you'd befriend her gay friend.

Avoid If:
Needless to say, don't do it in a more formal environment or if there are around her colleagues, boss, and family.

#5. Say Hi To The Guy

Go in and join the two of them.

You have two possible options depending on the situation:

- If it's a mixer party and they were having a conversation join them as if it were her gay friend and have an honestly positive conversation.
- If it's an intimate setting being too friendly is at risk of looking submissive and green-lighting his advances. So in this case, a smooth and socially-savvy beatdown is in order.

Ocean's Eleven has a great example of how to deliver a socially savvy beat down with the dinner scene.

There is only the Italian version on YouTube but the body language is all you need:

You can tell a lot by his reaction to your entrance.
This is how different types of men will react:

- **Cool guys:** a cool socially savvy guy will understand the situation and if you're equally cool he will respect you. They know that simply means they will just have to keep looking for another girl. Those are the guys with whom you can actually make friends
- **Scared ones:** less confident, less experienced guys will act like kids caught with their fingers in the cookie jar and will either apologize for openly and/or slink away
- **Overpowering:** some guys will ignore you, keep focused on your GF, or will try to challenge you.
  Now that's where the fun begins.

If they ignore you, act a bit bored as you stare into space and let your GF re-involve you, which would be her way of saying "this is my BF and I care about him".
Then re-enter the conversation and then take her away slightly after.

What if He Challenges You?

Never, ever address his challenges!

Remember, he is the challenger and you're the one in charge.
You have nothing to gain by taking the gauntlet of those who are beneath you.

Move your head away, staring into space, and put a slight smile as if what he's trying to do is mildly amusing to you.
Add "yeah, sure" in a low slow voice as if to say "look at this idiot".

Alpha females should jump in your defense.
If she is not *assertive enough* for that, this is the time to pull her away and leave the guy alone.

Avoid These Ones!

There are a few strategies that you definitely want to avoid when some guy is hitting on your girlfriend.

Here are some of the worst ones:

Bad: Get Aggressive

Look, I'm not generalizing.

In some circumstances, quick and resolute *aggression* might even be helpful. Aggression is a time-tested technique of *mate guarding*.

However, there are serious issues with it that make it a defensive move even while you're aggressing and, ultimately, cost you more than it's worth.

One risk, of course, is escalation to violence.
That's a risk both physically and legally.

And what are you fighting for? A girl who's *already* yours? Dumb move, if you ask me.

Even if you "win" the fight, belligerence, and violence are rarely conducive to seduction.

And it's also bad for what it says about your relationship dynamics.

***Aggression* communicates that you are afraid of the other guy and that she is of higher sexual value than you are**. If you are afraid she will leave, you are indirectly implying the other guy must be a higher *sexual market value* than you are.
And if you repeat the same behavior over and over, you also communicate *she* is of higher sexual market value than you are.
And by now we know that *women don't like men who are "less" than they are*.

The "advantage" of getting into a fight and winning it is the enormous display of dominance that might be attractive to some women.
But it will equally repel others, as studies show women prefer lovers to fighters.

Basically: little upsides and huge downsides risks.
And **it always makes you look defensive** and like you are the *lower quality party* in the relationship: avoid.

Bad: This is MY Girlfriend

Going to the guy and telling "this is my girlfriend" is another relatively bad common theme.

Bad because: It's similar to *getting aggressive*, except just tamer.
And relatively easier to sidestep and make you look like a tool.

The guy might reply "*oh cool man, we were having a nice chat here*", implying he was not interested in any sexual way.
And now you're the guy who got overly defensive and jumped the gun for nothing.

Similar to what happened to this man getting protective around Obama

Obama handles it seemingly well but not great.
When he says he was "nice about it" and he calls him a fool he offends the woman and sounds butthurt himself (also read: social climbing Obama case study)

Bad: Do Nothing 'Cause You're Scared

Have you ever had the feeling you were watching over your girlfriend as she talked to some handsome guys and you couldn't concentrate on the conversation because you were worried?

It happens a lot, don't worry.

But unless your girlfriend's conversation is *really* too flirty, you are ruining your good reputation with that behavior.

Bad because: most people will pick up on that. And it will likely shine through with your girlfriend later on too, as you probably will question her just a little tad too much about that guy.

Bad: Walk In Ignoring The Guy

This is one of the most common I see happening when going out solo.

The guy comes over, leans in to talk to the girl with very closed body language which communicates fear and discomfort, and completely ignores you (Pease, 2004).
It looks like a worried dog running back to the owner afraid that she might lose interest in him.

Bad because: it pushes the burden onto your girlfriend

The girl now has to juggle the *jealous boyfriend* and the new acquaintance.

What should she do?

Introducing the boyfriend, excusing herself for talking to someone new? Possibly she'll have to cut the new guy off because you're scared and worried.

But if you are worried and want to make it clear you are the boyfriend, that's *your* task, don't let your girl do the dirty work for you.

Bad: Stat Making Out With Her

The idea behind this move is to go in and either grope your girl, make out with her, or adopt any obvious couple-like body language.

There are two exceptions when it would work: your girlfriend is obviously not having a good time and you're rescuing her or it's an arousing game you're playing (see below a game version example).

Bad because: going in with a bold move like making out might make you feel like you're the man, but you're really just marking territory.

Joe Navarro says men are more likely to put their arm around their woman when other men might approach as a defensive gesture.
And you don't want to be defensive.

And if your girlfriend was having a good conversation, you are forcing her into a position that she might not want to be in.
In the worst-case scenario, she might as well spurn your advances and you'll look incredibly foolish.

Now that we talked about a few good techniques I wanted to get into what's even more important: the mindsets and the fundamentals.

Mindsets and fundamentals are what make *high-quality men* the real leaders of a relationship.

Guys Hit on Your GF All The Time?

This might be an issue because:

1. **Those other guys are not respecting you**
2. **You didn't pick a great partner**

Sorry to be so blunt, but you need to hear it.

The basic fundamentals are **who you are** -a man women would not cheat on- and **the girl you pick** -a girl who

doesn't cheat-.

These two elements will ensure you will NOT have to worry about anything. And both of them are under your control.

Become a Keeper Type of Guy

Quick question: do you think she's likely to switch to someone else if you're the best man she's ever been with?

Not very likely.

That's why it all starts with you.
Who you are, and who you are becoming.

It's not even that difficult.
If the average woman has been with around 8-10 men, then you only need to be in the top 10%.
Look around, you can do it.

And what if you were the best man she's not just been with, but ever met, including her father, brother, and cousins?

How to be that high *sexual market value* man?
Now you're getting in the right mindset.

Pick Her Right

Some women are more likely to stay faithful than others, an obvious point that might be worth stressing in a society with some strong politically correct shaming going on.

A few points backed by research:

- Yes, her past behavior matters: women with lower sexual partner count are less likely to stray
- Religious girls are more likely to be faithful
- Relationships with a friend are more likely to incur cheating
- Women in casual relationships are more likely to stray than in "serious" ones
- Read this article on how to find faithful partners

A few points backed by experience:

- Hardcore party girls are more likely to stray
- Women in poorer countries might be more likely to stray
- Women with jobs in highly sexed industries are more likely to sleep around

Mindsets of Overcoming Jealousy

Fear is the breeding ground of jealousy.

To get rid of jealousy, you have to get rid of fear.

This whole post is about defending because the simple question of "how to deal with a man hitting on my girlfriend" is defensive.

These are some important mindsets for prevention:

#1. Focus On Yourself First & Foremost

Truth to be told:

Yes, controlling can work.

But it's not the best option, it's not what the *highest quality men* do, and it's not conducive to your personal growth.

Most of all, don't fall for the complainer mentality that only blames women.

Of course, women can stray.
And of course, there are some "hoes" out there.

But the mindset of blaming women is a loser's mindset.

Your mindset is:

You know "*these hoes ain't loyal*" is the anthem and outcry of the weak men, the men who'd wish and believe they are *owed* loyalty, which is nothing but another form of an *entitlement mentality*.

But you, you aren't even thinking in terms of "owning" her or her loyalty.
You understand that there's one only simple rule of strong dating: she will be the happiest girl with you… *As long as you keep being a great man***.**

Loyalty is the consequence of you being a great man.
Your task is *not to control her*, not to "defend" her, and not to spy on her or spoil her. Your only task is being a great man.
And keep being a great man.

Then, the only thing you'll need to worry about is that she might be getting too into you.

> **Let her go, and if she returns, she's yours.**
> **Unless she returns and you turned into a pu*****

#2. Ultimate Power Is Making Her Want It

You understand that forcing her to stay faithful is seemingly strong, but actually weak (*43rd Law of Power*).

You shake your head at men curfewing their women and you know that ultimate power is her *wanting* to be faithful. Her *wanting* to come home early to stay with you.

And If she's not offering her exclusivity and trying to get the same from you, you're not yet where you need to be.

#3. You're The High-Value Giver

You are confident you bring a lot of value to her life.

Not in any confrontational or any you're "better" way. You are glad of giving her a lot and you're happy if she's happy.

But it also means you're confident you'll move on if she disrespects you.

Similarly, if you can't provide what she needs you'll be sorry to see her go but you *will* let her go if that's better for her. And you'll be happy for her.

#4. She Strays, She Goes. No Stressing

While you're very open and libertine, you also have very high standards and set defined boundaries.

You don't *tell* her what she can't do, you only tell her what you *expect*.

And if you expect her not to sleep around and she does, it will be the end of your relationship. And you're at peace with that.

Be Less Jealous Than She Is

You cannot *control the relationship* if you are the most fearful party.

And jealousy is a proxy for fear.
Even *The Oxford Handbook of Evolutionary Psychology and Romantic Relationships* *says this much:*

> Jealousy implies that one feels threatened by the loss of a partner's sexual or romantic exclusiveness

In turn, fear belongs to the one who feels he has more to lose.

If you're the more fearful party, you sub-communicate that she is higher value than you are.
That she can get better.

And since *women want men who are better than themselves* you never want her to have those doubts.

Ironically, being less jealous is relative.

If she's nuts jealous, you could be very jealous.
And if she's very jealous, you could be jealous.

As a matter of fact, showing no jealousy at all can be a sign of non-caring, while showing some jealousy can be a strong sign of appreciation and get the two of you even closer.

Partying and Power Balance

if you go often to parties and clubs together you can often end up in situations where she's being hit on.

And you might not always be able to get the same dynamics on your side or to neutralize the situation.

That's why **partying together with your girlfriend shifts the balance of power on her side**.

Solution: don't go clubbing with your girlfriend too often.
At least if you care about keeping a neutral *balance of power*.

At least if you care about keeping a neutral balance of power.

What Every BODY Is Saying: Summary & Review

Lucio Buffalmano · 29 August 2017 · Archived copy · Original

"*What Every BODY Is Saying*" (2008) is a *book on body language* in which author Joe Navarro teaches the basics to read body language and nonverbal communication.

Contents

- Bullet Summary

- Summary
  - Review

Bullet Summary

- Learning the baseline behavior of the people around you will allow you to pick any relevant changes
- Discomfort VS comfort signs are the two major and most helpful nonverbal categories
- The 3 major and most useful classifiers of nonverbal discomfort signs are "freeze", "flight" and "fight"
- Threatening limbic responses to freeze, flight, or fight is followed by pacifying behaviors

Summary

About The Author: Joe Navarro is a body language expert, public speaker former FBI agent.
He is also the author of "*Dangerous Personalities*".

1. Mastering Nonverbal Communication

Joe Navarro then gives 10 "commandments" for observing and decoding nonverbal body language:

1. Be a competent observer: A skill you can learn with practice

2. Observe in context: Body language is always observed within the context in which it takes place. Being nervous *at a job interview* for example is normal and it often dissipates. If nervousness shows again later on then you can wonder why

3. Learn Universal Body Language: Some nonverbal signs are universal and independent of the culture they take place in (example: pressing one's lips)

4. Learn Idiosyncratic nonverbals: Idiosyncratic behaviors are unique to specific individuals.

5. Learn Baseline Behavior: Baseline behavior is how people normally look, sit, move and behave. Once you know the baseline comfortable behavior, you will recognize when they're *not* comfortable.

6. Look For Clusters of Tells: Your accuracy will be exponentially improved when you can note several tells part of the same clusters. For example, a few nervous tells coupled with a few pacifying tells in a negotiator can tell you he's negotiating from a weak standpoint

7. Look For Changes: Looking for body language changes can alert you to something about to happen, particularly useful if the impending action can cause harm or.

8. Discern False from Misleading: Learning to tell authentic from misleading takes practice

9. Discern Comfort from Discomfort: Joe Navarro says there are two main clusters you should focus on: comfort signs and discomfort signs. Comfort is associated with high confidence. Discomfort is associated with low confidence.

10. Be Subtle In Observing: With practice and persistence, you will learn to observe nonverbal cues without making it obvious you're looking for them.

2. Living Our Own Limbic Legacy

Everything we do is directed by some portion of the brain, and by observing these behaviors, we can learn to interpret what's happening in the brain.

Joe Navarro says that the limbic system is the holy grail of body language.

The behaviors dictated by the limbic system are reliable because they operate outside of the neocortex, the conscious part of the brain.

Freeze, flight or fight

Joe Navarro adds, rightly, that the common "fight or flight" dichotomy is actually wrong.

There are instead 3 major responses to distress or threat: freeze, flight or fight.

- **freeze**

People being scolded; shallow breathing during questioning; shoplifters hiding their presence with arms close to the body and hunching (the "turtle effect")

- **flight**

All nonverbal behaviors increase the distance.

It includes leaning away, turning your feet towards the exit, placing a bag on your lap, placing a bottle in front of you in front of the table, rubbing or closing your eyes, or putting a hand on your face.

Eye-blocking behaviors are powerful indicators of consternation, disbelief, or disagreement.

- **fight**

A heated exchange is a form of fight, but it also happens without words for example by puffing out the chest, violating personal space, or other aggressive posture.

Pacifying Behavior

Freeze, flight, or fight are highly intensive for our brain, which then directs our bodies to provide comforting actions to calm us down.

The comforting behaviors are the so-called Pacifying Behaviors (in other sources are called "adapters").

When you observe Pacifying Behavior you can guess that someone is in a state of discomfort and had a negative response to something.
If it's in your vicinity, it might be to something you said or did.

Examples of pacifying behaviors:

- Neck Touching, covering, or massaging, such as playing with a necklace or adjusting a tie (men more obviously than women)
- Rubbing your forehead
- Touching or rubbing your cheek
- Exhaling puffing out your cheeks to release stress
- The Leg Cleanser: used when sitting by rubbing your palms on your upper leg
- The Ventilator: pulling on your shirt collar (for men) or tossing the back of your hair up (for women)

- The Self-Hug: rubbing the opposite shoulder with one harm

Pacifying behaviors are indicators of uneasiness, stress, or discomfort.
And there's a relation between stress and pacifying behavior: the greater the stress or discomfort, the greater the likelihood of pacifying behaviors to follow.

Joe Navarro also warns to take note of what part of the body a person pacifies, because usually the higher the stress, the greater the amount of facial or neck stroking will follow.

The ability to link a pacifying behavior with its cause will help you better understand the person with whom you are interacting and to gauge and possibly adjust the way you're interacting.

3. Nonverbals of the Feet and Legs

Joe Navarro says that **the feet are the most "honest" part of the body** because they are the first to be engaged in the freeze, flight or fight limbic response.

And they are also the easiest to read because people usually focus on the face to decode what others think so we also focus on the face when we want to fake something.

Hence Joe Navarro exhorts us to do the opposite: start from the bottom, focusing on the legs and feet first.

Here are some typical body language moves associated with feet:

1. Happy feet: Bouncing or rapidly moving feet indicate excitement or satisfaction, but can also communicate impatience. As it's true for most situations with body language, you must understand the context to correctly decode the meaning. Joe Navarro says that while you can't always observe the feet, this movement can also show in the torso and shoulders when seated.

2. Feet direction: The feet will point in the direction of what we like or the direction where we would like to move towards. If someone is talking to you but their feet are pointing away, it can mean they either don't like you and want to disengage, or that they must go somewhere else.

3. Weight Shifting: Placing hands on the knees and shifting the weight towards the foot placed in front while seated is an indication the person is ready and looking forward to getting up and leaving.

4. Gravity-defying behaviors: Similar to Happy Feet, they indicate happiness or excitement. One foot pointing upwards is an example. When it's the heel to be lifted it's a "starter's position" and it may indicate interest as well as readiness to go.

5. The leg splay: Planting your feet far apart is an effort to control the situation. Joe Navarro suggests that if you want to diffuse a situation when you standing this way, bring your feet closer together and it will communicate nonverbally you are not interested in escalating.

6. Standing leg cross: Crossing your legs at the ankles when standing communicates that you are very comfortable. Joe Navarro says it's because you anticipate that there's no need to freeze or run, which would require both feet on the ground. Crossing your legs at the ankle while standing is a great way to put someone at ease by communicating *you* are at ease.
Notice also that we will often bend our crossed legs towards the person we like most -or the one that makes us most comfortable-.

My note:
Pease and Pease say that Standing Leg Cross communicates a submissive or defensive attitude. I tend to agree with both depending on how the rest of the body language looks.

7. Seated leg cross: If the crossed leg point towards you it's an indicator they like you. Another important indicator is where the inside of the knee is facing: towards you is positive, and away from you is negative.

8. Walking style: How we walk affects our moods and attitudes and, of course, how people perceive us. It's especially important to notice changes when we already know how people usually walk.

9. Foot movements: People jiggle and move their feet all the time, so it's not useful in itself as an indicator of a lie. On the other hand, it's very useful to understand when this behavior begins to change. Jiggling of the foot can be an indicator of nervousness, while a kicking motion is an indicator of fighting back against something unpleasant.

10. The foot lock: Locking the feet while seating is a sign of discomfort. When people are comfortable they tend to unlock their feet. Interlocking the feet around the legs of a chair is even more pronounced and is part of the freeze response.

4. Torso, Hips, Chest & Shoulders

1. Ventral denial and ventral fronting: When things are good and we feel comfortable, we face our frontal body toward the person we're speaking to. When things are not good and we don't like the person or there's a relationship change, or we don't like the topic, then we will face away with our torso and belly.
Leaning in or leaning away serves the same purpose: we lean in to show comfort and liking and we lean away to show discomfort and dislike.

2. The torso shield: We shield our torso when we are not comfortable. Arm crossing is an obvious one, but also buttoning a jacket, adjusting a tie, reaching out to one of our cufflinks, or touching our watch, they can all serve as torso shielding behaviors.

3. Torso splays: Shifting the weight to one side while leaning back communicates a territorial stance or a power pose. Joe Navarro says you can do it at home, but better not at the workplace as it communicates disrespect for authority

4. Chest puffing: A very clear aggressive pose that communicates the situation could escalate to blows. If it's followed by removal of clothing to bare the torso it's a further step towards physical confrontation.

5. Shoulder shrugs: Shrugging of the shoulders is a common nonverbal way to communicate ignorance on the topic. What's most interesting is that Joe Navarro says that when the shoulder shrug is only partial- for example, if the shoulders don't raise much or if only one shoulder goes up, it means the body language doesn't fully back up the verbal statement

6. Weak shoulder displays: Shoulders coming up towards the head -the turtle pose- is a strong sign of major discomfort in the situation. The players of a losing team will do it, or the employees about to report on their accomplishments who haven't had many accomplishments.

5. Nonverbals of the Arms

1. Gravity-related arm movements: Similarly as for "happy feet", when we feel happy and energized our arms tend to go up. And when we feel confident, we will use our arms more and will often swing on our side when we walk. On the other hand, our arms tend to drop and droop when we are sad or experiencing negative emotions.

2. Arm withdrawal: When we are confident our arms tend to move conspicuously and stay to the side; when we feel threatened, our arms will move closer to our body or will cover our body. As a general rule, the meek will pull their arms in, the aggressors will spread their arms out.

3. Arm freeze: Part of the limbic freeze reaction, this is how our body makes us less detectable. Unluckily, Joe Navarro says that abused children will display restricted arm movements.

4. Arm cues that isolate: Certain arm behavior communicates we need or want distance and people should not come close.
Placing the arm behind your back for example, albeit often misunderstood as a pensive position, is a typical move

of royal families that communicates superiority and it tells people not to come too close. In crowded places, arms will also be used to keep people away from our torso and body.
And arms can be used to distance someone when we greet them: how far we reach our hand out will say how far we want to be from them. And when hugging, fully outreached arms are a very positive sign of liking.

5. Arms akimbo: Your hands on your hips are a typical stance for territorial display and to establish dominance. The akimbo with thumbs down is more inquisitive and less authoritarian. Placing the thumbs back and fully displaying the fingers is a stronger way of saying "there are some issues here".

6. Hooding effect: Interlaced fingers behind the head, leaning back and elbows forward while seating is another territory-claiming pose of dominance.
Usually, only the most senior person in the room will be allowed to take this pose.

7. Dominant pose: Spreading your arm while leaning on a desk or placing your arm around a chair nearby is a major territorial display of authority. Similarly, people who want to claim territory will spread their stuff wide on a table.
Dominant men might also put their arms around the date on the first date as if it were her property. Some men might also put an arm around their woman it *when they feel there's a lot of competition around*, which is one of the reasons why I wouldn't recommend you do the same.

8. Adornments and artifacts on the arms: Interestingly enough, Joe Navarro says that adornments and tattoos on the arm do communicate about us, and until tattoos will become fully acceptable he recommends avoiding them since surveys show people perceive people with tattoos as low status.

9. Arms as conduits of affection: Arms can tell how happy we are to meet someone. When meeting someone new, leave them relaxed, preferably showing the internal side of the arms and maybe even showing the palms. A hug is a great way of saying "I like you" (Leil Lowndes says hugging can mean more than "I like you" unless there's a pat on the back, in which case is always friendly)

6. Nonverbals of the Hands and Fingers

Joe Navarro says that our brain gives a disproportionate amount of attention to the wrists, palms, fingers, and hands, as compared to the rest of the body (Givens, 2005).

1. Effective hand movements: People respond effectively and positively to hand movements, so use them when speaking and to emphasize your points. Joe Navarro uses a very strong example of a man who used his hands extremely well to sway and convince crowds: Adolf Hitler.

2. Keep your hands visible: Hiding your hand creates a very bad impression, we human beings expect and want to see the hands and what they're doing. So keep them in front of you and above the table.

3. The power of a handshake: Joe Navarro says you should avoid the famous power plays of rotating your hand on top or putting your second hand on top.
Albeit some politicians might do it to avoid looking weaker than their speaking partners, it just makes people uncomfortable. And of course, avoid Trump's style Alpha Male Handshake.

4. Offensive hand gestures: Very interestingly, there are more learned hand gestures than most other body language signals we've seen. Hence, it's easy to offend some foreign cultures with hand gestures. Joe Navarro hence advises avoiding hand gestures in a foreign culture until you learn a bit about what they mean.
Finger-pointing is universal though, and universally offensive at that.

5. Manage sweaty hands: Sweaty hands tend to happen because of nervousness, so they're a possible sign of nervousness.

6. Nervousness in the hands: Our hands can shake because of stress, nervousness, or excitement. But can also be caffeine or neurological disorders, so you should always use context and baseline behavior to judge.

7. Preening: Preening yourself is rude when you're supposed to be listening to someone, especially if done in a self-attentive, dismissive way.

8. Steepling: Steepling, a go-to move of Angela Merkel is, Joe Navarro says, one of the most powerful displays of confidence we have. On the other hand, interlacing fingers is a sign of low confidence, especially if couple of hand wringing.

9. Thumb displays: Thumbs in full view communicate confidence, while thumbs hidden, either in your own hands or in your pockets, communicate nonconfidence (unless the rest of the finger fully frames the genitals in the "genital framing"). The thumb sticking out of the pocket is a high-confidence display.

10. Genital framing: Thumbs sticking in the belt or in the pocket with the other fingers pointing towards the crotch is a dominance display more often seen among young people.

11. Frozen hands: Same as frozen feet, a sudden stop of all movements can be an indicator of stress and lying.

12. Interlaced stroking or rubbing: In case of doubt or under low stress, people will slightly rub their palms together. When they move to rub their hands with interlaced fingers, the situation is more stressful for them.

7. Nonverbals of the Face

Joe Navarro deals last with the face for a simple reason: it tends to be less accurate.

1. Pupillary constricting and squinting: Our pupils tend to widen when we are surprised, aroused, or confronted. They constrict when we perceive something negative. We also squint our eyes when we perceive something negative or something we don't like, thus squinting plus constriction makes for an ever greater negative response.

2. Eye blocking: Our limbic system tries to block incoming negative information, which can translate into heightened blinking, blinking more slowly, touching our eyes, or bringing our palms to cover our faces.

3. Eye flash: The eyebrow flash, a non-verbal already talked about by another FBI agent in *The Like Switch*, happens when we raise our eyebrow for a split second, and it indicates a positive reaction.

4. Eye-gaze behavior: When we look directly at someone's eyes we either like them, are curious about them, or we want to threaten them.
We must rely on other facial cues to understand which one is it. When we look away during a conversation we can do it to engage a thought, in which case it is actually a comfort display. However, a little later, he says that subordinates are required to be attentive with their gaze and keep facing the king as they leave the room. But the dominant men can look wherever they want.
Also, he recommends that you look at potential employers at an interview as looking all over "as if you owned the place" will unnerve them and make you look superior and disinterested.

5. Eye-blink / eye-flutter behavior: Joe Navarro says that Eyelid flutter indicates an internal struggle either with our performance or with the person or environment around us. It cannot be a good indicator of lying though because any stressful situation can cause the bling rate to increase.

6. Looking askance: The head is tilted or looks sideways with an aside glance or eye roll.

7. Disappearing lips, lip compression, and the upside-down "U": These are, in order, all rising signs of stress

8. The lip purse: The lip purse involves puckering the lips, and indicates disagreement with something that is being said or done.

9. The sneer: The sneer communicates disrespect or disdain

10. Tongue displays: Often a pacifying sign. Tong jutting between the teeth without touching the lips is used when someone got caught for doing something they weren't supposed to do or when they got away with something.

11. Furrowed forehead: Frowning is a signal of discomfort or anxiety, but it can also be concentration and full

focus on a task.

12. Facial blushing and blanching: It's our response to an impactful, major event. Our blood is siphoned off from our faces in preparation for a flight or fight situation.

13. Gravity-defying behaviors of the face: Tucking our chin in and pushing our nose down is a sign of low confidence. Chin up and nose high instead are indicators of confidence.

8. Detecting Deception: A Coin Toss

Joe Navarro goes deep in dispelling a myth and an industry worth millions: the myth that we can spot a liar.

He says that "even the very best of us are no better than 60% accurate".

Body language is great to spot how a person is feeling, or a disconnection between words and nonverbal signs. But when it comes to guessing when someone is deliberately lying, then… It's no more than pure guesswork.

The wrong idea that many have is that any sign of nervousness is a sign of lying. It's not. People can be nervous independently of lies.

The idea of catching if someone is lying is to establish full comfort so that if he is nervous when lying, then it will be possible for you to notice the changes from comfort to discomfort.

> **It's simply a lie that anyone can accurately spot lies.**

Three Major Tells To Spot Liars

Three major tells you can look for are:

- **Synchrony:** Says no but nods
- **Emphasis:** When lying we don't put much verbal and nonverbal emphasis on our words
- **Confidence:** People who tell the truth tend to be more convinced. For example, palms up display a suspicious "please believe me" attitude

My note:
most "spotting a liar mechanisms" are based on the idea that if someone is lying, they might not be too experienced in it and will need to put a lot of mental load on the lie.
That will raise tension and lets the nonverbal go awry. So you wanna know the biggest secret to a perfect lie? Don't lie. And if you need to, believe in your lie. It's not a lie if you believe it ;)

[image]

CONS

I Would Have Liked More Pictures
More pictures would have been nice. Some interactive links to some videos would have made it an even more wow book. But for a non-interactive video, little to criticize, it's just great.

Review

"*What Every BODY Is Saying*" is a great book for anyone looking to improve their interpersonal skills.

It's well written, well researched, and contains boatloads of wisdom even for more advanced practitioners of the social arts.

Bullet Summary

- We think our signs are more obvious than they actually are: always give more signs
- How much women touch *themselves* is a great way to gauge how much they like you
- Women prefer being approached from the side

Full Summary

Body Language of Love & Dating requirements are quite far-fetched and easy for many to just nod along:

- Looking for Love
- Single Men or Women
- Interested in Building All Aspects of Relationships

Vanessa van Edwards says that she'll talk about all the nonverbal signs of seduction.
She says she gives love advice like nobody else does and her course is not about *gimmicks and sleazy stunts*.

Her course sets itself apart because it's science-backed and tested in her lab, sprinkled with a sense of humor and solution-oriented.

Let's see.

Body Language of Love

A man's favorite body part in a woman is the legs and a woman's favorite body part in a man is the butt.

Vanessa talks about congruency and incongruency.
When we are faced with incongruencies, she says, we will always believe the nonverbal signs.

Vanessa says that the body language of love is based on two main components:

- **Trust:** based on the oxytocin hormone
- **Attraction:** estrogen and testosterone

Women are looking for men with a high level of testosterone and men are looking for women with a high level of estrogen.

Vanessa also says in couples where the nonverbal communication decreases, the satisfaction of the relationship also decreases.

Science of Attraction

Vanessa goes on to explain how we know if someone is attracted to us. She lists five solid ways:

#1. Gazing

There are 3 different types of gazing, and intimate gazing is the way we show attraction:

Power Gazing
Power gazing is looking at someone's eyes and then forehead. Your gaze stays high and you want to use Power Gazing during business meetings or negotiations.

Social Gazing
Social Gazing happens when you look at your eyes and mouth.

Intimate Gazing
Intimate gazing is eyes and chest -not eyes to boobs, eyes to chest-. If you want to send a signal you like someone, you should drop your gaze to their chest area.

#2. Feet

The direction of someone's Feet will tell you about their mental activity.

#3. Proxemics

Vanessa goes into the intimate, personal, and social zones people tend to use when keeping their distance from other people.

You can gauge how close people feel to you by looking at how close they get to you. You can use proxemics in two ways: show them how close *you* want to be when speaking with them. Or by planting: stand and see how close *they* get.

When seating the same is true for leaning. And we can use also use touching to close the gap: the more we touch, the closer we want to be.

#4. Haptics (touching)

You can gauge how people feel about you not just by how much they touch *you*, but also by how much they touch *themselves* and how much they preen.

Vanessa says we use touch to release oxytocin and feel more connected.

Women tend to do more self-touching. Women tend to touch their:

- Necks (it releases pheromone),
- Hair (long healthy hair shows good nutrition and health)
- Lips (they might like to have something in their mouth, and it reminds them of other lips).

#5. Men Displays

While women tend to touch themselves more, men tend to:

- Show territorial displays when they're around women they like (spreading harms and legs, drapes their arm around a chair)
- Inflate (puff up chest)
- Alpha Cross (in western countries mostly: it takes lots of space and releases pheromones)

How To Know It's Time To Move

Vanessa suggests that before making a move you:

- Observe 3 different attraction signals or the same signal repeated 3 times
- Baseline: make sure she's not giving those signals to everyone

Flirting Fundamentals

Vanessa says that a study found that unattractive women with the right body language were approached more times than attractive ones who did not signal correctly.

Signal amplification bias: we tend to think that our signals are obvious. Most of the time they're not.

Vanessa gives us some ways to send proper signals in what she calls "Primal Flirting", composed of:

Availability

Fronting: move your toes, your torso, and your top towards the person you're interested in. Some women get nervous and move their torso away, that's bad because the brain cannot relax to form a connection if someone is facing away.

Smiling: smile as soon as you see your date to signal you're a friend and not a foe.

Eye Gazing: the intimate gazing already discussed, and deep gazing.
Solid and prolonged eye contact releases oxytocin.
On average, we hold eye contact for 60-70% of the time. You want to stay in that rage, but if a topic you are particularly interested in comes up, focus intensely as if you wanted to keep noticing their eye color.

Glancing: a study by Pamela C Regan found that successful men directed more brief glances to the women they liked. The flirting for them started way before they even started talking.

Confidence

Using Power Body Language will make you come across as more confident and will make you feel more confident too.
Look at some great body language at a bar or some sexy poses for hands in pockets.
Low power poses are contracting yourself, head down, and shoulder rolling.
High power poses are expansive.
It's claiming territory, head high, arms loose, shoulders back and chest open.

Vanessa says however that power poses are too obvious for normal situations and the ideal is in the middle (loose arms, open torso, shoulders down, head up and fronting).
But you can use power poses before a presentation or before going out and then the re-settle is in the middle.

I love how Vanessa suggests you find a few ideal poses for you, practice them and then use muscle memory to revert back to them and never get into low-power poses again.

Vanessa quotes again Pamela C Regan who found out that successful men, the ones who got the most numbers or went home with most women engaged in more "space maximization movements".

For example hands out of their pockets and arms over a chair.

And they displayed more non-reciprocated touching to the men around (patting, back-slapping, playful shoving)

Fertility

It's important to highlight a high level of testosterone for a man and a high level of estrogen for a woman.

Estrogen:
Body: The Hourglass, a waist-to-hip ratio of 0.7
Face: symmetrical face, large eyes, and large lips.

Testosterone:
Deep Voice: when you're tense the words tend to be higher pitched because of tense vocal cords. A good way to minimize this issue is to take a deep breath and speak after the out-breath.
Face and Body: prominent jaw and brow and large shoulders. Vanessa suggests that two-button shirts and two-button suits help to make your shoulders appear larger. Facial hair can also help accentuate the jaw.

The Psychology of Courtship

1 approach eye pattern:
The author says that the first 5 to 10 people enter a new space they will be scanning the room.

Next, we identify targets, which are one or two people that intrigue us and often our toes will also be pointing towards them as well.
This part lasts less than 3 seconds.

If we feel there's potential there, people we will engage in a longer 3 seconds gaze and will look if there's a smile and if the 3 seconds gaze is reciprocal. If all signs are positive, then there can be an approach.

The good thing about eye patterns is that you can do it before the approach to test the water, but also to invite more approaches. You can gaze at someone to invite their approach.

Monika Moore found that on average women had to make 13 direct eye contacts before being approached.

2. Approach:
Women like being approached from the side because it can feel too threatening from the front.

Men prefer instead being approached from the front.

Visual Voyaging: people want to assess and see the full body before connecting with them.

So while some people might feel discomfort and prefer not being seen fully it's important that you allow a person to look at you fully from head to toe.

Joe Navarro, for example, suggests that you do something to take your eyes off your speaking partner so that he/she can take a full look at you while you look away.

Also, read:

- How to approach women
- Cold approach as an approach strategy

> Cold Approach VS Social Circle (VS Tinder): Strategies

First Impression

Vocal confidence:
Vanessa recommends never to speak as if there were a question mark at the end of sentences, not even for women as that's often perceived as untrustworthy.
Men with deeper voices are considered more attractive while women with higher voices tend to be more attractive in the dating arena as it shows estrogen (but it's counterproductive in business settings).

Primal Flirting:
Fronting, smiling and confidence.

Validation:
Showing ourselves fully engaged in the conversation provides validation to our speaking partner.

Seduction

Leaning In:
We lean in when we are curious, engaged, or want to connect on a deeper level. You can use leaning to show engagement and test engagement. You test by gauging their reaction to your leaning in.
Do they stay put, do they lean in as well? If they pull back, you're coming on too strong for now.

Eye Brow Raise:
It's a sign of curiosity, used for example when saying "oh really (tell me more)?".
If people use it while they're speaking it's a way of saying "pay attention to what I'm about to say" or "this really matters to me".

Eyebrow Flashes and Glances:
Eyebrow flashes and direct flashes are the way in which women show sexual openness.
So when you see a woman giving eyebrow flashes and direct glances, that's a go-ahead signal.

Dating Dynamics

Vanessa goes into micro-facial expressions here.

She says we take in information from micro facial expressions even if we don't consciously see them or realize they happened.

Just one note, she is absolutely amazing at using her face to mimic facial expressions.

Dynamic Expressiveness:
People who use a lot of gestures are seen as warm and agreeable. People who remain still are seen as more cold and analytical.

Vanessa says that in dating you want to be seen as warmer and more agreeable.

A tip from Vanessa is to feel the emotions your speaking partner is feeling and mirror them in your face.

She also says that men using palm-up gestures are more successful with women as that communicates an agreeable personality.

Dynamic mirroring:
we unconsciously mirror those we like and the people whom we mirror also perceive us as more likable.

Again, and rightfully, Vanessa recommends a happy medium: don't mirror too much and only mirror neutral and positive signals.

You can mirror the body language, the pace of their speech, the volume or tone and the facial expressions.

Vocal Emotionality:
Vanessa cites an MIT Media Lab research stating that men are more interested in women who vary their voice tone.

The key to showing emotions in your voice is to *feel* emotional and passionate about the topic you speak about.

Relationship Connectivity

Vanessa van Edwards tells us that women use more brain areas to decode nonverbals and that men and women interpret nonverbals differently.

Short interjections:
short interjections are:"uh-uh", "ok", "I see", "aha", "yeah", "yup".

Vanessa quotes another MIT Lab Media research saying the more men used short interjections in conversation the more attractive they were to women.

The more short interjections the woman made, the more she liked the relationship outcome (she felt engaged in the relationship).

Going Deeper:
Nodding three times slowly has been proven to make people talk longer (slow though, doing it quickly shows impatience).

Head tilt shows empathy and engagement. To learn more about relationships, check *Men Are From Mars, Women Are From Venus*.

Let's Get Physical

There's not much "physical" about this section to be honest, and it's just another collection of dating tips, albeit there are quite a few useful ones.

Vanessa von Edwards cites Rebhahn research that men tended to overestimate women's sexual interest and women underestimated men's willingness to commit.

Kiss Signal:
Women who want to be kissed will put their mouths somewhat closer to you.

Women who are ready to be taken home and ready for action will revert to the “Marilyn”, which is the famous pose from Marilyn Monroe showing her neck, lowering her eyelids, and opening her mouth, thus mimicking an orgasm (read here how Marilyin’s seductive secrets).

Back-Up Signal:
Some signs to back up are the lip purse (she’s holding back what to say), touching her neck (she’s nervous), and using her purse as a block between you two.

Note:
I don’t understand here why she says touching her neck is a bad sign. It can be a great sign, even if she’s nervous it can be a great sign if she’s nervous because of you.

Some behaviors that show untrustworthiness are: leaning back, crossing arms, touching rubbing, or grasping hands together, face touching (for men, as it shows nervousness).

Men should show their hands to heighten trust and offering protection is the ultimate alpha behavior (opening doors, offering coat, pulling out chair).

Pre-sex touches:
Men prefer backrub/massages and kisses on the lips. Women prefer cuddling/holding and holding hands.

Vanessa repeats again the main things you can do is: show you are attracted, show you are willing to adapt and show you want to know them.

Real-Life Applications

- Start speaking after breathing out if you’re nervous
- Use short interjections (“uh-uh”, “ok”, “I see”..) with abandon

CONS

Upselling
Not as badly as *Captivate*, but some upselling is also present

Micro-expression and lying
I feel that spotting lies have little to do with dating to be honest, and micro-expression shouldn't have been covered. Also focusing too much on "lying spotting" and "facial micro-expression" can get you in the wrong frame of mind.

Review

Vanessa van Edwards focuses much on "warmth" and "agreeableness".

That's great, but I feel that a course on Body Language of Love & Dating should also deal with different dynamics of dating such as leadership and dominance.

That being said the course comes packed with lots of actionable and useful information you will not find everywhere.

And what I loved the most is that Vanessa shows some real-life examples from clips she took from a series called "Dating in the dark".
Those analyses are very good.

The Art of Closing The Sale: Summary & Review

Lucio Buffalmano · 1 September 2017 · Archived copy · Original

The Art of Closing The Sale teaches readers not just practical sales techniques, but also the right mindsets that will make you successful not just at selling, but in life.

Exec Summary

- Your personality is 80% of the sales skills
- Always think of yourself as self-employed
- Believe in yourself and what you sell or move to a company in which you can believe in

Summary

Brian Tracey says that confidence in your sales skills will make you more aggressive in prospecting and will give you higher self-esteem.

Because you know you can do what it takes to close the sale, you will feel like a winner most of the time.

This self-confidence will even affect your prospects, making them in turn even more likely to buy from you.

Personality= 80%

Brian Tracey says that your personality constitutes 80% of your success.

He says that top salespeople have a high level of self-confidence and self-esteem. Self-confidence is the natural growth of liking and respecting yourself.

I liked how *The Art of Closing The Sale* stresses that mental fitness is like physical fitness.
It requires a good mental diet and practice. And once you develop it, it will go beyond sales because how you feel about yourself is the single most determinant of the success of all of your relationships.

It's a simple rule: like and care about yourself, and you will like and care about others.

> **Like and care about yourself, and you will like and care about others.**

You're Self Employed

If you have been reading Brian Tracey you are likely to have heard this one before because it's a big mantra for him.

He says that **no matter where you are employed, you should always consider yourself as self-employed**.
You are the president of your own company!

He says that top salespeople accept 100% responsibility for everything they do.

And the top 3% of people in every organization look at themselves as self-employed.
Not in the sense that they don't belong to the company, but the opposite: they treat the company as if it belonged to them.

And they took everything which happened to the company as if it happened to them.

Work On Your Emotional Intelligence

As we've already seen in *Emotional Intelligence* by Daniel Goleman, Brian Tracey also restates that EQ is more important than IQ.

A person with empathy will try to put himself in the shoes of the other person to see what he feels.
And the author emphatically adds "if you can see John through John's eyes you can sell John what John wants to buy".

Empathy requires long-term thinking, and Brian Tracey says that **a balance between ambition and empathy is what you should strive for**.

Too much ambition and you're too focused on the short term, don't care about the customers and they will sense that.
On the other hand, if a salesperson is too empathetic he will not be *assertive enough* to ask for the close.

My Note:
I totally agree with Brian Tracey.
Also, on the subject, I believe it's great if you can switch empathy on and off at will.
Some people don't deserve an ounce of your empathy. Some deserve it all. Being able to switch it on and off at will allow you to adapt.

> **If you can see John through John's eyes you can sell John what John wants to buy**

Believe in: You, Your Company, Your Product

Here's another high-impact, simple rule Brian Tracey brings to the table: **your customer can never believe in your product any more than you do**.

There's a relationship between how much you believe in your product and your capability to convince your customer to believe in it.

And I leave you with one quote straight from the horses' mouth :

> **When you get into business you will make a living. But when the business gets into you, you will make a**

> **great life.**

Write Down All Lessons Learned

Brian Tracey suggests noting down immediately after each sale call/meeting what you did well and what you can do differently.

Notice that it's "what can you different" and not "what you did wrong".

By focusing on the positives and on what you can do differently you program into your subconscious mind the best behavior -like having a totally new interaction- and they'll be ready at your disposal on the next call.

My Note:
I used to record my own ales calls and listen to them afterward. Great learning!

100 calls warm-up period program

For every new job or product, you should make an effort to have 100 calls and face-to-face interactions as soon as possible.

The focus of these calls is not necessarily to sell but to get face-to-face time with prospects and tell them about your product or services.
And without focusing on sales it's even possible you will make sales more easily.

In any case, the 100 calls warm-up period will teach you much more than most people will learn in years (questions, customer feedback, customer issues, etc.).

And in the next two years, you'll find yourself doing sales to those 100 people you had calls with as it was easier to build a friendly vibe since you were not actively selling and didn't put them under any pressure.

Sales KPIs

The Art of Closing The Sale goes into the major skills needed for selling.

Any weakness in one of these areas will hold you back. And if you keep improving in each one of them, you'll quickly get to the top.

1. Prospecting
2. Establishing trust and rapport
3. Identify customers' problems and needs
4. Present your product as the ideal solution
5. Answering objections and concerns
6. Getting agreement to proceed
7. Obtain resales and referrals

Closing time

Brian Tracey says that your goal is to make the closing as smooth as possible for the customer.

It should be quick and your whole presentation should be structured with the close in mind.

Top salespeople know what they're gonna say word for word and rehearse. Poor salespeople wing it and sweat as they say whatever comes to their mind and hope.

6 major requirements to close

1. Positive, enthusiastic, and eager to close the sales: emotions are contagious
2. prospect requirements must be clear to you -as a result of asking questions –
3. the prospect must understand your product and its value to him
4. prospect must believe and trust you (and have faith your company will deliver)
5. the prospect must desire and want what you're selling
6. the product must be suited for your customer

Close at the right time (avoid high pressure)

Make sure the prospect :

1. Wants it
2. Need it
3. Can afford it
4. Be able to use it and get full value out of it

Signals the closing time has come

These are some signals that your prospect is ready to move:

1. Talking faster, becoming more upbeat and cheerful (from thoughtful and critical)
2. Sudden friendliness – relax and maybe ask a personal question (answer warmly and close question)
3. Chin rubbing – he's probably thinking about how to use your product. Stop talking, and when he comes up, ask a closing question
4. Price, terms and delivery questions. Ask another question and you've made the sale
   Him: *How much does it cost;* **You***: how soon do you need it*
   Him: *How soon can I get this;* **You**: *how many do you want*
5. Any changes in attitude, posture or voice

Closing Techniques

Brian Tracey says you should be able to master at least 10 different closing techniques to be used depending on the person and the situation and the kind of objections you get.

Try them out multiple times and practice them more than once until you perfect them.

And you're on your way to excellence.

Secondary close

You agree on the minor details so the customer implicitly decides on the major one. You help through the moment of indecision.

For example: *would you prefer this in blue or green / would you prefer it in 60 or 90 days / would you like it delivered or would you like to take it with you today*

Assumption close

You can ask "test closes questions" like "*does this make sense to you*" and if they say yes, assume they said yes to the sales and say "*then the next step is this*".

It allows you to keep control of the interaction: the customer either goes along or raises another objection that you

can address.

Selling past the sales

You begin talking about the joy of using the product and what will happen with it.

Tell (happy/sad) stories

Tell a happy story of a customer using your product.
Or the sad story of a customer NOT using your product.

You can start with "*BTW, this reminds me of Susan Smith, one of our customers..* ".
Once you talk about happy customers, you trigger an unconscious desire by customers.

Walkaway close

If the customer is walking away saying he wants to shop around, tell him most people did that before coming back and shopping from you.

You can tell him:

> **You**: You can go out but why don't you save that time and make a decision now. We can wrap up the deal right now and you'll spare yourself all that researching time and happily go on with your life.

If he still insists he wants to go:

Only today close

It's the last day of the sales contest so you can make a discount.

This is only to be done AT THE END of the selling. Save it until the last moment.

Ask For Referrals

Always ask for a referral.

One way is to visit each year customers of yours to make sure they are happy and then ask for a referral.

Think hourly

This passage of "The Art of Closing The Sale" made me reflect: most people work only a couple hours a day making the first phone call at 11 and the last at 3.

Sometimes it's true indeed.

Brian Tracey says that if you think of your goals on a yearly basis like most people do it's easy to waste time like that.

The solution?

You should instead think about your income goals in terms of hours.

And if you're doing sales then prospecting, presenting and closing are the only 3 activities that pay you money. All the rest is waste.

[image]

CONS

No major cons.

Slimy Risk
The only "so-so" thing in "*The Art of Closing The Sale*" is the part in which Tracey suggests lowering the price when the customer is about to walk away.
That can easily reek as desperate and, albeit it *might* help, it will *surely* make you look slimier.
And the customer will come to expect discounts from then on.

Review

The Art of Closing the Sale is a good book with many foundational principles of effective selling.

Brain Tracey, the author, comes across as an honest, genuine, and trustworthy person, and his tips are always mixed with the positive mindsets they should be used with.

The top lessons I take away are:

- You are self-employed and the president of your own company
- Personality is 80%.
- Liking and caring about others starts by liking and taking care of yourself

How to Negotiate Unfair Refund Requests: Case Study

Lucio Buffalmano · 2 September 2017 · Archived copy · Original

People have a right to request refunds.

And you should give them back their money if they're not happy.

However, as usual, you meet the assholes who try to take advantage of the system.
And they issue unfair refund requests not because they're unhappy with the product or service, but because they're trying to scam you.

This article takes the side of the seller, but it doesn't matter much which side you are on.
Because it's the *psychology* of negotiating that matters. And psychology is the same on both sides.

- Summary

Background: The Unfair Refund Request

The refund negotiation we are going to analyze is from a physical product sold on eBay.

The Internet indeed is awesome, but one of the few cons is that it also lowered the bar for playing tricks and games. It is indeed far easier to open an unfair refund request behind a screen than in person.

Buyers think they can easily get something back with little to no effort, so they exaggerate a small issue or completely make one up.

If you are selling online it can be an unnerving hassle because they can open a controversy and leave you a negative public review.

Worry not though, the answer is simple: playing the *negotiation game* better than they do.

My Mistake

I had uploaded pictures of the iPhone, stated that I wasn't sure which model it was and told the buyers to judge by themselves and buy based on pictures.

Then I put as the title my best guess as to which exact model it was and… Well, my best guess was wrong.

Technically, I was probably in the wrong.
But morally, I knew I was in the right.

How to Negotiate Unfair Refunds

Let's see how you handle it:

#1. Shame: The Psychology of Negotiating

You want to show yourself fully open to solving the issue, always.

You show total openness to stave off any risk of bad feedback and any possible escalation down the road.

At the same time, you also want to throw in a line to show it's their mistake too -and make them feel guilty for asking a refund-.

Why do you want to instill guilt in them?
For two reasons:

1. It makes it more unlikely they will try to damage you
2. They will ask for less (Guilt makes it more likely they'll ask for less)

Just make sure you end with the positive: that you're willing to help.

You didn t recognize the model from the pictures? ...

ebay™

Nuovo messaggio per: [redacted]

You didn t recognize the model from the pictures?

If you don t want it send it back and I ll refund you.

2. Master The Time: Control The Negotiation

Your main goals as to controlling the time and letting them wait here are different and this is what you will achieve:

- **Cool Them Off: Out of Sight, Out of Mind**

We are most adamant about anything which is fresh in our minds (*Cialdini: the importance of attention*).
The day they received the item they're all excited about it and salivating at the idea of making it an even sweeter deal by getting some cash back. Slurp! After 3 days though their lives go on. And now they're dealing with their partner's woes, their boss is a bit**, their cat's diarrhea -that one's annoying :)- and… And their refund is suddenly less important. After a week… All the more of that!

- **No Answer, No Money**

If you wait to reply you automatically start venting in their mind the idea they might not be getting anything.

This is the power of presuasion at work: faced with nothing, something, even something very small, begins to seem a lot (*Cialdini: Pre-Suasion*).

This will work wonders in lowering their demands and expectation and shifting further power on your side.

- **Let them get used to it**

This is similar to the *"puppy close" principle*: as they start using the product more and more, they get used to it -including the issues of the product and the made-up issues of the product-.

Plus, they start getting into the mindset that they might not be getting anything from you, which will make your negotiation easier.

Note on Deadlines:

In some cases, you might be negotiating against a refund deadline.
For example, a deadline for refunds or a deadline to leave feedback.

With a looming deadline, you have to make a judgment call as to who's the party with the most to lose.
Secrets of Power Negotiating indeed makes the (correct) point that deadlines favor the party with the most options (and with the least to lose).

3. Be Nice: Make An Offer They CAN Refuse

Sounds weird?

Hold on for a minute.

Once you reply after 5-7 days or after they send you a reminder, you are absolutely nice to them and full of understanding about their situation: again, you want to stave off any chance of receiving negative feedback.

AND you make an offer they don't actually want: to send the item back.

You say

> *Absolutely, I understand your point. I am happy to refund you fully if you send it back in the same good conditions it was sold.*

You don't talk about partial refunds at all. You just propose something they don't want: a return. This will do two great things for you:

1. Show you're open to solving the issue (will do wonders in case of a controversy)
2. Force them to refuse your offer -similar to *Rejection & Retreat technique*, a refusal of your gentle offer will give you negotiation points to spend later-
3. Suddenly makes something, however small, look great in comparison to something negative (*Law of Contrast*)

Chris Voss in *Never Split the Difference* says that a great way to negotiate is to make the other person feel empowered.

When you empower someone to *say no*, chances are they will be kinder to you just (and at the very least, they will not start behaving like a cornered rat).

4. Play Dumb and Induce Them Into Mistakes

Note that I say "*pick the cheapest shipping option*".

It's because I know this guy is not experienced and he's obviously a pinch-penny if he's playing games to get a few bucks refunded.

Pretend you're also clueless and naive, and if he actually goes for the cheapest option it will be a non-tracked package and he won't have any proof he actually sent the item back.

> **If he has no proof he sent back the item, you have him.**

Albeit I feel he's being dishonest I don't necessarily wanna rip him off back, but I do wanna give myself all the chances I can of succeeding.
And I'm covering my a** in case he decided to send back an empty package or broken item (a common Paypal fraud).

Also, and most importantly since I strongly doubt he wants to send the phone back, by offering something he doesn't want I'm *nudging him* exactly where I want him: either giving up or opening up a controversy.

Once we go into official channels, I know things are more likely to turn out positively for me.

NOTE:
ONLY use these moves if you're convinced of being in the right and/or if you're convinced the other person is playing games on you and deserves it.
You can get rich and powerful, but you'll never be a great man if your aim is to swindle honest people.

5. Let The Thief Call The Cops: The Trap

Notice you *nudge* them into an official controversy, you don't scream to their face to do it.

If you said right away “go ahead, open a controversy” it will sound like you are threatening them and that they have no chance to win.
When people feel they have no chance, their only chance is to lash out, and you don’t want that (in this case, negative feedback).

Robert Green in *the 48 Laws of Power* says the best deceptions are the ones that seem to give the others a choice: let them feel like it’s *their* choice to escalate.

Once they open an official controversy they dig their own grave.

You get the power that is on your side and you will have a much stronger case once they realize a controversy is a poor option for them-.

Plan to the end: Just make sure you’re in the “legal” right here, which is often not the same as the moral one.
I knew, for example, Ebay was going to take my offer of a full refund very well and likely propose the buyer to send it back.

6. Play By The Rules: The Rules Are On Your Side

Once they make a mistake or open an official controversy you’re in a much stronger position.

In this case, with an open controversy, say -or imply as in this case- you will play by the rules and will accept whatever comes out of it.

Easy for you, you know you’re gonna win! But saying it explicitly will do great things for you:

- Make a good showing for the people who will be reviewing the case
- Stack in your favor the *law of reciprocation*: you stick by the rules and accept the results in stride, they’ll feel compelled to be doing the same later on

7. Chill: Beaten Dog Shall Come Back To His Master

Again, do not proactively propose anything but let them get back to you with the tail between their legs once they realize it's not gonna get well with them.

The power is now swinging more and more in your camp, and the beauty of it is that they have no reason to lash out or leave any negative feedback: you've done nothing but being a friendly chap!

Look what a big U-turn this was: all his big complaints and demands turned into a little begging:

Just LOL
Notice that you can get two scenarios at this point:

- Some beaten-down former big mouth now begging for some pocket change or
- A cornered angry animal who's resentful towards you.

All our openings and willingness to cooperate have been for us to get the former scenario.

The latter scenario is what the hard-headed sellers or the stickler for the rules will end up with.
They get an unfair refund request, they jump up with their clenched fists in the air and scream "*I shall not yield*".

And yield they won't save ending up angry and unhappy and with a bunch of easily avoidable negative feedback (I had a few such sellers and might make an article on exactly that in the future).

8. Grand Finale: a Pat on The Good Boy Back

You got it.

If your customers still have the right to leave you feedback, and if the controversy doesn't allow you to remove a negative, one you might still want to appease them.
Drive a bargain or ask for something back and do it with friendliness.

In my case, I gave him the full 20 in exchange for mutually canceling the transaction, which saves me more than the 20 I gave him back.

Win-Win.

Note:
Notice how I am actually nicer and more open here at the end than I have ever been before.

At the beginning indeed you don't want to embolden your sneaky customer with too many niceties because you never want to appear in retreat, scared, or backing down.
But once it's crystal clear who's "won" you want to pander to his feelings and build him back up.

Remember: it's good for the feedback, but mostly it's good for your own moral compass.
There's little to gain or teach in piling up on an already vanquished man. And you want to make friends, no enemies.

> **Be bold in battle, relentless in defeat, but magnanimous in victory.**

Summary

When facing an unfair refund request, always keep cool and never let it get to you.

Here's a nice idea: use it as a practice to test and improve your negotiation skills.

Then:

- Highlight it's also their mistake AND be open to a refund
- Let them wait, and then:
- Don't offer a partial refund but only a full refund IF they send it back in good condition, thus:
- You gently move them towards either giving up or an official escalation. Once fully escalated:
- Let them come to you with a lowered request
- Propose less than what they asked or ask something back

Congratulations on getting this new skill under your belt and spreading around the world the message that sneakiness doesn't pay :).

48 Laws of Power: Summary, Review & Strategic Flaws

Lucio Buffalmano · 4 September 2017 · Archived copy · Original

The 48 Laws of Power (1998) by Robert Greene is a provocative self-help classic that delves into power dynamics, Machiavellian strategies, and manipulation.

Contents

- Quick Summary
  - Key Laws
- Summary of the Laws
- Quotes
- Criticism & Limitations
- About the Author: Robert Greene
- 48 Laws FAQs
- TPM Review
  - Who Should Read The 48 Laws
- 48 Laws of Power: Mastery Hub
  - Beyond The Laws: Real-World Power Skills That Work

Quick Summary

The 48 Laws of Power shares one overarching theme: power belongs to people who understand human psychology, manage perception, and navigate hierarchies with power intelligence, agentic goal pursuit, and amoral strategy.

Greene shows that success in competitive environments does not go to the most moral, hardworking, or talented. It goes to those who apply key laws like these:

Key Laws

1. **Don't make your superiors feel threatened** to avoid jealousy and defensive retaliation
2. **Conceal your intentions** in competitive settings; it's better to mislead the competition
3. **Don't embolden your enemies**: win decisively, never wound
4. **Make others come to you** to maintain leverage and frame yourself as the higher value 'prize'
5. **Calibrate to the situation**, never take the laws as commandments ('assume formlessness')

Summary of the Laws

This infographic shares all the laws at once:

Law 1: Never Outshine the Master

Make your superiors feel superior.

Outshining your boss or mentor risks resentment, and they may undermine you to protect their power. Use flattery, give them credit, and 'power protect' to make them feel good.

- ✅ **Flatter subtly** and let superiors take the spotlight.
- ✅ Show talents in ways that **benefit them**.

> "Making others feel powerful makes you indispensable."

For a summary of all 48 laws:

⍰⍰ Click to Expand: Detailed 48 Laws Summary & Breakdowns+

Law 2: Never Put Too Much Trust in Friends, Learn to Use Enemies

Friends turn frenemies and betray out of envy, while enemies, with more to prove, can be loyal allies.

- ✅ Work with **competent enemies** over familiar friends.
- ✅ Create enemies strategically to **sharpen your edge**.

> "Friendship is emotional; power thrives on pragmatism."

Law 3: Conceal Your Intentions

Keep them guessing.

Hide your plans to avoid interference. Use **misdirection** to mask your true goals.

- ✅ Employ **red herrings** to distract others.
- ✅ Stay **unpredictable** to maintain control.

> "Secrets are the currency of power."

Law 4: Always Say Less Than Necessary

The Social ROI quadrant™: powerful men get highest return, with less effort

Speaking less creates **mystery** and reduces the risk of revealing weaknesses.

- ✅ Be a **deliberate speaker** to command respect.
- ✅ Use **silence** to let others reveal their intentions.

> "Powerful people don't waste words."

TPM Note:
This is contextual, and the opposite is true in many contexts. See video here.

Law 5: So Much Depends on Reputation—Guard It With Your Life

Your reputation precedes you.

A strong reputation is your greatest asset, boosting influence. **Neutralize threats** and undermine rivals subtly.

- ✅ Build a reputation for **excellence**.

- ✅ **Counter attacks** on your credibility swiftly.

Law 6: Court Attention at All Costs

"Obscurity is the enemy of power."

Invisibility is death in the power game. Stand out through **boldness** or **mystery**.

- ✅ Craft a **memorable persona**.
- ✅ Use **spectacle** to stay relevant.

Law 7: Get Others to Do the Work for You, But Always Take the Credit

Let others handle the work while you claim the glory.

- ✅ **Delegate strategically** to save energy.
- ✅ Position yourself as the **mastermind**.

TPM Note:
This can backfire long-term because top performers will leave your team. Effective long-term leadership requires a more balanced approach, including acknowledging contributions to attract and keep motivated talent.

Law 8: Make Other People Come to You—Use Bait if Necessary

Lure others into your domain to gain the upper hand.

- ✅ Set **traps or opportunities** to draw people in.
- ✅ Project **calm authority** to disorient others.

> "Power flows to those who control the game board."

Law 9: Win Through Your Actions, Never Through Argument

Show, don't tell.

Actions prove power more than words. Avoid debates; let **results** speak.

- ✅ Demonstrate through **outcomes**, not arguments.
- ✅ Let **effectiveness** silence doubters.

> "Action builds credibility."

Law 10: Infection: Avoid the Unhappy and the Unlucky

Negativity is contagious.

Steer clear of those who drain energy or bring misfortune.

- ✅ Surround yourself with **optimistic, successful people**.
- ✅ **Distance yourself** from chaos.

TPM Note:
Helping those seeking improvement can be rewarding, but avoid chronic complainers. See this reel.

Law 11: Learn to Keep People Dependent on You

Make others rely on your skills or resources to secure their loyalty.

- ✅ Be **indispensable** by controlling key assets.
- ❌ Avoid empowering others to **outgrow you**.

> "Dependence ensures loyalty."

TPM Note:
Seeking dependence signals neediness, and it often creates toxic, co-dependent dynamics that limit freedom (Beatty, 1986).

Law 12: Use Selective Honesty and Generosity to Disarm Your Victim

Strategic honesty or generosity lowers defenses, creating opportunities for influence.

- ✅ Use **selective truth** to build credibility.
- ✅ Give **calculated gifts** to create indebtedness.

> "When others trust you, they miss your traps."

TPM Note:
Sophisticated scams, like Madoff's, do the opposite. They rely on consistent honesty to conceal the underlying, major deception.

Law 13: When Asking for Help, Appeal to People's Self-Interest

Self-interest rules the world.

Frame requests to align with others' desires, not their mercy.

- ✅ Show how helping you **benefits them**.
- ✅ Make it feel like **their idea**.

TPM Note:
Intrinsic motivations often provide more influence than extrinsic 'what's in it for me'; see criticism here.

Law 14: Pose as a Friend, Work as a Spy

Knowledge is power.

Appear friendly while gathering information to exploit weaknesses.

- ✅ Use **harmless conversations** to uncover secrets.
- ✅ Leverage **intelligence** strategically.

Law 15: Crush Your Enemy Totally

Leave no threats behind.

A defeated enemy can recover. Eliminate their ability to retaliate.

- ✅ **Destroy their influence** completely.
- ✅ Ensure **unchallenged dominance**.

> "Half-measures invite revenge."

Law 16: Use Absence to Increase Strength and Honor

Scarcity creates value.

Strategic withdrawal makes your presence more desired.

- ❌ Avoid **overexposure** to maintain respect.
- ✅ Return when your **absence is felt**.

TPM Note:
Absence doesn't create value, it can only boost it after you've shown value with presence.

Law 17: Keep Others in Suspended Terror—Cultivate Unpredictability

Controlled chaos intimidates.

Unpredictability keeps others off balance and fearful.

- ❌ Avoid **predictable patterns**.
- ✅ Use **surprise** to maintain control.

TPM Note:
This high-risk strategy, it alienates potential allies and encourages plots against you. Despots frequently meet an early demise (de Mesquita, 2003)

Law 18: Do Not Build a Fortress—Isolation is Dangerous

Connection is strength.

Isolation cuts you off from allies and information and makes you an easy target.

- ✅ Stay **engaged** with your network.
- ✅ Build **alliances** for power.

Law 19: Know Who You're Dealing With—Do Not Offend the Wrong Person

Understand others' temperaments to avoid costly conflicts.

- ✅ **Study people** before acting.
- ❌ Avoid provoking those with **nothing to lose**.

Law 20: Do Not Commit to Anyone

Independence is leverage.

Stay neutral to maintain flexibility and power.

- ✕ Avoid **predictable alliances**.
- ✓ Be **courted by all sides**.

Law 21: Play a Sucker to Catch a Sucker—Seem Dumber Than Your Mark

Feigned weakness disarms.

Pretending to be less competent lulls others into revealing their plans.

- ✓ **Appear harmless** to flatter egos.
- ✓ Exploit their **overconfidence**.

> "Let their arrogance be their downfall."

Law 22: Use the Surrender Tactic—Transform Weakness into Power

Yield to gain.

Strategic surrender buys time and confuses enemies.

- ✓ Use **temporary retreat** to plan counterattacks.
- ✓ Leverage **patience** for victory.

> "Timing turns weakness into strength."

Law 23: Concentrate Your Forces

Focus is power.

Channel energy into your strongest opportunities.

- ✕ Avoid **spreading resources thin**.
- ✓ Prioritize **intense effort**.

> "Concentration overcomes obstacles."

Law 24: Play the Perfect Courtier

Charm influences subtly.

Master court politics with adaptability and grace.

- ✓ Use **charm** to influence superiors.
- ✓ Advance goals **discreetly**.

Law 25: Re-Create Yourself

Define your identity.

Craft a persona that commands respect and attention.

- ✅ Build a **powerful image**.
- ❌ Avoid being **defined by others**.

> "Self-reinvention maintains power through changing contexts."

Law 26: Keep Your Hands Clean

Reputation is your shield.

Stay above reproach by using proxies for controversial actions.

- ✅ Use **scapegoats** to avoid blame.
- ✅ Protect your **image** zealously.

Law 27: Play on People's Need to Believe

Tap into desires for purpose to build a following.

- ✅ Use **simple, emotional messaging**.
- ✅ Create an **us-versus-them** dynamic.

> "People crave a cause to follow."

Law 28: Enter Action with Boldness

Hesitation breeds doubt. Act decisively to intimidate and inspire.

- ✅ Move with **confidence**.
- ❌ Avoid **timidity** at all costs.

> "Boldness is the lifeblood of power."

Law 29: Plan All the Way to the End

Foresight is control.

- ✅ Plan for **all contingencies**.

- ✅ Control events through **vision**.

> "Power demands preparation."

Law 30: Make Your Accomplishments Seem Effortless

Ease inspires awe.

Hide the effort behind your successes to look more powerful (law of social effort).

- ✅ Present work with **grace**.
- ❌ Avoid revealing **toil**.

TPM Note:
In modern contexts, showcasing dedication can also inspire respect.

Law 31: Control the Options—Get Others to Play Your Game

Frame the choices.

Manipulate options so all paths lead to your goal.

- ✅ Offer **controlled choices**.
- ✅ Ensure outcomes **favor you**.

> "Control the game, control the power."

📖 Read more on frame control techniques.

Law 32: Play to People's Fantasies

Dreams bind followers.

Offer idealized visions over harsh truths to gain loyalty.

- ✅ Tap into **desires and dreams**.
- ❌ Avoid **blunt realities**.

Law 33: Discover Each Man's Thumbscrew

Weaknesses are leverage.

Find others' vulnerabilities for control.

- ✅ Study **insecurities** carefully.
- ✅ Use weaknesses to **gain influence**.

> "Know their flaws, own their actions."

Law 34: Be Royal in Your Own Fashion—Act Like a King

Confidence commands respect.

Carry yourself with pride to be treated as powerful.

- ✅ Set **high standards** for yourself.
- ✅ Demand **respect** through demeanor.

> "Act the part, and others believe it."

TPM Note:
Once powerful or famous, this law often inverts. See for example Steve Jobs' career: formal as a junior employee, then casual to signal agentic focus.

Powerless Jobs (left) and powerful Jobs (right)

Law 35: Master the Art of Timing

Timing is everything.

Know when to act and when to wait for maximum impact.

- ✅ Be **patient** but ready to seize moments.
- ❌ Avoid **rushing or delaying**.

Law 36: Disdain Things You Cannot Have

Dismiss what you can't have to reduce its hold over you.

- ✅ **Ignore insults** or unattainable goals.
- ✅ Show **detachment** to maintain control.

> "Indifference is the ultimate revenge."

Law 37: Create Compelling Spectacles

Use dramatic displays to amplify your power.

- ✅ Employ **symbolism** and rituals.
- ✅ Make your presence **larger than life**.

> "People believe what they see."

Law 38: Think as You Like, But Behave Like Others

Blend in outwardly while keeping your true thoughts private.

- ❌ Avoid **standing out** too soon.
- ✅ Strike when the **moment is right**.

> "Blend in, then dominate."

TPM Note:
Strategic nonconformity can signal independence and status.

One cue of going against the crowd captures attention and signals a sense of superiority

---

Law 39: Stir Up Waters to Catch Fish

Chaos creates opportunity.

Disrupt rivals' composure to gain the upper hand.

- ✅ Provoke **emotional reactions**.
- ✅ Exploit **disarray** for control.

Law 40: Despise the Free Lunch

Independence is power.

Avoid obligations by paying your own way.

- ✅ Reject **gifts** with hidden costs.
- ✅ Maintain **self-reliance**.

> "Free gifts come with strings."

Law 41: Avoid Stepping Into a Great Man's Shoes

Forge your own path.

Create your legacy instead of imitating others.

- ✅ Build a **unique identity**.
- ❌ Avoid **living in shadows**.

> "Innovation trumps replication."

Law 42: Strike the Shepherd and the Sheep Will Scatter

Target the source.

Neutralize leaders to dismantle their followers.

- ✅ Focus on the **source of influence**.
- ✅ Weaken opposition through **strategic strikes**.

> "Take out the head, the body follows."

Law 43: Work on the Hearts and Minds of Others

Charm over force.

Win loyalty through emotional appeal, not coercion.

- ✅ Use **empathy** to build alliances.
- ❌ Avoid **force** to prevent resistance.

Law 44: Disarm and Infuriate with the Mirror Effect

Reflect others' actions to confuse or unsettle them.

- ✅ Use **imitation** to unsettle rivals.
- ✅ Reveal weaknesses through **reflection**.

Law 45: Preach Change, But Reform Slowly

Revolutionary zeal sparks backlash.

Introduce reforms gradually to avoid resistance.

- ✅ Respect **traditions** while innovating.
- ❌ Avoid **radical overhauls**.

Law 46: Never Appear Too Perfect

Minor flaws make you relatable and reduce envy.

- ✅ Show **small vulnerabilities**.
- ✅ Disarm **jealousy** with humility.

> "Perfection isolates; imperfection connects."

Law 47: Do Not Go Past the Mark—Know When to Stop

Stop at the height of success to avoid overreaching.

- ✅ Exercise **restraint** in victory.
- ❌ Avoid **greed** or overconfidence.

> "Overreaching leads to downfall."

Law 48: Assume Formlessness

Calibration is ultimate power.

Be flexible and unpredictable, like water, to stay powerful.

- ❌ Avoid **rigidity** in strategy.
- ✅ Embrace **fluidity** to outmaneuver.

> "Formlessness is the ultimate strategy."

Quotes

On resentment, jealousy, and *frenemies:*

> When you display your talents, you naturally stir all kinds of resentment, envy, and other manifestations of insecurity… you cannot spend your life worrying about the petty feelings of others

On leading with confidence:

> If you are unsure of a course of action, do not attempt it.
> Your doubts and hesitations will infect your execution. Timidity is dangerous: Better to enter with boldness

On work and friendship:

> Keep your friends for friendship, but work with the skilled and competent

On the dangers of victory:

> There is nothing more intoxicating than victory, and nothing more dangerous

On wasting time on other people's business:

> Never waste valuable time, or mental peace of mind, on the affairs of others—that is too high a price to pay

⁉ For more, see ‘best quotes on power‘.

Criticism & Limitations

⚠ **Applying these laws without calibration backfires**
The 48 Laws is a valid entry point for the ‘darker side’ of human nature and socialization, yet it’s not a how-to guide for life success, and can be misleading for beginners.

These dark psychology maxims are not laws but **generalizations that, without intelligent calibration, may harm more than they help** — leading to loss of power, leverage, and relationships instead of gains.

PROS	CONS
Valid maxims and effective *in certain contexts*	**Lacks true power principles** and lacks required calibration
Dark realism	**Over-cynicism**: cooperation & quality relationships matter
Tactical examples and case studies	**Lacks frameworks and strategies** to provide deeper guidance
Wake-up call for naive and too-nice guys	**Doesn’t build skills to deliver results** and lacks how-tos
Captivating storytelling	**Unscientific**

Unscientific and Anecdotal

The laws rely on historical anecdotes, not empirical data. Several of these laws are contradicted by scientific research.

Power Principles & Calibration Are Missing (Maxims, Not ‘Laws’)

While Greene lists good and bad examples, the book prioritizes catchy generalizations over effective calibration.

For example, ‘say less than necessary’ fails during group formation, where talkativeness affords leadership (MacLaren et al., 2020).

The maxims also don’t map to general principles but are either too specific or too abstract.
Examples of principle-derived ‘laws’ would be:

- ⚖ **Calibrate your dominance level to your target’s dominance**, for optimum balance between disempowering or overpowering others (from the ‘Net Effect Principle™ of interpersonal power dynamics)
- ⚖ **Never give too much without getting back**, or you self-frame as lower value (from the Compensatory Investment Principle™ of Social Investment Theory)

Over-Cynicism is Ineffective

A healthy dose of cynicism is helpful, but *over*-cynicism is ineffective because it can lead to cooperation breakdown.

No Skills & ‘How Tos’ = Little Results

While it can provide an important wake-up call and kickstart power awareness, it doesn’t install necessary ‘modules’ like calibration, calculativeness, or strategic thinking.

Even valid laws, like ‘assume formlessness’, offer philosophical flair but not actionable advice.
Examples of ‘how tos’ woud be:

- How to handle a manipulator
- How to prepare for betrayal with self-defense strategies
- What to do when someone makes you wait, a common power move

Frameworks Are Missing: It Lacks Foundational Guidance

The book provides many *tactics*, but it's not a guide because it lacks unified *frameworks* for acquiring power.

Key frameworks would be:

- **Smart cooperation**: get the benefits of win-win, minimizing risks
- **Power and warmth** as a baseline approach to socialization to get the best from both dominance and agreeableness
- **Foundational strategies of social success** as guiding principles for strategic decision-making

Mentally Low Power in Some 'Laws': Not For Top-1%

Beginners may fail to see that several laws can put them in a *low* power mental frame.
See the different mindsets:

Law	Low-Power Signal	High Power Mindset
Never Outshine the Master	The master determines your destiny	*I can leapfrog the boss or become an entrepreneur*
Never Appear Too Perfect	It's important others like you	*I don't need others to like me to win*
Play the Perfect Courtier	Be yielding because staying in the court is crucial	*I want to be my own king*
Avoid Stepping into a Great Man's Shoes	You'll look bad by comparison	*I can be greater than my predecessor*

Some others are *covertly* low power. For example, 'keeping others dependent on you' in relationships matters most to men who feel *lower* value and are low in self-sufficiency.

This is important because **high-power men are approach-oriented and don't think defensively**.
For example, studies in narcissism show that unsuccessful narcissists are threat-focused while successful ones are rewards-oriented.

- ⁉️ How I broke the 48 laws and won ↗: a video example of *breaking* the 'laws' and winning

About the Author: Robert Greene

Robert Greene, trained in classical studies, is a bestselling author of books on power and manipulation dynamics.

Greene works primarily as a historical curator of power stories, and not as a behavioral researcher. The historical

angle has its merits, yet the lack of empirical grounding can be a limitation.
Some of Greene's laws draw on *The Art of Worldly Wisdom*, which may reduce their originality for readers familiar with Gracián's work.

⍰ Strengths (Pros)	⍰ Limitations (Cons)
Power aware	**Limited real-life experience** in seduction and power
Well-read	**Unscientific**: history & non-empirical psychoanalysis
Intelligent author	**Lacks frameworks** to go from insightful tactics to achieving goals

Lucio's Take: Can a Geek Teach You Power?

> **Lucio**:
> It's an uncomfortable question we must ask.
> Before this book, there is little evidence that Robert Greene had much experience or succes with power or seduction, and his work has little empirical evidence.
> However, his power awareness helps make up for those limitations.

Paradox of Practice: The Laws Didn't Work for the Author?

Much of the author's success appears to have come from *writing* about the laws rather than successfully *applying* them.

Mj DeMarco calls this 'paradox of practice'. If the author himself couldn't successfully use the laws, can you really trust the 'laws' practical efficacy?

48 Laws FAQs

What are The 48 Laws of Power?

The 48 Laws of Power is a list of strategic maxims authored by Robert Greene in 1998. The "laws" are derived from historical anecdotes involving figures like Machiavelli, Sun Tzu, and P.T. Barnum. While presented as immutable rules for success, many of the laws function as **Dogmatic Maxims**—simplistic shortcuts to complex social problems that require careful calibration in modern, high-stakes environments.

What is the 48 Laws of Power book about?

The 48 Laws of Power is a book on "amoral" social strategy. The book is about the mechanics of gaining, observing, and defending in competitive hierarchies. Unlike traditional self-help, it focuses on **Dark Psychology** and offensive maneuvers. However, the book's primary value is as an "eye-opener" to social predation; for actual mastery, the anecdotal "laws" must be upgraded to **Evidence-Based Principles** and **Calibrated Nuance**.

What is the most important law in The 48 Laws of Power?

Law 48 (Assume Formlessness) is the most important because it warns the reader that all the previous laws are contextual and require strategic sophistication to be applied successfully.

The book sold well because it's engaging and easy to read while addressing uncomfortable truths about human nature that most self-help books long avoided.

What books are similar to The 48 Laws of Power?

Robert Greene's *The Art of Seduction* and *The 33 Strategies of War* are similar. *The Art of Worldly Wisdom* is most similar, *Influence* is more scientific, and Power University, although not a book, includes a full module on dark triad strategies and provides a clear framework for men's success.
Full list of books like the 48 Laws ↗

TPM Review

The book is an **excellent beginner's entry point** into power awareness, but it's **far from a complete or reliable manual.**
Greene curates stories brilliantly, yet **many laws are generalizations that backfire without social calibration** and strategic predisposition.

It's a book we loved and **highly recommend to the right audiences**, but we add the caveat that **it's not an equally effective guide for real-world success,** and it may set beginners off-path.

We rate it high not because it's a perfect manual—it's often flawed and unscientific—but because it is captivating, valuable for the right audiences, and one of the most popular primers for power awareness.

Who Should Read The 48 Laws

For	Not For
Beginners as a first step into strategy and power dynamics	**Beginners who stop here** (they'll misapply the laws)
Naive men as a wake up call	**Cynical men** who must prioritize their cooperative game
Too nice-guys	**High-IQ Machiavellians** who are already beyond this book
The Power Moves readers will find similarities and know how to put it in perspective	TPM critics will find *The 48 Laws* equally or more unappealing

Beyond The Laws: Real-World Power Skills That Work

The 48 Laws of Power is an excellent primer, and several members of our community successful used it as springboard to TPM's offering:

Like most people I started by reading Robert Greene's books 48 laws.., 33 strategies.., etc. which albeit gave me a good mindset didn't really help me in my day-to-day as much, and I made a lot of social mistakes trying to apply these laws such as becoming way to quiet (to say less than necessary) and trying to seek too much attention (court attention at all cost). For me, PU has been unbeatable in its practicality of power dynamics and learning how to be an overall high quality value-adding individual. The information is so good sometimes I laugh out loud. The self defense section on ego mode (the analogy of leaving them naked cracked me up).

Learning PU has definitely turned my life. I have more respect, status, and power as well as confidence and self esteem. Power awareness coupled with having been meditating and working out consistently for years has allowed me to navigate the world more effectively and assertively. I'm looking forward to becoming a value adding member of this forum. Cheers.

> Like most people I started by reading Robert Greene's books **48 laws**.., 33 strategies.., etc. which albeit gave me a good mindset **didn't really help me in my day-to-day as much**, and I made a lot of social mistakes trying to apply these laws such as becoming way to quiet (to say less than necessary) and trying to seek too much attention (court attention at all cost). The 48 Laws of Power: Lucio's Take

Popular book on power dynamics and the "darker side" of human nature. Greene lists 48 Machiavellian-sounding "laws" with historial anecdotes and superb prose. WARNING: it's NOT a guide. Most of these maxims have specific and limited applications and endless exceptions.

Body Language: Review (David Cohen)

Lucio Buffalmano · 4 September 2017 · Archived copy · Original

"*Body Language*" explains how to properly communicate nonverbally and it's mostly aimed at public speakers.

Contents

- Review

Exec Summary

- Words are more than 7%
- Gesticulating more, more eye contact, and more facial expressions are linked to dominance
- Extroverts get aroused faster

Body Language Summary

About The Author: David Cohen is a *body language* expert and a communication skills coach.

Words are more than 7%

David Cohen quickly dispels the most misunderstood and misquoted experiment ever.

The one from Albert Mehrabian states that words are only 7% of communication.

Just imagine this: if you told someone they're terribly unpleasant with a smile, positive body language, and an upbeat tone of voice, is the message going to be 93% positive?

Probably not, right?
And that's why words are more than a mere 7%.

Also, read "pop-psychology myths" and "self-help myths".

Displacement Activities

David Cohen calls "displacement activities" what some others in the literature called "adapters" and what Joe Navarro calls "pacifying behaviors".

Comparing displacement activities to the ostrich burying its head in the sad, Cohen says that the displacement activities don't necessarily make the situation any better, they only help *us* feel better.

He says that animals usually appear when they are torn between two opposing drives.
For example, wanting to mate but being deterred by a bigger opponent.

Proper Eye Contact

David Cohen says that the gazing behavior, or how much we look at other people's eyes, is determined by culture.

As a rule of thumb, in the Western world if you look too little in someone's eyes you might be perceived as deceitful and shifty.
If you look too much you can be viewed as domineering.

As a rule of thumb, **we are comfortable if the other person's gaze meets ours 60-70% of the time**.

Albeit we are told to look at people in the eyes usually the person who is speaking looks away more than the person who is listening.

Much research indeed shows it gets uncomfortable if you look at them too much, so a skilled speaker will only spend around 40% of the time making eye contact.

Bottom line:

If you are the speaker only spend around 40% of the time looking at the people you are speaking to.

Most episodes of direct gaze will last between one and four seconds.

Eye contact also signals that you're almost done speaking.

So the rule of thumb is: look more at them when they're speaking, less when you're speaking.

What Your Hairstyle Says About You

The author says:

- short and tussles hair on a woman communicates confidence and an outgoing personality, but not sexiness
- Medium-length hair suggests intelligence and good nature
- Long hair projects sexuality and affluence.

Handshake

Handshake is huge in body language, here is what Cohen says about it:

- **Double Handshake**

Cohen says that cupping your shaking hand with your other hand can be perceived as motherly, controlling, or too intimidating.

The exception is if there's a big gap in status between the two people shaking hands, in which case it's seen as a sign the person cares (example of Bill Clinton).

- **Handshake length**

The perfect length of time is 2.7 seconds. Too brief a handshake can signal anxiety

More Movements = More Dominance

People who make strong, definite movements are seen as more dominant.

People are also seen as more dominant when they gesticulate more, make more eye contact, and show more animation on their faces.

Submissive women also tend to stay in the same posture for longer, while women who move more are seen as dominant.

Extroverts VS Introverts

Extroverts tend to have fewer inhibitions about entering personal spaces.

Introverts will be more awkward about allowing people into their personal spaces.
Men who are perceived as cold tend to be given more personal space.

Extroverts are more impatience, get bored more easily, and also get aroused faster.
Introverts are slower instead, which would make them better lovers… If they didn't also get more anxious :).

The risk of an extrovert is that he might move too quickly for an introvert.

Also, read:

- Quiet the power of introverts
- Are you an ambivert

Relationships and dominance

Since I deal with power dynamics, this was one of the most interesting chapters for me.

Cohen says that:

- The person who drives most often in a couple will be the most dominant one in the relationship.
- When a couple is at the checkout and they forgot something, the person who stays is the dominant one as he or she has effectively sent the other one to fetch and carry.

Most interesting for me, was the author quoting an article on high-flying career women.
The women were used to being the boss at work, but the moment they got home they wanted to relax, and they relaxed by being submissive to their man -particularly in bed-.

Cohen says there's no dominance in flirtation, it's more like a dance.

> **Successful women behave submissively at home**

Relationships and communication

Cohen says that when a woman complains to the man "you're not listening" and the man says he's actually listening, they're both right.

Why the divide, then?

Women, use more "aha", "uhu" and other perfunctory sounds to show they're listening.

Men think those are signs of impatience instead, so they don't use them as much.

Result: men are listening but they don't communicate they are listening and women think they're not.
Vanessa van Edwards also says that men should use more "aha" when speaking to women.

How to Read People's Lies

Cohen talks about NLP and mentions a colleague saying it's not easy assessing if someone's lying by looking at

where their eyes go.

Eyelashes flutter means the person does not like the question.

There are 6 cues to spot liars:

1. fidgeting
2. cues suggesting you're reticent or withdrawing from the situation (ie.: looking down)
3. behaviors that are very different from your normal behaviors
4. behaviors suggesting you dislike what you're doing
5. cues showing underlying vagueness -hesitating before saying something-
6. incongruous messages

+

1. less "I" or "mine"
2. less emotional words such as angry or hurt

Self-confident people tend to lie better when they're under pressure and, funny enough, the author says attractive people tend to lie better (?).

Smile + Trust

We trust people who smile more than people who don't.

Politicians who smile more get more votes (Example: Bush and Al Gore).

Review

Reviews for "*Body Language*" on Amazon are not great and I can see the point in some of them.

The "out-breath/in-breath" part, for example, didn't make too much sense to me, and it dragged on for too long.

However, I enjoyed "*Body Language*" by David Cohen.
I learned a lot of new things and I appreciate he is not afraid of being politically incorrect and saying things how they are (ie.: career women behaving submissively in the relationship).

I also liked the author's calm voice and "nondefinitive" approach to information, such as presenting findings without

implying they were truths cast in stone.

Get Body Language on Amazon.

17 Steps to Neutralize a Toxic Boss (The Machiavellian Blueprint)

Lucio Buffalmano · 9 September 2017 · Archived copy · Original

Terrible bosses can make life terrible for most employees, but empowered and strategic employees do not have to suffer.

In this article we share strategies and techniques to handle toxic bosses and come out winning.

This article is for legitimately poor bosses whom everyone benefits from removing
We do not stand for toxic behavior, dishonorable vendettas when delivering poor work, or petty grievances. We are here to help good men win. The more Machiavellian notes in yellow boxes are descriptive and not prescriptive and we share them for self-defense.

- Careful With General Advice
  - 1. Talk to Him
  - 2. Talk To His Boss
  - Superior Strategies

Basics of Dealing With a Bad Boss

The three main basics of dealing with terrible bosses are:

- **Increase your power base** with good work, larger and higher-value network, fallback options
- **Record all of your boss' infractions**
- **Make friends with your peers** to ensure you're not, and are not seen, as the problem
- **Keep mental power:** Control your mind to control your environment

#1. Know Your Rights

> Who lets bad bosses trample on their rights? Those who don't know their rights

Almost anywhere, there's a large gap between what's legal and how things are done. Fortunately, toxic bosses are often way on the wrong side of the law.
Start by knowing your legal rights, your boss's legal rights, and, most of all, what matters in a court of law:

1. Consult a lawyer: a 200€ employment lawyer consultation can pay back 100x or more
2. Find a lawyer: *before* you need one. Knowing you got someone to call on will give you huge confidence. Consider getting legal insurance too
3. Research online: in the information age, the only upper limit is people's laziness. Luckily for you, that's quite a low bar
4. Ask: ask those who've already been there. Process, timelines, hurdles…?

Start today.
Research and consultation won't take you longer than a week of easy work and it will serve you for a lifetime.

#2. Record His Policy Violations

Record all evidence of your boss's law-breaking behavior.

For example, based on the information you gather, is it illegal in your jurisdiction to:

- **Work on weekends?** If not, don't necessarily reject his reach-outs, but record them instead.
- **Work longer than 10h a day?** Log your work schedule with laptops and back up all emails you receive before and after the 10h mark that require immediate action.
- **Work during holidays?** Don't pick up the phone if he calls, but let him use emails instead.
- **The big blunders**: Sometimes a single big move is all it takes. For example, toxic people tend to reveal their

true nature when alcohol is flowing. Many poor bosses revealed their true selves when they got sloppy at company parties.

Note:
be careful about what counts as evidence and what carries more weight.
In some countries, it's OK to record conversations; in others, it's illegal. Do texts count as much as emails?
That's all info you need to know and that's why you consult an employment lawyer within your jurisdiction.

Some highly Machiavellian employees make themselves verbally available for weekend work, late-night emails, or holiday calls, then quietly document every instance of the boss crossing those exact legal lines, building a log of violations.

#3. Never Seem Like A Threat

Robert Greene in *The 48 Laws of Power* suggests playing a sucker to catch a sucker.

If you appear overly litigious or high-strung, your manipulative boss will go underground. Instead, predators become careless when the prey is naive.

Machiavellian employees sometimes purposefully look cooperative and non-confrontational to make superiors and colleagues relax their standards, while they quietly document problematic behavior.

#4. Record Sick Leaves

> *Which enemy is easy to beat? The one the jury will hate*

If stress has become a medical liability, share your health concerns with your physician.

In most countries, you don't report the exact illness to your employer. Don't volunteer it. Record if he keeps chasing you while on medical leave.

Some highly cunning players may visit doctors while visibly run-down during critical deadlines, attribute symptoms to workplace issues in medical records, but downplay the sickness to the boss so he keeps contacting them — creating a trail of chase logs during sickness.

#5. Keep Your Hands Clean

> *Which enemy is unassailable? The one you can't see. No evidence, no case*

As your toxic boss leaves evidence of his toxic behavior, you stay irreprehensible:

- BYOD: bring your own device for your personal stuff. Use work equipment *only* for work stuff
- Do good work, something you should always be doing anyway
- Follow all guidelines about passwords, filing processes, etc.

Lifestyle Solutions: Live On Your Terms

Right now you have problems dealing with a bad boss because you have yet to fix deeper issues in your life.

Fix those same root causes and you will fix most other problems you have.

#6. You're Not The Boss's Victim

> *Who is a victim? Him who think of himself as a victim*

Let's face it dead on.

You're a grown-up in a free world.

Why are you a victim at all? **If you've been at the mercy of a bad boss for too long *you* allowed it**. Thinking of anything else is the equivalent of giving up to your oppressor the power to oppress you.

Are you really willing to give all that power over you to some frustrated mid-level manager?

Extreme ownership mentality, such as accepting that you are responsible for everything happening in your life is hard to accept at first, but once you embrace it will set you free.

Once you accept that *you* put yourself in a victim position it will also mean that *you* have the power to take yourself out of it.

Starting from now: you're a free man in a free world, you can move at any time and you can change your circumstances however you see fit. Internalize that psychology and let's start to give you practical options.

#7. Develop Options: Networking

> *Who stays a victim of bad bosses? Those with no other options*

How do you stay in control of any relationship?

By not needing them.

You might *want* them, and you *should* want any relationship you're in, but you are able to walk out and find other opportunities if the other party crosses your boundaries.

Developing options in the work environment means:

- Know everyone in your industry: meet up, events, trade shows
- Know every competitor in your city
- Make friends with HR
- Know every other boss in your organization (you could work for)

There are plenty of resources on how to network, including Ferrazzi's *"Never Eat Alone"*.
But the quick tip here is to follow that suggestion: always use lunch for networking and make as many contacts as possible.

Upper-management contacts empower you to potentially have toxic bosses removed

#8. Increase Your Financial Independence

> *Who's afraid of bad bosses? Those who can't pay rent if they get sacked*

Financial independence is a game-changer.

Not only to deal with abusive bosses but also for your own self-confidence and happiness.

While the capacity to generate your own income at will is invaluable, the minimal goal is much lower.
Save enough that you can survive for at least 6 months without any income.

That's the minimum threshold to give you the confidence of standing up for yourself.

Here are some ideas for you to consider:

- Have friends or a partner who could host you, just in case
- Rent out space: rent (or own) a flat with several rooms and rent them out for a profit
- Save money: as simple as that, money *is* power. Save some power for rainy days
- Golden parachute: arrange for a good severance package, use all the legal hacks above

9. Be So Good They Can't Sack You

> *Who is at the mercy of the queen? The little value adding pawns*

The simplest, and possibly the most useful "hack" is as simple as that: be(come) great at what you do.

Call it however you want, but make it so that losing you is losing an invaluable member of the team.

Deliver so much value that anyone will be afraid at the thought of you leaving.
Do so much that everyone in your organization knows you're the man.

If you take this strategy to the extreme you can become more useful to the company than your own boss is!
And **when you become more useful than your boss, then you hold the power**.

When that happens, guess who is actually afraid of escalating?

So don't complain, don't wait… Start today with a single-minded goal: become the best at what you do.

#10. Become a Hardened Target (Porcupine Strategy)

> *Who do bullies pick on? People who can't defend*

It doesn't matter if you're the biggest tiger, the king of the Savannah, or the deadliest snake on earth.

Nobody's gonna swallow a porcupine.

Even if on paper they are less powerful porcupines make it hard -and painful- for any wannabe assailant, and that makes them strong.

Similarly, you wanna make your boss feel the sting every time he disrespects you.
That's operant conditioning and trust that, like Pavlov's dog, he'll soon think twice before harassing you.

Here's a great example:

- How to deal with a boss yelling at you

Just remember: timid reaction calls for harder put-downs. Bold moves take the fire out for good.

#11. Turn Colleagues Into Allies

> *Who's easy to pick on? The lonely one with no friends*

Phil Jackson said:

> The biggest challenge of leadership is keeping the guys who hate you away from those who are undecided.

He is right, and that applies mostly to *toxic* bosses.
Make friends with others, see if they share your concerns. You don't need to spread hatred; you simply need to put everyone on the same page.

Let them vent, but never let your complaints be bigger than theirs and never talk like a victim: victims can never be leaders.
The correct frame is this:

> "This company/team has such great potential, we could do so much more with a better leader

If most of the team wants the despot gone and you remain a high-quality, honorable man, you may be ready for a promotion.

Power in unity. Disapproval in isolation has no bargaining power (Blau, 1964).
Instead, Machiavellian employees develop informal networks within the team and manage the shared narrative. They create informal coalitions of employees who share similar concerns so that the boss's removal becomes the group's shared goal.
Clusters of negative reviews may sometimes appear on employee-review platforms to undermine a poor leader and signal broader dissatisfaction.

Mindsets: Thank God For The Bad Boss

Competition is often more mental than physical.

So let's see the mental aspects of dealing with a terrible boss:

#12. You're Free

> *Who's happy in spite of everything? You!*

Imagine a place where you'd like to be.

A white sand beach. A snowy mountain. A happy ending massage in Thailand. Or a sunset on the ocean.

Because you can go there. You can live that. Any time you choose. Any. Time.

Your bad boss simply doesn't have the power to make your life miserable in a free world.

#13. Win The Mental War: Act, Don't React

> *He who makes the other react controls the game.*

Tim Grover says that top performers make others measure up to them, not the other way around.

Don't ask yourself how to deal with a bad boss then, think how hard it will be for him to deal with *you* instead. This is mostly a mental attitude of course.

It's crucial not just to deal with a bad boss, but in life, that you stand guard at the gates of your mind. Do not allow anyone to drag you down or spoil your mood. This is your mind, YOU call the shots there.

- Meditate
- Ask empowering questions
- Smile at how much better you're becoming thanks to him

Do anything, but retain control of your mind and emotions and keep it positive and constructive.

#14. Boss? You Don't Have a Boss!

> *You never have to deal with a bad boss if you never have a boss*

Let's be honest here:

Having a POS of a boss is demeaning.

Never mentally accept leadership from a dishonorable man just because his picture sits above yours in some meaningless org chart.

One of the best pieces of advice I got from Brian Tracey is that **you always think of yourself as your own boss**. You are the president of your own corporation.

If you have a boss, your boss is your final result only.

You're in:

- **Sales?** The customers are your boss. They're the ones who pay you.

- **Research?** Are you researching to make our lives better or are you researching to please your boss? Please get your priorities straight because we really need you to be in the former category.
- **Customer Relationship**? Are you making your customers happy or your boss? Please the former, this world really needs people who can make our lives better.

#15. Reframe It: Your Chance To Learn

> *Smooth sailing won't carry you to greatness. Harsh seas and high waves will*

Let the victims of this world complain about their hard, hard life.

But not you.

Stoicism is helpful here.
Find the silver lining in the hardships of his life because you know hardships are exactly what make you stronger and build your character.

A bad boss is your chance of putting into practice skills that will make you a more empowered man.

High moral ground reframe: From a power and influence perspective, Machiavellian players can frame the neutralization of a truly toxic leader as a 'moral duty' and systemic correction. It's a "righteous mindset" that strengthens resolve and better recruits other people's help. They aren't 'destroying' a bad manager; they are the architects of a more functional environment.

Careful With General Advice

If you research online "how to deal with a bad boss" you will get, of course, a plethora of plain vanilla, ineffective recommendations.

Some of them are actually counterproductive.
So here's what you shouldn't hed from the popular (and poor) common advice:

1. Talk to Him

> *People listen to actions, not words. Don't plead when you can act*

I gotta laugh at this advice.

Next thing you know someone will recommend you to pray and turn your cheek.

Sure, 3% of the time, with the right people and in the right situations it can be helpful.
But you don't make the rules with the exceptions.

Why "talk to your bad boss" is bad "strategy"?

Because he wouldn't harass you if he knew any better and/or if he cared about you.
"talk to your bad boss" also presupposes a few things that are more likely to be false than true.

Such as:

- **He can take negative feedback**: Great people *take feedback* without taking it personally. But great people are *not* toxic bosses
- **He will listen**: High dark-triad individuals are notoriously resistant to change and treatment
- **He will "change":** Most people don't change, and it's likely even truer for toxic bosses

Here's what's more likely to happen when you "talk to him":

He will resent you: If there was a chance he didn't dislike you before, now he surely will.
He will blame you for any issue in the team: You're on the watch list. Kiss goodbye to any effective covert strategy. And if you do great work you only become more dangerous to him.

The Great Popular Advice

2. Talk To His Boss

Here's another popular piece of advice: "go talk to your boss".

What are you a kid pleading for daddy's protection?

Because that's exactly how you will sound.
As Dan Rust explains in *Workplace Poker*, upper management doesn't like people bringing up problems to them.

Also, be realistic: it's more likely that your boss will know you complained to his boss, and it will complicate matters further.

Exception:
Think execution, not a complaint. The time you go over a toxic boss's head is when you have enough power or can rally enough critical mass to oust him.

Superior Strategies

- Review

Foundational Rules

- **Pick easy-to-seduce targets**, not just targets you like
- **Pick a target you *really* like** too -and never your same type-
- Seduction is about fantasy and idealization. **Provide an out-of-the-ordinary experience**

Full Seduction Process

About the Author:
Robert Greene is a popular author of books on power and strategy.

Although he doesn't have an educational background in psychology or sociology, he is an acute observer of power dynamics.
His other books include *"The 48 Laws of Power", "The Laws of Human Nature"* and *"The 50th Law"*.

🤔Can a geek teach you seduction?

Lucio:
Greene is not a prolific dater.
He still wrote one of the best seduction books available.
But if you're looking for practical strategies to improve your dating life today, his approach is not the most effective.

Part I: The 9 Seducer Types

The 9 seducer types are:

- Sirens
- Rakes
- Charmers
- Charismatics
- Ideal lovers
- Dandies
- Naturals
- Coquettes
- Stars

In the first part of *The Art of Seduction,* Robert Greene describes the personality types of the most successful seducers.
See here for the in-depth seducer types list.
And for a deeper overview of *male* seducer types, check out:

> 10 Types of Seducers Exlained: Pick Your Niche!

#1. Sirens

The siren is highly sexual, and confident, offering the promise of endless pleasure and a bit of danger.

Examples of sirens are Cleopatra and Marilyn Monroe.

Watch Marilyn Monroe here and read more on seduction here:

- How to seduce a man case study.
- How to make him crazy

Robert Greene says sirens are the most powerful seductresses as they operate on a man's most basic emotions, and these work on everyone.

Dangers of Sirens:

Members of the same sex can get jealous.

Example:

Robert Greene righteously talks about Marilyn Monroe's orgasmic faces. Here is an example for you:

#2. The Rake

The Rake insatiably adores the opposite sex, and their desire is infectious.

The Rake is a great female fantasy figure: **when he desires a woman he will do anything for her**. Sure he may be disloyal, but that only adds to his appeal.

The Rake is a guilty pleasure offering what society does not allow women: **an affair of pure pleasure** with the added bonus of danger.

To learn more about the rake type of seducers read:

- The psychology of womanizers
- How to spot a player
- Signs you're dating a fuckboy

#3. Charmer

Charmers want to please and know how to please: they are highly skilled social creatures.

Charmers seduce by removing themselves from the equation and taking full interest in their victims.
They will know what makes you tick, and understand your pains and… Your weaknesses. **Charmers make you feel understood** and they feel better about yourself.

The Dangers of Charm

Robert Greene righteously says that some people tend to view Charmers as slippery and deceitful.

Charmers must know then when to get rid of their flexibility and start acting inflexible.

Also, read:

- How to be charming (with video examples)

#4. Charismatic

Charisma is an exciting presence.

It comes from inner qualities that make you stand out. It can be confidence, sexual energy, a sense of purpose, or contentment.
Most people lack these qualities, and that's what draws them in.

- Read here *traits and video examples of charismatic men*

Contrary to Charmers, Charismatics thrived during turmoils, when they can show off their daring.
The examples in The Are of Seduction are Joan of Arc and Rasputin.

Dangers of Charisma

Charisma is as volatile as the emotions it creates, says Robert Greene.

#5. Ideal Lover

Ideal lovers thrive on broken dreams.

Do you long for adventures, romance, and losing yourself in the moment?

The Ideal Lover will reflect your fantasy.

Appeal to lofty ideals together with carnal desires and sexual affairs will become sense-engulfing love affairs.
The Ideal Lover is rare in the modern world because it takes much effort and time.

Dangers of Ideal Lover

You create a fantasy that involves the idealization of your own character. If your faults get in the way, you will destroy that fantasy.

#6. Dandies

Dandies like to play with their image, creating a striking and androgynous allure.

They live for pleasure and surround themselves with beauty.

The sexes *tend to have a chasm between them* and they don't understand each other. The Dandy is reassuring and feels comfortable for having similar traits.
The key is ambiguity: you are heterosexual, but you move delightfully back and forth between the two poles.

A difference with the Rake is that while the Rake's insolence is tied to conquering a woman, the insolence of the Dandy is aimed at society and conventions: it's not a woman he's trying to conquer, but a whole social world.

Example:
An example of the slightly androgynous dandy is Russel Brand:

> **Russell Brand**: (plays the dandy)

Dangers of Dandies

The Art of Seduction nails when it says that Dandies are likely to be accused of being too masculine -for women- or too feminine -for men-.

And of course, insolence can get someone really angry at you.

#7. Naturals

Naturals are spontaneous and open.

They bring us back to childhood, the golden paradise we consciously or unconsciously try to recreate.
They bring us back to that time by embodying those child-like qualities such as spontaneity and sincerity.

The key is to infuse your play with the conviction and feeling of a child, making it seem natural. The more absorbed you seem in your own joy-filled world, the more seductive you become.

Example:
You can see an example of child seduction in my article *"how to drive him crazy"*.

Dangers of Naturals

Total childishness can be annoying, so the best Naturals combine adult traits like experience and wisdom with a childlike manner.
It's the mixture of qualities that is most attractive.

#8. Coquettes

Coquettes are self-sufficient.

They seem to say they don't need you, and their narcissism is devilishly attractive.
Imitate the alternating heat and coolness of the Coquette to *make your target chase even harder*.

The real essence of Coquettes is to trap people emotionally. The secret of the coquette it's not much tease and temptation, **the secret weapon of the coquette is emotional withdrawal**.

Their withdrawal makes them mysterious… And it makes us insecure.
What if they've lost interest?

Example
You can see video examples of coquettes in action in *"how to seduce a man"*.

Dangers of Coquettes

Coquettes play with volatile emotions as love can easily shift into hate. Their absence can't be too prolonged, anger must be followed by smiles as the negatives can't overweight the positives for too long.

#9. Stars

Stars are ethereal and envelop themselves in mystery.

Daily life is mundane and can be harsh. **The star represents the escape into fantasies and dreams**.
To be a star, *The Art of Seduction* says, you must transform yourself into a glittering object.

Dangers of Stars

The danger is that people will tire of your illusion and move to the next up-and-coming star.
Once that happens you will find it very difficult to regain your spot in the sun.

Anti-seducers

Greene dedicates a chapter to the personalities and traits of the anti-seducers.
Avoid them at all costs unless you want to repel everyone:

- **Brute**: no patience and wants to skip seduction
- **Suffocator**: cling incessantly & loves too soon
- **Moralizer**: wants you to become like they want you to be
- **Tightwad**: money above seduction
- **Bumbler**: self-conscious and awkward (example)
- **Windbag**: talk incessantly
- **Reactor**: terrified of having their ego hurt
- **Vulgarian**: ignores the rules of seduction and yet expects to win.
- **Greedy**: make it too obvious they're after things

P.S.:
We helped thousands of men get rid of any anti-seducer within them and become effective in life, socialization, and with dating:

- **Power University** to become a top 1% man

The 18 Types of Seducer Victims

Don't think that everyone lacks what *you* are lacking and don't try to seduce your own type.

1. **Reformed Rake or Siren**: long to escape what restricted their freedom
2. **Disappointed Dreamer**: stuck in a boring life and longing for adventure
3. **Pampered Royal**: long for prince charming to let them live the pampered fantasy of a royal life
4. **New Prude**: concerned with appearance and judgment, secretly long release
5. **Crushed Star:** long to be adored again
6. **Novice**: excited about being introduced to a new, darker world…
7. **Conquerer**: give them an obstacle to overcome or a mission
8. **Exotic Fetishist**: want novelty, experiences, edgy stuff
9. **Drama Queen**: long for drama in their lives
10. **Professor**: analyze and ponder, but long been overwhelmed by a free spirit
11. **Beauty**: used to being appreciated. Focus on hidden features like her intellect or wit
12. **Aging Baby**: immature and looking for a supportive parent
13. **Rescuer**: long to feel like they're saving someone
14. **The Roué**: experienced in life and desire to educate someone more naive.
15. **Idol Worshipper**: seeking meaning in life
16. **Sensualist**: driven by their senses. Overwhelm their sight, smell, and touch
17. **Lonely Leader**: they're not used to being bossed. Act as their equal or superior
18. **Floating Gender**: float with them

Part 2: The Seductive Process

Phase I: Separation

Your victims live in their own world, their minds are busy with their daily lives and daily worries.

Your goal in the first stage is to enter that world and become their great escape.

#1. Choose The Right Victim

The perfect victim is the person who stirs you in a way that cannot be explained.

There should be some tension, the victim might fear you or even slightly dislike you.

Here are a few categories of people easy to seduce:

- **Unhappy**: Happy people are much harder to seduce
- **Imaginative**: a person with a good imagination is easier to seduce (they can fantasize about you)
- **Manly**: turn the aggression around with coquettish tricks and make him your slave.
- **Shy and introverts**: are better targets than extroverts
- **Disorganized & lost**: men without a goal are better than focused ones.
- **Lots of time**: people with lots of time are great targets. More time to think about you
- **Boring life**

Robert Greene says that we all want to be seduced.

#2. Create a False Sense of Security

If in the opening stages, you can make your target think they are doing the first step, you won the game.

Whatever action you take to let them come to you, avoid crowding your target: too much attention early on will suggest insecurity and give no room for imagination.

Robert Greene says that direct approach can be quicker, but indirect approaches may reduce the number of your conquests but more than compensate with quality.

My Note: I understand Greene's point of view, but you can seduce with direct approaches as well.

#3. Send Mixed Signals

Mixed signals suggest depth and it fascinates while it confuses.

A question mark, an elusive personality… It will make people want to know more, drawing them in.

The Art of Seduction says that great ways of adopting mixed signals are to show attributes running against your physical appearance.

Warning: keep your hidden quality subtle or else you'll seem schizophrenic.
Also, some people prefer things to stay simple: everything depends on your target.

#4. Appear an Object of Desire —Create Triangles

The Art of Seduction says you want your target to see you as someone others want. And that they might lose to these other admirers.

Doesn't have to be a specific conquest, but can be a number of admirers and even past conquests.
You can make your target feel in competition with both your past and your present.

Also, read:

- How to make him value more
- Power move in relationships: leveraging competition

#5. Create a Need— Stir Anxiety and Discontent

The Art of Seduction reminds us that a perfectly happy and content person is difficult to seduce. Hence, you should stir tension and disharmony in your target's mind.

Danger:

The risk is in going too far and making your target angry, or defensive.
Greene says, in the beginning, charm is better than making people feel bad (so skip the neg of the old *PUA style*).

#6. Master the Art of Insinuation

A useful skill in *the Art of Seduction* is the art of insinuation: making your target feel dissatisfied in a non-obvious, socially savvy way.

Danger:

When the target is already interested in you, skip it.

#7. Enter Their Spirit

Understand them, vibe with them, like what they like, and adapt to their moods. Don't just mirror who they are, but

also the ideal person they want to be.
Once they start opening up you can turn the tables and let them enter your spirit.

Danger:

Mirror for too long and they will see through it and be repelled by it. Mirroring is a tactic, a step in your seduction followed by them entering into your world.
It's important that beyond the mirroring you keep your own solid sense of identity.

#8. Create Temptation

Lure your target with the temptation of the pleasure to come.

Find that unrealized fantasy they have, that weakness they can't control, and tempt them with it.
Keep it vague, postpone the gratification, and let their mind fill in the gap.

Phase II – Lead Astray

Your victims are already intrigued by you, and your goal in this phase is to get them fully hooked and reach the point of no return.

#9. Keep them in Suspense- What's Next?

Reliable people are boring. When they know what to expect from you, your spell is broken.

The Art of Seduction explains that surprises work because they create a moment when the defenses come down and new emotions can take in.
Take them somewhere exciting, and make them seem spontaneous and natural. Or suddenly appear before their eyes: a great tactic, especially if they already like you.

> **Dogs are reliable, not seducers**

#10. Use Words to Sow Confusion

Use loaded words, sweet ones, and flattering ones. Make them feel better, spin fantasies for them, and give them promises. They will not just listen, but start falling for you.

Danger of Demonic Words

Too much flowery language can seem pretentious and it's a sign of selfishness. Less is more: vague and ambiguous leave more room for imagination.

#11. Pay Attention to Details

The devil is in the details and the details are what will differentiate you from the masses.
Pay attention to your aesthetic "finishing coat". Remember their details and make gifts that mean a lot to them.

Also think of everything about yourself: the way you look, *the way you walk*, your moves, *your poses*.

#12. Poeticize Your Presence

People are dying to fantasize about someone.

Embody some ideal or some cultural ideal of beauty. Chivalry, romance, adventure.
Even roguery and evil are better than nothing.

#13. Disarm With Strategic Weakness and Vulnerability

Most people try to hide their flaws, but what's natural to our character is also seductive. Something you can't control can be your most seductive quality.

Confess something bad about you, or something bad that you did. One honest gesture will cover many deceitful ones (this is a law of *the 48 Laws of Power*).

But don't overdo the vulnerability and read:

- Too much vulnerability is unseductive

Danger of Weaknesses

Weaknesses like neediness have no seductive value. And timing is everything: only share it when they're already falling for you.

#14. Confuse Desire and Reality

Bring their fantasy into reality.

Create their fantasy or embody their fantasy.
The best illusions are the ones that do not depart from reality too much. A bit like a drowsy dream.

#15. Isolate The Victim

An isolated target is easier to seduce.

Isolate them psychologically by having them think about you and physically by taking them away from what's familiar to them.

Make your target feel they're embarking on a great adventure with you, but they are also losing something, like their past or their comfortable life.

From Books to Real-World Results

Hi, I'm Lucio Buffalmano, founder of The Power Moves.

I write these reviews myself as part of our 3-pillars method.

We combine research, top books, and real-world experience into proven strategies for status, respect, and attraction.

Power University turns knowledge into wins.
Ready?

Check Power University

Phase III – The Precipice

The goal of phase III goal is to make everything deeper.
Once your hooks are deep into them, you can move at will until they snap.

#16. Prove Yourself

A self-sacrificing action will overwhelm your target's emotions.

Don't wait for something exogenous to happen, put your target in a difficult position and rescue them.

I'm glad Robert Greene says you should also make your target prove to you: it raises your values and covers your blemishes.

#17. Effect a Regression

The Art of Seduction brings us a super powerful tool when it introduces Regression.
Regression leverages the transfer phenomenon of psychoanalysis.

Ask about their childhood. As they talk, adopt a therapist pose. Be attentive but quiet, and interject with nonjudgmental comments to keep them talking.

Don't just talk though, you want people to act out their memories in the present. Make your target feel like they are

getting what they always missed with you.

The Art of Seduction describes the four types of regression:

- **Infantile**: the first bond with a mother is the most powerful one. The key to the regression is the unconditional love a mother has for the infant.
- **Oedipal**: must be tailored to your target because you play the parental role
- **Ego Ideal**: let them feel they are getting close to being the person they wanted to be.
- **Reverse Parental**: here you play the role of the child instead. Cute, and adorable, but also a sexual child.

Some types are more vulnerable to regression:

- Serious and "adult"
- Full of themselves
- Seem in command

They're often over-compensating.
And positions of power can be more of a burden they subconsciously want to be free of.

#18. Stir Up the Transgressive and Taboo

We all love to explore our dark side, so make your target feel they are going past those limits and into uncharted territory with you.

You don't respect marriage vows, religions, or age differences.
Someone to theoretically avoid, but in reality terribly seductive.
The shared feeling of guilt and complicity will further strengthen your bond.

> **In seduction, there is no power in respecting boundaries and limits.**

#19. Use Spiritual Lures

We all have some insecurities about our physical appearances and if we only appeal to the physical we risk making our targets insecure and doubtful.

Focus instead on something sublime and spiritual.
Art, the occult, an extra-sensorial experience.

#20. Mix Pleasure With Pain

The greatest mistake in seduction is *being too nice*.

Try inflicting some pain instead.
Focus fully on them at the beginning, then suddenly appear uninterested. Make them feel guilty and insecure.

The lower the lows you create, the higher the highs will be.

The Art of Seduction says that many of us have masochistic yearnings without realizing it. And when someone inflicts pain on us, the deeply repressed feelings come to the surface.
Works best on those who have it easy, those who have power and little problems.

> **The lower the lows you create, the higher the highs will be.**

Danger of Pain

Don't do it too early on and on people who recently experienced lots of pain.

Phase IV – Moving In For The Kill

You seduced their mind, then confused and stirred them up to seduce them emotionally.
Now the time has come for the physical seduction. By now, your victims should be weak and ripe with desire.

#21. Give Them Space to Fall— The Pursuer Is Pursued

Once they are under your spell, take a step back to let them pursue you. A touch of aloofness, a no-show, a hint of boredom.

Don't make it explicit, let them sense it and let their imagination do the rest. Soon they'll be aching to possess you physically.

Dangers

Don't go absent in key moments of the seduction.
And don't exaggerate: the strategy is give and take, if you only take away for too long you might lose your target.

#22. Use Physical Lures

Combine a non-defensive attitude with a charged sexual presence.

While you're relaxed, cool air is calming your target's mind and lowering inhibitions, your glances, voice, and physical presence are raising the temperature.

To achieve it, it all starts with you. **Train yourself to let go of your own inhibitions, doubts, and anxieties**.
Your confidence and fluidity will have more intoxicating power than any alcohol or drug you could apply.

Dangers of Physical Lure

Few people feel repulsed by their sexual nature but many are uncomfortable with their bodies.
An approach working only on the physical level then will frighten and disturb.

#23. Master the Art of the Bold Move

Some targets will never make the first move.

And some women can become disgusted if she's long been ready, but the man never made the move.

Don't give them the time to ponder over what's going to happen, to consider the consequences. Create conflict, stir up tension, and the bold move will come as a great release.
If you're hesitant or awkward, it means you're thinking of yourself. Be overwhelmed by the target's charm instead.

Here's an example of bold move:

Dangers of Boldness

While boldness can work wonders, uncontrollable boldness is more scary than seductive. So you need to be able to turn it on at off as needed.

> **One person must go on the offensive, and it is you.**

#24. Beware the Aftereffects

When emotions reach a peak, they can easily swing in the opposite direction if you're not careful.
If you are to part, make the sacrifice swift and sudden instead.

You can let some reality and routing creep in: too much mystery will create doubts. But never let your target take

you for granted.

If separation must happen, make it happen quickly and as beautifully as the seduction.

Appendix A: Seductive Environments

Robert Greene describes *seductive environments* as:

Spaces with a theatrical, heightened quality -glittery or opulent for example- create a childlike feeling that makes it hard for the victim to think straight.

Something mystical can help block out the real world: astrology books, angelic imagery, mystical music from far away land.

Any environment offering the possibility of playing a different role, of being someone different than in normal day-to-day life, is immensely seductive.

Also, read:

- Playlist for seductive environments
- Seductive environments

> 10 Steps to Prepare Your House For A Date (Seductive Environment)

CRITICISM

A great book, to which we need to add some caveats.

Let's start with a review of Greene's "seductive methods":

> View this post on Instagram
> A post shared by The Power Moves (@the_power_moves)

> **Lucio**: For these techniques to work reliably with attractive women, you better be a skilled, high-value man.

Greene promotes a 'therapist' approach to dating, but to date effectively you also need to lead.
And to be more dominant than her, *not* an equal.

Sometimes ignores basic power and intersexual dynamics

Sometimes it feels like there is no deep understanding of *sexual market value* and *dynamics*.

For example:

Greene recounts how actor Errol Flynn 'seduced' a black woman.
But it's quite easy for white men to sleep with black women in Africa, let alone for an attractive and confident one.

In this podcast, Greene marvels at Flynn's prolificacy:

> **Greene**: And the math was quite insane, at some point he must have seduced a woman every other day, something like that. What was his secret? What made him so insanely successful?

I was incredulous.
The guy was a rich, attractive, ***famous*** actor.
That's the biggest *sexual hack* ever.

He wasn't seducing anyone.
Or at least, not with any special skill.
He was busting a nut every other day coasting on his fame.

Not an effective approach for successful modern dating

"The Art of Seduction" is tailored to the old, classical times.

Many examples are pre-1900.
The examples of *letters* as correspondence tell you this is not 100% a "how to seduce in the 2000s guide".

I'm pretty confident in saying that if successful dating today is your goal, then you shouldn't follow *"The Art of Seduction"* recipe.

Also, see:

- **Straight Line Seduction**: for a more effective and streamlined seduction model

Check my *best seduction resources* if you're interested in more up-to-date seduction resources.

Mixes heterosexual, homosexual, and social seduction

And these all have different dynamics.

Since our main target here are ambitious men, this is an important drawback.
For example, heterosexual men won't have as much to learn from Andy Warhol.

Unscientific. Ie.: The myth of “powerful men are into submissive roles”?

In general, *The Art of Seduction* lacks modern real-world experience and scientific references.

For example, Robert Greene says that powerful men often want to be babied or dominated.

However, I’m doubtful.
The *Cambridge Handbook on Sexual Psychology,* for example, says that men’s fantasies tend to be more dominance and power-related. Testosterone also fuels both sexual and dominance motives, while Ogi Ogas’ data-driven analysis suggests that ‘most alpha males prefer the sexually dominant role‘.

So it seems like dominance in life is probably correlated to *dominance in sex* and relationships.

Greene ignores power and status for his seducer types

Of all Greene’s ‘seducer types’, there isn’t a single man who is:

- High mate value
- High value
- Alpha male type
- High status
- Socially dominant and confident

Maybe geekier types resent more dominant men who did all the dating in their younger years?

Seduction Case Study

This video shows you how to put *The Art of Seduction* in practice, but mixing solid high-power dating that also works for the modern world, and with attractive women:

> **Lucio**: She was taller than I was. But I seducer her and she fell in love in one single date

Review

The Art of Seduction is a fantastic book with a ton of insights.

Dark psychology, at times.
And of course, heavy in amoral manipulation tactics.

Recommended to anyone interested in seduction, power dynamics, psychology, and manipulation.
But NOT a high-priority reading for beginners looking to improve their dating and social skills.

Overview

- Most men miss women's sex signals
- For a successful seduction learn and respond accordingly to USS
- Learning USS will allow you to avoid rejections and improve your "hit rate"

USS Summary

Leil Lowndes says that women broadcast their attraction with body language and nonverbal language.
And to be effective at dating and seduction, you need to learn how to act on those signals.

Men Miss All The Signals

Leil Lowndes first says that 30 out of 31 men miss the signals a woman sends when she's interested in them.

Studies also back up the fact that major misunderstandings can originate between men and women when it comes to nonverbals.
While women give meaning to many nonverbals such as proximity, the topic of conversation, eye contact, etc, most men don't.

Conscious or Unconscious?

Leil Lowndes says that women's sex signals are both conscious and unconscious.

Why Women Are Better

The author says it's partly because women get a major head-start.

When men were watching wrestling and Dragon Ball, women were making up love stories with dolls.
While men were playing football, women were gossiping and dissecting everything a man said and did.

The 5 Steps of Successful Pick-Up

Leil Lowndes introduces a 5-step process for a successful approach:

1. **Acknowledge Her Signals (or response to yours):** As soon as you enter a room, look for possible USS and keep scanning around. It's likely she will flash a quick, slight smile together with the eye contact
2. **Respond**: You must return a smile or she gives up and move to another guy. Don't exaggerate, match her smile or match her signal's intensity: studies show that if the intensity is too different she won't appreciate it. When she peeks at you again, you smile again.
3. **Approach:** Wait until she catches your eye and then approach slowly. Do not overpower her with your physical presence. Leil says you could move in front of her and not start speaking right away, which might lead her to speak to you first. The best opening lines are something complimentary and neutral.
4. **Turn Your Head First:** Move to her side, and angle your body parallel to her. Only turn your head to speak to her so it doesn't come across as too strong. If she moves more strongly towards you, then you follow suit. Slowly turn your torso towards her and if you spot Undercover Sex Signals then move closer to her. As she gives you more USS, lean in towards her and fully focus on her
5. **Start moving in synchrony.**

My Note:
I disagree here you should approach them when she catches your eye contact as it seems very reactive of you, like a

dog who's just noticed the owner wanted to pat him.
The only exception, of course, is when you won't have a second chance.
If for example she's waiting for her girlfriend from the toilet and she's got her coat and is about to leave, then walk there confidently.

Also, read:

- **How to effectively approach women**

> How to Approach a Girl: 9 Science-Based Steps

Opening Lines to Approach Successful

Leil Lowndes recommends you drop *cheesy pick-up lines.*

The worst opening lines are about her physical appearance such as

> "what's a woman like you doing in a place likes this"

or

> "what's a beautiful woman like you doing without a date tonight".

Leil says you should look more interested in her mind than in her body and the best *conversation starter* is *"hi, my name is…. ".*

My Note:
I disagree that physical appearance lines can't work well. If delivered confidently and honestly they make your intentions clear and can start a sexually charged conversation which can lead to a quick resolution.

Also, check out:

- **Does cold approach work?**

> Cold Approach VS Social Circle (VS Tinder): Strategies

Difference Between Winners & Losers

The difference is in *how men take rejections.*

Winners take rejections not as a rejection of them but as a statement of fact.

For example, if the answer to the question "shall we dance to this song" was "no" the winners would say that it's ok and invite her to seat.
The losers would interpret it as a personal rejection and give up.

The winners also let very little poses happen in the conversation and would jump in with their own stories when needed.
The losers had less musicality and less sensitivity to the timing. Their conversations had more awkward gaps, they paused too long.

What Women Want From Men

Rather straightforward:

- **Resources:** Money, education, intelligence
- **Status**: Other people respect you
- **Physical Strength:** Mention exercises you do or some physical work you've done
- **Emotionally Caring**

Leil Lowndes gives a few ideas on how to show them all, but I disagree you should show off resources much really but won't go deeper on this one here.

Undercover Sex Signals says women still want their men to earn more, be smarter, or just be plainly better, whatever that means :).

When you are asked "what do you do", always sound proud and happy about it.

Lead And Choose The Date

Leil Lowndes says it might sound nice if you ask her where to go, but you should tell her where to go. She says I quote "take charge man, you make the reservation"

Pleasure Centers

While a man's pleasure center is more localized, a woman's pleasure center is spread all over their body, which is why women tend to self-touch more all over their bodies.

Why Women Go For Bad Boys

Leil Lowndes also discusses why women fall for bad boys.

First, she mentions a friend of hers who says she feels emotionally chaperoned with her nice male companions, as if her mother was sitting her with but she feels naughty and excited with the bad ones.

The bad boys seem self-confident and to get what they want by pushing other people around.
Leil Says that's to cover deep insecurities, but they keep it well hidden.

Then she mentions Stockholm Syndrome and how some women find some perverse pleasure in the pain some relationships give them.
She feels the drama all teenagers felt with their first love. She has no idea what's going to happen next (uncertainty). That kind of uncertainty gets her juices flowing.

So Leil Lowndes advises you to stamp out all unnecessary predictability in your relationship and do something to surprise her.

This topic is better explored in as*hole strategy.

And see:

- **Better than an as*hole**

> How to Be A Good Asshole (5 Easy Steps)

Should You Wait if She Says "Let's Be Friends?"

When she says "you're not my type" and she's not attracted to you, might she change her mind?

Should you stick around?

I love Leil Lowndes' reply on this one.

She says that if she's a woman who habitually ends up in *abusive relationships*, it might be a bad idea to "wait".

If her previous relationships simply didn't work out, she might feel her biological clock is ticking and she might pick you as a "good enough" option and hope she'll grow to like you -which she probably will actually-.

The bad thing is that there will never be that strong sexual spark and attraction and she will never love you in that hot, passionate way that you might like.

But if her love without her lust is enough for you, it might work out.

Women Look For Everything

Leil says that women, for evolutionary reasons, tend to be more selective than men. Women subconsciously listen to their genes for one-night stands as well.

See:

- Sexual market value to understand what woman want

Intense Eye Contact

When you stare deeply into a woman's eyes, particularly during silences, it will increase attraction.

This works best when she initially found you attractive.
Leil Lowndes is quoting here the famous study "The Effect of Mutual Gaze on Feelings of Romantic Love", saying that subjects who engage in mutual gaze increased significantly their feelings of passionate love and liking for their partner.

It works well because intense eye contact stimulates a primitive part of the human brain calling for two basic emotions: approach or retreat.
The reaction to deep gaze is fear, and fear is linked to romance.

So look deeply into her eyes, and when you look away too reluctantly so and slowly.

We don't use it enough because, Leil Lowndes says, the more someone overwhelms us, the more we avoid their eyes. If we meet someone particularly handsome and/or accomplished, we tend to avoid their gaze.

The risk of this technique is that if she's not attracted your eye contact will scare her off.

Undercover Sex Signal #1: Talking & Looking At You

Leil Lowndes says that many men get fearful upon seeing two women talking and looking at them because they think the girls might be ridiculing them.

That's not the case though: two women chatting to themselves while looking at you is one of the oldest and most obvious sex signals out there.

Giggling while talking and looking at you is a further added signal, but more mature women don't do it as much.

Undercover Sex Signal #2: The Peekaboo

Peekaboo is the game children play of hiding from a grown-up's view and then reappearing again. You've probably seen and played this one a few times if you've ever been around children.

In dating scenarios, I have seen some variations in relationships, but rarely as an interested signal. A more common variation might be you looking at her, she looking away, then you looking away and she looks at you.

Test The Waters

Leil Lowndes says that if you don't get any *Undercover Sex Signals* you can still initiate your own before approaching to see if you will be welcome.

Undercover Sex Signal #3: Shy Geisha

The way a woman looks at you reveals her true emotions. If you look at a woman and smile almost all of them will look away. How they look away will reveal loads.

If they look down as if to sweep the floor with her eyes, she likes you. If she looks up again to look at you within 45 seconds she expects and wants you to make a move on her.

If she looks away horizontally she isn't sure yet she wants to talk to you.

If she looks at the ceiling when looking away, she's not interested.

Undercover Sex Signal #4: Side Long Glance

Leil Lowndes says that since people don't respect women giving too long eye contact, she will be glancing over at you to see if you're noticing them.

Women have better peripheral vision than men, so this could be a bit like a head turn for men.

If she's glancing at you from the corner of her eyes, she wants you to approach her.

Undercover Sex Signal #5: The Jewelry Tag

Leil Lowndes says that playing with a necklace while looking at you is a strong sexual interest sign. Leil says that she is getting you to notice her decorations, her plumage if you want :).

Supporting Sex Signals

Leil Lowndes says that women often use two or three sex signals, with one being more prominent than the others.

Undercover Sex Signal #6: The Expose

If her dress falls from her shoulder it might not be a coincidence and she's just showing you more skin. A slightly open blouse could work the same.

You could say "boy it's quite hot in here" to show you picked up on it and are in tune with her.

Undercover Sex Signal #7: The Shoe Dangle

If a woman dangles her shoe on her toes, it's a major strong signal of availability.

Note:
what I've also read somewhere else is entering and exiting the shoe with her foot. I'm sure you can see the parallel in that rhythmic entering movement :)

Undercover Sex Signal #8: Close Encounters

Leil Lowndes here talks about proximity. Pay attention to how close she's standing to you.

If she's standing very close, it's a good sign. Do NOT act surprised or step back, unless you want to communicate disinterest, that is.
You could slightly move or lean in towards her instead or smile to reciprocate.

Undercover Sex Signal #9: Space Invasion

She might let just a part of her body enter your personal space. A leg, a knee for example.

Note: this was actually rather redundant and similar to number eight.

Undercover Sex Signal #10: The Innocent Touch

Leil Lowndes says that a woman will never touch if she doesn't welcome your advances.

If a woman reaches out and touches you for any reason, you must react very positively otherwise she'll think she's gone too far and back down.

Undercover Sex Signal #11: Leaning In

When a woman leans in towards you never ever back up.

Undercover Sex Signal #12: Weathervane palms

If she shows the inner side of her palm it's a good sign and a way of saying "I submit to you". When she's resting her head on her hand, does she show you the knuckles or the inner palm?

Showing the knuckles is a close body language sign and also might be a hostile sign. Leil Lowndes says though not to jump to conclusions too quickly if her palms turn away: it might be sexual tension or a sign of nervousness of a shy person who likes you.

Look for more signs.

Undercover Sex Signal #13: Necking

Showing the neck is a very powerful sex signal. If she moves her hair completely to the back while talking or looking at you it's a sign she wants to submit.

Undercover Sex Signal #14: Underarm Flash

She might be leaning back, supposedly appearing relaxed, but if she shows her underarm she knows exactly what she's doing.

The same showing of underarm can happen when she flicks her hair back.

Undercover Sex Signal #15: The Lips Lick

A woman might do it either conspicuously or covertly. She wants to make her lips most and more inviting for you, for her own pleasure or to imply what might be in store for you later on.

This is a rather obvious and sexually open sign. And yet, Leil Lowndes says, many guys still miss it.

Undercover Sex Signal #16: The Primp

She might quickly add some extra touches to herself like applying lipstick or makeup to draw your attention across the room. Alternatively, if you're already engaged with her, she might do it when you're not there, so pay attention if her makeup is more visible or if she applied fresh lipstick.

Note: I have walked on women adjusting themselves more than once either before the date when they were waiting for me behind a corner or when I walked back into the room :).

Undercover Sex Signal #17: Hair Play

When you're talking she can sometimes start playing with her hair or twirling them with her finger. Leil Lowndes says it's either a sign of sexual nervousness or she's tantalizing for you to be playing with her hair.

A little flip while looking at you is also a very common USS.

Undercover Sex Signal #18: Self Caress

If she touches herself on her neck, collarbone, arms, and thighs it's a good sign of arousal.

Leil Lowndes says that when a woman is very attracted to someone it's like the high of a drug. Some women freeze like deers in the headlights and can't speak or move, others feel a tingling sensation and caress themselves to pacify, and still, others might get silly and scrunch their shoulders.

Undercover Sex Signal #19: Shoulder Scrunch

As an above, some women will start acting like little babies when they're with a man they like. They might giggle and scrunch their shoulder together for example.

Note:
I was once out with a woman on a rainy day and the streets had some puddles of rain.
We were walking back from my place, it had been a nice time and she was so happy that she started in the puddle with both their feet. I thought that was a bit *too* silly and I didn't enjoy dirty water splashing on my jeans.

Undercover Sex Signal #20: Perking and Breast Trust

When you enter a room, notice if some woman perks up and straight her back thrusting her breast forward.

It can also be a good indicator when you walk up to her. Before you even say anything: is she thrusting her breast forward?

Leil Lowndes says all women do it, but it's not a tell that you can use by itself because, I'd add, most women would do it even with guys they're not necessarily interested in. So you should always combine this sign with other signals. However, if she does not perk up when she sees you, that's a very bad sign.

Undercover Sex Signal #21: Mirroring

When women start copying your signs and movement, it's a good sign.

Undercover Sex Signal #22: The Suggestive Suck

If she puts something in her mouth… You don't need a biology degree to see the hint there. It can be a spoon, a straw, or even her fingers.

Note: Since many women drink their drinks with a straw I'd like to add you should look for signs of her doing it in a particular way. For example, she does it a bit quicker and more often, or with a different style than her previous baseline behavior, like holding the straw, or more slowly, or while looking at you.

Undercover Sex Signal #23: Playing With Glass

If a woman runs her fingers around the rim of her wine glass she might be thinking about touching you. Or around the stem of the glass, or play with a pen.

Note: Since I rarely do restaurant dates and am more likely to get a beer, I have seen more than once women running their hands up and down a long beer glass.

Undercover Sex Signal #24: Being Goofy

Excitement and sexual nervousness, especially in younger or less experienced women, can come off as goofy.

Undercover Sex Signal #25: The Pose

When a woman strikes a pretty pose, she wants to attract you; don't mistake it for being standoffish.

Undercover Sex Signal #26: Showing Leg

Baring their legs is a major USS signal.

To Read With USS

Here are two related posts with pictures for you:

- Signs She Likes You
- Signs He Likes Her

[image]

CONS

- **Some Bad Suggestions**

On many occasions, I fully disagree with Leil Lowndes advice. Some of them are:

- Never let her pay for the restaurant
- dropping hints about your resources

These *can* be effective *depending on the occasion and depending on the man*.
But not always.

- Calling Strategies: She seems to be suggesting a very slow dating scenario with long waits, I disagree with that.

USS Review

Undercover Sex Signal is a typical Leil Lowndes book: funny, easy to read, and useful.

I find she has a lot of talent in social settings and she understands human relationships very well, including dating. However, some of her suggestions are not very conducive to the most effective dating for men.

Full Summary

About The Authors: Allan Pease, writing with her wife Barbara Pease, is an Australian coach of body language. He has written numerous *books on body language* and flies around the world delivering body language training.

Understanding the Basics

“The Definitive Book of Body Language,” says we quickly judge people upon meeting them the first time.

We quickly assess their friendliness, dominance, and whether they are a potential sexual partner. And we do it primarily with nonverbals.

Words are used primarily for conveying information and body language is for negotiating interpersonal attitudes.

Most People Are Unaware of Body Language

Barbara and Allan Pease say that Most people are unaware of the body language signals they send out.

Allan Pease makes the example of Australia’s prime minister Bob Hawke as he spoke about politicians’ salaries compared to executives.
He said politicians’ salaries had increased less than executives’ salaries, but his hands were always farther apart when talking about politicians, underlying that he actually believed politicians were getting it better.

Women Are Better At Reading Nonverbals

The Definitive Book of Body Language quotes an experiment showing movie scenes with the sound off showed that women read the situation accurately 87% of the time versus men 42%.
Female intuition is particularly evident in women who have raised children, and men in nurturing occupations such as artistic types, actors or nursing did almost as well as women. Gay men also scored well.

Women are mentally wired to do better than men: MRI scans show that women have 14 to 16 areas of the brain to evaluate nonverbal behavior while men have 4 to 6.

Inborn, genetic, or cultural?

I fully agree with Barbara and Allan Pease when they say cultural differences are many, but the basic signals are the same everywhere.

Sneering is a universal sign because it shows the teeth. The shoulder shrugs as well as it raises the shoulder to protect the throat, shows the palms, and raises the eyebrow, which is a universal submissive greeting.

3 Rules for Accurate Reading

1. **Read in Clusters:** never interpret a gesture in isolation from other gestures or the overall circumstance.
2. **Look for Congruence:** When verbal and nonverbal channels are incongruent people, especially women, rely on nonverbal
3. **Read in Context:** One might just be cold and not defensive in winter; a woman in a short skirt will look less approachable if she’s wearing a miniskirt but it’s just because she can’t open her legs;

Kids are Easier to Read

Kids have more muscle tone in their faces and grown-up have learned better to mask their lies and body language.

A kid for example might fully cover his mouth, a teenager might rub his lips with a finger, and a grown-up might have the instinct to cover his mouth but then change in the last second into a nose rub. But the nose rub would still be born out of the same feeling of covering oneself.

Can you fake it?

I was surprised Barbara and Allan Pease say the general question to this answer is “no”. A few signs are easier to fake, such for example exposing the palms to appear honest, but pupil dilation, sweating, and blushing cannot be consciously faked.

And it's much harder to fake for a longer period of time.

The Power Is in Your Hands

Hands send out major cues as to what our real intentions are.

How to Detect Openness

Barbara and Allan Pease say that when we want to be open or honest, we will often hold one or both palms out. Similarly, when people begin to open up or start being honest, they'll likely expose their palms.

When we are hiding something, the tendency is to hide the palms. A man who doesn't want to talk about his night out with the boys might put his hands into his pockets.
Men who don't want to take part in a conversation also tend to put their hands in their pockets.
Women instead prefer to look busy as they lie.

Law of Cause and Effect

Allan and Barbara Pease say that if we force ourselves to use more open-palm gestures our tendency to tell lies diminishes and most people find it difficult to lie with their palms open.

The law of cause and effect also says that if you are not feeling defensive but cross your arms, then you will start feeling defensive. This is what Tony Robbins refers to when he says "emotion is created by motion".
In a last twist, if you speak with your palms open, your speaking partner will also start feeling more pressure, to be honest and truthful.

Palm Power Dynamics

The palm-up is non-threatening, while the palm-down signals authority.

If you ask someone to do something for you with the same voice tone and facial expressions the palm down will sign you are pleading with them to do it and the other person will feel no pressure to do it and will not feel threatened. Asking with the palm down will make the other person feel like you've given them an order and he may start feeling antagonistic towards you.
If that person is of equal status, he might resist the palm down and is more likely to comply with a palm-up gesture.

Just imagine, say, Barbara and Allan Pease, if the nazi salute had been with the palm up. People would have laughed at it.

Also when couples walk holding hands the dominant partner will walk slightly ahead with his hand on top and the palm facing backward. Alla Pease says that looking at who's got the upper hand immediately reveals who wears the pants in the house.

The palms closed and finger-pointing is one of the most annoying gestures anyone can use. If you're delivering a presentation the finger-pointing will turn off your audience, make them like you the least of all three, and even remember less of what you said.
The palm-up was the favorite.

If you tend to use the finger pointing a lot, Pease recommends instead using the "OK" gesture touching your thumb and index finger in a circle. The OK gesture will make you authoritative but not *aggressive*

Handshake Analysis

When people turn your hand down and your palm up they are trying to dominate the handshake. Barbara and Allan Pease's study of 350 executives showed that 88% of men and 31% of women used the dominant handshake position.

Power and control issues, says Pease, are generally less important to women.
Also, read:

- Jealous and controlling man
- Signs of abusive men
- Accepting influence in relationships

Some women will give men a soft handshake in some social contexts to *show submissiveness* as a way to highlight their femininity. It should not be used in business contexts though: women displaying high femininity in business meetings are not taken seriously.
Pease adds that it doesn't mean she needs to act in a masculine way, but she needs to avoid too many *feminine signals* such as soft handshakes, short skirts, and high heels.

Handshake to Create Rapport
To create rapport make sure that your and your partner's palms are both in a vertical position and apply the same pressure you receive.

Disarming a Power Player
Trying to push your palm down, say, Barbara and Allan Pease, is typical of the overbearing person. Allan and Barbara Pease do a fantastic job of explaining a few practical moves to avoid accepting the *submissive position*. A simple one is the Double Hander: putting your second hand on top of his, grabbing his wrist as a last resort, or, for another genius technique, look at the pictures here.
There are a few situations when the power play goes well beyond turning your hand down and crushing your bones or starts pulling you in to show pure physical dominance. I wrote an article here based on a couple of real-life experiences: *how to disarm an alpha male handshake.*

Double Hander
Putting your second hand on top gives the feeling that the initiator is trustworthy and honest, but if you use it on someone you've just met it can leave the receiver feeling suspicious about you.
Indeed the Doubler Hander, says Barbara and Allan Pease, is a miniature hug and should only be used when a hug would also be acceptable.

Handshakes of Control: Two-Handed handshakes
Barbara and Allan Pease say that the intention of two-handed handshakes is to show sincerity or a depth of feelings. It's a bit like using the second hand to show the willingness of hugging the other person, so the farther up it goes, the more intimacy it shows.
It's also an invasion of personal space, so they are only acceptable when the person feels close to the other. If the intimate feelings are not mutual or the initiator doesn't have a good reason for using both hands, the receiver will likely be suspicious.
Unless you have a good reason, it can be political or business suicide.
You can use the Two-Handed handshake to reclaim some power if you are on the left side of a picture or video and your partner will hence get the upper hand.

Allan and Barbara Peas go on to detail a few common handshake blunders, among which the Vise and Bone-Crusher, used out of a desire to dominate and assume early control of the relationship or "put people in their place". Sometimes the person using feels weak and is afraid of being dominated.
The socket wrencher, such as pulling the arm in, wants the encounter to be on his terms.

The Magic of Smiles and Laughter

Smiling and laughing are universal signs of happiness.

Real and Fake Smile

The Definitive Book of Body Language tells us something we've already seen a few times on this website: **an honest smile involves the muscles around the eyes**.

The muscles that tense our mouth can be consciously activated, but not the ones around the eyes. So when we're smiling without really meaning we can recognize it as the smile is only a mouth smile, without eyes.

Lines around the eyes can also appear in intense fake smiles and the cheeks can bunch up making it seem as if the smile were genuine. But when a smile is genuine, the fleshy part of the eye between the eyebrow and the eyelid moves downward and the ends of the eyebrows dip slightly.

Smiling is Submissive

Barbara and Allan Pease go into how primates use smiles with "fear faces" and "play faces", both submissive gestures. The authors say that smiling serves much the same purpose in humans.

Smiling says you are non-threatening.

Subordinates are more likely to smile in the presence of dominant and superior people, both in friendly and unfriendly situations. Superior people instead smile around subordinate people only in friendly situations.
The superior person will also make subordinates laugh but without laughing himself -or laughing less- as a way to maintain his superiority.

Smiling is Contagious

Barbara and Allan Pease say we automatically copy the facial expressions we see in other people.

Allan Pease says that's the reason why it's important to be able to smile even when you don't feel like it: it will influence other people's attitudes and how they respond to you.
Science has indeed proven that t**he more you smile, the more positive reactions others will give you**.

Allan Pease also found out that smiling at appropriate times -such as at the beginning of a negotiation-, produces positive responses on both sides of the table leading to higher sales ratios and more successful outcomes.

Common Types of Smiles

These are the different types of smiles according to Barbara and Allan Pease:

- **Tight-Lipped Smile**

The authors say the lips form a straight line and the teeth are concealed.

It communicates you have a secret, an opinion that you don't want to share. Pease says that it's typical of women who don't want to reveal they don't like someone and it's a rejection signal (other women get it, men never).

You will also see in magazines pictures of successful businessmen who are saying "I got the secrets of success (but I won't be telling you)".
These people often talk about general rules to be successful but rarely give their details. Conversely, Richard Branson who always gives all he's got always sports a full smile showing all his teeth.

- **The Twisted Smile**

The Twisted smile shows opposite emotions on each side of the face. It can only be done deliberately and conveys sarcasm.

- **Sideways-Looking-UP Smile**

With the head turned down and away while looking up with a tight-lipped smile. It looks secretive but in a juvenile and playful way. It's a men's favorite as it generates parental male feelings.

- **Laughing Makes You Happier**

Intentionally producing smiles and laughter will make you spontaneously happy.

- **Smiling and Laughing to Bond**

Laughing is more than 30 times more likely to happen in social situations than when one is alone. Laughter has less to do with jokes and more to do with relationships.

- **Smiling for Women & Men**

Barbara and Allan Pease say Women smile far more than men in both social and business settings, which can make a woman appear subordinate or weak in the presence of an unsmiling man.

Pictures of unsmiling men were seen as less attractive and decoded as a sign of sadness. Pictures of unsmiling men were decoded as a sign of dominance.
Women should smile less with dominant men in business situations and -or mirror the amount of smiles of men- and probably more in social and dating scenarios.
Pease says that if men want to be more persuasive with women, they would do well to smile more in all contexts.

- **Laughter and Love**

The authors say women laugh more than men in courtship. The ability to make others laugh is a dominant trait, so the more a man can make a woman laugh, the more she will find him attractive (women love dominant men and men love subordinate women).

Humor makes you attractive to women: women laugh at men they're attracted and men are attracted to women who laugh at them.

Very interestingly, Pease says men also become annoyed when one man dominates the joke-telling, particularly so when there are women around who are laughing. The men who are not laughing will think the joke teller is a jerk and not funny either.

Arms' Signals

Hiding behind barriers is an innate behavior of human beings. Folding one or both arms across the chest we form a barrier as an unconscious attempt to block out threats or undesirable circumstances.

Arms' Crossing

Crossing arms in front of the chest is a sign that someone is nervous, negative or defensive.

As long as someone keeps an arms folded position, a negative attitude will persist. A good idea can be then to give the person something to hold on to that will lead them to unfold their arms.

"I'm Just Comfortable"
The Definitive Book of Body Language goes into something I have experienced a few times.

Some people will deny the significance of certain body language signals by saying they're just comfortable that way. Pease says that of course, you're more comfortable: if you're nervous, arms crossed will make you feel more comfortable.

For the law of cause and effect, having neutral people crossing arms in front of your chest also give you more

negative thoughts about the speaker and you will retain less information.

Arms crossing will also send out a message to the people around you though, and that message is likely to be negative. So the message is simple: avoid crossing your arms unless you specifically intend to don't agree or don't want to participate.

Reinforced Arms-Crossing
Clenched fists with crossed arms show hostility on top of defensiveness. If there's a tight-lipped smile or clenched teeth and red face, an attack, either verbal or physical might be imminent. A conciliatory approach is recommended.

Arm-Gripping
In the Doubled Arm Grip, the person tightly grips both his upper arms to further strengthen his barrier.

It's also a way to comfort oneself with a form of self-hug. You can sometimes see it in doctors' and dentists' waiting rooms or with first-time air travelers. It shows a negative, restrained attitude.

Pease says that in court, the claimant may be using a fist clenched arms crossed while the defendant may have adopted the double arm grip position.

Boss VS Staff
Barbara and Allan Pease say that status influences arm gestures too. A general manager greeting new employees, for example, will not cross his hands and will either keep his hands to his side, behind his back (superiority), or in his pockets (noninvolvement). The employees instead might cross their arms for the apprehension of being around the company's top person.
If the GM now met a young up-and-coming superior type, the younger gun might cross his arm but keep his thumbs sticking out and pointing up. The thumbs-up show a positive and self-confident attitude.

Also very interestingly, the authors say that defensive and submissive will be shown in symmetrical positions, while defensive and dominant will take an asymmetrical pose.

Thumbs Up
If the Thumbs-Up-Arms-Crossed appears towards the end of a presentation, chances are you can go ahead and ask for the order.

Hugging Ourselves
Barbara and Allan Pease say we hug ourselves when are stressed or we find ourselves in tense situations.

Of course, our self-hugs are more masked.
For example, one arm might reach out to the other upper arm -mostly used by women- and recreate the feeling of how their mothers held them.
Or holding both hands in front of our body -mostly used by men- and called the "broken zipper position", recreating the feeling of someone else holding our hands.

Famous and VIPs Arms' Crossing
The authors say that celebrities who tend to be more aware of body language will more rarely be seen with an obvious self-hugging gesture.

But their nervousness will still often leak.
For example, they might reach out with an arm to the bag on the other side, or fix their watches or bracelet, or shirt cuffs.
Women can often clasp their purses.

Gauging Our Speaking Partner
Offering a refreshment is a great way of gauging where the other person stands.
Do they place the cup on the side -open and accepting what you're saying- or in front -closed and not accepting-?

They can also hold it to the side, thus crossing their arm in front of their body, or hold it to the side, thus opening up.

Arms and Armrest
Planting your elbows on the armrest is a position of power.
Letting your arms fall on the inside of the chair is the position that humble, defeated individuals will take.

The Power of Touch
Barbara and Allan Pease say that Touching someone with your left hand while shaking hands can create some powerful results.

The Phone Booth Test showed that people who were being touched lightly on the elbow for less than 3 seconds gave back a coin 68% of the time VS the 23% of people who didn't.

Pease said that worked well because the elbow is a safe area to touch, second because touching a stranger is not considered normal so it created a powerful impression and third, the most important of all, a touch creates a momentary bond between two people.

Touching above or below the elbow did not produce the same positive effects, and touching for more than 3 seconds also had a negative response.

I was both appealed to and had to laugh when I saw that the same experiment with elbow touching gave an 85% return rate in Germany, 50% of French, and… A paltry 22% of coin returns in Italy. But Pease said that it's because, in the Italian culture, it's more normal to touch, so the elbow touch didn't create such a special moment.

Looking at conversation outside cafes indeed showed 220 touches an hour in Rome, 142 in Paris, 25 in Sindey, 4 in NY, and 0 in London.

Women were four times more likely to touch another woman than a man or another man.

A famous experiment with a librarian slightly brushing the hand while issuing a book also had powerful effects, with the borrowers being touched responding more favorably to all the questions and more likely to recall the name of the librarian.

Read also: *4 ways men touch women wrong*.

Cultural Differences

I fully agree with Barbara and Allan Pease when they say the world is becoming more and more similar and the basics are the same almost everywhere.

Pictures of happiness, anger, fear, sadness, disgust, and surprise in 21 different cultures registered mostly the same responses everywhere. Japan was the exception which described fear as a surprise.

The biggest cultural differences exist mainly in relation to territorial space, eye contact, touch frequency, and insult gestures.

The regions with the most local signals are Arab countries, parts of Asia, and Japan.

Pease says that we do business with people who make us feel comfortable and it comes down to sincerity and good manners. The author suggests that when you're in a foreign country and unsure of the local customs and gestures it could be a good idea to reduce the range of your body language signals until you can better understand the local ones.

Hand and Thumb Gestures

How to Spot Which Option We Prefer
Right-handed people give their favorite point of view or summarize their favorite contestant with their right hand

and left-handed people with their left.

Hand, Attention & Impact
Hand gestures grab attention, increase the impact, and help individuals on the receiving end of the communication remember more of the message (up to a third higher recall in an experiment).

Rubbing Palms
Rubbing the palms together is a sign of positive expectation. A quick rub signals the person expects the benefits to be for you, Slow rubbing signals the expectation is for them to profit.

Salespeople are instructed to rub their hands quickly indeed. When a buyer rubs his palms waiting for you to present your product it's a positive sign that he has high expectations it can be a good option.

Hands Clenched Together
Barbara and Allan Pease say Hands Clenched Together can be mistaken for a signal of confidence as people are often seen smiling when using it. It is though a gesture showing an anxious, restrained, or negative attitude.

During negotiation, it can be a frustrating gesture signaling a negative or anxious attitude. The person using feels they are either not convincing the other person or felt like they were losing the negotiation.

The hands can be held in front of the face, on a desk on the lap, or low in front of the crotch.
There seems to be a correlation between height and frustration: the higher the hands clenched position, the higher the degree of frustration.

As for arms crossed then, you should take action to let the person un-clench his hands.

The Steeple
Barbara and Allan Pease say the Steeple can be the exception confirming the "cluster rule" as it can often occur in isolation.

A favorite of Angela Merkel, The steeple is frequently used in interactions between superiors and subordinates and it shows a confident, self-assured personality.
It is often used when giving instructions or advice and it's common among accountants, lawyers, and managers.

The steeple is usually held high when speaking and held lower when listening. Women tend to use the lower steeple more often.

The raised steeple with the head tilted back gives more arrogant and smug air.

The steeple can also be a sign of negative confidence. If you are delivering a presentation or a sale and the client was folding their arms, crossing their legs, looking away, and having many hand-to-face gestures, and then assuming a steeple your prospect is feeling confident he will say and that he will easily get rid of you.

When you want to persuade or win the other person's confidence Pease recommends not to use it as it can come across as smug or arrogant.

The Face Platter
Resting the face on both hands can be a gesture used by women during romantic encounters or dates.
She is placing her face there for you to admire and to attract your attention.
If you are interested in more sex signals, take a look at *"does she like me"*.

Holding Hands Behind the Back
Barbara and Allan Pease say that holding one's hand behind the back is a sign of authority.

High military, headmasters at school, royalty, and policemen will usually use it.
The person is fully exposing his body in a show of fearlessness.
Cause and effect also apply, so if you use this pose in high-stress situations you will also begin to feel confident and even authoritative (albeit it does not change your hormonal state as *Amy Cuddy originally implied*).

If however, the person is holding his wrist behind his back it communicates frustration and an attempt to self-restraint, and the higher up the grip, the higher the frustration.
If you catch yourself doing it, change to a palm-in-palm position instead and you'll begin to feel more relaxed and confident.

Thumb Displays

Barbara and Allan Pease say that thumbs denote superiority, and body language gestures using the thumb show self-important attitudes. Thumbs indeed are used to display dominance, *assertiveness*, and sometimes even *aggressive attitude*.

A man will use protruding thumbs around women he likes, even when he's wearing high-status clothing. You will rarely see low-status individuals using it.

If someone is verbally showing humbleness and shows his thumb, you can probably guess he's not being fully forthcoming.

Thumbs coming out of back pockets are a bit of a tamer pose as if the person was trying to hide the dominant attitude.

Pointing at someone with the thumb is usually a gesture of ridicule and disrespect towards the person you point your thumb at. Usually, it is not directly pointed at the person you're speaking to, but it's pointed toward a third party.

Thumbs from Coat Pockets
It's common for people to feel in a superior position.

The boss will walk around the office with the thumbs out of his coat pockets and when he's not there the second in the line of command is likely to do so. None of the subordinates is likely to do it around the boss.

You can sometimes see people with their hands in their pockets and thumbs sticking out but their arms folded. The folded arms are defensive or negative, while the thumbs out show a superior attitude.

Also, see the pictures in:

- How to make thumbs in pockets look sexy

Evaluation and Deceit Signals

I love when Barbara and Allan Pease say that lying is the oil greasing social interactions.

Research shows that **social liars are more popular than people who continually tell the truth** even though we know the social liar is not being fully forthcoming.

Malicious lies, of course, are a different beast.

The Three Wise Monkeys
The authors say that when we see, speak, or hear lies or deceit or something we don't wanna hear or witness, our tendency is to use our hands to cover our mouths, ear, or eyes.

Women are Better Liars
Allan and Barbara Pease say women are better at reading emotions and even better at telling lies.

How to Lie Better
A good way of getting away with lies is to decrease your overall body movement so that you won't send any negative signals.
Lying is easier behind something that will cover part or all of your body. Behind a desk, for example, peering over a fence, from behind a door or, of course, via telephone or email.

How the Face Reveals the Truth
When we lie indeed we increase our hand-to-face gestures and increase the number of gulps of saliva and while there's no guaranteed movement that will let you know someone is lying you can learn a few clusters that will dramatically increase your chances of spotting a liar.

Note:
Allan and Baraba Pease here seem quite encouraging about the fact you can spot lies. This is in contrast to FBI agent **Joe Navarro** who takes a strong stand in saying spotting lies is notoriously difficult *and* unreliable.

These are some indicators of lies:

- **Mouth Cover**, or anything similar, could be a fake cough. If they cover their mouth while you're speaking they think you're hiding something.
- **Nose Touch** can be such an indicator and people tend to smile less when lying. The itching can actually be real
- **Eye Rub**. Men do it harder, women tend to just get closer to the eye and both genders can look away
- **Ear Grab**, another sign of anxiety
- **Neck Scratch** is a sign of doubt and uncertainty which says "I'm not sure I agree"
- **Collar Pull**
- **Fingers in Mouth**, a sign someone is in need of reassurance
- **Eye contact**, some people won't be able to hold eye contact when lying, and they get caught the easiest. But since most people are aware of that, they will swing in the other direction keeping eye contact more than they normally would -and get rarely caught-
- Foot Movement

Boredom
Supporting the hand with your hands is a sign of boredom.
Drumming of the fingers or of the feet is often misinterpreted as boredom but they're actually signs of impatience (the degree of impatience is related to the speed of the taps).

Evaluation Signals
Barbara and Allan Pease say that a closed hand resting on the cheek's face, sometimes with the index finger pointing upward, signals the person is evaluating something.

If they want to feign interest but are starting to the bored the palm will start supporting the head.

If the thumb supports the chin it's a sign of critical thoughts about the speaker or the topic. The index can rub or pull the eye if the negative thoughts persist. It can be mistaken for interest, but the difference is the supporting thumb under the chin.

Decision Making
Chin-stroking is a sign that a person is thinking about what to say or what to decide.

Stalling Clusters
People wearing glasses can take them off and put one arm of the frame in their mouth, a smoker will take a puff of smoke and someone with a pen can put them in their mouth.
Putting objects in the mouth is a sign that the person feels like he needs more time and wants to delay an answer.

Head Rubbing and Slapping
When someone forgot something or did a blunder they might slap their own head to communicate forgetfulness.
If they slap their forehead they signal they are not intimidated by you, if they slap the back of the neck it says you are actually a pain in the neck.
Habitually rubbing the back of the neck says that someone tends to be more negative or critical, while those rubbing the forehead tend to be more open and easygoing.

Eye Signals

Barbara and Allan Pease say that women have a wider peripheral vision, while men tend to have more tunnel vision. Women can look at you better without moving their eyes.

Pupils
Dilated pupils are a sign of attraction.
This is why lighter eyes are considered more attractive: because you can more clearly recognize a dilated pupil and this is why romantic encounters tend to be more successful in dimly lit places: the pupil dilates naturally.

In a direct mail campaign, Allan Pease was able to increase the sales of a lipstick brand by 45% simply enlarging the pupil size of the model.

Interestingly, people are better at decoding eye signals than they are at decoding body language. Women do better as usual, but men didn't fare poorly.

If someone is looking at you for more than 2/3 of the time he can either be interested in you, in which case he'll have dilated pupils, or he'll be hostile -in which case he'll have constricted pupils-. Women are good at deciphering it, men not as much.

Eyebrow Flash
The eyebrow flash is eyebrow-raising rapidly for a split second, and it's a universal, friendly gesture to say hello.

We don't give the eyebrow flash to people we don't like and to strangers and people who don't use it upon first meeting someone are perceived as potentially *aggressive.*
Jack Schafer in *The Like Switch* says you can use it to feign liking for someone, and Pease says that you should always Eyebrow Flash people you like or those whom you want to like you.

Eyebrow Signals
Lowering the eyebrows *shows dominance* or *aggression* and raising the eyebrows shows *submission*.

Women raise their eyebrows and eyelids to make their eyes appear bigger and create the "baby face effect" which makes men want to protect them.

Looking Up
Barbara and Allan Pease say that lowering the head and looking up is a *submissive gesture* women use to appeal to men.

It makes the eyes seem larger and makes the woman more childlike.
Pease says that Diana made an art out of lowering her head and looking up while exposing her neck.

Some women show sexual submissiveness by lowering their eyelids while simultaneously raising their eyebrows and looking up. It's one of the trademarks of *sex sirens* such as Marilyn Monroe and Sharon Stone (more *female seduction: attractive body language for women*). This is also the expression that many women have during an orgasm.

Gaze Behavior
Michael Argyle found that Westerners and European look at each other an average of 61% of the time while they speak. 40 to 60% when talking and 75-80% while listening. 31% is mutual gazing.

When one likes the other, he will look at him a lot. The person being looked at notices and he will likely like him in return as well. This means you should look at people a lot to make them like you. Your gaze should meet their 60-70% of the time.

When in foreign cultures though, the best course of action is to mirror the gaze time of your host.

The timid people who rarely meet our gaze are seen as untrustworthy.

When two people meet and make eye contact the subordinate is usually the one to look away first. This means that not looking away is a subtle way of delivering a challenge or showing disagreement.
Pease says that if the higher-status person is your boss you could keep your eye contact for a few seconds longer than is usually acceptable but that you shouldn't do it regularly if you care about your job.

Darting Eyes
Barbara and Allan Pease say that when our eyes scan the surrounding from left to right we are looking for escape routes.

We do it naturally, even when we're talking to someone boring. If sometimes we want to avoid looking like we're bored to death, we could then swing to the opposite, the same as we do for lying, and look into our speaking partners' eyes even more than normal.

In this case, we will often have a tight-lipped smile same similar to when we're lying.

Gaze Geography

- **Social Gaze:** moving your gaze between the eyes and the mouth for about 90% of the gazing time. This is non-threatening and others will perceive you as nonaggressive
- **Intimate Gaze:** across the eyes and below the chin to lower parts of the person's body.
  From far away it's eyes to the groin or below and standing nearby it's between the eyes and the chest.
  Intimate gaze is used to show interest and those who are interested will return this gaze. Intimate gaze too soon though would give the game away (men miss it anyway but women get it)
- **Power Gaze:** looking between the eyes and the center of the forehead.
  Pease says the impact is huge, it changes the atmosphere to be very serious, and if your gaze doesn't drop below the eye level you can keep the screws on him.
  Never use it in friendly or romantic encounters, just on those whom you want to intimidate or quiet down
- **Power Stare:** when you are under attack, maintain eye contact without blinking, narrow your eyelids, and focus closely on him. If you have to move from one person to another, don't blink first move your eyeballs and then let your head follow with your shoulders standing still

Starting a Great Job Interview
A man wants to check a woman's hair, legs, and body shape and you should allow that to happen to make everyone feel at ease.
Shake hands then and give the interview a 2-3 seconds time window to scan you.
This strategy also helps to sell better.

For more on getting the job you want:

> How to Prepare For An Interview: 6 Tips To Get The Job

Territories and Personal Space

Barbara and Allan Pease go into the personal zones here which I won't go into details here because it's a well-known topic.

The distances tend to reduce between two women and increase between two men.

When people embrace the distance they keep their hips apart giving away information about their relationship.

We hate riding elevators because the cramped space gets other people into our Intimate Zone and Pease says the behavior we follow is called "masking", which is everyone's trying to hide their emotions by wearing a neutral mask. And the people riding in the subway at rush hour, the author says, aren't really unhappy, they're just masking

their emotions.

I also found it particularly interesting that Pease says that the people who go around slapping everyone on the back are secretly disliked by everyone.

Why Mobs Get Angry
Barbara and Allan Pease say that one of the reasons why mobs get so angry is because everyone is in everyone's personal space.

When the police break up the crow the dynamics change and the riot usually stops.
And, the author says, this is why areas with the highest crime and violence are also areas with the highest population density.

My Note:
I'm not sure this makes any sense at all, places with the highest population density also happen to be the poorest areas, and poverty is correlated with violence and crime.

Spacing Rituals
The authors say that when deciding where to seat people will usually pick the place that gives them the most space. If there's only one person sitting the person who's just arrived will usually pick a place between the person sitting and the end (or front) row, so as not to offend the sitting person.

Cultural Differences
An Italian couple in Sidney was accused of hitting on everyone at a club they joined because the Italians, coming from a smaller personal space culture, were standing too close to the Australians.
Japanese also tend to stand rather close.
City dwellers also tend to have smaller spaces than country people.

Territory and Ownership
The Definitive Book of Body Language goes into a topic I have long observed before it became conscious: people can feel like a certain seat or space belongs to them in a place they often visit.
Or they might feel ownership of the kitchen in a house if they are using it.

To avoid offending anyone and starting a relationship on the wrong foot it's a great idea too as when you visit someone's house "which sit is yours".

People driving cars tend to feel like they have a bigger personal space, and that's why we see so many incidents of road races, Pease says.

How the Legs Reveal the Mind

The Definitive Book of Body Language says that the farther away a body part is from our mind, the less awareness we have of it. That's why legs and feed are some of the most honest body parts.

Walking Styles
Young and healthy people walk faster, resulting in their arms swinging the most, almost as if they were marching.

This walking style has been adopted by politicians and public figures who want to look younger and healthy.

Barbara and Allan Pease say that people walking slowly show they have plenty of time, are not interested in what they're doing, or have nothing else to do.
It's OK for retired millionaires but not for people who want to convey authority or health to a potential mate.
Influential people commanding attention walk briskly at a medium pace with medium-length strides.

Also read: *how to walk sexy*.

Legs & Feet

Barbara and Allan Pease say that evolutionary speaking legs served the purpose of going towards what we want and running away from what we don't want-, so the way we point our feet and legs tells us where we want to go.
As a rule of thumb, open or uncrossed legs show an open or dominant attitude and crossed positions reveal closed attitudes or uncertainty

Standing Positions

- **At Attention:** standing with your feet close together is a formal and neutral position showing no signs of commitment toward any particular course of action.
  With men and women interacting women use it mostly, and employees use it with bosses
- **Legs Apart:** predominantly a male position and the equivalent of a crotch display
- **Foot Forward:** the foot forward points in the direction our mind wants to go. In groups, we point our forward foot to the person we find most interesting or attractive
- **Leg Cross:** the standing leg cross and scissors show that someone wants to stay, but has a closed, submissive, or *defensive attitude.*
  It is usually adopted in the presence of people we feel superior to us and studies show it's usually people who lack confidence who uses it

From Closed to Open
When meeting someone we don't know often we start with crossed arms and legs. First, are the legs uncross, and next are the arms.
We can start with one arm only and flash the palm. Then both arms uncross. Finally, one person takes the foot forward position to show acceptance of the other.

(American) Figure Four
Sitting with one leg horizontally on top of the other is the seated version of a Crotch Display.
The authors say it's American or of any Americanized culture, but I find it just a very common and natural way of sitting.
Men sitting this way are perceived as more dominant, relaxed, and even youthful. Women using this position usually only do it around other women as they don't want to appear too masculine or signal too strong sexual availability.
It's not conducive to final decision making though as studies show most final decisions are done with both feet planted on the ground.

Figure Four Leg Clamp
Same as Figure four, with the leg on top being held by the hands. It's a sign of tough-mindedness and stubbornness in rejecting any idea.

The Ankle Lock
Barbara and Allan Pease say that locking ankles is the equivalent of biting one's lips and holding back.
It can also show uncertainty and fear. If the feet are pushed far back beneath the chair it also highlights a withdrawn attitude as people who are very into the conversation put their feet "in" the conversation.

When an interviewee locks his ankles, he is mentally "biting his lip." The gesture shows that he is holding back a negative emotion, uncertainty or fear. The feet are usually withdrawn under the chair, showing that the person also has a withdrawn attitude. When people are involved in a conversation, they also put their feet into the conversation.

During negotiations, it means the party is holding back on a concession.
If the ankle lock happens during an interview, questions can be reasonably effective in getting the interviewee to relax and unlock but going around the table and sitting beside them is probably the most effective.

I had to laugh when Barbara and Allan Pease said that 88% of dental patients lock their ankles as soon as they sit on the dentist's chair as I had to think back about my teenager's days and indeed I was doing the same as far as I can

remember.

Leg Twine
Almost exclusively used by women, and it's a sign of shyness and timidity.

Parallel Legs
Parallel Legs are the most attractive seating position for a woman. Since it would be difficult for men to sit this way, it's a sign of femininity.

Legs for Women
Men will watch TV shows with the female presenter for longer if she has a short dress.
However, men will also remember less of what she said. In business, it's best if a woman avoids short dresses and skirts (and best if men keep their knees closer together)

The 13 Common Daily Gestures

Barbara and Allan Pease go into common gestures of people who don't realize what they're actually doing.

Patting during a hug for example signals it's time to end the hugging, and starting to pat even before you hug is a sign you didn't wanna hug in the first place at all.
Kissing in the air as you're about to hug someone is pretty much the same.

Head Nod

Barbara and Allan Pease say that nodding regularly in groups of three nods leads to people talking for three to four times longer than they would have normally spoken.

Nodding slowly communicates interest, while fast nodding communicates it's time to stop talking or that you want to talk now.

The authors say that people will talk three to four times more than usual when the listener nods their head using groups of three nods at regular intervals.
The speed of the nod signals the patience—or lack of patience—of the listener.
Slow nodding communicates that the listener is interested in what the speaker is saying so give slow, deliberate clusters of three head nods when the other person is making a point. Fast nodding tells the speaker you've heard enough or that you want them to finish or give you a turn to speak.

Head Nod to Get Agreement
Finishing the sentence with a "wouldn't you" or "isn't it" as you nod will raise the chances the other person will agree with you.

Head Nods to Get More Information
A technique to get people to talk more and give you more information is to nod your head during his answer.
After he replies, you keep nodding your head another five times with one nod per second.
Pease says that by the time you counted to 4, he will usually resume speaking and give you more information.
Do it as you keep your hand on your chin and give it a few light strokes in an evaluation position, so you don't come across like an interrogator and it will seem natural

Basic Head Positions

- **Head Up:** neutral attitude.
- **Chin Forward**: When the head is lifted high and the chin pushed out and high it signals superiority, fearlessness or arrogance. It allows people to look down their nose
- **Head Tilt:** it's a submission signal as it exposes the throat and neck. Women will use it to show interest in men they like

- **Head Down:** a chin down signals a negative, judgmental, or *aggressive attitude*. Critical evaluations are normally made with the head down

Head Duck
Raising the shoulders and lowering the head signal submissiveness, and it's often used to show apology.

When someone walks past others who are talking or looking at a view or, as it's more and more often the case these days, taking a picture, they will usually use the Head Duck.

It's also used by subordinates approaching superiors and it reveals the status and power play between individuals.

> Managing Your Boss For Ruthless Career Advancement

Lint Picking
Looking away while picking imaginary lint is a sign of disapproval.

Hands-on Hips
The Definitive Book of Body Language says that placing the hands on the hips and pointing the elbows out shows readiness to dominate.
It's a nonverbal challenge to other men who enter their territory.

One hand on the hip is similar, especially if the elbow is pointed towards the person we are issuing the challenge. It's also been called the "achiever" pose as it shows readiness to tackle the issues and get down to it. Men use it around women to display an *assertive male attitude*.

Cowboy Stance
Thumbs into the belt or in the pockets are a gesture to frame the genital area and are used mostly by men to signal a *sexually aggressive attitude*.

Men use this gesture to stake their territory or to show other men they mean business.
Pease says it's regular for men on the prowl.

If it is used while talking to women, especially with dilated pupils and a foot pointing toward her, it immediately gives the game away as to what are his intentions.

- Also read: *signs he likes her*

> Does She Like Me? 35 Proven Signs of Attraction (W/ Pictures)

Leg Over Arm Chair
Mostly a man gesture as it also uses the legs spread.
It communicates ownership and signals an informal and *aggressive attitude*. If someone is having a serious discussion, it also communicates superiority and indifference.

Straddling a Chair
Barbara and Allan Pease say that the person straddling a chair wants to dominate (the crotch display) while at the same time using the back of the chair for protection).
Straddlers tend to be dominant types who will try to take control of others when they get bored with the conversation.

The Catapult
The Definitive Book of Body Language says the Catapult is the seated version of the hands on hips.

The heads are behind the head with the elbows pointing outward. It gives an air of superiority like the person knows it all.
Legs are usually in Figure Four or Crotch Display.

Pease says that women quickly grow to dislike men who use the catapult during business meetings and women can't really use it as it would show their chest too obviously even flat-chested ones are described as aggressive by both men and women.

Show of Readiness
Barbara and Allan Pease say that leaning forward with one hand on the knee, or both hands on the knees as it were the start of a race, signals that a person has reached a decision.
If it comes after closed-body signs, it's usually a negative answer. If it comes after decision-making clusters (chin-stroking) then the decision can often be positive.
It also signals the desire to end the meeting and move out.

Mirroring – How We Build Rapport

You've probably heard of mirroring a thousand times.

Basically, mirroring says, nonverbally, that you two are similar and share the same attitudes.

When people refer to having a good vibe or that it feels right they are unknowingly referring to mirroring and synchronous behavior.

Mirroring is also a way of saying we're in agreement with someone.
Usually, the person with the highest status makes the first move and the others copy.

Men VS Women Mirroring
Barbara and Allan Pease say that women are four times more likely to mirror another woman than a man to mirror man.

Women mirror men too but men mirror women less unless he's in courtship mode.
Women mirroring men should mirror their body language and use fewer facial expressions rather than trying to mimic what they *think* he's feeling.

Facial Feedback: Men, Women & Dating
Men use fewer facial expressions than women and tend to have expressionless faces when listening.

Men feel awkward at the idea of using facial feedback while listening as it makes them feel effeminate.
But it's the opposite.
Women judge men who use facial feedback as caring, intelligent, interesting, and attractive.

What's Mirrored
Intonation, voice inflection, rate of speech, and even accents tend to synchronize.

Pease suggests never speaking quicker than the other person as that makes them feel pressured.
It's extremely interesting when Pease says that a person's rate of speech is the rate at which their brains can analyze information, so either speak at the same speed or slower.

Intentionally Mirroring
It's possible to influence others by mirroring their positive gestures and posture, which will make the other person feel relaxed and receptive.

It's a good strategy to mirror people who adopt superior body language with you to disconcert them. Don't do it with the boss though Pease recommends.

Do not mirror their negative signals though in order to create rapport.

Subordinate – Boss Mirroring
Barbara and Allan Pease say that when the leader adopts a pose, the subordinates will usually copy, often in ranking order.

Leaders also tend to be the first of a group to walk through a doorway and like to sit at the end of a sofa rather than in the middle. In a conference room, the boss usually sits at the head of the table, often farthest away from the door.
In a boardroom, people who will mirror your position are also the most likely to vote for you.

When you present your product to couples, noticing who mirrors whom will let you know who's got the ultimate decision power.

Cigarettes, Glasses & Make-Up

I was not too surprised to read Barbara and Allan Pease saying that smoking is an outward signal of inner distress. But I was very surprised to read them say that smoking has less to do with nicotine addiction than it has to do with the need for reassurance.

Smoking then is one of the many displacement activities people use while non-smokers chew gums, bite their nails, groom, tap their feet, scratch their heads, or play with something.

Blowing Smoke
Blowing the smoke of a cigarette up is a positive sign.
Conversely blowing down is a sign the smoker is in a negative, secretive, or suspicious frame of mind. Blowing down from the corner of the mouth further reinforces the negative sign.

In sales scenarios, those who want to buy will blow upward, and those who don't blow downward.

Speed of Blowing Smoke
The speed at which the smoke is blown is an indicator of the intensity of the feelings.

Extinguishing Cigarettes
Barbara and Allan Pease note that if a smoker extinguishes the cigarette before it's finished it's an indicator he wants to terminate the conversation.

You can then change course and terminate it earlier so it seems it was your decision.

Glasses
The Definitive Book of Body Language quotes Desmond Morris when he noted that putting objects against the lips or the mouth is an attempt to relieve the security a baby had when he was breastfeeding.

A person wearing glasses putting the arm of the frame in or near the mouth is looking for reassurance. As we've already seen, it's also a stalling sign to gain time, as it is taking them off frequently to clean them.

Folding them will often mean they have reached a decision while putting them back mean says the person wants to "see" more of the information or evidence.

Big-frame glasses project power while frameless or thin-frame glasses convey a powerless image and say you are more interested in fashion than in business and the opposite is true in social situations.

Peering Over Glasses
Barbara and Allan Pease say that looking at people over the rim of the glasses gives a sensation they are being judged. The person on the receiving end may respond to it by crossing their arms.

Sunglasses on the Head
Dark sunglasses during meetings make you appear secretive and even insecure.

Wearing them on the head is seen as relaxed, youthful, and cool".

Pease says it's because they give the wearer the appearance they have two huge eyes with dilated pupils on top of their head, similar to the nonthreatening effect that babies have.

So don't be afraid of keeping your sunglasses fellas :)

Glasses and Makeup

Makeup adds credibility for women in business, as confirmed by a (small) experiment Pease conducted himself.

The combo of makeup and glasses was even more powerful.
An exception is if it's a woman-on-woman interaction, as women tended to see the makeup-wearing ladies as colder and more arrogant, probably because they saw her more as a competitor.

If you don't need to wear glasses, having a pair with non-correctable lenses could be a good idea for business meetings.

Lipsticks

Barbara and Allan Pease say that wearing bright color lipsticks for interviews made women appear as if they were more interested in themselves than in business and career.
Women without lipsticks were seen as more serious about work than men, but they were also seen as more lacking in personal skills.

Briefcases Signals

Large briefcases communicate the person is doing all the work and takes work home because he can't manage his time well.
Slimmer briefcases say the person is only concerned with the bottom line and has more status.

Body Points Where The Mind Goes

The Definitive Book of Body Language points to an extremely easy and super effective way of reading people's intentions: the direction in which someone points his body or feet is a signal of where he wants to go.

Body Angles

Open Positions

Standing straight and facing someone head-on is perceived as *aggressive*.

To avoid taking an aggressive stand we must stand at 45 degrees angles so that together with our speaking partner we form a 90 degrees angle. This position invites others to join the conversation.

Pointing the body away from the listener is seen as confident but not aggressive.

Closed Positions
Barbara and Allan Pease say that if two people want intimacy they will instead face each other.

If someone wants to monopolize the conversation with someone, they will take this position. A fully frontal position is also a courtship signal (see "*body language of love*").
If the other person accepts the courtship signal, they will also orient their bodies at zero angles.
Pease says it's OK to approach a woman from the front and eventually move to a forty-five-degree angle (also read: *how to approach a woman*).

The Closed Position can also be used to issue a challenge between people who are hostile to each other.

Attacks & Approaches
Research shows that men are wary of attacks from the front and women are wary of attacks from the rear (and approaches from the rear).

So never stand fully frontal with a man you've just met as it's perceived as either an attack from a man or a sexual interest from a woman.

How We Exclude / Include
Barbara and Allan Pease say that 45 degrees angles invite other people to join the conversation.

If two people were facing each other frontally and a third person joins it's likely the two will only turn their heads towards him but not their bodies. Only turning the head towards someone signals that the newcomer is not very welcome.
They will probably have tight-lipped smiles as well.

A *group conversation* can also start fully open with a triangle but two people can eventually start facing each other and it's a sign for the third one he should probably move along.

Seated Body Pointing
When we are seated we can point our knees towards the person we are most interested in or towards the person we accept the most.
Feet serve the same purpose: we point our feet toward the person we find the most interesting.

Courtship and Attraction Gestures

The Definitive Book of Body Language quotes Albert Scheflen when he found out that when we meet someone from the opposite sex physiological changes take place that make us more youthful in appearance.

A man will stand taller, protrude his jaw, and expand his chest while an interested woman will make her more *submissive and feminine*.

Barbara and Allan Pease say that because men tend to have more difficulties than women in dating most dating and flirting classes tend to have more men than women (see a few *tips and examples for text flirting*)

The Emergence of Colorful Men
Barbara and Allan Pease note that in most mammals it's the man who dresses up to impress the woman.
In humans, it's the woman who dresses more attentively to attract male attention.

Today however we see the re-emergence of the man who takes care of himself, sometimes even in ways that have been predominantly feminine. This is the sometimes so-called metrosexual man.

The authors say that while metrosexual men seem strange to many heterosexual men, their observations show that metrosexuals fall in the categories of gay men, effeminate men who realize that many traditional female behaviors are a great way to meet lots of women.

Attracting The Opposite Sex
When someone wants to attract the opposite sex, we do so by emphasizing sexual differences.
Pease says that most of the success in the mating game relies on the man's ability to read the signals a woman sends to him as opposed to initiating his own moves.

Barbara and Allan Pease talk about Graham and *his style as a seducer.* They say his success is mostly due to his ability to read women's signals and play the rituals well.
Women would describe Graham as sexy, masculine, humorous, and as making them feel feminine.
Men described him as *aggressive*, insincere, arrogant, and not particularly funny. Graham had few male friends as men didn't like a rival for the attention of his woman.

Women Call the Shots
The Definitive Book of Body Language will tell you what most good observers noted by themselves: most men will tell you they made the first move.

But most studies in courtship show that **women are the initiators 90% of the time**.
And while some men approach without being invited first and some of them can even be successful, their overall statistical success is low because they're simply playing the number game.

Women and Men Misunderstandings
Barbara and Allan Pease say most men tend to mistake friendliness and smiling for sexual interest.
Pease says that's because men see the world in more sexual terms than women.

Upon meeting a possible partner women tend to send a flurry of courting rituals in the first minutes.
They often send ambiguous messages in the early stages to manipulate men into showing their hands. Men often confuse these signals and make a clumsy passes.

I find it extremely interesting that Barbara and Allan Pease say this is one of the reasons why some women have difficulties in attracting men: men get confused with ambiguous messages and won't make the approach.

The Attraction Process

The human courtship follows a predictable five-step sequence:

- **Stage 1. Eye contact:** She looks at him until he notices and holds eye contact for around five seconds, then turns away. A woman will repeat this behavior a few times (my note: in my experience, it's often less than five seconds, especially if she's engaged in a convo with a friend or you're not straight on and she needs to turn her head to see you)
- **Stage 2. Smiling:** She gives him a quick half smile
- **Stage 3. Preening:** She straightens up emphasizing her breasts, sits to show off her legs, or if she's standing tilts her head sideways and tilts her hip. He can respond by standing up straight, pulling in the stomach, expanding his chest, tucking his thumbs into his belt, and preening as well. They point their feet or entire bodies toward each other.
- **Stage 4. Talk:** He approaches and attempts to make small talk
- **Stage 5. Touch:** She initiates light touching either "accidental" or not. A hand touch is more intimate than the arm. The touch is repeated to let them know it was not accidental. Touching the shoulder of a man says she cares about his health and appearance.

These 5 steps are critical, and they're what most people, especially men in primis, find challenging.

The 13 Most Common Female Courtship Signals

The Definitive Book of Body Language says that women use a lot of the same gestures men use, such as touching the hair, smoothing the clothes, body pointing, gaze, and one or both hands on hips.

She may even use the thumb in a belt gesture, albeit it's a bit more subtle, for example only one thumb tucked into the belt or protruding from a handbag.

1. **Head Toss and Hair Flick**: Usually the first, used even by women with short hair
2. **Wet Lips and Pouting, Mouth Open**: women have more subcutaneous fat than men, including lips, which are used as a sign of femininity. Pouting increases the lips' size. Also, the female genital lips are proportional to their lips, so it becomes a sexual mimicry. Aroused women have their lips, breasts, and genitals become larger and redder because of blood circulation, so red lipsticks are very attractive
3. **Self Touching**: our minds act on our secret desires
4. **Limp Wrist**: the Limp Wrist is a submission signal used only by women and gay men. In business, the situation should be avoided
5. **Fondling a Cylindrical Object**: a man could in turn symbolically possess her by fondling her belonging (a cigarette lighter, keys, etc.)
6. **Exposed Wrists**: especially simple to do for smoking women
7. **Sideways Glance On Raised Shoulder**
8. **Rolling Hips**: a woman has an accentuated roll that highlights her feminine pelvic region
9. **Pelvic Tilt**: Tilting the pelvis shows her waist-to-hip ratio. A waist-to-hip ratio of 70% is considered the most attractive. At 80% men being to lose interest and are not interested at 100% but are still interested at lower than 70%. 70% were attractive even when the woman was quite heavy
10. **Handbag Nearby**: a woman's handbag is almost an extension of her body and putting it near a man is an indicator of interest. Fondling or asking him to get something from it is equally positive
11. **Knee Point**
12. **Shoe Fondle**: it has the phallic effect of thrusting the foot in and out. It can unsettle many men without knowing what's happening
13. **Let Twine**: the most appealing sitting position a woman can take. Other leg signals are crossing and uncrossing the legs (slowly) in front of the man and gently stroking the thighs with her hand

For more signs also check out *"Undercover Sex Signals"*.

Also later on Pease says that a woman is likely to lean forward and push her arms close, pressing her breasts together and showing cleavage.

Male Courtship Signals

Men are generally not good at sending and receiving the signals used in the mating game.
They most often react to women's mating signals and often react poorly too.
Male courtship signals involved the display of power, wealth, and status.

Some other signs include:

- **Preening**: straightening the tie, brushing imaginary dust from the shoulder, touching cufflinks or watch, and rearranging shirt or coat)
- **Crotch Displays**: the most direct sexual display is the aggressive thumbs in-belt gesture; when seated or against a wall he can also spread his legs
- **Crotch Adjustments**

What Men Look at in Women
Barbara and Allan Pease say that when it comes to body shape both men and women prefer athletic body shapes.

Men are more attracted to women with childlike faces -large eyes, small noses, and full lips and cheeks- as it releases hormones that want to make them protect themselves.
Women prefer instead adult faces such as strong jaws, larger brows, and strong noses.

Guys are split among preferences for butts, breasts (men love them in every shape and size because it's the cleave that is most attractive), and legs.

What Women Look At Most
The Definitive Book of Body Language says something you are probably familiar with: women prefer men with deeper, smoother voices because deep tones are linked to testosterone levels. Pease adds that in countries where feminism has been more influential women have taken jobs requiring more testosterone production and have become more *assertive and authoritative* and their voices deepened as well. He adds he hopes his hairy chest won't follow suit.
40% of women prefer butts, legs, and chests/arms to be equally split.

Broad shoulders, muscular chest, and arms, and a tight butt are preferred. Up to a certain point though, most women don't like the muscle man bodybuilder type.

Barbara and Allan Pease say that a tight butt is preferred because it helps to make the strong, forward motions needed for successful sperm transfer during sex.

Availability Beats Looks
The authors say that a man is often more attracted to a woman by the signs of her availability than by her physical attractiveness and you can learn and practice availability signals.
Indeed, Pease says, studies show that most people are skeptical about beautiful people and it appears to be inborn as babies prefer average faces to very beautiful ones.
And we prefer mates who are roughly as attractive as we are (which means they're more likely to stay and not go look for someone else).

Cold People Are Actually Colder
People who are described as cold tend to be physically colder too because their blood flows to legs and arm muscles for the fight or flight response. When one person is attracted to another blood rises to the skin surface making them warmer.

Ownership, Territory & Height Signals

Humans lean against objects and other people to show ownership and stake a territorial claim.

If the object we lean against or touch belongs to someone else it can also be used as an intimidation sign or as a challenge.
Leaning against the doorway of someone else's office or sitting in his chair can also be an intimidation ploy.

A boss speaking to a subordinate in his own office could put his feet on the desk, but if his superior enters his office he is more likely to change that position, and might for example place a foot on the bottom drawer of the desk.

Lovers hold hands or put their arms around each other to show wanna-be competitors they have a claim on that person.

Height / Size
Barbara and Allan Pease say that people make themselves smaller to show deference.

Taller men tend to have greater reproductive success because height is linked to testosterone and because women tend to choose taller partners. Men prefer shorter women because it gives them a height advantage.

On the screen, we tend to assigner height centimeters based on the power and authority of their presentation.
This is why, Pease says, many short actors or politicians do well on the screen: they simply act tall.

My note:
I honestly see no point and no merit here in Pease's assertion of "acting tall".
Behavior is yes *somewhat* related to height, but so loosely that there's no such thing as "tall behavior".
Also, you act the way you need to act *independently* of your height. As a matter of fact, a short man acting powerfully is even more impressive and a taller man acting submissive is more striking.
Just look at Joe Pesci doing it:

Powerful performances or impressive titles all lead to you being perceived as taller.

Barbara and Allan Pease say that if you want to test the authority that comes with height lie down on the floor and try to reprimand someone standing. Then try the opposite.

My note:
I feel this "test" is preposterous as nobody deals with each other while lying down.
If you really wanted to try something similar, then you should stand on your knees. But even then, it's not very popular as you can't move around freely. You should just try to reprimand someone taller than you, as simple as that.

Very tall people can have a disadvantage when they want to connect with people shorter than they are.
tall salesman found out that delivering sales presentations while seated increased his sales substantially (a whopping 62%).

To sum it up, to fully quote Barbara and Allan Pease, height differences can have a significant impact on relationships, but height and power are often just perceptions.

Lowering Body & Raising Status
Barbara and Allan Pease say that slouching down in a chair can raise your status.
If the owner of the place is standing and you slouch down the complete informality on someone else's territory communicates a *dominant* or *aggressive attitude.*

People tend to be superior and protective when in their territory, especially their own home, so using submissive gestures and behavior is effective for getting them on your side.

The authors say you can also make yourself avoid intimidating others or avoid coming across as confrontational.
Pease uses the example of appeasing the cops who pulled you over for a ticket by playing the victim.
It's an extremely interesting example -albeit a bit slimy-.

Basically, the idea is to show that you're not a threat and encourage him to take the role of the reprimanding parent, in which case he may decide to give you a reprimand without a ticket, says Pease, up to 50% of the time.

Note:
I have used this technique twice, both times very successfully, but I wished he had added "the other option is to just be a (wo)man, take it in stride, and pay your ticket".

Learn more:

Body language & strategies to get out of a traffic ticket (alumni only!)

Negating Height Power
Barbara and Allan Pease say that If you are shorter, you can create a sitting situation that will neutralize the height of the other negotiators in the room by lowering their chairs or raising yours –as was suggested by Leil Lowndes-.
Sitting at the opposite side of a desk or talking to them standing while they are seated are also good techniques.
Talking in public settings such as bars or crowds, or in a car or plane also limits the tactics of taller speaking

partners.
Looking outside of a window as they speak gives the impression you are giving deep thoughts to the discussion also even the field as height advantage doesn't exist when you're not looking at them.

To appear taller, dark-colored clothing, pinstriped suits or pants suits, and full sizes watches make you look taller. About the watch, the idea is that the bigger the watch the more clout the person appears to have.

Seating Arrangements

This was for me one of the most interesting chapters of *The Definitive Book of Body Language* because it opened some new doors of understanding.

How you sit in relation to others is an important tell of relationships statuses and a powerful way to gain cooperation. It's very impactful and should never be left to chance.

Seating Positions

- **Corner Position**: when both of you are standing by the corner of the table it's used by people in friendly and casual conversation and it avoids territorial division of the table. The corner of the desk provides a smaller cover. Pease says this is the best position to deliver a presentation.
- **Cooperative Position**: sitting by the same side of the table. it's a great position for presenting your case and having it accepted as it's a cooperative seating position one can have. The trick is to sit in this position without the other person feeling like you invaded his territory
- **Independent Position**: each person is sitting at the corner, facing each other but both at the opposite end of the table, and it's used when people don't want to interact with each other
- **Competitive / Defensive**: the two face each other frontally with the table in between. The table becomes a solid barrier between the two and it can lead to each party taking a first stand on his point of view.

A competitive/defensive position can really make a huge difference, often a negative difference.
People speak in shorter sentences in this position, can recall less of what was said, and are more likely to argue.
An experiment showed that in patient-doctor relationships only 10% were at ease when sitting in the defensive position against 55% when the desk was not present.

Many managers unluckily prefer the desk. 76% of senior managers preferred the desk and 50% of lower managers did. Male managers were twice as likely to place a desk between themselves and their subordinates.

The person sitting to your right tends to be more cooperative than the one to your left.

Keeping 3 People Involved
If you're sitting at a table with two people and one is asking all the question when the third one mostly stay silent it's a good idea to still involve both of them.
Pease and Pease recommend that you look at the question asker as you begin to reply, then turn your head back to the silent person and keep going back and forth as you speak. You then finish looking at the question asker.

Rectangular Board Tables
The person sitting at the shorter edge of the table, the farthest from the door, is the one with the most power.
The person right in front of him across the table is next in line. Then the person in the middle of the long edge of the table. Then the person to the right of the leader.

Power Plays at Home
Open families tend to go for round tables, while closed families prefer square tables.
Authoritative families go for rectangular tables. Placing the shiest person at the head of the table will often lead that person to talk more and even more authoritatively.

Audiences and Sales
Barbara and Allan Pease say that if you want someone to pay attention to what you're saying you should sit them in the front row.

When you're having a business dinner or lunch it's best to complete the business talk before the food arrives.
Let your prospect sit with the back against a solid wall because open spaces make people uncomfortable. Sitting with the person's back towards the door or a ground-floor window also increases the tension.
Lights should be dimmed and muffled background music should be played to relax the senses.

If you're selling in the defensive seating you can try to place a paper in the middle of the table.
If the prospect picks it up and moves it into his territory it signals acceptance and you can ask to go over to show him something so that you can take the *collaborative approach*. But if he pushes the paper back to you don't encroach his personal space.

Interviews, Office Politics & Power Plays

Barbara and Allan Pease say that most job interviews are not productive.

Studies show indeed we tend to hire the person we like the most, not the one who's best for the job.

Pease says that the best stuff from the CV, what really matters, is forgotten.

The impression in the first 15 seconds was strikingly similar to the overall impression at the end of the interview.
And that's another striking proof that you don't get a second chance to make a great first impression.

Linguistics, Nonverbals, and Status
There's a direct relationship between the vocabulary range (and relative clarity of communication) and the status and power people command.

The higher up the person is, the fewer nonverbal gesture he will use because he can use words to convey meaning.
Less educated and less verbally accurate people will use more gestures to communicate as he tries to make up for their vocabulary range.

Barbara and Allan Pease say that James Bond uses minimal body gestures, especially when under pressure.
High-status people tend to keep their cool by revealing as little emotions as possible.
Actors such as Jim Carrey play highly animated roles, and they're usually powerless, intimidated men.

Golden Keys to Making Great First Impression

- **In The Reception:** remove outerwear and avoid entering with your arms full of stuff that can make you look inept. Stand in the reception area with Hand in Hand behind your back or the steeple and slowly rock back and forth on your feet. Never sit.
- **Entry**: when the receptionist told you can go in, enter without hesitation keeping the same speed (people lacking confidence change gears and perform a small shuffle as they enter)
- **Approach**: even if he's doing something, put down your briefcase, shake his hand, and immediately take a seat, showing that you don't expect to be kept waiting.
- **Handshake**: palm straight and match the pressure. Let him decide when to end the handshake
- **Sitting**: if you have to sit in a low chair directly facing him, turn the chair 45 degrees so that you're not in the reprimand position, and if you can't turn the chair turn your body. Avoid low-sinking sofas and sit on the sofa's edge if needed
- **Gestures**: cool people in control of their emotions use clear and deliberate gestures. High-status individuals use fewer gestures than low-status individuals: people with power don't have to move much. Mirror the other person when appropriate
- **Exit**: pack your things calmly and deliberately, shake hands, and walk out. If you're a woman turn around before

you leave the room and smile so the last impression will be your smile and not your rear

When Someone Keeps You Waiting

Barbara and Allan Pease say that if someone keeps you waiting for more than twenty minutes they're either disorganized or *it's a power move.*

Letting you wait reduces your status and enhances the status of the person making you wait.

Always bring an ebook or laptop with you and start working. When the person arrives let them speak first, lift your head slowly and greet them, then pack smoothly.
If they call you, you might even say you'll be there in a second you just need to finish something.

Another option is to make all the phone calls you had to do.
The message is that you're a busy person and are not going to lose time because of their disorganization -or power games-.

If the other person takes a call during the meeting or someone enters and starts talking to your interviewer for a long time, take out your notebook and start reading. It gives them privacy and demonstrates you don't waste your time. If you feel he's doing it on purpose take out your phone and do your calls.

Read more about this on *What to Do When Someone Makes You* Wait here:

> What To Do When Someone Makes You Wait

Some Tips

- **Keep your fingers together:** open fingers and hands above the chin is perceived as less powerful, so keep your fingers together and hands below the chin level
- **Elbows Out:** sitting on the chair keep your elbows on the armrest
- **Watch Coat Buttons:** more agreements are reached when people have their coats unbuttoned

Chairs and Accessories
The higher the back of the chair the more power and status it bestows upon the person sitting there. Swivel chairs have more power as they give more freedom of movement.

Sitting Distance
The farther away the visitor is placed from the interviewer, the lower the power.

Barbara and Allan Pease give a few fantastic examples of how to give feedback to a subordinate.
They say you face dead-on for direct answers, 45 degrees for more personal questions to take the pressure off.
They also present a case study of how they re-arranged an office to improve a manager's relationship with his employees.

CONS

Some Childish (Sexual) Jokes
A lot of childish jokes such as “how to tell if a politician is lying: his lips are moving”, or a Chirac picture with his hands far apart and the caption “measuring the size of an issue or boasting about his love life?”.

Jumping to (Unfounded) Conclusions
The author refers to Hitler more than once. One comment portrays Hitler putting an arm in front of his “lonely testicle” because he felt at odds with his sexuality.

Albeit that might certainly be true I’m not sure how the author can be certain that was the case.

Allan Pease also says that a candidate he advised won the election after he suggested he shorten his lectern, look straight at the camera and have the camera shoot his film from below.
Pease implies that was proof that people don’t vote based on debates but on who looks best suited to be the leader.

That’s some really bad critical thinking there.

Unscientific “Researches”
A few of the research he ran were good for anecdotal evidence, but not scientific.

Pease wanted to prove the theory that a man needs to be “1.09 times taller” than a woman for a successful relationship.
So he picks some random couples respecting the 1.09 ratio that are still together and some that don’t abide by the ratio and aren’t together anymore.

That makes no sense.

Random Paragraph Names
Some paragraphs’ names don’t reflect the content, and paragraph structures are not neatly arranged.
Sometimes information about X was under paragraph Y, or sometimes summaries introduced new topics.

The Body Language Project: Summary & Review

Lucio Buffalmano · 16 September 2017 · Archived copy · Original

"*The Body Language Project*" is a pictorial guide to learning to read body language.
The focus is particularly on the body language of dating, seduction, and approaching.

Bullet Summary

- Your goal is never to dominate a woman
- In real life, you're likely to get mixed signals
- Don't overdo any alpha male stuff: it's unattractive

Full Summary

Since *"The Body Language Project"* contains lots of pictures and little text, I will provide here a rather quick summary of some good points I liked and a review.

Mixed Signals for Ego Protection

Christopher Philip says that both men -mostly women I'd add- send mixed signals of interest and disinterest to protect their egos in case of rejections.

Women also have a conundrum: she might be interested in a relationship with you and doesn't want to look too easy -and too obvious with her signals-.

To make sure the signals are positive, the author says, you should look for 3-4 interest signals and make sure they're aimed at you.

How to Approach Sitting Women

For an overview, check out "*how to approach women*".

Towering

Christopher Philip says that towering is the wrong way to dominate, and it means you keep standing while she's sitting and slightly crouch down a little bit toward her.

Height advantage can be used while standing if you're taller, but should never be exploited if she's sitting and you approach while standing. That's called "towering" and feels overpowering.

Never approach a girl sitting while you're standing.

Your initial goal is never to dominate or intimidate a woman upon approaching her, your goal is to turn the natural fear response most women can have to a man's approach into excitement.
Christopher Philip says that trying to dominate is also an indicator of disinterest.

Squatting

Going nearby and squatting lowers your body height compared to hers.

Christopher Philip says that **squatting shows courtesy** and is not necessarily less dominant.

And I couldn't agree more.
When you approach her while she's sitting it shows a lot of cojones from your side, so showing courtesy on top of cojones will skyrocket your value to her eyes.

Cornering

You should never approach a woman giving the impression you are pushing her against a corner or against a wall.

Approach Angle

Christopher Philip says you should **never approach from behind**.
A frontal approach in plain view is preferable, and the best is giving her the chance to take a full look at you before approaching.

My Note:
I don't like a frontal approach instead.
Allan Pease also discourages a full-frontal approach.

Touching

All king of touching move two people closer together.

Especially when the woman initiates it, it's a sign of sexual interest (also read: *all the signs she's interested in*).

Touching is also a much stronger cue than body pointing, so if a girl has her hand on her leg but her legs are pointing away, it's still overall an indicator of interest.

Whispering

Whispering is a neat way of getting someone closer into your intimate space.
If someone is whispering into your ear it's an indicator of interest.

Also read: *all the signs he likes you.*

Finger Tap

A woman looking at you with crossed arms and tapping her index finger on her arm is an indicator of interest.
The finger tap is a way of saying "come here".

Mirroring

Christopher Philip says that you can use mirroring to test interest levels.

If you adopt the same pose your speaking partner is having and they change it soon after, they aren't interested in you.

Dancing can be a great way to test mirroring because movements happen very quickly and fluidly.
If she copies a bit of your style and looks at you, she's interested.
If she's doing her own moves and looks away, she's not.

Leg Cross Height

Christopher Philip says that the higher a woman crosses her legs above her knee, the higher the interest she's showing.

Tibial Torsion

When a woman points both of her toes inwards she's trying to appear smaller and less dominant, and it's a signal she's willing to submit.

Lip Puckering

Puckering the lips is an obvious attraction signal and also an indicator that the woman is ready to kiss.

Forehead Bow

When the head is tilted downward and the woman looks at you "through" the forehead.
This is similar to a bow and a strong indicator of interest as it shows a willingness to submit.

Childlike Playfulness

Any childlike games such as stealing something from you or pinching you are to be considered a positive sign and an indicator of interest.

Alpha Males

Christopher Philip also goes into *alpha male behavior* and says most men trying to look alpha overdo it.
They take up *too* much space and look *too* angry and competitive.

I couldn't agree more.

Also, read:

- Alpha male posturing
- Alpha male body language

And of course, the *ultimate article on alpha males:*

https://thepowermoves.com/alpha-male/

Eye Games

I was surprised to read Christopher Philip suggests you should break eye contact with a woman by looking down.

Looking down, he says, shows you're not aggressive and it "admits" you're interested.
Breaking eye contact to the side says you are just scanning the room.

Controversies

There were a few parts I found contradicting other sources and/or my experience. Here they are:

Steeple

Christopher says that interlaced fingers clenching the hands together is a subtle form of steepling while Allan Pease says it's a sign of frustration. I think they can both be right depending on the situation.

Leaning Against the Bar

Christopher says that not reclining against the bar or the wall for support is a way of saying you're alright by yourself.

In another picture of a man reclining against the bar with closed body language, he says that people like that tend to end up being the wallflowers of the evening.

I fully disagree here.
Reclining against something is natural and a sign of comfort. Standing as a standalone object is very unnatural. When you're at home you don't usually stand in the middle of the room doing nothing. You do something or lie down.

Foot kicking

Christopher Philip says that a foot-kicking motion is a sign of boredom.

Joe Navarro says that jiggling of the foot can be an indicator of nervousness and kicking is an indicator of "fighting back against something".

I tend to side with Joe Navarro here: foot movements are commonly misread for boredom but they're more often in the discomfort cluster.

CONS

Terrible Clothes
Some guys in the picture really need all the body language help they can get given the clothes they wear.

It brought me back to the time I spent in Eastern Europe and their fantastic fashion style.
The local men had too-wide shirts with too-long arms, too-wide and too-long pants folding over ugly plastic Bata shoes, and the color matching of a daltonic man :).

Review

Great, I really enjoyed Christopher Philip's work and loved the pictorial format. I also loved the fact that he shows many pictures that are not too obvious, where there are several contrasting signals, and how it often appears in real life.

He then often proceeds to say which signs are more important and what's the overall message.

The idea is similar to *Undercover Sex Signals* by Leil Lowndes, but I would say that Leil has better marketing and less content. Christopher goes deeper into body proper body language analysis.

How to Walk Sexy & Confident: Men's Guide (W/ Videos)

Lucio Buffalmano · 17 September 2017 · Archived copy · Original

Do you want to learn a confident and sexy walk for men?

You have landed on the perfect page.
My name is Lucio, I am a social scientist, psychology nut, social skills consultant, and eternal researcher of everything related to people and social dynamics.

This article will tell you what research and body language say about a powerful, confident, and sexy walk.

Contents

- 1. Move Your Shoulders
- 2. Pace Your Walk With Your Arms
- 3. Splay Your Legs
- 4. Walk With Erect Posture
- 5. Splay Your Feet Outward
- 6. Keep Your Gaze Up
  - Straight and Focused
  - Chill and Calm: Enjoying Life
- 7. Smile Slightly
- 8. A Walk To Pick Up
  - Walk Past Her
  - Give a Slight Smile
- 9. Bounce With Gravity Defying Steps
- 10. Brisk Walk is a Sexy Walk
- Walk Like You Own It: The Mindset
- Bonus: Some Less Sexy Walk for Men
  - Vladimir Putin
  - John Wayne

1. Move Your Shoulders

A shoulder swag is a crucial aspect of a sexy walk.

The *APA Handbook of Nonverbal Behavior* states that while women 'sway hips', masculine men 'swagger shoulders'.

Opposite to men, women instead sway their hips and bottom to highlight femininity.

2. Pace Your Walk With Your Arms

There are two elements of arms' movements to walk like a sed God:

- Back and Forth Movement
- Distance from the Body

You want to move your arms, at least a bit.

Not moving and standing still is a typical fear response part of the “freeze” category of our reptilian brain, which is exactly what you do *not* want to communicate.

Similarly, arms too close to our body signal fear and unconfidence.
It’s when we’re afraid of venturing into the nearby territory indeed that we keep our arms close to our bodies.

Why?

Because we unconsciously feel like our arms could be more helpful close by to defend our body.

Again, you don’t want to send the message you are afraid of your surroundings.
For a sexy and confident walk, we’ll move our arms and we will spread them farther from our body.

3. Splay Your Legs

We keep our legs crossed when we’re fearful.

And we keep our legs open when we want to show openness and masculinity in what’s often called a “crotch display”.

Also, as politically incorrect as it might sound, what’s one of the most stereotypical effeminate walks you can imagine?

It’s the walk with the thighs rubbing one another of course. Pressing your thighs against your crotch is a way of negating your sexuality.
Letting some air circulate is a way of displaying manhood instead.

An easy way of adding splayed legs to your budding sexy walk is to avoid your thighs rubbing each other.

4. Walk With Erect Posture

Slouching and dropping our shoulders it is a way of closing within ourselves and defending our inner body.

Erect posture is a sign of confidence and it makes you much more attractive.

5. Splay Your Feet Outward

When people open up their feet, they also open up the way to their crotch and make it more visible.

Some men “open” the internal side of their feet when walking and it’s rarer in women -it seems to me Asian women do it more often-.

And since much of positive sexual communication is about displaying gender differences, splaying out the feet can be considered a positive masculine sign.

When women do it while sitting it works as a powerful aphrodisiac for many men, as it feels like an invitation to their vagina (rawer and cruder style, classier women will never do that).

Warning:
Do it slightly. Some raw, masculine energy from splayed feet is good, but do it too much and not only you go overboard, but you also show poor physical joint structure.
And physical malformation is rarely attractive.

This video represents a good mix:

6. Keep Your Gaze Up

There are main ways of gazing while walking:

- ### Straight and Focused

This is the “man on a mission” kind of walk.

Look straight on, focused, with the slightly aggressive attitude of the man who knows where he’s going and wants to get there quickly.
Don’t look at people, your expression and demeanor say “*get the fu** out of my way”* (most will).

Warning:
Don’t use this type of walk in any social setting. It shows a (slight) disdain for people, it will make you seem unapproachable and it will look incongruent *if you want to approach* and socialize later on.

Daniel Craig does it great in general, and particularly well here at second 23.
Yours truly gives you below a poorer stylish-wise example but with a better camera angle.

- ### Chill and Calm: Enjoying Life

Sometimes life is to be taken in and enjoyed at a slower pace.

And while the “man on a mission” walk is sexy in a *dominant kind of way*, the “chill and calm” is sexy in a more *intellectually dominant kind of way*.

There are a few ways to make the “chill” and “enjoy life” walk work.

The most important part is that you do not look down and that you **move your head slowly.**
Men darting their eyes around are scanning the environment for opportunities and, more often, for threats. Not sexy.

7. Smile Slightly

I will have a proper article on smiling, but the short of it is that there are two main ways you can smile:

- **“Teethy” Smile**

A genuine smile is wider and larger and it fully shows the teeth.

It’s less sexy, *less dominant,* and more social but can also be attractive.
Note the difference: some smiles are submissive, but if you’re smiling with full gusto out of sincere enjoyment it says you can let go of yourself, which is sexy.

And it says you’re content with your life.
In a world where most people live a life of quiet desperation -to quote Henry David Thoreau-, we are naturally attracted to those who have found an inner source of happiness and peace.

- **Sexy Smile**

This is the sexier, smugger version.

A tight-lipped smile says you got some secret in your life that makes you feel confident and superior and that you will not share (*Pease and Pease*).

What is he up to, what's his secret, they'll be wondering…?

One corner of your lips is more raised than the other corner and you don't show any teeth: it's an ever-so-slight smile.

Warning:
sexier is overall better but doesn't *always* attract more women. Some can think you're too into yourself, and some others will dislike you for making them feel like you're out of their league.
When you're in doubt and want to socialize, it's safer to err on the more social side.

8. A Walk To Pick Up

Let's be honest: the reason we care at all about how to walk sexy is for the opposite sex.

There are two main ways you can make an impression which will result in more physical activity beyond just walking:

Walk Past Her

Keep walking past without looking at her. Your superior, snub style coupled with your sexy strut will sure as hell make her look at you.

Gianna Nannini has a famous hit song called "bello e impossible", meaning "handsome and impossible".

Why am I telling you this?

Because "impossible" is exactly what you're angling for here, except… Except you will meet her later on "accidentally" and if she plays her cards you might become "bello e *possible*" ;).

The effect is similar to having a *cool standing pose*: you let them look at you and admire you and the effect is to "celebrit-ize" you.

Give a Slight Smile

As you go past her, you turn slightly towards her.

Unsexy guys leering at girls make it wrong because they do it crudely and too obviously -and sometimes add the biggest attraction killer ever: the catcall-.

You, instead, look at them coolly… Yes, she piqued your interest… Somewhat.

But you're not fully sold yet, and you know how to play the game.
That's the message you want to send.

Looking at them this way is also more likely to elicit a reaction so that your approach will be more like a warm approach.

And if she doesn't look at you at all?

Well, then coolly turn around and go for it anyway, you have nothing to lose.

9. Bounce With Gravity Defying Steps

> ***Has he just had sex?***

Guys, if you're looking for "how to walk cool", this is your walk.

Energized and confident, this one communicates “the world is mine for the taking, and that makes me the coolest cat alive”.

Joe Navarro in “*What Every BODY is Saying*” talks about “gravity-defying” body language.

He says that when we feel energized and confident, we will gesticulate with our arms more often and we will often swing them from side to side when we walk.

A bouncy sexy walk also tends to move at a quicker speed.
It’s a bit more juvenile and you will rarely see it from more mature men, but it’s very sexy as **it underlines vitality, vigor, and a joyful personality.**

You do a bouncy sexy walk by moving slightly quicker and adding a bit of a bounce to your steps as if you had springs in your shoes.

And feel free to move your arms around, touch your face (in a sexy way), or adjust your clothes.
And don’t forget the mood: you love life.

I’m glad I can show you this walk with one the sexiest men alive:

10. Brisk Walk is a Sexy Walk

Some sources will tell you to move slowly and walk slowly. Well, that’s true… On some occasions.

In some others, not so much.

How speed relates to sexiness, is indeed highly contextual.

Slow will work great for:

- Retired millionaires
- Bigger men
- Powerful men in slower “lines of work” as we’ve already seen with *The Godfather*
- Strolling around with your woman

Look at her expression before thinking he was a jerk.
It will also work great for almost everyone in more chill settings, like a nighttime lounge, the beach, or a sunny day at the park.

But a healthy man in a busy, bustling city, with people swirling around you? Or when immersed in work, or partying on the dance floor?
Too slow will make you look silly there.

Like Tom Tucker in Family Guy:

Don't listen to sources saying "slower is better": it's just a bad generalization.

Walking during daytime stick to average speed with good strides or slightly above average speed underlying your goal orientation and physical fitness if you're doing stuff.

Slightly lower than average if you're strolling.

Walk Like You Own It: The Mindset

The mindset of a sexy walk is also what makes you sexy in general.

Believe you are a man with a lot of value to give to any woman -or guy for that matter- and you feel like you're in control of your life.

Walking powerfully with a goal in mind means you do have goals you care about in your life, and walking leisurely means you do enjoy life and know how to enjoy life -which is very sexy-.

Bonus points: research also shows that a confident walk is also *safer*.
Muggers and criminals subconsciously pick victims who display weakness with their gate and nonverbals.

Note On Video Examples:
my walks in the video examples are slightly accentuated to show the move more clearly.
For normal daytime and day-to-day situations, I usually rein it in a bit and I would advise you to move *towards* those examples without fully reaching them (except for when you wanna play a bit and for when the time calls for

it, then go full power).

Bonus: Some Less Sexy Walk for Men

Here are some examples of famous walks that are not as sexy:

Vladimir Putin

It's OK to swing one arm more than the other, even advisable maybe. But Putin overdoes it (KGB training some say) :

John Wayne

John Wayne is a symbol of manliness, but I wouldn't copy his walk here.

His upper body arm swings a bit too much in front of his body.
A good erect posture wants your arms more on the side, and the arms in front of the body are defensive.

He does much better here though and adds another great nonverbal gesture of dominance: the slight "get out of my way" hand gesture.

The Talent Code: Summary & Review

Bullet Summary

- The Talent Code is: Ignition + Master Coaching + Deep Practice = Talent
- To learn quickly you must struggle and make mistakes at the edge of your comfort zone
- To achieve mastery you need to love your craft so you will stay long at it

Summary

About The Author:
Daniel Coyle is an American journalist who has been covering sports and top performers.

How Myelin Impacts Performance

Myelin is a fatty tissue that surrounds the axon of the nerve cells in our body and, importantly, in our brains.

Axons are a bit like the connecting cables of our brains, and myelin is the sheath surrounding these cables.

Myelin can grow with usage similar to how a muscle can grow with usage, and the more myelin we build to connect some specific paths of our brain, the more skilled we will become at that specific craft we're working on.

Put simply: **practice builds myelin, and myelin makes your moves more natural**.

Skill is myelin insulation that wraps neurocircuits and grows according to certain signals.
The story of skill and talent is the story of myelin.

The whole point of *The Talent Code* by Daniel Coyle is to explain how we can optimize our practices to build

myelin quicker and more efficiently.

The Talent Code PART I: Deep Practice

Daniel Coyle says that Deep Practice involves “doing it yourself” first and foremost.

For example, if you’re struggling to remember a name and you remember it yourself you’re more likely to remember it later on.
And if you try to put a safe vest by yourself you’re more likely to remember how to do it compared to simply watching a flight attendant do it.

It’s because you fire those connections in your brain and you build myelin around them.

Do It Often: Action

The more often you repeat a certain action, the more myelin you build.

The deep practice involves quick cycles of repetition based on mistakes and quickly fixing them.

Daniel Coyle explains the huge number of talented Brazilian players in a game they all play growing up: futso. Futso is played on a small field and allows the player to touch the ball up to 600% times more often.

Being so often actively involved in the game allows the futso player to pack much more practice in a much shorter time.

The Sweet Spot: Make Mistakes

Daniel Coyle says the best way to build a good circuit is to fire it, attend to mistakes, then fire it again over and over.

You must teach that circuit how to fire correctly. The struggle is not an option, it’s a requirement.

And that’s why passion and persistence are key to talent: wrapping lots of myelin requires lots of energy and repetition. If you don’t love what you’re doing, you won’t do it often enough.

The author says effortless is a terrible way to perform and so is working against insurmountable odds with no solution in sight.

The sweet spot of deep practice is at the edge of your ability, where you can target the struggles that are near your ability level, make those mistakes and correct them.
Incidentally, the sweet spot at the edge of your ability is also a key to finding inner motivation, as explained by Daniel Pink in Drive.

Repetition Builds Automaticity

Daniel Coyle says our brain is built to make the skills we master automated. The more we build a skill circuit, the more we are aware of actually using it.

Myelin Buildup Cannot be Undone

Myelination -the growth of myelin- happens in one way only: once it’s built it cannot be undone.

The only way to change a pattern of behavior then is to build a new habit by building a new behavior.

We Can Myelinate During Our Whole Life

Daniel Coyle goes a bit into the age question and says that in children myelin arrives in a series of waves lasting until our thirties.

These waves vary depending on the person, and they form critical periods in which the brain is extraordinarily receptive to learning new skills.

We keep building myelin until around 50 when overall myelin tips towards loss rather than accrual.
But we retain the ability to myelinate during our whole life. That's why it's easier to learn young: our genes stay the same, but the ability to build myelin changes.

10 Years Rules

Top mastery requires around a decade, or 10.000 hours of deep practice.

This is one of the most misquoted and most popular notions coming out of Malcolm Gladwell's book "*Outliers*".
It's also one of the most misunderstood, as Daniel Coyle himself says it's more about how you practice than simply clocking hours.

Also, read:

- **Pop-psychology myths**

The Three Rules of Deep Practice

The three rules of deep practice are:

#1. Chunk It Up:

Look at the task as a whole first.

Listen to the whole song, and watch the whole movement sequence.

Then break it into chunks and do them slowly first.
Going slowly allows you to attend to errors more effectively and reach a higher degree of precision whenever you fire signals.
So your myelin grows over the correct portion of neurons more precisely and quickly.

Master the pieces individually, then start linking them together in progressively bigger chunks.

#2. Repeat It

You have to continuously keep working on your skill.

Myelin is a living tissue, it breaks down and repairs, so daily practice matters.

Repetition though is only as good as the quality of the practice. Coyle says that most top talent schools he visited practice no more than 3 hours a day, and doing that in a state of deep practice is not only enough, but it will often exhaust you.

My Note 1:
I don't fully understand here why the author says myelin breaks down while earlier he says that myelin cannot be undone (unless through age or illness).

My Note 2:
I was intrigued about this 3h day practice only that I had to research deeper. I expected to find out 3h only is not enough.
Well, Daniel Coyle in his blog actually takes it even further.
He mentions Barcelona's talent school practices only 70 minutes a day. And he suggests you quit when you're exhausted.

#3. Learn to Feel It

Daniel Coyle says that Deep Practice should feel to you as being a staggering baby learning to walk.

It's an uncomfortable sensation that most sensible people would seek to avoid. Yet the longer you endure in this sensation, the more myelin you build and the more skills you build.

The author then drops another gem when he says that to get good, you must love, or better be enthusiastic, about being bad.

> **To get good you must love being bad**

We Can Be Heroes (All Of Us)

Daniel Coyle says that genes matter and IQ matters.

But we have a good deal of control over what skills to develop and we have more potential than we might have ever presumed.

The Talent Code PART II: Ignition

Motivation is started and sustained through a process called ignition.

Let Your Skill Become Your Identity

Students who performed best in music classes answered they were going to practice longer than students who weren't sure.

The students who performed the best thought and felt like the art they were studying "was their thing".

They had acquired the identity of being musicians (read more on *how to build a supportive identity*)

It's also a social construct: the willingness to be like someone.
So if you had a musician in the family, it could feel to you like that's part of your heritage, which will also come to share your identity.

Ignition is that spark that leads us to decide who we want to be. Ignition shapes our identity.

> **Long term commitment always beats short term commitment.**

Believing You Can – And You Will

Ignition is also what makes us believe we can do it.

Daniel Coyle uses the example of Korean golfers.
There had never been a golfer in Korea, but the moment one appeared, it suddenly seemed possible that a Korean could be great at golf.

She became a star and a few years later Korea started dominating golf.

Similarly, it was for the first man who ran a mile in under 4 minutes. Before then it was thought to be impossible, but after Bannister did, many more did.

My Note:
this story always smelled fishy to me and it might be one of those fake "you can do it" cheap motivational stories with little truth behind it.
The more likely truth is very well explained in my list of *self-help myths*. You don't need fake "you can do it"

motivational psychology to empower yourself.

Ignition Through Competition

Daniel Coyle notices that even in sports where genetics seem to reign supreme, like running, there are strong indicators that there's more than meets the eye.

Most runners, for example, were younger brothers or sisters in the family.

To keep up with their older brothers they had to put in more effort, which worked as the ignition element to always put them at the edge of their skills, effectively leading them to deep practice every day.

Language of Ignition

Daniel Doyle gives a few examples of how throwing a challenge to someone can set out an ignition spark.

Sentences such as "you don't stand a chance" are perfect.

The author then talks about Carol Dweck and her research on *Growth Mindset.*

Telling children they were smart or telling them they worked hard had incredible consequences.
The kids praised for being smart were subsequently looking for easy tests to confirm their intelligence, while children praised for working hard sought difficult tests.
When presented with difficult tests the kids praised for intelligence hated those tests and gave up early. The kids praised for working hard were more likely to relish the challenge and stayed at it much longer.

In light of the myelin and Deep Practice point of view, we can now see how a *Growth Mindset* naturally leads people into Deep Practice (*learn how to develop a growth mindset*).

The Talent Code Part III: Master Coaching

I found Daniel Coyle's description of the master coaches inspiring and eye-opening.

The best coaches were quiet, mostly older, and have been coaching for decades.
Their gaze was deep and unflinching, they listened more than they spoke. They didn't give Hollywood-style prep talks but instead offered small and highly specific adjustments.
They are also a master in psychology and communication

John Wooden, probably the most famous of them all, wasn't looking for big improvements but was constantly working on smaller incremental improvements.

Daniel Coyle says that John Wooden's rules of learning on could be called the rules of myelin. The steps are:

1. Explanation
2. Demonstration
3. Imitation
4. Correction
5. Repetition

Also, read *"Eleven Rings*" by Phil Jackson.

Deep Practice and Psychology

In this part, Daniel Coyle talks about social improvement and how it's similar to deep practice.

Cognitive Behavior Therapy & Deep Practice

The secret to improving socially, as for most anything else, is to move to the edges of our comfort zone.

Then, linger in that uncomfortable area and learn to tolerate the anxiety.

Albert Ellis was a painfully shy kid and decided to react to his shyness problems with his actions.
One afternoon he sat on a bench and chatted with every woman who sat down. In one month he spoke with 130 women. 30 walked away and he spoke with the other 100, for the first time in his life, no matter how anxious he was.

Ellis went on to build an action-oriented approach to psychotherapy came to be known as Cognitive Behavioral Therapy, which works equally or better than prescription drugs according to the New York Times.

Cognitive Behavioral Therapy challenges the Freudian model of examining childhood experience and proposes action instead.

The issue with most therapies, Ellis said, is that they help you feel better. But you don't really get better. You gotta back it up with action and action.

> **Albert Ellis**: "neurosis" is just a high-class word for whining

This is similar to what Tony Robbins said in which Freudian psychoanalysis looks for the issues instead of looking for solutions.
The problem with looking for issues is that you find what you look for, so you will find them. So if you look for solutions instead you'll find solutions.

Prolonged Exposure Therapy: Building New Connections

Daniel Coyle says you can't undo myelin wrapping, but you build a new connection to link the traumatic stimulus to a new normal everyday event.

So, for example, doctors use software -Virtual Iraqui- to administer all the war sensations to the returning Iraqui soldiers dealing with Post Traumatic Stress Disorders.
The idea is to relive the memory without triggering the debilitating connection.

You can't easily unbuild the circuit of war memories and stressful reactions, but you can build another road where the war memories don't lead to any negative reactions.

This way the war memories and sensations, played and played again, become the new normal.

For more on trauma read "*The Body Keeps The Score*".

Real-Life Applications

Two huge lessons learned you can readily apply:

1. Use the Deep Practice methods in your craft of choice
2. Pick the identity of what you want to become to solidify behavior and long-term commitment

CONS

Naive empiricism
Doyle says Brazil has won the most World Cups and has the top players, so… It's got the results to prove Brazilians must be doing something "special", right?
Nope.
At the time of writing, Brazil has 5 world cups, and Italy and Germany have 4. But if you divide the world cups tally by population, then Italy has more world cups per inhabitant, which matters far more if you're looking at the country that produces the best talent.

Jumps to conclusions
The author says that Brazilians learn better than anyone else because they play on five-men smaller pitches. Doyle ignores that most guys in European countries also play on those same smaller pitches. For his theory to be even a valid hypothesis, he should have made sure that Brazilians play significantly more in smaller pitches than any other country.

Also, read "naive empiricism" in our foundational *naive self-help article:*

> Naive Self-Help: 10 Most Dangerous BS to Avoid

Does myelin undo or not?
In one part Daniel Coyle says you need to keep practicing all the time or the myelin scaffolding will undo itself. In

several other instances, he says you can't undo myelin.

Which is which?

Review

"*The Talent Code*" is a wonderful book.

It will improve your understanding of how the brain works and what you can do to reach mastery of your craft even faster.
And all information is applicable and supported with examples to make it easier for you to understand.

If I had to leave you with one key piece of advice to take away from *The Talent Code*, it's this:

> **Love The Struggle**

Be a Sales Superstar: Summary & Review (Brian Tracey)

Lucio Buffalmano · 18 September 2017 · Archived copy · Original

Be a Sales Superstars teaches salespeople how to become a sales superstar both through the mindsets and the techniques of selling.

Contents

- Full Summary
  - #1. Ambition
  - #2. Courage
  - #3. Commitment
  - #4. Professionalism
  - #5. Preparation
  - #6. Continuous learning
  - #7. Responsibility
  - #8. Make Every Minute Count
  - #9. Sales Superstars Tips
- Review

Full Summary

About The Author: Brian Tracy needs no introduction for most. He is one of the most popular self-help gurus, a high-ticket international speaker, and a world-renowned sales coach.

And here is what it takes to become a sales superstar:

#1. Ambition

Top salespeople see themselves as being able to be the best.
Make a commitment to becoming among the best 10%.

#2. Courage

You can't be great in sales without first conquering the fear of rejection and criticism. Repeat yourself "I can do it"

#3. Commitment

Top achievers commit to their craft.

Make a decision to commit to what you're selling, commit to your company, commit to helping your customers, and commit to yourself.

#4. Professionalism

Top salespeople see themselves as consultants.

This is important, Brian Tracey says, because how the person feels about you in the back of their mind is key to whether or not they'll buy from you.

And if they feel like you're a salesman, they might have some reservations.
If they feel like you're a consultant, they'll be much more open.

Brian Tracey says that people take you at your evaluation of yourself and then look for confirmation in your behavior. If you present yourself as a consultant people will tend to accept you as such.

I quote him for a great way of doing just that:

> *"thank you for your time, please relax, I'm not here to sell you anything, I see myself more as a consultant than a salesperson.*
> *All I want to do is ask you a few questions and see if my company can help you in a cost effective way.*
> *But I am more of a consultant than a salesperon".*

After such an intro, customers were far more open and more likely to buy and refer friends.

#5. Preparation

Sales superstars review all the notes before a sales call.

#6. Continuous learning

Top salespeople spend between 5 and 10 times more time and money on learning.

Brian Tracey also speaks about a friend of his who would not hire any salesperson who didn't read and keep informing himself.

#7. Responsibility

Top salespeople see themselves as president of their own sales corporation and they view themselves as self-employed.

They refuse to make excuses or blame anyone else for anything in their life they're not happy with.

Their motto is: if it's to be, it's up to me.

> **If it's to be, it's up to me**

#8. Make Every Minute Count

Top salespeople always ask themselves:

> what's the best use of my time now?

Brian Tracey also often repeats to turn your car and your commute into a learning opportunity: listen to audiobooks, and CDs and make use of that time. I couldn't agree more.

My Note:
It's not just sales superstars who make every minute count; it's very efficient people the whole world over.

#9. Sales Superstars Tips

And here is a list of what it takes to become a sales superstar:

1. **Act as if it were impossible to fail**
2. **Build long-term relationships**
3. **Build credibility with every prospect**: a prospect you treated well and professionally today is a customer tomorrow. A customer you treated well today is an evangelist tomorrow

4. **Handle objections effectively**
5. **Apply the 80/20 rule to everything**
6. **Keep your sales funnel full**
7. **Set clear income and sales goals:** and divide them by the hour
8. **Divide your territory strategically:** always schedule your meetings geographically closer so you will meet more people per day

Review

All material I have read or listened to from Brian Tracey is top-notch, and Be a Sales Superstar is no exception.

You can read here a summary of what I liked the most from Brian Tracey here.
Or you can get Be a Sales Superstar on Amazon.

Rich Dad Poor Dad: Good For Beginners, Top Men Need More

Lucio Buffalmano · 19 September 2017 · Archived copy · Original

Rich Dad Poor Dad is a popular book on personal finance that, through the author's personal experience, teaches the different mindsets between people who make money, and those who stay poor.

Contents

  - Libertarian ideology indoctrination
  - For beginners only
  - More cons
  - Other people's criticism
- Real-Life Applications
- Review

Bullet Summary

- **Working for someone else is for suckers**. It means helping someone get rich while putting little in your pocket
- **The employed middle class pays all the taxes**. They subsidized the poor while the rich avoid most taxes
- **Work to learn**, not for money

Summary

Robert Kiyosaki, the author, focuses more on mindsets than on pure practical advice on how to get rich.

And he shares the wisdom in parable-like stories. For this "*Rich Dad Poor Dad*" summary I will skip the parables and focus on the concrete advice.

#1. Stop Working for People

The first and possibly biggest lesson Rich Dad gives to Kiyosaki is to step off the rat race.

To stop working your life for someone else. Working for someone, being an employee, means putting little money

in your pocket and lots of money in someone else's pocket.

#2. The Rich Don't Work for Money

Kiyosaki says most people have been duped into playing it safe and not taking any risks.

So we have a whole army of poor and middle-class people exchanging lots of their time for (little) money and some security.

#3. Learn to Differentiate Asset VS Liability

Kiyosaki says there is one major rule for financial literacy and growing rich. And that's the Asset VS Liability Rule.

An asset is simply what puts money in your pocket. A liability is anything that takes money from your pocket.
And make sure that you only control assets

If you buy a house and live in it while paying mortgage and taxes, you got a liability.
If you buy a house and rent it and the rent pays the mortgage and puts something in your pocket, you got an asset.

Kiyosaki in this regard gives great simple advice: **only buy a house if it makes sense from a cash-flow point of view today -not in the future-**. never buy a house because of the potential for appreciation in the future.

Ask yourself:

> Is the cash flow positive?

If the cash flow is positive, then you have an asset.
And it's a good investment.

If the cash flow is negative and you believe it will appreciate soon, don't buy it.

List of Assets

Kiyosaki says the following count as assets:

1. Stocks
2. Bonds
3. Notes (IOUs)
4. Income-generating real estate
5. Royalties from intellectual property (software, music, scripts, patents)
6. Anything that produces income or appreciates (and bonus if it has a liquid market)

#4. Rich & Corporations Spend, The Poors Pay Taxes

Kiyosaki shows a rather belligerent attitude towards government and taxes here, but what he says still rings damn true.

The poor people pay taxes first and keep what's left.
Corporates and rich people who shield behind corporations know the systems and use loopholes to pay as little as possible.

Also, corporations don't pay taxes first. They accrue income, spend and then only pay taxes later on what's left.

Comparatively, it's as if you received your salary in full, without tax detractions, and then paid taxes on what you left at the end of the month.

Knowing the system, knowing accounting, loopholes, markets, investment vehicles, and the law also helps you. The ignorant get bullied, and the knowledgeable are in with a fighting chance.

Also, read:

- How corporations manipulate employees

#5. Work to Learn, not for Money

Kiyosaki says you are one skill away from dramatically improving your life.

Many talented people are poor because they are only specialized in one skill only.

The author uses the example of a girl with a master's degree in literature who refused to enroll in a sales and marketing course because she thought that was too beneath her.

He also uses a good example.
He asked a room of people how many people could make a better hamburger than McDonald's, and everyone raised their hands. Everyone can do a better hamburger than McDonald's, and yet McDonald's is a multi-billion corporation because it can sell well.

Kiyosaki says some key skills to learn are management skills, business system knowledge, and sales and marketing skills.

> **You are one skill away from revolutionizing your life**

#6. Rich Dad Mindsets

The author says that the 5 mindsets that most stand in the way of success and wealth are:

1. Fear
2. Cynicism
3. Laziness
4. Bad habits
5. Arrogance

I loved the story Kiyosaki shared. When he tells people there's money to be made in buying and fixing real estate people reply they don't wanna fix toilets.
Kiyosaki says it's silly that people look at the small detail instead of looking at the bigger picture and bottom line.

My Note:
To me, more than an example of looking at the detail, this is a typical example of letting your ego get in the way of what you really want. And a typical example of sacrificing long-term goal achievements for short-term pain.

Read more on cynicism:

> Positive Cynicism: Turning Poison, Into Gold

#7. Develop Financial IQ

After IQ and EQ, there is also "financial IQ".
To increase your financial IQ you must understand the following:

1. Accounting

2. Investing
3. Markets
4. Law

#8. Cash-flow Quadrant

Rich Dad Poor Dad is famous for its cash flow quadrant.

The employee in the first square *have* a job, have no leverage, and exchange time for money.

The self-employed *own* a job and how much they work is related to what they earn.
The business owner owns a system and leverages other people's time for income.

The investor leverages money to make money.

More Rich Dad Tips

A collection of tips I took away:

- **Pay yourself first:** always put some money aside for yourself, and do it first thing
- **Pick your friends:** get around people who like talking about money
- **Be generous:** your professional supports are the people propelling your success, choose a good broker, pay him well
- **Find a bigger reason:** find a bigger purpose in life to motivate you
- **Start as many businesses as needed:** 9 out of 10 businesses fail, say Kiyosaki. Good, then it means you gotta start 10 of them

Especially the last one was an "aha" moment for me.
I was a guy with a really bad mindset toward business, thinking that it was dumb to start a business when 90% fail.

> **9 out of 10 businesses fail. Then start 10**

Rich Dad Poor Dad Criticism

I'll save you time:

The stories are made up, and the book is very simplistic.

If you're not a beginner, skip it.

Smells of made-up stories

Once you develop your intuition for made-up self-help, you'll see.

Until then, trust me:

Half of these stories smell like made-up BS.

Actually, here's a litmus test for you:

If it feels like a Hollywood movie line, it's probably BS.

Here is an example:

> **Rich Dad**: (talking to a 9 year old) … that's my offer, take it or leave it

> **Robert**: may I ask a question first?
> **Rich Dad**: no, take it or leave it. (…) I got too much work to do to waste my time. If you can't make up your mind effectively, then you'll never make money anyway. Opportunities come and go, being able to make quick decisions is an important skill (…) school is beginning or it's over in 10 seconds
> (Richd Dad proceeds to be a weird teacher who pays slave wages and has him do menial work that feel nothing like learning)

LOL this Rich Dad talking like that to a 9-year-old, sure

Also, doesn't that sound like The Karate Kid?

My money is on this never having happened.

Libertarian ideology indoctrination

Many of Rich Dad's mindsets are your run-of-the-mill "small government" and libertarian takes.

But masked as if it were "the only possible mindset to get rich" -it's not-.

For beginners only

While the concepts and ideas are valid and great for beginners, more advanced and ambitious men need more.

More cons

- **Man Eats Man Perspective**

Kiyosaki takes an individualistic, "dog eat dog" perspective.

But many great businesses are built with an eye both to the bottom line *and* to adding value to the customers and the stakeholders.

- **Black and white thinking**

Dividing the world into "independent entrepreneurs who get rich" and "employees who stay poor" makes it easy and simpler to write an appealing book.

However, it doesn't do any good service in explaining reality.

There are plenty of employees who got wealthy –Jack Welch, technically, is an employee-.
And there are plenty more who live happy, fulfilling, and outright awesome lives without following the tenets of *Rich Dad Poor Dad*.

- **Real Estate Focus**

Rich Dad Poor Dad is heavily focused on real estate. It might be your thing, but if it's not, you won't get nearly as much value from it.

- **Caustic Towards Education**

There seems to be a hidden trend where Kiyosaki is hiding some anger toward the typical white collar well-educated employee.

I understand where that is coming from as I sometimes feel the same, but you gotta move beyond that.

Education, even university education, is not the antithesis of entrepreneurship, risk, and hard work.

As a matter of fact, I would advise getting that degree which will make your risks safer: whenever you fail or

whenever you need a degree make it easier for you to get a job and rebuild some wealth to start afresh.

- **Demeaning Towards Some**

Rich Dad Poor Dad tends to divide the world into "smart people", or those who follow his suggestions, and "dumb people", those who don't. I find it very demeaning and extremely simplistic.

Other people's criticism

Robert Kiyosaki has drawn plenty of criticism for his *Rich Dad Poor Dad* series.

- John T. Reed writes:

> Rich Dad, Poor Dad is one of the **dumbest** financial advice books I have ever read. It contains **many factual errors** and numerous **extremely unlikely accounts of events that supposedly occurred**.
> *Rich Dad, Poor Dad* contains much **wrong advice**, much **bad advice**, some **dangerous advice**, and **virtually no good advice**.

And he then proceeds to tear the book apart.
Kiyosaki himself replied to John T. Reed.

- Trent Hamm of The Single Dollar:

> I read the book a second time and **concluded that the book was a waste of time.**

Hamm says that he initially got very inspired by *Rich Dad Poor Dad*. But after reading John Reed's criticism he went through the book a second time and concluded it was a waste of time.

- Rob Walker at Slate writes:

> A good chunk (…) is self-help boilerplate. First, there's the mandatory declaration that it isn't a get-rich-quick book. Second, there's the repeated claim that "the rich" have "secrets" (…) that will herein be revealed. Third, the series of "lessons." And fourth, the counterintuitive revelations that effectively undercut various popular "myths."

He says, basically, that there is nothing groundbreaking here and that the advice is simplistic.

- Mike Norman of The Motley Fool

> Much of the wisdom can be best described as simplistic, unsophisticated and in some cases, totally absurd. ("You're a loser if you work at a job. Formal education is a waste of time if you want to get rich. Mutual funds are for losers," etc.)

Norman goes on to say that Kiyosaki didn't get rich with his own advice, but by operating what's actually a multi-level marketing scheme (*Go Pro* teaches how to excel at those).
This is the same that DeMarco says in *The Millionaire Fastlane* Kiyosaki got rich by *selling* the advice instead of *using* the advice -and he calls it a "paradox of practice"-.

And then there is Forbes alleging that there is no proof Kiyosaki was rich before the publication of *Rich Dad Poor Dad*.
And Farrington at The College Investor says that his company's bankruptcy makes him a hypocrite.

What I think of the criticism

As you can see, the criticism is plenty and abundant.

What do I think of all this criticism?
Well, I think that most of it is actually true.

However, that's not to say that Rich Dad Poor Dad doesn't also have qualities.
I look at my own family and cannot help but think how richer they could be if they had heeded the advice in this book.

They live in the countryside in their way too big houses with gardens.
They think of their houses as their little, invaluable nests.
And they really think they're richer because of their houses.

They'd never rent, and of course, they'd never rent their own house to someone else.
They *think* they are "well-off" because of the asset mentality, but in the meanwhile, keep paying taxes and crazy maintenance expenses.
Then I speak to them… And they're always complaining about how short on cash they are.

Doh!

I wonder how that might be…

If they had built smaller places, built in better areas, or if they didn't act as if renting out part of them was a sin…
Well, over decades they'd be much, much richer.

Real-Life Applications

Here are a few points I took away and I constantly try to apply:

Don't buy liabilities

- Do you really need a car?
- Do you need gym memberships if you don't go?
- Do you need to buy a house if you don't have cash and pay the mortgage and repairs?

- Do you need a pet?
- Do you need Netflix, Tinder Pro, and all other subscription services…?
- …..

Buy assets

- Low-priced flats for renting
- Dividend-paying stocks
- Bonds
- If for living, what if you bought a multi-room house and rented out a room to pay the mortgage?
- Storage units and sell space
- ….

Reduce Expenses
Kiyosaki says it's not how much money you have but how much you keep. The truth is deeper than it might seem: most people don't have any money because they let expenses balloon when they start earning more.

Entrepreneur Neuro-Associations

Kiyosaki suggests what's basically Tony Robbins' method to move towards your goals: associate pleasure with what you want and disgust for the other options.

If you want to quit the rat race, escape the middle class, or be your own man, I find Rich Dad Poor Dad to provide very strong neuro-associations to support it.

Here are some you can use to grow your disgust for being an employee:

- Middle Class is gullible to paying for everyone
- Employees are enriching someone else while putting little in their own pockets
- Employees are enriching the government and fat cats politicians
- Employees are the equivalent of the nice guys who make everyone happy except themselves

Review

Rich Dad Poor Dad is a good book to showcase some important mindsets that differentiate rich people from poor people.

Although basic for more advanced men, **Kiyosaki's main concepts are largely true and valid.**

As a matter of fact, I wish part of my family could understand the simple and yet transformative power of Assets VS Liabilities in reducing expenses.

The concept of having to start 10 businesses to be successful also hit me.
I used to think startups were silly and for silly people because, well, 9 out of 10 fail, why would anyone take that sort of risk, it just makes no sense.

So when I heard Kiyosaki saying it only means you gotta start 10 businesses, well… That was a major "aha moment".

Overall, if you have zero education on personal finances, **get *Rich Dad Poor Dad* and then come back here to learn the more advanced lessons on male success.**
If Ki'yosaki's concepts were already obvious for you, keep exploring our website.

Check here for the **best books to read** or Get it on Amazon.

Rich Dad Poor Dad Summary: Street-Smart or Simplistic BS?

Rich Dad Poor Dad has many critics, but the book simply delivers great insights and some key mindsets. Some of the insights can improve your life, and some of the mindsets can change your life.

- Agree and redirect, never argue!
- Sales are about making friends
- Don't tell people what's bad about their current supplier, ASK them what could be improved with their current supplier

Full Summary

About the Author:

> **Lucio**: Robbins is a fantastic motivational speaker, a self-help "guru" with great content… And an endless marketer and covert bragger. Still thumbs up, though

Pain and Pleasure

Tony Robbins says there are two main drivers in life: avoiding pain and seeking pleasure.

As a top salesman, you gotta build both!

When a person buys it's because he associates more pleasure in buying than not buying. Buying means pleasure, not buying means pain.

Tony Robbins says that if you want to sell you must get the person to a point where they are really dissatisfied with what they are and/or with what they have.
Once you get them to that point, they are now compelled to change. Now heal them with your product.

Tony Robbins says that AT&T reaches out and touches someone advertising masterfully using both pain and pleasure at the same time.

Basically, to stir pain, you must disturb your prospect. And then heal him again.

On the pleasure side instead, persuasion is the process of getting your customer to clearly associate their most desired feelings or states to your product or service.

Framing

Tony Robbins uses the example of selling a real estate property. Let's imagine the objection is the distance from the city. This is how you deal with it:

Preframe

Find out what the likely objection to your products or service is and start with them.
If the house is 50km from the city you can say

> "I will show you this property, it's amazing, the biggest I've seen around here. and most importantly it's 50km outside of this filthy city. You can be out there in the open space and smell fresh air. And if you gotta get here, in 40 minutes you are. And when you get home, freedom.

Reframe

If the objection comes later, make a question out of it and then address that question.

Let's imagine the prospect raises the distance objection, you say:

> *OK, but you really liked the property.*
> *Yes, but too far.*
> *How long will it take to get to the place you'd like to go to?* (turn the objection into a question)
> *How much longer will it take than the place you were possibly thinking.*
> *20 minutes*
> *Isn't it worth 20 minutes for living outside of the filth of the city?*

Deframe

Tell them they're not good enough for it.

> *It's too far away*
> *I'm kinda glad you said that, I didn't think you could qualify to live in this community*

And now he'll be proving to you that he's good enough.

Check Dan Rather interviewing George Bush for that.
On the topic of integrity, Bush first tries to reframe, which doesn't work and then goes for deframing. Now the interviewer is chasing. Now it's about Dan's integrity, not Bush.

Set Outcome

Tony Robbins suggests setting outcomes for your goals rather than listing a set of activities.

BELIEFS YOUR CUSTOMERS MUST HAVE TO BUY

1. **That You Have Their Best Interest in Mind** Believe in your product and care about the person. The most

important tenet

2. **That Your Product Fills Their Wants** Many salesmen sell what *they* wanna have. So if they are adventurous they tell their clients "oh this trip around the world will be so adventurous". While if the customers want to connect they should say "connecting with people of all cultures will make you feel great".
3. **What Will Others Think:** We are human creatures, we always care what our neighbors, friends, and colleagues will think. And of course, our partner.
4. **It's Worth It:** The question for the customer is what they have to give up to get your product. It's not just money, but do they need to wait, do they need to learn how to use it, to install it, to tell another supplier they don't wanna work with them anymore? You want them to believe the pain to acquire your product pales in comparison to the benefits they will get

If they don't wanna break a relationship, you make them hurt even more.
So ask them: wow you know what, I'm jealous of your supplier for such a great relationship. Tell me, what does he do so great (telling he's wrong goes against his beliefs)?
And then tell me, what could he do better?
Now, drill on the things he could do better: what does it mean to your company? What if the mistakes keep going on…?

Align and Redirect -Never Argue-!

If he says it's too expensive, never say "no" because that would break rapport.

Ask why it's too expensive, or compared to what it's too expensive.
Then ask "well, mr prospect, have you ever had a situation when you tried to save money and were dissatisfied with a cheap product you bought? It just happened to me some days ago with… ".

And then ask if they'd rather have a quality product.

Another great way is to actually agree with them and then redirect.

And if they don't know the answer to one of your questions you can say. *I can appreciate that, I know you don't know the answer, but if you did know what would you probably say*".

Or: "*I know you can't but if you could, what would it be"*

Handling Gatekeepers

Tony Robbins says some salespeople's strategy to go through gatekeepers is to bully them into compliance. I have seen the "bully technique" in action and experienced it firsthand. Definitely, not the best way to go.

He suggests instead that you be nice to the gatekeepers while staying steadfast to your goal at the same time. The approach he recommends is that you call and say something like:

> Hallo, this is Janet, good morning
> Hallo Janet, good morning, this is Tony Robbins from Robbins Research is mr Smith in?
> Who wants to speak with him?
> Yes, this is Tony Robbins from Robbins Research
> Oh, OK, can I take a message for you sir?
> No it's personal

Tony Robbins says it's OK to say it's personal because it is personal since your target is the only one who can actually evaluate your proposal and answer.
If the gatekeeper tells you he's in a meeting, here's the move Robbins proposes: you say "OK, I'll hold". Holding,

says Robbins, will pile up lots of pressure on the gatekeeper that will eventually yield and pass your call as soon as the meeting or the call your target was on is over.

Believe in Your Products

Similar to many other sales training and books, Robbins repeats a big truth of what it takes to be successful in sales: you have to believe your product is good and will help your targets.
Call not because you need to call, but because you want your prospects to be better off.

Make Friends

Lastly, Tony Robbins reminds us that salespeople are paid to make friends!
You have to love people!
Enjoy people, and like them, everyone has something you can like. Even annoying ones might have a bad day, and they will remember if you help them.

The people who are loved the most are those who can induce state changes. If someone is sad, that's your opportunity, make them happy!

How You Can Apply It

- Never argue with a customer, agree and change his mind with questions instead
- If you want to change someone's mind don't tell them about what's bad, ask them about what's bad and let them tell you

CONS

Scatterbrained
It's an audiobook and, like a few other Tony Robbins' products, it doesn't seem to follow a precise structure, it jumps a bit left and right which can make it slightly harder to follow

Review

Some great gold nuggets from Tony Robbins.

Especially the part in which the author says you don't ask what someone else is doing wrong as that's too direct. Make a compliment first, then ask what they could do better and let the prospect see the other party is not that great after all.
If you enjoyed it also check: *Personal Power II*

Awaken the Giant Within: Summary & Review

- Change your focus, beliefs, and identity to change your life

Full Summary

About the Author:
Tony Robbins is a renowned life coach, motivational speaker, author, and entrepreneur

> **Lucio**: Robbins is a fantastic motivational speaker, a self-help "guru" with great content… And an endless marketer and covert bragger. Still thumbs up, though

1. Dreams of Destiny

The 5 areas that impact us the most:

1. **Emotional Mastery:** the final goal of most things we do is to change how we feel
2. **Physical Mastery:** "mens sana in corpore sano" said the Latins. Such as; mental and physical fitness are

connected
3. **Relationships Mastery:** we are social beings, we can't be happy without great relationships around us
4. **Financial Mastery:**
5. **Time Mastery:** it's not time management as it may sound, but more about nurturing your ideas and potential for long enough to come to life. People overestimate what they can do in a year and underestimate what they can do in a decade

2. Decisions: The Pathway to Power

Tony Robbins says that to take control and direct our lives we must take control of our decision power.

We must be able to decide and commit to a course of action. Not once, but repeatedly and consistently.

Robbins advises the readers to decide who they are going to be and what they are going to do.
And then commit to it. Remove any other backup options if need to be and burn your bridges.

Three decisions with which you will control your destiny are:

1. What to focus on
2. What do things mean to you
3. What to do to create the results you desire

Our brain set up an internal system to make our decision-making more automatic:

1. Core beliefs and (unconscious) rules
2. Life values
3. References
4. Habitual questions
5. Emotional states

It's scary, that the vast majority of people never take conscious care of their thoughts and their actions.
But the good news is that you can always override and change the system with conscious and directed effort.

3. The Forces That Shape Our Life

This is a core pillar of Robbins' NLP-based philosophy:

> **What you link pain to, and what you link pleasure to shapes your destiny.**

Robbins says everything we do is either to avoid pain or seek pleasure.

When you don't do something even though you know it would be good for you is because you associate more pain with doing it than not doing it.
The net value is not positive yet in your mind.

If you don't change despite the pain, it's because the pain isn't strong enough yet.

So the secret to changing then is to associate major pain with the behavior or habit you want to quit and massive pleasure with the behavior you want to move towards.

For more ideas on changing habits check out "*Atomic Habits*".

4. Belief Systems

Tony Robbins says that Beliefs are generalizations telling us what leads to pain and what leads to pleasure.

Most of our beliefs are generalizations about our past and what happened to us.
They are not reality, but the meaning we gave to events.

It's indeed not about the actual experience, but about the meaning we give to our experiences.

The problem is that once we adopt a belief we take it for granted, we treat it as truth and we forget it's simply our interpretation.

A belief is supported by a number of references we feel confirm that belief.

My Note:
Oftentimes though we discard references running against our beliefs or we modify references to make them fit with our beliefs.
And we do that with unhelpful beliefs as well!

The most effective way to change a belief is to associate massive pain with that belief and massive pleasure with the new belief you want to adopt.

5. How to Change Neuro-Associative Conditioning (Operant Conditioning)

Tony Robbins gives us 6 steps to change neuro-associative conditions:

Step 1: Decide What You Want (and what's stopping you)

The first step to creating any change is deciding what you want so that you have something to move towards.

Ask:

> what do I want (instead of..) .. ?

The more specific you can be, the more clarity you will have and the more power you will command to achieve what you want more rapidly.

It's important you focus mostly on what you WANT, not what you DON'T want, remember, you get what you look for and what you focus on.

At the same time, we also must learn what's preventing us from having what we want.

At the bottom of it, it's because we link more pain to making a change than to staying where we are.

So ask yourself what is the pain you have associated with changing in the past and the pleasure you've gotten by not following through.

Step 2: Leverage! Use Pain and Pleasure

Change is usually not a question of capability but almost always a question of motivation.

The only way to make a change now is to create a sense of urgency that's so intense that we're compelled to follow through.

Tony Robbins says that one of the things that turn virtually anyone around is reaching a pain threshold, such as such an intense level of pain that you know you *must* change *now*.

If you tried to make a change and failed it means the level of pain for failing to change was not intense enough.

To get leverage ask yourself pain-inducing questions: rather than being busy estimating the price of change as we

mostly do, ask:

- what will this cost me if I don't change?
- What will I miss out in my life?
- How will it affect my loved ones?
- How much life will I have missed 2 years from now? 5 years from now? 10…?

Then ask yourself positive questions about what the change will mean to you once it's happened.

For example: if I do change, how that will make me feel, what kind of momentum could I create, how my family and friends will be, and how happier will I be?

Gets lots of reasons, or better yet, get strong reasons!

A few more ways to summon up more leverage:

Public Commitment
A public commitment might also help.
Or make the commitment to those people who will not let you off the hook

Personal Integrity
One of the strongest forces in human personality is the drive to preserve the integrity of our own identity and we often don't realize our own contradiction.

If you want to help someone you better access the leverage of keeping integrity.

do so by asking them questions that make them realize for themselves the inconsistencies (ask questions rather than telling them as that will only make them push back).
And this is also a tool you can use on yourself.

Example: Fixing a Marriage

A woman was not able to give herself 100% to her husband.

Tony Robbins found out it was because she gave 100% to her family but felt let down.

Tony asks what will happen to her relationship if she doesn't give 100% (here Tony is looking for leverage). S he tells him it will eventually lead to break up and bad feelings overall.

Now Tony got leverage.

Her pattern though is still that "what if he lets me down".

So Tony asks "lemme ask you a question, have you ever driven on a road where only a line was dividing you and the other cars? Is it possible someone could come to your side of the road and kill you? How could you then drive a car under those conditions". "well… I trust.. " "what happens if you don't trust… " "I cannot get from here to there, I'm trapped".

Now the association of not trusting is with not living, with being trapped, which means living a poor life.

In brief: Ask yourself what it has cost you so far, what it will cost you if you don't change over the next 2-3-4 years, and how it makes you feel. Then ask yourself what will you gain by taking this action right now and make a huge list that will make you feel great emotionally (say to yourself: I'll gain I'll gain I'll gain..)

Step 3: Interrupt The Limiting Pattern

If we run the same old patterns, we're going to get the same old results.

So we gotta interrupt the old patterns.

A powerful pattern interrupting system also creates leverage, and with these two steps alone you can already change anything.

You have to interrupt the pattern while it's happening. And the more outrageous the way, the more effective it will be.

Example: Stop Overeating
If you overeat, your pattern interruption could be to stand up at the restaurant and scream "PIG" pointing at your seat. This way it both interrupts the pattern makes you shy to do it again and gives you a reason not to overeat again.

Step 4: Create a New, Empowering Alternative and Link Pleasure to it

Step 4 is critical to establish long-lasting change.

We want to change our neuro associations because they have some major side effects we don't like.

But in our brain, those neuro associations and patterns have been designed for us to avoid pain and have been going on likely for a long time. So there can be a tendency to get back to them again.

So if you don't replace them with something new, chances are you'll be going back at it again.

You avoid going back to the old habits by filling the gap with a new set of behavior that will give you the same pleasurable feelings without the negative side effects. The benefits of the old feelings or behaviors must be preserved by the new behaviors or feelings.

Short-circuit Another Pleasure for the New Alternative
You can also use the pleasure of something else to start feeling strongly about the new pattern and link it to the new pattern through repetitions. For example:

Example: Music to Stop Overeating

Tony Robbins associated pain with not finishing everything on his plate.

He started associating pain with overeating and pleasure in pushing the plate away with food still on it.

He pushed the plate away playing his favorite music and putting himself into peak state, feeling pleasure while pushing the plate away, again and again.

Example 2 – Surfing to Learn

Tony Robbins received a kid who, the teachers said, couldn't learn.

Tony made him talk about something he loved: surfing.

And then Tony asked, "how did you learn to do that". "I learned that.. "

Now the kid is talking about learning.
Then he asked what would it be like to develop a surfing school.

Now the kid starts linking school to something great.

Then Tony Robbins took words the kid could not spell and told him to spell them as if he was surfing, with the same sitting position, with the same breathing, and with the same rhythm.

Guess what?

He was able to spell them.

Example: beat fear with the feeling of power

Tony Robbins was treating a guy fearing elevators.

So he got him thinking about a time he was feeling strong and powerful.
And then suddenly think about riding an elevator.
And he did it over and over again until the strong and powerful feelings started rubbing off the elevator rides as well.

For someone with a phobia, indeed, let them think about a time they felt super powerful.
And make them associate feeling strong and powerful with their phobia.

They feel differently, they behave differently.

Step 5: Condition the new Pattern Until it's Consistent

Conditioning is the way to make sure a change you create is consistent and lasts long term.

The simplest way is simply to rehearse it again and again with tremendous emotional intensity until a neurological pathway is created.

Any pattern that is continually reinforced will become automatic and will become a conditioned response. Anything we fail to reinforce will eventually dissipate.

Imagine It
And you can begin to condition the pattern by just imagining! Remember: your brain can't tell the difference between something you vividly imagine and something you actually experience.

Reinforce It with Rewards
We can reinforce our own or someone else's behavior through positive (or negative) reinforcement.

Such as every time we produce the behavior we want, we give a reward (praise, a gift, attention, a smile, etc.).

Punishment and rewards are not the same as reinforcement. Reinforcement comes immediately after, and punishment and reward may occur long afterward.
And timing is absolutely critical: the sooner the better.

Example: How to Make Your Partner Call You

A BF who wants the GF to call him every day might berate her for the delay when she finally calls.

If when they call you, you give them a negative reaction right away, that's negative reinforcement by giving pain right after the behavior you want to encourage.
The pain will be linked to calling you.

Remember: link pleasure to any behavior you want someone to repeat.

So the next step is to draft a schedule to reinforce your new behavior. Reward yourself for succeeding step after step.

Caveat is to make the reinforcement variable, otherwise, the reward will become the norm, and expected, and won't help us anymore.

Step 6: Test it!

One way of testing if it will work is "future pacing", from NLP, which means you imagine the situation that used to frustrate you and notice if it still frustrates you or if your new pattern has replaced it.

Example: Quit Smoking

if you have the urge to smoke when feeling overwhelmed, imagine yourself in an overwhelming situation.

then notice if you have an urge to read or run or whatever new alternative you've conditioned instead of smoking.

It's good to make sure the pleasures of the old pattern are maintained in the new one.

Also, it's good to test the "ecology", such as the impact of the changes you've made and if they fit in with who you are.

6. How to Get What You Really Want

If you dig deeper to examine why you want anything in the first place, you will eventually find out that you want it because it gives you a certain feeling or emotion.

Tony Robbins says that **one of the quickest ways to change how we feel is by changing our physiology**.

Another way is to change what we focus on: focus on what you want rather than what you fear and you will feel better and are much more likely to reach your goal.
And a great way to change your focus is with questions.

Here's another great idea: write down a list of everything that makes you feel great. Now you have a whole list of what you can do to feel superb.

7. Questions are the Answers

Tony Robbins says that quality questions lead to a quality life.

Three great things questions can do for you:

1. Change your focus
Questions will quickly change what we're focusing on consequently will quickly change how we feel

2. Change what we delete
What you don't think of, you will forget. By keeping at the forefront of your mind the positive stuff of your life you will also delete all that makes you unhappy.

3. Questions give you new resources
The brain will search and scan all the options available based on the question we ask ourselves.

If you ask yourself "how can I be so stupid", as many of us do, guess what? You will find a ton of reasons.

But if in times of difficulty, you ask yourself "how can I turn around" your brain will deliver ways to turn it around.

The problem-solving questions:

1. What's great about this problem?
2. What's not perfect *yet*?
3. What am I willing to do to make it the way I want it?
4. What am I willing to no longer do in order to make it the way I want it?
5. How can I enjoy the process while I do what is necessary to make it the way I want it?

> **Emotion is created by motion**

8. Improve Vocabulary & Metaphors

Tony Robbins says that there's a link between the words we use and the states we feel.

Replace words such as "terrible", "tragedy", "it killed us", and "furious" with something gentler.

9. The 10 Emotions of Power

As we've seen, we can choose what emotions to feel at any time.

It's still good to "listen" to them though from time to time to see where we're at.
They're like an internal compass pointing towards the actions you must take to reach your goals.

Four basic wrong ways people deal with emotions:

1. **Avoidance** (trying not to feel anything at all) ;
2. **Denial** (faking that "it doesn't feel that bad") ;
3. **Competition** (a race to who's "got it worst") ;
4. **Learning and Using** (the correct one)

Mastering emotions is done in 6 steps:

1. Identify what you're really feeling;
2. Acknowledge and appreciate, knowing emotions support you, you never want to make your emotions wrong.
3. Get curious about the message this emotion is offering you. It will help you master your emotions, solve the challenge and prevent the same from occurring again.
4. Get confident you can handle it immediately. Remember a time you felt similarly and successfully handled it.
5. Get certain you can handle it in the future as well. Rehearse handling situations where this Action Signal comes up again.
6. Get excited and take action.

And these are the ten emotions of power:

1. Love and Warmth
2. Appreciation and gratitude
3. Curiosity
4. Excitement and passion
5. Determination
6. Flexibility
7. Confidence
8. Cheerfulness
9. Vitality
10. Contribution

Note on Negative Feelings:
Tony Robbins also says not to forget that there is power in the pressure of dissatisfaction and in temporary discomfort.
You can use this pain in your life to achieve more and propel yourself towards more positive action.

10. Creating a Compelling Future

To awaken the giant within you, you must find a major goal that inspires you and that will drive you to log the long hard working hours needed to succeed.

You start creating a compelling future for your goals by getting a clear WHY you want to achieve those goals.

Then start feeling the joy of moving towards your goal.
Enjoy the little steps, love the path as much as the final attainment, and relish in the constant and never-ending improvement (CANI).

Then Imagine yourself once you have accomplished the goal. How does it feel, what it will mean to you?

And don't forget that all goal setting must be followed by immediate and constant action.

11. The Master System

Tony Robbins repeats that how we evaluate what happens in our life changes our life. There are five key elements that will decide how we actually evaluate things:

1. State
2. Questions we ask
3. Values hierarchy
4. Beliefs
5. Reference experiences

12. Life Values: Your Personal Compass

The author says that our values tell us what we pay attention to and determine the kind of person we are.

Values are built from beliefs, which are built from references, and there are both values we move towards, and value we reject and wants to move away from.

Ask yourself: what kind of person do you need to be in order to achieve all that you want? Ask yourself that question and go become that person.

Step 1 – awareness
Gain awareness of your current values.
Ask yourself: what's most important to me in life? Is it peace of mind, impact, or love..?

Step 2 – decide
Make a conscious decision about the values you want to live by.

As yourself not "what's important to me" but "In what order do my values need to be to achieve my ultimate destiny?"

Ask yourself what other values you need to add (in the case of Tony, intelligence wasn't there), and what values you need to eliminate (Tony found out that by constantly focusing on being free, he was missing out on the freedom he already had, so he dropped it from the list and felt immediately freer).

Ask which benefit you get from which values and which cons you get (for example for Tony having passion at the top meant he was burning out)

Example of a question to ask yourself: how would your capacity to deal with fear, frustration, and rejection be affected by placing "courage" high upon your move towards value?

Note on Values: Don't Compare
it's a human tendency to compare and switch based on what you see from people around that you would like as well.
Once you decide your values and your path DON'T compare yourself to people who have chosen different paths and values as that would make you switch course and be unhappy.

13. References: the Fabric of Life

References are all that has happened or that we've seen or heard or read or imagined in life.

The references' strength depends on the amount of emotion attached to them and the number of similar reference experiences.

They do not necessarily have to be accurate, but they do become accepted as real, regardless.
We have countless references for everything, often running contrary to each other.

And references build our beliefs not neutrally, but in the way we select them and the meaning we attach to them!

Nothing in life means anything but the meaning you give it, so please give your past events an empowering meaning to build powerful and empowering beliefs.

Write down some events you think impacted you negatively, and instead of using it as an excuse to beat yourself up, look for a positive and empowering lesson: there are no tragedies if something good can eventually come of it.

We are not our pasts unless we live there.

> **We are not our pasts. Unless we live there.**

14. Identity: The Key to Expansion

Tony Robbins says that identity is the beliefs we use to describe and define ourselves.

And identity beliefs create the boundaries of our lives.

Often the challenge we face in making a change is that we feel the change is inconsistent with who we are.

To define who we are we often look at our behaviors, at how we act and what we do.
And when start acting a certain way, the tendency is to keep acting that way to keep consistent with ourselves (see Cialdini).

But your past is not your future, and Tony Robbins says you can always change your identity.

1. Define your current identity
2. Decide who you want to be
3. Develop a plan of action to take that will start shaping your new identity. Choose friends accordingly
4. Commit to your identity by letting everyone around you know about the new you

Tony Robbins Criticism

Tony Robbins sometimes engages in unsubstantiated *pop-psychology* and quite a few *self-help myths.*

When it comes to financial advice, Robbins lost a case in court for providing misleading information (I remember one of his tapes claiming that you can get a "higher return without higher risk").

However, even as a reviewer who prefers fact-checked information, I must say that Tony Robbins also delivers so much potentially life-changing information that he is in a category of his own.

Review

Awaken the Giant Within is a wonderful read for everyone.

It delivers applicable and life-changing information that can lead you to take control of your emotions, your states, your actions, and your fate.

And as a matter of fact, not just your life, but apply these insights and you will lift the people around you to new heights as well.

Ambitious men need the ability to detach to remain effective and mentally strong and healthy.
Read how we combine mental power with social power to enjoy mental health and agentic pursuits (including status, respect, and attraction):

Personal Power II by Anthony Robbins: Summary

Lucio Buffalmano · 20 September 2017 · Archived copy · Original

Personal Power is a month-long transformation program where the author Tony Robbins provides mindsets and tips for a more optimistic, confident, and empowered mind.

TPM Note: Great for beginners, advanced players need more
While Robbins is considered a master of 'state management', his 1990s framework lacks deeper empirical grounding, as well as the added value of social exchange theory and power dynamics. This summary filters for high-agency tactics while discarding the dated 'rah-rah' filler

Notes

About the Author:
Tony Robbins is a self-help author and coach, especially popular and successful in the 1990s.

More about him:

> **Lucio**: Robbins is a fantastic motivational speaker, a self-help "guru" with great content… And an endless marketer and covert bragger. Still thumbs up, though

Success Formula:

1. Get clear on what you want: you gotta know what you want and what your outcome is
2. Take action! Do something. Personal power is the ability to take action in spite of fear
3. See what you're getting: develop acuity, take feedback on what works
4. Use a role model

Success is composed of :

1. Beliefs (core of our performance)
2. Potential
3. Actions
4. Results

Tony Robbins says that potential is unlimited but we only start tapping into it once we believe that we can reach good results.

Once you start believing you can, you will tap much more potential and take a lot more actions and then you will start tapping into a positive look cycle.
You get some great results and your brain goes "see I told you that you would succeed", and your beliefs grow stronger and you're in that success cycle.

Tony Robbins says that to get great results when you're in a downward spiral you can take massive action, and that's a great way.
Or you can change your beliefs and visualize your results in advance, which will make your actions even more confident and inspired.

The Controlling & Driving Forces of Our Lives

Ton Robbins says people are motivated by 2 forces:

1. Need to avoid pain (greater motivator in most cases)
2. Desire to gain pleasure

If you want to control your life and your actions you have to control the motivating forces.
You have to **link pain to not doing something and link pleasure to doing it.**

When you learn to change emotional associations to things and behavior in your life (pain and pleasure links), then you control your life.

The author says that if you try to make a change and never happens it's because your internal association of pain and pleasure hasn't changed.

You want to change something, but because we have strong "wiring" in our brains already in place it's difficult to

change purely out of will.
BUT we have the power to change that.

The basic idea is that **the less you use your old neuro association, the more they will atrophy.**
And **the more you use your new empowering neuro associations, the stronger those links will become**.

Use pain and pleasure instead of having pain and pleasure use you. That's the secret to success, Tony Robbins says. That's the secret to controlling life and not having a life to control you.

Then Tony Robbins gives us an example we can all relate to: how many times have you seen someone you're attracted to and whom you would have liked to date but didn't do anything?
It's because you associate more pain with walking up and asking for a date than not doing it.

Remember, the resources you need to change anything in your life are within you right now, Tony Robbins says. Right now you have a set of neuro-associations that habitually cause you to not fully use your capability. What you must do is reorganize your neural pathways so that they guide you in the directions you desire.

How to change your neuro associations:

Tony Robbins says we have to believe that we can change right now.
And that WE are responsible for the change.

Get to the point where you believe that something MUST change, that YOU must change, and that you CAN change it.

We've already seen the steps in *Awaken the Giant Within*, but here they are again for simplicity:

- **Step 1: Decide what you really want and what's preventing you from having it now**

Focus on what you want and clarify to yourself what's preventing you from having it. Understand what pain you link to changing to a new behavior and what kind of pleasure your current behavior is giving you (or what pain it's shielding you from).

- **Step 2: Leverage! Associate massive pain not changing and massive pleasure changing**

Start thinking and noting down your own brain's benefits of all that you are missing by not changing.

Ask yourself a question to self-induce pain in not changing. Ask yourself what you've missed in the last 5 years with your current sub-standard behavior. Ask what it cost you. Ask how much more you could have today if you had changed earlier. Ask what it's costing you right now. To you, to the people around you. Ask what it WILL cost you in the next 1, 2, or 3 years.

Another two ideas to get leverage is to make a public commitment that you're going to change (what Charles de Gaulle did to stop smoking) and personal integrity (ask yourself how your current sub-standard behavior is inconsistent with who you are.

- **Step 3: Interrupt the limiting pattern**

Anytime you see yourself leaning against the old pattern, change it immediately.

Change it abruptly and make it as conspicuous as possible. If you can manage to shame yourself too in the process of changing the pattern you will not only interrupt the pattern but also get leverage at the same time.

- **Step 4: Create a new, empowering alternative and link pleasure to it**

Step 4 is critical for long-term change.

Your old habit was likely filling a need for you and is also engrained in your brain. Simply erasing it is difficult. You

gotta replace with something new.

Ideally, you replace it with something that gives you the same pleasurable feeling without the negative effects. Or something that gives you *even more* pleasure.

A good technique is to “use” the pleasure from something else and link it to the new behavior. Tony Robbins for example used to link pain in leaving food on his plate. And when he started to link pleasure to pushing the food away he did it when playing a song he loved. He is using the song he loved positive association and started transferring it to push the dish away.

Genius.

Another technique is to think about a time you felt strong and powerful and then immediately think about what scares you.

- **Step 5: Condition the new pattern until it’s consistent**

Conditioning is the way to make sure a change you create is consistent and lasts long term. The simplest way is to rehearse it again and again with tremendous emotional intensity until a neurological pathway is created.

Do it long enough and it will become conditioned.

A couple of good techniques are to imagine it first (your brain can’t tell the difference between something vividly imagined and something actually experienced) and to reinforce it by giving yourself a reward.

- **Step 6: Test it!**

Testing is two-fold:

- Imagine yourself in a situation where your old habits would have taken hold. Are you able to resist and go ahead with your new habit?
- Make sure the new change is consistent with your identity

Neuro associations shaping your life

Tony Robbins invites you to take stock of all the positive and neuro associations in your life and then address the top 3 negative ones you want to change by following his 6 steps process.

The meaning we associate with our neuro association

The author says the meaning we associate with a given association controls our life and behavior.

Tony Robbins provides a strong example of a victim of an assault.
Many victims feel violated, dirty, and keep this dark hole inside.

But what if you completely changed the meaning of it?
What if you told yourself that you’ve been there and now you’re stronger than ever?
What if you could use that experience to help other people in a similar situation?
Or help people in general, by showing how resilient a human being can be?

Those are the kind of empowering questions that can change the meaning of a terrible event and give someone strength and power instead of pain and depression.

Incantations

Incantations are continuously repeating to yourself something you want to be true about yourself.

Brian Tracey, for example, suggests that you repeat daily to yourself “I’m the best, I’m the best, I’m the best”

My note:
Incantations have been proven to be potentially harmful to people with low self-esteem.
Also, read *pop-psychology* and self-help myths.

On another tape, Tony says as a youngster he repeated for hours and full intensity incantations to himself, after which his whole body was shaking.

Exposure therapy to destroy your comfort zone

Please like this website to keep reading this long article:

The idea is that you expose yourself to stimuli that cause anxiety until your brain and mind realize it's no danger for you.

What happens with social anxiety is your sympathetic nervous system kicks into overdrive and focuses all of your energy on "survival" because it tells your brain/body that you're in danger. Yes, approaching a hot chick is the same as a car crash or shark attack on your brain/body.

STATE – changing your state

The ultimate goal is that no matter what happens, you're gonna stay in a beautiful state.

Tony Robbins believes the success of his life has come down to one basic skill: state management.

On a consistent basis, Tony learned to manage his state and therefore he got himself to break through and take actions when he would have normally done nothing and when very few people around him were able to.

He says he's done every day, day after day, by doing things that would increase his physical ability changing the way he moves and breathes.

And by consistently and daily conditioning myself to ask the kind of questions and create the kind of focus that moved him in the direction he wanted.

The moment you put yourself in a better state you will see more solutions and you can tell yourself a better story to start a breakthrough and change plan.

Focus:

What you focus on determines how you feel.

Many people focus on what they don't have, or on the problems rather than what they have, the solutions, and what they can do.

Questions

Tony Robbins says a great way to focus on positive endeavors, is by asking questions.

The quality of the questions you answer yourself determines the way your brain thinks.

While already mentioned in the state section, questions are one of the 5 "master systems' in Tony's approach.

You gotta ask with conviction and a sense of certainty and expectation for an answer. And you really have to dig for those answers.

Example: The Man Who Stole From Tony

Tony Robbins had a guy who embezzled from his company. He started raging and screaming "how could he possibly do this to me, how could he have the audacity".
Then he switched.

Tony loves learning and started asking himself "what can I learn from this".
What's funny about this that I didn't notice? And he really started searching for those answers. And he changed his state.

Questions you can ask yourself:

- *"What are you most happy about right now"*

If nothing then:

- *"What COULD you be happy about if you wanted to be"*
- *"I know you don't, but if you did, if you could, what could you feel happy about"*
- *"What about that makes you happy"*
- *"How does that make you feel"*

Also, ask these questions to unhappy people around you and you will see what shift they will bring.

Morning questions

Ask yourself these 5 morning questions and give two answers each:

- What am I most excited about?
- What makes me happy
- What do I look forward to
- Who loves me (or who could love me, even if it means getting a puppy)
- What can I do today to make it a great day

Body

Ton Robbins uses his now famous equation that Emotion = Motion

He says the number one way to change your state is by changing your body.

Change the way you move to feel empowered and in confident.
Change your breathing and your facial expressions.

> **Emotion = Motion**

Breathing

How do you breathe when you're happy, excited, bored…?

Face:

Learn as many facial expressions.
Notice when you're tense you have some tension in your facial muscles.

Voice

How do you speak when you're happy, when you're euphoric when you're on top of the world?

Emotion templates:

Write them all down so that you can re-enact them whenever needed

Things You Can Do To Be Happy

Write down all the things you can do or experience that will make you happy.
Every time you need to feel in a specific way, you will have a list of things to do.

For example, a few items on my list are:

- Listen to great music and jump around
- A great smoothie
- Eating great and healthy food
- Having sex
- Spending time with a woman I like
- Spending time with someone I like
- Calling/texting someone I care about and making them feel great
- Read
- Enjoy a sunset with a beer and a cigarette

Exercise – Negative focuses

What do you focus on that doesn't help you?

I'm sure you gotta pretty long list here, I know I do :).

Consciously stop focusing on these whenever they come up, and consciously switch to positive ones as soon as it will become more and more natural.

Values

Tony Robbins says that your values tell you what you will pay attention to and will determine the kind of person you are.

Values are built from beliefs, which are built from references (more on that below).

There are both values we move towards, and value we reject and wants to move away from.
Your values determine your destiny. **Your values determine what you move towards and what you reject** and determine your most likely behaviors.

And it's very possible you have value conflicts that create self-sabotage (example: top value of success and top moving away from value as rejection).

How can you fix this?

Step 1 – awareness
Explore what your current values are.

Ask yourself: what's the most important thing in my life? Is it peace of mind, impact, or love..?

For Tony Robbins, for example, it was: passion, love, freedom, contribution, being able, growth, achievement/accomplishment, happiness, fun, health, and creativity.

Step2 – decide
Make a conscious decision about the values you want to live by.

As yourself not "what's important to me" but "In what order do my values need to be to achieve my ultimate destiny?"

Ask yourself what other values you need to add -Tony Robbins found out intelligence was a big one missing-.

Ask what values you need to eliminate.

Tony Robbins, for example, found out that by constantly focusing on being free he was missing out on the freedom he already had.
So he dropped freedom from the list and consciously decided not to make it an issue anymore.
And suddenly it was amazing the freedom he had by dropping it from the list.

Ask which benefit you get from which values and which cons you get (for example for Tony having passion at the top meant he was burning out).

Tony Robbin's list changed to: health/vitality; love/warmth, intelligence, cheerfulness, honesty, passion, gratefulness, fun/happiness, making a difference, learning/growing, achieving, being the best, investing, contribution, and creativity.

Tony asked if being happy higher than achievement would suck the wind out of his sails, but it was quite the contrary: he started achieving more by being happy.

My Note:
I did the exact same with freedom.

Freedom was such a big thing for me I felt suffering any time I was doing something that negated my freedom. Helping a friend? That's not freedom! Keeping an appointment? Damn, where's my freedom!

I dropped the freedom trap by reminding myself that I *AM* free. I *CAN* do whatever I want.
I always choose what I'm doing. Being a free man in a free world, freedom is *NOT* your issue.

Update:

I am not convinced anymore about "having to drop" your values. First, think about whether you can leverage your values.
Today I went back to valuing freedom instead of considering it a burden. And it helped me launch my business.

Also what you place higher up means you give it more importance, so ask yourself how the placement will affect your life. For example ask: how would your capacity to deal with fear, frustration, and rejection be affected by placing "courage" high upon your move towards value?

One more note:

Brian Tracey adds that our happiness and self-esteem are heavily dependent on how closely we live to our values. Our self-esteem is tied to our ideal self, such as the person we want to be, and the way we see ourselves at the present time.
Unsuccessful people have no values or sacrifice values for short-term gains. You gotta stay true to your values if they are to shape you in any significant way.

Rules

Tony Robbins says that rules are the belief (sense of certainty) about what needs to be fulfilled in order to achieve your various values.

They are generalizations you've set up for yourself about what has to happen to experience a certain result in your life. They often are in the form of "if… then" statements.

For example: "I wanna be successful". Success is the value. How do you know if you've reached it? Those are your rules.
The value is the target. The metrics to see if you've reached it are the rules.

Rules determine not only whether or not a certain value is met, but also whether we'll feel good or bad, whether we'll give ourselves pain or pleasure.

Tony says a great way to make yourself feel better is to have laxer rules.
Many are afraid that we have too lax rules or we'll lose our drive. But Tony says that you don't need to have ridiculously difficult rules to keep your drive. We certainly want to use the power of goals and the allure of a compelling future, but we must make sure at the bottom of it we have rules to allow us to be happy any time we want.

We want rules that move us to take action, that cause us to feel joy, that cause us to follow through. A bit of push-through pain is great, just don't make it overwhelming.

Rules and values conflict

You can also have conflicting values and rules.
For example, if you were heartbroken your new rule could be "never get too close to someone", but if you value love… major conflict.

Empowering and disempowering rules

A rule is disempowering if it's impossible to meet if it's outside of your control, or if it gives you only a few ways to feel good and lots of ways to feel bad.

To know if our rules are empowering or disempowering ask yourself *"what has to happen for me to feel good in.. "*

And remember, the most empowering rule is to enjoy yourself no matter what happens.

Kind of rules

The author says there are two kinds of rules: threshold rules (musts) and standard ones (should).

In a way, it's better not to have too many must rules, or we'll be shackled.

Example: Managing A Bit Let-Down

Tony was in a resort having high expectations for the eclipse which was going to happen.
But clouds gathered and it was a huge letdown for everyone. However, Tony decided he would enjoy his time anyway in spite of the clouds. It was possible because had decided that "no matter what happened, we'd find a way to enjoy it".

Some people say it's lowering your standards, but it's actually raising them because you'll enjoy it in spite of what happens.

Beliefs

Tony Robbins says that beliefs are feelings of certainty about what something means.

2/3 of top athletes are the oldest in their classes so they grow up winning and develop a belief they're the best.

My Note:
But beliefs can often trump the body.
An experiment allowed a mouse to win fights against bigger opponents by drugging the opponent. Then he was pitched against bigger NON-drugged opponents.
The smaller mouse trashed the bigger opponents.

Beliefs are supported by what we call references, which are life experiences. Imagine beliefs as tabletops, and references are the legs of the table.

An idea can become a belief the moment you start linking reinforcing experiences confirming that idea.

If for example, you have an idea you're sexy, girls telling you-you're a great lover, a playboy, attractive, etc., those are reinforcing your idea with experiences and it's like putting legs underneath that tabletop so you feel certain about it.

Often ideas we have turn into beliefs because we cherry-pick the experiences we will use as legs.

So if you think you're a failure it's often a self-reinforcing prophecy because you only register the times you failed and keep behaving as a failure and apply that "I'm a failure" lens to everything in your life.

The good news, of course, is that you can change beliefs and you can develop a belief about anything as long as you find enough references/legs.

Global beliefs are: "people are", "life is", "I am.."
The second kind of belief is that rules are: "if… Then" "if you love me.." "if you respect me.." "if you appreciate me..".

Tony says that every great achiever he's ever interviewed had the ability to get themselves to feel certain they could succeed, even though no one before had ever accomplished it.

Belief's categories

There are three categories of beliefs:

1. Opinion- something we are relatively certain about. Can be easily changed.
2. Belief- much stronger because it has more references and emotional attachment.
3. Conviction- eclipses a belief due to emotional attachment. Identity is based on convictions. To give up a conviction would be to lose your identity.

Tony Robbins says that often the best thing you can do to create mastery in any area of your life is to raise a belief to a conviction. The conviction will then become your identity and drive you to action and push you through obstacles.

Creating a Super Belief

How to create a conviction:

1. Start with a basic belief
2. Reinforce your belief by adding new and more powerful references (think about when it happened or make them happen)
3. Find or create a triggering event.

If you don't have that belief at all, start conditioning it with the 6 steps on neuro associations and then take action to reinforce it and create new references.

How to change your beliefs

1. Think what the negative belief is costing you (a staple to change, what it will cost you..)
2. Doubt the old belief (question it, find contrary examples, ask how was this belief ridiculous or absurd, was the person I learned it from an expert in this area, where they producing results?)

If you do this right you will soon start doubting the old belief and your mind is then ripe to instill a new one by associating pleasure with it and conditioning it.

Example: Getting Good With People

Let's say you wanted to get good with people, and you wanted to adopt the belief, "I can learn to get better with and understand people."

You'd build that up out of all of the references you have in the past for talking well to people, how many guides there are for talking to people, and how great it would feel to finally handle this area of your life.

Then, look for the antithesis you're feeling right now, that you're terrible with people and you'll never get better.

Find as many references that run counter to it, like how you can at least talk to store clerks or make small talk with people, how some people with backgrounds of being shy have evolved to socialites, and imagine finally shaking off this negative label for yourself.

Then, associate massive pain to it with the techniques listed above.

When it becomes too painful to not adopt the belief and too enticing to hold back from adopting it, you're on the right track.
You're now motivated enough to take action towards building this idea into a full-blown belief and you'll find ways to get experience with talking to people. Maybe you'd read guides, talk to strangers, figure out what works and what doesn't, and keep focusing until the changes stick.

Beliefs You Have

Tony Robbins then encourages you to make a list of all the beliefs you have. Positive ones and negative ones, and then encourages you to start changing the top 3 negative ones you are currently holding.

References

Tony Robbins says that references are all that has happened or that we've seen or heard or read or imagined in life.

Their strength depends on the amount of emotion attached to them and the number of similar reference experiences.

References do not necessarily have to be accurate, but they do become accepted as real, regardless.
With enough emotional intensity and repetition, our nervous systems experience something as real, even if it hasn't occurred yet.

We have countless references for everything, often running contrary to each other. And references build our beliefs not neutrally, but in the way we select them and the meaning we attach to them!

Nothing in life means anything but the meaning you give it, so please give your past events an empowering meaning to build powerful and empowering beliefs. Write down some events you think impacted you negatively, and instead of using them as an excuse to beat yourself up, look for a positive and empowering lesson: there are no tragedies if something good can eventually come of it. We are not our pasts unless we live there.

Rituals – The Power Of

Tony Robbins says asks what are some emotions you experience on an ongoing basis.

It's important to know because we often end up with "patterns", or sets of actions and thoughts we use recurrently. These patterns can make us happy or unhappy, and it's up to us to use the good ones and discard or change the bad ones.

Disempowering Rituals:

Step one to remove them is awareness. So ask yourself: what do you need to do to feel bad?
For me, it often used to be "having" to go to work, and this was the loop I'd fall into:

1. I go to sleep much later than I should (or I take a nap after 8 pm)
2. I am still sleeping when the alarm rings
3. I am still sleepy, and I feel staying in bed would be amazing
4. I think it sucks "having" to go to work (work is a duty here, not a potential enrichment)
5. I stay in bed longer with negative feelings
6. My face is contracted, my mouth tilted down
7. I get out of bed… Late

8. I get the pressure I gotta run because I'm late, fight back the "rushing" urge but it gets even later
9. I feel like my work sucks, and I translate that dislike toward my boss and the company
10. I go out of the house, again having to run, and I hate that feeling

Empowering Rituals:

In my case, these are some rituals that empower me:

1. I Push my limits in moving towards a goal I want
2. I start getting closer and closer and start loving the struggle
3. I take a small break and think of myself proudly
4. I get it done and feel fantastic
5. I give myself a small reward and it feels 10 times better than normal

Emotions – The Power Of

You can choose which emotions to feel and you should build that still. But at times it's good to listen to emotions without trying to change them right away because emotions can act as useful messengers.

Tony Robbins says there are four wrong default answer people have for emotions, which are:

1. avoidance (trying to suppress emotions) ;
2. denial (pretending "it's not that bad") ;
3. competition (a race to who's "got it worst") ;
4. learning and using (the correct one).

Mastering emotions:

1. identify what you're really feeling;
2. Acknowledge and appreciate: emotions support you, you never want to make your emotions wrong.
3. Get curious about the message this emotion is offering you. It will help you master your emotions, solve the challenge and prevent the same from occurring again
4. Get confident you can handle it immediately. Remember a time you felt similarly and successfully handled it.
5. Get certain you can handle it in the future as well. Rehearse handling situations where this Action Signal comes up again.
6. Get excited and take action.

Vanquishing Worry

Tony Robbins says worry is one of those emotions to stamp out, and you do it as follows:

1. Think of the worst-case scenario, accept it, then work to improve the worst-case scenario.
2. Focus on the goal, on what you want, rather than on what can go wrong
3. Get busy: if you're busy you ain't got no time for worry

My Note:
getting busy to "crowd out" worry is NOT a good strategy as that only covers up the issue, as well explained by Brene Brown *Daring Greatly.*

Rid of Procrastination

Tony Robbins says that an easy way of dealing with procrastination is, well, to procrastinate it.
Put it off.

Here's a 5-step process:

1. An easy way of dealing with procrastination is to put it off.
2. Find out how you create the rituals and put yourself in a state to procrastinate
3. Don't tell yourself you "have to do" because that makes your brain rebel. Say you "choose"!
4. Think of what you're missing while you procrastinate and think of how great it will be if you moved your ass
5. Develop the physical habit that as soon as you feel like you're procrastinating, you MOVE

Anchoring to Success

Tony Robbins says that you are anchoring every time. Any time you are in an intense emotional state, anything that happens around you consistently while you're in that state gets associated with that feeling.

Negative associations can kill a relationship because you go home and you are angry a few times in a row, then you anchor that feeling to that person.

My Note:
I second and confirm that from first-hand experience.

Create an anchor

Put yourself in an emotional state that you want to anchor in.

Example: Motivation
Think about a time when you were motivated, breathe how you were breathing, move like that) and once you're in the state consistently do something unique (for example: clap your hands and say yes).

It's important you create the anchor while you are at the peak of the emotional state, not going up for the peak, or coming down.
You can create several anchors that will as "buttons" to command your brain.

Collapsing an anchor

You can remove an anchor by collapsing an anchor.

Create a positive anchor similar to the negative one. For example, if I get sad when someone touches my left shoulder, then I create a positive anchor to the right shoulder.

Test the anchor by getting out of state and then back again.
Once the anchor is set, then fire both the positive and negative ones simultaneously.

My Note:
I didn't personally find anchoring super useful

Switch Patterns

Picture yourself about to start the behavior you want to change (play with your hair, crack your fingers, get weak in the presence of your boss).

Then create a picture of yourself as the guy you want to be, your ultimate self (confident, great communication, charming, drawing people in, a picture of success).

Take a picture of yourself taking the action you want to avoid and make it big.
Take a picture of who you want to be and put it behind the first weak picture of you.

Now feel the tension between the two pictures, like a slingshot. Make the picture of you want to be moved farther and farther away until it disappears.

Then release and make it come back again exploding right through the weak picture into your mind making a weird noise (woooosch).

Speed is important, the strong picture has to come back strong.

Financial Success

Tony Robbins also has a section on financial success, but I will skip it.

My Note:
I didn't find the steps or what Tony Robbins said here to be particularly useful, to be honest.
This was before he wrote his *Money Master the Game* and interviewed true experts like Ray Dalio. He said things like "you can increase your return without increasing your risk", which makes little sense.

The usefulness for me of this section was:

- Write down all the negative associations you have linked to money
- Don't make money your only and sole priority as that's the best way to fail at life
- Develop a belief that no matter what happens you are bigger than anything which can happen to your finances

And of course, the last point he gives is that you should help out people. Receiving is the evidence you've given consistently.

> **Receiving is evidence you've given consistently**

Overcoming Fear of Failures

Tony Robbins says that failure is impossible.

The only way you can possibly fail is to tell yourself you failed.

Tony Robbins advises you to write down what must happen for you to feel like a failure and what must happen for you to feel like a success. And then change that.

Your new failure will be quitting and totally giving up. And your new way to feeling successful will be to give it all no matter the situation and no matter the result.

Erasing technique

Worst-case scenario you can always "delete" a failure from your mind with the erasing technique.

Just think many times over about the scene of you failing, then start changing it.

Imagine the people around you getting smaller. Growing mickey mouse ears.
Farting or whatever silly stuff you can imagine. Rewind it back quickly, with all the voices unintelligible. Put some weird music as a background.

Be outrageous, do something your brain will not expect, and do it over and over again until you don't remember it straight anymore.

My Note:
This idea that it's impossible to fail is weak in my opinion and possibly dangerous.
You want to build yourself into someone who doesn't ache just because of a failure.
Also read: *the antifragile ego.*

Vanquishing Rejection

1. Decide you are not going to allow this limiting emotion to control your life.
2. get enough leverage on yourself: write down the price you will pay if you don't control rejection and all the pleasure you will get if you were able to get rid of the fear of rejection
3. Create a new set of rules for what is rejection (make it tough to feel rejected)
4. Repeat to yourself that mass rejection equals mass success. You really can't have success without rejection
5. Condition yourself to feel great in front of rejection. Feel unstoppable and create an anchor. Now imagine a reaction and fire off the anchor over and over until rejection makes you feel strong. It sounds difficult but it's actually easy!

Eliminating Self-Sabotage

Tony Robbins says that self-sabotage starts because our brain links an often wrong meaning to certain stimuli.

For example, any time you experience a significant amount of pain or pleasure your brain searches for the causes in 3 ways:

1. Something that appears to be unique;
2. Something happening simultaneously ;
3. Consistency –but we highly generalize about consistency-

Self-sabotage is a positive intent, the brain linked something in the past that it now wrongly associates with pain/pleasure.

Example: curing self-hurt
If someone hurts himself on purpose he probably associates that people care for him when he's hurt.

So he does it again to get love.

What Tony did with that man who was hurting himself was to make him realize that what he was getting wasn't really love, but an obligation.
And people were actually hating him for that (he is linking pain to his previous pattern).

And then Tony asked him "what do you feel when you give love", and the guy understands that giving love means love. And Tony begins installing a new pattern.

My Note:
This was simplistic as self-hurt is often associated with Borderline Personality Disorders (also see: I Hate You Don't Leave Me and Stop Walking On Eggshells)

If you clearly see a pattern where you are subconsciously self sabotage yourself, then you might be sabotaging yourself.

Mixed neuro associations self-sabotage

Harder to spot is self-sabotage originating from mixed associations.

For example, you might love the money, but at the same time, you link feelings of pain to money.

To find out if you might have self-sabotaging mixed neuro associations, you can list all that you think about something.

The negative associations don't have to be more in terms of quantity but sometimes are more powerful (ie.: "stress, greed, sleepless nights" are stronger than "security and opportunity")

Step by step and eliminate self-sabotage:

1. identify a behavior keeping you from your goal (ie.: getting nervous with pretty girls and people around)
2. ask yourself: what's the positive intent here, what is my brain trying to give me (shield me from rejection)
3. get some leverage on yourself (teach your brain that if you don't change you get more pain)
4. interrupt the pattern
5. install new patterns

Confidence

Tony Robbins says that confidence lies in the belief that every person you meet is better at something than you are.

But every person you meet, you're also superior to them in something else.

And he suggests focusing on what you've already done and accomplished.

Confidence is often a question of how you manage your memories.
Go back in your life and think of all the great things you've done, or of all the times you think you weren't gonna do it but you did.

Problem-Solving

Tony Robbins applies the Pareto Law here.

He says you should spend 20% of the time on your problem and 80% on the solution.

He suggests coming up with solutions and exploring them deeply.
Ask yourself "what if we do this.." and keep expanding on the options rather than shutting solutions down as they come up. This way you'll open up more possibilities.

Asking the right questions:
Tony Robbins gives us an amazing example of a time when he went back home, was super tired, and almost a hundred important calls had piled up for him to take care of.

So he starts by asking:

1. What's great about this (nothing? What COULD be great about it)
   Example: Well, 3-5 years ago Tony would have begged to speak to these guys. They just want me and these are movers and shakers and he can make a difference
2. What's not perfect yet (presupposing it's gonna be perfect)
   Example: I don't have enough time for my own personal life
3. What am I willing to do to make it the way I want it (presupposes you want and can do something)
   example: I'm willing to find a way to make these calls cause they deserve an answer and I will change my schedule
4. What am I willing no longer to do to make things the way I want them
   example: I'm willing to no longer complain when I set the thing up. And I'm willing to change things so that more people can take care of my things
5. How can I do what's necessary to get this job done and enjoy the process
   example: you own a Jacuzzi, haven't been there in a while, go outside, bring the laptop there, bring the phone, get in Jacuzzi, and have fun calling guys and making fun of them and with them!

Words and expressions for energy

Tony Robbins says that the words and expressions you use, and how you pronounce them, make a difference in your states.

For example, how you call your spouse will change the way you feel about them. Maybe keep "partner" for business

and use “lover”, “soulmate” or “better half” for your romantic relationship.

Softeners and Intensifiers

Softeners and intensifiers give us a greater degree of precision in our dealings with others, whether it’s a romantic relationship or a business negotiation.

Years ago when Tony thought something was screwed up he’d call the appropriate person and say *“I’m really upset” / “I’m really worried about.. “.*
That would automatically put the other person into reaction and they’d often become defensive, preventing them from finding a solution.

So what he learned, even if he felt more intensely, was to say “*I’m a little bit concerned about X, can you help me?”.*

This lowered his own emotional intensity and conveys that you have faith in that person’s ability.

Expressions and metaphors:

- *rather than “pissed” or “furious”: I’m getting a bit frustrated or peeved. Peeved made Tony laugh and moved him out of an enraged state.*
- *to a man who said “they put a gun to our head”, Tony changed his state by breaking his pattern by asking “what color is the squirt gun”. Now the gun has become a silly toy.*
- *to a guy who said they had put them in a box, he said “I don’t know about you, but I know nobody could ever build a box big enough to hold me”.*
- *If you’re drowning in a world of chaos, take a stroll down the shore of tranquility and think a bit before acting.*
- *to a woman who said she had pieces of baggage, Tony said: what if you dropped the baggage.*

Sometimes you need the opposite though and expressions can give you the hedge to move:

- *Some parents didn’t feel like they should encroach on their sons’ troubles and Tony wanted to spur them to action. So he said: “there are two bullets to your son’s head right now, one is alcohol and one is drugs, and one of them will eventually kill him”.*

That image gave them the strength to move.

Metaphors for life

Tony gives a few great metaphors for life:

- Life is giving by becoming more
- Life is a game
- Life is a dance
- Life is a gift

Blueprint and Happiness

Tony Robbins says that if you are not feeling satisfied in your life it’s because your blueprint -the idea you have of how your life should be- is not aligned with what your life is right now.

There are 3 ways people cope with that:

- Blame (themselves or others, and doesn’t fix the problem)
- Change their life (great approach)
- Change and rewrite their blueprint (great approach)

My personal challenge to you

Tony ends by saying that if you really wanna master your life :

1. Master your own mental and emotional state.
2. Develop compelling reasons to manage your state.
3. Develop goals to keep your good state.

Anticipate Challenges
Tony says to anticipate the challenges of life and role model how to deal with them.

Some challenges are obvious and fixed. Like death for example. What are your beliefs about death *so that you can deal with it*? Talk to people who have already done it successfully.

Some other challenges for people are turning a certain age, which Tony says often has to do with a "0" after a number.

Re-evaluate Life
It's a great idea to re-evaluate your life every 6 months or year.

Become a Team Player
The secret to lifelong wealth and happiness is this: become a team player.

Tony says that we will do more for the people we care about than we'd do for ourselves.
If you can find a team of people whom you deeply care for and you can make a difference for them and be a source of power and possibility you will be driven the most.

Every day cares deeply, create something new, cooperate with ppl on how to make a difference, commit to being the best and contribute. The dreams of your past will become small confronted with what you will have.
Life is a process, so enjoy it.

> **You are bigger than anything that can ever happen to you**

I wanna leave you with a great quote Tony uses by John How to spur those people who are scared of dreaming and acting big in case of possible failures:

> "*What a folly to dread the thought of throwing away life at once, yet having no regard by throwing it away by parcels and piecemeals*".

It's not how long you live, but how.
Live with passion!

Criticism & Scientific Verdict

Robbins' framework overlaps with evidence-based principles like:

- Reinforcement learning (pain/pleasure conditioning)
- Cognitive restructuring (changing beliefs)

However, many claims lack both realism and empirical grounding, including:

- Unlimited potential <— You're better advised to choose something where you have high potential
- Visualization as a primary driver of success <— Likely not a *primary* driver

More robust frameworks come from:

- Behavioral psychology (Skinner)
- Cognitive Behavioral Therapy (Beck)
- Social exchange theory (Homans; Blau)

Some other issues with Robbins, besides the notes above:

Guru-approach: use conviction, including in low-expertise areas

One of Robbins' secrets to success is his charismatic conviction.

And to keep up the charade of an omniscient human being, he talks with full certitude about anything. Including topics, he has no expertise on. And… It shows.
To people like me, he loses a lot of credibility. But to many other people, he just seems more Godlike.

Also see:

- Teacher frames (and why they're a red flag)

Law of Attraction

Robbins tells the story of a couple who won the lottery, twice in a row, by acting as if they had already won it.

That's stuff that I don't approve of and I would not recommend anyone to follow that path -either the blind belief in the law of attraction or focusing on winning the lottery instead of making through skills and dedication-.

TPM Filter: What Actually Works

Keep:

- State management (useful for action-taking)
- Pain/pleasure reframing (basic but effective)
- Taking action despite fear
- Optimism
- Internal locus of control
- Framing/reframing

Use with caution:

- Visualization (works as support, not driver)
- Incantations (can backfire for low self-esteem, focus on constant action instead)

Discard:

- Law of attraction
- "No failure" mindset
- Overconfidence without competence

Review

Personal Power 2 was one of the first self-development resources I started with, and one of the best ones I initially went through. It was practical and motivational at the same, and it was helpful for a beginner.

I can still recommend it for beginners, and this post will give you a quicker overview of the basics of self-development for ambitious men:

- **Foundations of self-development**

> 10 Self-Empowerment Foundations For Top-1% Men

Neil Strauss Analysis: Smooth, But Weak

Lucio Buffalmano · 21 September 2017 · Archived copy · Original

Neil Strauss, AKA 'PUA Style', writes in "*The Game*" that two years in a row he was the "best pick-up artist in the world".

Of course, that didn't say much about his abilities.

The title was awarded on an Internet forum which was likely populated by people who weren't very socially skilled.

This post analyzed the power dynamics of Neil Strauss' appearance on the show "The View".

Contents

  - Stand by Your Deeds
  - Nobody Has the Right to Intimidate You

Intro

Neil Strauss was dominated on The View.

He handled it smoothly, very smoothly. But he used ignoring in place of assertiveness.
It's not *completely*wrong, but he let the host disrespect him while he kept smiling. And that's not very powerful or masculine.

The short of it is that the host -Star Jones, the de facto "head bit** there- aggress and Neil Strauss evades.

Neil's strategy is to avoid confrontation, try to isolate Star and charm the rest of the group.
"Be like water" Bruce Lee would have said, very typical of the Charmer types as described by Robert Greene in *The Art of Seduction*.

Neil does rather well in charming the group and is relatively successful in isolating Star but at the very heavy price of being socially gored by her dominant, vindictive barbs.

Let's see then some great strategies Neil Strauss could have used to deal with the aggressive woman:

1. Nip It in The Bud: Set The Precedent

> ***Get Into Fight Stance to Avoid Fighting***

The beginning of social interactions sets the tone for what is about to come, and it is particularly true with an aggressive opponent.

Imagine that beginning as him sniffing you out and testing your mettle.

He will try to make an offhand remark, or maybe force the upper hand in the handshake.
And if you let it slip without doing anything about it the aggressor will feel he's just been green-lighted to tooling you.

Neil Strauss Is Too Submissive

Neil is too submissive at the beginning and sets a bad precedent.

Star shows the first aggressive sign with a disparaging remark (*yeah right*): only supremely confident individuals belittle so openly.

She then uses a thumb display, speaks loudly over the hand-clapping, and with a reproaching tone turns to Neil putting her elbow on the desk.
These are all nonverbal power moves as if to say "*what the fu** is that all about, explain*!"

Neil's movements are smooth in his reply, but no good execution will change the fact that the whole cluster -including his verbals- are submissive.

Here's what he could have done to show he's no pushover instead:

- **Touch Her:** Touching first is a sign of dominance and confidence.
  He could have smiled -not laughed- at her initial joke while lightly placing a hand on her back or upper arm. Touching is a simple, not aggressive way of showing confidence and dominance.
- **Imply She's Dumb:** Instead of saying "I'll explain" he could have smiled and said "*Nice intro. It's not exactly like that, lemme clear that up*". This implies Star got it all wrong with her generalization and sets him as the authority with the straight facts.

The Theory of Aggression

Before we dig deeper into the practical techniques it's great to understand the theory behind aggressive interactions and the escalation they often follow.

- **1. You're Dumbstruck and do Nothing**
  For most people, and especially if you are a non-aggressive person, the moment you are first aggressed will leave you at a loss for words. Most people in this situation withdraw within themselves and move on pretending nothing happened.
- **2. The Aggressor is Emboldened**
  Seeing the victim has no answer to their antics emboldens the aggressor and often leads to *more* aggression. This is why you need to push back right on.

If it's in a romantic relationship, this can often be the woman actually, and her aim is not usually to hurt you, but a misguided attempt to get you emotionally involved when she feels you are withdrawing.

Outside of a romantic relationship, the aim is usually to hurt you, make you look bad, or dominate you for their own gain.

- **3. Aggression Repeats**
  In either scenario, you will often find yourself in a situation where your boundaries are continually encroached upon. You can feel victimized and lost, but since the precedents have been set, you can feel like it's too late to do something. So the victim hopes the aggressor will not exaggerate, that he will show some restraint, and that it will soon be over. But it rarely stops by itself.
- **4. The Victim's Psychology**
  Some victims often defend their aggressor to cover up their inability to stand up. They will say "*oh it was nothing*". What they are really trying to say though is "*no, their behavior is OK, it's not me who can't do anything about it*". When brought to extreme cases, people can even develop real feelings for their harassers (captor bonding syndrome).
- **5. Aggression Escalates**
  The next step is usually much bigger aggression. It can sometimes happen because the victim tried to undermine the aggressor with passive aggression or simply because he's emboldened by successful previous aggressions. While the smaller harassment might have seemed justifiable, the big one is more humiliating and harder to ignore.

For example, your boss was raising your voice in private, but now he just berated you in front of everyone (how to deal with yelling bosses).

In Neil Strauss' case, the first major instance of escalation was when Star Jones shouted orders while pouncing the table with her hand:

2. Respond in Kind

> ***Fight Fire with Fire***

Responding in kind, in this case, would have meant this:

> *"How would you feel if I did this to you lady? Probably bad because it's very rude and disrespectful, right?"*

Chances are she would have been dumbfounded and, put on the spot, backtracked with an apology.
And if she kept up with her offensive antics she'd be playing into your hand: you are painting her as the ill-mannered one and she's just proving it to everyone.

Keep cool and repeat she's very rude as she shames herself by raising her tone (repeat: "yes you are", "yes you are").

3. Use Strategic Aggression to Shame Them

> ***And Recruit Everyone on Your Side***

With this technique, you call on everyone around to side with you by playing the "empowered victim".

Simply state what she just did is vulgar and uncivil. Then demand an explanation and show you're expecting an apology.

It's less dominant than "Respond in Kind" but can be even more effective because now it's "everyone VS her".

Watch Tom Cruise executing it:

https://youtu.be/9C4UvvHMoZs?t=20

Notice at the beginning Tom is accommodating, pretending it was OK. But then he quickly switches to the shaming technique. And notice the people around naturally siding with him.

Note: he then moves to aggression, which was a mistake. He comes across as vindictive and butthurt. He should have stopped at the shaming stage.

To read more on shaming, check:

- Defending against the moral police attacks
- Anatomy of a shame attack

4. Scold Them With Moral Authority

> ***Hit and Move Along***

This is possibly the simplest technique to use.

You state it was rude and move on. It's powerful because you become the judge and take the moral high ground.

Neil could have turned around slowly, looked at her for a second, and said: "Woah, that's very rude of you".
Then moved along with his speech. She would have probably gone crazy, but again, that would have been a good thing.

The idea is that you judge and then move along, leaving the aggressor behind. You communicate that you're a superior man who doesn't engage in petty social brawls.

Power Moved!

5. Use Nonverbals Against Them

Getting rid of someone without uttering a word is even more powerful than speaking.

Dominate with Touching

In Neil's situation, he could have turned around while still speaking and without missing a beat, put his palm on her arm or back.

Since she hadn't touched him yet, it would have been a dominant and socially savvy move—non-aggressive but strong.
Subcommunication being: "*I keep going and ignore it, but you won't be such a rabid dog, chill*".

Shame With Facial Expression

Similar to the moral authority technique, but you don't speak. You pause, give a disgusted or disappointed look, then resume.

Just make sure the facial expression is obvious and long enough to be picked up by the audience.

What Neil Strauss Should Have Done

Commit and Stick to it

He says a couple of times "*oh my God I can't believe I'm saying this*", only for Star to prod him and Neil follows suit.

Tentative decisions make you look insecure.

If you're on a show to talk about something, talk about it. If you don't wanna talk about it, don't. But don't waffle in between.

https://youtu.be/M0omMTu9Ax8?t=7m40s

Don't Finger Point

Research shows using your index finger while speaking makes you less liked by the audience.

Don't Kiss Up – Just Don't

As we've already seen, even outside of abusive relationships people often try to win over their aggressors with flattery or appeasement.

But that's a trap. Bullies interpret your friendly gestures as your final capitulation.

Look how Star derides and brushes off Neil Strauss when he kisses her:

POWER DYNAMICS

Host Advantages

- **Home Advantage:** Hosts feel at home on set—both emotionally and even hormonally (higher testosterone).
- **Final Authority:** It's their show, which subconsciously grants them a higher status role.
- **They Ask Questions:** The one who asks the questions has more control and power in conversations.

Neil Strauss' Advantages

- **Center Seat:** The center position is the highest status position. Think of the US president at Yalta or Jesus in the Last Supper.

- **He's the Only Man:** When you're the only one of your gender, you automatically grab attention.
- **Captivating Topic:** The topic was fascinating, especially to women, and he leveraged that to charm the group.
- **He's the Subject Matter Expert:** Being the expert on stage gives you status. People look to you for answers, giving you automatic power—even if the book itself isn't great advice.

How to Ace Difficult Interviews

Stand by Your Deeds

Neil Strauss looked insecure and ashamed of his work. That's why he was defensive and on the back foot.

To be confident, own what you do. Sign your work—even your mistakes. When you own your identity and deeds, confidence becomes a byproduct.

> *"Explain what? I don't have anything to explain—least of all to you. What are you, the moral police?"*

Nobody Has the Right to Intimidate You

Even if you're caught off guard, remember: you give respect, but also *expect* respect. You don't accept rudeness or disrespect from anyone.

If it means walking out of a show, so be it.

Brian Tracy: A Sum of ALL Lessons Learned (In 1 Post)

Lucio Buffalmano · 23 September 2017 · Archived copy · Original

Brian Tracy is a self-help author and speaker.

I have listened to many of his courses and tapes over the years, and they're great.

This post is **a concentrated summary of all lessons learned from Brian Tracy books, talks, and courses**.

There is much to learn from the man, so let's get started:

Contents

- #1. Take Responsibility to Lead Your Life
- #2. Brian Tracy Seven Mental Laws
- #3. Tap Into your subconscious mind
- #4. Increase Self-Esteem By Living Your Ideal Self
- #5. Set Your Goals
- #5. Categorize Your Goals
- #6. Ask Yourself These Questions
- #7. Prioritize Ruthlessly
- #9. Follow These Rules of Goal-Setting
- #10. Motivate Yourself to Achieve Your Goals
- #11. Maximize Your Productivity
- #12. Develop The Psychology of Success
- #13. Develop The 6 Qualities of High Performers
- #14. Develop Mental Fitness
- #15. Apply The Law of Reversibility
- #16. Work On Your Subconscious
- # 17. Conquer Your Fears
- #18. Apply the Law of Practice
- #19. Face Problems Head On (& Avoid Stress)
- #20. Learn That Crisis Are A Sign of Achievement
- #21. Make People Feel Good
- #22. Leverage The Law of Reciprocity
- #23. Learn to Provide Constructive Criticism
- #24. Use The 7 Laws to Raise Self-Esteem:
- CONS
- Summary

#1. Take Responsibility to Lead Your Life

There is a strong relationship between the responsibility people take and their income.

Responsibility means always looking at your contribution and what you can do fix the problem, and *not* looking at people to blame.

And that includes you.

I love when Tracy says that you are not guilty, but you are responsible for the way you react to the situation and how you conduct yourself. Everything is contained in your response.

Tracy says that people who take responsibility for their own life are positive, confident, and self-reliant.
Even psychologically they tend to be more optimistic, happier, and mentally healthier.

As a matter of fact, psychology says that there's a direct relationship between the amount of responsibility you take in a certain area of your life and how much you feel in control of that area.
And a direct relationship between how much you feel you control and how much freedom you have in that area.

Taking responsibility also makes you much less likely to hold negative emotions because you don't have the "brain capacity" to blame others.
Every time you're getting negative, repeat to yourself that you are responsible.

#2. Brian Tracy Seven Mental Laws

Brian Tracy lists seven laws

- **The law of internal locus of control**

Internal locus of control means that you believe you are in control of your life.

If you have an external locus of control you feel helpless, are sadder, get angry easier, and are more prone to depression. If you feel you are in control of your life and the master of your own faith you are energetic and optimistic.

- **The Law of Cause and Effect**

What you reap today is what you sowed yesterday.

For every effect in your life, there is a specific cause.
If you have an effect in your life that you do not enjoy, you need to trace it back to the causes and get rid of them.

The change in your outer experience is a consequence of the changes in your inner experience.

Change the quality of your thinking and you change the quality of your life.

Self-mastery and self-discipline start with taking charge of your own thoughts. It begins with accepting that no situation can make you feel anything if you don't allow it. It is you thinking of a certain situation that makes you feel a certain way.

- **The law of belief**

What you believe, with annexed feelings, is what will manifest.
This is why you gotta overcome your limiting beliefs. This is similar to the law of manifestation from *Think and Grow Rich.*

My Note:
I never agreed much with this one though. It's *pop psychology* and a *self-help myth.*

- **The law of expectation**

Whatever you expect with confidence becomes your own self-fulfilling prophecy.

A set of expectations with strong repercussions has been set for us by our parents, and we tend to live up or down to those expectations. Same for bosses.

BUT you can obliterate all past and current expectations if you decide to set for yourself a positive set of expectations.

You can become an inverse paranoid, and believe the universe is conspiring to make good things happen to you. Expect the best of yourself in every situation, that you are going to gain and learn and become better from any situation.

- **The Law of Attraction –** (subset of law and effect)

You are a living magnet.
You invariably attract into your life people and situations in harmony with your dominant thoughts.

My Note:
I don't believe in this one bit. Brian Tracy law of attraction is no better than all the BS spewed by the "law of attraction crowd". Also, read my review of *"The Secret"*.

> The Secret: Summary, Review & Criticism

- **The Law of Correspondence**

It says, "As within, so without." It says that your outer world is a reflection of your inner world.

- **The Law of Mental Equivalency**

Thoughts objectify themselves.
Your thoughts vividly imagined and repeated, charged with emotion, become your reality.

#3. Tap Into your subconscious mind

Brian Tracy says that your subconscious mind records all past beliefs and behavior.

It records all of them and keeps you on track on those.
Importantly, it also records all the limits of your comfort zone and works to keep you within them.

Start seeing everything you do and everything happening to you as adding up one more block for you to become the great man you are destined to be.

- **Law of Subconscious Activity –** Any idea or thought that you accept as "true" in your conscious mind will be accepted unquestioningly by your subconscious mind and your subconscious will immediately begin work to bring it into your reality.
  All your words, actions, and body language set a pattern consistent with your dominant thoughts and goals (law of attraction).
- **Law of Concentration –** Whatever you dwell upon, grows.
  The more you think about something the more it becomes a part of your reality. Dwell on thoughts of love, courage, hope, confidence, etc, and meditate on these daily.
- **Law of Substitution –** Your conscious mind can only hold one thought at a time and you can substitute one thought for another.
  This "crowding out" principle deliberately allows you to replace a negative thought with a positive thought. This allows you to control your emotional life. Stop thinking about the problem and start thinking about the Solution.
- **Law of habit –** Mentally speaking, in the absence of affirmative decision and determined effort you'll continue doing and thinking the same forever (earn the same, have the same friends, drive the same).

Changing your habit is not easy but it's key, the secret is to keep repeating what you want to become a habit. *Forming good habits* is hard but makes for an easy life.

> Forming good habits is hard but makes for an easy life

#4. Increase Self-Esteem By Living Your Ideal Self

How to increase your self-esteem?

Brian Tracy says you can make yourself into an extraordinary living being by setting high values and then disciplining yourself to live by them on each occasion

There are 3 parts of your personality and self-concept:

- **Self-ideal**, the person you most admire and wanna be like (future you);
- **Self-image**, the way you see yourself and think of yourself which guides your performance and behavior (your present you);
- **Self-esteem**, is given by how you feel that your current behavior is consistent with the best person you could possibly be.

For most people, self-ideal is an unconscious process.
You begin to improve yourself and your life once you bring this process to a conscious level and then do some thinking and auctioning on it.

#5. Set Your Goals

Brian Tracy hits you hard when he says:

> Those without a goal end up working for those with a goal.

He who's got the skills of goals setting down pat is either very rich or very happy or both

The law of concentration says whatever you dwell upon, grows.
Whatever you dwell upon continuously, will eventually come to fruition. Brian Tracy says that goals are even a way to happiness. When you're sad: think about your goals.

People don't set goals for the following reasons: they're not serious and have no real desire; they're talkers rather than does -but the actions count, not the words-; they haven't accepted responsibility for their lives; they are afraid of failure.

> Those without a goal work for those with a goal

#5. Categorize Your Goals

Use these 5 categories to set goals imagining you have no limitations. You will only evaluate and set priorities later.

1. **physical**

Physical health and longevity and things you'd like to do, like ride a boat, skydive, climb a mountain….

2. **mental**

All the things you'd like to learn and understand; skills you need.

3. **emotional**

Quality of relationships you wanna have with spouse, parents, friends, coworkers, self-esteem

4. **spiritual**

Quality of your inner life and inner development, peace with the universe, peace of mind

5. **financial and career**

Earn the money you need to do all the other things, how are the other people doing differently

6. **social**

Your goals for making a contribution. Superior men always feel a responsibility for the greater good

#6. Ask Yourself These Questions

1. What are the 5 most important values for you (this reply comes before setting your goals)?
2. What are your 3 most important goals right now (answer in 30 secs)
3. How would you spend your time if you had only 6 months to live
4. How would you change your life if you won 1 million dollars tomorrow
5. What's something you always wanted to do but were afraid to do
6. What do you enjoy most do in life, what you love to do
7. If you were guaranteed success, what exciting dream and goal would you set

#7. Prioritize Ruthlessly

Since you can end up with many goals, you should sort and prioritize.

You can use the ABC method: A for important and exciting; B you'd like but not as important; C for least important.

You can then take all the As and move them to another list.
At that point, you can add another layer of "A1, A2.. " to further sort out.

#8. Follow Your Natural Tendencies

Brian Tracy reminds us to keep in mind what we naturally do best and enjoy doing while prioritizing goals.

It is said that luck is when preparedness meets opportunity. Or when goals meet natural talent.

#9. Follow These Rules of Goal-Setting

- **Keep it congruent**

Your goals and your values must fit together like a hand in a glove.

- **Focus on areas of excellence**

it may change, but you should put your effort into what you love the most and possibly what you're already good at

- **Keep it balanced**

make sure that the goals you set in different areas are complementary to each other and don't work against one another

- **Develop a mission statement**

The N.1 goal is the most important of all. To find out a possible mission statement ask yourself: which goal, if I will achieve it, will do the most to achieve all the other goals?

#10. Motivate Yourself to Achieve Your Goals

Brian Tracy says that the moment you realize you can achieve any goal, you become unstoppable.

- **Desire –** Burning, Intense, Desire. The motivational force of power to overcome the fear or inertia that holds most people back. Dwell on your desires till they override and push aside your fears. Desires are personal, decide what YOU really want
- **Belief –** Conviction! You must absolutely believe it is possible to achieve your goal. You must have complete faith that you desire the goal and it will come to you exactly when you are ready for it. Nurture your faith and beliefs until they deepen to an absolute conviction that your goal is attainable. Belief is the catalyst to activate your subconscious.
- **Write It Down –** Goals that are not in writing are not goals at all they are merely wishes. When you write a goal down you crystallize it and make it tangible.
- **List all the ways you benefit from achieving the goal –** Reasons why are forces that intensify your desire. Motivation depends on your motive and the more reasons you have the more motivated you will be. Your reasons why must be uplifting and inspiring, they must be big enough to drive you onward. It is when you have big reasons for achieving your goal that you develop the intensity and purpose that makes you irresistible. If your reasons are big enough, your beliefs solid enough and your desires intense enough nothing can stop you.
- **Analyze your starting point –** Determining your starting point gives you a baseline to measure your progress and lets you know exactly how much you have to do to achieve. The clearer you are about where you are coming from the more likely you will be to get where you want to go.
- **Set a deadline –** Set a deadline for all tangible goals. People resist setting deadlines for fear of not meeting them. Think about your goal by projecting forward till after you have completed it and imagine the steps you took to get there. Then think backward from the achievement to the goal.
- **List all the obstacles to achieve your goals –** If there are no obstacles it is probably not a goal and more likely an activity. Make a list of obstacles then arrange them in order of biggest to smallest. The biggest obstacle is your rock. You will need to remove this first. Obstacles are the flip side of success and achievement. Your rock may be internal or external – Be honest!
- **Identify Additional information you need to achieve your goal –** The most successful people have more essential information than others. Make a list of all the information, skills, talents, abilities and experience will need then make a plan to learn, buy, borrow, or attain these as quickly as possible.
- **List all the people whose help and cooperation you will require –** To accomplish anything worthwhile you will need other people, people will help you accomplish your goals once you have shown them a willingness to help achieve theirs. Make a list and order it!
- **Make a plan –** Write out in detail what you want, when you want it, why you want it then make a list of activities ordered by priority. Many activities can be worked on simultaneously or others have to be done in sequence. Once you have all the actions listed in value for the plan, then START! The more detailed and better organized your plans the more likely you are to reach your goals exactly as you have desired them.
- **Visualization** -Create a clear mental picture of your goal as it would appear if it was already achieved. Project this picture over and over again on the screen of your mind, with emotion!
- **Make the decision in advance that you will never give up! –** Back your goals and plans with persistence and determination. Never consider the possibility of failure. Never think about quitting, hold on no matter what happens. Of all qualities to develop your ability to persevere is the most important.

Check out my video of how I developed my burning desire for my goals:

> Decide in advance that you will never give up

#11. Maximize Your Productivity

Brian Tracy says that good working habits can be summarized with two things: focus and concentration.

- **Focus** means clarity regarding the final result you want. It's like a lens, and you need to continually adjust your lens to make sure that what you're working on is the most important you could be doing.
- **Concentration** means the ability to stay with the task until it's 100% complete.

Also, read *Deep Work*.

6 steps to creating the quality of concentration common to all successful people:

1. Clear your workspace of everything except what you need for the highest priority at hand;
2. Organize your work and day by creating chunks of time (and allow plenty of time: don't rush things and just do the task at hand, nothing else). keep in mind the last 20% is usually the most productive because your mind warmed up and is fully into the task
3. A hard, sustained, concentrated effort is central to achieving
4. Develop a compulsion to closure and completion. Refuse to give yourself a reward until the job is 100% complete. And give yourself a reward when you complete an important task.
5. Program yourself with commands and use a trigger when your attention wanders: "back to work".
6. Discipline yourself to stay with the task until it's done

#12. Develop The Psychology of Success

It's not true that rich people are unhappy!

Overachievers enjoy more financial success and are happier with their money, enjoy more family success and take more joy out of family life, find more life success finding more meaning and contribution.

These are the characteristics of overachievers:

1. Have a greater capacity of coping with disapproval, move ahead quickly, and don't worry as much
2. Are more action-oriented
3. Use effective thoughts to cope with negative emotions (substitution: focus on what you can do something about)
4. Engage in less superstitious thinking, don't believe in good and bad omens
5. Better mental skills to cope with failure: failure is part of learning and doesn't lower self-esteem, so they take more risks and keep working even if it can mean some more "failure"
6. they don't think in categorical terms
7. practical optimism: positive but not naïve
8. Think positively but prepare for other possibilities
9. embrace new experiences and leave the comfort zone

#13. Develop The 6 Qualities of High Performers

These are the traits of high performers:

1. **See themselves as self-employed**. They accept 100% responsibility and see whatever happens in the company as affecting themselves. Look for ways to improve their organization, are team players, and are results-focused. All good leaders were good followers. All opportunities will open up once you start taking full responsibility for your organization.
2. **They have a clear sense of direction**: a career plan
3. **Unshakable level of optimism**. They know that self-confidence, self-trust, and self-esteem are key

4. **They are always self-teachable.** and never become impressed by their intelligence
5. **Mental resilience**: it's not how hard you fall, it's how far you bounce. Successful people don't allow external events to dictate their emotions
6. **High level of persistence** in the face of adversity and disappointment

My Note:
I particularly loved and made it my own, the idea that you never work for anyone else. You are always self-employed.

#14. Develop Mental Fitness

These 6 steps will help you keep a positive attitude:

1. positive self-talk and affirmation: use the law of substitution to tell yourself positive things. "I like myself" or "I'm the best" or "I'm sexy"
2. positive imaging: create mental pictures of the man you want to be. Or visualize yourself doing what you are about to do. Eventually, your subconscious accepts those ideas as true and as who you are
3. positive mental food: always feed your mind with positive books, movies, and audiobooks…
4. positive people: surround people you want to be like
5. positive training and development
6. positive health habits
7. positive actions

#15. Apply The Law of Reversibility

In all mental work effort defeats itself.

If you wish to develop a new pattern of thoughts, the more you relax and "don't try", the faster the thought is accepted by the subconscious mind.

> *The Law of Reversibility says that feelings and actions interact with each other.*
> *If you feel a certain way, you will act in a manner consistent you're your feeling.*
> *And the reverse is also true.*

Just as the feelings create actions consistent with the feelings, the actions create feelings consistent with the actions. i.e., you can act your way into feelings and the feelings will then generate actions consistent with them.

The second application of the law of reversibility is that just an object of state -an accomplishment or a success of some kind- generates a subject of state –a feeling of happiness and achievement-, a subject of state in reverse will also create an object of state.

ie.: if you arouse in yourself the emotions that you will get in the accomplishment of a goal or a solution to a problem and you can hold that emotion, the feeling will create in your outer world the result that goes with it.

#16. Work On Your Subconscious

Here's a 5 step process to internalize in your subconscious the subject of state:

1. verbalize and affirm your desired outcome
2. visualize and see the outcome
3. emotionalize your combine affirmation and visualization and create the feeling
4. release the situation from your mind with complete faith (as if someone will take care of that)

5. realization

Here are some ways when and how to use these steps best, use as many as you can and whichever is best for you:

Standard affirmation technique

Brian Tracy suggests going to a quiet place.
Take 7 deep breaths and relax. Read your goals and repeat them 5 times.

Visualize as if it were already achieved. Imagine how you'd walk, talk and act.
Emotionalize and create the feeling. Take another deep breath, exhale, and release the goal.

If you do it in the morning you activate the law of attraction and alert the reticular cortex to accomplish your goals.

If you do it in the evening your subconscious mind will work on the goals during the night bringing you ideas and solutions in the morning.

Quick affirmation technique

This technique is before non-recurring events like a sales call or a presentation or a meeting.

Close your eyes, affirm, visualize, emotionalize, and release. See and feel the event going well and then go to the meeting calmly and confidently.

Every time you think about the event use the law of substitution and use this technique rather than thinking about it with nervousness and anxiety.

Autogenic conditioning

It's a process of systematically relaxing your body before you affirm, visualize, emotionalize and release.

In its simplest form lie down or sit in a comfortable chair. Close your eyes, breathe deeply.

Now you can start talking to the six parts of your body (arms, legs, chest, and head) saying: "my left arm is becoming heavy and warm"… "my left arm is now heavy and warm".

In 10 minutes you'll be deeply relaxed and your mind will be in an alpha state and ready for deep programming.

This technique is sometimes called auto hypnosis and it helps people overcome anxieties and helps improve physical skills by rehearing the moves.

Heterogenic conditioning

What others say to you.

Think of what other people have told you. Or hear an audiobook saying the word "you" and saying what you desire to become.

If you enter a deep state of relaxation and then play classical music you will remember better.

You can use tapes with positive messages.

Make your own tapes!

17. Conquer Your Fears

Brian Tracy says that life is of the risk-takers, not the security takers

Successful people base decisions on desires and dreams; underachievers on fear and worries.

The starting point to overcoming fear and developing courage is, first of all, to look at the fact that predisposes us and second to analyze our fear objectively.

We are all afraid, the question is how you deal with it. When you move towards what you're afraid your fear diminishes and your self-confidence increases. When on the other hand you let fear dominate you, you are feeding the dragon until fear controls all of your life.

> Life belongs to the risk takers

#18. Apply the Law of Practice

Everything that you practice over and over again will eventually become a new habit.

This is the same for fear. If you practice doing the things you fear, fear will soon stop stopping you.

Make a habit to do the things you fear. If you do so, then the death of fear is certain.

Here are the key areas:

The courage to begin

The courage to lounge, to step out in faith, to move out of your comfort zone without guarantee of success.

A professor teaching entrepreneurship made a study, the only thing the successful ex-student had in common was that of willing to start a business.

The other who had done nothing was waiting for things to "be just right" and unwilling to launch themselves into the quarter of uncertainty.

Life belongs to risk-takers, not security-takers.
Life is perverse in the sense that the more security you see, the less you'll have. The more chances you take, the more likely it'll be you'll have security.

The courage to endure

The second step after you begin is the courage to keep going and endure in the face of difficulties.

The courage to see yourself as you really are

The courage to accept as you are, being honest with yourself. The courage to give up all excuses and accept responsibility.

My Note:
I prefer this one much more than the "self-lying" that are affirmations.

The courage of 100% commitment

Commit wholeheartedly to your job, your family, and yourself.

Make a firm commitment that you will give all yourself in what you're engaged in.

The courage to cut your losses

Brian Tracy recommends asking the following to know when it's time to cut your losses:

> knowing what I know… would I get involved with this person/relationship/business/investment… would I make this decision now again?

Admit if you've done a mistake

The courage to set big goals

Set big challenging goals and hold the dream of the life you want to have. You need big dreams to conquer your fears.

Crowd Out Fear

The mind can only hold one thought at a time. Have thoughts of courageousness.

Desire & believe

You have to desire to become courageous. And believe it's possible.

Think and envision the new you

Think about how you will be, how you will act courageously. Recall all the times you were courageous.

Affirm the new you

"I am calm, in control, and completely unafraid and genuine"

Mastering Worry

1. define the problem you are worried about (often half the cure)
2. Write the worst possible outcome
3. resolve to accept the worst possible outcome (now you're free)
4. improve on that worst situation

Also read: *How to Stop Worrying and Start Living*.

#19. Face Problems Head On (& Avoid Stress)

Brian Tracy says that are two kinds of people: those who try to forget the problems and pretend they don't exist, and those who confront them head-on and early on.

The "confronters" have lower levels of stress. People who confront problems are happier and healthier. By facing problems you will become stronger and more confident.

#20. Learn That Crisis Are A Sign of Achievement

If you push ahead for big goals, you'll always have a crisis.

And that's great.
The way you respond to the events of life builds upon itself until you will steel yourself up and become unstoppable.

#21. Make People Feel Good

People will like you and help you in direct relation to the way you make them feel.

#22. Leverage The Law of Reciprocity

Brian Tracy says that whatever you do onto others, others will do onto you.

If you want others to respect you, you simply give them respect.
This is also true in the sense that we feel the same way we make other people feel.

A major area where people need help most of the time is in their self-esteem, so start by *not* lowering their self-esteem.

My Note: Don't be naive and believe that doing good will get you good
This might be a good belief unless you believe that by simply doing good, you will receive good.
If you take it to an extreme, then you, first of all, fail the *law of balance*, and second, you *become naive* You're better off learning the law of reciprocity from the more scientifically sound social exchange theory:

- **5 social exchange laws to succeed in life**

> Social Exchange Theory: 5 Laws of Social Success

#23. Learn to Provide Constructive Criticism

Not everyone can take criticism.

With weak-willed people, if you need to criticize their idea, say it in the third person: "what if that person would say so.. ".
Many people have a tendency to want to get even, even when it's constructive criticism.

Eliminate destructive criticism

Completely, from your life. Don't even dwell on it, don't talk about other people negatively.

#24. Use The 7 Laws to Raise Self-Esteem:

1. **be agreeable**, don't focus on winning debates and fights, and get along. If you really have to counter, then use the third party, put the words in someone's else mouth, say: "what do you think our customers would say if they knew we were doing this" or "how do you think our investors would answer"
2. **acceptance**: smile and accept people for who they are
3. **appreciation**, say thank you
4. **gratitude**
5. **approval**, praise people as soon as they do something right, especially do so in front of others

CONS

The main cons for Brian Tracy's teaching are:

- **Lots of "self-help galore" that isn't scientifically proven or that's been proven to be sup-optimal**

You can also read articles on *self-help myths, pop-psychology myths*, and jump to the *best positive psychology books.*

- **Sometimes naive**

As Bel, a friend from the TPM's community noted, Brian Tracy sometimes spreads some naive beliefs and notions. For example, that doing good will (necessarily) bring back good karma in your life, and that morals and ethics are crucial to personal success.
I wish that were true, but I'm afraid it might not be. Or, at least, you're better off not banking your life on that notion that good deeds will necessarily get you back good karma and success.

I highly recommend you read the naive self-help article.

> Naive Self-Help: 10 Most Dangerous BS to Avoid

Summary

Brian Tracy is an awesome self-help author.

He is one of the self-help gurus I started with and I learned hugely from him.

As time went by and I grew my personal knowledge, I also got more and more into self-help with a critical mind. And I realized that Brian Tracy also shares some *naive advice* and *pop-psychology* and *self-help myths* that aren't always helpful for everyone.

However, Brian Tracy is still a man you can learn a lot from and a wonderful role model.

Creating Lasting Change: Summary & Review

Lucio Buffalmano · 23 September 2017 · Archived copy · Original

Creating Lasting Change is a course in which self-help author Tony Robbins teaches how to influence and persuade people to change.

About The Author

Tony Robbins is a motivational speaker and self-help author of books, courses, seminars, and live tours.
He has been of the most successful in this area, if not *the* most successful and famous self-help personality.

> **Lucio**: Tony Robbins is incorrigible, sometimes annoyingly and "power move-y" salesman and marketer… But also a great value giver with fantastic content

The General Rules of Change

Anthony Robbins says Change often happens when we least expect it.

For example, a tragedy strikes, and then we quickly change.

And it happens more easily when we're in a trance.
To put someone in a trance you can actually talk about YOUR experience and (if you do it well) they'll follow you in a trance. Your story will change their emotions, their focus.

Tony Robbins says that the problem with normal therapies is that they analyze for a long time the issue and where it came from.
But that often matters little.

Most **old-school therapies diagnose a pattern and give it a label, making it even stickier for people**.
If you know Tony Robbins you've heard this criticism towards the most common psychotherapies and I couldn't

agree more.

The author says you need to address the underlying problems, the source of the problem, not just the outward behaviors. And the source of the problem is an emotional pattern of physiology, language, focus, and beliefs.

Because if you smoke out of boredom and kill smoking habits, then people will start doing something else which might also be unhealthy.

The Basics of Changing People

Tony Robbins says that to change someone you need a solid relationship first, which is based on two things:

- **No judgment**

Never judge the person you want to help. Be open to whatever they have to say without putting any label on it.

- **Respect and care**

Look for something you can respect about someone. And care about them.

Tony Robbins says there are 3 levels at which people evaluate things: the targets (driving human forces: top 2 needs of 6 human needs), the guiding force (global/identity beliefs, so you know how they meet their needs); fuel of choice (the top emotions people experience).

To be happy match life conditions with blueprint

As we've already seen in *Personal Power 2*, Tony Robbins says that if your life conditions don't match your blueprint then you're unhappy.

If they match, you're happy.

To help someone you must either change their living conditions or change their blueprint.

To change, leverage the six human needs

Tony Robbins says that to change anyone you must understand what their needs are first.

Human beings have 6 human needs which drive their behavior. Our life is shaped by the way we learned to meet our needs.

Any time someone links in their mind consciously or unconsciously that thinking, believing, and acting a certain way meets 3 needs, it will become a habit.

Changing someone is about breaking the old pattern and showing them a new way to meet their needs.

1-4 are the needs of personality, and 5 and 6 are the needs of the spirit. The last two are what make you feel fulfilled.

1. Certainty

Anthony Robbins says you can get certainty in ways that are positive, negative, disempowering (for example: I know it's a waste of time, it never works so I'm not even gonna try) or empowering, attainable, or sustainable.

Worry is something that creeps up when we are not certain. Anthony Robbins suggests always getting a plurality of opinions and quality information.
A potent antidote for worry is to decide you're gonna have faith. Robbins' way to get through some of the toughest times is to believe you are guided. The power of belief and faith.

You can also have too much certainty though. When you have total certainty you lose your edge, you get bored and

you start yearning for a change.

2. Uncertainty/variety/diversity/challenge

The second human need is uncertainty.
We also need stimulus and change, we need it to feel alive.

3. Significance

Tony Robbins says that significance means feeling special and worthy of attention.
People get it with things like trying to be different with tattoos and piercings, dressing top brands, and being more generous than everyone.

4. Connection and Love

Tony Robbins says that everyone needs connection and love.
Love is a bit scary though so most people settle for connection which you can get with intimacy, walking in nature..

Again, you can meet this need in positive ways, negative ways, or empowering/disempowering ones.

5. Growth

Growth is the need to develop and expand

6. Contribution

The need to give beyond yourself.

Understand People and Yourself

What do you focus on?

Tony says most people focus on certainty and on being significant (often trying to be significant via FB even if it means faking it).

Once you understand what's driving you and what are the rules you follow you will understand yourself better.

To change someone, look at what needs they value most. The more you reinforce a person's behavior with the needs they value most, the quicker that behavior becomes automatic.

Step 1: Understand and Appreciate Their World

Tony states a huge truth about being with: to influence other people, you've got to know, simply, what already influences them.

You understand by listening and asking questions.

A person's model of the world is made up of 3 chunks/forces: human needs, beliefs (including identity beliefs), and their most common emotions.

Driving forces: what do they need and what do they want

Tony Robbins says that first of all, he looks at what are their top 2 needs. These are the preeminent needs and driving forces.

The first thing you need to understand to influence people is what they need and what they want.

We already know the needs they have. They all have the first 4, not everyone has the last 2 yet.
We need to know what they want, and we have to tease it out.

Example:

"I want to make a billion dollars" is significance;
"feeling in control of my life" is certainty.

Guiding Principles

Tony Robbins says that the belief systems and the values we have are what has to happen to meet our 6 needs -and mostly the top 2-.

For example, you can get significance by killing or by saving people, two completely opposite behavior but all going back to the same need.

Creating Lasting Change then goes on to describe the guiding principles (or guiding forces, Tony often switches words), which are composed of 7 parts:

- **1. Global Beliefs**

These affect everything. Your beliefs about time, life, death, people, God, and destiny. What it means to have children.

Questions: What is their life about; Who are their role models; what is life about; what is abundant in their life?

- **2. Identity Beliefs**

These are the beliefs about you. How you describe yourself.

For example: *"life is that way, OK, but this how I am, this is how I'm gonna show up"*

Questions: who are you really; what can you be; how can you expand your identity right now

Tony says that Identity Beliefs are key to understanding because if we give someone some tool consistent with his identity he'll use it. If those tools are not consistent with him he won't use it.

- 3. **Values**

Tony Robbins says that we know our identity through the values that we hold.

Values are ideals that are personally important to the individual. Values are what we want to move towards and away from.

Questions: what do you want; what do you desire most in life; what do you really fear or find yourself avoiding most in life;

- **4. Rules**

What has to happen for their values to be met? Those are their rules.

Questions: What must a person do or never do in a relationship; how do I know I'm successful

Example:
To feel loved I need to be told 'I love you' every morning; I feel loved when I love others ;

Example: bonding
Tony speaks with an audience member live, Jim.

In Jim's case: a good relationship has to push you and love you when you go off track and if you're really my partner you'll love me during those times.

So if you work with Jim, what's one of the best ways to bond with him strongly? When he screws up you tell him "no worries brother, you and I are in this together". Like that, you enter into his world the way it works for him.

Now that's human nature and most everyone will appreciate you for that, but in HIS case, it's even more powerful and he will appreciate you even more.

Contrary to Jim's someone else's rules could be "I only appreciate people who come out and confront me" and if you go and tell them "hey it's no problem", they won't respect you.

- **5. Vehicles**

The vehicles are what we use to meet our needs. They can be positive, negative, or neutral.

For some people it's their bodies, working out every day I get certainty, significance, and connection.

And whatever vehicle people pick, it tells you where their fears lie.
Did you pick your business? Money is your fear.
Did you pick your wife? Losing your wife is scary for you.

In the case of Jim, that's his business.
With his business he meets his needs for certainty, variety as it always changes, significance as it's growing, connection to the people around him, and contribution.
Another primary vehicle is his wife for both love and certainty.

- **6. Situation-specific beliefs**

Beliefs about specific situations or contexts.

Example:
When would you break your own rules?
Or you might have a few people in your life you think are screwing up your life in a specific period of your life.

- **7. Metaprograms**

How your brain processes information.

Example: ***Analyzing Jim***

Jim believes a long time is a very short time for most people. He's married. He has 13 burger kings.

"what is life about", he believes life is a journey.
"what kind of journey" a path A to B. "
so you know what the path is?" "yes",
"what if the path doesn't turn out the way you thought "you take a detour", "what's the reward" "uncertainty, variety"
"what's a relationship about" "partnership, no fun by yourself"
"what does your partner do" "push you at the right times, support, love you even if you're off the path".

Jim wants to know the system, just cut to the chase, show me what works "right Jim?" "amen".

Jim style works really well in an environment where you can lead in an authority position where people see him as superior than they are. Like in the military (Jim confirms he'd fire them easily).

He values certainty (one of the top 2) and significance.

How much does this man value love? A lot because he brightens up when speaking about his wife and he mentioned "support and love you when you're off path".

Tony says Jim is a love bug, but learned that you can't be a love bug and really have certainty.
If you open too much you risk. So Jim went for another strategy: going for certainty and significance.

Cause if I'm certain and significant I'll have enough within me and feel good about myself that I can love and along the way he found a partner to share it all with.

He has a motive for love and variety, in fact, he believes that if he's certain and significant he can enjoy the ride.

He's got his 4 major needs met so he goes to the next 2.

Tony is listening for his driving force and his map (the way he's gonna meet those needs, all 6 but especially certainty and significance).

He's listening to global beliefs (what's life about, what's a long time, what are relationships about..). Tony guesses that part of his identity is being an achiever and a leader.

He's a successful man and that's part of his identity. That's gonna help Tony understand what influences him and Tony has to communicate to him the way he'd listen.

For Tony, it's easy because there's a part of him like Jim. You influence Jim by entering into Jim's world.

Emotions – where do you live

Tony Robbins says you should find what emotions are they most often feeling.

On average we have a half dozen emotions or less and we get to those states any way we can. it's the language they use, it's what they focus on. Switch what they focus on towards what they want rather than what they don't want.

People go where they live: they find in the environment what triggers their emotions and then they blame their environment.

Example: 09.11
A woman stood up screaming we had to kill them all when 09.11 happened. We use the environment to meet our needs, she got certainty by getting really angry.
She got a connection: everyone was paying attention.

Step 2: Get leverage

Tony Robbins says that leverage happens when your brain and body become one and you go "this is it, no more" when you hit an emotional threshold.

When failing to change is more painful than all the other options.
Leverage must be immediate. Immediate pleasure for changing now and immediate pain for not changing now.

People don't change because the habit fills some of their needs.
For example, smoking makes you feel comfortable, it changes your state, creates variety, you connect with yourself and other smokers.
But if your health becomes too critical, or if someone you love deeply hates cigarettes… Now you start getting leverage.

How do you know what's the leverage? You try different things.
And if you know what their 2 biggest needs are, then you know where to look for them.

Sometimes the trigger can be physical, for example, stopping smoking by giving pain every time someone lights a cigarette. You can easily get to change someone with that kind of leverage.

But those people then take up eating or something else (more on this later).

Global solution

When you find a global solution you help someone get out of pain and into pleasure by finding something they value more than pain.

People keep being in pain because in their belief system pain meets some of their needs.

Changing will take away some of their needs. With pain, they are connected with themselves.

Example 1: Splitting Personalities
In Hawaii, a woman started splitting her personality during a Tony Robbins' event.

What needs is she fulfilling? She was raped by her father and then brought into psychiatry raped by her doctor.

Splitting personality was a way to get out of pain (certainty) and variety (you create movies) and significance (first person ever with that issue) and connection (people take care of me).

Tony has to increase pain to that behavior and find something she values more so she has something to go after.

And Tony goes "I know you believe all your personalities and that's very colorful. But I know you are Mary. You are an amazing woman. This adaptive behavior is impressive as you got through it and survived. And he actually compliments her.

And then hits her saying "but you are here for a reason. And that reason is pain". He said it low and takes a pause. Now Tony is stirring the pain to get momentum towards the change. He keeps going on saying that she's creating so much uncertainty for the people around her that they pay attention, but don't actually love her.

She goes "I'm Superman" and Tony Replies "no you're not, show me the S".

He has her admit her multiple personalities give uncertainty to herself as well to the people around her. And it's a lot of work to keep all that up.

She replies she's one of the first MDP and Tony goes "yeah and how many there are now, you're pretty much a dime dozen". But you know what, they all claim they can't change. And there hasn't been one who managed so far. Now changing would bring significance AND love.

Do you like children? Yes. They have lots of imagination, like you. You should write children's books.
Now, he's creating a path for her.

Example 2: Cheating
A man was so angry at his wife's cheating that he couldn't even connect with his daughter.

What made him shift was the realization that the love for his daughter was much more important and transcending than his anger and mind. He realized this through questions.

Example 3: firing a friend
The CEO of a large organization had been with his right arm for many years but a few facts made him realize he needed to fire him.

But he was in pain as he valued loyalty very highly.
When he realized that his real commitment to the organization to make the mission come through he felt he was ready to make it happen (that was the point of leverage: the mission of the company was higher)

Example 4: money don't buy you love
A man's entire life was about contribution.

He wanted to be significant (he made it through a business and making lots of money) but don't make it just for himself, make a difference to other people so they'll love you.

Be significant – contribute – you'll get love.

He was successful but lost all his money and his family's money in the stock market crash. Not only he can't give but now he took from others. His life blueprint is the opposite of reality.

Tony searches for leverage but can't find it anywhere, he is just hell-bent on giving back to the family by killing himself and giving them back with his life insurance policy.

That way, he can give and be significant. At that point, Tony takes it away from him saying he filmed the whole episode and he'll release it: now he can't kill himself anymore.

The look on the man's face: he exploded

Now his suicide was not significant anymore if he took his life away.

Example 5: The raw food eater
Tony asks her how long she'll live if she keeps going like she's going and she says "no longer".
Since she said it herself now Tony thinks he's got some leverage. But it wasn't enough.

So he said "Lisa", when you die and your daughter will be the pallbearer, how do you think she'll feel knowing you could have changed but you didn't?

She paused and started crying.

Now Tony thinks he got through to her. But she cries and tells him sobbing "true but I can't change".

Tony repeated his mantra "there's always a way" and prodded again "do you think her new mom will be a meat eater". Now that snapped her.

How to Use Framing

Tony Robbins says that to change someone's behavior you change people's state.

If you leave them where they are, they stay stuck in a negative state and won't budge.
And you do that through physiology and focus.

Focus

Focus is what they focus on and what it *means* for them. Ask questions whenever possible and tell stories so they get a bit in a trance.

If I tell you something and we have great rapport maybe you'll listen, but if I ask you "*what do you think this might mean in this context*" then I make you come up with YOUR OWN resources and you can't deny your own experiences.

Having a frame that interrupts their pattern is also important. You can ask a question which is really bizarre (example: Tony speaking to a suicidal guy and he tells him "is it because of the red shoes" "what?" "because they're fucking red").

Example: reframing a stubborn daughter
Tony spoke to a guy who complains her daughter is stubborn and too lively all the time.

And you could say "yeah, I like that, kinda reminds of me someone. Do you know someone who's really stubborn and makes them successful?" he builds rapport, makes a question, and interrupts the pattern.

Follow up question could be "do you think there'll be any place in the future it could be really useful for her to assert herself?" or he might jokingly add "do you think when a boy takes her to the backseat of her car and she doesn't wanna be there it will be useful?" (instantaneous reframe)

How to Use Preframing

Tony Robbins says to tell someone in advance what to pay attention to and what it means.
It's the most powerful way to change someone.

The pre-framing works like the placebo effect -which is extremely powerful BTW-.

An example is: what I'm gonna do right now is the most powerful pattern ever, there wasn't one person who didn't heal, you will love this one.

if you are with someone who's skeptical immediately say that you know what they're thinking. "*you know what, I don't know if this really makes sense, it probably doesn't, but why don't we give it a try*", which will immediately build rapport.

Example: dealing with Dennis Rodman
Tony went to coach the Spurs.

He was extremely badly pre-framed as they invited all the take it easy ticket takers entourage, white, with most overachievers players, black.
The Spurs had won 9 matches in a row and there was Dennis Rodman on the team who walked in, sat down with his sunglasses, and ripped the workbook in front of him.

He is introduced by someone who doesn't know how to introduce himself, who forgets what Tony had told him and that destroys his pre-frame even further.

The white guys in the back are clapping and the whole team is actually not giving a shit.

Now Tony needs to adjust that preframe.

He says:

> *"you're probably wondering why I'm here.*
> *You just won 9 games in a row, you haven't had a day off and it's your first day at home and now you've got some white guy standing in front of the room who's never play basketball for his entire life trying to show you how you can play better when you just won 9 in a row.*

Now Rodmann is looking up. He says "those are good questions to ask".

> *I wouldn't be happy if someone took my one day off (pacing their reality).*
> *I have nothing to do with that but I am here and I am responsible to deliver for you. You only gotta be here 1h.*
>
> *You gonna be here for 3. You have the choice to leave after 1h but you won't. And I tell you why: because I will deliver results to you that you've never seen before in 3h.*
>
> *And I'll deliver so much in the 1st hour that you'll wanna stay. And you will see that while I may not know how to play basketball I worked with the finest people in the world in all these categories (and went bam bam bam).*
>
> *I might not have all the answers but there's another reason you gotta listen to me:*
>
> *You never made it past the first round of the playoffs (Now everybody looked).*
>
> *I am not suggesting I will get you beyond because only you can do that and I know there are only a few things keeping you from there.*

He created a frame that he doesn't believe he's got all the answers BUT he's got the answers.
That he doesn't deserve to be there but he does. A frame that he's gonna deliver because he's done with it.

> *But before starting I'd like to make a prayer to guide us through (he knew the group is religious and always says a prayer before the game, he has done his research).*

He had heard they make crazy resounding prayers but this one was super weak.

So he makes a joke about it saying it looks like they don't hope to achieve much there, so he does one more thing: he takes his jacket away, gives it to the captain, and says

> *"I don't deserve to wear this yet. If by the time we finish I delivered so much value then you give it back to me and I'll wear it with pride. If I haven't, throw it on my face for having taken your time, but that won't happen. Let's*

> *begin".*

He created a frame that he doesn't believe he's got all the answers BUT he's got the answers. That he doesn't deserve to be there but he does. A frame that he's gonna deliver because he's done it.

If he had just started talking, it would have fallen terribly flat.

He gets Rodmann on stage and said

> *"I don't know about you Rodmann but I saw you the other day signing autographs and taking time for those kids. I know you wanna be unique and have your own space, but I know you're a good guy".*

Now they are participating but not at the level he's used to. He feels it's also because the people on the back are drowning them out (Tony thinks the players don't want to associate with them).

So he says

> *"OK, your hour is up. I know you guys played with me and taken notes when you usually don't and I've gotten you value but we haven't scratched the surface here to get the results you want. I need to tell you two things, frankly all the people on the back get outta here, leave. Leave, the boys and me need to have a talk".*

Then he says

> *"listen, I appreciate the attention you have given me but I am not like one of those people in the back. I ask you one question and you nod, that is NOT peak performance. I am here delivering for you and you gotta deliver back. You can leave now for 15 minutes or leave forever. If you come back here I have one requirement: you play full out with me. if I ask you a question you answer fully out. If I tell you to jump, you say how high. And if you don't wanna do it I'm totally cool with it because I'm here to deliver you results. If you get back here you will if you don't you don't (and he storms out).*

Example 2: delivering news of change
"today we're gonna talk about some great opportunities coming up in the company" VS "I have some news about changes in the company that will affect many of you", which changes the tone hugely.

My Note:
if you want to read more about the importance of pre-framing in persuasion, take a look at Pre-Suasion by Robert Cialdini.

Reframing

Tony Robbins says that pre-framing happens when someone has a problem and you change what it means.
What things mean is determined by what you compare and contrast them to.

Example of John Belushi: he forgot how life was when he was struggling. You make sure you never forget your roots, the ultimate frame of reference for Tony was taking his kids to some of the worst places.

Make sure you compare yourself to what empowers you and make sure what you reframe for the people you speak to aligns with their core values and beliefs.

Example: make pre-framing relevant
If I value learning and you reframe something as having fun, it's not as powerful.

It's better if done with questions and after you interrupted the pattern so they pay attention (if they're in a stuck state it won't work).

Example: changing the meaning
Your friend complains about the dates he's been going to are a failure and you say "maybe god is protecting you from these men because he has someone special lined up for you"

Context reframing
You let them see their situation in another context. i.e., a problem in one situation is a benefit in another.

Content reframing
Give some input they didn't have. Or tell them something they believe is not true.

Deframing

Deframing is when someone is caught up in something and you destroy their frame of reference.

For example, someone complains about something trivial, then a guy in a wheelchair passes by and says if you can help as he can't eat anything.

Example
your child who's complaining about eating his piece and you say "you know, there are a lot of children in the world who are starving and would love to have your piece to eat"

Step 3: Interrupt the pattern

Tony Robbins says that all change is the interruption of a pattern.

Once you understand that, all gets easier.

You interrupt the pattern and bring resources -confidence, calm, grit, etc.- from other realms of the personality (and if they don't have any, from other people).

People are subject to a pattern of: focus and beliefs, physiology and language (which puts them in certain states and give certain emotions).

Ideally, you interrupt all 3.
Language by itself won't do.

Interrupting the pattern is key: people often fail to change because they try to change the pattern before first interrupting the old one.
Ideally, you want to interrupt the pattern asap: kill the monster when it's small and before it's ingrained in their system.

Any pattern which is continually broken will eventually be changed. You have to scratch that old CD so that you can't go back.

You can break the pattern physically (throw water on them, pain, slap them..), take them into a more positive future, change the language pattern (ie.: "next time you feel depressed say, thank god I'm not a cockroach in Bulgaria and repeat 20 times a day")

Rapport & common mistakes

It's good interrupting the pattern with elegance and with rapport.

Sometimes it's not possible for Tony to build relationships first and he gotta intervene right away, but then he doesn't keep breaking patterns but builds rapport.

There's a fine line between breaking a pattern and destroying rapport.

Attention not to get too offensive, but also don't make it too subtle or expected.

Questions

The simplest way to break someone's pattern and rewire someone's brain is with questions.

Outrageous

The more outrageous and unexpected it is, the better. Something gross, bizarre, or sexual.

Example 1: Sadness is a state
Tony was receiving people who were ok when they walked in, then they'd sit down and start talking about their problems and getting sad and crying. And he'd scream "heeeey, we didn't even start here".

And he'd have them convince HIM that they wanted to change.

Example 2: *A golden medalist who's afraid of public speaking*

But he's so confident when he's playing his discipline. Tony gotta interrupt the pattern of the audience being in such a scary place.

So he brings the positive emotions beliefs and physiology he has for the competitions to public speaking. That's the core of change: interrupt the pattern and bring resources where they're needed.

Example 3: making mutes speak
They bring in a patient to Tony's original teachers (John and Richard) who didn't speak and hadn't said a word for 10 years. They brought him in and said with a challenge, see what you can do with this one.

The guys tell them to go out and leave them alone. John tells Richard "lock the door". "lock the door?" "lock the door! (shouting)"

And then pulls out a knife and proceeds to denude the patient whom… now did speak!

Example 4: curing Jesus
A guy who said he was Jesus is taken to the same teachers. The guy goes "excuse me, I understand you used to be a carpenter" and he goes "uh? Ah yeah, yes.. " "you are Jesus aren't you?" "yes my son" "ok, I'll be back".

That's a slight pattern interrupt. He didn't introduce himself as a doctor or anything and just leaves him hanging, now Jesus isn't so certain.

So he goes back with a tape and brings in hired people to build a cross with giant nails. The guy asks what they're doing and Richard goes "well you're Jesus right" "ohh.. yes my son" "well, then you know why we're here".

Barely 3 minutes and he went back to being John J.

He took shock therapy, he took drugs, he took analysis… but he wasn't ready to be crucified.

The more intense it is, the more effective it is.

Pattern recognition

When you learn to see the pattern, you can anticipate what's going to happen.

We need to learn their evaluation process. Noticing the state they're in, the questions they ask themselves, and the neuro-association they have.

If we can help a person see how their evaluation is the source of the problem, we can show them a way to solve it.

Step 4: Define the problem in solvable terms

Does somebody say they're depressed?

No, they're not depressed, they're bored.

They're living life under someone's else terms. You redefine their situation in a way that is addressable.

Example: The man who wanted to kill his wife and children
Bob wanted to kill his wife and children.

*Tony asks him what's a good life for him, and then tells him that he's trying to be something he's not. Tony tells him to fu** that idea of "responsible father" which is shackling him.*

He says there's no point in waiting for something, he can get back to living the life he dreamed right now and improve the life of the people around him by being a better person.

He says everyone loves a comeback. It's boring having been great all the time, but the person who makes a comeback and gets even stronger, that's what everyone loves.

He tells him he's a man who likes to ride and boogy, so tells him to close his eyes and imagine how it'd feel to get up, give a kiss to his kids, and get on his Harley (and Bob describes his surroundings) and feel the wind on his face. Then he goes back, grabs his wife, and makes the most passionate love he's ever done.

As he speaks Bob has the biggest grin on his face.

He plays "born to be wild" and now he's moving and dancing and singing.

Step 5: Create new empowering alternatives

Tony Robbins says that it's key to find out what vehicles people use to meet their needs.

Once you know, you must set a new empowering alternative. People need a new way of thinking, focusing, new physiology, new beliefs, and new emotions.

Any behavior/thought or belief that gets reinforced constantly will become automatic.

Be on the watch for someone's words.

And to change associate pain with the current behavior and associate pleasure with a new behavior.

Step 6: Condition it

To embed the new empowering alternatives you must use it every day. Doing is of course the simplest way. And Tony Robbins also proposes anchoring and incantations.

Anchor It

An anchor is creating an association between a specific stimulus and a specific state.

An anchor is created any time someone is in an intense state (depression, anger, love..), either positive or negative, and while they're at the peak of that state someone consistently does anything unique.

Create an anchor

Either find someone in a peak state or create it. You can just ask them how was it when they felt amazing.
The amount of emotional intensity is key.
Now consistently do something unique.

And to test it take them out of their peak state and fire the anchor.

Collapsing an anchor

Create a series of positive ones which are more powerful than the negative.

Incantations

When you speak aloud with absolute certainty and you repeat it and repeat it. They can override beliefs.

You have to do with your whole body and intensity and believe in it.
Tony as a youngster would do that for hours and hours, vibrating.

Example: don't create negative anchors with your partner

Tony's daughter waiting for the BF to call and was getting impatient. Then he calls and she screams at him. Then Tony explains she is conditioning him NOT to call.

My Note:
Incantations are not effective with people with low self-esteem. Read here why in the self-help myths list.

Step 7: Relate to Environment & Higher Purpose

Tony Robbins says that when creating change, you must connect it to a person's highest values and help them integrate the new empowering alternatives into the environment where they actually live.

Help them see how the change relates to what they value most and to what ultimately they want to accomplish -and their highest love, that's where the biggest leverage is-.

It might be a daughter, it might be a cause, it might be mastering an art or skill.

Get empowering friends

Most people's lives are a reflection of the expectations of their peer groups. You live a life that is the reflection of the expectations of your peer group.

If your expectations for your life are higher than those of the people around you, they will pull you down.

Create an alternative that meets your needs which is good for you, and for the people around and serves the greater good.

Leverage Identity

Identity is the belief in who you are.

One of the strongest needs in life is to remain consistent with our own definition of ourselves (with our identity).

Changing identity will create forever change.
Who you are is more than anything you can face.

What shapes an identity? Beliefs, physiology, language, what they focus on (the triad), and references.

If you wanna change someone's identity:

1. Give them an experience that contrasts with their identity and (limiting) beliefs. So you start developing a new set of beliefs.
2. A huge change in the physiology (train them to change them consistently and use their body consistently, so it's not just a one-off thing)
3. Change the person physically
4. Incantation: use the physiology and emotions with it (incantation is physiology, language, and focus the triad)
5. Create a peer environment in which the only possible identity is the one supported by your environment
6. Link so much pain to the old identity that they need to change and link pleasure to the new identity (or behavior, emotions, pattern). Pleasure is the long-term motivator for long term as people learn to deal with pain
7. Provide a compelling future

8. Help them master a new skill: it gives a sense of growth and the identity expands

This Is Leadership

Leadership is a state of caring and rapport and a set of standards that causes other people to want to have something that you have.

The person who is most certain, if there's rapport, will influence the other.
State and rapport are the two main ingredients.

You Must Be Your Personal Master First

Tony Robbins says that a leader's got to be effective in himself first. And doing so at many levels:

1. **Change your state in a moment**
   on yourself, you gotta be able to change your state in a moment.
2. **Change state in challenging situations**
   take a situation where you normally don't manage your state and link it to a situation that puts you in a great state. The trigger for a negative frame becomes the trigger for a positive one. Pick those situations that scare you the most and turn them around. When the tigers show up, you use it and you show up
3. **Live permanently in a great state.**
   create a model of the world where you have no tigers: most of your time is at peak state, fulfilled. Your whole way of looking at life

Individual mastery

1. Take someone and change their state in a moment
2. Take someone facing tigers and use those tigers to make them stronger
3. Change their model of the world

Social Mastery

When you can do it in groups.

TPM's reviews

CONS

- **Reactions Are Not Long-Term Results**

Sometimes I have the feeling Tony Robbins seems focused on making people change their state and move around and dance and act crazy.

That's what he likes to see.

But I gotta wonder how often those changes are actually long-lasting.

- **Jumping to Conclusions**

Tony Robbins is charismatic because he exudes conviction.
But that conviction comes at a high price: the guy always jumps to conclusions, and I'm pretty sure he got it wrong a few times.

- **Scatterbrained**

Tony Robbins often jumps from one thread to the other, going back and forth without always sticking to the topic and to the relative chapter. I find it confusing.

- **Unprecise Nomenclature**

Tony seems to use a different name for the same things, and he keeps changing it and mixing it, making it very difficult to summarize and, most of all, to understand what is he actually talking about.

You will think "it makes sense but… What step was he referring to?

Review

Creating Lasting Change is another amazing program by Tony Robbins.

It's packed with amazing useful information on how to change people's state and behavior and, most of all, I love the examples.

I like Anthony Robbins.
His credibility when it comes to influencing people and changing their state is unquestionable. So we should listen when he talks about influencing and changing people.

Just a personal note: don't try to change anyone who doesn't wanna change. Not only it will hardly be effective but you will only alienate people that way.

8 Keys to Eliminating Passive-Aggressiveness: Summary & Review

Lucio Buffalmano · 23 September 2017 · Archived copy · Original

8 Keys to Eliminating Passive-Aggressiveness offers a comprehensive overview of *passive-aggression*, including how it develops, how you can fix it, and how you can deal with passive-aggressive people.

Bullet Summary

- Passive aggressiveness stems from childhood
- Holding back anger is one of the main traits of passive-aggressiveness
- Passive-aggressive need an enabler in a long-lasting relationship
- You overcome passive-aggressiveness with *assertive communication*

Full Summary

8 Keys to Eliminating Passive-Aggressiveness has lots of great examples, so I recommend you get the full book to get the most out of it.

What Is Passive-Aggressiveness

Passive-aggressiveness is one of the *major four styles of communication.*

Andrea Brandt says that passive-aggressiveness arises from the taboo our society places on anger.

Passive-aggressive people don't set and don't know how to set personal boundaries.

And when people overstep those boundaries, they swallow their anger. But Anger doesn't go away, it's an energy that needs to be expressed.

So the passive-aggressive often projects their anger onto other people.

Others might not be angry at all, but the passive-aggressive actually provokes anger in the other person to then justify their feelings.

Passive-Aggression is a feeling of powerlessness

Andrea Brandt says that passive aggression is born out of a feeling of powerlessness.

It's no coincidence the roots are often to be found in our childhood.

If one of the parents is dominant and the other subservient children are likely to develop some passive aggressiveness personality traits. From the subservient parent, children learn powerful people shouldn't be approached directly.

Are you passive-aggressive? Go through this checklist

Andrea Brandt gives us a handy checklist to see if we're being passive-aggressive:

1. Withhold praise, attention, or positive feedback when someone deserves or asks for it.
2. Fail to follow through
3. Stall when an important issue needs to be resolved
4. Withhold intimacy as a way of punishment
5. Engage in sabotaging behavior
6. Respond with minimal words during important discussions (ex. "aha, hmm, I don't know, fine")
7. Respond in sarcastic ways about life, yourself or others
8. Feel frustrated, disappointed, or irritable a lot sometimes without reaching anger
9. Look at situations negatively even when they are going well
10. Make small negative comments underlying someone else's self-esteem
11. Feel depressed frequently
12. Never say no or always say yes

If you said a lot of yeses here it means that showing anger is a problem for you.

Also, see:

- **How to politely say no**

> 5 Techniques to Say No (Polite, But Effective)

The characteristics of weak boundaries

Andrea Brandt also gives us a list of what weak boundaries look like:

- Not protecting personal space;
- Revealing too much;
- Getting caught up in other people's troubles;
- Neglect own needs for others;
- Tolerate abuse;
- Confuse sex and love (and give in to pressure for sex)
- Easily persuaded by one religious creed or another;

Example: Passive-Aggression in real life

Luisa and Katka work together at a bookstore.

Luisa asks for an important favor to be taken care of ASAP.
Katka does her own things though as the task takes some time and then goes to lunch.

When she comes back Katka is doing the task herself and gets angry

> *-"I don't understand why you say you can help if you really can't"*
> -I didn't know it was that urgent
> *-I told you it was ASAP*
> *-I had some other stuff to finish.* I can do it now if it's important, I don't see why you're so angry
> *-Forget it*

Katka said sure without asking for a time frame and without considering her own agenda.
She just said yes almost always to avoid saying no.

Then she delayed doing it and said she didn't know it was that urgent when she actually knew it was ASAP and could have easily figured out how important it was.

And she could have easily figured out whether or not she could have managed and easily said no.

The 3 Types of Communicators

Andrea Brandt says there are three different communicator types:

Aggressive communicators are loud and domineering, winning is everything.

Passive communicators say little, don't stand up for their rights, and ignore attacks. If they have an outburst they are immediately ashamed. They say sorry. Their body language is tentative.

Passive-aggressive on the surface seems similar to passive, but the anger comes out in criticism and sarcasm. They send a double message: their face is smiling but the words sound mean.

How to communicate assertively

Andrea Brandt says that when we treat each other with empathy we see the situation from the other's point of view.

But this is different than assuming you know what they're thinking or feeling.
An essential part of assertiveness is seeing others as individuals and we reflect this understanding with "I" statements without accusations.

Examples:

> **Wrong**: *"you really hurt my feelings when you criticized my cooking in front of everyone"*
> **Correct**: *"I felt embarrassed and angry to hear you didn't like the dinner I made for our friends. I want to know what you think, but I'd rather hear it privately"*

And:

> **Wrong**: *You should really go to the dentist for your teeth, they're really yellow*
> **Correct**: *I was reading about… (news about whitening) … have you heard about it?*

Passive-aggressive communication assumes all discussion will lead to a quarrel, these examples show how criticism can be conveyed in non-threatening ways.

A passive-aggressive needs an enabler

Andrea Brandt says that a long-lasting relationship with a passive-aggressive needs an enabler.

The enabler creates an environment where passive aggressiveness can survive.

The enabler is usually the follower in the relationship.
They keep quiet when they should speak up, excuse outrageous behavior, and bail the other out. They say things like "he's trying" or "if I say something he'll get mad".

Andrea Brandt says that if you're the enabler and want to fix your relationship you'll have to become the leading figure.

Validation example

Andrea Brandt says it's incredibly helpful to confirm people's feelings.

She provides a few dialogue examples, and I propose a similar one based on hers:

> *-"the president is hosting a retreat and I haven't been invited yet*
> *-"so they're having a retreat and you want to go but you haven't been invited yet, that's the issue?*
> *-"yes"*
> *-"But I feel there's something more. Is it so important for you?*
> *-"blab la bla"*
> *-"OK, so you're feeling cut out and you're worried it might impact your career"* (confirm understanding)
> *-"I would feel the same in that situation, you are part of the team and you deserve respect and inclusion"* (validation)
> *-"thanks, I think so too and I don't know why I'm being left out"*
> *-"I had the same experience … bla bla bla"* (express empathy, let your partner know you had the same feelings)

+ bonus point if you can draw a positive message from your similar experience, or at least a new understanding and self-development

My Note:
This dialogue is golden.
When people say what they're feeling way too many people would reply "oh come on, what do you care about that stupid retreat", which is wrong because that's YOUR point of view.

[image]

Real-Life Applications

Take responsibility for changing!
And take responsibility for changing your relationship if your partner is passive-aggressive.

Review

"*8 keys to eliminating passive aggressiveness*" is wonderful and I learned hugely from it.

I personally found my own passive-aggressive tendencies and Brandt helped me address them.

I believe many of us have at least some hints of passive aggressiveness. Sure, there are people who have *none* of it, the people who *say no very easily and very quickly*, but it's a minority.

Even if you're not passive-aggressive yourself, "8 keys to eliminating passive aggressiveness" will help you understand passive-aggressive people.

I highly recommend the book if you're dealing with a passive-aggressive personality or if you are passive-aggressive yourself.

But if you are into communication and human relationships, I would say this is a must-read no matter where you stand on the assertiveness scale.

The Social Power Dynamics of “Can You Take My Picture” Requests

Lucio Buffalmano · 25 September 2017 · Archived copy · Original

You heard this a few times:

> Hi, could you please take our pictures?

Maybe you’re at a club and it’s a bunch of drunk girls, or simply some random people in the street.

But in this and ange it’s impossible going through life without someone asking you to snap their photo.

But what does that request mean from a social power dynamics perspective?

Should you take their picture or should you refuse to?

- Summary

Power Dynamics of Picture-Taking: A Story

It was a chilly summer evening in Brandenburg’s Gates, Berlin.

The band had just finished playing and I was looking around.
To be honest, I was a bit on the prowl.

I quickly noticed a girl glancing towards me. Let’s call her Madelaine. Madelaine was looking over me a bit too often and a bit too obviously to be just random (undercover sex signals).

She was in a mixed group of around 5-6 guys and girls, all still riding high from the parade and the live band.
I wasn’t too sure about her though, I’m not a fan of groups, and my “silent kill mood” wasn’t matching their energy levels.

Suddenly a cute blonde near Madelaine’s group seemed to appear out of nowhere. All by herself. Nice. I walk straight to her and introduce myself. Her name was Julia. Me and Julia hit it off very well.

We engage in a fun back and forth with lot of teasing, and something was telling me Madelaine wasn't too happy about it.

She was getting louder and louder.
She steps nearby on the edge of our personal zones a few times, absolutely the only one to do so in her group. I'm starting to think it's no coincidence and she's actually actively trying to disturb us, either out of jealousy or purely out of spite.

Eventually, she finally makes her full move to interrupt us. She barges in and asks loudly:

> "Can you take our picture?"

And hands me her camera even before we can consent.

Should You Say No To Picture Requests?

Can a request to take someone's picture be a power move?

Sure it can.
And it's the same for any small favor or requests.

There's an inherent power dynamics in all requests.
Most of the times they are hidden because they are small requests and tend to be low effort.

But once stripped of all cues, at the core, it's a party asking for compliance, and another party complying.
The good old dance monkey dance.

There are two different variables you should look at to consider whether you should yes and do the favor or you should say no and refuse.
They are:

- Effort Levels
- How They Ask

Effort Levels

Effort levels are key.

They tell us if there is a dancing monkey or if it's a balanced relationship.

The general rule is that **the person who needs something should be putting in more effort** or, at least, being willing to incomodate themselves with their request.
In this case, the person asking you a favor, should be putting in more effort.

It's important to note that effort has many forms beyond the most obvious physical effort and money or gift exchange.
Here are some other forms of effort and goodwill:

- Smile
- "please"
- "thank you"
- Head bow

Let's see how these work in the practical situation of taking a picture:

Low Efforts: Do It

Low efforts situations are those situations where taking the picture is easy for you.

It could be because you don't need to do much or because they make it easy for you.

Some examples of low efforts situation are those in which:

- You don't need to move
- *They* come to you for the picture
- Your weren't doing anything else

High Effort: Rebalance The Relationship

High effort means you have to put in work or inconvenience yourself.
Examples of high effort situations are:

- Sitting (and need to stand up to take the picture)
- You are talking to someone (need to stop your convo)
- You are far away and they expect you to move
- They ask for many pictures

Notice that these are not high effort per se: standing up is something you do all all the times. But it's high effort to do when you were not planning to do it, when you do it for someone you barely know or don't know at all and when you don't get anything back.

How They Ask

Nicely / Ask Permission: Do It

Asking nicely and thanking you is a form or repaying your effort, which make the relationship more even.
Some way of asking nicely:

- Emotional effort: non-threatening body language, smile
- Asking consent before actually handing the camera
- Providing a "why" or saying a few words
- Physical effort: walking towards you rather than expecting you to walk

This guy is expanding efforts in crouching down, explaining how it works and showing submissive body language (a great way to engage older women whom might be worried or anxious with younger men) :

Rude: Refuse (Or Rebalance)

Rude can mean actually rude, or not giving anything back for the favor they are asking. Some examples:

- Handing you the camera without you having said yes
- No "please", no smile
- Disrespect for your time

It's worth noting here why implying compliance is rude.

It's rude because of the social meaning behind it. **Implying that you will say yes sub-communicates that what they need is more important than what you're doing**.

And therein lies the power move.

See, Madelaine, the girl who asked me for a picture in the beginning of the story was not rude in the way you would define a typical rude behavior.
But by barging in the conversation uninvited, with open body language and by handing the camera without waiting for our consent she sub-communicated that our conversation was not very important or, at least, less important than her picture.

Which makes it, effectively, a power move.

Let's see now a few situations for when and how you can accept and when and how you can say no:

Low Effort and Nice Ask: Do it

They ask nicely, it's simple for you to do it… Simply do it.
It's good to be good people.

High Effort and Nice Ask: Ask for Compliance Back

They might be asking nicely, but if you have to put lot of effort you risk looking powerless.

Or that you either don't have important things to do or that you don't value your time and effort too highly.
You can still do it if you're just enjoying your day or if you like the person asking. But if the moment you are asked you care about looking powerful and in control at all, watch out that you don't over-comply and put too much effort.

Here are two ways then to do them a favore while still keeping a balanced exchange: do it on your terms, or can ask for compliance back.

- **Do it on your terms**

Saying yes but doing it on your terms then means in the picture example that you take the camera, but without inconveniencing yourself.

If you're sitting, you stay seated -or just stand up without moving-. If you were reclining against a wall, you just take a step forward but no more.

And if you're talking to someone, you take the camera, take a quick shot and quickly give it back.
Don't say "sure", "it was a pleasure", "do you need one more". The message you're sending here is that you want to be nice enough, but your conversation and your friend are more important and is not to be kept waiting.

Notice the girl in this Youtube prank example. She's sitting, the guy moves rather far away for the picture, but she still stays seated anyway. She's sub-communicating "sure dude, I can help… Without being too inconvenienced though, this is where I draw the line".

- **Demand Compliance Back**

An easy way of not looking like you're following their lead and putting in more effort is to demand from them equal compliance and have them follow your lead as well.

It's easier than it sounds: you simply command them on how to fit and pose the picture.
You're the one with the camera, don't let them tell you how to take the picture, YOU tell them how to move.
If they keep insisting having it their own way say you're the photographer. If they still keep insisting tell them to find another photographer.
But you will find the vast majority of people will just follow your suggestions.

Here's an example:

Not long ago a group of guys asked me to take the picture.
It was night time. Big group of guys, being noisy, taking time as they formed the group.
The social risk for me was that I looked overpowered and like a tool at their disposal.
The guy who gave me the camera told me "go back" so that they could all fit in.
Nice try buddy. I took it saying "no from here it's good". Then when I pointed the camera I told them to move farther back and form two lines.

Power balance restored.

Low Effort and Rude: Refuse

If someone is rude, even if the task is easy, refuse.

Demanding proper and well mannered behavior should be a staple of who you are.
If they comes to you and hand you a phone without a please or without a smile don't take the phone.

If they ask why not say it's because they were rude.

And If they look at you with a "why not expression" don't say anything: you never reply verbally to a nonverbal gesture.
Either take a step away as if it's a smelly bum or stay there and shake your head.

It will happen rarely though that someone will come to you and be rude. What can happen a bit more often though is in the example below:

High Effort and Rude: Ignore

Here's the simple rule: if someone needs something from you *they* should put more effort first, not the other way around.

You will mostly see this happening in these situations:

- **Waving you over**

This is the worst possible!

Maybe someone is sitting and you're walking by.
Or it's a group of people and they call out to you -groups always feel more powerful than single persons-.
You ignores these requests.

I remember once I was walking in a club and a guy sitting with a girl at bar was waving at me. I stopped and turned my head towards them. He took the camera out and motioned me to go there.

In these cases, you nod at them as if they just said hi and resume walking. The idea is that you ignore compliance while helping them save a bit of face so you also avoid making enemies.

- **Asking for too many pics**

It can happen sometimes the high effort is not apparent right off the bat (sometimes it's used in deceiving tricks by exploiting the consistency and commitment principle, Cialdini).

In the "take my picture case", you might be asked to take more pictures than you were expecting to.

In these cases, as soon as they ask for more, you say "*last one and then I need to go*". Or "*hey girls I'm too lazy, this is the last one*". Then hand the camera back -and let them walk to you to take it-.

	Low Effort	High Effort
NICE	Do It	Up to You
BOSSY	Refuse	Ignore

The End of the story

How did I handle the girl coming over and asking me for a picture?

Well, my first mistake was that I should have moved Julia away earlier. Moving her was good both in terms of her following my lead, in starting to do something together, and in removing us from the noisy group and jealous girl.

But of course, once Madelaine asked us for a picture it was too late for that.

It was important to me that Julia didn't think I was prioritizing doing a favor to this unknown girl over talking to her, which would have sent a bad message about my leadership and about my level of interest about her.

Also, I didn't want to look like I was complying too much to this group of unknown people. Accepting was going to be a risk in that sense.

But I was also wary of denying Madelaine a picture in front of Julia. Julia probably hadn't picked up on Madelaine's not so nice intentions and in that case *I* would have looked bad and rude -and nobody likes rude people-.

See, when you already intimate with a girl, or when you're with someone you know well, you have much more leeway to act as you please.
There's indeed already trust between you two and you can always explain later.
But so early in a conversation, your bond is tenuous and a miscommunication can be fatal to your interaction.

What did I do then?
I lightly put my hand behind Julia's back and said

> **Me:** *yeah, she will take it*

This way I took the lead and avoided both the risk of over-complying to Madelaine and the risk of having Julia think I was too spineless to let external events get in between us two.

Then I stood beside Julia to make sure she wasn't going to be drawn for too long and too deeply in the group dynamics and to send a message the two of us were together.
And as soon as the picture was done I restarted talking to her, minimizing the exposure to the group and to Madelaine's meddling.

How to Turn Down Picture Requests

And here are a few techniques to say no in case you feel too much pressure:

#1. Use an Excuse

Ideally, you won't need to make up stories and lies, but if it's really too difficult for you to say a direct no, then make up a story.

In the example of taking a picture:

1. My hand shakes
2. I'm waiting for an important call
3. I'm too busy right now

#2. Use Nonverbals

Put your hand up and lightly shake your head. You don't even need to say a word like this.

#3. Say "I could... But I think You Should Do It"

If the request is about something that they can easily do, just say

> I could do it but why should I do your job. That's your task

Then let them explain why you should do it. If their explanation convince you, then you can do it.
And it's a win anyway for you because by explaining they invested energies in the interaction.

#4. Pretend You Didn't Hear

If it's someone bothering you and you're walking, or if you are working on your laptop very busy, don't turn around.

Before asking you to do something they should at least make sure you are ready to listen. If they don't, they don't deserve your full attention.

Summary

From a power dynamics point of view, asking for a picture entails a power dynamic.

Some people, depending on the situation, might also use it for social climbing purposes.

If you take their picture the wrong way, you will lose social power.
But if you handle it well, you might even gain some points.

Cheers,

Lucio

Get the Guy: Summary, Review, & Criticism (Matthew Hussey)

Lucio Buffalmano · 2 October 2017 · Archived copy · Original

Get the Guy (2013) is a dating book for women in which the author Matthew Hussey shares dating strategies and techniques to meet more and better men with a mix of proactiveness and 'Strategy A' femininity.

Contents

- Overview

  - If You Want Him to Commit
- PROS
- CONS
- Review

Overview

- Find the guy with a mix of pro-activeness and high value
- Get the guy with a mix of challenge, value, and connection (+ visual chemistry)
- Keep the guy marrying high-value qualities with male needs

Notes

About The Author:
Matthew Hussey first started out as a dating coach for men in the then-budding "pick-up scene" and later transitioned to coaching women.
He says he's qualified to teach women how to get guys because he's spent years coaching men in dating and he knows how men think.

Part I: Find the Guy

1. Put the Odds in Your Favor

Hussey says most women meet too few guys.

They think it will *somehow* just happen, or that if it's meant to be the right guy will just *somehow* materialize.

He urges us to drop that mentality, build a lifestyle where we meet tons of new men, and **give as many men as possible a chance.**

Agreed.
Also, read:

- Biggest dating mistakes women commit
- How to find a boyfriend

> 7 Biggest Dating Mistakes Women Do (Before Sex)

Social Life Serving Love Life

Matthew Hussey advises an old technique around the social improvement field: says yes every time, to every invite.

In "how to work a room" Matthew suggests stopping and standing when you enter into new venues. Take in the environment, see, and let yourself be seen.
The author then tells a story of a club owner he met who seemed confident and in control, and suggests you should adopt the "owner mentality".

My Note: Not good for women
The "owner story" is popular in men's dating advice. I don't it's a good strategy for a woman: it's too overbearing.

Being a Woman of High Value

Hussey says that getting the guy starts with yourself.

As much as you're looking for a man of high value, men are looking for *women of high value* too.

The author concedes that "high value" is relative, but certain traits are fixed. These traits are:

- Confidence
- Independence
- Integrity
- Femininity

Self Confidence
Hussey says that a high-value woman is confident in her own value and knows what she wants.

She is also confident in making her needs clear when they're not being met and is able to walk away from relationships that do not fulfill her.

She is unaffected by superficial things and is neither intimidated nor overly impressed by looks, money, or high status.

My Note:
True, but don't overdo it. Like Harvey says in *Act Like a Lady*, many "strong, independent women are also lonely".

On the other hand, the author says, low confidence and uncertain women are doing things to please others.

A confident man will lose interest in an uncertain woman, and men can always sense when a woman is uncertain about herself.

My Note:

This would be the "nice girl" of *Why Men Love Bitches* (read: *better strong woman or submissive woman?*). One note here: well-placed insecurities can push the "need to protect her" button in a man.

Also, read:

- **The traits of high-value women**

> 12 Traits of High-Value Women (With Examples)

Approach Men

This is the biggest female misconception:

> if he really liked me he would have come and talked to me

He says the more he likes you, the harder it is for him. Indeed, the guys who are most likely *to approach you*, are also more likely to approach a lot of women, and they're probably only 1% of the male population.

Contrary to some other authors of dating advice for women (for example *Power of the Pussy, He's Not Into You*) Hussey recommends your approach.

How to Approach

Matthew Hussey describes a few ways a woman can start a conversation.
He says you should look at the guy first, maybe for half a second, and then smile the second time you look at him.

Then make it easier for him to talk to you by getting closer to him.

Matthew has a terrific piece of advice when he says that women should never be easy, but the first ten seconds of a conversation, be easy. Give him a chance.

Asking for a favor
You can start a convo by asking for a favor, which also plays on the man's ego and makes him feel like a man.

"Pass the Test"
Ask a question (for example: what type of drink you should order).

Then depending on his reply either say "*great you passed the test*" or "*oh that's a pity, it would never work between us*".
The author says he will automatically think "*yes it can work and I will prove it to you*".

My Note:
This is another typical man's pick-up technique. The risk is that the guy will see what you're up to, know that you're into him, and label you as a bit of a game player.

Seed the Date
Matthew Hussey says that you don't really ask for a date, but seed the idea. For example, you could say:

> **You**: *"All the guys I know keep telling to try (name of popular restaurant)".*

When he says he hasn't tried it, say you're the only two who haven't been there yet and you should go.

When you're leaving then you say something like "*hey, I gotta go, lemme leave you my number and maybe we can do something sometime*".

Part II: Get The Guy

Formula of Attraction

Matthew Hussey says the ultimate formula of attraction is composed of visual chemistry + perceived challenge + perceived value + connection.

Playing Hard to Get
Matthew Hussey says that playing hard to get is a terrible strategy in the long term. Pretending to be always too busy or too aloof will only get chasing you the most undiscerning types of men.

My Note:
I agree here and I'm glad he says it. Read *how to get high-quality men with mutual escalation*.

Sex Talk

Matthew Hussey says that waiting for X dates before having sex takes your focus into game playing and away from the most important thing: building a connection.
Sex should happen when you make an emotional connection.

The author says that waiting too long is also a mistake because he will feel like he's not important to you sexually. And men do get their validation through sex.

My Note:
couldn't agree more. Hussey is one of the few authors to nail this point. Also, read *why you should not let him wait for sex*.

How to Spot "Only for Sex Guys"
Hussey says that if gets too emotional or persistent when you deny sex, you shouldn't date him again.

Also, read:

- 7 signs of a fuckboy
- What to ask to spot a player

Denying Sex
Matthew Hussey says that a guy doesn't mind waiting for sex if you do it in a tactful way.
For example, if he calls you late at night for a booty call, you deny but there's no point in "punishing". What you do instead is to suggest an alternative.

My Note:
I fully agree. Also read: *how to reject sex*.

> How To Turn Down Sex & Get A Relationship

Why Hasn't He Called?

Matthew Hussey says that some misconceptions the guy hasn't called yet are because he's intimidated, because he doesn't want commitment, or because he's only after sex.

The real reasons, Hussey says, are that she was one of these:

- too nice and no challenge
- boring
- too aggressive

- too desperate
- trying too hard to impress
- too negative
- no chemistry

My Note:
I disagree with the " too nice and no challenge": he would still want to have sex with you.

Part III: Keep The Guy

How to Be The Woman of His Dreams

These are the crucial aspects of being the woman of his dreams:

- **Let him know you're attracted to him**

Matthew Hussey says that your man should know that you derive complete sexual satisfaction with him.

- **Make him feel unique**

Hussey says that you should make your man feel unique and that you would choose him no matter what.

- **Make him feel like the protector**

Matthew says you should make the man feel like you need him.
Being independent is what makes a woman a high-value woman, but not giving him any chance to add value or help you emasculates him.

- **Cheer Him Up**

The author says that supporting him and making him feel like you believe in him is another central part of keeping a guy happy.

Is he Mr. Right?

Matthew says that two values are the most important in guaranteeing a long-term relationship:

- growth
- teamwork

If you don't have these two values you don't have much long-term potential. If you have these two in common, you can overcome difficulties and differences.

My Note: teamwork is what high-quality men want.
I totally agree with Hussey, teamwork is what high quality wants. High-quality and driven men have things going on in their lives and it's either they find a supportive woman who adds value, or they aren't going to stick around. That's why the advice of dropping manipulative dating games and confrontational attitudes is great advice.

> 10 Nasty Games Women Play (Women, Stop These!)

If You Want Him to Commit

The author says that the extraordinary doesn't just attract the extraordinary, but also *keeps* the extraordinary.

And then adds that you should be careful to over-commit and give too much too soon.

The Girl that Made the Author Commit
Matthew gives a funny and great example of him telling a girl he wasn't going to commit.
Little did he know, not long after he did commit. How did she do it? She kept cool when he said he wasn't feeling like being in a relationship.
Then she lowered him in the list of priorities but STILL was great when they were together. That made the trick.

> Extraordinary don't just attract extraordinary. It keeps extraordinary.

My Note: Play selectively submissive to make him commit!
See an example here:

And read the full description here:

- **How to make men want to invest and protect** using selective submissiveness

PROS

- **Unique Point of View**

Of all the authors in the women's dating literature space, Hussey is probably the most original.

I believe a big reason why is that he comes from men's dating space, and he brings a lot of ideas from there that were not previously present in the women's dating literature.

That's a plus, but also a con (read below).

- **Great Insights**

The author has many many great insights that many other authors -especially female ones- don't have.

For example, many female writers fail to stress that you should reject his sexual advances tactfully.
Or that for most guys, being single means having little sex actually :).

CONS

- **Cheesy – Game-y**

The book is not overall cheesy, but some parts are (a bit reminiscent of *The Game* and *The Mystery Method*).
Some men will see you like them but are hiding behind games.

- **Made for Men**

Some of the advice is man dating advice swapping “she” with “him”. And sometimes that’s not ideal.

- **Confrontational**

Some of Hussey’s suggestions to be a challenge can start a silent battle dynamic.
For example, he suggests telling the guy he’s so lucky to be with her. That’s not good because it starts a “who’s lucky/better” dynamic (check: *4 communication mistakes men do in relationships* and *combative relationships*).

- **Video Bonuses Up-Sell**

There’s quite some up-selling in the book.

And, beyond the book, I find Hussey’s marketing to be more geared towards clueless consumers rather than smart women who are in charge of their lives (see here *dating for successful women*).

See here an example from the mailing list, which seems to me more aimed at selling than providing information (albeit the two are not necessarily mutually exclusive):

Matthew Hussey <matthew@howtogettheguy.com>
As [redacted] to it

If you caught my video blog on Sunday, you know that I did something for our community that will change the way you flirt with men forever…

I gave away an entire chapter of my bestselling guide, *How to Talk to Men*, for free!

If you grabbed the chapter, ***How to Tease a Guy to Create Uncontrollable Desire***, I'm sure you're already using the dozen copy-and-paste scripts to flirt your way to a red-hot connection with any guy you choose.

But if you haven't downloaded your free chapter yet, you're in luck. Your secret link is at the end of this email.

And once you click on it you get a video vastly overselling the results:

I find this approach predatory
Hussey talks about "getting any men to do as you please", "like mind control, but better".
In my opinion, this is an unethical approach to business. And it makes me suspicious about the quality of the product, too.

Review

Get The Guy has solid content and lots of good information albeit it recommends behavior that is not the *most feminine* and hence, sometimes not the most effective.

Just a bit cheesy at times and I would warn female readers to avoid the more “male pick-up style” advice because that would make them look less feminine, *and femininity is crucial*.

Exec Summary

- Go in with a mentality of making things happen right there right then
- Spend some time talking and spend time AFTER you exchange phone number
- Take some pressure off saying “I want you to come and have a drink with me at some point”

Day Game Todd Summary

About The Author:
Todd Valentine has been a dating coach for a long time now. He started with Real Social Dynamics (RSD) and then eventually branched out on his own after a rumored fallout with Tyler, one of RSD’s founders.
I find Todd to be the best of the Real Social Dynamics’ pack.
Todd is also the author of *The System*” and, he said in one of his courses, a proponent of applying Jordan Belford’s “*straight line persuasion*” to seduction (i.e.: “*straight line seduction*“).

A quick note on “Day Game”:
I usually recommend getting the full product if you find the summary good, and it’s especially true in this case as Todd presents lots of videos as examples.

Take the Pressure Off: Criteria for Success

Todd Valentine says that in many day game scenarios, you won’t have time to warm up, so **accept that not every interaction will be great**.

He says you should learn to be forgiving of yourself, and get the mentality you are going to make a girl happy in the worst-case scenario.

Your criteria for success should be that you did it and did the best you can independently of the result.

I loved it when Todd said you should be “outcome dependent”, but your outcome is doing it and doing the best you can, not “winning”.
If doing the best you can mean being a stuttering mumbling idiot during the first moments, be it.

Plan daygame in your life

Toss suggests doing a minimum of three approaches per day and going out earlier for your appointment so that you have some time to scout around. Also, you should know your area so that you know where to go for an instant date.

Decide your goal ahead of time

Todd Valentine suggests you decide beforehand if you want quick phone numbers, 10 mins of chat, and a phone number, or go on a date right away.

What makes a man attractive

Todd Valentine goes into what makes a man, which is:

- social proof
- leading
- knowing the dance of seduction
- entitlement and assertiveness

Entitlement and assertiveness mean that you believe you deserve things in life, stand up for yourself, talk in a loud tone of voice, voice your opinion even if they’re unpopular and you’re OK with being the center of attention.

Basically, *an alpha male is attractive.*

My Note:
This sounded a bit like the typical *"alpha male posturing recommendations"*.
Loud is good… Up to a certain point. And same goes for the center of attention, albeit Todd does not say to be at the center of attention but is OK with it, which is true.

Another attractive behavior, Todd says, is self-amusement. Self-amusement means that you enjoy yourself and enjoy what you say independently of whether or not the girl you're talking to might like it.

How to start a conversation

Todd says that mentality is the most important aspect.

The first few minutes you should assume that you have to bear the burden of taking things forward and making the conversation snowball.

Lower your standard, don't worry about a perfect conversation and focus fully on the girl and be present in the moment.

Todd Valentine says that you should trust you're a great man, that the bar is not very high, and that whatever you say is better than average anyway.

The author suggests speaking loudly: if you try not to be awkward you'll be awkward. Todd says you should focus on having a good interaction, not on her liking you, and keep talking at the beginning no matter what (remember: the burden is on you).

How to Make Her Like You

Todd Valentine says you should have the mentality that you need to risk to get a reward: you can't stay in polite conversation without going anywhere.

To get the hook Todd says to you:

1. Self amuse: enjoy the interaction in itself. You will find that when you're in a particularly good mood or loving your life, it'll work.
2. FRED (focus, relevance, emotion, decision)
3. Push-pull ; neg;
4. Force-qualification: for example, she says something and you say "*ah that's cool, I wasn't too sure about you, but now you seem cool*"

I found one bit particularly interesting.

Todd says that when she's really into a topic, rather than going deeper into it as most guys would do, change the topic by saying "*we'll talk about that later*", and when she tells you "*nono please let's keep talking about it*", she just cemented herself into chasing you.

Those high times can be exploited.

My Note:
I don't fully agree with this. If she's really into you maybe, maybe she'll say "please let's keep talking about it".
But it's more likely she won't say anything and just think you're either weird or couldn't care less about her.

How to Get Physical

Todd Valentine says you always change her mood, not her mind.

And *always be escalating*. When it doesn't go well, back off.
Never escalate just to touch.

> How to Sexually Escalate With Women (3 Steps)

How to Get a Solid Number

Todd says that you never go in to "get a number" or you are pandering to your ego.
The idea of a phone number is that: **you two like each other but it's just so impossible to do it right now so you plan for later.**

The 5 minutes AFTER the phone number are the most critical because after the number you are not strangers anymore but you are planning to meet.

Todd says that you'd rather have 2 mins of conversation and 5 mins after the number than 30 mins and then rush after the number.
And when you ask, expect to get it.

How to do an instant date

Todd Valentine says that the first rule is: **Just ask.**

Make it very casual and very normal and part of the interaction. Not a big deal.

And you can assess her reaction even before you actually finish the sentence.

If you're getting a no, think might be because of safety concerns. In which case, just say

> *"it's safe, and if you want to leave you can leave at any time and I help you to come back here".*

or:

> *"we'll go somewhere lovely and if you don't love it then you can leave. And it doesn't really matter either way because I'm having a good time and that's what really matters"*

Escalation to Sex

Here are a few tips from Todd to *escalate to sex back at home:*

- -Patience once you get back home and let her chill out a bit
- -Use intermediate locations, such as the kitchen before you get back to the bedroom
- -block both her hands with one of your hand and use the other one to escalate, the moment her hand start resisting, let go
- -pre-emptive sex: when things get heated, take a break
- -keep her panties on for a while then you'd normally go for, as it allows her to feel aroused without feeling in danger

> How to Sexually Escalate With Women (3 Steps)

Exercises

A few of the exercises I liked most from him are:

- 10 reasons why you're the best thing that can happen to her;
- 5 things you wanna see in her ;
- 1 week thinking only positive ;
- 1 week don't qualify yourself ;
- 1 week of certainty in the language (yes, no, and stick to a decision. And if you don't know say I need more time but I'll get back right at you)
- Talk to groups in the street to get in the mindset that having a conversation is normal

Todd Valentine Approach Review

In the video below Todd Valentine discusses *shit tests.*
I have analyzed and reviewed Todd Valentine approach here, take a look

Edit: the video has now been taken down.

- **Todd Valentine approach breakdown**

Day Game Review

I like Todd Valentine and I liked his Day Game work.
He shares some good stuff and good mindsets. Definitely recommended.

Difficult Conversations: Book Summary & Review

Lucio Buffalmano · 2 October 2017 · Archived copy · Original

"*Difficult Conversations*" (1999) is a *communication skills book* that teaches readers how to have constructive, respectful, and effective conversations exactly when it's most difficult to have those conversations: when the stakes are high when you are very emotional, and when the last thing you would want is to talk.

Contents

- Bullet Summary
- Summary
  - What Are Difficult Conversations?
  - #1. Stick to The Facts: What Happened
  - #2. Do Share Your Feelings
  - #3. Detach Your Identity From The Conversation
  - #4. Letting Go: Do You Really Need The Conversation?
  - Mastering Difficult Conversations
- Review

Bullet Summary

- Accusations are masked feelings: express the feelings directly instead
- Starting a performance review by asking people how they're feeling or how they think they've done is awkward
- If you think it or feel it, you are entitled to say it. Speak for yourself and you can speak with the power
- You can't move the conversation in a positive direction until the other feels heard and understood

Summary

About The Authors: Douglas and Heen are the founders of Triad Consulting Group, a corporate education and communication consulting firm founded by members of the Harvard Negotiation Project.

I have found their work to be of very high quality, including their latest "*Thanks For The Feedback*".

What Are Difficult Conversations?

Difficult conversations are all those conversations we'd rather avoid.

They include complaining to a neighbor about their barking dog or asking for a salary increase at work.

The authors say that underlying *difficult conversations* are three deeper conversations, which are:

- **What happened**: usually involving the facts, what should happen, and where the blame lies
- **Feelings**: the feelings and emotions involved, that most people try to cut out
- **Identity**: some conversations can go to our personal core. Are we good people? Are we competent?

#1. Stick to The Facts: What Happened

The authors say that the common mistake is to stop what has happened at a superficial level.

What we should do instead is to understand what *interpretations* of those events are and what is important to each

party.

For a good resolution, the parties involved should move from their own views of the fact to a curiosity about the other person's view of the events.

For example, you could prod:

> **You**: OK, and does it inconvenience you when I leave you the window open?
> **Them**: Totally!
> **You:** OK, and how od you feel when I leave the window open. Does it feel like I'm being rude?

From then on you can then explain you don't mean to "hurt" them or inconvenience them so that the conversation can move to two human beings understanding each other.

Don't Assume

The second common mistake is that people often assume to know what the other party's intentions are.

But **our assumptions are often wrong because we base them on our own feelings**.
So if we are hurt, then we tend to believe the other party's intention was to hurt us, and that's often just not the case.

Also, there's a certain tendency of going with the worst possible option, which certainly doesn't help in conflict resolution.
The simple solution is to ask the other party what was their intent.

Avoid Blame, Talk Contributions

And the third mistake is to assign blame, which can quickly escalate the situation and take us further from any resolution.

The authors say we should instead focus on finding out how we all contribute to the situation.

Telling first our own contributions can help the other party move away from the natural tendency of blaming.

Here are four common contributions in difficult conversations:

1. **We avoided it for too long**: We often contribute to a problem by avoiding it for so long, allowing it to grow
2. **We avoided the person**: Behaving in any way that makes it hard to talk to. Moving quickly, avoiding contact, being generally unfriendly
3. **We assume righteousness**: We all form opinions based on past experiences and references, but there are no right or wrong, just intersections of different needs and personalities
4. **We assume we're good**: We often assign ourselves positives roles in the issue which is comfortable for us but not useful

To expand your views on the contribution try to look at yourself from the other party's shoes and then look at the whole situation from a third party perspective.

#2. Do Share Your Feelings

Expressing emotions openly is difficult for many of us.

We tend indeed to avoid being too open about how we feel.

This is dangerous, the authors say, because unexpressed feelings tend to fester, find their way back into the conversation in nasty ways and prevent us from listening properly.

The solution is for all the parties to share their feelings openly and clearly. Don't mistake them for facts, this is

important, but don't pretend that feelings are not there. Both their feelings and *your* feelings.

#3. Detach Your Identity From The Conversation

Some conversations are very tough because they inherently touch our own sense of worth.

A job review for example, or talking about how to fix a big mistake.

The most difficult conversations threaten our ego and sense of identity by calling into question our competency or even whether we are worthy of being loved and appreciated (for more details on the importance of feeling worthy of love read Brene Brown – Daring Greatly).

The authors say it's a human tendency of thinking in terms of all or nothing that can make the identity level of the conversation so touchy.
We tend to think we are either great and everyone loves us, or we are terrible and unworthy.
The solution is in adopting the "And Stance" and ditching the "all or nothing" paradigm.

You're not bad because you have done a mistake.
And you can keep interacting and working on things: an issue, a refusal or a mistake does not spell the end of anything.

The authors say that there's a relation between how easily we can admit our own mistakes and our own mixed intentions and how balanced (and strong) we will feel during the conversation.
And once you can adit admit your mistakes and emotions, chances that your difficult conversations will go well will immediately rise.

My Note:
The identity side will always hit harder those people who have a fixed mindset. Read here *how to develop a growth mindset* and *how to develop an antifragile identity*.

#4. Letting Go: Do You Really Need The Conversation?

The authors say that while many of us tend too often to avoid *difficult conversations*, sometimes it does indeed make no sense to have the conversation.

They suggest that working out on your own the three levels of the conversation and drafting a "contribution map" without having the difficult conversation.

That will give you more insights and will also give you a better idea of whether it makes sense to have a conversation or if it's mostly an issue that you have within yourself only -an identity crisis for example-.

Mastering Difficult Conversations

Douglas and Heen provide a lot of practical advice and real-life examples.

#6. Tell The Story From Third-Party Perspective

They say most people start by describing the issue from their own perspective, which automatically raises the defensive barrier from the other party.

The best way to go instead is with a "third story" perspective to describe the issue in neutral terms.

Example: Discussing Open or Closed Window

For example, in my case, my neighbor always opens the window of the common building entrance area.

I hate it during the cold reason as it's expensive for the heating and unethical.
This would be stating the conversation from your own perspective:

> **Your Own Perspetive**: *you always open the window open and it's very cold in here*"

A third-party approach instead would be:

> **Third Party Style**: you prefer having the window open why I prefer having it closed during the cold season.
> I would like to find out why you want it open, explain why it's important for me to close it and find possible solutions.

#7. Do Listen

Listening is one of the most important bits of *difficult conversations.*

And it's exactly what most don't do.

Once the other party feels heard, it calms them down, makes them more likely to hear you, and exponentially increases the chances of effective problem resolution.

The key to being a good listener is very simple: **be genuinely curious and genuinely concerned about the other party**.
Ask questions, ask for examples, and paraphrase what they said to make sure you understand.

You cannot move the conversation into a more positive and constructive stage until the other person feels heard and understood.

#8. Express Your Opinion As Legitimate

Each party must understand that their own views and feelings are just their own and there's no wrong or right.

Also, personal views and feelings are no less -and no more- legitimate and important than any other party.

Don't present your views as if they were the only truth, use the "and stance" and avoid any exaggeration such as "you always" or "you never", which are a surefire way of raising the other party's defensive walls.

#9. Accept There Are Some Difficult People

The authors rightly point out that the other party has likely not read *Difficult Conversations*, so they might remain focused on blaming and arguing about right and wrong.

They provide and detail some great tools, including:

- **Reframing**: for example means taking the blame and accusation of the other party and reframing them in more positive terms for the discussion, for example as contributions.
- **Naming the dynamic**: if the other party goes off track, for example by interrupting or refusing to admit their own feelings, call attention to that behavior and raise it as a point of discussion. The naming of the dynamic technique will make the other person aware of their own behavior.

You could for example tell them:

> **You**: "it's not okay to only look at my contribution.
> I feel like I'm trying to look at the issue from both perspectives. Is there anything I'm doing to make it hard for you to look at your own contributions in the situation?"

Ultimately,

#10. Find Common Ground Solutions: Mutual Persuasion

Remember that you both need to agree on the solution and that they have to persuade you as much as you need to persuade them.

Ask them what would persuade them, and tell them what would persuade you.

When the parties cannot find a solution working for both, they must decide whether to accept a smaller solution, deal with the consequences, or walk away.

[image]

Review

Difficult Conversations is possibly the best book I have read on effective communication (and indeed it ranks first in the "*best communication skills books*").

I was excited when I first started listening to it because that's the feeling I get any time I have "struck gold": I get excited at how much I am going to learn -and share with you-.

The only caveat we add is that you do NOT want to share your full truth with sneaky people, *manipulators, gaslighters*, and what we refer to here as "turkeys".
In that sense, postulating that anyone is a worthy recipient of your full honesty is plain naive self-help.

Overall, I highly recommend "*Difficult Conversations*".

Full Summary

About the Author: Kurt Mortensen is an American trainer on influence and persuasion.

#1. The Rule Dissonance

The law of dissonance (Festinger, 1957) says that **people will naturally tend to behave consistently** with their beliefs, attitudes, and values -cognitive consistency-.

Conversely, when we behave in a manner that is inconsistent with our values and beliefs, we tend to adjust our behavior in accordance to our values and beliefs to regain cognitive consistency.

This is similar to the Commitment and Consistency principle in Influence by Cialdini.

This law has many interesting ramifications in our lives.
For example, after we have placed a bet on a horse we feel more sure the horse will win.
Or if we have made a lousy decision sometimes we will fight to prove it was right just to keep that internal cognitive consistency. Buyer's remorse is also a form of cognitive dissonance.

Cognitive dissonance is a powerful tool you can use by making people commit to something. The more they commit, the more likely it is they will later take action..
Cognitive dissonance is especially powerful when the commitment is:

- Public
- Written
- Preceded by a smaller commitment

- Effortful -the more effort needed, the more powerful it is-

Foot in The Door & Baith and Switch

The foot in the door and bait and switch are all (rather sneaky) techniques based on the law of dissonance.
For an effective FITD:

1. the first request needs to be big enough that it counts as a commitment, but not so big that it can be refused;
2. the prospect must not feel like he's being taken advantage of (that's why it's best a different person follows up on the second request)
3. there must not be external incentives to consent to the first request or the prospect won't feel internal dissonance (similarly Daniel Pink in Drive explains how external incentives cancel internal motivation)

And the steps to use the Law of Dissonance are:

1. Get the commitment
2. Create Dissonance: show your prospect he's not keeping the commitment
3. Offer the solution

#2. The Rule of Obligation

The rule of obligation is what Cialdini calls the rule of reciprocity.

It states that **when people do something for us, we feel the need to reciprocate**.
It's worth noticing that the rule also produces discomfort when we can't repay the favor.

Mortensen cites an experiment that had two people sell raffle tickets.
One was friendly, the other purposefully rude. The rude one though gave people a free drink. And **he sold twice more tickets *in spite of his rudeness* simply because he provided a small gift** that leveraged the law of obligation.

The author says the rule of obligation also works pre-emptively.
By sending a check to physicians in exchange for filling a questionnaire 78% filled the questionnaire VS 66% of those who were promised the check after they would send the questionnaire backfilled.

Even more interesting to me was that of those who received the check but did not return the questionnaire, only 26% cashed the check against 95% of those who received the check after they filled out the questionnaire.

It's been theorized this happened because the physicians didn't feel like they deserved the check and didn't want to feel the discomfort of taking it without giving it back.

Influence People With Mutual Concessions

When we show people we are willing to let them change our minds and opinion, they will also be more willing to do the same.

Basically, **to influence people show them they are influencing you**.

Mortensen says the same is true for secrets.
Sharing a secret with someone will make him feel more intimate with you and compel him to also share personal details.

#3. The Rule of Connectivity

The rule of connectivity says that **the more we attract or connect with someone, the more we will be able to influence them**.

Mortensen says there are four elements of connectivity:

- attraction
- similarity
- people skills
- rapport

Maximum influence then goes over how beautiful and physical attractiveness helps people in all situations and realms of life.

Mortensen also discusses the importance of people skills in getting ahead in life both in your relationships and in your career and that people skills account for most of your career success (80% is a commonly quoted statistic made famous by Daniel Goleman in *Emotional Intelligence*).

Remembering names is a great way to establish a connection, says Mortensen -and if people forget your name, check out "*when someone doesn't remember you*"-.

#4. The Rule of Social Validation

Mortensen says that we are social animals, and many of our decisions and behavior are influenced by the people around us, often unconsciously.

And as much as it would pain most of us to admit, **most of us do what the crowd does** (only 5-10% are rule breakers).
And the more we respect the people in the group, the more their opinion matter and the bigger the group's effect will be.

Social validation can be used both in sneaky ways and in constructive ways.

For example, children scared of dogs who watch other children play with dogs learn through social validation that if the other children can do it, and there's no danger, so can they -67% consented to sit with dogs after watching the videos-.

Similarly, watching a political debate where the crowd cheers for one candidate can easily sway the perception of that candidate in a favorable way (watch more about political debates in *Trump's debate power moves* and *How to Win a Debate*).

The Bystander Effect

Mortensen then goes over the dark side of Social Validation with the famous case of Catherine Genovese and what came to be known as the bystander effect.
The bystander effect says that people are unlikely to provide help when there are many other people around and nobody is acting.

To enhance the effect of social validation:

- Size: the bigger the group, the better
- Familiarity: the more familiar and similar the people in the group are to us, the better
- Clarity: the clearer the social validation aspect is, the better

The Dangers of De-Individualization

Mortensen goes into the de-individualization of the individual when being part of larger groups.

What happens is that **we feel anonymous in bigger groups and we feel we can get away with things we would never do by ourselves**. Anti-social behavior is then also more likely to rise.

An experiment showed how children left alone were almost three times more likely to steal when in a group than when alone, and more likely to steal when they hadn't given their name, thus making them feel even more anonymous.
Think for example of the hooligan phenomenon, or cat calls, which happen most frequently in a group of guys.

Social Validation in Marketing

Calling products "best selling" and "most popular" is an easy way of using Social Validation.

Allowing queues to form at the entrance of a club is another way of showing social validation.

#5. The Rule of Scarcity

People are more likely to act and want something when it is scarce.

This is a known phenomenon and is already well-detailed in Cialdini.

I particularly liked though when Mortensen talks about the principle of scarcity applied to auctions: **we often end up bidding above the value of the product simply because someone else is trying to outbid us,** making the item appear scarcer and more in demand.

To effectively use the rule of scarcity:

- Deadlines
- Limited number
- Possible loss: "you may already be a winner" compels more people to check the sweepstake than "you can be a winner"
- Restrict freedom

Threat of Potential Loss: When an item or a liberty is threatened to be restricted it usually becomes even more important to us. The mental trigger of potential loss can make us fight to defend something that we might have never even used otherwise.

Scarcity in Marketing

Some examples of the principle of scarcity in marketing are:

- Exclusive membership requirements
- Airlines informing they can only reserve your seat for a limited time
- Online hotel booking informs you only one room is left
- Sales "by invitation"
- Offers not available in stores, or not available online

#6. The Rule of Verbal Packaging

As Tony Robbins often repeats, language directs thoughts and emotions, so the way you speak will influence both yourself and the people you communicate with.

Need I say more than what I already wrote? Language directs thoughts and emotions and can make people act in ways they wouldn't.

#7. The Rule of Contrast:

The rule of contrast is all about human perception.

If I told you my legal fee was 3.000 you could be shocked.
But if I told you that you risk going to jail and having to pay 300.000 in reparations and a few days later I tell you I've just saved you from all of that and give you 3.000 bills you'll be delighted.

Mortensen says that timing is important: the two alternatives should be one after the other -or, as in my example above, still be fresh and relevant in the prospect's mind-.

Usually, negative information is more powerful than positive ones, and unluckily negative information tends to command more real estate in our minds.

Some ways the rule of contrast is utilized:

- Sweeteners: adding bonus items
- Reduce it to smaller units: instead of the yearly or monthly payments, break the costs daily and show how small they are
- Shift focus: your product is 3% fat? Say it's 97% lean instead
- Door in the face: start with a huge request and your smaller follow-up request will seem small
- Comparison: similar to door in the face but you present an undesirable alternative

#8. The Rule of Expectation:

Expectations influence reality.

Mortensen says that what is expected usually gets done.
People often rise to meet your expectations of them, and they also lower themselves to meet your low expectations (also see "*How to Win Friends*").

Assuming the sales is a typical way that expectations can influence reality, and the place effect is probably an even more surprising one.
Setting goals is also a way to tap into the law of expectations.

First Meeting Expectations: Mortensen notices how often people turn out to be just as we expect them to be as soon as we meet or sometimes even before we meet them. He says this is because we send unconscious signals treating exactly how we expect them to be, and they rise to those expectations.

#9. The Rule of Involvement

Involvement means having the person you want to influence participate more actively. Mortensen says that you can increase participation with:

- Role-Playing: let them make arguments against their own resistances and objections
- Asking for Advice
- Visualization
- Physical movement
- Increased Interactions: studies in retail showed that talking longer to a prospect increases the chances of sales
- Increased Contact: trying something on makes us more likely to buy
- Questions
- Riveting Stories
- Repeat and Repackage: the more we hear something, the more it grows on us. Mortensen says to repeat 3 times, with different words
- Building Suspense

#10. The Rule of Esteem

Mortensen says that acceptance and craving are some of our deepest cravings.

He then goes on to say that pride is the opposite of self-esteem and is usually a red flag for low self-esteem.

My Note:
I disagree here. Pride can be a roadblock in your personal development, but it's not a negative thing. You should be proud of yourself -just proud of the right things, of course-.

#11. The Rule of Association

Mortensen says that link objects with our inner states and feelings.

Anchoring (Tversky & Kahneman, 1974) uses the principle of association to create a specific gesture that we will associate with a feeling.
Once we want to recreate that feeling we will just have to repeat that gesture then.

Endorsements of famous people and endorsements also work with the law of association: we associate the positive qualities of the famous person or event with the product.

How where you are, who you're with, and how you associate, can affect the perspective of others.

#12. The Rule of Balance

Mortensen says that to persuade you have to focus on emotions but still maintain a balance between emotions and logic.

In most persuasions indeed people act on emotions and afterward justify their actions with logic.
A message only of emotions will set off alarm bells, while only logic will not compel enough to take action.

How to work both the logical mind and emotional heart of a person.

[image]

Review

Maximum Influence is a great book on persuasion, I enjoyed it all the way and absolutely recommended it.

As a matter of fact, I will tell you that "*Maximum Influence*" is a vastly underrated book.

Read more summaries or **Get Maximum Influence on Amazon**.

Social Exchange Theory: What Is It, and How to Use It

Lucio Buffalmano · 7 October 2017 · Archived copy · Original

Social Exchange Theory is one of the foundational frameworks in social dynamics and behavioral science for understanding how relationships, influence, and status actually work.

At its core, it explains a simple but powerful reality:
people gravitate toward interactions and people that increase their value and avoid those that decrease it.

Yet many intelligent and well-intentioned people struggle socially and professionally because they misunderstand how value, investment, and perception operate in real interactions.

This guide breaks down the science of social exchange and introduces the **TPM Social Exchange Model**, a structured, strategy-focused application that translates established theory into practical tools for becoming a higher-value, more effective man.

TPM Social Exchange Model
Based on established social exchange theory, the TPM Social Exchange Model combines research-backed principles with proprietary insights and actionable strategies to help men become higher-value and more successful.

Intro & Definitions

The social exchange theory postulates that people's interactions and relationships work like exchanges of value and investment governed by cost-benefit analysis

Social Exchange Theory (Homans, 1958; Thibaut & Kelley, 1959; Blau, 1964) is one of the foundational frameworks in social dynamics and behavioral science. And 'mental accounting' enjoys interdisciplinary support ranging from evolutionary psychology and relationship research, to intercultural negotiation, and intercultural persuasion.

The social exchange theory is

A framework that conceptualizes social relationships as exchanges in which individuals seek to maximize personal returns.

The social exchange theory starts from the premise that people seek relationships and people who add value to their lives, advance their interests, and generally make them better off.

Also read:

- **Social Investment Model**, applying social exchange dynamics to investment and effort

Value is

In social exchanges, social value is an umbrella term for everything that makes or can make people better off (value-positive)

Think of value in an all-encompassing way.
Making people feel good, or simply being a pleasant person to talk to, are also forms of value. What people want and appreciate is value-positive, and what they dislike and avoid is value-taking.

There are two high-level forms of value:

1. **Personal Social Value (PSV)** → *who you are*
   Traits, status, competence, personality, attractiveness, intelligence, reputation, etc.
   AKA: 'personal value' or 'social value' in general discourse.
2. **Value Exchange (VE)** → *what you give/take* (relates to 'investment dynamics')
   Favors, time, help, money, effort, support, opportunities, introductions, etc.

AKA: Give-and-take, investment

Total Social Value includes both.
The Social Exchange Model covers both, and they overlap and feed into each other, but they also have importantly distinct dynamics.

Passive Social Value

Passive Social Value™ refers to a latent form of value derived from inborn or low-effort traits such as looks, fame, or generational wealth.

Value-Givers/Takers

Value-givers are individuals who add net positive value, either through behavior, give-and-take, or association.
Value-takers are individuals who extract net value, either through behavior, give-and-take, or association.

Givers and takers can apply to any currency and at any level, ranging from a single back-and-forth in 1:1 interactions, to a lifetime and in relation to humanity.

People tend to like value-givers more, and to dislike and avoid value-takers.

Social accounting is

Social accounting is TPM's term for the cognitive process by which individuals unconsciously or semi-consciously track and maintain mental balances (positive or negative) of value-giving and value-taking transactions in their social interactions and relationships, applying to both actual or anticipated exchanges.

There is evidence that people tend to keep a "social accounting tab" in their minds (Buss, 2019).

And the results of our mental social accounting influence people's behavior.
When we expect a value-negative transaction, we avoid people. And **when we see the potential for a value-positive transaction, we welcome people** -or even chase them-.

Learn more:

- **Effective calculativeness**, a foundational component of social accounting
- **Machiavellianism**, a strategic predisposition skewed towards social accounting, 'what's in it for me', and strategic signaling

Social capital is

Social Capital is the net balance of your social ledger with others. It is the sum of your **social credit**, accrued through value-giving, and **social debt**, accrued through value-taking. High social capital functions as "relational equity," granting you influence, leverage, and the benefit of the doubt in future exchanges.

High social capital means others perceive you as a net value-positive individual, based on past contributions and expected future value.

As a result, people are more inclined to like you, seek you out, and maintain a relationship with you.
High social capital also increases goodwill, bargaining power, and influence.

⚠ **Note: Giving & investment must be matched by personal value, power, and smart strategies**
It's not wise to seek social capital by giving and giving (value exchange) because that frames you as lower *personal* value and trying to make up the difference ('Compensatory Investment Principle™'). It's a form of 'buying' their affection and time that often loses you respect and attraction. Focus on personal value instead, and be a smart giver.

Giving and expecting to win is naive. You need to give SMART. That's a foundational principle of TPM

Passive Social Capital

Passive Social Capital™ refers to the *potential* of giving, a latent, net-value effect that high-value people enjoy without even having to give anything

High-value people often enjoy initial social capital simply based on their passive social value, without having to give anything.

Social currencies are

A social currency is a specific form of value

Value can be traded in countless different ways. Beauty, kindness, cooking skill,s or owning a villa in Tuscany are all forms of value one can possess.

Total Social Value

Total Social Value is the net overall individual value within a social exchange, resulting from the balance of one's positive and negative attributes.

People compute 'social value' based on both objective-leaning criteria, and more subjective and contextual ones. The result differentiates people along a partially subjective spectrum of 'low' and 'high' value.

Social value in dating is also referred to as 'sexual market value' or 'mate value'.

High-Value People

Individuals with a high net overall value within a social exchange

High-value people tend to be selective because **people who have a lot to give also demand a lot back**.
So high-value people prefer associating and exchanging with other high-value people.

Indeed, unless blessed by excesses of value in some areas, people tend to pair up with mates of similar socioeconomic background and attractiveness, a tendency referred to as 'assortative mating' (Buss, 2019).

Also read:

- High value men, traits, and how to become one

⍰⍰ Approach High Value People Strategically

High-value people tend to be suspicious of those who pursue them because they're rightfully on guard against lower-value people who may turn out be 'value takers'.

Low-Value People

Individuals with a low or negative overall value within a social exchange

There are countless ways of being low value, or a value taker.
Fortunately, most forms of value-taking can be addressed with self-development.

Also, read:

- Low-value women
- Low-value men

Value Visibility Model

Value Visibility Model™ is a TPM framework postulating that **exchange dynamics are largely shaped by *visible* value**.
As a result, strategic actors engage in 'value signaling' and, potentially, deceptive signaling to increase their own perceived value.

To understand and influence these dynamics, it's helpful to look at different currencies of value in terms of *visibility*.

External Layers (High Visibility)

External layers are the qualities that people first notice about you.
They include:

- Beauty
- Style
- Fitness
- Body language, walk, posture, etc.

Deeper Layers (Low Visibility)

Deeper layer currencies are not directly visible; they're 'high opacity'.

To access them, people need to get to know you.
They include:

- Humor
- Knowledge
- Connections
- Life achievements
- Mastery (of something)
- Future potential

Being VS Appearing: A False Dichotomy

The popular 'being' VS 'appearing' argument deals with the *visibility* of social currencies.

And while virtue-signaling behavior dismisses the more visible currencies, deep down people know that *both* are valuable.

Plus, albeit at times tenuous, there is a relationship between external and internal traits (Miller, 2000). And both layers influence each other, and feed into each other ('halo effect', Thorndike, 1920).
For example:

- Beautiful people are perceived as smarter (Kanazawa, 2004)
- People in authority positions are perceived as taller (Blaker and Van Vugt)
- Great personalities who make us feel good are more attractive (Tornquist, 2015)

And the opposite is also true.

This argument sometimes parallels the similar 'being' VS "having", which relates to exchange value vs. personal value, where 'being' is associated with deeper traits of *personal* value.

External Layers 'Gatekeep' The Deeper Ones

Value-gatekeeping™ is the mechanism by which highly visible outer layers invite or repel access to deeper, lower-visibility inner layers of value.

Important real-life implication:

Few people are interested in your deeper qualities if you don't reach at least a minimum threshold of *external* qualities.
External qualities get your foot in the door.

⍰ Example:

How willing are you to associate with someone who lacks basic self-care, including hygiene?

Such a person might have much wisdom to share, but few people will stick around to find out.
Simple association with a negative-value individual can undermine your own status ('law of association').

Who would you rather date, befriend, or even talk to? The woman on the left isn't just more attractive. She also sub-communicates better "deeper" character-based traits

Value Signaling

Value-signaling refers to the communication or sub-communication of one's social value, where the approach and effect depend on objective value, strategic predispositions, and interpersonal skills.

Smart marketing of value is what differentiates successful social strategists from average guys.

We have many articles and a best-in-class course on how to signal value, but the first and most important shift is mental:

Mindset: switch to a "WIIFT approach"

The biggest improvement for beginners is to stop seeking value first, and ask yourself what you can provide for others.
A "what's in it for them" approach brings self-development and strategy to the forefront.

Some techniques:

- **Value-signaling**: the primer and framework
- Effective self-promotion at work
- Covert bragging
- Value-signaling in dating (the 'value sequence model')

The Relativity of Value

Social value is relative.

In economic terms, a $1.000 hunting rifle has low value outside of hunting aficionados. But if society were to collapse, it would be invaluable.

Currencies in social exchanges are similar.

Any type of skill or positive trait is a positive currency.
But how much people value them depends on the individual and the situation.

In dating, a man's wealth would matter much less for a woman looking for a one-night rebound.
This is why moving to sexual marketplaces that are more in line with your goals is a powerful 'hack' to boost your success.
Some other examples:

- **Status-relativity**: status is a form of social power and value, and it's entirely group-dependent (power beats status)
- **Role-based relativity**: a professor is higher value when he's in professor role at school, but just another guy outside of it

Appeal & Currency 'Hardness'

Currency Hardness™ refers to the breadth of social appeal of a given social currency. Hard currencies are universally valued and readily accepted, while soft currencies have limited marketability or only niche and situational appeal.

While subjectivity matters, some social currencies enjoy broad appeal ("hard currencies"), and some others are more situation or individual-specific ("soft currencies").

To make an economic parallel, you can have 1 million in USD, Ukrainian Hryvnia, or in raw material, say, palladium. Everyone will take your USD and give you back whatever goods you want, but few will take your

palladium bars.

In human social exchanges, money and looks are hard currencies. Knowledge is a softer currency.

Social Exchange Manipulation

Social exchange manipulation refers to the manipulation of signals in the social exchange, including both personal value signaling manipulation and value exchange manipulation (investment and give-and-take)

Whenever a signal can impact an organism's odds of surviving and reproducing, there is an evolutionary incentive to fake that signal (Dawkins & Krebs 1978).

So it would only be expected to find manipulation when it comes to social value-signaling and value exchange. Value Scalping™ refers to personal value manipulation, while Social Scalping™ refers to value exchange manipulation.

Here's an overview of social exchange manipulations with extra examples.

"Social scalping" includes a host of manipulation tactics to:

1. Inflate their giving ("credit inflating")
2. Inflate your debt ("debt inflating")
3. Deflate your giving ("credit erasing")
4. Deflate their debt ("debt erasing")

The manipulaotr uses the extra credits to get more concessions in negotiations, more favors in friendships, win more arguments in relationships, and, in general, gain more power and control.

Social Exchange Theory: What Is It, and How to Use It

Lucio Buffalmano · 7 October 2017 · Archived copy · Original

Social Exchange Theory is one of the foundational frameworks in social dynamics and behavioral science for understanding how relationships, influence, and status actually work.

At its core, it explains a simple but powerful reality:
people gravitate toward interactions and people that increase their value and avoid those that decrease it.

Yet many intelligent and well-intentioned people struggle socially and professionally because they misunderstand how value, investment, and perception operate in real interactions.

This guide breaks down the science of social exchange and introduces the **TPM Social Exchange Model**, a structured, strategy-focused application that translates established theory into practical tools for becoming a higher-value, more effective man.

TPM Social Exchange Model
Based on established social exchange theory, the TPM Social Exchange Model combines research-backed principles with proprietary insights and actionable strategies to help men become higher-value and more successful.

Intro & Definitions

The social exchange theory postulates that people's interactions and relationships work like exchanges of value and investment governed by cost-benefit analysis

Social Exchange Theory (Homans, 1958; Thibaut & Kelley, 1959; Blau, 1964) is one of the foundational frameworks in social dynamics and behavioral science. And 'mental accounting' enjoys interdisciplinary support ranging from evolutionary psychology and relationship research, to intercultural negotiation, and intercultural persuasion.

The social exchange theory is

A framework that conceptualizes social relationships as exchanges in which individuals seek to maximize personal returns.

The social exchange theory starts from the premise that people seek relationships and people who add value to their lives, advance their interests, and generally make them better off.

Also read:

- **Social Investment Model**, applying social exchange dynamics to investment and effort

Value is

In social exchanges, social value is an umbrella term for everything that makes or can make people better off (value-positive)

Think of value in an all-encompassing way.
Making people feel good, or simply being a pleasant person to talk to, are also forms of value. What people want and appreciate is value-positive, and what they dislike and avoid is value-taking.

There are two high-level forms of value:

1. **Personal Social Value (PSV)** → *who you are*
   Traits, status, competence, personality, attractiveness, intelligence, reputation, etc.
   AKA: 'personal value' or 'social value' in general discourse.
2. **Value Exchange (VE)** → *what you give/take* (relates to 'investment dynamics')
   Favors, time, help, money, effort, support, opportunities, introductions, etc.

AKA: Give-and-take, investment

Total Social Value includes both.
The Social Exchange Model covers both, and they overlap and feed into each other, but they also have importantly distinct dynamics.

Passive Social Value

Passive Social Value™ refers to a latent form of value derived from inborn or low-effort traits such as looks, fame, or generational wealth.

Value-Givers/Takers

Value-givers are individuals who add net positive value, either through behavior, give-and-take, or association.
Value-takers are individuals who extract net value, either through behavior, give-and-take, or association.

Givers and takers can apply to any currency and at any level, ranging from a single back-and-forth in 1:1 interactions, to a lifetime and in relation to humanity.

People tend to like value-givers more, and to dislike and avoid value-takers.

Social accounting is

Social accounting is TPM's term for the cognitive process by which individuals unconsciously or semi-consciously track and maintain mental balances (positive or negative) of value-giving and value-taking transactions in their social interactions and relationships, applying to both actual or anticipated exchanges.

There is evidence that people tend to keep a "social accounting tab" in their minds (Buss, 2019).

And the results of our mental social accounting influence people's behavior.
When we expect a value-negative transaction, we avoid people. And **when we see the potential for a value-positive transaction, we welcome people** -or even chase them-.

Learn more:

- **Effective calculativeness**, a foundational component of social accounting
- **Machiavellianism**, a strategic predisposition skewed towards social accounting, 'what's in it for me', and strategic signaling

Social capital is

Social Capital is the net balance of your social ledger with others. It is the sum of your **social credit**, accrued through value-giving, and **social debt**, accrued through value-taking. High social capital functions as "relational equity," granting you influence, leverage, and the benefit of the doubt in future exchanges.

High social capital means others perceive you as a net value-positive individual, based on past contributions and expected future value.

As a result, people are more inclined to like you, seek you out, and maintain a relationship with you.
High social capital also increases goodwill, bargaining power, and influence.

⚠ **Note: Giving & investment must be matched by personal value, power, and smart strategies**
It's not wise to seek social capital by giving and giving (value exchange) because that frames you as lower *personal* value and trying to make up the difference ('Compensatory Investment Principle™'). It's a form of 'buying' their affection and time that often loses you respect and attraction. Focus on personal value instead, and be a smart giver.

Giving and expecting to win is naive. You need to give SMART. That's a foundational principle of TPM

Passive Social Capital

Passive Social Capital™ refers to the *potential* of giving, a latent, net-value effect that high-value people enjoy without even having to give anything

High-value people often enjoy initial social capital simply based on their passive social value, without having to give anything.

Social currencies are

A social currency is a specific form of value

Value can be traded in countless different ways. Beauty, kindness, cooking skill,s or owning a villa in Tuscany are all forms of value one can possess.

Total Social Value

Total Social Value is the net overall individual value within a social exchange, resulting from the balance of one's positive and negative attributes.

People compute 'social value' based on both objective-leaning criteria, and more subjective and contextual ones. The result differentiates people along a partially subjective spectrum of 'low' and 'high' value.

Social value in dating is also referred to as 'sexual market value' or 'mate value'.

High-Value People

Individuals with a high net overall value within a social exchange

High-value people tend to be selective because **people who have a lot to give also demand a lot back**.
So high-value people prefer associating and exchanging with other high-value people.

Indeed, unless blessed by excesses of value in some areas, people tend to pair up with mates of similar socioeconomic background and attractiveness, a tendency referred to as 'assortative mating' (Buss, 2019).

Also read:

- High value men, traits, and how to become one

⍰⍰ Approach High Value People Strategically

High-value people tend to be suspicious of those who pursue them because they're rightfully on guard against lower-value people who may turn out be 'value takers'.

Low-Value People

Individuals with a low or negative overall value within a social exchange

There are countless ways of being low value, or a value taker.
Fortunately, most forms of value-taking can be addressed with self-development.

Also, read:

- Low-value women
- Low-value men

Value Visibility Model

Value Visibility Model™ is a TPM framework postulating that **exchange dynamics are largely shaped by *visible* value**.
As a result, strategic actors engage in 'value signaling' and, potentially, deceptive signaling to increase their own perceived value.

To understand and influence these dynamics, it's helpful to look at different currencies of value in terms of *visibility*.

External Layers (High Visibility)

External layers are the qualities that people first notice about you.
They include:

- Beauty
- Style
- Fitness
- Body language, walk, posture, etc.

Deeper Layers (Low Visibility)

Deeper layer currencies are not directly visible; they're 'high opacity'.

To access them, people need to get to know you.
They include:

- Humor
- Knowledge
- Connections
- Life achievements
- Mastery (of something)
- Future potential

Being VS Appearing: A False Dichotomy

The popular 'being' VS 'appearing' argument deals with the *visibility* of social currencies.

And while virtue-signaling behavior dismisses the more visible currencies, deep down people know that *both* are valuable.

Plus, albeit at times tenuous, there is a relationship between external and internal traits (Miller, 2000). And both layers influence each other, and feed into each other ('halo effect', Thorndike, 1920).
For example:

- Beautiful people are perceived as smarter (Kanazawa, 2004)
- People in authority positions are perceived as taller (Blaker and Van Vugt)
- Great personalities who make us feel good are more attractive (Tornquist, 2015)

And the opposite is also true.

This argument sometimes parallels the similar 'being' VS "having", which relates to exchange value vs. personal value, where 'being' is associated with deeper traits of *personal* value.

External Layers 'Gatekeep' The Deeper Ones

Value-gatekeeping™ is the mechanism by which highly visible outer layers invite or repel access to deeper, lower-visibility inner layers of value.

Important real-life implication:

Few people are interested in your deeper qualities if you don't reach at least a minimum threshold of *external* qualities.
External qualities get your foot in the door.

⍰ Example:

How willing are you to associate with someone who lacks basic self-care, including hygiene?

Such a person might have much wisdom to share, but few people will stick around to find out.
Simple association with a negative-value individual can undermine your own status ('law of association').

Who would you rather date, befriend, or even talk to? The woman on the left isn't just more attractive. She also sub-communicates better "deeper" character-based traits

Value Signaling

Value-signaling refers to the communication or sub-communication of one's social value, where the approach and effect depend on objective value, strategic predispositions, and interpersonal skills.

Smart marketing of value is what differentiates successful social strategists from average guys.

We have many articles and a best-in-class course on how to signal value, but the first and most important shift is mental:

Mindset: switch to a "WIIFT approach"

The biggest improvement for beginners is to stop seeking value first, and ask yourself what you can provide for others.
A "what's in it for them" approach brings self-development and strategy to the forefront.

Some techniques:

- **Value-signaling**: the primer and framework
- Effective self-promotion at work
- Covert bragging
- Value-signaling in dating (the 'value sequence model')

The Relativity of Value

Social value is relative.

In economic terms, a $1.000 hunting rifle has low value outside of hunting aficionados. But if society were to collapse, it would be invaluable.

Currencies in social exchanges are similar.

Any type of skill or positive trait is a positive currency.
But how much people value them depends on the individual and the situation.

In dating, a man's wealth would matter much less for a woman looking for a one-night rebound.
This is why moving to sexual marketplaces that are more in line with your goals is a powerful 'hack' to boost your success.
Some other examples:

- **Status-relativity**: status is a form of social power and value, and it's entirely group-dependent (power beats status)
- **Role-based relativity**: a professor is higher value when he's in professor role at school, but just another guy outside of it

Appeal & Currency 'Hardness'

Currency Hardness™ refers to the breadth of social appeal of a given social currency. Hard currencies are universally valued and readily accepted, while soft currencies have limited marketability or only niche and situational appeal.

While subjectivity matters, some social currencies enjoy broad appeal ("hard currencies"), and some others are more situation or individual-specific ("soft currencies").

To make an economic parallel, you can have 1 million in USD, Ukrainian Hryvnia, or in raw material, say, palladium. Everyone will take your USD and give you back whatever goods you want, but few will take your

palladium bars.

In human social exchanges, money and looks are hard currencies. Knowledge is a softer currency.

Social Exchange Manipulation

Social exchange manipulation refers to the manipulation of signals in the social exchange, including both personal value signaling manipulation and value exchange manipulation (investment and give-and-take)

Whenever a signal can impact an organism's odds of surviving and reproducing, there is an evolutionary incentive to fake that signal (Dawkins & Krebs 1978).

So it would only be expected to find manipulation when it comes to social value-signaling and value exchange. Value Scalping™ refers to personal value manipulation, while Social Scalping™ refers to value exchange manipulation.

Here's an overview of social exchange manipulations with extra examples.

"Social scalping" includes a host of manipulation tactics to:

1. Inflate their giving ("credit inflating")
2. Inflate your debt ("debt inflating")
3. Deflate your giving ("credit erasing")
4. Deflate their debt ("debt erasing")

The manipulaotr uses the extra credits to get more concessions in negotiations, more favors in friendships, win more arguments in relationships, and, in general, gain more power and control.

Barack Obama's Social Climbing: A Case Study

Lucio Buffalmano · 10 October 2017 · Archived copy · Original

Why is social climbing so harmful for a leader?

This article will answer that question -plus what you should do instead of social climbing-.

Contents

- Obama's Social Climbing
  - 1. Piling Up on the Weak: Bullying
  - 2. Throw Social Weight Around
  - 3. Delivering Hurtful Remarks (Masked as Jokes)
  - 4. Physically Exclude, Ignore or Reject
  - 5. Flaunt Superiority With Punishment Threats
  - 6. Exploit Mistakes to Self-Aggrandize
- Why Leaders Must Avoid Social Climbing
- Summary

Obama's Social Climbing

These are the most typical social power moves people engage when they social climb.

Many of which Obama used over and over:

1. Piling Up on the Weak: Bullying

Of all the Status Power Plays, this takes the crown as the most heinous.

It's bad enough to status jockey with your peers, but picking on the weakest to score an easy win and look cool and powerful is simply low, low, low.

Bullying can be either physical or verbal, and it's often about social status rather than bullies' 'insecurities' (CNN study).

To me, this kind of thinking is the sign of an excuse-making mindset.
Someone is mean or violent and someone who's afraid of standing up for himself says "deep down he's really just a little scared and insecure maybe".

Well, maybe he is.
Maybe not though.
But this is more ahole behavior and you're losing power and accepting a submissive role if you let him behave like that without even trying to do something about it.

The difference between bullying and all the other categories below is that here we're witnessing a full-on and direct attack. The others instead tend to be more hidden.
Bullying confers the following social points to the misguided perpetrator(s):

1. Strengthen the group by creating an out-group
2. Increase the bully's own self-confidence
3. Raise the value of the group (by communicating people like the victim(s), are not good enough to be in it)
4. Confers social power to the bully: he can harass with impunity

2. Throw Social Weight Around

Throwing social weight around is a common -and seemingly benign- Status Power Play.

You throw your social weight around when you use your position to pile social pressure on others.
This makes the person socially higher up feeling strong and powerful and it often embarrasses or diminishes the one on the receiving end.

Throwing social weight around confers social status by highlighting the perpetrator's position by showing how giggly/embarrassed/shy/weak at the knee people around can get.

Many of us have been guilty of it, and I know that I have. It feels particularly good when people are not very used to their social power, so that wielding that invisible weapon for the first time feels exciting and builds social confidence.

A typical example is when we make jokes about someone in a group and most people are laughing.
Except the person on the receiving end who is instead uncomfortable.

And what do many people do?

Of course, they *keep* making those jokes.

The group keeps laughing, increasing the social standing of the person who makes them laugh and all, of course, at the expense of the butt end of the joke.

See what's happening in the video?

The people start laughing at the poor girl, who's so embarrassed and overwhelmed she has a typical ostrich reaction: hiding her face.

Obama didn't go in saying, "I'm gonna embarrass her", quite the opposite, he wanted to help.
But he ended up doing just the opposite when he caved in to the sirens promising cool social points.

So he pointed at her and cracked a joke for the amusement of the bystanders. In that moment, he was basically communicating "look at her, how embarrassed she is for having fallen off stage in my presence".

3. Delivering Hurtful Remarks (Masked as Jokes)

Delivering hurtful remarks is one of the nastiest Social Power Plays because it is often less focused on building one's own social status than on tearing down others.

The idea is that, if you take social status away from others, but keep yours more or less intact, then you still gain because someone else has less status now.

It can also be concocted in a way that you look good by comparison, as in the case below.

Obama attacks the republicans, all of them, by saying they can't handle "a bunch of CNBC moderators".

This is a heavy attack which makes him look good because in a way he is saying that *he* can handle world leaders and *he* would easily chew those CNBC moderators like nobody's business. He also looks good by taking away status from Republicans, while democrat's status stays intact.

In doing so, however, Obama is not only taking a jab at *all Republican candidates*, but at the same time he is also lowering the status of all the CNBC moderators, making them look like weak and easy to dispatch. Nasty.

It's neatly masked as a joke though, so that people laugh at it.

Notice also Obama uses a Strawman technique here (which you can check it on this YouTube video).

4. Physically Exclude, Ignore or Reject

An easy and obvious way of raising one's status is to ignore, reject or leave someone out in the cold.

When someone rejects you, ignores you or turn their back to you they are communicating you are not valuable enough for them, not worth of their attention, or not good enough to be in their group. A rejection immediately places the rejecter above the rejected in the social hierarchy.

In some exceptional cases, some women do this by stopping talking to you or turning around or raising their hand in front of you, maybe even very theatrically if their goal is to let everyone know they are rejecting you.

Most of the time it's physical, but sometimes it can be verbal too.
For example, once I was at a company party with a group of three, and one of the two higher-ups suddenly blurted out:

> Well, it was good seeing you

And kept looking at me as if to imply I was supposed to move.

Note though in this case, it's not the girl who's being mean or anything, it's the guy who is being a social burden.

5. Flaunt Superiority With Punishment Threats

The leader position sometimes carries with it the possibility of retaliating or using physical or military force.

The basic concept is that he can do more damage to you than you could possibly do it to him. If he ever wanted, that is. He might also be nice and just imply it ;).

The Social Status gain here comes from the display of sheer force: if you're the one who can resort to force and violence and win, then it's difficult attacking your position.

Obama in the video below is veeeery subtle about it. Try to watch it before reading below and see if you can spot it:

Did you try?

So here it is then: Obama has a big-ish ego and always feels the need to hit back and assert his status.

When the guy says “don’t touch my girlfriend” Barack is a bit lost and his first reaction

> **Obama***:* I wasn’t really planning to

This is a defensive statement.

But as he regains his bearings, he goes on the attack.
First, he says

> **Obama**: *Mike is such a fool*

Which was unnecessary and mortifies the already anxious woman.

And he then adds

> **Obama***: fortunately the president was nice about it*

And that was the hidden threat (also see: covert power moves).

It was the implication that he, the president, could have NOT been nice about and unleashed some consequences for the rascal who dared to joke around the president.

6. Exploit Mistakes to Self-Aggrandize

This is another value-taking move.

It highlights the mistake someone has made to make him look poorer and, by comparison, makes us look better.

I have often seen this one in relationships, especially from men who feel the need to somehow reassert their intellectual superiority on the relationships (read combative relationships).

Needless to say, these aren’t great relationships.

In this clip, the guy asked Obama a silly question, something like plans about nuclear war with Russia.

So silly indeed, it didn’t even deserve comments or wasting any time on.
But Obama pounces on the occasion, raising it to a worthy discussion point, if not only to make everyone laugh and gain some “smart ass social points”.

All at the expense of the heckler of course.
We could easily say that the guy had it coming for his nonsense quip, but the best course of action was different.

When someone has a (brain) fart the highest value behavior is to help them save face and move on.

Exploiting mistakes is weak, and even weaker when they come from easy-to-attack people.
Typical social status climbing behavior.

Why Leaders Must Avoid Social Climbing

Social climbing shows insecurity.

A leader, by definition, is a high-status individual who sits at the top of a social group.

And if you’re “officially” at the top, you shouldn’t need Status Power Plays in the first place.

If you're at the top and social climbing, you communicate you do not FEEL like you're at the top.

And people around will feel like you are overcompensating.
That's their insecurity.

They're afraid someone might take their position. Their fear and insecurity, then leads to seeking the constant validation that comes with re-asserting their superiority.

The team that these leaders "lead" or the relationships they form tend to be combative and ripe with constant backstabbing and status jockeying.
Not good.

What do the high value leaders do, then? We'll go over it more in detail eventually, but here's an overview.
Effective leaders:

- Build people up (not tear them down)
- Address major challenges, but ignore minor ones
- Help people save face
- Make people feel good about themselves

Summary

Social climbing is an attempt at increasing one's social standing by attacking and taking away other people's value.

They are terrible for leaders because a leader, by his own position at the top, should not need to take away other people's social value.
An effective leader should instead focus on improving his group, which comes in good part from building up the people in it.

As a final note, I used Obama as an example because he tends to be more subtle than many others. And as they say, when you train in hard mode, you dominate the medium and easy mode.

When Someone Makes You Wait: Psychology & Tactics to Get Respect

Lucio Buffalmano · 12 October 2017 · Archived copy · Original

It's upsetting when someone makes you wait.
And if you're wondering 'is making someone wait disrespectful', the answer is that **yes, it's disrespectful to make you wait.**

Maybe it wasn't a calculated power move to assert power over you. Maybe they were busy, or are disorganized. Sometimes it's hard to say.
But waiting disempowers you independently of their intentions.

And **how you respond to being left waiting determines your relationship**, whether it's one based on respect or not.

Let's learn the best ways to handle it.

WTF dude… I've been waiting here for one hour

Contents

- The Power Dynamics of Making Someone Wait
- How to Wait For Someone
  - 1. Prevent It By Meeting at Your Convenience
  - 2. Start Without Them
  - 3. Busy Yourself
  - 4. Even The Scores: Let Them Wait
  - 5. Assertively Call Them Out On It
  - 6. Let Them Pay
  - 7. Cut Them Loose

- Restoring Power The Right Way
- Mindsets
  - You Respect Others, & Demand Respect Back
  - No Vendetta: Only a Fair Relationship
  - Your Time is Valuable
- Summary

The Power Dynamics of Making Someone Wait

Making you wait disempowers you because it frames you as lower power and lower value.

It sub-communicates that:

1. **You are needier** if you rushed and wait, it means you probably need something from them.
   Ie, a salesperson does not make the prospect wait
2. **He is more powerful**: making someone wait is disrespectful, and disrespect is 'more acceptable' when it comes from above.
   Ie, employees don't let bosses wait
3. **He is higher value** because whatever else they were doing is more important than you. And it lowers your value by sub-communicating that your time is not as important as theirs

As per Social Investment Model, effort and returns also play a role in disempowering you.
Punctuality doesn't come naturally to everyone; **punctuality takes effort**. You expanded that effort for them, but they didn't do the same for you.
Low Social ROI also signals low power. You're wasting your time waiting, with negative-ROI on your time. They're not.

In sum, the power dynamics are clear: you're being disempowered.

How to Wait For Someone

Of course, you are not cool with any of those implications, so let's see how you restore some power balance.

1. Prevent It By Meeting at Your Convenience

Prevention always goes a long way. Here are a few I routinely deploy:

- **Meet Close to Your Place**

The man who travels to meet the other signals lower status (Blau, 1964). So, whenever possible, choose meetings that are easy for you.

- **Confirm The Meeting**

If it's anything you have to leave the house for, always confirm the place and time on the morning of the scheduled meeting. Confirmation will make it harder for them to let you wait without looking disorganized.

- **Plan B**

"Plan B" is anything allowing you not to waste your time if you have to wait. For example, I always have noise-canceling earphones with a new audiobook on my phone, so worst case scenario I imbibe knowledge :).

Power Dynamics

The more you inconvenience yourself to meet someone, the more power you are giving them.

Now remember, there are exceptions: if *you* need something from them, then *you* should make it easy for them and meet as close to them as possible.
If it's a meeting with a friend, meeting middle way or alternating between easy for you and easy for him is fair.

2. Start Without Them

> ***You Wait for Nobody***

Once they fail to show up in a timely fashion, whenever possible start doing whatever you had planned to do without waiting.
So if you are sitting at a diner table, order. If waiting outside the office for lunch, go by yourself. If you are at a meeting, start the meeting without them.

Once people join the meeting later they will feel they have been marginalized and might try to grab attention back. They might say "sorry I was very busy". Or they might try to interrupt your speech with some made-up stuff like "sorry I was busy, where can I sit".

Don't dignify their excuse or you are giving them power back.
Instead, say it's OK, but say so very nonchalantly, and then move on. If they ask you a question, don't reply verbally or reply the bare minimum.

For example, if they ask where they can sit, keep talking, and point to an empty chair.
If they ask for a recap, don't give a recap and say you will take it offline 1:1 after you're done. If you can't avoid answering, add a little zinger in there. Something like:

> *"Yes, this is important for you to know so I'll repeat. Everyone else has already heard it so I'll be brief"*

You're communicating here that because of them every one is being inconvenienced and you're not afraid of

highlighting it.

Notice: "*this is important for you to know so I'll repeat*" is a great way to reduce your compliance with them. Instead of just following the order you add that you repeat… Because it's important for them to know, not because they just told you. Don't let the late *ahole* take away your power, but comply because you want to instead.

Power Dynamics

Waiting dignifies the late party and acknowledges that they, indeed, are important and can keep you waiting.

It's also a bad operant conditioning strategy as now everyone will think it's OK to come late.
And when you fail to educate people to respect your time, you can kiss goodbye to your chances of ever starting on time -and generally being respected for that matter-.

Starting no matter what instead does the complete opposite. It puts pressure on them for having joined late and sends the message that you wait for nobody.
Powerful.

> (Kabhib tells the organizer to start)
> **Kabhib**: I don't need to wait for nobody. This is 3pm, friends are here, media is here, everyone is here. Dana a little bit late but it's OK. But 3pm I begin, if you guys have questions, let's go.
> (15 minutes later)
> **Kabhib**: hey guys, thank you so much, it's 15 minutes late, this guy hasn't shown up, it's big disrespect, tomorrow at 9am I'm gonna show you my weight. See you tomorrow guys. Good night (and leaves)

Kabhib did great to start the conference on time. And by leaving early he totally denied McGregor's power move. McGregor arrives at a conference that had already started and ended.

In dating: leave

My date had me waiting.
AND had an attitude:

> **Her**: (late) <— She's already in debt for keeping me late
>
> **Her**: Relax, I'll be there <— Out of place
>
> **Me**: Where I come from it's disrespectful to keep people waiting <— The covert frame is a cultural difference around time and commitment. But going deeper via text is too high investment
>
> **Her**: I understand and I'm doing by best
> (…) Thank you for your understanding <— Covert power move. Imples that I will understand. Professional tone is out of place
>
> **Me**: (moves) <— She will have to make it up to me with her investment (text, calls, worrying)
>
> **Her**: Where are you
>
> **Me**: I moved
>
> **Me**: (stops replying, order and starts dinner)
>
> **Her**: (chases me and shows up at the restaurant, where she will pay for her dish)

3. Busy Yourself

> ***You ain't got time to waste***

If you can't start, *use* that time.

Bring anything with you that allows you to turn any downtime into productive time -including waiting for *some ahole* to play his games-.

If you have a laptop, use it. Or carry an ebook reader, or put an audiobook in your phone you can listen to.
If all else fails, call someone you had to call or call someone you didn't have to call just to say hi.

Power Dynamics

You are communicating here that you are a man who places a high value on his time and is not to be inconvenienced by their power plays. It will also soften the power of their move as you didn't feel any impact.

4. Even The Scores: Let Them Wait

> ***Tit For That: Fight Fire With Fire***

This one comes straight from Allan Pease.

When your beloved Power Mover finally shows up, let him greet you first and be slightly colder than usual in your greetings.

If you are behind a laptop screen or if you were reading an ebook, don't raise your head until they say something. Let them speak first, and then slowly raise your head and slowly pack.

If you were talking to someone, finish the sentence or keep talking for a little bit before you turn around to say hi:

you will communicate that the party who respected your time and presence gets more respect than the party that let you wait.

If you were on the phone, keep talking for a little bit longer before you hang up and possibly shake the Power Mover's hand while you're still on the phone -a devilishly sneaky move to lower his status-.

Look at the clip below.
Notice Ashton Kutcher doesn't say anything when his date arrives late and is rather cold and standoffish (turns his head the other way, and looks ahead into space).
He puts social pressure on her to speak first, lean towards him, and apologize, which helps restore some power balance.

> **Her**: (arrives late)
> **Him**: (says nothing, lets her speak first to expend more effort, and turns to his right when she goes to his left)
> **Her**: I'm late, will you ever forgive me (power moves start already)

Note:
She's very shrewd though, and hell-bent on keeping the power on her side. She leads towards the table first and thus forcing him to follow. But that's another topic

Power Dynamics

If you greet him first as soon as he arrives, you look like a dog waiting for the owner.
Letting them come to you and greet you first instead is a very easy way of restoring some power balance.

And of course, make them apologize:

5. Assertively Call Them Out On It

> ***…And Don't Rush Saying "It's OK"***

If they enter the room or join you pretending nothing happened, they are disrespecting you.

That's when you want to straighten things out openly or prod them into an apology.

If you are on the same level or if you are above in the company or social hierarchy, be open and direct.
Tell them it was not OK to let you wait and please not do so anymore without any warning. An apology is almost guaranteed at this point and you can resume being friendly after that.

With fresher acquaintances or with a *job interviewer* or boss, you want to be more indirect.

For example, you could look at your watch when they enter the room.
A further step below that, here are a couple of nice ways to nudge them towards an apology while at the same time showing some warmth:

> *"Hi, pleasure meeting you, I was thinking something happened"*
>
> *"Hi, good to see you, I was getting worried everything was OK"*

Power Dynamics

People who are inconveniencing you should be *volunteering to* apologize for the delay. If they don't, it's only fair you nudge them towards it.

6. Let Them Pay

> **How to Restore Power Balance**

If we are talking about a major delay and you're meeting for a coffee or lunch a person looking for a fair relationship might offer to pay.

At that point, you can go ahead and refuse because what matters most is the gesture.
The gesture, in this case, shows sincere apology and concern, which by itself restores the balance of power.

If you were the one running late you can actually end up strengthening the relationship when you volunteer to make

it up for them because it's an opportunity to show that you care.

But "letting them pay" doesn't have to be financial.
If the power mover doesn't apologize sufficiently, you could for example leave earlier than planned saying you unluckily have something important to attend and it's unfortunate you two only had so little time to share.

He came late, and you leave early, 1-1.

7. Cut Them Loose

Are they doing it over and over?

If you're dealing with people who repeatedly disrespect your time or who don't do anything to excuse their behavior, then it's time to consider appropriate alternatives.
It might be time to cut them loose.

Here are a few considerations to assess if that's appropriate.
Excluding people who simply don't get it, there are two possible scenarios:

1. They don't value you
2. They are actively trying to undermine you

If they don't value you, you can keep interacting with them in case you are the only party who's getting value from the interaction.

For example, if the other party is your mentor, and he's always late, you can willingly decide to take that disrespectful attitude in exchange for his help.

If it's an otherwise balanced relationship and they still often let you wait, start demanding investment back to be on an equal footing, and if they refuse to stop meeting them on their terms.

Restoring Power The Right Way

Human relationships can be seen as exchanges.

Is it you who needs something from them?
In this case, don't go overboard with the above tips.

Was it them who wanted something from you?
Then follow each and every step from above and quickly end the relationship if they don't take major steps to restore the balance.

And of course, if we're talking about close relationships, always cut more slack because it's more unlikely we're talking about Power Moves there.

Mindsets

As usual, the mindsets are the most important part.

You Respect Others, & Demand Respect Back

This is *the basic mindset of assertiveness.*

You are looking for a fair and balanced relationship.

Even if you're *at a job interview* and theoretically you want the position more than they need another candidate, there's no excuse for playing power games.

Letting you wait on purpose is indeed a sign they are not looking for a fair relationship.
But that doesn't change who you are and what you're after, and that's why:

No Vendetta: Only a Fair Relationship

You're not looking for vendetta and you don't sulk like a wronged kid.

You deploy any method you can to restore the power balance because you always stand up to power plays and demand win-win relationships.

But once you restore the balance, you stop pushing.
As a matter of fact, once you achieve balance, you turn 360 degrees and make them feel good they helped you balance the relationship. That's positive operant conditioning right there.

When you do that, people will feel you're a man of high value and will feel like idiots they tried to play you now that you're so welcoming.

Your Time is Valuable

Finally, you view your time as valuable.

You don't necessarily want to be mean, but you're not going to sit at a restaurant table fidgeting around.

Summary

Making you wait is one of the oldest Power Moves around.

It disempowers and lowers your value and empowers and raises the value of the person making you wait.

Your goal then is to neutralize these effects.

The above techniques are all designed to reset the power balance and restart afresh towards a win-win relationship.

Or, at least, a relationship where you're not losing.

That's what a *high-value man* does: win-win ideally, but definitely not losing if win-win is not possible.

How to Make Her Change Her Mind After Rejection: 7 High-Value Tactics

Lucio Buffalmano · 16 October 2017 · Archived copy · Original

If you're wondering how to make a girl who rejected you change her mind, the answer is simple: show her that you're much better than she thought.

This article shares tips and techniques that display high value and increase the odds that she will change her mind about you.

Note on consent: she must be the one to make the final decision because it's the best choice for her
Changing a woman's mind is about making the relationship a win for her. It always implies full consent because being with you is a win for her

  - No Ladder

Intro

We will address the topic of rejection and changing people's minds.

The first part deals with the techniques on what to do when a girl rejects you, and the second part on the general principles of rejections.

Let's start:

1. Prevent The Rejection

The easiest way to change her mind is to never get rejected in the first place.

Basics: Be Higher Value

Start with some basics:

- How to be a high-value man
- How to signal power and status
- How to lead your dates, like a masculine man

⍰ Tactics: Work Your Way Up In Smaller Steps

Imagine these two scenarios:

1. You meet a girl at the bar, chat for 10 minutes and then invite her home
2. You meet a girl at the bar and ask her about her life. And then:
    1. Tell her to see her bracelet;
    2. Tell her to come to sit with you somewhere;
    3. Tell her to watch your stuff while you take a leak;
    4. Tell her to go get some air;
    5. Finally, tell her you should go chill a bit back at yours

The second could take the exact same time, but it's immensely more likely to end up back at your pace.

Why?

It's because it followed a more linear progression where you took the lead role in incremental steps.
She granted you that position and got used to answering yes and investing more and more.

⍰ Ask More Persuasively

Some questions make it easier for the girl to say "no" than to say "yes".

And those are the questions that most men ask.

You want instead to make it easier for her to say yes by making the first move.

⍰ Example: Asking Girls Home The Correct Way

I like to ask girls if they want to come over while we're still walking, not when we've stopped.
And sometimes I will ask them after we've already passed their metro station.
There's little pressure on them, we're already moving and the dynamic expects a yes, which makes it very easy for them to just say "OK".

Here's another simple example.
Instead of saying "do you want to dance with me?" and then wait, tell her "shall we have a dance" and stick your hand out.
Much easier for her to follow your lead because you don't place the burden of decision-making on her:

> **Him**: this music, this place… Will you dance with me (*and* sticks his hand out)

2. Show You're Unaffected: Emotional Poise

What really sinks most men after a rejection is not the rejection itself, but their reaction.

They act like beaten dog who've been denied the treat. And that signals a lack of confidence and options.
Women don't want men who are easily broken. They want stronger men who can handle setbacks… And turn them around.

Sometimes simply displaying you're unaffected is enough to change her mind.
If not, it will make your job easier later on.

What if it was a test?

Most rejections are real.
But sometimes some women may reject a suitor to display preselection, gain power, or test your reaction.

In those cases, ignoring it and don't try to change her mind.
Trying to change her mind would only strengthen the frame that she's the prize. And the more you invest and chase, the lower value you become (Buffalmano, 2026).
And women don't like sleeping with powerless and lower value men.

Instead, keep acting normall.
Paulson and Roloff indeed found out that dealing with the rejection without mentioning the rejection at all, resulted in higher compliance rates (Paulson & Roloff, 1997).

Note: most rejections are REAL, don't act like they're not

3. Take a Step Back & Display Value

Instead of trying to change her mind, which is reactive, **stop chasing**.

This works best when you can see the "no" coming up, before it materializes, and to display value and bond more before escalating once again.

For example:

> (…)
> **You**: *"hey, I'd like to get a coffee with you one of these days when we have a bit more time"*
> **Her**: "*Hmm.. I'm quite busy these days"*

It's a polite "no", but it's not a "no" yet.

Instead of pushing or accepting the "no", interact a bit longer, show how cool you are, and chargeback later

> **You**: *"yeah, I can feel you, I barely got time to eat these days. What are you busy with"*
> **Her**: *"I'm working on this building model for uni and I have to finish it next week"*
> **You**: *"Oh cool, what kind of model are you working on"*
> …..
> ….
> **You**: *"Hey look, we're both busy, but we can exchange contact and schedule for when we have a free evening"*

This approach worked countless times for me.

4. Agree and Redirect

In some situations, you can agree with her, go along with it, and then change direction to something more fruitful.

For example:

> **Her**: "*OK, I need to go see my friends now"*
> **You**: "*You're right, this place is too smoky, let's go outside"*
> (Start walking with her)

Try to spot when Ashton Kutcher uses the same technique:

Notice she says “I’m leaving”, and he jumps on the occasion to take a huge plunge in the seduction: going straight home.
Instead of arguing on a possibly losing battle -to stay longer-, agree -leave- and redirect -leaving together-.

A similar technique is to agree and pretend it was your idea so that maybe you can have another chance at a different time. But this is more defensive and we’ll go over it in another article.

5. Change Tack

This is the bazooka you will use once you’re already knee-deep in bad precedents, especially if it’s over setting up a date or exchanging contacts.

The problem with getting a NO is that it sets a precedent.

And the more “NO” you get, the harder it is to buck the trend.
What you do then go for something big that takes her out of her rejection autopilot and turns the situation on its head.

For example:

> ….
> **Her**: “*I don’t drink coffee”*
> **You**: *“Well, Katy, I suppose you understand it’s not about the drink but about knowing each other”*
> **Her**: “*Yes, but I live far”*
> **You**: *“Alright Katy. I’m not here to waste your time, or mine. I’m looking for a serious relationship. I don’t know if you’re right yet and how knows I may be a good fit for you. I propose a coffee, and if you don’t think I’m a top option for you, you just walk away*

You can also use this with bolder approaches with a higher lover frame who wants to ‘give a good time’. But that’s more advanced stuff.

In any case, this technique scrambles everything and gives you the chance of *taking the lead back*. Also, it goes from asker -the guy who wants a date- to giver -giving her amazing sex-.

6. Get YES With *Calibrated* Persistence

NEVER become antagonistic after a rejection.
It’s weak, reactive, and makes women unsafe. The *opposite* of good seduction.

Instead, it works better to be, for example, *playful and energetic*.
Avoiding the overly serious signals that you’re not too concerned or boring.
And most of hell it staves off any chance she could think you’re annoyed, irritated or angry: women are naturally afraid of men who lose their temper too easily when sex is at stake because it rings rape danger bells.

Insisting is an art in itself and deserves its own article, we have examples in Seduction University.

⚠ #7. Bold Move: Acting On Underlying Attraction (not recommended)

For obvious reasons, this is high-risk.

See here an example:

I don’t recommend going for the kiss after a rejection as that would be too much of a step.

However, you can still be cool, lead, and see if she's willing to follow.

Common Mistakes When a Girl Rejects You

After this article, you can already understand many most common mistakes. But here are a few examples of what not to do when a girl rejects you:

Arguing Over Nothing

Sometimes the rejection can be not about you, but about your ideas, opinion, lifestyle, or whatever.

You don't need to agree with her, but it's paramount you don't let the disagreement become an argument and a reason why the two of you can't be together -if only for a brief night-.

You will see it often from the less socially savvy guys when they escalate their differences into heated arguments about who's right or wrong.

I remember years ago going back home to a girl's place.

As we drank and smoked weed, she started with her left-wing tirades and I didn't resist raising a few questions. A little argument ensued and I managed to go back without seeing any action.

God, I was a dumbass :).

Avoid Thread-Expanding the Rejection

Sometimes rejections are just stock sentences without any meaning.

It's a huge mistake trying to "convince" her she's wrong because you force her to repeat over and over that it's not going anywhere between the two of you.

A typical example is the girl saying you're just friends and the man saying it's not true.
Talking about a losing battle :).

Ryan Gosling makes that mistake in "Crazy Stupid Love":

> **Him**: I find you very attractive, do you find me attractive?
> **Her**: I don't
> **Him**: You do
> **Her**: I don't
> **Him**: permission to approach the bench (and now he's trying to "convince" her after he has thread-expanded on the no, he's fighting an uphill battle)

It was too early to ask her "do you find me attractive".

As she repeats NO both in her mind and verbally, that only serves to entrench her position.
The more we repeat something, the more real it becomes. And it triggers the *Commitment and Consistency principle*, which will make it harder for her to behave later on like she actually likes him.

After saying no it would have been better to smile and add "sure not".

No Ladder

You probably heard about the YES ladder.

Well, the NO ladder works exactly the same way but in the opposite direction.

Some guys make this mistake of confusing persistence with “asking the same thing over and over”, just changing a few words here and there.

The result is that they get rejected over and over.
As a matter of fact, two NOs in a row are already enough to sink you.

> **Him**: maybe you can show me around
> **Her**: I don’t think so. Can I get you anything else?
> **Him**: how about your phone number

Asking for her phone number comes too soon after the “no”. He had to give it more time.

Grit: Summary & Review

Lucio Buffalmano · 16 October 2017 · Archived copy · Original

Grit is the combination of passion and perseverance and, author Angela Duckworth says, is the biggest predictor of achievement.
Grit explains how you can find your passion and how you can increase your grit.

Bullet Summary

- Grit is a mix of passion and perseverance
- Grit matters more than talent in achieving success
- You can grow your grit
- Find an interest, develop it into a passion, and stick with it

Grit Summary

About The Author: Angela Duckworth is a psychology researcher, Oxford, and Harvard alumni, and psychology teacher at the University of Pennsylvania.
She became popular because of her research on grit, perseverance, and achievement for which she also won a McArthur award.
The concept of Grit and Duckworth's research has been controversial.

Part I: What Gris is and Why it Matters

Chapter 1: Showing Up

Angela Duckworth begins *Grit* with a quick overview of the psychology of the highly successful.

She says that the most successful people:

- Have huge perseverance
- Never feel like they're good enough, but are satisfied being unsatisfied
- Love the chase as much as the capture
- Have an enduring passion for carrying them through boring and painful times
- They know what they want: they have both determination and direction

And it's that mix of passion and perseverance that Angela Duckworth calls *Grit*.

> Grit is a mix of passion and perseverance

Grit Matters Most

Angela Duckworth studied the challenging Westpoint induction training.

She wanted to see what differentiated those who made it through from those who dropped out.
And she found out that Grit was an astoundingly reliable predictor of who made it and who quit.

She ran the same study with sales representatives, a profession with a notoriously high turnover rate.

And again Grit was a huge predictor of who stayed and who quit. Grit mattered more than any other personal trait.

Grit was of course not the sole predictor of endurance.

In sales, for example, previous experience mattered; in school, a supportive teacher helped students make it through; and for the military, the physical fitness at the start of the training also made a difference.

But Grit was important to *all* of them and mattered even when the other predictors were absent.

> Our potential is one thing. What we do with it is quite another

Chapter 2: Distracted by Talent

Angela Duckworth says that in spite of the USA being a country where most people appreciate and idolize effort and hard work, often that's more lip service than reality.

She says that, **deep down, we all love "naturals"**.

And experiments show that people would rather hire naturals and believe that naturals have higher chances of succeeding than hard workers, even when their skill set is completely the same.

The author says that it's a bit like people saying they don't care about physical attractiveness, but then we actually pick the cute partner to date when given the option.

Angela Duckworth says that talent is not a bad thing -of course, it isn't- and, importantly, that we are *not* all equally talented.
But the biggest reason why the preoccupation with talent is harmful is that we risk forgetting all the other important traits that matter, like Grit.

Chapter 3: Effort Counts Twice

The author says that our human tendency when we look at someone highly skilled is to stare in awe and think it's raw talent. "He's naturally gifted", we tell ourselves…

Angela Duckworth quotes Dan Chambliss when he says that, of course, not all of us will become Michael Phelps, but that the talent needed to succeed in swimming is lower than most people think.
And, importantly, that **greatness is doable**.

As long as you understand that a high-level performance is backed by countless hours of mundane work behind the scenes.

I found it fascinating to read the reason why Angela Duckworth says we all love talent, and **we all love talent because it lets us all off the hook**.
If the achievements of others are because of something magical, or because of some lucky mixture of genes, then we don't need to compare ourselves to them.

They are the special ones and freaks of nature, and we are normal.

Angela Duckworth's Achievement Equation

Talent x Effort = Skill →
Skill x Effort = Achievement

Talent is how quickly your skill improves when you invest effort.

Achievement is when you take the required skills and use them.
Notice that effort figures twice.
First by building the skill, and second by deploying those skills until you achieve your goals and objectives.

The author recognizes that this equation is incomplete as it doesn't include other important variables -ie.: a great coach- but adds that it's still relevant to understand the importance of effort.

Will You Quit at the First Obstacle?
Angela Duckworth says that many people often start things full of excitement, only to give up too soon when they encounter the real first obstacle.

We quit what we start way too early way too often.

But what really builds skills and leads to achievement is waking up day after day and staying at it.

Chapter 4: How Gritty Are You

Grit is about working on something you love so much that you simply want to keep at it.
Grit is falling in love and *staying* in love.

The author then proposes a test to assess how gritty you are.

My Note:
We all love tests with neat and defined results, but since it's based on self-assessment of yourself I would recommend taking it with a pinch of salt (or not taking the test at all).

Grit has two components: passion and perseverance.

Angela Duckworth says that passion often gives us the idea of a quick infatuation, but in high achievers, passion is about consistency over a long period of time.

> Grit is working on something you love so much that you simply want to keep at it

Grit & Goals

Grit means keeping the same end goal -which she calls a “life philosophy”- over a prolonged period of time.

Importantly, gritty people have related lower-level and mid-level goals supporting their life philosophy.
Imagine a pyramid, with the lower-level goals all there in support of the top.

On the other hand, people lacking in grit tend to have goals that don’t align. And some other people have a big final goal but without any supporting mid-level and lower-level goals. The author calls it “positive fantasizing”.

You can, and sometimes should, swap or scrap lower-level goals if that makes sense in your circumstances.
You should however strive to stay stubborn about your high-level goal.

> Grit is falling in love and STAYING in love

Chapter 5: Grit Grows

Of course, the author had to touch on the all-encompassing question: is Grit a “given” or can we change it?

Grit & Genes

Angela Duckworth says that the short answer is that in part our *Grit* is genetically determined.
But don’t start cheering or using that as an excuse yet.

All human traits are a mix of genes and experience and you can influence all of them.
Even height, the stereotypical genetic trait, is more malleable by the environment than most people think.

The next paragraph teaches you how you can grow Grit, but I think it’s also interesting to take a look at inter-generational Grit.

Angela Duckworth says that the previous generations show more grit than millennials.
She says this could be because of a different cultural environment, but also because millennials are younger today and Grit grows with age.

How To Grow Grit?

Angela Duckworth says most people quit because they:

- Get bored
- Don’t think it’s worthy
- Can’t see themselves ever making it.

She then says there are four specific psychological assets that the Grittiest people have and that serve to counter the forces that urge us to quit.

They are, in order:

1. **Interest**: Passion starts with enjoying what we do. You don’t have to enjoy every single part, but you enjoy it overall
2. **Practice**: You must devote yourself to improving in your focus area zeroing in on your weaknesses. “Whatever it takes I want to improve” is a common trait among gritty people
3. **Purpose**: The conviction that your work matters, that it’s connected to the well-being of others. Interest without purpose is hard to sustain
4. **Hope**: Hope encompasses all three stages and is what will keep you going when things are difficult and doubts arise

And the beautiful thing?

You can learn all four elements.

You can learn to become interested, you can build the habits of practice and discipline, you can develop a purpose and you can become a hopeful person.

> Enthusiasm is common, endurance is rare

Part II Growing Grit From the Inside Out

Chapter 6: (How to Find Your) Interest

Angela Duckworth says that you don't usually find your passion as if a bolt hit you from the sky.

From her interviews, most people found their passion by exploring many different interests they had.

Why It's Hard to Find Our Passion

Barry Schwartz says that most people don't stick to anything they are interested in because they have an overblown expectation of what it means to "find your passion".

It's a bit like a life partner, Barry says.
Some dream of a knight on a white horse with a book-long list of qualities.

But in real life, nobody has a book-long list of qualities without some deficiencies here and there.
And a related problem is the idea that falling in love should be sudden and swift to be "real".
But again, life is different, and love often grows.

To Find Your Passion try What You Life

To find your passion, try to go for something you believe you would like.

Don't be afraid of guessing if you're not sure, because there is definitely an element of randomness and trial and error.
Sometimes it can also be difficult to predict what you will enjoy, and if you pick the wrong one, don't be afraid of moving on.

It's also important that you *do* what you like because you don't find your passion through introspection but with first-hand experience.

In the beginning, our interests tend to be feeble and ill-defined, and indeed Angela Duckworth says that often the discovery of a life passion can even go unnoticed.
That's why it's important to at least give a fair chance to any new endeavor we start.

Once you start finding a certain topic or activity interesting, it might happen that you want to try something.
That's because, the author says, our brain loves novelty. Before switching, see if you can deepen your interest instead.

And remember: if you want to stay engaged in anything for the long term, you have to learn to enjoy the nuances and details of your discipline.

Finally, I would also like to add that, as Angela Duckworth herself highlights, the people around us are important in whether we will take a liking to something or not.
And early positive feedback serves to make us feel happy and confident we are indeed pursuing the right choice.

Finding Your Passion Step by Step

1. Try different things which seem interesting to you;
2. Pick one which is particularly interesting for you;
3. Proactively develop that interest;
4. Further, deepen it over a lifetime.

So, to be clear and for your complete understanding, it's more about "developing" your passion than it is about "finding" your passion.

> **You don't find your passion. You CHOOSE it and DEVELOP it**

Chapter 7: Practice

Experts don't just practice more, but they practice differently.

Grit by Angela Duckworth talks at length about the concept of Deep Practice.

Deep practice means zeroing in on your weaknesses, focusing more on what you did wrong than on what you did well.
And then fixing it.

Deliberate practice is exhausting.
Many top performers can only handle one hour before taking a break, and no more than 3-5 hours per day.

To improve more quickly under deliberate practice, follow these steps:

1. Set a precise stretch goal
2. Focus 100% on it
3. Get immediate and accurate feedback
4. Repeat and refine

Fear of failure and of looking bad are the worst enemies of deliberate practice.
It's because since the core idea behind deliberate practice is to train based on mistakes outside of your comfort zone you simply can't allow shame to hold you back.

Also check *Daring Greatly* by Brene Brown, largely based on beating shame and living fully.

Deliberate Practice VS Flow

Deliberate practice and *flow* are different.

Deliberate practice is a behavior and it's more effortful and rarely as enjoyable as flow.
It is planned and happens when you're beyond your skill level. Your goal is to increase your skill and you are looking for problems to fix.
Finally, deliberate practice is for preparation.

Flow is a state instead and it can be more challenging to accurately plan.
In flow, you're not analyzing what you're doing but simply doing it and you're effortless.
All the feedback you get is often great and not based on mistakes because your skill level is enough for the challenge.
Flow is for performance.

Deliberate Practice for the Gritty

Gritty people do more deliberate practice and experience more flow.

Importantly, gritty people also experience deliberate practice as more enjoyable than less gritty ones.

But some high achievers hate the practice part but still maintain an overall passion for their sport.
Some others go through hard practice for the pleasure of the final result (as Tim Grover explains in *Relentless*: these people are addicted to winning).

Overall, Angela Duckworth says there is not enough evidence to say whether or not deliberate practice can be perceived as enjoyable and effortless as flow.
Her own experience says that deliberate practice can be gratifying, just in a different way than flow is.

Learning to Work Hard

I think a key nugget of information that might slip by since Angela Duckworth didn't drill down on it is that the experience of working hard changes when the effort is rewarded.

Therefore If you're a parent it's important that you reward your children for the effort.
And if you're an adult you reward yourself for your hard work as that will help you link pleasure -or at least a pleasurable follow-up- to hard work.

To get to know more about effective practice, I invite you to check out:

- Peak
- Mastery

And for "flow", go straight with the original work:

- Flow: The Psychology of Optimal Performance

Chapter 8: Purpose

Angela Duckworth says that often gritty people have difficulty in putting into words what they feel about their purpose.
But the key is that purpose is always connected to other people.

Their action can be driven for the sake of the sport, for the country, or for some specific person. Or, in general, for what we matter to others.

However, an altruistic principle is not a strict requirement for grittiness and it's well possible to be a gritty villain.

Chapter 9: Hope

The hope of gritty people has nothing to do with luck but has to do with getting up again and again after we fall down.

The author calls "hope" what to me seems "optimism".
She says that optimists are different in that they find explanations for their failures that are temporary and specific.
Pessimists instead explain their failures with permanent and pervasive causes -ie.: "I'm a loser", "I always mess things up"-.

She is right, and she is referring to Seligman's groundbreaking studies of optimistic salespeople who outperformed pessimistic ones.
Also, read:

- Learned Optimism

Duckworth also talks about Growth and Fixed mindset and says that a Growth Mindset is strongly linked to higher levels of Grit (*read how to develop a growth mindset*).

Duckworth says that many of us often have a pessimist fixed mindset in us alongside the optimist growth mindset we profess.

Angela Duckworth says that a fixed mindset about your capabilities leads to a negative and pessimistic explanation of events, which in turn leads to both avoiding challenges and giving up early.

It makes sense.
If you believe your capabilities are fixed, why would you go through challenges?

On the other hand, the author says, a growth mindset leads to optimistic self-talk and Grit in the face of challenges.

> Grit is falling seven times and rising eight

Part III – Growing Grit From Outside In

Chapter 10: Parenting for Grit

Angela Duckworth says there is much research on parenting and some research on *Grit*, but no research on both of them.

The author says that authoritarian parents are demanding and unsupportive while permissive parents are supportive and undemanding.
She recommends instead a middle way that takes the positives of both of them: demanding and supportive parenting.

And the best way to grow Grit in your children is to show grit yourself and then adopt a parenting style that encourages your children to emulate you.

Chapter 11: The Playing Fields of Grit

Students who engage in extracurricular activities for longer than a year are more likely to graduate and do better in almost any measured trait from grades to self-esteem to employment after college.

The author recognizes the first doubt I had while reading that: is it sticking longer through extracurricular activities that helps, or are higher achievers simply more likely to stick longer to their chosen activity?

She says that the two aren't mutually exclusive and that both factors -cultivation and selection- are at play.

Learned Industriousness

The association that working hard leads to reward can be learned.

Because when we don't make that association, we tend to fall back to laziness.
We human beings have a tendency to preserve energy as much as possible when we don't see the point of action.
And when we don't make the association that working hard pays off then, guess what? We will not work hard.

The Hard Thing Rule

Angela Duckworth raises her children with the Hard Thing Rule.

The hard thing rule says that:

1. Everyone in the family has to engage in an activity that requires deliberate practice
2. Finish what you start: you can't quit until the course ends, the season is over or something major happens

3. You get to pick what you want to do
4. Once in high school, the kids must commit for at least 2 years

> If we don't associate hard work to rewards, we won't work hard

Chapter 12: A Culture of Grit

The culture we live in and with which we identify powerfully shape our behavior and, with time, our identity.

This is critical because our identity shapes our character and behavior.

Basically, sometimes we process information logically to reach a conclusion.
But many other times we don't deeply assess what are the benefits and drawbacks of our daily decisions, but simply revert to "who we are" and what people like us do.

This is important, Angela Duckworth says, because the results of long-lasting effort often take years to materialize.

And when we don't have an identity to push us through we might simply be tempted to give up when the results are both uncertain and so far away.

Chapter 13: Conclusion

You can grow Grit in two ways:

- From the inside out, by developing your interests into passion
- From outside in by immersing yourself in the kind of culture that promotes and foster grit.

The author also says *Grit* is of course not the only thing that matters in life. And if Duckworth had to choose for her children between goodness and Grit she'd choose goodness.

Angela Duckworth divides the major personality traits into three groups:

- Intra-personal (will)
- Interpersonal (heart)
- Intellectual dimension of character (mind).

Grit is part of the Intra-personal dimension, which also includes for example self-control, and this is the cluster that is most predictive of achievement.

For a healthy social life, though interpersonal traits are most important (check out this website's course to take your social skills to the next level).

Practical Applications of Grit

- **Focus on growing gritty**

Grit not only will make you more successful, but it will also make you a happier and prouder person.
Once you rationally understand that, start making it your goal to be grittier. And be proud when you show Grit so that it will start becoming part of your identity.

- **Associate hard words with results**

You have to believe that results will come via hard work applied over a long period of time.
This is a kind of mindset you have to develop and make yours. This is also connected to a *Growth Mindset,* which is the belief that with hard work you can improve yourself.

- **Grit-tify your goals**

Divide your goals into short-term, mid-term, and long term and make sure the shorter-term ones support your overarching goals (your life philosophy). That way it's easier to know what you can change or quit while staying gritty with your overall goal.

- **Choose gritty friends**

The culture and the people around you influence you and do so powerfully. Hence, if your goal is to achieve something lofty, escape from the pot-smoking friends and join a group of highly driven men and women.

- **Develop your passions**

You don't "find" your passions, you develop them.

Criticism

"Grit" as a psychological trait might not exist.

Grit is likely to be simply another definition of consciousness as measured in the Big Five personality traits.

You can read more here:

- Pop psychology myths list
- Self-help myths

This does not necessarily change much in what grit, or call it "tenacity" or "staying power" if you prefer, means to your success.
However, it does, in my opinion, take away from the author's personal reputation.

As Jordan Peterson, author of *12 Rules for Life* says in this Quora answer, Duckworth never apologized for her (likely) mistake.
Personality psychologist Keith Campbell said the same:

> Consider the case of the Grit Scale, created by psychologist Angela Duckworth, who wrote about it in her bestselling book Grit: The Power of Passion and Perseverance. Her TED Talk on grit is one of the most viewed.
> The Grit Scale captures an important trait in what determines success versus adversity, especially for long-term goals. However, as several researchers reported in a 2017 meta-analysis, **grit turns out to be a variant of the Big Five trait of conscientiousness—but with a cooler name**. That doesn't mean there is anything wrong with the Grit Scale, and in fact, it means the scale was well built, but it is redundant in some ways.

And it does cast a shadow of doubt upon Duckworth's recipes on "how to increase grit", which now basically rests on… Little science?

Personally, I believe in the validity of this grit and/or conscientiousness. And I also tend to believe in the validity of combining passion with perseverance to "deepen" your passion.

Review

Grit is a good book, and although founded on a 'wrong' scale that replicates conscientiousness, it remains valid in many of its takes on what contributes to long-term success.

Summary

Mark Bowden starts by saying that most business presenters do it all wrong with their body language.

For example, many have their hands by the side, hunch over their shoulders, and crunch their stomach in.
Some even tuck their head in, narrow their eyes and move around.

This is all wrong, the author says, because this is what the human body naturally does when we are getting ready to attack or to face an attacker.

We lower our center of gravity to be more grounded, to duck more easily and we move around so as to stay a moving target and jump more easily if needed.

Other signs of flight or fight are moving to the angle of the audience to decrease our vulnerable area and to hide behind an object.

Now the issue with that is that we mirror what we see other human beings do.
And if the message we send is a nervous and aggressive one of fight or flight, that's what the audience will be

feeling.

1. Gesticulate From the 'Truth Plane'

Never drop your hands by your side and never stand still.

Even if that's what many presentations of training recommend: S.

Instead, the universal signal that lets everyone know you have good and positive intentions is to gesture on a horizontal plane originating at the navel.

Mark Bowden calls the plane originating from the navel the "Truth Plane". Keeping your hands in the Truth Plane will also naturally let you fight anxiety and helps you relax.

The author also speaks about a client of his who was extremely tense about public speaking.
The suggestion of positive self-talk of his colleague was utterly useless.

Bowden is indeed of the opinion that in almost all cases of stage fright battling the fear is useless.
Instead, he told him to accept his anxiety for what it is, embrace it, and counter it with hands in the Truth Plane. It worked like a charm.

Step away from the podium (unless it signals high authority)

A podium, by denying access to the speaker's Truth Plane, can be a barrier to trust.

An exception is when the podium presents some important logo or insignia at the belly height that restores that trust and symbolism.
The eagle on the US presidential podium is such an example.

Mark Bowden says that another drawback of podiums is that the only gestures the audience will see are the ones on the chest area, the Passion Plane, which is more likely to make the speaker seem a bit too excited and over the top.

2. Stand Tall & Feel 'Grounded'

Mark Bowden says that "breathing from the belly" is not the magic pill that will instantly make you an effective presenter.

Instead, he says to breathe effectively you need to imagine a string is pulling you up from the crown of your head, lengthening your spine and at the same time making sure you stay well connected to the ground.

When you breathe with this position, Mark Bowden says, you are mostly in the in-breath position. The in-breath inspires the audience, and the out-breath expires them.

TPM Note: this 'in-breath/out-breath' could have been better clarified.

3. Gesticulate Higher From the Chest to Signal Passion

The Passion Plane expands from our chest area.

When gesticulating from this level, you raise the energy level.
The Passion Plane can also come across as aggressive, so Mark Bowden says you want to use the Passion Plane for content that is exciting and energetic, and you want to communicate from the Truth Plane for content that you want to come across as honest and sincerely felt.

Bowden's example is a business situation in which a woman calms an irate customer by sitting down, thus staying physically lower, exposing her belly by moving the chair away from the table, and gesticulating on the Truth Plane.

4. Ensure Your Mouth is Visible (Disclosure Plane)

The author says that the jaw and mouth are the disclosure plane.
If the audience cannot see this part, it will seem as if we are closing off and not revealing all the information.

5. Gesticulate at Head-Level to Signal 'Thinking'

Mark Bowden says that at the level of the eyes and the temples we have the thought plane.

Gesticulating from this area near our head will put a mental strain on our words.
But if we move our hands wide apart, it will seem agitated and crazy

6. Consider How You Use Right / Left Plane

The author then speaks a bit about the significance of gesticulating on the left or right plane.

He says that for most people the right hand is connected to the left side of the brain and to cognitive thoughts and the other way around.

Telling someone to imagine something with your right hand works better and using your right hand for multiplication tables will make it easier to follow them.

TPM Calibration Note: While Bowden's "Right/Left Plane" theory is based on the biological cross-wiring of the brain, no scientific is provided that it will impact your persuasiveness.
Treat the "logic vs. imagination" hand-gesturing as a **minor optimization** at most, rather than a fundamental pillar. Over-calibrating on "left vs. right" can lead to unnatural, robotic movements that actually *decrease* trust. What I recommend instead is to pick one side that you will stick for a certain point, and the other for the opposite point.

7. Keep Above Your Head for Over-The-Top (Ecstatic Plane)

Mark Bowden says that gesticulating above our heads will give our message an elated, over-the-top feeling.

8. Use the Indeterminate Smile to Draw People In (The Gioconda Expression)

An indeterminate smile is what Gioconda has in the famous Da Vinci painting, but also the Ko-omote smile.

A similar smile is an indicator of acceptance that makes the audience feel welcome and invited into the conversation.

The author says that this type of smile is positive enough to draw a viewer in, but at the same time, it's also indeterminate enough that the viewer projects his own feelings onto the face, thus inviting the audience to look in themselves.

The smile is positive enough to invite a viewer toward it with a feeling that he will be accepted, yet indeterminate enough that the viewer easily projects many of his own feelings onto the face of the communicator (the mask)—again to feel accepted.

In short, an indeterminate smile invites the members of an audience to look into themselves.

9. Use the Head Tilt to Show You're Listening

Mark Bowden says that tilting your head does not drop your status making you look subservient -unless you believe listening is subservient, he adds-.

Indeed the head tilt sends the message that you are listening. And a prolonged or heavy tilt adds strong empathy.

I also found it interesting and noticed it myself when testing, that tilting your head to the left engages the right part of the brain and tends to furrow your eyebrow with thoughts and questioning. A tilt on the left instead gives a

lighter feeling.

TPM Note: consider a straight head and using nods and 'uh-uh' instead. I recommend this approach for most men

10. Use Symmetrical Body Language

Beauty matters and symmetry an important cue of beauty and mate value.

Armed with this knowledge, Mark Bowden says we should strive to use symmetrical gestures, which also help lead the eyes of our audience more easily toward our mouth.

So here's a sneaky power move: **when you talk about your competitors, keep a positive appearance at a verbal level but use asymmetrical body language**. Back talking about your company and product, go back to symmetrical body language.

11. Boost People's Status (Yes State)

Mark Bowden says that we all naturally move towards increasing our status and we naturally move away from decreasing our status.

So if you could communicate in a way that increases people's status, they'd be drawn towards you.

That's the "yes state".

You get into the Yes State by opening up and exposing your full belly and chest area to your audience.
Lengthen your spine so that you stand tall and confident, yet vulnerable at the same time.

To get naturally into a Yes State consciously think "yes, good" and your body will follow.

The author says that performance reviews are most often seen in a negative way no matter how you try to spin the "improvement areas" because they're often delivered with closed body language.
And when you can give a reward experience with your feedback, the need for a raise in salary is reduced.

Mark Bowden says that you can watch the Yes State in the Hollywood actors on red carpets and as they stand with for the paparazzi's pictures.

I particularly enjoyed when the author suggests you use the Yes State when you are under attack in business situations.

Instead of closing off and going on the defensive, open your body, show your belly area, nod, and put on a gentle smile.
He says you will be amazed at how quickly you can move him to your side.

12. Push to Signal Rejection, Pull to Signal Acceptance

Mark Bowden says that pulling something towards us is a gesture of acceptance while pushing away is a strong gesture of rejection.

13. Careful Around Handshake Power Plays

The author says that an effective handshake that builds trust makes full palm-to-palm contact.

If you push your hands towards your partner's stomach he will become passive even when he was aggressive at the start of the interaction because, near this vulnerable part of the body, he unconsciously feels that his position is now compromised.

You are now the one in power.

Read more:

- Handshake power moves and self-defense

Let Them Have the Upper Hand to Make Them Feel Good

Instead of trying to dominate someone, you can reward him with the upper hand and make him feel great.

To let him have the upper hand, simply turn your hand with your palm facing up and slightly move his hand into your belly area at the level of the Truth Plane.
The author says your partner will naturally feel good and will likely smile.

And later on, he righteously reminds us that **people who give status to others are perceived as people who have enough to give away.**

TPM Note: This is good social strategy, but requires a baseline of power
Initial warmth sub-communicates you're there to respect and uplift, doesn't make others feel threatened, and prevents 'dominance competitions'. However, this warmth-first approach only works if you have a baseline of power (see: power and warmth).

Also read:

- How to respect others

Don't Listen to Machiavelli

He says that Machiavelli and his rule of better being feared than loved is a silly one -and Machiavelli died in poverty-.

14. Focus on influencing instead of 'reading'

I again found myself fully agreeing with the author when he says that influencing and persuasion are more about knowing the messages you are sending than reading what others are sending you back.

And wasting time reading other people's body language is either a distraction for beginners, or a luxury for the very expert who have 'time to waste'.
Reading others' body language is a low-value effort when you can instead influence others.

15. Be Aware of Power Dynamics & Social Exchanges

Power intelligence is crucial, a good communicator should send the message that you are there to help and to give.

A good communicator must also avoid any body language that makes people defensive.
And threatening someone's territory is a surefire way of doing so.

You invade someone's space when you lean on, touch, or stand very close to someone's objects, which include a desk, laptop, stationery, etc.

Special attention should be given to leaning against a door, which is a potent and unconscious major physical sign for most of us.

A doorway is the way, and it's the way out. It's our escape in an emergency, and having that escape blocked by standing on it or leaning against it triggers our flight or fight switch.

Lots of power is held by those who control and create a territory or access to vital resources such as water coolers, provisions, and light and heating.

The author also recommends watching out for crowds and groups.
When we see more than four people we perceive it as a crowd.
And seeing them all together and nearby can be threatening.

So if you are introducing a customer to your team, it's a good idea to break them into groups of two.

Read more:

- Power dynamics
- Interpersonal power dynamics

> Interpersonal Power Dynamics: The Traffic Light Sytem for Mastering Status & Respect

Be Aware of Proximity

Mark Bowden cites Hall when he says that social distance is correlated to physical distance.

People of similar status stand closer to each other, and the same is true when you have an emotional connection to someone.

Also, the closer we are to someone, the more we influence him.
So as a speaker, it can be a good idea to step closer to your audience, as long as you don't get too close as to towering over them or stepping into personal boundaries.

Mark Bowden says that a great tip is to notice the point at which you can't see the feet of someone without dropping your gaze down.
At that point, you can't foresee all their movements anymore, and that's when an important barrier has been crossed.

Dominant Body Language

Mark Bowden says that height conveys high status.

A loud voice, bigger and broader gestures, and aggressive colors all add to dominance and put together they can be too much and come across as threatening.

Bright colors also send a message of dominance.
Mark Bowden mentions reds, blacks, and yellows as aggressive colors.

And **if you are shorter, stand further back and don't turn your head up, but use your eyes to look at them**.

The author also reminds us that **you can command status at any height** and that the two are connected: people with high status are indeed perceived to be taller than they actually are.

- Dominant behavior

[image]

Review

Winning Body Language is a solid book on nonverbal communication with plenty of useful advice, both at the tactical/cue level, and at the higher level of strategy and mindsets.

It's not strongly empirically grounded, though Mark Bowden is a recognized expert in body language and communication.

How to Deal With Dominant Men: Case Study (Obama vs. Putin)

Lucio Buffalmano · 20 October 2017 · Archived copy · Original

Have you ever been wondering how to deal with a dominant man?

This post is just for you.

You will learn how you can interact with a dominant man without ceding one centimeter of social power through a real-life case study.

If you are looking for generic signs of power, there is much on this website:

- Alpha male body language
- Signs of a dominant man
- How dominant men speak
- Alpha male posturing

Contents

- The Putin Style of Dominance
  - #1. Reduce Friendly Signals
  - #2. Speak Less
  - #3. Touch Them (Or Avoid All Contact)
  - #4. Avoid Jokes
- Dealing With Dominant Men: Summary

The Putin Style of Dominance

For this case study on handling dominant men, we will be using Vladimir Putin.

Putin is not the kind of "dominant man" who slaps you on the back.

He is the kind of dominant man who dominates by silent intimidation (in my *archetypes of dominance system* I call this "cold-blooded" or "icy").

This case study focuses on his interaction with Barack Obama.

Overall, Putin was markedly more dominant than Obama in pretty much all their recorded interactions.

One of the reasons why Putin was more dominant is exactly why The Power Moves exists at all: Obama, like most people, was too friendly in the face of dominant behavior.

Let's see what we can learn from Putin-Obama interactions to deal with dominant men:

#1. Reduce Friendly Signals

You will notice in their very first meeting that Obama presents all the nonverbal signs of the person who is raptly listening.

He clenches his hands, visibly leans forward, and repeatedly nods his head.

Giving others your full and undivided attention builds their status. Which is great if they do the same, but it only makes you look submissive if they don't.
And Putin, indeed, often looks away -when he's speaking –*dominant men can look away*– and doesn't show half the

obsequious signs Obama shows:

Improvable Obama behavior:

- Lean less
- Nod less
- Match their body turn (notice Obama turns visibly more)
- Do NOT kiss up (Obama's "*I appreciate you taking the time to meet me*")
- Match their gaze behavior (if they don't look at you, don't look at them)
- Do NOT follow their gestures (Obama opening his jacket right after Putin)
- Say "*thank you*" when you can't avoid following (this way you frame them like they are helping you out: imagine like you'd follow a waiter, yes they're leading you to the table, but they're the ones serving you, outline by your "thank you")

#2. Speak Less

With the quiet style of dominant men who speak little, you should also speak less.

Otherwise, it will look like you're trying to win their sympathies with words.

A few crucial aspects of the social dynamics of this interaction:

- **Obama is Shunned**

When someone uses your language, he is communicating that your culture is dominant because he has learned your language (and you haven't learned his).

Obama tries to speak to Putin in English, and Putin doesn't reply. Obviously. A man like Putin who wants to stake a claim on the world and bring back Russia to superpower status will never accept that sign of cultural dominance.

It looks terrible for Obama because when you speak to someone and you don't get a reply, you look powerless and the other party looks either defiant -imagine a kid with a parent- or superior -because he has the power to ignore

you-.

- **Putin Leads Obama**

Obama comes in and tries to tell Putin "where he would like to sit". Putin barges in, and without saying a word curtly shows Obama where *he* should sit.
Obama looks very much dominated here because first he tried to lead, and then he gets told what to do, thus making it even more obvious who's the man in charge.

Improvable Obama behavior:

- **Don't Speak (in English)**

Obama should have known Putin would never reply without a translator.

And especially so in front of cameras.
He should have avoided addressing Putin before sitting and looking like he was talking to the wind.

As a matter of fact, more silence would have made him look more powerful.

Dominant people often use more nonverbal communication than verbal, so a great way of avoiding looking like you're being subservient is to speak less in general.
And this is especially true around people who have a quiet way of being dominant (like *The Godfather*)

- **Don't Tell Putin Where to Sit**

Obama should have avoided telling Putin where to sit.

This is Putin's place, there's no way he will accept anyone telling him where to sit in his place. Obama unleashed on himself Putin's aggressive reaction.

If Obama really felt the need to say something, he could have spoken to his staff about how beautiful that place was and bided his time until Putin invited him to sit somewhere, thus looking like he was the guest treated to a nice local breakfast.

#3. Touch Them (Or Avoid All Contact)

In this clip, Obama starts speaking even before he's fully out of the car.

Dominant people usually take their time, and starting to speak too early can come across as if you're overly eager to fill the awkward silences that make us uncomfortable.

Also, he is very far from a nice erect posture, which looks like he's trying to make himself smaller in front of the most dominant person.

And finally, and most importantly, he begins a pat on the back but then stops.
It looks like he wanted to look more comfortable but just couldn't bring himself to touch Putin (a bit intimidated?).

This is your rule: if you want to touch and start making the move, then touch.

Otherwise, simply avoid it.

Improvable Obama behavior:

- **Take Time to Speak, Speak Less**

People have a tendency to fill silences with words.

And we do especially so when we're nervous.
Thus, powerful people can look even more powerful and imposing when they speak little. Putin is one of them.

When you're facing a man who speaks little like Putin then, you will look like you're nervously crumbling under social pressure when you speak too soon and too much.
Chatterboxes are not dominant.

Obama should have taken his time to start speaking, or maybe even waited for Putin to speak first.

- **Touch or Don't Touch: Just do it All the Way**

Obama should have touched Putin no matter what when he started that move.

Not making contact made him look like he was intimidated.

And if he wasn't comfortable touching, he should have kept a frostily-distant exterior demeanor similar to Putin's.

- **Don't Grin**

Showing your full teeth is a submissive sign (*Pease, 2016*).

Avoid big grins in the presence of *alpha-behaving men* or you will look like their subordinates.

- **Don't Point Outside First**

You will notice Obama points away from the two with his hand gesture.

Often people who are nervous or under pressure will talk about some random stuff in the environment just to shift the focus away from themselves.

#4. Avoid Jokes

Here Obama cracks a joke with the idea of getting a laugh from the press and from Putin himself.

But Putin instead barely laughs and uses the joke to frame Obama as the one "trying to relax him".

When you say that someone is trying to relax you, you are communicating that you are a party with power and the other one is trying to make you smile so that he can appease you.

Quite something if you consider there are little doubts as to which country is the real superpower between US and Russia.

- **Jokes Are Friendly Overture**

Jokes are another way of making a friendly overture, and they signal that you're putting in lots of effort to appease your speaking partner.

That can be great… As long as the other party accepts the overture and shows the same friendliness.

But the problem with *controlling people, power-hungry men* and people obsessed with power and dominance, is that they often use jokes to frame you as the weaker and *more submissive party*.

For example, they will avoid laughing and make you look like you've spent all that effort to win them over for nothing. Or they might outright say it was a bad joke -showing power over you- or outright say you're trying to win them over -verbally implying you're the subordinate party kissing up to them-.

Dealing With Dominant Men: Summary

If I had to summarize in one sentence what we can learn from the Putin-Obama interactions on how to effectively deal with dominant men, it would be this:

- **Avoid Friendly Signals**

That's the major reason why most people look dominated by the presence of dominant men: they keep sending friendly signals, and the dominant men just take them without giving back.

With that "give without receiving" dynamic you build up their status while they take your status away at any chance they get.

Dealing with dominant men instead is all about playing the game the same way they do and behaving like their peers. It can be taxing having to stay guarded all the time, but that's the only way to avoid being slotted as the submissive party.

Leaders Eat Last: Summary, Review & Criticism

Lucio Buffalmano · 21 October 2017 · Archived copy · Original

In *Leaders Eat Last* (2014) Simon Sinek says that *leadership* is about taking care of people. Leaders are not responsible for the numbers, says Sinek, *leadership is about people* and for the people, who in turn will take care of the numbers.

TPM Strategic Review: Aspirational, But Not For Real World Power
While the book is inspirational, it offers an ideal of what a leader *should* be, but NOT what a leader *is*, or how you can can gain leadership roles

Takeaways

- *"Leaders eat last"* means that **leaders first take care of their people**, and only after they can think of themselves
- A team can only effectively face external threats when there are no internal threats, and it's up to **leaders must eliminate internal threats**
- **Leaders enjoy benefits but must fulfill responsibilities** too (protecting the tribe)
- **We need more leader**s, so take it upon yourself to become one

Notes

"Leaders Eat Last" starts with the difference between leaders and managers.

Sinek says that today's pieces of training are not about *developing leaders* but *training managers* instead.

The author says that goes hand in hand with a short-term mentality that disregards long-term viability and people. *"Leaders Eat Last"* wants to change that paradigm.

Part 1 – Our Need to Feel Safe

Chapter 1: Protection From Above

Simon Sinek uses examples from the military and combat because, he says, lessons are more obvious in life-and-death scenarios.

He says though that the same principles apply everywhere else.

Be it an effective platoon in the fog of war or a successful company in a booming market, they all share one thing: leaders provide cover from above and the people on the ground look after each other.

Chapter 2: Employees Are People Too

Sinek says that leaders of great organizations don't look at people as commodities to grow money, but they see money as a commodity to help grow their people.

Seeing the relationship between people and money from a people's first perspective, says the author, is a necessity to have the people care about the organization.
Once you can put the people first, In return, people will give everything they have to help the organization grow.

As leaders, says indeed Sinek, our sole responsibility is to protect our people.

And in turn, the people will protect each other and advance the organization as a whole.

On the other hand, when our leaders don't take care of us, Sinek says that it's our duty to protect and take care of each other (read more about *How to Deal with a Bad Boss*)

Simon Sinek might sound like an idealist to some… But he says he can't be accused of idealism when the organizations he describes actually DO exist and DO happen to do well.

> …To sacrifice the numbers to save the people, and not to sacrifice the people to save the numbers

Chapter 3: Belonging

Simon Sinek here introduces the concept of the Circle of Safety.

The author says that the world around us is filled with danger and forces trying to hinder us.
Back in the day, it was saber tooth tigers, today it is competitors, changing technologies, meeting deadlines, and personal life issues.

In some organizations, there are also threats from the inside towards the individuals, such as layoffs and bad cultures.

When organizations present threats from the inside the focus of the individual switches to self-preservation.
And when that happens people can't build a unified team but will defend themselves or their smaller teams at the cost of the overall organization.

It's the duty of leadership then to set an internal culture that is free of threats and rich in camaraderie.

The Circle of Safety

The wrong Circle of Safety (circle of threats):

Absent internal threats instead people don't need to self-preserve and our inner drives to socialize and care about

the group can take over.

And when effective leadership can fill the culture with a sense of belonging and care for the group, that's when the people can effectively tackle external threats.

The Good Circle of Safety:

Chapter 4: Yeah, But...

Simon Sinek reviews the reality of life for many managers and employees who are stuck in bad companies and bad cultures.

He says there are very few leaders who strive to make the work environment safe.
Some of us like and nod at the theoretical principles but then… Then we tell ourselves the reality is different.

We got to make sales, show some numbers, and, of course, we got mouths to feed.
So people stay put even when they don't like their job. And that's a pity because having a job we hate is often worse for our health than not having a job at all.

And still, even when we know that, we stay in jobs we hate, convincing ourselves that the dangers of staying are smaller than the dangers of leaving which, the authors, say it's not true.

Control And Stress
Sinek cites studies to say that work stress is not caused by pressure and high responsibility, but by the level of control that people have on their own work.

Basically, those who feel empowered to make their own decisions instead of waiting for approval suffer less stress.

And it's also not the effort required that makes us stressed, but the imbalance between the effort and the reward we receive that is stressful.
So people working for terrible managers who don't reward them, suffer higher stress.

Part 2 – Powerful Forces

Chapter 5: When Enough Was Enough

Simon Sinek says we work at our best when facing external challenges, and that's rooted in biology.

However, there are many misguided leaders who believe internal threats are necessary to push people in the right direction which, the author says, is simply not true.

The Biological Conflict

We all have a biological conflict of interest within us.

We have indeed four major chemical incentives in our body. Two are more selfish for "getting things done" -endorphins and dopamine- and two -Serotonin and Oxytocin- are for more selfless activities such as socializing and cooperating.

Serotonin and oxytocin are the backbones of the Circle of Safety.

Chapter 6: E.D.S.O.

Simon Sinek goes deeper into chemistry here and its effects. Don't skip it though as this is important to understand the powerful insights of the book:

- Endorphins are there to hide pain;
- Dopamine makes you feel good when accomplishing a goal;
- Serotonin makes you feel grateful for the people who support you;
- Oxytocin is responsible for love and is released when hugging or bonding.

Because of serotonin, Simon Sinek says, we can't feel a sense of responsibility for the numbers. We can only feel a sense of responsibility to the people.

> We can't feel responsibility to numbers. Only to people

Chapter 7: The Big C

Simon Sinek says that the release of social chemicals is not automatic but can be inhibited through Cortisol if we feel under threat.

So when our inner circle and tribe are ripe with threats, we release cortisol, which stops oxytocin.
When that happens, we have no feeling of empathy toward our colleagues and friends and have no drive to help one another.

When we are **immersed in an environment in which we cannot feel safe, we naturally *become more selfish*** and we start using our time and energy to preserve ourselves through politicking, backstabbing, gossiping, etc.

On the other hand, with a well-functioning Circle of Safety, Serotonin and Oxytocin can be released and we can even deploy our selfish chemicals and drives for good use.
For example, to further the goals and benefits of our whole organization and group and add value to the customers.

Chapter 8: Why We Have Leaders

As much as it's popular to say we are all equal, the truth is we are not and we will never be.

Sinek says we need a social hierarchy to avoid the constant battle for food that would leave us all divided and enemies.

With a hierarchy instead, we voluntarily step back and allow the higher-status individuals to serve themselves first.

However, Simon Sinek says, that higher status comes at a price, and it's this price that our current society often forgets.

The price for high status is to defend the group.
The alpha males of the tribe, the strongest of the group and brimming with serotonin, should indeed be the first to rush toward danger and protect the rest of the group.

And that's why we give them the first choice of mate: if they die early from the threats we want to keep their genes in the group.
The group is not stupid or irrational, we don't give them all the perks for nothing.
That wouldn't be fair.

My Note:
This is a bit of a ***naive interpretation*** of evolutionary psychology, to be honest. Sinek seems to describe some sort of "group selection" where people behave rationally and collaboratively to maximize the group's return.
But that is not the case.

That's why we get angry about huge severance payments of many executives: they took the perks and the money but did not offer any protection. They actually often do just the opposite: they sacrifice their people to boost their interests.
Fame and financial wealth should be a byproduct of alpha status, not a way to achieve it.

The rank of office, says Simon Sinek, is not what makes a leader. Leadership is the choice to serve others with or without any formal rank.

Those who want to enjoy the leaders' perks without fulfilling their obligations are, by definition, weak leaders.
True leaders are the ones who rise through the ranks because they fulfill their obligations and the tribe offers them a higher status.

It's obvious then why good leaders do well for their tribes in hard times, says Sinek: it's because their people willingly commit to seeing them, their tribe, and their company grow strong.

> Leadership is the choice to serve other with or without the formal rank

Part 3- Reality

Chapter 9: The Courage to Do the Right Thing

Simon Sinek says we trust people, not rules.

We don't really care about rules as long as the people in charge are doing the right thing for us.
That's why we find bureaucrats and *sticklers for the rules* annoying: the rules are there to serve us, not the other way.
And when the rules don't serve us anymore, there's no point in following and keeping them.

In strong organizations, people break the rules for the organization's benefit. In weak organizations, people break the rules for their own personal gain.

Chapter 10: Snowmobile in the Desert

Simon Sinek says it's ironic what happened with technology.

Our limbic brain controls our feelings and ability to trust and cooperate.
And it's exactly that ability that allowed us to build this complex and technologically advanced world we live in.

And it's ironic that this same technology is making it harder for us to cooperate and live well with one another.
He uses the booming self-help industry as a sign that we are growing apart from each other and growing more and more unhappy (also read: *self-help myths*).

My Note:
I have to disagree here. Technology is making it harder for us to cooperate. Where is Sinek living? This is a world of cooperation opportunities.

Part 4 – How We Got Here

Chapter 11: The Boom Before the Bust

Simon Sinek says that the World War I generation -the great generation- was all about serving others.
The baby boomers instead switched towards a path of only caring about themselves.

My Note: I have to call BS on this one.
I always recoil at these generation-generalizations and I'm not 100% sure how valid they can even be since none of us lived in that era.

Chapter 12: The Boomers All Grown Up

Disposable technologies took root with the baby boomers and that's when we started to look for more things to throw out.

Eventually, it ended up expanding to… People. People started becoming disposable.

The author says and will expand later, on the fact that we have become abstractions.
We are anonymous customers, lines on email lists, avatars, and expenses on a spreadsheet.

05.08.1981: The Culture of Lay Offs
On August fifth, 1981 Ronal Reagan fired 11.000 traffic controllers.

Sinek says this was a tacit approval from the country leadership and authority that easy, mass firings were OK and good for business.
Now everyone could be easily laid off if it served to improve the numbers.

Kicking off the layoff era

Part 5: The Abstract Challenge

Chapter 13: Abstraction Kills

I loved Simon Sinek's take on Milgram's experiment.

He first notices that people were more likely to inflict the most severe electric shock when they were not able to see the victim.
And then he says that the same experiment is taking place right now in offices around the world.

When people could not see the victims the victims weren't real but became abstractions.
Similarly, the more abstract and physically distant the people become from any headquarters or high-up office floor, the more we become capable of harming them with our decisions.

Chapter 14: Modern Abstraction

Sinek draws a parallel between the nazi famous defense of "I was *following orders*" to the modern "we have to provide shareholder value" of the corporate world.

Sinek says that we are visual animals.
We pursue things we can see. If we see a person needing help, we help. If there's a clear vision of a brighter future, we build it.
And if we have to work to increase a number from X to Y, we'll do that too. The problem is in the pain and harm behind those numbers and which we cannot see.

When we can't see our customers indeed we pursue the most immediate thing we can see: metrics and KPIs.
And to justify any action the new corporate mantra is "we work to provide shareholder value" or "we need to fulfill our fiduciary duty".

The author says that similar to Milgam's experiment where some people blamed the people who were receiving the

shocks, some bankers in the latest crisis ended up blaming the defaulting homeowners.

He quotes Jamie Dimon saying :

> **Jamie Dimon**: "*we are not evicting people who deserve to stay in their house*"

Funny enough, Duckworth used Jamie Dimon as an example to emulate in her book "*Grit*".

> Provide shareholder value = I was following orders

Chapter 15: Managing the Abstraction

Simon Sinek proposes a few rules to tackle the dangers of abstraction.

1. Keep It Real—Bring People Together. The Internet can't give us deep and trusting relationships. Trust is formed in person.
2. Keep It Manageable: 150 max. Keep your groups at no more than 150 people to reap the benefit of the group's cohesion and sense of tribal belonging
3. Meet People You Help. Getting a visual and real-world experience of the impact of your work will reward you and motivate you to do even more
4. Give Time, Not Money. We value the time and effort we receive more than money (read more on *Drive* by Daniel Pink)
5. Be Patient— 7 Days and 7 Years. It takes time to develop a bond of love and trust. Sinek doesn't know how long it takes but it's more than 7 days and less than 7 years

Chapter 16: Imbalance

Many organizations today are imbalanced in terms of selfish and social pursuits, a situation that he calls "Destructive Abundance".

Destructive Abundance is too much dopamine (goal accomplishment) and no oxytocin (social chemical).

It's getting the results without caring for those who produce the results, and it's focusing on the final score forgetting why we even started in the first place.
Destructive Abundance is often brought by leaders who don't take it upon themselves to shoulder the *responsibilities of leadership*.

Part 6 – Destructive Abundance

Chapter 17: Leadership Lesson 1 – Culture = Company

Simon Sinek uses a beautiful quote to introduce his concept:

> *You can easily judge the character of a man by how he treats those who can do nothing for him.*

What it means is that strong company culture will treat everyone well and not just those who are paying them or earning money at the moment.

The author says that the people working in bad companies are neither bad nor evil in themselves, but the companies they work for make it possible for them to do *bad and evil*.

Chapter 18: Leadership Lesson 2 – Leader = Culture

Sinek says that leaders set the tone of behavior in an organization.

Strong leaders delegate responsibilities and empower their subordinates. They foster an environment where social chemicals -and the relative behaviors- are abundant and people look after each other.

He outlines the example of O'Neil in Merrill Lynch as a terrible example of a bad leader ruining a culture and destroying a company.

And he details the positive example of Captain Marquet aboard the Santa Fe submarine.

He also speaks at length about Jack Welch and Sinegal from Costco.

Chapter 19: Leadership Lesson 3 – Integrity Matters

Simon Sinek says that when we cannot trust the people who are supposed to lead us and serve us, then the whole fabric of our groups comes apart.

Leadership is about:

- Integrity: the adherence to a code of morals; telling the truth; incorruptibility, and when our words and deeds are aligned. The worst betrayal of integrity is when people tell us what we want to hear and change their stance to suit their interests (politicians)
- Honesty: telling the truth. That simple.
- Accountability

Chapter 20: Leadership Lesson 4 – Friends Matter

The US Congress worked better in the past because Democrats and Republicans mingled with each other and spoke to each other once the business was settled.

The author says it's very healthy indeed to meet and spend time together outside of the business context as we are more inclined to see people as human beings and develop deeper friendships.

When we never meet and speak to our opponents, we also tend to demonize our opponents (also see "*The Lucifer Effect*").

Chapter 21: Leadership Lesson 5 – Lead People, Not Numbers

Here Simon Sinek debunks the myth of Jack Welch, the famed CEO of General Electric.

Welch was the typical leader who purported to serve the shareholders and went after short-term gains.
Sinek says he didn't leave behind as great of a company as most people think.

The author then compares him to Costco's CEO, who pays his employees above minimum legal wage and is interested in people and long-term growth.
Nobody knows him, but he built a far more solid company. His returns on the share, also, have been far larger.

Sinek says that teams led by directive leaders initially outperform those led by empowering leaders.
But in the long run, empowering leaders do better.

Part 7 – A Society of Addicts

Chapter 22: At the Center of All Our Problems Is Us

Sinek says that managers look after numbers and results, and leaders look after us.

But before we can point any finger at the terrible managers, we have to point the finger at ourselves first. We have to look at ourselves, and we have to admit we are the problem.

> Managers look after numbers. Leaders look after people

Chapter 23: At Any Expense

Simon Sinek says the desire to win has always existed and it has always caused problems.
He says the desire to win should not take precedence over taking care of the people we serve.

> Winning should not come at the cost of serving people

Chapter 24: The Abstract Generation

Simon Sinek says that cell phones are the new drug for Generation Y.

Digital addiction is making the new generation more impatient in the best-case scenario, and more lonely and isolated at worst.

The author then keeps laying it on thick on Generation Y saying it's a superficial generation all about "having an impact" and "raising awareness" but it forgets that **to have an impact and to solve problems requires grit, determination, and hard work**.

And doesn't happen with a share or alike.

Part 8 – Becoming a Leader

Chapter 25: Step 12

Simon Sinek says that for all of the people who enroll in Anonymous Alcoholics, almost only those who reach step 12 will get rid of alcohol addiction.

Step 12 is about service and taking care and helping someone else beat alcoholism.
Step 12 is about oxytocin, and oxytocin is key in beating addiction and pushing us through.

Interestingly enough, Sinek also says that Anonymous Alcoholics is a perfectly formed Circle of Safety.

Chapter 26: Shared Struggle

Simon Sinek says that to inspire us, we need challenges that outstrip the available resources.

Bill Gates for example said "a PC on every desk", and that was an example of a huge challenge.

The author says that if leaders can paint a challenge bigger than the available resources -but within the intellect capacities- people will become motivated and will give everything they've got.

Chapter 27: We Need More Leaders

Leadership is a commitment to people and takes time, effort, and energy.

He says that the Jack Welch style of leadership can seem more attractive because it feels more like gambling in a casino, more like an emotional roller coaster.

The author ends the book by saying it's not just those at the top who need to change.
It's the responsibility of all of us to keep the Circle of Safety strong, and we must all start today to make our own contribution for the good of others and to be the leaders we wish we had.

> **Let us all be the leaders we wish we had**

How You Can Apply It

- Take Care of People First: apply this in all your relationships and you'll be a happy person
- Paint Realistic Vision: "becoming N.1", and "being the leader of.." are no inspiring visions and mean nothing. Make something more practical and easier to measure
- Paint a Struggle to Motivate: to motivate people, make a big goal which is a struggle to reach
- Act Like a Leader: and shoulder the responsibilities. Or abdicate the role

CRITICISM

Leaders Eat Last is a "nice" read.

It makes people feel good because, listening to Simon Sinek, "most people in corporate are bad", and to succeed "you need to be better".

Yeah, nice, but… Please read this *naive-self help rebuke* right away:

> Naive Self-Help: 10 Most Dangerous BS to Avoid

Inspirational, but it's not how things truly work

"Leaders Eat Last" is a great-sounding book.

But not very grounded in reality.
And if you wanna make it to the top of your organization, this book might not help you.

I'm actually unhappy to write that. I wish it weren't so.

But evidence shows that *psychopathic traits get you to the top more often than empathy does.* And evidence shows that as a manager, it pays off to network more than to spend your time on the team.
If you want to be the catalyst for positive change, my advice is to *get politically savvy.* And then use it for good. But you must learn the truth, first.

High in morals, low in science

Sinek here refers to 'prestigious leadership'.

But he never calls it that way and it's an analysis more based on ethics, and less on science.

We wholeheartedly agree with his take and ethics.
But we also like science.

Also read:

- **Global leadership: prestige VS dominance**

Idealistic, unrealistic view of goal-oriented leadership

Has Simon Sinek ever worked in business?

Sometimes, it feels like he might have not.
Frankly, it makes little sense to say "leaders are not responsible for the numbers", when they clearly are.

Says leadership trainer Kim Scott, who has actually been a leader in a top-performing organization:

> Bosses are responsible for results, and they guide their teams to achieve results.

Yep.

Romanticized view of the past: but people don't really change over a few years

Way too often Simon Sinek defaults to romanticizing the past in contrast to the present.

It was all great back then, and today it all sucks. The previous generations were great, today's generations suck. Congress used to work well, now it doesn't. Even Goldman Sachs used to be a great company and today it's Goldman sucks.

It's probably a formula that helps selling and marketing, but it's not true.
The truth is that the leaders of our cave days were probably as ruthless and cunning as they are today.
Probably more.

And I had the same feelings for the chemistry descriptions of serotonin and oxytocin that seemed to be over-simplified (see Sapolsky for better endocrinology, his main summary of how the body works are "it's complex").

Applies more to average teams than top-performing ones. Top performers don't seek 'protection'

If you're a confident and ambitious man, answer this: do you think you need your leaders to protect you?

No, you're there to get a job done, not to search for 'protection'.

I'd hate if my 'leader' though he had to provide a 'circle of safety' for me. That's babying and disempowering. I want a hard-charging leader who drives forward.
And it's the same for any masculine, confident team member.

Ironically, **Simon Sinke's advice applies better for leadership in romantic relationships than for men leading top-performing teams**.
It's there that you want to offer 'protection' and a 'circle of safety'.

Review

"*Leaders East Last*" is a good book on the ethics, morality, and responsibilities of leaders within

As someone who's been around weak leaders after numbers and self-preservation, I agree with Simon Sinek.

But this is not the book that will help you advance in your career, lead top-performing teams, or make a difference during challenging times.
This is the book you can read when you get to the top of a stable company to help you develop more collaborative mindsets, and foster that same culture in the organization.

Exec Summary

- Virality is not the product of pure chance
- You can increase the odds of going viral by incorporating some of the 6 principles

Contagious Book Summary

About The Author: Jonah Berger holds a Ph.D. in marketing and is currently a professor at the Wharton School. He is considered an expert on *word of mouth*, social influence, and viral marketing.

The $100 Dollar Cheesesteak Gone Viral

Berger starts with the example of Howard Wein.

Wein was not selling just another cheesesteak, but a conversation piece. He did it by using great ingredients and asking for an exorbitant price: a hundred dollars.

It went viral.

Great Products Go Viral

Jonah Berger beings by saying that **one of the elements of virality is simply having a great product**.

Some ideas catch on for simply being better than the alternatives.

Attractive pricing is another obvious why products and ideas spread.
Advertising also helps, Jonah Berger says that word of mouth is more effective than advertising because it's more persuasive and more targeted.

Jonah Berger goes after the idea that you have to hit the opinion leaders to make your message spread.
He says though that **the message in itself is more important than the messenger**.

What is then the secret to making our messages contagious?

Jonah Berger says that it's six principles:

1. Social currency (people looking cool for sharing),
2. Triggers (reminding people about our product)
3. Emotions (when we care we share)
4. Public (can people see we are using the product?)
5. Practical Value (is it useful?)
6. Stories (what narrative can we latch onto our idea?).

It's important to notice that Jonah Berger says that principles are not like ingredients.
They must not be deployed in a certain fashion, and they are not even all needed at the same time.

1: SOCIAL CURRENCY

Jonah Berger says there are three ways to use social currency:

1. Find something unique
2. Use game mechanics
3. Make people feel like insiders

More remarkable products are talked about twice compared to less remarkable ones.

Game mechanics are levels and badges that make us want more.
Berger says that it works internally as we all love achievement, but also because we want to do better than others.
Icons can be used, or badges (fourth square).

Making people feel like insiders works because If something is supposed to be secret or limited access people love to share it.
It makes them look cool for sharing something reserved. They were one of the first in the know, and now they're sharing it with you.

People shared the video of a blender smashing marbles because it was interesting and unexpected.
And sharing something that others will find interesting will give us social points.

Here's the video the author refers to:

2: TRIGGERS

People talk about more cheerios than Disney World.

How's that possible with all the excitement and uniqueness that Disney World commands?

The author says it's because of triggers.
People rarely go to Disney World and few things remind them of it.
Cheerios are seen often at the supermarket and breakfast every day reminds people of Cheerios.

Jonah Berger says that interesting products receive more immediate word of mouth than boring ones, but interesting per se doesn't sustain word of mouth over time. Triggers do. When we see the same triggers over and over, the product comes back to our minds over and over.

The author says that Mars bars saw a big uptick in sales when NASA launched an expedition to, guess where? Mars.

KitKat was seeing a constant slump in sales that seemed hard to stop.
It was reversed when an advertising campaign linked KitKat to coffee so that people would use the coffee trigger to eat a KitKat bar.

3: EMOTION

There are two types of emotions that lead people to share (or not share):

- Arousing emotions
- non-arousing emotions

Emotions that make us share are arousing emotions like anger, awe, anxiety, or excitement.
Sadness and contentment decrease arousal, slow us down and make us relax, leading us to share less.

Very interestingly, Jonah Berger says that when we are in aroused states we tend to share more than we'd normally want.
So if we are on a plane with turbulences, we might tell the person sitting next to us more than we would normally like.

The author says that focusing on feelings is likely to increase sharing and even seemingly dull products can find a way (for example: google search with the story of a couple told through their search queries).

4: PUBLIC

Jonah Berger presents very few interesting cases on how what's public influences us even when in private most people would think otherwise.

For example, many college students don't enjoy drinking but drink anyway because externally everybody is drinking and all others who don't enjoy drinking are actually keeping it private.

Similarly, when a presentation has finished and the presenter asks if there are any questions nobody asks anything, because while nobody else has probably understood, the public and visible tell us that we are probably the only ones who didn't get it.

The author provides a few examples of a few products that effectively used the observability principle.
Hotmail for example, put in the signature the link to sign up for the free service (it was the first free service).
Apple white iPod headphones were a big help in spreading it.

The example of the anti-drug "say no" campaign was also extremely interesting.
Jonah Berger says that the campaign actually increased the likelihood people would try drugs because it brought drug use into the public observable territory.
The ads basically said that drugs are bad but also, crucially, that other people are doing it.

The example of the music industry was simply a big laugh for me.
When the ads said that only 37% of music was being paid for, the author implies the message was counterproductive.
It basically said that everyone was not paying, that it was OK not to pay, and that those paying must have been idiots (similar example for wood in the park).

> If something is built to show, it's built to grow

5: PRACTICAL VALUE

Jonah Berger says we share useful information because we want to help and if we can help it reflects well on us.

Putting a product on sale, even when the price stays the same, increases demand.

The author says that depending on the price of the product it can be better to list the discount as in percentage or as an amount.
The author says that for products above 100, it's better to highlight the amount and for products worth less than 100

it's better to state the percentage.

6: STORIES

Jonah Berger says that we don't think in terms of information but in terms of narrative.

It's important that the story is relevant to the product, or the product has to be a key part of the story.

[image]

Review

"Contagious" is easy to read, insightful, and highly applicable.

It makes a great pair with a few more books on marketing and influencing such as *"Made to Stick"* and "*Influence*", the big classic by Cialdini.

Of course, as the author himself says, *"Contagious"* is not a recipe that you can apply and be guaranteed success. I'm afraid that virality is, in good part, the product of *pure randomness.*

But that doesn't mean you can't somewhat increase the odds with some good knowledge, research, and creativity.

Overview

- Being too harsh on improving yourself is saying you're not good enough. Give less of a fuck instead.

- Choose what to give a fuck about. And then don't give a fuck about all the rest.
- Choose what to give a fuck about. And then don't give a fuck about the price to get there

Notes

About the Author:
Mark Manson started his career as a dating coach and *pick-up artist* to later broaden his scope into general self-development.
His first book was *"Model"*, followed by *"The Art of Not Giving A F*ck"* with which he broke into the mainstream and then followed by *"Everything is Fucked"*.

Chapter 1: Don't Try

Mark Manson says that our culture of always getting more and more focused on what we lack.

He says that dating and self-improvement advice are all ways of saying that you aren't enough.
And it's all designed to make you feel bad and buy more stuff.

He says that a confident man instead doesn't feel the need to prove anything. The key to a good life is not about giving a fuck more. It's about giving a fuck less.

Avoid Social Media

Mark Manson says that social media only accentuated the culture of never enough (read *Daring Greatly* for more on never-enough culture).

All we see is people trying to one each other up showing how great and better their lives are.
And when we can't compare we wonder what the hell is wrong with us.

Accept Negative Experience

The author then suggests that the desire for a more positive experience is in itself a negative experience.

And the acceptance of a negative experience is instead in itself a positive experience.

Trying to avoid pain is giving too many fucks about pain. When instead you become capable of giving less fucks about pain… Then you become unstoppable.

Give Less a Fuck

Mark Manson says that we have a limited number of fucks to give in our lives. Deciding what NOT to give a fuck about them will free our time and mental resources for the things we really care about.

What Not Giving a Fuck Means

1. Not giving a fuck doesn't mean being indifferent.

It's about choosing what to give a fuck about and then not giving a fuck about all the rest.
It also means you don't give a fuck about the troubles standing between you and what you give a fuck about.

2. Give a fuck about something more important than adversity.

If you don't find something important to give a fuck about, your fucks will be given to meaningless and frivolous causes.

3. You're always choosing what to give a fuck about.

So pick something meaningful.

> Not giving a fuck is not being indifferent. It's being indifferent to being different

Chapter 2: Happiness Is a Problem

Mark Manson says that happiness is not a solvable equation or something that can be worked for.

He proposes instead a different question: what pain do you want in your life? Happiness takes struggle and even requires problems.
And here's the beautiful catch: if you want the rewards, but not the struggle, you don't really want it.

Our struggles determine our successes and our problems, determine our happiness as we struggle to fix them. Because the joy is in the struggle itself.

> The question is: what pain do you want in your life?

Chapter 3: You Are Not Special

We're inundated by a deluge of self-help messages screaming:

> Each and everyone can be extraordinary!
> And that we all deserve greatness!

Even Oprah says it, quips Manson so it must be true!

This all leads to an entitlement mentality (read *how to overcome entitlement mentality*).

Bunce, once you accept that, you can be "normal", and that you don't have to be "special", it's liberating.

You can be normal and happy, and you can be normal and great in your "normalness".

And you will be able to enjoy the boring beautiful side of life: friendships, reading a good book, laughing, creating something.

> It's liberating to accept you're not really special

Chapter 4: The Value of Suffering

The question is not how to stop suffering but for what purpose you are suffering.

Your values should be instead reality-based, socially helpful, and controllable.
For example "being popular" is dependent on others and not fully up to you, and thus it's not a good value.

Picking and deciding on good values also allow us to give fucks about things that matter to us and for others.

My note:
True, albeit I think it's more about identity than values. Check my guide on building an antifragile identity.

> Self Improvement is prioritizing things to give a fuck about

Chapter 5: You Are Always Choosing

Mark Manson says that we can't always control what happens to us, but we certainly can choose what it means to us and how we respond to it.

My Note:

Albeit Manson criticizes self-help, this is a true and valid common mantra in self-help embraced by authors such as Tony Robbins and Brian Tracy and harking back to stoic philosophy.

Chapter 6: You're Wrong About Everything

Mark Manson says that it's easier to settle on certainties, even when they're negative.

And he suggests instead of resisting the temptation of being sure and accepting "never knowing who you are". It will force you to keep an open mind and keeps you striving to discover and find out.

Some questions Mark Manson recommends you ask yourself are:

- What if I'm wrong?
- What would it mean if I were wrong?
- Would being wrong create a better or worse problem?

Mark Manson ends by saying that if you're in a situation where you are screwed up or everyone else is screwed up… It's far, far more likely that it's you.

> If it feels like it's you VS the world, chances are it's just you VS yourself

Chapter 7: Failure Is the Way Forward

Mark Manson says that failures come from having picked the wrong values. And life is about not knowing but doing it anyway.

> Action doesn't just happen because of motivation, it causes motivation

Chapter 8: The Importance of Saying No

Freedom by itself means nothing.

You are always free, and roaming the world without a boss reading "The *4-Hour* Workweek" just to prove it won't give you any sense of meaning.

The only way to achieve a sense of meaning in your life instead is to reject total and boundless freedom and choose instead to commit to something. Like a place, a relationship, or even a belief.

The author uses himself as an example: focusing on just writing gave his website more success than he could have ever imagined, and committing to one woman gave him more happiness and joy than all the one-night stands he's ever had.

My Note:
this part basically summarizes *Grit* by Angela Duckworth.

> It's commitment that gives you freedom and liberation

Chapter 9: ...And Then You Die

I have to say, the beginning story of chapter 9 was touching.

Mark tells the story of a good friend of his, a guy he looked up to, who died at a party when jumping into a lake from a cliff.

My Note:

I have read a similar story from different authors now to the point that I must wonder how true it actually is.
It sure sells well and captures people's attention, which makes it all the more dubious.
Of course, I have no way of knowing that.
But we can still learn from it. Also, check how mortality can help you live better.

> If there's no reason to do anything – there's no reason NOT to do anything

How Not To Give A F*ck

And here are the deepest, practical aspects of not giving a fuck and enjoying life better:

- **Choose What to Give a Fuck About**

Pick your passion and then zero in and focus on it.
Mark Manson says it in the "bro" style, but however, you phrase it, deciding what matters in your life IS a great way of improving your life.

- **Leverage Mortality to Go For What You Want**

I particularly loved the last chapter in that it reminds us of a very important thing: we will all die.

That's not sad.
That's just how it is.

Reflect on that and then demand yourself: should you really waste your time doing things you don't like or don't care about?

- **To Beat Death…**

.. Care about something bigger than yourself. Which will also allow you to not give a fuck about so many things you shouldn't give a fuck today but you do.

CONS

Some Re-hashed Self-Help Ideas

Some of the contrarian-sounding ideas are actually established concepts that are explored deeper in other sources (but this is not to say they aren't valuable or that Manson doesn't give it a different spin).

Tries too hard to be contrarian

Trying too hard to be contrarian or counterintuitive is bad for accuracy, and it's a pitfall of *naive self-help*.

> Naive Self-Help: 10 Most Dangerous BS to Avoid

Being 'Special' Can Be Good. & You're Not Wrong About Everything

I'm not convinced about the usefulness of some concepts.

As a website focused on social interaction and people skills, I'd have to say that **second-guessing yourself on how wrong you are, for example, will make you very much uncharismatic**.

And yes, if your value is "being special" you're on the wrong path.
On the other hand, **men who can strategically adopt an air of being special often gain respect, status, and**

attraction.

A good middle ground can be in earning that 'specialness'.
If you tell yourself you'll *prove* how special you can *become* (proving it to yourself), just to motivate yourself, then it can also be a great motivator.

Also, read *"the law of optimum balance"*.

> The Law of Optimum Balance

Bro-"hip" language

It feels sometimes as if the author is trying too hard to sneak in one more swear word and to make his sentences sound cool and fun.
Maybe someone likes it, to me, it was a bit "meh".

PROS

- **Deeper than some might think**

The title could be misleading to some. And, in some intellectual circles, I have heard some scathing reviews for "The Subtle Art of Not Giving a F".
But I disagree: this book is the opposite of many other books. It is seemingly shallow, but in truth quite deep. Plus, contains solid and practical wisdom.

- **Good wisdom**

Beyond the cussing, *The Subtle Art of Not Giving a F*ck* is a book packed with practical philosophy and life-changing wisdom.

Review

I had some negative expectations, thinking it was some bro-book on *how to be an asshole.*

Well, I was wrong.

"*The Subtle Art of Not Giving a F*ck*" is **a good entry-level mix of philosophy and self-help** *seemingly* against self-help, but ultimately helping people to, well… Self-help :).

The ideas I'll take away from Mark Manson are:

- Pick what to give a fuck about. And don't give a fuck about the failures and embarrassments it takes to get there.
- If you want the reward but not the struggle, you don't really want it. Love the struggle or stop wishing for the achievement
- If there's no reason to do anything, there's no reason NOT to do anything

Note & Warning on Friend Who Died

I have absolutely no call in doubt the veracity of the friend who died story.

However, I have to note that I have read almost the same story in the book *Published*, by a rather skilled marketer. And it left me wondering a bit if it was copied from here.

Check out the **best books to read**, see **all my reviews at once** or **Get the book on Amazon**.

How To Fix Combative Relationships: Case Study

Lucio Buffalmano · 29 October 2017 · Archived copy · Original

Are you stuck in a combative relationship?

Or do you have a combative personality and want to change it?

You have found the right article.

By the end of this article, you will know exactly what combative relationships are, and how to fix them.

Contents

- Intro: What Are Combative Relationships
  - Combative Partner Definition

  - Try Appreciation
  - Teach Them The Right Way
  - Share Win-win Mindsets
  - Set Your Boundaries & Be Ready to Move On

Intro: What Are Combative Relationships

I will define a combative relationship as:

> A relationship where one or both partners are more intent on showing superiority than on supporting each other

Combative relationships are defined by nasty games of “one-upping” and put-downs.

A combative partner will often use verbal and nonverbal attacks as a way of demeaning their partner, such as:

- Making fun
- Highlighting partner’s mistakes
- Focus on “winning”
- Refusing small favors “out of spite”
- Diminishing partner’s accomplishments
- Belittling partner’s ideas and contributions
- …..

Combative Partner Definition

A partner who focuses more on competition, ‘winning’ and maintaining power, than on relationship communion,

win-win, and support.

Since we write for men, we'll refer to women here, but keep in mind that either or both partners can be combative.

Psychologically, a combative woman may have a 'fixed pie' mindset where the man's win comes at her cost.

It's difficult to have good relationships with combative women because they do not approach relationships with a win-win mindset.

Let's see a few mainstays of a combative relationship:

Sign 1: Covert Aggression

Partners in combative relationships are in constant bickering.

Criticism is not always an open act of aggression like yelling and shoving though, and that's why some people fail to diagnose where the problem lies.

Sometimes the criticism is *nasty jokes*, backstabbing, indirect criticism, covert aggression, and sarcastic put-downs.

Here is an example to stress the difference.
Imagine the couple who is having difficulties parking, these are the two different approaches:

> **Direct Aggression***: Of course there's enough space to park, you're a terrible driver, switch seats and lemme do it!*

Indirect aggression:

> **Indirect***: "Ahaha are you really asking me if there's enough space? Ahaha a 30 ton truck could park there…*

The first one could be mean, but the person saying it doesn't hide and is not making fun of the other.
It deals with the issue straight on and focuses on fixing it.

The second one is sneakier because it *undermines* your partner in an indirect way by making fun of her.

It's also not solution-oriented because it doesn't solve the issue.
Indeed the unconscious aim of the aggressor is to leave the issue open and up for longer discussion or escalation.

Look at a few real-life examples here:

> **Her**: (barrage of aggressive and combative "jokes" and attacks)

Psychology of Covert Aggression

Why do partners resort to passive aggression?

It's a mix of power and, potentially, insecurity.

It's because, **devaluing one's partner frames the attacker as comparatively higher value**.
This is part of the 'value scalping™' manipulation clusters.
The higher value party also tends to have more power and control, and to get more investment to 'make up for the difference' (see 'Compensatory Investment Principle™').

While many describe this approach as stemming from low self-esteem, Baumeister's research suggests it's egotism with high but fragile self-esteem that most often leads to aggression.

> When researchers began to conduct careful prospective studies of family violence, however, the evidence for low self-esteem disappeared.

> The new buzzword among researchers on family violence is status inconsistency.
> (…)
> The violent husband is the man who thinks his daily life is not confirming his exalted opinion of himself.

Status inconsistency refers to the willingness -and belief- that one deserves the leadership role in the relationship. And whenever he feels under threat by her independence, he needs to lash out to re-assert his power and control.

The Hide and Seek Game of Covert Abusers

Since combative personalities are often insecure, accusing them usually goes nowhere.

The aggressor will hide behind the smoke screen of "it's not true, it was just a joke".
This is a typical *passive-aggressive technique*.

Maybe they will even add a *gaslighting zinger* such as "don't be so touchy", just to push you on the defensive.

One Aggressive Partner Is Enough

In many combative relationships, it's not both partners who are aggressive.

It's instead one partner who feels the need to assert his superiority while the other partners the other party reacts in defense.

In a way, both are trapped in a combative relationship, but neither knows any better and so it keeps going on and on forever.

How it Should Be

A relationship with endemic aggression is a poor relationship.

No relationship, and least of all a romantic one, needs constant aggression and you should not settle for it.

Your relationship should be your sanctuary of understanding, warmth, and support. When you don't get warmth and support from your partner you might as well (try to) string a one-night stand after another.

Read more on how to turn criticism into constructive feedback:

- Fixing criticism in relationships

Sign 2: One-Upping

A 'one up' is any action that disempowers others and makes them worse off.

While one-upping may include aggression, it may also be covert aggression, with sneering, mean jokes, or broaching topics that others find painful.

The Psychology of One-Upping

The partner one-upping the other needs to feel superior or protect one's their ego.

One-upping is more common in people high in dominance, dark triad traits, or with a fixed mindset.

Notice the very first skit here:

> **Her**: I have over 37.000 followers on Instagram, thank you so much
> **Him**: 36.999 of which are mine <— sub-communication: "you're nobody without me"

How it Should Be

Partners in supportive relationships don't tear each other down**. Partners in supportive relationships build each other up**.

Confident men who care about their partner don't negate their wife's successes, but compliment, congratulate them, and make them feel great about it.
See the difference:

Weak One-Upping Man:

> **Her**: *I have just hit 10k Instagram fans today!*
> **Him**: *Oh, cool, and do you think that makes you a better person now? Who cares about followers…*

If she's bragging about it, it's obviously important to her! If she's bragging about it to you, she cares about what you think.

The man here probably doesn't have 10k fans and is afraid of being inferior because of it.

So he tries to tear down her whole metrics of success and, in the process, her whole judgment (very, very demeaning).

Confident Man :

> **Her**: *I have just hit 10k Instagram fans today!*
> **Him**: *Wow, congratulations baby! Give me a hug, we should have a toast to that! How do you feel about it..*

The difference is light day and night, right?

Here the man is making her feel great for her accomplishment.
But he is also communicating something deeper: that he appreciates her and her successes and that he can partake in that success because they are a team.

This second man is the kind of man she will want to be around and share her stories with.
And, very possibly, her whole life.

How To Fix Combative Relationships

First off, you need to understand you're in a combative relationship.

And if you are a combative personality, you need to admit it to yourself.

If you are reading this article, you either looked for it and you know, or you know now.
So own it.

Try Appreciation

If your partner is the aggressor, try this:

Make them feel appreciated in spite of their shortcomings.

People long to be who they are. But they are scared that they are not enough, and that's why they put on all that big fight.
But deep down, we all naturally long for a place and a relationship where we can let our guard down and be loved for who we are.

Teach Them The Right Way

But of course, before you get there, you might need to do some teaching.

Besides not showing warmth, you may also want to assertively address the bad behavior with some tough love and 'win-win' operant conditioning.

To show how we will move away from the Instagram example and use the situation from the video where she rudely refused to give him his pen:

> **Her** (swats his hand away)
>
> **Him**: (warmly, genuinely hurt) why are you doing that. I need a pen, I would happily lend you my pen if you needed one
>
> **Her**: Sorry that was a bit rude, maybe but why should you take my pen, get your own pen
>
> **Him**: No, I just needed it for a second, but the pen is not the point, it goes deeper and I've seen this dynamic a few times now and I feel we should address it.
>
> The point is that we're together now and if you needed a pen right now I'd be happy to help you with a pen right now.
>
> And if tomorrow you need help in some other way I can help you with, say a shoulder to cry on like it happened last week, I'm happy to help you in that way.
>
> Because I want to see you happy.
>
> I see relationships as a way of helping each other.
>
> So if one day, it's me who needs your support, I'd also appreciate you to help me too. I believe those are the best relationships, the ones where we are a team. You're my co-pilot and we are stronger as a team. Don't you think that would be a better relationship?
>
> **Her**: Yeah.. Sorry I just thought you wanted to steal my pen
>
> **Him**: All good

The first time you do it, your partner will likely feel ashamed of their behavior.
And that's great because it means they understand and care.

Do it a few times and your relationship will quickly grow stronger and more collaborative than you thought possible

Exceptions:
Of course, not everyone can be fixed.
Fringe cases are the real narcissistic, heavily egocentric, *power-hungry, abusive, controlling*, and *jealous-paranoids.*

Share Win-win Mindsets

These are the mindsets of benevolent relationship leaders:

- You understand that the mindset of trying to win and showing yourself superior to your partner is ultimately a weak one driven and motivated by internal deficiencies
- You know that strong and confident leaders don't push other people down and don't feel the need to show their superiority.
- You know that enlightened leaders do the exact opposite: they help the people around them get nearer their level, make them feel great, and build them up.

Men in great relationships don't dictate but instead, make their woman part of their common decision-making.
Or even delegates to her in any realm where she's better suited to lead or decide.

Ironically, the moment you stop “proving” yourself superior and focus instead on caring about your partner is also the moment you become the leader of that relationship.

Set Your Boundaries & Be Ready to Move On

Don’t accept disrespect, ever.

A high-quality man demands a minimum level of respect as a precondition to even date him.
Some women may simply not be good (enoguh) for your new high standards of behavior.

If you make it clear you only accept win-win and do not accept combativeness, aggression, and power moves and nothing changes… It’s time to move on.

4 Communication Mistakes Men Do In Relationships (W/ Videos)

Lucio Buffalmano · 31 October 2017 · Archived copy · Original

Some men doom their relationships by repeating the same communication mistakes over and over.

These 4 communication mistakes are possibly the most common and most deadly.

This article provides you with examples and fixes.

Contents

- Relationship Communication Mistakes
  - 1. Interrupting
  - 2. Not Paying Attention
  - 3. Belittling Her Opinion
  - 4. Ignoring Bids of Emotional Connections
- Fixing Relationship Communication Mistakes

Relationship Communication Mistakes

I had originally titled this section “communication mistakes men make in relationships”.

But I have changed the title since then because albeit men make more of these mistakes, the ladies aren’t immune either.

There are many different communication mistakes men do in their relationships. Here we will focus a bit more on the actual conversation, and as usual with plenty of examples.

1. Interrupting

Interrupting when there’s really no need to interrupt is bad for two reasons:

1. It’s disrespectful

2. It's too dominant and highlights she's the subordinate

Why both are terrible:

Respect Is The Bedrock of Healthy Relationships

Respect is the bedrock of any good relationship and one of the most fundamental elements. Without respect, no relationship can even reach a "sufficient" status.

Over-Dominance Breaks Bond & Rapport

Great relationships are often balanced bonds between people who are similar and share affinities.

The problem with domination is that it highlights instead a huge difference between the two.

I will share a story here of when it happened to me that I ended up dominating my partner too strongly:

> One night me and my ex girlfriend went out to meet an old friend of mine visiting town.
>
> On the way back to my place, my girlfriend was as angry at me as I had ever seen her.
> She was not directly lashing out though but expressing it in a very passive aggressive way, without talking and refusing to help me carry some grocery.
>
> Once I realized she wasn't yet ready to talk, I didn't try anymore, but just kept walking ahead towards home.
> The big surprise came once we reached the crossroad.
> Instead of going straight to my place I turned to the bus stop to send her back home.
>
> You should have seen the look on her face.
>
> I stopped and told her "I'd rather you stay, BUT you have to change your mood and TALK to me. Normally and politely".
>
> In a downtrodden and feeble voice she said: "but I cannot change now so suddenly".
>
> I didn't accept any compromise, though, if she wanted to stay, she had to pull it off. She spoke to me, and she stayed.
>
> I had imposed my will out of sheer power.
> I had "won", and she was now a browbeat, dominated woman. Broken, as she said herself as we walked home.

That was one of my lowest moments, way too much and very unnecessary.

It highlighted she wanted to stay with me more than I wanted her to stay with me -at least for the night-.
But it did so in a confrontational, unhelpful way.
Terrible.

Also, read:

- Controlling people
- Combative relationships

Dominance creates a chasm.
The man should be the leader, but not the owner of a puppet on a string because, and here's the key: there are no subordinates in great relationships.
Great relationships are formed by a captain and a co-captain.

In extreme cases focusing on "winning" and controlling is the sign of an abusive relationship. Read more:

- Relationships with power-hungry partner

- Types abusive partners
- Signs of an abusive relationship

2. Not Paying Attention

If interrupting communicates “I don’t respect you”, not listening communicates “I don’t care”.

As Brene Brown points out in *Daring Greatly*, stopping to care, or disengagement, is the first sign of betrayal. And it’s the first sign the relationship might be in its dying stages.

However, many men aren’t actually interested in ending the relationship but are actually still very into their partner. But they don’t pay attention because they don’t know any better.

And that’s why it’s paramount you don’t fall prey to this pitfall, but *show* that you care by paying attention.

Notice how he says “yeah yeah” without really paying attention as he looks down at his cards instead of looking at her.
He then suddenly turns around and gives her his back. When she’s looking for a word, he repeats what she said before with a fake ironic grin, communicating he’s not really interested in what she’s saying.
The last nail in the coffin, he interrupts her and moves the conversation off without letting her finish her point.

3. Belittling Her Opinion

Our opinions are a manifestation of who we are.

So when we belittle someone’s opinion, especially if it’s opinions they hold dearly, we are also belittling *them*.

This is especially pernicious with your partner, where caring for her personality is the main ingredient of a great relationship.

Basically, when you belittle her personality, **you are communicating you are with her only because she’s got a vagina.**

It doesn’t just say bad things about her but also says terrible things about you.
Namely, that you have low standards, that you are with her out of *need* –not out of *will*- and that you are probably not able to get any other pu**y if she dumps you.

Here’s a personal story of when it happened to me:

> Years ago an ex girlfriend of mine was animatedly talking to me about a writer she was studying whom had just become her favorite author.
>
> I kept arguing back this author wasn’t so smart if he supported communism.
>
> Eventually after some protracted arguing about the author and the (non) merits of communism, she snapped saying I didn’t appreciate her and respect her.
>
> Needless to say, I was an idiot back then.
>
> If the same situation happened today I would be curious about her opinion, ask more about the author and learn a new couple of things.
>
> Also, I would appreciate that she was drawn to communist-ideals out of a willingness to help people. I would still fully disagree, but I would not belittle her opinions anymore.

And here’s an example:

Notice her body language: as soon as he spurns and belittles her opinion she crosses her arms moving to a closed-off

position.
She feels under assault, also because he later takes the super sneaky road of “recruiting” the rest of the team against her when he says “boys, boys, is he done?”.
As if it weren’t enough, he calls the break without even giving her a chance of explaining.

4. Ignoring Bids of Emotional Connections

This is similar to “not paying attention”, but with much higher stakes because deeper feelings are concerned.

When the conversation turns more emotional it’s because your partner is telling you something important for her.

If you fail to listen and to connect, you are saying you don’t care about her emotions and you are snubbing her moment of vulnerability.

That hurts.
She exercised all that emotional effort for nothing, and she feels like she is the only one “making a real effort” while you stay cold and unaffected.

And when you ignore her emotional opening and connections, you are also communicating that you two don’t really connect on an emotional level after all.
That is to say, you are not a great couple after all.

But what are these bids for emotional connections?

If they’re not obvious enough for you, you can look at the topics. They often concern her, you, or the two of you. For example:

- Her past
- Difficult life experiences
- Feelings (especially if feelings for you)
- Embarrassing stories
- Anything concerning the two of you

Often emotional physical cues are also present, which can be part of the discomfort, hiding, or “reaching out” clusters. Such as:

- Looking down more than usual
- Moving body away
- Reaching out to touch you physically
- Looking at you intensely
- Tears

Here’s an example of an emotional talk. Not all will be so obvious, but you get the point:

And here’s a real-life example of failure to connect.
Don’t let the same happen to your partner:

She is sharing with him a major personal feeling.
She says they are so lucky for being on the same page. That’s very deep, she is telling him why she feels the two of them are so great together. His behavior is just proving otherwise though.
He again uses his typical “yeah yeah”, then looks away while she strives to meet his eyes and he makes light fun of her with him “are we gushing today”.
She puts a hand on his arm, trying to connect with him physically and hoping to get his full attention.
No such luck, he turns around and checks his computer.

Fixing Relationship Communication Mistakes

The mindset that will help you prevent the communication mistakes men do in relationships is the same mindset that makes you a top man in a relationship.

That is, you only get into relationships you want, not the ones you need. And you only accept relationships that fully stimulate you, both physically and intellectually.

That's the first step.

The second step is that you care about the people around you, both in the sense of getting to know them and in caring in the sense that you want to see them happy.

Both are traits that you can develop.

Once you have those two elements in place: being in a relationship because you want to, and caring, you will automatically avoid these mistakes.

Similarly, if you don't care about your partner, then be brave NOT to have a partner and allow her to find someone who will actually care about her.

Social Engineering: Book Summary & Review

Lucio Buffalmano · 3 November 2017 · Archived copy · Original

Social Engineering (2018) provides an overview of manipulation and dark psychology strategies and techniques hackers use to gain access to sensitive information.

Bullet Summary

- Watch out for the data you give to strangers and share with the public
- Education is the best defense against Social Engineering
- Confidence, human psychology understanding, and believing you are who you say you are, are the keys to a successful Social Engineering attack

Summary

About the Author:
Christopher Hadnagy is a well-known social engineering researcher and security consultant specializing in human-based security vulnerabilities.

Chapter 1: Social Engineering

The first step towards being more secure is accepting that systems are vulnerable and can be compromised. Believing a system is unbreachable instead is the surest way of making your system unsafer.

Christopher Hadnagy lists the different types of social engineers:

- Hackers: since software are becoming harder to break through, hackers are more and more moving into social engineering;
- Penetration Testers: they have the skills of a hacker but use them to test their clients' systems
- Spies
- Identity Thieves:
- Disgruntled Employees: often difficult to detect as they hide their displeasure. The more disgruntled they

become the more they justify their malicious actions

- Scammers:
- Recruiters:
- Sales People:
- Governments
- Doctors, psychologists, lawyers

Social Engineering Equations
Christopher Hadnagy says that the *Social Engineering* Equation is: Pretext + Manipulation + Subject's Greed = Success

> Knowledge is the best defense

Chapter 2: Information Gathering

Christopher Hadnagy says that gathering information about your target is your very first step and a crucial one.

I loved the story's examples with the dialogue the author provides.

He walked into a cafe where he saw his target get in. He orders the same, sits nearby, takes the newspaper, and makes a comment on a conversation-worthy piece of news he read and says:

> **Social Engineer**: *Even in these small towns things are scary nowadays. Do you live around here?*

He then says a few things more and adds

> **Social Engineer**: *"I sell X to major corporations, you're not a higher up in a big corporation are you"*

He then says he's not trying to sell anything but asks if he could stop by the day after to leave some information. To enjoy the full conversation I invite you to get Social Engineering on Amazon.

Chapter 3: Elicitation

Christopher Hadnagy says that elicitation works because it leverages a few inborn human tendencies. For example, the author suggests that people:

- Desire to be polite
- Want to seem informed and intelligent
- Talk and divulge more when praised
- Will not lie for lying's sake (most of them at least)
- Respond kindly to those who are concerned about them

The author says that great conversation requires the mastery of three steps:

1. Be comfortable and confident
2. To be comfortable, educate yourself on the topic, and don't pretend you know more than you do
3. Don't be greedy: give and share info as well

Pre-loading

Pre-loading is similar to what Cialdini refers to as *Pre-Suasion*.

Appealing to Someone's Ego

The book shows this as example where the attacker starts a conversation with this:

> **Social Engineer**: *you must have an important job and be good at it, X thinks very highly of you*

And if the target denies and corrects you, you can get what he actually does in the company, and then move on saying that he's modest.

Mutual Interest

Example:

> **Social Engineer**: *you have a background in Ruby on Rails, you should see the work we did at X to expand that language, I'd like to send you a copy*

Expressing interest is another great way to elicit.
The author says this is very powerful too because now the attacker controls the next step: what to send, when, and how much to share.

Deliberate False Statement

The author explains that attackers use deliberate false statements to trigger corrections, which can provide novel and truthful insights.

Volunteering Information

When social engineers say something to someone, their natural tendency will be to give something useful back.

Assuming Knowledge

The book describes how attackers create the impression of expertise to gain trust. People are more likely to share with others who seem already knowledgeable.

Leading Questions Manipulation

Christopher Hadnagy goes a bit into open-ended questions and close-ended questions.

He says that leading questions can be used to manipulate someone's memory.

For example, if you show someone the picture of a child's room and ask them if they saw the teddy bear, it implies one was in the room, and the person is likely to say yes, because it seems logical, or even expected, to have a teddy bear in the kid's room.

Read more on *dark psychology:*

> Dark Psychology: 7 Ways to Manipulate People

Assumptive Questions

Assumptive questions assume the target has the knowledge and knows the answer.

The author says it's used by law enforcement, when for example asking "where does Mr. Smith live", assuming the target knows the answer.

Chapter 4: Pretexting

Christopher Hadnagy says the best way of living your pretext is to become the person you need to impersonate.

Two tips I liked:

- Avoid “hmmm” before answering: it’s obvious you don’t know the answer
- If you need two seconds, you can pretend you’re going to ask a colleague

The book uses this cynical quote to illustrate the mindset of malicious social engineers:

> Honesty is the key to relationships. If you can fake that, you’re in.

Chapter 5: Mind Tricks

Christopher Hadnagy starts the chapter by saying that movies and comics often present larger-than-life characters who can recognize someone’s lying simply by looking at them. These representations are fantasies.

Senses of Reference

Christopher Hadnagy says that although we have 5 senses, we mainly refer to 3 for building our thoughts. They are:

- Sight – Visual Thinker (“I see what you mean”, “see where you’re coming from”)
- Hearing – Auditory Thinker (“I hear you”)
- Feeling – Kinetics Thinker

It’s important to understand the mode because it helps social engineers meet people in their comfort zone, and the more people are comfortable, the higher the social engineer’s chances of success.

The author highlights that finding and using someone’s dominant sense is not an exact science and you should not fully rely on it.

Micro-Expressions

I fully agree with him that, although you can become proficient at reading micro-expressions, you can’t really be sure what’s behind that expression, or why it’s happening.

Leveraging NLP

You will probably not use the side of NLP dealing with hypnosis, but NLP can serve you well with the use of voice, language, and word choice to guide people where you want them to be.

- **Vocal Tone**

The author says changing the tone of voice can change the meaning of the sentence and how the target will perceive it.

For example, asking “don’t you agree” without going up with your voice will make it more of a command.

- **Ultimate Voice – Embedding Commands**

Hadnagy describes the skill of embedding commands as a core part of a social engineer’s toolkit

TPM’s note: we’re skeptical of ’embedded commands’ from NLP

- **Choosing Words**

Social engineers use positive words to get targets into a positive state of mind and negative words when they want

their target to think negatively about the topic.

Building Instant Rapport

Christopher Hadnagy says that the prerequisite to building rapport is to like people and be genuinely interested.
He also stresses clothing and personal appearance.

Chapter 6: Influence

- **Smart Compliments**

The author talks about the power of compliments and how easy it is to use them wrong for beginners.
"You have beautiful eyes, can I use the bathroom" is the wrong of doing it.

Commenting on the picture she has on her desk saying they're beautiful kids and asking if they're their children, and then commenting you got children around the same age is a good way of doing it instead.

- **Send gifts**

Christopher Hadnagy says that gifts are very useful. He shares that sending a small gift and saynig that you only ask them to visit your website and download their catalog in exchange often worked.

- **Concessions**

Giving a concession is also a great way to get something in exchange (check *Reciprocity* in Persuasion by Cialdini for more).

- **Authority**

Social Engineers will often pretend of being authority figures to get people to comply with their requests or to let them enter and exit the premises unchallenged.
The author says that authority is especially powerful when people are acting on an auto-pilot.

- **Manipulation**

Creating stress, anxiety, and fear make people more likely to do what the Social Engineer asks.

> Manipulation: Techniques, Strategies, & Ethics

Chapter 7: The Tools of Social Engineering

Christopher Hadnagy goes into locks, lock-pickers, GPS, cameras, etc.
This goes a bit outside the scope of this website.

Chapter 8: Case Studies

The author mentions a few very interesting case studies here, both from his personal experience and from other famous Social Engineering attacks.

I invite you to check the full book for this part.

Chapter 9: Prevention and Mitigation

First:

Have in place **a good disaster recovery plan and an incident response plan** because a malicious attack is more a

question of when than if.

In *Social Engineering* you can't just be thrown money at the problem to make the system more secure though because it's often a matter of people and education.

[image] 
CONS

- **Some Unneeded Info**

I felt the information on actual software to be too detailed and only took up unneeded space. The specifics of programs and software will get old in a few years and can be easily retrieved with a Google search.

- **Broad… But Not Always Deep**

"Social Engineering: The Art of Human Hacking" mentions so many different things that it's only naturally impossible it could go deep into most of them.
So it ends up being an overview of many topics, which someone might appreciate, but in the fields, I love I prefer the depth of insight to the breadth of overviews.

Social Engineering Review

If you want Social Engineering because you're into social arts, psychology, and human relationships, the book has some good examples.

It's especially useful for:

- Hackers with few people skills
- People who want to learn Social Engineering basics
- People who want to learn more about how to defend themselves from scams

In all the above three cases, it's a useful book and I particularly loved the examples.

Those were also helpful for people relatively advanced in the social arts.

How to Touch a Woman: 4 Ways to Touch Like A Confident Man

Lucio Buffalmano · 6 November 2017 · Archived copy · Original

The power of touching a woman right is what makes a man attractive.

What happens when a man touches a woman is that it immediately communicates interest, confidence, and masculine presence. *As long as the touch is done right*, of course.

How you touch a woman makes the difference between happy relationships and sexy seducers who "get" women and… All the rest.

By the end of this article, you will know the proper way of touching a woman.

Contents

- How to Touch Women
  - 1. Touch Slow, Avoid Quick Touches
  - 2. Touch With Your Palm (No Backhanded Touches)
  - 3. Touch With Purpose & Confidence, No 'Peckers'
  - 4. Touch Her Seductively, No Bro Games
- Takeaway: Treat Her Like A Woman
  - When To Use The Bro-Touch
- The Power of Touching A Woman

How to Touch Women

Many men touch girls the wrong way: as if girls were their male pals.

But masculine men treat women like *women*, not like their male friends.
Treating women like women sub-communicates masculinity and confidence in your sexuality.

Conversely, touching her wrong, or like a 'bro' kills attraction.

When you treat women like your guy friends, well, that's also when you enter straight into the friend zone.
There are four major categories of this so-called "male touch", which we will also refer to as "bro-touch":

1. Touch *Slow*, Avoid Quick Touches

The Pointed Sisters said the following about their dream lovers:

> *I want a man with a slow hand*
> *I want a lover with an easy touch*
> *I want somebody who will spend some time*

That song might be more than 30 years old, but a few things in human nature change very slowly. And, pun intended, touching women slowly is one of those evergreen.

Hurrying and quick movements belong maybe to a magician's slight of hands bag of tricks, but they have no place in the world of sexy, sensual and romantic.

How to touch girls, then?

Slow.

A nightmare of many women is out of control men who jump on them too quickly, move straight to their vagina without any warm up, and then pound them rabbit style only to finish (here's happening to Carrie in Sex and the city).

If you noticed any thread in that nightmare is this: everything is too quick.

By moving slow before the actual sex, you communicate you're one of those men who's been around and is in no rush.
One of those men The Point Sisters wanted, a man who can spend some time warming up and reveling in the pleasure.

And it's the same for social situations: **quick movements communicates you're nervous.**

And in relationships, it communicates you prefer distance to empathic bonding.
For example, quickly patting on someone's back communicates you want to break the hug and keep some distance (Lowndes, 2003).

To be avoided both in relationships and in seduction.

Why?

Because the quicker one pats, the more uncomfortable and distant he feels and the more a-sexual he wants to keep the interaction.

via GIPHY
Notice the difference between the two and what that communicates. He communicates he doesn't want to be there to console and support her.

That's failing to read a bid for connection.

2. Touch With Your Palm (No Backhanded Touches)

The palm of your hand is the inner part of our hands, and it communicates openness.

The palm of your hand brings the external world inside, it's warm, communicates trust and welcomes people in (Bowden, 2013).

Touching people with a full open palm is a sign of deep connections.

Guys avoid hugging other men with the palm of their hand firmly on their back because they are afraid of looking too chummy, too close and… Not masculine.
So they go for the backhand to show distance in a misguided effort to look "super heterosexual".

The problem is that… They do the same with women, most of the times.

Then they read that they should be touching women and force themselves to go for it…. But they do it with the back of their hands.
And with that, they communicate that they are cold and distant.

Indeed, if you think of the nonverbal message of “whatever, I don’t care”, how do you do it?
With the palm of your hand or with the back of your hand?
Of course with back of your hand:

via GIPHY

And we use the back of our hand to push things away, or to say we don’t want to have anything to do with certain people.

via GIPHY

It should already be obvious by now why you don’t want to use the back of your hand with the woman in your relationship or for the woman you’d want in your relationship.

Here is one example:

3. Touch With Purpose & Confidence, No ‘Peckers’

The nagging touch reaches out and retreats like a pecker.
It’s used in two occasions:

- Friendly jokes

- When you're trying to get someone's attention

In the friendly case, you look a bit childish.
It's not too bad, but childish behavior is rarely sexy or romantic.

When you're trying to get someone's attention though it's even worse.

It communicates that their opinion matters hugely, that it's more important than yours and that you are having troubles being heard.
None of those says great things about you.

If you really need to interrupt her instead, just hold your finger high, *hold* your hand on her body, or start speaking (and then apologize and explain why it was so urgent for you to interrupt).

4. Touch Her Seductively, No Bro Games

Bro greetings are all those ways of greeting someone that men use, mostly among themselves.

Some examples:

- High fives
- Fist bumps
- 10 moves handshakes
- Clasping hand and touching shoulder

Try to remember someone using those.
And lemme guess, it was rarely women, right? Men mostly, and often young men.

And that's exactly why you don't want to use them with your woman.

Takeaway: Treat Her Like A Woman

You will notice that all these ways of touching girls are the same ways that guys would use with their male friends.

But how would you feel if a girl escorted you out of the door with her hand on the small of your back?
And if she took your hand like in the below picture?

A bit weird, right?

It's because she'd be treating you like you would treat a girl.
And it's the same if you treat her like you would treat your best friend. **When you touch women like you touch your friends you communicate you don't get women**.

And when you overdo the bro touching you are:

- **Offending her**

Because by treating her like a male friend you are negating her sexuality as a woman.
And you are nonverbally negating the possibility of you two getting together, which takes us to our next point:

- **Communicating (awkward) friendship**

If you wanted to be sexual with her, you are drastically reducing your chances when you use any of the above mentioned bro-touches.

Touching women like men is the fast way ticket into the dreaded friend zone.

If you already are in a relationship, it's great if you two can be lovers and friends at the same time, but that doesn't mean you should negate her female gender and sexuality.

When To Use The Bro-Touch

Who should you be using these bro-touches with, then?

Well, ideally, you would have a limited use of them with anyone, your guys friends included.
Mostly go for it in locker room situations and when you're half naked or a bit too physically close for comfort.

Quick motions, backhands and nagging touch I rarely see the need for.
If some men are your friends, don't shy away from real hugs when you meet them and don't be afraid open palms touches.

Men who are comfortable with their sexuality aren't usually too scared of looking gay.

It's guys with lots of sexual hang-ups and closeted homosexuals who are often most afraid of looking like one (in psychology it's called "Reaction Formation").

Look at the Godfather and notice: it's all open palms.
Even slight caressing.

And is he worried about looking gay? No!

He is communicating that he cares, and that he *takes care* of the people around him, men included.

The Power of Touching A Woman

The biggest takeaway for you from this article is this:

1. Treat women as women, not like your guy pal
2. Slow down your touches

… And you will become a more attractive man.

Bullet Summary

- Love -the bond of brotherhood- is what makes winning possible
- Distributing leadership is what makes you a great leader
- Not intervening is sometimes the very best you can do

Summary

About The Author: Phil Jackson is a former NBA and later NBA coach. He holds the record for most NBA championships by a team's coach.

Chapter 1: THE CIRCLE OF LOVE

Phil says the circle of love is the secret sauce that takes teams from a bunch of individuals to a cohesive winning teams.

Of course, the author clarifies, it's not about romantic love and not even brotherly love. What Phil refers to is the emotional connection that ties the warriors together in the heat of battle.
That kind of bond, of being willing to take a hit for a comrade, is critical to success.

Many other factors matter says Phil, like for example talent, intelligence, toughness, and even luck. But without love, none of those factors matter.

Phil quotes Dave Logan, John King, and Halee Fischer-Wright in their five stages of tribal development, which are:

- **STAGE 1 –** Despair, hostility, and the belief that "life sucks."
- **STAGE 2 –** Apathetic players perceive themselves as victims and who are passively antagonistic. The mind-set is "my life sucks."
- **STAGE 3 –** Focused on individual achievement and a mindset that "I'm great (and you're not)." The tribe is a tribe of "lone warriors"
- **STAGE 4 –** Pride of belonging to the tribe and a belief that "we're great (and they're not). It requires an enemy, and the more powerful the enemy, the more powerful the tribe;
- **STAGE 5 –** A sense of innocent wonder and the mindset that "life is great." (Chicago Bulls during 1995–98)

Chapter 2: THE JACKSON ELEVEN

Phil Jackson says that the *principles of leadership* he used are quite simple:

1. LEAD FROM THE INSIDE OUT

Some coaches look at new hip techniques to gain an edge.

That's an outside-in strategy and, he says, only works in the short term.
It backfires when players get *tired of following orders* and when the other teams catch up to your latest tricks.

He says that as long as he spoke from the heart, players would hear him.

Learn more on *how to execute tasks while maintaining power:*

> 10 Ways to Maintain Power When Executing Orders

2. BENCH THE EGO

Phil says that the most common type of coaching in the NBA is domineering or pandering to their stars and treating them like friends.
But the more he tried to exercise power in a direct way, the less effective and powerful he was.

What worked instead was distributing power as much as he could while still keeping final authority.

And he let go of his ego.

He wanted an environment in which everyone had a *leadership* role, however small that could be (also read

Principles: Life and Work).
Just as a note, this does not mean being a pushover.

Learn to let go of your ego:

- How to build an antifragile ego

3. LET PLAYERS DISCOVER OWN DESTINY

Phil says you can't force people to change, but you have to inspire them to want to change.

Phil wasn't even interested in getting players to do as he said, he wanted them to think on their own so they could make their own decisions during the game.
And he encouraged players to find themselves and find their own specific qualities (read *The Gifts of Imperfection*).

4. THE ROAD TO FREEDOM IS A BEAUTIFUL SYSTEM

Phil talks about the triangle offense system in basketball.

He says the beauty of the system is that every player counts and you can't simply rely on the superstar to do something.

It gives everyone enough freedom to express themselves within a well-defined structure.

5. TURN THE MUNDANE INTO THE SACRED

The son of two extremely religious pastors, Phil observed the communities they were able to create with faith and religion.

He learned early what it means to connect people together and with something greater than themselves.

Over the course of the book, Phil talks about the sacred he created to infuse practices and games with a sense of the sacred.

6. ONE BREATH = ONE MIND

Phil used meditation both in his life and with his teams.

Specifically, he introduced the Bulls' mindfulness meditation and had the players sit together in silence and breathe together in sync.

7. THE KEY TO SUCCESS IS COMPASSION

The author says that kind and thoughtful words have transformative effects, even with the apparent toughest men.

He says the day Michael Jordan realized he needed to get to know his teammate was also the day he became a compassionate leader, which in turn helped him take the Bulls to where they got.

Also, read *Daring Greatly* for more on compassion.

8. LOOK AT THE SPIRIT, NOT AT THE SCOREBOARD

Great team spirit is the key to the scoreboard, not the other way around.

9. SOMETIMES YOU PULL THE BIG STICK

Phil says he used many tricks to raise the players' game and level of consciousness. Including tough ones.

10. WHEN IN DOUBT, DO NOTHING

Sometimes focusing on something completely different than your current problem is the best way to solve that problem.

11. FORGET THE RING

Obsessing about winning is a loser's game, says Phil.

We should focus instead on creating all the conditions for success and then letting go of the outcome.

What matters is playing the right way and growing, as human beings and as players. Then the final win takes care of itself:

> Obsessing on winning is a loser's game

Chapter 3: RED

In this chapter, Phil Jackson focuses on his past as a player for the Knicks. If you're into basketball it's interesting and I invite you to check the book.

Chapter 4: THE QUEST

Phil talks about how he got into Zen and meditation and the power of a beginner's mind.

Suzuki teaches us to meditate by sitting with a straight spine, relaxed shoulder, and chin pulled in as if we wanted to support the sky with our head.
Then focus on your breathing in and out. Don't try to stop thoughts, but let them come and go and then go back to focusing on your breath.

Let your thoughts come and go naturally.
They will become less and less intense and will have less and less power over your conscious mind.
Meditation helps you clear your mind and fully focus on what you need to focus on, without any distractions in the background.

Phil says that it took him years of practice, but eventually the more aware he started to be about what was going on within him, the more he became connected to the world outside.

He became calmer and more patient, qualities that helped him immensely as a coach.
The aspects of Zen that have been critical to Phil Jackson are:

1. GIVING UP CONTROL

If you want to obtain perfect calmness you cannot be bothered by what's going on in your mind.

Let the thoughts come and go, and they will be under your control.

Similarly, to control people, the biggest mistake is to try to control them directly.
Give them lots of room instead, even encourage them to be mischievous, and then watch them.

The author says that was really helpful when dealing with Dennis Rodman.

2. TRUSTING THE MOMENT

Zen helped Phil focus on the moment without distraction from the past or the future, slowing down the way he experienced time and becoming more aware of the present.

3. LIVING WITH COMPASSION

Phil says he was particularly attracted to the Buddhist tenet of compassionate life.

Particularly, there was a key thought that became a building block of his work as a coach, and it was:

> *"what you do for yourself, you're doing for others, and what you do for others, you're doing for yourself."*

Chapter 5: DANCES WITH BULLS

The "Jordan Rules" is how the Pistons stopped Michael Jordan.

It worked by attacking him with multiple players any time he had the ball. Here's a video:

https://youtu.be/p2v0LOhjsJs?t=43

The author says he was looking for a system that had the ball move around in a selfless fashion and ended up using the triangle offense to reach that goal.

Phil sees the triangle as a system that develops as the game unfolds, "in the moment".

> The road to freedom is a beautiful system

The system has many upsides, including:

Hard to play against

The triangle was hard to play against and to prepare against because, well… Not even the players themselves knew what was going to happen.

Depersonalize criticism

It allows coaches to criticize the play, not the players.
He was interested the players all understood the basics of the system, and every critique and feedback was about that, not about the player.

Distributed Leadership

The group, as a whole, had a purpose and each player was an important part of the system.

The players began teaching one another, and that formed a stronger bond that no individual glory moment could ever foster.

Phil Jackson says that Jordan at the beginning was working solo a bit too often and that he had to emulate Magic or Bird instead in working with the rest of the team. He has a great quote from Red Holzman:

> *"the real mark of a star was how much better he made his teammates."*

Chapter 6: WARRIOR SPIRIT

Jordan didn't exactly love giving the ball away more often.

But when he realized Phil wasn't going to back down, he started looking for ways to make the system work to make him win. Exactly what Phil wanted.

To be precise, Phil Jackson wasn't looking for a totally selfless team where everyone is equal and there is no space for creativity.

He was looking for a middle way between systems and space for personal creativity.

Once the Bulls hit that middle spot they took off.

Bull's Leadership

Phil Jackson thought Jordan didn't really have the magnetic personalities of Larry Bird or Magic Johnson.

Jordan was not a natural leader, he was a natural doer who pushed the team with his will and with the high demands he placed on everyone around him.

The team needed someone else to balance Jordan's perfectionism, so Phil named Bill Cartwright as cocaptain. Bill wasn't afraid to stand up to Jordan.

Bull's Tribal Initiation

Phil Jackson wanted to give the Bulls a safe environment away from the spotlights.

A place where they could get a sense of oneness and team spirit.
So he stopped press access to training and started introducing some tribal customs from the Lakota Indian tribe.

Alpha Dog VS Distributed Leadership

The tendency for some of us might be to have weak people around us so that we can feel superior and in power.

Phil Jackson surrounded himself with the strongest and most knowledgeable people instead and then gave them space to contribute.
Obviously, Phil had a *Growth Mindset*.
Read here on *how to get a growth mindset*.

Chapter 7: HEARING THE UNHEARD

Phil often reminded the team to focus on the journey rather than on the end destination.

Each game had to be meaningful for them in light of what they were trying to do as a team.

Phil Jackson also describes in this chapter how the work of Carl Rogers inspired him during this period.

Rogers helped his clients more by growing personally than by solving their specific problems.
He says that unless we accept ourselves first it's impossible to change and accept others.

And that's exactly what he tried to foster as a coach: an environment where players can be and express themselves creatively within a team structure.

Haters and Team Chemistry

A great challenge for coaches is to stop the players who dislike them from corrupting the rest and undermining the team's chemistry.
He quotes Casey Stengen:

> *"the secret of managing is to keep the guys who hate you away from the guys who are undecided.*

I have seen a few teams and small companies crash and burn because discontent spread like a virus.
As Greene says in the 33 Strategies of War, you're better off eliminating these people.

Knowing the Players

Another great insight from *Eleven Rings* is that Phil Jackson made it a point to get to know his players.

He'd ask questions such as "what's your greatest aspiration", "whose influence you the most" or "what's something people don't know about you".

He'd have them fill out questionnaires or use psychological tests such as the "social bull's eye" to assess how players felt in relation to others.

Phil also mentions he never figured out a way to heal the wounds of players who didn't feel part of the team for getting little playing time.

Talking to Jordan

To get Jordan on board with his plans Jackson would not force anything on him.

He would treat him as a partner and ask him questions to switch his point of view. He'd ask how that strategy could improve the team, and what would Scottie or Horace feels about it.

When he let Jordan solve the problems and answer the questions by himself, he'd be more likely to buy into the solution (the "rule of involvement" as explained by Kurt Mortensen in Maximum Influence. Also read *How to Win Friends*).

Preparing for Matches: Meditation

Jackson says that back then most coaches prepared players for matches by exciting them and revving them up. But he realized he'd have a harder time staying focused and effective under pressure. So he did the opposite: he would calm players down.
To do so he'd use mindful meditation.

Relating to Players with Compassion

Phil Jackson tried an old technique called "whipping boy".

The "whipping boy" technique uses a single player for most of the criticism to motivate the rest of the team to bond together.

Jackson understood the whipping boy stratagem was a losing one and constructive criticism, respect, and compassion were the way to go.

Chapter 8: A QUESTION OF CHARACTER

Did it get harder as a winning team?

When it came to group cohesion, yes.

Once the spotlight turned on the Bulls, the team started vying for more attention and some players started getting jealous of Michael Jordan's fame and media attention.

As Michael Jordan said, "Success turns we're back into me's".

Chapter 9: BITTERSWEET VICTORY

Phil Jackson talks here about the rise of Scottie Pippen as a player and as a leader.

Scottie was more human than Michael and better at relating with other players.

He says that in every successful team, he's coached, players had a clear idea of their role in the team. **Having a clear structure helps reduce the players' anxiety and stress because there's no need to jostle around for power and positions**.

My Note:

Simon Sinek similarly says that when there's internal accord and supportive leadership then the tribe can focus on beating the external enemies (*Leaders Eat Last*).

Chapter 10: WORLD IN FLUX

Phil Jackson talks here about mindfulness.

It says it means "coming back to the present moment", an act that is not only limited to meditation itself but should take place all day long.

Dealing With Player Mutiny

Scottie Pippen famously refused to go back in the game once.

Phil stayed focused on the moment and looked for another player to take the shot instead of Pippen.
He then didn't let the situation pan out without injecting his ego and escalating.
Pippen understood and the issue was behind them.

Chapter 11: BASKETBALL POETRY

Phil Jacksons says he's often asked about the 95-96 Bulls.

And he says that the secret is that that team reached the stage 5 "life is great" mindset.
They were playing to enjoy the game itself and they were in a competition with themselves only.

Dealing With Rebels

How do you handle rebels like Dennis Rodman?

Phil says Dennis tried to buck the system, sometimes in small and childish ways, like showing up with an untied shoe or hiding some jewelry.

Sometimes Phil would make a joke, giving him a small fine, or simply ignore it.
And once Dennis realized nobody was interested in his little pushbacks, he stopped.

My Note:
This highlighted the psychological need of some people to stand up to authority just for the sake of not following orders. Once you ignore them, the issue often goes away as they don't feel pressured anymore.

Learn more:

- How to tell others what to do without growing resentment

> Power Protecting: How to Keep Win-Win With High-Value People

Standing Up to Bully

Jackson mentions the fight of Jordan vs Kerr.

He says that after he had stood up to Jordan, Jordan looked at him differently and never picked on him anymore.
And he started trusting him on the court more as well.

My Note: This highlights again the importance of standing up to bullies (see an example here on: *how to deal with an alpha male handshake*)

Give Credit for Devotion

Phil Jackson quotes Liu Bang on the importance of giving credit to the players.

He says he would put players in the position to fully realize their potential and then give them credit for their achievements.
Then, as the grass grows toward the sun, the players would sprout towards the coach in devotion.

Finding Courage: The Winning Team Secret

In one of Jackson's best seasons, the most significant match for him was a loss against a weaker team.

Instead of conceding defeat, they rallied and caught up.

They lost in the end by a few points but realized that no matter how dire the situation was, they could find in their heart the courage and the strength to turn the situation around.
That game, he says, the Bulls found their heart.

Chapter 12: AS THE WORM TURNS

Phil starts the chapter with a Zen quote:

> *Before enlightenment, chop wood, carry water. After enlightenment, chop wood, carry water.*

This is just another way of repeating a key tenet in *Eleven Rings*: focus on the task at hand, don't get lost in the past, and don't worry about the future.

Chapter 13: THE LAST DANCE

Phil Jackson describes here the emotional last dance with the Bulls.

Chapter 14: ONE BREATH, ONE MIND

The author says it's often a not easy task to foster oneness in popular sports.

It's a universe that often encourages egoistic behavior and a stardom mentality.
He says it was even more so in LA, the city of the glorified self.

Chapter 15: THE EIGHTFOLD OFFENSE

Rick, one of the players, said that Phil took a lot of pressure off the team by putting that pressure onto himself instead.

He'd get cities railed up against him, raise a s*it storm, and the press wouldn't be thinking about the players.

My Note:
This was a strategy later also used by football coach Jose Marino, albeit the guy after starting with a bang later slipped into anonymity.

Kobe Bryant: The First Mindset

Phil says that his approach with Kobe was to be as direct as possible and do so in front of everyone.

He played the bad cop and then use one of his coaches to mellow the player later on.

When Kobe said he'd like to be captain as soon as possible, Phil replied that you can't be a captain if nobody follows you. And back then, nobody was with Kobe.

Eventually, it sank in and Kobe started looking for ways to play more collaboratively, culminating with his Alley-Oop for Shaq:

> You can't be captain if nobody follows you

Chapter 16: THE JOY OF DOING NOTHING

Eleven Rings discusses Kobe and MJ.

Both of them wanted to win at all costs.
However, Michael had to win at everything, while Kobe seemed to compete with himself first and foremost.

Kobe was possibly more difficult to coach though, because his goal was to become the greatest of all time.
His goal was clear to him, so he didn't see the point to listen to Phil who told him to cut back on his shots and scoring.

Kobe VS Shaq

The alliance between Shaq and Kobe fell apart when Kobe wanted to be at the helm.
Jackson let it play out until it solved itself.

Chapter 17: ONE-TWO-THREE—LAKERS!

Phil says that trying to repeat a winning formula is a mistake many do.

Instead, the key to a successful run is to keep growing into the unknown and evolving.

Chapter 18: THE WISDOM OF ANGER

Chapter 18 starts with a quote from the Buddha:

> *Holding on to anger is like grasping a hot coal with the intent of throwing it at someone else; you are the one who gets burned*

Phil says that the more freedom he gave Kobe, the more combative he became.

Jackson would later understand that Kobe took his laissez-faire approach as indifference. And while in the past he had been *passive-aggressive*, now he was openly *aggressive*.
Phil says he realized there wasn't much he could do to change his behavior, so he focused on dealing with his own anger in reacting to Kobe's anger outbursts.

My Note:
I wished here he gave more practical examples and more factual stories.
But I felt like **Jackson had made a leadership mistake here**. By allowing Kobe to run slipshod, Jackson was showing weakness.
He was communicating he wasn't strong enough to stand up to Kobe, and people don't like weak leaders.

Don't Hide Anger

Phil says we're wrong trying to eliminate anger as if it were a flow.

The more you hide it, the more it will come out bursting later on.
It's better to learn how it affects you.

And then learn to channel its energy for sustained focus and creative energy.

Also, read *Relentless* by Tim Grover on how anger can put you in the flow and "*Flow*" for getting yourself into a state of flow.

Chapter 19: CHOP WOOD, CARRY WATER

Phil says the key to being successful in NBA is to:

- Control emotions
- keep your focus during games
- play through pain
- find your place in the team
- stay cool under pressure
- stay balanced during big wins and big losses
- perform consistently

Reading that list, it's a lot to do with emotional intelligence (read *Emotional Intelligence* by Daniel Goleman).

Chapter 20: DESTINY'S CHILDREN

Phil says, there's nothing like a humiliating defeat to focus the mind.

To him it means reaching that stage of deep camaraderie arising when a group commits to something greater than themselves, no matter the risks standing in the way.

It involves covering teammates' mistakes and weaknesses and even fouling when necessary to protect a friend.

> There's nothing like a humiliating defeat to focus the mind

Kobe Transformation

Phil says that during this season Kobe transformed from a selfish player into a leader that, finally, teammates wanted to follow.

The key, says Phil, was to learn that to get from his teammates, Kobe had to learn to give.

> To learn how to get, you need to learn how to give

Chapter 21: DELIVERANCE

Kobe says he learned hugely from Phil.

He learned to be present and enjoy the moments as they come. And he learned to lead his two daughters as well.

Letting them develop and explore at their own pace without forcing anything on them, but nurturing and guiding them along.

Chapter 22: THIS GAME'S IN THE REFRIGERATOR

The last chapter is about Phil's last season.

He felt it was a mistake to have stayed one more year and he talks about the importance of letting go of losses.

Drawing again from Zen's teachings, Phil suggests that we should not resist losses.
The best way of coping with them instead is to become an active participant in them. Instead of only seeking gain and happiness, we must accept losses as well.

Lastly, Phil says that the main message he wants to share with *Eleven Rings* is to **see yourself as something bigger than yourself**. Something going beyond the confines of your ego and embrace instead something that "includes everything".

> **What we resist persists**

[image]

Practical Applications

Coaches, managers, and leaders can learn a lot. I would say the most important takeaways are:

- Distribute leadership
- Check your ego at the door
- Foster an environment for growth
- Be compassionate

CONS

A few more specific examples of players' rebellions and how he handled the specific situations would have been nice (The Power Moves is all about specific situations and examples, which I believe are the best way to learn).

Review

"Eleven Rings: The Soul of Success" is a great book.

Absolutely recommended for anyone in any coaching or trainer position. And especially good for leaders leading highly driven and talented individuals.

I particularly liked the behind the scene and the focus on Phil's own personal growth via philosophy and meditation.

His approach of focusing on creating the conditions for success and then letting go of the outcome is also particularly inspiring (as opposed to a more "the result is all that matter" approach as in Extreme Ownership).

Mastery Chapter Summary & Review (Robert Greene)

Lucio Buffalmano · 10 November 2017 · Archived copy · Original

Mastery (2012) proposes a structured, long-term journey to achieving elite expertise by finding your life's calling, learning everything from a previous master, and then adding your own unique talent to develop and create something new.

TPM Takeaway: Insightful, but lacks a scientific foundation.
Mastery offers a compelling and structured path to developing expertise, but Greene focuses on ancient history and examples, rather than modern contexts and scientific evidence. That makes some of its conclusions harder to generalize or trust.
Also, while the book focuses heavily on skill acquisition, it only briefly touches on how those skills translate into real-world results—where factors like strategy and value also play a role.
 For a more evidence-based framework, see: **TPM's Competence & Power Guide ↗**

Overview

You achieve mastery with a set of replicable steps:

1. Follow your natural inclination
2. Go through an apprenticeship
3. Get a mentor
4. Master your craft
5. Set your creative energy free

Notes

About the Author:
Robert Greene is a best-selling author of books on power and strategy.
He has also written "*The 48 Laws of Power*", *"The Art of Seduction"*, *"The 50th Law"*, *"33 Strategies of War"* and *"The Laws of Human Nature"*.

Mastery Is A Simple Path

Robert Greene says the path leading to *mastery* is a simple process accessible to everyone.

He says there are three major distinct faces: the apprenticeship, the creative-active, and then mastery.

Greene mentions Darwin.
He says that what was specific for Darwin is actually common to everyone who achieved mastery: a passion and inclination for a subject, an encounter allowing them to apply their passion and an apprenticeship.

Masters often move ahead quickly because they are driven by their passion.
So **to master a specific field, you must love it first**.

Greene says it's mostly emotional qualities that drive people forward. Desire, persistence, and confidence play a much bigger role than reasoning powers.

Chapter 1 – Discover Your Calling: The Life's Task

Robert Greene says you have an inner force guiding you toward your life's tasks.

It was obvious in your childhood, and your first step towards mastery is actually always inward first: reconnecting with that innate inclination.

We are all born with a unique seed, and your life task is to find that uniqueness and bring it to fruition.
The force is there, and you can start moving toward it at any point in life.

But some people, says Greene, never end up who they really are.
They stop trusting themselves, they conform to the expectation of the people around and start wearing a mask.

When that happens, we end up in fields we don't really like, and we try to fill ourselves with the love of public approval.
The author says that when we do it for money and comfort, it's out of anxiety and to appease our parents. And our parents, in turn, push us into a more stable and lucrative position out of (misguided) care.

Greene gives us five strategies to find again our calling:

- **Return to Your Origins**: sometimes the inclination becomes clear while performing an activity. It's often visceral, nonverbal
- **Occupy the Perfect Niche:** overcrowded fields are attractive because everybody's there, but you get lost in politicking and can't focus on mastery. Find a niche you can dominate instead. Two strategies: start large and branch out till you're on your own or find connections between different fields
- **Avoid the False Path**: Realize you're in the wrong line of business. Rebel against the forces that got you there. If it was a father figure, you have to slay it
- **Let Go of the Past**: you don't have to fully abandon what you've done so far, but you can learn new ways to apply the skills and experiences
- **Find Your Way Back**: sometimes you deviate from the lure of money. But even if you get the money, you'll be unfulfilled. Going back to your inclination is your way to fulfillment

Robert Greene says that when facing your weaknesses resist the temptation to become like others and keep working on what you do well.

Don't think about grand plans for the future, but focus on the immediate strengths in front of you.
It will give you confidence and a strong base from which to branch out on future pursuits.
Keep going and you'll eventually hit your life task.

Indeed, the author says, your life tasks won't always be obvious to you.

But don't envy those who seem born with a gift in the meantime: it's often a curse because they don't learn to work hard at it.

> Being born with a gift is a curse if you don't learn to work hard at it

Chapter 2 – Submit To Reality: The Ideal Apprenticeship

After formal education, most of us enter a second practical education known as apprenticeship.

You will keep re-entering apprenticeships every time you switch fields.

Don't focus on the money or "piece of paper": **the goal of an apprenticeship is the transformation of your mind and character**.
Look for challenges, and move past your comfort zone: this is when you plant the seed for greatness and mastery.

My Note:
you absolutely need a *Growth Mindset* in this phase (*check my guide to get it*)

Robert Greene says there are three essential steps in a successful apprenticeship:

1. **Deep Observation**: learn the social and power dynamics, the unspoken rules. Don't try to impress people by showing you want to get to the top. If anything, impress by your eagerness to learn
2. **Skills Acquisition**: focus on a skill at a time, don't multitask. Embrace the boring and tedium and be fully present. 2-3h of intense focus is better than 8h of distracted work. Concentrated practice over time cannot fail to produce results.
3. **Experimentation**: initiate putting into practice and creative endeavors the skills you've built. Some people never experiment out of fear. Force yourself to do it before you feel ready and you'll know where you stand, get precious feedback, thicken your skin and develop a key skill: the detachment between your ego and your work.

Robert Greene also details 8 effective strategies for a perfect apprenticeship:

1. **Value Learning Over Money**: learning is the N.1 priority over everything else. If you can afford, work even for free as people will be more likely to teach you and divulge their secrets
2. **Keep expanding your horizons**: take responsibility for your own learning. Don't accept the status quo and any limitations you might have. Whenever you feel in a rut, shake yourself up and look for new challenges
3. **Revert to a feeling of inferiority**: to protect your ego you might be tempted to tell yourself you're good and better than your teachers. Don't. You're there to learn from them
4. **Trust the process**: it takes time. Push through the pain and frustrations with trust and faith
5. **Move towards resistance and pain**: our natural tendency is to avoid pain and difficulties. Do this instead: go in the opposite direction of your natural tendencies. Don't be nice to yourself, go against the tendency to lose focus
6. **Apprentice yourself in failure**: look at failures as learning opportunities
7. **Combine the 'how' and the 'what'**: learn deeply about your field.
8. **Advance through trial and error**: don't follow a linear path. Learn as many different skills as you can in the area that interests you.

Robert Greene says that nobody can skip the apprenticeship phase.

Mozart and Einstein, two examples often bandied as natural talents, also took 10 years before coming up with a great piece of work. The only difference is that they started very early and with full immersion.

Chapter 3 – Absorb The Master's Power: The Mentor Dynamic

Robert Greene says we live in an iconoclastic culture, we like to attack and dismantle all forms of authority.

Some of us believe that criticizing is a sign of intelligence and learning as a submissive pupil is a sign of weakness. That is a terrible mindset to reach mastery. **To learn we have to let go of the fear of submitting and accept and acknowledge there are people much further ahead in our field than we are**.
And their position is not due to friends or luck, but it's based on skills and knowledge.

Robert Greene says that books are generic and not tailored to your situation, but they can serve as mentors as well. You can idealize a figure of the past and ask yourself what they would do in your exact same situation.
Napoleon Hill had a whole team of great figures from the past he would turn to for suggestions (read *Think and Grow Rich*).

How to Deepen Mentor Relationships

1. **Choose Mentor Based On Your Needs**: refrain from looking for someone like your parents and don't just pick someone.
2. **Push Them to Give You Tough Love**: everyone's so PC and soft today, even self-help books tell you what you want to hear. That's damaging: you need your mentor to tell you the harshest truths even if that makes you uncomfortable
3. **Transfigure their Ideas:** take their teachings, but breathe your own personality into them
4. **Create Back and Forth Relationship**: don't only passively receive information, build a relationship of back and forth

Mentors Turning Sour

I particularly loved the psychological analysis Greene brings to the mentor-mentee relationship.

He says that good mentors will want you to become independent and will set you free once you're ready while remaining friends.

But **poor mentors will want to keep you subjugated**.
They will see your moves toward independence as an affront to their authority. They might come to envy you and your growing skills, your youth or your drive.

You can't let them hinder you: your mentee position is in no way permanent.
Your goal is to absorb as much as possible and then move on. If needed, start to resent him and use the emotions to break yourself free.

The mentor-mentee relationship often resembles that of a son-father figure, and sometimes you need to slay the father to burst your cocoon.

Once you internalize the knowledge you must move on. Your goal is to surpass your mentor.

> Your goal is to surpass your mentor

Chapter 4 – See People as They Are: Social Intelligence

Robert Greene says that social intelligence is key for any kind of mastery you're aiming for.

Why?

Because, Greene says, success without social intelligence is not real and will not last.

The author says that **social intelligence is about seeing people for who they really are**, what motivates them, and

what their manipulating tendencies are.
We're all different, but we all also have a dark side and a tendency to manipulate.

Robert Greene says the best approach is one of supreme acceptance.
He quotes Schopenhauer in saying that your goal is not to judge people and to change them, but to take them for whom they really are.

A few good tips in the book are:

- Too big praises or too much friendliness upon first meeting are signs of envy and you should be guarded
- To avoid envy ask for advice, self-deprecate, and show some weakness
- Hide your rebellious streak in the beginning -until you're at the top-
- Accept your boss will take credit, it's part of the apprenticeship but don't let colleagues do it

When you are getting too emotional when dealing with people, do the following to keep your edge:

1. Speak through your work:
2. Craft the appropriate persona: lean good public behavior
3. See yourself as others see you: we have a tendency to ignore criticism or fight it. Don't let it happen to you. Analyze the feedback you receive and your interactions as if you were analyzing a third person
4. Suffer fools gladly: fools are governed by their ego and are more interested in public approval and their personal career than in the truth. Do not lower yourself to their value

Chapter 5 – Awaken the Dimensional Mind: The Creative-Active

Coming out of apprenticeship, the tendency might be to relax or fit in and stay safe.

You must resist that urge and go to the opposite side instead.

Expand knowledge with different fields, experiment, and challenge the same rules you learned.
Developing and embracing originality will take you to new heights.

We often hear about how children are creative and open-minded. Well, Robert Greene says children never invent or discover anything life-changing.

Masters then DO retain the spirit of the child's mind, but they also add years of apprenticeship, knowledge, and a strong and deep focus on their ideas.
The key then is to blend the knowledge, focus, and mind-openness to explore new routes.

The author also goes into what the most common pitfalls are that are stifling our creativity:

- Complacency: we take everything for granted and feel like we know everything
- Conservatism: we stick to what worked in the past and we want to fit in. But if we worry about failure and what others think we'll never do anything creative
- Dependency: you have to distance yourself from your own work and art so that you can discern helpful feedback from useless hatred
- Impatience: the creative process requires constant focus and intensity, not hurrying and easy ways out. Tenacious application is required, what Da Vinci called "ostinato rigore"
- Grandiosity: praise does harm. We will start working to attract praise and as our ego inflates we'll come to believe it's our natural brilliance that pushed us up. What must motivate you is the process and the work itself.
- Inflexibility: it's about paradoxes and holding two thoughts at once. For example: doubts about what you know and trusting yourself

Robert Greene ends the chapter with a helpful reminder: the myth of creative power fueled by drugs is… A myth.

Don't fall for that cliche. Any work of mastery requires discipline, emotional stability, and self-control. Plus enduring hard work, doubts, and obstacles.

Chapter 6 – Fuse the Intuitive With the Rational: Mastery

Robert Greene says that *mastery* is not fully rational but a combination of knowledge, skills, and intuition.

Intuition needs both knowledge, skills, and experience and can take up to 20 years to reach.

My Note:
this reminded me of when Tim Grover spoke of "trusting your guts" for the very top performers in Relentless.

But it's never a point at which you stop and call yourself a master.
Mastery is a never-ending process.
You will never stop facing setbacks and situations that challenge you, and those are your blessing to keep going up and up on the never-ending road of mastery.

Reversal of Mastery

Robert Greene here tackles the critics of mastery.

Those who say there's no point in striving because masters are genius who were born lucky. Some others say it's immoral and only for the ambitious. Or a game of luck.

Mastery is not a function of genius, it's a function of time and focus, says Robert Greene.
And, last but not least, setting yourself on the path of Mastery is a favor you do the world.

> **Setting yourself on the path of Mastery is a favor you do the world**

[image]

Real-Life Applications

- **Breadth of Experience before Depth**

Learn as many skills as possible, and follow your circumstances, but only if they're in the path of what interests

you.
A wide range of experience will make you better suited to decide what to stick with later on.

And I invite you to read *Grit* by Angela Duckworth for more on the importance of many experiences.

- **Do not lower yourself to fool level**

Fools are those looking for short-term gain, being right, their own career, and public approval. Accept them as a part of life but do not lower yourself to their level.

CONS

> **Lucio**: Robert Greene lacks some experience in power and, even more, in seduction. But he has such a great grasp on human nature, especially in its darker side, to more than make up for it.

Some more:

- **Games, Games, Games**

Robert Greene seems to often resort to his *combative*, "48 Laws of Power mindset" with a heavy focus on games people play and you playing back.
It feels like Greene is obsessed with seeing the world as a big chessboard where defection is more common than cooperation.

- **Bullet Points Book… Without Practical Steps**

Robert Greene uses a lot of lists and steps in Mastery.
However, those bullet points didn't always seem like actionable steps. One example: the step "craft the appropriate persona" doesn't say much about how to do that, so it feels like those lists don't always deliver on their promise.

Review

Mastery lacks scientific grounding, but provides a unique and valuable take on the competence literature by adding the power dynamics and 'darker' aspects of human nature.

We appreciate Greene's power-aware take, some of which were brilliant, and at the same time would recommend our readers interested in developing competence to also check more scientific resources.

Tony Robbins VS Gary Vaynerchuk: Power Dynamics Analysis

Lucio Buffalmano · 13 November 2017 · Archived copy · Original

Gary Vaynerchuk and Tony Robbins are two of the most popular self-help gurus at the time of writing this article.

They are both dominant and both are used to leading and having people follow them.

Thus, their meeting was bound to be an interesting encounter for interpersonal power dynamics and various power moves.

Contents

- Intro: Why The Analysis
- Gary Vaynerchuk VS Tony Robbins
  - 1. Physical Dominance
  - 2. Verbal Dominance: Gary
  - 3. He Who Interrupts Dominates
- Overall: Tony Most Dominant & Best Communicator

Intro: Why The Analysis

There is no better way to learn how to be dominant than to look at two dominant men interact.

Vaynerchuck and Robbins are both authorities in their fields.
Both are men who are used to controlling and dominating their interactions, so their meeting was bound to be extremely interesting.

Also, even more interesting, the two have similar personalities.
Both Robbins and Vaynerchuk are super energetic, sky-high in extraversion (see OCEAN personality types), and major driver personalities.

Gary Vaynerchuk VS Tony Robbins

There are several layers of dominance. In this guide, we will go through each one, one by one, and analyze their interaction

1. Physical Dominance

Tony Robbins dominates the physical interaction at each and every level almost all throughout.

Physical Jostling

Robbins not only touches Gary first and right away, but grabs him and pulls him towards him, you can see it here.

Of course, he does it in a friendly, joking way: any other way would basically be a fight.
But joking or not pulling someone into you is a big display of extreme comfort, strong confidence and (physical) dominance.

You generally don't pull in people unless you feel at the very least at the same level as them.
But more often than not, people doing so usually feel both extremely confident and somewhat superior. Sometimes they might *want* to make a point of being superior, but they would hardly do it if they didn't feel able to enforce their dominance.

Just imagine this: would Tony do that if he were meeting a country's president, or even a strong moral authority such as a priest?
Of course not.
And that can communicate a sense of superiority.

Even more telling than the initial grab and pull for me was the moment Tony grabbed and kissed Gary on the head.

Kissing someone says you care about them, but also that you take care of them.
Fathers kiss their children, and caring teachers kiss (very young pupils). But among grown-ups? Very seldom.

Thus, kissing Gary on the head can sub-communicates something "you're my kid brother" or:

> *You're the kiddo, I'm the big daddy here.*

Touch: a Master Persuader

Tony touches Gary more often, while Gary mostly touches him as an answer to Tony's touch.

Tony also touches Gary with open palms, which shows a caring touch and a strong, strong confidence.
Most men are indeed afraid of touching other men with open palms afraid of invading the sexual realm or of looking gay (read more here: *touching other men*). Check it out Tony using open palms here.

I'd like to draw particular attention to the times Tony touches Gary when he makes a point. This is master persuasion and something the most charismatic of men do (see below for more).

Gesticulation

It's not that Gary is not good, he is good.

But Tony is best in class when it comes to hand gestures and accompanying his speech with hand movements.

Also, Gary commits a few mistakes:

Gary Vaynerchuk:

- Fidgets around with a pen or his own hands
- Keeps his hands below the table
- Sometimes crosses his arms

Fidgeting is often considered a sign of discomfort and low confidence (*What Every Body is Saying*), not showing your palms can make it harder for the audience to trust and connect with you (*Winning Body Language*), and crossing your arms is often considered defensive (*The Definitive Book of Body Language*).

Now I don't actually think that Gary was nervous.
Gary Vaynerchuk's personality type seems to be on the hyperactive side of the spectrum, high-energy and restless.

However, our subconscious will not necessarily make any justification for fidgeting, so even hyperactive men stand to gain from learning to stop fidgeting around.

Tony Robbins:

- Never fidgets or crosses his arms
- Gesticulates a lot and is perfectly in sync with verbal production
- Shows his hands a lot

Also while keeping your arms close to your body is defensive, using the space around you says that you are confident enough to let your arms "invade" the outside territory.

Read more:

- **Body language**: a primer for understanding body language, body, and value-signaling

Physical Dominance: Last Note

Tony has the advantage of being physically bigger, making it easier for him to pull and move Gary.

Gary, however, never, ever looked intimidated or on his back foot.
He kept his behavior constant and never let up on his host's powers. Gary looks like a man doing his thing, no matter what happens around him and *to* him.
There was a specific time instead when Tony did feel the dominant hook thrown by Gary (you can see it here)

2. Verbal Dominance: Gary

Gary was slightly more dominant when it came to verbal dominance. Of course, the fact that he's the host is a huge factor.

But he also has a natural advantage because, as a hyperactive man, he's always so eager to speak that he often tramples the normally accepted social conventions.
For example, he has issues waiting for his turn to speak and interjects constantly.

This inclination also brought him to master a few great techniques to take the speaking stage and defend his speaking time.
However, this same inclination is also a limitation and a drawback for him (see below "interruptions").

Here are a few Verbal Power Moves he deployed:

Verbal Dominance Tip: Repetition

Gary is very aggressive in defending his right to weigh in.

It can be very helpful to know how to do it because it's a relatively common occurrence that when you start speaking the other person doesn't stop.

It can be because you started too early, but it can also be because the other person doesn't respect you or wants to display dominance over you.

If it's the latter, it's a good idea that you enforce your right to speak. Some people do it by simply speaking further, but that's not ideal and the beginning of your message will get lost. A much more effective technique instead is to repeat your first word over and over.

By doing so you are basically communicating:

> "*wait a minute, it's my turn to speak and I got something important I want to say, lemme say it please*".

Watch Gary execute it as he repeats first "this is what Buffet" and then "Buffet, Buffet".

Notice that Tony soon realizes Gary is acting like he has something important to say and that he isn't giving up.

Notice indeed Tony quickly wraps up and lowers his voice.
He's finishing his point while at the same time communicating to Gary that he can go ahead, and he will listen.

Verbal Dominance Tip: Keep Speaking to Defend Right of Speech

When you're speaking, some people might try to interject to make a quick point.
This often happens when people want to:

- Correct a mistake you've done
- Make a joke about what you're saying

When people stop speaking and either correct themselves or take part in the joke, they are communicating that what they were saying was not important.
And they are communicating that the interrupter is of higher status than they are and he has something more important to say.

So unless you've made a blunder that really needs correcting, it's a good idea you **keep going and finish your point when people are trying to interrupt you**.
At least if you are making an important point, that is.

It's not rude, or at least it doesn't have to be.
It's indeed a good idea that you acknowledge the interrupter. You can do it either with a slight smile or a nod of your head and then possibly address their point later on verbally.

Gary does it well here, see how he handles it:

These are the correct moves he used:

1. Raises his finger (= nonverbal "wait a minute")
2. Says "lemme just.. " (=wanted to say "lemme just finish")
3. Looks at Tony with crazy intensity (=I really want to finish this)
4. Does not laugh (=I'm not buying into your joke/frame)
5. Says "yeah right" AND
6. Diverts his gaze from Tony (=attention withdrawn, I'm cutting you off now) AND
7. Keeps talking (=I've acknowledged you, but now lemme finish)
8. Touches Tony at the end (=nonverbal way of getting attention: "hear me out")

With all these steps Gary communicates that he's not allowing Tony to disrupt his speech and that he should cut his interjection short because he's in the middle of making a point.

Avoid Subordinate Role

Dominating and leading is as much about dominating and leading as it is about… *Not* being dominated and led.

If you want to dominate the verbal interaction -and that's not necessarily a goal you should have!- a challenge you face is that whenever you ask a question the one answering becomes the teacher and you become the student who's learning. The student is the subordinate role.

When that happens, they take the authority trappings that come with the teacher position.
They are the expert and you're not, what they say is true, and what you say is not necessarily true, and when you two disagree they're always right.

It also becomes more difficult for you to defend your right to speak and enforce your right to speak and win arguments.

Why?
Because the people around will perceive you as a nuisance: why should you speak when it's not you who's got the answers and insights?
Why on earth would you think it's OK to interject if you have no authority there?

Provided you are also knowledgeable about the topic, you might then want to avoid the teacher/student dynamic.

A few techniques to avoid a teacher/student dynamic are to either make a debate out of the interview or to listen

with some perfunctory notes when they're speaking.

For example, you can:

- Say you agree (showing you got an opinion as well),
- Quote someone (you're knowledgeable on the topics' literature)
- Add something (you know what they're talking about)
- Slightly correct them (huge authority boost for you)

Gary does well a few times and a bit in his "over-the-top way" in a few more instances:

He goes a bit overboard with that "of course" while rolling his eyes up, which is demeaning.
He's communicating there that what Robbins is saying is so obvious that he is wasting his time.

I would avoid doing that anytime you want to keep a good relationship with people.
Of course, Tony ignores it because he's a top man, but deep inside he does register that's not a friendly sign.
It's also a behavior that can easily come across as rude and overbearing to the audience.

"Hear Me Out"

This is where Tony is way better than Gary.

Gary is a bit of a steamroller, a bit like a bull in a china shop. Tony has the same sheer power when he wants, but also has much more finesse.

When he wants to draw attention Tony uses some great techniques that the most charismatic men use, which are:

1. Fully focus
2. Leaning
3. Changing voice pitch
4. Slowing down voice tone
5. Touching

All of them are basically saying, "hey, I'm talking to you, I know my stuff and I'm dropping some major insight right now, pay attention".
Watch Tony do it here:

3. He Who Interrupts Dominates

This is the dark side of dominance.

And it's something you better use with caution or simply avoid any time that it's not strictly called for.

Not only it impairs your ability to build relationships, but it also makes it difficult for you to win friends and build allies.

People might respect you out of fear, but deep down all the people you interrupt resent you, and the audience cannot connect with you at an emotional level (*Pease & Pease* say everyone secretly hates the "dominant" back-slappers).

He doesn't do it as much as on other occasions, but a few times Gary still does it with Tony, here's an example:

You don't usually want to change the topic so abruptly without at least acknowledging first what the person just said.
The problem with that kind of interruption is that this is what they communicate:

> *What you said is meaningless, unworthy of my attention and I don't give a F if you might be offended about it*

Of course, you can see why that's an issue when you want to win people over and make friends :).
Here's how Gary could have changed the topic in a more polite way instead:

> (nodding for a few seconds and then turning to Andy) *Did you hear that Andy? That's what you should do too, do you have any Facebook stock?*

That way he would have acknowledged Tony, complimented him for a worthwhile contribution, and gracefully moved out of the topic with a win-win social power move.

Interruptions and Relationships

This is so key for great relationships that I want to make one last note.
You tend to see this interrupting, jarring behavior from certain personality types:

- hyperactive / extroverted
- socially oblivious
- self-centered
- narcissists
- dominant

Now not all these people are rude and not all of them are insensitive.
I believe Gary is a good-hearted person. But he's not helping himself when he ignores people, interrupts them, and abruptly cuts them off.

People who are over-eager to speak without listening indeed have difficulties in forging deeper relationships.

Remember, people feel connected to people who know them well, not to people whom they know well.

Hence, **deeper human relationships are built on listening more than on speaking** (*How to Talk to Anyone,* Leil Lowndes).

Also, read:

- How to bond and emotionally connect

You can see Grant Cardone, a personality similar to Gary, committing those huge blunders in his personal romantic relationship: *Grant Cardone 4 Communication Mistakes.*

Overall: Tony Most Dominant & Best Communicator

Overall, in spite of Gary's slight rudeness in his interruptions and interjections, Tony Robbins still comes across as the most powerful man in the room.

What's most impressive, he does it while still keeping an overall vibe that is warm and welcoming.
When you're a leader who's dominant and respected but warm, welcoming, and caring at the same time, you're basically at the pinnacle of social skills.

Tony seems to have higher *emotional intelligence*: most people meeting both of them would feel closer to Tony than they feel to Gary.
And the same is probably true also for most audience members just watching,

However, nobody is perfect, and Tony had his muck-ups. Check out:

- Tony Robbins “me too” communication blunder

As a last note:
This analysis interprets observable behaviors in a single interaction and does not claim to provide final assessments on personality.

Zero to One: Summary & Review (Peter Thiel)

Lucio Buffalmano · 14 November 2017 · Archived copy · Original

Zero to One is a book on the mindsets of disruptive entrepreneurship. Peter Thiel, the author, says that mindsets come first because there is no guide to being a successful entrepreneur, but the mindsets will always apply.

Contents

- Overview
- Notes
  - Chapter 1: The Challenge of The Future
  - Startups Need New Thinking
  - Chapter 2: Party Like It's 1999
  - Chapter 3: All Happy Companies Are Different
  - Chapter 4: The Ideology of Competition
  - Chapter 5: Last Mover Advantage
  - Chapter 6: You Are Not a Lottery Ticket
  - Chapter 7: Follow The Money
  - Chapter 8: Secrets
  - Chapter 9: Foundations
  - Chapter 10: The Mechanics of Mafia
  - Chapter 11: If You Build It, Will They Come?
  - Chapter 12: Man And Machine
  - Chapter 13: Seeing Green
  - Chapter 14: The Founder's Paradox
  - Zero To One: Conclusions
  - Practical Applications
  - Cons
- Review

Overview

- Don't look for incremental, look for 10x: have the hubris to dream big
- Think like an **enlightened cooperator:** don't think to disrupt, don't think competition: think new, think value-adding
- Pick founders and employees who share your same vision and your same culture

Notes

About the Author:
Peter Thiel is a billionaire entrepreneur, investor, and venture capitalist. He is most famous for having launched PayPal with Elon Musk.

Mindsets Come First

Every major moment in business happens one time only.

The next Zuckerberg won't build a social network and the next Larry Page won't build a search engine.
Your best bet then is to learn the mindset of going from zero to one:

Chapter 1: The Challenge of The Future

Peter Thiel says that the future is only the future if it's different from today.

If society doesn't change for a thousand years, then the future is a thousand years away. If things change drastically over the course of a decade, then the future is now.

The author says that nobody can see the future, but we know two things about it: it will be different, and yet it will be rooted in today's world.

Zero to One: The Vertical & Horizontal Way

Thiel talks about two different kinds of changes: horizontal and vertical.

- Horizontal: Horizontal means incremental improvements on what exists already
- Vertical improvement means doing something completely new.

Vertical is not easy to do and to envision because it means finding new paths that nobody has explored before.

That means going from Zero to One.

Peter Thiel says that globalization is a horizontal change: taking what works in one place and replicating it somewhere else.
China wants to be and do as the United States does.

But without radical changes in technology, **the world cannot sustain billions of people living with the same US standards**.

Startups Need New Thinking

In some big and dysfunctional corporations entrenched interests work as a roadblock to change.

In those organizations, politicking is more important than getting work done.

If that's the case in your company, you should quit.
Also, read:

- Office political players

On the other hand, a startup's most valuable asset is a new way of thinking. What a startup must do is question ideas and rethink businesses.

> Brilliant thinking is rare, but courage is in even shorter supply

Chapter 2: Party Like It's 1999

Peter Thiel says that the dot.com bubble taught entrepreneurs four fake big lessons:

1. Make incremental advances: the only safe path
2. Stay lean and flexible: plans are seen as a straitjacket. "try things out" instead, don't plan
3. Improve on the competition: don't try to enter new markets prematurely
4. Focus on product, not sales: if you need sales, your product is not good

Thiel says the opposite is true instead:

1. Better to risk boldness than triviality
2. A bad plan is better than no plan
3. Stay away from competitive markets: they destroy profits
4. Sales matters (as much as the product)

But the dot.com bubble wasn't just madness, Thiel says.
It had some clarity and vision.

He says we need to look into the future, think big and we need that 1999 hubris to achieve it.

My note:
you can see this book has been a few years now. Thinking small is nobody's problem these days. *10x* and moonshots have actually become the new norm. Possibly, Zero to One helped shape this culture.

> The most contrarian thing of all is not to oppose the crow, but to think for yourself

Chapter 3: All Happy Companies Are Different

The business equivalent of a contrarian question is:

> What valuable company is nobody building.

Peter Thiel talks in this chapter about monopolies and perfect competition.

Monopoly though means something different in Peter's vocabulary: **monopoly is a company doing something so good that nobody else can offer a close substitute**.
Google is such an example of a company achieving monopoly for having gone from zero to one.

My Note:
This is simplistic in my opinion.
Once you are a monopoly you can leverage networks and integrations to keep your sub-par product afloat even if it's not the best.
Google, for example, could have a poorer map, but the competition can't usurp it because Google can integrate it with all its other products.

Monopolies Power Moves

Monopolies want to look non-dominant and weak by defining their markets broadly.
Normal companies want to look unique.

Basically, they do the opposite: monopoly companies define their market broadly and say they're in tough competition because they don't want unwanted attention from regulators.
Businesses in a competitive market instead define their markets very narrowly so they can dominate them.

An original Tajikistan restaurant, for example, might say they're in a league of its own as the only restaurant of its kind in the city.
But what if the market is not Tajikistan food, but simply all the restaurants?

Monopolies Are Good Companies

Thiel says monopolies are the best companies in the world.

Since they don't have to worry so much about profits, they can allow themselves to treat their employees well, to invest in new helpful technologies, and fund social projects.

It's the companies in perfect competition that are the most cut-throat businesses instead.

All happy companies are different because they solved a unique problem or came up with a unique, life-changing product. All failed companies instead are the same: none of them came up with a great new product.

Chapter 4: The Ideology of Competition

Thiel says it's just economists who frown over monopolies and love competition.

It's our society that has embraced the competition ideology.
Our educational system is based on competition and businesses love war references ("make a kill", "sales task force" etc.).

The author says that wars start for trivial reasons and keep going without any real reason.
Microsoft VS Google is such an example, taking on each other with a myriad of competing products.
Until Apple came along and focused on innovating instead of battling and made a killing (pun intended).

Thiel says competition is a destructive and distracting force instead.
Better to make alliances instead, as he did with former competitor Elon Musk to build, together, PayPal.

Chapter 5: Last Mover Advantage

Short-term profit-making culture pervades many startups.

He says the most fundamental question instead is: will this business still be around 10 years from now?

Numbers alone can't tell you the answers, but you have to think critically about your business.

He says that there's no surefire way to build a monopoly, but each monopoly shares four characteristics:

1. Proprietary Technology: great tech improving on the past in order of magnitudes (IE: google search, iPad)
2. Network Effects: when so many people use a product the scale tips and everyone joins
3. Economies of Scale: monopoly businesses get stronger and growing bigger (not the case for service businesses)
4. Branding: a brand should embody an ideology

Disruption

Peter Thiel says disruption has become a buzzword for anything that wants to sound trendy and new.

He says that **the disruption mindset is silly and counterproductive**.

When you call yourself disruptive you look at yourself through the eyes of other companies that become older and the enemies.
But **your act of creation should be the focus, not disrupting and upsetting** this or that industry.
Also, when you see yourself as the dark horse rebel you become focused on roadblocks and enemies.

But seeing yourself as the dark horse upsetting the world only brings trouble.
Think about Napster, Thiel says, who wanted to take on the whole music industry.
Troublemakers are sent to jail, and troublemaker companies are sent to Chapter 11 courts.

The author says PayPal was disruptive, but they didn't want to challenge any competitor and they ended up bringing more business to other payment methods eventually.

> Don't disrupt: add value and avoid competition

This was the 5-star idea in this book alone.
It's the idea of collaborative frames I espouse on this website. Also, see the *"fundamental strategies of power"*:

> The 4 Fundamental Strategies of Power

The Last Will Be First

There's no inherent benefit to being the first.

It should be a tactical move, but not your goal. It's far better being the last instead and enjoying years of monopoly profits.

You do that by dominating a niche first and then expanding from there.

Chapter 6: You Are Not a Lottery Ticket

Peter Thiel here talks about "luck" and its role in business success.

He says the phenomenon of successful serial entrepreneur calls into question the "luck logic".

My Note:
The serial entrepreneur thing is no proof, to be honest. One might easily "get lucky" twice. Or even thrice. Pretty sure there are several double lottery winners in the world (also read: *Fooled by Randomness*).

The author talks further about pessimists and optimists and about Lean Methodologies.
He says six sigma and lean methodology is about incremental improvements and will not get you from zero to one.

Chapter 7: Follow The Money

Thiel says that anyone without a salary or stock options is misaligned with the company's interests.

Part-time employees and external consultants don't work because they don't have aligned interests.
They don't really have the best future of the company at heart.

My Note: Great!
Great insight on aligning interests. This is one of the basics of the "**healthy cynic**" approach and of "**enlightened win-win**"

> Life Strategy: The Enlightened Collaborator

Even remote workers should be limited as it's easy to disalign without daily face-to-face.
The hiring decision should be binary: either fully on board or not.

Another interesting trend the author found, which was illuminating for me was that the less the company pays its CEO, the better it does.
Too high salaries make CEOs behave more like politicians busy defending the status quo.

A low salary also sets an example for the rest of the company.

Chapter 8: Secrets

Peter Thiel says in this world most people don't think there are any "secrets" left to discover.

My Note:
I can so relate to this.
As a kid first learning about Columbus and the explorers I always thought the world by now had it all figured out.

Of course, the truth is there are countless "secrets" left to be found and countless problems left to be solved.

Chapter 9: Foundations

You'll always make mistakes, but a few things you better get them right at the beginning.

The author says indeed that early mistakes are often very costly.
The constitution hardly ever changed even though an update would be beneficial.

Similarly, early mistakes in choosing your co-founders or even early employees are damn hard to correct.

Often the beginning of a relationship is full of excitement, but when it dissipates, if major rifts take place, they can easily take the whole company down.
Thiel says that these days he only invests in startups where the founders share a history and knew each other long before they started pitching VCs.

Set Up Clear Structure & Clear Responsibilities

Thiel says that a clear structure and clear responsibilities will help keep people in line in the long run.

A basic structure tells you who:

1. Owns the company (ownership)
2. Runs the company on a daily basis
3. Formally control the company affairs

The author says that distributing ownership in theory gives everyone incentives, but it also multiplies the chances for dis-alignment and internal power struggles.
Keep the board small then.
Similarly, everyone should be doing one thing and evaluated for that one thing only.

My Note 1:
This reminds me of *Eleven Rings* when Phil Jackson says that having clear roles allows people to focus on the task rather than wasting energy on it.

Keep Equity Shares Secret

Equity is a great way of aligning interests and keeping individuals motivated.

However, it must be allocated smartly.
Giving everyone the same is a mistake, but giving differently and making it public is also a mistake as that will breed resentment.

Time is also a huge differentiator in a fair equity distribution.
For example, if the company explodes in value a secretary joining Ebay in 1996 would make and own more than anyone else joining in 1999.
So to avoid any issues… Keep the details secret.

Chapter 10: The Mechanics of Mafia

Corbis/The Telegraph

Thiel says that in the ideal culture, employees love the company and love their job to the point they don't look at when it's time to go home.

The author poignantly asks: why should an engineer be the 20th hire instead of going for Google for more money? Well, the answer is specific to your company, but it's related to:

1. Your Team
2. Your Mission

The perfect hires are excited *specifically* to work with your company because of what you are trying to achieve.

And they want to join because they are perfectly in sync with their colleagues already working there.
When everyone perfectly fits in and is bought into the mission, the company will look like a cult.
And that's a good thing.

Sometimes your company won't make sense to external people. But that's OK. Better to become a cult. Or even a mafia.

The opposite of a cult are firms like consulting companies (Accenture for example). Consulting companies don't have a mission on their own and consultants are always rotating in and out of companies they have no link to.

> No company has a culture. Every company IS a culture.

Chapter 11: If You Build It, Will They Come?

Peter Thiel says there's a certain anti-sales mindset in Silicon Valley.

The idea, as wrong as it is, is that if you need to sell a product the product is not that good.

The author says that marketing and advertising work, and works on everyone, including the people who say it doesn't work.
Actually, sales might matter more than product. Sales and distribution can create a monopoly, but a great product

without strong sales distribution won't spread by itself.

Viral Marketing

A product is viral if the core functionality leads you to invite their friends to also use your product.

Check *Contagious* to learn more about how you can make your product more likely to become and go viral.

Chapter 12: Man And Machine

Peter Thiel says the debate of man VS machine or even machine taking over people's tasks is a silly one.

Computers are complementary to human beings, not substitutes.

And the best companies will be built by entrepreneurs empowering people, not taking away their jobs or their tasks.

Chapter 13: Seeing Green

Peter Thiel talks in this chapter about the failure of the cleantech bubble.

He says the reason for the failure is to be researched in 7 key areas every business must address:

1. Engineering: can we create breakthroughs instead of incremental
2. Timing: is now the time to start your business
3. Monopoly: are you starting with a big share of a small market?
4. People: do you have the right team
5. Distribution: do you have a way to distribute your product
6. Durability: will your market be defensible in 10 years in the future
7. Secret: have you identified unique opportunities others don't see?

If you nail all the seven you'll grow a monopoly and amass a fortune. Even 5 or 6 might work.

Thiel says you should dominate a small market first instead of going for a big one.
Big markets are usually competitive, so better build your foundations on a smaller niche and then go big.
Facebook, for example, started with Harvard first. Then universities. And then the world.

Peter Thiel analyses the tech bubble along those 7 variables and then goes into why Tesla has been successful by nailing those seven variables.

> Huge markets are highly competitive, not highly attainable

Chapter 14: The Founder's Paradox

Thiel talks about how paradoxical founders can be and what a difference they can make to a company.

A founder can also become the main figure of the whole company, and in spite of the modern tech they build, come to resemble kings of feudal time who imbibe their companies with their spirit -or use their persona for further marketing, hard to say sometimes-.

This chapter made me think of ego-driven CEOs and sociopaths' founders (read *Bad Blood* for an example).

Zero To One: Conclusions

Thiel says we need new technologies to build a better future.

No other options are possible.

Even a plateau would mean trouble for us, because in a world with finite resources and a growing, consuming population, that would be unsustainable.

Go ahead fellow founders and creators then, we need people going from zero to one.

> **To sustain life on Earth, we need Zero to One Entrepreneurs**

[image]Practical Applications

There are many key mindsets.
Here are a few to keep in mind:

- Don't focus on "disrupting": it gets you in a uselessly combative mindset
- Pick your co-founder as you'd pick your husband/wife
- Hire people who believe in your mission and fit your culture
- Don't look at the size of the overall market: dominate a niche, then go from there

Cons

- **Disagree with some analyses (ie.: monopolies are good)**

I don't agree with some analyses by Peter Thiel.

The idea that monopolies are good companies that treat employees well and experiment with new helpful technologies is not completely wrong but also *somewhat naive.*

Google's employees are as money and as power-driven as anyone else, and they will want to make sure that their products are commercial successes so so that they can line up their pockets.

And being a monopoly allows them to squash any new upstart, thus possibly stifling competition and new products which could be more useful to the customers.

- **“Be like a mafia”**

The way he talks about “being like a mafia” is somewhat misguided in my opinion.

- **Elon Musk is a great salesman?**

Peter Theil says that Elon Musk is a master salesman.

But I have some doubts.
Sales is a people’s profession and, in all his genius, Elon Musk does not shine for emotional intelligence and social skills:

Geoffrey Miller lists Peter Thiel among the “Aspergers who benefit the world”, and that might be the reason why Thiel is not the best one to judge other people’s social efficacy.

Also, read the full article here:

- Elon Musk’s emotional intelligence (and how he was emotionally manipulated by his ex-wife)

Review

“Zero To One” is a great book on entrepreneurship.

It’s a mix of mindsets, psychology, and sound business advice.
You will certainly benefit from reading it.

Incognito: Book Summary & Review

Lucio Buffalmano · 16 November 2017 · Archived copy · Original

Incognito examines the unconscious part of our brains and how they interact with our conscious brain.

TPM Note: Useful, but potentially disempowering
While much of our thinking and reacting happens automatically, this book sometimes leans toward a more deterministic and disempowering view of human nature and rationality as not being in control.
At TPM we prefer to a different frame: **you are influenced by forces you don't see, but not controlled by them**.
And learning about them further increases your control.
And ultimately, whatever portion of your mind you do control is what matters.

Takeaways

- **Our conscious mind is only aware of a tiny fraction** of what goes on -both within us and outside us-
- Our mind is made up of **competing forces and beliefs**
- **Genetics are important, but not everything**. Who you are and your actions are the result of too many variables to predict anything

Notes

About the Author:
David Eagleman is a neuroscientist and professor at Stanford University.

Chapter 1: There's Someone In My Head, But It's Not Me

David Eagleman says that most of what we do, think, and feel is not in our conscious control.

Consciousness is a minor part of the operation of the brain, and it has little access and even less knowledge of the processes taking place "beneath the hood".
You can easily realize when you:

- Hit the brake pedal even before you know why
- Find someone attractive – but can't really explain why
- Hear your name… Even though you weren't listening to the conversation

Even when you think that you came up with something, in truth, it wasn't probably a moment of genius, but your brain did all the work in silence before the answer finally came up to the conscious part of the brain.

Chapter 2: The testimony of the senses: what is experience really like?

David Eagleman says that most of our experience is a personal and subjective construction.

We're not really perceiving objectively what's out there, but simply our own interpretation of it.

And our brain makes all types of assumption that allows it to save time and resources, says the author.

For example, as you read, you are not aware of your left foot.
Now that you read i,t though, you might consciously think about it, but you're not aware of exactly what's on the side of your computer.

If there's a noise coming from another part of your room, then you won't be aware of your computer for a while because all your attention and senses will be diverted toward the noise.

Basically, at any time, we only really know what we need to know, which is a tiny, tiny slice of the world around us.

David Eagleman uses a few more examples to highlight how our brain makes up facts based on pure assumptions.

For example, our eyes have a blind spot, but we're not aware of it because the brain simply takes the information around the blind spot and fills it up (here's an experiment to check your blind spot).

The brain is plastic in the data it can accept, read and make sense of.
This opens up the door to amazing future possibilities.
We'll be able to plug ultraviolet or infrared light data. Our brain will struggle at first but eventually will learn to make sense of the information and use it.

Chapter 3: Mind: The Gap

David Eagleman takes it one step further in chapter three.

Not only do we not fully what is happening in the world around us, but we also don't even consciously access all that we know.

And it's not just breathing or blood flow, but also riding a bicycle, driving… These are all skills we have but that we don't consciously access.

These are all complex tasks ingrained within ourselves that would not benefit at all from conscious "meddling".
And we realize how complex these seemingly easy tasks are with artificial intelligence and robotics.

Robotics started with quick progress, but for decades it still hasn't overcome the most simple of human tasks: crossing a road safely, walking on a sidewalk without falling, etc.

We Like Those Who Are Like Us

People tend to marry partners with the same initial of their name more often than pure chance otherwise would have.

David Eagleman says it's because people with the same initial somehow remind us of ourselves (also discussed in *Influence* by Cialdini).

The same goes for a product we buy or say we like: we tend to prefer products with the same initial.

Psychologists say it's because of unconscious self-love or perhaps because we like things that are familiar (in psychology it's called implicit egotism).

My note:

I wish the author had explained whether we like people who are familiar with us because they remind us of ourselves or because we like things that seem familiar.

Mere Exposure Effect

We tend to like what we are familiar with.

If we saw a face before and then we see it again, we will judge it as being more attractive.
This is why some people in the public spotlight are often not bothered by the negative press but are happy anyway that they'll get airtime and people will be exposed to them.

Similarly, we are more likely to believe as true what we heard several times, independently of whether or not it was true in the first place (Trump used it across his campaign and even in the debate with Clinton, *check here an analysis of his tricks*).

An experiment showed people were more likely to rate as true statements they had heard before, but which they couldn't remember they had heard. As crazy as it might sound, it worked even when people were told the statements were false!

Energy and Specialization

The author then goes here into a well-known phenomenon of the learning process.

Our brains are hyperactive and burn lots of energy when we learn a new skill.
Once the skill is learned, the brain slows down.
The skills become part of the brain's system and now not much energy is needed anymore.

An athlete who has become great at a task will not think much about the task when he's playing.
That's why when he's learning he should push himself beyond his comfort zone and when he's playing he should be in the zone and not think much

For more on peak performance, read:

- Peak
- Mastery

Chapter 4: The Kind Of Thoughts That Are Thinkable

Not only the reality we see is only a tiny portion, but also the thoughts we can think are very limited.

We can't comprehend the vastness of the universe or the number of stars and celestial bodies in it for example.
The same is true for our instincts. We can't see or access our instincts.

Chapter 5: The Brain Is A Team Of Rivals

David Eagleman begins chapter 5 with Mel Gibson's example.

Mel Gibson viciously attacked Jews and then retracted everything.

The author asks: What's the reality, does he really believe what he said about Jews or is it possible our brain holds different views at the same time?
Is it possible to have a racist part of our brain and a non-racist part of our brain?

Well, it turns out, yes. **Our brain is constantly driven by different forces pulling in different directions**.

The author says we could divide our brain into two forces:

1. The rational part of our brain analyses information in the outside world, while

2. The emotional part of our brain monitors our internal state and worries about the consequences.

Short Term VS Long Term

You know the feeling: someone offers you a piece of cake, or you sit down to eat and love the food.

One part of us wants to eat everything, while another part of us wants to stay stronger so we can keep our weight.

One part of us is concerned with the short term and indulges the immediate satisfaction, while another part of us wants to play the long game and do what's best for us.

My Note:
Successful people are the ones able to resist the pull of immediate satisfaction, control their own minds and instruct their bodies to do what is best in spite of the difficulties and hardships (also read: *The Marshmallow Test* and *Grit*). This is what constitutes emotional intelligence, and that's why Daniel Goleman said that Emotional Intelligence predicts 80% of success (read *Emotional Intelligence*).

Emotional / Rational Balance

David Eagleman says the internal struggle is actually optimal, we do need a balance of "right now" and "future" and a balance of rational and emotional.

The author also mentions the current technology might pose a problem.
In today's world, we take a lot of decisions when we are far removed from the people that will be affected, and that will make us less "emotional", and hence less concerned for them (also read *Leaders Eat Last*).

Action / Feelings / Meaning Connections

David Eagleman says that "hidden programs" beneath our conscious level drive actions while our left hemisphere finds a way to rationalize and justify.

We are constantly looking for meaning, even when there's none, which often leads to loads of wrong rationalizations.

The author says our brain looking for meaning is the same reason why we are happier if we sit straight or force a smile. The brain reads the smile and says it must be because we're happy.

This is sometimes referred to as "sense-making" *in psychology*.

Consciousness = CEO

The conscious part of our brain acts like a CEO.

He sets the goals and then the vision and the rest gets to work.
The CEO is not aware of most of what goes on, but only steps in when his attention is required.

Chapter 6: Why Blameworthiness Is the Wrong Question

David Eagleman says there's no evidence that convincingly supports free will.

Then he goes into something I fully disagree with: that we are the product of both nature and nurture, but that we choose neither.

He says, depending on the brain chemistry we are born with, or with the genes that have been activated in our environment, some of us are more prone to violent behavior or addictions.

The author is very clear though that it doesn't mean we will not punish criminals.
Explanation does not mean exculpation, he says.

It simply means we need to find better ways to cope with people's problems. Something better than just jail, something to help them improve and society regains honest citizens.

Chapter 7: Life After the Monarchy

How to cope with our meaninglessness?

This chapter talks about what's left for us humans to feel special about after we're not at the center of the universe anymore, we're not created by God and we're not even controlling forces of ourselves anymore.

My note:
I disagree with this notion of us having been dethroned wholeheartedly.

Much More Than DNA

We're definitely tied to our biology, and yet the variables that influence us and our behavior as so innumerable that mapping everything is nearly impossible.

For example, have we found any genes that correlate to schizophrenia? Yep… Hundreds of them.
And yet the most important predictor is the passport people have.

If someone lives in a foreign place and looks different and he suffers because of it instead of being proud of his heritage… He's at higher risk of becoming schizophrenic.

Genetics play a role, but at the end of the day, says the author, we behave and turn out immensely different than what's written in our DNA.

My note:
And that's exactly why I don't buy the thesis about humans having been "dethroned" by anything.

CONS

Disempowering frame– at times-
David Eagleman is upbeat in the narrative and never says anything in the tone of “we’re screwed”. But at times it feels like that.

Not the most practical
Lots of info, but not so much highly applicable advice.

Review

“Incognito” is a good book on the human mind, yet at times I find it dramatic rather than scientifically and rigorously detached.

David Eagleman talks about the “dethroning revolutions” of human history.
Earth is not at the center of the universe, the subconscious, and now his book shows how little we really control.

I don’t feel less empowered in discovering how the brain works.
It does NOT matter how much you can control. Your task is simple: whatever you can control, you’ll do your best on that.

That’s it.

And whether that control is 0.1% or 99%… It doesn’t even matter.
This leads me to the last part I disagree with, which is that I believe you control yourself… A lot.
If you want to. And if you are willing to put in the work.

Predictably Irrational: Why We Are Not Rational (Book Review)

Lucio Buffalmano · 18 November 2017 · Archived copy · Original

"Predictably Irrational" (2008) is a book on psychology, biases, and introductory game theory in which Dan Ariely explains that not only are we irrational, but follow "patterns of predictable irrationality".

TPM Takeaway: Behavioral economics explains cognitive bias, but you need more for social success
Ariely's summarizes findings from behavioral economics, and most underlying mechanisms were already established in psychology and sociology. From a TPM perspective, they're useful and interesting, especially for marketing and entrepreneurship. For personal success, TPM's core frameworks like **social exchange** and **power dynamics** are more useful in real-world influence, status competition, and strategic interaction.

Overview

- We have no idea of intrinsic values: we only assess them by comparison
- Rationality goes out the window when emotional or aroused
- We are very likely to cheat when we have the chance and when we can easily rationalize

Notes

About The Author:
Dan Ariely started out studying physics and mathematics and only later transferred to psychology.
Today, he teaches psychology and behavioral psychology at Duke University.
Edit 2023: Dan Ariely has been accused of fabricating data for some of his research.

Chapter 1: The Truth About Relativity

Dan Ariely says we don't comprehend the world around us in absolute terms, but we make sense of it via comparisons.

For example, the author ran an experiment with The Economist newspaper. He asked his MBA students to pick among the different options presented, which were:

1. Internet-only subscription: $59
2. Print-only subscription: $125
3. Print-and-Internet subscription: $125

The second print-only option makes no sense when we see the third one, so 84% picked the third one.

But when the students were presented with two options only 68% chose the cheaper Internet-only subscription:

1. Internet-only subscription: $59
2. Print-only subscription: $125

The print-only option is the decoy.
It seems expensive and when we see that at the same price, we can also get Internet access, for free (!), the print-and-Internet seems immediately more attractive by *comparison*.

Here is another example:

Imagine you are undecided between a holiday in Venice and Florence.
Both packages come with a free tour, how could you sway the decision? You could add a third package for Venice with a paid city tour. This third option seems the least attractive and nobody will pick it.

However, it provides a term of comparison for Venice with a free city tour. Now most people will go to Venice with the free tour.

The Same Applies to Dating

And now the dating example.

Imagine there are two good-looking possible mates, mate one and mate one. Then we add a third one comparable to make two:

1. Attractive Mate One
2. Attractive Mate Two
3. Less Attractive Mate Three and similar to Attractive Mate Two

Now most people -75% as per Dan Ariely's MIT experiment- will go for Attractive Mate Two because they can compare it to Less Attractive Mate Three.

Chapter 2: The Fallacy of Supply and Demand

Supply and demand is not a realistic model.

Why?

Because we comprehend the world and assess values based on the *comparison*. There is no direct relationship between price and demand.

Prices can easily become irrational when there's no comparison or when the other items of comparison are irrational.

Indeed, when a consumer has no previous reference to a product you could place that product among other highly expensive and luxury products. Then you could sell it for a price that is aligned with the products around you instead of picking a price correlated to the costs and availability of your product.

Similarly, you can anchor your services early by mentioning a very high price at the beginning.
Cialdini mentions a friend of his who would simply say "I'm not going to charge you a million dollars". The simple sentence would make anything coming after seem like a very small number (check here *Pre-Suasion*).

Burning an Anchor

Dan Ariely says that price tags are not necessarily anchored by themselves.

They do become an anchor when we seriously consider buying that product.
At that point, we will compare each future product we review to that first pricing anchor, which we will use to judge future products as being cheap or expensive.

This makes a lot of sense since our brain does absorb information mainly when we pay full attention.

Arbitrary Coherence

Arbitrary coherence is an extremely interesting phenomenon.

It says we stay coherent with previous decisions, but the very first decision which gave impetus to our "rational coherence" might have been completely irrational.

For example, an experiment had students write down their Social Security Number and then bid randomly on a few items.
The students whose SSN ended between 80-99 were bidding 3 times higher compared to students who had written numbers ending between 0-19.

Their bidding stayed constant compared to their first bid which also functioned as an anchor, but the very first bid had been irrationally anchored by their SSN.

Other experiments proved that changing an anchor once it has been set can prove challenging and may fail.

Self-Herding & Building Habits

You probably know people tend to follow other people, right (*social proof*)?

Here's what Dan Ariely adds, though: we "herd ourselves" by looking at our past behavior.

For example, you might not like Starbucks, but one day you happen to have a date there and have a good time.
The day after you decide to give it another try and really like one of their coffee.
The third time you pass by Starbucks you have now 2 previous great memories and you are much more likely to go in based on your own past behavior.

With positive experiences, you anchor yourself to build new habits.

Chapter 3: The Cost of Zero Cost

Dan Ariely talks about the emotional pull and call to action that "free" represents.

Even when a service is priced at a "symbolical price", say less than 1 Euro, **there's a huge gap between any super small price and "free"**.

For example, when free shipping was offered by Amazon, sales jumped. They jumped everywhere except in France.

Were French people being more rational?

Not really.

In France, the price was left at a symbolical 1 Frank (0.2 cents). When it was replaced by “free” sales jumped in France as well, even though the difference between 0.2 cents and free was meaningless.

Another example?
Try to notice the length of the queue the next time you see some products offered “for free”.
Of course, those people in line probably don’t believe that time is money :).

Chapter 4: The Cost of Social Norms

Some people will work harder when there’s no monetary reward than when they are being paid to carry out the same action.

Ie.: people work harder for a cause than for cash.

The author divides the motivational forces into two camps:

- **Social Norms**: rules you obey when you help a friend
- **Market Norms**: the rules you follow when you work for a salary

When you offer someone money to carry out a task they were doing because of social norms you bring a major shift in the interaction because you go from Social Norms to Market Norms.

For example:

a bunch of lawyers was asked to help pro bono and a good chunk agreed.
Another group of lawyers was asked to help with money and most refused.

When they were asked to help pro bono, social norms applied and some of them were happy to help. But when they were asked to help with money, the market norms applied and the sum of money seemed low compared to their hourly fee, so they refused.

Small gifts are also perceived as being in the social norms.
But small gifts with a clear price tag shifted the interaction into market norms because it told people exactly how much you paid for the gift,

Should You Pay For Dates?

Dan Ariely also reflects on expensive dates.

Yes, they will impress your date or your mother-in-law, but they risk shifting the relationship from social norms to market norms. And once you are into the market norms, it’s difficult going back to the social norms.

My note:
Indeed the risk is that of shifting the interaction from a meeting of two connected souls to an exchange. For example, his money for beauty. This is why many cool guys don’t appreciate women who expect men to pay for them (check: **biggest early dating mistakes**).

Using Extrinsic Motivation

Since a cause is a bigger motivator for many people than money, you should hire people who believe in your cause if you have a company.

This is exactly what Peter Thiel says in *Zero to One* and the bond of people going after a cause is what he means when he says “mafia”.

And this is why you should be careful in rewarding people with money because that doesn’t make people feel like

your friends or part of a cause, but more like employees working for a paycheck, which will reduce motivation.

Companies Getting Social Norms Wrong

Mixing the two different realms of social and market norms is a mistake many companies do when they try to present an image of a friendly and trustworthy relationship with their customers but then hide fees or "punish" users with fines.

The same goes for the relationship between companies/employees.

The author says the current focus on short-term gains and cost-cutting is destroying the relationship by moving farther and farther towards a colder market norms realm.

The author says, righteously so, that company can't have it both ways.
You can't have loyal employees working hard for you and fire them if they get sick or when you need to meet Wall Street expectations.

On the topic also read:

- How to deal with a terrible boss when you have such a market-oriented boss
- The Rules of Social Exchanges for more on social exchange
- Corporate manipulations

> **People work harder for a cause than for cash**

Chapter 5: The Influence of Arousal

Humans also become irrational while in "special states", for example, when very emotional or when sexually aroused.

In an experiment with Loewenstein, Ariely asked students questions when they were sober and then when aroused.

The questions included some like using condoms and the likelihood of administering drugs to a woman to increase the likelihood of questions.
It was chilling enough to read that 5% of men answered they'd give women drugs to have sex, and even chillier to read that number jumped to 26% when put in an aroused state.

The bottom line is that **we are not the same people when emotions take us over**.
This is why, the author suggests, it would be a good idea to plan for altered states when we are actually sober.
For example, systems that do not allow us to drive after drinking (also read "*Nudge*").

Chapter 6: Procrastination and Self-Control

Our tendency to procrastinate gets worse when we have total freedom and the quality of our work drops.

Dan Ariely divided his class into 3 groups who were supposed to hand in three different papers.

- One group had no deadlines, just handing all the papers in by the end of the last class.
- The second group had self-imposed deadlines.
- And the third group had deadlines set by himself for every single paper.

The group with "external deadlines" did the best. Second came the group with self-imposed deadlines and last the one with no deadlines at all.

Self-Control Hacks

We all have procrastination issues, but those who do best are the ones who know and recognize their weakness and find ways around it.

With procrastination, pre-committing to specific dates works.
Best of all, if you can set many different dates for a big project each sub-task with its own date.

If your issue is credit card spending, you could avoid credit cards or set a very low limit that simply won't allow you to rack up debt with impulse decisions.

Chapter 7: The High Price of Ownership

We rarely make rational decisions when it comes to ownership.

The three major irrational quirks related to ownership and sales, the author says, are:

1. Falling in love with what already possess
2. We focus more on what we can lose (rather than gain)
3. We assume others share the same feelings about our belongings

Other quirks of ownership are:

1. The harder we work on something the more we appreciate it
2. We feel ownership before we actually buy it

Feeling ownership before we actually buy a product is why selling techniques like the puppy close, test drives, or *lowball techniques* work.

And it's the same reason why we often end up overbidding at auction sales. It's because we try the product or start imagining owning it, and we get addicted to those feelings that we don't wanna lose them and just need to proceed with buying it.

Chapter 8: Keeping Doors Open

Dan Ariely says we have an internal drive to keep our options open.

Often it's a good thing, but many other times it only leads to wasted opportunities, decision-making paralysis, and a lack of specialization (to specialize read: *Mastery*).

Dan Ariely devised an experiment to find out if people were actually going to earn less money, or even pay, simply to keep the options open. And lo and behold, they did.

It's much better than choosing something and then actively closing the doors of other possibilities so that they don't distract us any longer and can focus on something.

My Note:
Angela Duckworth makes a compelling case that by staying at something not only do we get better, but we also start liking it more.

indecision in predictably irrational

Chapter 9: The Effect of Expectations

You know this, don't you:

If we expect something to be good, it's likely going to be good and if we expect something to be bad, it's likely going to be bad.

Ariely ran many different experiments highlighting that what we expect influences our decisions.
For example, students preferred beer with vinegar drops in it, but when told about the vinegar drops, they all preferred the normal beer.

Students also rated higher the coffee that was presented in fancy cups and in upscale environments because the cups and environments led them to believe the quality of the coffee itself had to be superior.

Interestingly enough, Coca-Cola says tests prove that people prefer Coca-Cola, while Pepsi tests say people prefer Pepsi.
They're both right, the only difference is that Pepsi's tests were with a covered logo, and Coca-Cola's was with its logo showing.

People were swayed by Coca-Cola's brand and picked Coke even though they actually would have preferred Pepsi when picking blind.

Stereotypes Work on Expectations

Expectations are also the reason why stereotypes have real effects.

And we not only behave toward people according to their stereotypes, but we also behave ourselves according to our own stereotypes.

Women reminded of their gender before math exams performed more poorly compared to women who weren't reminded of their gender.
And Asians performed better when they were reminded of their ethnicity.

> The mind gets what it expects

Chapter 10: The Power of Price

You know about placebos, right?

Placebos can actually trigger internal chemical reactions that induce real changes in the patient.

What is also peculiar, though is the impact that pricing has on efficacy.

Ariely ran an experiment with a placebo saying that 92% of patients experienced pain relief. He told one group the drug price was $0.1 and for another group, he told the price was $2.5.

Almost everyone in the $2.5 group experienced improvement and only half in the $0.1 experienced pain relief.

Chapter 11: The Context of Our Character, Part I

The total costs of employee theft or fraud are higher than all the other theft combined.

Dan Ariely explains that there are no clearly defined lines between cheaters and honest people.
The rule of thumb is that **most people are fairly honest, but when given the chance, people tend to cheat**.

The interesting finding though is that, when reminded of morals and ideals, people tend to behave honestly.
~~When people were told to write down the 10 commandments, none in the group who couldn't remember them cheated.~~

~~The mere recall of a "moral authority" made people behave honestly.~~

Edit: this study failed to replicate and may have been fudged

Chapter 12: The Context of Our Character, Part II

Chapter twelve delves further into the concept of honesty.

It says that the more removed people are from cash and money, the easier it becomes to cheat.

An experiment left one-dollar bills on a plate and coke cans in the refrigerator.
The cans vanished quickly, the money always stayed here.
It's because cash makes it obvious to ourselves and to our conscience that we're stealing.

Also, the more removed we are from the act of cheating, the more likely it is we will cheat.

For example, Ariely says, it's more likely we will boost our expenses report if our secretary hands it in for us rather than us doing it ourselves.

And we're more likely to exaggerate our expense report if it's a trip abroad than one in our own city.

Super interestingly, cheating is not much limited by risk, but it's limited by our ability to rationalize our own actions to ourselves.

Chapter 13: Beer and Free Lunches

The last chapter provides an overall critique of the standard economics model of a rational consumer.

Overall, Ariely says, we are far less rational than economic models lead us to believe we are.
And there is a major reward to reap once we admit it and take steps to overcome our limitations.

Also, read:

- Misbehaving (on the birth of behavioral economics)
- The Undoing Project
- Thinking Fast and Slow

Need for Uniqueness

Dan Ariely ran an experiment with four people ordering beer and found out that when they ordered aloud and publicly, more different varieties tended to be ordered.

He later found out that the difference in order was correlated with the “need to be unique”.

Such as, people would order differently from the other patrons at the table simply to express their own uniqueness, even if that sometimes meant changing their order from what they originally wanted to get or from what they knew they liked.

In cultures where conformity is valued, such as in Hong Kong, the opposite instead happened: uniformity rose as people ordered what other people at the table also ordered.

Practical Applications

- **Base your pricing on what you want to earn**

Don’t base your prices on the competition or you’ll be compared to your competition. Pricing is often irrational, so find an irrational way to excuse your high pricing.

- **Watch out for Anchors**

Ask yourself about repeated behavior you show. It’s possible it all started irrationally and it doesn’t benefit you anymore.

- **Use Deadlines**

Break up bigger projects with staggered deadlines. Always give yourself deadlines when there are no external ones.

- **Prepare for When Irrational**

There will be times you're tired, aroused, emotional, angry, or… Just drunk. Give yourself a line of conduct of what you will do and not do and what you will accept of yourself and others. And stick to them.

CONS

- **WEIRD research: both extrinsic and intrinsic motivation matter**

Some of those researches were heavily based on small undergraduate samples and then generalized to the whole population.

Because a bunch of Duke undergrads work the same or harder when you reduce pay and compliment them more, doesn't mean everyone -or even the majority- does.

In truth, *both* extrinsic and intrinsic motivation matter.
And which one matters more depends on the individual and context.

- **Misleading title**

The name may also be misleading, since people are not *that* predictable at the individual level.

- **Some naive policy recommendations**

The author recommends scrapping "cap and trade" policies to reduce pollution in favor of no-money exchange "social solutions".

In my opinion, that's *really naive* to believe that executives will decide to self-contain themselves in order to save the environment.

The author -and the readers- might want to review both the theory and the continuous real-life examples of public goods games and the "tragedy of the commons".
Also, check out Matt Ridley's *"The Origins of Virtue"* which very well explains both.

And, most of all, this article on *naive self-help:*

> Naive Self-Help: 10 Most Dangerous BS to Avoid

Review

Predictably Irrational is a very good book summarizing research on rationality and human biases in a more popular and engaging format.

However, it still feels like a "list of anecdotes". *Predictably Irrational* is not exactly a behavioral economics book, not a deep psychology text, and not a practical guide on influence and persuasion.

It's a mix of all of them, and it does a good job of all of them. But it fell short in weaving a coherent narrative, advancing a unique theory, or in teaching anything new.

Social Climbing: What It Is, and Why You Must Stop It

Lucio Buffalmano · 19 November 2017 · Archived copy · Original

Ever felt like someone was trying too hard to impress others or get ahead by stepping on people?

That's a classic case of **social climbing**.

While a natural drive to improve one's social standing is part of human nature and a good thing to have, this article explores why certain **social climbing behaviors**, like being overly aggressive, obvious, or pushing others down, can actually backfire and *hurt* your **social status**.

We'll dig into the different types of poor social climbing, the hidden costs, and how to avoid these common pitfalls in your quest for advancement.

Social Climbing: Definition

Social climbing seeks to raise one's status within a group or society.

There are many tactics for social climbing, including self-promotion, networking, or pushing down on others.

It's important to note that **the aspiration to social climb is natural** and normal (Blau, 1964).
And **the act of social climbing can be empowering**, value-adding, and even honorable. Ambitious men are driven to advance, and masculine men all seek social status.

Bad Types of Social Climbing

In common parlance, social climbing refers to its negative form: aggressive, nasty, or *too obvious.*

Obvious social climbing is an issue because it signal lower value. Too aggressive, and you're antisocial; too 'in your face' and you lack social skills; too much compared to your life station, and you're posturing, and insecure. And you pay the costs.

Bullying For Social Climbing

An aggressive social climber may target a low-status, submissive-looking person and demeans him to look dominant by comparison.

He is effectively using him as a 'social peg™', stepping on him to gain higher placement in the hierarchy.

It's a form of bullying, a more extreme example of the dominance approach to social status, and it can work. However, it also comes with costs.

Costs of Social Climbing

Poor social climbing lowers your value because it signals:

- **Signals Lack of Top Dog Status**

People at the top of the hierarchy don't engage in social climbing because, well… There is nowhere to go once you're on top.
And that's why social climbing communicates you're probably around the middle of the hierarchy and craving to be higher. Sometimes you will see (clueless) top dogs engaging in social climbing though, and that's because he is afraid and insecure about his position.

- **Defensiveness and fear**

If you have a good reputation, continuous grandstanding looks suspicious. Why anyone who already has people's respect would keep bragging? It suggests insecurity about one's position in the world, or to potentially lose status to new upstarts.

- **Hostility and lack of cooperative, win-win mindset**

The positive way of climbing is to climb by your own merit.
The destructive one is to attack others.

And while of course both can work, competitor derogation can be socially costly and psychologically costly. associated with the most maladaptive forms of narcissism (Back et al., 2014). It comes with *lower* self-esteem, and general negative affect.

Impresses Below, Undermines Above

Social climbing can impress. But it mostly impresses the people who are at the bottom of the pyramid.

Just think about it: if you are vying for some above-average position, how does it look to below-average people? Kind powerful. But to higher than average people? It looks like you're scrambling for scraps.

In animal terms, a cat posturing as a tiger looks awesomely powerful to a mouse. But not so much to the other cooler cats in his neighborhood.

Hence, if your aim is slightly above average, happy social climbing.
But if you aim high, then you must grow in sophistication.

And that's the essence of it: **social climbing "works" in mediocre environments, among mediocre people, vying for middle layers of the social pyramid**.

How to Social Climb Well

Everything is contextual and there is a time and place for almost anything.

For example, early pick-up artists used some forms of social climbing to "demonstrate higher value". It doesn't seem to me they were doing it well, but in principle, if done well, it can be effective.

1. Calibrate to The Audience

Good social climbing starts with audience calibration.
High quality men and high quality women are power aware and see through the most basic games. Strategic social climbing with them is more refined and indirect. Much of your value display is on how you talk, and how you move.

2. Calibrate to The Context

Context also matters.
In some seductive contexts, even more blunt social climbing can work.

Many women enjoy the confidence, pride, and dominance that goes along with a well-executed social climb.
Two possible social climbing frames that work:
How lucky she is to be with this great guy that you are.
Look how great *we* are in this world of boring people (us VS the world)

3. Do It Smoothly, Subtly

Smooth social climbing requires calibration.

However, here's the key, when you are truly skilled and calibrated, you gain stauts, respect, and attraction without looking like you're even trying.
This is the paradox.
Good social climbing doesn't look like climbing at all.

The bumbling, unskilled guys look like they're trying too hard and look insecure. We baby and feel for these men. The strategic and effective men instead, we just naturally admire them. We call them 'cool guys'. Men naturally have respect for these men, and women are naturally attracted to them.

These are the types of men we train here at The Power Moves.

3 Sentences Summary

- When you're antifragile you become stronger when attacked
- Take upside risks while protecting your downsides (barbell strategy)
- Options and collaboration heighten your antifragility

Notes

About the Author:
Nassim Nicholas Taleb is a former trader, philosopher, and student of probabilities.
He is one of my favorite authors and he has also published *"Skin In The Game", "The Black Swan", "Fooled by Randomness"*.

Definition of Antifragile

Antifragile is not strong or robust, it's the *opposite* of fragile, which means that the more you attack it, the stronger it gets.

When we can build antifragile systems, they will thrive in our uncertain and inherently risky world.

Book I: The Antifragile: An Introduction

Chapter 1: Between Damocles and Hydra

Nassim Taleb here repeats what "antifragile" means. Namely, antifragile benefits from shocks.

The author says that the increased complexity of our society also makes our society more fragile.
But it doesn't have to be so.

Chapter 2: Overcompensation and Overreaction Everywhere

Post-traumatic growth is an example of antifragility.

Post-traumatic growth is the phenomenon by which human beings become better after traumatic accidents.

Similarly, when we bounce back from failures and grow out of frustrations and hardships, we also show antifragility.

Inventions, he says, are born out of necessity. Not via planning and not even with education.
Highly decorated Harvard professors of entrepreneurship and innovation never innovated anything, and the same goes for the highly expensive consultants.

Nassim Taleb says that humans tend to look at the past and fail to understand that the unexpected events of the present will likely surpass what happened in the past.
Our body, contrary to our behavior, does prepare better.

When you train for weights, for example, your body overshoots and over-prepares.

Chapter 3: The Cat and the Washing Machine

The natural and biological is usually antifragile.

The secret of life seems to be antifragility.

The author says we have a tendency to try to reduce normal swings in life. He says there's a tendency to overmedicate and overdose with drugs such as Prozac to smoothen out normal mood swings we experience.

Book II: Modernity And The Denial of Antifragility

Chapter 4: What Kills Me Makes Others Stronger

The antifragility of some comes at the expense of others.

The fragility of startups makes the whole economy resilient -what Schumpeter called the creative destruction of capitalism-.
Nassim Taleb says that restaurant as a whole is a very strong category, but it comes at the expense of high competition, and also high failure rates, of each single one of them.

Disasters also serve a similar purpose, says the author.

The Titanic, for example, was a disaster, but by being a catalyst for change in the ship cruising industry, it made the system stronger.

The single parishes while the whole system gets stronger.

Some systems, like the aviation industry, are set to be antifragile by getting better after a crash, but the same cannot be said for the financial system, says the author.
In economy and finance, a big error causes a domino effect because all the nodes are connected and interlinked.

The goal of a system should be to let single individuals or institutions fail without dragging anyone else down.
This is the opposite of what governments are doing by bailing out companies at the expense of the whole system, which ends up propping up the wealthy and damaging the poor.

The Definition of A Loser

The definition of a loser is someone that is embarrassed by his mistakes and tries to explain them away instead of introspecting and becoming better with the new piece of information.

My note:
this is key indeed to becoming a better person, and what Nassim Taleb is talking about is typical of a fixed mindset (read more on Mindset).

Those who made errors and learned from them are more reliable than those who never committed any error.

> **System antifragility feeds off individuals' fragility**

Chapter 5: The Souk and the Office Building

Professions such as artisans, prostitutes, and taxi drivers are more robust to black swans and more antifragile than employees, even high-earning employees.

The wage of an employee can easily go to zero, but an artisan with several customers usually weathers crises much better.

The author also discusses how we human beings do not usually grasp what's not concrete.
A baby crying is more important to us than a thousand dying somewhere else that simply do not seem real.
They are just a statistic.

Taleb also says we have a thirst for the anecdote and the sensational.

Chapter 6: Tell Them I Love (Some) Randomness

Trying to over-control systems often leads to fragility.

Systems need a relief valve and need to be able to re-adjust freely.

So when we want to keep everything fixed and unmovable, any small movement will create panic and overreaction.

Similarly, moms who try to shield their children from all the negativity and possibly dangerous experiences of life got it all wrong.
Children need those experiences to grow more antifragile, and the more they are shielded from them, the more fragile they will be when they will inevitably encounter them.

Chapter 7: Naive Intervention

Nassim Taleb says he is not against intervention in any way.

It's just that he often sees too much, naive intervention.

He says that systems often are more antifragile than we think, and we should allow them to re-balance by themselves before jumping in.
He says a protocol would be needed for when to intervene and when to leave systems alone.

The author says we often intervene because we listen too much to the news, to the noise, rather than looking at the substance and at the long-term repercussions.
And the shorter the time frame you observe an event, the higher the noise you will perceive.

> **The more data you get, the less you will understand**

He says that "the elder had far more wisdom" and uses the example of Roman revering a general called "the deferrer" who always preferred to delay intervention.

My note:
I am always suspicious of sweeping generalizations and arguments that can be boiled down to "before it was better/those guys knew better than us".

In some other instances though over-intervention happens because of greed, like surgeons who make more money by operating than non-operating, and because people sometimes need to justify their presence. Doing nothing would feel like they have no character and their position is not needed… So they just do something.

Nassim Taleb compares the nervous overreaction of the over-intervention to the more needed calmness, and he uses a mobster as a paragon.
He says to look at Salvatore Gravano and how he always looks calm and in control, the video below (also check the *Godfather's way of dominance*).

He says when a man like Salvatore, usually calm, gets angry, people heed it.

Chapter 8: Prediction as a Child of Modernity

Nassim Taleb says it's best to prepare with failure in mind than trying to predict how and when failure will happen and how to avoid it.

For example, the Swedish government focuses on fiscal responsibility so that a new crisis will cause a disaster there and the new nuclear plants after Fukushima are built with future failure in mind.

That's the best way to go.

Book III: A Nonpredictive View of The World

Chapter 9: Fat Tony and the Fragilistas

Nassim Taleb talks quite a bit about himself and his ideas here, it's very theoretical and a bit of blabla.

He says it's hard to make money by trying to predict the future, but you can make money betting that those predicting the future will get it wrong and face troubles.

Chapter 10: Seneca's Upside and Downside

Nassim Taleb dislikes the employee position because it makes you very dependent on someone -and on someone's whims.

Chapter 11: Never Marry the Rockstar

Nassim Taleb here introduces the barbell strategy as a way of being antifragile.

The barbell strategy means covering your downsides while increasing your upsides. You play it very safe on one side so that you can take more risks on another side.
If the risky part plays out badly, you're still OK. If a black swan event will make the risks pay off big, you profit handsomely.

I loved the examples of the barbell strategy. Of course, finance had to be there, so in that case, it would be putting most of your money in safe investments and 10% in highly lucrative ones.
Take a boring job while you indulge your passion for literature and philosophy.

Women's Dual Sex Strategy

Or, and here's the chapter title, a barbell strategy is the one women sometimes seem to follow: marry the boring guy, the accountant, and if it happens sleep on the side with the exciting Rockstar.

This is a very popular concept in the manosphere, also referred to as *"alpha fucks, beta bucks"* (also read *"The Rational Male"*).

I love when Nassim Taleb says he's not sure that's good for the species and simply not just for fun because, while evolutionary psychologists love a good narrative, he prefers evidence, and there's no evidence to prove it's good for the species.

My Note:
However, Taleb here fails to truly understand how evolution works.
Evolution doesn't always maximize what's good for the species. And he cannot simply say "they do it for fun", because that's not an explanation. Evolutionary psychology explains *why* people find pleasurable the behavior that they find pleasurable.

Also read: lovers VS providers.

Book IV: Optionality, Technology, and Antifragility

Chapter 12: Thale's Sweet Grapes

Nassim Taleb says that options are a great way to make the system more resistant to shocks.

The more options you have, the more ways you have to respond to black swans and unforeseen events.

My note:
That's true, but while that's pretty obvious and everyone knows that, I'd like to stress that too many options is actually bad and can lead to choice paralysis and lots of wasted time and effort. Predictably Irrational explains it pretty well with scientific tests.

Chapter 13: Lecturing Birds on How to Fly

Nassim Taleb is both damn right and hilarious when he reflects upon our lack of imagination through the "invention" of carrying on luggage with wheels.

He says it took 6.000 years from the invention of the wheel and billions of hours of people slugging through airports and stations before someone thought about stripping two of them beneath a piece of luggage to simplify everyone's life.

Can you imagine, he says, how many supposedly super smart people, traveling to and from conventions of PhDs

exerted an inordinate amount of sweat but never thought of luggage with wheels?

The same invention came 30 years after the moon landing, which seemed such a great thing… But **the moon landing did little to improve our lives, the wheeled luggage did**.

Chapter 14: When Two Things Are Not the "Same Thing"

Nassim Taleb says most people get it wrong with education and standards of living.

It's not education which improves standards of living, it's the other way around.

Education is not even strictly needed for a wealthy, antifragile society like Switzerland shows us with its heavy focus on "on the job" training.

Theory should be differentiated from practice and, empirically speaking, your grandmother's advice is superior to what you get in business school.
Also, to the economists' chagrin, Nassim says that economics is not a science and economists should not be advising on policies.

Nassim Taleb says it's not true the best idea survives.
It's indeed not a competition of ideas, but a competition of human beings who happen to hold and defend those ideas. I don't fully agree here, but one of my favorite quotes in the chapter:

> *An idea doesn't survive because it's better than the competition, but because the person saying it survived.*

Chapter 15: History Written by the Losers

Nassim Taleb has a very interesting theory here.

He says that it's not practical applications that follow the theory, but the other way around.
New great discoveries and breakthroughs happen by trying things out, by tinkering around, and then theoretical knowledge plays catch up and explains it.

To use Nassim Taleb's always interesting and colorful language, the theory serves to satisfy the intellectual bean counters.

Contrary to Peter Thiel's advice in *Zero to One*, Nassim Taleb seems to slightly mock plans and business plans and takes the example of a few successful corporations which started doing something completely different than what they ended up being successful for.

That's why you invest in people, not in business plans: successful entrepreneurs must be able to change course.

The author then sums up a few rules:

1. Look for optionality (many options)
2. Open-ended payoffs
3. Invest in people, not business plans
4. Apply the barbell principle (limit your downside)

Chapter 16: A Lesson in Disorder

In this chapter, Nassim Taleb takes it again on education and soccer moms.

What we learn in class often really stays in class and is rarely translated into real life.

The examples the author uses in the book are really great and also hilarious, ranging from bigwigs who got it all wrong on oil prices skyrocketing after the Iraq invasion to the traders who would be considered smart when they

could spell their street correctly who were very successful at what they were doing.

And of course, they cap it off with the example of the gym rat at a major disadvantage against the street fighter or mafia hitman :).

Book V: The Nonlinear

Chapter 17: Fat Tony Debates Socrates

Nassim Taleb says that we often decide based on fragility and not on probability.

It's very unlikely for example that aboard any given plane there will be a terrorist, but since the consequences would be devastating, then we put up with lengthy safety control just to eliminate any possible chance.

Chapter 18: On the Difference Between a Large Stone

Nassim Taleb talks about the nonlinear property.

For example, one crash at 100 km/h will wreck much more damage than 100 crashes at 1 km/h.

Your body is fragile to alcohol and five bottles of wine in one go is more damaging to your body than five bottles spread out over five days.

And the last glass of wine will be more damaging than the preceding one, which in turn was more damaging than the preceding one

Chapter 19: The Philosopher's Stone and Its Inverse

Nassim Taleb here talks about the Pareto Law and says that more than 80/20 it's more and more becoming a 99/1 across many realms.

He says that *collaboration* is also a tool to reach antifragility.
Similarly, as adding up units in nonlinear systems brings non-linear increments, also adding up people to a well-functioning team adds up more than the sum of its parts.

From a psychological point of view I also particularly enjoyed the author's point of view on "giving many reasons" for anything. He says that robust, strong decisions, require just one single reason.

When people try to cram too many reasons why it's usually because they are putting up smoke screens.

Read more on collaboration strategies here:

> Life Strategy: The Enlightened Collaborator

Book 6: Via Negativa

Chapter 20: Time and Fragility

Nassim Taleb says that what's most likely to stick in the future is what has already been around for a long.

When asked what the future house will look like, for example, a shelf full of books is a good guess because a shelf full of books has been around for centuries.

A chair is another safe bet.
Wine and forks… Huge safe bets.

The same goes for papers and books.

A new paper is “dangerous” because it hasn’t stood the test of time and is not proven. A recent book, the same. A book that has been popular for a decade instead is likely to stay popular for another ten.

And you can also rest your mind if you hate religion: rational or irrational, it’s been around thousands of years, so it’s likely to stick around for a while.

He also says the imperial system makes more sense than the metrical one because it’s based on reality.
A meter doesn’t match anything, but a foot does. A pound that you can imagine holding in your hands.

My note:
when Taleb mentions a stone makes sense because it weighs as a stone and a pound makes because it’s what you can hold in your hands I had to double check he wasn’t joking.
This part made little sense to me: stones go from tons to grams so, no, it’s not true that it’s more intuitive. If anything, it’s more likely to sidetrack people.

Chapter 21: Medicine, Convexity, and Opacity

Nassim Taleb comes back to some concepts of antifragility here.

Doctors tend to over-intervene even when there’s no need to and we tend to try to make life too comfortable when comfort only makes us more fragile.

The episode of Nassim Taleb in the emergency room arguing with the doctor if he had any evidence an ice pack on the nose was going to help in any way was hilarious.

Chapter 22: To Live Long, but Not Too Long

This chapter was very chatty, and philosophical, and reflected on the author’s life.

It made me smile when Taleb says a big improvement in his life came from removing offensive irritants such as TV, air conditioning, long commutes, and… Newspapers since just reading Friedman and Paul Krugman would lead to unnecessary bouts of anger :).

Book VII: The Ethics of Fragility and Antifragility

Chapter 23: Skin in The Game: Antifragility at the Expense of Others

Skin in the game is a big thread for Antifragile.

Skin in the game means people who take part in a system should also lose out if that system goes bust. And that’s not what it’s happening today.

For example, the Romans had the chief architects and constructors stand beneath the bridge they had just erected.

Or the leaders of ancient times used to put their own life on the line as a consequence of their decision.
Roman emperors marched with their legions and as a rule of thumb, the people with the biggest downside had the most respect and had the highest positions in society (the “bastardization” of leadership is something Simon Sinek discusses in *Leaders Eat Last*).

Today instead overpaid bankers can bankrupt a bank, or the whole system, and walk away with big bonuses.

That’s akin to transferring fragility from one party to the other so that one party becomes antifragile at the expense of other innocent players and bystanders.

Chapter 24: Fitting Ethics to a Profession

In this chapter, Nassim Taleb talks about the hedonic treadmill many of us are slaves of.

The hedonic treadmill is the tendency we have of wanting more and more material stuff even when we don't need them.
It's often driven by seeing the people around us possessing those same things.

Practical Applications

- **Comfort is the weakening of the will**

Push your limits and do make experiences to become antifragile.

- **Build your Ego with antifragility in mind**

It's funny that the biggest takeaway from this book, for me, was contained in a little more than a line. It's when Taleb talks about his definition of losers: people who make excuses when wrong instead of learning and moving on.

That's because their ego is not antifragile. And that's the most important step you can take to make your "system" antifragile.

Read here *"the antifragile ego"*.

CONS

- **Does Not Fully Understand Evolutionary Psychology?**

Taleb often criticizes evolutionary psychology, yet here he seems not to understand it.

He says that "there is no proof that it's good for the species", but no good evolutionary psychologist ever said evolution always moves towards what's good for the species. Especially sexual selection doesn't.
That's not how selection works.

I agree with him that sometimes people like to make a nice narrative out of something that might be random.
But that's not evolutionary psychology, that's just idiots who like to make up stuff.

He cannot deny a claim just by saying “they do it because it’s pleasurable”, because the question becomes “why do people find a certain behavior pleasurable”, and that’s what evolutionary psychology explains.

- **Some Find Taleb Arrogant**

You could find Taleb funny, entertaining, plainly honest… Or offensive.

I do not find it offensive, however, I can also understand if one were to label Taleb as being a bit arrogant.
There are a lot of personal attacks, including with swear words, in antifragile.

The author also says about the financial industry that wasn’t listening to him so he “took their money”, which sounds a bit vindictive.

Also of course he’s human, so while he attacked some people for not understanding anything, he also got some major predictions and analyses plainly wrong.

- **“Before was better”**

There’s a feeling that Nassim Taleb always hints that “before it was better”.

- **Long and Disjointed**

Was this a book about antifragility or was antifragility simply one of the many many random topics?

Don’t get me wrong, most of it was interesting and some parts even illuminating, but I didn’t see a strong common thread joining it all together to deliver a single, potent message.

And it’s ironic Taleb himself says a philosopher should be remembered for one thing only :).

- **Nebulous and Complex**

At times the book is not simple, which is OK, but I feel like there could have been easy ways to actually MAKE IT simple.

And any time you can simplify something but don’t, that’s hubris or lack of communication skills.

Review

“Antifragile” is longish, and not super simple.

It has many different concepts and some extremely interesting points of view.

Nassim Taleb is also eclectic, entertaining, and at times beautifully sarcastic writer (in Antifragile he coined “IAND”, standing for: International Association of Name Droppers).

He makes fun of “professors of innovations” -who never innovated anything-, economists, and even a bit of himself.
I particularly loved the line he used when he left the financial industry and thought it was over but then “they pulled him back in” (that’s a line from *The Godfather*, a move Taleb seems to like a lot).

I also admire Taleb for his knowledge and his classical history references. Alongside numbers, he quotes Latin, then goes into French writers only to go back to old Mediterranean civilizations, Greek philosophers, and Roman customs.
And then again back to analyze the present reality and the future. All in one.

I wish he had used more psychology in his concept of antifragility -I have done that with *the antifragile ego*-, but overall I enjoyed Antifragile.

How Expert Marketers Manipulate (14 Tactics From Tai Lopez)

Lucio Buffalmano · 28 November 2017 · Archived copy · Original

Is Tai Lopez a scammer?

I will let you answer that.
What I can tell you, is that Tai Lopez is good at using a lot of persuasion techniques all crammed in the shortest amount of space possible.

Sometimes those persuasion techniques can become manipulative.
This article shows you all of Tai Lopez's persuasive and manipulative techniques.

  - #14. Fake Scarcity
- Tai Lopez Review

How to Persuade Like A Marketer

First of all, why an article on Tai Lopez?

Simple: because the guy is killing it on YouTube (and, likely, with online sales).
Indeed, at the time of writing, Tai Lopez is the biggest self-marketer out there.

And let's be frank, it's not about content.
His quality content is heavily diluted, and if you really want to learn and develop yourself there are *plenty of better resources* out there.

What is it, then?
What allows Tai Lopez to build a huge following and rake in millions of online sales?

It's his heavy usage of persuasive techniques that allows him to make more money online than any other guru.

Persuasive Techniques Analysis

Persuasive techniques leverage some well-known psychological triggers.
We will start with the most obvious ones.
But keep reading for the less-known techniques.

#1. Scarcity

You know this one, don't you?

This is one of the most commonly used techniques the world over to make money online.
And there is a good reason why: it works.

The principle of scarcity, as explained by Cialdini in *Influence* says that the more something is scarce, the more we want it.
And Tai Lopez uses this principle any time he can.

The principle of Scarcity has an even stronger appeal when our product is scarce because of high demand.
And that's why Tai Lopez often pitches his products as only open to a few people because the demand is too high and he cannot -or does not want to cater to everyone.

Can You Abuse The Scarcity Principle?

I believe the abuse of the scarcity principle, which often is also a very easy one to spot, is the single most important factor why Tai comes across as such a fake snake oil salesman.

And that's why people like you and I might probably not buy from Tai.
BUT… Not all audiences are smart and educated.

And if you are selling to green-in-the-tooth, not particularly bright individuals, you can probably make more money online by abusing the principle than by using it, ehm… Judiciously and honestly.

#2. Authority

The principle of authority says we are (much) more likely to listen to someone when we perceive he has authority. Especially if we're dealing with his field of supposed expertise.

A cop in uniform for example, or a doctor in a hospital, or the head researcher in the experiment.

Tai Lopez as Authority

Tai Lopez tries to first of all places himself as an authority.

He does it when he says he started as a poor man and shows us all the rich-man trappings, thus communicating that he knows how to make money.

But he also gets authority when he says he learned hugely from top mentors and that he reads nonstop.
When he says that he is providing credibility to his teacher role because he never stopped studying and he learned from the best people out there.

His attitude of always explaining things and standing in front of flip charts also leads people to believe he knows what he's talking about.

All the materialistic possessions he accurately places around him also serve to project him as an authority.
His villa, his sports cars, the often objectified women… They are all authority tools because they communicate that Tai "made it", so he can speak from a position of experience.

Authorities Endorsing Tai Lopez

Tai Lopez also gets authority when he names-drop supposedly billionaire friends.
People think "wow, if so many rich people as friends he must be good".

Tai tries to show two things with rich and famous people, such as that they:

- Are part of his circle
- Respect him and his knowledge

Notice, for example, how nonchalantly he mentions Elon Musk.
He says "the last time I chatted to Elon Musk" as if those chats happened often and they're no big deal for him (watch the scene here).

Notice when he met Mark Cuban, a famous billionaire, Tai made the video of him opening his own house door as if to highlight that it was Mark Cuban who went to him and not the other way around.

That was a huge one for Tai and in a later video where he tried to defend himself from "fraud allegations" he mentioned sarcastically that "Mark Cuban stopping by was an impersonator", as if to say "if I were a fraud I wouldn't be able to meet Cuban".

This is strictly my opinion, but Mark Cuban didn't look very sharp for going along with that gag).

Authority From Scientists

But of course, Tai also doesn't shy away from the most obvious of authority endorsing: the top scientist

It sounds almost comical when he introduces the "leading scientist" as "having published in all these top scientific journals", but it probably works for many people (as a note, I looked that leading scientist up, and all publications I could find were self-published posts on his own LinkedIn).

#3. Social Proof

Mortensen in *Maximum Influence* says that we are social animals and many of our decisions are based on what other people think and do.

Tai uses social proof in abundance.

He always comments on the huge number of people following him, thanking him and asking for his suggestion. The listeners will think that if so many people follow him and write him… He must know what he's talking about.

Of course, very few think it might be a Ponzi Scheme..

Tai Lopez, Hot Women & Cars

Sex can sell fantastically, but the wrong sexual association can also spell doom for products that are not related to sex (Cialdini, Pre-Suasion).

Tai Lopez makes sure he never comments on him sleeping with many women because it could not gel well with his "knowledge and teacher image".

But he makes sure he always has hot women and Italian sports cars around (the two things are actually very tight in the modern world imagery).
It proves and sub-communicates that he must be very successful with women.

People seeing cars, money, and hot women want to become like him, and the quickest way seems to be to, well… Buy from him.

#4. Liking

Liking works in two ways:

1. We buy more from those we like
2. We buy more products that people we like also buy

In vulgar language, we could call the second part the "rub-off effect".
And that is why so many brands associate their products with a celebrity.

Linking Celebrities

Tai always tries to make a short video or take a snap of himself with some famous well-liked and respected celebrity.

That way he can inflate his own credibility by giving the idea those celebrities know him (and, sub-communicated, endorse him).

Check indeed this picture with Elon Musk and some people wondering "why Elon Musk is endorsing a scammer": Quora question (the obvious answer being Elon Musk cannot vet all people taking pics with him).

And he made his short video with Rihanna his very own channel intro video. That's how important it is for Tai to be seen as a known and respected man among top celebrities:

Notice Tai will later highlight Rihanna asked him for book recommendations because “she knew he had the biggest book collection”. Tai is using Rihanna in one single fell swoop for liking, social proof, and authority.
Watch out for value leechers when you become a celebrity :).

#5. “Secret Insights” Trigger

Would you listen to a billionaire who told you that he is going to share his “how to make millions online” only with you?

You probably would.

And that’s the power of authority combined with the power of “secret insight” trigger.

Our mind is programmed to look for shortcuts and the easiest paths to our goals. Secrets and information that are still unknown to the masses promise us an easy way to get ahead.

It doesn’t matter that the biggest “secret” to Mastery is effort applied over the long run (read *Mastery, Grit*): our subconscious is hypersensitive to keywords such as “tips”, “secrets” and “insider information”.

Tai Lopez often brands his information as “secret insights”, “insider information” and “new breakthroughs” which are available to a few lucky ones.

I don't follow Tai online… And yet I can buy it :)

#6. Repeat Exposure

Warning: you might need major capital to leverage this one.

A message that is repeated time and time again makes people eventually curious to go and find out who the hell this guy, who has become so present in their life, really is.

That's basically how Tai Lopez launched himself: with a huge multi-million dollar marketing ad campaign that got him in front of the eyes of his target group.
Multiple, multiple times.

With repeat exposure, he went from a nobody to an Internet phenomenon. And it didn't matter that he paid for that and that he rented the houses and the cars… Sometimes what it seems to be is equivalent to what it is.

Also, the "mere exposure effect" (check Incognito by David Eagleman) says that simply being exposed multiple times to a message, or to someone, leads us to like that person more and to believe that message more (also check the *Like Switch*)

#7. Strategic Honesty: Building Trust

A great way to build trust is to highlight a defect of your product.
It does two good things for you:

1. Builds trust, because you are willing to share negative information
2. Takes the objection away from people's minds because it's already been discussed

You will notice that Tai sets the bar very low for his courses and implies that if you just follow his suggestion you will live like he's living (hopefully that doesn't mean living on borrowed money :).

But he still often repeats that "*it's not a guarantee and not everyone will get rich… Not super quick at least*" (let's give time to the refund period to expire at least :)-.

This makes him sound more honest and offsets a little all the other sales techniques he uses.

> **This is not a get rich quick scheme..**

A special mention goes to his very first ad, the one that was all over the place.
He says "now this is not a get-rich-quick scheme", addressing the very first objection people have when looking at that video.

Of course, he then proceeds to re-lower the bar again by saying "*I can't promise you will be able to buy a Lamborghini tomorrow, but you will be able to buy it much sooner than you think..*".

#8. Self-Prospecting Questions

I love this technique because it's actually ethical.

Tai Lopez asks questions that are designed to make us answer internally "yes" so that we can self-prospect.
It's incredibly more powerful than telling and much more powerful than asking direct questions as well because this way we feel we reached the conclusions all by ourselves.

For example, while telling he didn't start off rich Tai Lopez will say:

> *Now I don't know where you're starting from…*

And when he's talking about money and he draws dollar signs he says:

> *Now I don't know what you want..*

Of course, the vast majority of people listening to those videos do want to get rich and are starting from low levels.
So as they answer in their head "I'm also starting from low (like you)" and "I also want money" they feel closer to Tai, *bond with him,* and confirm to themselves they are the perfect people to buy Tai Lopez products.

Very ingenious…

#9. False Entry Barriers

Would you feel cooler if you were admitted into the VIP section of a local club?

Chances are that yes you would, even though there is nothing inherently great with the VIP section.

But we all feel more special when there was a selection to enter and we made it through.
We "made the cut", we were good.

Tai Lopez often uses false entry barriers to make people feel good about "being good enough to follow him".

He does it in his very first advertisement.
He says:

> "*be an optimist, if you're a cynic don't click here*".

Of course, the cynics might have clicked but weren't going to buy.

Now the people who weren't unsure or the ones who were interested can identify themselves as the ones who "made the cut": they're not cynics, they're optimists, and they can go ahead.

And they feel proud and happy. And closer to Tai Lopez, the man who bestowed upon them the optimist label -and

how is just about to teach them how to make money online… After they give *him* money-.

And by the way, *some* cynicism is actually healthy.
See this article on positive cynicism:

> Positive Cynicism: Turning Poison, Into Gold

#10. Use Your Enemies: Outgroup Technique

This is an old favorite of *crooked politicians* the whole world over.

I think this is by far the best move from Tai Lopez.
It's a form of False Entry Barrier, but the way he uses it with his enemies takes its effectiveness to a whole new level.

Tai Lopez attracted lots of haters -and a few people willing to show the truth-
Some of these people found out he rents his place and doesn't own it, that he pays for women to stand around him, and that he… "bent" some truths.

Well, while pitching one of his products Tai says scathingly and disapprovingly:

> *I don't want to deal with a whole bunch of people who are super cynical. If you are one of those people who thinks that I don't know what I'm talking about, or this is all rented or this some kind of an act, then just go off the video, this is for serious people.*

Let's analyze what he did:

No critics ever said he doesn't know what he's talking about, they just said he's a liar and a fraud.
But by mixing true statements with fake ones he makes their objection seem much shakier and the product of "hatred".

Then he says if you're one of them you should stop listening and not join his group, please.

That's the False Entry Barrier because the critics would not buy anyway so he can safely tell them to go take a hike.

Then he says:

> **Tai Lopez**: "this is for serious people".

Now the people who are NOT his critics feel a stronger bond and connection to Tai Lopez and between themselves.

It's because now there's an out-group, the haters, and an in-group.
His followers can now identify as the in-group, which happens to have lots of positive characteristics: they don't hate, but they are optimists and serious about getting rich (and incidentally buying Tai Lopez products).

Genius.
To sum it up, in one fell swoop Tai Lopez:

- Makes his enemies' position shakier
- Uses his enemies to create an out-group
- Throws a fake disqualifier strengthening people's resolve to buy
- Makes the in-group stronger and prouder to be with Tai Lopez

11. Relatable "you can do it" path

Tai Lopez doesn't just present himself as a rich man.

He presents himself as a man who started poor and got rich. And that's why he's qualified to teach it.

That's a great pitch because it does three key things:

1. Communicates familiarity: "he was like me", people think
2. Gives a sense of possibility: "if he did, so can I"
3. Communicates credibility: "he must know what he's talking about"

Joseph Sugarman lists "familiarity" and "credibility" in his marketer's book *Triggers*, and they are both key ingredients in Tai Lopez pitch.

#12. The Charismatic Leader Triggers

Contrarian, rebels, and strongly opinionated leaders are the ones commanding the strongest following.

It's one of the secrets to *becoming a charismatic man.*

Tai Lopez tries to replicate that hard-core fan base with his own version of strong statements and opinions, but he does it again in a very "marketed" and safe way.

He does it when he says

> **Tai Lopez**: "*stops listening, if you're a cynic, I don't want you here*".

Or when he's very caustic with the "generation of *self-entitled people*".

Of course, he takes some aim at the private schoolers out there too and says that "genius level" smart people down-perform.

All these seemingly strong positions make him seem contrarian and opinionated, but **they are all safe attacks because most people buying his products are *not* in private MBAs**, not "genius level smart" and nobody thinks of themselves as entitled.

And they all strengthen his group of followers who now identify themselves as “those who don’t have a silver spoon in their mouth”.

#13. Exhaust Your Audience: They’ll *Need* To Skip (& Buy)

Make things fuzzy and they will pay for clarity.

Tai Lopez puts out an incredible amount of videos, often hours long. This doesn’t just help him with the “repeat exposure” we talked early, but also to sell with exhaustion.

People can’t possibly follow all his videos, so they think they must be getting a summary of all his says in a more concentrated form. With what? With his products of course.

Also his hour-long product presentations… I’d love to have some statistics but I’m guessing that most people who buy, buy before the end of the video.

It’s because we don’t have so much time, and after all the sales techniques Tai Lopez uses we would rather get to the goodies and “start getting rich” rather than waste time with the watered-down pitch.

#14. Fake Scarcity

Of course, sometimes if we could just lie it could make it all easier when it comes to influencing people.

At least in the short term…

And Tai Lopez doesn’t may at times cross that line.

He says his videos will only be online for a few days… And they’re still there after months.

He tells you this opportunity is “only for his followers”, and it’s there for everyone.
Sometimes he will pretend a product is out of stock and then collects your email to add you to his newsletter and the product magically reappears the day after…

Tai Lopez Review

Tai Lopez is a very smart and well-learned guy.

One may even say he's a wise man.

As a matter of fact, we agree on a lot of things, including:

- **Balance is key**
- **You don't necessarily need to be an *"alpha male"* to succeed** as per *exceptional dating dynamics* and the effectiveness of *"niches"*
- **You need a certain level of dark triad traits** to succeed, and Tai is a good example of (positive) Machiavellianism

Says Lopez in an old IG post:

> My mentor Dr. David Buss said that all dark triad traits are functional in the sense that they have successfully been perpetuated in the gene pool. So my guess is a little narcissism doesn't hurt. But a lot does. Balance. Not extremes.

When I hear him talk, he's the type of guy I'd like to meet.

But when we're talking about Tai the marketer, then, well… We differ.

Yes, you do some of these techniques.

Even if you sell great products you will still need to leverage a few of these techniques. Or lots of them.

Learning how to build a successful business is all about learning psychology and what makes people tick.

Tai Lopez has become successful by using a great number of influencing techniques… *Constantly*.
My main gripe with Tai Lopez is that he has shown no qualms in lying and pulling sneaky tricks as well.

The Moral Animal: Summary & Review

Lucio Buffalmano · 2 December 2017 · Archived copy · Original

The Moral Animal is an *evolutionary psychology book* that explains human psychology and human behavior in light of our evolution.
Robert Wright opened my eyes when I first encountered this book many years ago.

Bullet Summary

- Human males are high in MPI (=men invest in children, albeit not as much as women)
- We are naturally altruists, albeit often in a selective, self-serving fashion
- We deceive, self-deceive, and use morals as a tool to further our goals

Full Summary

Robert Wright says that Darwinism, in the shape of what he calls a vague ideology of “social Darwinism”, has fallen prey to racists, fascists and the worst form of capitalist ideologies.

The author also prefaces the book by drawing a line among the similarities in seemingly different cultures. Why do all people worry about social status, feel guilt (in the same predictable circumstances), or gossip (about the same things)?
Modern Darwinians, even when they focus on differences, don’t tend to see them as genetic differences but tend to see cultures as the product of a common human nature responding to different environmental and cultural circumstances.

PART I: SEX ROMANCE & LOVE

Chapter 1: Darwin Comes of Age

Robert Wright begins making light fun of the popular claim that Darwin was no special in any way and just a “normal boy” as he grew up.

He says those claims are suspicious as normal people accomplishing great feats always make for good reading (Mastery by Robert Greene also slightly uses Darwin as an example of an average man achieving greatness).

The author though doesn’t question whether Darwin was or not bright or smart, but he questions whether his theory of natural selection was that smart.

Indeed, he says, the theory is rather simple.

The Natural Selection Theory

All that the natural selection theory says is this:

> If in a specie there’s a variation among hereditary traits, some of those traits will prove more conducive to the survival and reproduction than others.
> And those traits will likely become more widespread

And the result is that the species aggregate pool of hereditary traits changes.

Madonna Whore Dichotomy

This is important to understand dating.

The Madonna-Whore Dichotomy says that men view women as belonging to two different groups: the ones you want to marry and love (Madonnas) and the ones you want to have sex with and quickly discard (whores).

The author says today there's a tendency to reject and laugh at these aspects of Victorian morality, but to completely discard them is to overestimate the advancements of our own morality.

Even educated and liberal men who wouldn't openly talk about "sluts" often end up acting accordingly to the Madonna-Whore Dichotomy.

At the end of the day, the author says, the Madonna Whore Dichotomy and the sexual double standard have roots in human nature and mental mechanisms we all use to evaluate each other.

The Madonna-Whore Dichotomy is based on the idea that if women do differ in terms of the likelihood of cheating and sleeping around, then **it makes sense for men to separate the two groups**.

And spread their genes sleeping with whores and marrying the Madonna who will never cheat on them (and trick them to raise children who are not his).

Also, read:

- The Madonna-Whore Complex

Chapter 2: Male and Females

The idea that men and women are identical in nature has less and less proponents.

Sex and attitudes towards sex are one such example.
Male sexual appetite, for example, seems to be more constant than a woman's sexual appetite.

Darwin himself had noticed that the men being the ones with insatiable sexual appetites always chasing sex and the woman being coy seemed to be a constant in the animal kingdom.

The author says that what creates the imbalance is the fact that men can reproduce hundreds of times a year while can't reproduce more often than once a year.
For a woman hence it makes sense to stop pursuing sex once she's impregnated while for a man that time never comes.

Since a woman can reproduce less often and has to invest heavily in one single reproduction, it makes sense for her to be very selective when it comes to quality.

Women indeed are more about quality than quantity.

Advertising Fitness

Since unusually fit males tend to reproduce unusually fit offspring, men tend to advertise their fitness to women.

There's a bit of an arms race because males have an interest in appearing better than they are and women have an interest in being able to spot false advertising.

Rape

Robert Wright goes into the very thorny subject of rape.

He says that women "choose" men even when they don't consciously want. Resisting rape ends up being such a choosing device because women will be able to resist weaker men but not stronger men.

Chapter 3: Men and Women

Robert Wright says that human men and women are naturally born to form bonds with one another.

In every culture marriage, whether monogamous or polygamous is the norm.

Human fathers everywhere feel love for their children, which makes human males high in MPI.

Male Parental Investment

MPI stands for Male Paternal Investment.

It's a measure of how much males in a certain specie invest in their offspring. Investing means sticking around, protecting, providing food, and teaching.

In humans, men are relatively high in MPI, albeit not nearly as high as women.

Robert Wright says one plausible explanation of why men started investing more and more has to do with us walking upright.
Walking upright means females have narrower hips and human babies are born very early.
Infants tend to be very vulnerable for long periods of time and severely limit the mother's ability to gather food.

Men helping the offspring grow allowed more children to reach adulthood and have offspring on their own, thus spreading the high MPI trait.

High MPI = Gold Diggers

The title is purely mine :).

What high MPI means is that suddenly women are not just interested in male fitness, but since he will stick around to help, they are also interested in his resources to help grow the offspring.

Women care more about men about the financial prospects of their mates. However, Robert Wright says, since our ancestors were not able to hoard riches as it happens today, women might be more attracted to social status, which translated into power.
It meant the ability to get more food after a big kill.

Also in today's societies anyway status, wealth, and power often go hand in hand and make a very attractive package for females.

Ambition and industry are also very appreciated characteristics as they raise the odds that status, power, and wealth will come in the (near) future.

My Note:
this is more true for younger men though. Older ones are better off with some wealth.

Affection and Tokens of Affection

Women in high MPI species care very much that their partners will stick around after sex and conception.

That's one of the reasons why "tokens of affection" such as flowers and gifts are particularly appreciated by women because they serve as a sign of the willingness of the male to invest.

It makes sense for women to care about affection because, albeit men are high in MPI, **it can make genetic sense for a man to impregnate a woman and not care for the kid.**

The kid could survive anyway and the mother could still be able to attract resources from some other men who will take care of the kid -whether or not he knows that's not his baby-.

In a low MPI species impregnating and moving on is fair because the female could not get any investment anyway.
It is an exploitative technique among species high in MPI such as ours because the woman COULD get resources from men.

But a man running away after having impregnated her makes it much more difficult for her to obtain those resources.

Affection Arms Race: Love Duping

Another arms race then can happen with men faking devotion and long-term investment and women having to filter through the fake devotion.

So there's a possible tendency for men to fake and inflate their willingness to commit.

However blatant lying in our ancestors' environments could be dangerous as it would ruin a man's reputation or lead to vengeance from the woman's family.

Robert Wright says that natural selection might have developed love to induce men to *believe* they will stick around longer than they actually will.

The Modern Casanovas

Robert Wright says that the lifestyle of some men to have sex and drop women without investing is not a real sexual strategy in our ancestor environment because it simply wasn't possible back then.

But that's what happens when you put men with their tendency of having multiple sexual partners into anonymous cities filled with potential sexual partners and contraceptive technology.

Also, read:

- The Psychology of Womanizers

Female Rivalries

Robert Wright explains how females in low MPIs species have no rivalries because men can simply impregnate them all and move along -and he'll happily oblige-.

But in species high in MPIs men and their resources can become scarce resource.

Albeit competition is not as high as among men for women, scarce resourceful men still lead women to rival one another to catch the best men out there.

Selectively Selective

In high MPI species, both men and women want partners who are "above average".

However, since for men a mixed strategy of high MPI and "impregnate and run" can make sense, they have a double standard.

Men tend to be selectively selective indeed: they are very selective for women with whom they want to stick around and much much laxer with women they just want to have sex with.

Female Beauty VS Male Beauty

As women have reasons to care about resources, men have reasons to care about the ability of women to produce offspring, which is highly related to age.

That's why probably men care more about physical attractiveness than women do. Men also tend to be attracted to traits such as large eyes and small noses, which are both related to age.

Threats to Genes: Fidelity and Emotional Attachment

What threatens the future of one's own genes is different in females than it is in males.

Infidelity is very dangerous for males in high MPIs because they might end up investing heavily in offspring which are not their own.

On the other hand, for a woman, it's dangerous if a man not just sleeps with another woman, but gets emotionally attached to that woman.

Why?

Because that could mean he might divert resources away from her and her children to the new woman and her children.

Indeed men are much more jealous and careful about sexual fidelity and women tend to be more concerned about emotional attachments.

It's still painful for women to be sexually cheated, but Robert Wright says that the result is often a self-improvement campaign: losing weight, better clothes, etc.
Men instead can often have trouble staying in a relationship after sexual infidelity.

Why Would a Woman Cheat

If a woman cheating would enrage her partner and threaten a break-up, why would she do it?

Robert Wright says there are many possible answers.

- Resource extraction
- Seeds of confusion
- Best of both worlds

For example, she might be able to extract resources from several men by carrying sexual favors.

Also, multiple sexual partners mean that more men could believe in being the father of a child -or at least having a chance to be and could invest in them, even in case of the death of the woman's partner, which in some cases could have had dire consequences.

Some speculate that women in the human species hide their ovulation periods as a way to help them seed confusion.

A man would not be able to know for sure when she's ovulating and he would not be able to guard her 24/7, thus allowing her to seed confusion and get the best of both worlds.

Women indeed are more likely to cheat during their ovulation period, suggesting they are after the genes.

There's also evidence women do cheat, with different statistics showing how a relatively high number of children are fathered not by their biological fathers.

Most interesting is the "best of both worlds" theory. Robert Wright says that a woman in a high MPI species seeks two things: great genes and investment.

Those could come from the same man, but could also not.

So she could find a man who is willing to invest in her and stay beside her while she gets the good genes from a more promiscuous, more brainy, or more brawny man.

Also, read:

- Why do people cheat
- What are emotional affairs and how they happen
- How to find a loyal partner

Testicles and Promiscuity

Testes size compared to body weight can shed some light on the promiscuity level of females within a species. Bigger tests produce more sperm and pay off when women sleep around because it gives males a higher chance of being the father of the children.

Testes' size then becomes a record of the female's sexual escapes during the ages.
Humans fall between chimpanzees -very promiscuous- and gorillas -more stable-.

The quantity of semen a man produces depends not only on the last time he had sex but also depends heavily on how long her female mate has been out of sight.

Also, read:

- Sex at Dawn

Cuckoldry Arms Race: The Madonna Whore Dichotomy

Another arms race then exists between men and women when it comes to infidelity.

A man would be well served in spotting infidelity and a woman would be well served in leading him to believe she's only faithful to him.

And this is where the Madonna Whore Dichotomy makes sense. If women differ in the level of promiscuity, it makes sense for a man to be able to identify which women are more likely to cheat.

So a man could think that if a woman shows too much sexual eagerness early on, sleep with her but doesn't keep her because she's not trustworthy.

If on the other hand, she's slow and coy, she makes for a good wife because she's not likely to stray and cheat (and let him raise another man's kid).

The speed at which a woman sleeps with a man then can become a big indicator a man uses in deciding whether to stick with her or not.
And women sexily dressed are more attractive as short-term mates than long-term ones.

And as much as that could pain some feminists or liberal women, Robert Wright says that the Madonna-Whore Dichotomy is common in every culture.

Also, read:

- Should she let him wait for sex?
- How to delay sex

Madonna-Whore Pay Offs

The Madonna-Whore Dichotomy is a continuum of course.

But some theories say some women will pursue a strategy of “sexy son strategy”, such as they will mate with sexy or brainy or particularly attractive men and risk losing that parental investment compared to if they had been more Madonna-ish.

But they will gain with the likelihood the children will be like the father and also eventually be sexually successful in spreading their genes.

Robert Wright says these theories are interesting, but they don’t have to be “cast in stone”.
The brain is more malleable and the strategies pay off better when they can be abandoned.

Frequency-Dependent Selection

Theoretically, two opposite traits will not be kept for long because if one is more conducive to proliferation, it should, with time, take over the whole population.

So why are there still behavior and appearances that some women adopt to seem more Madonnas or more Whores?

It’s because of frequency-dependent selection.

Frequency-dependent selection says that one strategy will make sense against another strategy as long as there’s an equilibrium.

Robert Wright uses the example of a fish, but to stay with the Madonna Whore Dichotomy, if all women were whores, the strategy would not pay off anymore. If all were Madonnas, it wouldn’t pay off either.

To keep existing and make genetic sense, they both need each other.

My Note:
this is often, indeed, a strategy.
Most women, including many of the ones more open about their sexuality, tend to hide their sexual fantasies and drives to cheat. But all women, be madonnas or whores, are at the end of very similar to each other.
That's why you're very well served usually by letting women know you "understand them" you know there's nothing wrong with their fantasies and that you will not "punish" them by labeling them whores are most men do. See how to do it a bit in my text flirting guide.

Adapting Mating Strategies

Pretty girls tend to marry up while women who have lots of sex early on tend not to marry.

Robert Wright says that it's possible that getting early feedback about their beauty and ability to secure a resourceful mate might influence women's strategies.

The prettier one might go for a more Madonna-ish strategy while the less pretty ones might realize they can't be choosy and go for a wider multitude of men.

Women might also adjust depending on how likely the male mates around are to stick around and invest, and they will change their strategy depending on the circumstances.

So women with too many men around or men who are not willing or not able to commit might pursue a more whore-ish, sexually aggressive mating strategy, only to shift again if the situation around changes.
This is why women in poorer areas tend to be unwed mothers more often: there's a scarcity of men willing or able to invest.

Similarly, for boys, high self-esteem and good looks are correlated to a higher sexual partner count. A "stud" will go for a shorter-term sexual strategy without providing investment.

Men with lower self-esteem and lesser looks might instead go for a provider strategy, promising and delivering on future investment and support.

And women, when they don't expect the relationship to last, place higher importance on looks, suggesting that they are trading off the investment for good genes.

Also, a study showed how rapists tend to lack confidence in themselves in both sexual and non-sexual areas, suggesting they resort to rape when they can't see themselves able to find a willing mate.

Edit: not true
David Buss summarizes the latest evidence in "When Men Behave Badly" says that, overall, the theory of the"mate deprivation hypothesis" is likely false.

Chapter 4: The Marriage Market

Robert Wright says that the breakup costs after the marriage have been consumed tend to be heavier on the woman's side.

It's easier for the man to find a younger woman than for the woman to find a man.

The man's dissatisfaction with the marriage is indeed the leading cause of divorce.

In this chapter, Robert Wright makes the case that polygamy is better for women.

It's easy to discount polygamy for more attractive women who can get a good man all for themselves, but the author says polygamy is simply better at distributing wealth and giving more women a shot at securing resources.

It would make for a more dangerous society though as single men left without a mate would more easily drift off towards crime.

Monogamy is best for men because it gives them a chance with women who would otherwise move up the social scale becoming the women of wealthier men.

My Note:
Robert Wright oversimplifies it here.
Monogamy is best for average men.
But top high-quality men who can get many women are better off with polygamy of course.

Our current monogamy is not monogamy anymore though, Wright says, but it's serial monogamy. Serial monogamy, though, is basically polygamy because few men monopolize long stretches of the best reproductive years of women.

Chapter 5: Darwin's Marriage

Robert Wright talks here about Darwin's life and his marriage.

He says it's strange that Darwin, as a rich and high-status man, would marry an older woman.

But he says that the rich+high status = young and beautiful is a bit of a crude equation. Intelligence, compatibility, and the selection of a wife also based on her abilities as a future mother, also have weight.

He says that as could be expected of Victorian England, Darwin pushed toward an early marriage while she was

more willing to put it off.

After the marriage she was blissful.
But the author says it's not equally obvious Darwin would be as well after consummation finally happened.

Chapter 6: The Darwin Plan for Marital Bliss

Robert Wright says that lifelong devotion is not natural. Not for women and even less so for men, so it requires an act of will.

Some great help in keeping Darwin's marriage strong were:

- Far from the city and young women's distractions
- Many children
- No pictures back then

The invention of photos and the proliferation of pictures and videos of young women can make men feel like the environment is more abundant in women than it actually is, and push them into a shorter-term, no-investment strategy.

Robert Wright says that males' sexual fantasies tend to be more visual while women's fantasies often entail tender touching and similar indicators of future investment.

My Note:
well, this doesn't necessarily mean that women don't have rougher fantasies as well.

Divorce is Good for Men

Robert Wright says feminists welcomed divorce as a great conquest, but that divorce is "better" for men than for women.

Men are more likely to be able to find a younger woman, especially if they're well off, but a woman in her 40s, especially if with children, will be hard-pressed in finding a new man.

PART TWO: SOCIAL CEMENT

Chapter 7: Family

Robert Wright says the only thing natural selection cares about is the survival of the specie and the passing on of our genes.

If we suffer in the process, or if we die, doesn't matter.

Altruism -and even death to save kin- makes sense because our kin shares part of our genes.

If we look at different species, we see that the bigger the share of genes they share from common descent, the higher the altruism.

Since brothers don't share 100% of their genes, there's always a sort of war of resources going on.
Parents as well can easily display preferences by giving more resources to those offspring that better seem able to reproduce.

Family Standing and Offspring Preferences

Poor families have a preference for pretty females compared to handsome males because they are more likely to marry up, and hence secure more resources for their offspring.

Poor families can prefer females in any case because it's easier for them to reproduce, while a malnourished male will hardly produce any offspring.

In wealthier families, all things being equal, it's the men who have more status because they can produce scores of offspring.

Robert Wright says this sounds all too Machiavellian to be true, but for a Darwinian, Machiavellian actually adds credibility.

And if that weren't enough, the daughter provides some chilling proof for this all.

Feelings, not Logic: Why You're Not Consciously Aware

Robert Wright says we are not aware of any of these tendencies going on.

Why not?

Because natural selection provided us with feelings to guide us through, not rationality.

We just feel closer to the daughter if we're in a poor family and we have no idea why.
Even brothers of poorer families tend to worry more about their sisters than their other brothers, the author says, and of course they have no clue as to why.

Chapter 8: Darwin and the Savages

In chapter 8 of *The Moral Animal* Robert Wright talks about groups and the differences among cultures.

He says that the rules can change from culture to culture, but adhering to them and the feelings of disobeying them are innate.

Group selection theories all have a common problem: it's hard to see how a group trait could ever exist without first existing at an individual level.

Chapter 9: Friends

Robert Wright here tackles the important question of altruism.

How can altruism make sense?

He says it's because human relationships are a Non-Zero Sumness.

Non-Zero Sumness

Imagine for example you have just finished your dinner and you're almost totally full.

But your neighbor is starving. That last dish will not do you as much good to you as it will do to your neighbor.

If you ate it, it would help you, from 0 to 10, 2. But if you give it to your neighbor, it will help him 9 out of 10. Now your neighbor is majorly indebted to you so that if in the future you need something, chances are you can count on him.

Because of the Non-Zero Sumness property, both parties can benefit from altruism.

Corollaries of Helping

One corollary is that we will be better off helping people in desperate situations.

And that's why we feel worse when we see someone in a very poor situation: so that it will be more likely we will help them and we will be able to cash in on bigger IOUs (Trivers, 1971).

The second corollary is that we are not really helping out to help out, but we are mostly interested in *looking* like we are helping, which is equally effective and costs us no resources.

Tit For Tat

Robert Wright discusses a test with software where different parties were programmed with different strategies.

The most successful was Tit For Tat, which would give the first time, then remember what the other did, and react the next time -give if the other gave, defect if the other had defected-.

In the long run, the *selectively collaborative approach* won out.
To read more on exchange theories in human behavior, read *The Social Exchange Theory*.

> Social Exchange Theory: 5 Laws of Social Success

How did Altruism Start?

Robert Wright says it's hard to see how any altruist behavior could emerge in the tough environment we developed for most of our time.

He says a good theory is that it started as kin altruism and then spread with people who started being selectively altruistic with other selective altruists -such as altruists with other altruists and not altruists with those who never gave back-.

As the software Tit for Tat showed, that's a mutually beneficial strategy that with time won over.

My Note:
Tit for tat developed over time to include other strategies that even better explain human behavior.
For more, check out "The Origins of Virtue".

Indignation and Fights

Robert Wright also talks about indignation and fighting.

He says how come some people would risk getting into a fight when they discover a small wrongdoing or act of cheating.
Partially it's because lots of cheating over a lifetime add up, so it could be worth the risk of "stopping" it right there and then with a major escalation.

However, another reason is because of the message it sends: that you are not to be trifled with without consequences.
That's why, ironically, many homicides happen in the presence of witnesses: because, from an evolutionary perspective, it's better to take the risk of a fight with people watching.

My Note:
indeed if you care about social power, it's most important you answer to affront when there are people around, as we have seen in the case of an Alpha Male Handshake.

Guilt and Knowledge

We are more likely to feel guilty if we can get caught.

So that we can ideally come clean before we get caught. We are also more likely to feel guilty if we get caught, not if we get away with it.

Collective Behaviors

A neat way of punishing bad people and promoting good ones is to spread the word about their deeds.

This is the reason for grievances: spreading the words of someone who cheated us will ruin his reputation.

As much as we can have an interest to punish who wronged us, we can also have a tendency to simply attack our enemies to diminish their public standing while we cover up our wrongdoing and try to look morally superior.

Chapter 10: Darwin's Conscience

Robert Wright says we all want to be seen as doing what others say is good.

What others say is good changes all the time though, and that's why conscience is so malleable.

Moral guidance is a misnomer, then.
Our parents actually guide us towards a moral compass that makes sense for the environment we are in, teaching us when to cheat, and lie and when we should look like whatever society is rewarding at our time.

The author says we have machinery for a helpful Tit For Tat, but we also have machinery for *more cynical* and egoistic behavior.

The problem with that?

In a more and more anonymous society with more and more fleeting encounters, the cynical machinery might be more and more rewarding.

PART THREE: SOCIAL STRIFE

Chapter 11: Darwin's Delay

This chapter of *The Moral Animal* is mostly about Darwin's life.

Chapter 12: Social Status

Robert Wright says that in most groups a pecking order arises from an initial one of chaos.

The pecking order is advantageous for most individuals in the group.

For example, if chicken A beats chicken B most of the time, it makes no sense for chicken B to continually go against chicken A and he's better served by deferring and obeying the pecking order.

No Inborn Social Status

Robert Wright says that there's no inborn gene for a leader or alpha status.

The serotonin equips the winner and the leader once he got there or when he's ready to fight for the position, he wasn't born with it (to read more on serotonin, read *Leaders Eat Last*).

People with low self-esteem are more likely to cheat and people low in serotonin are also more likely to commit impulsive crimes, suggesting that cheating is an evolutionary response to being relegated to the bottom of the pile.

My Note:
Watch out not to over-generalize here.
As Baumeister explains in "Evil", it's people with high self-esteem who commit violence.

Lust for Power

Since *alpha male status* warrants access to most females and the lowest statuses often preclude female access, it's a natural male tendency to be lustful for power.

Social Status in Primates

Social status in humans and primates is less rigid and obvious than in chickens.

It changes more often and it's more dependent on a web of friends and support than on pure physical strength.

After fights primates, as well as humans, often go through a ritual of reconciliation.
Beginning a reconciliation can be not easy because it carries costs. It can easily be read as an act of submission and as a loss of social status.

That's why many human males sometimes don't like asking for guidance, even in trivial things such as asking for directions as that would mean to admit the "superiority" of another man, albeit in a very circumstantial situation.

The array of activities and professions that can give status in human cultures is wide and entails many, many different types of skills and knowledge.

Chapter 13: Deception and Self Deception

Robert Wright says people present themselves in what's in their genetic interest to look like.

The author says we are not the only dishonest specie, but we're probably the most dishonest. If nothing else, because we do the most talking.

My Note:
talking is indeed the easiest to "fake". To better spot how to read people, learn some body language, for example with Joe Navarro and The Definitive Book of Body Language.

The author says in small groups which could have been our ancestor hunter-gatherers societies, it made genetic sense to downplay the abilities of others, especially those of the same age and sex as ours which represented the biggest threat to our mating options.

The funny thing is that since the best way to deceive others is to actually believe the lie, we often tend to self-deceive ourselves first (read *Predictably Irrational* for more info on the irrationality of our brain).

For example, we tend to believe other's success is because of luck and we tend to believe our success is purely because of talent and skills.

Give Credit to Non-Competitors

Interestingly enough, Darwin gave plenty of credit to smaller researchers who could never take his crown or share the stage with him.

But doesn't mention the people who actually influenced him the most. And even writes disparagingly of the man who might have given him the biggest contribution to the theory of natural selection.

It's because those people who influenced him the most were bigger guns and more at risk of making him look less smart, less independent, and less revolutionary.

Self Deprecation

Why does self-deprecation exist at all when self-advertising is so ingrained within us?

Well, to begin with, Robert Wright says humility gives us more credibility when we will eventually later on *brag or boast.*

In other instances, it can be beneficial for example when we want to step aside in a challenge and show deference to a superior. That's how low self-esteem can also sometimes be helpful in avoiding fights.

Also, I found it very enlightening when Wright says it's especially useful for women at times to show deference to a man or to make him feel better when, say, he comes back all deflated from work and she provides with her self-deprecating attitude a paragon with which he can regain some confidence.

Also, read:

- Vulnerability is not power

The Strategy of Conflict

Robert Wright quotes Thomas Shelling for some psychology on bargaining and the game of chicken.

Shelling says the trick is to be the first to convince the other party of your rigidness so that he will be the first to consent.

My Note:
there's some element of truth here, but it's equally easy to piss off the other party and make the deal fall through. Cialdini in his seminal book Influence explains how the most successful deals happen when people give concessions because a concession begets a concession.

Brain is a Machine to Convince The World – and the Owner

Robert Wright says that the brain is a machine to convince the world that the owner of that brain is in the right.

And often the best way to *manipulate others* is through self-manipulation first.

Chapter 14: Darwin's Triumph

Robert Wright says how people were willing to defend the validity of blatantly wrong statements when the people around them did the same.

Similarly, people quickly changed their opinion depending on who the audience was.

Robert Wright also tells us how another scientist, Wallace, had theorized something very similar to the natural theory of evolution.

Had he sent the paper to a journal or to anyone else but Darwin, he could have probably been remembered today as the first man to theorize the theory of natural evolution.
But he sent it to Darwin instead…

PART FOUR: MORAL OF THE STORY

This part goes into morals a bit deeper.

Albeit it's certainly important, especially when talking about such a thorny subject as evolution and human nature, I find it less applicable and I invite you to get the book for the full story on morals.

Chapter 15: Darwinian (and Freudian) Cynicism

Robert Wright says that, albeit most think Freud "relegated" human rationality to a thin slice of our brain functioning, the Darwinian theory is actually much more upsetting from that point of view.

There isn't a "rational" part in our brain as the rational and the subconscious are both parts of the same drive.
And we are not interested in reality or understanding but only in surviving and passing our genes on.

Chapter 16: Evolutionary Ethics

In chapter 16 of *The Moral Animal* Robert Wright talks about Darwin's ethics and moral point of view and expands on those with his own theories.

The author says we are prone to be indignant to groups of people whose interest conflict with the interests of the group we belong to. Unluckily, we also tend to be very tolerant of high-status people and very intolerant of low-status people.

In a nutshell, morality was designed by natural evolution to be employed selfishly.
However, we can distance ourselves from our tendencies long enough to see them and recognize them, says Wright.

Chapter 17: Blaming the Victim

If we are simply reacting to our environment and obeying inner drives ingrained in us by millions of years of evolution… Then we should call free will into question.

And we gotta wonder: can we ever be made "guilty" of our actions, if there's no real free will?

Well, the question never really touches the "punishment", which should be there at least to prevent anyone to do further harm.
However, it should take into account why we do what we did so that the punishment can more easily lead the guilty back into a productive role in society.

Righteously, the author says, the truth becomes what we say is the truth.
So if we say that sleeping around is natural, then we condone that behavior and likely will see it increasing.

David Eagleman also talks well about this topic in his book on the limitation of the human mind, which I invite you to check out here: Incognito by David Eagleman.

Chapter 18: Darwin Gets Religion

Robert Wright talks about Darwin's religion in the last chapter of *The Moral Animal.*

CONS

- **Should better state what's a hypothesis and what's more empirically sound**

At times it feels like the author is talking as if everything was proven beyond doubt, but he doesn't always back it up with studies.
Almost everything he says just makes a lot of sense, but maybe he could have been a bit more specific about what's been "proven" and what's a bit more speculative.

- **Some years have passed since 1994**

It's been a while now, and much new research has emerged.

Review

For several years during my student time I considered *"The Moral Animal"* the N.1 mandatory reading to understand human nature.[image]

I agree with almost everything in "*The Moral Animal"* and even with the fact that we are an "own interest maximizing machine".

However, I disagree with the message of supreme selfishness that the book seems to advance at times.
For example, in *Man's Search for Meaning* Viktor Frankl says that man is the species that built the gas chambers, but also the species that walked upright in them and gave his last piece of bread to another human being.

That being said, if you are not familiar with evolutionary psychology, do yourself a favor and start learning the basics.
There's no understanding of men, women, and humans without understanding the basic tenets of evolutionary psychology.

The Selfish Gene: Summary, Review, & Criticism

Lucio Buffalmano · 3 December 2017 · Archived copy · Original

"The Selfish Gene" explains evolution by looking at single genes as the basic units that are ultimately responsible for the selection process, and for driving our behavior.

Contents

- 3 Sentence Summary
- The Selfish Gene – Summary
  - Selfish Gene – Meaning
  - Selfish Genes Make For Selfish Human Beings
  - Inclusive Fitness & Altruism
  - Battle of the Sexes
  - Kins Battles Among Each Other
  - Groups Are Equally Selfish
  - Nice Guys Finish First
  - Humans Often "Disobey" Genes
  - Bigger Than Our Genes
- Criticism
  - The Original Premise of Selfishness Was Wrong
- Review

3 Sentence Summary

- Our genes don't care about us
- We all have tendencies to maximize our benefits
- We can consciously decide to override our genes' programming

The Selfish Gene – Summary

About The Author:
Richard Dawkin is an ethologist and evolutionary psychologist and has been a professor at Oxford for many years.

Note:
I read *"The Selfish Gene"* in my younger twenties, and while it remains a seminal book, I haven't re-read it because I consider more recent evolutionary psychology books to be more encompassing and updated.
[image]

Selfish Gene – Meaning

A gene is not selfish because only a sentient being can be selfish.

Richard Dawkins wants to express instead that natural selection does not care how the genes are passed along, but only that they will.

And the more likely it is that a gene will be passed along, the more likely it is that a certain trait that the gene gives birth to, will spread and eventually become common to a whole population.

If the animal or person carrying that gene will suffer or die in the process, again, natural selection does not care. Natural evolution can actually at times select behavior that is harmful to the organism as long as the organism passes its genes on.

Selfish Genes Make For Selfish Human Beings

Dawkins does present a view of very selfish human beings though.

He says human beings are selfish with a semblance of altruism.

The more selfish we can be while at the same time appearing the most altruist, the more benefits we can reap from the people around us while we are actually doing our own interests.

Dawkins says that any other being around us, especially if of the same species, can be an enemy in the struggle for survival and passing on genes.

Inclusive Fitness & Altruism

Richard Dawkins popularized the concept of W. D. Hamilton.

That concept is that an individual does not simply want to maximize the number of children, but wants to maximize the spreading of his genes, which is not exactly the same thing.

For example, caring for a brother makes genetic sense because his children will share 1/4 of our genes.

The book doesn't talk about it, but by extension, we share at least some genes and similarities with every other human being on the planet, so theoretically we tend to prefer to rescue a human being instead of an animal.

Battle of the Sexes

Richard Dawkins says that, from a genetic point of view, there's much between a wife and a husband that can be divisive.

For example, while both want the good of their children, one could easily gain by investing less than the partner so as to have more to invest in other possible children.

There's always a constant "arms race" where both genders, men especially, are trying to look better than what they actually are to lure a partner and the partner needs to be able to discern false advertising from the truth.
Women also have a tendency to try to look less sexual for men so that men will want to marry and invest in them (we talk a bit about how men can disarm this tendency in *text flirting for men*).

Kins Battles Among Each Other

Dawkins says that a parent's interest is to see as many of her children survive.

However, in some dire situations, she might sacrifice a son/daughter who's too weak to increase the chances of survival of the other children.

Children also present a strategy in which they try to maximize the Parental Investment all for themselves.

Groups Are Equally Selfish

Dawkins says that even when we form groups we display an apparent unselfish behavior, but it developed in the first place only because it helps spread the genes of each single individual.

Groups make genetic sense because we live in a non-zero-sum world: we can all profit from cooperation.

Nice Guys Finish First

Dawkins presents the famous Prisoner's Dilemma and how the simplest strategy to play the game won them all.

The strategy is called Tit for Tat always gives first, never "cheats" first but always retaliates when cheated. Tit for That drove away cheating behavior until everyone cooperated.

For more on "tit for tat" check out *"The Moral Animal"* and "*The Origins of Virtue*".

Humans Often "Disobey" Genes

Humans are far more complex and have built civilizations that often "disobey" genes.

Contraceptives and the use of porn instead of copulation are such an example.

Also, many elements of culture do not always seem to have a direct connection with natural selection.

Bigger Than Our Genes

Importantly, Richard Dawkins says, we evolved a neo-cortex and a brain, which allows us to step back, understand what our genes want and decide if we want to resist.

We all love sugar, for example, because of natural evolution, but we can force ourselves to eat less when we see it's not actually helping our organism anymore.

Or we can consciously decide not to have children.

> Let us understand what our own selfish genes are up to, because we may then at least have the chance to upset their designs, something that no other species has ever aspired to do

Criticism

The Original Premise of Selfishness Was Wrong

The Selfish Gene, both in its original version and its title, may lead people astray.

It's true that 'the selfish gene' operates under simple 'whatever replicates me best' rules.
However, it doesn't mean that the resulting behavior of the animal must necessarily be selfish. Instead, contrary to the title, the best interest of the animal, including humans, is often to cooperate.

This isn't a wishful thinking opinion, but it's the results of successive decades of theories and empirical evidence.

I quote Krebs from *The Cambridge Handbook of Evolutionary Perspectives on Human Behavior*:

> As brilliant and renowned as Richard Dawkins is, he reached the wrong conclusion about the evolution of morality, primarily because he conflated genetic selfishness, which pertains to the selection of genes, with biological and psychological forms of selfishness (a mistake that Dawkins corrected in revisions of his books). In a nutshell, behaving in biologically and psychologically altruistic and moral ways can increase fitness, and behaving in biologically and psychologically selfish and immoral ways can diminish fitness (Krebs, 2011).

So if you want to read *The Selfish Gene*, make sure you get the latest version.

Review

The Selfish Gene is a seminal text of evolutionary psychology.

It reframed evolution from the gene's perspective, showing how genes drive behavior to maximize their replication.

However, its original version also mistakenly overextended the "selfishness" metaphor to human behavior, and downplayed the role of gorup and cultural selection.

My crazy coincidence story with this book

I have an interesting story connected to *The Selfish Gene*.

Not long after I finished reading the book, I went to Facebook to check if there were any pages for it or (back then I had just opened the account a few days prior).

There wasn't any group, but I saw a person with that name. It was a girl.
I left it at that.

Years later, I was living in Prague and was out at a nightclub.
A girl approached me and we started talking. Wanna guess who she was? Yep, it was Selfish Gene.

I wish I could share a happy ending story and tell you she was nice and all. But here's a hint for you: if a woman represents herself with a marker of self-aborption, maybe she isn't the kindest and most supportive woman :)

The Brain That Changes Itself: Summary & Review

Lucio Buffalmano · 7 December 2017 · Archived copy · Original

The Brain That Changes Itself explains the properties of the brain that allow it to change through a phenomenon called “neuroplasticity” -and what that means to us as the “owners”-.

TPM Takeaway: The power of knowing you can change and improve at a neurological level
The Brain That Changes Itself shows that the brain is not fixed but remains malleable throughout life. While many of its cases are extraordinary, they demonstrate what is neurologically possible and support the broader principle of neuroplasticity.
For our readers, the strategic takeaway is that beliefs, habits, and skills are not static. They can be unlearned and rebuilt at any age, making deliberate learning and practice a valid approach for increasing competence and, ultimately, personal power.

Main Takeaways

- Our brain constantly changes -and you can use it-
- The critical period of growth in childhood can shape our lives
- Habits shape us as much as genes do -and more than choices-

Notes

About the Author:
Norman Doidge is a psychiatrist and psychoanalyst. Though not a neuroscientist himself, he does a great job reviewing the science of brain plasticity, while weaving in the more extraordinary success stories for ‘storytelling effect’.

Preface

Norman Doidge says that *The Brain That Changes Itself* is a collection of stories of scientists, doctors, and patients who discovered and proved that the changes over time, and can change with self-directed effort.

The brain's property of changing itself has been referred to as "neuroplasticity".

While empowering, neuroplasticity also allows for the development of paranoia or habits that are not in people's best interests. And that's one more reason to learn and understand brain plasticity.

2: Building a Better Brain

Chapter two of The Brain That Changes Itself tells the story of a woman who had been labeled as retarded and how she taught herself to be "normal" instead.

She showed that children with learning disabilities can go beyond compensation and correct the underlying issues instead.

My Note:
the story points to the power of grit and hunger for succeeding. The woman didn't just "study", she was up all night and worked super hard on her learning skills. First, she designed her own tests, then applied herself to them tirelessly.

3: Redesigning the Brain

Norman Doidge talks at length here about another hero of neuroplasticity: Merzenich.

Merzenich has made the most ambitious claims of them all when it comes to neuroplasticity: that brain exercises are as useful as drugs even when treating severe diseases and that our brain is plastic from birth to death.

Rewiring: What It Means

When we talk about "rewiring" we are talking about the connection between neurons.

Neurons are separated by a space called a synapse. Electrical signals travel from neuron to neuron through the synapse.

Rewiring occurs between neurons, at the synapse level.
A rewired group of neurons strengthen their connections at the synapse level.

Critical Periods

Norman Doidge also introduces here the concept of the critical period, such as that brain development goes through periods in which it is especially plastic and sensitive to change.

Language, for example, has a critical period between eight years and puberty. After this period has passed, it's hard not to have an accent when learning a new language.

The difference in plasticity between the critical period and adult plasticity then, says Merzenich, is that during the critical period, simple exposition is enough to change our brain maps because the brain is always in learning mode. In adults it's different: **in adults paying close attention and effort are what allow for plasticity**.

The Brain That Changes Itself also says this makes sense from a biological perspective because children cannot possibly know what's important.

How To Learn Effectively

Merzenich proved that human brains are plastic even in adult age, and that experience changes the brain.

Specifically, when neurons get trained through repetition, they become more efficient and can fire faster, and faster firing also means faster reaction and faster thought in general.

Also very importantly, when we want to remember something well, it's important we hear it or read it well, because our memory can only be as clear as the first impression. And it's important, to learn well, to pay close attention.

Brain Maps Competition

There's no precise definition of a "brain map".

But I would personally define it as

> A part of the brain, or a cluster of neurons, allocated to a certain task or to interpret a set of impulses (read brain mapping on Wikipedia).

An important trait of the brain is that if one area is not used for a certain task other areas, with their own maps, will "take over" that area to put that computational power to use, so to speak.

This is very important because it has major consequences for our everyday life. It means for example that when we stop exercising a mental skill the brain turns that space over to something else that we are instead actively practicing.

This also explains why it's so hard to learn a new language past a certain age, says Norman Doidge.
It's not just because the critical period for language learning has ended, but also because the more we use our native tongue, the more it comes to dominate our linguistic map space, thus leaving little space for a new entry.

Similarly, it's very important for our habits.
Learning a new habit is not just about learning a new one, but also getting rid of the old ones, because that old bad habit has now taken over a brain map and leaves little space for the new one.

So you first have to "unlearn" that old one, and that's why early childhood education is so important because it's much better to get it right early before the bad habits take hold.

My note:
it's important though to notice that you can change the bad habits.
Tony Robbins talks a lot about it.

Future Possibilities and Keeping Smart

Norman Doidge then puts a chip on every geek's shoulder talking about the possibilities of future human engineering.

It's possible for example, in theory and also in practice when tested on rats, to re-open critical period plasticity also in adults via external stimulation and drugs.

It's also possible to slow, stop, or inverse aging decline.
Aging decline happens in good part because the processing speed and the accuracy go down.
The future is full of opportunities… But before any breakthrough, you can simply exercise.

> Neurons that fire together wire together

4: Acquiring Tastes and Loves

Norman Doidge says that human beings have the biggest degree of sexual variety and plasticity in the animal kingdom.

That plasticity and variety also mean that our sexuality is not hardwired, but is altered by our psychology and experience.

The plasticity of this man's sexual taste exaggerates a general truth: that the human libido is not a hardwired, invariable biological urge, but can be curiously fickle, easily altered by our psychology and the history of our sexual encounters.

It could have been interesting when Norman Doidge says that sexual plasticity seems higher in those who have had many partners and in those couples who stayed together for a long time but fails to dig deeper and provide any sort of proof.

Love: It's The Ensemble of All Attributes

Falling in love brings about huge changes in our brains.

Especially when people commit to each other, they need to alter their existing lives as well, which is why, for many, love feels like a loss of identity.

The author says that we do not fall with looks alone but with a host of attributes, including the ability of that other person to make us feel good.

Once in love, highly pleasurable emotional states are triggered that can make us fall in love even with the defects of our partners, which made me think of 500 days of Summer.

A tolerance to love is what makes people eventually fall out of love, and couples can keep their "highs high" with novelty in their relationship.

Unlearning, Oxytocin & Love

Norman Doidge says that oxytocin reinforces bonding in mammals and triggers trust.

Contrary to dopamine, which triggers sexual arousal and excites us, oxytocin makes us calmer and warmer.

Oxytocin though also allows us to unlearn by melting down existing neuronal connections, as it's been proposed by Freeman.
Oxytocin is released when falling in love and when preparing to parent so that people can unlearn previous selfishier behavior and make space for the new partner and new baby.

Unlearning and changing at such a deep state also helps explain why so many people who fall in love with *manipulative persons* often end up being puppets and takes them years to recover.

Early Experiences Play Big Roles

The author says that, albeit there are exceptions, research shows that Freud was right.

And early childhood problems can get "wired" in our brains and repeat in adult life.
Especially important for sexual development are critical periods.

Pornography is Addictive

Norman Doidge goes on a long tirade against pornography.

He says pornography is addictive for its dopamine release and has negative repercussions for couples.

People who get hooked often require kinkier and kinkier stuff or are more and more violent and cannot get horny anymore with their partner without fantasizing about pornographic scripts.

Sex, Violence, and Overlapping Maps

The author speaks at length about a patient he had.

The patient had a childhood where violence was common and her mom also had sexual encounters with him.

He ended up mixing sex with violence and the two maps for sex and violence overlapped with each other.
Merzenich calls two overlapping mental maps that are supposed to be separated “mental traps”.

Doidge was able to disassociate the two maps by pointing out the difference between the two every time they came up in conversation, helping him see the difference and that he was capable of untangling sex from violence.

Sexual sadism is similar in that the two maps of sexual and aggressive are fused together.

5: Stroke Victims Learn to Move and Speak Again

For a long time, it was believed that there was little that patients could do to recover after a stroke.

Of course, given our brain plasticity, that was quite wrong.

Norman Doidge introduces Thaub and his research with monkeys.
Basically, monkeys who had had their arm deafferented -ie.: cutting the motor nerve- were not using their arms anymore, which is what everyone expected.

But Thaub had a genius idea: maybe the monkey was not able to use their arms because when they tried a few times it didn’t work, And so learned that it was futile to try again and simply gave up.

They still had the other arm they could use.

However, when both arms were deafferented they eventually started moving them again because they never stopped trying: they needed to use them.

> **You don’t get what you want – You get what you need**

Thaub began treating people with strokes even long after they had stopped normal rehabilitation, and many showed large improvements even when their stroke happened more than 4 years before.

One of the main tenets of Thaub’s treatment was “massed practice”, such as concentrating on a huge amount of exercise in just a couple of weeks.

We can learn different tasks even when there was a lesion because most of our brain’s operators are not specific.
A few are -like the one for colors-, but many are generic, so that our motor skills or computational skills, for example, can be taken care of in whichever part of the brain.

6: Breaking OCD Habits

Norman Doidge talks about OCD, obsessions, and neurosis here.

From a neuroplasticity point of view, a patient who indulges his worry by checking and re-checking that everything is OK only strengthens his fears and worries because he keeps firing those neurons over and over, making the neural connection more and more efficient.
Worry begets worry, says Doidge.

The author talks about Schwartz and his research to cure OCD.
Schwartz proposes that the patient, as soon as the worry comes up, should tell himself that the problem is not whatever he is worried about, but the OCD episode.
This will help him get some distance from his own brain’s chemical reactions. It can also help them to think they are helping themselves carve new positive pathways when they don’t give in to their compulsions. The struggle is

not to make the feeling go away, but not to give in.

The next step is that the patient focuses instead on a new, pleasurable activity.
The idea makes sense because instead of firing the worry neural connection, it grows a new brain connection. Because of the use or lose it principle, the more the patient does it the more the new connection gets stronger and the weaker and weaker the worry connection gets.

The patient does not really “break” the old pattern, but replaces it.

Because the patient should think about a pleasurable activity, he also gets rewarded with a dopamine release, which helps grow the new neuronal connection.

7: Pain, The Dark Side of Plasticity

Norman Doidge explains here that plasticity is a property.

As a property, it can be good, or used in good ways, or it can be negative or used for negative purposes.

The author then introduces Ramachandran and the phenomenon of phantom limbs, such as patients who lose a limb, but feel like the limb is still there. Sometimes the original pain that led to losing the limb can also be “locked in”.

While pain has often been seen as the transmission of information from a part of the body to the brain, Ramachandran says instead that pain is a more complex system obeying the brain’s plasticity properties.
He says that “pain is an opinion of the organism’s state of health”.

Ramachandran managed to help people with phantom limbs by basically “tricking” the brain.
He managed to finally allow an amputee to scratch his arm by scratching a part of his face because the brain maps of his face and arm had overlapped in the patient’s brain.

And he managed to cure other people’s pain with a mirror, tricking the brain to believe the arm was still there so that the patient could “move it” until the pain went away.

The whole idea also led to a simple revolution: providing pain-killer before the surgery even started allows patients not to have their pain “locked in” in their brain after the surgery was completed.

8: Imagination – How Thinking Makes It So

Norman Doidge introduces Pascual-Leone’s research and talks about the neuroplasticity of learning.

Brain scans of students during the whole week showed that on Friday the brain maps had a dramatic expansion, only to return to normal size on Monday.
Friday maps continued to grow for six months, but always returned to normal on Monday.

Monday maps were the opposite instead: they only started changing after six months and then increased slowly and stopped growing at the ten-month mark.

Pascual-Leone believes that on Friday the scans show the brain strengthening existing neural connections and “looking” for buried ones. The longer-term Monday changes instead represent the new neural connection being formed.

The two different speeds also help us understand a phenomenon we can all be familiar with: some people learn quicker and seem better at a new skill only to be overcome later on by those who stay at the skill longer and build longer-term skills.

And this is why it’s bad to prepare hard for a test a few days in advance: we cram all the information but we forget it because it’s not long-term learning.

To learn long term we need to stay at a skill for longer.

Mental Practice

Interesting was also the research of Pascual-Leone on “mental training”.

People training mentally on a skill were almost as good as people who actually trained physically in that skill.

Even when it came to physical tasks, people actually doing the physical task increased muscular mass by 30% and people just thinking about physical exercise increased their muscles by 22%.

The “trick” is that doing and thinking about doing aren’t that different after all for our bodies. Both start as electrical impulses in our brain which then send signals to our muscles.

Experiments have already proven how people with electrodes in their brains could move objects connected to those electrodes, allowing us to imagine a future where paralyzed people can move objects around them.

Our brain is not disconnected from our body. Every thought leaves a trace by altering the shape of the brain itself.

Plasticity, Brain & Identity

The author poignantly asks: if the brain is so malleable, how come we don’t change continuously?

Pascual-Leone uses a great analogy: imagine your brain on a hill covered in snow.
The slope, snow consistency, and terrain beneath the slope are our genes, a given. Albeit the slope is partly given, we can steer the sled to choose a path.

Here’s the interesting part though: sliding down the slope with a sled, we carve a few pathways.
The more we keep using those paths, the more we strengthen and the more we increase our chances of using them again. Those are our habits, which can be good habits or bad ones.

As Thaub showed with his research on OCD, to develop a new pathway, you have to block the other already existing ones.

However, Doidge later explains, we can also shape our genes.

Not all our genes are expressed, so when we learn we also affect which genes are utilized, which in turn shape our brain’s anatomy.

10: Rejuvenation and Preserving Our Brains

How do we preserve brain functions?

Our brains, like all other organs, gradually decline. And yet it still goes under massive plastic reorganization.

Here are a few ways Norman Doidge fleshes out in the book:

- Change your surroundings
- Exercise (physically)
- Exercise (mentally)
- Eat healthily

Notes From Appendix

IQ and Recovery
In spite of some books that seemed to downplay the importance of IQ, IQ helps people with brain injury to recover well.

High IQ has been correlated to how well someone can recover from lost brain functions. It seems like having the

intelligence to spare allowed people to better restructure the brain.

Left Hemisphere and Special Abilities
Norman Doidge explains how our left hemisphere inhibits and suppresses the right hemisphere.

It's an interesting phenomenon that people with left hemisphere damage can sometimes develop extraordinary computational or memorizing skills.

The question is then why on earth should the left hemisphere limit our potential?

Well, it's simple and it's because our brain is limited: we don't need to remember everything as that would take away much-needed space in our brains.
Better to let go of the details and use that space for other activities.

Culture and Neuroplasticity
Culture does shape the brain.
It's the same for any other activity we are immersed in: it does shape our brains.
Culture is simply no exception and it's a two-way street: brain and genetics produce culture, but then culture also shapes the brain.

Humans VS Chimps
Doidge explains we share 98% of our DNA with chimpanzees.

What's different then?

Well, a key difference is in a gene determining how many neurons will be produced. Our neurons are the same as the ones in chimps, we just produce more.

Civilization VS Barbarian Instincts
Brain Doidge asks how it is possible for us to mix together our most violent instincts with our cognitive brain.

My Note:
I found the question doesn't make sense; one because the two are not opposite in any way, and two because it's been proven that altruistic tendencies make perfect sense from a genetic point of view as well.

Freud said civilization rests on our ability to inhibit our lower urges, but sometimes we can go overboard with it and crease neurosis.
However, Freud doesn't explain how we inhibit those violent and aggressive tendencies.

Doidge instead suggests that our base tendencies from our older, instinctual brain part, can be attached, thanks to neuroplasticity, to a host of different activities, including our more civilized, cognitive-cerebral ones.

For example, the rush we get in trapping an enemy's king on the chessboard is the same as we would have gotten in trapping an animal one million years ago. This process is called "sublimation".

Civilization, says Doidge in one of the best moments of the whole book, is a tenuous affair that must be taught in each generation.

> **Civilization is a tenuous affair we must constantly teach and care for**

TV & ADD
There seems to be a link between how much TV children have been exposed to and the likelihood of developing attention deficit disorder.

Modern media such as TV, movies, and soap operas make constant use of cuts, zoom, and sudden noises that, genetically, attract our attention. However, they do so in an unnatural way because we haven't evolved for constant, continuous attention-grabbing.

The price to pay could be difficulty concentrating and staying on a task for a long time.
Which, I would add, is a key to success at pretty much anything.

[image] 
Practical Application

-Change your habits:

1. Resist the urge to obey negative habits
2. Immediately switch to a positive thought
3. Replace the negative habit with a positive one
4. Keep repeating and with time you'll rid of the bad habit

-Ditch TV and limit Movies

-Stay At Skills For Long
We learn in bursts, but if you don't stay at the skill those bursts will quickly fade away. You have to repeat the exposure to grow new neural connections

-What You Don't Use You Lose
Connections and activities you don't use for a long time, you lose. Which is great for your bad habits. But keep the good ones going if you want to keep them for long

CONS

- **Many personal opinions**

Sometimes the author proposes his own conclusions and his own theories -or other people's theories- which haven't been proved.
I appreciate a good theory that makes sense, even though they haven't been proven yet, but there were quite a few here.

- **Plasticity is real, but it's also limited: the limits were missing**

I found that Doidge does not discuss the limits of plasticity enough.

Review

The Brain That Changes Itself is a good starting book to understand brain development and plasticity over time.

And, as you learn about how the brain works, you can also pick up a few good strategies and mindsets for self-development.

Check our **best books for top-1% men**.

Principles: Summary, Review, & Criticism (Ray Dalio)

Lucio Buffalmano · 10 December 2017 · Archived copy · Original

In Principles (2017) Bridgewater founder Ray Dalio shares how he developed and institutionalized the best asset of his multi-billion-dollar investment firm: its culture.
The principles are the lessons Dalio learned along the way and, allegedly, codified into his business systems.

Contents

- Overview
- Notes
  - Part I – Where I'm Coming From

[image]Overview

- What's good for the whole is good. The whole takes precedence over the one
- Perfect meritocracy is the best system for decision-making. It requires:
  - Radical open-mindedness (know and accept reality and your limits)
  - Radical transparency (be frank and open about your and other people's assessments)
- You must always voice your criticism (or else the environment becomes toxic)
- Hire people with a thirst for making sense of the world
- Pain + Reflection = Progress

Notes

About the Author:
Raymond Thomas Dalio is an American hedge fund manager, author and philanthropist. He founded Bridgewater in 1975 in New York and led it to be one of the best-performing hedge funds in the world.

Ray Dalio has been on the receiving end of some critical investigative journalism.
The book *The Fund* paints a truly dark "behind the scenes" picture.
Before that, there was a highly critical article by the Wall Street Journal. *Read my analysis here*.

Also, see check out later our Machiavellian version of Principles:

- **Principles Machiavellian version**

> Principles Life & Work: Machiavelli's Version

Introduction

Ray Dalio says the first principles serve to find your own principles.

This is what you should do:

1. Think for yourself to first decide what you want
2. Find out what's true
3. What should you do to achieve what you want in light of what's true

You choose your principles and you can even accept someone else's principles if they help you attain your goals. But your principles must be authentic, meaning they should reflect your real character and values. And then you should live by them and walk the talk.

Ray Dalio says that the success he had is because of the principles he followed, and not because of anything unique about him. So anyone else following these principles can achieve the same level of success.

Principles' Levels

There are three level principles:
Higher-level principles are chapters; mid-level principles are designated by numbers and sub-level principles are designated by letters.
Please note I will not always write all sub-level principles.
However, for a complete understanding of Principles, I invite you to get the book.

Part I – Where I'm Coming From

My Note: I will be brief here because I'm not too interested in biographies.

Here are a few points. Ray Dalio:

- Fears mediocrity and boredom more than failure. Terrible is better than mediocre
- A "can't lose bet" he lost showed him it's always best to assume you're missing something
- Meaningful work and meaningful relationships are better than money
- Doesn't want paycheck collectors but people who wanted to make sense of things -as he wants-
- Bad times with good reflections provide the best lessons -and who are the real friends-
- The greatest success is having others do well without you
- There are far fewer types of people than people & far fewer types of situations than situations…
- .. Hence matching people and situations is key
- Happiness comes from struggling well

The key question is "how do I know I'm right". The best way to answer is with other independent thinkers while engaging in thoughtful disagreement.
Dalio realized the only way he could succeed was to:

1. Seek out the smartest people who disagree with him so he could understand their reasoning
2. Know when not to have an opinion
3. Develop tests and systematize time-universal principles
4. Balance risks in a way that keeps big upsides while capping downsides

Part II – Life Principle

#1. Embrace Reality and Deal With It

Ray Dalio looks at problems as games and puzzles he has to solve.

Any time he solves a problem he gets a token in the form of a principle which allows him to avoid the same problem in the future.

The more tokens he collects, the better decisions he makes and the more he advances in the game.

1.1: Be a Hyper Realist

Ray Dalio says he has become such a realist that he loves reality even when it's harsh.
On the other hand, he came to despise all impractical idealism.

Dream + Reality + Determination = Successful Life

People who drive progress understand the cause-effect relationship that governs reality and idealists who are not grounded in reality cause problems instead.

1.2: Proof is The Foundation of Good Outcomes

The author says that proof or an accurate understanding of reality constitutes the bedrock of any achievement.

Most people don't go for that though and fight reality when reality is not what they want to hear.

1.3: Be Radically Open Minded and Radically Transparent

We aren't born knowing what's true, we have to find out, says Ray Dalio. And the best way to do that is with radical

open-mindedness and radical transparency.

We learn with feedback loops from our actions and beliefs, and radical open-mindedness improves those feedback loops.

Radical transparency means facing the truth and speaking that truth freely. It can be difficult because it opens us up to criticism, but fearing criticism is tragic, says Dalio because you won't learn.
The more you do it, the more comfortable it will become.

Last but not least, radical truth and radical transparency allow for meaningful work and meaningful relationships.

1.4: Look To Nature to Learn How Reality Works

Ray Dalio says nature sets all the laws of reality.

It's clear Dalio has been deeply influenced by *evolutionary psychology* because he says that evolution is the greatest force of reality.

Most people, says the author, judge bad and good based on how it affects them. But nature optimized for the whole, not for the individual (similar to what Nassim Taleb says in Antifragile).

Other big insights into this principle:

- Don't get hung up on how things should be because you miss how they really are
- For something to be good, it must obey the laws of reality and contribute to evolution as a whole

1.5: Evolving is life's greatest accomplishment and reward

Getting better and evolving is simply instinctive and that's why we have an innate pull to it.
Radical open-mindedness will allow you to adapt to reality via trial and error.

And since nature and reality optimize for the whole and not for the individual (ie.: not for you), **contribute to the whole and you will probably be rewarded**.

Ray Dalio philosophizes here when he says we are unbelievably tiny and whatever we accomplish means nothing when seen from the universe.
And still, we want to matter and we want to matter to the people around us.

Which point of view do you choose and who do you choose to matter to and care for (family, country, world.. ?) It's your choice, and it will determine who you will be.

My Note:
Mark Manson says we can see death as a reason not to do anything or say there's no reason NOT to do anything (check The Art of Not Giving a Fu*k) and check my articles on how to leverage our *insignificance* and *mortality*

> **You are simultaneously everything and nothing. -Which one you choose?**

1.6: Understand Nature's Practical Lessons

It's evolution and progress itself that makes us happy and fulfilled rather than achieving the goal or material wealth. But to evolve remember that "no pain, no gain".

1.7: Pain + Reflection = Progress

Ray Dalio says there is no avoiding pain, especially when you're after ambitious goals.

Instead of trying to avoid it, you should develop a reflective reaction, which will make you develop much quicker. Reflection before the pain and during is best, but also afterward is helpful (plan around inflection points, says The

Power of Habit).

In any case, **you must run through the** pain **or it means you're not living to your full potential**.

- Embrace Tough Love

What Rai Dalio wants to give people around them is not what they want, which ultimately makes them weaker.
He wants to give them the strength to deal with reality to get what they want *by themselves*, which ultimately makes them strong and independent.

1.8: Weigh Second and Third-Order Consequences

Ray Dalio says that people who stop at the first high-level consequences get duped by nature and rarely achieve their goals.

Translated into normal parlance, this is a bit of a more obvious point, and it says that not exercising and eating sugar, for example, have great first-order consequences, but bad second and third consequences.

1.9: Own Your Outcomes

The author talks here about the internal and external locus of control.

Internal locus of control people think that they are in charge of their life and they are happier and outperform those who think that life is a crap shoot game they have no control on.

1.10: Look At The Machine From a Higher Level

Ray Dalio says it's helpful to look at yourself and the people around you from above and as if you were a machine.

It will help you to be more objective about where you stand and what you need to do.
Looking from above you'll be the designer and manager of your life looking at your worker self.

When you see a weakness from the above, you have four choices: deny them (unacceptable), accept them and work to address them (great), find ways around them (easy win), change what you're going after (great if you're not suited or don't enjoy your current path).

#2. The 5-Step Process to Get What You Want

1. Have clear goals
2. Identify and don't tolerate the problems standing between you and your goals
3. Diagnose problems to get to the root causes
4. Design plans to get around those problems
5. Do what's necessary to push those designs to completion

2.1 Have Clear Goals

- Prioritize because you can't have everything.
- Don't confuse goals with desires, but try to reconcile them to "follow your passions".
- Don't mistake the trappings of success for success (= don't go after the bling)
- Don't rule out goals because they seem attainable: great expectations create great capabilities
- Flexibility (accept what reality and mentors teach you) and self-accountability (holding yourself responsible) will get you there

2.2: Identify and Don't Tolerate Problems

Ray Dalio says most people are loath of bringing problems to the fore because it exposes their weaknesses, but successful people know that they have to.

2.3: Diagnose Problems to Get to the Root Cause

Ray Dalio says you should focus on the root cause of the problem really is before moving into solutions.

Fixing the root causes is important because the manifestations of that problem, which can be many and varied, will keep popping up.

2.4: Design a Plan

Design precedes doing.

2.5: Push-Through Completion

Great designers who don't execute their plans go nowhere.

Keep in mind your WHY when you're struggling, why you want to do what you're doing and it will help you stay focused and on track.

> **Good work habits are underrated**

2.6: Weaknesses Don't Matter If You Find Solutions

The author says everyone has at least one big thing standing in the way to success.
When you find them, go to the root cause, address it, and fix it. All the rest will come much easier.

If you can't overcome your biggest roadblocks, have the humility to understand and ask for other people's help and support.

2.7: Understand Your and Other People's Mental Maps and Humilities

Mental maps mean understanding yourself well, and humility means the open-mindedness to find beyond yourself what are the best things to do.

#3. Be Radically Open Minded

Ray Dalio says this is one of the most important chapters in the book because it addresses the two biggest weaknesses almost everyone has:

1. Your ego
2. Your blind spots

3.1: Recognize Your Two Barriers

The two main barriers are your ego and your blind spots.

- **Ego Barrier**

Our ego-protecting mechanisms make it hard for you to recognize and accept your mistakes and weaknesses.

Dalio talks about the high level (conscious) and low level (unconscious and emotional).
The high level is often fighting with the low-level amygdala.
For example, when someone disagrees and asks you to explain your point of view the low level you is getting angry and defensive, even if the higher level you know it's better to understand each other and come to a better solution.

But to be effective, **your need to find out what's true must be more important than your need to be right**.

- **Blind Spots**

We all have a preferred way of seeing the world which determines what we pick up on and what we miss.

For example, we can big picture or detail types of people or linear or lateral thinkers.

Most people never realize their mental blind spots. And their ego makes it harder for them to understand when someone shows it.

But realizing your mental blind spots is paramount to succeed at any kind of complex project (once you know fix them or get people who are strong where you're weak).

My Note:
To read more about the brain's limitations read Incognito and *Thinking Fast and Slow*.

3.2: Practice Radical Open-Mindedness

Ray Dalio says that radical open-mindedness is how you fix the ego barriers and blind spots. To be radically open-minded you must:

1. sincerely believe you might not know the best path
2. recognize your ability to deal with not knowing is more important than what you know

Dealing with not knowing means you ask equally knowledgeable and smart people. And don't worry if what they think is different and don't worry about looking smart and being right, worry about achieving your goal.

3.3: Appreciate The Art of Thoughtful Disagreement

Your goal is not to convince anyone that you're right, but to find out which view is true and how to act on it.

All people in thoughtful disagreement must be worried about missing some key information and talk with each other with the goal of putting all the pieces and perspectives together.

3.4: Triangulate Your View With Believable People Willing to Disagree

Ray Dalio proposes to individually talk to experts and encourage them to disagree with each other.

He basically creates a thoughtful disagreeing group that raises the chances of being right.

3.5: Recognize The Signs of Close and Open-Mindedness

Close-minded people:

- don't want their ideas challenged
- frustrated the other person disagrees
- feel bad about getting things wrong and are interested in being right.
- make statements instead of questions
- focus on being understood more than understanding
- say "I could be wrong but..", which is a semblance of open-mindedness while being defensive
- have problems holding two conflicting thoughts
- lack humility

Open-minded people:

- not angry when someone disagrees

- are conscious there's always the possibility they are wrong
- ask genuine questions
- feel compelled to see things from other's people's eyes
- listen attentively
- can go back and forth between conflicting thoughts

My Note:
Ray Dalio here is basically talking here about a fixed and growth mindset (check *my guide to developing a growth mindset*).

3.6: Understand How You Can Become Radically Open Minded

It will take time to become truly open-minded because it's a question of habit -18 months on average, Ray Dalio says-.

But you can become it and then anything else will become intolerable.
To practice open-mindedness:

- Use pain as a guide to reflection

Anger, irritability, and tensions are all signs that your low road is taking over.
Don't worry, it won't last long. Resist it and use it as a queue to go the opposite direction instead.

- Make Open-Mindedness a Habit

The more you practice, the more it becomes a habit and the more natural it will become.
Read more about changing habits from Tony Robbins and how habits work on the brain in *The Brain That Changes Itself*.

- Know Your Blind Spots

Record all the times you've taken bad decisions because it might be a trend. Ask others and you might be about to uncover a blind spot.

- Meditate
- Be Evidence-Based

Many people make choices based on what they like or on what their subconscious dictates. Use data and evidence instead.

- Help Those Around Be Openly Minded

Be calm and reasonable to help others prevent the fight or flight response (which is actually freezing, fight or flight, as per Joe Navarro).

#4. Understand People Are Wired Differently

Ray Dalio says hired plenty of book-smart people who excelled in top schools, but as often as not that didn't turn out well.

He finally understood that **the biggest differentiator was in personality**.

4.1: Power Comes From Knowing How We're Wired

Ray Dalio here passes the microphone to someone else -sorry don't remember the name- who says that we are born with attributes that usually have both positives and negatives.

4.2: Meaningful Work and Relationships are Genetic Predispositions

We crave meaningful relationships (Brene Brown saying that "connection" is why we are here)

4.3: Understand Brain Battles and How To Control Them

Principles here go deeper into the previous concept of high and low you.

The conscious mind is in a battle with the unconscious mind, and the biggest battle is between feelings -unconsciously governed by the amygdala- and thinking -the prefrontal cortex operating consciously-.

The people who guide their own personal evolution and achieve their goals reflect on their own amygdala hijacking and form good habits.

My Note:
God, I couldn't agree more with this one.
Learning our psychology to transcend it is one of the emantras of this website.
Also, read: *The Laws of Human Nature*, *Start Here,* and *The Best Books About Power*.

Good habits take on average around 18 months and if you keep up they will stick forever.
You don't want to fight the lower level you though, but treat it with kindness and respect, as if you'd teach a child.

4.4: Find Out How You And Others Are

The author says that self-assessment of ourselves and others tend to be very inaccurate and psychometric assessments are better.

At Bridgewater, they map employees on their personality traits and he talks about a few personality traits, which are:

- **Introverts /Extroverts**: introverts focus on the inner world and get energy from ideas and memories. Introverts prefer to share and communicate after they analyzed on their own, while extroverts can find it hard to work out ideas without someone (also read *"Quiet: The Power of Introverts*")
- **Intuitive / Sensing**: Intuitives focus on the context while sensing people focus on details
- **Thinking / Feeling**: some people make an analysis based on logic and others on harmony among people
- **Planning / Perceiving**: some prefer plans, others prefer the flexibility
- **Tasks / Goals**: goals-oriented are more visionary and task-oriented are more reliable and better at managing processes that don't change much
- **WPI**: Workplace Personality Inventory for example low achievement orientation and high concern for others are unwilling to step on people's toes to achieve their goals; someone bad at rule-following might be a more independent thinker
- Creators / Definers / Advancers / Executers / Flexors.

Archetypes
Dalio says that some traits often combine together to create archetypes we are all familiar with.

Albeit archetypes tend to be less useful and precise than the full assessments they can be useful when assembling teams: impractical artists, tidy perfectionists, crushers running through the wall to get things done, and visionary pulling ideas out of nowhere.

Shapers
Dalio adds a few archetypes, the most important of whom are the shapers with which he identifies himself.
The shaper is very rage and goes from visualization to actualization, he can hold different conflicting thoughts at the same time and he's a visionary + practical thinker + determined.

Also, check out this diagram on different personality types:

4.5: Right People in The Right Role is Key to Success

Using the traits above, you want to have the people with the best fitting traits for each task, and form teams with complementary traits.

#5. Learn How To Make Decisions Effectively

Ray Dalio says he has spent his life trying to make decisions effectively.

He has been looking for a way people can make decisions repeatedly with the same quality under the same circumstances, often using systems and computers.

5.1: Ban Harmful Emotions and Learn Before Deciding

Ray Dalio says that to make good decisions one must synthesize reality well and know how to navigate well.

5:2 Synthesize The Situation at Hand

Many things come at you and they all seem bigger during the present moment. That's why it's important to take a step back and realize what to pay and what not to pay attention to.

- One of the most important decisions you make is who you are asking questions to
- Everyone has an opinion, don't mistake opinion for facts, and don't believe everything you hear
- New is overvalued, great is better than new

5.3: Synthesize The Situation Through Time

Don't get duped by the fact that something is simply "improving".

Look how much it's improving and where it's starting from, or it might not be useful at all.

Everything important in your life needs to be above the bar and on a trajectory toward excellence.

- Remember the 80/20 rule and be an imperfectionist

5.4: Navigate Levels Effectively

Ray Dalio intends levels as the depth you are looking at any given topic.

The example is that of a map, are you at street level or at the country level?
Your decisions should make sense at all levels.

5.5: Logic, Reasons, and Common Sense Are Your Best Tool

Don't use anything else or you will be prey to your low level.
I loved the quote from Carl Jung:

> *Until you make your unconscious conscious, it will direct your life and you will call it fate.*

5.6: Make Decisions as Expected Value Calculations

Be logical and take decisions based on the likelihood of being right, including expected rewards, and the likelihood of being wrong, including expected losses.

Sometimes though it makes sense to take a chance if it costs you nothing even when the odds are fully against you if the rewards of a win would be big.

- Knowing when not to be is as important as knowing what bets are worth making
- Best choices have more pros than cons, not zero cons. Beware of people arguing against something just because they can find something wrong with it without considering the upsides

5.7: Prioritize Based on The Cost of Getting More Information

You need to decide if the cost of waiting to make a decision to collect more information is greater than the risks of making a decision right there and then.

- Don't mistake possibilities for probabilities: everything is possible, and the likelihood of it happening is what matters

5.8: Simplify

Any damn fool can make it complex, it takes a genius to make it simple. You do it simple

5.9: Use Principles

Using well-thought-out principles is a great way to simplify and improve your decision-making.

All situations could look slightly different, but if you can look beyond the differences and identify "which one of those" it is, you will have systematized your decision-making.

5:10: Believability-Weigh Your Decision Making

Triangulate your decision-making with people with high believability scores.

The two mental blocks to overcome here are assessing who is more believable and not rating your own believability too high.

5:11: Convert Your Principles in Algorithms and Recruit a Computer

Computers are an integral part of the process of systematizing and automatizing decision-making.

5:12: Be Conscious of Trusting AI Without Understanding It

Computers have no common sense, so you must be aware of the pitfalls of automatized decision-making.

Life Principles: Putting It All Together

To have the best life possible you have to know what the best decisions are and have the courage to make them.
To acquire principles that work it's essential that you embrace reality and deal with it as it is.

Part III – Work Principle

Work principles might be much more important than individual ones, says Dalio.

Why?

Because the power of a group is so much greater than that of the individual.

For groups to function well the work principles have to be aligned with the members' life principles.
Not aligned on everything, but at least on the most important ones: the mission they're on and how to deal with each other.

- A great organization has both great people and great culture -and it's not easy getting them both right-
- Great people have both great character (radically truthful, radically transparent, and committed to the mission) and great capabilities (skills)
- Great cultures bring problems and disagreements to the surface and solve them well
- **Work Relationships & Tough Love**

Ray Dalio wanted the people working for him to be his partners more than his employees.

He says that treat partnerships come from sharing common values and interests, having a similar approach to pursuing them, and having consideration for each other.

At the same time, they must be willing to dish out tough love to push each other to greater levels. Too often people avoid facing the truth and put comfort ahead of success so they can stay safe in their social comfort zone.

Basically, the more care you give, the tougher you can be.

- **Believability-Weighed Meritocracy**

Ray Dalio says he wanted an environment where everyone has the right and the responsibility to make sense of things for himself and fight openly for his point of view.
Resolving those conflicts in a meritocratic system with a believability-weighed will outperform any other system.

A full meritocracy means:

- radical truth + radical transparency + believability-weighed decision-making.

Ray Dalio says that while some called Bridgewater a cult, it's the opposite, and critical thinking is the main differentiator (Peter Thiel doesn't go this deep in *Zero To One* when he suggests a start-up to be a cult).

- **Exceptions & Common Sense**

It's important to remember that all rules have exceptions and you should use your own judgment and common sense.
Your Principles are like your GPS, if your GPS is telling you to turn right when there's no road to the right, you can't simply blindly follow it.

TO GET THE CULTURE RIGHT...

#1. Trust Radical Truth and Radical Transparency

It takes time to adapt to radical truth and radical transparency.

But the critics say it's not natural to have it wrong because after 18 months people adapt to it.

Dalio says it's almost always best to shoot straight and be honest even when the news is not positive.

So when they were thinking about spinning off a division, most companies would have kept it secret to avoid employee dissatisfaction.
But in the name of honesty and radical transparency, they made it public instead and kept great relationships even when the team eventually spun off.

1.1: Realize You Have Nothing to Fear Saying The Truth

The truth is your best friend to improve and the best way to dispense love and make others improve.

1.2: Have Integrity and Demand it From Others

- Never say something you wouldn't say directly to them

Criticism is always welcome, but never beyond someone's back

- Don't let loyalty to people stand in the way of truth and the well-being of the organization

Personal loyalties and covering for someone's mistake stand in the way of improvement and encourages deception. It's an insidious form of corruption and undermines meritocracy.

Dalio says he believes in a healthier form of loyalty founded on exploring what's true

1.3: The Right to Understand and the Obligation to Speak Up

In a perfect meritocracy, openness is not just a privilege but a responsibility.

Discuss what you disagree on until you are in sync or until you decided what should be done.

About Lying:
Don't be *naive about lying*: people who lied once are more likely to do so again, but at the same time be practical, everybody has lied at least once, treat cases as appropriate

1.4: Be Radically Transparent

In the beginning, it will be difficult and it has drawbacks.

Since everything is in plain sight it might appear that a radically transparent organization has more problems, and it might be more prone to scandals because nothing gets swept under the rug.

But Ray Dalio says wisely: the only opinion that counts are those of your employees and your customers.

So being transparent is the way to go, especially with what's difficult to share, and keep the exceptions rare. Exceptions, of course, are private information and "enemies" of the organization.

1.5: Meaningful Relationships & Work Are Mutually Reinforcing

… Especially when underpinned by radical truth and radical transparency

#2. Cultivate Meaningful Work and Relationships

A meaningful relationship means that people care about each other and can have a great time together both inside and outside the organization.

Asked if the relationships in Bridgewater are more like a family or a team, Dalio answers that he wants the organization to be like a family business where members have to perform excellently or be cut.
He would do the same with a family member because he believes that's best for all.

My Note:
I must call BS on this one though.
He would not cut family members, I bet, and the "family lie" is a typical ***corporate manipulation***.

He says he approached benefits for employees not in the impersonal transaction way most companies do, but like a family business.
It doesn't mean he would give and give, quite the opposite. He was very generous with something while expecting them to take care of other things for themselves.

Dalio says the company behaved often like a family and many employees would do everything for the organization and they'd spend holidays often together.

It can happen that some employees don't want to spend time with the organization outside of work and it's totally OK to opt out.
However, the opt-out people are not the ones who provide the organization with the kind of commitment that is necessary for extraordinary performance over the long term.

2.1: Be Loyal To The Common Mission...

… And not to anyone operating inconsistently with it.

2.2: Be Crystal Clear on What The Deal Is

You must be clear on what the rules and values are -what's the qui pro quod, what's generous, what's fair… And that people understand the difference between the two -.

Dalio advises making sure people give more consideration to others than they demand themselves.

2.3: Size of The Organization Can be a Threat to Meaningful Relationships

When you grow past a certain point people don't know each other personally well anymore and sectarian tendencies might sprout.
Ideal meritocracy demands you do not allow factions.

2.4: Many Feign Organization Interest While Maximizing For Their Own

Don't be naive.

Strive for the maximum amount of people going for meaningful relationships while realizing there will be exceptions.

For example, most people will try to maximize the money they can get while minimizing the amount of work they need to do.
So be aware, for example, of lawyers' advice as they want to bill more hours.

2.5: Treasure Honorable People...

.. Who are capable and they will treat you well even when you're not looking.

#3. Create a Culture of Learning From Mistakes

Ray Dalio says you must create a culture where making mistakes is OK but it's not OK not learning from them.

Making a mistake is painful, but you shouldn't shield yourself from that pain because it's there to teach you a lesson.
It's not easy finding people with the correct mindset towards mistakes, partially because schools stress the importance of having the right answers.

I particularly loved when Ray Dalio says:

> If you cannot look back at yourself one year ago and don't think how stupid you were, you haven't learned much.

3.1: Mistakes Are a Natural Part of The Evolutionary Progress

Don't feel bad about mistakes, but love them because they're your milestones in evolutionary progress.

3.2: Don't Worry About Looking Good: Worry About Achieving Your Goals

Get over blame and credit and worry about accuracy and inaccurate.

3.3: Are Mistake Patterns the Products of Weaknesses?

Our weaknesses are often revealed in the pattern of mistakes we make. Observe and take note.

3.4: Remember to Reflect When Facing Pain

Stay in the pain and explore them so you can build the foundations for improvement. And do the same for others: teach and reinforce mistake-based learning.

Pain + Reflection = Progress

3.5: Know What Mistakes Are Acceptable and Unacceptable

Of course, in some areas and situations, it's not OK to make mistakes.

#4. Get and Stay in Sync

Ray Dalio says that since we're all wired differently alignment among people cannot be taken for granted.

Quarrels can happen because of misunderstandings and disagreements.
And to fix disagreements people must be open-minded and *assertive* at the same time.

For open-minded assertiveness in conversations check Difficult Conversations.

4.1: Conflicts Are Essential For Great Relationships

Because it helps people understand each other and clarify their disagreements.

4.2: Know How to Get In Sync And Disagree Well

It's essential to know where the final decision-making authority lies and it's never acceptable to get angry because the meritocracy doesn't produce the decision you wanted.

4.3: Be Open-Minded and Assertive At The Same Time

Ray Dalio says most people have problems in being both *assertive* and open-minded at the same time and that *being*

assertive comes easier because it's easier to see things the way you want to see them.

But getting in sync is a two-way street with both responsibilities: listening and speaking.
And last tip: don't waste time with close-minded people.

4.4: If It's Your Meeting to Run Manage The Conversation

Make clear who is directing the meeting and who is there to serve. The person who has a goal for that meeting is responsible for it.

I also liked the warning on *assertive* fast talkers: people who articulately speak faster than people can process as a way of pushing their agenda.

Don't be scared of appearing stupid in saying you didn't get it.

4.5: Great Collaboration Feels Like Playing Jazz

> 1+1=3
> 2+1=4.25

In a great team, the result is greater than the mere sum of its parts.
But up to a certain point.
Beyond 3 the marginal benefit diminishes and it might be counterproductive as

4.6: When You Have Alignment, Cherish It

Make sure you end up with people with your same core values.

4.7: If You Can't Reconcile, Consider If The Relationship Is Worth It

If you can't reconcile the core values chances are you'll drift with time, so you might want to do that sooner rather than later.

#5. Believability Weigh Your Decision Making

In most organizations decisions are made either autocratically from the man on top or democratically.

Both systems produce inferior decision-making.

The best decisions are made by ideal meritocracy with believability-weighed decision-making.
Believability-weighed means that the opinions of more capable decision-makers are weighed more than those of less believable decision-makers.

How to Weigh Opinions
The opinions are weighed based on whether people have repeatedly and successfully accomplished the thing in question and can demonstrate they can logically demonstrate the cause-effect relationships behind their conclusions.

5.1: You Must Understand The Merit of Each Person's Idea

But if you have never done something successfully don't think you can tell others how it should be done, especially if they've done it successfully.

5.2: Find The Most Believable People Possible and Understand Them

Ray Dalio says you must check the believability of people you triangulate with and pick the best ones.

How do you check for believability?

Usually, those who have done it at least 3 times and who have great explanations of the cause-effect relationships that led them to their conclusions-.

Sometimes inexperienced people can have great ideas too though and sometimes better than experienced ones as they don't have preconceived notions and experienced ones can get stuck in their own ways.

5.3: Think If You're Playing Student, Teacher or Peer

You should be upfront about how confident you are in your opinion, and you should be upfront if it's a suggestion, a conviction, or an opinion.

There's also a weigh in the exchange depending on your position. It's more important the student understand the teacher first than the other way around.

5.4: Understand How People Came By Their Opinions

Don't just listen to the opinion as that can get you confused.

Ask people why they think what they think instead and it will help you get to the truth.

And be skeptical of statements with "I think that… ". Even more skeptical of statements beginning with "I think that I… " as people are poor at self-assessment.

My Note: Watch out for fake confidence
I'm not sure about this advice since it plays straight into the hands of those who feign confidence.
In general, men also tend to sound more confident than they're competent, and women tend to use more "I think" structures.

5.5: Disagreeing Must Be Done Efficiently

Disagreeing must be done following a protocol.

The teacher role always speaks first then the students.

And agree on important things first, then move to the smaller things -if necessary at all-.

5.6: Make Sense of Important Things Is a Right & Responsibility

You don't need to make a judgment about everything and if not important and not your expertise let someone else decide and move on.

5.7: Pay More Attention To Fairness of System Than Getting Your Way

Don't worry about "winning" but whether or not the system is fair.

With a fair system, you will get your way when you're right and you will develop as a person to reach your full potential.

#6. Recognize How to Get Beyond Disagreement

In this chapter, Dalio digs deeper into working out disagreements.

6.1: Principles Can't Be Ignored By Mutual Agreement

If you don't like a principle you need to speak up to change the principle, not just do what you wanna do.

6.2: The Right to Debate is Not The Same as The Right To Make Decisions

Responsibilities and authorities are assigned to certain individuals based on their ability to handle them.

They are stress-tested both up and down the chain and debates are always encouraged.

But the final decision is still their responsibility (but if they go against believability-weighed opinion they make a strong statement that will influence their future scorecard).

6.3: Don't Leave Important Conflicts Unresolved

Important conflicts can undermine relationships and the decision-making process. Always address them.

6.4: Once The Decision Has Been Made Everyone Must Get Behind It

The decision might change in the future again and people must not pretend they agree with it if they don't, but they must get to work towards the success of the final goal.

6.5: If Meritocracy Comes Into Conflict With The Organization...

.. Declare martial law only in rare and extreme circumstances when the principles need to be suspended.

But be aware of people who agree to suspend the meritocracy for the good of the organization.
Often these people place what they want above those of the organization.

Get rid of these people.

Also, read:

- Toxic employees archetypes
- Political players

> 8 Types of Toxic Employees & How to Deal With Them

6.6: If People With Power Don't Obey The Principles, The System Will Fail

For that reason, you only can give power to those who value the principles more than their individual or factional interests.

TO GET PEOPLE RIGHT...

People can change the culture for better or for worse.

#7. Remember: WHO is More Important than WHAT

Who is taking the responsibility is more important than what should be done.

Ray Dalio sees his role as that of a conductor looking for the best players able to perform better than him. Ideally, he would find a conductor who would do a better job than himself.

As a conductor, you must:

1. Remember the Goal
2. Give the goal to those who can achieve it
3. Hold them accountable
4. If they can't achieve this after training and time, get rid of them

7.1: Choosing Responsible Parties Is Most Important Decision

The parties holding responsibility are the most important parties in the system.

7.2: Those Bearing The Consequences Are Ultimately Responsible

If you bear the responsibility for the failure you're the ultimate responsible party.

If you want to build a house and pick an architect, you're the one ultimately responsible as you will pay for mistakes.

So when you put someone in a position of responsibility make sure their interests are aligned with the final person bearing the consequences.
And make sure everyone has someone to report to.

7.3: Remember The Force Behind The Thing

Companies don't make decisions, people do. Change the people, and change how things develop.

#8. Hire Right

Ray Dalio says people hire people whom they like, which are basically people who are like themselves.

So he developed two ways to radically improve Bridgewater's hiring practices:

1. Be crystal clear on what type of person they were looking for and
2. Develop a way to assess people at a much more granular level

At a high level they're looking for people who think independently, argue open-mindedly and *assertively* and, most of all, value the intense pursuit of truth and excellence, improving themselves and the organization.

8.1: Match The Person to The Design

Don't design jobs to fit people but think about which values, abilities, and skills you need -in that order- and find a person that fits those.

Values are deep-seated beliefs that motivate people and determine people's compatibility with each other; abilities are ways of thinking and behaving (faster learners, big picture types, etc.); skills are learned tools -the easiest to chance-.
Since most people don't change much, especially in the short term, it's best to assume their values and abilities won't change at all.

Once you know who you're looking for, make your hiring systematic and scientific.

8.2: Different Personalities Make For Different Jobs

Ray Dalio is a big proponent of personality assessments, which he says are often more reliable than *interviews*.

He also has a top suggestion on how to use the human tendency of people to pick people who are like themselves: if you are looking for a visionary, have other visionaries *interview the candidate* as their positive opinion will give you a stronger clue.

8.3: Think of Your Team The Way Sports Fans Do

Nobody by itself has it all for success and everyone must excel.

8.4: Pay Attention to Track Records

Since people don't often really change that much, track records do matter.

But be wary of school track records: they will not tell you much in terms of the abilities you are looking for. School is best at measuring memory, processing speed, determination to succeed, and the ability to follow directions.
And you might not need those.

And check the references.

8.5: Hire People You Want to Share Your Life With

You want to hire for the long term, so don't just look at the ability to do the first job you are hiring them for, but hire based on long-term compatibility.
And:

- Look for candidates with lots of great questions

Great questions are a much better indicator of future success than great answers.

8.6: Provide Both Compensation and Opportunity With Salaries

Pay enough that people are not under financial stress.

Ray Dalio says to pay more than it's fair, but not so much that people become unmotivated fat cats.

Capturing all the intricacies of top performance is very hard, but you should try to put incentives loosely tied to

performance metrics.
And finally, I loved:

Focus more on making the pie bigger than on slicing the pieces

The very best negotiation is the one saying “you should take more”, “no you should take more”.

Also, read: *negotiation manipulations you should be aware of*.

8.7: Consideration and Generosity Are More Important Than Money

Some people respond to generosity and others respond more to money.

You want more of the first kind of people, and start with yourself: be generous first and expect the same from others.

8.8: Great People Are Hard to Find...

.. So make sure you know how to keep them. Encourage them to speak up and assign a mentor.

#9. Constantly Train, Test, Evaluate and Sort People

Ray Dalio says that both people and design must improve for the machine as a whole to improve.

It can be hard but if people can’t get up to the bar in an acceptable time frame, they must go.

Choose between keeping incapable and liked people and missing your goals or getting rid of them and achieving your goal.

At Bridgewater, you have no choice because you must choose excellence, which in the end is best for everyone.

9.1: You And The People You Manage Go Through an Evolution Process

Since people evolve, their careers cannot be planned from the outset.

Evolution is a natural consequence of discovering strengths and weaknesses and how to tackle them.

The best way to teach them is to let them fail and make mistakes.

9.2: Provide Constant Feedback

Assessments should not come as a surprise because they should be constant.

9.3: Evaluate Accurately, Not Kindly

It might not seem so at first blush, but at the end of the day, accurate and kind are the same thing.

You must be precise in assessing who has been responsible for what results and judge independently because people tend to inflate their own contributions.

9.4: Tough Love is The Hardest and Most Important Type of Love

It’s the most important because it’s so rare. Compliments are easy, tough love is not, but it’s the most useful.
No pain, no gain.

9.5: Don’t Hide Your Observations About People

But explore them openly.

Make and note all observations, but at the same time don’t overemphasize any single observation but look at trends.

9.6: Make Personal Evolution Open, Evolutionary and Iterative

The review must be done together with the person being reviewed and must be ongoing.
There can be an inherent struggle in open evaluations: the evaluated see themselves better and have an interest in appearing better.
Keep in mind that your only final goal is always the truth.

9.7: Know How People Operate Is More Important Than What They Did

Ray Dalio says that knowing how people operate and whether that way of operating will lead to good results is more important than knowing what they actually did.

In Bridgewater, they call it “paying more attention to the swing than to the shot”.

If someone is doing a job poorly pay attention if it’s because of a lack of learning, which can be fixed, or a lack of ability, which cannot be.

> Pay more attention to the swing than the shot

9.8: If You’re in Sync About Weaknesses It’s Probably True

If you are in sync with someone about their weaknesses, it’s because it’s probably true.

Ray Dalio says that people feel safer evaluating candidates for hire than colleagues. But anyone looking for the truth should see how that’s a mistake.

9.9: Train, Guardrail or Remove. Don’t Rehabilitate

Rehabilitation is an attempt to create changes in values and abilities, but since those are difficult to change, you’re better off removing incompatible people.

Including the people you love. The best way to “shoot the people you love”, says Dalio, is to love the people you shoot.
Do it with consideration and in a way that helps them.

Sometimes you can let people step back to another role after failing, but you have to be cautious about it. They could grow resentful and that position could go to someone better suited.

> **Love the people you shoot**

9.10: Transferring is to Benefit The Community

Both managers should agree a new role is the best highest use for someone.

If there’s no such role they should escalate to make a termination.

For continuity reasons, it’s always best to let people finish their tasks and goals before moving to a new position.

9.11: Don’t Lower The Bar

Ray Dalio says that at Bridgewater they cannot compromise on the fundamentals of their culture.

And if a person cannot operate within the requirements of excellence and radical truth and transparency in an acceptable time frame, he must go.

TO BUILD AND EVOLVE YOUR MACHINE...

Ray Dalio says that thinking of your organization as a machine has some important ramifications on how you behave.

#10. Manage And Operate a Goal-Achieving Machine

Anyone diagnosing problems must understand what the parts of the machine -the design of the people in it- are like and how they work together.

10.1: Look Down On Yourself And Your Machine From High Level

That macro-perspective of looking at yourself and the machine from afar will give you a better perspective and much better insight.

Always simultaneously try to accomplish the goal and evaluate the machine, people, and design as all outcomes are a reflection of how the machine is running.

10.2: Move Closer To Your Goals and Train/Test The Machine

Use any situation to move closer to your goals and to train and test the machine.

Training and testing your machine is even more important than moving closer to your goal because that's how you build a solid organization working well in all circumstances.

I particularly liked that Dalio suggests looking at everything as a case study and looking at it at two levels: the case level and what to do about it and the machine level (why that outcome was produced).

10.3: Managing, Micro-Managing & Non-Managing

Micromanaging is telling the people working for you what tasks to do or doing the task for them.

Not managing is letting them do their tasks without oversight or involvement.

Great managers orchestrate like conductors of an orchestra.

10.4: Your People Are The Most Important Resource: Know Them Well

Know how much confidence you can have from the people around you instead of assuming. And regularly take a temperature check of the most important people around you.

10.5: Assign Responsibilities Clearly

It made me chuckle when Dalio says people in organizations are often like children playing football and all running after the ball. Avoid that with clearly defined responsibilities.

10.6: Probe Deep and Hard to Learn What You Can Expect

Ray Dalio asks people reporting directly to him to take 10-15 minutes daily to write a report of what they did, their thoughts, and their problems.

He says that probing into problems allows you to get a feeling before those problems hit with full force.

It's also important to probe to a level beneath your direct reports and allow them to escalate problems to you because you can't fully know the person until you know how he behaves with his direct reports.

10.7: Think Like an Owner

.. And expect the people you work with to do the same. As Dalio said before, you don't experience the

consequences of your action, you'll take less ownership of them.
Thinking like an owner means that you are always responsible… Even when on vacation.

10.8: Recognize and Deal With Key Man Risk

Every key person should have one person who can replace him.

10.9: Don't Treat People The Same, Treat Them Appropriately

To treat people fairly and appropriately, you must treat them differently. But all are treated with the same set of rules.

Over the years, many threatened Dalio to quit, sue or spread bad press.
He says that while it seemed easier to "just let things go away" giving in to threats is short-sighted and communicates that the rules have changed. It only invites more of the same behavior.

He says he is willing to take the punch in the short term because he's worried about doing the right thing, not what people think.

> **Worry not about what people think, but about doing the right thing**

10.10: Great Leadership is Not What It's Made Out to Be

Dalio says he does not describe what he does as great leadership because he believes what most people think of leadership is ineffective.

The stereotypical leader is strong, and confident, and motivates others to follow him. The emphasis is on "follow".

He says that it's more important to have challengers than followers and you should be both weak and strong at the same time.
Asking questions is perceived as weak and indecisive, Dalio says, but it's not because it's a necessary step to becoming strong and decisive.

Don't Worry Whether People Like You
Some people will dislike you no matter what decision you take, says Dalio.

That's why you only have to worry about making the best decision possible.

If you are in a leadership position it's also plausible to believe your opinion weighs more than the average person's opinion.
If that weren't true then the average person should be in your position.

How To Lead
The best way to deal with your people is to encourage everyone to come up with their own ideas and let the meritocracy decide so openly and reasonably that everyone will recognize the valid merits of your thinking.

Once the decision has been taken in a meritocratic way, be happy whether your idea "won" or not as long as the best idea wins.

And don't give *orders to follow*, but strive to be understood, understand and get in sync.

10.11: Hold People Accountable...

… And appreciate them for holding you accountable.

Keep in mind you can't hold people accountable when there wasn't a clear agreement between you two, so always be clear.

10.12: Communicate The Plan Clearly and Have Clear Metrics

Once you decide on a plan, it's your responsibility to communicate it well and know how you will measure progress.

10.13: Escalate When You Can't Handle Responsibilities

Escalation is not a failure, but a responsibility

#11. Perceive and Don't Tolerate Problems

Most people have a tendency to celebrate wins and sweep problems under the carpet.

Those people have their priorities exactly backward.

11.1: If You're Worried, You Need to Worry...

.. And if you're worried, you don't need to worry.

This really made me smile. A favorite saying of mine has always been "the best way to be unsafe is to feel safe"

11.2: Your Machine Must Check if Things Are Good or Not

You have to make sure that people are not afraid to look for, investigate and report problems.

Dalio, for example, gives them independent reporting lines.

Without systems that make sure problems are brought to the surface, you cannot count on people to raise all the problems you need to hear about.

And be aware of group-think: the fact that nobody seems concerned doesn't mean nothing is wrong (also check the spiral of silence on Wikipedia)

11.3: Be Very Specific About Problems

Avoid "we" and "they", be specific about people.

11.4: Don't Be Afraid to Fix Difficult Problems

Sometimes people can be afraid to start tackling problems that seem too difficult to fix. But not fixing them is worse.

#12. Diagnose Problems to Get at Their Root Cause

Ray Dalio says that the most common issues when fixing a problem are:

1. not getting to the root cause
2. not connecting the problems to people
3. not connecting the problems to see patterns

12.1: Diagnose Well and Ask These Questions

- Is the outcome good or bad
- Who's responsible for the outcome
- Is the party responsible incapable or is the design bad?

12.2: Diagnose Continuously

Your system should keep diagnosing on an ongoing basis.

12.3: Diagnoses Should Produce Outcomes

Or at the very least lead to theories about root causes and clarify what information is needed to reach outcomes

12.4: Use Drill-Down Techniques

Step one is to list all the problems and identify the root causes. Ray Dalio uses the “5 whys technique” (5 whys on Wikipedia).

12.5: Diagnosis is Foundational to Progress and Quality Relationships

As you dig deep into problems, it’s also an opportunity to get to know people better and help them grow (and vice versa).

#13: Design Your Machine to Get Around Your Problems

Once you find out the problems, you have to design plans to solve them.

13.1: Build Your Machine

Instead of focusing on each task at hand, try to modify the machine in a way that you fix the issue at the operating system level.

It takes longer, but it will pay many times over.

13.2: Systematize Principles And How to Implement Them

Build your principles into habits and into the machine.

Ray Dalio, for example, puts all his thinking processes and principles into algorithms to systematize his decision-making.

13.3: A Good Plan Resembles a Movie Script

Try to visualize different plans and assess the second and third-order consequences they will bring about.

13.4: Between Now and Then There’s a Work-Through Period

Between a bad now and a good then you try different plans and designs

13.5: Build Organization Around Goals, Not Tasks

Build the organization around goals and organize departments and sub-departments around “gravitational pull”.

Hire and build from the top down.
You hire managers before hiring reports. The people overseeing others must have higher standards, and don’t just trust people to do their job well.

13.6: Create an Organizational Chart Like a Pyramid

The arrows should go down and don’t cross.

The whole organization should look like a series of pyramids but try to minimize layers to minimize hierarchy.

13.7: Create Guard Rails When Strictly Needed

Guard railing is to help good people perform better, not to prop up not good enough people.

An example of a good guard railing is siding people with other people who have key strengths they are lacking.

13.8: Keep Strategic Vision While Making Tactical Changes

Don't act like you don't have time for strategic issues because you're dealing with tactical ones.
Kicking the can down the road is the path to slaughter.

13.9: Have Good Controls to Fence Dishonesty

Do not assume that people will act in your interest rather than their own.

When faced with the choice of being fair or taking more for themselves most people will take more for themselves.

Dalio says that even a minimum of cheating is intolerable, so investigate and let people know you will investigate.

Dalio suggests using public hanging and shaming to deter bad behavior and make sure everyone sees that bad behavior does not pay.

13.10: Have Clear Reporting Lines for Responsibilities and Reporting Lines

Assign responsibilities based on workflow and abilities, not job titles.

Dalio also says he is always looking for leverage, and technology is a great way of doing so.

For example, designing FAQs and building manuals and training.

13.11: Virtually Everything Will Cost More and Take Longer

Virtually nothing goes according to the plans.
To get better estimates, Dalio usually multiplies the estimates by 1.5.

#14. Do What You Set Out to Do

Motivations of why people follow through differ says Ray Dalio.

And at the end of the day, most of the success comes from doing mundane and often distasteful stuff, like identifying problems and sticking through them for a long time.

My Note:
on the importance of long-term commitment for success, but also for the long-term growth of your passion, I warmly invite you to read Grit by Angela Duckworth).

14.1: Work For Goals You're Excited About

.. And think about how your tasks are connected to those goals.

14.2: Recognize Everyone Has Too Much To Do

What differentiates those who do a lot with the same amount of time is creativity, character, and wisdom.

Creativity leverages people, technology, or different work approaches. Characters help wrestle with the challenges. Wisdom looks at us as a machine from above to prioritize, redesign and make sensible choices.

If something bad hasn't happened yet, wait and it will. But it is what is, success is going from failure to failure without loss of enthusiasm.

14.3: Use Checklists

But don't confuse them with responsibilities.
Your task is doing your job well and achieving your goals, not crossing items off a list.

14.4: Allow Time For Rest and Renovation

Plan and schedule for rest.

14.5: Ring The Bell

Do celebrate when you achieve your goals.

#15. Use Tools and Protocols

Dalio says that even though most can see why these principles make sense, they won't be implemented because people agree or recognize it makes sense.

Tools and protocols are needed to shape those principles into habits.

15.1: System-Embedded Tools Are Especially Useful For Ideal Meritocracy

For an ideal meritocracy to operate the way Ray Dalio describes it, you need effective tools to collect all the data and convert it into decisions.

These tools allow people and systems to work with each other in a symbiotic way.

A good system will make the system fair and all decisions less arbitrary.

#16. Don't Overlook Governance

Governance is the oversight system that removes people or processes when they are not functioning well.

And all the principles will be useless without good governance.

Governance makes sure that the best interests of the whole are placed above those of the individuals.

16.1: To Be Successful All Organizations Need to Check And Balances

For an ideal meritocracy, governance must always be more powerful than any single individual.

Make sure nobody is more powerful than the system and that nobody is irreplaceable.

My Note:
As a website on sociology and Power Moves, I must note the divergence here.
Your interest as an individual is to be (almost) irreplaceable instead. But it also means you deliver outstanding work, which is great for the organization.

16.2: A Great CEO Is Not As Good As a Group of Great Leaders

In Bridgewater Dalio places several co-CEOs instead of just one. That's what's best for ideal meritocracy, he says.

16.3: Great Partnerships Still The Way To Go

All governance, check and balances, and principles will take you far unless you have great partnerships.

Such as capable people in positions of power who want to operate for the good of the community based on the agreed-upon principles.

Work Principles: Putting It All Together

Ray Dalio says we work together to accomplish three things:

1. more leverage to accomplish our goals
2. quality relationships

3. money that allows us to buy what we want for ourselves and others

Ray Dalio believes an ideal meritocracy is the best way to achieve all of them.
An ideal meritocracy requires you to do three things:

1. Put honest thoughts on the table for everyone to see
2. Have thoughtful disagreements to come up with the best answer possible
3. Obey the meritocratic ways of getting past disagreements (such as believability-weighed decision-making)

Real-Life Applications

This is how I would recommend you strive to apply Ray Dalio's principles:

Love Reality
Always look at reality. Love reality even when it's harsh.

Radical Open-Mindedness
Be open to accepting the feedback you receive on your current skill levels, action, and personality. Only by accepting the feedback from the real world as openly as you can, you'll be able to move forward as quickly as possible.

Radical Transparency
Foster relationships based on radical transparency. Accept and give feedback with full transparency and straightforwardness. Don't start business ventures with close-minded people who can't handle radical transparency.

My Note:
don't be radically transparent with everyone! Most people would get hurt and you'd make enemies out of them (read How to Win Friends for more).

Sit Through Pain… With A Pen
Painful experiences with reflection are the biggest growth opportunities. Don't shy away from pain. Sit through it and make your principles.

Believability-Weighted Decisions
Just genius. Pick the people with the most credibility and assign different weights to their opinions.

Duty Of Speaking Up
If you're building a company, make it a duty of every employee to speak up when unhappy or when they feel wronged. It will stop rumors and dissatisfaction from spreading behind people's backs.

> **Love Reality. Even when it hurts. Especially when it hurts.**

CONS

- **Sub-Principles Org-Chart Not Perfect**

Some sub-level principles did not fit well with their upper-level principles. They still made sense, but they would have been better under other higher-level principles.

- **Repetitive**

Some concepts repeated across different principles and a slight pruning would have made the book more digestible.

- **Some principles can trample individuals' rights**

The concept of “the whole is more important than the individual” is good for reaching a goal.

However, it can lead to treating the individual as disposable, especially in bigger corporations (something Sinek talks about in *Leader Eat Last*).

The idea of “loving the person you shoot” can be applied in many harsh ways, too.
Call me an ineffective romantic, but I like to think that bonding between individuals can matter as much as the whole.

Also, read: corporate manipulations.

> 12 Ways Companies Manipulate Employees (W/ Examples)

Principles Review

Principles is a great book that packs endless insights for self-development and empowered mindsets.

It’s one of the best books I have read about business, one of the best leadership books, and one of the top 3 best books I have read on how to shape company culture.

Keep in mind though that it’s a bit on the idealistic end.
In that sense, if you don’t add power dynamics and human nature, it may even be naive self-help.

So we recommend you also read *The Fund* and Machiavellian principles right after.

4 Steps to Mastering Group Conversations

Lucio Buffalmano · 10 December 2017 · Archived copy · Original

Group conversations are daunting for beginners.

But worry not, like most other things in life, it can be learned.

By the end of this post, you will know what are the top mistakes and the golden rules of awesome group conversations.

good group conversation around a table

Contents

- Group Conversation: Example

  - 3. Brings People Together
  - 4. Asks Deeper questions
- Summary

Group Conversation: Example

Some days ago I was sitting in a cool bar having a beer and laughing along with the guys.

We were all having a great time.

Everyone was engaged, everyone was listening and everyone was ready to jump in with their opinions.

Of course, the fact that we were talking about women contributed to that group's engagement, but… That's no guarantee of great group conversation as we shall see.

Party Pooper Steals The Show

We will call the *socially awkward* fella "party pooper".

And as soon as Party Pooper barged into the conversation, the mood immediately soured.
Some nursed their beer, some looked away.. And everyone disengaged.

Party Pooper had effectively managed to bring the group from cohesive and engaged to removed and disjointed.

What had happened? How could the mood shift so quickly?

Let's see:

Group Conversation Example

I can't remember the conversation verbatim.

But this one below is a good close approximation:

> **…**
> **Guy Who Gets It**: *And what about Cristina, what do you guys think of Cristina*
> **Guy 2**: *Physically not my type, I like though how she's always kind and welcoming towards everyone*
> **Guy Who Gets It**: Yeah she *is awesome, but I understand if she's not your type. But what's your type then…*
> **Guy 2**: *blabla*
> **Guy Who Gets It**: *Oh got it, you're into X, I like that too, what do you think about Cristina, Guy 3*
> **Guy 3**: *I dig her man, nice body shape and the boobs, man, blablabla*
> **Guy Who Gets It**: *Damn those boobs (smiles). Guy 4 also appreciates her boobs (looks at Guy 4)*
> **Guy 4**: *I would blablabla*
> (Everyone laughs, ready to move on to some other topic / girl, when…)
> **Clueless Party Pooper**: *Oh yeah, about Cristina, I met this great guy at the conference in Rome, Paul. I was having a very deep conversation about her with Paul. We have a very good understanding, that guy is amazing, turned out both of us…*
> **Everyone**: *looking away*

Group Conversation: 3 Top Mistakes

You will notice that the Clueless Party Pooper makes a few mistakes all packed into one sentence.
Let's see which ones:

1. Beating a Dead Conversation Horse

The first conversation mistake is that he tries to bring back to life an already dead topic.

That's a mistake people sometimes do when they try to remember something but cannot.
Then they finally do and say it even though the conversation has moved on. When that happens to you, don't try to

remember anything: you're better off going with the flow instead.

But it wouldn't have been the end of the word if he had quickly weighed in with his opinion.
The two bigger issues are:

2. Conversation Dead End

You will notice Party Pooper takes the conversation where it cannot go anywhere else.

Beautiful conversations are like an ebb and flow of an ocean wave. They come and go naturally between water and land.
But he doesn't pass the buck along to anyone else and neither does he throw any new meat on the conversational fire.

He just goes on a new road, *all for himself*, and it's a dead-end road.

That's another common mistake, and when it happens you will notice that there's a pause within the group where nobody says anything.

If the group lacks a good conversationalist, an awkward silence will reign.
But if there is a good conversationalist, he will jump in at this point to re-kindle the conversation or to start a new topic.

However, Party Pooper made a much bigger mistake it that would have made the job of an even more skilled conversationalist much harder.
And it's this:

3. Conversation Hijacking – And You Guys Are Out

The biggest issue of them all was that **Party Pooper took a conversation that was all about the people in the group and turned it into a "me, me, me fest**".

You will notice the conversation was entertaining not only because of the topic but because everyone was chipping in.
And everyone's opinion was being valued and appreciated (that's the hallmark of a great conversationalist, as we shall see).

Imagine an inclusive line, and that line was all around the group. Everybody was in it, and that's one of the reasons why everyone was so engaged and enraptured.

With Pooper's interjection, it became instead "me and this other guy".
He basically took that red line and put it around himself and that new guy alien to the group.

This is what he did with a picture:

And that's why nobody said anything or *wanted* to add anything.
It's because everyone had been left out and with no way back in.

And maybe, just maybe, everyone deep down thought what a dumba** move the Pooper had once again done.

It's a bit like this "Italian guy" spoofing in Family Guy:

See how unsupportive that is?
It's the equivalent of saying "you sucked… But me, mate.. Me I'm great".

4. Conversation Social Climbing

If you dig deeper, you will also notice that this is yet another form of *social climbing*.

Why?

Because it basically does these three things:

1. Aggrandizes a non present person
2. Aggrandizes himself by association
3. Demeans the people around

First of all Party Pooper throws a name of a guy at a conference nobody else attended and lavishes praise on this Paul.

If the person were famous, it would have been typical name-dropping and social climbing by association (check an example with Tai Lopez).

Since nobody knew this guy, Party Pooper needed to build him up first, which looked like he was fawning at him with the end result which was possibly even worst than "simple" name-dropping.

He then proceeds to build this special connection with this supposedly great guy by associating himself with him - "deep conversation", also a slight dig at our conversation-.

As we've seen a couple of times, the worst kind of *social climbing* doesn't just raise the climber's status, but *lowers* the status of others as well (*value-taking social climbing*).
Here it's a bit less obvious, but it's there.

By hijacking the conversation and building this "special understanding" with this great guy outside of the group he is indeed also slightly demeaning us.
Nobody in the group was allowed into their little bubble and nobody was given the stage afterward.

Notice also that he doesn't share what the content of the conversation was, making it seem as if the group wasn't exclusive and special enough to hear about it.

For more on social climbing:

- Social climbing in absentia
- Obama social climbing

Subconscious Fu*k You

Unless you read a website such as The Power Moves -in which case kudos to you :)- most people are unlikely to consciously understand (or reflect) on what happened.

However, don't let that fool you: on a less conscious level, everyone notices.

And if anyone in that group were to have a party, what do you think are the chances Party Pooper will be invited? :)

Indeed albeit there's no conscious understanding, the consequences are very much real and concrete.
People feel zero rapport with individuals who behave like Party Poopers and will most likely not like them all that much.

What's the proper way of doing group conversation, then?

How To Converse Well In Groups

How to be successful in group conversations, then?

It's about bringing a positive mood and having everyone engaged (positive doesn't necessarily mean laughing BTW).

Guy Who Gets It, as the name suggests, does a lot of good things.
let's see a few of them:

1. Passes The Conversation Microphone

You will notice from the conversation at the beginning that Guy Who Gets It is working as a connector.

He is asking an opinion from one guy, then adds a bit of comment, and then passes the packet to another guy to further enrich the conversation.

He is allowing everyone to participate and chip in.

That's why everyone is drawn in: everyone knows that his opinion matters and that his time to speak will come soon.
So, in exchange, everyone cares about listening and understanding what the others are saying.

2. Refrains From Too Many Comments

High-value men don't feel the need to always get their ideas validates.

And many *high-value men* would rather take the "moderator role" in group conversations.

People who are *dominant* enough to take the moderator role and "pass the mic around" should know the N.1 risk of having group power: that of hogging the conversation.

You will notice indeed that Guy Who Gets It doesn't talk at length about his own opinions.
He just adds quick remarks on each. And all of them are rapport-building, like: "I like that too", "damn those boobs".

Everyone feels connected to Guy Who Gets It.
And everyone loves him.

3. Brings People Together

The other risk of being the one passing the mic is that you end up with a group that is too dependent on the moderator.

In that case, the group ends up like this one here (a Star Network type for the geekiest among you):

Star networks are fragile because they're dependent on the central node.

So for building effective group relationships, one should let the other nodes take part as well.

Back to people's world, that means letting less talkative and shier people chip in and connect directly between themselves.

You will notice Guy Who Gets It says "Guy 4 Also Appreciate Those Boobs", basically bringing Guy 3 and Guy 4 together as two people who both share the same tastes and liking.

Normally Guys 3 and 4 will also look at each other and add a few comments, which brings the two closer together. With a good, engaged atmosphere, more people will jump in, thus strengthening the bond between them and bringing the group further closer together.

Now it starts looking more like this:

This is also a great way to introduce people by the way.
Find a connection or commonality between them and use it for an introduction. For example:

> **Guys Who Gets It**: *Matteo, meet Catherine, she also loves cooking*

Or:

> **Guys Who Gets It**: *Caterina, meet Matthew, he also plays in a band.*

That way you bring the group closer.
And once the group is closed, you can even exit the group because you have made it independent of yourself.

As John Maxwell said, the true test of *leadership* is time (meaning: what happens once you leave).

4. Asks Deeper questions

I understand that some people might think this is just a shallow example of group conversation.

Just talking about women with a beer, after all.
Well, I don't fully agree: these are great types of conversations *to bond and connect* people together.

Furthermore, notice that Guy Who Gets It still goes for a quick dive into more personal territory.

When Guy 2 says Cristina is not her type of girl, that's the perfect occasion to go a bit deeper, and Guy Who Gets It asks what type of girls he like then.

That's a deeper question than it might seem at first blush. Brene Brown in *Daring Greatly* righteously says we are on this earth looking for connections.
And guess what, romantic connections are some of the deepest connections we form.

Thus, asking about what type of partners one gels with is really getting to know an *extremely* important aspect of any individual.

Summary

There are of course several other techniques for successful group socialization.

But this article gave you a good idea of how to prevent some of the most common blunders.
And it gave you a few good ideas on what constitutes a proper group conversation.

The techniques in this article work best for when you're the group moderator, the most extrovert one, the one who knows all the others in the group, or the most *socially powerful* group member.

To summarize:

1. Don't form "us" groups with people outside the group
2. Have everyone engaged
3. Speak little if you're the moderator
4. Bring people together with common traits or common stories
5. Pose quick, deeper questions: those bond the best

And make friends and spread the good vibes :)

The Power of Myth: Summary & Review

Lucio Buffalmano · 11 December 2017 · Archived copy · Original

The Power of Myth records the interview of Joseph Campbell, a popular mythologist, and shows us how myths build civilizations, shape cultures and capture our imaginations.

TPM Strategic Audit: Myths are the ultimate Macro-Frame
As a website on power dynamics, myths may seem too abstract. But while micro-tactics can sway interactions, Myths can sway civilizations. Myths can also serve as guiding principles for men's self-empowerment, if not even as roadmaps (ie.: Hero's Journey).

[image]Key Insights

- Civilizations are founded on myths
- Our modern society is losing myths
- Many great cultural phenomena such as Star Wars are all based on myths

Summary

Campbell says that much of our life must be mythologized to hold power over people.

Think of something as simple as the robe the judges wear.
If the judge was simply a role, he could wear a suit.
But instead, he wears a magisterial black robe to ritualize and mythologize his position and power.

Chapter 1: MYTH AND THE MODERN WORLD

Campbell says that myths are clues that human life can have spiritual potential.

Myths are also a way to put you in touch with the experience of being alive, and the realization of being something more than simple flesh and blood.

Religions are myths but realize that you should read other religions because there's a tendency to see our own

religion as containing facts.

Sometimes normal people, when they become models for other people's lives, become mythologized.
It happens mostly with actors in movies (TV creates more celebrities and less myth, another reason not to watch TV as we've already seen in *The Brain That Changes Itself*)

Chapter 2: THE JOURNEY INWARD

Campbell says that we have the same body, organs, and mind as the Cro-Magnon man thirty thousand years ago.

And the same inclination towards myths and stories (I don't fully agree with that, but read more on evolution in *The Moral Animal*).

For example, he says, that the myth of the eagle and the snake is a common recurring theme in cultures very far apart.

Campbell says that civilizations are grounded in myth.
In the Middle Ages, for example, it was grounded on Christian myths and the cathedral was the center of that civilization, with the caste protecting the cathedral.

Then Campbell says that the absence of ecstatic religious experience and the denial of transcendence in our society has pushed many towards the use of drugs.
Drugs become the way for that kind of experience that religion used to provide.

Chapter 3: THE FIRST STORYTELLERS

Chapter three of The Power of Myth stood out to me for two concepts.

One is that if you identify yourself with consciousness you don't fear death and your body decaying (also read: *how to leverage mortality*).

You can watch your body functions go away one by one without worry because your body is a vehicle of consciousness, which will keep existing no matter the body.

The second one is that myths serve as a rite of passage.

So for example the sometimes cruel-looking rite of passage of boys into adulthood make sure that the boy is really an adult when he comes back.

And you don't have any modern-day men who at forty-five are still obeying their fathers and then going into psychoanalysis to have the analyst do that job for them.

My Note:
I disagree here.
This idea that old societies produced stronger men and that "rite of passage" makes men stronger is a BS that I have already addressed in "The Rational Male", "Tribe" and "The Way of Men".

And if you wondered who today's myth-makers are… They are the artists.

Chapter 4: SACRIFICE AND BLISS

Chapter four talks about sacrifices and the tendency different cultures have of making myths out of the landscape they live in.

And of course, today we don't have those sacred places anymore.

I found it interesting that Campbell says you can recognize a society by looking at its tallest building.

First, it used to be the temple, then the city hall took that place, and now it's a skyscraper with office spaces taking

care of the affairs of both temple and political buildings.
That's the history of Western civilization, Campbell says.

Campbell also reflects on the fact that Christianity is built on the Fall of Man from the Garden, which leads us to see nature as corrupt. That type of myth corrupts every spontaneous act as sinful.

The Fall from the Garden of Eden leads us to see nature as corrupt. That myth corrupts the whole world for us. Because nature is thought of as corrupt, every spontaneous act is sinful and must not be yielded to.

You get a totally different civilization and a totally different way of living according to whether your myth presents nature as fallen or whether nature is in itself a manifestation of divinity.

Chapter 5: THE HERO'S ADVENTURE

The hero differs from the leader in that he saves people or supports an ideal and sacrifices himself for something.

That's the morality of it. And what he sacrificed himself for doesn't cancel his heroic deed.

Campbell says that a society needs a hero to pull people together against the tendencies of separation.

Campbell analyzes George Lucas' Star Wars.
Dart Vader has such a shapeless face because he hasn't developed his humanity. He's a bureaucrat living not on his own volition but on terms of an imposed system. Luke Skywalker instead is on a hero's journey.

Campbell also uses the mythical image of the dragon to talk about the fear we all have to follow our own paths. When we don't follow our path, we are under the dragon's spell.

You gotta slay the dragon, and follow your own bliss, wherever that will lead you.

Read more on how to make your own hero's journey:

https://thepowermoves.com/heros-journey-for-men

Chapter 6: THE GIFT OF THE GODDESS

Campbell talks about father figure and mother figure.

Myths are all about finding the father first of all because, well… The mother is right there, you're born from there and she's there to nurse you.

Chapter 7: TALES OF LOVE AND MARRIAGE

Campbell explains how "love" the way we intend it today in the West was actually born in the twelfth century with the Troubadour literature.

Before love was simply Eros and sexual attraction.
It was more impersonal.

The troubadour poetry was the first to shatter that notion, also going against the church which back then was for arranged marriages.

Chapter 8: MASKS OF ETERNITY

Campbell and Moyers talk a bit about Jesus here.

They say Jesus today would not be a Christian and probably would be a monk more in touch with the spiritual side of life (also read: *The Power of Now*).

I particularly liked when he refers to Jesus saying to Peter to "put back thy sword".

But the sword has not been put back in the sheath ever since.

Campbell then explains a touchingly philosophical way of looking at life taken from Schopenhauer.

Bullet Wisdom

- The difference between the hero of the myth and the modern celebrity is that the celebrity lives for himself while the hero redeems society.

CONS

There is this feeling, very common in certain authors, that "things are bad today" and, guess what, "they were way better before"…

For example, Campbell says that today's world has no mythology anymore and that's one of the reasons today's world is not as good.
He says:

> Well, as I said, all you have to do is read the newspaper. It's a mess.

Of course, it's not a mess and I won't even start with why it's plainly silly looking at the newspapers to get a snapshot of how things are (read: *Fooled by Randomness*").

Review

The Power of Myth is an ethereal and philosophical book.

It's not the most typical type of book you will find on this website. But that doesn't mean it's any less powerful.

Quite the opposite, indeed.

Some of the most influential cultural products are myths.

And they end up having concrete effects on people's thoughts and behavior.

Definitely do explore The Power of Myths if you're into artistic endeavors or want to create a new cult with super-

engaged followers.

The Game by Neil Strauss: Entertaining, But Not Always Effective (Book Review)

Lucio Buffalmano · 12 December 2017 · Archived copy · Original

The Game is a mix of Neil Strauss' autobiographical descent into the pick-up and a dating advice book for guys, chronicling how the author learned to pick up women, going from an almost virgin to, allegedly, a ladies' man.

Contents

- Takeaways
- Notes
  - Chapter 1: Select a Target
  - Chapter 2: Approach and Open
  - Chapter 3: Demonstrate Value
  - Chapter 4: Disarm the Obstacles
  - Chapter 5: Isolate the Target
  - Chapter 6: Create an Emotional Connection
  - Chapter 7: Extract to a Seductive Location
  - Chapter 8: Pump the Temperature
  - Chapter 9: Make a Physical Connection
  - Chapter 10: Blast Last-Minute Resistance
  - Chapter 11: Manage Expectations
- Practical Applications
- CONS
- PROS
- Review

Takeaways

- Disarm her sense of superiority with "negging"
- Signal high value (with stories, magic tricks, social skills, etc.)
- Move her somewhere private

Notes

About the Author:
Neil Strauss was a journalist and Rolling Stone writer when he wrote the book.
With "*The Game*" he became (relatively) famous and later wrote a few sequels. He seems to be lower on power and masculinity and more of a charmer type (check The *Art of Seduction* or archetypes of seducers).

Chapter 1: Select a Target

The main idea is that you approach within 3 seconds of seeing the girl you like.

Girls standing physically near you or dressed in bright colors or skimpy clothing make for good targets.

Also, read:

- Signs she likes you

> Does She Like Me? 35 Proven Signs of Attraction (W/ Pictures)

Chapter 2: Approach and Open

The *type of approach* depends on the situation, says Strauss.

But the book relies a lot on Mystery, author of *The Mystery Method*. The mystery was all about "owning" the group and showing your *alpha male qualities* by entering a group and becoming the center of attention.

Some of the most popular openers on 1:1 situations are about asking an opinion, such as what gift a guy should make to a woman or "who lies more, men or women".

My Note:
This does not seem like a good technique to me as it's more about friendship than seduction.
Approaching a random girl to ask for an opinion when you're actually interested in the girl herself gives off major alarm bells in her head that you're interested but don't have the balls to be more direct.
And if she actually believes you're not interested… Then it's even worse and you become her friend.

Another famous technique is that of "negging" the target, which means giving a back-handed compliment or a slightly offensive remark.

The idea is to lower *her self-esteem* so that she will be easier to get and more dependent on your approval.

Also, read:

- How to approach a woman

> How to Approach a Girl: 9 Science-Based Steps

Chapter 3: Demonstrate Value

Demonstrating value means showing off your qualities.

Mystery was a magician and he'd use to perform tricks, so the whole community started getting into tricks to impress women at the bars.

Neil Strauss also describes going around with a bag with all the tools of the trade to perform magic.
He also had a pack of pictures in his bag to show women. Those pictures showed him doing cool activities and being social, all aimed at "showing high value".

My Note: avoid the 'bag of tricks' ⍰⍰♂
The tricks make you look like a jester who's there to entertain her instead of, say, the guy who leads and take her to bed.
Also, there's a big imbalance of power as you spend lots of effort while *she is the judge* of your performance.

Chapter 4: Disarm the Obstacles

Disarming the obstacles refer to dealing with friends who want to take her away from you.

It can be *alpha females* who don't like you, or it could be other men who cockblock or try to tool you.

Check this article for men hitting on your girlfriend.

Chapter 5: Isolate the Target

Once you're in the group and everyone thinks you're cool you will want to move the girl you like away from her group.

If you have a wingman he can help you by taking her of her friend for example

Chapter 6: Create an Emotional Connection

Once you are alone with the target it's time to create an emotional connection.
"The Game" is actually rather poor when it comes to *bonding and connecting* with people.

Chapter 7: Extract to a Seductive Location

You will want to eventually move the girl to a more secluded location where you can escalate physically.

Chapter 8: Pump the Temperature

Once you're alone with the woman, you want to make her excited.

Check this article for a guide on text flirting.

Chapter 9: Make a Physical Connection

A physical connection is when you start to get touchy-feely with the girl.

The Game had many stories of guys who tried to hypnotize girls and then slowly touched them more and more intimately.

Chapter 10: Blast Last-Minute Resistance

Last-minute resistance is what happens when you go home and are possibly kissing, but she is resisting or *delaying sex*.

One of the most popular methods to address *last-minute resistance* was that of "freezing her out", such as completely ignoring her and doing your own thing in the house.

My Note: freezing out is high risk because it relinquishes leadership
Freezing out can work and, if she was interested, it will get her to re-initiate and try to get your attention.
You have to be careful though that she was into you and does not see you are stepping back as a final refusal, because if that's the case she will close off, and write you off… And hate you for it too :).

Chapter 11: Manage Expectations

Managing expectations is the phase happening after you slept with her.

It sometimes also means handling her attempts to lock you up in a relationship.

Also, read:

- Female relationship control

Practical Applications

Go For It
The drive to self-improvement and going for it even when you're uncomfortable is one of the main positive lessons from The Game

Be a Challenge
The idea of being a challenge is something many men could do more of.
Turning the tables on women trying to be *the prize of the relationship* is what differentiates men who chase women from those who get social dynamics (albeit in "The Game" the guys often overdo it and then it's not effective anymore).

CONS

- **Puerile**

I always felt "The Game" is all about shallow candy pills for these guys' egos than actual results.

Even the night that Neil Strauss says consecrated him as the best Pick Up Artist it's about him kissing the -supposedly- hottest girl of the club.

Now albeit that was an interesting story and he did use some interesting techniques, "making out with her" is not a real result to me.
Unless you're a teenager, making out means little (and even then, there are plenty of teenagers who actually get laid).

- **No great seducers in this book, potentially counterproductive**

Some techniques in *The Game* are great.

Some others, not so much.

And some are not just bad but counterproductive when it comes to both seduction and even appearing like a "high-value man".

Most of these guys weren't getting laid, including the "masters".

If you can read between the lines, it's pretty clear.
For example, Mystery says that "you need 8 hours to sleep with a woman and everything less is a fluke" (sure).

Mystery also one day announced that phone numbers were "wood" -such as useless-.
Why would he say that? It's because they were useless *for them*.
They couldn't get girls to see them again, which tells you a lot about their success.https://thepowermoves.com/manipulation/

- **Blind to women's manipulation**

Says Bel in our old Discord server discussing Katya's (redacted for brevity):

> Neil Strauss did not grasp what was going on (…)
>
> But the facts are:
>
> **1. She found a FREE place to live** (she chose Mystery's mansion; she used her dog, initially leaving it there for days, to establish a sense of emotional connection with the guys);
>
> **2. She painted herself from as the innocent "victim"** (she "confided" to Neil that she was "worried" to "fall" for Mystery, which Neil Struss – fully under triangulation – later recounted as "proof" that Katya was wronged);
>
> **3. She provoked Mystery (…)** to blow up in front of everyone repeated times (thus reinforcing the idea that she was the "victim");
>
> **4. She cheated on Mystery with his friend, in the same house, all the while appearing as the victim.** And rubbed it in his face ("provoking someone to behave badly so as to gain the social allowability to do the same to him").
>
> That Mystery had a mental breakdown and oscillated between "love" (trauma bond) and "hate" (for being abused) is fully in line with what happens when one is abused by someone and doesn't realize it. Everybody thought Mystery was the sole problem

While I'd have some added notes, it's a great analysis with top-notch power awareness.

Katya was a terrible woman who harmed Mystery and ruined the harmony in that house.
She sought seeds of hatred, while also staying there free on everyone's dime.

Also read:

- Nasty games women play
- Female domestication

PROS

- **Entertaining**

Albeit some have called into question the veracity of some parts of the book, Neil Strauss writes well and The Game is a whole interesting and entertaining read.

- **The Real Man Behind The Mask Shines Through**

What I liked most was that Neil, albeit at times a bit self-promotional, is also oftentimes honest and sincere.

He shares with the readers the *real* feelings he had, including his fears and insecurities about not being strong or cool enough.

That's the *courage of vulnerability*, and that's something that not many authors can do.

Review

The Game is an entertaining book of cultural significance because it chronicles the early developments of the pick-up movement, but while it shares many helpful techniques and mindsets, it's **far from being the most effective guide on dating and seduction.**

If you are interested in how the PUA movements and early 'gurus' like Mystery, DeAngelo or RSD Tyler took off, this is a great read.

However, although many of the principles were groundbreaking and valid, *The Game* is not an effective resource to get dating results.
It's not even its focus, and when it delves into strategies and techniques, many concepts needed refinement.

To make a comparison, the Wright brothers' plane is a historically significant work.
But *not* something YOU should rely on for travel.

  - The Phone Call
  - Good Guys VS Bad Guys
  - Never Going Back to Zero
- CONS
- Review

Bullet Summary

- Women look for strength first and foremost
- Place yourself “higher than her” (with validation & tasks)
- There is no dichotomy of nice guy/bad guy: there are great good guys too, and they’re the top

Full Summary

Kezia Noble starts with an example of a man in her life who managed to excite her in spite of the fact he wasn’t physically her type.

Understanding Chemistry

Kezia Noble tells a captivating story of a night out when she met a guy who managed to do everything right.

She says that state and frame of mind are very important as that comes across your face and body language and people pick on it.

Understanding What Women Want

Kezia says that while *loyalty* is the most important trait men look for in women, for women it's a bit different.

Loyalty is also often among the top three, but what takes precedence is strength. **Women want strength**.

She then goes into evolutionary psychology to explain why (to deeply understand why and social psychology I invite you to read *The Moral Animal*).

Bad Boys VS Caring Men

Kezia says that as a younger woman, up until around 19 YO, she preferred bad boys.

But then started to tire of them and found their rebellious streak childish and a waste of energy.
She started being more attracted to caring men.

Other women she knows though had the opposite and started being into bad boys later on in their lives.

The author uses this example to make the point that men should not worry about superficial traits because those change.
They should focus instead on the most important trait women are looking for strength. "The strength of who you are", she says.

Confidence and The Mistake of Being Vague

Kezia says that the super common advice of "being more confident" hurts people more than helping them.

It's because people start thinking of themselves as not having confidence, and that can be a self-fulfilling prophecy.

You should then stop to tell yourself you have no confidence and look at areas where you are performing well.
Then understand that getting better with women is simply something you can learn.

The Stage

Kezia says, righteously, that a woman must respect a man first in order to be attracted to him.

She introduces the concept of the stage to teach body language (weak stage VS strong stage).
The stage is composed of six columns:

1. Leg Position = shoulder width far apart when standing
2. Arm Position = don't keep both of them in your pockets
3. Hand Gesture = avoid "palms up" as it feels like you're begging and that you need help
4. Eye Contact = hold gaze in sexual escalation, before kissing and during intense and mood/shifting conversation
5. Facial Expression = never laugh nervously or to cover silences
6. Vocal Tone = don't start with "so" or end questions with mumbling, "or" or going up with your voice

Kezia Noble certainly has some very interesting tidbits in there, the most important of which I highlighted above.
These body language topics are very vast though, and for a deeper understanding, I invite you to check *The Definitive Book of Body Language* and *What Every Body is Saying*.

Since learning body language without actually watching is difficult, check out these video/picture articles:

- Sexy Walk
- Sexy poses at the bar
- Sexy hands in pockets pose

The 3 Elements of Attraction

Kezia says that the three elements of attraction are control, impact, and connection.

- **Control**

Controlling means basically… Controlling yourself and the environment. And Kezia goes more into mindsets adding it's also about taking responsibility for how things go (check *Extreme Ownership* for that kind of mindset).

- **Impact**

The impact is about standing out and grabbing her attention. Kezia also stresses it's not about being the super entertainer jester of the situation.

- **Connection**

Kezia suggests going for questions that people don't usually get asked.
For example, to a woman who tells you she's a lawyer, everybody would ask "how long have you been doing that", but you could ask instead "is that what your parents wanted you to do".

My Note:
Going so deep so early can be weird, so use it with caution and never in group situations.

Kezia Noble tells yet one more captivating and helpful story. This time, of a man she dated and with whom she opened up very quickly.
The man explains women love dropping their masks and sharing personal stuff.
When they reveal something personal and might feel a bit vulnerable, that's when you reveal something very personal about yourself too, so you both connected on a deep level.

My Note:
this is good indeed. I would like to add it might be even better not to share anything about you and simply listen with a slight nod and let the "heavy moments of vulnerability" hang in the air.
You basically become a bit of a psychoanalyst or slightly distant father figure (Robert Greene mentions this as well in *The Art of Seduction*).

Pre-Approach

Kezia Noble says that women are much more aware of men of what goes around while men are often way too obvious.

If you're nervous to approach, Kezia suggests focusing on the defects of the woman or comparing her to your favorite celebrity or sexual fantasy.

I liked, even more, her suggestion to build a list of qualities you like and then go with a mindset you want to see if she fits your criteria.

Also, read:

- Signs she likes you
- Undercover Sexual Signals

The Opener

I love the example Kezia gives of an opener that would have quickly gone south.

A man approached him asking if she was Italian, and to her "no", he replied, "how bad, I was looking for an Italian girlfriend".

I otherwise didn't like her "opinion-based openers", which reeked a bit of The Game by Neil Strauss.

Also, read:

- Step-by-step guide to approach a girl
- **Cold approach VS social circle**

> Cold Approach VS Social Circle (VS Tinder): Strategies

Conversation Skills and the 9 Hooks Lead System

To keep a conversation humming beautifully Kezia Noble suggests you think of everything she says as a hook, and then gives 9 hooks to use:

1. Open Ended Questions: will make her speak and provide you with many hooks
2. Facts: drop some fun facts to lighten the conversation
3. Opinion: early opinions show personality and lack of fear. Saying you hate what she likes is a way to make an impact
4. Challenge:
5. Humor: if you say something funny and she doesn't laugh don't pretend it never happened but comment on it or laugh by yourself
6. Anecdotes
7. Tasks: tell her to do something, including to tell you something -but without "please"-
8. Validation:
9. Assumption: a great way to make a raise out of her even when wrong (great story of a psychic)

Since these are a lot Kezia recommends starting with 3 and putting validation and tasks among them.

Don't Back Down in Arguments
Kezia says that you should never back down if you enter into an argument. You can and should defuse though. Tell her to stop, then say you will never agree, and say it's great because you appreciate she can voice her opinion contrary to most girls who just avoid confrontation.

Validate Her

Kezia Noble says that every successful man in seduction places himself above the woman.

Even *"alpha women*", as Kezia self-defines herself, also enjoy pleasing a man and doing something that impresses him.

A way to validate is to say that you appreciate something she says or does, as that sets you up as "the evaluator" (also see: *soft power*).

Negative validation is instead about a slightly negative reaction, possibly following positive validation, which should prompt the girl to prove herself to you afterward to regain your approval.

Kezia Noble goes into the push-pull technique and tells another amazing story of a man picking up a gold digger and hunting celebs for which I invite you to get the book.

Bitch Shields

1. Stay detached and keep composure: don't allow anyone to change your state

2. Destroy the negative pattern
3. Validate: tell her you to love her attitude

Again Kezia Noble delivers a couple of great examples, both well-executed interactions and bad ones.
For more, also check out:

- How to respond to shit tests

Sexual Escalation

Kezia Noble divides the interaction into three stages:

1. Beginning: your energy level should be high, at least equal to hers
2. Comfort: use this stage to start planting the seed, a man showing attraction is better than a man staying noncommittal for too long
3. Seduction: slow down your voice, triangle gaze between right eye, left eyes, and then lips (do it a bit during comfort as well)

Kezia Noble says many men are afraid of being seen as sleazy or creepy and then talks about flirting.
Flirting is great because it intrigues and introduces the sexual without giving your cards away (check this article on how to *text flirt effectively*)

> How to Sexually Escalate With Women (3 Steps)

Closing

Kezia Noble talks about "number close" and "kiss closes here".

My Note:
I very much disagree here on the kiss close as even counting at all.
Kisses not only mean nothing but at times can even be counterproductive by introducing uncertainties in the seduction.
For example, a kiss might happen because you were both very horny. But then emotions come down.
She might feel like the next time you meet it's going to get to sex because you've already kissed.
And since right now she's not so hot about you, she'll never come out (I talk a bit about these pitfalls in *Women Early Dating Mistakes*).

Kezia talks about a few great techniques, such as taking pressure off of your ask by adding "I'll text sometime next week" and some I'm less convinced about, like asking her to put her own name on your phone with her nickname.

She says that "Facebook close" is not so good and the risk of long chats there is that she will start taking your relationship as an online, chat relationship and never from there (check this article though on *how to effectively use Facebook*).

The Phone Call

If you exchange a number through a direct approach you should call her that same evening.

An atypical exchange should follow that path because you created a moment, but that moment quickly vanishes so it needs a quick reminder (same suggestion Kezia gives on *Texting Game* and similar on why I suggest *calling after a non-answered text*).

Otherwise, wait 3 days and when you call do something so you seem busy and not like you were just doing nothing

and thinking of her.

I particularly laughed at Kezia's idea on why background noises are helpful: if she says she can't speak now you tell her that you couldn't hear and you'll call her later LOL.

Good Guys VS Bad Guys

Kezia Noble really hits the nail with this part.

Basically, she says that it's not a dichotomy of *"nice guys*" VS "bad guys" as many seem to make it.

She adds "good guys, which are men who are as confident and unashamed of *sexual escalation* as "bad boys" but who do not make women feel bad and used or try to lower their confidence.
These are the real top men.

I tend to agree.
Also, see:

- How to be a good asshole

> How to Be A Good Asshole

Never Going Back to Zero

Never going back to zero means that you keep your own life, even when in a relationship.

In case you break up you will get back in the game more easily, but keeping your own life and interests will also give you a stronger and more solid relationship.

Kezia also says some women will threaten they want to leave you to get a reaction out of you. In those cases, you should tell her she's free to go.

My Note:
I disagree here. Threatening to leave the relationship is unacceptable and you should not play any games there.
Also, read:

- What to do when she threatens to break up

When you've done something really wrong though like cheating you tell her… Oh well, I invite you to get the book for that :).

Albeit I love what Kezia suggests, I think it's mostly important when you do something really wrong that you take care of re-balancing the relationship by giving power back to her to really make it us as perfectly explained by David Lieberman.

CONS

Some Question Marks on Honesty?
Kezia Noble suggests when you give some fun facts that those could be… Well… Not really true. The way she also reacts to past boyfriends having lied to her is very nonchalant.
Since she doesn't seem to take a strong stand against lies, it makes me wonder if the stories she presents as factual are actually factual.

Review

A few blemishes here and there don't allow me to give this book 5 stars.

But Kezia gets many, many things right.
And most of all her stories, some of her insights, and her conversation and social dynamics breakdown are top-notch.

Read the best dating books for men or **Get The Book on Amazon**.

Conversation King by Tom Torero: Review & Summary

Lucio Buffalmano · 14 December 2017 · Archived copy · Original

Conversation King is a video product by late dating coach Tom Torero on how to do day games and converse with women.

Contents

- 3 Sentences Summary
- Summary
- Practical Applications
- Review

3 Sentences Summary

- Check your body language first
- Assume familiarity
- Let her talk the most

Summary

Tom Torero says that the fundamentals of body conversation are:

- a good body language
- staying positive
- keeping eye contact
- avoid going up with your voice

- use “OK” rather than “wow”, ” cool”, “how amazing” or any over-the-top compliments

When it comes to “quantity” of speaking, she should speak the most and the topic should be 90% about her.

You should assume familiarity, meaning that from the moment you stop a girl pretend you’ve met through a social circle and you’re at a house party.

Conversation Safety Nets: Statements and Question

Once you stop a girl, before you ask a question you will make a statement about either her or the environment.

The statement will break that hideous pattern of “questioning mode”, which is jarring and unnatural.

My note:
I totally agree, the pattern of question/answer is very dangerous early on and must be avoided.

For example, you sit down at a café and say

> *oh you look very relaxed and chill, what did you have of special today*

Or

> *“you look very Russian, blonde, with a good style, with the fur.. “*

My note:
the nationality thing is a double hedged sword as many “international” people don’t like being pinned down or judged based on how they come from, but the overall concept is spot on.

Some other suggestions Tom Torero gives are:

- Open-ended questions (what is it about X that you love; what is it about dancing that you love)
- Girls’ questions (how did that make you feel..)
- Stealth questions (“I don’t know about you, but.. “ “oh, you’re from, X must be so different from Berlin which is cold and full of people.. “, ie. You are forcing her to give an opinion)
- Vacuum (take your time before replying and stop speaking at times)
- Environment switch (use interesting surroundings)
- Intent (say you like something about her) my note: this sounds more like qualifying than intent
- Disagree

About the topics, Torero suggests you explore her past, present, and future. For example:

- Past: how it was growing up where she grew up, what she wanted to do as a kid etc.;
- Present: you look like you’re carrying a heavy bag, where are you going
- Future: so you are here studying, but in a year’s time where are you going to be

Tom Torero also suggests that you prepare how to introduce yourself beforehand.

And also prepare a few answers to the most common questions so that you’re not always left thinking about what to say next or repeating the same boring stuff over and over.

For example, you could say you moved to the city because you like the challenge of a new place, that you enjoy the vibe, or that it wasn’t easy at the beginning but now you love it, which opens up the question of why it wasn’t easy.

Practical Applications

I think that one of the biggest take-ups away is to start with statements first so that you don't fall into the all too common vicious spiral of question/answer which goes stale very very quickly.

Review

I think Tom Torero is reasonably good at what he teaches.

He is a solid guy to learn from and he's got a *socially powerful vibe* in his videos.

Unluckily he's been caught hiring actresses for his videos, and that somewhat tarnished his reputation.
You can't help but wonder "which videos are true and which are staged"?

But that doesn't mean his material doesn't work, or that you cannot learn even from the staged ones -as long as they were good at making them realistic, at least-.

Also, check out the best dating books for guys.

How to Make Girls Chase by Chase Amante: Review

- Girls Chase Review

Bullet Summary

- Balance value, investment, and attainability
- **Hit 'escalation windows'** for successful seductions
- **Follow an effective process** for reliable results

Girls Chase – Summary

About The Author:
Chase Amante is the founder of Girlschase.com, a blog on dating and seduction for men.
After launching a few products on conversation and an ebook, he then launched a course called *"One Date"* and several more courses launched via his email list.

How to Open

Chase Amante recommends *cold approaches*.

He says you better avoid approaching women from the back or with your body in full frontal position.

Approaching from the side is better (I agree, and the same as Vanessa van Edwards in *Body Language of Love and Dating*).

Chase also recommends that you "pre-open her", meaning that you grab her attention and make her look at you before you look at her.

Then, "lock in" as soon as possible, meaning that you assume the most comfortable position -for example leaning against the bar or sitting on a stool-.

Both moves of her looking at you first and you take the most comfortable position are designed to make it seem like she's the one most invested, which highlights you're "above her"

My note:
Chase also recommends you drop openers such as "excuse me" as that sounds like you're apologizing.
I don't fully agree with that, "excuse me" is not so much an apology as it's an attention grabber before starting a conversation.

Also, read:

- Step-by-step guide to approach a girl
- Signs she's interested in you

> Cold Approach VS Social Circle (VS Tinder): Strategies

Use Genuine Interest

Chase Amante recommends you tell her directly you are interested in her and you do so with what he calls a "killer compliment".

A killer compliment is a compliment that is highly relevant to her.
Your goal is to make her feel special (as opposed to trying to lower her ego as often happened in *The Game*).

The author also provides examples of how to actually structure a solid opener, and I invite you to get the book for

those.

The Hook

Chase says that the all-important moment of an early interaction is reaching “the hook”.

The hook is that point in the interaction when she starts being interested in you and engrossed in the interaction.

He says there’s no silver bullet for that, but the most reliable ways are to have proper fundamentals.

Fundamentals include:

- Your voice
- Body language
- Posture
- Fashion

Focus on getting her investment early on.
Ask questions and focus the conversation mostly on her.

My Note:
I think many people get this “focus the conversation on her” and “ask questions” all wrong.
The easiest mistake to fall into is to ask lots of questions in close succession. In the beginning, some statements can be more useful to that bad pattern (also see Kezia Noble and Mark Manson).

Chase Frames / Push-Pull

Chase Amante talks about the famous Push-Pull technique and uses the example of:

> *You’re cool, but don’t get any ideas, I’m not easy*

The technique is effective in that it first gives a compliment drawing her close in, and then pushes her away.

Also, that second part is what “chase frames” are about, such as implying that she is chasing you.
Some other examples could be:

> *I also like you, I’m glad you spoke to me*

Thus implying, or highlighting, that she’s the one who’s making it happen.

My note:
I use this technique a lot, especially implying she’s into boys in general which is less risky for push-backs. You can read more on it as that’s the first point of my Text Flirting Guide.

Repartee and Rapport

Repartee is the very beginning where you exchange a few witty remarks and it’s helpful to break the ice.

He highlights you avoid any joke that might sound aggressive or *combative*.

Then you move into rapport, which is where you bond at a more personal level.
Rapport is where you need to manage the three biggest pillars of seduction: value, investment, and attainability.

Deep Rapport

Chase Amante calls deep rapport, or that sensation of “being in a bubble”, deep diving.

He says though that emotions don't last, so you should do something useful with it (an expectation we explored in *women's early dating mistakes*).

For example, make a comment to "cement" those emotions, for example, saying you're happy that you met, it was so little ago and you already got that great connection.
Or when she smiles tell her that's the biggest smiley you've ever seen and it's lovely.

And again, always focus on her. Her dreams, ambition, her story..

Pillar I: Value

Chase Amante says that the basic definition of value is what you have to offer to someone (check *The Social Exchange Theory* for more).

Your value should be tied more to your unspoken fundamentals than to your stories and obvious show-offs.

Chase then goes into the all-important distinction of what women value in men, such as qualities that make them lovers or providers (and all the mixes between them).

If you're not familiar with them, I definitely recommend you look it up in his book or even read an evolutionary psychology book that will explain the difference from a more scientific point of view (check *The Moral Animal*).

Pillar II: Investment

Investment is the time or effort or "emotional cycles" that a woman spends for you.

The more a woman invests in you, the more she will feel for you.

Chase Amante breaks down the investment types you can get, which are:

- Compliance (as Chase calls it): asking her to do things for you, from "(can you) tell me about that" to "(can you) pass me the lighter"
- Taken compliance: no question but proceeding as if it were obvious she said yes <— ⚠TPM's note: be careful with this. Gaging her willingness to follow requires high social and mating intelligence to do effectively. In today's culture, assuming compliance can also lead to issues
- Rumination: she thinks about you. Give her a task to do in your absence and she'll think more of you
- Intriguing: when she wonders whether you like her or not or she wonders about you
- Angering her: the most dangerous and not recommended for non-experienced guys
- Temporal: spending time together
- Auto investment: some women will invest on their own, always accept

Chase Amante says that kissing and *sexual escalation* are a form of taken compliance.

Many men run into resistance there because they haven't built enough compliance before and the woman is not accustomed to following his lead.

On the "anger" one, I agree it's dangerous (also see *The Art of Seduction* by Robert Greene).

To learn more about how investment works, see:

- Social Investment Model: the primer article on interpersonal investment dynamics

Rewarding and Punishing

Chase Amante takes a leaf out of Skinner's book here in terms of operant conditioning

Rewarding and punishing both shape behavior and her perception of you.

If you allow rude behavior to go unchecked, her respect for you will tank. So you have to both discourage that behavior with punishment and show that you're no puppet that will take her disrespect.

On the other hand, you want to encourage good behavior by rewarding it. You can reward with attention, more questions, compliments, physical proximity, etc.

My Note: Operant conditioning is an old model of psychological influence
Operant conditioning is not always the most effective.
I prefer a more direct approach to addressing bad behavior.

Screening

Chase Amante proposes screening as your way of showing her you've got standards.

When you screen her, you are looking for qualities that you like.

When she confirms she has those qualities, she is complying with you and trying to show her value to you.
And that's when you reward her for it (we've talked about this in "*how to make a powerful first impression*").

With that, you automatically position yourself as the one who's judging and picking.
And as we've seen many times on this website, the one who's judging is the one who is "above" in the interaction.

Chase Amante says there are three ways of screening:

- **Questions**: easiest and most basic
- **Comparisons**: "all my friends are very driven people, they go for what they want"
- **Self Description**: you describe a characteristic of yours, putting pressure on her to agree with you

Avoid Gaps
When she doesn't qualify, the gap between you two grows larger.

So you should "help her" to pass your screen by nudging her a little bit or by amplifying her only slightly positive answer.
For example, if you ask her if she cooks and she says "not much" you could add "like nothing? You can't even do some basic pasta?".

If she replies "just a bit of pasta" you could amplify and say "well that's not just a bit, pasta is great good, what kind of pasta do you cook".

Another way to help screen girls who aren't experienced is to give them multiple options.

Your goal is to not get "nothing" as a reply, so you could tell her "what do you do of exciting, travel, write… Make your mom go crazy by skipping class all week?".

Pillar III: Attainability

With attainability, Chase Amante introduces the topic of value balance.

Basically, in a (budding) relationship the woman should feel like the man has high value but she can access that value.

If the woman believes the man is *low value*, she will not want him.
If he is *high value* and difficult to get, she will write him off and resent him.

If she perceives him as being high value, but he manages to build her up with good screens and rewards, she will feel like she can happily get him and be with him.

And that's the definition of the perfect seduction.

Move Fast

Chase Amante stresses the importance of moving fast with women.

Meaning you should try to shorten as much as possible the amount of time spent between the first meeting and sex. That's an indicator of both confidence and previous experience and success with women.

Touching Girl

Chase says that going for too long without touching as it builds attraction, can become too much.

The girl will feel under pressure and will jet.

Touch helps close that tension gap between you two and gets her accustomed to your physical contact.

Chase then goes on to describe the different kinds of touches and how you can deploy them and I invite you to get the book for the details (and check *4 ways women touch men wrong*).

Inviting For The Date

Chase Amante says you should not ask for her phone number and you should not even say "number", but instead "contact".

And always ask on a high point and preferably middle conversation, before you two say goodbye.

The author recommends you avoid group stuff, clubs, bars, and expensive activities.

Meeting near to your place is great, and if she was very into you, even straight to your place could work.

Follow-Up & Texting

Chase recommends text over calls.

One text soon after you met, and then later to arrange the meeting.

Chase elaborates further on his blog on his texting process.
He proposes to ask women something like:

> **You**: When are you free this week?

Or:

> **You:** How does your schedule look like?

My Note:

Chase is a good observer of dating dynamics, but we disagree on this one.

While for some time I tried that approach, Kether helped me change my mind on this. Kether is one of the best dating coaches I've had the pleasure to meet and learn from.

The problem with asking her is that it's a big-ish ask. Many women don't know their schedules or don't want to make plans in advance -or don't want to make plans at all-. So even if they may want to meet you, they may still bulk at taking charge of the next step.

The second problem is exactly that: scheduling is an important part of *leadership*. And asking about her schedule feels a lot like relinquishing leadership.

The third problem is pure *power dynamics*: it feels like it's *her* schedule that matters only. And whatever she says,

you'll *adjust*. That's low-value and low-power dating. And we know that women *don't exactly like* guys who are lower value than they are.

When Kether first pointed it out to me it hit me like a ton of bricks. I sat there thinking "that makes SO much sense. What the f*ck was I even thinking".

Sometimes you need someone to (re-)slap some common sense back into you :).

So now we advise on proposing the days yourself.

Frames

Chase Amante uses the word frame to refer to your view of the world, values, and intent.

He says it's important your frame "wins" over that of a woman.
To have a strong frame, you need to know who you are, what you want, and what you are willing and not willing to put up with.

The author uses the example of a stronger frame in what he calls the "hard push".

The hard push consists of calibrated insistence until others buy into your frame.

Also, read:

- Signs of social power
- How powerful men speak

Responding to Challenges

Chase Amante also talks about responding to challenges.

A challenge is a woman being snippy and/or *shit-testing you*.
For example, she might tell you she only dates rich men.

The common answer of qualifying yourself -saying you're rich- or challenging back.
Challenging back can be fun and it's a step forward, Chase says, but it lowers your attainability.

He then proposes other solutions such as:

- dismissal (ignoring it)
- self-deprecation (jokingly disqualifying yourself)
- invitational (using the challenge to move the interaction forward).

Pulling Her Home

Chase Amante says that after you move a girl, made her invest, and possibly *built a connection*, it's time to start thinking to pull.

Pulls can happen after hours or after a matter of minutes, so don't get hung up on checking the time.

Escalation Windows

Chase Amante is the first author I've ever read who introduces the concept of "escalation windows".

Those are times when you need to progress the relationship forward and if you miss them… It's all but over.

During escalation windows, the girl is hoping the man will make a move -either invite her to sit, invite her home or escalate sexually-.
If the man doesn't move forward, *she will write him off* and eject him.

Follow The Process

Chases says that proposing is what will get you from a lone man to one with women in his life.

He gives a rough seduction process to follow similar to this one:

1. build social momentum meeting many new people
2. move women quickly until you meet one who will carry with you
3. get to know her
4. invite her home
5. escalate to intimacy

Girls chase CONS

Focus on her, always take the spotlight from you to her

Good general advice, but needs lots of caveats.

First of all, this is a good example of the *law of balance*.

You don't want to overdo it or it seems shifty and like you're hiding something.

Second, calibration is the name of the game.
While some women will happily talk all the time, some others require you to lead a bit more to make them comfortable enough to open up.

Also, if you know how to showcase your good qualities, talking can be a great opportunity to increase attraction and emotional connections.

Also, see:

- The law of optimum balance
- **The law of balance in dating**

> Why Balance Is Most Seductive

Dogmatic / Black & White Thinking

Chase seems at times to be a bit dogmatic.

Generalizations don't sit well with my critical approach to social dynamics.

For example, he says "move quick and you will *always* have more success".

Well, not always.
There are *plenty of exceptions in dating*.

But I get it.
"Laws" are more memorable.
They save Chase space, time, and the complications of *explaining exceptions*.

They might not be closest to the truth, but "close enough" and "enough times" to help, more than harm.

Some of the examples I felt were "black and white":

- **Never leave your contact information** because girls never contact you

My experience instead:

Generally true.

But it's a catch-all ceiling advice for beginners who only rely on leaving information.

Some women can be shy, or be close to their families or even boyfriends when you meet them.
And leaving your card is the easiest way to discretely exchange info.

Plus, in some countries, conservative women may be uncomfortable being seen with a flashy foreigner.

In any case, more than one woman contacted me when I left my card. Including attractive ones, including a very successful entrepreneur that I ended up dating.

- **Never use FB/social media** because you'll never be successful with it

Again, *for most guys*, it's low odds.
So I agree with the general principle if you remove "never" and if you add a few caveats.

But exceptions always apply:

My experience:

More than once I dated women that I cold-reached out on social media.

My nephew is also in a relationship with an attractive woman he reached out to on Instagram.

Also, more than once social media allowed me to stay in touch, and date/get intimate later.

- **You will never get a girl back if you don't have sex with her *when escalating***

And yet again, generally true.

Actually, often true.

And yet still, exceptions apply and, if you're skilled, you can (almost) easily skirt this issue if you stop on time and spend more time after.

My experience:

I got together with several women after I first escalated to sex, but didn't get intimate.

Some women even liked me a lot in spite of the "failed escalation", and some even fell in love.

For one example, *you can read the message here*, and scroll down.

You can see in **Seduction University** how to do it.

> Seduction University

Girls Chase Review

How to Make Girls Chase is a very good book for beginners and intermediates, written by a capable author, and offered on a website that produced several valid dating articles.

More advanced practitioners may find some exceptions and add some nuances, but they can still find value in it.

Even years later *How to Make Girls Chase* remains in our list of top dating books for men.

Check out the **best dating books for guys**.

Phantoms in the Brain: Summary & Review

Lucio Buffalmano · 15 December 2017 · Archived copy · Original

Phantoms in the Brain reviews exceptional neurological cases to shed new light on brain functions such as decision-making, self-deception, recovery, and neuroplasticity.

Bullet Summary

- There’s no unified self
- We construct our own reality
- We all deploy defense mechanisms

Full Summary

About The Author: V.S. Ramachandran is a neuroscientist and he is known for being a bit of a maverick in the scientific community.
His contributions have not only helped increase our scientific knowledge but also helped countless patients.

Studying The Exceptions

Ramachandran has a different approach than most.

He prefers investigating borderline neurological cases rather than the norm.

He removes patients from the realm of insanity and says they are often simply defense mechanisms.

Ramachandran says that “borderline cases” and “exceptions” provide the best examples to understand how the brain works.

Instead of discounting and ignoring them as most do, one single example is enough to at least start a theory.

He says that if I showed you a talking pig you wouldn't say *"but that's just one, show me one more, and then I'll believe you*".

Ramachandran also often uses very simple techniques and technologies.
He says Galileo understood all planets orbit around the sun with cardboard with two lenses inside.

Today is no different: many discoveries are staring into our faces and need no expensive equipment.
And Ramachandran certainly walks that talk…

Chapter 1: The Phantom Within

Ramachandran says there are some specialized parts of the brain and focuses on how they interact with each other.

The example in chapter one is of a woman whose left hand tried to strangle her.

Chapter 2: "Knowing Where to Scratch"

Chapter two of Phantoms in The Brain focuses on phantom limbs.

The patient he examined, Tom, had a constant itching sensation on his amputated hand.
He couldn't scratch it because, of course, the hand wasn't there.

What happened is that the mental maps of the arm and face took over the space in the brain that was allocated to the hand. The over-imposing of the brain maps created a mix-up of signals for Tom.

Ramachandran found out that, by scratching certain parts of his face, Tom was able to finally scratch his hand.

Also, people with an amputated foot had much bigger orgasms because the penis mental map took over the foot mental map.
Ramachandran wonders if the foot fetish has something to do with the fact that the mental map of sexual orgasms and feet are spatially so nearby.

Chapter 3: Chasing the Phantom

In chapter 3 Ramachandran discusses a man with an amputated hand who had the feeling his fingernails were digging into the palm of his amputated hand.

Ramachandran managed to cure him with a simple assembly of different mirrors, giving the patient's brain the feeling that he was seeing the paralyzed hand moving.

As the patient opened the non-amputated hand, the brain thought it was the amputated hand, and finally, the pain was relieved.

Chapter 4: The Zombie in the Brain

Ramachandran says that perception is much more than replicating images in our brains.

Chapter 5: The Secret Life of James Thurber

Chapter 5 of Phantoms in The Brain focuses on hallucinations.

Ramachandran talks about the blind spot and how our brain "fills the gap" (you can check your blind spot here).

This is not an exception, but the example of a trait of our brain to fill in information even when there's no information.
The same principle applies when we see a dog behind a fence: we don't perceive the dog as in pieces, but as a whole

even though our brain sees “pieces”.

Ramachandran says that our brain fills information out of a basic evolutionary need: saving resources and saving computational power.

Chapter 6: Through the Looking Glass

Ramachandran in chapter 6 of Phantoms in The Brain talks about the patient Ellen.

Ellen damaged her right parietal lobe and simply does not pay attention to what happens to the left of her space and body.
She will notice if people draw attention to it, but if not she might.

Ramachandran experimented with putting a mirror on her “good side” and a pen on her left side.
She knew full well it was a mirror, but since she now saw the reflection on her right side, but doesn’t pay attention to her left side. She thought the pen was “in the mirror” or must have been behind it, never even thinking it was on her left.

Ramachandran says it calls into question our own perception of reality, and how an alien looking at us from a four dimension world might interpret our behavior as being equally perverse.

Chapter 7: The Sound of One Hand Clapping

Ramachandran talks about a patient with a paralyzed left arm… Who was convinced it wasn’t paralyzed?

It was a case of denial patients, who often make up inane and crazy excuses of why their arms or legs don’t move when they need to.

The author introduces Freud and the defense mechanism in this chapter.
He makes the case that all the lies, excuses, and rationalizations patients use are nothing more than an extreme case of defense mechanisms we all engage in -be it the bills or denying our final destination, death-.

Ramachandran shows with experiments that denial patients are not trying to save face but fully believe their own lies.
The author then wonders if there’s some part in their brain that knows the truth, and with another “Ramachandran” experiment he borrowed from an Italian neurologist -dropping cold water in the ear canal-, he found out the patients know the truth deep down.
And that truth can be brought to the rational part of the brain, finally admitting their paralysis.

Ramachandran proposes a couple of ideas about why the cold water worked, but it’s mostly speculative in the book.

For more on separate compartments of the brain also read: *Incognito*.

Reaction Formation

This chapter is particularly interesting for Ramachandran’s digression about Freud.

He says he used to be, like most of his colleagues, very skeptical about his ideas.
But as he researched more and more he came to realize that, albeit Freud wrote a lot of nonsense, “there’s no denying he was a genius”.

Reaction Formation is the tendency of emphasizing a trait that runs contrary to our natural disposition in an effort to disguise people and ourselves reality.
For example, a late homosexual might strut in cowboy boots and act macho in an unconscious attempt to assert his presumed masculinity.

A study also shows how “gay bashers” get bigger erections when watching male pornography than non-bashers.

Humor

Ramachandran says that humor is also often used to “disguise the absurdity of the human condition”.

We use nervous laughter or all the time we use humor to defuse tense situations. It might not be the case that humor is often about topics that are the most difficult to openly talk about, such as sex, religion, and racism.

My Note:
Indeed, all those people who bear tense situations without cracking a joke or smiling are considered stronger.
Think of The Godfather.

Chapter 8: “The Unbearable Likeness of Being”

Chapter 8 of Phantoms in the Brain deals with people who don’t recognize their parents or close relatives and believe they are impostors.

Ramachandran explains it with a breathtaking theory.
Since the emotional parts of the brain are damaged they don’t feel any warmth when looking at their parents.
So the brain tells them they cannot be their parents and must be someone else.

Basically, we human beings also have a sort of imprinting. Imprinting based on emotions.

Chapter 9: God and the Limbic System

Ramachandran says many traits differentiate us as human, and pondering on our own lives and the existence of God is possibly one of the most relevant.

He wonders whether our brain has some circuitry for religious experience, and if it exists where it come from, and how it evolved.

It appears there are circuits in the human brain involved in religious experience.
We don’t know though if they evolved for religious experience or if they generate other feelings that are conducive to religious beliefs.

Ramachandran starts his dissection of evolutionary psychology here.
He says that just because a trait is common to all culture doesn’t necessarily mean it has biological roots.
For example, almost all cultures cook, but there are no “cooking genes”.

Chapter 10: The Woman Who Died Laughing

In chapter 10 of Phantoms of the Brain Ramachandran goes deeper on evolutionary psychology.

He says that fiction and facts get easily blurred in evolutionary psychology. The author sat down once to test how far one could go in making up theories without any back evidence, and came up with an “evolutionary psychology” story of why men like blonde.

He easily published the paper and few complained about it.

Ramachandran says there seem to be two camps in evolutionary psychology:

1. One affirms that natural selection selects all our mental traits
2. The other camp calls the first “ultra-Darwinist” and contend there are more factors at play.

For example, feathers evolved to keep reptilians warm but slowly morphed to being used for flying (pre-adaptation).
Ramachandran is more in line with the second camp.

My Note:

Always watch out for people on Internet backing up their theories with evolutionary psychology “stories”. That being said, the field will shed copious light on your understanding of human beings, for which I highly recommend you check out The Moral Animal and The Selfish Gene).

Chapter 11: “You Forgot to Deliver the Twin”

Ramachandran talks about false pregnancies, such as “pregnancies” with no fetus, and what they tell us about the connection between mind and body.

The author says that the “wholeness” of mind and body is not just new wave philosophy. There’s some truth behind it.

Ramachandran also mentions those rare cases where tumors disappear by themselves and wonders why they are no studies to investigate this phenomenon more deeply as they could hold the secret for curing cancer.

Chapter 12: Do Martians See Red?

Ramachandran says here that after years studying borderline cases and normal people he has come to the realization that **we create our own reality and that there’s no single unified self**.

For more on our brain limitations check: Predictably Irrational and Incognito.

[image]

Practical Applications

To me there’s on single, huge application that I would draw from this book:

You Make Your Own Reality
You make up your own reality. So why not make a great reality, and one that is useful to you?

Defense Mechanisms
We all deploy defense mechanisms. But these mechanisms often don’t really help us move forward, make us happy or achieve our goals. I would invite you to read Principles by Ray Dalio for an approach that revers reality, be it “good” for us or “bad”.

CONS

Collection of curiosities

The book is super interesting, yet I'd have troubles to pinpoint what exactly it talks about. There's so much meat, and so much variety of it, that there's not a single thing that stands out.
This doesn't have to be a con, but the book is less memorable because of it.

Lots of "Theories"
The book presents a lot of theories which are.. Ramachandran's own ideas. Not necessarily a bad thing, but definitely something to keep in mind.

Review

I wish every researcher read Phantoms in the Brain and followed Ramachandran on his pioneering spirit and disregard for dogmas.

Hopefully, we will have more and more and we will move quicker and quicker towards alleviating the sufferings of many.

I find by the way his method not too dissimilar from this website. The Power Moves also takes specific and often "difficult" social situations and derives general social rules from the specific cases.

How to Stop Worrying and Start Living: Summary & Review

Lucio Buffalmano · 16 December 2017 · Archived copy · Original

How to Stop Worrying and Start Living is a self-help book that shares readers' tools, techniques, and mindsets to help readers enjoy a more fulfilling and carefree life.

Contents

- Overview
- Notes
  - 1. Fundamental facts you should know about worry
  - 2. Basic techniques for analyzing worry
  - 3. How to break the worry habit before it breaks you
  - 4. A mental attitude of peace and happiness
  - 5. The perfect way to conquer worry
  - 6. How to keep from worrying about criticism
  - 7. How to prevent fatigue and worry and keep energy and spirits high
- CONS
- How to Stop Worrying Review

Overview

- Ask yourself what's the worst that can happen and be OK with it.
- Then work to improve on that worst-case scenario
- Act more, worry less

Notes

About the Author:
Dale Carnegie writes this book because, he says, he was a worrier himself and a deeply unhappy man.
However, he managed to teach himself the way to a more carefree, happier, and more fulfilling life. And he teaches techniques in *"How to Stop Worrying and Start Living"*.
Carnegie is also the author of "*How to Win Friends and Influence People*".

Into: Why You Must Stop Worrying

Dale Carnegie says that worrying too much will make your life shorter and more miserable.
Thankfully, there are ways to deal with and eliminate worries. Many people have done it, and you can as well.

1. Fundamental facts you should know about worry

Dale Carnegie quotes William Osler to make this simple point:

> To care less about worries, start caring more about your present tasks and goals

Because most people worry about the future, the best way to have a good future is to do a good job now.
So make your life more compartmentalized and deal with every single compartment one by one.

Carnegie recommends readers associate lots of pain with worrying ways that changing becomes a must.

This is an NLP technique that Tony Robbins discusses at length.

More techniques Carnegie recommends:

1. Ask yourself what's the worst that can possibly happen if you cannot solve the problem that makes you so worried.
2. Accept mentally the worst-case scenario and be OK with it
3. Work to improve the worst-case scenario: you can only get better from there

2. Basic techniques for analyzing worry

1. First of all, get all the facts.
2. Once you have all the information you need, make a decision.
3. Once you have a decision, it's time to act on it.

No worries, no sweating, just action.

Dale Carnegie also talks about the top insurance salesman in the country. He wasn't always at the top though and was struggling until he asked himself the following questions:

A Simple Set of Questions to Eliminate Worry

Frank Bettger, one of the top insurance salesmen in America, used these questions to reduce his worries and multiply his income.

Early in his career Bettger began to despise his work and felt discouraged. He was working too much and was burning out.
Frank was always either in meetings or calling out prospects and wasn't having much success at all.
Then, one day, he wrote down and answered these questions:

1. What is the problem?
2. What is the cause of the problem?
3. What are all the possible solutions?
4. What is the best solution?

3. How to break the worry habit before it breaks you

1. Stay busy: no free time, no time to worry (my note: don't do this as Brene Brown explains)
2. Don't allow small things to get in your way
3. Understand numbers: chances of catastrophic events are slim
4. What you cannot change is not worth worrying about
5. Put a stop-loss order in your life: after a certain threshold, you move and that's it
6. Stop worrying about the past. It's useless

4. A mental attitude of peace and happiness

1. Think and act joyfully and you'll be joyful
2. Thinking about what we don't like is poisonous: don't waste a minute with people you don't like
3. Don't expect gratitude and you will not be disappointed by the lack of it
4. Focus and count your blessings, not your troubles
5. Be yourself and don't try to copy others

6. Do your best with your losses. Profit from them. When life gives you lemons, make a lemonade
7. Help others to help yourself

5. The perfect way to conquer worry

Dale Carnegie suggests that believing in a greater being, in God, and praying, is a great antidote for worry.

6. How to keep from worrying about criticism

1. Unfair criticism is often a compliment: it means you have raised envy
2. Grow a thicker skin: you'll be criticized anyway. Your job is to do your best, not to avoid criticism
3. Criticize yourself first and then ask for more criticism: it's the best way to grow

7. How to prevent fatigue and worry and keep energy and spirits high

Rest is important, says Carnegie.

Churchill took two naps a day during WWII. Make sure you get enough rest as well.

At work, clear your desk of all papers, because **the mess around you translates into mental mess** and stress. Then prioritize and execute (a mantra of *Extreme Ownership*).

[image]

CONS

- **Map Without Compass**

All the tips make sense, but they're also common sense.
What would have been more useful is all the nitty-gritty of how to actually do it. I believe guys like Tony Robbins do a better job at that.

- **Too Busy To Worry… Really?**

The suggestion to get too busy to worry is not only scientifically unfounded but counterproductive. It doesn't address the root cause.

It's like telling the hangover patient to keep drinking and the headache will go away. Better drinking water instead. The hangover will take more time to heal, but it addresses the root causes.

How to Stop Worrying Review

"How to Stop Worrying and Start Living" is one of the grandfathers of the self-help books.

It has sold 6 million copies, and if *Nassim Taleb* is right when he says the longer something remains successful, the better it is, then you can't go wrong with this old classic.

The content is indeed top-notch, and most of it is evergreen -as Ray Dalio said, *great is better than new*-.

However, don't miss out on new contemporary authors because neuroscience has developed a lot since Carnegie and can teach us a lot.
For example:

- The brain that changes itself
- Phantoms in the Brain
- How to develop a growth mindset

Gary Vee Analysis: Emotional Intelligence & ADHD

Lucio Buffalmano · 17 December 2017 · Archived copy · Original

Gary Vaynerchuk talks a lot about EQ and 'emotional intelligence'.

So one would assume he has a lot of it, right?

He constantly says he loves people and emphasizes Emotional Intelligence.

Then… he must be good with people and have EQ in spades.

Well, not necessarily.

Intro: Gary Vee EQ

Whenever I watch online interviews, I pay close attention to patterns—especially in communication, power dynamics, and social intelligence.

And when I saw Gary Vaynerchuk in this interview with Seth Godin, I was surprised. It was one of the clearest examples of communication breakdown I've seen.

To be clear, this isn't personal criticism. It's an analysis of communication habits. What happens in this conversation offers several powerful lessons on **what to avoid** if you want to connect with people, build rapport, and communicate effectively.

Seth Godin himself eventually threatens to get up and leave.

Let's go over Vaynerchuk's recurring communication patterns—and how to avoid making the same mistakes.

#1. Interrupts All The Time (0 Listening Skills)

Interrupting is one of the worst habits in conversation—and one of the most common reasons why communication fails (as explained in *Difficult Conversations*).

The more passionate we are about a topic, the more tempted we are to jump in. But this damages both the content and emotional quality of the interaction:

- **Interruptions reduce the listener's attention and engagement**
- **They break rapport and mutual respect**

Cognitive bandwidth is limited. When someone is interrupted, they can't process ideas calmly. Instead, they get defensive, angry, or just check out.

From a rapport standpoint, interrupting signals egocentrism. We bond with people who care about us and listen to us—not with those who constantly talk over us.

Even worse, when you jump in with your opinion too soon, you often misunderstand their point. And the conversation feels disjointed.

Watch this example:

Exception: When She Wants to Impress You

In certain dating scenarios, a woman may interrupt—not out of rudeness, but eagerness to connect or fix a past mistake. In those cases, it's more endearing than aggressive.

The best response? Smile and signal that it's OK. It reinforces that she's emotionally invested—and you're socially intelligent enough to recognize it.

#2. Seeks Differences Instead of Building Consensus

When someone shares an opinion that differs from ours, it's natural to disagree or correct them. But constantly highlighting differences can kill rapport.

Especially when someone is trying to bond or share something meaningful.

Case in point from the interview:

> **Gary Vee**: Seth, I hate science.

Seth Godin had just praised science as one of the great achievements of humanity. Responding with "I hate science" isn't a playful quip—it's a rapport-killer.

Especially when your partner is still emotionally invested in their statement. It can feel invalidating or even disrespectful.

Example: Right... and Alone

> Many years ago I went back to a girl's place with a bottle of wine as we chatted and *flirted* along the way.
>
> That must have been an easy one, right? Well, it should have, yes.
>
> But when she aired her very left wing opinions on genders, gypsies and "integration policies" this dumbas* escalated what was a bonding conversation into a discussion (super un-sexy).
>
> I started explaining why my ideas were "right", and I wanted to prove it. I wanted to win.
>
> Of course, there are no winners in those scenarios, only losers.
>
> Rapport was shattered, romance was gone… And I went home in my hand's company soon after :).

#3. Breaks Rapport Repeatedly

Gary often interrupts, disagrees, and competes in conversation. It becomes less of a dialogue and more of a performance.

Even when you technically "win" an argument, if it comes at the cost of warmth and connection, it's a hollow victory.

Example with Seth Godin:

Gary challenges and disrupts—Seth holds frame—but the overall emotional quality deteriorates.

Contrast: How to Maintain Rapport

> This year I had one of the most remarkable dates I have ever had.
>
> She wanted to become a shaman.
>
> She had occult talents, was in touch with otherworldly entities and she was sure aliens live among us. Or so she professed.
>
> Of course the dumber side of me wanted to debate that. And to possibly prove it wrong (argh!).
>
> But thanks God this time I knew better.
>
> I told myself I was going to learn from this and stay nonjudgmental, warm and supportive. So I got curious. I inquired, dug deeper, shared my local stories of occult and.. *Rapport and bonding* sore.
>
> They sore very high,,, ;).

#4. Overuses "NO"

"No" is one of the most powerful—and risky—tools in conversation. It instantly shuts down ideas and establishes hierarchy. That may build authority, but it destroys collaboration and warmth.

Example: Conversation Shutdown

> **Her**: (…)
> *And this is my great idea!*
> **Me**: *Oh that's cool, seems like mobile marketing will be key to get traction*
> **Her**: *No, it's more about partnerships..*
> **Me**: *Yeah, that too I guess, both are important. Germany would be a great market to start with*
> **Her**: *No, I want to start with..*

Repeated "No's" sent a clear signal: she didn't value my input. I walked away from the project—not because of the business plan, but because of the communication pattern.

Tip: Don't Say No to Compliments

When people give you a compliment or offer connection, rejecting them with a "No" feels like a slap.

Even if the compliment doesn't resonate, accept it. To do otherwise breaks connection and signals detachment.

Tip for Sales Professionals

In sales, avoid correcting your prospect—even when they're wrong.

> Customer: So it's kind of like X, right?
> You: Yes, a bit like that. And also… (insert your message)
> — or —
> You: That's a cool angle. Actually, what we offer is more like…

Agree first. Then build. That keeps rapport strong and makes them feel heard.

#5. Struggles to Go Deep

Surface-level talk is fine at first. But real connection happens when people feel heard, validated, and emotionally understood.

Gary often changes topics too quickly, doesn't let others go deep, or cuts them off before the connection builds.

Watch this clip. Seth Godin is trying to thoughtfully respond to audience questions, but Gary rushes the process:

He forces the conversation back to surface level. And Seth clearly resents it.

Compare that with great conversationalists who ask open-ended questions, dig deeper, and hold space for real discussion.

- How to develop a deep emotional connection

Rapport or Honesty?

Some say, "I'm just being honest"—but often, that's an excuse for being blunt or socially unaware.

True EQ is expressing your truth in a way that deepens connection—not in a way that hurts, postures, or shuts others down.

There's enough overlap between honesty and rapport that you can absolutely have both.

Gary Vaynerchuk ADHD

Does Gary Vaynerchuk have ADHD?

We can't say for sure. But his high-speed communication style—frequent interruptions, topic-hopping, impulse responses—resembles common ADHD communication patterns.

It's not a judgment. But it can explain why deep rapport and listening may be more difficult for him.

Gary Vee's EQ: Final Thoughts

Gary Vee is great at energizing crowds, commanding attention, and delivering bold messages.

But when it comes to deep one-on-one communication, his patterns often create friction rather than connection. And those patterns—interrupting, disagreeing, redirecting—undermine emotional rapport.

If you want to communicate better, study these examples. Use them to improve how you listen, how you respond, and how you build meaningful connections.

Crucial Conversations: Summary & Review

Lucio Buffalmano · 18 December 2017 · Archived copy · Original

"Crucial Conversations" (2002) is a self-help and *communication skills book* for business leaders who want to improve their interpersonal and communication skills through theory, practical advice, and examples.

Contents

- Bullet Summary
- Summary
- Practical Applications
- CONS
- Review

Bullet Summary

- Start with the heart: don't let the need to win or look good get in the way
- Find a common purpose and communicate that you care: it makes the conversation safe
- Start with facts and a positive note and be curious about the other person's stories

Summary

About The Authors: The authors are four corporate trainers who founded VitalSmarts, a business consultancy providing corporations and executives with the tools and knowledge to be more effective at work.

Introduction

Why Mastering Crucial Conversations?

The authors say that very often when you found yourself stuck, it's because of a crucial conversation that you are not having or are not having well.

What differentiates great companies from good ones, they say, is how they manage crucial conversations.
In great companies crucial conversations take place and problems are never swept under the rug.

Chapter 1: What's a Crucial Conversation?

A crucial conversation has three ingredients:

1. High stakes
2. Strong emotions
3. Opposing opinions

The author says the irony is that **the more important conversations are, the poorer we handle them**.
It's because our emotions take over and our pre-cortex, the region that makes us humans basically, shuts off.

And we end up behaving like animals exactly when behaving like human beings is most important.

Poor Communicators Suffer or Get Violent

The authors say that the two most common destructive patterns relating to crucial relationships are silence and violence.

We either avoid engaging in crucial conversations or we do so hyper-emotionally and in violent ways.

Often we also swing between the two. The more we stay silent, the more we are likely to eventually explode.

Silence is much more common, and it's very dangerous when it becomes the company's culture.

Chapter 2: Mastering Crucial Conversations

Dialogue is the exchange of meaning when people have a conversation.

The author uses an imaginary "pool" at the center among the people conversing.
The more people can be open and put information in the pool, the more likely it is we will reach good decisions.

This is basically the principle Ray Dalio institutionalized in Bridgewater. Dalio sought a culture of radical transparency and radical open-mindedness where people are expected to speak up and share opinions (check Ray Dalio's Principles).

Chapter 3: Start with Heart

Starting with the heart means starting within ourselves first. We need to examine our own personal contributions to the problem.

The authors also suggest that you focus and ask yourself what you really want. What you want for yourself, for the other(s), and for the relationship(s).

Looking within yourself and asking what you really want is also a great way to avoid damaging feelings such as the need to look good and to "win" the argument.

Don't Get Stuck in The Sucker's Choices

The authors also remind us that we often see difficult conversations as two opposing choices that cannot co-exist. Or two bad decisions.

It's however often not the case.
To look beyond appearances, it's often great to ask questions such as "how can I do X and still do Y".
Or "how can I do X without hurting Y".

My Note:
Being honest and building rapport is such a choice. You can both build rapport in conversations and be honest (check out this analysis of Gary Vaynerchuk).

Chapter 4: Learn to Look

Learning to spot and recognize the sign of a crucial conversation is not always easy, but it's an essential part of being successful at crucial conversations.

Especially look for signs of silence and violence.

When you see someone being silent a great way to draw them out is to ask something like:

> *you say you are OK, but I can see you're not*

or

> *are you sure everything is OK, you don't sound like everything is OK*

Chapter 5: Make it Safe

The authors say that when we are dealing with a crucial conversation we often feel that our message and our words are the problem.

So we water it down and look for safer alternatives. And we don't say what we really want to say.
The key though is exactly that: being able to say what we want and need to say the most. The best way to do so is to make the conversation safe.

There are two ways to make a conversation safe:

1. Mutual interest = they must know we care about their interests and goals
2. Mutual respect = they must know we care about them

When our conversation partners know and believe both of those elements are in place, they can relax and really listen to what you're saying without defensive barriers.
When they don't believe those two are in place, we get silence or violence.

When respect has been shattered the author suggests that you:

- Apologize (when respect is broken)
- Contrasting (when mutual interest is broken)
- CRIB, an acronym to avoid miscommunication and finding out what the others really want

My Note: You have to state it and own it if it's not "safe"
Unluckily the book starts from the premise the conversation IS safe. But what if the consequences are big from then? Then it's NOT safe, but you still have to say it first to avoid tension.

Apologies: Also, from a social skills website such as this one, I found apologies especially captivating. Indeed a well-placed apology works wonders in mending relationships.
The authors say: the party often doesn't want to be compensated because they're wronged, they want to be healed because they're wronged.

Chapter 6: Master My Stories

The authors say that our emotions come from the stories we make up, not really from reality and facts (something Tony Robbins often repeats as well).

The core of this chapter is to encourage us to look at the facts and the stories from different and more complete angles.

The authors say that when we engage in crucial conversations it's easy getting emotional and upset. When we do that, there seems to be a tendency where we take the story the worst possible way., which further escalates emotions.

To break the negative patterns we must then look at all other possible stories and change our judgments and conclusions.
As we expand the breadth of our stories, we become calmer and better prepared to have crucial conversations.

- **Start With Facts**

The authors also recommend you start crucial conversations from facts -as also suggested in *Difficult Conversations*-. It will be less personal and it will make you more credible.

- **Start With What You Agree**

I also particularly like the suggestion of starting with what you agree, so that you begin on a positive note.
They propose the acronym ABC, meaning Agree, Build (instead of tearing down, "yes and.."), compare (what you see differently).

Chapter 7: STATE My Path

The author introduces here an acronym to help us with the crucial conversation:

- S share the facts
- T ell your story
- A ask for another's story
- T alk tentatively
- E encourage testing

Chapter 8: Explore Other's Paths

When people fall into silence or violence, we need to encourage them to take the same healthier steps that we want to take for ourselves.

The authors say that we need to move beyond the simple expression of their emotions to their facts and stories.

A great way is to get curious. Ask yourself: why should a reasonable person like X act and behave like this? What brought them there? And then get down to find out what happened.

Chapter 9: Move to Action

Understanding each other and having a positive atmosphere are not our end goals. Those are the means to an end.

Once we have no silence or violence and once we have a big pool of shared meaning it's time to move to solutions.

Always keep a record of the decisions and keep one single person accountable for a single result.

Chapter 10: Yeah, But

The authors say that most people believe those neat principles sound good but don't really apply to their personal cases.
Well, they do. They then proceed to present several case studies to walk us through them.

I warmly invite you to get the book because examples are how we really learn.

Chapter 11: Putting it All Together

The authors suggest that to improve you:

- Analyze the crucial conversations after they happened for lessons learned.
- Think about patterns in your relationships.
- Change in real-time when you notice a mistake
- Ask friends for feedback

Practical Applications

The whole book will improve your communication style. The crucial points to take away for me:

Words don't matter. Caring does.
You can say whatever you want as long as the conversation feels safe. As long as they know you have a common goal and that you care about them.

Start with what you agree
This is a small piece of advice that changes everything. Often we approach crucial conversations defensively or are already angry. Changing that mood is crucial.

CONS

More Hard Cases
I would have liked some more borderline case examples, such as people furious or screaming. But that's just me, the book is otherwise great.

Review

Crucial Conversations is almost a must-read for anyone serious about improving socially.

The topics are similar to *Difficult Conversations*, but there are a lot of different insights from each of them.
So I would recommend both.

I also enjoyed the psychology behind people who avoid crucial conversations, which reminded me of *passive-aggressive personalities.*

The main caveat we add is that you want to be less truthful and more strategic with *manipulators, gaslighters,* and what we refer to here as "turkeys".
In that sense, acting is anyone is a worthy recipient of your full honesty is plain *naive self-help.*

Here's What To Do When She Threatens to Break Up

Lucio Buffalmano · 19 December 2017 · Archived copy · Original

Of all the manipulative power moves threatening to break up might be *the* most toxic.

If you have ever dealt with breakup threats, you know it can be an emotional, even scary moment.

In this article, we deep dive into this manipulative technique that's sometimes referred to as "holding the relationship hostage".

You will learn why your girlfriend is threatening to break up, and how you can handle it.

Let's start.

- Why You Must Stop Your Own Threats
- Summary

Why Women Threaten to Break Up

Your girlfriend will threaten to break up because of three different reasons:

1. As a power move (manipulation to achieve a goal or accrue more power)
2. Because she is naturally confrontational and/or emotionally unstable
3. Because you or the relationship are not providing for her basic needs

If it's the first time it happens, you might not be sure which one it is, and that's exactly what you need to find out. But first, let's start by exploring the most common reactions to a break-up threat:

Typical Reactions to Break-Up Threats

These are the most common reactions men experience when their women threaten to break up:

#1. The “Why, Why” Begging Reaction

Breakup threats make us emotional.

It’s normal.

Especially the first time you hear a breakup threat it will likely blindside you and you will be lost for words.

After all, the more we care about something, the more likely it is we will be overridden by emotions.
And the ironic consequence is that the more we care, the worse we perform.

That being said, this is no excuse not to bring our very best to the table. Some typical reactions of the beggars are (click hyperlinks for video examples):

- **Trying to change her mind**

Terrible because pushback is a natural answer to a push. Basically, you become the one who’s trying to patch it up and she becomes the one convincing you -and herself- that actually breaking up is a great idea

- **Asking “why, why, why”**

It’s wrong because, of course, now she is looking for reasons why breaking up is a good idea;

- **Promising change**

Communicates that you are indeed at fault and/or not good enough. While that *might* be the case, most often than not, it’s not what leads your partner to threaten the end of the relationship.

- **Being incredulous, stating “we’re good”**

Similar to trying to change her mind, with the added bonus that if there are indeed issues you look clueless.

Here’s an example of a man quickly moving to the upper echelons of beggar-dom as soon as she airs her breakup

intentions:

> **Him**: (beaten dog face, about to cry) We can work it out

Why Begging is Wrong

This should be obvious, but for the sake of clarity:

1. You legitimize her threat
2. You look low-value

It sub-communicates that you want the relationship more than she wants it.

Since it's usually the lower mate value partner who clings to the status quo, it immediately places her above you. And women don't like being with men who are obviously below them.

Thus, the begging reaction confirms to her that she should go ahead and enact her threat, which is exactly what happened in the video example.

#2. The Brinkmanship Game

Similarly to the Beggar, the brinksman wants to keep the relationship.

But he knows that trying to change her mind or getting all emotional is the best way to lose her.

What the Brinksman does, then, to quote Eminem, is that he'll be nervous on the inside but on the surface, he'll look calm and ready to drop bombs. And he pretends he will be OK if she goes ahead -possibly better than she will be-.

A well-executed game of brinkmanship shows power and strength.
If well-executed, she will "realize" she is the one most invested in the relationship and will quickly turn things around (Kezia recommends this approach).

In the brinkmanship game, the one who shows to be least invested wins.

See an example from The Notebook:

In the video, they are both in love. He walks away first and "needs to think about it", which drives her crazy.
She chases hard, and notices the only time when he actually walks towards her is when *she* says it's over. This video very well explains the power of the first mover when it comes to the hideous games of brinkmanship.

Why It's Not Optimal

This is not an optimal solution.

To begin with, the brinkmanship game doesn't just communicate you need the relationship less but also communicates you don't really *care* that much about the relationship.

This is what partially happens in the video example, and one of the reasons why she flies into a rage, trying to get a reaction out of him.

But most of all, the biggest drawback of the brinkmanship game, even when you win, it's exactly that.
It's all about "winning".

You "win".

But **great relationships are not zero-sum games**, so if you win and she loses it's still not great for the relationship.
The relationship becomes a combative relationship of continuous power struggle.
And that sucks.
You deserve better than that.
Look at another example of brinkmanship escalation: is this a good relationship?

#3. The Steamroller

The Power steamroller does not accept being pushed into a corner and having to take a step back.

He is afraid of any concessions: for him, concessions are a sign of weakness.

So as soon as the woman airs the possibility of a breakup, he sees red and he charges head-on.
He must win that battle, so he jumps the gun and tells her to go.

The Power Steamroller sounds like the most powerful answer.
Probably it's no coincidence that it's one of the favorites of most gung-ho "dating coaches" (example) and all the *alpha male posturers.*

It has a certain pull, I can see that.
Beggars look at the *Alpha Steam rollers* and think "Wow, that guy… He's the man".
Of course, he's not.

Note:
Just to be sure, showing her the door right away *can* be a fair answer, but you must first make sure of that.

Why It's Not Optimal

The Steamroller is far more concerned with "proving" his power than making the right decision.

And therein lies the issue.

When faced with a scary outcome, the Steamroller type is defensive. **But true confident men are not defensive.**

So when the chip falls and it comes to a threat, the steamroller falls into the same bad habits that plagued him the whole relationship long: a focus on himself and ego protection.

The Steamroller never really paid attention and understood her partner, so what are the chances he'll do so now?

And that's the final and fatal issue with the Steamroller answer: another great occasion to understand her partner goes to waste.

Example 1: The Godfather

An old-school steamroller type is *The Godfather*.

Instead of telling her to go fu** herself though, he tells her she can't leave (*typical of abusive men by the way*).

The emotionally distant Godfather never really understood his wife. Steamrolling his way into the final showdown only further highlights the huge chasm between him and her, culminating with her saying:

> **Kate**: "I feel no love for you anymore"

Of course, she doesn't, you can't love an emotionally distant Steamroller!

If there ever was a chance for them to stay together, treating her like an owned object was the last nail in the coffin:

Example 2: My Story

Years ago an ex-girlfriend of mine in rather heavy distress threatened me that, if X happened (don't remember what X was), she "wouldn't control herself" (a veiled hint at possible violence).
Now there are a few things I won't tolerate in a relationship, and threats and violence are two of them.
I paused, looked at her, and said "if that ever happens, it's over".
As she plunged into silence, lowered her head, and looked down, I had won.

But "won" what, exactly?

What a Pyrrhic "victory", and what an idiot I was.

She had been super sweet until then, what the hell was that?
I had no idea if she was serious, or if she could become abusive in the future.

Or maybe the topic was just too emotional for her that she was not being herself?

The Steamroller in me never found out.

How to find out, then?

Enter, The Cool Detective:

#4. The Cool Detective

And now we finally come to the optimal way of handling it.

As usual, mindsets are key.

The cool detective knows that a break-up threat is a serious infraction in a relationship.
He knows it can be the sign of a major *personality flaw* and only the first of more problems to come. He knows it means he might be forced to actually end the relationship.

But he knows it can also be something else.
And he wants to find out.

When she threatens to break up the detective breathes in and pauses for a second, looks at her straight in the eyes, and with a slow, neutral voice tone asks her:

> **Cool Detective***: Now, tell me. Why would you ever say that*

There aren't many good examples of this behavior of course, but you can check the Godfather again using a similar technique in a business setting. It's the famous senator scene.

Why It's The Best

When you are faced with a breakup threat you need to make an important decision: whether you want to stay in the relationship or end it.

And to make the best information you need to have all the information you can.
Especially since said information is readily available and staring straight at you.

The Cool Detective, such as remaining calm and asking for more information, is the only reaction that will allow you to probe and dig deeper.
It's the only answer to a breakup threat that lets you better understand where you stand, where she stands, and what she's made of.

Douglas Stone explains that in emotionally-laden conversations it's best to seek to understand first -rather than being understood-.
So make sure you let her talk and express herself freely and safely for as long as it's needed.

And now let's see why she would even ever threaten to break up:

Break Up Threats: What They Mean

As we've seen, there are three high-level reasons why she threatens to break up. Let's review them better:

- **She is naturally confrontational**

If she sees the relationship as a power struggle, you are probably better off moving on (see *Elon Musk's relationship* as an example).

> **Talulah Riley**: There's been so many times where I think "alright, I'm gonna get on a plane to England and I'm never gonna see him again

From a power dynamics perspective, confrontational women who often threaten breakups feel superior to you and confident you will yield -or at least that you'll get scared-.
That means you can probably do better personality-wise (keep reading The Power Moves :).

In case you are also part of that combative attitude, you also need to work on yourself. Check *how to fix combative relationships.*

- **Personality disorders**

Breakup threats are common with *borderline personality disorders.*
If she also engages in suicide threats, self-harm, and wild emotional swings, then she may have BPD.

- **It's a power move**

Yes, it can be a nasty power move just to get power.

If that's the case, let her follow through on the breakup. You're better off alone than with a value-taking partner.

But it also might be using the breakup as a bargaining chip to get to something specific -i.e., marriage or children-.

And that might mean either that the relationship is not very important to her or, more likely, that what she is looking for is very important to her.

Break-Up Threats: Are You The Issue?

We can't know for sure about your specific relationship, but here are a few common scenarios why your partner might have a point when she threatens to break up:

#1. Mismatch of Needs

- You are noncommittal about something important to her (marriage, kids, fidelity…)
- You refuse to give in on a major important topic (making it official, allowing her to sleep in, meet her parents, etc.)

In *The Laws of Social Exchanges*, we saw that all relationships also have a transactional and self-interested element. And if you're not giving something that is critical for your partner, you should really look within yourself and decide.

If you want to stay in the relationship, you must provide for her core needs at the very least (here's an article to *help* you decide when it's best to break *up*).

And if you cannot, don't further *waste any more of her time.*

#2. You're Not Seeing The Obvious Issue

Men often have a tendency not to see signs of discomfort, which women instead believe are pretty obvious.

She might have tried to "explain" to you that there was a problem with her behavior, but *you failed to understand it*. She thinks it's clear, he thinks she's creating pointless drama.

Both are frustrated.

Sometimes she might have tried with words, but she starts the talk *too strongly* and men end up *defensive, stonewalling*, or escalating.
The result: arguments multiply and issues don't get solved (example).

#3. Emotional Distance

You are distant, *emotionally unavailable*, or generally fail to care about her and the relationship (maybe you're an *avoidant* and you're in an *anxious/avoidant relationship trap*).

She still probably likes you and that's why she "threatens to break up" instead of just doing it.
Deep down she hopes that threatening to end the relationship will make you realize that you should take care of her a bit more.

In these cases, the "break-up threat" is a communication failure from her side. The threat is actually a cry for help. It reads "care about me" or "show me you care".
That was exactly the example we saw earlier from The Notebook.

Bad listeners and emotional distance are the situations where the Cool Detective approach helps you the most.
It will help you unearth what's going on, what's missing, and what you can do to get back on a positive track.

#4. You're Being A Jerk

There are a hundred different ways a guy can be a jerk, including *over-the-top jealousy, abusive behavior,* or acting too low power and *losing all attraction*.

Says evolutionary psychologist David Buss:

> The final tactic, called resisting control, involves expressing anger at the partner for being too controlling, fighting with the partner to preserve independence and freedom of socializing, and threatening to break up with a partner who is too smothering.

#5. You Must Eearn Her Respect

Here's the general principle:

Women don't threaten high-value men they admire and respect.

The solution: be a higher-power, confident man. Study our website or, better yet, consider Power University.

How to Stop Breakup Threats

This is only going to be relevant if you decide to stay in the relationship.

You should only if:

1. Your girlfriend is not playing power games
2. Holding the relationship hostage is not her modus operandi and if
3. You can provide what's lacking

If you want to keep the relationship, then you might even use the occasion to get better together.

Let's start:

#1. The Mindset

Your mindset should be to only accept supportive relationships.

Bar violence, threatening to break up is the hallmark of the worst kind of combative relationships and it's not to be accepted.

You do your part of having a supportive relationship, if your partner doesn't, then your partner is at fault -and you may end it-.

#2. Communicate It Effectively

The next step is to let her know just that.

After you let her vent and clarified, say something like this:

> Look, I hear you, I understand how important it is for you and I'm very glad we clarified and can fix this issue.
> Now there's something else I need to add as well.
> I can't deny that when you came up with a threat, because that's what you did, I was disappointed. *Very* disappointed.
> As I often tell you, I see relationships as teams, and as a way of adding value to each other. I only want a relationship where we are a team and we both make each other better.
> Think about it, have I ever threatened you, or do you think it's likely I ever would?
> Exactly.
> The point is, in a great relationship there's no space for threats. And I expect of you that the next time you're unhappy you speak to me instead.
> Do you understand what I mean?

> Do you think you can do that?
> Good

It's very powerful when people seek to raise your level of expectations. She will only admire you that much more after this.

#3. Become A Higher-Value Man

And finally, the most foundational fix:

Become a high-quality man that women look up to.

And I guarantee you no woman will ever threaten you again.

We help good men turn into high-quality leaders who gain women's devotion in Power University.

Why You Must Stop Your Own Threats

Threats are generally a bad idea because:

1. **It's low power** to use your biggest leverage too soon because effective should first use high power, clear, and *assertive communication*
2. **The more you threaten without acting, the more power you lose**
3. **It ruins the relationships for both**, so not really a leader-like behavior, and especially not an *enlightened* leader

Of course, some exceptions apply.
But first off, you better learn the general rule first.
And second, you rarely want to threaten the breakup, and more calmly explain why you cannot accept certain behavior within your relationship -and, as well, you generally want to frame it in the positive, rather than with the threat-.

Read this topic for the *threats' power dynamics.*

Summary

A breakup threat is a serious offense, and if you are not doing anything wrong it's acceptable only once.

Sometimes though it happens because she sees no other options with you and/or you are not meeting her basic needs.
How you answer her first threat will set the tone for the rest of your relationship.
And now you have the right tools to answer well.

In a nutshell:

1. remain calm
2. ask "why would you say that"
3. let all the real issues come to the surface
4. make your call: end it or address the root causes?
5. If the latter, fix it and let her know from now on only open dialogue and win-win are accepted
6. keep monitoring

And enjoy a much-improved relationship.

-Lucio

Onward by Howard Schultz [An Analysis of Leadership & Spin]

Lucio Buffalmano · 21 December 2017 · Archived copy · Original

Onward is the entrepreneurial history of how Starbucks founder and leader Howard Schultz got back at the helm of his company to take it back from the brink of bankruptcy during the 2008 financial crisis.

TPM Power Takeaway: A story on managing the empire succession
Onward is the story of building an empire from a vision and a dream to a multi-billion-dollar reality, almost losing it due to poor succession strategy, and stepping back to secure the empire and its cultural legacy.

[image]Key Takeaways

- Growth for growth's sake can be poisonous
- Stay true and focused on your core values
- Reinvent and innovate around your core values

Notes

About the Author:
Howard Schultz is the founder of Starbucks. In this book, they took a bloated, inefficient company that was losing its soul and re-innovated it while going back to its roots.

Introduction

In the introduction, Howard Schultz explains how he was inspired to start Starbucks in the bars he saw visiting Italy.

He describes the experience of Italian cafes as human interactions that resembled an amazing theater unfolding before his eyes.

The goals, he says, were never only that of winning or making money, but to build a great company that also cares about people. One that would give people the feeling of Italian bars.

The idea of striking a balance between profit and social conscience is indeed a big recurring refrain throughout the book.

However, Starbucks was failing that objective. During the years when Howard Schultz stepped out as CEO Starbucks started being obsessed with growth and bottom-line revenues.

He takes the blame for that shift as well, but in January 2008 he decided to step back in and take the reins of the company again.

Onward is the story of his comeback and of Starbucks' turnaround.

Part 1: Love

Chapter 1: A Beverage of Truth

In Chapter 1 of Onward, Howard Schultz talks about the unprecedented decision of closing all US stores to retrain the baristas.

He says it was a bold move that was likely to have many critics.

It was an admission that the company was not good enough. But Howard Schultz says that he knew that was the truth.

But at the same time, it was a galvanizing move.
The author had seen the quality of Starbucks cafes and experience deteriorate more and more, and he addressing the core product was a necessity.
The simple fact that Starbucks was going for it was a strong message the company was going to invest in its people.

And to put people and customers back at its core.

Chapter 2: A Love Story

In chapter 2 I particularly loved the description of entrepreneurship from Howard Schultz.

He says that the companies entrepreneurs build become part of themselves and, as such, are deeply personal.
The entrepreneurial journey has high highs, but also low lows that can break your heart. Entrepreneurs must love what they do so much that it's worth the pain.

Doing anything else, for the entrepreneur, would be unimaginable

Howard Schultz says that when we love something, emotions drive us. And in reading Onward I had the perception indeed of a caring man with a big heart.

> **Doing anything else would be unimaginable for entrepreneurs**

Chapter 3: Surfacing

Howard Schultz explains his humble upbringing.

His father was a blue-collar delivery worker and when he fell and broke his hip and ankle he was simply sent home. No health care coverage, no severance payment, no nothing.

He deeply believed that people deserved better than that.

But just as tragic for Schultz was the fact his father never found fulfillment in his work.
Work should be fulfilling, Howard Schultz thought.

And he wanted to build that kind of company that his father never got the chance to work for.

And to build such a company, one needs intent, process, and heart.

Chapter 4: Nothing Is Confidential

Howard talks here about an internal memo he wrote and how painful it was to see it leaked.

And yet that reminded him of two things: one, that Starbucks needed to be more active in digital media.
It needed to have the power to tell its own story, rather than being the victim of a rumor mill.

And the second was that as long as he spoke from his heart, he would be fine.
He says:

> Only by not speaking from my heart do I betray that trust

Chapter 5: Magic

Chapter 5 is interesting for the dilemma Howard was facing: following his heart or the data?

Customers loved the sandwich cheese they were serving, but the melted and burned cheese was destroying the coffe aroma.
And the coffee aroma was at the core of Starbucks.

Howard Schultz was not interested in finding a compromise.

Chapter 6: Loyalty

The major lesson learned is never to let success get to your head. Schultz says Starbucks never did… Until some did.

Part 2: Confidence

Chapter 8 A Reservoir of Trust

Howard says he wanted to return to the roots, but it must have not been as a way of dwelling on their storied history.

He had to go **back to his roots while reinventing and innovating**.

He would not cast blame on anyone, and the number one priority was that of instilling back confidence in the company's future.

As a website on social interactions, I found it particularly interesting when he talked about the "reservoir of trust". Howard says that during the years, with exceptional employee benefits and respect, he had earned "points" with his employees he could now use in difficult times.

This is basically the same principle of *The Social Exchange Theory* applied over time.
And he's right, "deposits" do apply over time as well.

Did Starbucks Need Differentiation?

One thing I didn't agree 100% with Howard was when he talked about competitors and he says Starbucks needed to "differentiate itself".

I think a company with strong roots doesn't need to "differentiate" itself.

It's the commodity producers that need to differentiate themselves.
Companies with a soul and strong values don't worry about differentiating.

Indeed, soon after he explains that Starbucks had to show how their experience and customer relationships were not the same as a fast food business.
It wasn't simply based on a transaction, but there was added human value.

Howard talks further about the competition and says that McDonald's could actually serve well to Starbucks as a strong motivator.
He is basically pointing out here the rule of out-group / in-group. We all feel closer and more emboldened when there's an "enemy" outside (check how Tai Lopez uses this technique)

Partners, customers, and shareholders

Howard says he puts partners first, then customers, then shareholders.

To create long-term value for shareholders a company must create value for the employees and their customers

first.

Which is not what always happens under the pressure of Wall Street.
He was going to change that.
By slowing the opening of new stores first and putting the customer experience back in pole position.

Chapter 9: A New Way to See

Howard was going to put Starbucks' core product first: without great coffee, Starbucks had no reason to exist.
Starbucks had to be *the* coffee authority.

Chapter 10: Playing to Win

Howard says the company too often played on the defensive.

Missing the earnings estimate was the primary fear and the primary motivator behind Starbucks' actions.

It was scandalous for him that Starbucks' coffee was rated behind McDonald's.
So he would, first of all, restart grinding beans directly in the store, something that had been scrapped in a push to serve customers faster.

Chapter 11: Elevating the Core

Howard Schultz eliminated comps figure reporting as one of the main culprits in driving short-term thinking.

He refers once to walking into a store and seeing a bunch of stuffed animals for sale.
They had nothing to do with coffee or Starbucks, but the store managers said they were great for sales and had a big profit margin.

That was the mentality he needed to stamp out.

Chapter 12: Get In the Mud

Howard Schultz says that Starbucks' mentality had become that of big numbers.

A bad store, a non-perfect cup of coffee, or an unhappy customer meant nothing with the big numbers.

But they forgot that… "ones" add up.

The new mindset he wanted, instead, was to start from the core of what Starbucks was. One cup of coffee at a time.

> **Ones add up**

Chapter 13: A Reason to Exist

Howard Schultz didn't particularly like external consultants but decided to give them a try.

And was very pleased with the top global leaders who retreated a consultant firm organized.

He presented there his "Transformation Agenda", and was particularly touched seeing the line of people forming to sign their copy of the mission statement.

Chapter 14: Benevolence Inside

The author says Starbucks' coffee is exceptional, but that emotional connection is their true value proposition.

And it's something, he says, too subtle for many business people and cynics to appreciate or replicate.

He also speaks here about the importance of their Fairtrade initiatives.

Chapter 15: Beyond the Status Quo

Chapter 15 of *Onward* is all about the digital world and the new push of customer interaction he wanted to champion.

Building a website to collect customers' feedback and idea was the first step.
Today, as of 21.12.2017 it seems to me this is the result.
And it's not possible to read other people's ideas.

Chapter 16: Bold Moves

Howard Schultz talks about his colleague, Costco CEO Jim Sinegal, a hero of ethical retail entrepreneurship.

Jim told him never to lose his customers because re-acquiring them after they were gone was going to be much more difficult and expensive.

And Howard started introducing reward cards.

Part 3: Pain

Chapter 17: Whirlwind Starbucks

Howard talks about the critics he received, especially from Wall Street, for his decisions.

He says that Starbucks is not a coffee company serving people, but a people's company serving coffee, and human behavior is paramount because it's much harder to change than a recipe or a marketing strategy.

That's what most of his critics never understood.

He says that he realized later on how the good decisions he made had something in common while the bad ones didn't.
The good ones:

1. Were right and engaged partners (Starbucks' employees)
2. Was right for customers and met their needs
3. Was right for the business

Howard talks about a few more frustrations here, including how he feels it's unfair that while Wall Street was taking the world down with them, Starbucks had become a symbol of excesses with the "$4 latte".

Chapter 18: A Lethal Combination

Howard talks here about the outdated in-store technology and all the bloated expenses Starbucks was running.

He says that growth had taken precedence over everything and was the carcinogen that had invaded the company. Many of the newly opened stores didn't even make sense from a financial perspective.

Chapter 19: Reverence Building

The stores opened without paying attention to the returns they would bring and had to be closed.

Howard here describes how painful it was for him to close stores and let go of workers.
It was 600 at the end. 70% of which had been opened in the last 3 years, during the crazy push for growth and expansion.

He describes all the steps he took to make sure he was giving the laid-off workforce a chance.

Chapter 20: No Silver Bullets

Howard Schultz talks about the big success the customer card turned out to be, but how there was no silver bullet.

I found it particularly interesting that the author fell for a “silver bullet mentality”, trying to find something that would change his business overnight.
And in that desperate quest, he embraced a product, an Italian sorbetto, that turned out to be a failure.

Chapter 21: I Know This to Be True

Chapter 31 of Onward then goes into the pain of having to let go of office staff.

He says that as much as they opened stores haphazardly, so people were hired at times to cover up process deficiencies.
Throwing bodies at problems instead of fixing the root causes.

He said again they tried to do it as emphatically as possible and provided with more benefits than most other similar companies would.

Some employees understood and thanked me, but others didn’t. And Howard peaks at a few emails he received from some fired employees that hurt him to read.

He says he read every name of people being fired, not allowing them to become just a number on a spreadsheet (again, this is the danger of remote decision-making, something Sinek talks about in *Leaders Eat Last*).

He also made sure to speak about it and give people the chance to vent. Publicly.

He hoped that talking to him and doing so publicly would reinforce the very values some felt he was tarnishing.

It reminded me a bit of Ray Dalio when he says that you “must love the person you shoot” (check Principles by Ray Dalio). But Howard seems much more human than Dalio.

Part 4: Hope

Chapter 22: Truth in Crisis

Howard Schultz talks about how inefficient Starbucks’ supply chain was.

Particularly interesting as a leadership lesson learned for me was the fact that the supply chain had no real supply chain expert.
Starbucks used to promote from within, what the author calls “stretch hires”.
But it seems like sometimes one does need experts.

Starbucks’ supply chain didn’t need generalists to learn on the job, it had become a very complex matter that needed specialists.

Chapter 23: A Galvanizing Moment

Schultz talks about the 10.000 people strong conference he was being pressured to scrap to save costs.

But he was adamant to keep it.

He says he needed to see all the leaders and store managers all together to reignite the passion and remind them of the company’s values.

He says it was a huge success and a game-changer.

Chapter 24: Nimble Someone

Chapter 24 of Onwards talks about the “free coffee for voters” campaign

They managed to launch in a few weeks and which turned out to be a huge success.

It was a reminder that it was still possible to move quickly and that social media was going to be a game changer when used smartly.

Chapter 25: Plan B

Chapter 25 deals with cost-cutting initiatives and the Lean methodology Howard implemented.

He says he was skeptical, but soon changed his mind and the results were great.

Chapter 26: Stay the Course

Chapter 26 of Onwards talks about the investors’ conference.

Howard was worried, but then a former MBA player on his board of directors gave a pep talk behind curtains that helped everyone step up and deliver.

Part 5: Courage

Chapter 27: Innovate For more

Howard says that a good idea is not enough.

Great execution is equally important.
But instead of asking why, he would ask “why not”, and launched a R&D branch to come up with new products.

Chapter 28: Conviction

Howard says he doesn’t believe leadership has a single recipe for success, but he believes *great leadership* has two major attributes:

1. Confidence about the destination
2. The ability to bring people along

Also, read:

- How to be a great leader
- How to be a great manager
- Best leadership books

Chapter 29: Connecting The Dots

Chapter 29 was interesting regarding how watchful famous people must be in front of cameras.

Howard said Starbucks saw the situation in the UK as quite dire.

The journalist interviewed a UK government official soon after whom, in turn, lashed out against Starbucks.
Lesson learned.

Chapter 30: Balance The first

Howard Schultz talks here about the importance of *charm,* values, and human connection.

And at the same time he wants to do it at scale.
He wants the magic of the coffee, but also wants it replicable and of the same quality over and over.

This reminded me of Michael Gerber when he says McDonald is as passionate about burgers as any other burger enthusiast, but he made it at scale (check *The E-Myth Revisited*)

Howard wanted to balance efficiency with romance, humanity, and profitability.

The lean methodology actually allowed baristas at Starbucks to be less stressed, move more quicker, and also have more time to talk to customers.

Chapter 31: Conscience

Traveling in Rwanda Howard wonders how much can one person or a single company do.

He did not have an answer, but he knew that doing nothing was unconscionable.

EPILOGUE

The epilogue stresses again the importance of balance.

Howard says that growth is a tactic, not a strategy. And **Starbucks lost its way when growth became a strategy**.

Again Howard stressed the importance of the sustainable economic model and the emotional attachment to the customers.

And of course, being an authority in the core business. I particularly loved when he said:

> **The proof of Starbucks' coffee authority will always be in the cup**

TPM Power Analysis

Onward is a case study on building the empire, passing it down to the wrong people, and stepping back to re-set it

on the right course, with better guardrails.

TPM Power Lessons:

- **The Dominance Display:** Closing 7,100 stores for "retraining" signaled to the Board and the Market that Schultz's vision superseded short-term profits.
- **Social Capital as a Battery:** Schultz's "Reservoir of Trust" is the ultimate example of **long-term social strategy.** Sacrificing short-term gains to buid social capital for the future.
- **Control over maximum scaling speed:** Growth without control undermines your empire. It allows the short-term corporate suits to take over and milk your dream.

Practical Applications

- **Speak From The Heart and You'll Always Be Right**

Howard said that whenever he speaks with honesty, he feels safe and right.
Indeed.

- **Dreams and Execution**

A great reminder that great ideas are nothing without great executions. Great ideas, says Howard, must be embraced by those who execute them, meet customers' needs, and meet business criteria.

- **Sometimes You Need Experts**

Better to drop the silly idea that "everyone can learn anything". Sure they can, but it takes time. And sometimes you don't have that time.

- **Excel in Your Core Business**

Don't forget your product. You must always excel in your core product.

CONS

This is strictly personal.

But as Starbucks talks about humanity and the Italian espresso bar atmosphere, I couldn't help but think that **Starbucks has nothing of the Italian bars' human experience.**

Starbucks is also a multinational with a bunch of all-the-same stores.

Yes, I'm a bit *no-global* at times.

Review

"Onward" is a wonderful book that any entrepreneur of *values-based business* should read.

At times, it felt a bit self-referential though and some measures sounded silly.
For example, writing his own "CEO", with small letters, "ceo", felt really unneeded.

I'm also not a big fan of this idea of calling employees "partners" and all the bragging about providing shares (including an employee crying about it).
To me, this can easily be a form of *corporate manipulation*.

Doubts About Starbucks:
There are also plenty of doubts and rumors about Starbucks, including:

- Blocking baristas from joining unions
- Their fair trade is not that free trade after all?

I leave the final judgment to you, but whatever the case, there's lots of good in this book and I hope you will build a big and ethical business. **Get Onward on Amazon**.

The Power of Habit: Summary & Review

Lucio Buffalmano · 22 December 2017 · Archived copy · Original

The Power of Habit explores the science behind habit creation and change, including tips and advice on how to change our habits and make them stick.

Bullet Summary

- Habits are around 40% of your life. They have 3 parts: cue, routine, and reward
- You can change your habit more easily by just changing the action part: the routine
- Willpower is a habit you can grow. And it will change your life.

Full Summary

About The Author: Charles Duhigg is a reporter, so technically not a scientist or psychologist himself. However, he makes a good job here at condensing lots of science in a way that is accessible and practical.

Introduction

Charles Duhigg opens the book with the example of Lisa. Lisa changed her smoking habit when she felt she *had* to change to accomplish her goals.

When she switched smoking with jogging a cascade of positive changes started, including eating healthier.
The change of one single major pattern -known as keystone habit- taught Lisa how to change the other habits as well.

Lisa still has powerful cravings to overeat when she sees images of food, but there's new brain activity in what's

supposedly the region of inhibition and self-control.

Charles Duhigg says habits can be changed -if we understand how they work-.
And that's what The Power of Habit sets out to do.

Part One: The Habits of Individuals

Chapter 1: The Habit Loop – How Habits Work

Charles Duhigg explains that habits emerge because the brain looks for ways to save effort.

The Basal Ganglia stores habits for us, and once stored we don't need to use the rational part of the brain to execute. We just access our habits in "automated mode", and it all goes very quickly.

The process of making a routine into a habit is called "chunking".

The brain activity spikes at the beginning of a habit, when it's looking for a cue. And spikes again at the end, when a reward is usually present.
In between spikes, the brain relinquishes control of the habit.

The habit then consists of three steps:

1. **Cue**: a trigger telling the brain to go into automatic mode. Depending on the trigger the brain selects a specific routine
2. **Routine**: physical, mental, or emotional behavior that follows automatically
3. **Reward**: positive result telling our brain if this loop is worth memorizing

Habits are automated, but they are not destiny.
They can be changed, ignored, or replaced.

Old habits stay inside our heads, but as we develop and use new ones, the new ones become stronger (read *The Brain That Changes Itself* for more on neuroplasticity).
Understanding how they work is your first step in choosing the habits you want.

Companies (Ab)Using Habits

The author explains how McDonald's uses the power of habit by standardizing everything.

The shop architecture, the food, and what the employees say.
All are designed to deliver the exact same feeling anytime, anywhere.

Habits are delicate though, and even small shifts can change them. If the place closes, for example, the family can start having dinner at home.

Also, read:

- Corporate manipulations
- Best manipulation books

Chapter 2: The Craving Brain – How to Create New Habits

Charles Duhigg introduces the famous advertising pioneer Charles Hopkins.

Charles Hopkins Rules

1. Find simple and obvious cues
2. Clearly define a reward

Hopkins says when you identify those two points, products will sell like magic.

However, Hopkins was wrong.
He didn't sell Pepsodent toothpaste because of the "clean teeth reward".
That was what everyone else said too.

The difference was that Pepsodent had a chemical that made the toothpaste foamy and tingling in the mouth.
That was the cue: the tingling sensation.

Similarly, Febreeze from P&G failed at the beginning as an odor remover. People don't have any craving for "no odor".
But it exploded when P&G marketed it as an air freshener. After they used it people craved for that fresh smell.

Charles Duhigg adds then the missing third step: craving.

Craving drives habits.
When there's a craving, creating a habit becomes much easier. The endorphin rush of working out, for example, fuels the habit of working out.

Chapter 3: The Golden Rule of Habit Change

Charles Duhigg discusses American football coach Tony Dungy.

Dungy wanted to change the habits of his player, but want to do it quickly and easily.
The idea behind it is ingenious indeed.
Instead of changing the whole habit, Dungy set out to change the habits by changing the routine between the cue and the reward.

It's much easier indeed to change behavior if cue and reward stay the same. If there's something familiar at the beginning and at the end, changing what really matters, the routine, becomes much easier.

Stopping Nail Biting

Any time the patient felt the need to bite her fingers, she was advised to grab a pen or put her hands in her pockets.

Then she should search for something to provide quick physical stimulation, such as rubbing her arms.

The cues and reward should stay the same, just the routine changed.
And little by little she replaced the old habit with the new one.

The author adds though that changing any habit is easily described but not easy to do.

It requires determination and understanding of why you do what you do (understand cues and rewards).

The patient, for example, understood that nail-biting was her craving for physical stimulation.
And studies show that smokers who found out what their cues and rewards were and then changed their smoking routine with something else were more successful at quitting.

For example ask yourself: if you eat unhealthy snacks at work, might it be it's your way to get away from the desk?

Belief: The Key Ingredient for Changing

Charles Duhigg then discusses AA (anonymous alcoholics) and its efficacy in dealing with alcohol addiction.

The author says AA attacks the habits that surround alcohol usage.

Research shows that alcoholics with faith and belief in God stayed sober the most. It wasn't a specific faith in God that helped though, but more a general belief they could change.

You need to believe things will get better.

Small wins are particularly useful in that realm. Small wins galvanize us and show us that bigger wins are possible, as long as we stay constant.

Habits That Win Gold Medals

Charles Duhigg says that Michael Phelps, like many elite athletes, has the capacity for obsessiveness.

The author says what sets him apart were his daily habits.
Phelps had all his days down to routines.
No matter if it was an Olympic race or a normal day, he has his habits, always all the same, that would ground him and keep him calm and focused.

My Note:
This is pure speculation on the part of the author. We don't know whether that's true or not.
Who says that Phelps might simply not be a guy who naturally does not get stressed?

Part Two: The Habits of Successful Organizations

Chapter 4: Keystone Habits

Charles Duhigg describes Paul O'Neill's stewardship of Alcoa.

O'Neil changed the habits of the organization to revolve around the importance of safety.

My Note:
I didn't find Alcoa that great, but O'Neil taking responsibility when a tragic accident took a worker's life reminded me of true ownership as exemplified in Extreme Ownership.

The idea of a keystone habit is that of a crucial habit you can change that will change your whole life.

For example, the habit of exercising will also lead to better eating habits, better mood, etc.

Chapter 5: Habit of Success – When Willpower is Automatic

Self-discipline predicts academic results more than IQ (check *Emotional Intelligence*). And the best way to strengthen willpower is to make it into a habit.

It seems true that students with high willpower aren't working hard, says Duhigg quoting Angela Duckworth, and that's because they made it into a habit (check *Grit* by Angela Duckworth).
It's normal for them.

Willpower Is Learnable: Like a Muscle

Willpower is learnable and works a bit like a muscle.

If you use it a lot it gets tired and then you run out of it the rest of the day. Like a muscle though, it also builds over time.

The author says that patients in rehab who had written plans and a plan to cope with pain to get healthy quicker did so twice as fast as those without plans.
It's because they had plans and solutions in advance to deal with what Duhigg calls "inflection points". Inflection points are those points when pain, emotions, or fatigue hits us.
And the patients who healed quickest had cues and rewards to deal with inflection points (for example: walking to the bus stop and saying hi to their wives).

The author says that's what Starbucks does with its employees: it provides them with routines to use when they hit an inflection point and a customer screams or is rude (check *Onward by Starbucks CEO*).
And of course, as we've seen in *Drive*, Duhigg also reminds us that a sense of control over one's tasks also increases willpower.

My Note:
The science of willpower is still heavily contentious.

Chapter 6: The Power of a Crisis

Charles Duhigg talks about how crises can become the catalysts of new and better habits. An example is a hospital where nurses were mistreated and browbeaten into obedience.
When nurses noticed mistakes, they said nothing. When that cost the hospital -and the patients- many tragic mistakes, the culture changed. Cameras, checklists, an anonymous reporting system, and a culture allowing everyone to speak up transformed the hospital into an example.

Chapter 7: When Companies Predict (and Manipulate) Habits

Chapter 7 of *The Power of Habit* delves deeper into how companies use big data to predict and take advantage of consumers' buying habits. For example, why put vegetables at the beginning as they are more delicate and can get ruined at the bottom of the shopping cart? It's because after we buy healthy stuff we are more likely to buy all the unhealthy stuff that we will encounter later on.

Companies got so good at matching consumers' shopping habits and state it became spooky. Pregnant women started to wonder how the hell could their supermarket know they were pregnant. So Target started sending advertising for pregnant women… Alongside random stuff, so to make it seem random.

The Habit of a Big Hit

Also very interesting for me was the psychology of making a hit. Making a hit is all about making the unfamiliar sound familiar.
We often like familiar songs even when we say we don't. People say they don't like a specific popular song or artist, but they don't change station the way they do with a new song.
"Hey Ya!" by the Outkast was slated to be a success by the producer. And yet it was failing on the radio because it didn't resemble previous songs. The trick is to get people hooked to Hey Ya and then want to sandwich between two other popular and familiar songs. Blending the unoriginal with the original.

The Habit of Eating

Similarly, there's a strong to stick to what we've always eaten. To change the eating habits of soldiers the army changed the way it delivered a certain type of meat to make it look as if it were the same type of meat they had

always eaten. And the troops just went along with ti.

Part Three: The Habits of Societies

Chapter 8: How Movements Happen

Charles Duhigg explores the act of defiance of Rosa Parks and how it became a movement.

He says there had been similar cases before, but Rosa's turned into a movement because she belonged to many social groups and had a strong network of activists and acquaintances.

The word spread quickly and everyone who belonged to the same organizations' Rosa Parks was a member of felt she was somewhat of a friend. And they felt compelled to participate in the movement.

Chapter 9: Free Will – Are We Responsible for Our Habits?

The last chapter deals with the hot topic of free will.

We have already seen this topic in *Incognito* and *The Moral Animal*.
The author talks about gamblers addicts and says it's unclear if the brain is born with an "addiction tendency" or if the exposition to gambling changes the brain.

However, as we acquitted of homicide people who weren't fully cognizant when they killed, then Duhigg wonders if she should do the same for people with uncontrollable gambling habits.

Appendix: How to Change Habits

At the end of the day, though, the message is a positive one.

Alcoholics can get sober, dysfunctional companies can transform themselves, and you can change your habits.

To change it you must:

1. **Identify your routine:** What is it that you want to change
2. **Experiment With Rewards**: the reward is often far from obvious. Change the "routine" part as a test and see which works. For example, if you're eating junk food, try eating an apple. If you still crave junk food, hunger wasn't the issue. Try coffee. If you're still hungry, maybe you needed a break. Try chatting with friends or exercising. Write down your results and keep trying until you identify the right cue driving your habits
3. **Find The Cue**: Once you isolate which reward works, find out what was the cue. They're often related to a location, a time, a person, an emotional state, or a preceding action. Keeping a log of the habit you want to change will allow you to isolate your cue
4. **Have a Plan**: Prepare a plan on what you will do once the cue comes up and stick to it

Practical Applications

Changing Habits
You can change your habits.
To make it easier for you, make sure the reward stays the same, but you change the behavior.
With time you'll have a new habit. So pick one that is not detrimental, but beneficial.

Understand why you do what you do
The second lesson learned is the importance of understanding yourself first and why you do what you do, which will open new doors of self-awareness.

Plan for inflection points
I particularly loved the tip on planning for your moment of weakness. Something I will do.
Anger is also a good motivator for your moments of weakness (read Relentless by Tim Grover, all about using your anger and dark side).

Grow Willpower
Willpower is a habit you can grow. It works a bit like a muscle and it will change your life. Start right now.

CONS

- **Split Stories Format**

Charles Duhigg starts a story and doesn't finish it.

He begins a new one and doesn't finish it.
Then he goes back to the first one and doesn't finish it.

I find this cycle unhelpful and confusing. Especially for people who read more than one book at a time or have many things going on at once.

- **Too Many Stories & Too Long**

Wouldn't it be nice to have science and a few examples and stories on how people apply in real life and how we can do the same?

That's my template of a great book and that's what The Power Moves does.

The Power of Habit at times seems to be more a collection of stories and some science than science with examples though. For me: too much unnecessary blabla.

- **Disjointed**

Some stories, topics, or chapters -like the weak ties for example- don't seem highly connected to habits in my humble opinion. I prefer laser-focused products.

Review

The Power of Habit is a great book on understanding habits and routines.

It is not as actionable as the later *"Atomic Habits*", but it contains all the practical steps you need to change your habits.

Macron VS Trump: Alpha Male Battle (Case Study)

Lucio Buffalmano · 23 December 2017 · Archived copy · Original

Macron utterly failed to influence Trump.

As a matter of fact, Macron managed to make an enemy out of Trump in a matter of a few days.

This article is a case study on influence, using Macron VS Trump as an example.

It will explain how Macron spectacularly failed to influence Trump and managed to make an enemy out of him by turning the relationship antagonistic.

By the end of this post, you will understand some key principles to influence people.

My name is Lucio, I hold a master's degree in communication, I am a *psychology buff* and most of my time goes into analyzing effective (and not-so-effective) human behavior.

Background: Macron Burst Into The Scene

Emmanuel Macron, France's president, burst into the political scene hailed by some as the new leader of the "free" and progressive world.

I don't know if Macron believed the hype himself, but he certainly barged in with some very bold moves.
Some of them were bold in a dumb way though.

Macron Persuasion Mistakes

Let's see, in chronological order, how he spectacularly failed with Donald Trump and the Paris Agreement negotiation.

#1. Don't Make Enemies

Macron didn't like Trump.
But if you want to influence people, you should not let your personal feelings get the best of you.

The Handshake

Macron went into his first meeting with Donald Trump with a tough-guy mindset.

He knew that Trump often resorts to bullying and aggressive tactics when dealing with others -check *Trump's Alpha Male handshake*-.
So he must have thought he should go even more aggressive to show his resolve and *"how alpha" he is.*

I think he went a bit too far with that handshake and mean look. But, overall, his intention was sound. It was actually a great tactic.

A show of strength is often indeed a very effective way of handling bullies:

The problem was that he didn't stop there.

The Swerve & Let Him Wait

Macron goes too far with his "display of strength".

A few hours later from that handshake, Macron is approaching the group of the various head of state at the NATO summit.

He seems to be going straight towards Trump.
But he swerves, avoids Trump, and goes to Angela Merkel first.

Approaching someone first among a group of people is often a sign your respect him/her the most.

And avoiding to approach someone who's physically closer to you is a sign you don't respect him much or don't want to deal with him.

On top of moving away from Trump, Macron also let him wait (check *what to do when someone makes you wait*).

After Merkel, he then greets a man between Merkel and Trump, with the momentum suggesting he's about to finally Greet Trump… And instead, he goes back to a man to the left of Merkel.

Letting Trump wait even longer.
See here:

An obvious sign of disrespect from Macron.

There's no point in hiding here.
In this era, in any NATO meeting, the US president is the most important man.
Avoiding him and letting him wait like that in front of everyone is most certainly a sign of disrespect.

Trump Hits Back

When finally Macron greets Trump, Trump uses his old "yank and pull" handshake technique.

This is a staple of Trump in asserting physical dominance.

However, given all that preceded I think Trump had to somehow hit back. Macron cornered him and was taking away social values from him.
Trump, typical of him, answered too directly obviously.

But he had to do something to restore the power balance.

A better alternative for him would have been to start talking to someone nearby and let Macron wait before shaking his hand.
Or even better, quickly shaking Macron's hand without even looking at him and then starting walking again as if he had barely noticed him.

Trump didn't handle it perfectly here.

#2. Don't Make Them Feel Inferior If You Win

Sometimes you might need to stand your ground.

And you might even win.
But if you want to influence people, you must play down your wins and make friends again (there are examples of how to do it in the course).

That's the best possible scenario, actually.
You show how strong you are, and then you make friends. Win: Win, you can influence them with both fear and friendship.

Not Emmanuel Macron, though.

He runs his big mouth to the press about his first handshake (check the main part of the article).
He says Trump believes in the "logic of the trial of strength".
But it doesn't bother him, he says, as he won't let anything pass.
And, in a major blunder, he highlights that his handshake was on purpose, that he wanted to show he makes no concession.

Basically, Macron publicly talks smack about Trump and shows off how he beat him (at his own game). And **by showing off his "Trump domination" to the press, Macron makes an enemy out of Trump**.

This was his biggest mistake.

Men like Trump, who have big ego and a *fixed mindset* tend to be very touchy.
Trump had already shown, clearly and repeatedly, that he takes things very personally.
And he tends to be very vindictive -the Rosie O'Donnell example, so spiteful it's actually funny-.

#3. Don't Induce Them Into Vendetta (Trump Quits Paris Agreement)

Trump will later quit the Paris Agreement to mitigate global warming.

Some Trump aides say Trump's mind was mostly made up about the Paris Agreement. But they add that if he had any doubts, Macron's behavior cleared them all (here's the Washington Post article).

Some other political observers went much further and placed the US' withdrawal blame even more strongly on Macron.

Now the story could be over, but out of social dynamics interest, let's see what happened after and what we can learn from it:

#4. Repair Relations (But Macron Escalates Further)

Macron, taking his role of leader of the progressive world one step further, prepares a message in English for the US citizens.

He opens it by saying:

> Let me say a few words to our American friends.

Macron speaks as if he were talking to an occupied territory that needs to be liberated.
Of course, Trump was not going to like that: dah!

Soon after Macron also launched a program and a website inviting American researchers to go to France to research.
And he writes on his website "to all responsible American citizens", **clearly implying that Trump is *not***

responsible.

See it here:

Whether or not we agree with Macron on that, that certainly isn't helping their relationship.

#5. Seek Agreement (Avoid Drawn Out Wars)

War is the antithesis of influence.

When you're at war, people hate you.
In war, people suffer and die just to hurt you.

Macron started a war with Trump.

Macron then invites Trump to Paris for the national celebration. As soon as he's out of the car Trump is more dominant, but his main revenge comes later:

#6. Don't Fight Out of Ego (Trump Shames Macron... Trolling Power Move)

Now here's the interesting thing.

Have you noticed how Macron spoke to the press about his Trump handshake?

He was serious and spoke matter-of-factly about his tactics. Macron revealed all his cards, publicly, and left no room for imagination.

Trump instead never reveals his cards.
He always covers his tracks and raises dust to hide his real moves.

As the *48 Laws of Power* suggests, he conceals his intentions.

And when the press asked him about Macron after the Paris meeting, he hits him indirectly.
He says that Macron loves holding his hand. And he adds "*and that's good, as far that goes*".

People who are too used to literal talk will say that Trump is, at his usual, talking nonsense.
But he's actually very effective.
He blames the victim while at the same time taking the pi** out of Macron.

Trump pretends it was Macron who wanted to hold his hand in Paris.
And he slightly implies Macron might be a little bit too much into him. It's even a slight dig at Macron's dating preferences –same technique I describe against a guy who wanted to out-alpha me-.

Trump outmaneuvered Macron both physically and socially.

https://www.nytimes.com/2017/07/13/us/politics/trump-interview-transcript.html

POLITICS | Excerpts From The Times's Interview With Trump

HABERMAN: He was very deferential to you. Very.

TRUMP: He's a great guy. Smart. Strong. Loves holding my hand.

HABERMAN: I've noticed.

TRUMP: People don't realize he loves holding my hand. And that's good, as far as that goes.

TRUMP: I mean, really. He's a very good person. And a tough guy, but look, he has to be. I think he is going to be a terrific president of France. But he does love holding my hand.

[crosstalk]

Macron's Influencing Mistakes

Macron did well in the first encounter.

He proved he was not to be trifled with. That's where he had to stop.

His mistake was that he kept insisting down that belligerent path in front of the whole group of heads of state.

You get respect when you deal strongly with someone one on one.
You get hatred and rage when you do it in front of others because that becomes shaming.

And then again, bigger still, he brags publicly to the press.
Macron said to the press that he wanted to show he wasn't going to make any concessions.
And of all the stupid things he said, that was one of the worst.

First of all, a man like Trump prides himself on deal-making and negotiation skills.
Macron painting himself as the best, toughest negotiator is like emasculating Trump.

Basically, **Macron created a win-lose situation**.
And when you create win-lose situations with those who are calling the shots, you lose.

Of course, at that point, Trump was motivated not to stay in the Paris Agreement as that would have felt like he was submitting.

And further still, Cialdini shows that the best negotiators are not the tough ones. The best ones *do* make concessions.
Making concessions is the best way to reach mutually beneficial agreements.

Macron had to keep his show of strength private. That way he would have gotten Trump's respect without souring relations.

> **When you create win-lose situations… You can lose**

How to Influence People: The Correct Way

Now the big question is, what should have Macron done?

We've already seen that his plan of showing Trump he was no guy to be pushed around was great.
You often get bullies' respect only after you show strength.
Or after you show you're not afraid of escalating -and ideally after you beat them-.

After he showed Trump some resolve Macron was in the perfect position to make it up to Trump and make him feel good.
Indeed, **people don't respect those complimenting them from a lower position as that feels like brown-nosing**.

But since Macron was now in a position of strength, he could use the full leverage of building Trump up.

Men with big ego like Donald Trump are more easily manipulated, and Macron should have used that to his advantage.

For example, he could have said publicly that "*Trump is the most important person in the difficult quest of saving our planet*".
And then complimented him for how deeply he cares about the common people.

That would have put pressure on Trump to conform and given him an incentive to step up to the plate.
Such as the honor of championing a worthy cause.

Summary

Tony Robbins said in one of his sales training: selling and influencing is the art of making friends.

He couldn't have been more right.
Such a simple lesson, and yet so often overlooked.

Macron did the exact opposite. He picked up a fight and backed Trump into a corner.
The Paris Agreement was the collateral damage of Macron's *alpha male posturing*.

Here's what he did:

1. Stood up to Trump
2. Shamed Trump publicly & made an enemy
3. Created a win-lose atmosphere saying there are no concessions
4. Forced Trump to hit back

Here's a summary of what he should have done:

1. Showed strength to earn Trump's respect
2. Offer an olive branch to make a friend from a position of strength
3. Strengthen that friendship
4. Appeal to Trump's ego to champion a better world

How to Help Friends Out of Awkward Social Situations

Lucio Buffalmano · 25 December 2017 · Archived copy · Original

We've all been in awkward social situations.

Wouldn't it have been nice in those situations to have someone to help us and support us?

This article explains how to do just that: helping friends out of awkward social situations (and saving people's faces).

Contents

  - Smoothly & Subtly
  - Cordially & Quickly
- The Social Rescue Equation
- Summary

Rescuing People From Awkward Social Situations

These are some of the most common socially awkward situations and how you fix them:

#1. Let Them In

> ***When They're Standing Outside, You Open The Door***

Standing at the edge of a group is a typical awkward social situation for many.

The longer someone stays in the periphery of the group, the stronger the message they are not welcome is broadcasted. And you don't want that to happen to your friends.

What you then do is this:

1. Take a step back
2. Put your arm on your friend's back inviting him to step in
3. Step back in together with your friend
4. Introduce him or mention him in what you say next

Being ostracized and left outside in the cold is a great fear of human beings. Rest assured that people will remember and cherish those very few who notice and open the social doors for them.

#2. When Ignored, Show Interest

It happens relatively often that someone is telling a story, but the people around them start ignoring him.

What to do then?

Here's an example:

I got a question
A few weeks ago a friend of mine, let's call him Terry, was telling a story to a group of 4 guys, all knowing each other, and 2 new girls.

Terry was looking at the two girls as he spoke, but they suddenly turned to each other and started talking to themselves.

Now, the story might not have been the most captivating ever, but that was very socially oblivious and rather rude of them.
Terry looked shunned and was losing big social points.

The quickest and easiest way to rescue anyone in Terry's situation then, is to jump in and make a wrap-up question (read below why wrap up).
This will allow Terry to finish his story, show everyone that he's not isolated and comfort him that there are people who care.

It looks like this:

> **Friend**: *I tried La Casa pizza parlor last week, and it was* superb. (nobody listens, tries with a question) *Have you guys ever tried La Casa*
> **Group**: (Looking away, starting side conversation)
> **You**: *Oh cool man, I've heard about that place a few times, how was it*

Also, read:

- Mastering group conversations

#3. Hurtle Away From Awkward Situations

> ***The Shorter The Time, The Less The Embarrassment***

A very common way of helping your friends out of awkward situations is to move away from them as quickly as possible.

You can pretend it never happened, change the topic or keep going.

Leil Lowndes calls it "see no bloopers, hear no bloopers".
It's a very easy and simple method that doesn't require much effort, so in the very worst-case scenario, you can always come back to it.

It works well… A lot of times.

Exception: When The Blooper is Too Obvious

But you cannot use it when the blooper was too obvious to ignore.

When the blooper is too obvious, big, or grave, then ignoring does not work.
That's where the saying "ignoring the elephant in the room" comes from.

Rather than ignoring them, you can address them head-on and "normalize it". For example, you can say it happened to you too, or you can tell a story of when something even worse happened to someone you know.
When you normalize the blooper, the blooper has no shaming power anymore.

#4. Put Your Social Weight On Their Side

> ***And Openly Take Your Friend's Side***

Most people who put our friends in awkward situations do so with opinions or with out-of-place questions.

Imagine they take one side of the scale.
But if you can put your own judgment on the other side of the scale and you have more weight, you win.

Let's review the same Sex & The City example:

> **Antony**: *Mother of God, what's with the gut. Well she's eating something out there*
> **You**: *Not true at all. I'm just bummed she's my friend. I hate having hot friends and not being able to make a move, or I'd be all over that (smile)*
> *Welcome in baby! (Open arms for a warm welcome)*

This works particularly well if your opinion is highly regarded in the topic and the attacker's opinion is not so much.

In this case, for example, it works great if you're a guy with good taste, or rumored to sleep around.
Then your opinion on the topic matters. And his opinion as a guy naturally not interested in women matters much less.

#5. Undermine Their Attacker

> ***No Social Weight, No Harm Done***

Opinions and questions that put our friends on the spot often look powerful because, *the moment we set ourselves as judges,* we *become* judges, and acquire huge social power.

If you, on the other hand, can highlight that it was simply an opinion -and a silly one at that-, you take away power from the judge.
And you relieve the social pressure.

You do so by questioning the attacker on their motives or undermining their authority.

A great way to do this is to use humor so that people will laugh.
A humorous moment also decreases tensions and helps to move on more quickly.
And, of course, you won't look butthurt.

> **Antony**: *Mother of God, what's with the gut. Well she's eating something out there*
> **You**: (rolls eyes, speaking as if you don't wanna be heard, but loud enough that everyone hears) *says the guy highly experienced in women. We'll ask him when we need an opinion on di**s. In the meanwhile, come on in*

> *Samantha, you look spectacular* (hugs her and welcomes her in)

Notice also this is the same technique Jesus Christ used to save an adulterous woman from being stoned (talking about awkward social moments lol).
It's when he said:

> ***Let him who is without sin cast the first stone***

With one simple sentence, Jesus put the attackers on the same level as the victim: everyone's a sinner.
Once everyone was on the same level, he robbed the attackers of their ability to pass judgments.
And relieved the pressure on the victim.

#6. Support Them By Relating With Them

> ***No Worries, Everybody Poops***

Of course, some of the most typical awkward moments involve body functions at the wrong time.

Ideally, your friend will own it without making a big deal about it, but this post is about how we can help our friends, not how to control their minds.

So a good technique to relieve the pressure is to laugh at it… Naturally.

You want to avoid anyone thinking it's weird, and you to do so you gotta believe it first.
It's a natural, healthy body function.

Your friend might still feel singled out though. "Yeah sure, it's a healthy body function, but it was me who did it and you're all laughing about what I did", they might think.

That's when you relate a short personal story of when you were also embarrassed.
Make others laugh at yourself so you take pressure off of your friend and get your own share of laughter.

Then you can keep talking about other people's embarrassing stories or move on the conversation to something more relevant.

And this is the wrong way to do it (from a silly video of top 10 farts, a typical socially challenging situation):

https://youtu.be/QdRTa0iK8zs?t=51

The host perks up, all surprised as if to say "oh my God, what have you just done". That's the opposite of helping our friends out of socially awkward situations.
Even worst, he looks around, which is a typical way of showing emotional disconnect.

People who laugh at other people's expenses start by looking around. They're looking for others to support them and "gang up with" (see more examples in Power University).
All of which of course puts further pressure on the woman (and are rather *low-quality behavior*)

#7. Throw an Emotional Life Preserver

> ***Problems Are Twice As Small With a Partner***

The emotional life preserver is one of my favorites because there are no dangers of escalation, no losers and it actually strengthens the bond between the group.

Look at the example of Meet The Parents, a fantastic comedy based on awkward social situations and people more

or less dealing badly with them:

Why is it so awkward?

For a few reasons, a big one being that nobody really takes Greg's side or helps smoothen the transition.
Ideally, the person who will help us is either the most powerful or the one closest to us. In this case, imagine if this had happened:

> **Doctor**: *oh really what field*
> **Greg**: *nursing*
> **Doctor**: *ahahaha. no really, what field*
> **Greg**: *nursing*
> **Greg's GF**: (gets up, goes to Greg, kisses him on the cheek) *Greg is one of the very best nurses in his hospital. He aced the MCATs but decided to be a nurse to stay closer to the patients and follow his heart. And that's why I love him* (takes a chair, invites him to sit, changes topic). *Greg, you absolutely have to try this jam, it's from our aunt's farm, Michelle* (points to Michelle) *and it's deeeliiicious. Greg also loves natural products auntie.*

Social Support: The Top Socialite Way

The top socialite saves their friends from awkward situations in two socially savvy ways:

Smoothly & Subtly

> ***Your Friend is Not a Lost Puppet***

Subtlety is the name of the game.

Your goal is always to land a hand in the most subtle way possible. And draw the least possible attention to your social rescue move.

Why?

Because the more obvious your rescue is, the more attention you draw to the social faux pas and the more you are communicating that your friend made a mistake.
And, of course, more attention to the fact that your friends need your help.

People resent those who help them too obviously, because that's not real help.
That's us showing off our social power.

Do it subtly instead. Help them save face, but make it seem as if nothing happened.

Cordially & Quickly

> ***Save The One Without Destroying The Whole***

Ray Dalio says that the whole is more important than the individual person.

If your friend puts himself in awkward social situations, it's often because he's made a social faux pas.

And he is being "socially punished" for that.

If you save him too obviously, that also means that you going against the group.
And you don't want to antagonize the whole group.

You will notice in the Terry example that the friend helping him asks "how was it".

He didn't ask "I'm super curious, tell me all about it".
Or "oh cool man, do you like Italian food".
These kinds of questions build up the victim too much while encouraging them to ramble on.

Terry has made a mistake and the group has already spoken about that. And albeit he might have not deserved a harsh punishment, you don't want to keep going against the group.

"How was it" instead is a neutral question that does not build him up, and which invites a quicker reply, such as "oh it was really good".
Terry saved faced, the topic is closed… And now we can all happily move on.

The Social Rescue Equation

To generalize, you rescue people in social situations in two ways:

1. Putting your social weight behind them
2. Neutralizing the social threat causing embarrassment

Notice that it doesn't really matter what the "social threat" causing the awkward situation is.

It can be another person -as in Antony's case-, a blooper caused by the person himself -passing gas- or anything else in the surrounding. But the principle is still always the same.

Example: Blaming the Circumstances
Your friend might be embarrassed because they "walked through" a glass door and hit their face.

The situation is embarrassing because, the mind goes, it's silly not to see it was a door.

But is it really silly?

You can still single out the door as the "embarrassing agent" and take power away from it to rescue your friend.

You can say for example that it's idiotic to use such perfectly transparent glass as a door.
"I would have hit it myself", you can add.

Now it's less about your friend being awkward and more about the safety issue of a transparent door.

Summary

Saving our friends from awkward social situations is about showing we are close to them and then helping them up. And, when applicable, by taking pressure off of them and shifting blame to the embarrassing agent.

Always do it as smoothly and quickly as possible. And everyone will love you for that.

- Defending people from social assault

How to Defend Friends From Social Attacks

Lucio Buffalmano · 27 December 2017 · Archived copy · Original

Knowing how to defend someone—whether it's a close friend or an innocent victim—can make a big difference in both their social status and your own.

In this guide, you'll learn effective and socially intelligent techniques for **defending a friend in social settings**—smoothly, and effectively.

As one of the few websites focusing on power dynamics, we use the term **social assault** to describe these behaviors:

> Social assault is an umbrella term covering any form of social attack that decreases the social power and status of the target, while potentially—but not necessarily—increasing the power of the attacker.

Social assaults include:

- Covert aggression
- Rude behavior or hostile expressions
- Implied or direct threats
- Social climbing
- Throwing someone under the bus
- Undermining others

Let's now explore several ways to protect your friend or ally when they're under social attack.

Contents

- 1. Use Physical Proximity
  - Physical Threat
  - Emotional Support
- 2. Touch: Show Your Support
- 3. Break the Pattern
- 4. Bond with the Victim
- 5. Attack the Attacker
- 6. Mediate from Above
- Case Study: A Real-Life Rescue
- Summary

1. Use Physical Proximity

Standing physically close to your friend during a confrontation signals solidarity. Depending on your posture, it can be interpreted either as a warning to the aggressor or as emotional support to your friend.

Physical Threat

This is common in high-adrenaline environments like team sports. Standing next to your friend, facing the threat directly, sends a non-verbal message: "If things escalate, you're dealing with both of us."

Watch this example from the Italian national football team, where teammates defend Francesco Totti after an

unjust red card.

- Face the aggressor directly
- Align your body toward the threat
- Project tension and readiness

Emotional Support

Contrast the above with this video, where physical presence is used to *comfort*, not confront:

Here, the woman comforting Emily doesn't engage the aggressor. Instead, she focuses fully on her friend. That silent act of support sends a powerful message: "You're not alone."

2. Touch: Show Your Support

Human touch communicates trust and solidarity. During tense social moments, placing a hand on your friend's back, shoulder, or arm says: "I'm with you." It also signals to others where you stand.

In group dynamics, this can subtly raise your friend's status—especially if *you* are well-respected within the group.

Example from *The Godfather*: Fredo tries to support Mo Greene with a public gesture of solidarity—although Fredo's low status renders it ineffective.

3. Break the Pattern

When someone is under verbal attack, both parties often become emotionally reactive. Introducing a third-party voice—especially a calm one—can interrupt that dynamic and reset the tone.

Tony Robbins calls this technique "pattern interruption."

Example from my high school days:

Our French teacher was angrily shouting at a classmate, Alessandra. During a tense pause, I calmly said, "She just

forgot her homework." The mood shifted. Others chimed in. The teacher calmed down—and even joked Alessandra should like me for standing up for her.

This scene from *Goodfellas* shows a failed—but insightful—example. Watch how Anthony tries to interrupt Tommy's aggression:

4. Bond with the Victim

Just being friendly and warm toward the victim—especially in public—can counterbalance the attacker's narrative.

However, this approach can provoke the attacker if it's too obvious. The trick is subtlety.

Watch how Fredo tries (and fails) to bond with his brother here:

Fredo was too overt and ended up escalating tensions. In contrast, a private, sincere gesture—like a handshake later on—would have been smarter.

This approach is best used when the social attack wasn't too severe or when the victim did make a small mistake and just needs some moral support.

5. Attack the Attacker

Sometimes, the only way to defend someone is to go on offense. Especially when the attacker is going too far or trying to dominate the interaction.

If you sense that silence would allow the aggressor to gain momentum, a sharp rebuttal can shift the power dynamic.

Examples:

- Call them out on hypocrisy
- Accuse them of the same behavior they're criticizing
- Undermine their credibility

This scene shows a full-blown counter-attack:

Use this approach only when:

- The attacker is clearly in the wrong
- You can handle potential escalation
- You expect others to side with you

6. Mediate from Above

In some cases, the wisest way to defend a friend is to rise above the conflict entirely and act as a neutral mediator.

This is powerful because both the attacker and the victim want peace—but don't want to look weak by initiating it. When a third party steps in with authority, everyone saves face.

To pull this off, break the emotional state first. You can:

- Interrupt with higher energy (example)
- Interrupt with unexpected calm (guy stops fight while eating chips)

Then play peacemaker: gently call out both sides, offer a resolution, and ideally end with some symbolic gesture (like a handshake or hug).

Case Study: A Real-Life Rescue

One night in Boracay, I witnessed a girl publicly and cruelly cut off a guy named John. He'd been chatting with her, but she suddenly turned her back and began ignoring him completely.

John was left standing outside the group, trying to save face. I couldn't stand her behavior—so I stepped in.

- **I gave him a fist bump –** let him reframe the social dynamic
- **I stepped back –** created space in the circle for him
- **I put my arm around him –** signaling warmth and inclusion
- **I subtly criticized the girl –** attacking the attacker, but lightly

This intervention flipped the script. He went from rejected outsider to accepted group member—and I gained social capital as someone who defends others.

Summary

Defending others in social interactions isn't about blind loyalty or raw aggression. That may also be effective in some cases, but it lacks social calibration for most contexts.

Defending your friends socially is about using power dynamics, emotional intelligence, and social strategy to:

- **Support your friend or ally**
- **Neutralize or undermine the attacker**
- **Interrupt the pattern and mediate peace**

When done well, you not only help others—you increase your own status as a socially powerful and respected individual.

The 2008 Financial Crisis: A Psychological Analysis

Lucio Buffalmano · 27 December 2017 · Archived copy · Original

The following is an excerpt from my master's thesis on the psychological causes of the subprime mortgage crisis.

The main behind is **that financial crises are *not* the exception, but a natural consequence of human nature and human psychology**.
To really understand them -and prevent them- we then need to understand -and plan- with human nature in mind.

I will share here how some well-proven psychological biases might have contributed to the financial crisis.

Contents

- Hyperbolic discounting
- Diffusion of Responsibility
- Social Rationality & Competition
- Cognitive Dissonance
- Belief manipulation (or "self-deception")
- Obedience
- Representativeness
- Base Risk Bias
- Optimism
- Overconfidence
- Illusory Superiority
- Bandwagon Effect and Herd Instinct
- Attention Anomalies
- Loss Aversion & Ambiguity Aversion
- Categorization Bias
- Normalcy Bias
- Familiarity
- Anchoring
- Abundance Bias
- Psychopathy & Sociopathy

- Sociology & psychology of financial crisis: Summary

Hyperbolic discounting

Hyperbolic discounting is:

> the tendency for people to increasingly choose a smaller-sooner reward over a larger-later reward as the delay occurs sooner rather than later in time.

Such as, humans show a preference for the temporally nearest reward by a factor that increases with the increase of the delay.

This might also be due to an *evolutionary disposition*: since we evolved in an environment where food was not readily available at will, it made sense for our ancestors to guzzle and get as much as possible on those few

occasions when they could have guzzled.

Even though rushing might have caused a stomachache a few hours later, that might have given them a big leg up in tackling a possible food shortage in the coming days (note: this is *highly* speculative, it's just my personal *guess* and there's no proven science behind it).

In the same way, when traders and bankers can binge on the profits, there's a tendency to just do it.

Hyperbolic discounting only addresses rewards, but it's probably not too much of a stretch to imagine that short-term rewards can blind people not just to bigger rewards in the future, but also to lack rewards, or even full-blown problems, in the future.

After all, we probably all know someone who spends all they have -or even borrows to consume more-.
And this is nothing, after all, more than the "grasshopper mindset" of the famous fable The Ant and the Grasshopper.

The hyperbolic discounting is magnified by the fact that the "costs" are often not borne by the individual. Or at least, there's a tendency to believe they are.

Enter, the diffusion of responsibility:

Diffusion of Responsibility

When many different parties are contributing to a flawed process it is easier for everyone to tell themselves that they are not at fault.

This helps people assuage their moral and ethical concerns about their own actions.

And in there were so many parties involved in the securitization process that it was easy for everyone to say, both to themselves and to others: "look I'm not doing anything wrong here, everyone else is doing the same".

Most might not have been even aware that something was wrong, but the diffusion of responsibility bias simply never led anyone to even *ask* if what was happening was good or dangerous.

Social Rationality & Competition

Social rationality refers to the type of practical rationality displayed by individuals in multi-agent decision-making situations.

Basically, people apply simple heuristics to complex problems and tend to follow the crowd.

Strong economic competition and social interaction push financial institutions to follow short-term strategies by taking as reference what the majority thinks (either go with or against the majority), independent of the actual relevance of what the majority thinks.

This might have brought people to sell and buy CDOs and MBS not much because they thought it was the best thing to do, but because they were in competition with the other hedge fund managers that were all doing the same.

> Our competitors are packaging and making mad money off of CDOs.
> Shall we play it safe, research thoroughly and plan for the long term or shall we do the same and make mad money too, right now?

The question had such an obvious answer that many probably never even asked it.

Social rationality, coupled with the "**competitive arousal**" model of decision making suggests that situational factors such as rivalry, time pressures and external people judging our performance stimulates physiological arousal that pushes us to win.

No matter if winning means doing the right thing or not.

Competitive arousal also crowds out more thoughtful consideration of risks and costs, and pushes people "straight into grabbing the spoils".

Social rationality and competitive arousal seem to have been instrumental to the exponential increase of leverage.

Cognitive Dissonance

Cognitive dissonance is the discomfort we feel when we take actions that conflict with our (usually positive) self-image.

To avoid coping with the fact that they were doing something wrong, bankers and traders *manipulated their own beliefs* to convince themselves that everything was ok.

This is a process called by Barberis:

Belief manipulation (or "self-deception")

The high complexity of the derivatives might have helped in the "belief manipulation".

It would have taken considerable effort to disprove the claim that MBS were relatively safe, and since we prefer the path of least resistance, the normal path was to delude themselves about their risks.

The "belief manipulation" comes in help other biases, like the **Confirmation bias**, which leads people to overweigh information that confirms their prior beliefs and to underweight information that disproves those beliefs.

Through these two biases, we can also more properly frame the role played by the mathematical models.

Many blamed the models for the crisis, but I don't fully agree with it.

The mathematical models didn't fool everyone, but they were a ready excuse and a handy instrument of self-deception.

Why shall I believe that silly voice in my head that things can turn sour?

The mathematical models of our smart finance whizzes say everything shall be alright.
So let's get back to making money…

Obedience

People are remarkably willing to follow instructions from an authority figure, even when the task seems inappropriate.

Especially in confusing situations, we look to authority figures for guidance on what to do (so our dependence on authority figures rises in the presence of a stressful situation).

Many people may have felt that what they were doing was not completely sensible but they felt a psychological need to do what their bosses wanted them to do.

It might not be a coincidence that Bridgewater was one of the very few mutual funds to foresee the crisis since Ray Dalio strongly encouraged a mentality of independent thinking and speaking up (check Principles by Ray Dalio).

Representativeness

People's tendency to see patterns, especially trends, in data that are actually completely random.

This is coupled with the tendency to extrapolate too readily (over-extrapolate) from small samples.
Housing prices had been rising for several years, so most home borrowers went ahead with their mortgages never

even thinking they could lose money.

Base Risk Bias

Akin to the representativeness is the "**base risk bias**", such as the tendency to overweight base-rate information and historical statistics.

For what concerns the crisis, an example is over-weighing historical default rates, which might give the impression of safety without assessing how the fundamentals, or the lending standards, had changed (Shefrin, 2009).
Similarly, people looked at the historical data to reassure themselves that house prices had never fallen.

Interesting how Greenspan, the then-president of the Federal Reserve, used this statistic to convey the idea that a housing crash was not an immediate danger to the economy.

Conservatism is an empowering factor of the "base risk bias", and is the tendency to overweight base-rate information relative to new (or singular) information.
This phenomenon is sometimes called "underreaction" because we tend not to react promptly to the new information we receive.
Conservatism might have slowed people's reaction when news about higher insolvency rates started to appear.

Optimism

People have excessively rosy views of their prospects and the outcome of planned actions.

This includes overestimating the likelihood of positive events and underestimating the likelihood of negative events.

In surveys, people overwhelmingly think that setbacks are more likely to happen to others than to themselves.

The optimism bias operated at many levels.
Households may have underestimated the risks of taking a large mortgage and thought house prices had still a long way up to go.

Hedge fund managers, investment bankers, and investors might have concentrated on the possible gains of their investments and underestimated the chances that they could actually lose money.

Overconfidence

People strongly overestimate the precision of their forecasts.

This too may have contributed to the poor modeling and the poor predictions we had about the future course of the housing prices.

Overconfidence may have led people to believe that they could forecast future house price movements more accurately than they actually could.

Illusory Superiority

Illusory superiority is a cognitive bias that causes people to overestimate their positive qualities and abilities and to underestimate their negative qualities, relative to others.

Optimism, overconfidence, and illusory superiority played a role on all levels.

Bandwagon Effect and Herd Instinct

We tend to assume naturally that when other people all say something it's probably true (bandwagon effect) and we tend to follow them (herd instinct) to feel safer and avoid conflicts.

Therefore, when everybody behaves as if a housing crash is so unlikely, we follow the herd believing they have good reasons for saying so.
And when everyone traded CDOs, it seemed just normal that we do the same.

Indeed, people tend to self-censor, and many could have been embarrassed to bring up the possibility that we might have a financial crisis.
Shiller says it worked for him and a colleague of his as well when he refrained from publishing a book dealing with the importance of psychology in finance.

This bias can also be strengthened by the "**omission bias**", the tendency to judge harmful actions as worse than equally harmful omissions (inaction).

It might not have been a case that many of the people that predicted the crisis was rather marginal and unconnected people, sometimes also regarded as "oddballs".

Of the same family as the biases just described is **Groupthink**, a kind of thinking in which group cohesiveness is more important than carefully considering the facts.
Symptoms include people not voicing contrary opinions so as not to rock the boat.

The pressure is on dissenters to conform and opposing opinions are viewed in a stereotypical, simplistic way.

This is often referred to as **Conformity**, the strong tendency to conform to the group we belong to even though we don't think it makes any sense. It's a behavior that stems from the basic human need to be liked and accepted by others.

Even if some bankers or traders saw the problems, they may have kept quiet for the sake of conformity

Groupthink is considered to be particularly strong when: the group is valued and attractive to belong to, which seems quite possible in the case of Wall Street.
The group is isolated from other opinions, and indeed there was not a very big diversity on the Wall Street boards, and often risk managers weren't lent a hearing; there's a strong leader who makes his view known, and is a *strong assertive leader* is almost a prerequisite to becoming a CEO in Wall Street.

Also, see:

- **How to be assertive**

Attention Anomalies

We are more concentrated on emotionally salient stimuli and on what people and media around us are talking about.

Thus, investors might see their brain resources hogged by the "attractive" yields of the subprime borrowers that everybody is talking about, or by the growth targets discussed in the company's meetings and spend less time researching what might go wrong.

Loss Aversion & Ambiguity Aversion

People have an aversion to losses and ambiguity, especially under certain circumstances.

For example, the loss aversion is stronger when we've recently experienced a loss.
And the ambiguity aversion is stronger when we don't feel well prepared to understand what's happening.

Once CDOs and MBS started losing value both institutional and individual investors experienced increases in loss aversion and ambiguity aversion, leading them to quickly dump their holding of risky assets quicker than the real economy would have granted for.
This bias possibly accelerated the domino effect.

Categorization Bias

Categorization bias leads to partitioning objects into general categories and ignoring the differences among members of the same category.

Categorization bias may produce unintended side effects if the members of the same category are different from each other in meaningful ways.

The categorization likely played a major role once the rating agencies rubber-stamped their ratings.
So all investors considered all AAA assets to be the same when it clearly turned out that wasn't the case.

Similarly, AIG, one of the biggest insurers of toxic CDOs, treated the mortgage pools it was insuring at the beginning of the 2000s as the ones it insured in 2005-2006, even though the latter contained far more subprime mortgages.
A behavior that provided devastating for AIG and for the ripple effects it provoked.

Normalcy Bias

The normalcy bias refers to a mental state people enter when facing a disaster.

It causes people to underestimate both the possibility of a disaster occurring and its possible effects.

Nassim Nicholas Taleb, in his book "*The Black Swan: The Impact of the Highly Improbable*", explains it as the psychological biases that make people individually and collectively blind to uncertainty and unaware of the massive role of rare events in historical affairs.

According to the Black Swan Theory, unpredictable events are much more common than people think and are the norm and not the exception. Black Swan events are hard to predict based on historical events.

This, coupled with the tendency to have an optimistic view, helps explain why many thought it was impossible some catastrophic event might have happened.
Mathematical models were also built without taking into account what back then seemed highly unlikely events and the results of the model further helped many people to overlook the chances of improbable events.

Familiarity

We feel safer with what's familiar, even when what's familiar might not be necessarily safer.

Supported by the notoriety of a certain financial instrument, we are reassured into buying it.
We don't notice this influence, and we distort our risk-profitability ratio.

Maybe this could also be stretched to include the "daily familiarity" we developed with certain securities. So for example after years of lucrative gains with CDOs and MBS traders might have felt those securities "reassuringly safe".

Anchoring

The **anchoring** (or **reference point bias,** Tversky & Kahneman, 1974) is the tendency for which we tend to make forecasts on the ground of a starting assessment, or of a price thought to be "right".

An anchor to which our mind binds and prevents us from reacting promptly when new information surfaces.

So for example, people holding CDOs who were rapidly depreciating might have been brought to keep them because the price they were currently trading for was "far below the right one".

Lehman Brothers traders, including his CEO, bought a big portfolio of MBS as it sought to deleverage because they thought "it was a great deal".
It was such great because they were comparing it to the old prices.

This, maybe also more importantly, is also true the other way around. People that get used to certain profits, might use them as references.

And as the risk premiums declined and the same amount invested was yielding less, here it surfaces the "need" to leverage to reach –and surpass- the reference point of the previous years (or quarter, or trade).
A reference point can also be set for emulating purposes. UBS increased dramatically its exposure to subprime products because a consultant company had advised doing so (McKinsey).

Abundance Bias

Abundance bias might kick in when there's so much to one's disposal that worrying about the future shrink till reaching zero, and an end of the bonanza doesn't even cross people's mind.

Traders and bankers were so busy splurging that they just couldn't fathom that the end of their plush life might be in the cards.

Psychopathy & Sociopathy

Finally, it's possible that the higher concentration of sociopaths and psychopaths in high-risk and high-reward industries such as investment banking and trading might have also contributed to the crisis.

Psychopaths tend to be highly driven towards gains and rewards while ignoring risks to both selves and, even more, others.
Many psychopaths are also undeterred by the risk of punishment (which few people were considering anyway thanks to the diffusion of responsibility bias).

For more on psychopathy in business organizations, please read:

- **Psychopathy in business**: it's Machiavellis that reach the board

And of course, also take a look at:

- **Machiavellianism**

Sociology & psychology of financial crisis: Summary

The markets were –and maybe still are- ill-prepared to cope effectively and efficiently with the less rational side of human nature.

When the bubble was inflating, judgment and decisions about risk, reward, and the evaluation of success had become systematically compromised.

The excitement of gains erased the anxiety about potential consequences, producing herd effect, and competitive arousal.
Plus, any anxiety about the risks of financial collapse and legal consequences was quelled by the "diffusion of responsibility", as people were comforted by the fact that "everyone else is doing it", so "it's safe being a scoundrel when everyone else is a scoundrel">

When the bubble started deflating the same psychological forces started acting in the opposite direction.
Anxiety and panic broke out leading to the 21st-century version of bank runs, far worse than a 20th-century version of bank runs since the whole system was far more global and interconnected, which lead to a domino-effect collapse.

And in the aftermath of the crisis, the emotional pain and social status loss that is involved in accepting and admitting responsibility stand in the way of learning our lessons.

Disrupt You! Summary & Review

Lucio Buffalmano · 28 December 2017 · Archived copy · Original

Disrupt You! by Jay Samit teaches readers how to lead disruptions and how to *think like successful entrepreneurs.* It explains what disruptions are, how you can use them, and how you can create them. But, first and foremost, how you can disrupt yourself.

Contents

- Disrupt You: Take Aways
- CONS
- Review

Bullet Summary

- Disruptions create a new market and business model
- One disruption spawns a wave of disruptions as it propagates to different markets
- You can profit without inventing by applying a disruption to new markets or creating ancillary services/products
- Other people's money is the best funding. To tap it creates an opportunity for others with your product

Full Summary

Jay Samit calls disruption the intense introspective process of questioning his assumption about himself and his goals.

With self-disruption, he realized he could accomplish what he before thought impossible. And he realized two things:

- If he can express problems as a series of challenges he can build a team to meet those challenges
- Businesses don't sell products; They sell solutions.

Jay Samit says that the mentality of disruptors is that of seeing obstacles as opportunities (check also *The Obstacle is The Way*). disruptors constantly reinvent themselves and their careers and are never afraid of losing their jobs because they create jobs.

To become a disruptor you don't an MBA or an engineering degree. You simply need to think like a disruptor.

Disrupt You! is Samit's way of teaching us how they do it.

Chapter 1: In Defense of Disruption

Jay Samit says that disruption almost always happens because of technological change, but the impact of disruptions goes far beyond the technology industries.

The author talks about the laserdisc in which he had invested feeling safe it would be the next revolution. It failed instead. And he learned that it failed because it tried to compete with the old technology, the VCR.
But for disruption to happen, it must create a new market and transform the existing business model.

Samit refused to give up and learned that failing is trying something that doesn't work while failure is throwing in the towel. And he refused to be a failure.

The author says that big disruptions often set out a chain of disruptions.

For example, cloud computing, wearable technology, 3-D printing, etc are providing the chance of making a fortune with hundreds of related applications of the new tech.

Sometimes in the simplest way.
For example, while the entrepreneurs were busy coming up with complex computer systems in the '90s, Samit's friend Billy made a fortune selling mouse pads and plastic floppy disc containers.

With a big disruption underway, you should apply your unique experience and viewpoint to look for opportunities in parts of the market that others have overlooked.

With his own company, Samit looked at how personal computers were disrupting non-technology-related business.

Since he came from advertising, he applied his own point of view to sell the first CD-ROM with stock photos in it. The stock photo companies hadn't realized the big opportunity that lay on the CD-ROM.

In a period of endless disruptions, says Samit, the secret to thriving as a disruptor is this: Use existing technology to disrupt a different business.
A wealthy disruptor then is the one who captures the value which is released by disruption.

The chapter ends by saying that your corporate job isn't really secure. And it's not security that robs ambition, it's the illusion of security that robs ambition (something Seth Godin also talks about in linchpin)

> **The world is a process of our thinking. It cannot be changed without changing our thinking**

Chapter 2: Become a Disruptor

Jay Samit says that being a disruptor is a state of mind.

It's looking at opportunities in the obstacles you face, to respond to setbacks as if they were new beginnings and, he says, it's being the silver-lining business.

The author says that every person who has transformed a business started with a personal problem and then took note of how many others shared the same problem.

Examples:

- Branson started Virgin when he noticed how many stranded people were at the airport and he chartered a plane.
- The girl who started the dresses for rent noticed how many girls shared her problem of wanting a top designer dress but couldn't afford to buy it.
- The man who started an online university noticed how many students were drowning in debt.

All these people shared a disruptor mindset.

Instead of waiting for someone else to solve the problem or to suffer in silence, they jumped in headfirst. Massive problem equals massive opportunity.

THE ART OF SELF-DISRUPTION

Jay Samit quotes the Buddha when he says that "the mind is everything. What you think, you become".

He says you must remove all definitions of self, internal or external, that limit your progress.
Self-disruption is like undergoing surgery, but you are the one self-operating.
It's not a comfortable process and it requires getting out of your comfort zone.

The author uses the same value chain links used to describe businesses to describe our own personas:

- R&D: takes input from the environment and sees them as obstacles or opportunities. Annihilate all beliefs holding you back.
- Design & Production: our actions in response to our perceptions. Avoid baby steps, train to see the big picture, and go from the solution to where you stand now
- Marketing & Sales: do something you never thought you could do, that'll change your perception of what's achievable
- Distribution: how we spend our time and direct our focus, think of how you can become more effective and do more of what you love and moves you towards your goals

Jay Samit focuses a lot on the beliefs we hold and how they influence us.
He mentions the Matthew Effect, Children who are told they are smart to do better (my note: watch out here, it's better to tell children they work hard, read *Mindset* by Carol Dweck).

Basically, you get what you believe you deserve.

The author also recommends visualizing and I recommend you get the book for his own personalized suggestions.

Chapter 3: The Disruptor's Map

Samit stresses the importance of having a map and a plan.

Think about what you want to achieve, both in your career and outside your career.

What do you want to achieve and experience?

Work-life balance is about choosing what's important in your personal life and career and then placing them on your map according to importance.

Planning is bringing the future into the present so that you can start working on it.

The author stresses the importance of mentors, invaluable and often crucial to disruptors' success.
He says they are easy to find, just read the blogs in your industry and you'll quickly find the luminaries you aspire to emulate.

Last but not least, Samit urges us to get going.
Time waits for no one and the number one regret of dying patients is they wish they lived according to their true self instead of following the expectations of others.

> **Failing to plan is planning to fail**

Chapter 4: Building a Brand of One

Jay Samit talks here about personal branding.

He says for a long time he believed his work should speak for itself, but he realized that's not true.
Our personal brand often speaks for us before we even have the opportunity to open our mouths or show our work.

A few great ideas to grow your personal branding:

- Public speaking: many conferences are desperate to find speakers, and the more niche your topic the less competition
- Certifications: especially from big brands so you can put their logo on your business card or CV
- Big brand endorsing: big publishers need people to write for them, and your story on the Huffington Post makes you a columnist

- Guerrilla marketing: having stars use your product

Particularly interesting were also the techniques Jay Samit describes for getting a dream job, such as buying ad word impressions for executives who are very likely to Google themselves.

Chapter 5: Disruptors at Work, the Value of Intrapreneurship

Jay Samit says that big companies are too busy fighting other big companies to often pay attention to future disruptors.

My note:
In some cases, this is because, as Peter Diamandis explains in *bold*, new technologies develop at a logarithmic scale, meaning they develop without challenging the status quo for a while, but when they start disrupting they do so abruptly.

The author says that big organizations are built for efficiency, not innovation. Management is rewarded for achieving more of what's already proved to be successful, and trying new paths is often a career suicide.
Also, any initiative that could cannibalize or kill the existing revenue generators faces strong internal headwinds.

Basically, the whole culture is strongly biased towards safe and short term -which ends up being nonsafe in the long term-.

So big organizations prefer to overpay for a new promising startup than do the internal investment required to do the disruptions themselves.
And this is all great news for the disruptors.

Most Silicon Valley millionaires indeed didn't become millionaires by building profitable businesses, but by selling to bigger and established companies.

Disrupting From Within

However, Jay Samit still managed to disrupt from within during his stints at Sony, EMI, and Warner.

He says the trick is to get what you want by giving the company what they think they want.

And of course, never complain that the current management doesn't understand you, it's always up to you to communicate to them in a way they will get it, which is by presenting the new idea as if it were an old one.

This is something *the power of habit* explains well: always pitch your novelty through familiar lenses.

And when he received a NO to his project, Samit understood another huge lesson: you can do whatever you want in life as long as you can find someone who is willing to pay for it.

I invite you to read the book where Samit shows exactly how he's done it.

Chapter 6: In Search of the Zombie Idea

Jay Samit says that every time you get a great idea, your task is to find a way to kill that idea.

Do it yourself and early, or the marketplace will find it and you will waste time and money.

The faster you can kill bad ideas, the quicker you can pivot to a successful one. Speed to fail should be every entrepreneur's motto, says Samit.

And when you can find a big idea that can't be killed -what he calls a Zombie Idea-, then go ahead with it.

The Big Idea

Jay Samit says that the "Eureka" moment of the big idea is a myth.

Big ideas are actually easy, but they don't come from moments of brilliance, they come from careful and methodical observation.

He says you have to look at the existing value chain that is most easily upended. Look for the link that will shift the most dollars away from the present setup.

Uber for example disrupts one link of the taxi chain: distribution. And it shifts the money from thousands of small cab companies to one centralized software.
The next step is to capture as much of that unlocked value in the shortest possible time.

The author encourages his students to look at their lives and write down every problem they encounter and every possibility of disruption.

The Stealing Ideas Myth

Jay Samit says that the common misconception of keeping your great idea under cover or else someone will steal it is baloney.

If your idea is original, people will say it won't work. If it's not original, people will say there's already X and Y company doing it so why should they invest in it?

Also falling in love with your great idea is silly, your goal is to kill it and attack it until what's left is a Zombie Idea.

> **Nobody is going to steal your stupid idea**

Chapter 7: Pivoting Your Energies

Jay Samit says that pivoting is a skill and a difficult decision.

But if it has to be done, get rid of your silly emotional attachment to your original idea and change course.
Staying the course too long because changing is a tacit admission you were wrong is a common mistake.

A great way to decide when the time has come is through data.
Data has no ego and makes an excellent copilot, the author says. It may disappoint, but it never lies.

So invite it any time you can.

Chapter 8: Unlocking the Value Chain

Chapter 8 deals with the potential of identifying links that are costing you too much and that can be safely discarded.

For example, Cirque du Soleil got rid of the animals which were the most expensive link, and focused on the most profitable and value-adding parts of the show.

Chapter 9: R&D – Unlocking the Value of Waste

Jay Samit says there are billions and billions worth of research in universities that could yield to huge new disruptions.

And major disruptions are under way only looking for new uses. You only need to look.

And if you don't know where to start, you can crowdsource the development of your invention.
A website like Quirky is such an example of bringing the product to market via crowdsourcing.

Chapter 11: Production – Reuse, Repurpose, Re-create

Jay Samit stresses again that for an innovation to be successful it must not just create value, but capture it -unless world improvement is your goal, then you have Wikipedia and Craiglist that only displace industries without capturing the value-.

With his company, called Jasmine Samit, he was making money only when he was hired to produce courses.
He was like the old scribes before Gutenberg invented the movable printing press.

Then he contacted his big customer brands and proposed to sell their courses to other brands with their logo in it and he'd give them a revenue share. Now Samit was making money even while sleeping.

He talks about the revolution 3D printing will unleash and how the copyright laws will be easily circumvented again by everyone who wants to.

Those who will cling to the status quo will lose. Those who recognize the inevitability of such changes stand to benefit the most.

Chapter 12: Marketing & Sales

Differentiation and disruption in the sales model can be as revolutionary and disruptive as the product itself, says Samit.

The challenge is not in coming up with a new and creative marketing campaign, but rather in developing completely new sales strategies, channels, and business models.
Differentiation of the sales model can be as powerful as the differentiation of the product itself.

I invite you to read the book for further examples.

Chapter 13: Distribution – Unattained Value

Physical dollars have been replaced by digital dimes in many industries, and yet several companies have figured out a successful model allowing them to capture the greatest value.

They did it through distribution while disrupting the producers' ability to maintain profit margins.
Distribution, Samit says, seems to be the higher value link in the digital age.

Amazon, eBay, and iTunes squeezed the producers' profits and amassed a fortune for themselves.
And a new generation of entrepreneurs is connecting the world without ever having to create any content themselves.

Chapter 14: Capital Revisited – Other People's Money

I love Samit's take on Other People's Money (OTM).

Venture capital and borrowing can be great ways of expanding your startup, but whenever you can OTM beats them all.
To use OTM you need to create opportunities for those who have more capital than ideas and entrepreneurial wherewithal. It's your chance to monetize your creativity and go-getter attitude.

In a nutshell, the secret to use OPM is to find someone else's problem and make your product their solution.

The secret to OPM is to find someone else's problem and make your product their solution.

When working for Sony and trying to launch the company's own e-store for music against the much more powerful iTunes, Samit managed to get free partnerships with rock events and McDonald's.

Especially the partnership with McDonald's was not easy and had a crazy twist in the end.

The way Samit solved it is genius and I invite you to read the book for it.

Chapter 15: Disruption in the Era of the Crowd

Samit says that the easiest industries to disrupt are those where inefficiency is your only competition.

An example is the real estate industry, where investing was complex and time-demanding.

Websites and services allowing investors to simply put a small chunk of money in projects of their choice easily disrupt an industry that was so inefficient at its core.

Chapter 16: Disrupt the World

The last chapter is about the disruptive process and attitude applied not just to industries but to countries and political regimes.

The examples Samit uses are the Arab Spring and the Syrian revolt again Assad, albeit I'm not too sure that applies well seeing the results in hindsight.

Jay Samit makes a last great example with bottle recycling though. He says passing the bill to recycle used plastic bottles seemed so very difficult because of entrenched benefits.

But when the bill gave potential new profits to the local bottlers, it became immediately easier and embraced by everyone in the industry. The message is that to solve a dysfunctional political systems a business approach may be needed.

My note:
On top of a business approach, it's a human approach is needed. The example was, after all, a simple application of the social exchange framework.

Epilogue: The Self-Disruptor's Manifesto

Jay Samit reminds us that to change the world we first have to start with ourselves.

And once we do that our future and the world's future are far more malleable and we realize.

Photo by jdlasica

Disrupt You: Take Aways

Disrupt Yourself
Before changing the world, seek to disrupt yourself first.

Use Data
Use data whenever possible to decide. Data doesn't have an ego and doesn't lie.

Use OPM
Whenever possible, position your product as a solution to someone else's problem so that they will invest or help you out by working together.

CONS

Disruption Mindset
Not technically a con, but just a reminder. Peter Thiel in *Zero to One* says that the "disrupt" mentality can be dangerous.

If you take it to mean "we will destroy X industry" it will pitch you *against* people and big companies instead of giving you a mentality of *adding* value to people.

Samit never meant to use "disrupt" in an aggressive way, but it's a caveat to keep in mind.

Review

Disrupt You by Jay Samit is possibly the best book I have read so far on entrepreneurial mindset -with examples too!-.

It's packed with insights, clear examples tons of "wow moments" and good step-by-step explanations.
On top of it, an aura of positive, contagious can-do attitudes permeates this little pearl cover to cover.
Absolutely recommended.

Note: I'm honored Jay Samit himself commented on this page and he has 40 pages for free on his website, snag it out before you get the whole book: **http://jaysamit.com/** or:

Thinking Fast and Slow: Summary & Review

Lucio Buffalmano · 29 December 2017 · Archived copy · Original

Thinking Fast and Slow (2011) is a popular psychology book dealing with human cognitive biases, including descriptions, research, and examples. Daniel Kahneman, the author, also seeks to develop a theory of human biases, assigning biases to the "fast" way of thinking, as opposed to the slower and more rational way of thinking.

Contents

- Overview

- Review

Overview

- We are less rational than we think
- Intuitive heuristics are simpler rules we use when faced with a complex reality
- Only when intuitive heuristics are not enough we engage our slower, rational brain

Notes

About The Author:
Daniel Kahneman is a psychology professor and researcher, a Nobel laureate, and widely recognized as a leading researcher and expert on human psychology.
Kahneman collaborated with Amos Tversky for a long time in pioneering research on human cognitive biases and heuristics
In the book "*The Undoing Project,*" Michael Lewis tells the story of the friendship and rivalry between Kahneman and Tversky.

Introduction

Daniel Kahneman says economics was blind for many years to the fact that humans are far from rational.

Today, the idea that our mind is susceptible to systematic bias mistakes is generally accepted, and, in good part, it's thanks to the work of Kahneman and Tversky.

Part I: Two Systems

Kahneman describes two different modes of thinking we deploy, which he calls System 1 and System 2.

System 1 is our default system. System 2 is only called upon when system 1 doesn't have a ready and quick answer

and an “escalation” is needed.

System 2 also monitors System 1 to ensure that any suggestions and default decisions are correct, and it suppresses the ones that aren’t. But more likely than not, system 2 will go along with what System 1 dictates. Kahneman says “laziness is built deep into our system”.
Also, self-control shrinks when our brain is fatigued.

System 1: Fast

System one is fast and automated, it needs no voluntary control. It operates on simple heuristics that kick in automatically for the simplest actions and behavior. System one takes care of things like:

- 1+1
- Understand an angry face
- Drive (after you’ve been driving for a long time)

Some complex or more difficult tasks, such as the example of driving, can be “burned” into the system after adequate and long enough training and repetition.
The insightful part of the book is that system one, the nonrational part of our brain is much more influential than most of us would want to believe.

System 2: Slow

System two is the slower, rational part of our brain, the one that uses focus and concentration looks at different variables, and makes pondered decisions.

We use system two when for example:

- Fill out a complex form
- Decide between two job offers
- Walk faster than we are used to

Some Heuristics Daniel Kahneman introduces are:

- **Priming**

Conscious or subconscious exposure to a particular topic primes one to think in the direction of that topic.

Studies proved that people reading about older people walked slower and people who were asked to move more slowly more quickly recognized words related to old age. And it’s true that our body and movement influence our mood (emotion is created by motion says Tony Robbins).

2019 Update:
Priming has been largely criticized and, possibly, debunked. Read the criticism section for more.

- **Cognitive Ease**

Things that are easier or more familiar seem more true.

Similarly, if a statement is linked to other beliefs or preferences you hold, it will also seem truer.

Repeating something over and over then does work in making it sound truer (check Trump leveraging cognitive ease during his first and second debates).

- **Coherent Stories**

We always try to make the world and the events fit into stories that make sense to us.

- **Confirmation Bias**

We look for evidence of what we believe is true and discard evidence proving the contrary (this is why for a long time scientists refused to believe the brain is malleable).

- **Halo Effect**

When we like someone we tend to fill in the dots of traits we haven't even seen yet with positive characteristics.
And the inverse is true.
That's why first impressions are very important.

- **Substitution**

When faced with complex questions we often substitute it with an easier one instead and answer that one.

Part II: Heuristics and Biases

System 1 doesn't like doubt.

As we've seen for the confirmation bias, it's System 1 that especially takes care of fitting exceptions and ambiguity in a way that fit our stories.

System 2 is our inner skeptic.
It can handle doubt and can maintain opposing thoughts at the same time. But doubt is more taxing for the brain and sometimes System 2 just doesn't intervene at all.

- **Law of Small Number**

We often lend high credibility to the result of small samples.
It's a mistake because small samples are likely to lead to imprecise outcomes and are not statistically relevant.

- **Confidence Over Doubt**

We tend to make connections and attribute causality when there are actually no connections.
Sometimes it's pure chance or luck and there's no law or design behind the events.

- **Anchoring**

Anchoring (Tversky & Kahneman, 1974) is the tendency to change our own beliefs and guesses based on the number we've previously heard.
This is also sometimes used in negotiation as explained by Cialdini.

- **Availability Heuristic**

We tend to overestimate the odds of something happening when it's easier for us to retrieve that information.
So being exposed to news about terror attacks, we tend to overestimate the likelihood of them happening.

- **Rare Events Overestimation**

We overestimate the chances of rare events happening and we assign them too big a weight in our decision making.
Also read *The Black Swan*.

- **Representativeness**

We judge something we don't know based on how familiar it is to something else we know.

For example, baseball scouts used to recruit new talents based on how closely they resembled previous successful players and the league improved when statistics instead started becoming common use.

- **Conjunction Fallacy**

We are more likely to believe a person has more than one characteristic based on plausibility than having a single characteristic, which is obviously statistically more likely.

For example, students rated as more likely that Linda is a feminist teller than her just being a teller.
It's because system 1 overlooks logic in favor of plausibility and system 2 just doesn't always intervene.

- **Underestimating Statistics**

When we only have statistics we usually make accurate predictions, but if we have statistics and plausible stories, we favor stories over data.
So we tend to generalize from single stories and events rather than going from the general to the specific.

Also, read "*How to Lie With Statistics*".

- **Overlooking Luck and Chance**

We assign stories and explanations to events that are just random.

If we yell at a bad performance, we think it's our yelling that "sets them straight", but it's just the natural regression to the mean.
But yelling is not the best way to teach. It was bad luck the student had a poor performance and it was simply likely he would do better the next time out.

- **Intuitive Predictions**

Sometimes we just "feel right" and trust our intuition.

That's usually overconfidence bred from System 1, which has a tendency to predict events and extreme occurrences from flimsy evidence.

Part III: Overconfidence

- **Narrative Fallacy**

We look at the past and create false narrative stories that make sense to us, but that do not necessarily -and often do not- adhere to reality. And we tend to underestimate chance and luck.

- **Hindsight Illusion**

Our intuitions feel much more true after the event has actually happened.

So we get the famous "I knew it" or the worst "I told you so" when nobody actually told us anything.
We are prone to giving too little credit to good decisions because in hindsight they seemed obvious. And we overestimate bad decisions as they also seem like obvious blunders in hindsight.

And that's why Ray Dalio suggests to judge the swing more than the shot.

- **Illusion of Validity**:

Sometimes we feel confident about our judgment because we base our judgment on the coherence of what we have and the cognitive ease we experience in processing it.

Of course, we often discard to check other data and neglect to consider data running against our beliefs.
Intuition exists, but it's more an immediate pattern recognition based on high experience or highly emotional events.

- **The Planning Fallacy**

We have a strong tendency to plan with the best-case scenario in mind and we often fail to take into account worst-case scenarios and likely issues we'll face.

- **Optimistic Bias**

We tend to overestimate our capabilities and believe the final result lies fully in our hands.

We discount the element of luck and the uncertainty of our environment. This is accentuated by human nature: confident leaders make us feel more certain and we turn to them.

Part IV: Choices

Daniel Kahneman introduces this part of Prospect Theory, the theory that granted him a Nobel prize.

I invite you to read the book for more because it's very interesting.
But basically, the theory debunked the aspects that viewed humans as being rational and mathematical when approaching money and risk (Expected Utility Theory).

For a quick summary:

1. The value of money is subjective to how much one already has
2. Changes in wealth are subjective to how much it previously changed
3. Losses command a much bigger real estate in our brain

For more on behavioral psychology see Misbehaving by Richard Thaler.

- **Loss Aversion**

We dislike losing more than we like winning

Edit: Not true on loss aversion
And subsequent research showed that gain frames can work better, depending on context. See more in the *Routledge Handbook of Persuasion*

- **Theory Blindness**

Once you accept a theory you tend to use it as a filter to see the reality.

But you only see evidence supporting the theory and tend to exclude and omit anything else running against that theory.

- **Endowment Effect**

We overestimate the value of an object we like and use.
We invest it with emotional attachment and we hate to lose it.

- **Possibility Effect**

We tend to overestimate the possibility of highly unlikely positive outcomes.
Think of lottery tickets.

- **Certainty Effect**

We underestimate the likelihood of highly likely scenarios

- **Expectation Principle**

The Possibility and Certainty Effect together explains how people don't make decisions based on the weighted value of the outcomes, but more on the psychological feeling that winning and losing gives us.

This means:

1. We are scared large likely gains might not happen and will accept much smaller but sure gains
2. We overestimate very small chances of winning huge. And we buy lottery tickets.
3. We buy insurance -and often overpay for it- because it buys us peace of mind
4. Faced with high chances of making things worse, but a small chance of improving we'll take the gamble because it gives us hope.

And that's why gamblers keep on losing till they have nothing left (or until they can borrow more to lose).

- **Disposition Effect**

We prefer selling stocks we are making money with than the ones we are losing with.
Selling losers is an admission of failure and selling winners makes us feel smart.

- **Sunk Cost Fallacy**

To avoid the bad feeling of cutting losses and admitting failure we stay too long in negative scenarios, be it losing trades or abusive relationships.

- **Framing**

How we verbalize the same scenario will lead to different choices.
Doctors are more likely to operate with a 90% survival rate than with a 10% mortality rate.

Part V: Two Selves

Daniel Kahneman says we have two selves: one who experiences and the other who remembers.

Once the event is over, the one who remembers is the one in control.

And if we had an amazing holiday but on the last day had a negative experience, we are likely to remember the holiday as not really positive.

Kahneman also notices that people are really bad at assessing their global well-being -they answer how happy they are right now- and what will make them happy in the future.

- **Ending Fallacy**

How an experience ends takes a disproportionately bigger role in how you remember that experience.
Also see Pre-Suasion by Cialdini.

- **Duration Neglect**

How long we experienced the positive or negative experience matters little for our memory.
The peak of the experience and the ending are the most important

- **Focusing Illusion**

The most essential thing in our life… This is what we are focusing on at that exact moment.

And when we are asked to rate how happy something or someone makes us we are likely to focus mostly on one aspect.
And we tend to focus on positive traits disregarding how often we actually experience those traits.

Criticism

First of all, from a self-development point of view, I warn you of the potential for mental disempowerment if you go to the extreme of the "human irrationality" bias.

And I recommend two articles here:

- **Law of optimum balance**, such that your own empowerment starts from accepting your (mental) limitations, without going to the extreme and thinking of yourself as totally irrational. Indeed, you grow more limitless as you accept your cognitive biases, while also finding ways around them
- **Naive self-help**, especially the section on "naive disempowerment"

From a more academic point of view, *Thinking Fast and Slow* has been heavily criticized for lending support to the priming research literature which has specularly failed to replicate.

Kahneman originally demanded more clarity and continued to profess optimism that priming research would be confirmed (note: there was a link to Kahnemann's response that has been then taken down).

But later in 2017 he eventually admitted that the criticism of chapter 4 of "Thinking Fast and Slow" is legit.

He said:

> I placed too much faith in underpowered studies
> (…)
> However, I now understand that my reasoning was flawed
> (…)
> Unanimity of underpowered studies provides compelling evidence for the existence of a severe file-drawer problem.

You can read more here:

- Pop psychology myths: the full list

More Irrational Than We Really Are

One of the issues with Kahneman's work is the endless list of biases that sometimes frame humans as "irrational".

At the extreme, that becomes "hopeless irrational".

But in truth, **those heuristics work more often than not**.
Or, at least, they often work "reliably enough" to keep us alive and well-functioning.

Says Jordan Peterson:

> That doesn't mean that the heuristics themselves are deeply flawed. That's the problem with the work of Kahneman ant Tversky, they take perfectly valid heuristics (and look for specific and rare situations in which they fail).

Real-Life Applications

- **Trust Yourself… A Bit Less**

All the heuristics in Thinking Fast and Slow have a common thread: we are not rational decision-makers.

And often our decision does not serve our best interests or the interests of the people around us.

This allows us to make huge improvements in our life if we only learn where we fall short.
As an example applied to human interactions, check 7 dating mistakes women do.

- **We Prefer Stories**

When given the choice between listening to data or stories… We choose plausible stories.
So choose plausible stories when you need to influence people.

CONS

Lack of Common Thread
Well, the thread of Thinking Fast and Slow seems to be that of "we are less rational than we think we are", but it seems at times a list/collection of heuristics.

Review

Thinking Fast and Slow is a classic of cognitive psychology and a good book to understand an important aspect of human cognition.

I'd have personally preferred if it had dedicated less space to each cognitive bias, or at least if it provided a more encompassing evolutionary framework.

That said, I'm grateful to Daniel Kahneman. He is one of the main forces behind behavioral economics -on which I based my master thesis-.

For more on general psychology, see:

Best psychology books of all time.

Bullet Summary

- A trend becomes a snowball depending on the type of people sharing it, the stickiness of the product, and the overall context
- The people spreading a trend are well-connected, love helping others, or are good at selling
- The overall context or historical period must help the trend spread

Summary

About The Author:
Malcolm Gladwell is a journalist for The New Yorker, a public speaker, and the author of several pop psychology books.
Among his other bestsellers are: Blink, Outliers, David and Goliath.

Introduction

The Tipping Point starts as most captivating stories begin: with an open loop.

Gladwell introduces the seemingly inexplicable rebirth of a brand that seemed on the verge of disappearing: Hush Puppies.
In the 1990s the Hush Puppies shoes went from being popular in the Soho district of NY among the hipsters to spreading to the whole country.

How did that happen?

Gladwell will explain how that happens in the course of the book.

Chapter 1: The Three Rules of Epidemics

Gladwell says that most social trends spread following the same rules.

Whether it's the spread of a disease like syphilis or the Hush Puppies shoes, they all have a moment the author calls a "tipping point" that unifies many isolated enclaves into a unified trend.

For Gladwell, the factors that make a trend reach the tipping point are three:

1. Law of the Few
2. Stickiness Factor
3. Power of Context

Chapter 2: The Law of the Few

Gladwell notes that a few "super infectors" are responsible for most of the spread of the virus.

These super infectors spread the virus to dozens or hundreds of other people.

These are what Gladwell calls the "connectors", part of the three major types of individuals that help a trend reach a tipping point:

- **Connectors**

Connectors are people who know everyone and who help spread the word -or the virus- on a bigger scale.
They often have varied interests spanning different realms, so they also help bring the trend to different industries and different personalities.

- **Mavens**

Mavens instead of knowing *everyone* seem to know *everything*.

They read more than the average person and love to gather information, and they love using that information to help other people.

Mavens are enthusiastic about introducing new ideas and concepts, and their passion is contagious and helps spread the trend with natural charm.

- **Salespeople**

Salespeople are able to influence others in changing their behavior or directing their buying decisions.

Salespeople have great *interpersonal skills* and use the *power of body language* (check *The Definitive Book of Body Language*).

Gladwell also goes into how salespeople influence conversations.
He says that everyone has a different speaking rhythm, such as the words per minute or the moments he pauses or speaks.

When two people meet, they will have to reach a common ground.
But the one who draws the other into his own rhythm will be most powerful, and influential and dictates the terms of the interaction.

Chapter 3: The Stickiness Factor

Gladwell calls the "stickiness factor" a special quality or trait that "sticks" easily in people's minds.

There's a way to package your information or product that, under the right circumstances, will make it irresistible.

Gladwell doesn't provide a clear way to make your product or message sticky.
But in that regard, I recommend you check *Contagious* and *Made to Stick*.

Chapter 4: The Power of Context (Part One)

The power of context refers to the bigger environment around the product or trend itself.

The environment can stifle or give impetus to the budding trend.

Malcolm Gladwell uses the example of the welcome and yet the strange and unexpected sudden decline of crime rates in New York in the 1990s.

He says there were a few small but influential changes that helped by changing the context and he introduces the Broken Windows theory.

The authorities in New York, for example, focused on ridding the subway system of graffiti and cracking down on subway fare dodgers.

My Note:
The Broken Windows Effect has received much criticism.
Read the National Bureau of Economic Research article on what helped make NY safer besides the contextual efforts.
As a heads up, the paper says that the police measure that most consistently reduces crime is the arrest rate of those involved in crime.

Chapter 5: The Power of Context (Part Two)

Albeit major trends reach big numbers spanning different demographics often it's one specific demographic that fuels that expansion.

This concept reminded me of the 1.000 screaming fans Tim Ferris talks about and the Diffusion Curve that *Start With WHY* also mentions.

The author also talks about group properties as related to the size of the groups.
Up to 150 people the group members can get to know each other and that allows for strong interpersonal relationships to blossom.
That intimacy effect and the efficiency that ensues are usually lost in groups of more than 150 members.

Chapter 6: Case Study

In chapter 6 of Tipping Point Gladwell introduces the case study of the Airwalk shoes.

Airwalk's initial consumers were skaters, but the brand wanted to expand beyond.

How to sell to people who never skated in their lives?

The ad agency targeted many typical emblems of "coolness" spanning from gang culture to hipster fashionistas

To manage to appeal both to the masses and the more selective hip fashion movers, the company selected models for boutique stores and mass-produced models for department stores.

Chapter 7: Case Study – Suicide, Smoking

Malcolm Gladwell addresses the potential rise of disturbing trends.

For example, we sometimes witness sudden increases among teenagers in mass shootings, cigarette smoking, or suicides.

He says teenagers are most likely, perhaps genetically predisposed, to imitate others and “try new things”.
And those who champion those “new things” are also most likely to become the easily romanticized cool guys the teenagers want to imitate.

I particularly liked how the author differentiates “benign experiments” from abuse and suggests not to become hysterical at a teenager trying cigarettes or a drug for example.

Chapter 8: Conclusion

In the last chapter, Gladwell brings a few more examples of how some movements or brands used the tipping point rules he listed.

Lexus, for example, spent an inordinate amount of money pampering its customers when it had to recall a few autos.

Why did they invest so much?

Because the very first buyers were more likely mavens, people who care about cars and talk about cars.
Those are the guys who would influence all the rest.

Practical Applications

- **Conversation Rhythm & Social Power Moves**

A website like The Power Moves had to pick up on the little hidden social gem and power cue of the book.
People have different speaking patterns such as speech rates and pauses. When they meet, the one who has the other adapt to his pattern is usually the one with the upper hand.

- **Use Mavens and Connectors**

When you spread your idea or product try to get mavens and connectors first to love it and they will help you spread it further.

CONS

Overall, there has been much criticism of the concept espoused by Gladwell in *“The Tipping Point”.*

For example, Andy Sernovitz, author of a book on *word-of-mouth marketing,* says it’s plain average and normal

people who drive word of mouth and not particularly “thought leaders”.

Indeed, among the major drawbacks for me is this one:

- **Lots of Stories but Light Evidence**

The stories all sound interesting and plausible, but there is no strong data here.

Kahneman in *Thinking Fast and Slow* explains how plausible stories are often a smokescreen to reality.

Indeed, I found the evidence behind those stories lacking.

- **Simplistic Recipes End Up Being Tautological**

Gladwell often explains the success of this or that campaign for “targeting mavens and cool people”.

But that explains nothing and is no proof of anything.

Furthermore, that’s exactly what *every* brand is trying to do. Why that one was specifically successful? Could it be it was just chance? Those were the questions I was left with.

Also read: Fooled by Randomness.

Review

The Tipping Point is an interesting and easy read.
And albeit the concept of “tipping points” is valid and a relatively common dynamic in natural and human phenomena, Gladwell still does not provide a holistic view of the phenomenon.
So I would still warn readers to be careful in over-generalizing or over-extrapolating its concepts.

Ultimately, Gladwell writes books that are designed to be pleasant and interesting to read, and not to provide readers with the best possible information, or to equip them with the best possible tools to affect any real-world change.

Once you keep that in mind, *The Tipping Point* is a well-written book with lots of wisdom to offer.

Hillary Clinton Personality Analysis (& Why She Lost)

Lucio Buffalmano · 31 December 2017 · Archived copy · Original

There are many theories as to why Hillary Clinton lost the election.

As a website on social dynamics, I will focus on Hillary Clinton's personality and the social aspects of her campaign.

Overall, one aspect shines: few people truly liked Hillary Clinton.

But why?

That's what we will find out here.

TPM Note:
This article provides an opinionated analysis of Hillary Clinton's campaign and public perception, focusing on social dynamics, voter psychology, and media framing. The points below reflect the author's interpretations and are intended to explore lessons in authenticity, perception, and strategy — not to make factual claims about her character.

Contents

- #1. Hillary Clinton Seemed Fake
- #2. Many Felt She was Amoral
- #3. Clinton Seemed 'Politician Sneaky'
- #4. Hillary Clinton Lost Femininity

- Where She Got It All Wrong
  - Likable Trap
  - Aggressive Trap
  - Clinton Before Big-Time Politics

#1. Hillary Clinton Seemed Fake

Hillary Clinton didn't come across as honest and genuine during her campaign.

It feels like she always tried to be and say what gave her the most vote, never who she truly was.

Clinton Fake Smile

This is particularly clear in her smiles, which never seemed genuine and have already been scrutinized several times by body language experts (here is an example).

Why It Mattered

We like genuine and honest people, and we dislike fake ones.

We cannot trust and rely on fake people.
If they praise us or say anything positive today, we feel they only say it because it's good for themselves.

But if tomorrow's stabbing us in the back will pay off, then they'll stab us in the back.

The most popular word to describe Hillary Clinton was indeed *liar*, which is closely related to fake.

How To Avoid Being Fake

To avoid being fake, pick a few values you believe in and do not renege on them for anybody.

The more you stick to your values, even when it would be convenient for you to ditch them, the more you gain respect.

It's also helpful if, while you think highly of yourself, you also think less of yourself.
Meaning you focus more on your goals and the people around you instead of how you will come across.
Which, accidentally, makes you come across as more genuine.

#2. Many Felt She was Amoral

By "amoral," I mean it literally.

Hillary Clinton rarely showed any hint of a strong set of morals and values she believed in.

Trump ran against the politician's clique.
Obama campaigned for change.

But Hillary?
Why was she running?

It felt like she didn't have a big enough why, a reason underpinning her candidacy that was about the American people.

And since she didn't have a strong enough "why", it was easy for people to fill that vacuum with their own criticism: **Clinton's WHY was winning**.

That "winning" was self-referential, of course, it was about her.
In that, she seemed like the typical politician who tries to keep it as safe as possible while at the same time telling you what you want to hear.

This was especially clear with her policies' flip-flopping when pandering to the audience she had in front:

Why It Mattered

Liar, dishonest, and crooked were the top 3 most common words to describe Clinton.

It might not be a coincidence that most religious people, who tend to care more about values, voted largely for Trump (check the source).

Compare it to the grassroots movement Bernie Sanders commanded instead.
Sanders had a large grassroots appeal because it was clear he had strong values and beliefs.
It was clear Sanders wanted to get on top to help those on the bottom.
That's why people were willing to mobilize and campaign for him.

But those without morals who only care about themselves…? We are happy to see them bite the dust.

How To Avoid Being Amoral

Start caring about something and someone besides yourself.
And drop the mentality of "the end justifies the means".

Put among your top values some that are about others and helping others. And then stick and honor them.

Also very useful here is what we mentioned before: shift the focus from yourself to others. Tony Robbins says the best way to be happy is to make others happy.

#3. Clinton Seemed 'Politician Sneaky'

By sneaky I mean trying to avoid direct confrontations and harsh truths or trying to weasel her way out of uncomfortable situations.

As also evident by her reaction after the loss, Hillary rarely took full accountability.

And her refusal to face major issues head-on helped fueled the flame of her "crooked" nickname.

You might disagree with Trump or Sanders, yet you wouldn't call them sneaky, right?
Even though Trump is a master power mover, you still wouldn't call him sneaky (weird people humans, eh? :))

Trump's super successful "crooked" campaign was in good part possible because of Hillary's own sneakiness (take a look here at Trump's Power Moves in the first and second presidential debates).

Hillary indeed was not only unable to attack Trump with the same efficacy but also unable to effectively clear her name.
The shadow of her lazy backroom deals and big corporation entanglement never left.
And very much tainted her.

When confronted with difficult questions, she was always on the defensive and always looked sneaky.

Notice as she replies she gesticulates, looks down, and stutters.

She never addressed the issue convincingly. She changes the topic, but in a rather awkward way that doesn't fool anyone.
And also notice how she walks backward at minute 6:52.

We move backward when we are uncertain and we want to move away from our own stories.

Why It Mattered

Nobody wants a crook as a leader.

Many who didn't want Trump simply couldn't turn up to vote for Hillary. Notice that Trump lied too and he was also faced with big, big scandals.

And yet, like it or not, he never looked as sneaky as Hillary did in confronting them.
Yes, he either denied or blatantly lied sometimes, but he didn't look as sneaky.

How To Avoid Being Sneaky

When you are accused, attack back if you're not guilty or own up to your mistakes.

Address the open issues and you get to write the last word.
More times yes than not you can even look better off when you own up to your mistakes (check *Extreme Ownership*).

And if you try to sneak your way out, you never clear your name or get to write the word end.

This is especially true in an electoral campaign with people full-time busy throwing dirt at you. Your issues will just keep popping up.
And Trump never stopped scoring big points at "crooked Hillary", the shill for big corporations.

For example, she could have said:

> *Well yes, I did give a speech at Goldman Sachs.*
> *And yes, it was very well paid.*

> And we can both guess why they paid me a lot: because they probably wanted reassurance I will not legislate against them.
>
> *And I gave the speeches and I took the money.*
> *And you know why?*
> *Because I am running a very expensive presidential campaign and I need all the money I can get to become president and enact the positive reforms I want.*
>
> *I don't want to punish Wall Street, I will enact the reforms that will bring Wall Street to work for Main Street. Without getting rich on taxpayer's money and without leaving anyone behind.*
>
> *And if to enact my pro-American reforms will take me giving speeches, I am happy to do that.*

A response like that would have addressed the root causes because she would own up to it while at the same time putting a positive spin on it.
Once she owns it, she can't be accused of it anymore.

#4. Hillary Clinton Lost Femininity

Clinton has often been accused of being overly ambitious.

And some people said the only reason she's accused of unbridled ambition is that she's a woman.
And those people are most likely right.

Ambition above a certain limit is a trait people don't always appreciate, but as Sheryl Salzberg notices in *Lean In*, that's all the more true for a woman.

But that's how it is, and you gotta live with reality even when you don't necessarily like that reality, as Ray Dalio recommends.

Blaming Americans for misogyny makes no sense: Hillary needed Americans' vote, not the other way around.
It was Hillary who had to convince them, not the Americans who had to change their mindset for Hillary.
And Hillary Clinton could have done more to seem more likable.

Another masculine trait she embodied a few times and that certainly damaged her is aggression.
Clinton often looked rather ugly with her aggressive bouts towards non-aggressive constituents:

Finger pointing, screaming with voice cracking… As a professional politician, she should know better than that.

Read more:

- How to be a powerful woman and still be feminine

Why It Mattered

Hillary lost big among men, in rural areas, and among those with low education.

Exactly with the ones who are most likely to see -and to prefer- women in a more traditional role.

What We Can Learn

Hillary should have avoided shouting, finger pointing and generally looking like an angry hyena.

At all costs. In those situations, she just looked mean.
We also talked about a bit femininity and how to be powerful *and* feminine at the same time in how to be feminine.

Photo by Gage Skidmore [image]

Where She Got It All Wrong

Hillary is not a monster.

As a matter of fact, I think she would have been far better for the US and for the world as president.

And she's probably not a bad person by any stretch. Her biggest weakness was that she trapped herself in a "need to please" and "need to win".

I feel like she was trapped into a mindset that she needed to be "better", which for her translated into "likable" and "stronger".

She then swung like a pendulum from trying too hard to please -with all her fake smiles- to being strong -with the angry shouting-.

That's also where her nervousness and discomfort came from: it's because she was not being herself, she was acting.

Likable Trap

And of course, in her effort to please, she abandoned her morals and values.

When you try to be someone you're not, you end up being everybody.
And you're always checking if your actions and beliefs are "good enough". And when you're afraid they're not…
Your bulk.

And lie.

And sneak…

… And then, you lose the election.

Aggressive Trap

I feel that once she stepped into big-time politics "stronger" often led Hillary to be more aggressive.

Since that wasn't her natural self, she ended up overcompensating.

Some people say indeed behind the curtains Hillary Clinton is warm and charming.

Keith Ferrazzi says Clinton remembered the name of his kid and asked him how he was doing.
But we've rarely gotten to see the warm and welcoming Hillary during election time.

Clinton Before Big-Time Politics

I base this analysis not only on looking at election-time Clinton but especially by comparing election-time Clinton to old-time Clinton.

If you look at her old interviews, you will notice she was much more natural and came across as more genuine, like in this example.
And more feminine even when discussing serious politics like in this example.
She was more vulnerable and likable, and often even more confident.

That's striking, considering younger Clinton didn't even have a third of the experience election time Clinton had.

I think that if Clinton had managed to bring that younger, more natural self to the election, she would have cleaned it.

Why Men DO NOT Marry Bitches (Book Review)

Lucio Buffalmano · 1 January 2018 · Archived copy · Original

Why Men Marry Bitches is a dating book for women, the sequel to *Why Men Love Bitches*. Sherry Argov, the author, follows the same 'high independence strategy' to dating, which, she suggests, should get these independent women the wedding they (supposedly) want.

TPM Strategic Audit: Argov's work is analyzed here as a female manual on Dating Power Dynamics, including dating strategies, dating leadership, and frame control. For high-value men, this power awareness is essential for vetting quality women and self-defense, so they never end up 'controlled' or manipulated into commitment.
See: TPM literature analysis (what truly works) ↗

Contents

- Takeaways
  - 1. Ask: What's The Advantage of Having a Guy?
  - 2. Don't Chase
  - 3. Delay Sex
  - 4. Maintain Emotional Control
  - 5. Keep Your Money to Assuage Fears
  - 6. Don't Mention "Commitment Needs'
  - 7. Don't Be a Doormat
- Real-Life Applications
- CONS
- PROS
- Review

Takeaways

- A bitch is independent, knows what she wants and what she will not tolerate
- Don't always be available, and don't give him the feeling that he has you. Let him chase
- Don't ask for commitment, focus on being a great woman, and you'll have leverage

1. Ask: What's The Advantage of Having a Guy?

Sherry Argov criticizes what she says is the widespread women's dating advice found in magazines.

The most common attitude, she says, is that of clamoring to be picked, she says, and that turns men off.
The bitch instead turns that attitude on its head and asks "what's the advantage of having this guy around"?

TPM Note: Effective dating means doing *both*. Focusing on both value given and taken
Argov criticism to 'mainstream dating advice' does not apply today.
Anyone who wants a relationship should instead focus on what value *she* brings to the table first, and then ensures also gets value back. Asking what value he adds without ensuring she also adds value is entitlement mentality that drives good prospects away.
See smart cooperation, effective calculativeness, win-win dating

2. Don't Chase

Sherry says that "being upfront" about your commitment makes him run away.

So you better behave, as you like him, but don't want to lock him down.

And, Sherry says, avoid mentioning any biological clock ticking like Sara Tomei did (albeit, I have to say she's quite sexy there):

> **Her**: my biological clock is ticking like this (stomps her foot on the ground)

3. Delay Sex

In regards to sex and physical contact, Sherry seems to espouse the view of sex as a bit of an arm's race.

That means that his goal is to make it happen quickly, and yours is to preserve the possibility of a long-term commitment by delaying sex.

This is common advice in the dating literature for women. Kara King of "*The Power of the Pussy*" for example, recommends "waiting as long as possible" and Steve Harvey in "Act Like a Lady, Think Like a Man" recommends "at least 90 days".
Some other authors only advise having sex after the official relationship

My Note:
I partially agree with this advice, but it's highly contextual. It depends a lot on the environment, the type of man she is dealing with, the type of dating they are having, and the sexual chemistry between the two.
For exceptions also read:

- Why you shouldn't let him wait for sex
- How to slow down sex

> How To Slow Down Sex & Get A Relationship

4. Maintain Emotional Control

Sherry Argov says that men consciously provoke women to get a rise out of them.

They do so to test their women and see where they stand or to seek validation.

And when you let that get to you, he feels validated and in control.

I found this concept deeply insightful, and I invite you to check out the book for the details.

TPM Note: Women test men more than men test women (unless he's a top-1%)
Testing goes both ways, with women probably testing men more than the other way around. This also aligns with evolutionary psychology and dating power dynamics.

5. Keep Your Money to Assuage Fears

Sherry speaks many men's minds when she says:

> some men are afraid of losing big with a divorce.

And that's why, if you're financially independent, you will feel more secure.

And will respect you more.

Sherry has a few more gems regarding financial independence; read them in the book.

6. Don't Mention "Commitment Needs'

Sherry Argov says that staying for a year without mentioning your "commitment needs" will give you leverage.

After one year, he knows you're not easily replaceable.

But if after a year there's still no ring, you can't give an ultimatum. The author suggests you have two conversations.

In the first one, you say you're not happy. If he doesn't give you what you want, cut back on the time you spend with him. The Second one, you say, forces his hand a bit more.

TPM Note: Not a good strategy. Quality women don't waste a whole year

7. Don't Be a Doormat

And in the relationship, avoid being a doormat.

Argov uses the example of Rose in "The Joy Luck Club":

> **Him**: I wanna hear what you want
> **Her**: (keeps proposing more and more options for him to decide)

I dated some women like this.
And yes, sometimes you want them to tell you more and more clearly about what they want. Sometimes, I even got a bit angry and assertively instructed them to think about it and tell me what they preferred.

However, in general, based on my experience and observation, **her submissiveness is rarely a deal breaker for most men**.

What is much more often a deal breaker instead is too much female power and dominance.
Also, read:

- Why do feminine women do better than dominant ones

> Why Submissive Women Beat Strong Women In Dating

Real-Life Applications

Focus On Yourself…
.. And your life and becoming independent. Think about your values, what you accept and don't accept.

Don't Ask For Commitment
Focus on being a great girlfriend instead and he'll be the one to offer commitment. If not, you will have great leverage when you will tell him the relationship is not progressing.

When Men Provoke You…
.. You must keep it cool and either dish it back equally, address it *rationally* (say the word) or take distance. Above all, do not get emotional.

When You Move in..
.. Move to a new house together and not "his" apartment.

CONS

- **Most Men *Actively Avoid* Bitches**

Sherry's bitch is fiercely independent.

Some men prefer a woman they can take care of and provide for though. *Act Like a Lady Think Like a Man* by Steve Harvey is such an example.

Also read: why submissive women have more dating options.

- **1 year without asking for commitment wastes a lot of time and is a high-risk**

The concept of not asking for commitment is great… On paper.

But it's also risky. What if your man is happy without a wedding or stronger commitment?
Because… Many men are.

Then the 1 year conversation can become a bit of a win / lose argument and you should be careful not to make it seem like you're holding the relationship hostage. As Dale Carnegie explains, there are no winners when arguments arise.

- **If you want a marriage, learn from married authors**

We don't know whether the author is married or not. In general, if you want to achieve a certain goal, it's more reassuring to learn from someone who has achieved it already.

PROS

Valid for Too Nice Girls
I don't think it's the majority of women, but there certainly are many women who are way too nice. Why Men Marry Bitches is perfect for them.

Great For Social Skills
Why Men Marry Bitches is a very good book to help people understand social dynamics and improve their social skills.

Good For Power Dynamics
I could see quite a few parallels in the book with this website as many tips and suggestions leverage important psychological triggers. And some which you could classify as "social power moves". And at the very least, they're great to know.

High-quality men marry high-quality women. As simple as that.

Review

Why Men Marry Bitches is an easy read sharing the same DNA as *Why Men Love Bitches*, but slightly more competitive and less genuine.

Whether that's good or bad, is up to you.

The question I'm even more interested in though: is it *effective*?

And I think that it's not the most effective approach to dating -at least for women who prefer getting the highest quality men they can-.
So the correct title would actually be "some men with fewer options marry bitches, while high-value men prefer feminine women".

On the other hand, although I don't necessarily agree with everything, Sherry Argov shares many gems in this book. Especially useful and recommended to women "hunting for the one", women who get clingy too soon, and women who are a bit too nice.

Check the **best dating books for women**.

Made to Stick: Summary & Review (+ Examples)

Lucio Buffalmano · 2 January 2018 · Archived copy · Original

Made To Stick (2007) examines viral advertising campaigns, urban myths, and compelling stories to determine the six traits that make ideas stick in our brains.[image]

Contents

- Bullet Summary
- Made to Stick Summary
  - #1: Simple
  - #2: Unexpected
  - #3: Concrete
  - #4: Credible
  - #5: Emotional
  - 6: Stories
  - Epilogue
- Real-Life Applications
- CONS
- Review

Bullet Summary

- Take the core of your idea and communicate unexpectedly, concretely, credibly, and emotionally
- Avoid raw statistics but humanize them in a way people can relate with
- Don't tell and pitch, hold attention with mystery and show with stories

Made to Stick Summary

About The Authors: Chip and Dan Heath are two brothers, both academic authors, and researchers.

Introduction

Stick means understood, remembered, and with the capacity of making an impact.

The Heath brothers introduce the "curse of knowledge" as the great enemy of your ideas to stick. The person sharing the idea knows all the nuances the receiver has no idea about.

So he often ends up glossing over core information or indulging in too many details.

The authors highlight the principles are not a mathematical formula that will guarantee your ideas will stick, but they are proven methods that will increase the likelihood:

#1: Simple

Simple ideas stick, complicated ones don't. To make your ideas simple:

- Present the core of your idea
- Share it in a short form using the 6 principles (SUCCESS)

The authors suggest you use the inverted pyramid of journalism, such as starting from the most important aspect, then adding important details, and then all the other background information.

I particularly liked the idea of CI or Commander Intent, very useful when you need people to act on your behalf in a big organization.

It's a very short and simple sentence that sums up the overarching goal of the organization and functions as a filter for localized decision-making.

Southwest Airlines' CI is "we are THE low-fare airline". So nobody would think to gift trinkets on board because it's not in line with the CI.
In Bill Clinton's campaign, it was "it's the economy stupid" so that everyone knew what to focus on.

Analogies and metaphors can also help simplify complex issues.

For example, Disney calls the staff in their parks "cast members" as it projects its parks as theaters.
Disney doesn't need to explain why it's important to behave in a certain way to its employees: being a "cast member" reminds everyone they're always on stage.

My Note:
Also, read "corporate manipulations".

#2: Unexpected

Attention is key in making your message stick say the Heath brothers. We need to both get attention and keep it.

As *Thinking Fast and Slow* explains, the rational part of the brain only starts paying attention once something is out of the ordinary.

So the key to getting someone's attention is to break their patterns, or to surprise them (this is something Tony Robbins stresses a lot).

Example

An example of grabbing attention with the unexpected is the buckle-up campaign:

To keep attention the authors introduce Robert Cialdini's "Influence" and how Cialdini used mysteries to keep his students' attention.

Mysteries are so powerful because they create a need for closure. Your goal is to raise questions, open gaps of knowledge with mysteries, and pique curiosity.

The Heath brothers suggest you:

1. Identify your core message
2. Present it in a counter-intuitive way people don't expect
3. Introduce a mystery and explain it with your message

My Note:
In a quest for the unexpected, some advertisers focus too much on grabbing attention in ways that do not relate to the content. You must always grab attention in a way that relates to your content.

> **The 'huh?' moment prepares the scene for the 'a ha!' moment**

#3: Concrete

The easier we can relate to something, the more we understand it and remember it.

Concrete is something the senses can capture and something that we have already experienced.

So similarly to what Jay Samit and Charles Duhigg suggest, the Heath brothers say you must link a new idea to something familiar.
For example, to introduce Speed to Hollywood producers you pitch it as “Die-Hard on a bus” and Alien becomes “Jaws on a spaceship”.

Joseph Sugarman in *Triggers* said a great way to sell the first and unknown smoke detectors was to pitch them as “electronic noses”.

The authors also compare the (in)effectiveness of complicated CEO parlance such as “maximize shareholder values”.
Too often mission statements sound like meaningless hot air nobody cares about.

Compare it instead to what fueled US’ efforts for a decade.
When JFK made the government’s mission to “*land a man on the moon and return him safely to the earth*“.
That’s concrete and clear.

The curse of knowledge comes into full force here.
Experts tend to see things at a higher, more abstract level than novices and the danger is that they will explain it in more abstract terms as well.

And this is one of the reasons why The Power Moves always makes examples and shows videos: to give concrete examples.

Last but not least the Heath brothers say that our memory functions in the form of “hooks”.
The more familiar and concrete hooks our message has, the easier it will be to remember (this is similar to what Johan Berger calls Triggers in *Contagious*. Check it if you’re interested in making your idea viral).

#4: Credible

To make your idea credible the Heath brothers present a few different triggers:

- **Authority**
- **Anti-authority**: people who experienced firsthand the nefarious consequences (ie.: smokers)
- **Details**: the more details we hear, the more real it seems; details are often a proxy for expertise
- **Statistics**: not the raw numbers though, highlight relationships, contextualize them in a way that’s human
- **Sinatra test**: if you’ve already done it in a difficult environment, you’re credible to do it in easier ones
- **Testable experience**: if they experience it first hand they believe it more. This is Reagan asking “are you better off than you were 5 years ago”? Or Wendy providing verifiable facts about their bigger burgers (check below the ads)

A great example to contextualize a statistic.

Imagine you have to explain how accurate is a missile.
You could say it can be shot from the sun and hit within a Km of the target. But to humanize it you would say it goes from New York to LA and hit within 5cm.
The distance has been humanized because people have no idea of the sun-earth distance.

A great way to make your message more credible is to have the audience test it themselves… Without knowing.
For example, a nonprofit picked up potential donors to meet them.
And then told them how successful they were in turning homeless people into honest workers.
One of them was their own driver (surprise).

Example

The authors say that Wendy successfully prodded consumers to experience firsthand -or confirmed first-hand experience from those who tried already- that their burgers had more beef meat.

See here the spot:

#5: Emotional

Emotion is about making people care.

People who care act.
The authors quote Mother Teresa when, paraphrasing, she said:

> People will do for the one what they will not do for the many.

Research shows how people who heard a story about a single child donated more than when they heard about the big numbers related to the same problem.

The reason is that the numbers appeal to our analytical brain while the story appeal to our emotional centers -the same decrease in donation happened if people were asked to perform calculus-.

Interestingly, combining the story with the data did NOT produce better results contrary to what one might think (ie.: "if I used both logic and emotions I'm fully covered").
So it's best to know both and use them depending on your audience or situation, but not to blend them (read more on the topic of how to elicit donations).

The Heath brothers say to call to action you can appeal to:

- **Self Interest** (WIIFM): use "you", and talk benefits to them & not feature. Let them imagine
- **Associations**: link something they care about to your message
- **Identity**: Sometimes we don't pick what's best for us but what's best for the group we belong to. Or based on our "ideal self-image"

The authors debunked the Maslow hierarchy saying people pursue all the benefits simultaneously and not one after the other.
Emotional is actually about getting out of Maslow's basement.

Appealing to pure self-interest with only a money bonus may crowd out higher engagement as people feel "bought out" and ultimately less motivated.

Examples

A couple of emotional ad examples are the anti-cigarette campaign that depicted teenagers delivering body bags to a big corporation.
Teenagers smoke to rebel, but the ad showed "The Man" being the evil corporation.
So now nonsmoking is rebellious (check the ad here)

Texas government found it hard to make people stop littering. So they used identity. They had very Texans icons embodying Texans' virtue telling them not to litter.
Now the people heeded: being a Texan also meant respecting Texas and not littering:

6: Stories

Sticky ideas often use stories with a simple plot that people can relate to.

And that inspires us.
The authors say that a story lit in our brains is the reenactment of that story which “burns it” in our brain (check *The Brain That Changes Itself* for how the brain rewrites itself).

The Heath brothers introduce three different types of stories:

- **Challenge Plot**: the underdog story, overcoming adversity, inspiring grit
- **Connection Plot**: relationships, people overcoming discrimination, and social gaps
- **Creativity Plot**: people moving around obstacles with ingenuity and smarts

Stories also help lower the audience’s guard.
While pitching them your idea often gets people to look for cracks in the idea, a story will get them engaged and think for themselves.

Epilogue

The authors say this is not a checklist that will guarantee your idea will stick, but it will help.

To make an idea stick, it must make the audience:

1. Pay attention (unexpected)
2. Understand and remember (concrete)
3. Agree and believe (credible)
4. Care (emotional)
5. Be able to act on it (story)

Real-Life Applications

Commander Intent
Give your team -or yourself- a clear and brief top-line goal that will serve to filter all ideas very quickly. In the fog

of war, a plan is too complex, but a commander intends to stick.

Appeal to Emotions, not Logic
Think about not using numbers at all when you can tell stories. Numbers call for logical reasoning while stories influence emotions.

Use Stories To Avoid Push Backs
I especially liked the idea you pitch with stories. People will be less inclined to push back as they start thinking about what it means and how they can act on it.

Humanize Numbers
Always bring numbers and statistics back to people's lives in a way they can understand what it means. For example, don't use microns or light-years. Use units people have daily experience with.

CONS

Examples
Some of the examples didn't fully cut it for me, but it's small potatoes. I love practical books with big insights and Made To Stick is exactly that.

Review

Made To Stick is a great, practical resource on how to communicate effectively in a way that your message will influence and motivate you to take action.
The Heath brothers heed their own good recommendations and provide lots of examples to go along with heaps of insights, which makes *Made to Stick* a must-read for marketers.

Bullet Summary

- **Men and women are different** by nature
- To get along, we should **take a step toward the other without compromising our true nature**
- Men care about competence and achievement, women about feelings

Full Summary

About The Author:
John Gray is a relationship counselor and a speaker.
His academic background, not in psychology or humanistic fields, has been subject to some controversy.
⚠ It's unclear where Gray completed his bachelor/master and whether he received his Ph.D. It seems to be from a

now-defunct and unaccredited institution after completion of a correspondence course.

That being said, I find some of Gray's points to be accurate observations -albeit they're also broad-stroke generalizations-.

Introduction

John Gray warns in the introduction that he generalizes about men and women.

Some of those generalizations will ring truer to you and some might seem less so.
The reason is simple: beyond the generalizations, we are all unique individuals.

Gray also mentions that sometimes genders switch: men relate to women's descriptions and women relate to men's descriptions (around 10% of women, possibly for being born with more testosterone).

That's a case of role reversal and it's nothing to worry about.

Differences lessen when genders have been single for a long time and will manifest more strongly with children or during high-stress periods.

The author says that some men deny some aspects of their masculine side and women deny some aspects of their feminine side (most workplaces reward masculine attributes).

Chapter 1. Men Are from Mars, Women Are from Venus

John Gray says that men and women are of two different natures.

To get along well they need to stop expecting the other to be the same and understand each other instead.

The most common complaints of a woman are that his man:

- Doesn't listen
- Is inattentive
- Is no longer romantic
- Is self-centered
- Divorcing reason: he doesn't give back to all of her giving

Men would complain that their women:

- Overreacts
- Make a big deal out of nothing
- Withholds sex
- Is unreasonable
- Divorcing reason: no matter what I do she's never happy

These are the most common fears by gender:

- **Fears for men**

Men's deepest fear is of being incompetent and not good enough.

They are afraid of giving because, when they give, they risk failure and rejection.
Fear increases when he cares, so he might stop giving when he cares the most.

- **Fears for women**

Women can be unconsciously afraid of being worthy of love and she's afraid of getting too much.

She's afraid she won't be supported and unknowingly pushes away the support she needs, which makes him feel rejected and turns him off

Men are empowered: when they feel needed and trusted, so women can feel free to show she needs him

Women are empowered: when they feel cherished and cared for

Chapter 2. Mr Fix-It

> ***He Needs To Show Competency***

John Gray says that men care about abilities and women care about feelings.

Men value power, competency, and achievement, and their sense of self is defined by their success and ability to achieve their goals.

Achieving their goals is a way to prove their competency.

Similarly, men want and need to have their abilities recognized and appreciated and resent having them ignored or called into question.
When a woman offers to help it's often an offense for the man as that's a vote of distrust in his abilities.

Women instead want to be listened to. They don't want to be alone and like cooperation and assistance.

Men offer solutions when women complain, but women are not looking for solutions.
They want to have their feelings recognized and appreciated. They don't want to be left alone when hurt or when dealing with a problem.

Chapter 3. Men Go to Their Caves and Women Talk

When dealing with problems men tend to withdraw, go sit by themselves and avoid communication.

For solutions and examples also read:

- Stonewalling in relationships

The problem is that women do the opposite: they communicate to find a solution.

When the two sexes communicate, women often communicate for the sake of communication and for the sake of talking.
Men like to talk in a solution-oriented fashion instead.

For a man, there must be a point and a conclusion in the conversation.

What a woman can do to help his man is to let him know in advance the outcome of the story, and then go back for the details.

Men don't like the suspense: give him the facts straight.

My Note:
I couldn't agree more with this.
In my relationships I often found myself urging women to cut to the chase.

Chapter 4. How to Motivate the Opposite Sex

Jon Gray says that a man's instinct tends to be self-centered while a woman's instinct is to care and look after others, even if that means sacrificing herself.

If both genders give in to their instinctive behavior, the man gets all the care and attention and the woman gets nothing.
One wins, and the other loses, which bodes badly for the relationship long term.

Once the two genders enter into a relationship instead they should meet in the middle.
The man should learn to care for the woman and a woman should learn to give less instead of endlessly giving and then resenting for not getting back.

She must remember to express her desire for her needs. And the man should express his desire to help.
This way, they both win.

My Note:
I'm not too sure about the "looking after others at her own sacrifice". *The Moral Animal* explains how women have a tendency to hoard resources when they can.
Which is the opposite of self-effacing giving.

Also, read:

- How women control relationships

> Female Domestication: How Women Control Men & Relationships

Chapter 5. Speaking Different Languages

> ***He Must Hear Her Out***

Men communicate literally while women communicate more dramatically and "artistically".

Women use "artistic" language as a way to express their feelings.

Men like to sort through their thoughts privately before communicating. But women can get antsy as he steps back and they need reassurance he still cares.

Women indeed prefer to sort through their thoughts "as they speak" and tend to put all their concerns out there.
Men can feel under assault when she does that because it's a threat to who he is.
He needs to know she still values him.

When facing challenging situations the man likes his woman to tell him he "got this" as that's a tacit compliment of his skills.
Conversely, he feels undercut if she offers assistance or sympathy.

The woman wants him to show concern instead, she feels snubbed if he doesn't offer any assistance.
She doesn't want him to tell her the problem is "easy" as that would be a way of brushing off her feelings.

Men also have a tendency to jump in with solutions as the woman talks about her problems.
He wants to show his skills and resoluteness.
But the woman doesn't want to hear solutions, she wants first of all to be heard.
The man should then offer a solution only after he has fully listened to her.

Chapter 6. Men Are Like Rubber Bands

> ***Men alternate between the need for intimacy and the need for autonomy***

John Gray says that men have periods in which they withdraw and want to avoid any communication.

Women don't understand this because they only pull back if they feel unloved or if some serious issue arises.
Women then can be unconsciously afraid he's avoiding her or going forever and keep prodding him for a reaction.
The situation can easily escalate.

Instead, **she should instead allow him to withdraw** and give him the space he needs. When women don't do it, they upset the cycle, "torture" the man, and destroy the relationship.

On the other hand, he can reassure her that he will be back (men's cycles are short anyway).

Once the man springs back, he's ready for intimacy and romance again. But she might be hurt and need her time to

rebuild back up. That can be another cause of friction.

When both partners can be supportive and understanding in their low periods, they will find their partner also finds it easier to do the same.

> **Let him pull away and he will come back quicker**

For more on cycles of intimacy and distance also read:

- Anxious-Avoidant Attachment Trap

Chapter 7. Women Are Like Waves

> ***Women Have Slower Up & Down Cycles***

John Gray says that women have slower cycles instead.

They periodically enter into depression and can become negative.
When a woman is at a negative point of her cycle she cannot give love.
She may then revisit old issues, even if they have already been discussed and resolved.

They will demand men that pay attention and provide support. Some men are stumped sometimes by the time it takes for the women to get back to their usual loving ways. But they must avoid trying to rush her or criticize her because it's a natural female behavior.

With his support, she will grow to trust the relationship more and she'll go through waves in a milder, more loving way.

The author suggests that if a woman's needs to be heard and supported overlaps with the man's need to be on his own, she should turn to her girlfriends then.

My Note:
Suggestions like these have sparked some criticism that the book asks women to do most of the "work" to meet in the middle.
I don't fully agree with the criticism though.

Chapter 8. Discovering Our Different Emotional Needs

Men and women have different emotional needs, and providing our partner with *our* emotional needs will not necessarily fulfill our partner.

Men look for: trust, acceptance, appreciation, admiration, approval, and encouragement
Women looking for: caring, understanding, respect, devotion, validation, and reassurance

Top 3 mistakes women make in relation to men's needs:

1. Tries to improve him or his behavior with unsolicited advice
2. Complain about what he hasn't done and doesn't appreciate what he's done
3. Corrects him and his behavior as if he were a child

Top 3 mistakes men make in relation to women's needs:

1. Minimize the importance of her feelings and needs
2. He listens. but then blames her for bringing him down
3. After listening, he says nothing and splits

John Gray says there's a knight in shiny armor in every man and a girl looking for a knight in shiny armor in every woman. And they can find each other.

Chapter 9. How To Avoid Arguments

John Gray says that arguments often balloon out of men's failure to pay sufficient attention and women's expressions of disapproval.

Disapproval will get the men angry and defensive.

When arguments arise verbal attacks can be destructive for the relationship. Men usually charge the hardest as they want to "win" the argument, using strong and aggressive words.

The woman backs down to avoid never-ending escalation and the man feels he has "won".
But she hasn't changed her opinion, so the following "peace" is phony as the underlying issues have not been fixed.

To avoid communication degenerating into fights, the author suggests men strive to listen *without raising their defensive walls* and women should communicate without criticizing their partners.

More on communication:

- Fixing combative relationships
- Two good books are Difficult Conversations and Possibly Crucial Conversations

And if you're already arguing a great way is to stop and take a break.

She Must Be Direct

Women often unknowingly start arguments by not being direct when sharing feelings.

For example, when a man is late, the woman might be worried or bothered. But when he shows up she asks rhetorical and *critical questions* such as:

> *"why didn't you call"*

Or

> *"how can you be so late".*

The man feels attacked because that's disapproval to him.

When a woman expresses frustration or disappointment the man gives explanations without allowing her to vent. What she feels though, is that he doesn't care about her feelings. For her to hear his reasons, she needs him to hear her reasons first

> It takes two to argue, but one only to stop it

Chapter 10. Scoring Points with the Opposite Sex

> ***She Must Appreciate Him For What He Gives***

John Gray says women give unconditionally and proactively.

Love for women means anticipating someone's needs and they don't stop giving.
Men only give when they feel that their efforts will be appreciated and often are not good at guessing when it's time to give unless they are specifically asked.
And they tend to stop giving when they feel they have done their part.

When it comes to giving, men value results while women appreciate more the thoughts that come with it.
So women appreciate lots of little gifts while men tend to value the big gifts more.

When men and women fail to understand these dynamics, the relationship can easily sour.

When the woman does not appreciate the man giving he may stop giving altogether while she continues to give unconditionally expecting to eventually get something back.
However, as she gets nothing back, she starts feeling unloved and grows resentful.

To help meet each other's needs, men should give in many little ways without being asked and learn that if their partner does not ask doesn't mean she's happy.

Women, on the other hand, should talk clearly if they are not happy and should reduce their own giving -or even ask things back- and never forget to appreciate him.

Here's a simple one for women: "thank you for listening".

With men giving and her appreciating, both will gain.

Chapter 11. How to Communicate Difficult Feelings

John Gray goes deeper into interpersonal psychology.

He says that to ease unresolved conflicts men bury themselves in work while women might seek perfection and lapse into depression to avoid feelings of anger.
In *Daring Greatly* Brene Brown also digs deeper into perfection-seeking and vulnerability.

Before even tackling effective communication the author says we must first unlearn to repress our feelings and to avoid negative communication.

He suggests that writing is a great way of expressing negative feelings in a controlled manner instead of exploding with our partners.
Both positive and negative feelings as often we don't realize how loving we can be.

Once we write and work through our feelings we will be better prepared to explain in a clearer and loving way.

My Note:
Avoid keeping a secret diary of your relationship. I can't remember the source but a study shows that keeping a diary raises the chances of breakup -and then regretting those breakups-

Chapter 12. How to Ask for Support and Get It

Women should not come to expect their partners can read their minds and anticipate their needs.

They should ask for help but ask without making it seem like a demand because men hate doing things when they are demanded.
Indeed, giving excessive instructions will make him feel like a slave.

Women have to ask with tact because any request to be more or get more makes the man feel inadequate

Questions with the form of "could you" or "can you" sound to him like questioning his abilities, so "would you" or "will you" are better. And it's best to let him choose the way and time he does it.

It's OK to ask him when he's busy but be prepared for him to postpone or say no.
A woman should also come to understand denials as a request also implies the possibility of a no.

Chapter 13. Keeping the Magic of Love Alive

John Gray says that there's a conundrum in love.

The more we feel in love and safety, the more turbulences of the past can surface as our minds "let go".
Wade through them: they're only a sign that your relationship is great.

The author says that love changes over time.
The bliss of the beginning does not last forever and our normal faults emerge for what they are.
But by sticking through the highs and lows the initial bliss becomes a more mature form of love which gets stronger as the years go by.

Criticism

“Men are from Mars and Women are from Venus” has been criticized for relaying stereotypes from *pop psychology*.

John Gray has been criticized too for some shady practices and for not earning a real PhD.

We even made this picture for another article on common marketers’ tactics:

Some criticize the portrayal of women as (more) emotional creatures, while some say that Gray’s advice is “sexist” because it asks the woman to do more of the adjustment.

I did indeed notice more “requests for changes” aimed at her rather than at him.
However, that doesn’t *necessarily* mean “sexism”.
It might simply mean the author believes it’s easier for the woman to adjust or that it’s simply best for the relationship.
Or, here at TPM, we would also say that if the man is giving more, it’s fair exchange that she may have to adjust more.

Let’s see some more:

Advice On Power Dynamics, Missing Critical Power Insights

In brief, this is the communication it espouses:

- Women should power protect men when tasking them
- Women should be more feminine
- Men have the right to their space, lone time, and pursuit of masculine hobbies

Unwritten and covert is this:

- **Men are higher power and value than women** in the relationship. Not necessarily wrong, but only valid for high-value men

And common tropes based on social and value exchanges:

- Good partners seek to add value
- Both partners must focus on giving and compromising for win-win

All of these make sense.

But Grey's analyses exclusively based on gender generalizations make it seem a lot more simplistic -and less accurate- than it should be.

Unscientific

Note that unscientific does *not* equal "inaccurate" (as much as "scientific" does not always mean "accurate", also see the *replication crisis in psychology*).

And while it doesn't have the scientific backing of a John Gottman, this book has, in many ways, more insights than many other research-backed books.

I also believe it can help many couples to better understand relationship dynamics, and common gender-typical issues and, ultimately, it can help many men and women improve their relationship.

Stereotypes: They Can Be True, But Exceptions Matter

This whole book is the *emblem* of generalizations and stereotypes.

The reader should always keep that in mind.

You just need to look at the title to realize that this is not going to be a book that goes into the nuances.
And it doesn't ever mention that there is plenty in common between men and women.

Book For... Average Folks & Relationships

Trying to describe ANY woman, man, and relationship…

Men Are From Mars ends up serving almost no one in particular.

This is true for ANY book or advice that lacks specificity.
See our article on ceiling advice:

> Ceiling Effect: Why 99% of Self-Help Leads to Plateaus

More growth-oriented folks will both *need* this advice less, while also being able to *use* this advice best.

The top guys who work on themselves to improve and develop a growth mindset won't get nearly as defensive as the author mentions.

And of course, the same is also true for high-quality women.

It's Masculinity & Femininity, Not Men and Women

Grey describes masculinity and femininity, which is not the same as men and women.

Some men can lean more into feminine psychology and behavior, while some women can lean more masculine psychology and behavior.

Also read our centerpiece articles on that:

- What is masculinity
- How to be more masculine

Real-Life Applications

“Men Are From Mars Women Are From Venus” describes somewhat valid general tendencies about men and women and turns them into practical applications for improving relationships.

What struck me the most based on my experience were:

Give Him The Results Quick
When telling a story, give him the “executive summary”, one sentence of what happened.
Then flash out the details. Men will get impatient if it takes too long to get to the main point.

He Must Let Her Vent First
The man must let the woman vent first before giving explanations or she’ll feel he doesn’t care.

Review

Men Are From Mars, Women Are From Venus is a not-so-bad popular book to understand how feminine and masculine tendencies can at times clash and create possible issues within intimate relationships.

Do I recommend you read it?

Yes.
And no.

These stereotypes are so common that you probably heard them.
And because of the padding, you may get similar value from the full book as from this summary, to be honest.

Keep in mind these are also generalizations and don’t take into account individual differences or how the dynamics change based on mate value.

So if you read it, do so with a critical approach.

Get it on Amazon or check out:

Best Songs For Romance & Make Her Fall In Love

Lucio Buffalmano · 4 January 2018 · Archived copy · Original

Nothing lubricates the gears of love like a great playlist of seductive music.

A great soundtrack is one of your best bets for *successful escalation*, make her fall in love and give her an unforgettable time.

Even for couples, the perfect music will make your time together all that more special.

So let's review a few ideas for a great soundtrack for romancing:

Contents

- 1. Bruce Springsteen
- 2. Slow Classics To Dance On
- 3. Mellow Classics
- 4. Romance Soundtracks: Your Songs
- 5. Trance Rhythm
- 6. Romance From Exotic Sounds
- 7. A Song For You To Sing On
- 8. Break Pattern Songs
- Avoid These Songs
- The Mindset of Romancing
  - A Man Leading
  - A Contagiously Passionate Man
- Summary

1. Bruce Springsteen

> ***Romance The Mannish Way: Show Her Who's The Boss :)***

The Boss is passionate and romantic at the same time without ever getting corny.

He's also a handsome and mannish performer that will reflect well on those who choose him.

An old favorite of mine, here are a few picks:

- **I'm On Fire**: a masterpiece of dripping sexual desire.
  "hey little girl is your daddy home, did he go and leave you all alone, I've got a bad desire, I'm on fire"
- **Tougher Than The Rest**: perfect ambiguity between the propositioning for love or a roll in the hay
  Well it ain't no secret I've been around a time or two, Well there's another dance All you gotta do is say yes
- **Human Touch**: some touchy-feely lyrics, but great to add a layer of "broken man seduction"
  You can't shut off the risk and pain – Without losin' the love that remains

2. Slow Classics To Dance On

> ***Dance Is Love… While Standing With Clothes***

When you want to put the full romance moves on, the most archetypal romantic moment cannot be missed:

The slow dance.

Dancing is a mix of romantic and sexual. It hints at and can be the prelude of, more carnal, physical contact to come.

Unless you're prepping out and pre-gaming for clubbing, stick to slow classics.
She might think it's corny, but it always has a big impact, *even when it's corny*.

Here are some good options:

- **Strangers In The Night**
- **Can't Help Falling In Love**

And a good example of "there is no corniness in romance", including for high-power frame control:

> (moon river starts playing)
> **Her**: so corny
> **Him**: no! It's classic. Listen
> **Him**: (tells a story about his parents, reminiscing, shows a glimpse of his most vulnerable and emotional self
> Then invites her to dance)

And just in case some of you might think "it's just a movie", you only need to read the real-people comments below it:

This scene always get me. The moment where big let's down his defense and finally shows us a different side to him.

26 REPLY

Gabby Hagood 5 years ago

He's such a selfish prick and carrie is childish for playing a long with his games - but I can't help but love them together. I can't help it. This scene is so romantic.

NYCBlonde 10 years ago

Simply breathtaking scene. It brings tears to my eyes. What a lovely, lovely valentine to their relationship, and the NYC–knowing it was filmed before 9/11 but aired afterwards...it just gets to me. Perfection.

REPLY

The slow dance is also a good move before sex to make intimacy more special and unique.

You can also use it as a tool to gauge where you stand with her.
If she hugs you tight you can likely go ahead and become lovers soon.
