If you have several of these red flags, there is reason for concern.

Why Do Women Stay in Abusive Relationships?

This is a very deep question and would require its own in-depth article.

There is no one answer fits all, but :

1. Low Self Esteem

For women with low self-esteem abusive relationships become a self-fulfilling prophecy. They don't believe they deserve a good man, and will unconsciously rule out better men and/or sabotage relationships with better men.
A man who mistreats them instead fulfills their own self-narrative of being unworthy.

Low self-esteem can sometimes be the consequence of parents who haven't given enough love or only gave conditional love (read *Will I Ever Be Good Enough?*).

Read more here:

- How low self-esteem leads to abuse

2. Masochism

This is something that few have the courage to admit. But that doesn't make it any less true.

Relationship Researcher John Gottman admits in *The Relationship Cure* that he was shocked to hear women tell him that their best sex was after their men got physical.

3. Perverse Attraction

Robin Baker, the author of *Sperm Wars*, says that women stay with men who successfully raped them because those men show strength and power over them.

Since rape can, sadly, be a valid strategy for procreation in *specific and limited conditions*, a man who is effective at raping can provide her with potentially good genes.
Indeed it seems like the incidence of pregnancies from rape is higher than from routine sex with a partner.
It's f*cked up, I know, but don't shoot the messenger.

And now that you know, this information can actually help you get over an abusive relationship.

4. Fear / Sunk Costs / Change Resistance

There is always some fear connected to change.
There are sunk costs, like the time you've spent together, and the things you have in common. Maybe children or marriage to void.
And the all too human tendency to stick with the devil we know.

The wonderful song Better Man is about an abusive relationship.
But there is otherwise nothing poetic about abusive relationships.
All I want to add here is that you can overcome and move on to a better life.

SUMMARY

The signs of an abusive relationship are obvious to any external observer who knows what to look for.

But not everybody knows what to look for.
This article gives you some better tools to troubleshoot your relationship.

If you found out you're in an abusive relationship, you should know that things rarely change. And you might better off ending the relationship.

If you don't think you're in an abusive relationship but are still unsure, check this article on overcoming relationship ambivalence.

7 Types of Abusive Men: a Psychological Analysis

Lucio Buffalmano · 20 June 2018 · Archived copy · Original

Abusive men come in all shapes and sizes.

But we can differentiate a few specific types based on the external expressions of their abusive tendencies.

This post will provide you with an overview of the types of abusers, their psychology, and their modus operandi.

Traits of All Abusive Men

First, the most important thing:

The commonalities.

I believe that to truly understand human phenomena, it's always best to start from the deeper layer.
At the core, abusive men have a very distinct psychological makeup that seeks power and control.

All abusive men:

- Seek to control her partner
- Disrespect her partner
- Seek to lower her partner's self-esteem
- Undermine her independence (and independent partner can't be controlled)

The specifics of an abusive relationship can change because different abusers have different levels for each trait and they all find different ways to express their abusive "needs".

Lundy Bancroft, a professional counselor with decades of experience with abusive men, introduces seven archetypes of abusers.
Here they are:

1. Demand Man: The Woman Is There to Serve Him

The demand man believes that his woman is on earth to serve him.

His needs and wants take precedence over almost anything else. About your own needs, for sure, and often even above the children's needs.

If you are in a relationship with an abusive man of this type, he will order you around and expect you to drop anything else to serve him.
Just like a paid servant waiting on standby.
Except he doesn't pay you, he is always unhappy because his standards are too high to meet, and he treats you like dirt.

These are his main beliefs:

- It's your job to do things for me
- If I fail at something, I'll still get angry at you
- If I'm unsatisfied with anything, it's your fault
- You can't demand anything of me but I can demand everything of you
- Be grateful for whatever scrap I give you
- Don't ever criticize me
- In spite of it all, I am a loving person and you're a lucky woman

The demand man can be less controlling than others… As long as you meet all his needs.

2. The "Padre Padrone": The Family's Authority

Ludy Bancroft calls this type of abuser the "military general".

The military general is all about control.

And he takes "controlling" to a whole new level.
He wants to know everything you do in your life and most anything requires his approval.

Some of them, but not all, take the same uber-controlling attitude toward the whole family, while some others only focus on their wives.
When he takes control over the whole family, then I call them "padre padrone".

"Padre padrone" is an Italian term.
It's a wordplay of "padre", meaning "father", and "padrone", meaning owner.

It's a great expression because it goes to the core of what this type of abuser is all about **the "padre padrone" feels like he owns the family**, and he *acts* like he owns the family.

My experience with military generals

My former neighbor used to be a military general with his wife, and he built a custom-made chastity belt for her (I'm not joking).

And I have once dated the daughter of a padre padrone.
Without actually knowing anything about the types of abusive men, she said of him that he was "like a general".
It pained me to see how deeply that idiot had psychologically impacted her.
I still feel for that woman: that idiot scarred her for life.

Example: The "Padre Padrone"

You will not understand the words, but you will still understand the dynamics:

The "padre padrone" is more common in conservative and religious countries and, most of all, in "cultures of honors".
Cultures of honor *encourage* men to be and act more like "owners".
Men who don't act like owners in cultures of honors are mocked as spineless.
The protagonist of the video above later attacks another man and yells at him "are you a man, or are you a muppet?". That other man's fault? He wasn't controlling his family well enough.
Because real men, like him, control.

"Padre Padrone" are sometimes hyper-jealous and protective of the females in their household, so they sometimes overlap with the jealous-paranoid abusive type.

The Scarface character is a jealous "padre padrone" towards his sister:

Tony Montana in the movie Scarface also overlaps with the criminal abuser (N.7 on this list).

3. Mr. Right: I Know It All, You Know Nothing

Abusive men don't always beat their women or yell.

The violent abuser is the favorite representation of TV and movies, but there are more ways of being abusive.

Mr. Right takes most of his pride in knowing it all.

He believes he has superior knowledge and intelligence compared to you.

There are different types of "Mr. Right" and some of them pick specific niches of authority.
But the most extreme of "Mr. Rights" are the ultimate authority on… Pretty much everything. Including your life.

He knows what's the best course of action for you and he has an easy answer for any of your problems -you're just stupid not to see it-.
If you keep arguing with him indeed, you are stupid and you are disrespecting him.

A big area of his expertise, of course, is your shortcomings.

4. The Master Debater: I Must Win All Arguments, You Must Lose Them All

The "Master Debate" will listen to you.

But not to truly understand you, but to use anything you say against you and to win the argument.

The master debater does not scream and does not intimidate you -not physically at least-.
His weapon of abuse is different. He is usually very skilled in verbal production and in influencing people, and he uses all the persuasion and manipulation techniques in the book.

How do you recognize a "Master Debater"?

If a man always gets under your skin and you find yourself angry and resentful without any apparent reason, chances are you are dealing with the verbal and mental power moves of a master debater.

"Master Debaters" often deploy a technique part of "gaslighting".

How do they do it?

When you blow up and become emotional or aggressive, he uses your (legitimate) reaction as proof that you are the abusive one.
Women with master debaters are the most likely to blame themselves because their tactics are some of the hardest to even detect.

It's hard living with a "Master Debater", of course. Relationship researcher John Gottman found out that one of the keys to positive relationships is to accept one's partner's influence.
Exactly what Master Debaters don't want to do.

Example: Jordan Peterson

If Jordan Peterson were an abusive man, he would be extremely effective at it:

Note: NOT saying Peterson is abusive.
It's his verbal skills that can be used to get under your skin.
Peterson gets under Newman's skin here, so the example.

4.2. The Therapist

Therapist controllers use psychology and therapist-talk to maintain control.
But it's only a facade for their craving for power.

A good example:

> **Her**: (does not submit)
> **Him**: I'm a little bit concerned about how disrespectful you are to me
> **Her**: OK (does not submit)
> **Him**: What do you think about that. I'm serious <— His demands for control are cushioned in therapist speak

NOT saying the main this example is abusive.
But that abusive men who take a therapist angle use similar techniques.

5. The Sensitive Guy: "How Can You Do This to Him"?

The sensitive guy uses guilt to control you.

When we talked about emotional caretaking in signs of an abuser, this is the type of guy who demands it the most. He will not scream if your dinner is late, but he will go berserk if you don't sacrifice yourself for his emotional well-being.

Sensitive abusers tend to know some psychoanalysis and psychologist lingo, which they will use to play up their pain and to find faults within you.

He blames you for his pain, but when *you* are hurt, of course, he ignores it or minimizes it.
With time, he can get threatening and intimidating.

Example: The Good Girl

In the movie “The Good Girl” the protagonist has some traits of the sensitive abuser:

The Victim: Sensitive On Steroids

Similar to the sensitive guy, but he plays up his pains.
For example, to excuse his behavior, he will talk up his childhood abuse, previous women taking advantage of him, or life generally being so harsh on him.
Ben Shapiro uses this technique to verbally abuse his victims.

And here is an example of a woman using this technique with me (and how I handled it):

> **Her**: I just neeed to get out of Jogya right away. I know you can help me and you can afford me, but you won’t

She is framing herself as in bad need of help. And me as the only savior who can help her.
That technique worked great.
I was feeling really bad about it. But angry at the same time, because I knew the game she was playing.
And I held strong to my guns -“dominant frame technique“- to break free of that abusive game.

P.S.:
Don’t jump to the conclusion someone is an abuser. Recognize which is which and you might really help a poor soul out.

6. The Abusive Player: From Object of Desire to Object

The abusive player tends to look good and be a sexy man.

In the beginning, he can be head over heels for you and you might feel like a lucky woman.
How could this guy possibly be single?

As time goes by though his interest becomes only sexual.
He spends less time with you and does not want any restriction on his freedom.

Many abusive players see women only as sexual objects he uses to feel good about themselves and sometimes are narcissists and/or present sociopathic tendencies.

There is one book dedicated wholly to this type of abusive relationship, and it's called "*Psychopath Free*".

Example: The Pimp

Pimps can sometimes be a crossover between players and abusive men.

Pitching Women Against Each Other

Chronic infidelity is abusive per se.
But the abusive player also manipulates your feelings.

For example, he lies about other women and tries to pitch one woman against another.
This has a name, and it's called "dread game" in The Red Pill community, where men with abusive tendencies learn how to become better at it and how to play mind games.

But the true abusers, the ones with sociopaths and psychopath tendencies, take it one notch further.
They will say that other women are spreading rumors because they are jealous, or that they are trying to drive a wedge between you two.

Of course, not all those "other women" must be real.
He might simply make up some stories just to make you jealous, keep you on your toes, and increase his value.

As a last note, not all players and womanizers are abusive. Read more in "the psychology of a player.

7. The Criminal Abuser: 360° of Abuse

Some abusers are not aggressive only with their partners, but with everyone.
These are the ones who are most likely to have other criminal offenses on their record.

Why do women end up with these types of men?

Well, to begin with, he does not introduce himself like an abusive man who is going to batter and physically assault her.
He presents himself as a fearless man.
And because of his attitude, he can make women feel protected.

Of course, rationally that makes no sense.
It's like keeping a grizzly at home because he will keep other grizzlies away. It just doesn't work like that: if anything, he is more likely to attract other grizzlies (and behave like a grizzly, of course).

Indeed, this type of abusive man is the most likely to get threatening and physically aggressive.

Here are his central beliefs:

- Aggression is good and masculine
- Compassion and empathy are 'g*y'

An emotional connection with this type of abusive man is virtually impossible (and we might argue it's impossible with *any* type of abusive man).

Example Raging Bull

Since movies like to focus on the most visible and extreme elements of domestic abuse, there are plenty of examples of criminal abusers.

One of them is the character of Jake LaMotta, portrayed by Robert Deniro in the movie "Raging Bull":

Sadistic Abuser

If there were a scale of the worst types of abusers to live with, well… It would probably be "all of them".

But if one were forced to pick one, it would probably be the sadistic abuser.

The sadistic abuser, similar to the criminal abuser, leverages physical power and threatens you with physical violence.
But on top of being physically abusive, he also takes pleasure in inflicting pain.

These are also the guys who can be very dangerous for retaliation after a breakup. If you are engaged with a sadistic abuser, you must plan your breakup in advance.

Personally -and this is just my opinion here- I would even advise you not to just rely on the legal system but move away and make it impossible for him to know your whereabouts.

Are Abusers Dependent on Women?

Patricia Evans, the author of Controlling People, says that abusive men are actually *dependent* on their women.

Albeit that's not the case for *all* of them, it's true for many of them.
Abusers sometimes form a sort of co-dependent relationship with their spouses. And they can go into a tailspin when she tries to leave them.

As crazy as it might sound, Evans makes the case that some abusers are controlling because they are afraid of losing you and the bond with you. They have an extremely anxious attachment style, and, for some of them, controlling is the only way of keeping the relationship. As a matter of fact, controlling can be his way of "working on the relationship".

What they don't realize, of course, is that they are actually destroying that bond with their behavior-.

Susan Forward, author of "*Men Who Hate Women*" also agrees that misogynists, who tend to be verbal and psychological abusers, are most often afraid of being abandoned.
Misogynists can be highly entitled and demand to be "put first" by their women because they need the unconditional love that they didn't receive as children.
Also, see here an example:

> **Him**: But here's the bottom line, I was here before the kid, your loyalty should be with me (…) it's almost like a chain in command

Forward says that misogynists want to be put before the children because they never had unconditional love from their own mothers.

Needless to say, explaining a behavior, even when it's misguided and motivated by the willingness to be together, does not mean justifying.
No matter what are the reasons behind the abuse, *any* relationship with an abusive man is a toxic relationship.

Abusers Have Big, But Fragile Egos

Let's dispel a myth.

You probably heard this one: abusers are weak and low in self-esteem.

That's what everyone says, including sometimes therapists.
However, that's not true. As social psychologist Roy Baumeister well explains, most abusers are egotists.

Such as, they have *high* self-esteem, but *fragile* self-esteem.

That's why they perceive more threats and feel the need to lash out when something -or someone- threatens their high self-opinion.
They need to maintain their high self-esteem, and women who make them feel less of a man are a threat to their core identity.

Psychopaths VS Violent Men

Some abusers are psychopaths.
And some others, albeit they might present some psychopathic traits, are

There is a big difference between the two.
Relationship researcher John Gottman calls them "pit bulls and cobras" (Gottman, 2007). And psychology researchers Kevin Dutton, tells us that the difference between the two might be in their level of psychopathy (Dutton, 2012).

See here the difference:

COBRA	PIT BULL
Displays violence toward others	Usually only violent toward partner
Feels little remorse	Shows some level of guilt
Motivated by immediate gratification	Motivated by the fear of abandonment
Able to let go and move on	Obsessive; often stalks victim
Feels superior	Adopts the role of "victim"
Fast talker; spins a story for police	Greater emotional lability
Charming and charismatic	Depressed and introverted
Control means "not being told what to do"	Control means "constant monitoring of partner" (see: jealous BF)
Traumatic upbringing; violence prevalent in family	Some degree of violence in the family background
Impermeable to therapeutic intervention	Sometimes benefits from treatment programs
Manipulative: partner less likely to leave	Partner more likely to leave
Antisocial: 90%	Antisocial: 33%

And this is how they differ in the use of violence:

COBRA	PIT BULL
Violence: more severe	Violence: less severe
Use of closed-fist / strangling: 91%	Use of closed-fist / strangling: 62%
Threatened partner with knife or gun: 38%	Threatened partner with knife or gun: 4%
Actual use of knife or gun: 9%	Actual use of knife or gun: 0%
Violence outside relationship: 44%	Violence outside the relationship: 3%

You can notice that the psychopaths are "colder" in their controlling ways, and more effective.
The non-psychopaths are more emotional.

Probably, it's the non-psychopaths who are dependent on their women. But the psychopaths, unable to form emotional bonds, are *not* dependent on their women.

SUMMARY

If you have experienced dating an abuser, chances are you can look at one of the types and above think "oh, that was him".

But of course, there can also be crossovers and overlaps, where one abusive man shows the characteristics of several types.

In summary, you must distance yourself.

Full Summary

About The Author:
Lundy Bancroft is a consultant on domestic abuse. He spent decades coaching abusive men and learned much about their psychology and personality.

Introduction

Lundy Bancroft says that the similarities among abusive men outweigh their differences.
But society greatly misunderstands the widespread phenomenon of abusive men.
"*Why Does He Do That*" provides accurate information about abuse and helps women overcome this awful phenomenon.

Myths About Abusers

Lundy starts with a list of dangerous myths that are too pervasive in our society, including psychologists and doctors.

Some myths about abusers are that they:

- Lose control
- Are otherwise good people
- Have low self-esteem
- Are insecure
- Lack education
- It's mostly poor or minorities
- You can spot an abuser outside of their relationship
- Therapy will help

My Note: Self-esteem is a predictor of IPV
Bancroft shares some hard-hitting truths that some women badly need to hear.
However, research shows that self-esteem *is* a predictor of IPV.

Therapy won't help by making the abusers get in touch with their feelings. **Abusers need to get in touch with their partner's feelings, not their own**.

Some abusers are so self-centered and have such entrenched entitlement mentality that they genuinely think they are abused by their victims.

The source of Abuse is His Value System

After he debunks a lot of myths about the causes of abuse, the author makes the point that it's a bad value system that causes men to abuse.

Such value system includes the belief that:

- Women should serve men
- He is smarter / better than her
- He possesses her
- It's up to him to call all the shots in the family
- He's not abusive, it's her who deserves it

> The abusive mentality is the mentality of oppression

Early Signs of Abusiveness

Bancroft lists the following traits and red flags.

An abuser might:

- Speaks disrespectfully about exes
- Show disrespect toward you
- Make a show of generosity or do a favor you don't want
- Be very controlling and/or possessive
- Be self-centered

- Have issues admitting fault
- Abuse of alcohol or drugs
- Move ahead too quickly with the relationship
- Treat you differently in public
- Pressure you for sex
- Intimidate you during arguments
- Have a general negative attitude toward women

It's important though to notice that a single warning does not give you any guarantee. Many non-abusive men will show one or some of these signs to a certain degree (minus physical intimidation, which should be a clear "run away sign").

Abusers Don't See Themselves As Abusers

An abuser minimizes his behavior by comparing himself to men who are worse than he is, whom he thinks of as "real" abusers.
If he never threatens his partner, then to him threats define real abuse.

And if he is a batterer, then it's his wife's fault who "knows how to push his buttons".

Abusers Won't Change

It's rare for any abusers to change.

They almost never start from an intrinsic motivation because they don't want to change and they don't think they're doing anything wrong.

The motivation must come from strong, extrinsic factors, such as the risk of losing their partner or major criminal consequences.
After they start on the path to change, then maybe intrinsic motivation will also help.

But deep, permanent change is sadly rare.

Don't Do Therapy With Abusers

The therapist wants the couple to work together. But a woman should not work with an abuser: that only serves to reinforce the abuser's case.

Cultural Reinforcements

The author makes the point that our society is too lenient on abusers. For example, he says, Eminem won a Grammy for a song of his, Kim, in which he murders his wife.

The song is indeed quite terrible:

Real-Life Applications

Track down previous partners
When in doubt and when he speaks disrespectfully about women and ex-partners talking to an ex-partner of his might save you years of misery.

And check out this article to catch the signs of a sociopath and learn the manipulative strategies of psychopaths:

Lucio's Analysis

I loved "*Why Does He Do That*".

Yet, some parts left me unconvinced.

Standing against abuse is the only right thing to do.
Let's dig deeper:

There is little scientific research, and it shows

The author has much experience running men's workshops.
However, that may mean he has less experience from the *female* side.

Also, *Why Does He Do That* quotes little research.
For example, from the research we've seen:

Evidence Shows That IPV Is A Two-Way Street

I want to say this first:

Many women reading ARE true victims who contributed little or nothing to abuse.
Many are wonderful women who deserve and must get better.

Focus on that first, and move forward to a better life.

Now, that being said, if one wants to explore IPV properly, there is abundant research on this topic.

And the picture that emerges from research is quite different from what you may get reading this book.

To sum it up very quickly:

- **Partners are a poor match** and bring vulnerabilities for aggression
- **The *relationship* is part of the issue**, and turns conflictual and distressed
- ***Both* partners participate in the aggression**, with lack of communication and problem-solving skills, possible verbal provocation, and reciprocating hostile behavior that leads to physical escalation

In one picture:

by J. P. Forgas and J. Fitness, 2008, New York, NY: Psychology Press. Copyright 2008 by the Taylor & Francis Group. Adapted with permission.

For more I recommend the chapter on IPV in the *APA Handbook* on relationships:

https://thepowermoves.com/apa-handbook-of-personality-and-social-psychology-vol-3-interpersonal-relationships/
Once again, if you're reading here, it's possible that the blame lies with your partner.

And it's possible that your partner is just an awful person.
A POS is POS, and there is no excuse for that.

IPV May Be Linked to Infidelity Fears, Suggesting Possible Solutions

Abusive behavior is linked to control, sexual proprietariness, jealousy/paranoia, and fear of infidelity.

The fear of infidelity can be imagined or, sometimes, real. A point also made in the recent *Cambridge Handbook of Evolutionary Perspectives*.

In a few limited cases then, **a possible solution for some women may be to assuage infidelity fears.**
We in no way suggest this may solve most cases, or that a woman should allow anyone to monitor her: quite the opposite. But in some limited cases of women with otherwise good men who happen to be overly worried, assuaging fears may help.

In any case, this is the type of evolutionary-informed, solution-focused approach I wanted to see more of in the book.

Some Unsubstantiated Claims

Since there's little research, quantitative analysis, and few references, some claims end up being unsubstantiated.

For example, Lundy says:

> (…) although most abusers are men and most abused are female, the reasons are social and not biological.

Based on what exactly does he say?
To me, this betrays a lack of evolutionary insight of this ugly phenomenon.

Sometimes it feels a bit like a double standard

Again, let me say this first: many male abusers deserve all the criticism they can get. And more.

That being said, a good analysis must still be dispassionate, and look at all sides of the equation.
Lundy says that abusers criticize his program as "man-hating".

Well, I'm sure many abusers use that as a manipulative tactic to avoid fessing up to their crimes.

But at times I also did feel like some anti-male bias.

For example, **Bancroft says that "it depends" on whether physical aggression by women toward men is abuse.** His rationale is that since men don't experience physical aggression as intimidating, the long-term emotional effects are less harmful.
And he adds that it's rare to find a man who's lost self-esteem and freedom because of her partner's aggressiveness.

Well, I get his point, but… So what, only because the harm may –*may*!- be small, on average, then it's not abuse?
It still reeks of a bit of a double-standard mentality.

On another occasion, a woman asks if she is violent because she slapped or shoved his partner a couple of times.
And, again, he replies with "it depends". He says that if her actions did not harm, scare or control him, that's not violence for him.

Then, well… Shouldn't he say the same for men?
That if his action did not harm, then it's not abuse?

Hence, I didn't agree with that.

Biased Toward the Plaintiff

More than once I found the book too strongly on the side of the defendant.
For example, Bancroft writes:

> If you report to the court that you were assaulted or threatened, or that your partner broke a restraining order, your word is evidence. **Courts can, and do, file charges on the basis of victim reports alone, but tragically they can be reluctant to do** so in cases of domestic abuse or sexual assault

Tragically?

Why does he say tragically?

He laments that the courts don't (always) take the woman's word on abuse. But he himself says somewhere else that most (but not all) abuse allegations are accurate.

So why should courte take words as evidence?

Plus, since we're here, how does he know most allegations are accurate?
I actually also think that may be the case.

But still… How does he know that?

And what about those inaccurate ones?

Lundy never says…

And he adds everyone should be very, very cautious in accepting a man's claim that he's been unjustly accused.

That's a big twist of the principle of innocent until proven guilty.

And hey, maybe from a number's perspective, he's right. But he doesn't show numbers. And he never stops to think about the plight of false accusations (and convictions).

He never for a second admits that maybe, just maybe, sometimes plaintiffs can lie, just like pretty much anyone else in the world.

Basically what I'm getting to here is this: abusers are scumbag assholes. No bones about it. But so are liars who abuse the legal system to harm an innocent person.
That also exists, can happen, has happened, and *will* happen again.
But the author seems too feverishly lost in his (fair) crusade against abusive men to stop and consider that there are many NON-abusive men. These non-abusive men might be victims of false accusations, as they have a right to innocence before proven guilty.

Christian targeting

Lundy writes:

> To make matters worse, these religious sects have greatly increased their political power around the globe over the past two decades.
> As a case in point, consider the growing influence of Christian fundamentalism in the United States.

Honestly, I found this misplaced.
With increasingly secular Western civilization and with terrorism around the world, the author picks the example of Christian fundamentalism.

Why Does He Do That? Because It Works, If You Let It

That may be the ultimate, most disconcerting answer that Lundy never really gets into.

Abuse is widespread.
And that may suggest that it's evolution equipped some men with a predisposition towards this behavior.

For example, writes Arnocky, in the *Oxford Handbook of Infidelity*:

> these apparently diverse acts of aggression all have in common is, broadly, their robust **links to (typically) male sexual proprietariness** (…) **to control and monopolize women's reproductive decisions** to stymie infidelity, reduce paternity uncertainty, and prevent women's defection from the relationship (Daly & Wilson, 1988; Taylor, 2012; Wilson & Daly, 1996)
> (…) repugnant and societally damaging behavior **(e.g., IPV) may constitute adaptions** that require ultimate (i.e., distal) explanations that relate to their functional significance (Archer & Vaughan, 2001; Daly, 2014; Vandermassen, 2011; Welling & Nicolas, 2015)
> (…)
> domestic assault appears to function primarily to prevent infidelity, whereas in-pair sexual assault seems to be a response after infidelity has been committed (Camilleri & Quinsey, 2009; Daly & Wilson, 1992; Goetz & Shackelford, 2006)

The possible adaptive nature of IPV is a point made by several researchers, including David Buss.

And that's the powerful explanatory angle that Lundy Bancroft misses on: the evolutionary psychology one.
Including an evolutionary lens would have allowed *Why Does He Do That* to cover all angles, from the real-life examples Bancroft shares, to the deeper "why".

From what I've seen, research and power dynamics suggest:

- **Some men are motivated by control and abuse is a consequence of control** to prevent infidelity and defection
- **Higher 'sense of ownership' = higher odds of controlling**, and higher odds of abuse when men feel their control is slipping, or that their partner is evading their control
- **Controlling behavior may have been adaptive** for some context, an unfortunate truth that both good men and women must contend with to get rid of this problem

I believe that facing these uncomfortable truths is the unly way to freedom and liberation for both men and women.
So here's my intervention for you, dear reader:

Will you let this cr@p keep working on you?

Maybe it's time to stop trying to understand him, hope he will change, or try 'fix' things.
Maybe it's time to move on.

PROS

Great Overview of Abuse
A really, really great book to understand the phenomenon of abuse and the mentality and psychology of abusive men.

Much Needed Abuse Wisdom
Lundy does a great job dismantling some persisting myths about abuse. Society really needs this.

Deep Psychological & Power-Related Wisdom
Like for example high-dominance and abusive men are annoyed when their woman is at the center of attention because they see their partner as being supportive cast *to* them.
Or how abusive men prefer younger, less experienced, or vulnerable women because they can dominate more easily. Be aware of a man who's attracted by power imbalances, says the author.

Review

"*Why Does He Do That*" is a great book on the psychology of abusive men, relationship power dynamics, and potentially women's empowerment.

I learned a lot with Lundy Bancroft.
And I consider this book is a must-read for anyone who wants to understand not just the psychology of abusive men and toxic relationships, but also very useful for power dynamics and general psychology.
Some of these traits, albeit at a much smaller scale, also drive some otherwise non-abusive men. Like power-hungry men, for example.

I believe that this already great book could would have been even better with more research, evolutionary insights, and deeper consideration of dyadic dynamics.
Finally, female readers may have also benefited from more practical advice on how to handle these dynamics, or how to get out safely.

- SUMMARY

#1. Lack of Intimacy: Friends But Not Couples

John Gottman in *The Man's Guide to Women* says that the biggest complaint of women in relationships is the lack of intimacy and emotional connection.

What men should know is that with more intimacy and connection not only they can also enjoy a better relationship, but they can also fix their two major complaints: too much arguing and not enough sex.

Emotional intelligence is key to fixing relationship problems related to intimacy. Here are two articles to help you fix the lack of intimacy:

- Build shared meaning
- Turn towards

#2. Emotional Unsafety: Fear of Being Vulnerable

In some bad relationships, partners are afraid of opening up and sharing intimate details.

They hold back on affection and signs of love in fear they might be spurned.

Amir Levine in The *Attached* explains that feeling secure in the relationship makes us feel secure in life. Not feeling secure in our romantic relationships instead makes us feel insecure about life.

To fix emotional unsafety both partners need to look and act in the relationship as a sanctuary to being oneself. And they both must restrain to use any personal details as a tool to attack and undermine their partners during arguments -which amounts to emotional abuse-.

- Example of an emotionally unsafe relationship to avoid

#3. Lack of Interest in Partner's Life

It's simple:

When someone is interested in us, we feel like they care. And if they're not interested, we feel like they don't care.

Being interested in our partners also enables intimacy, because it allows us to get to our partner more than anyone else.
When we feel like our partners know us better than anyone else, we feel bonded with them.

Knowing our partner is not something that we do once and forever. It's a continuous interest and curiosity that we keep for our partner.

- How did their day go
- What do they think about the latest scandal
- Why did they decide to vote for this candidate
- How do they feel about the new boss
- …

Keeping curious about our partners is also a way of saying "I care about you".

As a bonus, a common refrain of people who develop affairs is that “the affair partner understands me so much better”.
Knowing each other well and updating that knowledge with curiosity also becomes an antidote to affairs.
As one woman said:

> *I share all significant events with my husbands. How could I have an affair, I’d have to immediately run and tell him about it*

#4. Ignorance of Our Partner: “He Doesn’t Really Know Me”

This is the consequence of a lack of interest.

Many relationship experts agree that a crucial element that makes couples stick in the long run is a good friendship.

It can be hard to develop a strong bond though unless we know each other. Couples that don’t know each other well cannot feel understood and cannot develop a strong bond that transcends all other relationships.

- How to get to know your partner

As an example of how lonely it can be to live with a partner who doesn’t know us, I like this scene with Jack Nicholson:

#5. Unmatched Attachment Styles

Attachment style mismatches are an extremely common relationship problem.

Most people miss both the warning signs and the fixes though because, well… Very few people know about attachment styles.

Attachment styles in a nutshell

In a nutshell, people are categorized through attachment style depending on how they stand in relation to intimacy (here’s a quiz to find out where you stand).
Some people:

- Crave lots of intimacy and are afraid of losing it (anxious attachment style)
- Are afraid of intimacy and push it away (avoidant attachment style)
- Are comfortable with intimacy, both asking for it and giving it (secure attachment style)

You can already see from this description the worst mix you can have is between an anxious who craves intimacy and an avoidant who pushes back on intimacy.
That’s what I describe in this article as a match made in hell.

#6. Harsh Arguments: It’s Not About Arguing, It’s About How You Argue

It’s not true that arguments are an issue.

It’s *harsh* arguments that are an issue when they are not offset but more powerful and more frequent intimacy-building moments.

Arguments have a strong, strong tendency to start as they start.

That means that couples starting arguments harshly or with a heavy critical tone are likely to spin their wheels in the ugly swamps of pointless fighting.

Becoming more skilled at having arguments will mean that you will solve more problems, reach more resolutions, and have fewer and more pleasant arguments.
Here are the keys to better arguing:

1. Start gently
2. Take a break when things get too heated
3. De-escalate
4. Drop meanness and the mindset of hurting your partner

Here's how you can improve your arguments:

- Conflict management in relationships
- How to soften our critics

#7. Bad Communication: The 4 Horsemen

Communication.

How often have you heard this is the crux of all relationship problems?

Well, I've got news for you, Sue Johnson, author of *Hold Me Tight* makes a compelling case that great couples don't communicate any better than poor ones.
The key, she says, is in the emotional connection, not in the communication.

Communication overlaps with emotions

I agree with Jonson, but also partially disagree.

And research seems to be on my side.
Bad communication goes deeper than words and becomes entangled with feelings and emotions.

When you accuse your partner of a global deficiency instead of addressing the issue at hand indeed you're not just communicating poorly, but you are also negatively shifting the mood and emotions.

Communication styles to avoid

Avoid what John Gottman refers to as The Four Horsemen of The Apocalypse, such as:

- Criticism
- Contempt
- Defensiveness
- Stonewalling

And also read:

- Relationship unsolvable issues

#8. Negative Outlook: You Get What You Think Of

A negative outlook happens when the relationship has become so bad that we filter everything that happens through negative lenses.

Couples who are badly entrenched in their negative outlook see everything that happens through negative lenses.
That means that you mostly see and focus on the negatives and miss the positives.
And when you do see a positive, you spin its significance.

For example:

> ***Him***: *She is being strangely nice… She wants something or she feels guilty for being such a bitch*
>
> ***Her***: *He's being nice because his team won. If he could only care about me as much as his stupid football team…*

The antidote, for your relationship and for a better life as well, is to consciously focus on the positive instead. Here's an in-depth article:

- The positive perspective

#9. Vicious Circles: When Everything Positive Goes Out The Window

Vicious circles are what happens when you let a negative outlook take over.

Mira Kirshenbaum, an author of *Too Good to Leave, Too Bad to Stay*, says she has never seen a troubled relationship that wasn't in the vice of a mutual shutdown -what I call here a "vicious circle"-.

When we start a relationship there is a non-written rule that we will do our best… As long as our partner keeps doing their best.
And the unspoken other side of the coin is that we will retaliate if our partner hurts us.

Little by little, each partner feels they are in debt and that they have to receive before they can start giving again. But so feels the other partner. The result? There is little giving in the relationship while they are both acting hurt and entitled.

- Here's how to fix a vicious circle

#10. Refusing Influence: When "Being Right" Kills Cooperation

Accepting influence means listening to what our partner says and taking it into account.

Not accepting influence means doing it our way without consideration for our partners.
It happens relatively often that, especially men, are not very open to accepting their partners' influence. And the impact is huge: More than 80% of couples who don't accept influence split up.

How to accept influence

How do you accept more influence, then? It's a simple shift, yet one of the tectonic proportions: you must go from "I" to "US".
And believing that there can be no win unless both partners are either on board or accept the decision.
Here's more information on the subject, including examples:

- Accepting influence
- Power hungry partners

#11. Power Struggles: When Winning Kills Cooperation

A consequence of refusing influence is that a relationship becomes a power struggle.

Partners think about how they can win instead of winning together.

Unluckily much dating literature for women and for men focuses on power games which don't always lead to the best relationships you can have -unless you're able to make a U-turn for the relationship-.
Some manosphere self-improvement circles like The Red Pill also teach men how to win and how to control

relationships instead of how to be successful at relationships as a team.

Here are some typical power moves:

- Becoming the prize
- Make him value you more
- Break up threats

#12. Resentment: When Fights With No Fondness Turn Love Into Bitterness

Bitterness is the feeling you get when the relationship is based on power struggles and games.

Partners caught in a vicious circle and mutual shutdown are also often bitter toward each other.
And of course, partners who use the four horsemen of the apocalypse are also often bitter towards one another.

The antidote is:

- Fondness and admiration

13. Affairs: The Ultimate Betrayal of Trust & Bond

Affairs are traumatic events which in a matter of minutes within the discovery shutter trust and goodwill.

- Signs your partner is cheating
- Why do people cheat
- The stages of an emotional affair
- Myths and facts of infidelity

And most important:

- How to prevent cheating
- How to recover from affairs
- Making your relationship cheat-proof

14. Ambivalence: When Partners Are Not All In

Ambivalence is straddling the fence, not knowing whether you want to stay in the relationship or not.

It's one of the major relationship problems because you stop giving fully, you second guess everything and you keep your options open.

The antidote, simply, is to decide.
But of course, deciding is not always is, and this is a really good article to help you decide:

- How to know when to break up (or stay)

#15. Dysfunctional Relationship Dances: When Couples Get Stuck In Poisous Patterns

Dysfunction relationships can actually stay together for a long time. However, they are simply not optimal.

Growing out of a dysfunctional relationship sometimes means growing as individuals first and foremost, because each partner enables the other like two planets in each other's orbit.

This is an article on some of the most typical dysfunctional relationships:

- The most common dysfunctional relationships

#16. Abusive Relationship

Fixing all the relationship problems will NOT help if you are in a relationship with an abusive man.

Doing any fixing with an abusive man is actually likely to make the problem worse because it focuses on joint responsibility.
And focusing on joint responsibility gives the abusive partner -most often albeit not always, the man- all the excuses to keep blaming you.

But you cannot fix anything until you first fix abusiveness -which is difficult and unlikely-.
More information:

The Art of War: Summary & Review

Lucio Buffalmano · 21 June 2018 · Archived copy · Original

The Art of War is the most famous book on war, strategies, and "power moves".
Sun Tzu is the Chinese ancient Machiavelli, and the book is as much on warfare as it is on mindsets.

The Art of War – Summary

About The Author:
Sun Tzu was born in 544 Before Christ, and sources disagree on the details of his life and whereabouts.
We know though that he was Chinese, and like was a general, military strategist, writer, and philosopher.
His name is linked to this book, "*The Art of War*", which has heavily influenced Eastern and Chinese military strategy and general philosophy.

Introduction

First of all, says Sun Tzu, war is a grave endeavor to undertake and should not be started without detailed consideration.
That's why you should always start by gathering all the information available.

Detailed Assessment and Planning

The main message here is that not analyzing and not preparing well will lead to failure.
Sun Tzu describes the five fundamental factors, such as:

- mission
- climate
- ground
- command
- methods

> Failing to plan is planning to fail

Waging War

The chapter"Waging War" focuses on the costs of war.
This is a critical concept of *The Art of War* as Sun Tzu stresses that conflict is expensive and beating the opponent without conflict is always the best resolution.
If you must wage war, though, do it resolutely and as quickly as possible.

> **Everyone loses on long drawn out wars**

Strategic Attack

Destroying your enemy is not the highest form of war achievement. Capturing and subduing without fighting is.
These are Sun Tzu the best strategies for war:

- Upset the enemy's plans

- Prevent the enemy from joining forces
- Attack in the field

And worst of all, is to besiege walled cities.

Positioning

Before even moving you should think of avoiding loss.

An army should defend the existing positions until it's ready and capable to forge ahead in safety.
Don't move aimlessly, but learn to spot the opening that your enemy gives you. When you can spot a mistake, you can win with little cost and little strength.

> **You can conquer without being able to do it**

Forces

Creativity is important to win wars, but unbridled creativity can be dangerous. Creativity must be bound to reality and used in conjunction with proven, working methods.
Then it becomes a force.

Weaknesses and Strengths

The idea of this chapter is to attack when and where your enemy is least prepared and able to defend.

Make the enemy hurry to fight you, and he'll arrive tired. Appear where he doesn't expect you, and you'll catch him by surprise.
Hold positions that cannot be attacked and attack positions that are undefended or hard to defend.

My Note:
This chapter was very good and in many ways, it echoed the work of contemporary Robert Greene in "The 48 Laws of Power".

Maneuvers

Direct conflict is dangerous and costly, but sometimes it's necessary.

This chapter focuses on the logistics of war. It's good, but I don't think it's going to be useful to a modern reader. One because a modern reader is not very likely to be a general, and second because if he actually is a general, war has changed dramatically since then.

Adapting to the Situation

Every situation is unique, but you can recognize familiar elements in any unique situation.
While we want to stay creative, we also want to adhere to proven methods that work.

Movement and Development

This chapter details the movement of an army. It might be more antiquated given the modern warfare of rockets and airplanes, but some elements are still valid for infantry.

Some general rules, such as:

- Camp on high terrain
- Don't climb high ground to fight

- Move away from the river if you cross it
- Attack when the army is halfway through crossing a river

Six Field Positions

This chapter looks at the different types of terrain and the advantages and disadvantages of each.
These are the six types of terrain:

1. Accessible terrain
2. Entangling terrain
3. Temporizing terrain
4. Narrow passes
5. Precipitous heights
6. Far away

For example, accessible terrain is easy to leave and to go back.
Entangling terrain that is easy to leave but hard to go back should not be used to launch an attack. Because if the attack fail it's not easy for you to retreat to where you came from.

Nine Battlegrounds

Sun Tzu lists nine types of battlegrounds:

1. Dispersive (own territory)
2. Facile
3. Contentious
4. Open
5. Intersecting highways
6. Serious
7. Difficult
8. Hemmed-in
9. Desperate

Fire Attack

There are five ways to use fire in war, says Sun Tzu says you can burn:

1. Soldiers in their camp
2. Storages
3. Baggage trains
4. Arsenals
5. Hurling fire among the enemy troops

Intelligence

The Art of War makes the point that there is no such thing as an objective reality, but different interpretations of it.

How closely we interpret reality is a major element of winning or losing a war.
In a sense, all wars are wars of information.

My Note:

Sun Tzu was incredibly prescient here.

> **All wars are wars of information**

How to Use The Art of Wart in Everyday Life

Avoid wars whenever you can
This is not just for real, literal wars, but also verbal wars, legal battles, and long-standing "frenemies" relationships.

Only fight wars you can win
Don't willingly enter into wars that are difficult for you to win.

Approach life strategically
Generally speaking, applying the Art of War to your everyday life is all about thinking strategically.
I highly recommend:

- Power Intelligence
- How to be Machiavellian

And, of course, the best of all: Power University.

CONS

Translations Ruin It
With *The Art of War*, there isn't just the "simple" complexity of translating a (very) different language. But we're talking about translating a different language of a different era. Modern Chinese is also nothing like Sun Tzu's Chinese.

It Aged
Some principles of *The Art of War* stand the test of time and will keep standing the test of time for a long time to come.
But some other parts aged quite a bit.
For example, political strategies Bruce Bueno de Mesquita makes a compelling case that Sun-Tzu is perfect for despots, but not as good for democratic leaders (see "*The Dictator's Handbook*").

PROS

Deep Principles
Some principles, like don't fight if you don't have to and fight quiet if you have to, are really good not just for war but for everyday life.
The same can be said for preparation.

The Art of War – Review

The Art of War is the military equivalent of what "*The Prince*" is for political machination: a landmark text.

The Art of War is not just military warfare though and it goes beyond, encompassing philosophy and life strategy.

When it comes to actual strategy, If I had to pick *The 33 Strategies of War* and *The Art of War*, I'd probably recommend the former to most readers as it applies better to social interactions.

But Sun Tzu is also a monument to human ingenuity and a piece of history in itself.

Relationship Power Dynamics

We start with what's relevant to this website: power dynamics.

- **How to Maintain Attraction**: the basics of power, control, and attraction in long-term relationships
- **The Stages of Power**: How power changes in intimate relationships depending on the stage of the relationship
- **How women control relationships**: in most relationships, women are the prize and have true power. I call this role "the judge", and it also exists in social relationships
- **When men and women struggle for power**: this is what happens when there is no clear leader and man and woman struggle to one-up each other
- **Power hungry-partners**: mostly men, but in a few exceptional cases it can be women. It describes why people very high in power-seeking don't usually make for great partners

Below are articles less focused on power dynamics, but equally helpful to master intimate relationships.

1. Picking the Best Partner

There are several layers you want to take into account when looking for a great partner.

1. Personal Quality

Learning to recognize your partner's quality today is the greatest investment you make in your tomorrow:

- Traits of high-quality women

- Traits of high-quality men
- Traits of low-quality women
- Traits of low-quality men

2. Finding a Loyal Partner

3. Attachment Styles

One of the most important traits you need to have compatible with your partner is attachment style.
It's as important as it is underrated. Few people talk about it because few people know about it.
Read here:

- Attachment styles overview
- Anxious attachment style
- Avoidant attachment style

What Makes Strong Relationships

1. Accepting Influence

Accepting influence means listening to your partner and taking into consideration what they like and prefer.
Couples who don't do it split up more than 80% of the time.
Read:

- Accepting influence
- Power hungry partners

2. Emotional Connection

Sue Johnson, author of Hold Me Tight says that great couples don't communicate better than poor couples. They are just more emotionally attuned.
Read:

- Emotional connections: turning towards

3. Positive Outlook

Couples who have a strong sense of relationship see each other positively.
And this is true for life in general as it is for relationships. Having a positive outlook means that you interpret negative behavior as the exception and positive behavior as the norm.

- The positive outlook

4. Fondness and Admiration: Staying in Love

A great way to stay focused on the positives and stay in love forever is to cultivate a culture of fondness and admiration for our partners.
Read here how to do that:

- Fondness and admiration

5. Knowing Your Partner (Love Maps)

Knowing our partner and keeping alive the curiosity it takes to update that knowledge says "I care about you".

What Breaks Relationships

And here's what has been proven to destroy relationships instead (here's a more in-depth overview article focusing only on relationship destroyers)

1. Ambivalence

Ambivalence is not knowing whether to fully commit or not. You can't have a good relationship while being ambivalent.

- Fix ambivalence here

2. Bad Conflict Styles

Arguing well is not necessarily a plus, but arguing badly does break the relationship apart.

- The secrets to arguing well

Avoid the following, also called The Four Horsemen of The Apocalypse:

Unsolvable Issues Bitterness

Conflict resolution is great, but don't go thinking you'll solve all problems.
Some relationship issues stem from core differences, which makes them perennial issues.
Here's how to deal with them:

- Solving unsolvable issue

4. Vicious Circles

When you argue badly, you accuse your partner of your unsolvable issues, and you lack most of what makes an awesome relationship, a bad thing starts happening: vicious circles.
Vicious circles are how most relationships end:

- Understand vicious circles and prevent them

Relationships to End

1. Abusive relationships

Abusive people rarely change, which means you can't work on a relationship with an abusive partner.

There are as many bad women as bad men, granted.
But most abusers are men, so this list mostly focuses on men.

You must avoid these guys altogether:

2. Bad Relationship Dances

Relationship dances do not necessarily spell doom and some of them are not the end of the world (parent/child for example).
But still, if your goal is as awesome as you can be:

- Read here the bad types of relationship dances

3. Combative relationships

Great relationships should be sanctuaries of safety. That means no one-upping, no undermining, and not too many power games.

Summary

About the Author:
Niccolo Machiavelli was an Italian diplomat and politician in the Florentine Republic.
He was also a philosopher and writer thanks to his book "The Prince". he has often been called the father of political science and modern political philosophy.

Introduction

A quick foreword: Machiavelli has become a synonym for cruelty, backhanded tactics, and amorality.

I beg to differ.

While he writes with no moral and ethical filters and advocates for "whatever works", his message is that it's best

for a ruler to create a peaceful and prosperous reign.

Could anyone disagree with that?

If a good ruler gives way to those who are not good, guess who will rule?
Let's not leave the world to the bad apples. Let's all learn some Machiavellianism for when we really need it:

Look at The Reality of How Things Are

Long before Ray Dalio made "love reality" a principle, Machiavelli taught us to look at the reality of what works and what people do, and not what they say and profess.

This is a principle that we espouse on The Power Moves.

1. Learn to Be Bad

Machiavelli says:

> A good person is bound to be ruined among the great numbers who are not good.

And that's another principle this website wholeheartedly embraces.
The prince who wants to hold on his power must learn how to be bad when necessity arises, says Machiavelli.
Read more here:

- Why to be good you need to be bad

> **A good person is ruined among the great numbers who are not good**

2. Appearances Reign

Once you learn to be bad, you need to learn how to *appear* good.
The vulgar crowd will always be swayed by the cover of the book, says Machiavelli. And the vulgar far outnumber everyone else.

> **Everyone sees what you appear to be, few experience what you really are**

Also see:

> The Psychology of Political Manipulation

3. Kill, Don't Wound

I love this one.

If you need to wage war on an enemy, don't hit lightly so that take revenge. But either show no animosity or destroy them.

So if you have a bad boss for example, either you get him fired or accrue all the evidence to sue him and win, or be nice to him until you can. As Sun Tzu says: only wage wars you can win.

> If you must injure a man, make your injury so severe that you need not fear his revenge

4. Do the Popular, Delegate the Difficult

Delegate those tasks that are difficult, unpopular and likely to make you enemies.

And keep for yourself the tasks that are popular and that will make you loved.
Cesare Borgia for example sent one of his captains to subdue a rebellion with strength and cruelty. Once the region was under control, the people hated the new rulers.
Borgia then had the captains killed in public display on the square. And *he* provided food and entertainment.
Now everyone yells "long live to Cesare Borgia".

My Note:
Wow. This was really, deeply amoral.
I would probably draw the line at this behavior unless you could find some terrible captain deserving of execution and you send him to a final mission.

5. Mental Power: Growth Mindset

I feel that Machiavelli might have been one of the first authors to understand the power of a growth mindset and of an antifragile ego.

He says that the best way to avoid the dangers of flattery and the best way to learn what's really going on is to let people know that the truth does not hurt you.
Genius.

6. Combine Cunning AND Strength

Strength should always be accompanied by cunning. And cunning should not exist without the backing of strength.

> **Always back your words with the power to enforce them**

7. Assess People by Those Around Him

… Much before Jim Rohn ever did, Machiavelli said that the first way to estimate a ruler's intelligence is to look at the people he has around him.

8. It's Safer to Be Feared Than to Be Loved

And finally, the rule Machiavelli is most famous for.

Being loved is good, but it's based on the principle of obligation and reciprocity. And those are easily broken by people's natural propensity to self-interest, says Niccolo Machiavelli.

If a prince should choose between being feared or being loved, he should go for being feared.

However, Machiavelli also says, the goodwill of the population your rule on is better than any fortress you can build.
That's why he says that an act of violence and cruelty is OK, but you should then focus on bringing peace and prosperity.

Real Life Applications

One act of cruelty!
Machiavelli says that the prince must sometimes use violence and cruelty, but once he has achieved his goal he should revert to building goodwill.

> If cruelty is needed: commit them all at once

Win by deception
Don't win by force when you can win with deception. Saves you energy and time and it's cleaner and neater.

> Never attempt to win by force what can be won by deception

Back your claims with the strength to defend them
The wise man knows that nothing is as unstable and uncertain as power or fame not founded on his own strength.

> You own nothing without the strength to back your claim

CONS

Needs some historical background
Italy of Machiavelli's days saw a proliferation of smaller states and fiefdoms that was heaven on earth for power games and power moves.
But to get the most out of The Prince some background knowledge will help because Machiavelli doesn't always do it for the readers.

PROS

Great wisdom
What Machiavelli says makes a lot of sense.

Good cause
At the end of the day, Machiavelli recommends all his underhanded techniques for a good cause: installing a good ruler, bring peace and freeing Italy from the barbarians.

Review

The Prince is a classic of political science and a fundamental book for this website and its mission.

Machiavelli's fellow countryman Giulio Andreotti, the most successful Italian politician from the second world war till this day, was rumored to sleep with a copy of "The Prince" on his bedside table.

Andreotti, a political figure in the Christian-Democrat party who also sought Christian voters coined the quote we often use here:

> To think bad you may commit sin, but you get it right

The Prince: A Crucial Text for Self-Development

The Prince is a fundamental text for true self-development and growth.

What do I mean by that?

Well, it's one of the central messages of this website.

And it's that good people need to learn to be bad.

Incidentally, that also makes "The Prince" one of the best books for social well-being.

If people with morals and with good intentions don't learn how to be bad, power will always go to the bad apples.
It's simply a law of nature: while the good guys shy away from what it takes, the bad ones stop at nothing.
Of course the bad apples win out!

We need good people that know how to be ruthless instead. We need good people who take the power and then go back to being good.

Imagine if better candidates had known how to debate against Trump.
Imagine if the Assad of the world had met with a good-natured, but equally ruthless and more Machiavellian foe.
Imagine if the Hitlers of the past and of the future will always need good-natured, but equally ruthless and more Machiavellian foes.

Now you see where I'm going: we need good people equipped with the same weapons of the bad people!

Godfather of Power Strategies

The Prince is the Godfather of power dynamics literature, including the modern "The 48 Laws of Power", "The 50th Law" and "33 Strategies of War".

And, in a way, we find a touch of Machiavelli also in the message of Jordan Peterson, author of 12 Rules for Life (in the idea of the need for evil in good people).

The Prince is not as easy and not as "marketable" as the above titles, which were written with big sales in mind.
But Machiavelli is a genius, and The Prince is a classic.

A Complete, No BS Guide To Mastering Social Skills

Studies show social relationships are the biggest determinant of an happy and satisfactory life (Diener & Seligman) while Robert Greene says that success without social intelligence is not real and will not last.

However you slice it, social skills skills are possibly the most importance competence you should focus on in your life. Social Mastery Guide is here to help you along.

This guide will cover, as quickly as possible, all the basics you need to go from awesome but socially underdeveloped caterpillar to awesome social master gracing the people around with his presence

Mindsets

Any external improvement goes hand in hand with an internal improvement. And social skills are no exception: they start with you.
Below are the most important mindsets you need to develop.

#1. Develop a Growth Mindset

At the core a growth mindset says that you can get better -grow, indeed- in whichever endeavor you choose.
A growth mindset is at the core of any meaningful improvement effort, including improving your social skills.

To develop a growth mindset you must..

#2. Develop an Ego to Help You Move Forward

You probably think of yourself as not good with people.
And you're ashamed of "looking bad in public".
That's all normal, but to improve socially, we need to change.

You will build here an identity that will support your new social persona through beliefs and actions. You will become the kind of person who enjoys social interactions -both successful and unsuccessful-.
Your ego will not stand in the way anymore but it will grow stronger with failures.

To do that, you first need to choose the right identities for yourself, which are..

#3. Further Key Mindsets

The two biggest foundation are growth mindset and identity + ego. The following ones are also very helpful:

- You'll die… Soonish (and that's empowering)
- You're not that special after all (and that's freeing)
- Nobody owes you anything (overcome entitlement mentality)
- Leverage pain and failure for massive action
- Overcome limiting beliefs
- Leveraging loneliness to become a better -and more social- person

Social Skills

#1. Remove Physical Fear: Martial Arts

I understand it might be odd that the very first item on a social skills guide is to "learn to fight". After all socializing is about making friends, adding value and bringing people up, right?

Right! That's true.
Yet, when it comes to a lot of social fears people have, it's often rooted in visceral physical fear, and that's where martial arts…

#2. Learn How Not to Be a Social Burden

Before starting to get *good* with people, you want to avoid the typical behavior that make you *bad* with people. These articles show you the biggest mistakes that make people social burdens.

As a Man Thinketh: Power Starts With Thought, But You Need More (Book Review)

Lucio Buffalmano · 24 June 2018 · Archived copy · Original

As a Man Thinketh teaches readers to harness the power of thought, which, the author says, is the most important influence in our lives.

TPM Strategic Note: Thoughts are a foundational aspect of an empowered mind, but not enough
Your internal monologue and "Self-identity" act as the foundational 'operating system' for your feelings, emotions, and behavior. While James Allen correctly identifies that thoughts matter, **this book lacks both the modern psychological evidence and the tools and tactical "how-to" required to engineer an empowered mind**. At TPM, we view this book as the "Level 1" realization, t**o be supplemented with modern science and how-tos.** See our:

Key Takeaways

- To be the master of your life, be the master of your thoughts
- Good thoughts lead to a happy and successful life
- Poor thoughts lead to an unhappy and unsuccessful life

Overview

About the Author:
James Allen was a British writer known for his inspirational books, most well-known for his book, "As A Man Thinketh". He has been a pioneer of the self-help movement based on positive thinking.

Introduction

James Allen likens the mind and our lives to a garden.
If you plant the seeds of good thoughts in your mind, you will reap a healthy psychological state and a good life.
If you allow it to run wild bad weeds will poison your thoughts and ruin your life.

Chapter 1: Thought and Character

James Allen says that we are literally what we think. Our character is simply the sum of all our thoughts.
But that also gives us extreme power, because by changing our thoughts, we can change our character.

Indeed, "As a Man Thinketh" says that if we want to change our character and our situation in lif,e all we have to do is change our thoughts.

> **A man is literally what he thinks**

Chapter 2: Effect of Thought on Circumstances

The outer conditions of our lives are a reflection of our inner thoughts and our inner state.

The inner thoughts and our outer condition are not exactly the same because external conditions do have a major influence, says Allen.

However, there is a relation between the two and we can have a major influence on our outer condition with the way we direct our outer condition.

> **We are each the masters of our own destiny**

Locus of Control: You're in Charge

Since we can change our circumstances and our lives, the author makes the point that blaming and complaining are useless.

More than useless, actually, they poison our thoughts.
And he makes the point we all take and accept more responsibility in life.

My Note:
This concept is called “internal locus of control”. It means you believe you are in control of your life instead of being shaped by external circumstances and events.
It’s indeed of great benefit for you to switch to an internal locus of control and accept extreme ownership of your life.

Chapter 3: Effects of Thoughts on Health and Body

The mind influences our body as well.

Allen says that habits of thought will produce physical effects on our bodies, and if our thoughts are good, they will produce positive effects. If our thoughts are negative, they will produce bad effects.

While we might think that thinking about the risks keeps us safer, always thinking about diseases makes it more likely we’ll get them, says As a Man Thinketh.

> **A sour face doesn’t happen by chance: sour thoughts made it**

Good Thoughts Lead to Healthy Habits

As a Man Thinketh also links our thoughts to actual habits we form, which makes a lot of sense.

If we think about our health and care about it, we are more likely to form positive habits of healthy eating and exercise, which will lead to a better life.
Also read The Power of Habit.

Chapter 4: Thought and Purpose

As a Man Thinketh has two key messages in this chapter:

1. You need a purpose in life
2. Doubts and fears stand in the way of achievement

People without a purpose have too much time on their hands to focus on fears, worries and petty problems.
And in turn, worries, fears, and doubts are the greatest enemies of achievement.
They distract you, thwart your willingness to take action, and bring upon exactly what you are afraid of, like a self-fulfilling prophecy.
If you want to forge forward, you need to clear fears and pessimism from your path.

> **There is no accomplishment until thought is linked with purpose**

Chapter 5: The Thought-Factor in Achievement

The chapter states that all achievements in life -or lack thereof- are a direct consequence of his thoughts.
However, he also adds an important element: hard work.

The high achiever in As a Man Thinketh must sacrifice a lot to accomplish a lot.

Chapter 6: Visions and Ideals

Dreams and visions underpin reality, says James Allen.

Dream big, and you will achieve big.

> **The greatest achievement was once a dream**

Chapter 7: Serenity

Calmness of mind is the last stage of wisdom, says Allen.

My Note: To achieve serenity, meditation can be helpful. Here are a few good resources:

- The Power of Now

As a Man Thinketh in One Quote:

> Watch your thoughts, for they become words.
> Watch your words, for they become actions.
> Watch your actions, for they become habits.
> Watch your habits, for they become character.
> Watch your character, for it becomes your destiny.

TPM Analysis

Go through this article on naive self-help since it addresses many of the pitfalls common to books like *As a Man Thinketh*:

> Naive Self-Help: 10 Most Dangerous BS to Avoid

There's more than thought

Albeit *As a Man Thinketh* advises you to *work* on what you want, one should still avoid the common mistake of thinking that thoughts and states of mind will do the work for you.

Thoughts are important to support action, but a**ction only will give you real-life results** like status, respect, and attraction.
Action achieves goals.

So learning to act despite thoughts is crucial:

Build a mind that acts *independently* of thoughts

Thoughts are crucial to a good and healthy inner life.

But I find that **the capacity to act despite negative thoughts is crucial to being an effective man.**

This is how an empowered and masculine man thinks: I feel great about myself, but I don't need to feel great about myself to do what I must do.

Learning to act even when in doubt or in fear is a superpower that allows you to win even when your mind is doubtful.

And that's habit, discipline, and the power of will.

PROS

Short and to the point
I write this of very few books, but AS a Man Thinketh is one of the very few books that adds no fluff.

Simple yet important insight: start with the mind
Most of our success and most of our behavior and sub-communication starts with our minds. This is something we agree on at TPM, and part of the approach we call 'from the inside out'.

See more here:

- **Foundations of self-development**: starting from the mind, letting good body language and behavior follow, and then earning external world's achievements

Review

As A Man Thinketh offers a single concept based on nurturing positive thoughts, a foundational yet insufficient aspect of an empowered mind.

James Allen has been a pioneer, although the successors turned more commercial and woo-woo, including *The Power of Positive Thinking*, *The Secret*, and various new age figures who peddled the same idea but framed it as science (see Joe Dispenza).

It's important to remember that while thoughts are important, **it's the capacity to act despite the thoughts that yields real-life results.**
And while thoughts are an important aspect of an empowered mind, you need to understand how to have better thoughts, and of what kind.

How to be Charming: The Art of Social Seduction

Lucio Buffalmano · 25 June 2018 · Archived copy · Original

Charm is the art of social seduction.

Once you learn how to be charming you naturally become higher value, more popular, and sought after.

This article explains what charm is and how you can become more charming.

What's Charm

Google Dictionary defines charm in very simple terms.

> Very pleasant or attractive

And that's exactly how it is.

Pleasant is the most important part: if you are not pleasant you can't be charming.

But the upper echelons of charming are not "either/or" but are *both* pleasant and attractive.
Attractive can be, and often is, sexually attractive.

But charm does not imply sexual attraction. An old lady can be attractively charming.
Charming is *social* seduction, not necessarily sexual seduction.
Thus, **even sexually unattractive people can still be charming**.

Traits of Charming

The traits of a highly charming personality are a mix of social skills, high personal value and warmth:

- Pleasant
- Calm and comfortable
- Warm & welcoming
- Uplifting
- Fluid,
- Socially in control, confident & calibrated
- Bonus: sexy (helps increase the value you share)

Charms and Social Skills

Charm happens at the intersection of highly developed social skills and high personal value.

High personal value includes a certain inner power and confidence.
We could define it as "comfortable in one's skin" inwardly.
And, outwardly, it turns into social confidence.

You can't be charming if you're self-conscious.
An inner lack of comfort projects outside an unappealing vibe of nervous and self-consciousness.

Focus on People

Social charmers have very well-developed social skills and they focus on the people around not on themselves.

They ask questions, take people under their arm, build people up and tell everyone how wonderful it is to see them. They also save people's faces and help mend disagreements.

If charmers were a book, they would Dale Carnegie's *How to Win Friends*.

Why Charming is Good

When the charmers make people feel good, everyone will love them (law of social exchange).

And the more people will love them, the more they will push the social charmer up in the social hierarchy.

That's the charmer's virtuous cycle.

Charmers and Value

Why is it important for charmers to be high-value?

Only high-value people can effectively build others up because you must intrinsically be high-value to pull others up.

The higher the personal and social value of the charmer, the more he can build up the people around and make them feel great.

How to Be Charming

Keep in mind that each single entry here is a skill, a talent, or an art in itself.

We won't go into the details of each one of them, but here's a quick primer on what you need to be charming:

#1. Love People

You can fake anything in life, of course.

And probably many politicians who are labeled as “charming” do overplay their love for people and social interactions (see politicians’ manipulations).
But in the long run, it’s way better to develop a natural liking for people and social interactions.

Here’s what charmers love:

- People
- Social interactions
- Networking
- Getting to know people

#2. Converse Well

Conversation is the invisible glue of social interactions, and being a good conversationalist is the bread and butter of charming.

Talk Little About Yourself
The world is full of self-absorbed ahole, and none of them is charming.
Talk little about yourself, and be ready to ask questions back.

Focus on Others
Listen to people, ask questions, compliment when you feel they’re looking for approval and take mental notes on what makes them tick. The more they come to crave your approval, the more power you get.

Humor
Humor is not necessary, but it helps.
Self-deprecating, uplifting or slightly sexual humor are particularly great.

See an example of Bill Clinton at the inauguration of Bush’s library:

P.S. Laura Bush is charming as hell.

#3. Build People Up

Charming is all about making the people around you feel great.
You can use:

- Compliments
- Self-deprecating humor
- Pompous introductions
- Saying others are way better

Mohammad Ali does it here with Tyson:

Ali is charming because he deprecates, looking humble, and builds Tyson up. Tyson loves it and so does the crowd (just listen to the cheering).
In turns, Tyson says Ali would win, which makes for a memorable skit that raises both men’s values.
Imagine if instead Ali had answered with “we will never know”.

#4. Remember Names & Details

Remember people’s names and details, then ask more about them as the conversation progresses or when you see

them later on. People will love you for it.

#5. Acquire As Much Status As Possible

The higher you are in the social hierarchy, the easier it is being charming.

One of the less understood reasons is that being high in the social hierarchy allows you to give a bigger "lift" to the people around you.

It also works socially, as everyone will admire you and think you are tremendously magnanimous -and charming-. Obama does this often, with his famous fist bumps to janitors and small shop stops.
See an example here.

#6. Make Friends

An easy way to be instantly charming is to walk into a place and know everyone.

People saying hi to you and you saying hi to everyone will immediately boost your social value (at least relative to the people in the venue).
A great scene to understand this concept is the scene from "The Goodfellas" where Harry takes Karen out).

#7. Be Smooth

Sometimes it's easier to understand things by looking at their opposite.

By "smooth" I mean the opposite of nervous and self-conscious.

Charming people relish other people and social interactions, and they happily move around the room smoothly and fluidly.

Thanks to their social skills they enter and leave groups with ease, flowing gracefully around the room.

#8. Stay Positive in Social Adversity

It's easier being charming when everything is swell and we're flying.

What differentiates the top charmers from the lucky break charmers is how they keep their composure when things don't go their way.

Keep a good attitude in front of a critique, smile at a social jab and you will show charming superiority.

> **Gosling**: (remains cool despite the aggression) That's one way to treat people

That's a charming way of answering to what might seem a social slight.

It shows superiority and a strong frame in the face of (social) adversity.
Here's another fantastic example with George Bush.

#9. Be "High-Power Humble", Avoid Social Climbing

Effective charmers are high-power.

And once you're high-power you can -and should- allow yourself to be humble.
Low power and humble equals self-debasing. But high-power and humble instead is charming and affable.

Humble people also avoid the "status rat race" like the plague.
The status rat race entails attacking and demeaning others to social climb and seem better by either "winning", or by

comparison.

Hence, avoid:

- Social climbing (example with Obama)
- Alpha male posturing
- Undermining others

These are all signs of combative behavior that make you come across as unfriendly, overly aggressive, and most certainly not high-status.

#10. Positive Vulnerability

Charming is different than the super confident, the cocky or the charismatic.

Charming is about relating to others, and vulnerability helps us relate.
A strong frame of confidence with the odd vulnerability is supremely charming.

Look at the charming master of them all, notice the vulnerability in his aura, how he shows cracks of discomfort that only make him more charming and attractive:

Warning:

- **Don't over-do vulnerability**, or you become too weak and feminine

Charming Men Examples

And here are a few examples of charming men and women:

#1. George Clooney

George Clooney is the archetype of the charming man.

Almost any video you take of Clooney and any real life interaction it's going to be an example of pure charm.

Good-natured, even on questions he doesn't like, gets a "woooh" from the ladies with the underwear joke and builds up everyone around him (except for his date, typical of avoidants, but that's another topic).

#2. Bill Clinton

If Clooney is the archetype of the charming sexy man, Bill Clinton is the archetype of the charming political man.

Notice how he meets a random man. And immediately puts his arm around him. And asking "where are you from".

#3. Leonardo di Caprio

Catch Me if You Can is a movie highly based on social charm:

Notice the strategic vulnerability at minute 1:05.

Strategic is the keyword.

If he had pretended not to notice the sexual game, he would have looked stifled or clueless. But if he had jumped on it, he would have looked to hungry and eager.
His fake coy reaction instead is smothering sexy charming.

#5. A Charming Hostess

I have been looking for a great video of some top charmer woman, ideally one hosting an event and greeting people.

I couldn't find one, but I remembered of this amazing story from Leil Lowndes' *How to Talk to Anyone*, I quote without paraphrasing:

The best example I heard of this high sensitivity was from one of my clients.

She was invited to brunch at the home of a wealthy socialite known as "Lady Stephanie."
Lady Stephanie's home was filled with beautiful objets d'art. Not the least among them was an exquisite collection of extremely valuable Fabergé eggs, which all the guests admired.

At the end of the elegant champagne brunch, my client told me she was walking out the door chatting with several other guests.
Just then, Lady Stephanie sidled up to one woman leaving at the same time as my client. "Oh, I'm so happy you were admiring my Fabergé collection," Lady Stephanie said, sliding her hand into the pocket of the guest's mink coat and plucking out one of her priceless eggs. "You must have wanted to see this one in the sunlight. Come, let us look at it together. It does reflect the bright light beautifully."

The mink-clad thief gulped and furtively looked around to see who had witnessed her gentle entrapment. My client and everyone in the foyer saw what happened, but took Lady Stephanie's lead and pretended naïveté of the attempted heist.

Carrying the charade a step further, Lady Stephanie and the sticky-fingered guest "admired the egg in the sunlight." Then Lady Stephanie, with her Fabergé egg secured safely between her perfectly manicured fingers, marched home to put the treasure in its rightful place. The attempted egg snatcher crawled back to her car, from her last attendance at Lady Stephanie's coveted bashes.

The hostess let the foiled filcher get away with a few slivered shreds of her ego left intact.
Why did Lady Stephanie come out ahead? Everyone who witnessed—and subsequently heard about—the thwarted burglary has renewed respect for Lady Stephanie. Snaring the thief, yet sparing her pride, helped Lady Stephanie keep her reputation of "hostess with the mostest".

Examples of Non-Charming Behavior

And now an example of behavior where charm was badly needed but everyone failed badly at social grace.

See the Oscar blunder here:

Here's the anatomy of the bull in a china shop:

1. The guy who says "we lost by the way" shows a bad temper about losing
2. The bald one is too socially crude in taking the winner's card out of Betty's hands (the presenter)
3. Beatty is terribly defensive and instead of easing the social tension he *increases* it
4. The co-hosts screaming "Warren what did you do" comes across as piling up

See here an analysis of that whole situation.

Sex Appeal and Charm

Charm makes both men and women high quality, but not necessarily sexy.

Let's examine a bit the relationship between charm and seductive sex appeal:

Men, Charm & Sex Appeal

For men who want to be successful with women, charm is *very* helpful, but not necessary.

You can be successful with women going through life as a lone wolf with limited social skills, by being edgy and

even by being an asshole (the approach of some Red Pill guru, though better to move beyond asshole game).

That being said, knowing how to turn on the charm is an important edge both socially and in dating.
Here is a great scene of charm with sex appeal from the movie “Eyes Wide Shut”:

Women, Charm & Sex Appeal

Charm in men denotes social confidence and a certain level of social dominance.
Building people up is also usually a sign of either social superiority or social equality (when lower-status men do it it’s kissing up).

When women do it too much, they risk coming across as overbearing, and if they look too dominant they lose in femininity.
That’s why women who want to keep a broader sex appeal should be careful to adopt a more feminine style of charming.

That being said, a slightly more demure social charm in women is also a sign of very high quality.

Risks of Charm

In *The Art of Seduction,* Robert Greene says that some people view charmers as slippery and deceitful.

This is especially true for direct and masculine ‘alpha types‘ people who don’t appreciate the charmer’s self-effacing and pleasing attitude.

Charmers tend also to be what during the European religious wars were called “politique”, such as people who don’t take extremist stances and prefer dialogue and moderation.
This is another type of crow where charmers don’t do too well in: extremists and hardliners don’t like them indeed.
They tend to see charmers as too intellectual, refined and slippery.

Leading in Turbulent Years

During turbulent years political charmers also suffer.

People look for conviction, charisma and strength in leaders.
The appeasing charmers tend to lose out to the charismatic men.

If you want to lead during difficult and revolutionary times, that’s when you should drop your charming ways, scream louder and embrace strong positions.

SUMMARY

Charming is a mix of social skills, personal value, and sharing that value to build people up.

High personal value and high social status boost the social charmer power.

P.S.:
We helped thousands of men become more charming, higher status, and more attractive with Power University.

Lean Startup Summary

About The Author: Eric Ries is an American entrepreneur, blogger, and creator of the Lean Startup Methodology, which he explains in "The Lean Startup".
He studied at Yale and in 2010, he became an Entrepreneur-in-Residence at Harvard Business School.

Introduction

Eric Ries says that too much effort and human capital is wasted in startups that fail to leave their mark and add no real value to the world.
He believes that a good chunk of that failure is because of a wrong methodology which many entrepreneurs use.
And he aims to fix the issue with The Lean Startup.

The Determination Myth

Eric Ries says that determination leading startups to success is a myth.

It's an appealing one, because it gives us the false belief that perseverance is the key and we can all be perseverant

(I'm looking at you, Gary Vaynerchuck and Angela Duckworth!).
But it's not true, and it's an unhelpful myth.
We heard a few stories of people who won without ever giving up, but we don't hear about the many more who kept wasting time beating a dead horse.

Methodology Leads to Startup Success

Eric Ries says that success doesn't happen because you're in the right place at the right time.
And it's not the flamboyant stuff that makes success, or the dogged determination.

It's the boring stuff that leads to success. It's processes and methodology.
Startup success can be engineered following and taught.

Entrepreneurship is a Type of Management

Eric Ries says that most people in startup and entrepreneurship circles see management as dull and boring. They see management as the opposite of entrepreneurship, with entrepreneurship being instead daredevil and exciting.
But that's wrong.
Entrepreneurship needs management. A specific kind of management geared towards uncertainty

> **Entrepreneurship IS management**

What's a Startup

Eric Ries defines startup as:

> A human institution to create a new products and services under conditions of extreme uncertainty.

Lean Startup

This is startups' biggest problems:

Startups often build products that nobody wants. And they find out too late, when they spent all the budget and there's no more time to pivot.

The solution is a new way of looking at product development. A new way which emphasizes fast iterations, customers' insights, huge vision and great ambitions all at the same time.

Here's how you do it:

#1. Minimum Viable Product (MVP)

Some entrepreneurs can fall victim to analysis paralysis: talking to prospects, white board strategies and research reports.
There's no point in spending too long in the research phase: you can't predict the future on a whiteboard.

The perfect mix between no analysis and over-analyzing, says Ries, is a minimum viable product.
The quickest, simplest product you can assemble to start testing your assumptions right away,

An MPV is the bare minimum you can ship so that the first users -usually the innovators– can give you that early, precious feedback that will help you steer your development.

What if Someone Steals Your MVP?

Eric Ries says that one of the biggest push-back against an MVP is that other companies will steal your ideas.

This is something Jay Samit also discussed in Disrupt You, with the core concept being that nobody cares about your lousy idea.
And if the competitor can out-execute you once the idea is out there, you're doomed anyway.
The push behind a successful start up is to accelerate that build-measure-development feedback loops faster than anyone else.
Keeping your product under wrap, away from the feedback it desperately needs, will only make your failure more likely.

> **The only way to win is to learn faster than anyone else**

2. Test Hypothesis (Measure)

Marketing and product experiments must follow scientific methodology.
It starts with a clear hypothesis based on your visions and makes predictions on what's supposed to happen.
You need hypothesis because if you "just do it" and see what happens you will always succeed, even when you fail.

3. Change Based On Feedback

Based on the feedback you get, keep testing and refining your product and marketing as quickly as possible.
If you don't see results or if the feedback leads you somewhere else, consider pivoting.

These are the ten types of pivots:

1. **Zoom-in pivot**. This pivot can be useful when you see that one feature in your product gets far more traction and interest than the other features in your product. You can then "pivot" by offering a new product that offers only that one feature.
2. **Zoom-out pivot**. This is the above pivot in reverse. You broaden your product to include more features. Now what was considered the whole product becomes one (or several) features of a larger product.
3. **Customer segment pivot**. Your product may prove popular but not with the user segment that you had initially targeted. Therefore your product positioning may need to change and the value proposition, pricing, and channels would all need to be reviewed.
4. **Customer need pivot**. If you identify that the problem you are trying to solve with your product is not very important to customers, you may need to point your existing product at solving a different customer problem or you may need a completely new product.
5. **Platform pivot**. This talks about a change from an application to a platform or vice versa. (Examples of platforms are eBay, Airbnb, Uber, Android store etc.)
6. **Business architecture pivot**. Geoffrey Moore, author of Crossing the Chasm, tells us there are two types of business: high-margin, low-volume businesses and low-margin, high-volume businesses. You cannot be both but sometimes you can pivot from one to the other.
7. **Value capture pivot**. This pivot refers to changes to how you monetize or earn revenue. This is how the business captures value, typically by charging customers money.
8. **Engine of growth pivot**. Most startups these days use one of three primary growth engines: the viral, sticky, and paid growth models (more on that later). You can pivot from one of these growth engines to another.
9. **Channel pivot**. Here you change how and where you sell your products and services (in stores, online, through partners, in-app).
10. **Technology pivot**. This pivot is when a new technology can be used to achieve the same outcome. (This can be beneficial if the new solution has lower cost and/or better performance.)

4. Accelerate Business Growth

There are three main ways to drive sustainable growth:

- **The sticky engine**: retaining most of your users and keeping a low churn rate (i.e. making sure your customers come back to use your product or service again—creating and keeping repeat customers).
- **The viral engine**: word of mouth and virality (i.e. current users recommend other users).
- **The paid engine**: spending money on marketing to acquire customers.

Note: The "churn rate" is your "people leaving rate". So, for example, for a product or service, it's the percentage of customers that unsubscribe in a given period.

#5. Use Lean Methodology

The last part of the book was mostly focused on the lean methodology, a product development system born in Japan with Toyota.
Here are a few techniques Eric Ries discusses:

- The 5 WHYs: ask "why" five times to go at the roots of the issue
- Small batch sizes: the idea of repeating sequentially the same tasks over and over instead of assembling the final product one by one won't allow you to spot the mistakes early

[image]Real Life Applications

Get everyone in the room when brainstorming issues
If you don't get everyone involved in the room, says Ries, the one not present is usually the one everyone will blame.
And if it's a junior employee most will assume the fix is to replace him; if it's the CEO most will assume you can't fix the issue. Both assumption are often wrong.

Reading is good, action is better
I totally agree with this one. To save time on knowledge absorption check my metasummaries.

CONS

Software-Centered

It's more tailored towards software development than on physical products.

Less interesting Lean Methodology
I found the part of the book discussing lean methodologies a bit less interesting.

Not so great examples
I found the examples that were supposed to confirm how awesome the Lean Startup method is to be somewhat lacking.

PROS

Great mindsets
The Lean Startup not only introduces an awesome methodology for launching successful startups, but also shares awesome and empowering mindsets.
For example:

- if a new employee breaks the product environment, it's no shame on the newbie. The senior developers should focus on building an environment that's not so easy to break;
- if something goes wrong always ask yourself: how can I prevent being in the same situation ever again (which the founding idea of Principles by Ray Dalio)

Awesome methodology
There's a good reason why this book has become so popular: the idea was groundbreaking. And groundbreakingly useful.

The Lean Startup Review

Years ago a former boss of mine sent me this book.

I had no intention of reading it though because back then I was fully focused on people and social skills and had no time for entrepreneurship.
But I played along pretending I was going to read it just because he was my boss.

Unluckily he didn't forget, and a few weeks later when he asked me I had to confess I hadn't even started it.
To which, he replied:

> **Sebastian**: hey, did you read the Lean Startup already?
> **Me**: Ehmm, it's in my to read list, gonna get there soon
> **Sebastian**: Oh my God, how can't you not read the startup Bible!

LOL, cheers Sebastian :).
I did read it now, and it's awesome.
Of all the entrepreneurship and wealth creation books that I have read, I consider "The Lean Startup" to be the most useful. I personally put "The Lean Startup" far ahead of Zero to One and even better than the widely acclaimed "Launch".
I have used Lean Startup methodologies for ThePowerMoves.com as well. And if I had to go back, I would use it even more.

This is a must-read for anyone interested in entrepreneurship, startups or launching a product.

Bullet Summary

- A straight line from meet to sale is the safest way to sell
- Never cut off the prospect, but always nudge him back towards your straight line
- Some people are born closers. Others will have to learn it

Summary

About The Author:
Jordan Belfort became increasingly famous after the movie *The Wolf of Wall Street* popularized his life of excesses (and frauds) on Wall Street.
We don't necessarily endorse the author here.

Introduction

Why some people are born closers?
Because they unconsciously master tonality, rapport and control of the sale. Straight Line Persuasion will break down for you how to do it consciously.
So that you can consciously train to become a master closer.

1. Three Tenets of Straight Line Persuasion

Persuading is helping people to overcome the internal obstacles that prevent them from taking action.
Jordan Belfort says that the key to selling is to maintain control of the interaction. And that's why he coined the term "straight line", you want to lead the prospect straight to the sale.

These are the three tenets of Jordan Belfort's Straight Line Persuasion:

1. Develop rapport quickly
2. Gather intelligence (do they have the money, is the product a good fit, are they ready to go?)
3. Control the interaction

Controlling the interaction means that, without breaking rapport or pushing, you gently nudge the prospect back towards the straight line towards the sale

> **Persuading is empowering people**

2. Art of Prospecting

Prospecting means finding people who are interested while at the same time you are weeding out those who aren't going to buy without wasting any of your time.

Qualify as quickly as possible while still keeping rapport. And use a script.
Belford recommends you work backward from the amount of money you want to make yearly until the amount of reach out you need to do daily.

The three keys here are:

1. Be enthusiastic as hell
2. Sharp as a tack
3. A figure of authority

> **Dials are the only things you can always control**

3. Mastering Tonality

This is where Straight Line Persuasions start hitting its stride.
Belfort begins with my favorite part of the course: reading the script and breaking down what works and what doesn't.

He focuses on tonality, here, and as you can imagine it cannot be properly explained in text.
Belfort says that tonality develops rapport at an unconscious level.
Take for example this script:

> Hi, John! This is , calling from Global Capital, in Tampa, Florida. How's it going today?

When you raise your voice at "Florida" you show pride of your job and conviction.

> Great!
> Now, if you recall, you attended a seminar last Friday at the Marriott Hotel, with one of our top Forex traders, James Arnell. Does that ring a bell?

Go up at the end of each block, as if you were adding "right?" and agreeing with him. You will build an unconscious yes ladder.
When you slightly raise your voice at "ring a bell" it communicates you expect them to remember.

> Now if you recall…

Use a tone of mystery at "now if you recall" which you achieve by stressing the "ca" portion in reCAll and going slightly up as if you were asking them a question. Squint your eyes so that your body language naturally supports your tonality.
The tone of mystery will nudge them into searching into their minds of their experience.
Genius.

> OK great, now the reason for the call today..

Drop your voice here, so it sounds like you're sharing an insider secret, and it implies scarcity (read Influence by Cialdini for more on scarcity).

> Is that you're one of the last of the group who hasn't actually enrolled yet

Put "one of the last of the group" all together, and you sound sharp like a tack

> I'd like to share an idea with you. You got a minute?

Go up at "you got a minute", to sound what Belfort calls the "reasonable man effect".

To learn more about tonality, check out:

- **How powerful men speak**

4. Being a Visionary

People won't buy into your goals, but they will buy into your vision. This is why Belfort also mentions it's important that you find your why.

In this module, Belfort steps back live coaching and demonstration to go into more theoretical knowledge of sales, human psychology, and body language.

Some good wisdom I enjoyed:

- Dress for success
- No goaties / pinkie rings

- Stand directly in front when talking to a woman
- Stand at an angle when speaking to a man

For more on body language, read:

- *How powerful men move*
- *Alpha male body language*

5. Inner Game of Sales

In this module, Belfort delves into the personal mindsets and beliefs that make a successful salesperson -or successful person, period-.
He talks for example about the importance of mastering your emotional states, facing your fears, and setting lofty goals.

6. The Straight Line System

Here Jordan Belfort goes back into the actual selling process.
He explains the three tenets of closing, such as the elements that need to line up in the moment of time when your prospect is ready to buy:

1. They love your product
2. They trust and connect with you
3. Trust your company

How to Ask

The more personal the questions are, the more you should make them sound off handed and informal. For example:

> Out of curiosity, what are you trading right now?

If he talks a lot don't interrupt but don't go off tangent with chit chat and unrelated topic. Empathize, make a comment and then go back to the straight line.
You're a busy professional: respect his time and your time.

7. The Art of Qualifying

Straight Line Persuasion goes back here into my favorite part: going through the straight line scripts with live coaching.
Here are a few examples:

> How much money do you have in the stock market, just a ball park?

Whenever you ask someone about money, always always go into a disarming tone. Imagine you were putting your hands up in front of you with open palms, as if to say "no pressure…. Just a ballpark".
This part was possibly the best in the course.

> Are you looking for that right now or do you have to raise the money

Another gem on par with the above one.

The volunteer got the tonality completely wrong and at first blush I totally miss it. Then Jordan Belfort delivers the same line and explains the difference.

Since this is a highly probing question, you have to deliver it matter-of-factly, with an inflection that says “we know how it is, no big deal! Just tell me, maybe I can help you”.

> Just for suitability purposes, how would you say your current financial situation is right now?

With this one you communicate rapport and that your questions are “just for suitability purpose”. Otherwise, you two could have a friendly chat with a beer.

8. The Presentation

In this section, Jordan Belfort goes into the actual presentation of your offer.
He explains the perfect tonalities to communicate:

- Scarcity
- Certainty
- Disarming

The parts I liked the most:

- How to box people in (use with integrity)
- Create urgency in the last part of the script
- Use a soft close, such as “sounds fair enough?”
- How to emotionally drive the prospect towards a state of certainty
- Handling rejections with looping

Presentation is key, so make sure to check out:

- **Speaking Pro** by Roger Love

> Speaking Pro by Roger Love: Review & Notes

9. Power of Language

Straight Line Persuasion delves here into the nitty-gritty of language and word choice.
Here are some gems:

- Virtually

Virtually gives you free rein to make as many bold claims as you want without committing 100% or lying.

- Huge upside with little downside

People are naturally inclined to look for worst-case scenarios. This sentence addresses their fears while also allowing them to dream at the same time.

- Incredibly easy to get started

People are lazy: they don’t want to do the legwork after agreeing. Remove the fear of big-time commitment.
If they’re afraid of consequences, say it’s incredibly easy to modify or change the terms.

- It’s a long-term relationship

It assumes you’re closing soon, reassures them and builds rapport.

- Please don’t misconstrue my enthusiasm for pressure

In case you feel you've been coming off too strong.

Save the Best for Last

Get progressively more convincing as you get closer to the close:

- If you only do half as well as my clients..
- All I ask is that you give me on shot..
- Believe me you won't be sorry

10. Becoming a Person of Influence

Jordan Belfort says you must respect if your customer cannot afford the product or if the product is not good for him.
But you should not accept a stall.
If he doesn't like the product but you feel it's perfect for him, loop back until you convince him with logic. If the stall is emotional, educate him on your company and your company building rapport.

Finally, Belfort restates again the importance of building relationships based on honesty and trust.

Straight Line Script

You could get the Straight Line Script, but unless you learn to deliver it well, it's just words on a paper. The advantage of Jordan Belfort course is to learn the delivery from him.

Here's a sneak peek preview of Straight Line Persuasion:

Real-Life Applications

Tonality is everything on the phone
On the phone, tonality absorbs body language as well and becomes 90%+ of your communication.

Move as you speak
Gesticulate, change your body language and your facial expressions as you speak and you will sound more natural.

Put yourself in the right state
Put yourself in a confident and enthusiastic state before calls.

CONS

Self-Help less valuable for me

Straight Line Persuasion dips into the self-help literature with mindsets, beliefs, and internal locus of control. That stuff is fundamental, and any comprehensive sales seminar should deal with it. But for a guy who has read hundreds of books on the topic, it wasn't the most useful part.
Still some good parts there though, and I loved this quote:

> There is no embarrassment in struggling – the embarrassment is in quitting

PROS

A real, proven closer
Jordan Belfort has proven his sales skills and the validity of his Straight Line Persuasion in the field.

Efficient system

Moving on a straight line is the most efficient way of selling.
The slower you go, the more room for mistakes and second thoughts you have. That's true for most things in life, and certainly is true for sales.
Of course, finding out what exactly "safe" means will make all the difference between being too pushy and Jedi sales master, and finding that sweet spot is part of the beauty of the art of sales.

Live coaching
Loved the part where The Wolf has people read his script and then breaks down what they do well and at they do wrong. I wished he had even more of that.

Some good wisdom
The way Belfort analyzes the interaction between tonality, rapport and human psychology tells me he's a guy who really understands human psychology.

TPM's review

Review

Let's be frank:

Jordan Belford has had a reputation as a top-tier manipulator.

However, that's in his past (?).
As a driven man, he saw a shortcut to riches, and went for it.

Is he now changed?
It's not up to me to judge.

When it comes to the product and the quality of his training, I was surprised to find out that the famed Wolf is much more than high-pressure sales.
He understands influencing and human psychology not just unconsciously, but in a way that he can consciously articulate.

I've been working in sales for many years and read and researched a lot on psychology.
I have worked with a few people whom everyone considered rockstars, and they all had a bit of that Jordan Belfort high-energy vibe.
However, the real challenge and where the true advanced level is, is in striking that balance between high-energy and empathic listening, in knowing when to sell hard and speak passionately, and when to shut up and let the prospect talk.

And I think that Belfort is very good at walking that fine line between the two different skillsets.

When it comes to selling, I rate Belfort higher than Grant Cardone or Gary Vaynerchuk, both of whom fall short in the listening and empathizing departments.

Why I picked It

Before starting the course, I wanted to better explore "high-pressure sales" tactics and approaches.

I have been in sales many years and sometimes I have had the feeling that some people scoffing at "pushy" salesmen and promoting "consultative selling" may instead be afraid of rejection and of coming across as pushy assholes. Some others instead reject it not because it doesn't work, but because *they* don't like it.

Instead, to be the best salesperson you can be, you should probably try different approaches, and maybe even cross that pushy line a few times to understand the limits.

With Jordan Belfort, I wanted to go to a guy who had a proven track record for being great at high-pressure sales. However, Straight Line Persuasion isn't about high-pressure tactics *at all*.

In many ways, that's a good thing…

Is Straight Line Persuasion Worth It?

At the original selling price of $2000 it was not worth it, in my opinion.

Now it's down to $498, which means that the higher price tag either wasn't selling much, or was getting a high refund rate.

And if at $2000, I considered it too pricey, at $498, it depends more on your own current level (keep on reading).

Should You Buy Jordan Belfort's Course?

For most people the brutally honest answer is that you can find better products.

To go a bit more granular:

If you're selling clothes at Primark with next to zero commissions and have no dreams to move ahead in life, this is *for sure* not for you.

On the other hand, if you are eager and motivated to advance in life and to learn as much as you can when it comes to selling, and if you have income to spare, then you can learn a thing or two about voice tonality.

But don't expect a complete system: there is no overarching structure to guide you from first contact, to sale.

Who Is It Good For?

I feel this course is best for intermediate and advanced salespeople.

True beginners can use the mindsets and self-help part of the course.

More advanced guys know that stuff already and the main added value for them will be voice tonality.
$2.000 for voice tonality was steep, but at $498 it may be worth it for you.

The Happiness Project – Summary

Gretchen Rubin says that when it comes to happiness, according to research, genetics account for 50%, life circumstances 10-20%, and all the rest is up to how we think and act (also read The Power of Positive Thinking and As a Man Thinketh).
Her personal happiness project consisted in focusing each month on a specific area of her life she wanted to improve.

JANUARY: Boost Energy (Vitality)

Research shows that happiness energizes you, and being energetic gives you higher self esteem and the firepower to entertain activities that in turn make you happier, such as socializing.

On the other hand feeling weak stressed and harder makes everything seem harder.

Gretchen decided to:

- Go to sleep earlier
- Exercise better
- Toss, restore, organize
- Tackle a nagging task
- Act more energetic (studies show acting energetic gives you more energy)

The result?
She was impressed by the mental energy boost she got.

FEBRUARY: Remember Love (Marriage)

In February The Happiness Project tackles the romantic relationship with her husband. The author reads Gottman books, such as The Seven Principles for Making Marriage Work.

Rubin learns to argue well and to avoid the four horsemen of the apocalypse (criticism, contempt, defensiveness and stonewalling).
She finds out that we all have a negative bias which makes having less negative experiences more crucial than having positive ones (the magic ratio).
The author resolves to:

- Quit nagging
- Don't expect praise or appreciation
- Fight right
- No dumping
- Give proofs of love

Gretchen Rubin says she wished her husband would listen more, care more or notice more about her changes and needs (indeed The Man's Guide to Women explains men's behavior is more important than women's in happy relationships).
But overall, she was very pleased with the positive changes she could make single-handedly in her relationship.

At one point the author went full throttle: she decided that for a week she would go above and beyond in giving and asking for nothing. She dubbed it "week of extreme nice" (which is a great way to stop vicious circles BTW).
It was difficult and she was a bit disappointed her husband failed to recognize and appreciate her for it.

Read More on Relationships

As you can see, I researched a lot about relationships as well. If you want to master this area of your life check:

- Relationships overview
- All the problems in a relationship

MARCH: Aim Higher (Work)

Gretchen knew from her research that challenge and novelty are key elements of happiness, and that's why she decided to launch a blog. Enthusiasm is also more important than innate ability in reaching mastery because it fuels your willingness to practice.

- Launch a blog

- Enjoy the fun of failure
- Ask for help
- Work smart
- Enjoy now

I found especially interesting how she tackles here the arrival fallacy, such as the idea that when X will happen we'll be happier. That's often not true and we should all learn to enjoy the destination instead.

APRIL: Lighten Up (Parenthood)

In April Gretchel realizes that it's true that acting the way you want to feel works. Singing in the morning was indeed proving a major driver of happiness.

- Sing in the morning
- Acknowledge the reality of people's feelings
- Be a treasure house of happy memories (revisiting and remembering happy moments worked for her)
- Take time for projects

MAY: Be Serious About Play (Leisure)

The Happiness Project tasks for May:

- Find more fun
- Take time to be silly
- Go off the path
- Start a collection (didn't work for her)

Gretchen realizes that because something is fun for someone else, it doesn't necessarily work for you. Finding happiness with your happiness project is also about finding your own path and experimenting. And knowing yourself helps a lot.

JUNE: Make Time for Friends (Friendship)

The personal traits that most predict life satisfaction are the interpersonal one. Meaning: friendships, relationships and social interactions are some of the most important, if not THE most important elements of a happy life (also check social skills mastery).

- Remember birthdays
- Be generous
- Show up
- Don't gossip
- Make three new friends

Gretchen was focusing on making other feel good by "helping them think big" (also read The Magic of Thinking Big), which basically consisted in her telling people they should do and go for what they want.
And as she did that, she reached her first magic breakthrough: **to make yourself happy, make others happy**.

She focuses here on making new friends and being better at socializing.
She holds back on criticizing, make follow up questions, tries to understand when people are looking for opportunities to say more and she focuses on being warm.

JULY: Buy Some Happiness (MONEY)

The Happiness Project focuses here on the relationship between happiness and money. It's a complex topic, but you can boil it down like this: money does not and cannot buy happiness. But it can help.

- Indulge in a modest splurge (worked for her only when done rarely)
- Buy needful things
- Spend out
- Give something up

I really, really loved this part because it really spoke to me. Gretchen goes into some very key tenets of happiness for me which are:

- Maximizers and satisficers (The Paradox of Choice)

Maximizes look to all possible options before buying. They waste time and usually end up more unhappy than people who buy as soon as they find something they like (satisfiers).
And they are also more regretful when they find new possible options they *could* have bought.

- Underbuyers and overbuyers

Underbuyers only buy when something is strictly needed. And that leaves them worried, for example, their toilet paper will soon run out.
Overbuyers on the other hand have houses full of stocks they often end up throwing away.

- Spenders and keepers

Spender enjoy what they buy. Keepers keep things for some distant future. They often never use it until their beloved product has passed out of style, is expired or… They died.
As a damn keeper, I am working on this.
This is also true for ideas. For example Gretchen Rubin says she would think of a good idea for a post and then "save it" for the future. Much better to spend out, she realizes, and trusting in abundance.

- Buyers and discarders

Some people use things out over and over, trying to squeeze the last tiny bit of value out of dull razors, old underwear and ugly clothes they don't want to throw away.
This creates clutter and baggages. Learn to remove and throw out, instead.

AUGUST: Contemplate the Heavens (Eternity)

August in Gretchen's happiness project meant focusing on spirituality.

- Read memoirs of catastrophe (to enjoy what she has)
- Keep a gratitude notebook
- Imitate a spiritual master

The gratitude book didn't work for the author as she was doing it every day and it felt forced. If you do the same, do it more rarely.

Admit Happiness

Some people, says the author, are afraid of admitting happiness in fear of jinxing themselves. This only reduces their level of happiness though.

SEPTEMBER: Pursue a Passion (Books)

In the ninth month of her happiness project the author tackles the following mini-projects:

- Write a novel
- Make time
- Forget about results
- Master a new technology

The author talks to some people who doesn't believe you can pursue happiness and that simply focusing on happiness will make you unhappy.
They followed John Stuart Mill quote:

> Ask yourself whether you are happy, and you cease to be so

But Gretchen Rubin, strong of her own personal successful experience of increasing her own happiness, strongly disagrees.

You're happy if you think you're happy

OCTOBER: Pay Attention (Mindfulness)

The author stops to reflect and enjoy the small things of life. Pushing her baby in a stroller, watching her play and savoring the beautiful daily moments with her family.

- Meditate on koans
- Examine True Rules
- Stimulate the mind in new ways
- Keep a food diary

I especially liked a passage in which she went to help her child trying to climb stairs. She wanted to take her newspaper with her to read and then she stopped herself.
That was it, she thought: a beautiful summer day, the sun, her husband nearby and her daughter learning to climb stairs. That was it.

NOVEMBER: Keep a Contented Heart (Attitude)

The author forces herself to laugh out loud even when she didn't feel like it, but if often worked:

- Laugh out loud
- Use good manners
- Give positive reviews (look for the positive in everything)
- Find an area of refuge.

The author realizes here that she has a tendency to being belligerent in conversation. When someone said something, she'd naturally look for ways why it wasn't true and for ways to contradict it.
I have this same tendency, which is something that Tony Robbins calls "mismatchers", such as people looking for contrarian examples.

She realizes also that being critical can be addictive because it makes people come across as more intelligent and discerning as compared to people who agree and pontificate.
She resolves to move beyond it and to only give positive reviews.

DECEMBER: Boot Camp Perfect (Happiness)

December is the recap month for the happiness project.
Gretchen tries to put everything together and stick to all resolution she has done in the previous eleven months.

It's also a time for reflection.
She realizes that the biggest boosts in her happiness came from eliminating all those behavior, feelings and pattern of thoughts that made her feel bad.
Such as: too much clutter around, snapping, nagging, bad food, gossiping and "controlling her sharp tongue". She says she was able sometimes to stop mid sentence and change tone, or change tone before even speaking (this is emotional intelligence by the way).

But the most effective tool was her resolution chart. The resolution chart kept her focused and reviewing it everyday kept her goals present in her mind at every turn.

Real Life Applications

Spend out!
Use what you love and makes you happy

Discard!
Throw out what you don't like and don't use (sorry, let me fix that: give it away or sell).

Admit happiness!
Don't be afraid of jinxing yourself. Admit when you're happy, celebrate it… And remind yourself of those moments

Move past disagreement
If you also tend to always look for counterarguments and counterexamples, only restrict it to areas where they will serve you well. Socializing is NOT one of them!

Resolution chart
A resolution chart is different than goals. Goals you hit or miss them. A resolution chart pushes you to try to be your best and when you fail it's OK: there's still tomorrow to do your best once again.

CONS

Research references?
Gretchen Rubin often says “research says…” but never links and rarely quotes any research. I wish she did.

She never meditated
The author said she never meditated because she didn’t feel like it.
If it’s a project of trying new things though, I felt she should have forced herself at least to try. Especially after so many were telling her it’s important.

PROS

Natural, everyday tone
I liked Gretchen Rubin’s writing style: conversational and natural. It flows naturally and that makes it a crossover between a novel and a great self help book.

No talking down tone
Grechen never pretends of being better than what she is and never lectures. She opens up on all the challenges and difficulties she faces, which makes The Happiness Project all the more valuable.

P.S.: she could use that same demure, everyday tone on her website too. “Blockbuster New York Times best seller” and “has an enormous readership” sound like unneeded self aggrandizing.

Humor
The Happiness Project is not only an easy read, but also often funny. Here’s an example that made me smile:

> That night I did a better job, largely because I was so tired that I went to bed at nine. Being asleep is a great way to avoid being critical.

Lots of wisdom
There’s really a lot of wisdom here. You can see Grechen is a fellow avid reader and she has learned a lot. I learned a lot too, thanks to her. And I love that.

Powerful message: little things matter
The Happiness Project shows everyone that to change for the better you don’t need to change your life or move to another continent. The little, everyday things are what makes all the difference.

Review

I loved “The Happiness Project”.
I wasn’t thinking I could ever give 5 stars to a book that seemed very light and doesn’t set out to improve you or teach you anything. But it doesn’t matter what it sets out to do: it *did* improve me and it *did* teach me a lot.

If you’re looking for ways to be happier, to improve yourself and even to get to know yourself better, chances are you will love The Happiness Project.

Edit: Eventually I demoted it to 4 stars. As good as it is, time showed me that it didn’t leave a mark.
Still highly recommend, though!

So Good They Can't Ignore You: Summary & Review

Lucio Buffalmano · 29 June 2018 · Archived copy · Original

So Good They Can't Ignore You (2012) is a self-help book teaching people how to maximize their talents and how to find their passions. Cal Newport, the author, turns the idea of "following your passions" on its head.

Bullet Summary

- Don't follow your passion when you're skill-less and inexperienced
- Working right is better than looking for the right job (and more likely to lead to passion and work fulfilment)
- Passion increases with mastery
- If you want independence and control, accumulate skills and experience first

Full Summary

About The Author: Calvin Newport is an American associate professor of computer science at Georgetown University, he has a PhD from MIT and he is a popular author of self-help books, including Deep Work.

Don't Follow Your Passion

We all know everyone wants to follow his passion these days. After all, even Steve Jobs said that.
But is it true?

Cal Newport says that "following your passion" is not good advice to find the work you love.
It can actually be very good advice, as it pushes people to search for some sort of "magic passion-stroke" as they jump relentlessly from job to job.
And Steve Jobs himself, he didn't actually follow his passion. He stumbled upon his passion and he got more and more passionate as he deepened his skillset.

> **Don't listen to what Jobs said, look at what Jobs did**

Career Passion Are Rare

To being with, says Cal Newport, it's rare that people start a job because they have a burning passion.
That alone makes it difficult for anyone to "follow their passions" because, for most people, there's not such an obvious thing as a burning passion ready to drive them.

Skills Trump Passion

Newport says that the happiest employees are those most skilled because there was a relation between years spent on the job and job satisfaction and "passion".

My Note:
However, it seems to me that Cal Newport makes a major assumption here because, of correlation, but correlation is not causation.

Skills Trump Passion

Passion, says the author, is a side effect of mastery.
Newport quotes Daniel Pink, author of Drive in explaining that the major factors that lead to happiness in the workplace are:

- Autonomy
- Competence
- Relatedness (feeling of being close to your colleagues)

Newport says that you become more competent and autonomous as you get better, which tells him that skills trump passion.

My Note:
But again, what if mastery is also the side effect of increasing passion? Or if the two simply influence each other?

> **Work right, don't find the right work**

Passion Mindset VS Craft Mindset

Cal Newport says that a craft mindset focuses on acquiring skills and what you can offer to the world. A passion mindset instead focuses on what the world can offer you.

The author says that a passion mindset, when it clashes with reality as it often does, makes you focused on why that job is not right for you, and all you see is negativity.
He urges the readers to set aside the question of whether your job is your true passion and instead you focus on becoming so good they can't ignore you.

Passion these days focuses on what they can get

How to Get So Good They Can't Ignore You

Cal Newport then talks about how we can get so good they can't ignore us.

He introduces deliberate practice (read The Talent Code) and talks about The Tipping Point, Outliers and the 10.000 hour rule.

My Note:
It's unlucky the author mentions the 10.000 rules as that's rather poor science there.
Also see "self-help myths", "pop-psychology" and what the original researcher, Andersson, says in "Peak".

If You Want Control and Life on Your Terms...

… Get so good they can't ignore you.

Cal Newport says that the mistake many do today is to "follow your passion" blissful advice without having built what he calls "career capital".
Career capital is a skillet that allows you to sell something to make a living.

The author says you should pursue more control in your life only if when you can offer something that people are willing to pay for.

Real Life Applications

Don't jump from job to job looking for passion
Don't move from job to job looking for that missing spark of passion. Passion is, often, like love: it develops over time and with the deepening of the relationship.

You gain control through skills
You gain more freedom and control over your life by deepening your skills. Then you have more bargaining power with your employer and, well… With life in general.

CONS

Naive: they may not ignore you, but can steal all your credit

Ultimately, the approach of only being good is naive.

Yes, you may get so good they can't ignore you.

But they can recognize your great work, take your credit, and leave you with nothing for it.

Also see:

- Naive self-help

Unconvincing data

The data used to make the point there is not such a thing as a readily available passion didn't convince. The author mentions a few old interviews, but interviews are not great tools and I don't remember any numbers being

mentioned.

Unconvincing examples

The author uses a few stories to make the point too many quit their jobs to mistakenly follow their passions. There's nothing wrong with stories… If there are number backing them up.

But it felt to me it was *just* stories.

The examples of James as the poster child of this generation clearly shows what I mean. The author introduces James, a lifestyle designer who quit his job to live on his way by blogging.
James is clueless about monetizing his blog, and the author says says (I paraphrase for brevity):

> A distressingly large faction of these contrarians skipped the development of the means that would support their unconventional lifestyle.

Hmmmm, wait a second, based on what does he say "distressingly large faction"?
It feels like he's taking a swing at the generation Y trying to pass his perceptions for facts.
And here's the funny thing: I do agree with him. I have the same perception that this a generation which feels entitled to success. But it's a feeling, it's not based on numbers. I wished Cal hadn't tried to pass feelings for facts.
Also, I didn't particularly appreciate James got pretty much ridiculed for his supposed failure.

Too Much Meat on The Fire

"So Good They Can't Ignore You" starts denying that "following your passion" is a good advise.
Then it says that getting skilled is the best way to become passionate. All makes sense here and it's awesome insight.
Then it goes into explaining how to get those skills, which is a deep topic in itself and feels a bit hastened here.
And finishes off discussing the pitfalls of gaining more autonomy, resembling a bit The Four Hour Workweek. It felt too much to me.

PROS

Top, Top Insights

I loved the idea that passion takes time, something we've also seen in Grit by Angela Duckworth.
Cal Newport also hits the nail on the head when it comes to way too many people "following their passions" without any idea or skills to actually monetize those passions.
And again, his advice to be strategic and deliberate on winning your freedom and life control is awesome.

Review

First of all, I'd like to say this: do mind about your passion.

I feel "So Good They Can't Ignore You" goes too much on the opposite end of the spectrum in denying the role of passion. Chances are there is something that pulls you and draws you more than others.

Like Robert Greene says in Mastery, sometimes it's something you loved as a kid. Or what you love doing in your spare time.

That being said, this is a fantastic book.

Not only it is informative, but it can spare some major headaches to people who too quickly follow their passions.
All the while, it also provides a way on actually finding that passion (ie.: getting good at something).

And it also shows the proper way of conquering more freedom for those of us who can hardly handle a 9 to 5.

Intro: What's Charisma

Charisma is a presence that excites us.

Charismatic people have something that most other people don't have. Something *they* don't have and wish they had.
We look up to charismatic people and we can't resist but following them and idolizing them.

It's that looking up to the them that gives charismatic men a strong social power.

Should You Try to Be Charismatic?

Short answer:

Absolutely yes.

Most people would gain from learning to be more charismatic.

Many traits of charismatic men are high quality traits that will make you an overall better person.
Confidence, conviction, a vision and a WHY in life, for example, are all high quality traits that will also make people more charismatic.

Eloquence, the ability to change people's states and persuade others, are crucial life skills that also happen to be charismatic traits.

So let's see how to do just that.

How to Be Charismatic

Here are 11 steps to be more charismatic:

#1. Get a Life Purpose

Have something you believe in.

A goal you're moving towards, a vision you believe in, a change you want to see in the world.

This is a world of lost souls looking for a master. And when you know where you're going people will instinctively want to follow you.

Even if you're not yet clear about the steps, the vision and drive are the most important aspects.
Where you're going matter less than having a strong cause, an ideal or a vision you communicate passionately about.

Just look at Greta Thumberg.
She knows sh*t about climate change, but she communicates with purpose and passion and the sheep follow her.

#2. Show Uncompromising Saintliness

Most people pay lip service to their values.

They say they respect religion, values, honor, etc., but everyone knows it's just words because, well… That's life.

And that's a great opportunity for those who actually walk the talk.
The few who actually honor their values no matter what impose their bigger-than-life presence on the masses of hot hair producers.

And we look up to them.

Example:

By putting values and tradition above the baseness of money, he shows the trait of charismatic saintliness.

#3. Go to the Extreme – And Stay There

Most people compromise, change their mind, say one thing and do another, show a face in public and another in private.

It's part of life, part of keeping an even keel and staying afloat. We come to accept it as simply how it is.

But deep down we admire the people who go on the extreme -and stay there no matter what-. They have guts, we think.
And especially in times of uncertainty and turmoil extremists gather a strong crowd of followers.

Girolamo Savonarola, in the picture, was a dangerously charismatic extremist.

With religious fervor and uncompromising puritanical zeal he set out to undo years of enlightenment in the world capital of enlightenment: Florence.

And with the zealot that only the most charismatic men can muster, he gathered a crowd of puritanic idiots to help in the dirty job.

He lacked the strategic oversight to understand when to stop and eventually was executed. But he did manage to stir much discontent and to burn and destroy much art before it came his turn to burn (dark pun).

#4. Be Eloquent

Charismatic leaders are masters in using the demonic power of words to elevate, incite, stir anger or to simply beat their opponents into (verbal) submission.

A good example of eloquence in the service of charisma is Jordan Peterson, author of The 12 Rules of Life:

Jordan Peterson gathered a huge following because he speaks well, with passion, and looks like he breathes lives into his deep well of knowledge.

#5. Speak With Passion

Eloquence is nice, but by itself, it's just words.

Eloquence by itself makes you an academic. But eloquence with passion, purpose and direction, now that makes you a charismatic leader instead.

This is an example of an impassioned speech:

Many charismatic men have led other gullible men to their own death.

#6. Speak With Conviction

Most people are constantly in doubt.

They don't know if they'll manage, they don't know what they will do with their life… And they don't know what they will do later today.

Not the charismatic.
The charismatic has an air of eternal confidence and certitude.
And it's frankly difficult not to be swept away by the mixture of passion and conviction of some of the most charismatic men in history.

Sometimes they appeal to nothing concrete.
They call up in arms for honor, "empires", values… And even peace (!). But they say it so convincingly passionately that, deep down, we all admire them and want to be on their side.

> **Benito Mussolini**: The keyword is one and one only. Winning. And we will win.

Here's another great quote from Marshall McLuhan that perfectly sums up the convinced charismatic man:

> I may be wrong, but I'm never in doubt.

Reverse of The Law:

Some charismatic people will speak with conviction even when they have no idea what they're talking about.

However, that cannot last long.
If people get to know you well and you keep talking nonsense, your charisma will quickly fade over time.

#7. Display Dominance When Needed

Pavid, fearful men are not charismatic.

Just think about it:

Would you admire and follow anyone if they withdrew when they're needed the most?

Probably not, because we want our leader to show strength when strength is needed.
When the chips must fall on the table, you must show your strength and resolve to make things happen.

People admire and follow those who are in charge. And as Machiavelli said, being feared is better than being loved.
Which is especially true in moments of crisis.

Ben Affleck is not afraid of laying down the law in Boiler Room:

#8. Display Fearlessness

A step above and beyond muscular leadership is showing fearlessness in the face of danger.

Al Pacino in Scarface can be a good example of fearlessness.

#9. Be Disinhibited

We all fall conventions, afraid of being judged and ridiculed.

Not the most charismatic men among us.
They are who they are and go for what they want without caring about what everyone else thinks.
And that's supremely attractive.

#10. Play Vulnerability Well

We all put on a mask in public.
We try to hide our emotions, to show ourselves stronger, smarter and better than we really think we are.
So when someone can show himself (figuratively) naked in front of an audience it impresses us all.

Dropping the mask can be a sign of strength, and it's also a sign that we are possibly more emotional than rational.
And again, it's emotions that appeal us the strongest.

Vulnerability also includes admitting and fessing up to your shortcomings without fears.
Look at Bush doing it here:

Instead of listening, pretending of knowing or agreeing, Bush admits he doesn't know.
And implies he doesn't care.
He's got other priorities, we imagine, and couldn't care less about the German healthcare system.
Very charismatic in a slightly asshol-ish way.

Reversal of The Law

Vulnerability can be a double-edged sword for the charismatic leader.
People want to believe the charismatic leader to be a sort of God, so you must be careful.

Vulnerability in showing anger and emotions, especially for past events, is OK if you frame it as your driving force.
But vulnerability as a show of weakness is a no-no.
Also read "vulnerability is not power".

#11. Be Adventurous

Some of the most charismatic characters show a daredevil side, a rebellious streak.

They live life their own way, sometimes even going against the grain of society.

That's exactly what makes Han Solo, a Stars Wars character, the most likable and charismatic man in the trilogy:

> Never tell me the odds

LOL, so typical Hollywood :). But it shows the adventurous spirit combating against "the timid bore of numbers and rationality".

#12. Be Present In The Moment

Have you noticed how many of these ascetic personalities manage to draw in the crodws by the millions:

- Sadhguru
- Russel Brand
- Jay Shetty

One quality that monks develop is the ability to be present in the moment.
Most people aren't truly present. They're thinking about what to say next, how to come across, what body language pose to strike, etc. etc.

But if you want the biggest hack to charisma, it's this:

Be present in the moment.
Focus intensely on the person in front of you, what they say, and what it says about them. And then react to it *in the moment*.

Psychologists call it 'flow', laymen call it 'in the zone', and some others call it 'presence'.

However you want to call it, this is the charisma superpower.

Charismatic Men in History

History is peppered with charismatic men.

Most dictators are charismatic men. They often take the helm of nations by riding the waves of discontent, rebellion or strong emotions.

They sometimes make up enemies so they can whip the crowd into a frenzy by pointing their fingers at something else.
They will ride that growing wave and as everyone is taken over by emotions, very few will realize how poorly equipped they are to actually lead a country.
For Hitler the enemies were Jews, for Lenin it was the rich capitalists oppressing the poor.
Let's hope we'll all be smart enough to recognize the next dangerous charismatic man before it's too late…

Some other examples of charismatic during histories:

- Joan of Arc
- Rasputin
- Robespierre
- Benito Mussolini

Dangers of Extreme Charismatic Leadership

Charisma can turn on you.

Robert Greene in The Art of Seduction uses the chilling example of Robespierre's own death as an example of the dangers of extreme charisma in the political arena.

Robespierre rode a wave of highly emotional rebellion that turned nasty with the reign of terror.
Eventually, Robespierre kept the heat of the terror on for way too long when the population wanted to go back to normal life. And in a few months he went from revered charismatic leader to everyone turning against him.

Charisma is indeed as volatile as the emotions it creates, says Greene.
The charismatic man often wins love and support by barging into a difficult situation as the savior. He provides a strong guidance and helps everyone right through the turmoil.

But once the people start feeling more secure or feel the times are changing, charisma is less needed and the charismatic man a thing of the past.
Some charismatic will try to keep the flames of danger and risk ablaze just to stay in power. Or because they don't know any better or what else they can do.
But people will tire of it and at the first sign of weakness will turn on you.

Robert Greene says you should then turn the heat lower when the adventure is over and slowly settle into a more boring routine.
People will admire your self-control and adaptability if done correctly.

The alternative is having an army to prop yourself in power, which you will need as charismatics tend to make quite a few enemies.

Don't Follow Charismatic Leaders

Once the dust settles charismatic leaders and rulers tend to leave a mess behind with their wild personalities.

The one who follows after a charismatic is left with a big clean up to do. Most people fail to understand how the mess was created in the first place though.
They miss the charismatic leader and blame the successor for the problems.

To avoid this situation Robert Greene suggests instead going in a completely new direction.
In the 48 Laws of Power he explains how Truman escaped that way the charismatic curse of Theodore Roosevelt.

Charisma and Social Skills

While to be charming it's imperative that you are socially skilled, people's skills is not a necessary requirement to be charismatic.

Indeed a charismatic man might also draw more power from being asocial. That communicates that you are all too consumed about your art, passion or mission to even care about people.

However, social skills and understanding of social dynamic is what would ultimately allow you to stay in power (or to stay popular).

If Robespierre and Rasputin had been more socially skilled for example they would have seen the writing on the wall and adapted their strategies.
But they were too self-absorbed and socially unaware to notice…

Why do People Follow Charismatic Leaders?

Charismatic leaders tend to hog all the power.

So why people follow them?

Haslam in the seminal book "The New Psychology of Leadership" says that:

- In times of crisis, people look at magical-looking leaders to solve unsolvable problems
- Followers go after charismatic leaders to fend off a sense of hopelessness
- Followers can relinquish the burden of responsibility at a time when they just can't seem able to cope

People are so looking for a figure who projects an aura of certainty in uncertain times that we even help would-be leaders to convince us that yes, they are the answer to all our problems.

Lipman-Blumen says that, in the process, we even push charismatic leaders to believe in their own infallibility. Until, eventually, reality catches up with us all.

But by then, lots of damage might have been done…

As Haslam concludes:

> The notion of the leader as the hero is bad for leaders, it is bad for followers, but, most of all, it is bad for the group.

Charisma Is NOT Loudness

Finally, there is much misunderstanding of charisma.

Some people confuse charisma with loudness, and "high energy behavior".

A high-energy, super extroverted man *can* be charismatic, but he might also be un-charismatically obnoxious. And a quiet man can be charismatic.

How to Set Boundaries With Dominant Bosses: Case Study

Lucio Buffalmano · 1 July 2018 · Archived copy · Original

Setting boundaries can be difficult.

But it's much more difficult when you are dealing with individuals who are more dominant, have more power, or have a higher rank.

This article deals with that worst-case scenario: setting up boundaries with a boss, who also happens to be a dominant bully.

As our case study, we will be using Trump and Comey.

Boundaries With Bosses

Setting up boundaries with your boss is difficult.

And that's why it's paramount you learn how to push back against any bullying.

Donald Trump VS James Comey is a great example of how to set boundaries with powerful people.
Trump was annoyed by the FBI continued investigation over the Russian interference in the US presidential election.

And according to Comey's autobiographical book A Higher Loyalty, Trump was pressuring him to drop the investigation and to confirm his allegiance to him.

Not an easy position, but a rather common one.

Theoretically the FBI is independent of the president, but most power struggles are independent of what the law and regulation dictate.
Furthermore, the president can appoint and fire the FBI director, which makes that independence even more theoretical.

When Bosses Encroach Our Boundaries

Comey's position is nothing unique.
The whole world over, many people find themselves in the exact same situation.

Here are just a couple of examples from the workplace:

Credit Manager Pressured For Returns

Imagine you are a credit risk manager who theoretically should only make sure your company's portfolio is safe and sound.

You are the one responsible for financial viability of the outstanding loans and you are the one who underwrites the credit lines.
But maybe you have a pushy boss who needs to show end of the quarter growth. And he's pressuring you to approve far bigger credit lines you'd be comfortable with.

Same situation as Comey VS Trump: your allegiance is theoretically to the company's financial only, but your boss can still pressure you with final authority on your job and with "soft power".

Consultant Pressured To Work Against Client's Best Interest

Or you might be a consultant, working alongside your customer.

Supposedly you should have the best interests of your client in mind.
That's what the internal regulations of your own company say as well.

But then your boss starts putting the screws on you and on your team to recommend to your customers a provider he is friend with.
You don't particularly like that provider, but your boss is making it clear he "would really appreciate it" if you could all recommend it and "they are good anyway".

Again, same situation where, out of personal ethics and values, you need to enforce your boundaries while also

avoiding a full escalation.

Let's see how Comey did it in a famous recorded video.

Case Study in Setting Boundaries

We know from his autobiography that Comey was hoping not to be called or singled out by Trump on his inauguration with the highest brass of law enforcement.

And I personally believe him. It fits well with the whole story and with what eventually happened. And he was also standing very far away, which a clear sign he wanted to stay distant.

But of course, Trump knew he had a riotous, difficult man on his team. He either wanted to send a signal of his power, or he wanted to offer another olive branch.
The way he spoke and moved, I believe it was a power display more than olive branch.

1. Trump Power Move: Testing Boundaries

Trump calls Comey over to him.

Comey is on the opposite side of the room and has to walk all the way to greet him.
It's as strong a sign of power as one can have.
Trump even open his arms, resembling Jesus welcoming the disciples.

As Comey walks over, Trump makes the joke:

> You're more famous than me

This is a typical power compliment.
As he pretends to build him up, he implies he might not like that. And of course, by saying that, he sets himself up as the yardstick to which everyone else must measure against.

2. Comey Power Move: Show Disagreement

Comey starts his walk with a slight bow of his head, which is a strong deferential sign.

But as soon as he Trump makes his power joke, he slightly shakes his head.
Awesome, awesome move:

Shaking his head Comey shows, in a subtle way, that he disapprove of that joke.
And since flunkies don't disapprove, he is showing that he is willing to keep a critical stance of the president.
That's a subtle, yet very strong public display that he is confident of his own means and that he can defend his agency.

How insubordination works

Small acts of insubordination are great to send the message that you are were willing -and possibly able- to defend your boundaries.

A slight critical remark, not laughing at your boss's jokes… These are all great ways to subtly and semi-publicly reaffirm your independence.

Notice that small acts of insubordination while you are still overall complying are examples of passive aggression.
But that's OK: passive aggression is weak *and* harmful in close relationships. But in the workplace and when you need to stand up for yourself, everything goes.

Small acts of insubordination reaffirm that you:

- are not afraid
- keep your independence
- are a strong character yourself
- you're not be trifled with

3. Reaffirming Own Boundaries: Body Language

As they shake hands Trump puts a hand on his back. It seems he might have been trying to make it more friendly than it ended being.

Comey indeed shows all the signs that he wants to keep the distance instead. He:

1. Extends his arm while still far away
2. Doesn't use his other arm to pat Trump
3. Keeps his eye contact brief and moves to the next person
4. Says "thank you", but no more
5. Tight-lipped smile: only a facade smile
6. Says hi to the vice president as well, another sign this is not personal
7. Goes quickly back

Everything Comey does scream "this is strictly business, we are not friends".

Notice that physical distance is also a sign of emotional distance and, possibly, of dislike.
If Comey had been too friendly and gotten too close, he would have sent the message, to Trump and to everyone else, that he was submitting and that Trump was going to have influence over him.

This way, with physical distance and "cold professionalism", he shows that he is adamant to keep his independence -and, by extension, FBI's independence-.

4. Showing Your Independence

Finally, Comey is very quick with his salutation and goes back to where he was coming from.
Another sign that yes, he will go to say hi because he's the president and he has to.
But that's it about his involvement with Trump.

Quickly going back to his position is another strong signal that he doesn't want to be too close to Trump and that he will hold to his position.

Example of NOT setting boundaries

Just look at the huge difference between how Comey behaved and how this other man behaved on that same day, just a few seconds earlier:

Isn't it obvious that Trump can easily influence that first man, but not so easily influence Comey?
Don't you have that same feeling?
Yep, guessed so.

How to Set Boundaries

To set your boundaries with meddling and powerful people, you also need to show some distance and to display your independence at every opportunity you get.

Since more powerful people can fire you, harm your or otherwise cause troubles, you want to keep your displays of

independence under wrap.
Overall, you say hi, you respect their authority and their position and you comply with everything you're supposed to comply with.
But at the same time you need to show that you are not for sale, that you won't bend down and that, yes, they better fly straight too because you're not that harmless after all.

If they try to get too close like Trump did, operate similarly to how Comey did:

1. Show respect for his position, but:
2. Keep your relationship strictly professional
3. Avoid looking like friends in public (company parties, lunches together etc.)
4. Keep distance, physical as well

What Will Happen When You Hold Boundaries

If you enforce your boundaries effectively and it's clear you will hold to your autonomy, two things can happen:

1. They will try to get rid of you (/fire you)
2. They relent, then leave you alone, then secretly respect and admire you

Whichever the case, you will earn the respect of everyone. Not least, you will earn the respect with that one person that matters the most: yourself.

Whether you end up with option one or two, depends on a host of things. Not least your social skills, the number of allies on your side and how strong your position is.

SUMMARY

Having to set your boundaries and defend your autonomy from a powerful individual can be annoying. It means that someone is trying to push you around and force you into a power struggle.

As much as it's tiresome, you will learn how to assert yourself and you can take pride in doing what's right. And you will grow your self esteem in the process.

This article gave you an example of setting boundaries and a few guidelines you can follow.

Best Personal Finance Books

Lucio Buffalmano · 2 July 2018 · Archived copy · Original

The best personal finance books are split into three categories depending on what they focus on most:

1. Books to save money
2. Educating on a specific topic (ie.: investment strategies)
3. Books to make money

Most personal finance books fall mostly in the first category with a smattering of the third category (making money).

The best personal finance books on *making* money are not much about building businesses though.
They are mostly about investing your savings in the stock market and leveraging compound interest to get rich over decades.

That's for a quick overview of the personal finance literature, now let's start our best-of list:

Contents

- 7. The Total Money Makeover
- 6. The Millionaire Next Door
- 5. The Book of Common Sense Investing
- 4. Rich Dad Poor Dad
- 3. Money Master the Game
- 2. The 4 Hour Workweek
- 1. The Millionaire Fastlane
- Final Words
  - Also, Read

7. The Total Money Makeover

[image]

by Dave Ramsey
Summary | Kindle | Audiobook

I picked *Total Money Makeover* as the best book focused on saving money. Ramsey wants to move you from a spender mindset to a saver mindset.

This is really helpful for people who overspend and tend to have issues with debt and credit card over-usage. Dave Ramsey doesn't mince words and he can give you a much-needed wake-up call.

> Quote: "We buy things we don't need with money we don't have to impress people we don't like."

---

6. The Millionaire Next Door

by Stanley & Danko
Summary | Kindle | Audiobook

If you're looking to make money, what about some data?

The Millionaire Next Door is one of the best personal finances books -if not the best- because it's based on actual numbers. The authors surveyed real millionaires and find out how they live and how they think.

And if you were expecting flashy watches and extravagant holidays, that ain't it…

> Quote: "I am not impressed with what people own. I'm impressed with what they achieve (..) Strive to be the best in your field, don't chase money. If you are the best in your field, money will find you"

---

5. The Book of Common Sense Investing

[image]by John C. Bogle
Summary | Kindle | Audiobook

The Little Book of Common Sense Investing focuses on investing. The message is simple but it's all you need really: cut the middlemen and replicate the market returns with ETFs.

Bogle says that's the safest, most lucrative, and even easiest and most comfortable way to grow your investments - and if it's worth anything, I agree :)-.

> Quote: Gunning for average is your best shot at finishing above average.

4. Rich Dad Poor Dad

[image]

by Robert T. Kiyosaki
Summary | Kindle | Audiobook

Robert Kiyosaki has received his fair share of critics over the years.

Rich Dad Poor Dad can seem indeed rather unscrupulous when it says that the rich pay little taxes and can get their holiday reimbursed by failing it as a business expense.

However, that doesn't make it any less true.

And that's why for me this is one of the best money books of all.
If that weren't enough, Kiyosaki's take on assets & liabilities is as simple as it is eye-opening.

> Quote: The lack of money is the root of all evil.

3. Money Master the Game

[image]

by Tony Robbins
Summary | Kindle | Print

Money Master The Game shows a path towards financial freedom with a mix of prudent saving and smart investment.

Robbins teaches you how the mutual fund industry is robbing you, why you should avoid brokers, and why the 401(K) is *not* a good investment vehicle. All in simple terms everyone can understand. Powerful stuff.

And if that weren't enough, he caps it all off with a self-help sounding chapter that puts money in perspective. Money is only a tool, he says, and by itself won't make you happy. How not to agree with that?

> Quote: *we're drowning in information, but we're starving for wisdom*

2. The 4 Hour Workweek

[image]
by Timothy Ferris
Summary | Print

The 4-Hour Workweek is a crossover between a personal finance book, a self-help book, and a philosophy lifestyle book.
It's the most business-like book as well, and we chose it as #2 for a specific reason:

This book helps you understand that most personal finance books are for the very basic of comfortable living *only*.

For anything more than that, you need something different.

And albeit I'm not a huge fan of Ferris, he does a good job with this book.

With a vision of freedom and financial independence, and with a blueprint to get there, Tim Ferris doesn't fill you up with the hot air of empty motivation. He paints the dream for you. And then gives you the courage and the tools to go make it a reality.

It has aged a bit when it comes to the actual tools, but the mindset is what matter the most and those are eternal. Honestly, there are so many awesome quotes from this personal finance book that I'm stumped as to which one to pick.

> Quote: They don't have riches. The riches have them

1. The Millionaire Fastlane

by Mj DeMarco
Summary | Audiobook[image] | Kindle

DeMarco basically rips apart all the personal finance books focused on saving money and investing with compound interest. Awesome!

And we love a smart guy pulling the wool out of the masses' eyes around here.

Here's what I learned:

1. Saving & Investing is for suckers: employees, duped by the compound interest myth, trade invaluable time today for distant (and uncertain) riches. Not worth it.
2. The paradox of practice: if authors selling get-rich products got rich not with their methods but by selling their methods to you, are they credible?
   Great question. And a truly awesome read.

> Quote: *Dump the damn job. The job sucks*

Final Words

This best personal finance book list covers a very disparate range of topics. It goes from saving to investing to lifestyle.
But you can't go wrong with any of them: they're the best books when it comes to money.

9 Traits of High-Value Women (With Examples)

Lucio Buffalmano · 3 July 2018 · Archived copy · Original

The traits of a high-value woman aren't just cultural or subjective but can be scientifically determined based on evolved mate value preferences and social exchange dynamics.

High-value women aren't just attractive—they lift the people around them, care for themselves, and know how to navigate life with grace and confidence.
In this article, you'll discover the 12 defining traits of high-value women, backed by psychology, research, and real-world examples.

A bit on the snotty side, but definitely conveys high value

High-Value Woman Traits

Definition & Methodology: We assess "value" through **Social Exchange Theory** (Blau, 1964), and the evolutionary concept of **mate value** (Buss, 2016). In contrast to men, we exclude 'power' as less relevant.
Definition: a woman who possesses more traits that make her socially and sexually attractive than traits that make her unattractive.
TPM Perspective: From a high-value man's perspective, more likely to be a net giver in his life.

This article leverages solid psychology, research, and the author's own experience.

A high-quality woman with the following traits is great girlfriend material but also makes for a stable and reliable business partner, colleague, or friend.

Let's start:

1. She is Feminine

While being attractive helps, femininity is even more foundational.

The fact that more and more women are losing touch with their femininity presents a great opportunity for high-quality women. They will stand out even more and reap more and more rewards.

Marilyn Monroe is a classic example of high femininity:

Monroe is extreme. You don't need to go that far, as it might even be too much for our current social environment. But it's a good example.

But what does feminine mean?
Read:

- How to be feminine
- Effective seduction examples: the feminine type

2. She Takes Care of Her Appearance

Being and appearing are a false dichotomy: they're not mutually exclusive, and they're instead linked.

Exceptions always apply of course and one can go into extremes of vanity and haughtiness. But within optimal intervals, **taking care of one's appearance signals about caring in general.**

Women who care about themselves are more likely to care their social standing, their careers, their family, their goals, and, eventually, their children.

All these external signs are important indicators of self-care:

- Personal hygiene
- Posture & body language
- Clothing
- Makeup

Nothing's sexier than perfectly applied lipstick

... And Doesn't Hide It

Pretending you put on the first old scruffy thing you saw in your wardrobe is a low-value way of trying to hide in the shades of mediocrity.

High-value women take pride in caring about themselves.
They know that appearances and perception shape reality, and they make no mystery that they take care of them.

Taking care of hersels maintains high-quality at any age.
Look at the difference between these 3 women, from the lowest quality to the highest:

The first one doesn't even try. The second one tries but doesn't know how to. And the third one cares and knows how to (and she is the oldest).

Beauty Matters

Beauty directly boosts both her social and mate value. In relationships, it also boosts her man's status.
But beauty isn't just about aesthetics; it is a primary signal of **genetic potential**, an important factor for men who want to have children.

Melania Trump has average social skills, but makes it up with beauty, high-status body language, femininity, and style

3. Takes Care of Her Health

Similar to the above, but addressing her body.
She takes care of:

- The food she eats (no fast food, no adding kilos of sauce & salt, etc.)
- Drinks (avoids pops, colas, etc.)
- Exercising

Overall, she keeps her body running smoothly.

4. She Is Kind, Cares About People

Kindness is one of the most sought-after traits in dating. And for good reasons. Kindness boosts the likelihood of:

- Supportive partner
- Win-win relationships

Contrary to what Hussey recommends in *Get the Guy,* women shouldn't walk around the bar asking people how they're doing as if they owned the place (that's the man's way).

But they do let people know they're happy to see them. Maybe a slight touch on their arm, a warm smile, a comforting word.
Or a simple "well done, I'm so happy for you".

See more here on how to combine femininity and power.

> Feminine AND Powerful: 9 Tips For Women Bosses

Cares About Her Partner

And of course, she cares about her partner.
And supports him to achieve what he wants to achieve.

With an important caveat, of course: she expects the same kind of treatment back.

That's why high-quality women don't get stuck in toxic relationships and that's why the asshole game is a poor style for long-term relationships with high-quality women.

Warning For Men

If a woman couldn't care less about your dreams, goals, ambitions… About your health… Then she's either extremely self-centered or lacks empathy.
Either way, she's not a high-value woman.
And she's not good relationship material.

Lucio's Example: **The moment I knew she wasn't for me**

Lucio:
Years ago I went to the hospital for an issue that could have been serious.

Once there, they told me I should get hospitalized for further checks.
I called my girlfriend to ask if she could bring me the laptop and some more clothes.
When she started talking about her job interview I waited and waited for her to ask about me.

But it never happened.

Eventually, I had to interrupt her to let her know I had to be hospitalized

I was sadder about her lack of empathy than about my hospitalization, and that led me to reassess the relationship.

5. She Is Emotionally Stable

Women tend to have wilder mood swings as compared to men, so they get a bit more leeway.

But a high-value woman is still expected to be:

- Relatively secure in herself and of her own worth
- Not going to make public drama
- Not excessively anxious
- No wild mood swings (a sign of borderline personality)
- Generally positive and uplifting

Being emotionally stable doesn't mean she doesn't cry or that she never gets angry. It doesn't even mean she can't have a nervous breakdown or have bouts of slight depression and self-doubt.
Those are normal parts of life and dealing with them openly is actually another sign of high value.

🤦♂️Lucio's Example

Lucio:
Years ago, me and an ex-girlfriend of mine were removing old wallpaper.

I was making fun of her as being largely ineffective.
I was surprised she was taking it so personally, but truth to be told I was also amused by what I perceived as her large overreaction.

These days I would have spotted the signs it was going too far, but back then I was quite a bit thicker and I kept going.
Then, at a certain point, said something like this:

> **Her**: My blood is boiling, I'm losing control

Little later she left the room to go decompress on her own.
I later rejoined her, apologized, explained I didn't realize I was going too far and then we resumed without further trouble

The only reason that didn't turn out to be a big argument and a drawn-out fight was her outstanding emotional intelligence.
Her realizing she was reaching her limits, articulating it well, and preventing a major blow up was a huge green flag of emotional and social intelligence.

And the fact she preferred to go decompress instead of blowing up is another major sign of self-control.
Both are signs of high-value women.

6. Positive Affect: Lifts People Up

People differ in their tendency towards negative or positive emotions. And that makes a large difference on someone's character, and someone's impact on others.

"Positive affect" of course doesn't mean "always happy".
That's just silly.
It means that she experiences more positive emotions and fewer negaitve ones. Ideally, her baseline mood is slightly on the happier side, interfacing the world with a smile instead of a growl.

Without getting into politics, what feelings, states, and emotions do you think the two women below evoke in the people around them?
Very different impact, right:

Which of the two lifts people up instead of tearing them down?

Example: When Negativity Is Out of Control

At the opposite end of the spectrum are women who are often angry or bored.

I had a girlfriend who'd often complain to me "I'm bored". And then expect me to lead her out of her state.
And when I'd be busy with my own things, she'd get cantankerous, argumentative, and bad-tempered.

That character doesn't work well with agentic men who want to focus on their mission.

7. She Is Socially Skilled

Great social skills are important for everyone, but they are even more important for women.

Women, on average, are more skilled than men at building social networks (Brizendine, 2006) and we could argue that social skills for women have been a matter of survival strategy (Wright, 1994).

In that sense, social skills are feminine, and charm is extremely alluring in a woman.

Advanced, "top socialite" social skills include:

- Turning down a guy's advances without hurting his ego (keep a friend)
- Release tense social situations
- Deflecting inappropriate comments without making enemies

Here's an example for the last one:

Him: (unprofessional innuendo)
Her: (fake smile, turns her attention to someone else to 'throw him under the bus' without nastiness)

Good Language Skills

Language highly correlates with intelligence.

But it goes beyond communication skills and intelligence.
It shows that she has read and taken care of her education.

It's especially useful if she speaks good English, since English is the current global lingua franca. Her good English is also a valuable asset for high-value men who tend to move in international circles.

Difference Between Men and Women
Women often tend to go broad with languages rather than deep. More women living abroad will try to pick up the local language than men. This is because of women's stronger drive to build social networks.

8. She's Straight, Plays Little Games...

The women's dating literature is all about playing games.
By far the three most popular are:

1. Make him wait for sex
2. Pretend you're not interested
3. Let him invest more

We've already debunked the idea of letting him wait for sex, the drawbacks of feigning disinterest, and the issues of making him invest more.
The issue with nasty games is that they are win-lose. And dating win-lose starts win-lose relationships.

This is not to say that high-quality women don't play any games at all.
Quite the opposite.

Games are part of the marketing package. What I'm truly referring to here are the nasty games.
Instead, the high-quality woman deploys games that build people up and make others feel good.

And, once in a relationship, she decreases the number of games because she knows that a relationship based on honesty and mutual support is superior to a relationship where she's constantly gaming her partner.

For example, the high-value woman does not:

- Try to make you jealous
- Threaten to break up
- Pretend his exes were better

> 10 Nasty Games Women Play (Women, Stop These!)

... And Prefers Collaborative Approaches

Instead, she prefers building his partner up.

And she is not afraid of showing her fondness and admiration, because she knows that positive behavior begets more positive behavior.

This is the message one woman sent me:

- Smart cooperation

Approachable vs. Unapproachable Value

There are two ways of being a high-quality woman:

1. Welcoming and uplifting to (almost) everyone
2. Unapproachable and only for a selected few ones

I put this one last because some women overdo it and end up looking bitchy and conceited, and that's not high-quality anymore but screams "gold-digger with little to offer".

However, there are ways to look "unapproachable and make it work. Maybe the topic for another article.

High-Value Women FAQs

Do guys like high-value women?

By definition, everyone likes a high-value woman, and everyone prefers a higher-value woman compared to a lower-value one.
However, power dynamics, attachment and subjectivity all play a role. Some men only feel comfortable with women closer to their own value, and many men in a happy relationship prefer their woman to any other 'higher value' woman.

Is a good career important for a woman's value?

While not as important to a man's value, a good career certainly boosts a woman's value because it correlates with her social status and income.
Some people get this concept confused because they conflate a woman's value as an individual with her mating value. A good career may matter somewhat less in mating markets contexts because while some men appreciate an ambitious and financially independent woman, many others feel more comfortable with a more stay-at-home partner.
That being said, a woman who combines personal success with femininity may be the peak of high value.

SUMMARY

In one sentence:

High-value women are feminine women who take care of themselves, as well as caring and taking care of the people around them, including their partners.

There is a lot of overlap between high-quality men and high-quality women, but also some major differences. This article provides you with an overview of the traits of high-value women.

Best Power Quotes (Explained)

Lucio Buffalmano · 3 July 2018 · Archived copy · Original

Many lists of "best power quotes" are filled with empty platitudes or lack a true understanding of the raw power dynamics that make those quotes work.

Below is our definitive ranking of the best power quotes. Each quote is followed by analysis through the lens of power dynamics, leadership psychology, and social strategy.

Power and Strategy

> **"Appear weak when you are strong, and strong when you are weak."**
>
> — *Sun Tzu, The Art of War*

Sun Tzu wrote that all warfare is based on deception, which in his writing, often meant to appear the opposite of what you are. Weaker when strong to **catch an opponent off guard**, and strong when weak to discourage aggression.

> **"The essence of strategy is choosing what not to do."**
>
> — *Michael Porter*

A powerful reminder to focus on the few things that truly matter.

> **"He who has satisfied his thirst turns his back on the well."**
>
> — *Baltasar Gracian, The Art of Worldly Wisdom*

If you give it all until they don't need you anymore, you lose all your leverage. Better to give something valuable, imply there is much more in store, and negotiate a good deal while they still need you.

Also read:

- **Effective calculativeness**: The primer and first step towards smart giving

> **"Let your plans be dark and impenetrable as night, and when you move, fall like a thunderbolt."**
> — *Sun Tzu, The Art of War*

Textbook element of surprise.

> **"Never interrupt your enemy when he is making a mistake."**
> — *Napoleon Bonaparte*

Wise reminder that some of your enemies will harm themselves without you wasting time on them.

> **"Be nice, be courteous. But always have a plan to kill everyone in the room."**
> — *James Mattis*

Mattis reminds us that raw power must not come with an ugly face, and that a powerful man can also be a nice guy. It's indeed good to be welcoming, the only problem is being *too* nice, always, and without any power.

> **"Speak softly and carry a big stick; you will go far."**
> — *Theodore Roosevelt*

Roosevelt delivers the civilized spirit of Mattis's previous quote. It's an approach that underpinned much of America's foreign policy after WWII, an empire-supporting policy that worked fantastically well until recent times. And it's the international relations equivalent of our interpersonal strategy of 'power and warmth'.

> **"Never attempt to win by force what can be won by deception."**
> — *Machiavelli, The Prince*

Deception is often cheaper and has a higher ROI than open competition.

Power, War, & Peace

Looking at the best quotes on power and war, it turns out that **power is as related to war as it is to peace.**

> **"Let him who wants peace, prepare for war (Si vis pacem, para bellum)"**
> — *Publius Flavius Vegetius Renatus*

Powerlessness invites predation.
Not planning for the worst fails to understand the competitiveness of human nature, and it's planning to fail.

It's probably no coincidence that peaceful and prosperous times in history came during unchallenged domination within (relatively) cooperative frameworks of trade (Pax Romana, Pax Britannica, and Pax Americana).

> **"An eye for an eye will only make the whole world blind."**
>
> — *Mahatma Gandhi*

Powerful reminder on the dangers of continued lose-lose vendettas.

> **"Carthago Delenda Est"**
>
> — *Cato the Elder*

Because sometimes it's you or them.
A powerful quote for when a nagging enemy remains a constant thorn in your side.

> **"The supreme art of war is to subdue the enemy without fighting"**
>
> — *Sun Tzu, The Art of War*

War is costly, and the highest ROI is always to get what you want, without war (an approach that also informs our foundational strategies of power).

Power and Influence Quotes

Influence, or your ability to change other people's behavior and states, is a form of social power.

> "The final key to the way I promote is bravado. I **play to people's fantasies. People may not always think big themselves. but they can get very excited by those who do.** That is why a little **hyperbole** never hurts. People want to believe that something is the biggest, the greatest and the most spectacular."
>
> — *Donald J. Trump, The Art of the Deal*

Ties back to our concept that some followers are easily impressed by bravado.

> **"You own nothing without the strength to back up your claim"**
>
> — *Niccolo Machiavelli, The Prince*

Influence is soft power, but this is a strong reminder that hard power also matters. Soft and hard power influence each other. Without that strength, you depend on people's goodwill.

> **"A soldier will fight long and hard for a bit of colored ribbon"**
>
> — *Napoleon Bonaparte*

This cynical observation on motivating soldiers to risk their lives supports our observation that, sometimes, great leadership is great manipulation.

But while Napoleon's quote frames military awards as useless baubles, they provide some benefits. For eaxample, status-related benefits such as peer respect, and psychic benefits like self-esteem and pride.

Power and Seduction

> **Be the flame, not the moth.**
>
> — *Casanova*

Casanova hits at a foundational law of dating power dynamics. As per the social investment model, the pursuer's heightened emotional and effortful investment signals lower value, which undermines attraction.

> **"The man who professes his love to a woman in words must be sent to school again."**
>
> — *Casanova*

Powerful reminder that early and uncalibrated vulnerability is rarely good for men.

> **"Everything in the world is about sex. Except sex. Sex is about power."**
>
> — *Oscar Wilde*

Oscar Wilde, an artist type of seducer, was onto something. Although sex isn't only about power, both leadership and power are crucial to successful dating. And the dynamics of dominance and submission are tightly intertwined with sex.

> **"Power is the ultimate aphrodisiac."**
>
> — *Henry Kissinger*

If it's true, as some say, that women are hypergamous, then hypergamy comes down to power.

Mental Power

Personal power starts from the mind and emanates outward.

> **"You have power over your mind – not outside events. Realize this, and you will find strength."**
>
> — *Marcus Aurelius, Meditations*

The central tenet of Stoic philosophy is control of one's mind, independent of external events.
Control your mind, and you'll always better control the outer world.

??♂ Lucio's Note: I first read Marcus Aurelius' quote on 'choosing not to be harmed' in my school diary. It stood out among dozens of other quotes and felt like a power move to turn the tables on life. It took me a couple more decades to fully realize the power of this concept.

> **"No one can make you feel inferior without your consent."**
>
> — *Eleanor Roosevelt*

This is mental-level frame control, the foundation of all advanced frame control.

> **"It always seems impossible until it's done."**
>
> — *Nelson Mandela*

Such a powerful antidote against pessimistic naysayers.
Naysayers let history dictate their future. Winners look for ways to make history.

> **"The best way to predict the future is to create it."**
>
> — *Peter Drucker*

A quote to go from passive planning, to active mover and shaker.
This is similar to 'reading body language', an important skill to gain intel. But never forget that the real power is less in reading, and more in *changing*.

> **"Victorious warriors win first and then go to war, while defeated warriors go to war first and then seek to win"**
>
> — *Sun Tzu, The Art of War*

Winning starts with the mind.

> **"It's not the size of the dog, it's the size of the fight in the dog"**
>
> — *Mark Twain*

Fierce competitors always have at least a chance. Fighting spirit also always provides leverage because nobody wants to take the risk.

> **"It's in your darkest hours that men are born and characters are forged"**
>
> — *The Power Moves*

A powerful reminder whenever facing adversity.
Heroes are built on heroes' journeys of challenges.

> **"Success consists of going from failure to failure without loss of enthusiasm."**
>
> *— Winston Churchill*

You don't even strictly need enthusiasm as long as you keep going.

Power and Leadership Quotes

Leadership is the peak of social power.

> **"He who wishes to be obeyed must know how to command"**
>
> *— Machiavelli, The Prince*

Leadership isn't just a role, it's also a set of skills, character traits, and their signals, including effective dominance in both behavior and verbal cues.

> **"Weak men choose leaders who make them feel strong. Strong men choose leaders who make the collective stronger."**
>
> *— TPM's Value*

Briefer version: 'Weak men follow strength; strong men follow honor'.

Strength without honor can include bullying, which to some weak men is stronger and perversely attractive as a dark power they wish they had.

This quote links leaders' power to followers' power, part of our competence–control tradeoff model of leadership™.
Meaning: disempowered men are blinded by theatrical overdominance, overconfidence, and dark triad traits. These are emotional choices, masked as rational. It's more akin to **a social seduction process** by the leader.
Empowered men, themselves high in power and confidence, aren't impressed by strength alone, and tend to promote more honorable leaders who look after the collective interest as well. It's a more rational and masculine choice.

Ultimately, a despot's power grows with disempowered followers. A sentiment also echoed by Machiavelli in our next quote:

> **"The first method for estimating the intelligence of a ruler is to look at the men he has around him."**
>
> — *Machiavelli, The Prince*

Not only his intelligence, but also his character.
Narcissistic types seek sycophants, despot seeks loyalists, and leaders interested in achieving goals seek competence.

> **"Leadership is the art of getting someone else to do something you want done because he wants to do it."**
>
> — *Dwight D. Eisenhower*

This is the ultimate quote on soft power.
Extrinsic motivators and aligned incentives are higher ROI: require less policing, and get more buy-in (Haslam, 2006).

> **"Treat your men as you would your own beloved sons. And they will follow you into the deepest valley."**
>
> — *Sun Tzu, The Art of War*

Sun Tzu proposes a model of honorable leadership based on prestigious leadership (Henrich and Gil-White, 2001).
This is more effective for empowered, high-competence teams than Robert Greene's 'credit-taking approach' in *The 48 Laws of Power*.

> **"Great leadership is great manipulation"**
>
> — *Lucio Buffalmano*

Effective leadership means turning 'Is' into 'We's', channeling self-interested concern towards the group, mission, or leader. While that's at times good and can increase the pie for all, overriding self-interest may entail not just persuasion and logic, but also manipulation.

This is especially true at the extremes, where individuals may risk their lives.

> **"It is much more secure to be feared than to be loved."**
>
> — *Machiavelli, The Prince*

An important reminder for leaders not to be *only* high warmth, but also high power.
Tools for rewarding are crucial, but so are tools for sanctioning poor behavior and removing poor team players.

> **"That which isn't good for the hive, isn't good for the bee"**
>
> — *Marcus Aurelius, Meditations*

Great mindset for a leader to have. And also effective for greater cooperation, a bigger pie for all, and overcoming the tragedy of the commons.

Quotes On Powerful Women

> **"If my strength intimidates you, I hope you realize that's a weakness of yours"**
>
> — *Anonymous woman*

Intimidation is only a thing for those who feel *below* her.

> **"Being powerful is like being a lady. If you have to tell people you are, you aren't."**
>
> — *Margaret Thatcher*

Good reminder to avoid uncalibrated bragging. Though the other half of the quote may feel dated with later cultural changes.

Power and Corruption

Power has long been associated with corruption in popular culture, often encapsulated by this most famous quote:

> **"Power tends to corrupt and absolute power corrupts absolutely"**
>
> — *Lord Acton*

It's not wrong: power *can* corrupt (Klaas, 2021). However, it's more nuanced. Power can also liberate, while a *lack* of power can corrupt, as highlighted by our next quote:

> **“Power corrupts those who don’t have it”**
>
> — *Lucio Buffalmano*

Power is the foundation of honor.
It’s required for honesty and assertive communication, and standing up for what’s right requires power to survive the fallout.

It is the *lack* of power—mental, social, and financial—that breeds corruption. Weakness forces people into the shadows of passive-aggressiveness and covert power moves. Poverty creates the desperation that leads to theft. Social neediness chains men to toxic leaders.

A dynamic made even clearer with Buffalmano’s quote on honor and power (below).

> **“No one ever seizes power with the intention of relinquishing it.”**
>
> — *George Orwell, 1984*

This quote goes beyond ‘power corrupt’. The keyword is ‘seizing’ here. If someone is willing to risk everything to get power, he will risk everything to keep it.

> **“It is not titles that honour men, but men that honour titles”**
>
> — *Machiavelli*

True.

Power and Honor

> **"Honor without power puts you at the mercy of the dishonorable. Honor with power puts you above them."**
>
> — *Lucio Buffalmano*

The will to virtue without power can demand unsustainable sacrifices. It's a vulnerability among the many who are not honorable, and a strategic handicap that can make you comparatively *less* effective.
But honor with power is a legacy among the many who lack the strength to be both, and look up to it.

> **"If you want to test a man's character, give him power"**
>
> — *Abraham Lincoln*

Many nice-looking guys aren't nice out of choice, but out of fear of being assertive.
Power instead liberates people to be who they truly are. This is the insight in Lincoln's quote.

> **"In matters of style, swim with the current; in matters of principle, stand like a rock."**
>
> — *Thomas Jefferson*

Good strategic approach to stand up for what's right when it matters, but minimize the costs for trivial stuff.

> **"If it is not right do not do it; if it is not true do not say it."**
>
> — *Marcus Aurelius, Meditations*

So simple, yet so honorable.

TPM Power Quotes

> **"To find your unique voice you must first quit singing on someone else's tune"**
>
> — *The Power Moves*

A quote about empowered individualism over collectivist psychology.

> **"Weak men seek refuge in the same tribe that strong men return to lead after they quit it"**
>
> — *The Power Moves*

This quote highlights the need for men to go through transformative life experiences before they can become life-tested, empowered leaders. These experiences are most formative when abandoning the safety of the tribe, and venturing into life on one's own.

> **"A good person is ruined among the great number of people who are not good"**

Albert Einstein Letter to His Wife: the Idiocy of A Genius

Lucio Buffalmano · 5 July 2018 · Archived copy · Original

Many consider Albert Einstein one of the most intelligent men in history.
And few if have any have the honor to see their name associated with “genius” as much as Einstein has.

Maybe he was a genius.
And as far as I know, he might have also been the most intelligent person on earth (I doubt it, but who knows..).

But he is also the perfect example that there is no such thing as an all-defining, all-encompassing intelligence.
Indeed, as much as Einstein was smart with numbers and abstract reasoning, he was rather poor in emotional intelligence.

And when it came to relationships, Einstein was as clueless as the next guy.
Actually, he was *much* more clueless than the next guy.

This is the letter he wrote to his wife.
It outlines Einstein’s conditions that his wife had to meet to keep a happy marriage:

CONDITIONS

A. You will make sure:

1. that my clothes and laundry are kept in good order;
2. that I will receive my three meals regularly in my room;
3. that my bedroom and study are kept neat, and especially that my desk is left for my use only.

B. You will renounce all personal relations with me insofar as they are not completely necessary for social reasons.
Specifically, You will forego:

1. my sitting at home with you;
2. my going out or traveling with you.

C. You will obey the following points in your relations with me:

1. you will not expect any intimacy from me, nor will you reproach me in any way;
2. you will stop talking to me if I request it;
3. you will leave my bedroom or study immediately without protest if I request it.

D. You will undertake not to belittle me in front of our children, either through words or behavior.

When I first read this letter I had several different reactions at once.

At first, I wanted to laugh at the sheer stupidity and naivety: as if any woman -or human being for that matter- was going to gladly comply to that tone.
And who sends a letter to the person you are in a romantic relationship with instead of speaking, anyway?

But I also felt bad for him, for having so little understanding of human psychology. And of course, I felt bad for her for having such a husband.
I don't know any more details, but from that letter, it's not a hard guess that this was a dysfunctional relationship. Possibly even an abusive relationship.

What's most appalling is that not only Einstein didn't think the rules could backfire, but that he thought they would fix his relationship.
Obviously, Einstein understood little about people, women and relationships.

At least, he didn't suffer too much because of it. He was aware of not being very good with people, and he cherished his time alone.
That makes me think Einstein might have been an introvert and an avoidant when it comes to attachment styles.

Anyway, back to the story.

Einstein Wife's Reaction

What do you think his wife did?

She divorced him shortly afterward, of course. And looking at that letter, could we blame her?

Now you might think, "Eh, fair enough, I don't think the dude really wanted to stay in that relationship anyway so he was probably happy with the result".

Well, she also took his children though and…. Quite a bit of money from him. I don't think Einstein must have been too pleased about that.

Also, if Einstein wanted to influence, he also utterly failed.

So even purely from a cold-hearted, rational perspective, that was a dumb move.

Lesson learned?

Work on your social skills.
And, better yet, on your *power* skills.

How to Approach Girls In 10 Easy Steps

Lucio Buffalmano · 6 July 2018 · Archived copy · Original

Cold approaches as intimidating for most men.

Luckily, if you do it well, it's easy and with a high chance of going great.

This guide mixes personal experience with studies and data.
By the end of it, you will know exactly what truly works best to approach women.

- 10. Lead & Show Higher Power

- SUMMARY

1. Pre-Approach: Look High-Power

A great approach starts before even saying hi.

It starts with “who you are” -and how she sees you behaving-.

A popular study aptly called *“Getting That Female Glance“* observed forty men on fourteen evenings in three different bars and recorded their approaches and success rate.

The men who were the most successful did more of this:

Do more intra-sexual touching

Onlookers perceive nonreciprocal touch as a sign of a dominance-submission pattern.

That means that you’re high-status in the group.

Adopt open body language

Open body language signals confidence and comfort.
Also, see:

- sexy hands in pockets
- how to walk sexy
- body language of dominance

Take up more space

In many species, humans included, the most dominant member commands the largest space. You can check a few picture examples here.

However, don’t overdo it: it’s easy to go from comfortable to immature and tacky.

Glance around more

There are two types of “glancing” in the study:

- Type 1 is sweeping around the room
- Type 2 is more toward a target

Don’t overdo any of them as too much of the first means “scanning for threats” while too much of the latter can turn into “weird”.
The main point here: don’t look down or “collapse” into your drink.

Gesticulate more

Social power was communicated through the use of frequent and expressive hand gestures. You might want to add some gesticulation to your interactions.

Touch yourself more

No, not private touching.

But touching the beard or growth area is a display of manliness.

2. Let Her See You (Being Cool)

Alright, so now you’re cool and high-power.

What’s next?

Well, she has to see you being cool, or it doesn’t count.

This study confirms what's helped me get me results that cannot be matched by "random approaches".

So, what's the secret?

Simple:

By far the best, the best thing you can do to make your approach a welcome success is to have her be attracted to you *before* you even approach.
Don't worry too much about what that "attracted" means: anything is better than her not seeing you at all.

As a matter of fact, **even her simply *seeing* you, just seeing you, is much better than appearing in front of her as a total stranger**.

To have her notice you, you can use the behavior we discussed earlier.
Or:

- Stand cooly watching the sunset while you sip your drink
- Walk past without looking at her with a confident smile
- Talk animatedly with a friend as if you couldn't care at all about the world around

Most of all, do your own thing without looking at her: let her look at you first.

Stand Out

A great way of being noticed, of course, is to stand out.

Here is an example of how it's helped me:

> **Her**: and I thought you are their manager or director

That's what she said after I approached her.

The girl thought I was the manager of the show.

Now imagine what a difference it does if a guy goes to say hi to a girl as a random stranger she didn't notice, or as a guy she thought was the head honcho of the night.
Huge difference, no?
Day and night, I'd say.

An easy and reliable way to "be cool" is taking care of the basics and how you move and behave (see "Power University"), plus having cool groups of friends in which you have high status.

3. Glance at Her

There is a caveat here, so bear with me for a second.

The issue with locking eye contact for long is that making it obvious you're looking at her gives your game away. And it can give your power away, too.

There's an exception for more advanced folks.
If she likes you and you're an exciting presence you can spark a certain "wolf preying on a lamb dynamic". And don't listen to the PC police, if she's into you, that can be very exciting.

She'll be wondering when you're going to make your move, and she'll be worried if she'll be cool enough for you (that's ideal, then once you're there build her up to show that yes, you think she's at your level).

Or don't look at her at all.

Anything less than confident and at the top of your game though, your safest bet is not to look at her.
Indeed, giving your game away if she doesn't perceive you as awesome (yet) would mean slotting yourself into the chasing position.

Note: however, it's still best if she has seen you before. Studies show females report discomfort in being approached by a male whom she hasn't seen or not yet made eye contact with (Renninger & Bradbury).

4. Walk Up to Her

Here are a few different ways you'll begin your approach nonverbally:

With Eye Contact: Smile and Walk Directly

If you're looking eye contact, you can start walking towards her.

However, here's an important tip: SMILE. If you start walking towards her without smiling it can seem confrontational.
You want her to be excited, to fear that she might not be up to your level… But you do not want her to fear *you*.

Without Eye Contact: Go to Her Side

You don't want to open from behind -God forbid- and to stand right in front of her and startle her.

The best approach when she hasn't seen you yet is from the side.

Playing The Game: Pretend You're There by Chance

Here is an advanced move for you.

What if you haven't done any eye contact and if you don't want to signal any interest?

A great move, in that case, is to pretend you ended up near her "by chance".

This is how most women will do it with guys they like and this is how you want to do it too.

A few ideas:

- Walk past and pretend you've just noticed her
- Go to the bar while she's there but pretend you're only there to get your drink. Then drop a casual "how's your night going"
- Go to the bathroom 5-6 minutes after she's gone and greet her as she walks out

5. Say "Hey, Hi"

You can face two different alternatives:

Smile And Just Say "Hi" If You've Been Exchanging Glances

If you have been looking at each other, you "both know what's up".

The best approach in this case is to don a sexy smile and say "hi" with the confidence of the man who knows he'll be well-received.

This is what you must think and sub-communicate:

> *You know why I'm here, and I know you like me too. And it's quite exciting*

More on what you say later.
But, in general, both my experience and research suggest that it's best to match the intensity of your approapco to the intensity of her invitation.

Let Her Look at You First If You Haven't Locked Eye Contact

Who's looking at who is a sign of who is pursuing who.

If you were looking at her first, it means you noticed her first while she didn't.
And it subtly but importantly slots you as the party with the lowest value of the two.

Instead, you will slightly nudge her to make her look at you first.
You can do it by placing your hand lightly on her arm, for example. Or you can start talking to her while looking ahead or past her (instead of looking at her like most guys do).
Then when she turns, very quickly, you return your gaze to meet her eyes.

Most of all, you want to avoid the all too uncommon "startling effect", such that she turns to face you and sees you staring at her.
That's very predatory, and not in a good way.
Just imagine turning around and seeing someone interested in you before you even realize what's going on:

When she turns and sees you staring at her

6. Start Talking (& Lead)

Plenty of ink has been poured on what to say to women since *The Game*.

And plenty of research has been done as well.

Combining altogether, it's safe to say that you want to avoid cheesy pick-up lines.

What you say depends on the situation, of course.

If she saw you being cool and/or if you had strong eye contact and she returned interest, then I recommend you keep on that good vibe and retain as much power as possible by not telling her you like her.

BUT, you can compliment her on something unique about her if anything truly caught your attention.

If she thinks you're cool upon approach, you help raise her to your level with a compliment and it communicates you're only interested in women you find attractive because of X.

Here are some good ways of starting an approach with a compliment:

> **You**: Hi.
> I love women with a good style and that dress is… Fabulous.

Start with an even bigger bang:

> **You**: I have to say… You have the sexiest legs I've seen in a while
> (pause, she laughs)
> My name is Lucio, hi

Starting strong is the best and my favorite way.
Look Gosling does it:

> **Him**: I find you attractive, do you find me attractive?

I generally don't recommend that so early though, it's too high risk.
His opening though was perfect.

Something simpler though for when you don't have a Hollywood script to support you:

> How's your night going

Or if the vibe was just great, go up there and smile without saying anything (or just say "hey").
That communicates that you know she's into you and will start the conversation with a collaboratively sexual undertone.

In this article a few more ideas of how to start a conversation.

Mindset: Carry the Conversation

The mindset here is that **it's up to you to make it a good interaction**.

If they're happy to have you and talk a lot, you can sit back a bit.
If they don't talk much, you must do the work.

Also, see:

- **How to Lead to Seduce Women**

7. Start With Light Banter

I found that the best way to start an approach is with some humor and some light laughing.

It does a few good things:

- Provides a valve to release tension
- Show you're a socially savvy guy, which increases attraction
- If you make her smile, she's already following your lead
- Provides good vibes
- Dispel doubts and fears

The last one is important.
The first moment you approach a girl indeed her brain is on full alert. And she is wondering if you are:

- As cool as you seemed
- Going to stick to her like glue (socially dangerous)
- Weird and causing troubles

She is hoping you're awesome, but she is also worried you're lame and she will have to reject you. Or worse, that you might be a threat.

Avoid Overly Serious

A failure to make the interaction light and fun in the beginning and starting off too seriously is a common mistake.
Many a great couple never got together, sacrificed on the altar of a too serious beginning: don't fall for that!

How to Make Light Banter

Flirting is great light banter.

Here are a few lines you can use:

> **You**: And what brought you here. Looking for some boys to have fun?

Or:

> **Her**: And how's your night going
> **You**: Give me a beer, and I'm always good
> (but make sure she knows you're joking, nobody likes an alcoholic)

Positivity is also great to show you're a well-adjusted and likely high-value man:

> **You**: What's not to love about tonight. An awesome, vibrant city, a light summer breeze, a beautiful sunset… Life is beautiful

And some more ideas here for you:

- Text flirting to get you laid

8. Make Her Invest

Having women do something for you subconsciously tells them that they must like you.

The earlier you can get her to do something for you and the more significant it is, the faster your approach will move to seduction.

For example, you can:

- Ask her to move a little bit
- Tell her to move with you
- Pick the most comfortable position for yourself (she invests more in the interaction if she's in the most uncomfortable position)
- Tell her to stop talking for a second (you need to have a good reason for this though)
- Ask her to show you something (pics of her art on the phone, her bracelet, etc.)
- Make her talk about herself -ideally, trying to prove to you she's good enough for you-

Also, research shows that a light touch increases compliance.
Before you ask her to move with you, or before you ask her to trade contact information, lightly touch her on the arm.

9. Get to Know Her

After the initial banter, you want to go a bit deeper.

The idea is that you want to show her that you are only interested in high-value women and you will only show deeper interest after she has proven to you that she is one.

Here are a few keys to getting to know her well:

- Talk about personal topics

- Talk about emotional topics (no work, weather, etc.)
- Keep it uplifting
- Make it light again for a second when it's too serious for too long, then go back
- Bring the conversation always back to her

How Long Should You Talk?

If there is sexual chemistry, keep it up and seek to move her to a sex location ASAP.

If things are going well, but not *that* well, just keep going.
Move her with you. For example, tell her you two should sit, or go out for some air. If she's following your lead, great. Ramp up intimacy, and then tell her you two should go somewhere alone.

But if you just want to swap contacts, it's important you don't make the interaction too long or too awesome. If you do it and then don't stick around, she might feel you're not serious, not ballsy enough, or not interested.

Max 7 minutes if you want to swap contacts.
And do this if she says no the first time.

10. Lead & Show Higher Power

Finally, women lust for men who are "better than they are".

Especially when it comes to power, status, and dominance.

This whole website is dedicated to power.
But an easy way of doing it is to honestly disagree with something she says and control the frame.

Also, read:

- **Dominance to get girls**

SUMMARY

Approaching a girl successfully starts before the actual approach.

Here are the steps of the ideal approach in summary:

1. Let her see you being cool and high value
2. Lock eye contact a few times to make her think about you and let her fantasize about your approach (or to come her come to you, big bonus)
3. Say hi (make it look natural, or go from the side)
4. If there's a lot of sexual tension, keep it up and seek to quickly move to a sex location
5. If not, banter and joke, in the beginning, to put her at ease and display your social skills
6. Generally, keep it light, but get to know her better, AND let her know you as well
7. Make her invest in you and the interaction
    1. Ask questions, and let her explain
    2. Task her
    3. Move her
8. Display leadership and higher power (frame control, openly disagree when you disagree, challenge her, strategically self-promote yourself, etc.)
9. Stick with her if you want to pull later, or propose you two should meet another day

Bullet Summary

- Normal diet plans don't work for people with addictive hunger
- You win weight loss by changing your habits for life and sticking to exact measure
- Flour and sugar are addictive: you must give them up forever

Summary

About the Author: Susan Peirce Thompson says she holds Ph.D. in Brain and Cognitive Science.
She shares in the book that she is an addictive personality, including past addiction to all types of drugs and, later, to food.
She developed Bright Line Eeating as a program centered around the concepts of addiction personality and breaking free from food addiction.

Intro

The author says that 99% of obese people who try to lose weight fail.
And a vast majority of that 1% regains weight over the next years.

Bright Line Eating wants to change that for you, and it starts with psychology:

You Can't Rely On Willpower Only

The author says that most diets fail because they rely too heavily on willpower. Most people, even healthy ones, think way too often about food.

And since our willpower part of the brain is especially sensitive to glucose, it's right when blood sugar is at its

lowest that we crave the most and that we are the most defenseless.

My Note:
The concept of willpower has been at the center of a heavy debate in psychology, read more here.

Two Types of Insatiable Hunger

The insatiable type of addictive hunger comes with two traits:

1. It's unsatiable: eating more doesn't placate the hunger
2. Comes with an urge to be sedentary

Leptin is the hormone that should tell our brain to stop eating because we are full.
However, some people can develop leptin resistance. When we are leptin resistant, insulin stops leptin at the hypothalamus and at the brain stem level.

And what do we usually eat in the Western world when we're hungry? Exactly the type of sugar-laced food that makes us even hungrier.

And it's a type of hunger that is difficult to resist. The brain stem level is also called "the lizard brain" because it's the older part of our brain.
The brain stems control all activities related to our survival, which can make overriding the "lizard hunger" an almost impossible task.

Cravings VS Insatiable Hunger

Cravings are different than insatiable hunger.
Cravings are what push people to drive to a specific place an hour away just to get a specific type of food -their "fix"-.

Similar to the drug addict, says Susan Pierce Thompson, the food addict searches for food not to get high, but to get normal -just for a little while at least-.

The Phenomenon of Addictive Downregulation

Typical of addiction, food thins out all the dopamine receptors in the brain, which makes us less sensitive to taste.
But you don't need to be addicted to impair your dopamine receptors, eating enough flour and sugar will do the trick.
Yep, says the author, you should start looking at sugar and flour as drugs.

However, a less sensitive sense of taste is not the biggest issue. The biggest issue is that life in between bouts of eating is bleak.

From Susan Peirce herself:

Where Do You Stand on The Susceptibility Scale?

Bright Line Eating keeps the analogy between food and drug with the susceptibility scale, which is an interesting quiz to test how likely it is for you to become addicted.
It's been indeed my experience as well that some people just get hooked more than others.

This is important to know because diet plans based on moderation for people high on the addiction scale do NOT work.

Obesity For Non-Food-Addicts

Not all overweight people are necessarily addicted to food though.
One can have a slower metabolism, be clueless about nutrition and keep snacking on junk food.

Addicted Skinny

And not all skinny people are non-addictive personalities. Some of them can be high on the addictive scale but spend their whole life battling cravings.
They might abuse laxatives or spend a whole life obsessing about food and struggling valiantly to resist.
Not a good way of living.

Is Addiction Learned or Genetic?

A lot of is genetic, but strong emotional traumas can also create it.

Often it happens to children but can also happen in adults more rarely (that's why many PTSD war veterans, for example, develop addiction).

Watch Out For Dangerous Eating Cues

The author describes an experiment with rats that had food delivered together with a lever coming into the cage as a cue.
Later they started delivering the lever without the food.
As anyone who is familiar with Pavlov's dog experiment would know, the rats expected the food when the lever was provided and ran to the dish.

What was unexpected though was that some rats didn't run to the food, but ran to the lever. And started fondling, cuddling, and enjoying the dopamine rush even without the food.

What does this mean for people?

The Psychology of Signal Tracker (& Why Food is More Addictive For Them)

Well, some people who signal tracker (loving the signal) instead of a goal tracker will go through their days continuously being reminded of their addiction.
For example:

- the clock signals 8 pm and you start salivating
- office is empty and lunch breaks remind you of food
- the alarm goes off and breakfast comes to mind
- McDonald's golden arches appear on the horizon and you dream of junk food

Addicted people who track signals will have a harder time stopping overeating because everything reminds them of food.

Don't Liste To The "Saboteur Voice"

As we've also seen in *Phantoms in the Brain* Susan Pierce Thompson says that different parts of our brain all talk to us trying to pull us in different directions.
However, we believe that all of them represent us, that they are all "me".

Turns out, it's the left part of the brain that makes sense of the behaviors and impulses from different parts of the brain and assigns them a narrative that "makes sense".

This is bad news for people high on the addictive scale who have broken previous diet commitments. because they

will come to see themselves as “hopelessly obese”.
And over time that can lead to self-disgust and low self-esteem.

The Solution: Bright Lines

The solution is not to reduce portions “more or less” or to “stop for a period”.
You must stop bad behavior forever.
They must become part of who you are.
Repeated over time, your choices of food will become automatic, and you won’t need willpower anymore.

Your dopamine receptors in time will adjust again, and you will start to taste and enjoy vegetables as well and you don’t have crazy cravings anymore.

Here are the cardinal tenets of bright-line dieting:

1. **No sugar and flour** (forever)
2. **No artificial sweeteners**
3. **No dried fruits, juices, and smoothies**
4. **No alcohol**
5. **No snacking** (stick to 3 meals a day)
6. **No bites, licks, and tastes while cooking**
7. **Commit to your food**: decide the evening before what you will eat and stick to it
8. **Stay consistent**. Consistency is key
9. **Stick to the quantities**: use a digital scale for quantities (an eyeballing portion is an invite to the saboteur)
10. **No exercise as you ingrain the new eating habits** (you’ll do it once your diet is automated, in the beginning, it will only deplete your willpower)
11. **Coffee better not**
12. **Nuts and seeds only if you weren’t binge-eating on them**

Emergency Action Plan

There will be times when it’s tough and you need to prepare for them.
Here’s what Bright Line Eating recommends:

- Social support (find a buddy to call, or use the Bright Line support system)
- Prayer
- Meditation
- Gratitude
- Service (make it less about yourself and focus on others)
- Distract yourself

You Must Learn to Read Ingredients

Learn to read the ingredients and spot all derivatives of sugar and flour.
The rule here is that you need to read the list of ingredients in the product and if there’s no sugar or flour in the first three ingredients then it’s okay.

You Must Stick to The Plan

Bright Line Eating has lots of other tips and tools, like staying at Airbnb with its own kitchen and preparing your food to be on the road.

In case you fail once, you must:

- Go back to the plan ASAP
- Don't isolate yourself but find social support

[image]

Real-Life Applications

If You're Addicted to Food, Ban Some Food Categories…
If you tend to binge eat, then it might make sense to ban the foods you binge-eat on.

If You're NOT Addicted, Enjoy Everything (In Moderation)
If you're not addicted, not binge eating, or not mightily struggling to contain the weight, this book is not for you

CONS

- **Heavy on Marketing**

I find the tone in Bright Light Eating very marketing-oriented.
The author says for example:

> Thousands of people (..) used this method to lose collectively over 300,000 pounds

Collective loss says little from a scientific point of view though.
Or:

> The average Boot Camper, in 8 weeks, loses 19 pounds. Many lose much more

Well, of course, "many lose much more", it's an average number, hence it's also true that "many lose much less".
Also, the success stories at the end of every single chapter made me feel it was a bit too marketing-style.
HOWEVER, this doesn't have to be a con for the Bright Line Eating Bootcamp: products are effective or ineffective independently of marketing.

- **Ego Depletion is Not Certain Science**

The author places a big emphasis on the phenomenon of ego depletion as championed by Roy Baumeister.

However, the model of ego depletion has been criticized and there is not yet a consensus on whether or not it actually exists.
However the author makes valid points even if ego depletion didn't turn out to be an important factor, it would still not take much away from this program.

- **Supports The Unscientific China Study**

The author got into plant-eating after reading The China Study by T. Colin Campbell. I'm surprised that the scientist she is didn't go dig into the heavy -and valid, I believe- criticism that the book garnered.

- **The "addictive personality" is still a hypothesis, still needs more research**

Personally, I think this might be a case where research will back experience.
I've seen and met enough people who get easily addicted to all kinds of substances to believe that it just makes sense that some people are more likely to get addicted than others.
And the fact that if you have an addiction you're also more likely to have another (Michael Weaver, 2021) also seems to back the "addictive personality" hypothesis.

On the other hand, when it comes to how to cure and address food addiction, that might be anyone's guess -and Susan might as well be on the right track, for all I know-.

PROS

- **Interesting On Psychology of Food Addiction**

Bright Line Eating is a good read when it comes to the psychology of (food) addiction and addictive personalities.

- **Seems Well-Founded and Sound**

It seems to me like the author sought to ground her program and approach on scientific research. Whether that is sound, I cannot say for sure.
It seems to me that her main theory is at least logical.

- **Sounds Like A Great Program for Addicts**

If food addiction is indeed a thing -and it may be, for all I know-, this might be a highly restrictive, yet effective way of solving it.
Drug addicts can also learn a lot from this book.

Bright Lines Review

Bright Line Eating is not a book and program for everyone.

And it's not for the casual dieter who's not willing to commit. Such as, not the type of dieter who says to be on a diet and then "casually" gives in at the second invite.

This is for people who are very serious about weight loss, and who don't mind making huge and restrictive changes to their lives.
Ad it's especially suited for people with addictive personalities

Albeit I'm neither of those, I loved this book and it was eye-opening on the psychology of (food) addiction.

Bullet Summary

- Use diaphragmatic breathing
- Only speak when you have a belly full of air
- Make sure your larynx (in your throat) is not blocking the air

The Perfect Voice

About The Author: Roger Love is a voice and singing coach.
He is probably the most famous speaking and singing coach in the world, having worked with the likes of Tony Robbins, Gwen Stephany, Selena Gomez, and many more A-list celebrities.

Let's start with our summary and review:

Learn & Use Diaphragmatic Breathing

Diaphragmatic breathing, sometimes also referred to as “belly breathing”, consists of deeper breaths in which you channel the air deeper into your lungs, almost as if you were breathing into your belly.

Diaphragmatic breathing is better in a number of ways, including a better voice.

When you learn diaphragmatic breathing, you can control the stream of air that comes out of your mouth as you speak.

How do you know you’re breathing with your diaphragm?
Simple: **to learn diaphragmatic breathing, let your belly swell with air, instead of your chest**.

Roger Love says that your stomach should

- only move your stomach from your belly button to 3-4 inches above it
- only breathe from your nose

If you can control the airflow, you can also control the sound.

Only Speak With Air Support

You should create a continuous stream of air that comes out of your mouth as you speak.
That air should come as you push your belly back in.

Exercise with diaphragmatic breathing and speak only when your stomach is coming back in. Breathe in from the nose, then breathe out from your mouth slowly.

Roger Love has a few guided exercises with a few stock sentences, including the following:

> If my stomach is coming in in as I speak I’am going to sound a lot better.

Common mistakes people do:

- Raising their chest breathing
- Keep speaking after they’ve run out of air, trying to squeeze the last words in. And that sounds terrible
- Tension in the top part of the stomach
- Holding air trying to make it last longer

Types of Voice

Roger Love is simply amazing at mimicking the types of voices and what they do wrong.

Similarly for *Straight Line Persuasion* which is all about tonality, there’s no point in me “describing” how the voices sound.

But here are two examples I could find:

1. Nasal Voice

2. Airy Voice

The airy voice type is one of sex goddesses Marylin Monroe and Mickey Rourke:

This type of voice uses lots of air but does not use the air for actual speaking power and loudness because it does not engage the vocal cords.

The 6 Elements of Voice

- **Volume**

Most people speak too low. Fill the space around you and never have anyone ask you to repeat.
A good volume is a mixture of air and cord vibration.

- **Melody**

Melody is about going up and down and adding variety. Melody keeps people guessing and enthralled.
Most people are too close to monotone.

- **Pitch**

The too-low pitch sounds like you're too serious. Too high and people won't take you seriously.

- **Tone**

Too airy and whispery sounds fragile, like Monroe used to speak.
At the opposite end of the spectrum is that grating, irritating sound you hear holding the "A" in "graaaass", where it feels like you have no air left.

- **Pace**

How quickly or slowly you speak.

Keep A Good Posture

Keep a good posture and don't hunch over or you will constrict the airflow.

Drinks Lots of Water

Drink almost 2 liters of water a day.
It's the water that you drank the day before that will help you mostly the day after.

Voice Exercises

And finally the most important part: the exercises.

Belly Breathing Exercise

Many are afraid of breathing with their belly and holding tension there because they don't want to make it look as if they have a big tummy.

Let go of that fear.
Breathe from your belly and let the air go out of your mouth as in a whistle, very little.
Let a bit of air come out without pressure on your stomach.

Birthday Candles Exercise

Imagine you have a birthday pie in front of you, and you want to blow off the candles.
One by one, blow from your mouth, and at each blow push your belly back in.

The goal is to not create any tension in your stomach. Let it come in, then relax. Let it come in, then relax.

Air to Fingers Exercise

Put a hand in front of your mouth and speak. The air should come out NOT in bursts, but unobstructedly.

Roger Love says

> I need to connect all of my words together

Of course, you can say anything though.

Scale Exercise

- Gog

Repeat “gog” up and down the scale. This exercise helps find both your low, middle, and high voice

- Gag

Same but with a wider scale

Speak Low to Adjust The Larynx

First: find your Adam’s apple.

The larynx, or “sound box” is right behind it.
Swallow and it should go up.

Here is the thing though: when you speak the larynx should NOT go up or it will suffocate your voice.
To find out if your larynx goes up, put a finger on the Adam’s apple and start speaking. It should not move more than a quarter or a third of an inch and not nearly as close as when you swallow.

A larynx going up when you speak is one of the most common problems affecting speakers and you should fix that.

You fix that with a series of low-larynx exercises.
Repeat “mom” and speak like Yogi the Bear or like Sylver Stallone.
Repeat “mom, mom, mom” with a low pitch.

Volume Exercise

To get the best volume, simply get more air out of your mouth.

Put a hand in front of your mouth and count from one to ten, making sure that more air comes out of your mouth as you go from 1 to 10.

Remember that more air should not be “breathy” as with Monroe’s speaking, but a full voice.
To make sure your vocal cords are activated, repeat “caaaaaant” as you feel the vibration in the back of your throat.

Pitch Exercises

To reset your pitch say “hello” and keep the “o” going. Put your fingers on your stomach right below your rib cage and push in a quick motion.
Your “ooo” should start vibrating up and down.
Now try to stay only with the high pitch and let go of the lower part of the scale.

Mouth Physiology

Some of us make smile when pronouncing certain words and spread our mouths too long (especially “e”).
Smiling is great, but not while speaking because it pushes air into the nasal cavities and we don’t sound good.

To fix the smiling and spreading of mouths, put your index fingers on both corners of your mouth and push in as if you wanted to purse your lips a bit.

Then speak like that and recite the alphabet.

You don't need to smile to say "e". Say "u", hold your mouth like that, and then say "e".

Vocal Power or The Perfect Voice?

Both "Vocal Power" and "The Perfect Voice" cover the same exercises.

But The Perfect Voice is more compact and more tailored to actual voice exercises.
Plus, it also has online access to questions and answers from students and I learned hugely from the questions and answers because many of them are questions I also had.

I recommend "The Perfect Voice".

CONS

Videos might have helped
The program is in audio, and that's cool.
At times I thought that maybe a video version could have helped with a few exercises.

No Throat Tension / Mask
I wish Roger Love had dealt with throat muscle tension because I feel that's one of the areas I should target.

PROS

Brief and to the point
No beating around the bush, no thanks to Mom and Dad, no time wasted: everything is about voice here.

Warm-up exercises
I particularly loved Roger Love's warm-up exercises. One single track on your phone and that's all you need for your daily exercises.

Learn From A Master
Roger Love is really a master at what he does.
When he replicates people's voices it's almost funny how good he is. And that's very helpful to make you understand what vocal sins you are currently committing.

More Voice Resources

Some other resources I find very good when it comes to speaking:

- **New York Coaching**

I'm exploring this guy too these days. He is also crazy
good: https://www.youtube.com/user/NewYorkVocalCoaching

- **Felicia Ricci**

Felicia Ricci is also very good, she has a ton of crazy and helpful exercises. To overcome my throat tension I favorited this video of hers:

Roger Love Review

Roger Love has some awesome exercises to help you improve your voice.

I have been a Toastmaster to learn public speaking for 3 years, went all the way from being scared to death to being

president of the club.
And I always felt my voice was my main weakness.

Well, believe it or not, after doing many exercises, people mentioned “voice” as one of my strengths. And that included people who were vocal experts. That was crazy for me and says a lot about what you can achieve if you apply these exercises.

It’s been months now that I do the exercises every single morning.
And since I have a tendency to speak by raising my larynx when I go out after exercising and I hear myself speaking… Wow, I ask myself how could any girl resist me :).

I think that because most of us speak every day since we were around two years old we fail to realize how important proper voice is.

Don’t do that mistake: it’s a fundamental tool of socialization, power, and influence. And it’s because we use it daily that we must make sure we use it properly.

Feminine Body Language: 10 Sexy Poses to Attract Men

Lucio Buffalmano · 9 July 2018 · Archived copy · Original

Feminine body language is seductive body language: the two go hand in hand.

And seductive body language is inherently *sexy* body language.

This article shows you the traits and "moves" of feminine and sexy body language, including examples and videos.

- SUMMARY

#1. Body Curves

Curves are feminine.

Evolutionary psychology postulates that women developed breasts and larger buttocks as sexual attraction tools (Geoffrey Miller, 2000).

Women also have a more pronounced lumbar body curvature to optimize weight distribution during pregnancy, and men like women who "stick their ass out" more than men do (Lewis et al., 2015).

Source: Lewist et. al., https://doi.org/10.1016/j.evolhumbehav.2015.01.007
See here what the perfect curvature would look like.

Now back to real life:

In short, curves are feminine.

After all, just think about it: would you imagine a guy standing like in the picture below?
Exactly, me neither.
Because curves are feminine, and the female model below looks ultra-feminine and smoldering hot.
By bending her neck backward, she is also sending submissive signals for “sex readiness”, and it’s as if she were inviting men to ravish her.

Curves are sexy

Of course, you probably will not be standing like that any time soon at work or while queuing up for groceries.

But you can adopt the same principles in a more “civilized” and “acceptable” format.
First of all, avoid standing straight like a cadet in front of a general, that’s male-style or gender-neutral.
Instead, do the following:

- Take a slight step forward which will rotate your hip a bit
- Stand on one leg only and let the other leg loose so your hip is slightly inclined
- Arch your back slightly (see the difference below)

You can train in front of a mirror. And you might even want to record yourself.
No need to be shy: that's exactly what the sexiest women on the planet have done countless of times.

#2. Flowing Movements

Curves in static body language translate into flowing movement while in motion.

Flowing movement, even more than sexy, is what I would call sensual.
Smoldering sensual, if well done.

The best way to learn flowing movement is by learning dance.
Learning to dance teaches you how to move with allure, and also helps you to feel comfortable in your own skin.

Here is an example of flowing movement through dancing:

She will not move in her daily life the same way she dances of course, but you can rest assured that it will rub off and that she comes across as an extremely sensual, feminine, and sexy woman.

#2.2. Hips Swaying

This is one of my favorites.

It's both sexy and feminine to sway your hips while walking.

Marilyn Monroe is a typical example here.
If you want to see more, check the feminine seduction in *How to Seduce a Man*.

#3. Legs Crossing

Men and women sit differently.

And since feminine body language is often about accentuating the *differences* between men and women, sitting presents a great opportunity to display some advanced seductive body language.

For example, men don't sit like this, and that's why you should (just lose the heinous shoes please!):

Here are two attractive female poses:

3.2. Leg Twine

The leg twine is exquisitely feminine.

It communicates shyness and possibly discomfort and it does not ooze the sex appeal of a secure woman.

So, why are we even putting it here?

Because it's still very, very attractive. More in a feminine "protect me" kind of way.
And trust me, men love that. It was one of the secret sauces of Monroe's sex appeal.

So don't try to suppress it if it's coming naturally to you: it's endearing.

- **Leg twine examples** (2 sittings, last one is "half-twine" standing)

Or watch Monica Bellucci do it in the video:

Perfect legs cross.
Albeit some consider Bellucci the peak of languid seduction, she plopped on that chair too abruptly though. A more flowing movement would have been even more feminine.

3.3. Parallel Legs

According to Allan Pease in *The Definitive Body Language,* parallel legs are the seating position that most men find *the* most attractive.

Men cannot do parallel legs, so this one *screams* feminine sex appeal.
Don't worry if you can't manage the full parallel legs, "open parallel" is still OK:

- **Parallel legs for women**

In the picture going from perfectly parallel to “open parallel”, which is less “extreme femininity” and far better for workplaces.

Legs Cross In Motion: Sharon Stone Example

You are probably aware of Sharon Stone’s famous leg cross in Basic Instinct.

The vagina shot though, allegedly one of the most paused scenes in movie history, should not overshadow the erotic charge of the whole leg movements.

The leg rub right from the parallel leg position is much more sensual than the open legs shot.

#4. “Protect Me & Ravish Me” Gaze

In body language looking down is a sign of submission.

Two words about that as I know some female readers might bulk at the idea of “submissiveness”.
Some people lament that “in our society” submissiveness is connected to femininity. I see where they’re coming from and I get their point.
Still, those people don’t understand basic human behavior, drives, and psychology.

Submissiveness in seduction is in the nature of things and it’s very localized. It doesn’t really mean “submissive for life”.
It’s as much a sign of submission as it is a sign of choice (which is empowering).
It’s a way of saying:

> OK, I decided you are good enough for me. You got permission to go ahead.

Now that we clarified that, let’s get back to some real talk.

The best version of looking down is when you follow it with a lookup.
So it looks like this: **look at him, then look down, then look back up at him. Bonus points if you look back at him with your head tilted down**.
In short: up, down, up.

This move is very invigorating for men and makes them feel awesome. It’s possibly the best move you can make to embolden a man to come to you.

I still remember the first time I received a perfect “up-down-up” gaze.
It was years ago from a beautiful Kazakh brunette in a club in Prague.
Back then I wasn’t as book-smart when it comes to body language, but I immediately had a visceral pull towards her.

Also, read:

- Strong VS submissive women in dating
- Alpha females (some of them are feminine and submissive)

Sexy EC Example: Angelina Jolie

Angelina Jolie got the “up-down-up” to a science.

She is so smooth in doing it that most people wouldn’t even consciously notice it.
But it’s one of the main reasons why men are drawn to her like moths to flame.

The first one is subtle and can be used also with men you “only” want to be attracted to you. The second is more obvious.

#5. Eye Brow Flash

The eyebrow flash consists of a rapid raising and lowering of the eyebrows.

Eibl-Eibesfeldt recoded it as a flirtatious signal in many non-industrialized countries.
It’s less frequent in Western and American samples (Moore, 1985), but that’s exactly why you want to do it more.

It’s more feminine and playful, and you stand out.

Add on a pesky, slight allusive smile, and it’s sexy.
Sexy in a jaunty, cheeky way.

Even better and more allusive is if you can pull it off with a single eyebrow up (in which case, drop me a note in the contact section :):

The above flight attendant example is a 10/10 also because of the perfect voice tonality.

#6. Hair Flick

Oh well, you should know this one.

You’re probably doing it already as most women do it, consciously or unconsciously, pretty often.
But don’t skip it just yet. The fact most women do it naturally doesn’t mean you can’t do it consciously, better, or both.

It’s a bit like walking and talking: everyone does it and nobody thinks much of it.
Instead, it’s *exactly* these basic moves that make the difference between sexy women and non-sexy women.
This is an example of a hair flick.

#7. Facial Expressions

High-value women use facial expressions more often and more expressively than most other women (and most men).
Let’s review a few staples of sexy female facial expressions:

7.2. Primal Smile

We have seen Angelina Jolie twice already.
That makes sense, right? She is (was) one of the most beautiful women in Hollywood.

Well, here’s the thing though: Angelina Jolie is NOT the sexiest woman because of her beauty. She is the sexiest woman because of her body language.

If you have ever noticed Angelina Jolie’s smile, it is not a normal smile. It is broad. And wide.
She doesn’t smile as 99.8% of the population smiles. She opens her mouth fully.

Look at her:

Jolie’s smile makes her look slightly out of control and a bit mad (or “dumb”, someone said). But it’s sexy. It’s sexy in a primal, carnal way.

Did she carefully pick and trine that “carnal smile” to become who she is? That, I don’t know.
But I personally think so.

7.3. Lips Moisturizing

There is a connection between the size of the lips and the size of the vaginal labia.
And of course, lubricating lips is a not-so-subtle allusion to sex.

7.4. Sexy Winks

Winks are not the sexiest expressions of feminine body language. They're more boyish / friendly and a bit too obvious.

However, anything can be turned into sexy. Best of all, if you combine it with a sensually opening mouth, which is an obvious hint of the sexual.

#8. Sex Body Language

When you need to go nuclear, you drop the "y" from "sexy" and you go "sex body language.

Suggestive poses, finger in the mouth, and orgasmic facial expressions all belong to "sex body language".
Female porn "prepping" also belong to this category.

Signs of open sexuality include:

- Sucking a finger
- Licking a glass
- Faking an orgasm
- Mimicking a BJ on a banana or popsicle
- Openly touching oneself

They all have a place and they can all be extremely sexy… Under certain circumstances.
When you're already engrossed in a sexual atmosphere for example, while having sex, when you want to send a crystal clear message, or maybe with a guy who just doesn't get it.

This is the sub-communication of open sexuality body language:

> I'm a sexual being and I'm horny: fuck me

Sexually explicit body language outside sexually-charged interactions can easily become tacky though.
And you should be aware that this is something that transexual men often use.
I'd be wary of a woman who uses "sex body language" outside of very specific situations, and this is something I recommend only if you are a "pro".

#9. Attractive Body Language During Sex

Attractive body language is all about alluding to sex.

But what about the actual act of sex?

Well, this is a very interesting topic, but let's keep this article on more *public* expressions of attractive body language.
And maybe I'll do one post just for "during sex" body language later on.

For now, though, enjoying sex, reaching orgasm, and abandoning yourself to it is a very powerful way to be sexually feminine.
Indeed, we could probably say that an orgasmic face is, well, the peak of sexy body language.

Also on the topic:

- Mistakes women do during sex

#10. More Attractive Body Language

Finally, here are a few more that most people are naturally aware of:

- Glancing over the raised shoulder
- Neck touching
- Eye batting
- Shoe dangling
- Fondling a (long) glass
- Exposing the side neck
- Showing the internal side of the wrist

Example of going from most close and unfriendly (left) to most open (and submissive):

You can see more pictures and examples in:

- Does She Like Me

Types of Attractive Female Body Language

There are four types of attractive female body language:

1. Sex Body Language

Attractive female body language is a big win for sexuality.

However, when that sexual layer goes from hint to “in your face”, the woman can be perceived as lower quality as compared to more subtle women.

Sexual body language which is overly obvious will also eclipse everything else.
Your words, your job, your thoughts… They will all disappear when the sexual becomes too obvious.

What to do then?
You need *a touch* of sexuality and you need to reference sexuality. But don’t leave it by itself. Temper it with mixed signals or with other traits such as submissiveness.

2. Submissive Body Language

Submissive signals communicate sexual accessibility in a way that is coy and mixes the “protect me” with the “fu*k me”.

3. Aggressive Body Language

Aggressive is openly sexual while being forward and devoid of teasing and submission.

It turns the tables on him and she becomes the aggressor.

When it’s well done, it’s hot as hell and necessarily non-feminine. It can certainly have its place in steamy encounters, but like the purely sexual it’s best not to be used in public unless you’re already a pro.

See an example here from “Crazy Stupid Love”:

A good mix of aggressive sexual abandon mixed with push-pull during the first escalation to sex (read: how to postpone sex).

4. Teasing

Teasing is possibly my favorite.
It’s very powerful and it makes men chase like wild beasts as it sub-communicates the following:

> I might be up for it. But will you be man enough to catch me (/fuck me)?

The winks we have seen earlier are examples of good teasing.

The Sexiness is in The Mix

The above categories don’t work in isolation and there is often a mix of the different styles.

The most seductive women manage indeed to send mixed signals from all different categories, and they can move from one role to the next depending on the occasion.

As in the following:

- **Explicit & Teasing**

Ayda Yespica whom we reviewed in How to Seduce a Man mixes sex and teasing to perfection.

- **Explicit & Submissive**

This is possibly the most powerful of them all.

Marylin Monroe is the best example as she was high in purely sexual (orgasmic faces) and sky-high in submissiveness.

The submissive and protection-seeking body language would take the edge off of her purely sexual body language so she wouldn’t look “whorish”.

Explicit and submissive is indeed the only style that can be extremely sexually forward without being labeled as a whore (this is important because of men’s Madonna-whore complex). Monroe was indeed considered a high-value woman.

SUMMARY

Sexy body language for women must always have:

- Femininity
- At least a hint of sexual

7 Best Nutrition Books That Changed My Life

Lucio Buffalmano · 15 July 2018 · Archived copy · Original

Health, fitness, and, even more, nutrition are minefields

To begin with, science is relatively underdeveloped compared to other fields of study.
And, most importantly, the field is chuck full of quacks. Including quacks who do actually hold a “doctor” title, which allows them to be even more “successful” in their quackery and manipulative marketing.

Keep in mind that I removed most nutrition book summaries and reviews from the website.
The reason is, that there are very few that are really good and provide a broad overview.

So here’s an overview of the best books on nutrition, and which to avoid

7. The Omnivore’s Dilemma

[image]
by Michael Pollan
Summary | Kindle

A frightening, eye-opening account of the modus operandi of industrialized food production.

Reading of animal livestock given other dead animals as pasture might not make you sleep more nicely, but it provides a strong wake-up call on how seriously you need to take your nutrition.

> Quote: *"You are not what you eat. You are what your food eats"*

---

6. Younger Next Year

by Chris Crowley and Henry S. Lodge
Summary | Kindle | Audiobook

If you were to get Younger Next Year looking for a secret formula to eternal youth, you might be surprised.

You might be surprised that you already know the "secrets": great food, and constant exercise (cardio + strength training).

The groundbreaking idea of this awesome health book though is that you can preserve your vitality, strength, and independence well into your old age if you take care of yourself.

> Quote: "Aerobic exercise saves your life; strength training makes it worth living"

---

5. The Whole 30

by Melissa and Dallas Hartwig
Summary | Kindle | Audiobook

The Whole 30 cracks the top 5 of the best nutrition books for a simple reason:

The "troubleshooting approach" to nutrition supports your individual needs and preferences.

The idea is to stop eating ALL food that can cause allergies or bodily harm for a month and then see how you feel. If you can get rid of some pain or skin rash, or if you will feel better, then you know you weren't eating well. And that you can do better.

Great news.

Then you can restart to add foods one by one and monitor the results, so you can reach the perfect diet for you based on what matters most: results.

> Quote: *"You cannot out-exercise poor nutrition*"

~~4. Eat Fat Get Thin~~

~~by Mark Hyman~~
~~Summary |~~ Print

~~There have been a few books in the last few years that re-rehabilitated (saturated) fat as a positive contributor to our health.~~

~~However, I have chosen Hyman for this best nutrition book list because Hyma says that also grain can be a part of a healthy diet when consumed in moderate quantities.~~

Note:
People like Hyman have the potential to change your life in the negative.
Mark Hyman does not provide any overview and, starting from the title of this book, his approach is highly misleading.
He sells a specific diet as "superior", demonizes whole classes of food, and over-hypes others.
As such, he fits the definition of a… Well, read below.

3. In Defense of Food

[image]by Michael Pollan
Summary | Print | Audiobook

I loved Pollan's anti-geek approach.

He says that most people who fancy themselves as "health-conscious" end up being geeks and "food label hunters". Such as those people you see on the supermarket aisles reading and comparing labels (I'm one of those :).

If you are doing the same, that's a poor approach, says the author.
Food labels are misleading (to say the least).

The solution?
Eat more whole food, and you won't have to worry about labels.

The only limitation of this book might be that the author proposes to eat less meat in favor of more plants.
That might be the only downside since I don't see how the leaner cuts of meat would be bad for you.

Still, generally speaking, a very well-balanced approach.
And that's exactly what you should be looking for in any book or nutrition coach.

2. Food Rules

by Michael Pollan
Summary | Print

I give another top spot on this best nutrition book list to Pollan.

Food Rules ends up this high for its groundbreaking simplicity.

Because of the many gurus, pundits, and dogmas around health and nutrition, you quickly realize this:

The more you read, the less clarity you gain.

Food Rules embraces no single diet, does not quote a hundred studies to legitimize itself, and doesn't ban any food or classes of food.

Food Rules gives you a few general and simple guidelines which you can start applying right away to enjoy a healthier life.

> Quote: "*If you're not hungry enough to eat an apple, you're not hungry*"

1. Fat Loss Forever (Layne Norton)

This is my #1 go-to resource.

A true “no BS scientist”, it’s also the #1 nutrition guy TPM can endorse.

Layne Norton is the guy. He holds a Ph.D. in nutrition and is an award-winning bodybuilder.
And Biolayne is his YouTube channel.

I’m truly grateful to Layne because he rescued me from the sea of zealots, quacks, and fake gurus.

And I’m certainly not the only one.
Says a very telling message in one of his “debunking videos” (aimed at Hyman, BTW):

> I actually developed an eating disorder from watching all these people talk about how bad food is.
> I was terrified to eat anything and as a result i ended up pushing this on my wife and son. It’s taken me a couple years to accept that there are no bad foods and now I have a pretty healthy relationship with food. Part of that is thanks to people like you Layne. Thanks so much for combating these ideas and thanks for the content
>
> *Max Mills, a commenter on Layne’s channel*

I haven’t yet read his book which seems to be tailored to fat loss and it’s not something I’m interested in right now.
Update: I have now, plus we reviewed it here.
But I’ve watched almost all of his YouTube videos.
And I can tell you: for a balanced, open-minded, and scientific overview of nutrition, look no further.

Nutrition Quackery

Generally speaking:

Avoid anyone who pushes a single specific diet or anyone who hypes up any specific fasting schedule.

It doesn’t matter whether it’s keto, carnivore, paleo, vegetarian, 16:8, one-day meals, or whatever.

Nutrition is very individual-dependent, and anyone who pushes a specific type of diet for everyone else is, at best, misguided.

Many are proselytizing to feel better about their own choices. But the worst ones are conmen seeking to line up their pockets.

How to spot quacks:

1. **Pushes one particular diet**
2. **Oversells the benefits of a specific diet**
3. **Pushes / oversells the benefits of fasting**, or whatever latest fad is being popular
4. **Does not mention the limitations of their favorite approach**
5. **Rarely or never mentions the all-important "individual factor"**, such as what works for some might not work for others
6. **Makes nutrition sound complex**, while instead, the best approach is to simplify things. But the more complex he makes it sound, the more of your time, attention, and money he can grab
7. **Lists "superfoods"**
   1. Bonus points if those "superfoods" come with a long list of miraculously-sounding benefits
8. **Lists "terrible foods"** (demonizing helps sell)
   1. Bonus points of if those "terrible foods" are responsible for the "cancer pandemic", "obesity pandemic", "heart disease pandemic", or whatever
9. **Talks about "hacks" and "bio-hacking"**, is nothing wrong with ""hacks", it's just that they often come with the obsessive-compulsive approach of the geek measurer, the charlatans, and the over-hyping of "superfoods" or "new techniques" (and, of course, the other side of the coin: the demonization of this or that food or chemical compound that you must absolutely avoid)
10. **Lists some (obscure) research that backs their argument, without mentioning methodology or limitations**
11. **Never mentions research that might disprove their point of view**
12. **Uses vague but complex-sounding or "alarming" terminology**, such as "toxic", "poisonous", "mitochondrial", etc.
13. **Speaks in definitive terms**, because confidence is the conmen's name of the game to manipulate you (and the opposite of what an actual scientist does)

Nutrition Quacks to Avoid

It's too many to list.

But just to name some of the most popular:

1. **Mark Hyman**, a keto zealot, and there are many like him
2. **Sadguru**, just avoid him in general, and even more for nutrition
3. **Tom Bilyeu, Lewis Howes**, + all other hosts. They're about VIEWS, not reliable information, so they chase the latest fad and hype.
   Specifically, those two both give space to any popular quack they can find, without ever asking the tough questions that a good host should ask.
   See here why you want to avoid Bilyeu.
4. **Paul Saladino**, you don't even need nutrition expertise, but simply basic power awareness to smell the BS
5. **Tim Ferris**, has lower-quality advice and an even worse attitude. He will take you down the dark rabbit hole of the geek approach to food and nutrition (eat X of this, X less of that other one, cheat day on Sunday, fast when on a full moon, add 0.1 grams of that one…)

Health & Nutrition Books to Avoid

And some books to avoid:

- ANY book that promotes a single, specific diet for the general public
- ANY book that promotes an overly restrictive diet for the general public

Some examples:

- Eat Fat Get Thin
- The Plant Paradox
- Grain Brain
- The Case Against Sugar (yes, limit sugar, but sugar won't kill you and the book is still not the best investment of your time)
- The Complete Guide to Fasting (fast if you wanna fast, but don't be a fool: it's no shortcut to any promised land, *do the basics* instead)
- Keto Clarity
- The China Study (be a vegetarian if you do it for moral reasons and you got all my respect. But twist the truth to make up non-existent super benefits, and you turn into a manipulative asshole)

Full Summary

Intro: McDowell and Crowed ground their approach in trust. Trusting yourself and your ability to handle it without being scared you'll destroy everything.

The Three Tenets of Difficult Communication

These are the three tenets of showing up:

1. Your kindness is your credential
2. Listening speaks volumes
3. Small gestures make a big difference

Don't Worry: You Can't Make it Better

The author says there is a reason why most people don't know what to say. In certain situations, there are absolutely no words that can make things better.

Fixing Words

I find the biggest value of There Is No Good Card for This to be in their examples and fixing wrong expressions for good ones. And that's exactly the preview I will provide you with this summary.

Don’t Reproach Them:

- Why didn’t you tell me
- I’m so sorry, how are you

Don’t Try to Fix It (too soon):

Trying to fix the issue or cheer someone up too soon is a common mistake.

- You’re still young, you should try speed-dating!
- I see, I’m sorry to hear that

This is trying to cheer up:

- Oh don’t be such a downer, that guy was an idiot, cheer up! Come out with us
- I’m sorry Helene. Hey, I understand if you don’t feel like it, but we are going for a drink tonight. Maybe you wanna join, help you take your mind off it?

Avoid the word “should”:

- You should do X

If you must offer help, save their face:

- I have been through something similar before, if you want some pointers on it I am here. But I can imagine you’ve done your research already

Don’t Tell People You Know How They’re Feeling

Telling people you know how they’re feeling is often fake empathy. Don’t rush telling them you know how it is for them, everyone is different and it sounds dismissive jumping to conclusions

- I know how you’re feeling
- When it happened to me it was a difficult time. How are you feeling

Avoid “How Are You” in Obviously Difficult Times

“How are you” is very good on many occasions and too many people shy away from it. But in very hard times it puts people off because it’s obvious they are doing badly.

Mention Similar Stories

If you have stories of friends or about yourself in a similar situation, it can be very helpful to share them.

My Note:
indeed it makes the person feel more “normal” and less embarrassed for their troubles or mistakes.

However, don’t make it sound like you are trying to give an easy fix or they might feel you’re painting them as dumb for not having realized:

- Who cares what your parents think, everyone gets divorced these days, it’s no big deal
- When I divorced I was surprised my parents understood. But every situation is unique, how come yours are finding it difficult to accept

But Don’t Hijack the Conversation

If you mention similar stories, pay attention not to hijack the conversation

Don’t Pressure to Get in Touch

- I tried to reach you a few times, please let me know if everything is alright
- Hey, just sending you a text to say I’m sorry about X. If I can help, let me know. If not, know that my thoughts are with you

Don’t Make Excuses for Being Late

If you are reaching out late don’t make long-winded excuses on why you didn’t have time or didn’t know. It makes you sound very self-centered and very little concerned about them.

- Sorry for calling so late, I didn’t it happened or I would call earlier

Avoid Being Judgmental, Surprised, or Worried

Making too many questions out of surprise puts people on the defensive instead of helping them. And it sounds judgmental.

- Oh wow I can’t believe it, how did it happen

With this response now your friend feels like she needs to justify herself

- Oh wow, you guys seemed to be going great how did it happen?

Now not only she has to cope with the bad news but has to “report” to you all the bad details. Not exactly helpful.

- What about the children?

Sounds super judgmental, and now she needs to “convince you” it will be fine.

Don’t Say Platitudes...

For example:

- It’s God’s plan
- You’ll be stronger

Don’t Minimize the Pain

These tell the people that their reaction is “wrong” or their approach to life is wrong. It adds insult to injury:

- Everything will be OK
- Well at least it’s not a 90% chance, you gotta stay positive!

Don’t Overblow Encouragement

If you build them up too much you stifle their ability to open up and be vulnerable. For example:

- I have always admired how strong you are, if there is someone who can do it easily, it’s you
- I know you’re a strong woman, but I can imagine this is not easy. How are you doing

It also makes people feel like you are pitying them, like:

- God, you are so brave

Which basically says “how can you even put up with it”

Real-Life Applications

Don't Be Afraid of Difficult Situations
Difficult situations and hardships are a part of life. It's not your duty to make people feel better and often it's impossible.
Say you're sorry is sometimes all you can do. And it's enough.

Offer Help Proactively
When you can, do offer your help proactively. Instead of asking "what I can do for you" say you can do X for them.

CONS

Hmmm, no cons really.
Maybe the examples were so good that categorizing them under specific chapters would have made the book even better.
For example, put all the bad examples for "fixing the issue too quickly" altogether. And then "minimizing the pain" mistakes all in a different chapter.

PROS

True Wisdom
The Is No Good Card for This spells true wisdom and tells the truth.

Awesome Examples
I particularly loved the many examples. They were great and abundant.

Review

There is No Good Card for This is an awesome book to improve our social skills and to increase even our empathy and emotional intelligence.
I put it in the top 10 of my most underrated books of all time.

You will probably read "There Is No Good Card for This" and think of all the times someone has made these blunders with you.
Or of the times you have done them yourself. Well, you don't need to keep it that way. With this book, you can fix

it!

Bullet Summary

- Learn all the gambits: negotiating is a skill
- Never say you are the ultimate decision-maker, always say there is a higher authority above you that you must check with
- Flinch when the other party makes the first offer

Full Summary

About The Author:
Roger Dawson is a trainer, public speaker, author, and expert in negotiations.

Introduction

Negotiating is a super quick way of making (or saving) money. If you are negotiating a house, but even a car… Or a piece of furniture, you can make the equivalent of thousands of dollars in an hour.
And it's all bottom dollars: no taxes and expenses.

1. Ask for More Than You Expect

You ask for more for two reasons:

1. You never know he might be willing to give it
2. You will seem more cooperative when you will make larger concessions

But if you are asking for way more than plausible imply some flexibility or you might look out of touch with reality.

2. Never Say Yes to First Offer

Saying yes right away triggers two thoughts from the other side

1. "I didn't do as good as I could have" and he's not happy with the result
2. "there must be something wrong"

In the first case, they will be unhappy and the relationship will sour. In the second case, they might even pull out of the deal.

3. Flinch At Their First Offer

Always react with some shock at their first offer.
Most of the time, a concession will follow right away.

When you don't flinch and take the first offer seriously, then the seller (or buyer) will feel legitimized by their first offer and will try to defend it.

4. Avoid Confrontation

When you escalate an issue you push the other party to want to prove you wrong.

5. Be Reluctant

If you look eager, you show a weak hand and the other party will feel like they can do better.
Show yourself reluctant, instead, like you're not sure like they need to push you and cajole a bit more.

Playing reluctant at the beginning is a great way to lower their demands before the negotiation even starts

When people play reluctant on you

If somebody is pretending to be reluctant at your price, say the following:

> I'm afraid there is not so much flexibility on the price, but if you tell me what you are looking for (make him commit first) I'll bring to my team (higher authority) and I'll try to convince them (good guy/bad guy)

6. The Vise

The vise technique is a simple sentence:

> You'll have to do better than that

Then don't say anything and let them change their own stance with a concession.

Responding to the vise

An experienced power negotiator will answer in a way that makes the other party commit first without making any concession:

> How much better exactly

7. Higher Authority

Weak negotiators fall prey to their own egos and present themselves as the ones with final authority.
Much better instead if you can refer to a vague, higher authority that must approve.

With a high authority, you can:

- Play the good guy (you) and assign the bad guy to the higher authority
- Ask for tough concessions without seeming nasty (higher authority requirements)

The author for example would negotiate the best price he could get. Then he would say it looks good but he only needs to run it through the board.
After a few days, he'd get back in touch and say the board is being difficult and needed some better terms.

Higher Authority Example

The author used to take pride in being the owner of the flats he was renting.

Then he realized that people always bothered him with too many questions, asked him for exceptions, and didn't pay on time because they thought he must have been rich and not needed the money.
Then he started introducing himself as the middleman for some foreign investors instead.
And when they'd ask him to pay late, he'd say:

> I understand, sometimes it can get difficult, but on this property my hands are tied.
> They told me that if the rent is not due on time I must file an eviction notice.
> What can we do to get the rent on time?

Or when you want to say no to a proposal right away you could say:

> Yeah, I see your point, but the commiteee has already rejected a few proposals around that price

Putting Pressure Example

Imagine you're a buyer and would like to spend 20k on a product. The quote comes in at 25k though.

You could say:

> Wow, that's much more than I was expecting. I'd need to wait for the committee on that. I'd be comfortable giving you the go ahead for 20k, but anything above I'd need to hold off until the committee convenes.

And there you just created enough pressure that the seller might want to make the sale right away and give it at your price.

Dealing With Higher Authority

Ideally, you want to remove the recourse to higher authority right away. And you do that by having the other party admit that he can make a decision.
You could say:

> "If the offer (or car/proposal) meets all your needs, is there any reason you wouldn't give me a decision today?

If they are shrewd to avoid that, use the following 3 steps:

1. Appeal to their ego (they always listen to you, don't they?)
2. Get a commitment to recommend it 2 ("You will recommend it, won't you?")
3. Write "subject to" close (in your proposal write "subject to committee rejection within 24h")

8. Get Counter-Concessions Right Away

The value of a service or of a nice act quickly depreciates and becomes the status quo.
If you do a favor, that means you won't be able to get a favor back if you let too much time pass.
That's why you would get concessions for your own concessions.

How to ask it

Roger Dawson recommends you use the following sentence:

> If we can do that for you, what can you do for us?

My note:
I don't personally agree with that sentence, which feels highly impersonal and blatantly manipulative -also read Never Split the Difference–

> Manipulation: Techniques, Strategies, & Ethics

9. Never Offer to Split the Difference

When people offer to "meet in the middle" play dumb.
Say that

> Oh, you mean like you could go down (or up) at X? Let me talk to my partners and see what they think.

And then you have just moved the negotiation range with the previous middle now being the low-bound.

10. Overcoming Impasses

When you're facing an impasse, put the big issue aside and deal with the other small ones. That will allow you to rebuild momentum.

11. Good Guy / Bad Guy

One negotiator will pretend they are angry at your proposal and might storm out.

The other one will say they will try to appease them… If you can make a few concessions here and there.

This is the most obvious example (and BTW: you should avoid negotiating with two people when you're alone in general).

It can be used in conjunction with higher authority, where the negotiator says that the committee doesn't usually like X but he'll try to soften them.

Counter Moves

When people use good guy/bad guy against the author recommend you:

- Shame them (come on, you aren't using a good guy/bad guy against me)
- Create your own bad guy
- When he shows up with someone else, jump in and say "I'm sure you're here to play the bad guy, let's skip that and find a win-win approach, fair enough?"
- Call the bluff in your mind, know what they're up but don't say anything

12. Nibbling

At the end of the negotiation, when the tension is releasing, try to have another go at something you couldn't get earlier. Or add something new.

Counter Move

You could say something like:

> Oh come on, you are getting an awesome deal (you're not trying to squeeze us with the last penny now)

Do it with a smile on your face so it's not confrontational and they know you're not taking them seriously.

And also:

- Negotiate all details in advance
- Make the other party feel like they won

13. Taper Your Concessions

Don't make a final big concession and then say "that's the most I can do".
If the concession is too big the other party feels like you still have room to go.
Decrease your concessions instead until you say "now that's it".

14. Never Give Your Bottom Line Up Front

Some people say they don't like wasting time negotiating and giving their final price in their opening sentence.
But these people, say the author, are doing it all wrong.

Some other times you can get tricked into giving your bottom line. For example, a customer might show up and say "we have 2 other similar products we want to go for.
But just to take a quick look, can you give us your absolute bottom line price".

15. Withdrawing the Offer

If you are dealing with a very interested party you can pretend your committee rejected your last negotiation round and is also vetoing the previous one.

Now the bottom line price you can do is X (X being higher than what you had told him before you were comfortable with).

This is a big gambit that can make or break a deal.

16. Make The Other Feel Good

You don't want to lose a negotiation just because of the other party's ego. Watch out not to push too much and to give something.

Also, read:

- How to Win Friends

17. Cherry Picking

Cherry picking is shopping around for options, then going to your favorite provider and trying to make him match his competitors on their favorable terms.

Countermove

You should try to stop your prospects from shopping around by showing your great knowledge in the field. Once they realize you can tell them what your competitors will propose, they might realize there's no point in wasting time.

18. Time Pressure

80% of the concessions happen in the last 20% of the allotted time.
Some unethical negotiators can use time against you, and that's why you should never reveal if you have a deadline.

When time pressure works on both sides, the side with the most options has the most power.

Sometimes you can leave your proposal on their table and with time they might find acceptable what at first they said they would never consider.

19. Walk Away Power

Learn to develop walk-away power.
The author says that the minute you pass the point when you are able to say "I'm prepared to walk away from this", you lost the negotiation.

But don't threaten to walk away abruptly, make it under the protection of the good guy/bad guy.

20. Don't Use "Take It or Leave It"

It's annoying and cantankerous. Use instead something like "sorry, but less than this I will have to drop out".

21. The Hot Potato

The hot potato is people trying to make their problem your problem.
Like "it's not in my budget" or "I can't authorize that".

Power negotiators always test the validity of such expressions.
For example, you could say:

> Let's imagine this hypothetical scenario where I can find you exactly what you're looking for and you will love it and your team will love, is there any point in letting you know then?

or:

> Imagine I could show you a car that is twice as safe and in the best running condition you've ever seen but cost 10% more. You might still want to take a look at it, don't you?

Justifiers Never Deliver

Justifiers are words that tell you in advance your partner is not going to deliver.
They are expressions such as "I'll try my best" or "I'll see what I can do".

Real-Life Examples

Here are a few articles where I apply many principles of Secrets of Power Negotiating:

- How to sell a house fast
- How to buy a house low
- Lowball technique in action

Real-Life Applications

Don't Be Intimidated by Title…
… They most often don't mean a thing.

Never Think You've Got the Weak Hand..
… That's the mistake most beginners do.

CONS

Some Examples Are Borderline Manipulative

The book is great, but not all examples are in my opinion. One is the complaint to the top hotel staff to get a discount on the room.

Some Awkward Moments
In one of the examples, Roger just does a nice sale of his CD during a dinner. Galvanized, he pays for both. When the guest says they would have paid for the dinner, he calls back the waiter to get his credit card back (and he had also picked the best restaurant expecting the guests to pay).
I couldn't help but think that was the cheapest move ever (and the second cheapest move is to pick the most expensive restaurant knowing your guests will pay, I always despised that behavior).

How Americans/Asians/Chinese negotiate
I found the chapters on local customs to be little more than folklore with some utter nonsense mixed in.
He says that part of the reason why Germans enjoy 3 weeks in a SPA and Americans only work is that America never experienced the life-changing effect of a war.
Little later there is some population-level stereotyping (ie, 'Asians people are… ').

A bit later again he says:

> Frankly, I doubted that they would ever make a transition to a free market economy because the Russians are not entrepreneurial at heart. Understand that the communist system removed all incentives from their way of life.

Again I'm scratching my head.

Bad Body Language
There are a few chapters on body language, but some of it is wrong.
He says that after all the countries he traveled to, smile was the only body language to mean the same in all languages. Not true, there are many more signs that are cross-cultural.

Long Winded Digressions
There are quite a few digressions from the main topic. Some of them are quite interesting though, like his take on the Amalfi coast:

> If you can find a balcony in Ravello and get yourself a glass of Chianti Classico while you savor the view that has enchanted visitors for centuries, you'll agree with me that life doesn't get much better than that. You can search if you want, but you might as well take my word for it: Life doesn't get much better than that. Maybe it does with a bottle of Chianti Classico.

Charisma / Charm Confusion
The author talks about the power of charisma and uses Clinton as an example. I feel he makes a major confusion here between charisma and charm (if you're interested read how to be charming and how to be charismatic).

PROS

SO Much Wisdom
The Wisdom of Power Negotiating is exactly the kind of wisdom that we promote here on this website.
This is the kind of "Machiavellian knowledge" and information that will make the victims of this world able to stand up for themselves against the sharks of this world.

Awesome Hostage Negotiation Explanation
The author goes into the training that hostage negotiators do and how hostage negotiation works. Fascinating stuff.

Review

I have listed a lot of cons.
But if you have been reading around here I always list a lot of cons for the best books. It's because I hold them to a whole different standard than most books.

And Power Negotiation is the kind of book that you have to hold to a higher standard simply because it's that book.

The first part is better than the second half which gets a bit too chatty and long-winded. But overall, this is a life-changing book. And a book everyone who wants to understand psychology and human nature should read.

This is exactly the kind of information that this website wants to spread to empower people.

Games People Play: Summary & Review

Lucio Buffalmano · 20 July 2018 · Archived copy · Original

Games People Play (1964) is a psychoanalytical look at everyday social interactions in which Eric Berne, the author, looks beneath the superficial layers of lies and manipulation and lays bare the real motives of why we do what we do.

Bullet Summary

- We keep playing destructive games to:
  - avoid facing our unresolved psychological issues and
  - make interactions easier
- We are mostly not aware of the games we play
- We can overcome our games when we understand what we're doing

Games People Play – Summary

About The Author: Eric Berne was a Canadian psychiatrist and founder of transactional analysis, a theory of social interactions to explain human behavior.
Albeit unique and distinct, Berne's theory has been influenced by the work of Sigmund Freud.

Introduction

Eric Berne says that we are rarely conscious of the games we play.
But we keep playing them, even the destructive ones because we inherit them from childhood.

In a way, they are comfortable because they absolve us from confronting unresolved psychological issues and can make some tense interactions easier to resolve.

My Note:
When people get stuck in a pattern of games, they develop "dysfunctional relationship dances".

This is the transactional analysis list of games people play:

1. Now I Got You Son of a Bitch

This might be the most famous game from the book.

An example of that of a wife who explodes when the husband forgets to throw the trash away.
Eric Berne says that she was actually waiting for an excuse to let go of her own anger.
And she was looking for a scapegoat, a reason to blow off.

2. If It Weren't For You

"If it weren't for you" is a game people play in relationships.
It consists in blaming our partner for not getting and doing what we really want and deserve in life.

The author says that most people unconsciously pick partners who will place limitations on them.
But the real reason we do it is because we are actually afraid of ourselves to go out and do it, so we can always use the excuse of our partners.

My Note:
sometimes that might be true. And sometimes people will use their partner as an excuse. But in my opinion, saying that people choose their partner just so they can use it as an excuse for not doing what they're afraid of is pushing the envelope too much.

3. Why Don't You – "Yes, But... "

You are probably familiar with the interaction in which we ask for an opinion but then proceed to refute all the suggestions we get for changing and improving.

Berne says that happens because we are not really looking for a solution, but we are looking for sympathy. We are playing the child, and the other gets to play the adult.

4. Wooden leg

We pick a limitation that we have and use it as an excuse for our bad behavior, poor results, or lack of motivation.
It's a game we use not to take full responsibility for our lives.

5. Forgiving Manipulation

The player here wants to manipulate someone into forgiving them.

He may for example break something on purpose but make it seem as if it were an accident.
The player here wants to move the host into a parent position so he can play the child.

He might have kept breaking things on purpose, and at a certain point, they both might know what was going on.

6. Frigid Wife

The woman makes the man horny, only to refuse him when it comes down to it.
She wants to take the role of the parent and force the husband into the child role. And she gets to reinforce her own prejudices about men who only want sex.

Fighting Against Sexual Tension

To avoid sexual tension, the player might want to start a fight to release the pressure.

Therapist & Couple Relationships

On the surface a couple in therapy might seem to engage in adult behavior, says Berne.
But in reality, deep down one individual is playing the child and using the therapist as the adult to complain about the other partner.

My Note:
This is a generalization and while it's probably true for a good number of people and couples, I doubt it can be generalized to the whole population.

[image]

Real-Life Applications

Watch Out for Patterns of Behavior
If you notice a pattern of behavior that gets repeated over and over, watch out: it might be a destructive game you are playing to avoid solving your own issues.

CONS

Freudian
Freudian doesn't necessarily have to be a con. Freud was a genius. But when Freudian means "everything must be explained through childhood & parent relations", then to me it becomes a con.
I felt that Games People Play was way too Freudian in its explanations.

Technical & Confusing
Technical doesn't have to be a con, but when the technicalities fail to easily translate to something simple and easy to understand, then it can be a con.
I felt Games People Play failed to make the complex understandable.

Overly Dark
Life is more complex than everyone happily getting along and speaking their mind. For sure. But life is also more complex than a web of games and traps.

Not everyone “inherits childhood destructive games” and not all relationships are fraught with the games Eric Berne describes.
I wish Eric had stated that a bit more clearly in Games People Play.

PROS

First Analytical Look at Everyday Interactions
Games People Play was one of the first popular books to bring professional analysis tools to everyday interactions.

Good Sexual Games
I like sexual games. There was quite some wisdom there.

Great Games Description
Many games are well described and will make a lot of sense to you as you realize you have seen them happening in your life. It’s the Freudian explanations I have issues with.

Games People Play – Review

I had high expectations for Games People Play and was really looking forward to this book.
But reaching the end was a struggle and finally, I had to admit this book wasn’t going to deliver.

I usually would have quit much earlier based on my rule that anything I do should be worthwhile.
But since this book is so relevant to what I do and what I am interested in, I soldiered on.
But in the end, I had to just admit it: Games People Play just hadn’t delivered nearly as much as I was hoping for.

To be precise, I really enjoyed the game descriptions. Many of them are awesome. It’s the explanations that often left me scratching my head.

I still reserve the possibility of going back to Games People Play and hopefully getting more wisdom out of it.
But as of now, I found the book way too Freudian.

But Transaction Analysis Is Golden

Albeit “*Games People Play*” disappointed me, transactional analysis has been a huge game-changer in my understanding of power dynamics.

I can highly recommend Harry’s book, also based on transaction analysis and Berne’s work.
It’s called “*I’m OK, You’re OK*“.

Kick-Ass Copywriting Secrets: Summary & Review

kick-ass Copywriting Secrets of a Marketing Rebel is John Carlton's guide to effective copywriting.

Bullet Summary

- If you sell to one in person, you can sell to a thousand with a good copy
- A salesman is more likely to become a great copywriter than an English literature major
- It's not about you, it's all about the reader

Full Summary

Carlton gives a bit of background and says he ended up in copywriting because he couldn't stand the corporate hierarchy -that rang a bell here-.
He was forced to succeed as a copywriter he says because he had simply no other option.
It doesn't matter where you are now he says, what matters is where you want to be. And learning to sell is one of the best ways to get there.

It's His Needs, Not Yours

If you understand what moves people, you can move them.
Here are some basic human drivers:

- Greed

> "and you can have it for a half of what everyone else has to pay".

- Sex, love & intimacy
- Self Improvement

Most people are depressed and despise where they are in life. Here's an idea:

> How to jump-start the quality of your social life by simply tweaking a tiny aspect of your personality

- Pleasure

We all crave the bliss and joy of a child. Here's an example:

> I've never laughed so much in my life. The secret of the happiest people in the world

The More You Tell, The More You Sell

Companies and marketers base their copy on the idea that people don't read flops. They base their whole campaigns on cute slogans while instead longer copy sells.

Don't Look Like an Ad

Everyone is trying to scream loud, but people can recognize advertising.
Get under the radar instead.

Headlines

The headlines are often the only piece of copy we read. It has to stop us in our tracks to invite us to read the rest. Three ways to do:

1. News he is interested in ("how to use the new tax laws to lower your property tax by half")
2. A spectacular benefit ("new pill makes you look 10 years younger)
3. Arouse burning curiosity ("why does this hacker smile every time you're online")

Don't care about what people or colleagues think about your ads. It only has to be good for the audience.

Upsell

You can double the amount you make by offering other products to your buyers. The best customers you'll ever have are those who have just happily bought from you, so always offer an upsell.

Put your best product forward and then capitalize on the goodwill.

How to Launch a Product and Sell in A Weekend

This chapter was awesome. Selling something quickly is not what I'm aiming at, but this chapter was awesome nonetheless as an inspiration for what's possible.
The idea is to pick a market with a passionate clientele and become an expert on a tiny, very specific fraction of that market.
Check the guide for the details.

Real-Life Applications

Copywriting Is Better Than In-Person Selling
I don't know why, but it only hit me with Kick-Ass Copywriting Secrets that being great at copywriting is better than being great at selling in person. The author says "if you can sell to one customer in person, you can sell to a thousand at the same time".
The author says that the skills are the same and the pitch is the same. There I have to disagree though.

Don't Hard Sell

And this is one of the reasons why I believe copywriting is not the same as in-person selling. Pushing hard to sell your product and showing lots of passion can work in person.
But it doesn't work as well in copy as you come across as disingenuous in pumping your own product (something I was doing wrong).

> **Don't hard sell, and offer instead the privilege of buying from you**

CONS

Sales Pitch The Same as Copywriting?
I personally don't believe that you can take your vocal sales pitch and make it a successful copy material. But hey, that's just my opinion and you know what they say about opinions :).

Audiobook Not Professionally Read
It's not bad and I love the passion in the reader's voice. But it's not flawless either. Anyway, it's not the most important detail. As the author himself says, don't waste too much in the form and look at the message instead (save the detail attention for the ad lol).

PROS

Good Content
kick-ass Copywriting Secrets stresses a lot of the basics that I haven't seen in some other copywriting courses (such as human nature and basic psychology).

Very Motivational
The attitude is very energetic and "can do", really serves to spur you into action.

Review

Good content and I also liked the author's attitude and mindset.

Bullet Summary

- Change will happen: don't grow dependent on the status quo and be ready
- Don't be afraid of venturing towards the unknown: the longer you live slave of your fear, the worse off you'll be
- Sometimes think less and act more

Full Summary

About The Author: Spencer Johnson was an American physician and author. He wrote several children's books as part of his series "ValueTales". His most famous tale is "Who Moved My Cheese?", which also happens to be one of the biggest best-sellers of self-help books.

Preface

As a parable, Who Moved My Cheese is not easy to summarize. So I won't try. Instead of giving you the story, I will tell you the lessons learned from it.

Just keep in mind this is a novel taking place in a maze, with two "little humans" and two mice.

The maze is a metaphor for life, and the cheese is a metaphor for what we really want in life.

#1. Act More, Think Less (ie.: we think too much)

The mice in the parable always went back and forth looking for their cheese.
The two humans instead, called Hem and Haw, plotted all kinds of strategies to make their search more efficient.
All that thinking though didn't really help them achieve better results.

As a matter of fact, it often only confused the humans more, and they would have been better off just scuttling

around as the mice did.

Lesson learned?

- Think less, act more

#2. Don’t Take Things For Granted (ie.: practice gratitude)

When the humans finally found a reliable source of cheese they were overjoyed.
Yet, little by little, they got used to it.
They started it for granted and they even became dependent on it.

Lesson learned?

- Stay grateful and don’t become overly dependent on anything

#3. Be Prepared for Things to Change

One day the humans woke up, only to find out that their reliable source of cheese was gone.

It wasn’t really gone, the humans had failed to see that things were slowly changing. The cheese was diminishing and it was also rotting a bit. But they ignored the signs and clung to the status quo.
They were back to square one, but now they felt horrible about it.

Lesson learned?

- Things never last forever: don’t grow complacent and look for signs of change

#4. Don’t Cling to the Bygone Past (ie.: keep moving)

The mouses didn’t sweat the change.
They soon got back on their feet and moved again. And soon found another cheese station.

The humans instead couldn’t psychologically accept the new reality. They clang to their old good past and revisited older cheese stations that were long depleted.
It might not be a coincidence that the humans in Who Moved My Cheese are called Hem and Haw.

Lesson learned?

- Don’t cry over spilled milk. Roll back your sleeves and get going again

#5. Move Towards Your Fears

After their cheese was gone Hem and Haw were afraid of getting back in the game. They had grown too comfortable, or “mentally fat” as I sometimes call it.
They were afraid of moving toward new alleys.

Lesson learned?

- The more you wallow in fear, the worse things will get. Move towards your fear and the death of fear is certain (cit.: Brian Tracy)

#6. Visualize Your Goals

Eventually, Haw started visualizing himself sitting on top of his all-time favorite cheese.
How wonderful life would be again?
That gave him the strength of venturing out into new and uncharted territory.

My Note:
90% of self-help books tell people to visualize their goals. But repetition doesn't make something that's not (always) true, true.
For more, check: self-help myths and pop-psychology myths.

#7. Your Life is The Result of Your Mindsets and Actions (ie.: take responsibility)

While Haw got moving, Hem stayed behind instead. He kept sitting at the old cheese station, getting hungrier and growing more and more emaciated.
Wallowing in pity and anger.

Hem's life wasn't easy.
In the beginning, he wasn't finding much cheese, but he was proud of himself whenever he could find any. He was growing more confident in himself and in his capabilities, also getting happier.
Eventually, Hem found a new big cheese station (ie.: he reached his goal by taking action).

My Note:
In psychology, the mindset of taking responsibility is also often associated with an internal locus of control, such as the belief that we can change our circumstances and we can change our environment.

Lesson learned?

- Your life is the result of how you react to failure

As someone said:

> **Judge me not by the times I fall, but by the times I get up again.**

[image]

Real-Life Applications

Who Moved My Cheese is a parable about powerful mindsets to adopt in life.
It's difficult to pick one as they are all great, but if I had to just go for one:

- **Keep on Going**

In the face of failure, don't dawdle on the past. Keep on going. The world belongs to people who stay gritty in the

endless pursuit of their dream.

> **Success is going from failure to failure without loss of enthusiasm”**

CONS

- **Little People Have Little Power?**

Putting two people together with mice and giving them so little control over their lives didn’t seem to me like a very empowering metaphor.
Sure, the attitude that you will always do your best is super empowering (and freeing).
But oftentimes we can also do a lot to change our environment. And that didn’t shine through in “*Who Moved My Cheese*“.

- **Visualization Was Least Powerful Message**

While Who Moved My Cheese shares a lot of very empowering mindsets, I personally don’t think visualizing is the most powerful way to overcome an impasse.
Don’t get me wrong, visualizing is awesome, but I believe that visualization is only one of the many tools of mental power (and possibly not the most powerful).

- **Analyzing is Not Necessarily Bad**

Analyzing the situation before acting can sometimes bring you much bigger payoffs.

PROS

Great Wisdom
Who Moved My Cheese does a great job of outlining many of the typical human pitfalls.

Review

Who Moved My Cheese leverages a fictitious story to share deeper truths of life.

In that, it’s similar to *The Greatest Salesman in The World* for sales books and *The Richest Man in Babylon* for personal finance books.

Alongside top reviews, it also had many bad reviews by people who are annoyed by the fable format and the repetitiveness.

And while I’m not a big fan myself of the fable format, “*Who Moved My Cheese*” hits on many key psychological pitfalls we all have as humans.
And I think the author does a great job of mixing entertainment with important life and self-development truths.

What to Say When Someone Dies (Dos and Don’ts)

Lucio Buffalmano · 24 July 2018 · Archived copy · Original

Few people really know what to say when someone dies.

And to be honest, most of the time there is nothing you can say or do that will magically make people feel great again.

However, you can avoid making some major mistakes.
And maybe, you can offer some good words of support.

This article will help you do just that.

  - 3. Avoid “He’s in a Better Place”
  - 4. Avoid “You’ll be Better (Soon)”
  - 5. Never Say “If That Happened to Me…”
  - 6. Never Talk About Your Concerns
- SUMMARY

#1. I’m Sorry

As simple as that.

Some people think this is “too little”, and that they should do or say more.
And while it’s commendable of anyone to want to do and give more, they sometimes approach the situation with the wrong mindset. The mindset is that they think that they need to console someone or cheer them up.

And don’t get me wrong: the moment to cheer our friends up might come… But it’s *not* soon after their loss.
Indeed “forcing” people to feel better, and trying too hard to change their states might easily feel like violence.

What to do instead?

Hug And Say “I’m Sorry”

If you are very close, hug them as you say “I’m sorry”.

And If you are close, hug them, then release them.
Then add “I’m sorry” as you keep a hand on their arm to show your support with physical body language contact.

If you are not close, a handshake will suffice.

#2. Know That I Am Here

If you are close *and* able to offer your support, this is a great way to add more supportive power to your “I’m sorry”.

It shows the person grieving that they are not alone and that they can count on someone.
Most of all, it also offers immediate emotional support.

Absolutely use it whenever you can and feel free to modify it with the following:

- Know that I am here *for you*
- I am here with you
- You are not alone in this
- **I know it’s a difficult time. When all of this will be over, I’ll be there**

The last one is particularly good.
The whole experience of coping with a loss and having to organize the funeral and religious ceremony is overwhelming.
The bereaved often go ahead out of sheer must, but without fully understanding what’s happening on an emotional level.

When everyone starts showing up at their doorstep, they also need to face the social jungle and keep a stiff upper lip.

At least, everyone who shows up is sorry and supportive. But after? It's the days after that are often the toughest for the bereaved.

When you tell them you'll be there, you show empathy and take pressure away from them. It's not *them* who need to attend to you, it's you who will be taking care of them.
It's very touching and soothing.

#3. Know That I'm Close to You

"Know that I'm close to you" replaces " the above "know that I'm here" when you cannot offer your help or support.

You can use this one for example to end a non-personal communication such as a text message or an email.

#4. I'm Close to You in This Moment of Pain

This is similar to the above and you will use it especially when you knew the person who died.
In one sentence, it communicates you are close to them and that you too you are feeling the pain.

It joins the two of you in this moment of sorrow, and it makes the bereaved feel less lonely.

#5. You Are in My Thoughts

This one can be used a bit more freely than the three sentences above.
It doesn't require you to be particularly close to either the person who died or the person who is mourning.

"You are in my thoughts" is also another great way to end any non-personal communication such as an email or a text message.

#6. This Sucks

This is more informal and can be used if you are on a very friendly basis with the bereaved.

If you think "this sucks" is too slang and out of place, it might be because you don't talk like that or because you don't talk like that with the bereaved.
If that's the case, you shouldn't use it.

However, if you do talk informally but think it's too "slang", then you are focusing too much on form and you are making it too much about yourself.
Remember, if you feel the pain, communicating it with your own words and without a filter is the best thing you can do both for yourself and for your friend.
There is no shame in labeling a bad situation for what it is.

#7. He Was Such a Wonderful Person

This is a common, stock expression.

However, it's fine… *As long as you believe it.*

Don't use it though if you didn't think the deceased was indeed wonderful or if you didn't know him well enough.
If you weren't close and/or didn't know the person well, it sounds like you are either using cliches or, worse, that you are being insincere.

If you knew him just from the periphery of your social circle, it's OK to say "he always struck me as such a wonderful person" or "he always seemed such a beautiful soul".

#8. This Must be Hard for You

Telling your friend you are aware of his feelings shows empathy.

It will move the two of you closer at an emotional level and make him feel less alone in this moment of hardship. It also provides the bereaved the safety to act how he feels rather than faking “strength”. And he can use it as a chance to open up emotionally if he needs to (ie.: yes, it’s incredibly hard).

#9. Share a Memory

If you have a great memory that positively encapsulates who the deceased was for you, you can share it with some of the family members or you can go up to the funeral ceremony and deliver it to everyone.
You can rest assured everyone will remember that nice gesture.

However, don’t share it with the bereaved so early as that will hardly console them and might actually aggravate their pain.

Watch Out for These

While there are often no good words to cheer someone up, there are a few unhappy expressions you should avoid.

The expressions below either make the situation worse or make *you* look bad.
And yes, while the focus is on the deceased, it doesn’t mean we shouldn’t care anymore about our reputation.

1. Don’t Say “I’m Sorry for *Your* Loss”

I want to get this one out of the way ASAP.
“I’m sorry for your loss” is a perfect thing to say in a few specific cases. And the cases are:

1. When the death was expected and/or
2. When you didn’t know the person who died

In other cases the "*your loss*" part shows a terrible lack of empathy.
If a friend of yours dies you don't tell her wife about "*her* loss". It's *your* loss too.
If a child dies, you don't tell the parents "you're sorry for *their* loss". It's a tragedy and it should involve everyone with a heart.

2. Don't Ask "How Are You?"

How are you can be a fair question if you're very close or if the death is not devastating.

For example, when my grandmother died of old age it wasn't a shocking news for anyone.
So I asked exactly that to my mother. It was perfectly befitting because I cared about how she felt and because I really wasn't sure (was she devastated, was she sad, was she sad but overall OK?).

However, when the death is unexpected or obviously devastating and/or you're not close enough to ask that, it's a big mistake.

For example, would you ask your neighbor who's just lost a child in a car crash "how are you?".
How do you think she's doing? And how can she even reply to that? Of course, she's devastated.

3. Do Not Smile

Even if they say something funny or mildly hilarious, it's always best to flash out a big grin.
Or you'll end up looking like Michelle Obama, which her smile very much out of place:

Always Avoid These

Always avoid the following, I cannot think of any situation when saying them to a person who has lost someone would be ok:

1. Never Say "Now You Can Live Your Life"

Some deaths can relieve the family of having to look after the deceased. And it's true that they will be able to use more of their free time.

However, soon after death is not the time to talk about the benefits of death!
To get back to my example: sure my mother was going to be able to travel and enjoy more her own retirement. And we all knew it. But was I going to say that when my grandmother passed away?
No!
Both because it wouldn't have felt good in any way for my mother to hear and because it's quite disrespectful towards the deceased.

2. Avoid "I Know How You're Feeling"

You might know how they're feeling and you might have been in a very similar situation. But it still feels condescending and egoistical to the bereaved.
You see, they don't care that you know how they're feeling.

Notice that "I know how you're feeling" might sound similar to the previous "this must be hard for you", but it's not. "This must be hard" is about *them* and paces *their* reality.
Plus "must be" is a statement/question which they can deny, correct, or explain.

"I know how you're feeling" instead is about *you.* And it's a statement. You don't even know how to answer that.
Actually, the only sensible answer would make them sound like complete jackasses (which is, by the way: "no you don't").

3. Avoid “He’s in a Better Place”

Maybe you believe that. Maybe the bereaved believe that.
Maybe it’s even true!

But still, when tragedy happens it’s not the time to say it.
People miss their loved ones and don’t want them in a better place, they want them nearby.

Never broach the “he’s in a better place” topic when the wound is still fresh.

4. Avoid “You’ll be Better (Soon)”

That is true, isn’t it?

Of course, they’ll be better. Maybe even soon indeed. But again, this is not the time to say it!

Mourning and grieving will take some time and that time has to be respected and honored. Being sad is part of life and it’s OK. Saying “you’ll be better” feels like you are not respecting their current feelings.

5. Never Say “If That Happened to Me...”

Then you’d be destroyed. Or you couldn’t handle it. Or maybe you want to make them a compliment about how strong they are.
DON’T!
This is about them, and saying anything about you feels like you’re trying to steal the show and make it about you.

And talking about hijacking the conversation, please don’t:

6. Never Talk About Your Concerns

At the funeral, people talk.
And they talk about everything. And that’s OK.

It’s also OK to talk about different issues and help the bereaved clear his mind for a while.

But do not, ever, try to pitch, sell or “make it about you” in any way. That’s terribly insensitive and they will (righteously) resent you for it.

SUMMARY

Most people are worried about what to say when someone dies because they:

1. Are afraid of saying something wrong (as long as you're sincere you'll mostly be fine)
2. Think they have to make the other person feel better (it's the opposite: it's trying to make them feel better that is insensitive)
3. Feel bad being close to someone who's in so much pain (pain is a part of life and they will most likely be better eventually)

Your goal when offering your condolences is simply to express sympathy, compassion, and/or share the pain if you do. This article showed you how to do that well.

- SUMMARY

#1. Listen & Let Them Talk

Understand this:

We are social animals.
And oftentimes one of the reasons people feel bad about bad news is not just the bad news in itself, but having to face their social circle with it.

Indeed, people loathe judgment and questioning from inept friends.

Spare your friends in a judgmental, disapproving, disappointed, and questioning tone.

Surprise your friend with some emotional intelligence, instead.
To begin with, ask fewer questions in the beginning and let them volunteer information.
As a matter of fact, help them volunteer information:

> **Friend**: Everyone is blaming me for our break up and my family just can't let it go. I didn't leave him and I do feel bad he's taking it so poorly. I wish we could have stayed together, but we were just too different
> **You**: Too different?
> **Friend**: Yes, I wanted adventure and variety, but he… Bla bla bla

Asking "what are people blaming you for" would put her in a bad defensive mood.
Another mistake here would have been to truncate the conversation before she's had a chance to "exculpate herself".

Let her make her case from an affirmative, positive place, without pushing her on the defensive, which is what everyone else is doing.

#2. Use Open-Ended Questions

Open-ended questions allow people the freedom to choose what to say. It gives a feeling of being appreciated for who they are.

> **Friend**: And the owner evicted me

The mistake here would be to ask:

> You didn't pay rent?

That would put your friend on the defensive. If he didn't pay rent now he needs to say "no I didn't, *but* it was because bla bla bla".

Instead, you say:

> **You**: How come…
> **Friend**: I was going through a very rough patch back then..
> **You**: I see. And how are you doing now…
> **Friend**: much better! Bla bla bla…

If they are done telling their story the question is great because it allows them to go from a "bad situation" to a

positive, which is exactly what you want.

#3. Give Space and Time: Don't Rush Solutions

Giving space and time means:

- Listen
- Accept silences
- Let them cry/be angry/complain

And it means that you:

- Don't force them to "see the positives" too quickly
- Don't tell them how "it's going to be better" too quickly
- Don't tell them how to fix it too quickly (most likely they're not ready for the solution)

Don't rush your solutions and don't minimize their pain.
Give them instead space to be sad, silent, or even cry.

It's most effective to change the state of crying people with light banter, smiling, and positivity.
But that's the mentality that you must fix it for them, and that's not always the case (especially in relationships).
The option I like most these days is to stay present and near. Maybe rub their shoulder and back a little bit, as if to say "it will be OK".

The idea you want to give is that "*I'm here for you… As soon as you are ready. But take your time*".
Crying is actually often therapeutic, so don't sweat it too much.

#4. Help Save Face: Mention Your Troubles

Sometimes people feel bad for a blunder or a particularly embarrassing situation.

An easy way to smooth out the transition from embarrassment to opening up (or to a laugh) is to share similar stories that happened to you.

> **Friend**: To be honest, it went bad as I involuntary emitted gas and couldn't recover from there (cheeks getting red)
> **You**: Damn, I can imagine. I remember when I once involuntary burped in front of the whole class. God, I wanted to disappear
> **Friend**: Burping is OK…. I farted!
> **You**: LOL, but you should have heard *my* burp. Godzilla and King Kong should merge into a single entity to reach half of that resonance
> **Friend**: Ahaha (now she's already off the hook, back to normal)

Sharing your similar troubles helps to "normalize" any situation and your friend won't feel any more dumb or isolated.

#5. Criticize Their Critics First

This is really next-level social finesse.

If someone has been fired, rejected, or harshly criticized, they find themselves between a rock (their ego) and a hard place (their social circle).
If they criticize their own critics, they look like they are complaining and that they are butthurt.
However, here is the catch, when we *don't* criticize those who refused us it feels like endorsing or justifying them, which is the equivalent of saying "indeed, I *do* suck and deserve their rejection".

So there they are, mumbling some BS like "it's ok to receive criticism", "it's great feedback" or, a bit better, "you can't appease everyone".

Help them out from that mental catch 22 and they'll love you for it. Here's how you do it:

> **Friend**: Carl broke up with me
> **You**: I'm sorry and I'm glad you seem OK. Can I be honest now? That guy was an asshole, how did you manage to stay together until now
> **Friend**: God yes! Listen to what he did… Bla bla bla

Or:

> **Friend**: No, that job thing didn't work out (embarrassed about it)
> **You**: Mate, what the f*ck were you even doing with those amateurs. I've heard that guy there, what's his name, the sloppiest of the bunch, he burned through 3 millions without getting a single client! Is that true.
> **Friend**: Bro, you can't even imagine how sloppy they are, bla bla bla
> **You**: Idiots! When are you joining us now

When you attack the people that took value away from your friends you show you're on their side. And second and most important, you give them permission to let their anger out and be really frank about what they think.
Now that's real bonding!
After they're done venting, they might even turn around and admit their mistakes.
At that point -and only at that point!- it will be sincere.

#6. Say You're Sorry

For anything you can do little about, like loss in the family or illnesses, these two little words are your stock answer:

> I'm sorry

Then, depending on how they look or how fresh the loss is, you can add:

> And how are you now

If the loss is fresh and obviously painful you don't want to ask "how are you". At that point, you can add:

> Man, I can imagine it must be hard. I want you to know that whenever you feel like, I am here for you. When you need to take your mind off, have a blast or simply just talk about it, I am here.

Then let them decide whether they want to continue the interaction now or at another time.

What to Avoid

I don't know how your own experience is so far, but in my case, it feels like more people do it wrong than right. Here are the most common mistakes when it comes to consoling someone or helping them out:

1. Using Their Pain to Troubleshoot

This happens whenever we want to make sure that we are safe. Our questions aim to relieve ourselves instead of supporting our friend:

> **You**: I lost all my files in my computer. Weeks and weeks of work, I feel like crying
> **Clueless**: Argh, how could that happen, didn't you connect your computer to Dropbox
> **You**: no, otherwise I could recover them now
> **Clueless**: oh good, because I have Dropbox and was getting worried, feeew

This is a bit exaggerated to make my point.
Most people would move back to you *after* they troubleshoot for themselves.
But granted, there are also many who are really *that* clueless like in the example.

2. I told You! And what did I tell you?

Few things are as annoying as the friend who always saw your problems coming long before they materialized.
And his close brother: the friend who warned you in advance.

A special place in hell belongs to those who didn't even warn you, but still say it anyway, just to make you feel even worse (this is a power move, BTW).

See a funny example from Family Guy:

3. Assigning Blame

And here comes the "you must have done something wrong" type of friend:

> **You**: I just didn't make it on time to break and rear-ended him. I have troubles moving my neck now and I'm even out several thousands. Sheeet!

> **Clueless**: Yes, but were you wearing the seat belts?
> **You**: Yes, but the airbag didn't go off
> **Clueless**: Oh, I see, you didn't do the regular inspection did you?

You can see clueless here is more intent on assigning blame than supporting.

Some people do it because they refuse to accept that there is also a lot of randomness in life. You can't control everything and assure safety.
Living entails risks. Even when you do everything right. Make your peace with it.

4. Endless Loop Questions

I still remember this one like it was yesterday. I was traveling, had slept very little, and was having some stomach flu because of some bad food I had.
This is what Deborah thought would help:

> **Me**: I'm not feeling too well, I might have some light food poisoning
> **Deborah**: You are sick? Why are you sick… You shouldn't be sick
> **Me**: ….

Those are not real questions.
Asking "why are you sick" puts the omen on them to explain, again, why they are not well. That's an endless loop question: the is no answer other than "ate some bad food".
And the icing on the cake is: "you shouldn't be sick", which made me feel as if I needed to justify myself for having chosen to get food poison.

5. Saying they "had it all" (before their mistake)

I remember years ago I was working in a goodish company in a good position. And of course, like all conservative parents, my parents weren't happy to see me leave big corp.
I was having some issues finding a new job and this is how it went:

> **Me**: I've been sending applications. It's not as easy as I thought though..
> **Dad**: (highly complaining tone) Oh dammit, but you had a good job
> (implies I made a mistake not holding onto it)
> **Me**: (eye-roll)

Another one could be:

> **You**: All the good guys are married, all the attractive ones are players and all the single ones are gays
> **Clueless**: What about your ex, he was a good guy, you two were good, why did you leave him

In this second example, Clueless is forcing you to explain yourself and re-defend your choice.
Chances are you won't stay good friends for long like that.

6. Making Light of It

Trying to relieve them of their pain too early is another common mistake.

People will get better, but they don't wanna hear you tell them. Or at least, not so soon.
It makes people feel like you're not appreciating their difficulties and that you think they are being weak.

And don't ever say "it could have been X":

7. Fixing It

John Gray calls men "mr. Fix it".
And he is not wrong: it's often men who fall for the "I need to fix their problem" attitude.

But when you think you can fix their problems in two seconds you are actually saying that you think they're incompetent.
And they might be incompetent! But people still don't want you to make them feel that way (read *How to Win Friends*).

I have a friend who always does it:

> **Clueless**: and what did I tell you? Now this is what you do. You go there and tell him X,Y,Z
> **Me**: Hmm that's not a bad idea (mental note: last time I talk to this guy)

Fixing people's issues is patronizing AF. It doesn't make you come across as more incompetent. It makes you come across as socially inept.

8. "Oh My God" Reactions

"Oh my God reactions" are exaggerated reactions to bad news.
Look at this example:

> **You**: no, Frank won't be coming tonight because we are not together anymore
> **Clueless**: oh myyy God!! are you serious??
> **You**: yes… (A bit peeved, doesn't know what to add) it was consensual
> **Clueless**: but you were such a great couple!!
> **You**: Well, it looked like, but..
> **Clueless**: How did *that* happen!!
> **You**: (look around, then loud) is there are any other seat available? I'd like to move

You will notice here that the "Oh my God" reaction is coupled with way too many questions that push you into defending yourself and your decision.
People facing difficult times need support, not a barrage of questions that makes it harder for them.

9. Empty Platitudes

Please avoid any of the following platitudes:

- Everything happens for a reason
- What doesn't break you makes you stronger!
- It's always darkest before sunrise. You'll be happy this happened

And anything God or destiny related:

- God doesn't give anything to those who can't handle it
- It's in God's plan

Trust me, even the most God-fearing person would be hard-pushed not to tell you where to put your God's platitudes.

SUMMARY

Comforting someone when they're feeling down is an important skill in the social master's arsenal.

This article, inspired by the book *There Is No Good Card for This*, taught you how to console and support a friend.

Once you have listened and let them off the hook, then you can start moving towards a more positive attitude. And we will focus on that in the next post.

Shoe Dog: Summary & Review

Shoe Dog is Nike founder Phil Knight's autobiography in which he talks of how he launched the biggest shoe empire in the world.
Nike today is one of the strongest brands in the world, but to get there Knight pulled through a few near-death experiences and lots of up and downs.

Bullet Summary

- Phil Knight was hugely passionate about sports and running shoes
- An early partner who can hope easy doors for you is priceless
- A team of a hard worker who believes in your vision will make a world of difference

Summary

About The Author: Phil Knight is an American businessman and founder of Nike, Inc. He was madly passionate about shoes, and they used to call men with a passion for shoes "shoe dogs". That's why the name of his autobiography.

Importing Onitsuka

Phil started out importing Japanese running shoes Onitsuka Tiger in the US. He flew to Japan to pitch the managers of the company and wasn't necessarily expecting something to come out of it.

But he got there at the right time and the CEO agreed to start him off with 300 pairs of shoes. For the next months, he would sell the shoes from the trunk of his car.

World Travel

Phil Knight comes before the Steve Jobs-inspired generation of traveling to India and getting into "Eastern

philosophy".
So he just traveled the world instead and fell in love with the cradle of Western civilization: the Greek Acropolis.

Nike Temple

Phil Knight was so fascinated by it that he would stand for hours in front of the temple.
Years later he stumbled upon a play called "the Knights", where a king receives a new pair of shoes as a gift. Want to guess where did that take place?
In the Nike temple of course.

Partnering With Bill Bowman

Phil Knight was a runner himself and he had admiration for coach, Bill Bowman.

While working on his Onitsuka importing business, Bill accepted to join Phil to work on it.
That was great timing. Phil was training future Olympian athletes, and that was of great help to spread and give publicity to Phil's shoes.

The Passion for Soes: Shoe Dog

Phil was what in the industry was referred to as a "*shoe dog*", or someone who is obsessed with shoes.
He would take shoes apart, then assemble them again with different pieces and parts in his search for making them lighter and more performing.

However, Bill also helped with the shoe design himself. The first major sales success came from Bill's shoe-modified idea that Phil sent back to Japan for production.

The Early Nike Team

Phil Knight gives much credit to the early team of employees.
He says that one of the reasons for Nike's success was that early employees were all genius and misfits at the same time.
And because they were all misfits, they were able to see past their quirks and reach each other's hidden genius that most of society was missing out on.

Leadership Style

Phil Knight never micromanaged anyone (of course, the artistic types wouldn't like that anyway).
He believed in the mantra of telling people what to do and letting them surprise you with how they do it.

He also included the team in much of the company's strategic decision-making.
Including how to name the new company after they stopped the Onitsuka cooperation.

Nike Is Born

Indeed the company wasn't called Nike in the beginning. It was Blue Ribbon. But in 1971, when they decided to stop selling Onitsuka shoes and build their own shoes, they needed a new name.

The name Nike actually came up in Jeff Johnson's dream. It immediately reminded Phil of his previous experiences with the name (temple and novel) and they ran with it.

Why Did Phil Work Hard on Nike?

It might seem natural that Phil Knight would eventually think of starting his own line of shoes.
Yet one of the motivators to rely less on Blue Ribbon and Onitsuka was because of Onitsuka.
While Blue Ribbon was the exclusive US contractor for Onitsuka's track and field shoes, Phil heard that Onitsuka

was sending a manager to the US to look for other possible contractors.

That proved to be a major motivator for Phil Knight to work harder on his own line of shoes.

Onitsuka – Nike Lawsuit

In the early years of Nike, the budding company was threatened by a lawsuit from Onitsuka in Japan. To defend itself Nike counter-sued in the US.
Nike won that crucial lawsuit and it was a turning point: losing it would have put the company in jeopardy.

US Government Lawsuit

Phil Knight says that Nike's competitors, Converse and Keds, sued Nike for an obscure law on higher imported prices for specific types of shoes.

Albeit Phil had never heard of that customs law, it was real. In 1977 the government requested him to pay 25 million.

Phil Knight fully believed in his innocence, but he thought that fighting hard against the government would have destroyed goodwill. And he needed that goodwill. So he settled for 9 million.

IPO and Integrity

Phil Knight wasn't looking forward to an IPO.
He regarded Nike's culture of hard work combined with fun and play as one of the key characteristics of the company.
The IPO though would have helped solve some financial issues like bank over-reliance and difficult access to major credit. And the 25 million government lawsuit eventually convinced him the IPO was going to be helpful.

He designed the share structure in a way that would allow Nike to keep control instead of becoming "just another corporate machine".

Phil Knight says that Nike managed to keep its culture and its strong ethical code, to which he attributes much of its international success.

Integrity and Sweatshops Scandals

Phil Knight says that Nike rented space in sweatshops just like many other corporations did.
But it was at the center of the cyclone because people knew that the Nike brand would bring more attention to the cause.

He says that the company always fought hard to improve the living and working conditions of all workers before the scandal broke. In one case, it was stopped by a local government official because workers earning more than doctors would be bad for the economy.

After the scandal, though, Knight realized they had to try harder and do more.

Real-Life Applications

I think that the true lessons of "*Shoe Dog*" are not to be found in the actual words but in reading between the lines.

For me, they are:

- **Do Find Your Passion**

Reading *Shoe Dog* I was struck by the fact that Phil Knight was hugely passionate about sports and shoes.

This made me think of books such as *Grit* and *So Good They Can't Ignore You*. The former says you *develop* your passions, while the latter goes yet further saying that "following your passion" is bad advice for most.

Well, there are many exceptions to that and I think it's important instead you spend most of your time on something you are passionate about (or something you can develop a passion for).

- **Find Believers in Your Mission**

Shoe Dog shows that having early employees and cofounders who share your dream and work hard for it is key.

- **Find Great (and helpful) Cofounders**

A co-founder who can easily open a few doors thanks to his knowledge and connection can be a huge, huge asset.

CONS

- **Treating Sponsored Athletes Well? Some Silly Self-Promotion**

Autobiographies should all be taken with a grain of salt.
And "*Shoe Dog*" is no exception. Especially since Nike and Knight seem to have many public skeletons in the closets.

I found the part in which Knight says that he treats sponsored athletes well to be a bit ridiculous, to be honest. He prides himself on treating them as "real people" and not just vehicles to sell more.

However, that seemed a bit ludicrous to me: athletes paid millions don't need Phil's special attention and friendship. If anyone, then it's the lowest paid workers would need a bit more of that attention maybe. And that wasn't very forthcoming.

PROS

Great Entrepreneurship Lessons
Shoe Dog teaches more about entrepreneurship than many entrepreneurship books.

Review

Shoe Dog is an awesome memoir.
It's well written, with a captivating story and lots of lessons learned.

It teaches more about entrepreneurship than many books on entrepreneurship (including the difficulties of finding cash, even for fast-growing companies).

It also shows a lot of the power moves and dirty tricks companies use against each other.
Phil Knight's point of view is his point of view, of course, and I'd be very curious to hear what Onitsuka would say about him (for a different account on the Asian sweatshops, we have that point of view: check out *No Logo*).

In any case, inspiring entrepreneurs can learn a lot from Shoe Dog.

Bullet Summary

- Crime rates dropped because of the abortion law
- Economic incentives can crowd out moral or social incentives
- We all tend to jump to explaining events through apparent causation, but that can be spectacularly wrong

Freakonomics Summary

About The Author: Steven Levitt is an American economist and professor of economics at the University of Chicago. Stephen Dubner is an author and journalist, and he has a radio show and podcast.
Both of them enjoyed much success with Freakonomics, which then followed up with similar titles such as “Super Freakonomics” and “Think Like A Freak”.

Introduction

Freakonomics starts by taking aim at a pillar of old economic theory: that men are purely rational individuals who act on purely rational (and easily to computer) economic incentives.

Financial Incentives Are Just One of Many Incentives

For decades, economists loved the idea of economically rational incentives.
We are all rational, postulated the now almost defunct *Homo Economicus* framework.

Freakonomics does not deny that rational and monetary incentives play a huge role, but it takes a larger view on incentives.

It also includes social incentives, such as not wanting to look bad, and moral incentives, such as not wanting to do something which feels wrong.

Purely Financial Incentives Can Backfire

Focusing only on one side of the incentive equation, such as the financial ones, can indeed often backfire. The author uses the example of the now-famous daycare center in Hafa, Israel.
To reduce the number of late pick-ups by the parents the school started charging a $3 dollars fine for every time a parent would show up late.

Did that decrease the incidence of late pick-ups? No, it doubled it.
Why? Because the financial fine replaces the moral obligation. Now the parents felt that, by paying the fine, it would be OK for them to show up late.
Sort of a “pay per time”.

Lesson learned?

When you are thinking about introducing incentives, think instead if you can strengthen some already existing natural incentives. For example, the human need to not be unfair, which the daycare center could have leveraged.
If you are interested in the topic, I can highly recommend you read *Drive* by Daniel Pink.

Which Incentives Work Depends on Context

Imagine a contribution box where people can chip in money in exchange for bagels. It mostly relies on the incentives of wanting to be honest and wanting to look honest by the people who happen to be around.

What can it teach us about contextual incentives?
A lot.
Donations were higher when:

- It was a sunny day
- The overall office mood was higher
- During non-stressful holidays (Christmas and Thanksgiving are labeled as stressful)
- After 9-11 happened, which is probably because of a general surge in empathy

Incentives Are Not Always as Aligned as They Seem

Imagine you want to sell a house.

Theoretically, the interest of a real estate agent is the same as yours: selling it at the highest possible price.
However, the amount of commission the agent would earn for selling your house at a 10% higher price is not much compared to how much time they can save by closing the deal quickly and moving on to the next house.

Indeed data shows that when real estate agents sell their own houses, they keep them on the market longer to wait for a good offer.

How “Experts” Exploit Us

Levitt and Dubner explain how people in possession of specific knowledge can use our relative ignorance to cheat or overcharge us.

Lawyers and accountants are examples of experts who are in the position of overcharging their customers.
But also a car salesman can take the role of an expert when for example he leverages our fear saying that a cheaper model is “not so safe”.

When you feel someone is trying to play on your fears always delay decisions.
And then ask for a second opinion or research. The Internet is a God-send gift here in helping reduce the information disparity.

How Internet Change The Game

In the nineties, the prices of life insurance policies fell dramatically. Why was that? The author says it's because people were suddenly able to quickly compare prices.

Similarly, if you want to buy a house these days you can easily go online and look at the prices and you don't need to trust the real estate agent.

Share Information, Because When In Doubt, People Expect The Worst

Why do cars lose as much as a quarter of their value the day after they have been bought?
The author says it's because of the asymmetry of information.
Since the buyers cannot know what happened to the car and why you're really selling, they fear the worst.

Similarly, the very worst thing you can do on an online dating profile is to omit your picture. People will naturally think the worst.

Correlation is Not Causality

This is a mistake that people do all the time.
They see two variables move together and assume that one is causing the other. There might indeed be a *correlation* between the two variables, but the correlation does not imply causation.

Also read: Fooled by Randomness.

More Money Doesn't Win Election

A great example is that of money and politics. Usually, the candidate with the most expensive campaign wins. So people tend to think that money wins the election.

But the winner has more money only because people tend to back the favorite candidate at a higher clip. The author says that the winning candidate could cut their campaign spending by half and only lose 1% of the vote.

What's Near is Causal

When looking at what caused something, we also tend to give a disproportionate amount of attention to whatever is close and easier to be noticed.

For example, when the crime rate dropped precipitously in the early 1990s in the US most commentators said it was because of an improving economy, more police, gun control, and similar.
In reality, it was because of the abortion law. The most likely convict born in poverty in single-parent households. With abortion, fewer likely criminals were coming of age in 1989.

As Cialdini says "what's focal is causal".

My Note:
What causes crime to rise or fall is a heavily debated topic and I wouldn't necessarily jump to the abortion conclusion of the authors (albeit the increase in abortion might have certainly helped).

[image] 
Real-Life Applications

Don't Jump to Causal Conclusions!
It's tempting to see an event, look for a possible cause and automatically explain the event with the first cause we can find.
Especially so if there is an apparent link between the event and the "cause" we found.
But correlation is not causation.
P.S.: as a kid, it annoyed me to no end to see my parents always jumping to causal conclusions.

CONS

Bit Redundant
The second part of the book loses a bit of the edge

PROS

Pushes Us to Ask Deeper Questions
One thing Freakonomics does great and which I really appreciate it for, is to urge people not to stop at the first layer of analysis.
To get to the truth, we often have to first overcome our own biases.

Review

Freakonomics is a book that purports to use an economics approach to answer difficult questions with data and science.

In reality, it's a book of intriguing facts, data curiosities, and psychological biases.

Since most facts are indeed intriguing, the book has become a big success and a brand in itself.

I personally enjoyed it.
There is some interesting stuff and it's a good book, but it's not enough to make it into a must-read book.

Read This Instead:
If you're into psychological biases, go for "*Thinking Fast and Slow*". If you're interested in behavioral economics, go for "*Misbehaving*". And if you're interested in logical thinking and fallacies go for Nassim Taleb, for example,

"*Fooled by Randomness*".

In Short:
What Freakonomics does really well is to marry good information with the entertainment factor. So if you are looking for a book to entertain you AND to teach you something, I highly recommend it.

The Five Dysfunctions of a Team: Summary & Review

Lucio Buffalmano · 27 July 2018 · Archived copy · Original

The Five Dysfunctions of a Team is a book that, through a fable format, explains what works and what doesn't work with teams.

TPM Strategic Takeaway: Mainstream corporate, lacks depth and deeper power-insights
The Five Dysfunctions of a Team is a mainstream management model explaining why teams fail across five areas: trust, conflict, commitment, accountability, and results. It is useful as a simple corporate framework, but it is not a deep or scientific model of group behavior. From a TPM perspective, it should be read as a surface-level description of team coordination problems, which can be reinterpreted through underlying power, incentives, and status dynamics.

Key Takeaways

- **Teamwork is a competitive advantage**: make it a priority
- **Trust is a key element** of performance, and it starts with the leader's vulnerability in admitting his mistakes <— **TPM Note**: leaders must avoid over-vulnerability and walk a line between openess, and maintaining authority
- **Everyone has to be on board** with the final decision, even when there is no consensus

Notes

About the Author:
Patrick Lencioni is an American writer of business books, particularly focusing on leadership and team management.

Foreword

"The Five Dysfunctions of a Team" uses a made up story to explain the key tenets of what makes a functional or dysfunctional team.
I will skip the story for the most part and focus on the key takeaways.

Cohesiveness

It's not easy to exactly define what makes team great, but there is a lot of consensus around one trait: cohesiveness. Cohesiveness is the adjective that identifies "teamwork".

The importance of cohesiveness can be routinely experienced in team sports, where a cohesive team of good or even average players routinely beat the dysfunctional team of stars.

Why Talented Teams Perform Poorly Without Teamwork

Patrick Lencioni says that the (potentially) star performers in poor teams waste time and energy in politics and game playing.
The politics and games take focus away from work and performance, resulting in lower morale, lower engagement and lack of focus.

#1. Trust: The Foundations of Great Teams

When there is trust the team is free to communicate openly about any issue, which leads to all issues being brought to the table.

And for all issues being brought to the table, everyone feels free to say what they think, and the best solution is more likely to emerge -without anyone getting hurt-.

To foster trust, the author says people must embrace vulnerability.
And the first person to show vulnerability should be the leader. In the parable of DecisionTech, the new CEO Kathryn Peterson started by sharing her weaknesses, her past mistakes and even admitting she had been fired in the past.

My Note: Oversimplification of open communication
There are deeper psychological and power-related issues that contribute to a team opening up or not, including diverging interests, level of competitiveness, advantages/disadvantages of cooperation, and dark triad traits in the team

#2. Constructive Conflict

Constructive conflict is what allows teams to openly debate ideas. And openly debate idea is the best way to increase the likelihood of reaching the best possible decision.
To be constructive a conflict must be focused on the topic and decision, and not on personal agendas.

#3. Commitment

Great teams know that a decision is better than no decision at all.

And they put their personal egos and agendas aside to stand behind any decision: even the ones they didn't initially want.

Lencioni says that it's critical that everyone gets a chance to be heard.
Once people feel that their opinion has been heard and considered that's often enough to make them feel as part of the decision making, even if the final decision is not what they advocated for.

#4. Peer to Peer Accountability

For me this was the best and most insightful part of "The Five Dysfunctions of a Team".

The author says that when good rapport develops in a team people also become reluctant to hold each other responsible for results and top performance.

Ironically, that's exactly what ruins those relationships as people hold back from what they really think and resentment can fester.

Also when there is no peer accountability, everyone feels less accountable for the final result. And the full omen of discipline and keeping a high standard falls to the team leader.

But when there is trust in a team people know that any possible criticism is not a personal attack but it's for the common good.
And they come to respect colleagues who help them tweak their performance as they know everyone is adhering to the same high standards.

#5. Focus on Collective Results

Great teams don't focus on personal achievements, but on collective, team achievements.

The author uses the example of Kathryn's husband, a basketball coach who had to let go of the most talented player in the team because he didn't care whether the team won or lost, but only for how much he scored.

Lencioni says that the best goals are clearly defined and easy to measure.

My Note: Broad stroke take for average teams rather than top performer
I don't see necessarily a dichotomy between "own selfish interests" and team's interests.
Also, many star performers are often pushed to achieve by their high drive and hunger for victory. I don't think that superstars should be dropped by the team, but you should find solutions to make their talent work for the collective good.

For example, at DecisionTech Katryn's goal was to have 18 customers by the end of the year.
That was a common goal for everyone.
The result was that there were fewer fiefs in the company. The engineering department was willing to help and support the sales team instead of protecting its resource to achieve its own goals.

Great Team Spend Time Together

Lencioni makes the point that great, top-performing teams, spend a lot of time together.[image]

Real Life Applications

Hold Colleagues Accountable *Strategically*
Don't be afraid of holding colleagues accountable. If you don't, it will breed resentment. However, if you do poorly you can make enemies. So be careful. Do it *tactfully*, it will develop trust and respect.

Lead by Example
If you're the team leader, but also if you're a team member, never forget this simple rule: be the change you want to see in others.

> **Be the change you wish to see**

CRITICISM

Black & White View of Personal Ambition vs Collective Results
I feel that the personal drive for achievement does not stand in direct contrast to good teamwork. We all have our own egoistical drive and we should leverage the team for results, and not try to squash them.

Demonizies Selfish Drives: They're Natural, Not Always Harmful
Lencioni tends to label personal drives as "harmful", which is a common but imperfect way of looking at what is, after all, a natural drive for each one of us. Correct handling of selfishness is about managing and channeling, not repressing it or demonizing it.

Review

"*The Five Dysfunctions of a Team*" is a corporate management classic touching on several foundational elements of effective team, but also missing out on other crucial aspects of psychology and power dynamics.

By largely skipping the 'darker' aspects of socialization, such as diverging interests, manipulation, or negative elements that must be handled, it's also a classic 'naive self-help'.

Bullet Summary

- Editorial copy usually beats sales-style copy
- Present the best benefits of your products in three different formats
- Always test your assumptions

Full Summary

The Three Rules

Maria Veloso has three rules to writing copy:

1. Don’t make your copy look like an advertising (editorial style always beat sales-letter style in all her tests)
2. Stop readers in their track

3. Capture email addresses (people rarely buy the first time)

The First Screen is Paramount

What users see first when they open your webpage is paramount. Therefore, make sure your headline is visible on the first screen and don't make the mistake many do of putting a big logo on your page.

Questions Instead of Statement

Questions are often more powerful because they get the reader to answer themselves instead of spoon-feeding information that is often rejected or not believed.
For example instead of saying:

> This diet will easily help you shed 10Kg
>
> What if you could lose 10Kg in the next one month?

When you ask a question, the reader is filling the canvas with his own colors, which is much more powerful.

Early Testimonials

Put the testimonials early in the copy as it helps made all the rest sound more credible.

Make Your Copy Look Good

Only 16% of readers read word for word (!).
Make your copy look "scannable" to the eyes by using bullet points, paragraphs, bold words, caps, underlining and pictures.

Also: present one idea per paragraph and use the "inverted pyramid" concept where you put the most important stuff on top.

P.S.: the P.S. is the second most read part of the copy, so put important stuff there.

Creating the Blueprint

First of all, you should identify your target audience. Once you know them well, the blueprint is the story-line that your copy should present. And you can develop it answering the following questions:

1. What's the problem
2. Why the problem hasn't been solved (you can dig deeper in the history of the issue and why past remedies are not ideal)
3. What's possible? (open the world of possibilities of what could happen for the prospect once the problem is solved)
4. What's different now? How will things change for your prospect? (explain how your product is the new and best way to solve the problem and give the prospect the world you painted in step 3)
5. What should you do now (buying your product, signing up to the newsletter etc.)

Fleshing Out the Blueprint

1. Inject emotions (does it frustrate you that… ; do you suffer from feelings of…; don't you just get mad when..)
2. Add bullets, bonuses, guarantee and trial closes
3. Credibility-building elements (testimonials, facts, quotes, case studies, stories)

4. Psychological and involvement devices
5. Replace rational words with emotional ones

Maria Veloso lists a whole two pages of emotional words you can use in Web Copy That Sells.
Final tip: replace the word “when” instead of “if” when describing what prospects will get, which assumes the sale.

The Price

Maria Veloso says that if you’re going for the editorial style you should never introduce the price before you have stated your offer.
I’m personally not sure this would work well for non-editorial sales pages.

Then she describes a few techniques to introduce price, such as dividing the price by 365 and stating the price per day, or by first mentioning a high price to anchor a high number and then positively surprise the prospect with a lower number.

Email Opt-In

Veloso says that the old “free newsletter” doesn’t work as well anymore and you should instead offer something for the visitors to give you their precious email.

Headline is Your 80-20

The headline is the most important part of your copy and the part where you should spend most of your time.
Write 40 or 50 headlines before you pick one, then narrow down to a few and let it sit for a day before you go back.
Your headline should answer the following question: what’s in it for me?

Veloso has an awesome example. For a discount club, instead of highlighting the savings, she would write:

Discover How to Give Yourself a 20 Percent Pay Raise— Without Having to Squeeze a Single Cent from Your Boss

Some More Ideas

- Make a promise in the beginning that you’ll reveal a big secret to make the prospect read everything
- Use a drop letter in the beginning of the copy
- Use multiple pricing structure
- Try to make your promises different (ie.: increase sales by 20, 30 or even 50%)
- Use a well-designed question to open your copy

> **It can’t be too long; only too boring**

Zeigarnik Effect: Only One Path to Sales

When we see too many interesting stories and links we are not satisfied until we explore them all. But this also means that we will not give enough attention to any of them.

You want to avoid it by making a clearer, simpler path to the action you want your prospects to take.

Use NLP

The author also gets a bit into NLP and hypnotic language.

Commands

> I wonder how quickly you are going to **buy this product**

Presupposition

> What will you do with your extra 2.000 Dollars of income?

Linguistic Bind

> While you're sitting there reading this page, you understand why you can't afford to waste anymore time

The first part is obviously true (sitting there reading this page), which lends credibility to the second part of the sentence.

Leverage Consistency

Ask a question in the beginning of the copy, such as:

> If I showed you a way to double your sales, would you be willing to invest 1h to learn the system?

At the end of the copy, after you tell them how it's possible to double their sales, you can remind of their initial commitment writing something like:

> Now that I've shown how you can undoubtedly double your sales, it's time for you to take action

You can read more here on the consistency principle.

Cyrano Effect & Emotional Satisfaction

The author says that what buyers really want is emotional satisfaction *during the sales process*. The benefits of your product actually become secondary.
She says that when you can give a lasting emotional experience during the sales process and you can get the buyers to like you, they will most likely be satisfied with the product almost independently of the product itself.

You can give an emotional jolt by either stirring pain or letting them imagine a pleasurable future.

Trifecta Neuro-Affective Principle

The best way to change your prospect's mind is to approach it from different angles. Usually, three is the best number.

You want to coalesce your idea or sales proposition to the essential three elements that must cover the following:

1. Emotional resonance
2. Redefinition (make the prospect see the problem in a new light)
3. Resistance (identify the objections and address them)

Then present them in three different channels so that you can cover all possible prospects' personalities.
For example you will use:

- Narrative

- Quantitative arguments
- Logic
- Aesthetic
- Humors
- Visual

The trifecta can be a stripped down copy you can use when you have little space and time. Otherwise, you can add and flesh out even more benefit when longer copy is needed.

Always Test Your Assumption

Finally, the author says that just because something worked for her or for clients of her won't guarantee they'll work for you.
You need to do your own testing.

And always test your assumption about your target audience.
Ask for feedback why they bought the product and what they liked about it. And then adjust your offer to reflect what the audience want.

Some More Ideas

- Make a promise in the beginning that you'll reveal a big secret to make the prospect read everything
- Use a drop letter in the beginning of the copy
- Use multiple pricing structure
- Try to make your promises different (ie.: increase sales by 20, 30 or even 50%)
- Use a well-designed question to open your copy

> **It can't be too long; only too boring**

[image]

CONS

- **Dated (in a funny way)**

Even the second edition by now is clearly dated in a world that advances and changes so quickly.

Myspace at 240 million users and Facebook at 100 million is all you need to hear to know it's basically a lifetime ago :).
However, that doesn't change the great wisdom of this book. The environment changes, but the human mind is still exactly the same.

- **Trifecta a Bit Confusing**

The idea of the trifecta seemed very powerful, but it was a bit confusing to me.

PROS

Overall Great
I have difficulties at pointing out all the great ideas I got from Web Copy That Sells because they were simply too many.

Review

I haven't read that many copy-writing books yet.

But of all the books and resources I have consumed on this topic, *Web Copy That Sells* is my favorite.

It opened my eyes on several copy-writing topics and I changed much of this website as a result of reading *Web Copy That Sells*.

Therefore, I can't do much else but recommend it.

Never Split the Difference: Summary & Review

Lucio Buffalmano · 29 July 2018 · Archived copy · Original

Never Split the Difference (2016) is a *book on negotiation* techniques in which Chris Voss, the author, makes the case that psychology, empathy, and rapport play a crucial role that has long been neglected and misunderstood.

Takeaways

- Don't negotiate as if emotions didn't exist: they do exist and are often part of the problem you must tackle
- Use empathy: put yourself in the other person's shoes and label their feelings
- Make the other feel powerful, listen to them, summarize what they've just said until they say "that's right" and ask "how" and "what" questions

Notes

About The Author:
Christopher Voss is a former FBI negotiator turned into a businessman, public speaker, lecturer, and author.

The 3 Voice Tones

Chris Voss says there are three types of voices available to negotiators:

1. Late-night "FM DJ voice"

2. Positive playful
3. Direct and assertive tone of voice

The assertive one should be used sparingly as it says that you are trying to assert dominance either aggressively or passive-aggressively and people tend to push back.
Most of the time, you should be using the positive and playful.

Empathy to Win Negotiation

The author says that the old approach of "leaving the feelings outside of the negotiation" makes no sense.

How can you leave the feelings outside when feelings are part and parcel of the human experience and when feelings often are the main problem?

He says instead that a great negotiator always has empathy for the other side. That doesn't mean you agree, but it means you put yourself in his shoes.

Also, see this post on smart collaboration:

> Life Strategy: The Enlightened Collaborator

Label Their Feelings

Once you recognize the feelings the other person must be feeling, you should put them into words and tell them about them.

In the book's example, with fugitives holed in inside a house, it was:

> **Chris Voss**: It looks like you don't want to go back to jail

And:

> **Chris Voss**: It seems like you're worried if you open the door they will come with guns blazing

Labeling decreases the intensity of the emotions.

Steps of Difficult Negotiations

1. Focus on clearing barriers to the agreement (why they don't want a deal is more powerful than why they want)
2. Label barrier or mirror the statement
3. Pause (let them talk and gather intel)

Allow Them To Say No

If the other person has a chance of saying no he is feeling safe and secure.

The mistake many salespeople do is to force a yes, which often is a hollow yes that will not lead to any follow-up.

Dump The Yes Ladder: Use the No Ladder

The author takes aim at the yes ladder and says that in spite of everyone raving about it, it's not the best sales tool because the final yes is not sincere.

Much better to let the prospect start with a no and empower him to choose the final yes instead after a series of "no"

that makes him feel in charge.

Example of NO Ladder

So, for example, when calling for campaign donations against the sitting president the caller would start by saying:

> **You**: Do you think the best day for America are ahead?
> **Him**: No
> **You**: And are you letting this president sit in office without a fight?
> **Him**: No

And then the caller would say: if you want to do something today to make sure that doesn't happen, you can give to the X committee, which is fighting hard for you not to make that happen.

The "no" script got a 23% higher return rate.

Make the Other Party Say No

The author says you must phrase your question to make the other party say no.

You can do it by saying something obviously wrong, like for example:

> So it seems like you are really eager to leave your job

Or you could talk about what they *don't* want.

Make Them Say "That's Right"

When they say "you're right" it's bad.
You say "you're right" when you don't own the conclusion… And when you plan on doing nothing about it.
When people say "that's right" instead you're doing great.

Don't Use Deadlines as Weapons

Chriss Voss takes aim at an old cliche of the negotiating theory: that you should hide your deadline or that will give an advantage to the other party.
He says hiding deadlines increase the risk of an impasse and they work both ways.

My Note:
I also find that a bit imprecise. As Roger Dawson says in *Secrets of Power Negotiating*, deadlines help the party with the most options and damage the party with fewer options (or who wants the deal the most).

You Must Learn About The Other Party

There is no encompassing form or fairness that everyone recognizes and none of us is really rational.
If you approach the negotiation table thinking the other party has your same opinion on what's a good deal or what's fair, you're wrong.

Using Fairness As Manipulative Technique

Chris Voss says that people who utter "we just want what's fair" are using it as a manipulation negotiation technique to get a concession from you.
I loved how the author uses it:

> I want you to feel like I'm being fair at all times, so please stop me if you like I'm being unfair and we'll

> address it

For more manipulative negotiation techniques also read:

> 20 Manipulative Negotiation Tactics

Anchor Their Emotions Low

If you need to offer something lower than expected, preface it by saying what you're about to tell them might be shocking and they won't like it.
That you're terribly sorry.
Then, once you set your expectations very low, you can say:

> but before I take it to someone else, I wanted to at least let you know. Here is what I can offer.

Faced with the options of nothing or something and having their expectations much lowered, they will take you up on the offer.

The Tit for Tat Blunder

You have been taught negotiations all wrong.

The author says that much of Western negotiation rests on the mistaken assumption that you always have to ask for something back.
Or that when you give something, you must necessarily get something back.

That paralyzed his team's effectiveness, he says.
For example, they wouldn't ask the kidnapper to put hostages on the phone for fear that they would say no and that they'd be embarrassed.
And they wouldn't ask much for fear they'd have to give something back. Everything was a race for the negotiator: if you ask, then you owe.

Make Them Feel in Charge With Calibrated Questions

Calibrated questions start with "how" and "what" and are designed to open up dialogue, make the other party feel in charge, and let them negotiate with themselves.
Some examples are:

- What caused you to do it (instead of accusatory "why did you do it")
- What did you have in mind when you…
- How could we go about doing it

Avoid "why" questions as they seem accusatory. And bite your tongue and never overreact.

> **There is great power in treating jerks with deference**

Reinforce Commitment With The Rule of 3

Earlier, we saw how useless empty yeses are.
To confirm and strengthen the commitment to a course of action instead, let them confirm the resolution three times.

1. First time they propose or agree to something, that's number one
2. Second time you summarize and let them confirm with "that's right"
3. Third time you ask a calibrated "how" or "what" question about the implementation

The Three Types of Negotiators

There are three types of different psychology and dispositions when it comes to negotiating:

1. Accommodators
2. Assertive
3. Analysts

It's a common mistake to think that assertive are the most successful.

Each style can be successful, but **to reach your peak potential you need elements from all three styles**.
A study also shows that 65% of some of the most successful negotiators are accommodators.

Some Real Life Examples

I had written a few posts before here on real-life negotiation.
Without ever having read "*Never Split the Difference*" before, I realize that most of the techniques I used there were exactly what Chris Voss recommends.
Check them out:

- Negotiating an unfair refund request
- Lowballing with psychology
- Make friends, not enemies

And a few sneakier tricks:

- Sell a house fast
- Buy a house low
- Manipulation techniques

In a way, Never Split the Difference also vibes well with *How to Win Friends and Influence People* in that it seeks to save people's faces and avoid needless escalation.
Here is a good example of when such an approach would have worked wonders:

Real-Life Applications

Keep this one in mind:

- **The More They Say "I" the Less Power They Have**

I loved this rule of thumb.
The more someone says "I" trying to sound more powerful, the more likely it is they're clueless and have little actual power.
More shrewd people use "we", "they" and "them".

CONS

- Splitting the difference works

Says Thomas Schelling in his classic '*The Strategy of Conflict*":

> The frequency with which final agreement is precipitated by an offer to "split the difference" illustrates the same point, and the difference that is split is by no means always trivial. More impressive, perhaps, is the remarkable frequency with which long negotiations over complicated quantitative formulas or ad hoc shares in some costs or benefits converge ultimately on something as crudely simple as equal shares, shares proportionate to some common magnitude (gross national product, population, foreign-exchange deficit, and so forth), or the shares agreed on in some previous but logically irrelevant negotiation.

- **A Bit Braggart**

My personal feeling is that the author came across as conceited at times.
The way he says "they're wrong" or "you're wrong" gives me a feeling of someone who's taking the higher ground on the reader.
Talking about a "student of his" who did a mistake, he is careful to highlight "this is before he was a student of mine". And I felt that was unnecessary.

- **Some Bad Suggestions** (or at left, very risky)

In an effort to make the other party say no to make him feel in charge, the author uses the sentence:

> it seems like you really want this project to fail.

That's not a good idea in my opinion because it won't just push the other party to say no, but it will also actively make them dislike you.

There was also a rent negotiation example, with the student/renter talking to the real estate agent. And the student, to make the agent say no, tells him

> "*it seems like you would rather run the risk of keeping the place unrented*"

That is a barely veiled threat and sounds very confrontational to me (in spite of the author presenting his method as "working along" instead of ever risking an escalation).

- **Seems a Bit Simplistic at Times**

At times it feels to me like "*Never Split the Difference*" is a bit shallow and simplistic.
It stresses so much these little moments of interaction as if they were the big secrets to changing everything.

The pause after you say X or the words "that's right" in the author's opinion are the turning moment of all successful negotiations.
As if all of them were infallible. And as if someone could not use different words to convey the same meaning (ie.: "that makes sense" instead of "that's right").

- **Unfocused**

Never Split the Difference is a book with lots of genius, but sometimes it feels like it's disorganized genius.
I had so many notes after reading it, but putting everything together to make sense of it felt like a major task on my part -whereas it should have probably been on the editor's part-.

PROS

Lots of Genius

Never Split the Difference is one of the best books on negotiation. Chris Voss has a great grasp of human psychology and uses it effectively.

Brings Emotions to The Fore
I suppose that for several years, in many classes, the negotiation was taught as if the players were perfectly rational and one should keep emotions out of the equation.
That's silly, and Never Split the Difference makes that very clear.

Many Examples
I appreciated Never Split the Difference where there are a lot of dialogues and examples.

Review

I enjoyed Never Split The Difference.

Yet, part of me feels this cannot be the only book on negotiation you need.
Sometimes you will meet negotiating parties that are out to take advantage of you, scare you, or simply don't play by the fair rules.

And of course, there are times when more aggressive negotiation styles win:

When Power Negotiating Works

There are many situations in which you don't need to make the other feel powerful and in which you're better off crashing the opponent -also read *Secrets of Power Negotiating*–.
The author says that two pit bulls will only make a bloodbath where everyone loses. True.
But you don't necessarily need to give power to a chihuahua or to a pit bull to which you got a gun pointed.

Attention: I'm not saying you need to crush your opponent. I do am saying though that there countless situations where some aholes will take advantage of a weak opponent to bully him.
And many situations where you are better served by making a show of power instead of one of deference.

Basically: don't overgeneralize that one method is "superior". And train yourself to at least have the guts to be in charge and push back.

Overall Review

Never Split the Difference is a great book on negotiation that takes (good) psychology into account.
I wish it were written and organized a bit more clearly, but it's a must-read anyway for those who want to learn negotiation.

Flick Through It
Flick through the book to your relevant section and you might get a few ideas to get you going in your copy

CONS

No Guidance
All words are tossed out in the same list, there is little guidance as to what might sound better for your specific needs.

PROS

Lots of Words
There are really a lot of words and expressions which can help you get unstuck when you're at a loss for words or

adjectives.

Sparks Ideas
I guess it can be very helpful also to branch out for new ideas. If you're writing about self-improvement for example you might not necessarily need to use the words in the book, but it can help you see other possible benefits of the product that you weren't even considering.

Review

In the era of Google Dictionary *Words That Sell* loses a bit of its utility. But it's still useful since the categories are very detailed. So for example you have " luxurious" or "money-making" and all possible related adjectives and expressions are categorized for that specific copywriting need.

Personally, I was looking for a "normal" book and I was a bit disappointed to find out there is little explanation or little guidance as to what might work better.
But it's supposed to be a collection of words and expressions, and it does what it's supposed to say.

How to Build Emotional Connection With Women & Friends

Lucio Buffalmano · 31 July 2018 · Archived copy · Original

This world desperately needs men who can build an emotional connection with women-and anyone else, for that matter.

We have an oversupply of people screaming “me, me, me”, craving to be heard, rewarded, and “popular”. These entitled folks do not know how to connect with others.

This leaves **millions of women who are starved for a human connection.** And it’s a once-in-a-lifetime opportunity for the empathic man who can make women feel bonded.

Learn how to bond and connect, and everyone will want you: men and women.

An example from a friend of mine I bonded with:

“Bro, it’s always awesome to hear from you, so psyched to see you again”. And I felt the same. That’s the beauty of bonding with people

Step by step, this is how you develop a deep emotional connection with someone:

- SUMMARY

1. Start Light: Vibing

Rather than jumping on the deep end, you start *vibing* first.

Vibing is a mix of both breadth and depth, but prioritizing breadth and light-heartedness.
We might describe vibing as:

> Generally upbeat conversation with rapid changes of topics and pace, some deeper-dives, and snippets of important information about oneself.

See "Seduction University" for an example.
But also read here for troubleshooting:

- **Avoiding the "too deep" trap**

2. Make People Comfortable to Open Up

How do you make people comfortable opening up?

The first and deepest aspect is always character-based.
And then we can add the "techniques".

Character Development

You want to:

1. **Accept people's dark side**, something we repeat often here, starting with *your own* dark side
2. **Grow curious about people**, besides bonding, you will also learn more about people and life
3. **Find pleasure in making people feel accepted and cherished**, which automatically makes you accepting of people
4. **Find pleasure in bonding and connecting**. Or even more: only accept as close friends those who can and also want to go deeper

Techniques

Here is how:

1. **Talk, share, ask and listen**. Talk about your experience, likes and dislikes, relate to theris
2. **Ask *personal* questions as well**. Without personal sharing it's just a distant, cold, forgettable chit-chat. The secret is doing it naturally. The mindset is that for you it's normal that close people share personal information
3. **Ask *deep* questions**, for example, "what do you think of… " or "how do you feel about that". They're one of the best ways to get to know people and are almost as important as personal questions
4. **Actively listen without judging**, pay attention, nod, and ask clarifying questions
5. **Empathize**, even more important than "sharing back". Berg and Archer found that people react more favorably to expressions of concern and interest than to reciprocation of intimacy of disclosure
6. **Share back your own story/experience/feeling**. Research shows that self-disclosure is one of the most effective techniques to develop rapport. Asking only is taking. Sharing back is a win-win.
   Best is sharing back with:
   1. Similar topic
   2. Similar level of "depth" / vulnerability
   3. Similar results
   4. Similar feelings you had
7. **Disclose something personal/intimate** *at the appropriate time*, after they disclose or as you get closer. A meta-analysis showed that people who engage in intimate self-disclosure are liked more than those who disclose nonintimately
   ⚠ Calibrate! Revealing "too much too soon" won't be reciprocated and will make you disliked
   - Don't be afraid of seeking support if you need, it makes your friend feel valued (Routledge Handbook of Communication)
8. **Reframe it positively or back to lighter conversation**, once people are done sharing and as soon as it's getting *too* heavy so you keep it fresh, vibrant, and upbeat
9. **Rinse and repeat**

That simple.

Extra tip:

Match your facial expressions to the feelings and mood of your speaking partner and to their story. It shows that you're attentive and in sync.
But to also be an uplifting force, over-match the positive feelings, and under-match the negative ones.

If They Don't Want to Open Up

In a few cases, people might be uncomfortable with deep questions.

That's OK.
You might have gone too deep, or it might be too soon and you need to develop more trust and rapport.

If they push back, this is what you do then:

1. **Stay nonplussed, say they're normal questions** for you but you're cool if they prefer not sharing. Hold the frame that is close to you means going deeper and personal
2. **Answer the question yourself first** to show there's nothing wrong with the topic. That shows that you're not asking anything you wouldn't share yourself, resetting the frame from "taking" to "sharing"

If they still dig their heels, it's possible that you are not comfortable yourself yet, or you are not projecting an aura of sincerity.
Step back to "safer" chit-chat and go deeper again later on.

Internalize That Going Deep Is Normal

Creating a deep bond is about leadership.

Leadership, and personal growth as well.

To execute this part correctly, you have to believe in that going deep is how you develop strong and win-win relationships.

Asking and sharing deep topics is the best way to both interact with others and *care* about others.

Whenever someone pushes back, you can reply:

> What else should we be talking about, the weather outside?
> This is how people get to know each, this is what matters to people: personal feelings, dreams and desires, what they truly like and dislike.
> Or at least, that's the only way I see to develop good relationships.

That's how you hold the frame of reference and acquire power and respect.

Example: Emotional Connection With A Woman

This is how deep connection looks like at the beginning of a love story:

> **Her**: I always feel this pressure of being a strong and independent icon of womanhood (…) but loving someone and being loved means so much to me <— something deep and personal, not something she would disclose to anyone
> **Him**: Sometimes I dream about being a good father, a good husband (…) but if I'm really honest with myself I'd rather die knowing that I was really good at something (…) than I just been in a nice and caring relationship
> *<— shares back something in the same vein, while also indirectly displaying drive and ambition*

They're both so emotionally invested.
And that emotional investment is golden.
Plus, they're probably thinking, "My God, I've never opened up so much with anyone else". And they both feel a *special* connection.

What he could do even better is to ask her questions to better understand her, before launching into his own story.

P.S.:
This is similar to how I got together with my first serious girlfriend.

Example: How Growing Distance Looks Like

> **Him**: do you smoke weed?
> **Her**: not really
> **Him**: (surprised, almost shocked) you don't? <— he expands on the huge difference between them
> **Her**: no
> **Him**: at all? <— he keeps expanding on their difference
> **Him**: like in the morning? <— and again…

Little later, she leaves.

3. (Sub-)Communicate You're "Safe"

The deep sharing in the above example can only happen if:

1. People trust each other to **listen without judging** them
2. People trust each other to **keep their stuff private**

The good thing is that by becoming a generally high-quality individual you naturally give off vibes of dependability (including privacy).
Some more tips to communicate confidentiality:

1. **Say it:** if they seem worried to share something, say that if they wish so, it will die with you
2. **Stay cool**: over-eager people are untrustworthy. Act like your world isn't gonna change either way
3. **Look away more often**: this is the nonverbal equivalent of "giving them more space"
4. **Stay silent**: the verbal equivalent of giving them more space

Do it as a priest would:

> **Godfahter**: (confesses his sins)
> **Priest**: (looks aways, stays quiet, does not judge him)

And never forget to empathize when they share an issue.
NEVER joke about a meaningful misfortune (example here).

4. Alternate Depth and Light-Heartedness

To go beyond small talk and "deep" is a popular advice.

And that's good advice.

BUT…

The mistakes that many do -and that I was doing- are:

1. Always trying to go even deeper
2. Over-focusing on depth at the detriment of fun/vibing
3. Staying deep for too long, until it feels "too much"

There are two issues with staying too deep for too long:

1. **It can feel invasive**: People are cautious when first sharing intimate details. Digging too much can make them feel like they're over-sharing. So take it easy with very personal details.
2. **It can feel "too grave"**: If you stay too deep, too long, at a certain point it feels "too much". Too serious, too dark, or too grave.
   As someone said, "girls want to have fun". So do guys, for that matter.

When it feels too invasive or "too grave", the conversation sputters, the "magic" breaks, and neither of you will know how to save it.

You both know that you had some magic for a while… But now it's gone.

The solution?

1. **Alternate**: light-heartedness and "depth"
2. **Keep it light throughout**: works better with more easygoing, fun-loving people and takes the edge off very personal questions in early dating

Example

Here's an example of "keeping it light throughout":

> **Him**: (with silly voice) Describe your first sexual feelings toward someone

They share very personal stories about themselves and "who they are". But under his leadership, they do so in a very light and fun-loving fashion.

Hawke breaks an important emotional and personal boundary.
And albeit "boundaries breaking" often implies a negative connotation, it's the opposite in developing an emotional bond.

An emotional bond requires you to break personal boundaries that other people cannot cross.

But *you* can, *because* you are emotionally close.

5. Joke and Laugh Together

Some people think the emotional connection is "deep talk" and childhood traumas.

Not true!

A connection can also be based on mostly joking and laughing.

Laughing releases oxytocin and sub-communicates you share similar personalities. Laughing together, to use the words of an ex-girlfriend of mine, communicates that you "ride the same wave".

I'd personally still have my moments of more serious talk.
But it's OK to have 80% of humor and laughter.

Unique Humor Bonds You The Most

As a rule of thumb:

The weirder the humor is, the more you two are bonded.

Laughing while watching a comedy together is good, but if you can laugh about the "killer penguin" story you just

made up, it's even more powerful.

The made-up "killer penguin" is a story unique to you two, and that creates the "us bubble".

Use Politically Incorrect Humor

Politically incorrect humor is also great.

It sub-communicates that you two trust each other, are both open-minded and also creates an "us bubble".

Sometimes I make it a point of being racier and raw early on indeed: PC is for acquaintances.
The "real" you with all its quirks and kinks is where the real emotional connection takes place.

Of course, please note that not everyone is ready for PC humor.
So test it early on, and if it doesn't work, cut it out.

However, as a general rule of thumb, most guys will gain by being more irreverent.

6. Let Them Speak, Don't Fix Them

Men have a tendency to "fix" things -and people-.

That's often a mistake when people are opening.
Instead of finding solutions or sharing facts, just let them talk.

Example

See here, and notice the dynamics:

> **Her**: I think I am afraid of death twenty-four hours a day. That's why I'm on the train. I could have flown to Paris. I'm just afraid of flying.

Did you notice her fear is irrational, and makes no sense?
Notice how Ethan Hawke does the opposite of what most men would do.

Such as:

1. **Talking facts, data, and "rationality"**: people want to be understood and accepted, not schooled on what's "rational" or "true"
2. **Fixing it**: there is a time for teaching. And it's not right when people open up first
3. **Encouraging**: "I believe in you, you can do it". Please don't go motivational guru on people. Not right away, at least
4. **Using her vulnerability to look cool**: worst of all, some men exploit vulnerability as their chance to social climb, look cooler, and do some alpha male posturing.

For example, they might say:

> **Doofus**: Ehehe I love planes instead. The more the turbulence, the more I sleep.
> I'm not afraid of death anyway…

Wow, that's a tough guy right there, eh?
How is she supposed to feel after someone exploits her vulnerability to parade his "superiority"?
She won't open up again any time soon, and she'd be right.

Notice instead how he is the epitome of full acceptance.
He just says:

> **Cool unjudgemental guy:** I bet

Boom.
That's the kind of man that makes people feel free to be themselves.

7. Let the Bond Develop Naturally, Don't Force It

It's not a sprint.

It's a marathon.

Trying to force the connection is a common mistake.

Some authors say that to make people fall in love, you have to repeat "me too" as often as possible and as quickly as possible.
Not true.
Just imagine the following:

> **You**: Maybe we can get an ice cream. I love their pistachio ice cream
> **Her**: Me too, I love pistachio!
> **You**: Especially pistachio ice cream with a cone, cones are awesome
> **Her**: Me too, I love cones!

You'd think she either has no personality, or she's forcing it.
And if a man thinks that, it's 100x worse for a woman.

Instead, you want to give time to people to come out of their shells and *then* connect.
Then it will be a deep connection.

Another common mistake in forcing a connection is telling people "I know how you feel".
That can be OK once you know someone or if you have a spectacular connection. But early on, in most cases, don't

tell people you *know*, it feels stifling. Let *them* share their feelings.

Plus, it can spectacularly backfire when you misunderstand people.

See here an example:

> **Godfather**: (tells her how she feels instead of asking and letting her)
> **Her**: (thinking to herself "God, he's so clueless")

He jumps in early with his *own* interpretation and builds a castle on wholly wrong foundations.
That was the last straw on the camel's back: now she *knows* there is no bond between them.

Indeed, relationship researcher John Gottman says you don't get any brownie points for "guessing their feelings right" and you should stop any mind-reading efforts. They'll be grateful you give them the time to do so themselves.

8. Develop "Us Bubbles"

Same technique in "how to make her fall in love".

I remember a late morning, a few years ago.

Me and a woman who later became my girlfriend were sitting on a bench, in front of a small park.

We were watching kids and dogs running and people walking by.
And we commented and made fun of the world that lay in front of our eyes.
As if we were watching a movie.

This is very powerful.
When you look at the world as if it was you two peeking from a window, you are communicating *"that's the world… and here it's us"*.

Little later she blurted out:

> **Her**: It feels as if it's just the two of us in the world

That was the moment I knew she was falling hopelessly in love.

Example: "Us-Bubble"

Here is a good example from Family Guy:

> **Both**: (perched in a little corner, observing and making fun of the world around them)
> (silence when they both feel the bubbling romance of love enveloping them)

And before you think this is staged…

This is almost exactly what happened to me with an ex of mine.
And right after the pause, her voice pregnant with emotion, she muttered "I feel like it's only the two of us in the world".

9. Experience New Things Together

What do you think people are more likely to feel for you:

You have coffee, dinner at a pizza parlor, and a walk in the shopping street.

OR:

You do a skywalk, visit a monument for the first time, or go to a small restaurant with a cool “wine-tasting” concept.

Notice that “skywalk” is the only “crazy” and out-of-the-ordinary thing in there.
You don’t need to do that the first time you meet someone -but it’s great for later-.
Instead, do the other two first. They are easy. BUT they feel like *novel experiences*.

People relish new experiences.
People feel alive when having new experiences. And they’ll feel alive *with you*.
You become a memorable person who brings life into their lives, who makes memories, and who expands their horizons.

That bonds people *positively*, rather than “just” bonding.

And if you’re a man and *lead* women in that new experience, then we also have seduction.

9.2 Do Something Crazy and Adventurous

Warning here:

People have different risk appetites, and it’s possible that you can overdo “crazy”.

BUT, if you keep it “low intensity”, it works for the vast majority of people.
And if it’s not enough… You can calibrate as you go (or find someone new if *they* are too crazy for you :).

Doing anything exciting or mildly risky also produces the same chemicals responsible for attraction and infatuation.
It works wonders in romantic settings but also deepens the bond with same-sex, straight individuals.
This is why soldiers develop a strong camaraderie.

Here is another classic movie (The Dreamers):

Nothing too crazy, but exactly what makes a love story memorable.

10. Label and Cement the Emotional Connection

Cementing makes the frame “stick”.

If I wanted to cement the frame in the example above and get us even closer, I’d have said something like:

> **Her**: It feels as if it’s just the two of us in the world
> **Me**: (pause) Yeah. It feels that way. I think we have a great connection. I’m glad we met

And then maybe kissed her.
That’s a properly executed powerful vulnerability.

Why would you do that?

Because emotions are fleeting and **when you label emotions, you strengthen them and crystallize them.**

Example: Officializing Your Emotional Bond

Again from this wonderful movie:

> **Him**: I wish I had met you earlier, I really like talking to you
> **Her**: Yeah, me too

That's textbook labeling and cementing guys.
Labeling increases both the power and duration of your emotional connection.

See:

- **Frame control basics**

Bonus for Love: Spend a Whole Perfect Day Together

We have so far reviewed several videos from "Before Sunrise".

And what makes "Before Sunrise" a textbook example of a deep emotional connection is the presence of:

1. **Depth**, as we reviewed so far
2. **Breadth,** with different experiences
3. **Time**, spending the whole day together

Spending lots of time through different venues and environments has a "time distortion field effect".

It feels both like you've just met, and yet like you've known each other forever.
Mix all together, and you get **an explosive cocktail that makes people think "all of my life, where have you been".**

The fact that you *don't* know each other for a long time (or never knew each other so deeply), creates a contrast that is the basis of "whirlwind romance".

If you can't do the whole day, or if you're just bonding with friends, afternoon to evening also works great.
For example, *do* first something, then go eat together.

Mindset of Deep Connection

This is the mindset to reliably build emotional connections:

> I believe that getting to know the *real* person behind our masks is the best way to interact with people, and it's good for me, and them.

Once you internalize that mindset, the next steps are the "courage" and spontaneity of the execution:

1. Become a person who is comfortable talking about deep and personal topics
2. Grow the courage to ask and share deep and personal topics
3. Learn the technicalities of vibing and keeping a good flow

Follow this guide, and you will be shocked at how quickly and reliably you can develop deep emotional bonds. Because here is the truth about this world:

Most people are more scared and more lonely than they care to admit.
And we all long for someone who comes along and cares and listens with empathy and acceptance -or, dare to call it, "with love"-.

Then it's not really about *making* people open up anymore.
It's about *allowing* them to.
And they will love you for that chance.

SUMMARY

A deep connection is an intertwining of souls.

It's supremely pleasurable, whether it's romantic or social.

Learning to go deep and develop emotional connections will take your social skills to the next level.

How to Write Seductive Web Copy: Summary & Review

How to Write Seductive Web Copy by Henneke Duistermaat is a book on copywriting for small business owners or freelancers.

- Full Summary
  - 1. Who Are You Writing For?
  - 2. Benefits and Problems
  - 3. Your Value Proposition
  - 4. How to Write Persuasive Website Content
  - 5. How to Edit Your Text

Bullet Summary

- Find out who is your ideal customer and write for him/her
- Don't use specs and features but benefits and problems. You need to test if it for your audience benefits are better or if stirring problems is
- Make your text look good: most people scan instead of reading and put a call to action on every page

Full Summary

How to Write Seductive Web Copy is short and to the point, divided into 6 easy sections.

1. Who Are You Writing For?

Henneke says that the biggest mistake writers do is trying to write for everyone. When you try to everyone, you're really not writing for anyone.
The second mistake, she says, is to write what you want to write instead of what people want to read.

My Note:
I don't agree with that second part. I think that by being authentic you naturally attract the readers that vibe and like your personality. This allows you to be yourself and write what you love while you still write for someone: those who are like you (or want to be like you).

Instead, says Henneke, you should write for your ideal reader.
If you don't have one, it's time to sit down and come up with your ideal reader.

2. Benefits and Problems

People are not interested in you. And not even in your products. They are interested in what you or your product can do for *them*.

Features and specifications are dull.
Talk about the befits for them instead and the problem you solve.

The author says that even benefits can be dull and she asks whether problems to avoid are more powerful than benefits and pleasure to gain.
She says that depends on your audience and you need to test it.

3. Your Value Proposition

The value proposition is what you put under the headline in bullet points.
Henneke says that the bullet points need to be credible, concise, and clear. And they all need to follow the same structure (ie.: if the first is one line, then you should try to make all the other bullets fit in one single line).

4. How to Write Persuasive Website Content

Everything should support your selling efforts on your website.
Even your About page is not really about you, it's about what's relevant for your customers.

Make People Nod

I liked the idea Henneke introduce of "making people nod" with your copy.
Once you know who your ideal prospect is, you can introduce your copy with questions designed to make the reader nod. For example:

> Are you tired of being single?
>
> Would you like to have a loving life partner?

Stand Out Call to Action

Each of your pages should have a standout call to action. In different colors, or in bigger letters.

5. How to Edit Your Text

Use short paragraphs, with four sentences maximum.
Read your copy again and cut all the unnecessary and redundant information.
If an adjective or a word doesn't add value, remove it. Especially, eliminate all superlative. Let the reviewers laud you, don't do it yourself.

Real-Life Applications

Check Amazon Reviews for Ideal Reader
If you are not yet sure who your ideal reader is, you can check Amazon reviews for products in your category. Reading who they are and what they liked about the product can help you come up with the ideal reader (note though that many reviews are fake, as many authors launching books have teams for piloted reviews).

Don't Make Testimonials Too Sugary
Don't make your testimonials too over-the-top sugary or they'll lose credibility.

Use Picture Captions
Captions are one of those "highly read" bits of information in your copy. Use it!

CONS

How to Write Seductive Web Copy is short and to the point and with lots of great tips I have taken away from it. However, maybe I wished it were a bit longer.

PROS

Great Wisdom
I learned a lot from this book.

Review

How to Write Seductive Web Copy was a really good read for me.
It's mostly for freelancers and small businesses who have a 3-4 pages website, but I could still take a bunch of great nuggets of wisdom out of it. As a result of this book, I edited a few of my products and I believe that both the products and my knowledge, have improved.

Therefore, I can recommend How to Write Seductive Copy.

1. The Bait and Switch Game

The bait is showing interest first, then switching with (fake) disinterest.

Not proudly, I’ve been doing it myself a few times.

Not really to play dating mind games, but because I’m driven and busy with my stuff. And I lose interest if I don’t see reciprocated interest and/or if the first date is not hot enough to make us lovers.

However, some men might use this one on you in an effort to make you chase.

Here is how it looks like:

This one also leverages the time-tested technique of mixed signals.
It first sends the signal that he had a good time, but then never follows up, sending the signal he’s not that interested.

That vacuum often leads her to invest more mental cycles in him, which only gets her more and more hooked.

Handling The Bait and Switch

A basic rule of life:

Never consider anything real until it's real.

Words are never real. They are warm air (in person) and a bunch of meaningless bytes (in texts).
Actions speak: is he taking you out, is he texting you, is he supporting you?

Also, make sure to work on yourself: these games always work best on fragile egos.

2. The Adventurer Game

This is a dating game that has been growing in popularity.

The plan is to date as a lover and presents himself as an adventurer, globetrotter, artist, or any other exciting seducer style.

Men use it based on the idea that women slow things down with potential boyfriend candidates.

But, here's what they try to angle for, women move much quicker to bed if they know that he will never be their boyfriend… And if he is excited.

It's not a bad idea, also considering *all dating books for women* suggest to indeed let him wait for sex –a strategy I don't fully agree with-.

Very common in online dating

This game works well in online dating.

While traveling years ago I had a Tinder description precisely tailored to portray the "roguish" image of an adventurer.
I described myself as a free spirit traveling the world, a man who didn't like chatting but preferred to enjoy human connections in person, and a fun-loving daredevil who was happy to share adventures with some local women, as long as they were "cool" (ie.: 'down to it').

Something like this:

“unforgettable memories” often were not-so-unforgettable, basic hookups at my place designed to be quick and low-investment

Worked like a charm.

Also, read:

- The psychology of the player
- 7 signs of fuc*boys

How to Handle It

If you want to shame him:

> You’re like the 10th guy who says that in the last two days. I think it’s insecure of a man to have to sell himself so hard

Then watch how quickly a pricked hot balloon can scuttle running for cover.

This woman also had an interesting approach to blowing the cover of my game:

With “hoping you’re not a “poser”, she is using inverse psychology to make me prove myself to her, drop the “adventurer” mask, and be more “real”. Not bad.

3. The “I Never Date X” Game

Technically, this is a form of “disqualifier”, a PUA technique.

The goal is to sub-communicate that “you’re not good enough for him” and that “he’s not interested”. Ideally, you then chase *him*.

So if you’re a brunette, he might say:

> **Him**: I only date blondes

The idea here is that people want what they cannot have, which is in part true.
And by writing you off and pretending you can’t have him, he is hoping to turn the tables on you and make you chase.

How to Handle It

If you wanna get your hands dirty in power moves, then:

> **Him**: I only date blondes
> **You**: Oh, really, usually blondes like other blonde men. No offense, but can you find any as a balding dark haired man

The trick is to NOT sound mean. You should say these like you’re really worried for him. As if to say “*Poor you, can you really find any of those girls you like?*“.
He’ll be thrown off and chances are high that he will reply with something like this:

> Yes, of course I can…
>
> No, they also like…

In either case, he is now proving himself to you.

4. The Chameleon Game

The sexual chameleon does what a chameleon does:

He adapts.

The sexual chameleon feigns interest in your same passions and pursuits and seeks to be just like the person you dream of date.

If your ex was either abusive or an asshole, the chameleon is kind and supportive. If your ex was a spineless too nice guy, the chameleon will act strong and decisive.

Here's a quick story as an example:

⍰♂Lucio's Take: **My chamaleonic experience**

Lucio:
I remember 4-5 years ago, sitting at the clinic and waiting for our turn. We had met the day before, and she was leaving the city on that same day.

So I helped her get medication for a condom mishap.

As we waited, she was showing me the pictures of the art gallery she had been to.
One image was a big wall painted in red. Nothing else, just a big wall with red paint.
I looked at it, thinking it was meaningless, but didn't say anything.

At that point, she blurted out:

> **Her**: But… You don't really like art

At that moment, I realized I must have been a bit chameleonic the day before.

Read more on how to develop a deep connection.

How to Handle It

First off:

Don't think that *all* chemistries and commonalities are manipulations. You would lose your spontaneity and not everything is a game.
But at the same time, always reserve final judgment until you see concrete proof.

To uncover the "we're alike" game, throw him some curveballs:

> **You**: Everybody loves X because he's good, possibly one of my favorite. What do you think of him

X is either someone almost unknown or a made-up name. You preface it with "everyone loves X" so that you will make it more difficult for him to admit he doesn't really know him.
If he bites saying he also loves him, he's trying hard to position himself as a kindred soul.

4.2. The "I Like What You Like" Version

A similar game is to present himself like what he thinks she wants.

Or going for a stereotypical "great guy image" he thinks will surely make an effect.

Here is an example from Sex And the City (before he started a fight of course):

> **Him**: Great guy! And how about his wife? Now that's my idea of a perfect marriage
> **Her**: (totally sold on him and fantasizing already) Totally

In this case, he presents himself as the perfect boyfriend candidate. But since he's such a high-value man, that works for him.
And he'd probably be able to have sex with her very soon.

5. The "My Girlfriend" Game

This is dangerous for women looking for a relationship.

And it's mostly women who have a policy of "making him wait for sex" that will encounter it (delay sex like this if you really must).

So what does he do?

He will give you what you want as quickly as possible so he can get what *he* wants.

How is he going to do that?

He will call you his girlfriend.

The idea is to make you believe you reached your (alleged) goal of being in a relationship so that you can now "safely" have sex.

Not all men will disappear after sex and not all men play this game with malice, so don't be next to him just because he calls you his girlfriend before sex.
However, it's a possibility you should consider.
Look for signs of unreliability, a lack of past long-term relationships, and a pattern of lies, however small they might be.

How to Handle It

Say that you prefer not to use labels until it's official and mutually agreed upon.

Don't say it in a mean way of course, and the more you like him, the warmer you want to be with your delivery.
If he's really great, then be excited as you say it, but add that "you don't wanna rush things".

And make sure you do it privately as anything similar in public would be a major embarrassment for him.

6. The Fake High-Value, With Fake Connections

When fake, this is quite manipulative.

He will first listen to your goals and dreams, and then fake that he has good connections in the industry you want to succeed in.
The most stereotypical example of this game is the model agent or model photographer -who doesn't know anyone in the modeling industry except the girls he's trying to scam-.

There is also a powerful, subconscious effect where you feel that to "fully unlock" that offer of help, you might have to give him back something first.
And gosh… What is it that he hopes you will give him?

I tried it a couple of times when I really had something to offer, and it works great.
This musician didn't reply my text and answer my call, but when I had something to offer… Quickly called back:

How to Handle It

Again, words are as cheap.

Let him come up with the facts instead and tell him:

> **You**: Thank you very much, I'd love to meet this great connection. When can you introduce us?

Then stay out of contact until he proves he does have value to offer.

7. Games of Chicken

Games of chicken are power games to get the upper hand in the relationship.

Often, they're threats or ultimatums that put the whole relationship on the line unless she invests, chases, or… Put out.
When she crumbles and eventually follows through, she submits and gives him the reins of the relationship.

In a committed relationship, threatening to break up is a form of a game of chicken (albeit women play that more often).
Early in dating, simply not replying to a text can be a game of chicken.

In this example, it was a tit-for-tat game after she misbehaved by canceling on the same day with a weak a*s apology:

If she was playing a power game first… She lost it.
By the time she came around, the power was all on my side and… I had already mentally moved past her.
The only date I was willing to offer at that point was a "come over and we'll cook something together" type of date.

This is one of the reasons why I strongly recommend women to play little "chase me games": they mostly work with non-busy, lower-quality men and drive away all the cool ones (read more about the biggest dating mistakes women commit).

7.2. The False Takeaway

He pretends to walk away to make her chase.

If she doesn't go to him, the interaction is over.
But if she really cared, chances are she will go.
And once she goes, the power is on his side.

Example from “Under the Tuscan Sun”:

> **Her**: (laughs at his romanticism, framing it as “sappy”)
> **Him**: What?
> **Her**: No. It’s just that’s exactly what American women think Italian men say (laughs again)
> **Him**: (looks down, plays offended) thank you (walks away)
> **Her**: (walks to him) Marcello, I’m sorry. I’m so sorry

8. The Date Ending “Near His Place”

This isn’t really a “bad mind game”, but it’s still good for you to know about.

Men who are more experienced in the game, either because they’ve read about, or because they’ve been around, don’t date randomly.
They got a system.

And also won’t date far away from their home place.

Instead, he plans the date to make it seem spontaneous. But it’s designed to increase the odds of you two having sex.

Some examples:

- Doing something exciting (excitement rubs off as sexual attraction)
- Pretending to do something “spontaneously crazy” but actually planned
- Changing several venues and ending up close to his place

How to Handle It

If you like him, great: let him lead.

However, it might be better if he knows you’re not that naive and that *you* are letting him lead, rather than him moving you like a muppet.

So tell him:

> **You**: oh what a coincidence, we went through all these places and now we are just near your apartment. Isn’t that neat, John.
> Could it be that it’s not really a coincidence, John?

Say it not in a mean way but as if you wanted to say “you naughty boy” or “how random, eh?”

This is a great way to test how he reacts.

The best answer would be:

See “Seduction University”.

9. “Beauty is Common & I’m Deeper” Game

He’s trying to frame himself as experienced, deep, and interested in your personality.

Maybe you tease him he is only looking for sex, or that he is a fuckboy.
And as an answer, he will launch on a tirade that while “beauty is common”, he is looking for something deeper as well.

That way, he communicates pre-selection (other beautiful women probably wanted him) and that he can appreciate you for who you are on top of whatever flashy thing you got (big boobs, shiny hair, etc.).

Of course, it will be true for some guys.
But it's a minority.
So you have to judge based on other indicators you see of him.

10. The "Sex Provider" Game

Interesting approach:

Rather than pitching commitment, resources, personal qualities, a future together, or all the other things that most men offer… He offers (great) sex.
Either directly offers sex, or implies it with his heavily sexual undertones and mannerism.

Example:

> **Him**: Listen, sweetheart. Give me an hour in the sack, and you'll swear I'm the jolly green giant

The best players of this game do it more subtly, with stories, sexual talk, and body language.

Feel free to go for this one if you are so inclined -just be aware of the game, and that the great sex might or might not be true in the end.

And now the worst kind of mind games men play:

11. Power Moves & "Negs"

Some of the *early pick-up artists* advise "the "neg", shorthand for "negative hit".

The neg often was a back-handed compliment or a light insult.

Why would they do it?

To:

1. Lower the woman's self-esteem
2. Make her chase him to regain his approval (emotional power dynamics).

Is it effective?
Sometimes it can be.

It's an inherently lower-value game though because men who are obviously higher sexual market value wouldn't need to push women down -unless they're socially sadistic-.
It's lower-value men who need to push her down closer to his level.

These games, when repeated over and over in a relationship, are potentially dangerous because they can semi-permanently lower her self-esteem.
See "Seduction University" for more.

How to Handle It

This game often shows a value-taking mindset and personality.

Games designed to devalue and lower your self-esteem are the first red flags of potentially abusive men. And abusive men can only give you one thing: abusive relationships.

I have a whole article on how to play the same games back on him.
But best of all is to drop all games.

Say something like this:

See Seduction University.

12. The “Dread Games”

There is a whole class of red-pill men who discuss how to control women with the so-called “dread game”.

Dread games consist of keeping her in fear so that he can keep control of the relationship.

How to keep her in fear?

Some of the “techniques”:

- Never fully commit but string her along as much as possible (AMS’ advice)
- Triangulation games (see “The Art of Seduction“)
- Talk about “hot exes”

You can see here an example played on a friend of mine by her current boyfriend:

Did he really have so well-endowed exes? Who knows. Sure it’s helping him keep her on the edge though. But the fact she tells her *ex*-lover that, is not a great sign for him.

You can play the same back in what I call “my study exes game”, see “how to make him value more“.

Sadly, there is a subset of the male population in The Red Pill, a group often bordering on the misogynists, who purposefully learn how to play dread games.
For men, please see “how to move beyond The Red Pill” and become better leaders who don’t need to lower women’s self-esteem.

These games lead to toxic relationships.

Luckily, this website helps you spot value-taking men and abusers early and reliably, so you can avoid them.

Also, read:

- Are you dating a sociopath?

13. Broken-Man Game

You might be surprised that "broken men" can be attractive.

But they are very attractive to a subset of women referred to as "*women who love too much*".
These are women who always end up with men who need to be saved and rescued.

The best men at this game though do have *some* appealing traits.
Maybe they're rebels, or they've got a deeply romantic soul, or they're troubled writers… Or maybe they just need a little help to get back up.
Their appeal is to look like a diamond in the rough.

Some of them can seem fearlessly intelligent, scornful, and angry at society, somewhat melancholic, sad, and with an attractive artistic streak.
What are they hiding?
Who broke their hearts?
With a little bit of fixing maybe they can be hers. And since she fixed him, he will be eternally grateful.

Or so she thinks.
It appeals to her maternal side but, more times than not, he drags her down.

There is some overlap here with the "Byronic hero", but the "broken man" takes less care of hiding his darker side.

The movie "The Good Girl" presents a great example of "broken man seduction".
Unluckily the video was removed, but he comes across as a poetic soul who can't find satisfaction in a world that doesn't understand him.
And on his menial job, he bonds with her:

> **Her**: I hate my job
> **Him**: That makes two of us

And be aware, on top of the dark, many of these men are also (emotionally) abusive.

How to Handle It

Just stay away.
98% there is nothing you can do to help them and they will drag you down and emotionally abuse you.

14. The Average Joe Games

We have reviewed a few popular mind games men play in dating.

However, the most widespread games are the ones you don't need this post for :).

The *APA Handbook* on relationships for example mentions:

- **Exaggerating the depths of his feelings**

In Buss' survey, 71% of men admitted to having exaggerated the depth of their feelings to have sex with a woman.

- **Appearing better than he is** (richer, smarter, cooler…)

At the extreme are the men who rent a car or borrow to show off resources they don't have.

- **"Buttering up" compliments**

Gushing compliments about your sexiness, tastes, or personality.

How to Handle Men Who Play Games

See "Seduction University".

SUMMARY

This post showed you the mind games men play during dating.

Games men play in dating are not always and necessarily bad. Learning the types of games and their effects also helps you recognize the good men from the not-so-good (and from the abusive ones).

Meditations: Summary & Review

Lucio Buffalmano · 3 August 2018 · Archived copy · Original

"*Meditations*" is a collection of diary entries and notes from Marcus Aurelius, the enlightened Roman emperor. It's fascinating that a 2.000 years old book has almost all the mindsets you need to live an empowered life and take control of your mind (and life).
Marcus Aurelius is what on this website we would refer to as an "eagle". As a matter of fact, an eagle's eagle.

Takeaways

- We all have certain talents. It's your task to find them and put them to use for yourself and for the world
- Whatever happens in your life, you decide what that means to you and how you feel about it
- Don't waste time on mean criticism, complaints, and what you can't control: stay focused and do your best on everything you *can* control

Notes

Marcus Aurelius was the last of the Five Good Emperors, five rulers who oversaw the Roman Empire during one of its most prosperous and peaceful times.

Aurelius was also a philosopher, and he ascribed to the Greek Stoicism, a Hellenistic philosophy founded in the third century BCE.

Logos

Logs can be roughly (very roughly) translated with "reason", and it's all around us. It's in trees, objects, and people as well.

Logos gives things its shape, but also order. And it's the reason why people are where they are. It's because of the logos behind people that one can be a slave or an emperor.

Now the interesting thing about logos is that it's a force of the universe, and it constantly moves the world toward its best possible form.

My Note:
The fact that logos move the world towards its best possible form is similar to the Leibnitz hypothesis that "we live in the best possible world".
That's certainly an interesting idea. However, the second law of thermodynamics actually says that matter moves towards chaos.

What's Empowering About Logos?

There is something very empowering about logos. If you believe that "everything happens for a reason" and in the greater scheme of things it's moving you and the world towards the best possible outcome, then three things happen:

1. You lose the desire to change things and "wish they were better"
2. You can acquire a strong sense of calmness
3. It gives you a strong positive bias with which you look at things

> **There is little to regret when it's all meant to be**

Death is Inevitable

Dying is a normal part of life.
It's the logos that decides when and where you will die, and there is nothing you can do about it.

And there is also nothing to be sad about it because it's a transformation more than an end.

When we die the logos that are part of us re-joins with the greater logos. From the greater logos, it might rejoin a new form of life in an endless cycle that moves the world forward.

Squeezing the Most Out of Life

Marcus Aurelius *Meditations* has this great idea to get the most out of life: imagine you've already died. But somehow you came back and all the time you get is a miracle.
Wouldn't you be happier and do the most out of your time?

Also, read:

- How to leverage death for a fulfilling life

Always Be the Best You Can

Meditations say that since we all die and we don't know when it will happen, we must each moment we have very wisely.

It's no use wasting time complaining, for example. Marcus Aurelius, for example, didn't particularly enjoy spending time in court.
But it was part of what the logos had for him. He knew that it was a duty that comes with being the emperor, and he obliged to the best of his ability because complaining would have only meant wasting time, doing a poor job, and contributing to a poorly functioning court.

What's Your Purpose? Leverage Your Strengths!

Marcus Aurelius' *Meditations* say that we all have certain strengths. Leveraging what we are naturally good at will make us more effective, happier, and fulfilled.
And if you want to really be happy, use your strengths in service of others.

Logic Trumps Emotions

Marcus Aurelius and the stoics held logic in high esteem and viewed emotions as dangerous when they clouded reason.

After all, the logos is reasonable as it moves towards an improved world.

Marcus Aurelius worked hard to stand guard at the gates of his mind. He never allowed strong emotions such as hatred, revenge or lust to take too much real estate in his mind.
He strived to keep his mind cool and collected.

And what would he do when feeling overwhelmed? He would meditate on logos to regain his balance.

Perception Trumps Pain

And now we get to one of the most important tenets and lessons from Marcus Aurelius' meditation. One that is today being repeated by pretty much all motivational speakers from Tony Robbins to James Allen.
And this is it:

> Whatever happens to you, you choose what it means to you

This concept is very powerful to gain control of your mind and your life. If you are interested in how to take control of your mind and change your perception of the world, check Ultimate Power.

Personal Pain Means Little in Grand Scheme of Things

Marcus Aurelius *Meditations* says that personal pain should be accepted if the serves to move the logos towards its desired, improved state.

This concept is very similar to Ray Dalio's "what's good for the whole is good to do".

Real-Life Applications

There is really a lot here to take from:

Rebalance Yourself Game
Everything you get sad, you catch yourself complaining or doing anything that doesn't help you or the people around you, make it a game to see how quickly you can rebalance yourself.
Do it often enough and you will see how with time you will gain more control and mastery over yourself.

Everything Changes – & Bad Things Happen
Everything changes and bad things will happen. Be prepared. Not in the sense of "being prepared for the worse". Quite the opposite. Be prepared by enjoying the good time you're having without being too hurt when eventually something bad will happen.

Control Your Mind, Control How You Feel
You have the ultimate trump card on all events around your life. You ultimately control what they mean to you. And with that, you can always choose how you feel.

Stay Focused on What You Can Control
Some things you can't control. You shouldn't be flustered by them and you shouldn't waste your time about them. Do your best to control and improve everything you can control instead (a major tenet in Covey's *7 Habits of Highly Effective People*)

Do Your Best
We can always go at any time. Always do and be your best with the time you have.

Most Criticism Comes From People Who Don't Like Themselves
Mean criticism can hurt us a lot.
Well, Marcus Aurelius says that most criticism, and most mean criticism, comes from people who are neither very happy nor very successful themselves.
Why bother about them, then?

Find Your One Thing
Find something you can love doing and where you can use your strengths and dedicate yourself to it.

CONS

Everything Happens for a Reason
I don't personally much with the idea that everything happens for a reason.
I believe things happen randomly.

Watch Out for Good Translation
Similar to other timeless classics like *The Art of War* and *The Prince*, there are different translations of this book available. They're not all of the same quality, so you must do a bit of research to find a good one.
By the way, you can get it for free online.

PROS

I can't list all the pros for a 2.000 years old books which almost by itself could make the whole modern self-help industry redundant.
This is not to say we didn't advance, we did. And yet a 2.000 years old book has more and deeper wisdom than 90% of modern *self-help books*.

Review

Marcus Aurelius *Meditations* is the diary of a man who tirelessly worked on himself to become better and better and to gain deeper and deeper mental mastery.

These are the types of men who drive our world forward.

I find absolutely fascinating that a man who lived more than 2.000 years ago already had all the ideas that most of today's self-help industry is based on.
And I find it incredible that more than 2.000 years ago there was a man, at the head of what was back then the most powerful empire in the world, that tirelessly worked on himself to be the best man and leader he could be.

Why am I surprised?
Well, I was born with a "modernist" bias. I used to believe that everything new and modern was better. And that anything from the past couldn't possibly stack up with what's new.

Today I know that's silly. Great men are very similar, the whole world (and time) over.

And we could use some enlightened rulers of the stature of Marcus Aurelius today, couldn't we?

Bullet Summary

- Everyone is afraid. The secret is running toward that fear
- Focus on your work, process, and skills. Let the results be a byproduct
- Let your dream drive you, yes, but focus on the process mostly. Day in and day out, commit to your craft

Summary

About The Author: Steven Pressfield is a writer and author. He prides himself on having struggled before eventually making it, and now he teaches others how to do the same.

The War of Art: The Resistance

What's the resistance in The War of Art?

Have you ever struggled to start what you wanted to start? Maybe a business, maybe a creative endeavor, maybe expressing a difficult opinion?

That's the resistance.

When Does the Resistance Kick In?

The resistance hates anything new and risky. This means the resistance kicks in every time we do something outside of the ordinary.

How Does the Resistance Stop You?

The resistance has many sneaky ways to keep you “safe”… And away from your dreams. Some of them include:

- Fear of failure
- Self-doubt
- Procrastination

How to Beat the Resistance & Do Art

Steven Pressfield proposes a few ways we can beat the resistance and ship our art:

- Always refocus on your dreams instead of your fears
- Fully commit yourself to your art (treat it like a full-time job)
- Accept that doing art also entails waging war against the resistance
- Embrace your fear: fear shows you the way
- Stay persistent and organized in the face of fear and resistance

> **Fear shows you the way you need to run towards**

Following Your Passion

We have been seeing a few different takes when it comes to passion:

- Cal Newport in So Good They Can’t Ignore You says you *develop* your passion.
- Robert Greene in Mastery and Angela Duckworth in Grit say instead that you first start with something you’re interested in, and then develop your passion over time.

Steven Pressfield in *The War of Art* takes a different approach.
He says instead that you already have a passion within you. It’s that thing that you really love doing, or that thing you wish you had done.

Pressfield says that the fear coming from the resistance is also an indicator that something is your dream. If you are afraid of failing at it, it’s because you care about it.
And if you care about it, you should run towards it.

The Unlived Life

The author says we live two separate lives: the life we’re actually living and the unlived life of our unrealized dreams.

It’s the resistance that is stopping you from embracing the unlived life or your dreams.
And if you let the resistance win, you will never live a fulfilling life.

Fight the Resistance Like a Professional

The best way to fight the resistance is to treat your dream like a professional.

Treating your dreams like a professional means that you don’t work on it for a few hours here and there, in hiss and fits. It means that you make it your main goal in life to pursue your dream.
You immerse yourself in it, you live it and breathe it.

Even if you have a main 9 to 5 job you can still treat your dream like a professional if you do everything in your power to move ahead towards your dream.

How to Be a Professional

Being a professional also means:

1. Knowing yourself (your strengths and your limits)
2. Delegating (get on board people with complementary talents)
3. Keep learning and growing

The best of the best keep learning and growing even when they're already at the top, like Tiger Woods and Madonna.

Focus on Process

Steven Pressfield recommends you don't focus on the goal and reach it as quickly as possible. That might lead you to set unrealistic goals and get discouraged along the way.

Instead, focus on the process. Pace yourself, ration your work, and execute it, day in and day out.

The Obstacles Mindsets

Instead of seeing obstacles as impediments to your goals, *learn to see them as opportunities* to get closer to your goals.
You will certainly face challenges, and each challenge you overcome is one step closer to your goals.

Artists Battle Hierarchies

I loved this part.

The author says that hierarchies are everywhere, and most people allow the hierarchies to define them and dictate their lives.

Hierarchies all oppose change and try to "pressure you" into a determined role.
Professional artists, thus must battle externally imposed hierarchies to stay true to their art and craft.

To learn more about hierarchies, freedom, personal power, and social dynamics also read:

- The Small Pond Syndrome

Focus on Art, Not What People Want

I've been reading a lot about copywriting recently.
I loved most of those books (*Web Copy That Sells* first and foremost), but one thing they all had in common which I didn't like, was that they all recommend you write for your readers.

I like the opposite approach instead.
Write what you like and your readers will auto-select themselves.
Which is the same approach Steven Pressfield takes in *The War of Art.*

He says that instead of focusing on trying to guess what people want, professional artists focus on their art. Like Steve Jobs or Elon Musk.
Or the writer Rainer Maria Rilke, who recommended you write for yourself and your art will be much better.

Pick a Territory And Specialize

Pick a Territory in Pressfield's work is not just a physical territory -like, he says, the gym for Schwazznegger-, but a field where you can keep growing.
It can be computing or film-making like Woody Allen.

This concept is similar to *The One Thing*, which basically recommends you focus on one thing in your life.

Real-Life Applications

Run Towards Fear
Whenever you want to do something you are passionate about, it's only natural you will be afraid.
The amateur thinks he will conquer fear and then do it. The professional knows he has to sit with the fear.
Understand that fear only provides confirmation that you should do it.

Make Your Dream Your Full-Time Job
Keep chasing your dream with full dedication and unending perseverance.

Shun The Critics (and look in the mirror)
Those who are the meanest in their criticism are the ones who haven't expressed themselves yet. This is a concept very similar to Marcus Aurelius' Meditations.
And it's the same when we criticize others too vehemently. Look at yourself first. Are you not expressing yourself enough? Are you not going after what really matters and what you really love?

CONS

- **Some Nonsense Self-Help**

On his website, Pressfield says that talent means nothing (yeah, sure).
And that all is about work.
This is typical empty self-help that sells so well by telling people what they want to hear. But it doesn't really tell the truth.

Also see: self-help myths.

- **The War of Art?**

I don't really like this name.
It's confusing with *The Art of War* by Sun Tzu. And I also don't like this idea of "war against the resistance".
Guys, don't make the monster bigger than it is.

- **Some Woo-woo "Science"**

In the third part, The War of Art goes a bit off the rails describing how artists are a manifestation of the divine. It's an interesting point of view, but I don't particularly appreciate it. And it sounds elitist. Why are artists the conduit of the divine and not welders, sportsmen, and employees?
He goes into some further woo-woo "science" with the ego and the relation between illnesses and embracing our own real self.

The more rational among you will probably also not love that part. And you'd have a point, in my opinion.

PROS

Great Wisdom
The War of Art nails it both when it comes to resistance and how to beat it and ship your art.
I won't list all the pros here because they are too many.

Review

The War of Art goes a bit woo-woo in the last part but it's overall an awesome, awesome book.
It's one of those rare books that can combine inspirational content with potentially life-changing information.

I thought it was quite similar to Seth Godin's *Linchpin*, and then I realized that Seth Godin wrote his book later and together with Pressfield.

Anyway, I can definitely recommend it if you're trying to achieve something with your life.

Updated:
I demoted it from 5 stars to 4 stars because the advice is somewhat common in self-help and because of the "woo-woo" part.
Still a top-notch book though, and probably my N.1 recommendation for aspiring artists.

Small Talk Hacks: Summary & Review

Lucio Buffalmano · 4 August 2018 · Archived copy · Original

Small Talk Hacks by Akash Karia is a book on social skills and conversations.
It's brief and to the point with good content.

Contents

- Bullet Summary
- Full Summary
  - First Impression
  - Break the Ice
  - Memorable Verbal Impression
  - Become an Active Listener
  - Make Your Personality Shine
  - From Introduction to Intimacy
  - How to Revive a Conversation
  - Conversation Killers
  - Ending a Conversation Well
- Real-Life Applications
- CONS
- PROS
- Review

Bullet Summary

- Put yourself in a positive, enthusiastic state
- Prepare a quick elevator pitch about yourself
- Ask more personal questions to build a stronger emotional connection

Full Summary

Since most information is solid but is already been covered extensively on this website, I'll give you a more schematic overview:

First Impression

- Make a conscious choice to be enthusiastic
- Take care of your posture
- Smile
- Dress well

Break the Ice

- Use your surroundings
- Use the latest news and events

- Ask questions (and listen to the answers!)
- Just say “hello” (my favorite)
- Ask for an opinion (what do you think of the party?)
- Give a sincere compliment

Akash recommends you only do compliments when you really believe in them.
If you don’t, you can thank them without mentioning what you thought of the speech. For example:

> Thank you so much for your talk this morning – I really appreciate the time you took out of your busy schedule

My Note:
I disagree with telling anyone about their busy schedule. It’s guesswork and it feels intruding. How do you even know they’re busy? Who are you to infer about their lives?

Overcome Fear of Striking a Conversation

Akash says that to overcome the fear of approaching people you should first understand what exactly it is that you’re fearing. Then it will be easier to address.

Also, read:

- 11 Conversation Starters That Work

Memorable Verbal Impression

- Prepare a 30 seconds commercial (or elevator pitch, something interesting about what you do)
- Make your commercial specific to the situation
- Make them visualize what you say
- Practice your commercial
- Your commercial is only the tip of the iceberg: don’t over-rely on it
- Listen more than you speak

Become an Active Listener

- Nod your head when you agree with some points
- Rephrase what they have said and feed it back to them
- Stay focused on the conversation and don’t get distracted
- If you get sidetracked: refocus
- Don’t interrupt
- Ask questions
- Listen without worrying about what to say next
- Don’t sweat the pauses: don’t be afraid if there is a pause after he’s done speaking

Make Your Personality Shine

The author says that to become more charismatic it’s important to embody positive feelings and emotions.

From Introduction to Intimacy

- Invite approach with open body language and a smile
- Don't make snap decisions about people (albeit Blink says snap decisions are often correct)
- Be genuine
- Ask for help
- Ask how you can help
- Venture into asking personal questions
- Don't be pushy though, you want people to naturally open up rather than prying them open
- Research by Dan Ariely reveals that controversial topics make the conversation more interesting

Also, read:

- How to quickly form a deep and strong emotional connection

How to Revive a Conversation

- Exact same techniques to start a new conversation
- Just let it die, maybe the conversation has run its course

Conversation Killers

A few topics or behavior will kill your conversations (and social attractiveness). Avoid all of the following:

- Monopolizing the conversation
- Forcing your opinion on others
- Negativity
- Profanity
- Fishing for compliments by lowering your own value

Ending a Conversation Well

- Give a reason to leave
- Express appreciation
- Positive reflection (say what you particularly enjoyed about the convo)
- Exchange info and schedule the next meeting (optional)

[image]

Real-Life Applications

All tips are highly practical and applicable. The ones I liked most are:

- Make a conscious choice to be enthusiastic
- Tailor your clothes
- Be specific about what you fear when it comes to social skills

CONS

Using the Latest News
Akash Karia recommends using the latest news to open up a conversation. I disagree with that idea, it's a shallow way of starting a conversation. Similar to Tim Ferris, I also believe you should not waste time with the news.

PROS

Brief & To The Point
No fillers and time wasters, only the good stuff.

Mostly solid advice
For the most part, it's solid advice. Much better than many other bigger sellers I have reviewed.

Review

Small Talk Hacks is a brief book that goes straight to the point.

It's a bit basic in the sense that most people who have been reading on social skills and/or are already good will not find a lot of revolutionary ideas, but for beginners, it's an awesome book.

And also for the more experienced, it can be a good refresher (or you can even find some new nuggets of wisdom).

Oscars 2017 Mistake: Learning Leadership From Weak Leaders

Lucio Buffalmano · 5 August 2018 · Archived copy · Original

Do you remember the 2017 Oscars mistake where La La Land was wrongly awarded the Oscar?

Much has been said and shown about that evening indeed, but nothing noteworthy when it comes to power dynamics, dominance, and leadership.
This article will review the 2017 Oscars mistake from TPM's perspective.

The key moment when Warren Beatty lost leadership (plus status and respect)

Warren Beatty Oscar Mistakes

First of all, let's start with Warren Beatty, the main presenter.

He is the one that made the mistake and he is the one that came off the worst out of it. Not because he made the mistake, of course, but because of how he behaved both before and, even more, after.

Let's see:

1. Crumbles Under Pressure

First of all, when Beatty sees the card, he realizes something is wrong.

However, instead of making sure he's going to do the right thing, he vacillates and looks indecisive.

Probably he felt the pressure of the whole auditorium waiting for the winner, including Faye Dunaway standing beside and prodding him to go ahead.
Usually, it's better to double-check and make sure that letting the people around rush you into something. Even if you realize everything was correct, you have really looked bad or "wasted time": people will actually enjoy the little diversion.

2. Gives Card to Faye Dunaway

This might have happened because Beatty wasn't unsure and maybe he felt safer with a second brain double-checking the information.

However, after the events, it's only normal people will think he was simply passing the hot potato so he could shift the blame.

As a leader, you should actively avoid any behavior which will make you look like you are setting up others to take the blame for you. As Simon Sinek says in *Leaders Eat Last*, the only job of a leader is taking care of his team.

3. Relinquishes The Stage

What I found to be the biggest mistake of all though is how he reacted after they eventually found out there was a mistake.
Even if it was live, even if it was being watched by millions… A mistake like that means little, really.
And if you fix it and own it you gain power and respect, *not* lose it.

However, Beatty doesn't fix, address or own the mistake in *any* way. He stays away from the microphone as Jordan Horowitz takes the lead like a bull(y) in a China shop.
Beatty also never seems willing to reclaim his microphone to make amends. Again, he stays in the background looking fearful and indecisive.

This was the moment the stage needed him to stand strong in his position as a leader.
And instead, he relinquishes it and allows someone else to take over (and do a bad job at it).

4. Doesn't Own Mistake

Finally, when he meekly returns to the microphone, he looks defensive and apologetic.

Jimmy Kimmel: Meh

Jimmy Kimmel was the second in command.
And he does do better than Beatty.
He is the one who reclaims the microphone from Horowitz and he does what anyone should do in these cases: cracking a joke (he references a similar mistake at Miss Universe 2015)

That was gold: cracking a joke to release the tension.

However, a little later, he makes another joke, this time a rather bad one:

Joke's on You Type of Joke

When from the side he screams to Beatty:

> Warren, what did you do!

That's one of those bad types of jokes. It's bad because it puts the whole pressure on Beatty, implying *he* did a mistake. Instead of helping, this type of joke puts people down.
It points at Warren as the scapegoat, and that's not how most people enjoy laughing because, unconsciously, everyone understands what's wrong with that.

What did you do?
This is, after all, another attempt at social climbing at the expense of someone else.

Jordan Horowitz Oscars Mistake

Jordan Horowitz took over after Beatty's mistake as the leader of the pack.
He was very dominant but way too forceful.

Overpowering Bully

He takes the microphone, calls people on stage, literally takes the card out of Beatty's hands, and even announces the actual winner: S.

There are times when it's best to be a leader and times when it's best to be smart enough to *enable* a leader to lead well.
Horowitz should have gone for the latter here because Beatty was the leader, and not him. He should have helped Beatty re-take the lead and supported him in making up for his mistake.

Instead, he hijacks Beatty's role like a bull(y) in a China shop.

Robs Beatty of The Chance of Making Amends

It's a rather antagonistic behavior because not only does it comes across as overly aggressive, but also because it robs Beatty of the chance of quickly owning and making up for his mistake.

If Beatty had taken the microphone first thing after realizing his mistake, he could have come out of it neutrally. If he had been able to crack a good joke and own it well, he would have come out *even better off*.

Horowitz instead contributed to making Beatty look timid and fearful.
Horowitz might not have won that Oscar, but he 'stole the show'… Although not in a positive way.

Oscars Mistake: Lessons Learned

1. **Stand the pressure to get it right**

The reason why Beatty made the mistake he made is that he gave in to the pressure of announcing the winner. Undecided on whether to double-check or bow to the pressure, he bowed to the pressure.

If you're in a similar position, prioritize getting it right instead of going with the flow.

2. **Take responsibility for a risky move**

In hindsight, after we know what happened, Beatty looked really poor for having passed the letter to Dunaway. It feels like he wanted to cover his as* in case something went wrong.

That's the opposite of what a leader should do.

3. **fix the mistake**

Own your mistake, apologize, take responsibility, and whenever you can, fix it.
If not, owning an apology is more than enough.
A mistake you own and take responsibility for will make you look better than if you had never done any mistake.
Guaranteed.

4. **Push the bully away**

And now finally to the main social power move lesson learned.
The host owns the stage.
And if it's your stage, it's your duty to manage the stage.
When some bully hijacks it, you must reclaim it.

It doesn't matter if he's younger, stronger, taller, balder, or angrier.
If you're the host, it's your duty to *be* the host.

Beatty should have walked toward the microphone and grabbed it. If Jordan Horowitz was still standing there, he should have asserted the right to that space as the host.

If it sounds too much to you, it's all a question of attitudes.
You are the host, you've made a mistake, YOU must fix it and correct it. It's your moral duty to make sure YOU do it.

Remember:

> **You're never an jerk for pushing back against a jerk**

Also, read:

- **How to be a good asshole**

> How to Be A Good Asshole

SUMMARY

The Oscars 2017 blunder was not a big mistake per se.
It would have been a big funny diversion if Beatty had owned it and provided the right leadership.

But because of weak leadership and a bully running slipshod, it ended up looking bad for almost everyone involved.

This article provided a socio-analysis of the now infamous 2017 Oscars mistake.

Don’t Sweat the Small Stuff: Summary & Review

Lucio Buffalmano · 5 August 2018 · Archived copy · Original

Don’t Sweat The Small Stuff (1997) is a simple self-help book sharing a deep philosophical take on life.
Richard Carlson, the author, recommends we take life a bit less seriously and we prioritize peace of mind, love, and relationships over the stresses of overworking and “achieving”.

Bullet Summary

- There are no emergencies. Chill
- Stress is an acceptable, even admired form of mental illness. Don’t buy into it
- Don’t skimp on relaxing time: prioritize it

Full Summary

About The Author: Richard Carlson was an American psychotherapist, motivational speaker, and author.
His message was focused on the well-being and the joy of life over “achievement”.

#1. Choose Relaxed Over Competitive

The author says it’s not true that to achieve and get things done, we need to be competitive and stressed out.

It’s best to approach life with a relaxed and contemplative attitude, instead.
And you should never lose the ability to relax and take a breather whenever you need one, especially after having worked hard.

Here are a couple of great ways to enjoy a more relaxed life:

- Stop living life according to others
- Stop trying to please others

> You can't please everyone. Stay true to yourself instead

Let Go of Your Ego

We are all driven by a need to look good and "important".

When we give in to these cravings, we can do things that hurt the people around us.
Sometimes even in very small ways, like jumping in to fix a mistake so that we can "look good" or trying to impress them with how good we are.

But when we focus on impressing instead of understanding, developing human connections, and helping people for the sake of helping, we hurt our relationships

Much better instead to take a step back from our own ego.

> Let's all take a big step back from our own egos

Let Go of Resentment & Need to Be Right

Sometimes we harbor resentment out of small squabbles or little things someone said or did.
When we let that happen, we unwittingly turn small things into big ones.

Richard Carlson says that we do it because we tend to see forgiveness as weak and sometimes we feel like in a race to show who's stronger.
We might decide to cut a relationship with a loved one in the hope that they will come back so we can "win".
But maybe they're thinking the exact same thing.

Avoid it altogether by keeping small things small and letting go of the need to be right.

Spread the Love

Remind the people you love that you love them.
And cut some slack to the people who annoy. Chances are that nobody is actually out to annoy you, but that you are just having a bad day yourself.

> Treat yourself well by treating others well

Your Thoughts Are Your Reality

Our lives are a reflection of our thoughts.
And if we can change our thoughts.

Similar to many self-development authors like Tony Robbins recommend, Richard Carlson recommends that when you're feeling negative you deliberately change your thoughts to something more positive.

The author says that a good way to take control of your mind and thoughts is to spend some time alone, like meditation, yoga, or a walk in nature.

Don't Sweat the Small Stuff has some content overlap with *The Power of Now* when it encourages the readers to focus on the present and to "live in the moment" instead of worrying about what might happen in the future.

Some books on meditation and the power of thoughts:

- The Untethered Soul

- As a Man Thinketh

> The present is the only time that exists: cherish it

Don't Fight Against Your Problems

The author says that a great obstacle to thinking positively is problems.
But more than our problems, it's actually how we *approach* problems.

We should not approach problems as if we need to fight against them, but we should approach them as an opportunity to learn from.
And focus on what you have instead of what's missing.

Also, read:

- Marcus Aurelius' Meditations
- The Obstacle is The Way

> You can't control the world outside you. But you control the one inside you

Don't Be a Perfectionist

Some people think that being a perfectionist will bring out the best in us. But Carlson instead says that perfectionism will only make us unhappy by focusing on what we did wrong.

Also, read:

- Daring Greatly
- The Gifts of Imperfection

Nothing is An Emergency

And finally, my favorite part.

I have repeated this to myself, to friends, family, and partners alike a million times.

When you're stressed out, when you feel you really destroyed your chance to achieve X, or when you get fired and everything seems bleak, stop for a second.
And tell yourself:

> Nothing is an emergency

And then go do something that makes you happy or get in touch with someone you love.

Prioritize Relax

The one thing that we too often seem to procrastinate on is relaxing time.
Indeed, in my opinion, the highest achievers among us will often feel bad even when relaxing, thus they have no relaxing time at all.

It's time you start planning some time for yourself instead without putting it off any further.
It might take a while to get used to that relaxing time is an important part of our life.
Life for anything else, stick with it and it will eventually become part of who you are.

[image]

Practical Applications

This is such an important life philosophy:

- **Don't Sweat the Small Stuff, and It's All Small Stuff**

I absolutely, absolutely love this title. And it summarizes a great approach to life.

Stop being a drama queen, it's just 90 years on a rock spinning around space.
No matter what you do, it's not gonna matter much anyway.
And that's truly empowering.

This is similar to Mark Manson's "*The Subtle Art of Not Giving A F*ck*", but expressed in a deeper fashion.

CONS

- **Bit Goody-Goody**

Sometimes Don't Sweat the Small Stuff felt a bit too goody-goody Pollyanna to me.
In the sense that yes, for sure, do good… But you also must be ready for those who aren't going to do go stuff. And as you do good, you must also be able to judge characters that are not going to do good things back.

- **Happiness Before Achievement… ??**

Don't Sweat the Small Stuff seems simplistic in its approach to life and "happiness" sometimes.
It says not to worry too much about "achieving" because you might forget about more important things in your life like your own peace of mind and your family. And those are what will make you happy.

But what about people who are happy while they strive to achieve as much as possible (read Be Obsessed or Be Average)? Or those people who can't help, but strive to achieve (read *Relentless*)?

PROS

- **Truly Great Life Philosophy**

Don't Sweat the Small Stuff shares a great life philosophy.
I know many people -and you probably do too- that take things often way too seriously.

This book can help you take a step back and, well, chill a little bit more.

Review

Don't Sweat The Small Stuff often reflects my own life philosophy.

Don't Sweat The Small Grades: My Experience

I remember in high school when most of my colleagues stressed about grades and desperately tried to copy during tests.
And I'd write my own paper without even trying to copy. The professor would go out and I still wouldn't copy.

This scene has remained emblazoned in my mind.
Our history and philosophy professor wouldn't even check if people were copying.
He gave us a test and then started reading the newspaper. Then, all of a sudden, he stood up.
Suddenly.
And the whole class exploded: everyone had their books out to copy, and everyone scrambled to hide them as quickly as possible, either back below the table or back inside their bags.

Everyone except one.
Because that guy didn't want to copy.
He wanted to write what he remembered, adding his own spin to events.
And because, well… He didn't really care about the grades.

Grades were small stuff.
And he didn't sweat the small stuff.

But A Few Things Matter, And Those You Should Focus On

So this book struck a chord with me.

I totally agree with it. But at the same time, I don't live according to it because I also enjoy achieving my goals and progressing.

As I explain in Ultimate Power, that's the power of holding two conflicting thoughts in your mind.
So for example I care about providing the best possible material and content on this website. And about that, I *care*.

This is something I'd invite you to do as well if you want to achieve while living a happy and fulfilling life.
Focus on a *few* things that matter… And don't sweat the rest of the small stuff.

Read more about how this philosophy helped me launch this business.

Small Stuff approach to Enlightenment
TL, DR: albeit I don't live as the book recommends in all areas of my life, I still have that same philosophy for most of my life.
And I can only recommend it to you.

Essentialism: Summary & Review

Lucio Buffalmano · 5 August 2018 · Archived copy · Original

Essentialism (2014) teaches readers to be happier and more productive by focusing on fewer things and doing those few things better.

TPM Critical Note: An essential approach for ambitious men who want to reach the top of their chosen field
While it's certainly possible to be good at different things, it's still a good idea to narrow down to a few things you truly enjoy and want to excel at. Ideally, ambitious men will also pick one single objective that they pursue as their legacy.

Overview

- Live life by design, not by default: choose what matters to you and say no to all the rest
- Doing less also means doing more (and better)
- When you're not sure, ask yourself how important something is to you. If it's less than a 9 on a scale of 10, say no

Notes

About the Author:
Greg McKeown is a business and leadership consultant, motivational speaker, and author.

Introduction

The day Mckeown's wife was delivering at the hospital and he said yes to a business meeting was the day he realized something had to change in his life.
That's when the idea of Essentialism started blossoming.

Do Less But Better

Less but better applies to several different realms in life, including:

1. Pick One Thing to Focus On

It means that we can't be an expert at everything, so we must choose the field we like the most.

2. Buy Only What You Love

And it means that buying everything we just "like" will make us fool things that maybe we "like" but don't love.
And over time, they become clutter (take a look at the now uber-popular Marie Kondo).
Being full of things will not only not make us happier, but will saddle our level of joy and passion.

Don't Get Busy: Drop All That Doesn't Matter

Less is more also applies to our lives duties and work responsibilities.

Having our schedule and calendar full seems like an aspiration in today's society, but it will only increase your level of stress and often decrease your productivity.

What's the alternative?
Same as for everything else: focusing on what really matters the most to us.

> **Less Is More**

The Pillars of Essentialism

Essentialism by Greg Mckeown identifies 4 major pillars to live the essentialist life.
They might seem easy and obvious, but few of us are actively putting them in place:

1. Do Less But Better

The central tenet of essentialism is that of removing all that is not necessary so that we can free up more time to do more and better of what really matters.
This is basically the application of the Pareto principle.

2. Reject The Notion You Need To Do It All

Do you know all those long lists of "to-do" tasks?
Those lists that you will never see the bottom of? Those are the enemies of essentialism.

Not only do they make you feel less productive, but they make you spend most of your time on small tasks that matter little.
They *decrease* your productivity.
You don't need to do it all. You only need to do a few things, well.

3. Questions Yourself (and your plans) Accordingly

You don't pick what matters once and forever.
It's a constant process and update whereby you decide what matters and, even if it hasn't changed, you decide what to say no to based on what's important to you.

4. Ensure Changes Stay in Place

Once you're clear on what's important and what's not, what you will pursue, and what you will say no to, you must make sure you stick to it.

“I Have To” VS “I Choose To”

I loved how essentialism separates the “I have to” from the “I choose to”.
Mckeown says that those who say “I have to” are not following the essentialist path.

“I have to” is the learned helplessness with which most people approach life with passivity.
And we relinquish our power to choose, we give others the power to choose over us.

And here’s the great twist McKeown adds to the story: the people who adopt a life of helplessness aren’t just those who do nothing and let others control them.
It’s also those who do everything!
When you say yes to everything, you are not choosing.

> Saying yes to everything is relinquishing control of your life

You Must Accept Trade-Offs

When you embrace essentialism you also accept that you can’t do it all.

It might be tempting to believe we can do it all, or that we can do a few things more.
But you’re often best served by sticking to your core choices.

An example is that of Southwest Airlines, the largest low-cost airline in the world.
They focused on getting people from A to B, cheaply and with no frills. It could have been tempting to add meals, different classes, and reservations. But they said no to everything that would add further costs and complexities.

Clear Out Time

Schedule some time out for nothing but thinking.
You should use this time to avoid getting lost in the small details, which happens often, and to refocus on the bigger picture.

Greg McKeown proposes that you keep a journal, but instead of writing everything that has happened to you, you focus on writing as little as possible.
The idea is that by writing little, you only focus on what matters most. As you read through your journal, you will realize what matters most to you and the bigger picture will start to emerge.

Schedule Play Time For Inspiration

As you block out some time to take a look at the bigger picture, also add some time to play.
Playtime is an essential tool for inspiration and recharging your batteries.

Sleep As Much As You Need

Most of all, the essentialist knows that skimping on sleep is the silliest thing you can do.
Both because it’s not good for your health and because it even actually decreases your productivity.

My Note:
I couldn’t agree more that you shouldn’t skimp on sleep. However, the link between sleeplessness and alcohol level seemed very silly to me.

90% Rule: Only Say Yes To 9 & 10 Opportunities

The 90% rule helps you become an essentialist by restricting your decisions only to what matters most. And you only accept -or keep- what scores a 9 or higher.

For example, when cleaning out your closet, ask yourself, what are the chances I will wear this again? If it's less than 90%, it's equal to zero.
Throw it away.

Build Fences and Routines

To help you stick to your new essentialist life, it can be helpful to put fences around your top 10% of priorities. For example, if you want to keep your family time pristine, you could say "no work whatsoever, ever, when it's family time" (this is a similar concept to Bright Line Eating for dieting BTW).

And of course, it helps if you develop routines that will make it easier for you to repeat your good habits.
Also, read *The Power of Habit*.

Write As Little As Possible Journal
I found the idea of keeping a journal where you write as little as possible very intriguing. Indeed it could be a great idea to force you to stay focused on the bigger picture and what matters most.

90% Rule
I loved the idea of the 90% rule so much that I included it in my guide Ultimate Power. Anything that you won't love at a level that is a 9 or a 10, don't accept it in your life.

You Choose, Not Have to!
Never tell to yourself that "you have to". Unless you're in chains, you always have a choice.

CONS

Some Bad Cliche Examples
I didn't particularly like the examples.
It's very common for authors to provide a theory, and then pick a few success stories and say "see? It works".

However, that's rather meaningless most of the time. It's an inductive fallacy that doesn't prove anything, to begin with (read *Fooled by Randomness*).
And everyone can "force" reality to be an example of almost everything we'd want.
Take Southwest Airlines for example.
I've seen this example played over and over. Some attributed its success to customer service, while others said they won because of how management treats employees (*Leader Eat Last*). And here, McKeown says they won because they applied "*essentialism*".

PROS

Simple Yet Life Changing Philosophy
Essentialism is basically the Pareto law applied all around your life.
And that can be life-changing for those who aren't doing it already. Which is, most people.

Review

Essentialism is a useful book that largely applies the Pareto law to one's life.

But Mckeown adds some extra tips, suggestions, and wisdom that make Essentialism a valid read read to improve your life -and your business, and your happiness.

The Elements of Style: How Good Writing Builds Credibility & Authority (Book Review)

Lucio Buffalmano · 7 August 2018 · Archived copy · Original

The Elements of Style is the most popular book on how to write properly.
It covers all the bases and should provide the foundation for any writer out there.

TPM Strategic Review: Effective writing is a power signal
Just like body language, behavior, and voice are. Specifically, Strunk & White's guide is for **Low-Investment, High-Impact Communication**, obeying the law of least effort.
Use this approach for business and socialization, but always be ready to calibrate and do the opposite when you want to display knowledge, high SES, and IQ.

Main Takeaways

- **Don't use flowery and long sentence**s: they don't make you look smart but dumber
- **Remove all unnecessary words** (and djectives and most adverbs)
- Write in a **chronological sequence** and format in logical sequence (one paragraph: one idea, go from simpler to

more complex)

- Always **make it easy and clear** for the reader to understand

Notes

About the Authors:
William Strunk was an American professor of the English language at Cornell University. He is best known for his book "*The Elements of Style*", which was revised and enlarged by a former student of his, E. B. White, which is why the book is commonly referred to as "Strunk & White".

Foreword

"*The Elements of Style*" has lots of examples that I won't always write here. So if you are serious about getting the most out of this book, you should consider getting the full version.

Use Active Voice

These days many software designed to help you write better text will suggest you pick the active voice instead of the passive one.
And that's also something Strunk and White recommend.

What's active voice, and what's passive one?
This is passive:

> That the text was written in excellent form because I was feeling so inspired

And this is active:

> I was so inspired, I really wrote that text in excellent form

The rule of thumb is that to write in active form, the person performing the action should come first.
If you are not too sure, you can also install software that will let you know whether you are using too much passive form.

Write in The Positive Form

The Elements of Style recommends you write in the positive form instead of the negative one. That means you write what happens instead of what does *not* happens.
For example, this is a negative form:

> I did not make a good job that time

And this is a positive form:

> I did a rather poor job that time

Exceptions: When You Want to Stress Something

The general rule mostly applies to the use of "not" in sentences that you do not want to particularly highly.
Indeed, there are many exceptions where you can use the negative form to great effect.
For example:

- The fact that it *never* happened that the sun didn't rise doesn't mean it *never* will
- It's *not* just me… It's pretty much common sense
- He doesn't have it in him anymore (when you want to stress the negative instead of the positive)
- I don't know (instead of "I know little of that": sometimes negative is just more natural)

Don't Overstate Your Argument

When you overstate your argument with words and adjectives, you can actually lose credibility.
It's because overstatement makes you sound more partial and less authoritative.

This is especially true when writing technical texts as well as a copy to sell a product, where you would come across too "sales".

For example writing:

> I am 100% convinced that this season is going to be best we have ever seen so far

Write what convinced you it will be the best season:

> Based on the trend we see from the past year and the early booking so far, this season promises to be the best we have ever seen

As you can see the second example makes you come across as more authoritative. In the first sentence, people must believe *you*. In the second sentence, you let the data speak.

Place The Emphasis At the End

If you have a strong, emphatic word, you should place it at the end of the sentence. And if you have a strong, emphatic sentence, you should place it at the end of the text.

This is also true for more technical writing, where the last part of the paragraph should serve as a final summary and overview of the paragraph.

Exception: Aesthetic Writing

Sometimes you might want to get creative and scramble things.
In that case, you can grab the reader's attention right away with the emphatic sentence right at the beginning.

For example:

> Such a joy I might never experience again my life

However, don't overdo it or it comes across as too flowery and like you're trying too hard.

One Paragraph: One Idea

The paragraph should be your basic unit of text.

One paragraph should represent one idea or one topic.
And starting a new paragraph means you have moved on to a (slightly) different topic or idea.

It should be as long as it needs to be, but keep in mind that too big paragraphs represent what people refer to as "walls of text", which might scare the readers from even attempting to read it.
At the opposite end of the spectrum, too many short paragraphs also make your text hard to process.

Transition Words

Transition words or transition expressions help the readers make sense of the structure of your text (and of your thoughts!).

Examples of transition words are:

- Sequence words (to begin with, first, finally)
- Additional information (furthermore, moreover, on top of that..)
- Examples (for example, for instance, such as..)
- Summary (to sum it up, overall, in conclusion)

Follow a Chronological Order

If you are telling a story, tell it in the chronological order in which it happened.

Related Words Should Go Together

Place similar words and expressions near each other and keep them apart from other words and expressions where they might give rise to confusion.

For example:

> My girlfriend came to visit me while I was writing this article with a nice bottle of wine

That's a bit confusing.
Your girlfriend brought a nice bottle of wine or you were writing the article with a nice bottle of wine?
If your girlfriend came over with a nice bottle of wine, then rewrite this:

> I was writing this article when my girlfriend came over with a nice bottle of wine.

Much clearer right?

Write Shorter Sentences

While longer sentences are grammatically correct, they are not any easier to read and process.

I find that English-speaking people already tend to write shorter sentences.
I come from a longer-sentence language and I used to write long sentences even in Italian. That means that I had to retrain myself to use more full stops.

Make Sure Readers Know Who's Speaking

When you are writing text with a lot of dialogue, make sure the readers know who is it that is speaking.

The Elements of Style says that one way to do it is by inserting expressions such as "he said / she said" early in the dialogue.

Stay Consistent With the Tenses

If you start using a specific tense, keep using it all along.

Use Similar Form for Connected Concepts

Imagine this example:

> Andrea is a Mac user, but he prefers Android phones.
> Which is funny, because his dad prefers Apple phones, but uses a PC.

This example inverts the order of the preferences and uses different words to express preferences.
Better would be to say:

> Andrea is a Mac user, but he prefers Android phones. Which is funny, because his dad is a PC user, but prefers Apple phones

Write Concisely

I used to be a long, verbose writer because I used to take pride in my knowledge of language and adjectives. Unconsciously, I probably thought that writing was my way to show off my intelligence.

That was silly, and now that I'm more aware of basic power dynamics, I know that **over-investing is almost never a good idea** -not even when it comes to writing.
Much better instead to:

- Remove all words that add no real value
- Don't repeat the same idea multiple times with different words
- Adjectives and qualifiers such as "very", "pretty much", "rather" can be safely removed
- Use active voice (shorter)
- Read your material looking for ways to streamline

Writing With Good Form

Similar to writing long sentences, I used to like difficult adjectives or flowery expressions to show off how well-read I am and how wide and deep my vocabulary is.

Silly me: flowery language has the opposite effect.
When you use too many big words, people don't think you are smart, they infer you're trying too hard and you're not smart at all.

- Use simple words (unless to avoid repetition or to cause a specific effect)
- Limit the usage of adverbs (and don't rely on them to explain your text)
- Change your sentence structure (or your text will seem monotone)

Elementary Rules From Elements of Style:

1. Form the possessive singular of nouns by adding 's
2. In a series of three or more terms with a single conjunction, use a comma after each term except the last
3. Enclose parenthetic expressions between commas.
4. Place a comma before a conjunction introducing an independent clause.
5. Do not join independent clauses by a comma.
6. Do not break sentences in two.
7. Use a colon after an independent clause to introduce a list of particulars, an appositive, an amplification, or an illustrative quotation.
8. Use a dash to set off an abrupt break or interruption and to announce a long appositive or summary.
9. The number of the subject determines the number of the verb.

10. Use the proper case of the pronoun.
11. A participial phrase at the beginning of a sentence must refer to the grammatical subject.

[image]

Real-Life Applications

My main takeaway:

Don’t Try to Look Smart By Adding Words

This is a lesson that it took me a while to learn. But once I learned it, it made me more effective, authoritative, and higher power.

Verbosity is not a tool to show how smart you are. The more you try to look smart, the more you’ll seem try-hard. Write for clarity and understanding instead.

CONS

Lacks Deeper Strategy: Impressions Are Important

Your writing, just like your words, *must* show you’re smart.

IQ is power, it sells, it impresses, and it’s even attractive.
So the secret is not, of course, in hiding, but in HOW to show it well. It’s not with verbosity, we got that. But the book **doesn’t show how to write for strategic impression management.**

We teach how to sub-communicate intelligence and good traits here at TPM.

AI Can Help You Learn Writing

Probably the chapter on spelling was popular decades ago.

But today, with spell checkers, it's not nearly as needed (BTW: spell checkers will also help you learn good spelling for handwriting if you pay attention).

Same for the active and passive forms and the "unneeded adjectives". Yoast and Word give you those suggestions today.
And plugins like Grammarly and Ginger are getting smarter and smarter by the day in helping people write more clearly.

PROS

Many Examples

Clear and Concise
Strunk and Write put their writing where their mouth is: *The Elements of Style* is clear and concise.

Review

The Elements of Style tackles an often forgotten and underappreciated fundamental of high-value signaling: writing.

Personally, I'd have learned better if it had examples of longer sentence structures.
But I learned enough to make it worth the time, and learned even more by practicing, re-reading, and using modern tools for feedback.

Why Submissive Women Beat Strong Women In Dating

Lucio Buffalmano · 7 August 2018 · Archived copy · Original

Why do men like submissive women?

And is it even true that men like submissive women?

This article will answer those questions.

- SUMMARY

Submissive vs. Strong Women

First of all, let's see what's the difference.

Submissive Women Traits

Needless to say, there is no mathematical formula or an exact mix of ingredients that "certifies" submissiveness.

That being said, here are the relevant traits of submissive women:

- Feminine
- Prioritize family and relationship
- Defers to her man for decision-making
- Takes traditional roles at home (cleans, cooks, caretakes)
- Prefers going out with her man and family rather than her girlfriends
- Supports her man to succeed rather than seeking her own personal success

Not all submissive women are feminine, of course.
But femininity comes more difficult for strong women and easier for submissive ones. So from now on, I will use "submissive woman" and "feminine woman" interchangeably.

Strong Women Traits

Strong women tend to be:

- Independent
- Working, possibly good income and career-focused

- Goal-driven (as compared to relationships-driven)
- In some important aspects, similar to men (ambition, drive, assertiveness, etc. etc.)

Strong women are comfortable with:

- Speaking up
- Traveling and going out alone
- Disagreeing, challenging people on their opinions and decisions

Strong women tend to be more independent, at least in appearance. So from now on, I will be using interchangeably "strong woman" and "independent woman".

Submissive & Strong: It's a Continuum

Of course, the two categories are a simplification.

Most women can be submissive or strong depending on the situation and, as well, depending on the man they are with.

And everyone sits on a continuum, not on polar opposites.
The majority of women cluster around the middle so they are either "slightly strong" or "slightly more submissive".

However, don't throw out the categories just yes. They are still helpful in understanding the differences.

Should You Be More Submissive?

The tough question:

> Should you be more submissive?
> Or maybe more independent?

Let's see what the dating gurus say.

The *women's dating advice* is heavily split among those who recommend you be an independent woman and those who recommend you to be more submissive (of course they'd never use the word "submissive" though!).

Both camps tend to be rather scornful of each other.

The proponents of the strong woman say that the submissive woman gets played and abandoned.
While the proponents of the more traditional role for women say the strong type is “lonely”.

Be Feminine! No, Be Strong!

For example, *Act Like a Lady*, the most popular dating book for women, is in the “be feminine” camp, and it has a chapter called:

> Strong, Independent -And Lonely– Women

And *Why Men Love Bitches*, in the “be strong camp”, is subtitled as:

> From Doormat to Dreamgirl

Where the doormat is the girl who is “too nice” (and submissive).
Only a few of the *best dating resources* espouse a happy middle.

Women Recommend Independence, Men Submissiveness

Now here is the other twist:

It’s mostly *men* who advise more submissiveness.
And it’s mostly *women* who advise more strength.

Why?
What’s going on there?

In my opinion, part of the reason is that women who write dating books have burned themselves and have a grudge against men.
The same happens in the male’s camp of course, where men schooled in the “Red Pill“, share rather misogynist views and “strategies”.
And this is one of the reasons why I recommend you don’t take relationship advice from dating authors.

But the main reason is a bit more perverse:

Why Some Women Trick Other Women

Women, just like men, seek to increase their sexual market value.

Don't take that advice
One way to increase one's sexual market value is to increase one's own appeal.

The other one is, guess what? The manipulative way of increasing one's own appeal is to lower the appeal of other women.

Women suggesting other women be stronger and more independent are (subconsciously) trying to make other women *less* competitive and appealing.
And by decreasing the appeal of other women, they automatically increase their own sex appeal.

Does it seem too far-fetched?

Just ask yourself this: have you ever heard a woman telling another woman to be more feminine?
Exactly, me neither.
Albeit, as we shall see, being more feminine is obviously the most competitive position to adopt in the dating marketplace.

So yes, there is much manipulation going on with women telling other women to be strong and independent.

> Manipulation: Techniques, Strategies, & Ethics

Why Most Men Don't Give Great Advice Either

So does that mean men are right to tell women to be more feminine?

Well, partially.

But still, they're not 100% right.

When men complain about women being too feminist, masculine, or independent, they are often complaining that women are too independent *for them*.

They take issue with not being able to control their women, but instead of looking in the mirror, they go for the good old finger-pointing.

And of course, men also have an obvious interest in making their dating options larger and more palatable.
By telling women to be more submissive, men seek to increase their own dating options (as well as dating pleasure, since submissive women make for better relationships).

Therefore, I would recommend you always keep that in mind when dating advice comes from women -with the unconscious agenda of making you less appealing- or from men -with the unconscious agenda of making dating easier *for themselves*-.

Yes, you got it, it's just another form of cultural manipulation that serves to fight the infinite sexual war.

> Sexual Conflict: How Men & Women Fight The Sex War

The Truth of Strong VS Submissive

If we define "winner" as "having more options", then it's clear:

submissive women have more dating options.

This is because women prefer relationships with more dominant men.
And men prefer relationships with women who are more submissive (especially for the long term).

Mathematically, then, submissive women naturally have more options.
You can see this in the picture below.

The submissive woman (pink-clad angel on the left) is only at odds with very few super-submissive men. And she can date almost any man (green arrow to her right).
The strong woman is at the opposite end of the spectrum though. The pool of men she's interested in -and who are interested in her- is much, much smaller (only a few of the most dominant men).

Submissive women have far more dating options
This has been proven and confirmed by many pieces of research:

- Men prefer more submissive women, and women prefer more dominant men (Wu et al., 2016)
- Men don't like women who outsmart them (Park et al, 2015)
- People still feel men should earn more (Bertrand, 2013), and men tend to marry lower-earning women
- Men like women who look happy, not proud. The opposite for women (Tracy and Beall, 2011)

However, there are a few caveats:

#1. Both Extremes Are Unattractive

In some areas, there cannot be "too much of a good thing".

But as per the law of optimum balance, for most things related to humans, there often is such a thing as "too much of a good thing".

So it's worth noting that whenever a woman goes too far in each direction, either too independent or too feminine, it's usually unattractive.

One of the reasons Hillary Clinton lost is because, in an effort to look more dominant, she ended up forgetting to be a woman in far too many instances.

And at the other end of the spectrum, women who overplay the submissive hand, end up being annoying to men as well:

> **Her**: (mature woman acts like a baby caricature who can't function without a man)

If he hasn't had sex with her yet, he'll immediately want to f*ck her. But later, it will become annoying.

I highly recommend this article on dating balance:

> Why Balance Is Most Seductive

#2. Men Tend to Prefer Similar Levels of Assertiveness

Men prefer women who are more submissive.

Yet, often, there is a tendency for people to cluster around similarities. And thus, men also tend to prefer women who are not too far off from their level of assertiveness.

#3. Both Types Can Be High-Quality Women

It's not a question of quality.

Sure, if strong women lose in femininity, then they lose big.
But if they can manage to retain their femininity, then they can be very high quality (also see: how to be strong and feminine).

> Feminine AND Powerful: 9 Tips For Women Bosses

And the same is true for submissive women.
You can have both high-quality submissive women and low-quality ones.

What Should You Do

Does this make sense to you so far?

We covered quite a few topics and this was not the simplest of all articles.

Let's focus now on the practical applications of this information.

How can you use this information to become an even higher-quality gal?
I would say there are three major lessons learned here:

1. Stay Away From Extreme Strawmen

First of all, drop all the strawmen stereotypes.

Most women railing against "too nice girls" and most men railing against "feminists" are screaming at strawmen-types of stereotypes that rarely exist in the real world.

The vast, vast majority of independent women are no family-destroying, man-hating lesbians.
And the vast, vast majority of traditional women are no pushovers who let men take advantage of them (on the contrary, men are often happy to provide for them).

2. For Maximum Appeal, Err On The "Slightly More Submissive"

Generally speaking, men maximize dating effectiveness by being slightly more on the mannish, high-power, dominant, and high-leadership side.

And women, of course, maximize dating effectiveness by being a bit more on the feminine and submissive side of the spectrum:

3. Tweak Your Style, Don't Change it

What you should do depends a lot on where you're standing right now (and what kind of men you like).

Best of all, in my opinion, is to embrace your natural disposition and tweak it if needed.

If you're too submissive and your man is doing whatever he pleases without respecting you, then some assertiveness training can help.

And if you are too on the strong woman side, you might gain from becoming more feminine and more accommodating.
This is especially true at the far end of the strong spectrum where the attitude is that "*I'm not gonna be nobody's woman*".
That attitude shrinks the dating pool to a puddle.

Also, read:

- Dating for successful women

4. Collaborate With Him, Avoid Power Struggles

If you're a strong woman, keep this in mind:

If you insist on dating on your terms, you will only end up with submissive men.
That's OK if it's OK for you.
But if you meet a man you like, you might want to consider not getting into a struggle for control against him.

This is especially important if you're a gal who likes dominant men.

Indeed, the three top seducing strategies we reviewed, all use a hint of submissiveness.

5. Do Display Submissiveness to invite Approaches

Evolutionary psychologist David Buss says:

> Signs of submissiveness and helplessness lower barriers to approaches.

> Acting submissive elicits approaches from more men, expands the pool of potential mates, creates greater opportunities for choice, **and ultimately increases the quality of the mate obtained**.

Yes, it's not just a question of quantity.
Strategic submissiveness can actually increase the quality of mates.

Of course, that's also more likely to attract men who feel like it's going to be an easy lay, or that she is going to be easy to control and discard.
So you must be watchful when deploying that strategy.

6. Don't Bash Or Convert: Adapt

Submissive women don't mind independent women because they are not as competitive.

It's from the strong women camp that the flak gets more intense.
Independent women resent more feminine women. And they also resent men who prefer feminine women.
All that flak is mostly out of self-protection. But it's an attitude that adds no value whatsoever to either you or the world.
It only poisons you and it looks spiteful.

If you're more on the independent side, avoid calling submissive women "weak" or "pushovers".
And see if you can learn a couple of things, instead.

Women Aren't Going To Tell You!

Do you know the Bruce Lee quote:

"Be like water my friend"?

Well, women, on average, are very good at being like water and adapting to their environment.
Well, human beings on average are very good at adapting to the prevailing social customs.
However, women are even more so.

What does that mean to us?

It means that most women in the West will say, and maybe even actually believe, that they are independent.
And most women in cultures that prize (or force) women into traditional roles, will say they are good, traditional housewives.

This means that you have to look at how they *behave*, not at what they *say*.

As a matter of fact, many women who flaunt their independence might as well try to cover up their *lack* of confidence and independence, which is a phenomenon called *reaction formation* in psychology.

SUMMARY

This was a bit of a complex topic.

Was it clear enough?

In summary:

- Submissive women have more dating options (most men go for more submissive)
- But some men prefer women closer to their dominance level (but not all)
- Strong/submissive has little to do with overall woman's quality
- Discard most general dating advice of "being more independent" or "more submissive"

Thanks for the Feedback: Summary & Review

Bullet Summary

- To get the most out of feedback change your identity, switch to a growth mindset
- The story you tell yourself about the feedback will affect how you take it and act on it (and you control the story through emotions and thoughts)
- Always look at feedback as the intersection of two realities (what you see is not the same they see)

Full Summary

About The Authors: Douglas Stone and Sheila Heen are two business consultants who have spent decades helping people and corporations. They focus on communication, learning techniques, and communication.
Douglas Stone is a lecturer at Harvard Law School, and so is Sheila Heen.

Introduction

Learning about ourselves can be painful.
Especially if we accept the idea of “I’m not good enough as I am”. That’s what makes feedback difficult.
But we can all improve in both receiving and giving feedback. That’s what Thanks for the Feedback is all about.

Receiving Feedback Well

Receiving feedback well does not necessarily mean accepting the feedback.

It means engaging in the conversation skillfully, making good choices on whether and how to use the information, and managing our emotional triggers so that we don't get defensive.

Here are the two crucial steps to receiving feedback well:

1. Avoid looking for "what's wrong with the feedback" first thing
2. Make sure you understand what's being said

And, I would add:

- Even if it sounds strange, ask yourself "what if this were true"

The Three Types of Feedback

There are three main types of feedback:

- **Appreciation** (build a relationship, appreciate and encourage)
- **Coaching** (helping someone grow, change and improve)
- **Evaluation** (comparisons against others or a standard; align expectations, inform decision-making)

We need all three of them.
Appreciation might seem like it's not even feedback. But no relationship can stay healthy without enough appreciation.

1. Appreciation

Three qualities are necessary for good appreciation feedback:

1. Specific
2. Come in a form the receiver values and understands (check The 5 love languages)
3. Authentic (it must be deserved)

The Three Feedback Triggers

When we get defensive because of feedback is usually because it triggers strong reactions in one of the following areas:

- **Truth triggers**

Truth triggers mean understanding whether the feedback is true or not.
It can be more complex than we think, and most of the Thanks for the Feedback is also aimed at helping us understand how to skillfully analyze the feedback.

- **Identity triggers**

Identity is the story we tell ourselves about who we are.
If the feedback challenges the idea we have of ourselves, it's possible it will be highly destabilizing for us and we can either lash back or reject the feedback outright.
The author says that a huge determinant of how we take feedback at an identity level is whether we have a fixed or growth mindset.

- **Relationship** triggers

- Do we like the person giving us the feedback?
- Did the feedback giver treat us well?
- Do we trust them / are they credible?

Often we react more to the person giving us the feedback than to the feedback itself.
It might be the way they say it "how dare you talk to me like that" or "you're a fine one to talk".
Relationship triggers the risk to put two different "tracks" on the table that we should better not mix: our relationship and the feedback itself. Treat them separately.

None of these reactions are necessarily wrong, but they shouldn't stop us from tackling the feedback and looking dispassionately at the information the feedback carries.

Having a reaction to feedback is not a problem in and of itself. But it's a problem if it stops from engaging fully in the feedback conversation, which it can easily do.
Knowing and understanding our triggers will help us locate the source of our issues with the feedback and within us.

Roadblocks to Good Feedback

- Different data (we might be looking at different data)
- Interpretation (we might interpret the same data with our own biases and preferences)
- Psychological biases (we assign good intentions to ourselves, but not always to others)
- Blind spots (what we don't see about ourselves that others see; ie.: our body language, knowledge gap etc.)

Overall, the authors say, nothing guarantees "objective" feedback and there is always an element of subjectivity. Even when feedback is given based on strict numbers, someone still had to pick those numbers to evaluate us against.

Strive For A System Level View

Often feedback is given in a way that communicates "you are this way (and it's a problem)".
But often the problem is not in one person but in the intersection between two persons.

For example, a person snoring might not be a problem if the partner didn't have a light sleep. It's the intersection between light sleep and snoring that creates the issue.

The solution is to look at the problem from a system perspective. There is a reality, and there are several contributing factors to it, including all the people who are giving and receiving feedback.
Here are the levels you should look at:

- You + me intersection (personal differences)
- Roles clashes (is our issue part of the different roles we have)
- Environment (processes, laws, other players)

Feedback Profiles

We can recognize a few archetypes of people when it comes to receiving feedback:

- **Blame absorbers**

They fail to explore the intersection of the problem, and how everyone is contributing. And they always take the whole blame, which sometimes means they feel terrible about it (and it's often related to low self-esteem).
Another issue with blame absorbers is that they can easily build resentment over time.

- **Blame shifters**

They never acknowledge their roles in the problem.
“It’s him, not me”, “it’s the new update that screwed up everything”, “it’s a setup against me”.
It’s not relaxing to avoid blame, it’s exhausting to always have to shift blame. And it’s a very weak way to approach life.

How Baseline Personality Affects Feedback

Our baseline personality also heavily affects how we receive feedback.

1. Baseline Behavior

People who are generally happy and content and with high self-esteem take feedback better.
People who are generally unhappy, dissatisfied, and with low self-esteem take negative feedback harder.

2. Swings

There are differences in the mood swings people experience

3. Sustain / Recovery

There is also a difference in personalities when it comes to “moving on” from feedback, whether positive or negative, giving rise to four different possible mixes:

- Recovering quickly from negative feedback
- Recovering slowly from negative feedback
- Sustaining joy for positive feedback for a long time
- Sustaining joy for positive feedback only for a short time

The result is a quadrant, where ideally one would recover quickly from negative feedback while staying happy for the longest time on positive feedback.

My Note:
Ideally, I think you should aim and not be impacted by “negative” feedback at all.
This is what Ray Dalio calls “looking at yourself from above as if you were a machine”. Also, check Ultimate Power.

The authors say that *we can change our wiring*, which is true.

How Our Stories Affect Feedback

A major component of how we react (and act) to our feedback is the story we tell ourselves about it.

The authors say that thoughts + feelings = stories.

That means that what we think about the feedback and how we feel when we receive it will determine what we tell ourselves about the feedback.
And that will ultimately influence how we react and how we act upon that feedback.
To control how we feel and act on the feedback, we must control our feelings and thoughts.

Feelings
For example, if we are super tense while we receive feedback from our boss, we tend to see it more defensively because our body is in a fight or flight response (the response we have to a threat).
Calming ourselves down is a great way to positively influence how we will receive feedback and how we will think about it.

Thoughts
The thoughts are what we tell ourselves about the feedback, and we have an easier time controlling them. There is also a strong connection between thoughts and feelings, as thoughts can also generate feelings.
By controlling our thoughts we influence how we receive and act on the feedback.

Strategies to Get The Most Out of Feedback

- Be prepared
- Think about what the worst could be and accept it (same strategy in How to Stop Worrying and Start Living)
- Separate stories from feelings and feedback (this is self-awareness)
- Separate the feedback (not being great at X does not make you bad at Y or at your life in general)
- Step back from it (take the perspective as if you were coaching a friend)
- Look at it from 10 years from now (not such a big deal anymore right?)
- Accept you can't control how they see you

Increasing Ability to Take Feedback: Identity and Growth Mindsets

The three biggest aspects you can change to accept feedback are:

- Switching to a growth mindset
- Adopting a more resilient identity
- Accepting that you have complex and mixed intentions (you are not always as good and pure as you tell yourself you are)

Without a more resilient identity, our tendency is to simply reject the feedback to defend ourselves. With a more resilient identity, we don't have to accept the feedback in any case, but at least we can look at it rationally (and give ourselves a chance at growing).

Recognizing Bad Feedback

Some feedback might not be useful or it might not be motivated by a real willingness to help.
There is no exact formula to recognize them, but here are a few ways to spot them:

- The feedback entails a critique of the type "you'll never do anything in life"
- You ask for a change in feedback style but it keeps coming the way it hurts you most
- You change but there is always something more they criticize you for
- The feedback holds the relationship hostage (ie.: "feel free not to take the feedback, but if you don't we're done"
- The feedback is a threat, not a warning
- It's always only you who has to change

Also, watch out for relationship partners who tell you that you are the only one who has to change. That's a hallmark of abusive men and abusive relationships.

Turning Down Feedback

You can say "thank you, but not now" or "not now, not like that, I need time and space".
The authors also recommend you learn to use "and" instead of "but" to make your communication more appreciative while still being firm at the same time.

Take More Time
The first time you hear strong feedback you might naturally get defensive, or end up taking more blame than you

really should.
Give yourself time! Say that you didn't expect to hear it and that you need to think about it.

Real-Life Applications

Give Yourself Time
Don't jump to conclusions and don't let people rush you in to say anything. If you receive strong and unexpected feedback, say you didn't expect it and you need to think about it.

Calm Yourself Down When Receiving Feedback
Calm yourself down or help the person receiving your feedback calm down when they receive your feedback. This way, you will not perceive the feedback as a threat.

Think Positively About the Feedback
Always look at the feedback as an opportunity to improve.

Look at The System
When you want to give feedback, always consider the whole situation and how *you* are contributing to the problem.

If You're Defensive…
… Always ask yourself "what could be right about this feedback"

Don't Swarm People With Feedback
If there are many things to say, pick the top one they can focus on. You can also ask them what they are most interested in.

Use Positive Feedback to Spur Groups to Action
When you have to give feedback to a group for not conforming to something, say thank you to those who have done it already. You make a compliment, and those who haven't done it yet will be gently reminded. It's more effective like that.

40% of Happiness is Interpretation

Research suggests that 50% of our happiness is inborn, 40% is how we interpret things and 10% is circumstances.
Also, read Marcus Aurelius' Meditations.

CONS

- **Terrible Audiobook Voice**

The male narrator (whom I believe is the author himself Douglas Stone) might have a good speaking voice, warm and soothing.
However, it's not a good voice to read audiobooks, where you need a clear voice and perfect diction.
His voice is too "airy".

I struggled to understand him and cheered every time the woman started speaking instead (whom I believe is the author herself Sheila Heen).

- **Could Have Been Shorter?**

Thanks for the Feedback is quite long.
Most parts are very helpful and add loads of value, but I think it might have been more condensed.

PROS

Deep, Deep Insight
Douglas Stone and Sheila Heen touch on the deep psychological triggers here. This is stuff that can really improve people's lives (ie.: identity, growth mindset).

Great Examples
Same for Crucial Conversations, I loved the examples.

Review

I was thinking:

"Wow, *Thanks for The Feedback* is AWESOME!"

And then I realized it was from the same writers of *Crucial Conversations*, a previous book I've already plenty lauded and given 5 stars to.
And then, it made sense.

Douglas Stone and Sheila Heen write are some of the best authors out there.
They know people's psychology and they know their way around social skills.

For example, they say they don't know enough about the brain, which is exactly what knowledgeable people do.
And then they proceed to give you a highly relevant and deep overview of how our brain wiring affects feedback.
Hats off.

I think their books are some of the most underrated books out there.

The 8 Best Psychology Books to Understand Human Behavior

Lucio Buffalmano · 9 August 2018 · Archived copy · Original

The best psychology books to understand people and human behavior—right here.

Creating this list of psychology books was both exciting and challenging.
Psychology is vast, and choosing the very best takes careful consideration.

This isn't just any list.
It's a carefully curated, *constantly updated* collection for anyone serious about understanding people and excelling in life.

Let's dive in:

Contents

- 8. Evil
- 7. The Psychology of Social Status
- 6. The Oxford Handbook of Evo Psych & Romantic Relationships
- 5. The New Psychology of Leadership
- 4. The Dark Triad of Personality in Everyday Life
- 3. The Social Animal
- 2. The WEIRdest People In The World
- 1. Evolutionary Psychology

- Great Psychology Books
- Best For Psychology Students
- Best Applied Psychology Books
  - 5. Red Flags
  - 4. Learned Optimism
  - 3. Influence
  - 2. In Sheep's Clothing
  - 1. Power University
- Change Log

8. Evil

By Roy Baumeister
Summary | Kindle

Why do people act evil?
And how do otherwise good people end up acting evil?
Can people “get used” to evil and commit more and more of it, as in a slippery slope?

These are only a few of the questions that *Evil* provides an answer to.

It’s similar to *The Lucifer Effect*, but broader.

Busting the low self-esteem myth

The pop-psychology interpretation suggests low self-esteem makes people lash out against ego threats.

Baumeister explains that it’s instead people with *high but fragile* self-esteem who react violently to perceived ego threats.

> People will settle for any vaguely plausible argument when they want badly enough to believe that their hurtful actions are justified.

7. The Psychology of Social Status

By Joey T. Cheng, Jessica L. Tracy, et al.
Summary | Amazon

Theoretically more of a *social* psychology book.

However, as social animals, the demarcation line between social psychology and psychology is blurred.

Plus, it's truly enlightening to understand people, how our minds work, and why we do what we do.

It replaces a spot previously held by *The Status Game* because it's more empirically sound.

> human hierarchies are the product of our species' evolved tendency to submit to those who wield force and intimidation, and to follow and learn from those who garner respect and admiration.

6. The Oxford Handbook of Evo Psych & Romantic Relationships

by Justin K. Mogilski, Todd K. Shackelford, et al.
Summary | Amazon

Combines the latest evolutionary psychology research, plus relationships.

Survival, reproduction, and… Love.
This trio defines life, and the latter is what many believe makes life worth living.

And, from a learning perspective, *The Oxford Handbook* is on par with both the best evolutionary texts, and the best relationship books.
So you kill two birds with one stone.

As with any evolutionary texts, expect some amoral deep dive into human nature and psychology.
BUT there is also plenty to be optimistic for, including what this quote represents:

> Despite the often too prevalent perception of a war between the sexes in the social sciences (see special issue of Sex Roles, e.g., Vandermassen, 2011), to a large degree interdependent reproduction promotes cooperation rather than confict (Buss, 2017; Mikulincer & Shaver, 2007)

5. The New Psychology of Leadership

By Alexander Haslam
Summary | Amazon

The New Psychology of Leadership is not "just" about the psychology of leadership.

It goes deep into social identities, group dynamics, and inter-group dynamics.

All the wisdom it shares is backed by hundreds of studies and research.
And that makes it great both for the average readers who are going to learn more than with any other leadership book, and for the academic who wants to dig deeper into the research.

> Leadership that is grounded in shared identity will always win out over that which is grounded in ego.

---

4. The Dark Triad of Personality in Everyday Life

by Minna Lions
Summary | Amazon

You could probably find a better book on narcissism, psychopathy, and Machiavellianism.

And to understand human psychology you need to understand the dark triad.

What earns *The Dark Triad of Personality* a spot on this list is that it combines all three, in one single book.

Plus, all backed by research.
What could you ask for more?
A good quote maybe. But handbooks aren't famous for great quotes . Here's me trying:

> The interpersonal damage caused by dark personalities could imply that individuals high on these traits are not "mad" (i.e. , mentally ill, needing some kind of interventions), but simply "bad"

3. The Social Animal

[image]
by Elliot Aronson
Summary | Print

The Social Animal is in between a book and a university textbook.

And I have rarely seen anything so densely packed with research-backed, eye-opening information on people and human psychology.

The Social Animal is the quickest way to gain an overview of decades of research on social psychology.

> "People who do crazy things are not necessarily crazy."

2. The WEIRdest People In The World

by Joseph Henrich
Summary | Amazon

This book will transform how you view psychology while offering the best explanation of the past millennium of Western history and progress.

It beautifully connected the dots between individual psychology, social psychology, and cultural psychology.
And explains societal progress and innovation -or lack thereof- along the way.

That makes it a must-read not only for anyone interested in psychology but also for policymakers the all world over.

I'd also recommend it to anyone invested in humanity's progress and well-being.
As one of those people, I found Henrich's insights invaluable also for refining this website's values and philosophy.

> The result is that textbooks that now purport to be about "Psychology" or "Social Psychology" need to be retitled something like "The Cultural Psychology of Late 20th-Century Americans."

1. Evolutionary Psychology

[image]
by David Buss
Summary 6th edition / 7th edition | Amazon

All books in this list are fundamental pieces of the human mind puzzle.

And no puzzle is complete without all the pieces.

But I agree with David Buss that **evolutionary psychology is the meta-discipline that glues all the other branches of psychology together**.
Or, at least, helps make sense of all the psychology branches.

Even positive psychologist Martin Seligman agrees when he says "*natural selection reframes almost everything, and it has pervaded my thinking about psychology since* (Seligman, 2018)".

Take the popular fascination for "human biases", for example.
In "*How the Mind Works*" Steven Pinker argues that humans aren't as irrational as cognitive psychology might lead you to believe. You can understand how those 'irrationalities' made sense when you look at it through the lens of evolution.

Finally, evolutionary psychology, allows you to understand people across and beyond cultures, going at the shared roots that make everyone similar.

Only when you look at psychology through *evolutionary* psychology you can connect the dots.
I doubt anyone can fully understand dating, relationships, and human behavior without first understanding the basics of evolutionary psychology.

> "We are built to be effective animals, not happy ones"

Great Psychology Books

Outside the top list, but also insightful:

- **I'm OK – You're OK** to understand interpersonal emotional dynamics and 'judge power dynamics'
- **Machiavellianism – The Psychology of Manipulation** for Machiavellianism, manipulation and political manipulation. The original work by Christie & Geis' also superb
- **Will I Ever Be Good Enough** should be mandatory reading for mothers and children of narcissistic parents
- **The Highly Sensitive Person**: the Bible of high-sensitivity, helped me better understand myself
- **I Hate You Don't Leave Me**: the best book on the psychology of BPD (Borderline Personality Disorder)
- **Quiet**: best book on introversion
- **Emotional Vampires**: the layman's introduction to personality disorders, including their positive impact on society
- **Eliminating Passive-Aggressiveness**: to learn, deal, and cure your passive-aggressive tendencies
- **Behave**: an interdisciplinary overview of why we do what we do

Best For Psychology Students

These books are the best psychology books for psychology students and researchers, as well as professors and academics:

1. The Hope Circuit: With tips on how to get published, and strategies good academic careers. Read between the lines, and you'll learn how Martin Seligman was so successful
2. Learned Optimism: A crash course on Academia's power dynamics. Read between the lines, and you'll see how the author's ambition, and not just intellectual pursuits, also shaped his moves and choices
3. Misbehaving: The story of how psychology -and psychologists- fought their way into a different turf discipline: economics. And, of course, of how economists tried to fight psychologists off.
4. The Undoing Project: The 'behind the scenes' of how science advances.
   Plus, how psychologists sometimes fail to apply psychology in their lives. Ie.: Kahneman and Tversky won the Nobel and still couldn't manage to keep their friendship.
   Maybe they should learn power dynamics as well :)

Best Applied Psychology Books

This list focuses on books that translate psychological theories and concepts into practical tools and actionable advice.

5. Red Flags

by Wendy Patrick
Summary | Audiobook

What could be more helpful than psychological insights on how to read people?

Especially how to read and avoid the toxic people that can ruin lives?

Wendy Patrick is one of the best authors for this task, with both scientific and first-hand experience.
And Red Flags stands as one of the best books I've read on how to read and recognize (bad) people.

> "What do you want?" we sometimes joke when someone gives us a big compliment. Actually, that is a very good question.

4. Learned Optimism

by Martin Seligman
Summary | Audiobook

Martin Seligman can at times come across as self-absorbed (and I dislike his blindly patriotic stance), but this book is very helpful for a man's mental empowerment.

In "Learned Optimism" you will pardon the cacophony, and learn how to be happier and more optimistic.
And, incidentally, also how to achieve more, enjoy better relationships, and, if you're interested, how to be elected in office -no kidding, optimistic politicians clean it at the polls-.

"Learned Optimism" is one the first books in the field that has come to be known as "*Positive Psychology*".
And, in the years, there has been a proliferation of "Positive Psychology" books.

But I still recommend "Learned Optimism" over all other Positive Psychology books.

Albert Ellis's books are equally good when it comes to self-development and becoming happier, more empowered people. But he is less about general psychology and more about drilling on specific techniques (REBT).

> What we want is not blind optimism but flexible optimism—optimism with its eyes open.

3. Influence

By Robert Cialdini
Summary | Audiobook

The psychology of persuading and selling had never been systematically researched in the world of academic psychology.

Until Cialdini burst into the scene with “Influence” in 1984.

It was long overdue for psychology to get scientific into persuasion, influence, and manipulation.
And “Influence” became an instant classic -and deservedly so-.

Even today, 35 years later, you’d be hard-pressed to find a better book on influence and persuasion.

> When we ask someone to do us a favor we will be more successful if we provide a reason.
> People simply like to have reasons for what they do

2. In Sheep’s Clothing

Summary | Audiobook

This is a big darling of The Power Moves.

Why?

Because it provides much backing for this website's philosophy and mission.
George Simon says that people in power have a tendency to be more abusive, more insensitive to others and more dangerous than most people are.

And even if you refuse to believe that this book still has truckloads of wisdom to teach.
It delves deep into the psychology of manipulators and power-hungry individuals.

Finally, it's a much-needed slap in the face to a really annoying tendency of some psychologists.
The tendency to look for the "deep reasons for abusive behavior", which often seem dangerously close to turning victimizers into victims.

No, it's not always about childhood trauma or deep insecurities. **Sometimes an a**hole is just an a**hole**.

Highly recommended.

> Power by itself doesn't have the ability to corrupt a person's character.
> It's the character flaws already present in people's character that lead people to pursue power and abuse it once they have it.

1. Power University

By Lucio Buffalmano
Overview | Reviews

Power University is a one-of-a-kind course that transforms psychological insights into practical strategies for real-world success.

This program integrates psychological insights with a focus on mastering relationships, social influence, and achieving goals.

It's all actionable advice designed to help you:

- Build genuine self-confidence
- Understand and read people effectively
- Navigate social dynamics to achieve goals
- Boost your social status and influence
- Develop attraction and relationship skills

With its comprehensive system, Power University goes beyond individual skills to offer a complete framework for thriving in life's most important arenas. Whether you aim to improve relationships, excel professionally, or increase personal power, this course equips you with the tools to succeed.

This isn't just learning—it's transformation.

Tony Robbins vs. #MeToo: Analysis Of Communication Failure

Lucio Buffalmano · 9 August 2018 · Archived copy · Original

We talked about Tony Robbins already on this website before.

We summarized *some of his best work*, featured *Awaken the Giant Within* in our *best self-help books list,* and also reviewed his power dynamics with Gary Vaynerchuck.

As a great influencer Robbins makes for a very good case study indeed.

However, nobody's perfect, and Tony recently had a major communication blunder with his #metoo movement embroilment.

Let's quickly review here what his mistakes were.

Contents

- 1. Picks a Touchy Subject as an Example
- 2. Generalizes His Attacks to WHOLE Movement
- 3. Cuts The Woman Off
- 4. Fails to Address The Real Issue
  - Weak, Off-Mark Step Back
  - Bullying Tactics
- 5. Physical Push Back
  - Robbins Sounds Overly Dismissive
  - Voice
- 6. PR-Sounding Apology
- SUMMARY

1. Picks a Touchy Subject as an Example

Tony Robbins wanted to touch upon two different topics:

1. Victim mentality and why people should avoid it
2. People who fake harassment, pain, or wrongdoings to get attention

He could have picked a lot of examples for either of them. But he probably wanted to pick something recent and attention-grabbing.
So he went for the #MeToo movement.

However, the #MeToo movement is also a controversial subject. Especially when you go against it.
Up until here, nothing wrong though.
We should not shy away from controversial topics if they can help us make a sensible point.

2. Generalizes His Attacks to WHOLE Movement

The problem with Tony Robbins' comment is that he makes it sound as if they apply to the whole movement, not a few bad apples.

How could he have avoided that and still used the #MeToo movement as an example?
Well, he could have prefaced his comments.

For example, if Tony Robbins had said something like:

> The MeToo movement is doing a great, great job at finally taking to the fore a problem that for too long the world has turned a blind eye on.
> Too many sleazy men have been abusing their power to harass and extort sexual favors. Shame on them!
> At the same time, as for any large movement, there are some who are jumping on that bandwagon and falsely accusing people in an effort to get certainty and significance.
> I am speaking to this people when I say that if you are trying to…

Now even with that preface, some people would have still not liked his example.
However, probably nobody would have spoken against it and nobody would have taken it *too* badly.

Without prefacing his comments, however, it's only normal that many felt like he was attacking the *whole* movement. Which includes plenty of women who have faced *real* harassment, ranging from actual rape to annoying remarks.

3. Cuts The Woman Off

When a brave woman called Nanine speaks up, Robbins does not even pretend to listen.
That felt, to Nanine and to most of the audience, rude and overpowering.

4. Fails to Address The Real Issue

What Robbins says replies is also way off the mark.
He says:

> Not for you personally. What you see is people making themselves significant by making somebody else wrong and getting certainty.

Tony Robbins again perseveres on his initial communication blunder. He sounds as if all women behind the #metoo movement are making up stories.

Weak, Off-Mark Step Back

Then he adds:

> And there is nothing wrong with that, it just won't make you happy.

This is a weak step back.
If Tony Robbins is making the case of women making stories up, then *there is* something wrong with that behavior.
That was NOT what he had to take a step back on.
What he should have corrected was his stance that *all* women are making stories up, not that it's wrong of *some* women to falsely accuse people.

Bullying Tactics

Not only Tony Robbins doesn't listen to Nanine, but deploys a few tactics to isolate her and browbeat her.
He uses the example of Jesus to make his point, which lends "holiness" to his position. And he uses his trademark signature of getting people on his side by saying:

> Say yes and raise your hand

When the crowd raises their hands (and few seem to do it here) Robbins is not only shoring support for his position, but he is roiling the crowd against Nanine.
That must have felt really bad for her.

5. Physical Push Back

Finally, Robbins calls Nanine on the aisle.
We can hypothesize that Robbins probably thought he could not “lose” that battle without losing too much of his authority.
And, probably, he thought he was also right and was now going to show it to her and to everyone else.

However, the whole idea of pushing her back was terrible to begin with.
He’s a huge dude. And there he is, physically pushing around a woman who has been the victim of abuse. Of course, that image wasn’t going to go unnoticed by his critics.

Robbins Sounds Overly Dismissive

Robbins tells Nanine to put his fist out and then starts physically pushing her back, saying:

> Why are you pushing back? Why are you pushing so hard?
> When you push someone else it doesn’t make you safer.
> It just makes them angry

That sounds a lot like he is suggesting her -and women- to stop pushing back. He probably didn’t mean it that way, but it definitely sounds like he is dismissing the validity of standing up to one’s abusers.

Voice

Tony Robbins has a strong, raspy voice.
While that might have helped people to hear him and to sound more authoritative, it was not helping him here.

He only sounded more aggressive and intimidating, as the woman indeed commented.

6. PR-Sounding Apology

His apology was very good… Especially the part when he says “I still have much to learn”.

But a HUGE piece was missing to make it sound credible.
First, read it out:

> At a recent Unleash the Power Within (UPW) event in San Jose, my comments failed to reflect the respect I have for everything Tarana Burke and the #MeToo movement has achieved. I apologize for suggesting anything other than my profound admiration for the #MeToo movement. Let me clearly say, I agree with the goals of the #MeToo movement and its founding message of “empowerment through empathy,” which makes it a beautiful force for good.
>
> For 40 years I’ve encouraged people to grow into the men and women they dream to be. I watch in awe as more and more women all over the world find their voice and stand up and speak out. All of our growth begins with learning. My own started with a childhood marked by abuse. I am humbled that others have looked to the path I have taken in the decades since as lessons in their own journey. But sometimes, the teacher has to become the student and it is clear that I still have much to learn.
>
> I teach that “life happens for you, not to you” and what I’ve realized is that while I’ve dedicated my life to working with victims of abuse all over the world, I need to get connected to the brave women of #MeToo.
>
> I am committed to being part of the solution.
>
> I am committed to helping to educate others so that we all stay true to the ideals of the #MeToo movement. I will never stop examining my own words and actions to make sure I am staying true to those ideals. That begins with this brief statement but will not end until our goals are reached.

What was missing?
The initial idea that first got him to criticize the fake voices in the #MeToo movement is missing.
This apology feels like too much of a U-turn.
And when something feels too much of a U-turn, what do people think?

Exactly, they think it’s fake and PR.

Indeed THE most highly rated and upvoted comment on that post says exactly that. That his apology was a big PR stunt.

SUMMARY

Tony Robbins is a man who has helped many and he is someone who has done a huge amount of good.

However, that is not to say that he is perfect and does nothing wrong. And even as good as he is in leadership and communication, he makes mistakes like all the rest of us.
Tony Robbins bashing the #MeToo movement is such an example.

Overall, I think Tony Robbins could also limit his usage of “say hi” and push people to conform to him. That’s annoying to most independent thinkers -like yours truly-, and double annoying when he does it to get support against someone (in this case, Nanine).

Make Him Chase You? Why It's A Bad Dating Strategy

Lucio Buffalmano · 10 August 2018 · Archived copy · Original

Some women end up here looking for "let him chase you book".

And that's how I realized there is actually a book with the only goal of making men chase.

Well, it's not surprising.
That's what almost everyone says in the dating industry.
But that doesn't make it an effective advice.

- So, Should You Stop Letting Him Chase?
  - Be Selectively Hard to Get
- SUMMARY

Intro: Debunking Dating Myths

We have already addressed a few very common dating mantras in the women's dating literature.
Some of them:

- Let him wait for sex
- Make him invest in you
- Unavailable games (and other top dating mistakes)

Check those out later.

Do Guys Actually Like Chasing?

This is what some of the most popular dating books say:

Let him chase because that's what men want.

They are hunters at heart.
They like chasing the prey.
Millions of years of evolution shaped them that way.
They say…

Personally, I have always been skeptical of pop evolutionary psychology.
However, there is some truth here.
There is indeed an innate tendency for people to want what's scarce.
Robert Cialdini said it first in his seminal work "*Influence*".
And there is also a tendency for people to keep chasing what seems to be right at the edges of their reach ("cat string theory").

So let's say that "the let him chase theory" has a valid theoretical foundation.
In theory, it works.
Or at least, it works with some guys.
But **the major drawback of the "let him chase" advice is that it doesn't work with the best men**.

Let's dig deeper:

#1. The "Let Him Chase" Strategy Works With Lower Quality Men

The "let him chase you" mantra is a generalization.

And, like most generalizations, it works sometimes and with someone, and it backfires in some other situations and with some other men.

Letting him chase you is bad advice because it works with the lowest quality men.

Why?

Well, think about it, what differentiates low-quality men from high-quality ones?

Three important traits of high-quality men are:

- High-quality men are busy and have their goals and visions
- High-quality men have dating options
- High-quality men are socially aware

Being socially aware means that they know what's going on and they will either outright avoid pursuing or stop as soon as you do it a little bit too much.

Here is an example, notice how I analyze her attempts to make me chase her:

What are the issues with this?

1. I, like most men, don't like overpowering women
2. I, like most intelligent men, see her power moves, and don't like dating or, God forbid, partnering up with uncollaborative women
3. I, like most men who feel like they have other options, prefer dating and meeting more feminine and more collaborative women

This is why, **letting him chase works best when you are *above* him**, in terms of general personal value, and when he idealizes you.
But since women prefer men who are around their same value, or above, the "let him chase" strategy is most likely to work with men that you often don't truly want as long-term partners.

And that's why "letting him chase you and invest" is a favorite technique of hookers and gold diggers: they are not looking for a win-win relationship, they're looking for a sucker who will dote on them.

#2. Instead of Chasing He Might End Up With More Available Women

Sure, under the right circumstances, some men will chase.

But guess what's another human tendency?

Men also tend to follow the path of least resistance.

Same as women, after all.
Imagine you are at home.
You have two options: eating an OK meal at home or a good meal outside. To go outside you need to dress, put on makeup, drive, and fork out more money.
Sure the restaurant would be nice, but… You're in PJ now, you have work tomorrow, and you're a bit tired. And you could just watch TV now. *And* save some money and time.
Chances are that, at least sometimes, you just stay at home.

Indeed that holds true oftentimes even the quality of the meal you can have at home is not comparable with the one at the restaurant.

It's the same for men and dating.
What's available right here, right now, often trumps the hard-to-get option.

#3. Men Like to Be Liked, Too

Men are humans.

And, like all humans, they like to be wanted.
It's a major inner drive and well known in psychology.

Psychology researcher Viren Swami and author of "*Attraction Explained*" puts it best:

> When we play hard-to-get, we give the impression that we dislike the person – and that just isn't conducive to sparking attraction

But you don't need to read any paper.
Simply ask yourself: how do feel when a man tells you that he likes you? Good, right?
So why do you think it would be any different for a woman to tell a man she likes him / respects him / adore him / loves him?

Indeed, from personal experience, I make the case that early honesty in dating, opening up, and showing appreciation, *helps* the woman's case.

From the How to Get a Boyfriend article, take this example:

I wasn't uber-excited about this date.
And if she had canceled I would have definitely seen the bright side of staying at home and keep working.

But when she replied she was "looking forward to meet" an immediate switch happened.
That was the equivalent of saying "I like you" and "I want to spend time with you". **It was the female equivalent of chasing the man and it made me feel great**.
I also loved her honesty, it showed me she was a woman that didn't play games.
I loved her honesty, I valued her much more and I was also looking forward to seeing her.

See an even more powerful example here in the forum.

How a Song Exposes the "Let Him Chase" Theory

I know none of you knows Vasco Rossi.

It's funny how everyone knows Pavarotti but nobody knows the greatest Italian rocker outside of Italy.

But for our purposes, you don't need to know him. You only need to know that his personal experience with the "let him chase you" is generalizable to many sought-after men.
In the song "Quanti anni hai", he sings:

> I thought of you, you know
> Tonight
> I thought of you later
> **She called me first**
> I couldn't say no
> Where are you going later (she asks)
> I don't really know, kid (he replies)

This song explains *exactly* the major flaw with the "let him chase mantra" when it comes to sought-after men.
Vasco Rossi lets us know that he preferred girl number two. But girl number one called him first. Girl number one

was there, and available. And probably made him feel good for showing her interest.
And now he is going out with her.

Maybe they'll never ever have a relationship.
Maybe they'll even hate each other. However, girl one has a shot. Girl two is playing second fiddle hoping for her turn… If it will ever come.

For all purposes, girl one who didn't play the "chase me game" won the dating game.
And the more successful a man is, the more likely this scenario will play out.

Of course, as for everything human, one can go to an extreme and lose out. Men will probably not want for long term the girl who throws herself at him. But we're not about that type of extreme here.

Science Exposes the Let Him Chase Theory

The best advice is based on experience, observation, and on some good science and data as well.

So let's review some data now.

#1. Men Only Chase When Women Are Scarce

In many animal species, humans included, male behavior changes dramatically when the gender split ratio changes.

When women are scarce, the culture tends to become highly romanticized. Men pursue, chase, and engage in ostentatious displays to woo women.

In these favorable dating markets, she ABSOLUTELY should let him chase.
That's what he wants, that's what the culture expects.

However, the opposite is true when there are few attractive men and lots of attractive women.
As Birger brilliantly shows in his *Date-Onomics* **men chase very little -if at all- when there is an abundance of women**.

What does it mean to you?
Do not make him chase when there are plenty of (attractive) women.
That is likely the case if you live in big cities if you are a smart woman, and if you got a good education and career (also read: successful women dating).

Do you want to see a texting proof?
Here it is.
The exact same place, with two opposite approaches: one girl wants me to invest and chase, and the other one is more accommodating.
Guess who had a date that night:

The first woman is not wrong. Yet, because there were more available -and warmer- women, at parity of sexual market value, the guy does not chase the demanding woman. It's a simple law of offer and demand.

And just to be sure here: being more accommodating does *not* mean that you must sleep with him quickly.
The woman in the second text example did not come up to my place after our date. And we saw each other again.

#2. Assertive Female Daters Win, Auction Theory Predicts

Auction theory is the second big issue for the make him chase theory.

I'll try to be brief and simple.
In auction theory strong bidders are the bidders with more resources and more confidence they can win the auction.
These are the equivalent of women with a lot to offer.
Conventional wisdom would have that these bidders would win most of the time.

But that is not always the case.
Mark Gimein says that auction theory predicts, and empirical studies confirm, that weak bidders win more often.
This is because weak bidders, with less to offer, know they can be outgunned and they feel the pressure to "bring something home".

Weak bidders are the equivalent of more assertive female daters.
Assertive female daters win because they date more actively: they don't play "chase me games" and help men along the dating process.
In a way, weak bidders date more ruthlessly.

The strong bidders instead are more likely to hold out, keeping their powder dry for the imaginary great auction to come. The great auction is the equivalent of Mr. Right.
As you know, in real life Mr. Right is extremely rare. In the meanwhile, almost all "Mr. Almost Right" and "Mr. Good" have already paired up.

And that's why a high-quality woman with a great career often suffers in her dating life.

#3. Successful Daters Pick One Man And Avoid Distractions

This is a pet peeve of mine.
And it's the so-called "paradox of choice".

Barry Schwarz reviews the literature on decision-making to make the case that having lots of choices often leads to choice paralysis.
And, perversely, when a choice happens, we are *less* happy with it.

People with fewer options instead, knowing they don't have that much to choose from, tend to pick something quicker, be done with it, and… Be happier.

Modernity has tricked our brains into a huge paradox of choice.
We live in big cities where we are led to believe there is an endless supply of options, we can swipe a hundred profiles in a matter of minutes.
And of course, says evolutionary researcher David Buss, advertising of photoshopped supermodels makes us believe that the options are all much better than they truly are.

Women who fall for the paradox of choice make men chase more than it's effective because they falsely believe there are endless choices.
Keep that in mind next time you meet a good prospect.

When You Must Cut (To) The Chase

Let me say this first:

Reality is complex and any non-personalized advice must be taken with a grain of salt.

However, there are a few situations when dropping the "let him chase" theory and being decisive is a clear winner.

These are some of them:

#1. When There Are Few Attractive Prospects

When men have a lot of options men switch to a "players' strategy" and get lazy.
There is no hunter and chaser there and assertive women win the day.

#2. When You're a Good Prospect Yourself

As we've already seen, weaker prospects are naturally more aggressive.
If you think of yourself as a good prospect, chances are you tend to wait and dawdle.
And dawdling has rarely led to dating success.

#3. When You're College Educated

If you are consuming content here, chances are you are either a smart gal and/or an educated one.
Possibly both.

In the West -and in many other areas of the world as well- there has been a massive shift in the education and earning potential of the genders.
Women are kicking boys' asses. But that comes with huge dating handicaps. There are now more college-educated women in the West than men.
And that trend is not getting any better.

And since women, on average, strongly prefer "marrying up", that means that they are dating in a difficult market.
As we've seen, in difficult markets the assertive dater wins.

#4. When You're Still Young In A Difficult Market

Difficult markets get worse with time.

And there is a simple way to explain this concept: remember the game of musical chairs?
Well, it's the same principle.
In the beginning, even if there are more high-quality women (players) than men (chairs), it's still easy to find a mate.
But as time goes by and more chairs get removed (bachelors who pair up), the game becomes more and more difficult and the percentage of people who don't find a seat (women staying single) increases.

Just like a musical chairs game, it becomes a mathematical certainty that dating in such a market will only get worse with time.

And as we have seen, women who locked in early weren't necessarily prettier or smarter. Often, they were simply more decisive.

What does decisive mean?
Here is an example from my last girlfriend:

So, Should You Stop Letting Him Chase?

Well, not always.

Sometimes it can be a good strategy.

If you're trying to *make a man spend on you*, for example, it's a great idea to stay just a bit outside his reach. Femme fatales have been doing this for centuries, and even an expert seducer like Casanova fell for it.

Or if you are confident he will not meet any other woman, the amount of chasing he does also increases the value he places on you.

It's difficult to give specific advice without knowing the specific situation, and that's exactly why you should stay away from generalizations.
However, as a rule of thumb, I would be wary of "let him chase games" in all these situations:

1. **He's a great guy and he's socially aware** (he sees through the game)
2. **There are few good male prospects** (lots of options, assertive female daters win)
3. **You have a history of getting angry over men who stop investing as much as you want** (that's a warning

sign for you)

4. **You live in a big libertine city with lots of options**
5. **You two have great chemistry** (chasing games will only douse water on the flame)

Finally, there is a great middle-of-the-road option that has the benefits of making men feel special and liked, and exclusive as well.
And that's being selectively hard to get.

Be Selectively Hard to Get

When a woman plays hard-to-get, men might end up wanting her more, but actually liking her less.

For some men, the most driven and abusive, that ends up looking like "fucking her and then throwing her away" just to "show her".

So is there a way to be wanted more and liked more?

Well, yes.
Enter, "selectively hard to get".

Being selectively hard to get means that **you are hard to get for most people, but "easy" for the man of your choice. Not because you are generally easy, but because he is special.**

Psychology research supports the idea that "selectively hard to get" is what men prefer the most.
And experience confirms that men do love easy women who are easy just for them.

SUMMARY

This article is no bashing of the "let him chase theory" here.

Whenever you can get people coming to you, that's all power to you.

But besides the fact that it might not be the best foot forward toward a relationship, it simply works against you in many situations.

This article explained why and when "let him chase" works against you.

And as for everything: balance. This is not a free pass to start doing all the chasing and romancing. Quite the opposite. The most skilled gals are great at "helping" the man along the romancing process (a story for another article).

So long,

No More Mr. Nice Guy: Summary & Review

Lucio Buffalmano · 10 August 2018 · Archived copy · Original

In *No More Mr. Nice Guy* (2000) Robert Glover analyzes the personality and psychology of "nice guys".
The core message is that nice guys aren't really nice but are instead doormats who are nice out of fear of being assertive. Glover seeks then to provide readers with advice and solutions to become a more assertive and higher-power man.

Takeaways

- **The nice guy syndrome is the naive belief that if one is really nice they will do well in well**. They will be loved, have their needs met, and avoid problems
- **Nice guys aren't really nice at all**, but are either guided by misguided beliefs, or afraid of assertiveness, aggressiveness, and confrontation
- **Nice guys need to work on themselves to improve**. They must become higher-value, higher-power men

About the Author

About The Author:
Robert Glover prefaces his name with "Dr.", albeit I could not find anything about his specialization.
We're not very big into titles here though and we prefer looking at the quality of the material instead.
On his own blog, Glover defines himself as an expert on "nice guys syndrome", helping men go from passive and resentful victims to empowered, "integrated" males.

10 Traits of Nice Guys

Most people have one or two of these traits, but nice guys have most of them:

1. Givers
2. Caretaker
3. Seek approval from others (especially from women)
4. Conflict-avoidant
5. Seek the right way to do things
6. Try to be perfect and avoid mistakes (so people don't think they're bad)
7. Repress their feelings
8. Want to be different from their fathers
9. They're more comfortable being with women
10. They exert tremendous effort to make their partners happy

They give because they think that's what makes them good.
And they tend to others because they put everyone's needs ahead of their own.

The nice guy is afraid of conflict, so he avoids it at all costs by being nice.
Since he avoids conflicts, nothing ever gets solved with him. He might disagree, but he doesn't say it or he might even pretend to agree, just to avoid conflict and arguments.
If you are thinking that sounds a lot like passive-aggressive, you got it right: the nice guy is the epitome of passive-aggressive.

When he disagrees, he still tells people what they want to hear. But, typical of the worst slimy people-pleasing behavior, he then reverses his words and decisions to please someone else.

Here is an example of a nice guy from the movie "I Love You, Man":

The ladies are talking smack about him, and his own girlfriend added some personal detail of his life that she could have probably spared. Yet when he shows up, he flashes a super fake smile.

Why Nice Guys Aren't Really Nice

Robert Glover says that nice guy is actually a misnomer and nice guys aren't nice at all.

Nice guys:

- Lie telling people what they want to hear
- Hide their true intention
- Use indirect ways and manipulation to get what they want
- Can be very controlling
- Only give to get
- Often brew resentment and anger

6 Traits of "The Integrated Male"

What's the "integrated male"?

Glover presents the integrated male as the antithesis of the nice guy and the type of man the nice guy should strive to become.

The key to the integrated male is total acceptance of who he is.

The integrated male:

1. Likes himself
2. Takes care of his needs
3. Is comfortable with his sexuality
4. Values integrity, and he speaks up
5. Sets clear boundaries and is not afraid of enforcing them
6. Accepts his flaws

Also, read:

> The 10 Traits of High-Value Men (W/ Examples)

How Do People Become Nice Guys

Nice guys received the following message in their formative years:

> It's not acceptable, safe or desirable to be who you are.

That can take many forms.
For example, parents who:

- Abandoned them early
- Had sky-high expectations for them and never rewarded them

The Two Types of Nice Guys

There are two types of nice guys:

1. Those who think they are bad and need to correct themselves
2. Those who think they are so good, lie to themselves to keep their self-image.

The former had a troubled and rebellious childhood and now he feels like he needs to make up for it.
The latter was the good boy of the family and he stays that way to keep his social identity and his self-identity.

8 Steps to Overcome The "Mr. Nice Guy Syndrome"

Glover recommends these steps to overcome the Mr. Nice Guy syndrome:

1. Force yourself to enforce your boundaries
2. Learn to please yourself first
3. Cut porn and learn to have sex for the sake of it
4. Face your fears
5. Repeat positive mantras
6. Eat well
7. Do sport
8. Spend more time with men

The last one, spending more time with men, is common advice in the manosphere.
See for example "*The Rational Male*", "*The Way of Men*" and "*Tribe*".

I recommend you also check out the article "how to become an asshole" (a good one):

> How to Be A Good Asshole

Nice Guys Don't Have Intimate Relationships

Nice guys cannot have intimate relationships.

Why?

Because intimate relationships require people to look within themselves and open up about who they really are.

But nice guys are always wearing a mask and always hiding their true selves. That makes their relationships unauthentic.

The mask of the nice guys is different than the *mask of masculinity* of the alpha male postures, but it's a mask nonetheless.
And that makes stands between true human connections and bonding.

Two Types of Relationships Nice Guys Have

There are two types of nice guys in relationships:

1. Those who get over-invested and over-involved at the expense of themselves
2. Those who are nice to everyone except their partner

Glover calls the second type "avoidants", possibly referencing to the avoidant attachment style, albeit he doesn't expressly reference attachment styles.

Nice Guys Must Learn to Set Boundaries

Boundaries are crucial for good emotional health and positive social life.

The author makes the point that **women want boundaries from their men** as that makes them feel more secure. As a matter of fact, she will test his boundaries to make sure they are strong and resistant.

> Shit Tests Power Dynamics: 8 Ways To Win the Game

Nice Guys Want to Be Good At Sex to Make Her Happy

The author says that all the nice guys he has met had some issues with sex.

The issues span the whole gamut, but at the core **nice guys are ashamed and uncomfortable with their sexuality**.

The most interesting bit for me was that some nice guys pride themselves on being good lovers. However, **good lovers for nice guys means always putting the woman first**.

They are concerned with making her orgasm because they want to provide. And that also means that they approach sex like a robotic undertaking.
Ultimately, it's not enjoyable for themselves and often not nearly as enjoyable for the woman.

The author has a very interesting point here: be more like alpha males in nature.
Confident, competitive, and putting themselves first, including his own pleasure.

My Note: Go easy on "more like alpha males"
Nice guys can indeed gain with the goal of "being more like alpha males". On the other hand, this is one of the things that's SO easy to overdo.
Trying too hard to be an alpha male also presents its own issues and mental blocks.
At the very extreme, it's also potentially toxic. Also read: growing past the red pill toxicity.

Quotes

Here are a few great quotes I loved.

On approval-seeking:

> Just about everything a Nice Guy does is consciously or unconsciously calculated to gain someone's approval or to avoid disapproval

On women's pleasing:

> One Nice Guy asked me, "If a man is talking in the forest and no woman is there to hear him, is he still wrong?

On the extremes of the nice guys:

> When our god fails to respond in the ways we expect, we humans tend to respond in one of two ways. We either blindly intensify our acts of worship or lash out in righteous anger

On values:

> Self-respect, courage, and integrity look good on a man.

Real-Life Applications

No More Mr. Nice Guy teaches you what nice guys are and why it's best to move beyond it.
If you are one of them, then your task is to understand and become a more assertive, self-respecting human being.

What One Man Can Do, You Can Do
Towards the end, "*No More Mr. Nice Guy*" becomes a bit of a self-help, motivational book. And I absolutely loved this quote:

> **What one man can do, you can do**

Which is also one of the central tenets of Ultimate Power.

CONS

- **Fuzzy Category Problem: "Nice Guy" Is Catch-All For Any Self-Empowerment Issue**

On the plus side, this simplifies things.

But it's a downside because different people may only have SOME of these issues, and hence may need different solutions.

Clover's nice guy includes 'seeing things in black and white', 'fear of failure', 'passive-aggressive', and more.
I don't see the connection among these different issues. 'People pleaser' may be the canonical description for many of Glover's listed issues.

And in TPM's parlance, **'low power' is a better description for this 'syndrome'**, and offers more power-related, targeted solutions.

- **Personal Conjectures Presented As Facts**

At times it feels less like a book from a doctor and more like a text from a manosphere author who makes up random theories.

There is nothing wrong with that, but I believe that everyone should always mark personal conjectures as “my own speculations” instead of presenting them as facts.

- **Unscientific At Times**

The author says that after World War II boys have been disconnected from their fathers and forced to use their mothers as role mothers. So now men accept female definitions of what it means to be male.

Well, maybe that’s the case.
But until I see some data and statistics I must remain skeptical. Is the increase in divorce really as big as to justify Glover’s theory? Again, no numbers are provided.

- **Confusing**

First, the book says that nice guys become nice guys because they get the message they are not good enough. Then a bit later it’s because men grew up with females and female culture.

Which one is which?
Possibly the author meant that both factors contribute, but he should have made that clearer.

- **Men-Bonding Isn’t Necessarily A Solution For All**

Maybe spending time with other men can help some nice guys.

But I’d add caveats.
It’s more about the *quality* of men you spend time with (and the quality of women, for that matter).

And some nice guys need to date more, rather than man-bond more.

PROS

Good Starting Block For Nice Guys
I listed a lot of cons, but I always do so with good books because I hold them to a higher standard.
So don’t get it wrong, *No More Mr. Nice Guy* is a great resources for beginners.

Review

No More Mr. Nice Guy is a valuable self-help book for men lacking assertiveness and personal power.

That includes people pleasers, passive and passive-aggressive communicators, overly submissive men, etc.

We know a thing or two about too-nice guys here because they’re one of our core audiences and we’re proud to say that **hundreds of too-nice guys cured themselves with our programs.**

And we can most certainly thumb up Glover’s book.
Albeit *No More Mr. Nice Guy* is not an evidence-based book, Glover’s analysis are largely on point.

When it comes to “fixes” for nice guys, there are some good tips as well.
The book format limit people’s ability to address the root causes. So you may want to consider reading more here or, if you can afford it, consider Power University.

Bullet Summary

- Always calm yourself down before addressing the situation
- When it’s unexpected, say that you need to think about it

Full Summary

About The Author: Renee Evenson is a writer of business books on communication, customer service, and conflict resolution.

Use “I” Sentences

When you need to voice a complaint never start with “you”, lest it sounds like you are attacking people.
Use I sentences instead.

The same concept applies to relationships, and you can see many examples of “I statements” in this article on fixing criticism.

The 5 Steps to Deal With Difficult People

The author recommends five steps for dealing with difficult people or a bad boss.

1. Think first (think about the issue from all angles and calm down)
2. Gain a better understanding of the situation
3. Define the problem (once you understand, say how you see it and get a common understanding)
4. Propose your best solution
5. Agree on a resolution

Dealing With a Bully

I liked the dialogue the author presents on how to deal with a bully.
This was my favorite part:

> Going forward I expect you to treat me respectfully. If you can't, then please don't say anything to me.

Also read: what to do when your boss screams at you.

Dealing With Credit Takers

What do you do when someone in your team takes credit for the whole team's effort?

Renee Evenson recommends that you speak up right away while they do it.
Doing it after is always more difficult, and not doing it at all is the equivalent of giving your consent to their behavior.

Real-Life Applications

There are a lot of relevant lessons learned here, and they are particularly relevant to this website and this website's credo.

Tackle Challenges Head On
If something deeply bothers you, then you must tackle it. Failing to do so is a sure way of becoming a nice guy or a passive-aggressive.

When Unexpectedly Put On The Spot Say You Must Reflect On It
If you reply right away, you risk sounding too defensive and taking on too much of the blame.
I agree indeed that saying that you must think about it will not give you a win, but it's a powerful tool to limit your losses or completely erase the potential for losses.

CONS

- **Sometimes Simplistic, With Easy Examples**

Some of the examples were very interesting, but they were all solved too easily.
I wish I had seen some really nasty character with which it's truly difficult to deal with.

- **Sometimes "Not Bad Enough" For The REal World**

I feel that some of the examples were too direct and made your position too clear.
For example, with some people, you can build a better working relationship.
But with some others, you should mentally categorize them as an enemy and then move from there. If you try to address the issue with them, they might use it against you and only undermine you more subtly (and more powerfully).

- **Sometimes I Didn't Like the "5 Steps Formula" Applications**

The author uses the 5 steps format in every single situation.
I don't think that was always the best approach, and there is no size-fit-all in social skills.

For example, to a colleague who is giving big discounts to make a sale, she asks:

> "I'm wondering why you do that"

I feel that such a question is annoying to anyone because the answer is obvious, which would be “to make a sale”. Asking that question makes you come across as slimy. When the “why” is obvious, it’s best to approach it directly in my opinion.

For the readers, the truth is that you can’t escape developing your own personal power and social intuition.
Even the best advice requires social calibration.

PROS

Good Foundations
Some good, solid basics of communication here.

Review

I was surprised to see the book with rather lowish reviews on Amazon.

I have seen plenty of bad books with good reviews, and “*Powerful Phrases for Dealing With Difficult People*” might be a bit basic, but it definitely shares solid foundations of communication.
In my opinion, it deserves more credit.

Overall, it’s not The Power Moves style of book I was looking for but I give it a nod when it comes to improving communication skills in difficult situations.

Emotional Intelligence 2.0 Review: Does It Work Without Power?

Lucio Buffalmano · 12 August 2018 · Archived copy · Original

Emotional Intelligence 2.0 discusses the role of emotional intelligence in life and career success.
Bradberry generally aligns with Goleman who initially said that emotional intelligence is a major predictor of career success.
While we don't disagree with that, we believe that power intelligence is an even better predictor.

Full Summary

About The Author: Travis Bradberry is an author, business consultant, and entrepreneur. His consultancy provides businesses with emotional intelligence tests and training.

Note About The Test: Emotional Intelligence 2.0 comes with a test. But you need to purchase the book to get the code.

Emotions Control Us

Travis Bradberry says that unless we take deliberate steps to prevent it, we are hard-wired for emotions to control us.

That's simply human nature, it comes with the territory of how our brain is structured.
Everything coming from our senses indeed travels to the brain through the limbic system -where emotions are produced- before reaching the prefrontal cortex -where our rational thinking takes place-.

That means that emotions happen first, and our brains cannot stop them from forming.

EQ Lies At The Intersection of Rational and Emotional

It's the communication between the emotional part of our brain and the rational part of our brain that will determine our level of emotional intelligence.

So what does constitute emotional intelligence?

Says Tradberries:

What constitutes emotional intelligence is a good understanding of the emotional side of our brain from the rational side of the brain. Coupled with the ability to either delay action or take action as needed, in spite of the emotions.

EI Outperforms IQ

Daniel Goleman said it already in Emotional Intelligence: IQ does not fully explain the level of success people experience in life.

And after years of research, the author states, emotional intelligence (EQ) emerged as the critical factor to explain and account for success.

And it's so critical that each one-point increase in EQ leads to an increase of 1.300 dollars in annual salary.

My Note:
This is one of those statistics I would have liked to see fleshed out a bit more in-depth because like that it means little.
See the criticism section for more.

There Are Only 5 Types of Emotions

Travis Bradberry says that of all the people they tested, two-thirds cannot accurately identify their own emotions.

He says that part of the reason is that we have too many words and labels for emotions.
But at the core, there are only 5 of them:

1. happiness
2. sadness
3. anger
4. fear
5. shame

IQ Does Not Correlate With EQ

Emotional intelligence leverages your ability to recognize and understand emotions, in yourself and others, to manage your behavior and your relationships.

I was surprised to read the author say there is no connection between IQ and EQ as that's the opposite of what

Daniel Goleman says.

You Can Grow EQ

Contrary to IQ, you can learn and grow your EQ.

Personality

Travis Bradberry says that IQ, EQ, and personality are what make up individuals.
Personality traits such as introversion and extroversion. And he says that EQ is the only one you can change and grow.

My Note:
I disagree here. People can change personalities. I have changed my personality quite a bit

The Four Realms of Emotional Intelligence

There are four emotions that form a quadrant and aggregate along two primary competencies: personal competence and social competence.

Personal competence means being aware of your emotions and managing your behavior.

- Self-awareness
- Self-management

Social competence is the awareness of other people's feelings, moods, and behavior in order to improve the quality of your relationships.

- Social awareness
- Relationship management skills

1. Self-Awareness

Self-awareness is the ability to perceive and understand own emotions.

Just thinking and knowing about self-awareness increases it.
It makes for a much happier and more fulfilling life because people who can define themselves well know their strengths and can better pick something that interests them, motivates them, and allows them to leverage their strengths.

2. Self-Management

Self-management builds upon self-awareness and it's your ability to self-control and direct your behavior positively. Of course, it's about the most obvious "resisting" rage and strong emotions, but it's also about keeping an even emotional keel and persevering.

In my opinion, this is where success lies, as *Grit* by Angela Duckworth shows the ability to stick with things over the long run, even when we don't feel like it, is one of the keystones to success.

3. Social-Awareness

This is a bit the equivalent of self-awareness but directed toward others. It's your ability to feel and understand other people's emotions and moods.

4. Relationship Management

It builds on and leverages social awareness to manage social interactions successfully.

CEOs are Low on EQ

Emotional Intelligence 2.0 measures half a million senior executives and employees (albeit on Forbes he says they were 100.000, which is which?).
It turns out that middle managers are the highest in EQ and CEOs score the lowest.

This is my chart replicating Bradberry's numbers:

EQ and Leadership

The authors say that EQ skills are more important to job performance than any other leadership skill.

People high in EQ also make better decisions because paying attention to our emotions is the best way to doing the most logical decision.

> **The most logical decision making pays attention to emotions**

The Variables That Influence EQ

There are several variables that influence EQ, including:

- **Age**

Self-management skills rise with age, but a conscious effort can cut that time short.

- **Culture (China Beats US)**

Chinese executives had higher EQ than their American counterparts, probably because of cultural reasons.

- **Gender**

Women score higher in EQ in general, and specifically in social awareness.

Real-Life Applications

These are my main takeaways from "Social Intelligence 2.0":

- **Manage Your Self-Talk**

Negative self-talk damages your ability to manage your own state and allows for negative emotions to take over.

To eradicate negative self-talk:

1. Ban words such as "always" and "never"
2. Replace negative self-talk such as "why am I so stupid" with more factual ones such as "this was a mistake"
3. Accept responsibility
4. Look at your mistake as an opportunity to learn something
5. Use this mistake never to make the same mistake again (the mistake becomes a principle, in Ray Dalio's words)

Also, read:

- Learned optimism

CRITICISM

I really enjoyed Emotional Intelligence 2.0.
Yet, there were many important points that didn't convince me at all:

CEOs Are Low on EQ – Wait, What??? Whole Theory Debunked!

In the author's own data CEOs are the lowest on EQ.

That should throw a monkey's wrench into the whole theory that EQ is the most important determinant of life's success.

Yet the author explains it away blaming the system (!). In their Harvard Business Review article, they say that companies are still promoting bosses based on knowledge and length of service.
The author's message is that "CEOs should do better since EQ is important for job performance".

Of course, the author is heavily biased because of the training he provides. And, in my opinion, it shows here.

Also, read:

- **The Myth of Emotional Intelligence**
- Why CEO/EQ is BS
- In Sheep's Clothing

No Mention of Criticism

There is a hot debate in the psychology world on whether or not emotional intelligence is even a psychological trait.

For once, not everyone agrees it can be measured. Jordan Peterson, author of *12 Rules for Life* has been a highly vocal critic. Others make claim it does exist, but it does not predict success in life.

Some Big Claims Without References

The authors say that EQ accounts for 58% of performance in all types of jobs.

Wow, now that's a statistic that makes little sense to me.
How on earth is that supposed to be even useful when there are jobs that are all about people and some that have very little to do with people?

Also, based on what do they say it? As a critical reader, I want to know, and there was no reference to back up that claim.

Extrapolation Bias Mistakes

The authors make huge generalizations after analyzing just 4 years of data.

In my opinion, this could be a typical *fooled by randomness* case. We see a trend and believe it's significant and consistent and it will keep growing over time.
Often, that's not the case (also read *Thinking Fast and Slow*).

Intuitive Predictions

The authors make a lot of "intuitive theories".
Such as, in front of a lack of data, they come up with their own explanation.

For example, when they saw a dip in the EQ results in 2008 they say it was connected to the crisis.
And that could be, but… How can they be sure?

Even worse, they see men "catching up" to women and they say it's because now men are encouraged to entertain their feelings. Wait, and they say that based on a 4 years time span?

Emotional Intelligence Test Not Open

You can only take the test of emotional intelligence if you get the key from the book.
In my very personal opinion, that's not a good move. Not even from a marketing perspective.

PROS

It Will Help You Lead A More Fulfilling Life
Emotional Intelligence 2.0 can help increase awareness of social skills and emotional competence.
For many people who still believe "emotions are for the weak", this can serve to show that no, emotional competence and social skills serve to lead a more fulfilling, happier, and even more successful life.

Some Good Tips
First of all, the message that EQ can be improved is a highly empowering one. And there are some good tips to do just that.
I'd like to add another: watching the YouTube videos on my channel can help you start seeing the social patterns.

Review

First of all, I'd like to tackle the biggest issue with Emotional Intelligence 2.0:

The CEO Conundrum

The data from the author themselves shows that CEOs are very low on EQ.

The author explains it away saying they are not doing a good job. However, they never wonder if being too high in EQ can be a drawback and it's the CEO role that requires a more decisive approach.

That could happen, for example, if their EQ tests was assigning too high points to high agreeableness, which can be a drawback for leadership positions.
But the authors never ask themselves that.

Overall, this is my opinion: EQ will improve your life. But if EQ means being very agreeable and caring too much about how others will feel, then you must know when to put EQ aside to make the hard decisions, no matter who is unhappy about it.
The authors never say that EQ means becoming paralyzed by emotions and others' feelings, but in my opinion, their EQ tests score high for people high in agreeableness, which leads to a lack of strong decision-making capabilities.

Final Thoughts

I don't think "*Emotional Intelligence 2.0*" does a great job of outlining the current state of scientific research.

I think it can actually muddle the water for most people who want to understand emotional intelligence, life success, and the impact of emotional intelligence on success (and relationships).

It can still be useful in a few ways though, such as in pushing people to listen more to their own emotions.

Bullet Summary

- Don't react emotionally: that's what the verbal attacker wants
- Agree with them when they use general presuppositions
- There are many kinds of attacks, but once you know how to answer a few, you can answer all of them

Full Summary

About The Author: Suzette Elgin was an American linguist and science fiction author. She also authored non-fiction books and products, focusing on communication and verbal self-defense.

Principles of Verbal Self-Defense

These are the overarching principles you need to learn for effective verbal self-defense:

#1. Know You're Under Attack

Many people don't know when they are being victimized and instead, blame themselves for being too sensitive.

This is because the attacker often is not physically threatening or because he uses double-binding techniques. This is an example of a double-binding technique:

> **Verbal manipulator**: It's not your fault if you don't have any sense of humor, I would be the same in your situation

Now if you get snippy and angry, you do validate his statement.

How do you know when you're under a verbal attack?
Simple: listen to how you feel.

#2. Know What Kind of Attack You're Facing

This requires some experience and knowledge of the different types of verbal attacks.

#3. Fit Your Defense to The Attack

This requires some experience, knowledge, and training in verbal self-defense.

#4. Know How to Follow Through

This is about actually putting the strategy to work.
Some people know what they *should* do, but they don't do it.

Instead, they plunge head-on with their feelings and overreact, while some others do nothing and let the bullies run them over.

Verbal Attackers Want to Get Your Reaction

Suzette Elgin says that verbal attackers get a kick out of getting a reaction out of you.

Sometimes it's power-hungry men who are addicted to the sense of power that comes from stirring people's emotions.

Ben Shapiro uses the "get under your skin" technique:

Ben Shapiro is a great case study to learn verbal bullying techniques.

Types of People Acting & Reacting to Verbal Bullying

People fall into different categories during verbal attacks, including:

Blamer: they use words such as "always", "never", and "everybody". They accuse, sometimes talk louder, and wiggle their fingers.
They look confident, domineering, and powerful. But it's because they're insecure that they feel they need to use that aggressive style.

Placator: they use words and body language that express a desperate desire to please.
This is typical *nice guy syndrome*.

Computer: neutral. They don't use "you" or "I" and speak in instructions.

Distracting: they switch from one mode to the other

Respond in Same Sensory Modes

You should answer the attack using the same sensory mode as the attacker (ie.: sight, hearing, feeling).

Agree to Defuse The Attack

When the attacker uses general language, such as "everybody knows that X is done that way" or "anyone who cared about the budget would not throw money around".

And you reply:

> **You**: You're absolutely right

Or:

> **You**: That's true indeed

That takes the wind out of the attackers' sails.

Rules of Engagement

Whenever you are attacked:

1. Ignore the bait
2. Respond to the presupposed attack
3. Send the message you're not playing their game

The "Even You" Attack

Example of an "even" attack:

> **Verbal Bully**: Even a woman can understand that

Everything coming after "even" here is supposedly inferior. Taking the bait here would mean replying "listen, I can understand here as good as any man on this team".

A few good replies:

> **You**: The idea that women are somewhat inferior has been put to rest since a long time, but I'm really astonished of hearing it from you

Or

> **You**: When did you feel I wasn't meeting your standards

Avoid "why" or "what makes you think" because you give the attacker a chance to keep attacking.

Never Give an Order

… If you can send the message in any other way.
This is the same principle as in *Never Split The Difference*, and it's based on the idea that people don't like being told what to do.

Smart Use of Proposition

If you must ask a silly question, don't say:

> I know this is a silly question and I'm sorry I need ask it, but what did we decide on…

But say:

> I know this is a silly question and I'm sorry I need ask it, what did we decide on…

Might seem a small change without the "but", but it makes a big difference.

Real-Life Applications

Don't Take Ownership of The Offense
Same as in Verbal Judo, one of the core principles of verbal self-defense is that you should avoid putting your ego on the line. Refuse to take ownership of the offense.
Lots of verbal attackers take pleasure in getting under your skin: it makes them feel powerful. Don't give them that satisfaction.
Note: however, you must respond to direct public offenses or you look weak.

CONS

Time Has Passed
There are cassettes being sold of "The Gentle Art of Verbal Self-Defense". And they go at 89 Dollars. That's a sign that the book has been around for a while.

Examples Are Less Culturally Relevant
Some of the verbal abuse made fun of women, saying things such as "even a woman would know how to do that". Today that stuff would get the bully in trouble very quickly.

Off-Topic
The book strays from its original goal of teaching people how to verbally defend themselves.

PROS

Some Good Wisdom
Some of the recommendations are very good and I took away some good wisdom.

Review

The Gentle Art of Self-Defense is a good book, but it wasn't "biting" enough for me.
It lets the attackers too easily off the hook in my opinion.

Yes, many times you don't want to react, and almost never you want to overreact. But sometimes you must push back because the attacker is trying to shame you, dominate you, or use you for social climbing.

In those cases, you must go on the offensive. And the book doesn't deal with those situations.

Science of Dating Well: Background

Love, sex, romance… Relationships.. Feelings
Some of what makes life worth living.

Conventional wisdom says that it's difficult to analyze this stuff with numbers.

And well, it might be. But that's not an excuse to shun science and data.
Because without any data, we only have personal opinions and platitudes left.

Which is exactly what most dating resources do: share advice which is fully based on opinions and almost completely devoid of any science or data.

Some of the most popular opinions in the women's dating literature for example:

1. let him wait for sex
2. let him invest (so you get the serious guys)
3. Let him do all the dating (it's the man's job)
4. let him chase you (men are naturally hunters)
5. buy her things (women like money)
6. don't buy her things (or you look like a provider while you should be a lover)

This article will present studies and numbers showing how these popular suggestions only apply in some specific circumstances.

Sexual Market Value: Supply & Demand

The gender ratio split, such as if a sexual market place has more female or males, has a huge impact on the behavior of the males and females in the population.

As we will see the impacts are so large that it influences not just dating behavior, but also cultural norms.

We will start with a few animal examples first, but don't worry: I'm not wasting time with random zoology here, the same principle applies to humans.

More Females = Less Male Commitment

Cichlids are fishes that, similarly to humans, nurture their offspring together until the children can live on their own without parents.
However, also similarly to humans, the offspring can sometimes survive just with the help of their mothers.
And also like humans, fathers sometimes deserted their mothers after birth.

Therefore cichlids made a very good subject for experimenting on gender ratio.

Mart Gross, professor of ecology and evolutionary biology at the University of Toronto, writes in The Evolution of Parental Care:

> Males increasingly deserted their mates and the young in their care as the opportunity to remate increased in their environment

Basically, it means that males adopted more of a "player's strategy" by having sex and then moving on when there were more females around.

The same is also true for humans, as Anthony Walsh concludes in *Love: The Biology Behind the Heart*:

> Across a huge variety of species, from lobsters to humans, the sex ratio in a breeding population is the most important environmental factor affecting mating patterns in nominally monogamous species

Now what happens when there are more males instead?

More Males = Females Get Choosier

The consensus seems to be that male behavior is more strongly affected by gender ration.

However, females also become change their dating behavior when they can have their pick of the litter.

In dating environments where the male does not help raising the offspring, females pick the healthiest, strongest mates (or, in the case of humans, more attractive).

In dating environment where men do help raising the offspring though, she also looks at the resources.
Biologists Neff and Pitcher indeed says:

> It's been relatively straightforward to show that females prefer mates who bring the most resources.

Bottom line: when there are lots of men, men need to bring the goods to the table. They need to provide and prove themselves.

More Men = Courtship & Romance

Gender ratio changes whole cultures!

Harvard Psychology professor Marcia Guttentag in her seminal book *Too Many Women* shows that societies with more men emphasize romance and courtship.

This is probably because since men must compete for women, they make a bigger show of how much of a great provider and committed individual they can be (and data shows they work harder and make larger debts too).

Also the arts shift towards romance, courtship and female veneration. Artists paint idealized versions of women and, basically, put them on a pedestal.

Men who want to learn how to date well in environments with lots of women learn the art of being a gentleman. Ideal lovers, like Rudolph Valentino.

But here is the clincher!

Women Become Prized Possessions

It's not a game.
Men actually *do* value women more and appreciate their wives and girlfriends more (John Kim, 2013). They have a tendency to "lock down" their partners and defend them, and in these societies women tend to take more traditional roles at home.

More Women = Libertine Culture

But what happens now when there are more women instead.

Well, a lot happens.

Less Commitment & More Sex

Men commit less in the presence of many women.
And a culture of free sex and libertine values takes hold.

The current culture of college hookups might indeed be a consequence of an abundance of women in the sexual marketplace.
Jon Birger uses plenty of data and anecdotal evidence indeed that in college with fewer women there is no hookup culture.

Note:
there is a common idea widespread these days that the cultural values move from rigid to libertine to eventually circle back to rigid.
I don't believe in the "inevitability" of cultural shifts, and this view is severely limited by not taking into account the gender ratio.

When Men Are Scarce Women Care Less About His Looks

When men are scarce women care less about men's looks and focus more on the looks *of other women*. Such as, they shift their focus less on looking for the perfect mate and more on the competition.

If you are in an environment with lots of women, you have probably experienced it yourself. Women become much more critical of each other.

Especially, women become critical of feminine women, which they tend to shame because they represent the biggest threat in the dating market (also read feminine women VS independent women).

Women prioritize career when men are scarce

Researcher Kristina Durante concludes that:

> Whether a woman chooses a briefcase or a baby— whether she invests heavily in a career or in starting a family—is related to the local mating ecology and the availability of mates.

It makes sense after all. If finding a stable man willing to put on family is difficult, putting more energies into a career is a logical choice.
And partially, in my opinion, it's also an ego protecting mechanism (ie.: instead of risking to pursue a man and a family and not making, I turn it down first).

Feminism Rises

Marcia Guttentag's theorizes -and backs up with data- that feminist movements are energized by oversupplies of women.

Why is that so.

Because women come to depend on finicky and commitment-phobic men for a relationship.
But not to come to depend on men for everything else in life, they at least fight to win more independence in the social, political and economic arena.

Dating Markets Women Should Avoid

What does this all mean to you?

It means that, if you want to settle down or have easier access to member of the opposite sex without even needing how to date, it will pay off big time if you're an environment that is under-supplied by members of your own sex.

Difficult Markets for Women

When there are many women, the sexual market value of women goes down and men commit less.

If you are interested in dating more on your terms and/or finding a committed partner, it might be a good idea to avoid the markets with an oversupply of women.

Here are some of them:

1. Russia & EX URSS Countries

All the top 5 biggest alcohol consuming countries are located in the ex URSS (Wikipedia).

Italy in comparison is in place 87.
And while 65% of alcohol drinks in Italy are wine, in Russia more than half of the alcohol consumption is spirits.

What does that mean?
Lots of alcoholics.
In Belarus a whopping 11% of the population is physically dependent on alcohol.
Alcoholics are not gender neutral now. Most of them are men.

That leaves lots of women, chasing fewer eligible bachelors.

Have you ever wondered why Eastern and Russian women have a stereotype for being more feminine and attentive to their looks?
Now you may know why…

- **How to be feminine**

2. Big Cities

Lena Edlund in a paper called Sex and the City shows that urban areas see a bigger inflow of young women than young men.
Young men go to the city because of higher wages. Same for women. But also unskilled women move to the city, potentially looking for high earners.

That also means that well off male city dwellers have even more options that they would have otherwise.

This is statically significant because men have a much smaller propensity to pursue women based on their income and women a much smaller propensity of enjoying and pairing up with men who are below their socio-economic level.

3. College Degree Cohort

If you are a smart and driven woman, chances are that you are in a difficult market.

In the last decades women, by and large, have been overtaking men. In 1994 more women received a bachelor degree or higher.
And the disparity has only grown since then.

Nobody told them of the gender gap yet

4. Religious Groups

In the West women tend to be more devout than men and men tend to leave organized religions more frequently than women.
That means that church groups often see more women than men.

5. Thailand / Philippines

Everywhere there are more gay men than lesbian women.

However, in some places in the world a significantly large percentage of the male population crosses into gay/transexual.
Sometimes to the point of being indistinguishable from women (here's how to recognize ladyboys).

Not only these are men that disappear from the man's cohort, but they move into the women cohort chasing other men.

Difficult Markets for Men

And these are the sexual marketplaces that tend to favor women to the detriment of men:

1. Italy / Latin America

Italian men tend to take care of themselves much more than the average.
And they tend to be more forward with their dating.
The same can be said for some other Latin sexual marketplaces.

2. China

Decades of one child policy with a strong bias for male children led to a population with an oversupply of men.
Why do you think Chinese men must own a flat to date well? And why can Chinese women inquire about what the men own?
Because women have their pick.
Some commentators even say the Chinese economic boom is partly fueled by men trying to acquire goods that they can exchange on the sexual marketplace.

3. Technical Universities

Except of architecture which is already mostly women in many places, most technical universities are oversupplied with guys.

4. Tech Sectors

If you want to date well, stay away from silicon valley, tech startups and developers-centric companies. Go into HR instead.

Also read:

- **Sexual market value hacks**

The Women Quality Oversupply

Today all across the west there is a consistent, higher number of women obtaining college degree as compared to men.

The issue with that is that women don't like "marrying down" with men who are less educated and/or driven than they are.
Some studies show that would be easier for women if he had a good blue collar job with a sizable income. But as we know, blue collar jobs are disappearing…

This is true for most Western countries and it offers a good explanation as to why we see a decline in marriage rates among college-educated women.

The college gender gap is even wider among blacks

Men Should Be Masculine… But Not Too Much

Most people reading around here probably already know basic stuff such as:

- Deeper voice in men is attractive
- Beard is attractive
- Good body / muscle is attractive

These are all signs of masculinity. And, on average, they are attractive.
What most are less aware of though is that there is an upper bound. This Oxford paper titled "Lover or a fighter" reveals:

> Men's vocal attractiveness peaked at around 96 Hz. Beard growth had equivocal effects on attractiveness judgments. In contrast, perceptions of men's dominance simply increased with increasing masculinity (i.e., with lower-pitched voices and greater beard growth).
> Together, these results suggest that the optimal level of physical masculinity might differ depending on whether the outcome is social dominance or mate attraction.

Fascinating stuff.

The paper basically says that women want "mannish man"… Up to a certain point.
However other men keep assigning higher dominance level to manlier man without an upper limit.

People who know a bid about seduction knew that androgyny and some feminine traits on an otherwise attractive man can be very attractive (also read The Art of Seduction).

But this paper backs the idea that too much manliness is a turn off.
Why is that so?

Hard to say, and I recommend you distrust "ad-hoc" evolutionary explanations.
However, it could be that it's because very high testosterone is associated with men abandoning women.

Masculine Men Make for Bad Partners

Men with higher testosterone have been shown to:

- Marry less
- Cheat more
- Divorce more
- Make for general lower quality marriages (hitting, squabbles etc.)

Read Booth and Dabbs 1993.

Me love you long time (and then move on)

Who's More Romantic? Men Are

Most people believe that women are more romantic than men.
Yet studies show that men tend to be more romantic than women.

Why is that so?
Partially it's good old numbers. Women, on average, have more readily available options than men.
And men with little options tend to idealize and fantasize about women. White-knighting, treating them well and all that.

Partially, of course, it's also cultural.
And culturally it's more OK for women to embrace romanticism and it's less OK for men to do so.

Men still do it, but you don't see it.
You see women with their screensavers of Brad Pitt and posters of Johnny Depp -how come Depp is so more popular than Pitt by the way?-.
And you equally have men who pine after Catherine Zeta Jones' lips or dream of embracing Scarlett Johansson salacious figure before going to bed… But they don't say it and they hide their dreams.

Also, there is a major difference between men and women when it comes to romanticism. Women are eminently realistic. They might start a relationship that they adore him and romanticize about him… But they will soon grow restless if the relationship doesn't progress and he doesn't deliver the goods -from lover to more serious to official to babies-.
Men instead can keep idealizing a woman for the whole length of the relationship.

However, in my experience, women tend to idealize men harder and stronger when he allows her to take over the very feminine and submissive role in the relationship. That's when you will see women with puppy eyes and star in the eyes.

But, again, that often doesn't last forever.

Are Men Intimidated By Smart Women?

Men are intimidated by smart and successful women.

I bet you heard that a few times.

And men prefer dumb women.
You probably heard that too a few times.

But is it true?

It turns out, that it's not true that man want stupid women.

Indeed an increase in intelligence makes the woman more appealing.
However, there is an upper limit.
When he perceives her to be *too* intelligent, then her overall appeal does indeed decrease. And that limit is not that high. Around a 7/10 in perceived intelligence.

Man will *say* they like intelligent women. Even smarter than they are.
But in reality, they are *less* romantically attracted to them.
And *especially* so if the women are smarter than them (Park et. al., 2015).

Basically, men like intelligent women. But not so much very intelligent women. And especially women who are smarter than they are.
Determining why, Robert Burris says, it's not as easy though. But yes, it might be the good old ego thing.

Example

Ted in How I Met Your Mother didn't particularly appreciate a woman overplaying the dumb side:

Also read:

- **Dating for successful women**

It's the opposite for women:

Women Like Smart Men. And Handsome. As Much As Possible

For women instead there is no upper bound.
Women always preferred men who were smarter and more attractive.

And while women show a preference for looks over intelligence, women measure the two against each other. That means that a not so attractive man still has a chance if he is intelligent.

The Eligible Bachelor Paradox

Have you ever noticed that some very smart, articulate and often even attractive women remains bachelors?
And other less attractive and generally less

Why is that so?

Well, Mark Gimein provides an explanation with auction theory. He calls it "The Eligible Bachelor Paradox".
Gimein says that in auction theory -and in real life as well- weak bidders win the auction more often than strong

bidders.

In human dating terms, that means that women with less to offer end up with a mate more quickly and reliably than women with lots to offer (lots to offer = confident they can find a mate).

Why?

It's because the weak bidders, as we have seen before, focus more on the competition.
They know they can be outgunned and they are more in a rush to secure a win (ie.: a mate).

The strong daters instead wait around for Mr. Perfect. But in real life Mr. Perfect rarely shows up.

Bad, bad strategy.

Hurry! Difficult Markets Get Worse Over Time

The problem with waiting around is that gender imbalanced don't stay the same. But, just like a game of musical chairs, they get worse over time.

What happens is that while she awaits for Mr. Perfect, all Mr. Good Enough get scooped up by the more aggressive daters.

And she is left at 40 without any single good prospect around.

Hollywood Crates Unrealistic Expectations?

You've heard it before.

People -especially men who are more visual creatures- are now so used to airbrushed women, fake boobs and

plastic faces that they can't appreciate "real" women anymore.

That leads to unrealistic expectations that impairs their ability of loving and appreciating "real women".

But… Is it true?

Turns out, sadly… That might really be the case.

Douglas Kenrick and Sara Gutierres asked male college students to rate the attractiveness of potential blind dates after and before watching an episode of “Charlie’s Angels”.
The men rated the much more “real” potential dates as far less attractive.

A follow-up study exposed men to picture of female models or modern art.
The men who saw female models’ picture answered that they were less in love with their wives as compared to the men who saw pictures of modern art.

Advice for Men

Get more realistic about your expectations.
Most women grow hair when unshaven and, without bashing anyone, also actresses are much, much plainer without all make up.

The Paradox of Choice

The Paradox of Choice is a book I deeply enjoyed and even put it in the top 10 best self help books.

Barry Schwarz proves, with data and research, that when we have a lot of options we often don’t make any choice.
And when we make one, we tend to be less happy than if we had no choice at all.

The Paradox of Choice connects well with auction theory and further expands it.
In today’s society, with social media and online dating, everyone feels as if we were drowning in a sea of options.

How to Date Against The Paradox of Choice

Pick one and work on it.
People who pick and stick with an option and work on it are happier and more fulfilled.

Not sure… I’ll just wait

The Carol Syndrome

Is it true that very beautiful women don’t get approached much?

Yes.

José-Manuel Rey developed a mathematical model to prove it.
He says that when a man sees a beautiful woman, he runs the following paradigm in his mind:

1. She's beautiful
2. Many men want her
3. My chances are low
4. I will protect my ego and don't try at all

The key concept of The Carol Syndrome is that dating doesn't happen in a vacuum, and that all players considers his options in relation to other players.

Since we are all social creatures, this does make sense. And plenty of anecdotal evidence seems to support it.

High and Low Competition Markets

If we look at how often men reproduced in the past, we can get an idea of how competitive a market is for men.

When lots of men passed their genes, we can assess that a region is:

- Low in competition (every man got a shot)
- High in monogamy

When few men passed their genes, we can assess that a region is instead more towards polyamory and higher in sexual competition.

This female to male breeding ratio paper shows us that:

- In East Asia 91% of men have reproduced
- In Europe 77%
- In Africa 71%

There are no figures for India, but if we look at a Durex poll from 2005 India is one of the most sexually conservative places in the world.
The arranged marriages and few divorces leaves Indians with little comparative experience in the dating marketplace when they're outside of India.

What Does It Mean

These figures mean that, theoretically, guys going from high competition markets to lower competition markets might bring with them a higher level of training.
That's far from a given though, since men from high competition markets might have as well *not* have trained at all.

It does mean though, with a higher degree of reliability, that men from low competition markets will fare, on average, poorly in higher competition markets.

For a woman looking for a stable relationship, an environment with lower competitions is might be better.

My note:
These numbers left me scratching my head a bit.
Black women seem more protective of their men, which fits into the paradigm of more philandering men.
But traveling to Africa I have found it to be one of the easiest place to meet women and get laid. Black women are also warmer on approach than most other women. Also in Europe.
And they seem to play less unavailable games (and games in general) and help men along the dating process.

Everything I have researched made sense to me. Just this one is a conundrum I have yet to solve.

The Strongest Currency: Sex

> Women Give Sex For Stuff – Men Give Stuff For Sex

You have probably heard the story of Weinstein and how he asked for sex in exchange for help.
Now, let's be clear, that guy is disgusting.
His takes sleazy to a whole new level.

However, what he was engaging is nothing more than has been going for a long time. And women have been doing the same as well.

The difference is that women trade sex -or the hint of sex- to get stuff. And men trade stuff and favors for sexual favors.
Books such as Goal Digger Guide even teach women how to get stuff from men.

Daniel Kruger puts this theory, and something we all instinctively knew, on a research paper here.
The fact that there are far more women selling sex and far more men buying sex is also proof of how sex is traded in the sexual marketplace.

Are We Monogamous?

Are humans monogamous?
It's a fair question.

In short, evolutionary psychology tells us that we are "in between monogamous and polyamourous". We form pair-bonds, with the occasional cheating.

We can clearly see it in our behaviors.
Male humans do invest time and resources in the offspring, which is a crucial aspect of monogamy. But most of us know of instances of cheating around us, too.
In the scale of male parental investment, we are around the middle in the animal kingdom (The Moral Animal).

To make it short, humans have a tendency for monogamy. But also a tendency to cheat and move from

monogamous partner to another.

As we have seen before, the gender ration split also influence how monogamous couples are (more men means more monogamy).

Contrary to popular beliefs gorillas and silver-back have very small penises and minuscules testicles. This is the case because gorillas have their mating warfare at a physical level. *Not* at a sperm level.
Once they win the battle with other males, their females are theirs and they won't stray.
So they don't need much sperm (genitals) or to place their sperm deeper inside (long penises).
Obviously, we are different.

Pareto Law in Dating

CDC data and an ABC News Poll show that sexual partners are more evenly distributed among women than among men.

Albeit the polls show that there aren't that many men who are getting nothing, there is indeed a tendency for a few men to have much more sex than most others.

Note: I wouldn't personally trust self-reported data on surveys. Especially when it comes to sex. However Gladwelll in The Tipping Point makes a good case with data that is harder to lie about: sexually transmitted diseases.
And those show that a few "super infectors" were responsible for the bulk of a virus' spread.

This study by OKCupid showed that women are much, much harsher than men when it comes to scoring the opposite sex.
In that sample women rated 80% of men below average.

All seem to point to women having sky high standards.
Maybe too high?

What It Means To You

Many women complain that men don't want to settle down.
I suspect this is because many women disproportionately go for the top guys who, indeed, tend to settle down much less than more "regular" guys.

While this is certainly not true for everyone, either men or women, it might make sense for women to start considering a broader range of men.

Probably, considering that they actually rate men wrong the whole time…

Women Are Bad at Assessing Men

Based on lots of empirical evidence, I can tell you that women rate men wrong *all the time*.
Both in terms of short term and long term mate potential.

1 enjoys every moment; 1 thinks I'm a weirdo (the former was also much more attractive, so it's not all a question of SMV)
A woman I have never been intimate with basically proposes herself sexually to me in the belief that there is a queue of women wanting to have sex with me.
Another other woman whom I met at a parade and with whom I thought we had a good time together never replied.
And this other woman blocked me right away.

This girl I had a date with "enjoys every moment with me".
And this other woman never wants to see me again "after my very inappropriate behavior".

This ex girlfriend of mine believes I can get all the girls I want.
While another short fling told me in person she regretted it ever having done it with me (a very low point of my life BTW).

How does the same person go from top sperm donor to weirdo? And from guy who can get any girl to guy who doesn't deserve a reply?
He didn't go anywhere!
Women are simply terrible at estimating men's potential upon brief interactions.

The line between sexy and "go away" is so extremely easy to cross that most people wouldn't believe it until they actually experience it (or until evidence is provided like in this post).

I have approached women who reacted star-struck, and some other times like I had leper.

Over the longer term though, patterns start to emerge.
In short: women are terrible at assessing potential in the short term.

But over the long term women's assessments and reality start to align better.

2 think I'm the best; 2 block me

What It Means to You

Bottom line:

1. Do not rely on first blush impressions
2. If you're looking for a relationship, give some "weirdos" and "poor prospects" more leeway
3. Don't believe the first impressions of sexy guys: often they're not that better than normal ones

First impressions are by far the easiest to sway and the easiest to get wrong.
Players and womanizers are also the best at faking positive first impressions. And often they have little to show for except that they put women on a higher priority in their life -while the rest of their lives suffer-.

Attachment Theory: How Women Miss Emotionally Available Men

Are women passing up the best men for a relationship?

No scientific how to date guide could be complete without a look at attachment theory.
And attachment theory says that indeed many women do are passing up the best men and highest quality men for a relationship.

Amir Levin, author of *Attached*, says that some women, and especially women with an anxious attachment style, confuse an activated attachment system with love.

What does that mean, in practical terms?

It means that when women cannot get enough of their partner/fling, they confuse their craving for more time together as love.
But it's not love, it's simply that her emotional needs are not being met.

Basically: (emotionally) **unavailable men give women the *false* belief that they are in love**.

This means that women often end up with men with an avoidant attachment style, and that rarely makes for very good relationships.
And what happens when these women meet men with a secure attachment?

Men with a secure attachment tend to be higher quality men. They are more emotionally stable and they are comfortable giving intimacy and asking for it.
However, they are also more *available*, and they give women less emotional roller coaster.
And women who are used to emotional roller coasters find more stable men boring.
So when they meet a high quality, secure men, they mistakenly believe there is no chemistry. Which is wrong: most of the times love is developed over time.

Genders and Attachment Styles

Note: the opposite can also happen. Such as that men confuse an activated attachment system for love,. The movie 500 Days of Summer is the example of a man who falls madly in love with an unavailable woman.
But it's a bit less common.

Ultimatum Games & Dating

Nobody that I am aware of has yet applied ultimatum games to dating.

Which is highly surprising, since ultimatums can be a great tool to force a decision for the many "sticky topics" that often happen in dating, such as:

- Commit or leave
- Marry me or leave
- Make me a baby or leave

What's the popular dating advice here?
Some popular authors say you must ask for commitment. Some others recommend women never to ask men for commitment.
The latter is very bad advice.

Research on Ultimatums

John Molloy, author of *Why Men Marry Some Women and Not Others*, assembled a team to interview 3,000 couples right after they got married.

60% of the recently married women said they were ready to walk away if their men were not ready to get married.

Note: Molloy's research is not a final proof that "ultimatums" and demands for commitment work.
However, I consider it to be a strong indicator for something that makes logical sense: that feigning disinterest in a commitment, marriage and "official status" is not a good strategy.

Why Ultimatums Works

Jon Birger in his wonderful *DateOnomics* makes the point that ultimatum work because they create scarcity (one of Cialdini's principles of influence).
I am not convinced about the scarcity principle in this case. I think demanding commitment work in part because of the threat, but also because demands increase the woman's value.

A woman who demands commitment indeed is also making a statement that she is a woman who expects to receive, and that is an indicator of value, confidence, and market value (because she believes she can get commitment from

someone else).
Also, it raises her value by placing her closer to the Madonna in the Madonna-whore dichotomy. And men love that.

You Must Follow Through

All the best negotiators (*Secrets of Power Negotiating, Never Split the Difference*) will tell you that if you don't follow through on ultimatums you lose almost all of your power.

Basically:

If you make an ultimatum, you must be ready to follow through.

What We Learned so Far

Here is how all this information translates to you:

- **Men Won't Necessarily Chase You**

Dating book best sellers tell you that you have to let men chase. Because they are hunters.
Not fully true.
Yes men do pursue and romance… When there are more women in the environment!
Otherwise men, like all human beings, have an ego and enjoy women who return their love and fervor.
Read more in: the myth of the chase.

Hunters at heart… Or just few preys?

- **Men end up with what's available**

All human beings have a tendency to follow the path of last resistance.
And when there are lots of women available -but even when there aren't that many-, men to end up with what's available and easier for them.

- **Men approach very beautiful women less**

Because they think she must be too difficult and their chances must be low.

- **Asking for commitment seems to work**

Not asking for commitment on the other hand favor the men: they get what they want without having to commit.

- **A few men get most of the sex**

The sexual marketplace seems to be a market where the Pareto law applies. Women are more evenly distributed and guys are more skewed towards a few big sex takers.

How to Date Effectively: Results

Bottom line.

WIIFY.
What does this all mean for you?

1. Don't Let Him Do All The Work

We have seen that the advice of "letting him chase" is meaningless unless we also look at the environment.

Making him chase you works. And it works great. IF the culture is one of courtship, women idealization and if men outnumber women (the two overlap as we have seen).

If that's not the case:

2. Date Assertively

Auction theory shows that women who date assertively pair up with men more frequently and more reliably.

Dating assertively of course does not mean to be masculine and/or to lead the dating dance. You still have to be feminine.

Dating assertively means to swap the culture of "feign disinterest, let him chase and invest as much as possible" to one of "show up and help him move the interaction along".

3. Consider Guys Without a Degree

Women show a strong reluctance to "marry down". And that so far has included men who don't hold a degree.

Women with a degree should probably be well served by considering also the pool of non college-degree men, where men are struggling with an oversupply of males.

This is especially true for cohorts where the gap is even wider, like black women.

4. Give More More Men More Chances

Ie.: stop only focusing on the top 10%.

The data shows what we instinctively know is true: the manliest men and the men with most options commit less and cheat more. And if you manage to settle with one, data also show they make for worse relationships.

Of course, if you are looking for fun, go after whoever strikes your fancy.

But if you are looking for commitment, you are probably well served by giving more men more chances and looking for more diamonds in the rough.

5. Settle Down Early

If you are in a difficult market, it's a mathematical certainty that things will only get worse.
Then, it can pay off to make an effort to settle down early.

6. Ask for Commitment

This article makes the point -through data- that “letting him chase, invest & wait” does not work in environments with an overabundance of women.

However, “have sex with him and never ask for anything” is not the solution. That does not work either.

Instead, ask for commitment.
There is no data as to how/when to ask for commitment.

7. Pick Environments With Good Gender Ratio

If you’re a woman, date in environments with more men (and the opposite for men).
Or consider countries where your traits are more in demand.

And if you want a relationship, countrysides are better than cities.

8. Make Yourself Easy to Approach

The Carol Paradox, or the idea that beautiful women are pursued less applies to beautiful women. But the truth is that all men are scared of rejection with *all* types of women.

The easier you make it for men to approach you, the more opportunity you will have.
Leil Lowndes says that men miss most female approach signals, which are too subtle for them. The solution?

- Look more welcoming (smile more)
- Make your signals more obvious
- Position yourself near him

Overview

- Sociopaths are relatively common (around 1 in 25 in the US) and they are often difficult to spot
- Stop making excuses for bad people: some people have no conscience and you better know how to deal with them
- Sociopaths see the world as a big game where they want to attain power and domination

Overview

About the Author:
Martha Stout is an American psychologist. She completed her psychology training at the McLean Psychiatric Hospital and obtained her Ph.D. at Stony Brook University.
She served on the clinical faculty of the Harvard Medical School and works in private practice as a clinical psychologist.

Introduction

Not all sociopaths are violent and go on a killing spree. Most of them are not that conspicuous.
Most of them live among you and me.

Traits of a Sociopath

The American Psychiatric Association defines a sociopath as someone who possesses three of the following seven traits:

1. Failure to conform to social norms
2. Manipulativeness and deceitfulness
3. Impulsivity and failure to plan ahead
4. Irritability and aggressiveness
5. Recklessness, disregard for the safety of self and others
6. Consistent irresponsibility
7. Lack of remorse

The author adds superficial charm, which allows the sociopath to seem a captivating, normal individual with a gift for getting what he wants through social seduction or actual seduction.

I highly recommend this article on sociopath's sexual strategies and manipulation techniques:

> Psychopaths' Sexual Strategy: Marauders of Sex

Sociopaths Lack Conscience

The author makes the point that the real biggest difference between sociopaths and others is conscience.
Sociopaths don't have a conscience.

My Note:
After some personal research, some sources say that sociopaths can develop a bond and may feel hurt and remorse for hurting someone they have a bond with (contrary to psychopaths).
And WebMD says that sociopaths have a "weak conscience" (contrary to psychopaths).

Some People Are Evil: Don't Make Excuses For Them

Martha Stout says that we often make excuses for people committing crimes.
We say it was the family of origin, a poor background, or a lack of options.

Most people fail to even think that sometimes malicious sociopaths can hide behind a socially recognized authority to cause harm.
We wouldn't think, for example, that a psychologist or a doctor might actively harm patients.
If it happens, we might even make excuses for them rather than think there must be something wrong with those people.

Similarly, good people are often the first to think and say that we all have a dark side. And that given the situation, we are all capable of unspeakable things.
But the author rejects this notion.
Stout says that sometimes we almost seem too fearful in simply admitting that some people are evil because of a lack of conscience.

Note:

Stout is right. Some psychologists even went as far as to say that “heroes” and evil are twigs of the same tree. That is not true, and if you’re interested check out my article Good & Evil.

> **Some people are just bad and evil. Stop with the relativism**

Power & Dominance Motivates Sociopaths

The author says that sociopaths want to win and dominate.
They like approaching life like a big game where other people are like pieces on a chessboard.

Sociopaths crave control over others. When they can diminish others and make them feel bad, the sociopath is happy.

My Note:
Indeed, if you read “Confessions of A Sociopath“, the author says she likes “ruining people”.

Do Sociopaths Know They’re Sociopaths?

Yes, but they see nothing wrong with it.
In fact, they often feel superior.

My Note:
Well, I’m sure that many of them went through their lives for quite some time before realizing they were sociopaths.

Sociopaths Can Have (Some) Emotions

Sociopaths can feel emotions.
Sometimes they are envious of others for having a conscience and a wider breadth of emotions and feelings.
And when they are envious of others, it’s possible they might want to destroy them.

The author says sociopaths feel “primitive affective reactions” resulting from immediate pain and pleasure and short-term successes and frustrations.

Sociopaths do get into relationships, but they don’t really love.
They can learn to fake emotions but don’t really feel them.

When Normal People Behave Like Sociopaths

Sometimes normal people can ditch their conscience.

Our conscience indeed binds to other people who also have a conscience. But in the presence of war criminals, sex offenders, and terrorists, we often disconnect our conscience.

These “monsters” are depersonalized. They become “it”, and everything goes against them.

Depersonalization also happens when a “us VS them” mentality takes hold. And sociopaths who gain control of tribes, societies, or nations can leverage them to commit atrocities.
We become the good people, they become the “its”, the enemies we must destroy.
And everything goes.

Also, read:

- Evil
- The Lucifer Effect
- Successful psychopathy

Why Do We Allow Sociopaths to Be Our Leaders

Martha Stout asks how come over and over in history, people allowed sociopaths to wreak havoc.

She says part of the reason is that the enemies become "it" when the rhetoric of the "monster on the other side of the fence" takes over.
Part is because we look around and see that nobody else is complaining (this is called the Spiral of Silence BTW), or we get resigned to "it's just how it is" or "it's how politics is".

But most of all, The Sociopath Next Door makes the point, we are programmed to obey authority. Even against our own conscience.

Authority Trumps Conscience

The author introduces the famous Milgram experiment.

The Milgram experiment shows that a figure of authority giving us order can trump our conscience and make us do things that we wouldn't otherwise do.

In the experiment, two-thirds of the participants administered highly painful electric shocks to people just because an authority figure in a white overcoat insisted they did so.

Our inborn tendency to obey authority serves the sociopaths of the world very well, Martha Stout says.
And that's why later in the book she encourages people to question authority more often.

Education is The Antidote

The author says that education is a good antidote to the tendency to blindly follow authority.

Not because education per se educates us to be better human beings, but because **someone who regards himself as an equal to the authority is less likely to blindly follow that authority**.

Indeed, when it was an ordinary man instead of a scientist to order the electric shocks, the obedience went down from 62.5% to 20%.

Note: our obedience also depends on how physically close we are to the figure of authority.
The farther away the figure of authority, the less people are likely to obey, for example, a "fire" order.

Historical Sociopaths (Sexual) Conquests

The author talks about sociopathic conquerors of the past, like Genghis Khan.

Once they conquered a new city the Mongols sometimes slaughtered the local population and had sex with the local women.

The authors say that 8% of the men living in the region of the former Mongol empire carry the same Y chromosome. That's 16 million people who live today as a result of Genghis Khan's legacy of genocide and mass rape.

Covetous Sociopaths: The Worst Kind

Covetous sociopaths are sociopaths who crave other people's belongings.

Not just things though, but they can be jealous of success, intelligence, or looks.

These people believe nature has slighted them, and if they can't enjoy what others have, neither should others be able to enjoy them.
And retribution becomes their goal.

Sometimes the victims haven't done anything against the sociopaths, and they are incredulous when a sociopath is attacking or sabotaging them.

What Causes Sociopathy?

Sociopathy is partly inborn. Up to 50%, to be precise.
What the other factors are, we don't know too well as of today, but these are some likely causes:

1. Childhood Abuse

Some research went into childhood abuse, but the results are inconsistent.
Childhood abuse does not seem to cause sociopathy.

2. Attachment Styles

Attachment styles have also been explored.

And a complete lack of parental care can cause incredible neediness (anxious attachment style) and the inability to form intimate relationships with others.
People with a total lack of parental care do have something in common with sociopaths, but they are not Machiavellian, charming, or charismatic.
They are simply indifferent and hostile (read Romanian Orphans and get the book for more information, this was an appalling and eye-opening story).

3. Local Culture

Marta Stout says that the overall culture has a strong influence on the incidence of sociopathy.

Eastern regions, with a more social culture of collectiveness, have much fewer sociopaths than the West, where the culture is more individualistic.
For example, in Taiwan, less than 0,2% of the population can be diagnosed as sociopaths, VS 4% in the US.

Rules to Survive a Sociopath

Martha Stout introduces 13 rules to deal with a sociopath:

1. Accept that sociopaths exist
2. Trust your instincts above what people say
3. Don't be too open to those who haven't gained your full trust
4. Question authority
5. Suspect flattery
6. Don't mix fear with respect. If they try to scare you into something they're not good leaders
7. Don't try to beat them at their own game
8. Cut contact
9. Sociopaths play the pity game: don't let your conscience succumb to people without a conscience
10. Three times a lie or a cheat is a pattern: let them go
11. Don't help them hide their true nature
12. Don't allow them to lower your self-esteem
13. Focus on yourself: living well is always the best revenge

Why Do We Even Have a Conscience?

The author wonders why do we even have a conscience when being conscious-less can be an advantage for the individual.

This section was a bit too off-topic for me, also because it's very well covered in other books and branches of research.
Also, read:

- The Moral Animal
- The Origins of Virtue

Sociopaths VS Narcissists

Narcissists are half sociopaths.
They can feel their own emotions but have no awareness of other people's emotions.
They lack empathy.

Narcissists suffer because they want relationships, but have difficulty in forming and maintaining them since they can't empathize.

The Drawbacks of Being a Sociopath

Sociopaths are often hypochondriacs, get easily bored, and often get addicted to drugs.

It's also not easy for them to obtain the success they want as they cannot sustain heavy workloads for the long haul.

This is why sociopaths are rarely in a position of power. **Sociopaths lack the staying power needed to get to the top power position**.
They go for the easy shot, the big heist, the shortcut. And of course, that rarely works.
When they get to the top of business organizations, they often do it by managing to disguise the amount of work they do or that they have done.

See more information about sociopaths in business organizations here:

- Snakes in Suits
- Bad Blood

The lack of conscience, turns out, also makes for poor decision-making.
Sociopaths are short-sighted and impulsive and learn little from mistakes. They often end up financially broke.

[image]Real-Life Applications

There Are Bad People Among Us
Keep your antennas up.
And learn how to act with these people.
This is one of the tenets of this website, too.

Don't Second Guess Bad People Too Much
Good people make too many excuses for inexcusable behavior.

CONS

Scientifically Not As Precise
Starting with the use of the term 'sociopath' that has no strong clinical or scientific backing.

Unneeded Excursus
A wonderful book, but it gets lost in unneeded detours.
The Freudian superego, the Milgram experiment, theology… They didn't fit the topic too well.
Same for the stories used as examples.

Untestable Clinical Diagnosis to Dead People
The author assigns sociopath diagnoses to a lot of historical despots or dictators she has never met. Like Gengis Khan, Nicolae Ceauşescu, Caligula and Benito Mussolini.
I'm Italian and I don't think that Mussolini was a sociopath. But it's hard to say. And that's the whole point: the author makes those diagnoses sound way too easy and obvious.

PROS

Martha Stout Question Go Deep… Deep Into Human Soul
Why do we allow sociopaths as our leaders, to wage war, kill and destroy on their whims, games of dominance, and

thirst for power?

Interesting Look on Cultures Promoting Anti-Social Behavior
The author makes the point that Western culture accepts manipulation and mind games in the name of success and individualism. That can make the environment more sociopath-friendly.

Review

While limitations exist for lacking stronger empirical foundations, *The Sociopath Next Door* is a good book for laypeople to understand sociopathy, and protect themselves.

In a way, we share a similar mission as we also help men with a conscience handle conscious-less people.

And it reinforced my belief that in this world we need ultimately good people who know how to be ruthless when the need to stand up to sociopath-like foes arises.

Bullet Summary

- BPs are slaves of their emotions and extremes in their feelings and behaviors
- Wild swings of emotions make it difficult for BPs to stick to things and nurture long-lasting relationships
- Self-mutilation, suicide threats, and the explosion of anger are common (and often tools to coerce you into paying attention to them)

Full Summary

About The Authors:
Randi Kreger is the founder of BPDCentral.com, which she claims to be the largest community dedicated to borderline personality disorder. Paul T Mason is vice president of clinical services at Wheaton Franciscan Healthcare in Racine. His research on BPD has been published in the *Journal of Clinical Psychology*.

Traits of BPD

Patients are classified as BPD when they present at least 5 traits of the following:

1. Frantic efforts to avoid real or imagined abandonment
2. Unstable and intense interpersonal relationships, alternating between idealization and devaluation
3. Identity disturbance: markedly and persistently unstable self-image or sense of self
4. Impulsivity in at least two areas that are potentially self-damaging (e.g., spending, sex, substance abuse, reckless driving, binge eating).
5. Suicidal behavior (threats, self-mutilating behavior)
6. Affective instability due to a marked reactivity of mood (e.g., dysphoria, irritability, or anxiety ranging from a few hours to a few days)
7. Chronic feelings of emptiness
8. Inappropriate, intense anger or difficulty controlling anger
9. Transient, stress-related paranoid ideation or severe dissociative symptoms

What BPD Means In Simple Terms

People with BPD feel and do the same as any other people do.

They just feel more intensely, and act more extremely.
Their more extreme behavior is a direct consequence of feeling more intensely coupled with generally weaker self-control.
Indeed, BPDs have difficulties regulating their behavior.

BPD In Relationships

People with BPD look to others to provide what they can't provide for themselves.
Such as:

- Self-esteem
- Approval
- A sense of identity

They look for a nurturing caregiver with never-ending love and compassion to fill their void.

BPs are always terrified of losing a relationship (extreme anxious attachment) while at the same time, they have such low self-esteem that they don't understand how anyone could be with them.
BPs have trouble differentiating between physical absence and abandonment and they can continually call their partners to reassure themselves they're not alone.

They seek long intimacy, but their behavior only makes intimacy more unlikely.

The best predictor for a BP to keep a relationship is to get into therapy and take steps to cure themselves.

Communication Misunderstanding

BPs often misread messages in the most negative way possible.

For example, if you cancel a date because you had to work longer, they might jump to the conclusion that you don't want to see them ever again because you don't love them anymore.

If you say you are so proud of your daughter, your BP wife might hear that you love your daughter more than her.

For BPs it's hard to understand that you might need to cancel and still want to see them.
Or even deeper, that you can be angry with them *right now*, but still overall love them.

Why BPs Self-Mutilate

The reasons why BPD self-mutilate vary widely, and include:

- Feeling alive
- Express anger at someone
- To number themselves
- Punish themselves and express self-loathing
- Relieve stress and anxiety
- Feeling in control of their pain
- Seeking relief from emotional pain
- Asking for help

If the self-mutilating behavior is taking too big of a toll on you, step back. The best way to support someone, in the long run, is to take care of yourself in the short run.

Suicides (Threats)

Between 8% to 10% of people with BDP commit suicide.
Many BPs also make suicide threats without actually ever attempting suicide.

When a BP is threatening suicide:

- Don't get into an argument about whether they're serious about dying
- Don't accuse them of manipulating you
- Be cautious to give in just to prove that you care (the same will repeat again and again)

Communicating With BPs

One woman says the only way to make her anger subside is when her husband tells her:

> I know you're scared and not angry (then hugs her)

And anger melts away.

One BP recommends not to tell BP to calm down because they are not in control of their emotions and it only makes them feel worse.

Enforce Your Boundaries

It's important that you enforce your boundaries and assert your limits for proper communication and behavior.

Don't say that you want it like that because it's "normal" or "expected".
Just state it the way you want it.

For example, you can say that when things get too intense and the BP starts screaming, you will stop the conversation and return to it later when you're both calmer.

Stay away from arguments on whether your arguments are right or wrong.

> **BP**: you're a selfish / bad person
> **You**: I understand you think I'm a bad person, but I feel good about myself and I'm proud that I respect myself enough to set this limit

Or:

> **BP**: you must hate me
> **You**: no I don't. Quite the opposite. I care about you that I want to work together to make a better relationship. But I also care and respect myself, which is why I'm bringing this up

And some more proper communications:

> **You**: There are no villains here, we just see things differently
>
> **You**: I'm not willing to take more than 50% of the responsibility
>
> **You**: I know you want an answer right now, but I need time to think

Whatever limits you decide to set, it's important you don't accept abuse and rage. It's bad for your relationship, for your self-esteem, and for possible children.

3 Cs and 3 Gs

The three Cs and three Gs are a system for dealing with people affected by BPD:

1. I didn't cause it
2. I can't control it
3. I can't cure it

And the three Gs:

1. Get off the BP's back
2. Get off the BP's way
3. Get on with your life

Protecting Children From BPs

If you don't have children yet, the authors recommend you postpone children until the BP has taken steps forward in therapy.

Some of the stories in Stop Walking on Eggshells really make you understand how difficult it can be to raise children with DBP.

Children might plot against their parents or lie to cause trouble to their parents. You must also be vigilant that they don't cause harm to other siblings.
BPs don't know boundaries, and in the extreme, that might mean abusing siblings.

But whatever happens, they say, remember that it's the disorder that is causing the problem and that BP children need love as much as other children (and maybe more).

> **Love the child, hate the disorder**

Distortion Campaigns

Distortion campaigns are webs of lies, false accusations, and other harmful behavior the BP engages in to damage you.

It doesn't have to be from intimate partners, and can also come from former friends.

The problem with BPs is that when you end a friendship or relationship they don't remember the good of the relationship. Or they fail to see you as a whole person with both good and bad.
You can easily become the embodiment of everything that is bad and evil for them.

To guard against possible BP revenge, think in advance. What can they do to harm you and what can you do to defend?
With prevention don't forget though that you might want to avoid stoking their fire with too an aggressive defensive plan.

Risk Factors for BPD

There are several biological and environmental risk factors that combine to increase the likelihood of BPD.

Environmental factors can include:

- Abuse (albeit it's not a major predictor)
- Ineffective parenting (from drug use to mental illnesses)
- Chaotic home situations
- Sudden loss of a caretaker

Stop Walking on Eggshells then goes into current medications and treatment. It says that mindfulness as part of Dialectical Behavior Therapy is very promising.

I won't get into the medications here as new drugs and researches come out every year and a few Google searches can provide more updated information.

[image]

Real-Life Applications

Cure Yourself
If you are a BP there is good news: people do get better. Be willing to stare at the reality of things and work on yourself, do work on increasing your emotional intelligence (check Goleman, Tradberry).

Avoid BPs Who Blame You
BPs who yell at you, abuse you and make public drama while at the same time refusing any cure are low-quality people.
Having had an experience like that, I would advise you don't date them unless they are willing to take part in the blame and work on themselves.

CONS

Lots of Stories, Less Science
Quite frankly, I'm not sure this is a con.
I highly appreciated the author's heavy immersion into discussion boards to get real-life stories. This is not a medical text, but it's "medical enough".
Why did I even put it as a con then? Well, you know me… I like the resources and the data too.

BPDs Overlapping With Other Psychiatric Disorders?
The authors make some examples that seemed more on the sociopath/psychopath end of the spectrum. Like the girl at 14 who tried to hire gang members to kill her parents.

PROS

Great Overview
A very good overview of borderline personality disorder gives both the medical information and the practical, "day-to-day" translation of what it means.

Awesome Recommendations
The recommendations are very, very good.
The communication tips are of very high quality.

Review

I very much enjoyed "*Stop Walking on Eggshells*".

Without getting too technical and clinical, it gives a very good overview of borderline personality disorder. And it gives great suggestions and recommendations and how to handle BPs.

I had a girlfriend with BPD, and reading this book was a bit like a jump in the past. For a guy who had never experienced anything similar, it was shocking to see her starting to get drunk as quickly as possible to numb the pain and get my attention.

And of course, when she started scratching her hand more and more furiously till it started (lightly) bleeding.

If you are dealing with a BP, definitely get Stop Walking on Eggshells.

High-Value Man: Traits, Behavior, & How to Become High Value

Lucio Buffalmano · 21 August 2018 · Archived copy · Original

The idea of a **high-value man** is widely discussed in dating and self-improvement. But much of the online advice is vague, ideological, or disconnected from research.

In reality, the concept overlaps with several well-studied areas in social science, including **mate value** in evolutionary psychology**, social exchange theory,** and **status dynamics** in human hierarchies.

In this guide, we break down the **high-value man concept** using both behavioral research and real-world social dynamics. You'll learn the traits that create value, how those traits translate into attractiveness and status, and how men build them in practice.

Let's start.

High-value men must not necessarily dress snazzy. But good style and taking care of oneself are high-value traits

- SUMMARY

Definition of High-Value Man

We anchor our definitions of value on social exchange theory (Blau, 1964), mate value from evolutionary psychology (Buss, 2016), and power as a multi-faceted construct defined as 'the ability to achieve one's goals (Buffalmano, 2024).
In one sentence:

> A high-value man is a man who possesses more traits and resources that make him socially and sexually attractive than traits that make him unattractive, enabling him to achieve goals and be a net value-giver to those around him

There are important nuances to this definition:

- **Context matters**: In some environments, people may not perceive someone's value, even if it exists
- **Visibility of value matters**: If others don't know, for example, that he's a billionaire he may be less attractive
- **Personal value & exchange value**: two broad categories of value are **personal value**, more related to genetic endowment and skills, and e**xchange value**, more related to resources one possesses or actions he undertakes (also see 'social investment model'). They cover *any* form of value that boosts attractiveness—not just looks or money

While subjectivity plays an important role in any value assessment, many traits also enjoy wide appeal with most people.
And those **wide-appeal traits make you high value almost anywhere, to almost anyone.**

So let's focus on wide-appeal traits:

1. Be High Power

High power is an umbrella terms that include crucial traits and social resources such as:

- **Mental power**
- High **status**
- **Respect** from others

High-value men **know how to *earn* that respect**.
In socialization, people test and social climb on others. When you don't defend or counter-attack, you lose status and respect.
This is an invisible game that most guys are unaware of -and that's why they linger at the bottom of the social hierarchy-.

An all-around high-value man tends to acquire high status and be a well-respected member of any group.
In some cases, he may as well go all the way to the top, becoming the alpha male of the group.

You can read more in:

- High power behavior
- How to speak high-power

Or better yet, get Power University.

1.2. Be High-Power In Your Relationships

High-value men enjoy full respect and, often, high devotion and love from their partners.

They know how to read and handle various dating games and how to spot dating red flags, so they tend to pick quality and collaborative partners.

They're the leaders, but go for win-win, instead of 'raw dominance'.

Very **high-quality men don't seek control because they don't need to.**
They have the self-esteem to believe they're top options. Plus, their women are naturally devoted.

Of course, they're not naive and know that everything is possible. But they're comfortable in the uncertainty. They have options, and an easy solution: if their spouse cheats, she's out. And a new and better one will get to enjoy him.

2. Be Goal-Oriented (High Agency)

Goal-orientation is masculine and high power.

While in the manosphere this was often referred to as 'having a purpose', high agency simply means caring about outcomes and goals, and may be as simple as caring about your job, or a fitness-related goal.

High agency men have no time for BS. They talk straight, and do not place women on a pedestal.
If successful in their goal pursuits, they also lead other men and accumulate resources.

Example: James Bond

James Bond is charismatic because he's always on a bigger pursuit:

> **Him**: I always wondered how I'd feel if I ever saw you again <— He did love her. But his purpose came first)
> **Her**: (slaps him) <— It's different for women. To her, he was first priority
> **Him**: (takes it in stride) Now I know. Was it something I said?
> **Her**: How about the words "I'll be right back"

Men with a purpose are naturally scarce, turning the dating power dynamics on its head, making *women* chase him.

3. Take Care of Yourself

Driven men with a purpose look at themselves as if they were machines.

And they have the mindset that the more they take care of the machine, the farther they will go.

Also, they know that the dichotomy of "being or appearing" is nonsense. The two feed into each other. Everyone

judges the book by its cover, so you also need to take care of that book cover.

Meaning:

- **Eat healthy**
- **Exercise**
- **Keep learning and investing** in yourself.

High-quality men are like high-quality wine, getting better with time.

3.2 And Take Care of The People Around You to Be A Leader

The next level is taking responsibility for the people around them.

Taking responsibility for others is what turns high-quality men into high-quality leaders.

And, contrary to high-quality women, leadership qualities are almost a must for high-quality men.

4. Develop High Self-Esteem

This is foundational.

While it's conceivable to be high-value with low self-esteem, **external success without internal self-esteem is like building a tower on shaky foundations.**
Always in danger of crashing down. Plus, low self-esteem 'leaks' with subconscious low-value signals and incongruent behavior.

Dominant men without high self-esteem are like hollow dolls:

Appearances of high-value work in the short term. But not in the long run, and not with experienced men who can sniff a poser

And attention here:

It's *self-esteem*, not confidence.

Confidence is *great*, but self-esteem is even better.

Confidence ebbs and flows depending on your results and skills in a given field.
But self-esteem stays.
Confidence is founded on strengths and results, while self-esteem stays *despite* losses and weaknesses.

Also read:

- **How to signal high value**

4.5. Generate Your Own Self-Esteem

As long as you depend on external approval to prop up your ego, you're chasing validation and will always *depend* on others.
In TPM's parlance, you give the world judge power over you.

That's reactive, mentally fragile, and *not* associated with high-power masculinity.

High-value men have much stronger control over their self-esteem than most.
We have a full course on self-esteem, but for a preview, see:

5. Acquire Some Wealth

You do not strictly need money to be high value, but wealth is a major value booster.

Money is one of the most liquid forms of value because almost anyone is better off with more of it.
And it doesn't matter whether one is ugly, short, or dumb.
A wealthy man can still add value to most of the world's population.

That almost automatically makes him high value in many people's eyes.

Looks like a haughty jerk. But "high-value" has little to do with character quality

6. Be Competent (at least at *something*)

At the highest level, competence means being competent at *life*, achieving your goals, and excelling in your pursuits.

We built Power University to become *that* type of man.

But the minimum is being competent at your job. And the more competent you become, the higher value you become (at least in the area of your competence).

Read more:

- How to develop competence

7. Climb Social Hierarchies

Status is social value, so high-status men tend to be high-value.

Advanced **social skills are crucial because social value is largely a social construct**.
To be more precise, it's *power* skills, the agentic form of social skills, that help you gain status, respect from other men, and attraction from women.

Power skills relate to power intelligence, and some dark triad men may have a 'naturally' higher sense for power dynamics.
We teach these skills here and in Power University.

7.2. The Modern Exception: Tech Billionaires

While social competence was a necessity for millions of years in our evolution, modernity added new venues for gaining status and popularity.

One can become a tech mogul and still lack social skills and interpersonal dominance. They reached the top by *creating* their own hierarchies, becoming wealthy and famous.

But we still strongly recommend grasping the basics of interpersonal power dynamics, because even wealthy and high-status icons can fail at interpersonal power dynamics:

> **Talulah**: (disrespects Elon)
> **Elon**: (passive)

7.3. Be Assertive

Assertiveness is the sweet spot that allows the high-quality man to:

- **Speak up** for his rights, without undermining others
- Expect and **demand proper behavior**, while treating others respectfully
- **Get everyone's respect without making enemies**, because he's not disempowering others

The high-quality man adopts this mantra of assertive communication:

> Say what you mean, mean you what you say, without being mean

In contrast, the passive man is too afraid to speak and enforce his boundaries. The passive lingers at the bottom of the social hierarchy.

The aggressive man instead *takes* advantage of others' lack of power and assertiveness.
An aggressive man can be high-value. But his aggressiveness weighs against him as other high-power men will either avoid him, or fight him.

High-quality men know what's fair and not fair, what's friendly and what's rude, and what they can take and what they will *not* take.

8. Carve Your Own Path In Life

This is an *attitude* to life. It doesn't necessarily mean he's an entrepreneur or "doesn't have a boss".

But it means that he:

- Chooses for himself how to live
- Does not accept just about anyone as his boss
- Does not conform 'out of pressure' if he disagrees

This last one includes a certain "mental power".
High-quality men don't indiscriminately accept other people's values and "recipes for life".

There is no shortage of influencers telling men how they should behave these days. High-value men may listen to them all.
But, ultimately, they choose for themselves. They develop their own value system and have their own moral compass. And they only choose how to live their lives.

9. Take Responsibility

Responsibility is one of the foundational blocks of masculinity.

It STARTS from responsibility for yourself.
But can expand to your significant other, then to a group of people… And it may as well end with you taking responsibility for humanity.

The Responsibility Mindset

At the individual level, the locus of control is the degree to which people believe that they have -or don't have- control over their lives (Rotter, 1966).

These are the two types of locus of control:

Internal locus of control means you believe you are in control of your life.
External locus of control means you believe life events determine the course of your life and you don't have control over them.

The locus of control determines whether you feel like you're at the helm of your life or like a castaway in a

rudderless lifeboat.
And **high-quality men feel like they are at the helm of their lives**.

Taking responsibility starts with your own life first and foremost: you take responsibility for your current station in life, and for where you want to go.

Great leadership is an extension of this principle. It's the responsibility of taking care not just for oneself, but for those around.
This is also the healthiest way to be a leader in your relationship, which supports attraction over time and is a positive form of soft power, making others *want* to follow you.

Example: Horoscope

⍰♂Lucio's Take: **Displaying value by displaying internal locus of control**

Lucio:
A girlfriend of mine once asked me if "I really didn't believe at all in the horoscope".

I took a second to reply, shook my head, and explained that no, my worldview is incompatible with horoscopes. The horoscope tells you what's going to happen to you as if it were all already written.

But I believe I'm in control and it's on me to make things happen.

10. Be Popular

Popularity and fame are like turbo-boosters of status, providing the famous person with fans and dating options.

Think of this scene for example without fame:

> **Attractive woman**: (speaks to reporter)
> **70+ year old overweight, balding man**: (sneaks from behind to interrupt and says she reminds him of an ex-girlfriend)

> **Attractive woman**: (flirts with him ?)

How would that have gone down without Jack Nicholson's fame and power?
Like a lewd weirdo that security would kick out in a blink of an eye, that's how.

Fame and popularity aren't all in high school popularity or social media following.
You can become a smaller local celebrity at your favorite restaurants, bars, and nightclubs.
Or simply in your company, or in your area of expertise.

Socially skilled men are also able to manufacture an appearance of popularity in the way they greet and talk to others.
We explain how in Power University.

High-Value VS High-Quality Men

High-value men are men from whom you want *something*.
High-quality men are men that you want more of *because you respect and admire them*.

High value is amoral, it's all about quantifying "value". High quality is about being an "honorable man" and includes pro-social traits and personal values.

A high-value man can be a total piece of sh*t.
As long as he has a lot of value to give, chances are that people will *still* seek him out.
But one cannot be a manipulative, compulsive lying jerk and be high-quality.

You don't need to be Mother Theresas to be high-quality, but you must have a conscience and a preference for win-win and adding value

Read more here:

- **Honorable man approach**

The Ultimate Value Litmus Test

Put a man in a room full of people.
And then observe:

1. **Level 1: Do others seek him out?** If yes, chances are he is very high-value and one of the highest-value men in the room because people *go to him*
2. **Level 2: Is he well-received when he engages others?** If yes, chances are he is high-value. People may not go to him, but are happy to engage with him
3. **Level 3: Is he not ignored when he engages others?** If yes, he has at least some status and power that people give him the bare minimum respect of not ignoring him

Negative value is active avoidance, social climbing on him, and generally disrespecting him.

The skilled socialite can *become* high value and reach level #2 in most groups he joins.

SUMMARY

A high-value man is any man who can make others better off.

There is a strong element of subjectivity when it comes to high value.

For example, a man may be a loser to the whole world. But as a child is almost always high value to his parents.

And if a loser can make a woman fall in love, he will also always be high value to that woman.

However, as this article showed, some traits tend to be sought-after by almost anyone.

Our article focused on these higher-level, broader-appeal traits.

Intro

We define 'low value man' in relation to social exchange theory, mate value from evolutionary psychology, and power defined as 'the ability to achieve one's goals'.

In one definition:

> A low-value man is a man who possesses more traits that make him unattractive than traits that make him socially and sexually attractive, is less likely to achieve goals, and is more likely to be a value taker than a value giver.

This article leverages psychology and power dynamics to uncover the most telling signs of low-quality men, and how to fix them.

1. Submissive & Too Nice: Lacks Power

Social value comes down to status, respect, and influence.

High-value men tend to have high status, get respect from others, and influence others.
Low value men, the opposite.

Low-value men lack the skills and character to gain social recognition.
Climbing social hierarchies requires assertiveness, power-intelligence and, sometimes, even the ability to be aggressive.
Passive too nice guys stay stuck at the bottom because they lack these skills. Instead, they fail because they:

- Don't enforce boundaries
- Let people disrespect them
- Allow bosses and colleagues to humiliate them
- Let their girlfriends abuse them and control the relationship

If they push back, they use passive aggression rather than direct communication.
The movie "Fargo" presents a great example of a low-value pushover:

> **Low-value guy**: They'll only deal with me <— Tries to influence others
> **High-value guy:** No, it's my money, I'll deal with it. I don't want you to muck this up <— Refuses and disrespects him
> **Low-value guy**: (offended) What you mean. No, see…. <— Fails to address the disrespect
> **High-value guy**: It's my show here, that's that <— Lays out the law
> **Low-value guy**: (puts his hands together in a praying pose and lowers his gaze) <—- He's been dominated. He failed to influence and accepts his role as the lowest status man

Low status alone doesn't make someone low-value, but it's an important element, especially if the group is important in the man's life.

2. Unattractive & Needy Around Women

In dating markets, value is most often referred to as 'mate value' (Buss, 2016).

High mate value men tend to be attractive and have dating options, while low-value men tend to have little dating options.

When they believe they have one option, they tend to develop oneitis and chase her as if she were the only available woman.
Lower value men invest more with time and money because they don't believe they can be enough for a woman.

Lower value men invest more because they believe they're lower value than she is and must 'make up' the difference.

They court more as providers rather than lovers because they don't believe that a woman could be interested in intimacy only with them.

See more in this foundational article:

- **Social Investment Model**: a primer on investment and exchange power dynamics

🤔Lucio's Take: **I lost all my respect when he displayed low-value behavior**

Lucio:
I once rode an elevator to work with a cute girl and a manager. The girl was talking to me only, sharing her fears about a presentation.
The manager jumped in:

> **Low-value manager**: (leaning deeply towards her, almost in front of her face, with high-pitched voice) Oohhh, you're shy of doing the presentation? <— Subcommunication ⍰⍰ "you're soooo adorable, I want to protect you, please tell me more about your fears so I can show you that I can support you"

He was chasing too hard, making the girl the center of his world. He signaled he craved a weaker woman to feel stronger.

Relationship Clinginess

Lower value men tend to be needy, sometimes overlapping with an anxious attachment style. They're fearful of abandonment and seek continued confirmation of commitment.

Some are too passive to even try to steer the relationship, but some others turn hyper-jealous and controlling.

3. Lacks Wealth & Financial Literacy

Money doesn't impact a man's character, skills, or charisma. However, money is one of the most universal forms of value because almost everyone prefers having more of it, than less.

Plus, financial resources in many societies correlate with power and influence.
So having money tends to increase a man's value, while poverty can lower perceived value in many social environments. **Poverty can also keep people away** because, deep down, people worry that poor people will soon turn into value-taking liabilities and/or ask them for money.

⍰♂Lucio's Take: **I lost a friend because of money issues**

Lucio:
I once had a good friend in Prague who was generally a cool guy and had his way with the ladies. But he unfortunately had a gambling addiction and spent all the rest of his money on alcohol and cigarettes.

He'd often come out with zero money, and that impacted our friendship.
Eventually, I stopped getting in touch with him because it simply doesn't feel like a genuine friendship is one only takes, and the other is forced to give.

Financial Poverty Can Signal Poor Mindsets

Financial resources can also signal a man's character, education, and strategic intelligence.

Some poor people tend to focus on short-term consumption while disregarding future well-being.
People who lack long-term predisposition and financial know-how also tend to use money poorly. They buy liabilities and depreciating assets that keep them poor.

Sometimes consumerism is also associated with an entitlement mentality, not backed up by hard work, skills, and real earning power.
Look at this man, for example:

> **Him**: (buys an expensive bracelet because 'he deserves it') <— Entitlement mentality + reckless spending
> **Him**: (messages me to borrow 200) <— Loses social capital by acting like a value-taker (I was in monk mode working on TPM non-stop: purpose-driven and long-term thinking)

4. Lacks Drive & Purpose

Ambition is correlated with advancement, both in life and socially.
Lower value men often stay stuck or go backward because they lack ambition, drive, and purpose.

Low ambition also often comes with poorer habits that only compound to signal low-value to ambitious men and women, like excessive **gaming**, **smoking**, **junk food**, or **TV-watching** (instead of meeting real women).

This video of Brian is an example of a man low in any kind of drive, and finding satisfaction in consumption instead of production:

> **Brian**: (fat, eating chocolate while sitting on the couch) I loooove chocolate <— Knows it's not good for him but does it anyway, lacking discipline

Vicarious-Living & Low-Added Value Passions

If low-value men are passionate about something, it's often about things that do not really help them advance in life.

Being passionate about one's favorite team or influencer does little to help a man advance in life.

Apathy: Caring About Nothing

A low-value man doesn't care about the very things that could make him more high-value, such as:

- **Productivity**, how he spends (or wastes) his time
- **Career**, how much he makes, and how he could be promoted

- **Self-development** and what he could do to move forward

And of course, he doesn't care much about how he looks, either.
He is cool with being overweight, having cheap and ill-fitting clothes, and looking disheveled.

The exact same man, but one cares about himself and how he looks (and is high value), the other doesn't (and he's low-ish value)

5. Sees Himself as Powerless

Locus of control is the degree to which a person believes that outcomes in his life are determined by his own actions versus forces outside his control (Rotter, 1966).

In practical terms, it means:

- **Internal locus of control = you're at the helm**, steering your life in the direction you want
- **External locus of control = a castaway**, reacting to circumstances you feel unable to influence

This dynamic can lead to learned helplessness, a phenomenon studied by Martin Seligman, where repeated failure leads individuals to conclude that effort is pointless—even when control is possible.
Men with an external locus of control tend to struggle more with confidence, persistence, and achievement.

Also read:

- **Self-empowerment for men**, starting from the mind

6. Entitled But Incompetent

Low-value men tend to have poor results in life, or they wouldn't be low-value.
Per se, that doesn't necessarily make them 'bad' and many low-value men can be kind people who can even attract some sympathy and help.

However, low value combined with a large sense of importance and entitlement mixes the worst of both worlds and crosses into a more socially repulsive territory.
These men **feel entitled to high status and special treatment, without having the value to get it**. People aren't willing to afford them the special treatment they demand, leading to constant disappointment.

These low-value men tend to grow resentful of others and adopt an antagonist approach to socialization that truly repels others (think of an angry antisocial person or the angry Karen meme).

Ego=Sense of self-importance, entitlement, and craved status; Power=Competence, confidence, actual status

High entitlement and high sense of self-importance with low confidence and life outcomes are associated with vulnerable narcissism, sometimes also referred to as 'failed narcissism' (Cain, Pincus, & Ansell, 2008; Krizan & Johar, 2012; Miller & Campbell, 2008).

This psychological profile can often go together, and be aggravated by:

- **Fragile ego**: in need of constant validation, defensive, and breaking down or lashing out when ego-threatened (Baumeister, 1999)
- **Fixed mindset** and performance orientation: believing that traits and skills are fixed and cannot be improved, and focusing on trying to look good instead of improving (VandeWalle, 1997; Dweck, 2006)

Men with a fragile ego and fixed mindset tend to stay low quality because they don't develop over time, are always defensive, and tend to be touchy and vindictive.

To overcome it, read:

- **The antifragile ego**

7. Lacks Internal Compass

High-value men rely more on internal references for their self-assessment, self-esteem, and decision-making.
But **low-value men rely more on others because they lack confidence and self-respect** to value themselves, including their values and criteria.

This is crucial for a man's mental power because it also means that others will control your emotions and self-esteem. A bad performance, criticism, or even a disapproving look is enough to collapse their confidence.
Low-value men also tend to fall more for judge types, disempowering teacher/pupil frames, and manipulation.

He Submits to Gain Acceptance

Fakeness is often a byproduct of this dynamic.

Low-value men fear that being themselves will make them disliked or ostracized, so they adopt different masks depending on the group they want acceptance from.
They suppress traits they believe are undesirable and exaggerate traits they think will earn approval.

Low Value vs. Low Quality

Value is your leverage, and quality relates to how you use your leverage, including the morals and ethics linked to behavioral choices.

It's possible to be generally high value, while being lower value in some other areas of life, and to display low-quality character that lacks integrity and honor.
From an ethical point of view, coercing, bullying or generally taking value from others is low-quality, even when it comes from a high-value man.

Case Study: Harvey Weinstein

Weinstein was high-value, but in dating he lacked honor and power, behaving low-quality
Weinstein was a 'pseudo-high value man'. He had some high-value traits such as ambition, work competence that allowed him to gain status, powern, and resources. He even the voice and presence of a hyper-masculine, 'alpha male type'.

Unfortunately, he had the psychology of a value-taker when it comes to dating and relationships. He was low power and sneaky, supplicating to women, and using what seemed like emotionally manipulative pity plays. That's not high value.

His modus operandi in dating also seemed to lack honor and integrity, making him a high-value man at work, but a low-quality character for society (and for many women who crossed paths with him).

Overview

- Narcissistic mothers are all about themselves and give no love to their children
- Children of narcissistic mothers take all the blame for the lack of love and internalize the idea they are not good enough
- Daughters carry damaging self-limiting beliefs for their whole life
- Daughters can have problems getting in touch with their own feelings as well

Notes

About The Author:
Karyl McBride, Ph.D. is a licensed marriage and family therapist with decades of experience in treating trauma.
McBride is also an expert on narcissism and curing victims of narcissism.
She keeps a blog on Psychology Today writing about narcissism and "distorted love".

What Is Narcissism?

The Diagnostic and Statistical Manual of Mental Disorders (DSM) describes narcissism as a spectrum disorder, which means that **narcissism exists on a continuum**.
One could be a full-blown narcissist, but there can be many more people who have some narcissistic traits to different degrees.

Here are the nine traits that define narcissism:

1. Grandiosity with expectations of superior treatment from other people
2. Fixated on fantasies of power, success, intelligence, attractiveness, etc.
3. Self-perception of being unique, superior, and associated with high-status people and institutions
4. Needing continual admiration from others
5. Sense of entitlement to special treatment and to obedience from others
6. Exploitative of others to achieve personal gain
7. Unwilling to empathize with the feelings, wishes, and needs of other people
8. Intensely envious of others, and the belief that others are equally envious of them
9. Pompous and arrogant demeanor

With Lack of Maternal Love, Children Internalize They're Not Good Enough

Love and affection are something every child needs, but daughters of narcissistic mothers don't get enough love.

Without enough love and affection, psychological issues develop.

Daughters who don't get enough motherly love internalize the message that they are not good enough to deserve that love and come to believe they are not *worthy* of love.
Some of these daughters carry that message within themselves for years and years. Some, for a lifetime.

The idea of not being worthy of love leads to two opposite paths:

1. Destructive path
2. Perfectionist path

Which one the daughter takes, says the author, depends on whether they had someone else in the family who gave them love.
Albeit the paths seem polar opposites, they have the same roots:

#1. The Achievement Daughter

The achievement-oriented daughter wants to prove mother and herself that she is good enough (and deserving of love).
But the only way she knows how to do that is by doing more and more and achieving more and more.

She tries to fill the void with awards, money, great grades, a great career, etc.
Often, she becomes a woman who outwardly seems successful and accomplished, but she never feels accomplished.
And when she cannot manage to achieve, she feels worthless.

#2. The Self-Destructive Daughter

On the other end of the spectrum, the self-destructing daughter tells herself "what's even the point, I'll never amount to anything anyway".
The expectations of a mother were so high and she was never happy anyway, so why bother?

She sometimes gets addicted to alcohol, drugs, or food, and strings a bunch of poor relations (also read how self-esteem creates a loop of bad relationships).

My Note:
The author doesn't mention it, but in my opinion, some children may self-sabotage on purpose to prove their independence. This might be more true for men.
I know it was the case for me.

For both the perfectionist and self-sabotaging daughter, the path to healing is finding internal validation.

Mother-Daughter Relationship Dynamics

Karyl McBride details a few traits peculiar to the mother-daughter relationship:

1. You always try to win her affection, but you can never please her. The little approval is about who she wants you to be, not who you are
2. Mother emphasizes the importance of how it looks more than how it is
3. She is jealous of you (for looks, age, partners, relationship with fathers, life opportunities, taking attention away, etc.)
4. Mother suffocates expression of yourself, especially if they conflict with her own needs
5. It's always about the mother
6. Mother is unable to empathize (and daughter feels her feelings don't matter)
7. The mother cannot deal with her own feelings. If confronted, she will likely stonewall, clam up or lash out
8. Critical and judgmental (uses daughter as a scapegoat for own unhappiness and insecurity)
9. Treats you like a friend, not a daughter (can discuss personal intimate stuff and use daughter as emotional props)
10. The mother does not respect your boundaries

Dishonesty and Appearances

Narcissistic families and mothers sacrifice honesty for appearances.
What "people think" is often more important than "what my children feel".

You're There For Her

Daughters of narcissistic mothers believe they are there for the pure benefit of their mothers.
And the opposite is not true: the mothers don't care much for their daughters.

Daughters Try Hard to Be "Good Girls"

Daughters grow up believing that if they only try hard to be "good girls" they will get the love they need and crave.
That if they really manage to please people, then they will get some love.

Daughters Suffer More Than Sons

Daughters suffer more than sons.

A narcissistic mother sees her daughter as her own extension and puts pressure on her to either be exactly like her, or to be exactly like she wants.
The daughter is raised to try to be exactly like her mother wants her to be.

And they can also often be jealous of their daughters while they rarely are so of their sons.
Indeed the author says that most daughters who have brothers report their being favored over them (the exception being if they get married and bring a woman into the family)

Two Types of Narcissistic Mothers

The authors outline two types of narcissistic mothers:

1. Absent mother (under-parent)
2. Engulfing mother (over-parent)

The two styles sometimes overlap and a mother can swing from one to the other depending on the situation or period of life.
However, both types of mothers make individuation -or the development of self as a separate person- difficult for

the daughter.

The author has a few movies examples of narcissistic mothers, and this one is an example of an engulfing mother:

Notice the obsession with her daughter's achievement and her focus on looks.

Narcissistic Mothers Never Get to Know You

Narcissists have a superficial approach to emotional life.

Their world is image-oriented, concerned with how things look to others. She doesn't care and doesn't focus on who you really are.

But she cares about how you look, how you make her look, and what you can do for her.

The Six Types of Narcissistic Mothers

1. Flamboyant-extrovert
2. Accomplishment (success is what you do, not who you are)
3. Psychosomatic (uses illness and aches and pains to manipulate others)
4. Addicted
5. Secretly mean (nice in public, mean in private)
6. Emotionally needy (expect their daughters to take care of them)

The achievement mother can be especially confusing at times.
When the daughter works to achieve the goal the mother is not supportive because she it not living for her.
Then, once she achieves the goal, the mother gloats and uses her to show off.
The daughter the only way to get a positive reaction is to achieve more.

What About Fathers?

Fathers are often subservient to their mothers and pander to their needs. They revolve around mothers like planets around the sun.

The author says the narcissist needs a supporting partner or the marriage will not survive.
The husband accepts the role and, often, enables the narcissistic mother.

The father, for pandering to the mother, can look narcissistic. However, when in alone time with the daughter, it's likely that he can love. And that can make a difference for the daughter.

Example:

In Terms of Endearment, she is a narcissistic mother. And he would have ended up being the perfect father/enabler to a narcissistic mother

I had a girlfriend who had a full-blown narcissistic mother, and he perfectly fits the bill of "orbiting around her".

Dependent or Codependent Relationships

The daughter learns that she can't depend on her mother.

She grows up anxious, fearing abandonment, and expecting deceit at every turn.
She is more likely to develop an anxious attachment style, which makes her look for partners who either can depend on her or a partner that she can take care of.

They tend to end up in a relationship that is either dependent or codependent.

Dependent relationship: when she is in a dependent relationship she hopes to get the love that she never got from her mother. In the beginning, she's on cloud nine. But then she starts becoming too demanding, jealous, and needy. She will want him at all times to fulfill her emotional needs.
When the relationship starts going south, she will blame him for it.

Even in codependent relationships, she will switch back and forth with dependence because co-dependence is a front anyway. When under stress, her neediness will surface and she will look dependent.
Read: *codependent no more*.

Other Relationship Dances

Daughters also end up in different types of dysfunctional relationships.

Some other times she might choose emotionally unavailable men because that's what she's used to and because she herself is not in touch with her own feelings.

And in some cases, the daughter can pick men who are not nearly as accomplished, driven, or assertive as they are. When she can control them, she can't get hurt. And they end up with mostly passive men.

Relationship failures only deepen her low self-esteem.

Steps to Cure Oneself

1. Understand the issue you had and what it caused you
2. Grieve and process the feelings (allow yourself to feel the pain, the anger, the sadness, and depression. And cry a lot)
3. Begin healing

Steps of Grieving

These are the steps you must go through before curing yourself:

1. Denial
2. Anger
3. Bargaining
4. Depression
5. Acceptance

When you are angry, you might feel guilty as in our culture it feels like a sin to harbor bad feelings toward mothers. But don't worry: it's ok. Some narcissistic daughters only feel free after their mothers die. So don't be ashamed.

Steps to Healing

1. Accept your mother's limitations, and allow yourself to grieve
2. Separate psychologically from mother
3. Reframe the negative messages
4. Develop your own self and personality
5. Deal with mother in a healthy way (stop expecting love. It could mean in a detached way and in extreme cases no contact at all)
6. Treat your own narcissistic traits

CONS

Why Only Daughters?
The author says that the sons of narcissistic mothers are not nearly as badly affected.
That might be true… On average. But that might change when the narcissistic mother only has sons to "work with".
Then it might be the exact same game.

Could Have Been Briefer?
Maybe it could have been briefer.

Healthy men don't want to be mothered?
The author says that healthy men don't want to be mothered.
I think that's true. With some exceptions. Some men who *look* like they don't want to be mothered might still regress, which makes an "endless love" approach a potent seduction technique.

PROS

Curative
Will I Ever Be Good Enough is a book that will directly help anyone who's had a narcissist or emotionally unavailable parent.

Deep Wisdom To Understand Human Mind
Even if you didn't have a narcissistic parent, it all makes sense in this book. And you will *better understand human psychology*.

Positively Touching At Times
The work of Karyl McBride is a positive contribution to humanity.
There was one part that was especially touching.
McBride is talking about a little girl she was curing, the daughter of a narcissistic mother:

> I've had many children ask me to take them home, such as one darling eight-year-old who said, "*Dr. Karyl, do you know how to cook? How many bedrooms do you have at your house? Do you have any toys?*" Then she quietly added, "*If I can come home with you, I will do the dishes every day and even wash all your windows!*"

Touching, isn't it?

Review

Will I Ever Be Good Enough goes straight into my list of the best *psychology* books I have ever read and I have recommended it to many people and customers already.
It made me understand more about people, about parenting, and about my own life and psychology.

I realized that my mother had that kind of "I'll love you more if you are like this" attitude that conditioned me for a long time -and is still conditioning me-.
This book will explain to you exactly how it is conditioning you. And what you can do to fix it.

If that rings a bell, you must grab a copy of *Will I Ever Be Good Enough.*

And even if that's not your case, you will still understand so much more about human psychology.
Thank you, Karyl McBride!

The Psychopath Test: Summary, Review, & Criticism

Lucio Buffalmano · 24 August 2018 · Archived copy · Original

The Psychopath Test is an investigative analysis of the state of the mental health industry. Focusing on shortcomings and misdiagnosis, the author Jon Ronson raises important questions on whether mental-health diagnoses are true science or more error-prone personal judgments.

Bullet Summary

- There are a lot of gray areas between sane and insane
- Diagnoses often contain a (sizable) portion of personal opinion
- We have too many mental disorders on record (347): not everything is a dangerous symptom that needs to be medicated

Full Summary

About the Author:
Jon Ronson is a Welsh journalist and documentary filmmaker. He focuses on science topics and controversial fringe politics, and his work is characterized by an investigative and skeptical attitude.

Introduction

It's difficult to summarize The Psychopath Test because it's the story of the author's own research into psychopathy. But it does not reach any conclusions or make any points based on research or on an overview of the literature.

But here are my main takeaways:

Psychiatrists Often Got it Wrong

Before the Hare Psychopathy Checklist, labeling someone a psychopath or not was fully up to the medical personnel.

And they would often get it wrong.

Hospitals, for example, admitted for treatment as psychopaths several healthy individuals who only wanted to prove that the system couldn't really tell people apart.

When the experiment was revealed, the psychiatric world was shocked.

One hospital then said to send more healthy people posing as psychopaths and they would recognize them.
They indeed recognized more than 40.
The problem was, no healthy individuals were purposefully sent.

That's what the Hare checklist wanted to provide: a standardized way of assessing patients that would eliminate (or reduce) human judgment.
Turns out, it might not have really done it:

Psychopathy Diagnosis Is Very Personal

The author reviews a few "gray area" cases and shows the limitations of Hare's checklist. The Hare Psychopathy Checklist is the instrument psychologists and psychiatrists use to assess and "label" people as psychopaths or not.

It turns out, a checklist might not be such a great tool and is very prone to human judgment. And human mistakes.

There is A Psychiatric Label For Everything!

The author makes the point that we used too many drugs. Sometimes people have issues that might not necessarily be the symptoms of psychiatric issues.

But, he says, the DSM has so many entries that almost any behavior could be labeled as a mental illness.

Psychopath In Business

Jon Ronson also goes into the overlap between psychopathy and business organizations.

If I remember correctly, at one point the book either claims or suggests that "the higher you go, the more psychopaths you meet".

The author interviews one of the most ruthless CEOs corporate America has ever seen, Albert Dunlap.
Albert Dunlap himself prided himself on having psychopathic traits that helped him in business.

My Note: Not a good example, since Dunlap crashed and burned
I didn't think that was a good example at all though, since Dunlap ended up in a big crash and burn. So if every psychopath were like Dunlap, there would be few of them as business executives.

The Psychopath Test Criticism

The book has been criticized for its lack of scientific rigor and for the sensationalism it seeks to create.

Although no final judgment can be made by the title and as the saying goes 'don't judge a book by its cover', it still provides a first cue.

You can read Robert Hare's reply here. It's an instructive -and even entertaining- read.
Robert Hare says that Ronson is not an expert at spotting psychopaths, that his process of scoring people wasn't correct, and he casts doubts about Ronson's truthfulness by sharing some mischaracterizations about their personal exchanges.

That being said, Hare sometimes may come across as overly caustic and vindictive. What stood out to me is that Hare says that his checklist as "copyrighted material", potentially implying that Ronson appropriated material that he had no right to take or use.
Legal matters aside, I didn't feel it was the highest moral ground to withhold information that may help improve public awareness. And it also displays potential bias and a possible source of defensiveness.

[image]

Real-Life Applications

Don't Trust Diagnoses Blindly. And Don't Trust Self-Diagnoses
Diagnoses, often, are nothing but a personal opinions that leverage experience, research, and maybe a checklist. But they still keep that personal opinion in the mix.
Watch out especially for your own self-diagnoses, as they tend to be particularly poor.

CONS

There Is Gray… But Sometimes There Is Black and White
The author quotes the book *The Sociopath Next Door*. However, the messages from these two books are very different.

The Sociopath Next Door makes the point that it's sociopaths who want you to believe that everyone can do anything. And blurring the lines of "good" and "evil" only serves the sociopaths.

I side with Martha Stout here: *There are* evil people.
And good and evil don't overlap nearly as frequently as romanticized novels would want you to believe (also read "Do Good and Evil Overlap").

Disjointed
The Psychopath Test might as well have been called "A Random Walk in Psychopathy".
It felt random to me, without a single threat that would unify the different parts and chapters.

No Single Message
At the end of the day, if someone were to ask me "what's this book about", it would take me a long-winded answer which would say a lot while at the same time saying little.
I don't think that's a good thing because books like this usually leave me with little takeaways.

Sensationalist, Unscientific Categorization of Psychopath
As Ronson interviews a famous financial operator, he tries to score him on the Hare checklist. But he does so in a

light and shallow way.

PROS

Raises Some Good Questions
The Psychopath Test raises some very good and important questions. Such as:

- How much can we really trust mental diagnoses?
- How do we ensure we don't make grave mistakes (ie.: keeping non-dangerous people locked up and setting dangerous ones free)

Review

I didn't really get the point that "*The Psychopath Test*" was trying to make.

I listened to the audiobook and I failed to understand the author's main point and I failed to take away a main and coherent message from the book.

At the end of it, I didn't feel I had learned too much about either sociopathy, psychopathy, or mental illnesses in general.

Except, maybe, that labeling is difficult and possibly prone to lots of mistakes.
That, by itself, might be an important takeaway, though.

I think indeed the author was trying to somewhat discredit the psychiatric profession, but he falls short in admitting that was his goal.
That is what I missed from this book: a clearer stance from the author. Even if his stance ended with an "I'm not sure", he should have been clearer about it in my opinion.

Overall, all in all, I would say this:

If you want to understand psychopathy, this book is not for you.
If you want to read a more journalistic, captivating book on psychopathy and the issues around mental illness, then go for it.

Bullet Summary

- Codependency is an addiction
- Codependent people lack self-esteem and they caretake out of a need for control and security
- Excessive codependent almost never helps dependent people and makes everyone worse off
- Healing from codependence starts with awareness and with taking care of oneself.

Full Summary

About the Author:
Melody Beattie is a self-help author who has been focusing on abusive and codependent relationships. She doesn't have a psychology-related background, but she has grown her expertise over decades of personal research and experience.

Introduction: Everyone's Unique

The author says *Codependent No More* is not a cookbook for mental health because each person is unique.

Codependent Definition

This is how Melody Beatty defines a codependent partner:

> Someone who has let someone else's behavior affect them and who is obsessed with controlling that person's behavior

The heart of not definition is not in the other person though. It's in the supportive partner who, as codependent, allows the loop to exist.
Curing codependency means fixing ourselves, not the dependent partner.

Codependent Are Also Addicted

Codependents aren't as crazy and sick as alcoholics, but they hurt just as much.
And they might be just as addicted as their troubled, substance-addicted partners.

The author is not sure whether codependency can be labeled a disease, but it can make you sick. Over-involvement indeed can lead to anxiety and if you forget about taking care of yourself, you can get dragged down into the dependent's abyss.

Also, it's not helpful to help anybody: the codependent might actually contribute to the dependent partner staying sick.

Codependents Don't Act, But React

Codependent people don't really act, but they are always reacting to others' behavior, troubles, and misdeeds.

The author says that learning how to non-react or to act less and/or in smarter ways, is one of the keys to fixing codependency.

Codependent's Need for Control

The author says that codependents become obsessed with helping and pandering to their dependent partner as a way of controlling their environment.

They have often been hurt in the past, and caretaking becomes a way of achieving some type of stability and security in their lives.

What they don't realize though is that their controlling and caretaking behavior is actually controlling *them*.
But they don't realize it because they don't have good *emotional intelligence* to understand their own feelings, thoughts, and drives.

Codependent's Psychology

Codependents tend to come from troubled families, but they deny it.
They tend to have low self-esteem and blame themselves for everything.

They set their feelings aside, fail to listen to them, and repress themselves (including anger).
Codependent people tend to be pushed over like *too nice guys*, and they often resort to passive aggressiveness.

Furthermore:

- Deny their problem
- Pretend it will get better
- Binge-spend, over-eat
- Have temper outbursts (and are ashamed of their anger)
- Seek love from people incapable of loving them (avoidants)
- Wonder if they will ever find love
- Have sex when they don't want to
- Can get sexually repulsed by their partner
- Fantasize of extramarital affairs
- Sacrifice themselves (for things that don't require sacrificing sometimes)

You Must Detach Yourself

I thought it was particularly deep when the author says:

> The codependent feels responsible so much because the people around them are responsible for so little. They are just picking up the slack

However, if you have been codependent for a while, it's safe to assume that you can't help the dependent.
And you're not helping him/her by caretaking. And you're certainly not helping yourself.

The best of all is to detach.

Stop feeling like you have to intervene.
Stop feeling embarrassed or guilty for someone else's behavior

> God hasn't abandoned you. We abandon ourselves. He is there, waiting for you to cooperate by taking care of yourself.

Let's quickly review the steps to healing:

How to Heal

- Awareness: understand you are codependent and you have an issue
- Accept you have an issue
- Accept yourself and accept your feelings
- Understand you cannot cure or change the dependent
- Detach yourself
- Learn you can listen with empathy without taking on the problems
- Deal with your feelings
- Rebuild your self-esteem (even a part-time job helps)
- Attend alcohol anonymously
- Make yourself a priority and take care of yourself

To me, this sentence is the very best one-sentence summary of the whole book (and the whole codependency issue):

> **She kissed the frog hoping to get a prince. She turned into a frog instead**

[image]Real-Life Applications

Don't Get Into Troubled Relationships
Don't get involved with low-quality men and low-quality women. You can only get dysfunctional relationships and it can easily turn into an abusive relationship.

CONS

- **Lacking in Psychology**

Codependent No More is a bit lacking in good, deep psychology.

The author, for example, says the codependent has been sometimes hurt in the past, but I didn't find a good explanation on how that has affected them.

Or she says that the codependent learned that it's wrong to state their needs. An alcoholic parent or spouse was happy to teach those rules. However, people don't usually internalize rules just by listening to other people. That's why I found the psychological analysis a bit lacking.

Check *Will I Ever Be Good Enough* for a book that explains very well -and deeply- how someone can end up in a codependent relationship.

- **Fuzzy Description of Codependent**

I found the description of the codependent to be way too generic to be helpful.
It's basically everything and the opposite of everything.
We didn't need such a long list of traits if there are no clear-cut attitudes that closely describe a codependent. It only makes the book *less* clear.

- **Lots of Off-Topics**

I felt a few sections went on too far and too long off topics.

The goal-setting chapter, for example, explains goals through *The Magic of Thinking Big* (not the most empirical or strategic book). Or alcoholism. Or whole chapters on anger.
Not that it's an issue talking a lot about anger, but is it really a defining trait of codependents? I wasn't convinced…

PROS

Groundbreaking
Before Melodie Beattie and Codependent No More, there was no widespread understanding of the codependent phenomenon. That's a huge testament to her work.

Warm, Down to Earth Tone
The author could well blow her horn to have almost single-handedly codified a new dysfunctional relationship dance.
Instead, she's warm, vulnerable, and down to earth.
Much appreciated.

Review

Codependent No More has been a groundbreaking book in related literature.
I find it to be a good explanation of the dependency/codependency phenomenon, yet not excellent

I thoroughly enjoyed it, but personally didn't find it deep enough to warrant a five-star.
Still, I can highly recommend it to people who are struggling with codependency.

The 5 Worst Books Ever: AVOID These

Lucio Buffalmano · 26 August 2018 · Archived copy · Original

It's difficult to truly make a list of the "worst books ever".

One is because there are so many poor books.

And two, because it would probably include a long list of unknown books that most people, luckily, never read because they never made a single sale.

So this list actually contains the "worst *best-selling* books ever".

These books were previously summarized and reviewed on TPM.
But I removed them after I decided to only focus, review, and keep *great* books and courses here.

Contents

- #5. The Science of Getting Rich
- #4. The 7 Spiritual Laws of Success
- #3. You Can Heal Your Life
- #2. The China Study
- #1. The Secret

#5. The Science of Getting Rich

The Science of Getting Rich does not just feature prominently in this list of worst books ever, but would also score high in a list of "worst misnomer titles ever".

It's not science.
It's the law attraction again.

> Quote: A thought is a substance, producing the thing that is imagined by the thought.

So much for the “science” of getting rich (eye-rolling).

#4. The 7 Spiritual Laws of Success

I was particularly angry at wasting time on this book because I was somewhat expecting something good and, you know, actually *spiritual*.

Well, I was wrong.

Both in terms of spiritual and, if at all possible, also in terms of “good”.
There is nothing spiritual here.

Again the law of attraction to the service of material wealth.

> Quote: I will release this list of my desires and surrender it to the womb of creation, trusting that when things don’t seem to go my way, there is a reason, and that the cosmic plan has designs for me much grander than even those that I have conceived.

#3. You Can Heal Your Life

[image]

There certainly IS a connection between mind and body. And by extension, between feelings, thoughts, and body. It's not a new concept after all, the Romans knew it all along:

> Mens sana in corpore sano (healthy mind in a healthy body)

However, I feel that *You Can Heal Yourself* takes it a bit too far.

Saying that the cause of *most* issues is our thoughts and limiting beliefs is disingenuous. And saying that you can heal yourself by changing your thoughts is dishonest.
Especially in all those cases where there is actually little connection between diseases and a state of mind (ie.: baldness)

> Quote: Fear, and the tension it produces, can create things like baldness, ulcers and even sore feet.

I should spread the news to my bald pals: grow a set first and the hair will follow suit!

#2. The China Study

[image]

Apparently, it's not just bad thoughts that can kill you.

Meat can kill you too.

But don't worry, because plants can cure you!
Indeed animal food causes cancer and a plant-based diet prevents cancer.

And plants can even revert cancer and heart disease.
That's what Colin Campbell, says in *The China Study*.

I wonder if that's the type of cure Steve Jobs was trying to follow rather than getting immediate medical attention.

But it's not the idea of the book I criticize, which might as well be the main result of The China Study (albeit that's also been heavily criticized).

It's the attitude of the author that made me dislike the book.

Campbell doesn't refer to himself as a vegetarian, but he has the fervor of the most crazed of them.
Instead of questioning his own theories and assumptions like every good researcher should do, he defends his theories and ideas like an angry bee defends his honey.

That's not the attitude of a scientist.

I think it was Ayrton Senna, an iconic F1 racer, who once said: *the day you see a gap and you don't go for the overtake, you're not a race driver anymore*.

I liked that quote and I think it beautifully translates to science and research as well.
Similarly:

> When you stop looking for the truth, you're not a scientist anymore

And here are a couple of quotes from The China Study.

Quotes:

> American diet was so bad for us that that it was destroying our hearts. The status quo boys didn't like it

> (…) But the powers that be didn't let it happen

The status quo boys, that made me smile quite a bit when I first read it :).

However, it also made me queasy about the author's motives.
Why would anyone resent the "establishment" so much? The establishment is nothing but a product of human nature.
Resenting how things are is resenting life.

And of course, as someone said, "*when it's you against the world, you are either terribly wrong or about to make history*".
But you should at least be open to the possibility that it's the former…

#1. The Secret

[image]

Would you be interested if I had the secret to making your dreams come true?

ALL of your dreams?
Including the ones you don't even know you have.

Would you still be interested if I told you that you don't even have to work hard?

Here it is: you just have to think about what you want. Believe you will get it. Then act as if you already have it.

That's, in a nutshell, what our top worst book ever says.

It's *The Secret.*
Fully based on the law of attraction.

Why N.1 Worst Book Ever

The Secret is the second most popular book on this list by sales, and it's the most damaging of them all.

The Secret not only perpetrates the audio… eh-em… The idea of the law of attraction, but actively advocates that you don't work hard on your dreams and goals.
Why not?
Because otherwise, you communicate to the universe that you don't really believe in it.

And if that weren't enough, it actively advocates that you behave as if you are already receiving what you ask for.
I suppose that if you demand to receive a lot of money, then you start spending all the little money that you *do* have.

I really hope it won't turn too badly for the people putting this book into practice.

Quotes:

> Food cannot cause you to put on weight, unless you *think* it can
>
> The law of attraction is a law of nature. It is as impartial and impersonal as the law of gravity is. It is precise, and it is exact.

Sure after this list we grew a bit desensitized to BS, but The Secret still manages to take it to a whole new level, doesn't it :).

And with these two last pearls of wisdom I believe, we can close in style this list of the worst books ever.

Cheers, fellas.
And let's watch out for what we read: time is our most precious resource.
And time wasted reading cr@p is no better than time watching garbage TV.

How to Solve Perpetual Relationship Problems: A Guide

Lucio Buffalmano · 26 August 2018 · Archived copy · Original

How can you solve perpetual problems that seem unsolvable?

Well, sometimes, you can't.
But some other times, you can.
Or you can work around them.

This article helps you address perpetual relationship problems.

Happy ever after means fixing perpetual problems
Note: this article is based on John Gottman's research.
Gottman uses alternatively "unsolvable problems" and "perpetual problems", and I will also use them interchangeably.

What Are Perpetual Problems

This is a definition of "perpetual problem:

> Perpetual problems cover the areas of friction, disagreements or problems that a couple finds difficult to solve once and for all and that keep re-occurring over and over again.

The reasons why fixing perpetual problems is difficult to vary and include personality traits, deep beliefs, irreconcilable habits, or difficulty or unwillingness to change.

Types of Relationship Problems

To help understand relationship problems it's helpful to put them into the contest.
Relationship researcher John Gottman says there are three types of relationship problems:

1. **Solvable problems** are topically related and situational. It can be about a disagreement on where to go for dinner, or on where to spend Christmas. They have no deeper meaning behind the issue and you can solve them with a compromise or an ad-hoc solution.
2. **Perpetual problems** cannot be solved because they center around completely different ways of seeing the world, different or contrasting values, or different personality traits and preferences. For example, deciding where to spend Christmas could be a perpetual problem if she wants to spend lots of time with her family together with him while he prefers alone time with her
3. **Gridlocked perpetual problems** are perpetual problems that the couple has not handled well and that have become chronic and painful issues in the relationship. For example, if every Thursday it's an argument about spending the weekend with her family and he is passive-aggressive every time he goes, that's a gridlocked perpetual problem.

Relationship Perpetual Problems Examples

Here are some examples of unsolvable problems:

- **Frequency of sex** (one wants or needs it more often)
- **Spending habits** (savers VS spenders)
- **Family ties** (spends lots of time with the family of origin VS highly independent)
- **Socializing** (wants to go out a lot VS stay at home partner)
- **Organizational requirements** (tidy VS disorganized)
- **Time management** (advance planner VS last minute planner or no planner)
- **Family planning** (wants children VS doesn't want children)
- **Relationship status** (marriage / just sex)

You will notice that lots of these problems relate to deeply entrenched personality traits.
It can even be as simple as being on time VS not being on time.

And since people rarely change, most of these issues will not find a permanent solution most of the time.

And that's OK, for some types of problems.
But it can get more complex when the differences relate to the relationship itself.

Ted and Robin in the series "How I Met Your Mother" were fighting against those types of unsolvable problems that doom a relationship.
See here an example:

Ted made the mistake of trying to solve one of those unsolvable problems that doom relationships.

Some women have done the same with yours truly, and that didn't end up well:

Some unsolvable problems lead to heartbreak
However, **there are also plenty of perpetual problems that are totally OK**.
The skill is in knowing which is which.

Gridlock: When Perpetual Problems Get Problematic

John Gottman says that some perpetual problems can turn the whole relationship sour.

This can happen when the problem is too big and important to both.
However, it can also happen when the problem is not really huge.

How can that be the case?
Small perpetual problems can become huge problems when one or both partners have a poor attitude towards it.
Indeed, says Gottman, most of the time it's not about the origin or cause of the problem but it's about attitude.

It's when partners refuse influence from each other and adopt a negative view of each other that unsolvable problems ruin the relationship.
One partner cannot accept that their partner is different from they are and start seeing their whole partner's personality in a negative light.
They either dig their heels refusing to budge or "go underground" by refusing to discuss the issue and silently build resentment.

Each partner starts believing they are "right" and "good" while the other is "wrong" and "the villain of the relationship".

Example of Perpetual Problem That's Become Gridlocked

The movie Blue Valentine has an example of a perpetual problem that has become a gridlocked problem:

You will notice she is ambitious while he is not.
She has not accepted how he is, and she is also not dealing with the issue openly. She comes across as judgmental and unhappy with him. While he feels under fire and becomes highly defensive.

How to Solve Perpetual Problems

Before I started delving into relationship literature, I thought that any successful couple had no unsolvable problems, by definition.

I was terribly wrong.
John Gottman says that **every couple has unsolvable problems**. And it just makes sense if you think about it: unsolvable problems relate to being different.
And since the chances of being exactly the same are quite slim, we will all have some unsolvable problems to deal with.

But here is the point:

The unsolvable problem will not ruin the relationship if we deal with them well.

Here is how to do it:

1. Prevent It By Finding A Compatible Partner

Somebody once said that when you marry someone you also marry a set of problems.

That is so true.
But the solution is simple: **when deciding who to partner with, make sure must make sure that the problems between you two are problems you can live with**.

Therefore a great and often under-appreciated relationship skill is learning how to date and prospect.

2. Approach With Open Mind

You can approach the conflict with an open mind and a negotiator mindset.

That means looking for solutions instead seeking "victory".
Talking about problems with an open mind will also get you into a mindset that you can talk about anything with your partner and that together you can solve any problem.

Now that's a great mindset to possess.
And if you learn some basics of negotiation and "pie-enlarging" strategies, that will surely help (check out the *best negotiation books*).

3. Don't Try to Change Your Partner

It's almost common knowledge that trying to change people doesn't work.
And John Gottman found out in his laboratory experiments that couples trying to change each other rarely improved their relationship.

The same related issue is trying to solve the problem in a way that you benefit the most. That's a bit like expecting and forcing your partner to change.

In the long run these "solutions" either don't hold or build resentment.

Again, think win-win instead and try to meet around the middle.

4. Understand Your Partner

Talking about your issues is a great opportunity to better understand your partner and build emotional intimacy.

What do they like best, why, where can they compromise, and what are they going to be happy with?

That's the mindset of *turning obstacles into opportunities.*

5. Pick Your Battles

Let's be practical here.

Maybe you want to spend every weekend with your partner, throw the trash out every single day, clean the dishes the second you finish eating, and never watch an action movie/football match with him.

But instead of going for every single item on your list, how about prioritizing and asking what's most important to you?
Pick your battle and differentiate what you *need* from what you really want and what would be nice to have.

6. Argue Well

We have talked a lot here about arguing well.

We introduced the four horsemen of the apocalypse and we explained what they are and how to avoid them.
For a deeper review check:

- criticism
- defensiveness
- stonewalling
- contempt

Suffice here to say that the basics of arguing well are to approach the conflict with an open mind and want to understand your partner first.
Only after seeking to understand seek to be understood and then address the issue with a win-win mindset.

If the conflict is highly emotional, it can help to prepare your approach in advance.
Here are some very good resources for dealing with difficult conversations:

- Difficult Conversations
- Crucial Conversations
- Thanks for The Feedback

7. Communicate Directly

Unsolvable problems often fester because we don't feel like we can be fully honest with our partners.

This is most common in partners who tend to be more submissive, too nice, or passive-aggressive.
But you need to be brave and tactfully address the issue with full honesty.

The example from Blue Valentine is a good example of a gridlocked issue where neither partner is owning up to their side of the problem.

Her side of the problem is:

- I wish we could be more well off
- I sometimes wish you were more driven
- I would like to see you leverage and use your talent

His side of the problem is:

- I feel like you are judging me
- I want you to communicate your thoughts freely
- I am happy with my life the way it is, are you happy with yours

If the two of them had discussed their position in full honesty, they would have gone to the heart of that issue. And they'd have had a chance to fix it.

8. Accept Some Problems Will Take Time

If you are already gridlocked, have some realistic expectations.

It's possible you will make strides, but it's also possible that it will take some time to bring the situation to a point where you both can be happy.

The first immediate goal should be to first stop resenting your partner.
It can help to lay out a plan of the "bare minimum" you can tolerate:

1. The bare minimum you require
2. Your areas of flexibility
3. A first draft of resolution

From then on, you can slowly move towards positive territory.

Unsolvable Problems Checklist

So far we reviewed that:

1. Problems are unavoidable
2. Some problems are unsolvable, and they're also unavoidable
3. Unavoidable problems don't (necessarily) undermine a relationship
4. When unavoidable problems become gridlocked they ruin the relationship

The question then is: are your unsolvable problems gridlocked?

Here is a checklist to find out:

- You don't talk about the problem (anymore), and yet it still pains you
- It feels like a war is about to break up when you broach the topic
- You talk about it, but nothing ever moves forward
- Both of you are entrenched in your position
- You are both more intent on getting your way than meeting a middle ground
- Nobody has ever tried to put themselves in the other partner's shoes
- When you talk about it, it can get mean and nasty
- The issue gets bigger with time
- You are disengaging from each other
- When you think about your partner, you think of gridlocked relationship problems
- You start resenting your partner

If that's your case, don't worry, it's never too late to start an open, honest communication.

It can help if your partner as well reads this article. Two of you are much more powerful than one.

SUMMARY

Every relationship has unsolvable problems because they simply stem from differences in our personalities, values, and background.

Worry not, unsolvable problems do not have to be a threat to the relationship.
If you can tackle them with humor and understanding, they can even spice up the relationship.

It's when the unsolvable problems undermine your team spirit that they risk starting a vicious circle that unhinges your relationship.

This article explained how to address and solve unsolvable relationship problems.

Atypical Seduction Techniques To Sweep Her Off Her Feet

Lucio Buffalmano · 27 August 2018 · Archived copy · Original

Sweeping women off their feet is possible if you use the right seduction techniques.

By the end of this article, you will learn 4 counterintuitive seduction techniques that will help you sweep women off their feet.

INTRO

First off:

We don't recommend these techniques if you seek efficiency.

However, if you want to learn more atypical and advanced techniques, as well as learn the exceptions to the rule, then read on.

Men who sweep women off their feet break the rules and throw caution to the wind.
They're not afraid of risks, of potentially looking like idiots, or of charging head-first into a relationship.

Both the mainstream and pick-up artist seduction advice tells men to:

1. Don't chase
2. Don't invest too much
3. Don't rush things

And that advice makes sense.
However, when you want to go for memorable, you really need to break all the rules.

This article shows you that the exact opposite behavior of typical dating advice when executed well, overcharges your seduction by 10x.

Let's start:

1. Swarm Her Heart With Unrestrained Passion

The conventional wisdom is that you should not over-invest.

And that makes sense.

The problem with investing too much indeed is what it communicates.
It suggests that you believe she is more valuable than you are -higher sexual market value-. And your investment is

a way to make up for the value imbalance.

And since women lust after men who are "higher up" than them, they often don't really go crazy for men who over-invest.
That much is true.

However, in a cynical world where most men seek not to look to into her, a man who does the opposite can be supremely attractive.

Swarming her with passion includes:

- Texting her
- Calling her
- Scheduling dates
- Being upfront about your lust
- Being upfront about your willingness to see her
- Doing gallant things for her (opening doors, protecting her, checking up on her, etc.)
- Picking her up and driving her back

All of the above shows that you really like her.
And people love people who like them, it makes them feel good. Plus, it shows you've got the balls to go directly and unashamedly what you want.

Why it Works

Robert Greene in *The Art of Seduction* calls this style "Ideal Lover" and says that its allure is that of making the woman the center of his world.
Swarming her with attention, time and effort is not just about sex or finding a partner.
But it appeals to greater ideals of romance, love… Passion.

Rudolph Valentino is an example of a man who swarms her lover with unrestrained passion (at least on screen).
But many of Casanova's conquests were also based on over-investment and unrelated shows of affection.

However, don't think this is all about lovey-dovey stuff.

There is also a powerful element of sex here.
Indeed anything unrestrained powerfully hints at the sexual.

Have you noticed how serial-killer psychopaths have lots of women who want to have sex with them?
Well, the unrestrained passion touches on similar attraction triggers. But it removes the most anti-social traits of psychopaths and adds romance, making its appeal much larger and, I'd dare to say, almost universal.

Doing It Well

How do you do it?

First of all, the big distinction: there is a big difference between the run-of-the-mill, *nice guy* average Joe who over-invests and the way the Rodolfo Valentino-type of man operates.

What's the difference?

The average Joe is plain and boring.
There are hundreds of thousands of average Joe operating the same way.
An army of men in ill-fitting clothes and all working for the man.
Ordinary.

Plain.
Boring…
And ordinary is bland and unattractive.

Valentino instead is over the top.
He is passionate, outlandish, his style is out of this world.
Something like women have never experienced before.
He shows unrestrained abandon in his pursuit.
His out-of-this-world style suggests romance and sex that are also out of his word.

That's the way you gotta do it if you want to sweep men off their feet.

The Notebook beginning here, one of the all-time most favorite chick flicks ever, is all about him over-investing and blatantly chasing. Hanging with one hand at the risk of dying to get a date is the ultimate over-investment example.

Note of Caution For Women

Sadly, this is not just the style of incorrigible romantics and Casanova-style womanizers.

There is indeed an overlap between this seduction technique and the style of cluster B personalities (narcissists, psychopaths, and *sociopaths*).

Cluster B men make their targets feel like they are the only thing that matters, and the best woman they have ever met.
They add a shower of praise and admiration to stroke her ego and make her feel like a queen who's living the romance of her life.
They crowd her time, write her first all times, they are constantly on her mind.
And she's walking on clouds during the initial stages of romance.
But there is no happy ending. Once she is completely under his thumb, the romance turns into a nightmare.

The thousands of women who fall prey to sociopaths and who later join websites like sociopathfree.com are the eery testament that this technique does indeed make women go crazy (almost literally).

So watch out if some guy romances you like this.
It *might* be the romance of your life. But it might also be a sociopath who doesn't even know what romance is.

1.2 Profess Love Early On

Says Susan Forward *in her book* "men who hate but seduce women":

> Then, when he took me home that night, we were sitting in the car in front of my house and he kissed me and said, "I know this sounds crazy, but I'm in love with you. Now that's romantic. The next morning, when he called me, I told him that I wouldn't hold him to anything he'd said the night before. His response was, "I'll repeat every word of it right now." **Jackie felt like she was on a magic carpet from that evening on**. Mark's falling in love with her so quickly completely swept her off her feet.

And says the author herself:

> I believe that when a romance moves as swiftly as these did, there's an underlying sense of danger in the air. The danger may actually add to the excitement and stimulation of the affair.

And I believe she's right.

2. Pursue Her With Abandon

The popular dating advice is never to chase a girl.

And for good reason: in basic dating power dynamics chasing a girl is the same as over-investing.
It communicates that you have little going on in your life and few other female options.

That makes sense.
In general.

However, the simple fact that chasing evolved in men and comes naturally to almost everyone, shows that, at least sometimes, it worked -or its genes would have died with the very first men who started pursuing-.

And with a few tweaks, chasing can be turned into a technique to sweep her off her feet.

A note of caution though: this is not the easiest seduction technique.
Chasing a girl who doesn't want you over months can be ego-battering and outright scary.
And it's not the simplest to execute: it's a bit like a tightrope walk.
Indeed the difference between an effective chase netting you a girlfriend (or a lay) and a restraining order can be dangerously thin at times.

But it's doable.

Why It Works

We live in a fast-paced world.
Most men have little time for romance and the #meToo movement is only the last drop that makes men skittish of persistence.

It's a pity because calibrated persistence is a big female fantasy.
Lots of romances and even fairytales entail the man persisting and overcoming hurdles until she finally relents.

And in a world where everyone is too busy for romancing, the hard chase becomes all the more effective.

How to Do It Well

Chasing in style can be done in two different ways:

1. With the Valentino style, over the top
2. With constant pressure

Over the top would mean things like sending flowers to her workplace (always huuuge effect), delivering a small gift at her place, and sending a love letter full of flowers.

This is an example from Grant Cardone on how to do it with constant pressure:

> **Grant Cardone**: for 13 months I called her once or twice a month
> **Alena**: no returned phone call (from me)
> **Grant Cardone**: I spent the next 13 months pursuing her, doing everything I could. Meeting her friends, finding out what she'd like to do, finding out what turned her on, anything and everything

The constant pressure seduction technique is a bit more common and bland, so you should offset the chasing with lots of personal value.
Cardone in the video for example was still working hard on his life and becoming a more and more successful man.
That also made him attractive.
Had he been a bum, chasing incessantly would have probably gone nowhere.

The Bad Ways to Do It

The worst way to deploy this seduction technique is best summarized with the attitudes of the following sentences:

> Why don't you call me back
>
> You are the woman of my dreams
>
> Please give me a shot..
>
> I can make you so happy!

They are all examples of supplicating, begging, or clueless behavior.

Example: How Chasing Worked for Me

I very rarely used this seduction technique, and never until the end.
But I've dabbled in it enough to know first-hand it can work.

Here is an example:

Some years ago and for a period of time, I was calling a girl who picked up the phone but didn't want to go out with me.

When we met, she said she wasn't interested in dating but she kept a polite conversation going on.

After our interaction, I called her 2-3 times over a rather extended period of time while I was walking on the way home. And we'd had these very open talks about our lives.

I was careful to communicate I was interested, but I never bugged her too much about the meeting. Our calls had the frame that "I'm interested, but I'm not going to harass you".

If I'd ask her out and she'd decline, I'd always step back and make it seem it was nothing.

The last time I called her I could feel some excitement in her tone.
And by the end of it, she was inviting me to go out with her group.

I never followed up on that, but it was enough proof for me that I could make persistence work.

Note: chasing and persistent romancing become part of the culture when there are more men than women: read the article Science of Dating for more.
And also note that when you chase hard you might start the relationship with the balance of power skewed on her side. But you can correct that during the relationship.

Warning: Chasing VS Persisting

The difference between chasing and persisting is all in:

1. **Your personal value** (and how you can communicate it during your pursuit)
2. **Your emotional intelligence** (to make sure you walk that line of persisting, without ever becoming creepy)

It's absolutely not easy to do.
As a matter of fact, **it's easier to never chase, than to chase effectively**.

Also, read:

- **Straight-line seduction**

> Straight Line Seduction

3. Drop Babies Hints

The widespread dating advice is that you should not rush things and you should not show too much interest.

Rushing means you don't have many options and that you don't screen for high-quality women. Which, in turn, communicates you don't even like *her* and you would take just about anyone.
And albeit that's not necessarily true, in our culture rushing is also associated with poor decision making.

Again, that makes a lot of sense… In most normal situations.

But we're not talking normal here.
We're talking about sweeping off her feet seduction techniques.

And if you can evoke the allure of a great inseminator, things will move to bed with passionate abandon.

Why it Works

Let's not forget that dating, at the core, is nothing more than looking and screening for a mate to procreate.

Hinting at babies is only a more direct way to tap into that subconscious drive that *all women have*.

Research showed that women rate higher men who attend to children and that general displays of kindness are also favored (Bleske-Rechek, 2006).

If you do it well, it unleashes a strong, carnal sexual desire.
Not simply the more common desire for sex and sexual pleasure, but a **desire for impregnation**.

Shall we be even more explicit: a lust for your semen?

How to Do It Well

Don't broach the babies topic too seriously or too directly.
Albeit you could make that work too, I see more ways it would backfire than it would work.

Basically, you want to plant the seed for *her* to think about you as a great baby-maker, *not* you asking her to give you a child.

The ways to do it correctly then are:

1. Hint babies while making it clear you're not fully serious (Tinder text flirt for example)
2. Drop far-away hints and let her connect the dots

The second is the best option.

When to use it:

This is going to be much more powerful when women start thinking about children.
That's related to age of course, but also by culture.

A girl in the West in her younger twenties won't be thinking about children most of the time.
But in parts of the world where women give birth early, you might be astonished at how early the baby mindset starts.

Example: How I Seduced With Babies' Hints

Since this can sound very abstract, here is the most glaring example I have:

A couple of years ago I was having dinner and wine at my Airbnb place with a girl.

Given the circumstances, things were probably going to happen anyway (in the texting guide I show how I set it up as a first date).

But as they say, better safe than… Masturbating :).

Sitting at the table, we were also playing with the laptop as we got to know each other.
And I got to know she had had a bad childhood (to be accurate: a general-style abusive father).

At that point, I knew that showing old pictures of my happy-ish family and childhood was probably going to take her into fantasy land.
The fantasy land of the family she never had.

Then, once in the right mindset, I showed her the pictures of me as a baby.
And I let her connect the dots.
The dots being she could have had the same… Maybe starting that night :).

I expected it to be a good boost in attraction.
But I was quite surprised at *how* powerful it actually ended up being.
She went into a frenzy-like state, grabbed my hand, and started squeezing it.
A little later, you can imagine what happened.

4. The Broken Man Seduction Technique

The lives of 99% of men revolve around trying to look stronger, cooler, and wealthier than they actually are.

And that makes sense, one might argue: *for obvious reasons* women of all species are attracted to strong mates.

However, again, that's the bland way of dating.
And a run of the mills' seduction techniques doesn't sweep anyone off their feet.

Enter, the broken man.

Why it Works

To begin with, a too strong and perfect figure is unrelatable.
So it's not even an ideal one should strive for.

A shady past shows a glimpse of a deeper layer, a mystery. Maybe even a slight sense of danger.
And we know that's exciting.

A vulnerability, an uncontrollable emotion, even some tears, they are reminiscent of the byronic hero, the sexy but flawed man in need of fixing.
That works in two ways: the "normal" sexual attraction *plus* it evokes maternal instincts of protection (here's the female version of this seduction technique).

And it's particularly powerful when she thought you were an extremely high-value man, almost out of reach.
In that case, she will think that by taking care of you she can make you 100% hers.
And that's another woman's dream: the man everyone wants, just for herself. The only lady who found a way to complete him.

How to Do It Well

Doing it well means showing cracks and deeper layers of personality that you normally keep hidden.

From an overall frame of a sexual being, you are showing her a brief peek into your troubled soul.
In a way, you are gifting her that glance into yourself because no one else gets to see it.

She feels special.
And she feels bonded.

I am still searching for the perfect example in a seduction environment.

But in the meanwhile, this is the execution (outside of a seduction environment):

What makes it good?
It's a moment of fleeting weakness in an overall solid frame of high-quality men.
He is opening up, which takes courage. He is striving to control himself, which shows he is not a low-quality, out-of-control man.
And then he regains his balance.

Just a glimpse.
Maybe there is more, baby, but I can't spill all my beans just yet.

Bonus point if your vulnerability resonates with her.

The quick peek into your soul is the emotional equivalent of a skirt up in the wind. Sexy as hell, isn't it?

Doing it Wrong

Doing it wrong instead means showing your vulnerability:

- Too early (she might not be into you yet)
- Too often (you're not a constantly crying baby)
- Too much (being fully out of control is not sexy and a sign of BPD)

This is an obvious example of doing it too much.

SUMMARY

For sweep-off-her-feet seduction, you need to break the rules.

Yes, breaking the rules is risky, but big seductions require big risks.

On average, the better you get, the more rules you can break.
As a matter of fact, to get into really powerful seduction, the ones that she will remember for a lifetime, you need

to operate outside all the rules.

This article gave you four examples of how breaking most dating rules is the most effective way of sweeping her off her feet and delivering a memorable seduction.

Full Summary

About the Authors:
Kouzes and Posner are two popular authors of leadership training and books. They also wrote "*The Truth About Leadership*".

The Most Important Leadership Role Models

Research shows that the people closest to us are the ones who have the biggest impact on us.

Even for teenagers who are in love with pop stars or sports athletes, the biggest leadership role models are still their parents.

Similarly, teachers, business bosses, and coaches are also ranked high.

We Can All Learn to Be Leaders

Kouzes and Posner say that in most fields it's not intelligence or talent alone that determines results, but it's effort

and continuous practice.

The Five Practices

1. **Model the way** (be clear about your values and embody them)
   - be clear about what you stand for: people don't trust flip-floppers
   - show instead of saying: you must embody the virtues you want to see in your team
2. **Inspire a shared vision**
   - make everyone feel responsible for behaving along the team values and goals
   - show the way and create a sense of hope
   - be forward-looking: imagine a future, inspire people with it, and draw a map to get there
   - talk to people, make them feel heard, and make them feel like they belong
   - tie big ideals in the shared vision, make people feel like they're doing something useful
   - use symbols and figures of speech to instill a shared culture
3. **Challenge the process** (overcome obstacles and stack small wins)
   - the status quo breeds mediocrity: look for new ideas to implement
   - people give their best under deadlines and challenges, and use them
   - emphasize the small wins along the way
4. **Enable others to act** (get others engaged)
   - great leaders foster a great team environment where everyone trusts each other
   - develop competence
   - empower the team: give them a sense of ownership
5. **Encourage the heart** (do it passionately and energetically)
   - encourage community formation
   - reward positive results: in person and unexpected positive feedback works best
   - celebrate wins

> **People commit to causes, not to plans**

Foundation of Credibility

The best leaders have credibility.

1. Honest
2. Forward-looking
3. Competent
4. Inspiring

A great way to gain credibility is: DWYSYWL: do what you said you will do.

Vision + Challenge

Great leaders have a great vision in mind. Nobody will follow someone who is not convinced in his own dream. The challenge is also almost a given. Few people have done their best when it was easy peasy.

Most everyone did their best when they face a challenge along the way.

Love

Love what you do, love your life, love the people you serve.

> **What you do speaks so loud that I can't hear what you say**

[image]

Real-Life Applications

Show Up At The Party
Building community is a great way to increase team spirit, trust, and bonding. The leader however should take part in the celebration

CONS

Lots of Team Inspiration, Little Leader's Power

I find some popular leadership books like *The Leadership Challenge*, *Leaders Eat Last,* or *The 21 Irrefutable Laws* to all focus on character, values, and team inspiration.

And that IS important.

But none of them focus on crucial domains like charisma, power dynamics, and the interpersonal elements of power dynamics like dominance and submission.
I feel that's what's missing in much of the leadership literature -and that's why I started this website-.

Leadership In Challenging Times?

The Leadership Challenge seems to be about relatively quieter times at big companies.

The monthly team meeting, the feedback slips on the boss' desk, the employee of the month with the applause, etc. All are equally part of leadership, of course.

But there are times in smaller companies when the idea of the employee of the month seems silly and trivial. There are times when the only goal is to ship. Or win a big customer without which you're in trouble. Or simply

surviving to fight another day.

In those cases, leadership is more based on masculine qualities, leading the charge, and making things happen. That type of leadership doesn't show here.

There Is More Than One Type of Leadership

I have the impression that *The Leadership Challenge* makes it seem as if there were only one type of leader. However, that's not the case and different personalities can lead in effective -but different- ways.

PROS

Great & Deep Overview Of Being a Leader
If you have been studying psychology and communication, what you read here will not break new ground.
But it really puts everything together into a big and coherent framework.

Touches On Most of What Matters
The Leadership Challenge touches upon almost all that is necessary to be a great leader.

Survey-Based
Kouzes and Posner are to leadership a bit what Gottman is to a relationship: these guys have collected data for decades.
Now that does not guarantee they are right or know better than anyone else, and surveys can be notoriously poor formats of collecting data. However, they still give more quantitative foundations to what they say.

Review

The Leadership Challenge is a great book on 'big company' leadership.

I listed a few major cons there, but if you have been reading around here I am often more demanding of great books than of average ones.
That's because I raise the bar for great books and put them under heavier scrutiny.

The Leadership Challenge is both and exhaustive. It can be one of the very first reads for aspiring leaders, and a go-to manual when they need some refreshing.

And if you want more real-life leadership in free-forming groups, leadership in more challenging, or dating leadership, then this is your website.

10% Happier: Summary & Review

Lucio Buffalmano · 28 August 2018 · Archived copy · Original

In *10% Happier* author Dan Harris shares his journey into meditation and mindfulness, and how it helped him improve his life.

Bullet Summary

- Meditation will help you become more mindful
- Mindful means you are aware of what's going on around and within yourself
- And will you be able to better control your mind

Full Summary

Dan Harris wanted to make sense of meditation and mindfulness.
And use it to improve his life in practical terms: becoming less stressed and happier.

10% Happier is the story of how he achieved that.

Ego Is The Voice In Your Head

Dan Harris says that ego is the voice in our head. No in psychotic terms, but as the normal voice, we all have that comments on our actions and behavior.
The voice for example tells you "I'm too tired to go out".

But the author also expands on the notion of ego. He says it's also what makes you check the fridge when you're not actually hungry, and what makes you check your email -or your Facebook feed- a hundred times a day.

All these ego-driven actions do not do anything to make you happier.
And by learning to control the ego we can all become a bit happier.

The Ego Is Never Happy, Always Wants More

Dan Harris says that the ego is never satisfied, it always demands more.

Whenever you get what you want, a new toy or a new pay rise, it becomes your new standard and the ego starts wanting more.

The ego also loves compares.
It compares what you don't have with what others have, and it makes you jealous and unhappy.

The ego doesn't live in the present but in the past and future.
And it particularly loves living in the past. It loves revisiting old wounds to make you feel the pain in the present.

The ego is an endless pit of dissatisfaction.
And when you learn to control the ego, you learn to become happier.

Meditation and Mindfulness

Through meditation, we can learn mindfulness.

Mindfulness is the ability to become aware of our surroundings and our inner impulses without having to react to them.

Do you remember how our ego dwells in the past and worries about the future?
Well, mindfulness helps us stay in the present without letting the worries of the future and the pains of the past affect us.

Meditation also helps you to become more compassionate towards others and towards yourself.
A study even showed that people who meditate are more attuned with others, use less the word "I" and even laugh more.

Mindfulness Gives a Fourth Option

Most people have three modes with which they relate to the world around them.
They:

- Want something
- Reject something
- Zone out (ie.: don't care)

Mindfulness gives you a fourth option:

- Observing without judgment

Accept Negative Emotions (Without Denying Them)

Dan Harris says meditation does not cure everything (of course).

And it cannot make negative feelings and emotions go away.

However, it helps in the way you cope with them.
You do it in four steps:

1. Recognize the emotion
2. Allow it to exist
3. Investigate what it's causing
4. Separation: emotions are not you, so don't take them on board

Dan Harris says that rejecting emotions, or worst trying to repress them with drugs will only worsen the problem.
That's what he was trying to do with the trauma he was battling after having been a reporter in a war zone.

And that led him to a panic attack while on air.
Here's the video:

Mindfulness is NOT Pushover

The author says that many fear becoming more mindful because that could mean becoming "softer" and a *pushover*.

Not true.
Learning to control your ego does not mean you forget about your needs and wants.
As a matter of fact, it helps you gain clarity on what you want and need. And it helps you achieve your goals by becoming more productive and getting more creative ideas.

Indeed Dan Harris realized that stress and competition were not the most effective ways to fuel his drive.
And that controlling his urges was in and by itself a great mental challenge.

How to Meditate

Sit comfortably and focus on your breath.
Your mind will naturally wander, and that's OK. Every time, take it back to your breath.

Sometimes you will have some light discomfort while meditating, like an itching or a slight ache.
And that's when you can start to apply the principles of mindfulness: observe it without intervening.

As you do it more and more, you will be able to apply mindfulness to more complex thoughts and feelings.

How Meditation Helps

Dan Harris says that meditation helps with:

- Depression
- Drug addiction and smoking
- Binge eating
- ADHD
- Asthma
- Psoriasis
- Irritable bowel syndrome

Real-Life Applications

More compassionate towards yourself
If I take one great concept away from *10% happier* is that compassion doesn't just apply to the people around you.
But it applies to yourself as well.
It means you are more understanding of your mistakes and shortcomings, and you are less judgmental of your character and behavior.
Great stuff.

CONS

Bit Unscientific and Generic on "Ego"
I didn't find it to be very accurate in its psychological description.
As a matter of fact, I was reading about the ego I was starting to have a low opinion of 10% Happier.

PROS

Grounded and Practical
There are no woo-woo or big words here. Indeed the author found books such as The Power of Now too complex and wanted something simpler.
He achieved it.
10% is about what meditation and mindfulness do for you and how it can help you in daily life.

Review

10% Happier is a very good book.

It strikes a great balance between meditation and Eastern philosophies and the Western life of those who want to work hard and achieve.

That means no woo-woo stuff and a lot of practical tips on how meditation helped the author improve his life.
No need to go to India, tripping on LSD, or becoming a guru.

I especially recommend 10% Happier for people who are very driven -if you’re reading this website, chances that you are-, and people who might suffer from stress by overwork.

Quiet: The Power of Introverts (Book Summary & Review)

Overview

- **Introverts are better at analyzing** and learning from mistakes
- **You can learn to be more extroverted**
- **Introverts are generally more sensitive** to stimuli and threats, and get overwhelmed more easily
- It's not true that extroverts are more socially skilled

Notes

About the Author:
Susan Cain studied law, and she is a writer and lecturer. However, she did a good job with her research on introversion.

Western Society Favors Extroverts

Susan Cain says that Western society has an extrovert bias and that extroverts' traits are more likely to lead to personal and career success.

She mentions Tony Robbins as an example that our culture equates high-powered extroversion -and borderline narcissism– and as the pinnacle of leadership.

Harvard Business School is also structured to make students more outspoken and extroverted.
And organizations emphasize teamwork, bosses want "interpersonal skills", and the entrepreneurs who get VC money have confident or overconfident personalities.

Even the authors who get published must convince publishers that they are "talk show ready".
Susan Cain says you wouldn't be reading to Quiet if she hadn't convinced her publisher.

And many introverts grow up believing "there must be something wrong with them".

Quiet: The Power of Introverts challenges all of that.

Are You Introvert or Extrovert?

Susan Cain says there is no standard description for introversion, but she gives a helpful list.

Introverts:

- Are drawn to their inner world of thoughts and feelings;
- Focus on the meaning of events;
- Recharge batteries with lone time;
- Feel good with little stimulation (ie.: quietly sipping wine);
- Prefer one task at a time and can focus;
- Are more immune to social status;
- Listen more, dislike conflict, and think before they speak
- Process information more deeply (think and ponder deeply)
- Pay more attention to warning signals
- Have more "muted" reactions to stimuli

Extroverts:

- Are drawn to the external life of people and activities
- Plunge in the events around them
- Need to recharge with socialization
- Prefer multitasking and jumping from one thing to another
- Are more risk-taking
- Tend to be more assertive, and dominant, speak more than talk, and are comfortable with conflict
- React more quickly
- Pay more attention to the reward (and can make mistakes rushing and taking risks)
- Amplify positive emotions (which can lead more easily to addictions though)
- Cheat more, exercise more, have more sex partners, and divorce more frequently

Quiet's Introversion Quiz

1. I prefer one-on-one conversations to group activities.

2. I often prefer to express myself in writing.
3. I enjoy solitude.
4. I seem to care about wealth, fame, and status less than my peers.
5. I dislike small talk, but I enjoy talking in-depth about topics that matter to me.
6. People tell me that I'm a good listener.
7. I'm not a big risk-taker.
8. I enjoy work that allows me to "dive in" with few interruptions.
9. I like to celebrate birthdays on a small scale, with only one or two close friends or family members.
10. People describe me as "soft-spoken" or "mellow."
11. I prefer not to show or discuss my work with others until it's finished.
12. I dislike conflict.
13. I do my best work on my own.
14. I tend to think before I speak.
15. I feel drained after being out and about, even if I've enjoyed myself.
16. I often let calls go through to voice mail.
17. If I had to choose, I'd prefer a weekend with absolutely nothing to do to one with things too many scheduled.
18. I don't enjoy multi-tasking.
19. I can concentrate easily.
20. In classroom situations, I prefer lectures to seminars.

The more yeses you give, the more introverted you are.
If you are split around the middle, then you might be an ambivert.

Susan Cain says there are no 100% pure introverts or extroverts.

And even if you are very introverted or very extroverted, that is not a predictor of your behavior in each situation.
It would be like saying that all men like contact sports. A lot of men do, but not everyone.

Shyness VS Introversion

People often confuse shyness with introversion.
And that makes sense actually, because the two can look similar and overlap.

Susan Cain says that shyness is the fear of social disapproval and humiliation, while introversion is the preference for an environment that is not overstimulating.
Shyness is painful for the shy individual, while introversion is not.

You can confuse them easily because the external behavior may look the same.
The shy person in the business meeting does not speak because he's afraid of speaking up. The introvert does not speak because he is observing, and processing data and information in his head.
But to the external observer, the two look very similar.

Brain Differences: High & Low Reactivity

Introverts have a more sensitive amygdala than extroverts.

The amygdala helps us detect changes in the environment, especially threats, and dangers.

Introverts are naturally more highly alert to changes (high reactivity), which makes them more prone to the release of cortisol and stress.

That makes introverts more reactive and sensitive in general.
Indeed, following this train of thought, it's not just that introverts get more easily flooded during social interactions: they are more easily flooded in any new environment.

Seeking or Avoiding Stimuli

Introverts prefer less stimulation. Fewer people, lower volume music, and a quieter, less chaotic environment -and less coffee, too-.
Extroverts, are the opposite.

An experiment showed indeed that introverts perform better with a lower level of noise while extroverts perform better with higher levels of noise.
Introverts also perform better when sleep deprived because sleep deprivation makes us less alert.

Nature or Nurture?

Introversion and extroversion, like all other major personality traits like agreeableness and conscientiousness, are about 40-50% heritable.

What about the other half?
Well, one theory is that when you are born with a certain tendency, you tend to seek out experiences that push you further along your natural tendency.

Risks & Opportunities of Nurture

So low reactive, extrovert children, climb more trees, jump more fences, and naturally grow more comfortable with the challenges and fears around them.

The risk if they grow up in a bad neighborhood is that they are more likely to end up in gang crime.
If they grow up in good families that channel them, say the author, they are more likely to become driven overachievers (Oprah and Richard Branson).
Taking it to an extreme, *sociopaths* have an extremely low level of reactivity. Lykken has controversially called psychopaths and heroes "twigs on the same genetic branch".
Also, read:

- Signs of a Sociopath
- Is Donald Trump a Sociopath?
- Do Good and Evil Overlap?

The risk for introvert children is that they have too little experience and grow up too afraid.
And they are more sensitive to both good and bad environments around them. If that's the case, they are more likely to slip into depression, anxiety, and social anxiety.
The upshot is that introverted kids also enjoy a bigger boost from stable home environments and good parenting. If they get such positive nurturing, they tend to have fewer emotional problems and more social skills.

Introverts Learn Better Than Extroverts

A study shows that introverts tend to make fewer mistakes because they are less impulsive and think more.

But the most interesting aspect is what happens after the mistake.
After the mistake introverts slow down.
Extroverts instead speed up. And don't learn as much from their mistakes.

Reward and Treat Orientation

This is because extroverts seek the win and the buzz and don't focus on the threats.
Any roadblock along the way is something they want to smash as quickly as possible.

Introverts instead are programmed to analyze the environment and look for threats and pitfalls.

Changing Our Personalities

We can certainly change our personalities.

But up to a certain point (rubber band theory).
For example, when we engage in positive self talk the amount of activity in our amygdala goes down and activity in the prefrontal cortex goes up.

But it's not powerful enough to switch off the amygdala altogether. The unlearning indeed is not total.
The prefrontal cortex can suppress the amygdala, but during times of stress, when the prefrontal cortex is too weak to soothe the amygdala, the fears can resurface again.

Self Monitoring

Introverts who were better at learning to act as extroverts score very high at a trait that psychology calls "self-monitoring".

Self-monitors are very good at scanning social environments and looking for social cues. Then they are very able to act and behave in ways that conform to the environment.

These are the ultimate social chameleons.

Introversion and Sensitivity

Introverts are more likely to be highly sensitive and to have a strong conscience.
They are more likely to be moved by a serenade or a kind act.

We don't know exactly how many introverts are also sensitive, but we do know that 70% of sensitive people are introverts. And even the other 30% need a lot of "downtime".

This seems to say that there is an overlap between introvert qualities and sensitivity.

Also, read:

- The Highly Sensitive Person

Introverts Understand Social Dynamics Better

A study showed that extroverts were better at gauging whether their conversation partner was glad to be talking to them.

And that seemed to confirm the obvious: extroverts are better at social skills.

But that was because the study measured the understanding while the conversation happened, and extroverts are better at multitasking.

When it comes to observation, studies showed either no difference or that introverts were better at picking social cues.

Communication Style

Introverts tend to be conflict-avoiders while extroverts easily engage in conflict and speak more directly.

Extroverts tend to talk about lots of topics, while introverts pick a few and dig deeper into them.

But the funny thing is that they can get along very well with each other.
Introverts feel extroverts are a breath of fresh air, while extroverts feel they can relax with introverts.

Agreeableness and Intimacy

Introversion is not correlated with agreeableness and enjoyment of intimacy.

Introverts are just as likely to search for the company of others. Just in smaller doses.

Introversion and Extroversion in Leadership

We all have a tendency to equate charisma and extroversion with competence.
And to follow the more outspoken leader, the one who seems to have a quick answer to problems.

But we are wrong:

Why The Super Extrovert Leader Myth is Wrong

The more extroverted and charismatic leaders have higher salaries, but not better performances.
Jim Collins research set out to study what made corporations outperform the market and didn't want to touch upon leadership.
However, it turned out that leadership was instrumental to outperformance.
And the best leaders, as exemplified by Adam Smith, were all unassuming, quiet, reserved, and mild-mannered.
Some people even described them as shy.

Basically, the myth of the highly extroverted charismatic leader as the effective man at the helm of the organization does not hold true in the research.

Susan Cain says:

> We need leaders who build not their egos, but the institutions they run.

Now the question: are introverts better leaders?

Introverts Are Better Leaders of Great Workforces

Extroverts manage to get higher performances when their teams are passive and do their job without exercising initiative.

Introverts outperform extrovert leaders when they are heading a motivated and active workforce.

What's the difference?
Introverts listen to the inputs from their team and are more likely to empower them and put those ideas to the test.

This research is still in its infancy, says the author, but it's highly promising.

Introverts Underrated Powers

- Alertness
- Sensitivity to nuances
- Complex emotionality
- Power of focus over the long haul (grit)
- Deeper analysis of topics
- Better at delaying gratification (a staple of long-term success)

- Learn better from mistakes (are more reflective and less likely to rush through)
- Less likely to get caught up in “deal fever” and “winner’s curse” (ie.: competitive mistakes)
- Better control their emotions (best traders tend to be emotionally stable introverts)
- See the dangers (not by chance the men who foresaw the financial crisis were outcasts not duped by groupthink)
- Less drawn to easy rewards like the lures of alcohol, sex, party, and drugs (don’t buzz as easily)
- Accuracy over speed

Alone Practice is Best Predictor of Success

Susan Cain says that practicing in groups is not the best and most effective way of doing deep practice because it requires unwavering, direct, and undisturbed focus.
It also requires working hard on the parts that are *most challenging to you*.
In most disciplines, that happens when practicing alone.

That’s a big advantage for introverts, who naturally prefer alone time to work.

Good Ideas Drown In Extroverts/Introverts Mixed Groups

Let’s imagine that extroverts have equally good ideas as introverts -and that might be an understatement!-.

The simple way how extroverts and introverts communicate will almost guarantee that great ideas from introverts will drown out.

Extroverts tend to think out loud and speak up. Introverts tend to be soft-spoken and to think through their ideas longer.
This means that extroverts’ ideas and opinions will get more air time and that extroverts’ ideas and points of view will often not be heard at all.

The issue is compounded by our tendency to rate talkers as smarter than quiet ones (while studies show the opposite).

Studies show that is exactly what happens.
Studies show that we are wasting introverts’ good ideas!

What to do then?

Brain Storming Doesn’t Work: Here’s What to Do

Brainstorming happens in groups and has four pillars:

- Generate as many ideas as possible
- Don’t judge or criticize ideas
- Be freewheeling, don’t censor your ideas
- Build on the ideas of fellow group members

But here is what research shows:

- People produce more ideas when they are alone
- The ideas they produce alone are of higher quality
- Performance gets worst as the group size increases (unless it’s online groups)
- Groups alter people’s minds in a way that promotes groupthink and conformity (and people actually believe they reached the conclusion on their own and without pressure)

What’s the solution then?

If you have talented team members encourage people to work alone when you are looking for creativity and efficiency

- Make people come up with ideas *before* the meeting
- Encourage electronic collaboration

Internet Empowers Introverts

Malcolm Gladwell's The Tipping Point popularizes the idea of connectors as super extroverts with hundreds of friends and connections.

But building a huge following is not a prerogative of extroverts anymore.

Today an introvert can start a website, a blog, a digital product, or even self-publish a book.

The Internet changed the rules.
The same person who finds it difficult to introduce himself at a bar can gather millions of followers online.

Real-Life Applications

Exaggerate When You Pitch Extroverts (and Politicians)
Politicians tend to be extroverts. If you need to pitch a congress, make your pitch more attention than you normally would because extroverts have a higher bar when it comes to sensitivity and you need more stimuli to get through.

Include Introverts In Your Organization
Keep in mind around one-third of your team is introverted.
Give them space in open offices, and allow your team to write down their ideas. And watch out for groupthink and for losing the introverts' best ideas to the louder extroverts.

Leverage Your Strengths
Whichever you lean towards, learn what are your strengths and play by them.
If the system is skewed toward open offices for extroverts, then don't play by the system's rules.

CONS

Some Off Topics
We didn't need to hear about Tony Robbins seminars in my opinion. A bit of it also felt like a couched attack on Tony Robbins.
I thought that part was irrelevant and way too long for the value it added.

Missed One Citation
Quiet is awesome and well-researched. At a certain point, the author said "introversion is a better predictor of grades than cognitive abilities".
That seemed huge to me and I wish she had given a reference for such a statement.

PROS

Helps You Understand People
If you have been reading around here for a while you know that I rarely give out five stars.
But as a man passionate about understanding people, Quiet has opened new doors of understanding for me.

Best Resource for Introverts and Extroverts
If you want to better understand introversion and extroversion, look no further.

Can Be Life Changing

For people who are struggling as introverts in a world designed for extroverts, they can actually face nasty psychological consequences. They can think they are not good enough for not coping well with open offices and multitasking.
For these people, Susan Cain's Quiet can be a life changer.

Quiet Review

I approached this book thinking I already knew about introversion and extroversion.
I thought Susan Cain's Quiet was going to confirm a couple of things and add one or two more.

I am glad I was terribly wrong: Quiet changed the way I understand introversion and extroversion.

And it deeply expanded my knowledge of *psychology and people*.

Including my own self-awareness.
Susan Cain says that introverts process and ponder more deeply. And introverts who are socially oriented spend a lot of time thinking about social dynamics and social interactions.
This is why I became good at analyzing social interactions and power dynamics.

This is a great read for those who want to understand people and psychology.
But it's also an important book from a leadership, organizational, and business point of view to get the most out of the many introverts in the workforce.

Best Pick Up Lines (And Avoid These Cheesy Ones!)

Are you looking for the best pickup lines?

For smooth pick-up lines that actually work?

You have come to the right place.
This article will tell you everything you need to know about pick-up lines.

And by the end of it, you will know how to use pickup lines to get girls.

- SUMMARY

Best Pick-Up Lines

The 5 best pickup lines are:

1. ***Hi, my name is Lucio, what's your name*** <— Neutral, *assumes* attraction
2. *This cue is infinite, is it always like that?* <— Social opener, doesn't give interest away
3. *I, couldn't help but notice X about you, are you always like that* <– Personally-relevant comment

4. *Hi, I liked your X, it looks great on you. My name is Lucio* <— Honest compliment, no games
5. *Hi, I'm gonna be honest. I find your walk very sexy. I wanted to meet yo*u <— Bold and direct, displays masculine confidence

Neutral conversation starters are how you would start a conversation.

The direct and honest style signal that you are approaching her because you like her.

Compliments tell her what you find attractive about her -without joking and without putting her on a pedestal-.

Finally, you can put all your sexual innuendos while actually delivering a neutral line.
That's the most advanced style.

See Ashton Kutcher doing it:

> **By the way, there is only one pick up line. Everything else is cheese.**

Smooth Pick-Up Lines That Work

Here are the only smooth pick-up lines:

- … (smile at her, say nothing, until she speaks first)
- Hi (sticks his hand out, palm up and gallant, as if he knew her)
- Me, you, going on an adventure. Right now

Now you may be wondering:

Why are they so different than most popular pick-up lines?

It's because **the problem with most popular pick-up lines is that they pedestalize women**.

You say something like "did you get hurt when you fell from heaven" and you immediately place her above you.

And **women don't like men who are below them**.
Women are programmed to like men who are higher value than they are.

So the smoothest pickup lines don't idealize her, don't place her above you, and don't sub-communicate that you're chasing her bad.

Example

Of coures, pick-up lines may work.

But they must be in the right situations, from the right man, and well-delivered.

Here is a good example:

What makes Sean Connery's pickup line good?
Well, to begin with, Connery comes across as a very high-quality man. So some cheese can serve to take the edge off.

Furthermore, he does not make it about her.
She mentions the word "pussy", and he makes it more about sex than about her.

He comes across as a womanizer who loves women, not a guy who is idolizing a specific woman.
Big freaking difference.

Good Canned Approaches

And now let's go to a few better options here, shall we?

> **"Excuse me.**
> **I know this is going to sound strange, but if I don't ask you now, I'll be kicking myself for the rest of the day. I'm running to meet a friend [i.e., I have friends and am not a stalker], but I think you're really [extremely, drop-dead] cute [gorgeous, hot]. Could I have your phone number? I'm not a psycho—I promise. You can give me a fake one if you're not interested**

That's actually the script that Tim Ferris proposes in *The 4-Hour Workweek*.

It's a bit reminiscent of the *early pick-up scripts*, and a few things are very wrong with it:

- I know this is going to sound strange (the idea is to "pace her reality", but only communicates you are doing something strange, which is not, and leads her to believe something strange is about to happen)
- Could I have your number? (asks for permission: bad)
- You can give me a fake one if you're not interested (takes the pressure off, yes, but also takes the pressure off from you, which can lead her to think you can't withstand social pressure. Plus, it's tentative)

The "kicking myself" bit is very popular around the web:

> **(…) but I would have kicked myself if I hadn't come to talk to you**

It's not too bad, but it's not the best either.
The issue with it is that it's too self-referencing. It's too much about yourself.
Are you into her, or are you just talking to her so that *you* will "feeling bad"?
Ideally, you want to make her feel that the chemistry was so good that you just had to talk to her, and not that you were just avoiding remorse.

> **'I just wanted to tell you, I think you are gorgeous and would love to get to know you better. If you want to have a drink and talk, I'll be over there. If not, that's fine.**

I like this one.
The issue with it is that while it does indeed take the pressure off, it also leaves it fully up to her to make the move.
And few women actually make the move.

> **Excuse me, but do I know you from somewhere?**
> **'Wow, I could have sworn I'd seen you in my classes / office. Well, now that I've got you here, what would it take for me to be able to take you out sometime?**

Not the worst, if you end it well.

In this case, it does not end well though.
Also, I like it most if it's true that she looks like a known face.
If you were using it as an excuse, then you're better off with something else.

Bad Pick-Up Lines: 10 Lines To Avoid

Let's dig some deeper.

We will now take a few pick-up lines and explain what's so bad about them from a social dynamic perspective:

- **Do I know you? Because you look a lot like my next girlfriend.**

Who would pick a girlfriend only based on first looks?

Only a guy with little experience and few options.

High-quality women don't choose boyfriends based on first looks, and they will be thinking: "do I want to be in a relationship with this guy"?
99% of the time the answer is "no".

- **Are you religious? Because you're the answer to all my prayers.**

Many pick-up lines follow this format: you are the woman of my dream and now I say it to you in a very corny way.
The problem is all the same: it's typical of low-quality men to put a woman on a pedestal without even knowing her.
It communicates low standards and that all you care about is superficial appearance.

- **Did the sun come out or did you just smile at me?**

While you build her up, you are also deprecating yourself. But it's not the good self-deprecating style of the high-value man.
This style of self-deprecation is more like the dog who wags his tail at any scrap she throws at him.

- **Kiss me if I'm wrong, but dinosaurs still exist, right?**

This style of pick-up line makes fun of you tricking her into doing something sexual with you.

And that's exactly the issue with it: high-quality men don't need to trick women into being sexual with them.

- **I'm lost. Can you give me directions to your heart?**

The dream of a woman is a man who makes her follow in love in a whirlwind of romance.

And that does *not* entail her giving instructions.
When women need to give instructions they either lose interest very quickly, they get annoyed very quickly, or, in the best-case scenario, they enter the relationship as a puppet down in power.

Here is an example from "Terms of Endearment":

> **Her**: "Don't worship me until I've earned it".

What an awesome explanation straight from the horse's mouth on why pick-up lines don't work :)

Let's go on:

- **Roses are red, violets are blue, I can't rhyme, but can I date you?**

Again, puts the onus on the woman to lead the dating dance.
But the man who dates successfully does not ask for permission.

- **Are you sure you're not tired? You've been running through my mind all day.**

Pick-up lines are bad enough.
That stalker pickup line can take it to the next level though.

- **Is there an airport nearby or is it my heart taking off?**

This is an example of the pick-up lines implying you're falling in love.

It's usually guys with little experience who fall in love very quickly.

They idealize women without even knowing them. But women, like everyone else, prefer people who can appreciate them for who they are, not for non-existing mental masturbation.

- **There's only one thing I want to change about you, and that's your last name**

Well, I have to admit… This one had me smiling.

Since marriage is becoming so much rarer in Western cities these days, this pickup line is so out of touch reality that it might even work if delivered as tongue-in-cheek.

- **Hi, how was heaven when you left it?**

Again, idealization of the woman.

This is a huge burden on women. They want to be women, with their defects and sexuality, and not weighed down by his immature madonna-whore complex.
Don't idealize people, take them for who they are.

- **Do you believe in love at first sight or should I pass by again?**

This one also had me smiling.

But it doesn't help your case any.
It actually frames your first time as not being good enough. And now she's the one calling the shots why you're the one prepping up for your second try?

- **Was your dad a boxer? Because damn, you're a knockout!**

Direct sexual compliments can work great.

But when you express sexual appreciation hiding behind a pick-up line, this is what it actually communicates: "I don't really think you'd ever screw me, so I'm just admiring".

- **Do you have a pencil? Cause I want to erase your past and write our future.**

This style is a poor style of being a provider, and while dating as a provider can be an effective dating strategy, fantasizing about her is never is.
"Erasing her past", again, communicates he is seeking a fantasy, not a real woman with a real life.

- **Are you a dictionary? Cause you're adding meaning to my life.**

Simply terrible.

And a very common reason why pick-up lines do not work: they communicate that without her your life is meaningless.
But women don't want men who are incomplete without them. They want men with rich lives, who are doing things and going places.

- **Did it hurt? When you fell from heaven?**

One of the most typical and cheesiest pickup lines.

It's the archetype pick-up line of putting women on a pedestal.
It's usually inexperienced men and too-nice guys who put women on a pedestal.
And neither of them fares too well in dating.

You must be a broom, ‘cause you just swept me off my feet.

It’s the man’s role to sweep her off her feet, not the other way around.
Drop the cheese and grow a set instead :).

You don’t need keys to drive me crazy.

And you don’t need much help to masturbate if you keep using those lines.
And trust me, you’ll train yourself quite a lot of it if by now you still didn’t get why pick-up lines don’t work.

Do Pick-Up Lines Work? What Science Says

Science is clear:

Pick up lines don’t work.
Or, to be more are accurate, are sub-optimal.

Quoting from The APA Handbook on Relationships:

> (…) both men and women found the cute–flippant lines to be the least desirable…

However, men still miss on this:

> However, consistent with hypothesized gender scripts, women rated them as less preferred than men

And more research confirmed the same:

> (…)
> Subsequent research, using different methods, has generally been consistent with Kleinke et al.’s (1986) findings (Cunningham & Barbee, 2008; Levine, King, & Popoola, 1994)

However, consistent with what we say here, it doesn't really matter for high-value men and lover type seeking short-term situations:

> research has suggested that the type of relationship desired influences a woman's evaluation of a man's opening line. Senko and Fyffe (2010) varied the nature of the relationship being sought by a woman (short vs. long term), the attractiveness of the male, and the opening lines in hypothetical scenarios. Consistent with evolutionary theory, if a long-term relationship was being sought, women preferred the direct or innocuous lines and associated these with intelligence and trustworthiness, but if a short-term relationship was the goal and the man was attractive, women had no preference for type of opening line.

So…

What does this mean to you?

Learn how to be a power-aware, high-value man.

Some starting articles:

- How to approach a girl
- How to meet girls
- Cold approach

But to any successful, power-aware man, science only confirmed what they already knew.

I scoured the web looking for the best pickup lines.

I paid particular attention to the "pick-up lines that work".

And… I couldn't find many that actually work.

Most collections of pickup lines are of the cheesy kind.
And if your goal is to sleep with a girl, or enter into a relationship with her, the cheesy pick-up lines are all terrible.

If you're not sure what I mean by cheesy pickup lines, this is an example:

> **Are you a magician? Because whenever I look at you, everyone else disappears!**

Even if your goal is to tell a funny pickup line to make her laugh, you can probably do better than that.
Both in terms of an actual introduction and in terms of starting with a laugh.

Indeed the laugh that most girls have is that kind of "oh God, I can't believe you said anything that cheesy" type of laugh.

Also, people interpret jokes as if there is at least some truth behind them. And the truth behind a pick-up line is not a good one.

Why Cheesy Pick-Up Lines Don't Work

There are two major reasons why pick-up doesn't work.

And that's that when you deliver them, it communicates the following:

1. You're not serious about seducing her, you're just there to joke around
2. Cheesy pickup lines put her on a pedestal, and communicate that she is out of your league (higher sexual market value than you)

And finally, the vast majority of people -and women- feel that pick-up lines are:

- A cheesy way of flirting, and an indicator of low social skills

Here is an example from a family guy for you.
Is this the line that anyone who's serious about getting to know a woman would use?

Exactly.
That's the line that a kid would use.

SUMMARY

Pick-up lines, especially cheesy pick-up lines, don't work.

However, some smooth pick-up lines can work well if you deliver them in a funny and self-amusing way that starts the conversation with a big laugh.
However, you must quickly change the dynamic to avoid a frame of you chasing her, and her on the pedestal.

Women do love men who make them laugh, and if you use a pick-up line to do just that, without coming across as cheesy and chasing, then you're good -and hats off to you, you're a socially advanced guy-.

Intercultural Communication Definition

Intercultural communication is communication flowing across different cultures and social groups.

In theory, the bigger the cultural differences among those groups, the more difficult the communication will be. And in theory, the more you familiarize yourself with the other culture, the more effective your communication will be.

Why You Better Learn The BASICS

Learning the specifics of intercultural communication is a poor use of your time UNLESS you are already extremely proficient in all the other basics of communication and *human psychology*.

Why?

Think of it this way: imagine you are moving out of your parents and want to learn to cook.
Would you start by trying to master the art of making pizza while tossing the dough in the air?

Probably not.

You would start instead by learning how to switch on the oven and the burners.
Then boil pasta and add sauce.
Or grilling some meat.

Or whichever basic food you like most.

Well, learning intercultural communication before you are proficient in the basics of communication is like learning to toss dough in the air.
Fancy to look at, but useless if you first don't know how to switch on the oven.

Bottom line:

Intercultural communication is a "good to have".
It's the icing on the cake.
Learning the basics of communication and people psychology is a must-have.
Before worrying about icing, you must get the cake.

Differences Are Infinite, Commonalities Are Shared

The differences between cultures are important.
But even more important are the *commonalities* among human beings.

There are thousands of cultural differences. As many cultural differences as there are cultures, in fact.
But there are only a handful of *foundational* commonalities!

You learn the human commonalities once, they serve you well for a lifetime… And everywhere.
You learn cultural differences… And they only help you with *a* specific culture (on a superficial level).

Commonalities Run Deeper

The commonalities run deep.

For example, says the *APA Handbook of Nonverbal Communication*:

> Not only are the seven universal facial expressions panculturally recognized (Elfenbein & Ambady, 2002; Matsumoto, 2001) but there is pancultural similarity in judgments of relative intensity among faces; that is, when comparing expressions, people of different countries agree on which is more strongly expressed (Ekman et al., 1987; Matsumoto & Ekman, 1989).

They are common because they are ingrained within us by common ancestry over millions of years.

A focus on the commonalities is a focus on what matters most.
It's a focus on what makes us human beings, on what makes us accept or reject people at a visceral level.

Cultural differences are more superficial instead.

When you make a cultural mistake you are branded as a foreigner who doesn't know any better.
Not great, but not terrible either.

But when you get the human basics wrong, you will be ostracized.

Individuals Trump Cultures

Quoting from the Routledge Handbook on Communication Skills:

> there are individual as well as cultural differences in individualism and collectivism (Pfundmair, Graupmann, Frey, et al. , 2015). Individuals differ as much as or more than cultures, and so it is the nature of the interlocutor that is important rather than the cultural background from which he or she comes (Ivey, Ivey, & Zalaquett, 2014).

Humans Naturally Adapt

There is also proof that humans naturally adapt to a new culture.

For example, Sussman & Rosenfeld found out that non-native English speakers automatically adopted the same social distances as Americans when they spoke in English.

My advice then is to hone that ability to adapt, like a good Machiavellian, instead of learning a set of outdated rules of intercultural communication.

Speaking of outdated:

Globalization Is Converging Towards A Global Nonverbal Language

Matsumoto & Hwang found out that some emblems are becoming recognized across cultural boundaries.

And other researches noted that mass media and the Internet may be pushing towards a universal set of emblematic gestures common across the whole world.

Intercultural Communication Over-Hype: Example

I remember some time ago reading a book on communication.
I don't remember the title of the book, but it had the customary paragraph on intercultural communication.

And what's the most typical example of intercultural communication for Westerners, especially business Westerners?

Japan of course.
One of the richest countries in the world, and one of the most culturally different.

Well, the example was a woman on a business trip in Japan.
Let's call Dana, and here's a quick recap of that story:

1. Dana met her prospects in the lobby of her hotel
2. They were in suits, she was in jeans and a shirt
3. The Japanese bowed. She didn't
4. They brought a gift, she didn't have any (and she didn't excuse herself and didn't try to make up for it… Smart:S)
5. They gave their business card with two hands, Japanese style
6. She grabbed it and shoved it in her pocket without looking at it

Soon after, the Japanese stood up and left.
And Dana was surprised!

The author gives us this cross-cultural communication failure and says: “see? This is what happens when you don’t learn intercultural communication”.

The author was onto something. That was a communication failure.
But it was NOT an example of failed *intercultural* communication.
That’s an example of failing at the *BASICS* of social skills.

- A bow -and lowering our head- is a sign of reverence in *any* culture.
- Bringing a gift is an offer of value and a symbol of reverence in *any* culture
- Failing to value a personal object given to you with much attention is a sign of disrespect in *any* culture
- Not matching the levels of deference and warmth is a communication failure in *any* culture

The woman in the example -if she was even real- is not the example of a woman who was not skilled at intercultural communication. She is the poster child of a severe lack of *emotional intelligence* and social skills.

How The Basics Trump Intercultural Communication

You can reach 80% of intercultural effectiveness with the basics.
And *without* knowing the intercultural differences.

Take the example from above, and see how you would behave if you had a solid foundation of social skills and social awareness.

Someone bows at you, but people don’t bow in your culture.

But if you know the basics, you know that matching deference signals with deference signals is the equivalent of exchanging olive branches (unless you are trying to dominate them).

And if someone gives you something of value -such as a gift- and you are familiar with the theory of social exchange-, you know that to be in balance you need to give something back.
For example, a socially smart woman in the example below would have profusely thanked them and apologized for being so “thick”. Then she would have said something like “please let me make it up to you”, then called the waiter and ordered a bottle and/or finger food for all of them.

And if would have immediately gone from a mistake into positive territory.

If you know the basics you also know that you show appreciation for what your guests appreciate.
So when someone gives you a business card with two hands, you will hold it the same way, look at it and then thank

them. And then give your business card the same way they did.
And you don't need to know the specifics of the Japanese culture in handling business cards.
Simple principle: when you are not sure, copy them.

How to Get Out of All Sticky Intercultural Situations

A warm smile and a welcoming attitude will get you over 95% of intercultural issues.

For the last 5%, you can say something like this:

> **Her**: Hi, you are so welcoming, thank you so much. I love this country. Unluckily I don't know the culture. So please, please, if I do anything that offends you, let me apologize in advance.
> Please let me know what I do wrong and what are the cultural and social norms here, I would love to learn your culture

Not only do you both verbalize and show your warm attitude, but you elect them as your teachers.
And now they will love you twice for it.

Indeed, it's my belief and my personal experience, that **a warm and welcoming personality doing intercultural communication mistakes is actually endearing**.

People understand when you come from a fundamentally good and respectful place and they will want to help you out.

Who is Over-Hyping Intercultural Communication?

If intercultural communication is not so important, why do so many seminars focus on it?

I don't know the answer to this question.

I have a few reasons in mind:

- It sounds cool to talk about "intercultural communication"
- Telling people to focus on the basics is much less sexy and appealing
- It makes for entertaining training
- It's simpler than actually learning the basics

Don't Study Intercultural Communication: Learn It

Based on the notion that time is the most limited resource we have, I believe that studying intercultural communication in a classroom is a colossal waste of time.

Go wherever you want to go and observe in loco.
It will make your journey more interesting and it will develop your social skills more deeply.

The Basics You Need to Master

All along this post, we repeated that the basics are what matters.

Well, what are these basics?
It's all that makes you a high-quality, socially skilled individual.

These are what I would call the "human constants".
Such as **basic principles of social communication that are valid with every human being**, wherever you go in the world.

Here is a quick list just to give you an idea:

- Body language
  - Comfort/discomfort signs
  - Taking up space / making oneself smaller
  - Aggressive/welcoming
- Voice
  - Tonality
  - Volume
  - Nervous cracks / confident
- Facial expression
  - Warm smile
  - Raising eyebrow upon meeting (friendly signal)
  - Micro-expressions
- Social behavior
  - Listening (respectful everywhere)
  - Asking questions (an indicator of interest everywhere)
  - Talking over people (dominant and disrespectful everywhere)
  - Matching and mirroring (if you don't know what's expected, mimic them)
- Fears and phobias
  - The whole world over we're afraid of the same things, including social fears
  - Save people face
  - Build people up in front of their peers
- Basic drives
  - The whole world over we all have the exact same drives: learn them and you can influence people no matter the culture
- Ego
  - The whole world over we all want to be: cherished, respected, loved, praised

SUMMARY

Intercultural communication is a subset of social skills.

Imagine your ability to relate with people is a tree.

Then social skills are the trunk. And intercultural communication is a twig on that tree, part of the branch of communication.

When you grow your social skills trunk, you *automatically* grow intercultural communication as well.
But if you grow the twig of intercultural communication you don't really grow your tree at all.
And that's the definition of time waste.

This means:

Focus on the trunk of social skills, not on the twig of intercultural communication.

The Better Angels of Our Nature: Is Pinker Realistc, or Naive?

Lucio Buffalmano · 1 September 2018 · Archived copy · Original

In *The Better Angels of Our Nature* (2011) author Steven Pinker explains that our world has been increasingly improving, moving towards peace and safety. But it's not written anywhere it will keep on going the same way, and it's up to each one of us to keep it on that positive trend.

TPM Strategic Note: From brawn to Machiavellian brains
From a strategic point of view, Pinker suggests that we evolved from power resting more on violence and raw dominance to a more sophisticated arena of **Cognitive and Social Manipulation (High-IQ Power).**
Old warlord approaches have been replaced, or at least co-exist more, with **Soft Power**. Understanding this historical arc is not only about "optimism", but also about **contextual calibration**.

Key Takeaways

- Humans are violent and peaceful at the same time
- The world has been increasingly moving towards a safer and safer place to be
- Constant improvement is not a given, and we must all contribute to keeping the good trend

Notes

About the Author:
Steven Pinker is a psychology professor at Harvard, and a popular author of science books, including "*The Blank Slate*", "*How the Mind Works*", and "*Enlightenment Now*".

Violence Driver #1: Personal Gain (Predation)

Steven Pinker never defends or justifies violence, of course, however, he does explain that it's a natural part of being a human.

Through *natural selection,* all organisms evolved to compete. And competition sometimes requires the use of violence to acquire scarce resources or preclude competitors from getting those resources.

This type of violence is called predation.

Violence in Daily Life

The most violent stage of life is toddlerhood, and though most humans rein it back as they age, we still continue having violent thoughts.
A university survey showed that between 80% and 90% of college students fantasized about killing someone in the past year.

We Also Naturally Keep Violence in Check

However, we also have natural inborn mechanisms to keep that violence in check, says Steven Pinker.

Violence is risky, for example.
Violence doesn't guarantee victory, and the person using violence might as well lose the battle. And even when winning, it's rare that he will suffer absolutely no consequences.

Also, violence against kin harms our own genes.

Dominance Hierarchies Reduce Violence

Since violence is dangerous for every single individual of a species and can also be counterproductive for the group, humans evolved dominance hierarchies and rank each with social status.

Steven Pinker says that dominance hierarchies are based on who *would* win a fight.
In humans, the hierarchies tend to favor males who have an advantage in size and aggression.

The male at the top has access to more women and resources, which means that as hierarchies reduce violence, they also encourage it to reach the top position.

In men, it's not as crude as it is in other animals, but remnants can still be seen today.
Indeed, it's men who still pursue women and value social status and prestige the most.

My Note: this is a very good point Steven Pinker mates.
However, it's not completely true in all cases. When women outnumber men, men pursue very little and the need for competition diminishes among men while it increases among women.

This is something Jordan Peterson, author of *12 Rules for Life* talks about (and something this website often addresses).

Dominance Became Less Important

The author says that as humans developed into hunter-gatherer societies women became more interested in commitment from men than simple sperm from the most dominant.

Indeed, since raising children cost lots of effort and resources, women also wanted loyal men who would provide help. And that increased *male parental investment.*
The author says that's what produced our innate tendency to be generous and loyal to our loved ones (albeit not always loyal).

Violence Driver #2: Revenge

Steven Pinker says that the desire for revenge, including the long-term desire for revenge, is one of the major drivers of worldwide violence.

The author says that acting on our vengeful feelings makes us feel good, but that doesn't explain why the feeling even developed in the first place.

Steven Pinker says that most likely we developed the feeling of revenge as a deterrent. If an attacker knows that the victim or the parent will want to exact revenge on him, he will likely relent from his plans.

Violence Driver #3: Sadism

Sadism is the willingness of some people to inflict pain on others for their own pleasure.

The author says sadism is a far less common motivator for violence, and it's even less common in today's society.

The author says that sadism is an acquired trait that can become addictive.

Violence Driver #4: Ideology

Ideology strives to create a better world.

But it's actually similar to predation: we deploy violence to get what we want.

Steven Pinker says that we are wired to fall prey to ideology because of our natural *psychological biases:*

- Ingroup/Outgroup: we divide the world between the group we belong to and the others
- Polarization: grouping together people with similar ideas increases extremism
- Groupthink: when an ideology is adopted by the majority few people will question it
- Social Conformity: disagreement within a group is often repressed through social pressure

Luckily, we also have many natural drivers for peace and love.

Peace Driver #1: Empathy

Empathy is the altruistic concern we have for others.

Steven Pinker says we developed empathy to take care of our children.
One corollary is that we tend to like more people who have baby-like facial features.

Empathy eventually expanded to also include non-relatives, which further fueled the exchange of favors and resources.

Empathy can also lead to exploitation and unfairness.
People in line at a hospital, for example, were more willing to let a 10-year-old girl skip the line when they were told she had a serious illness. However, that does not take into account that in the line there might be people who need attention even more urgently.

Peace Driver #2: Self Control

The limbic system, the most ancient part of our brain, drives us to take advantage of an immediate opportunity even if the long-term consequences don't make it a good opportunity at all.

The prefrontal cortex instead, the area of the brain that governs complex decision-making and rational thinking, controls the impulses to make more rational decisions.

The prefrontal cortex provides self-control and willpower.
Even when it comes to violence, the prefrontal cortex often reins us in, and we can strengthen our own self-control through practice.

Peace Driver #3: Morality

Morality can be a strong driver against violence.
For example, morality provides a driver for a more equitable society and for a fair system of law.
Morality also controls violent tendencies and promotes sharing and caring.

However, morality has also been the cause of violence.
Let's think for example of times when homosexuality was regarded as immoral and gay people were killed in the name of "decency".

But Steven Pinker says that, on net balance, the effect of morality is more positive than negative.

Peace Driver #4: Reason

The reason could be used to increase our capabilities of destruction. And it has certainly been used that way.

However, sentient beings are more likely to pursue personal gain through the common good, which ultimately benefits everyone.

Overall, the net effect of the reason is that of decreasing violence and conflict.
Steven Pinker refers to the Flynn Effect when he says that reason is increasing in the world as global IQ also increases.

The overall increasing cognitive abilities involve abstract reasoning most of all, which is crucial in empathy because it helps us see things from other people's perspectives (also read: *Emotional Intelligence* and *Emotional Intelligence 2.0*).

Research shows that people who are good reasoners are more likely to hold cooperative stances on world politics and act less violently.

States and Governments Brought Peace

Steven Pinker settles the silly idea that nomadic tribes and hunter-gatherers were peaceful at heart.
They were instead in constant warfare for hunting land and watering holes.

With the switch to agriculture around 5.000 years ago city-states and governments began to form. That led to a decrease in violence because the government had a monopoly on violence.
Every legal system grants the government the sole right to the use of force and violence. Private citizens instead are persecuted when they commit violence.

More State Power = Less Violence

As the states became more and more powerful, they could strengthen their monopoly on violence.
This was especially evident and accelerated in the 15th century as Europe emerged from the Middle Ages.

With Trade Honest Toil Paid More Than Violence

As states and governments spread and as society became less violent, a virtuous circle formed.
Trading in honesty and peace provided a better way to get wealthy than through the use of violence.

Humanitarian Revolution

The third big revolution came in the 17th and 18th centuries.

The idea that began to spread was that everyone deserved to be treated with humanity. Even if of a different religion and even if suspected of witchcraft -while in the Middle Ages that meant burning on stakes-.
The humanitarian revolution also decreased the number and usage of slaves.

And it also improved the condition of criminals and outlaws. The rule of fair law started replacing the old eye for an eye, tooth for tooth, and torture, which once was common even for relatively smaller crimes, started disappearing.

Peace Among Powers

I found the statistics of The Better Angels of Our Nature to confirm something I had always suspected myself as a bit of a history buff: great powers have been progressively waging fewer wars.

In the 16th and 17th centuries, the major European powers were at war 85% of the time. Between 1850 and 1950 that figure was down to 15% of the time.

And in the 1980s the great powers had been at peace for the longest time since the fall of the Roman Empire.

The author says that, overall, also smaller wars, genocides, and terrorism have decreased (yes, even accounting for 9/11).

Rights Revolution

The author says that the rights revolution of the ’60s and ’70s also decreased the violence against minorities. Steven Pinker says the rights revolution could be seen as a continuation of the humanitarian movement.

The violence against minorities and their living conditions have improved across the board. For women, racial minorities, and LGBT people of course.
But also corporal punishment against children has sharply decreased.

And of course, even animal rights and protection have been improved beyond the rosiest expectation.

TPM Takeaways

Gain Sophistication: More Than Dominance

Positive dominance is still a foundation for a man's empowerment because it's based primal biology. But it's not engouh.
Dominant bullies in the past may have fared better. Today, they only 'win' in primary school, then fall back to being low-status, low mate value men who struggle to even find a mate, let alone a quality one.

Don't Believe Warped Statistics

Please stop looking at the news and thinking that life is dangerous "these days". We are on a long-term, upward wave that moves towards a better and better world.
Steven Pinker indeed makes the case that, in spite we're living in a much safer world, most people's perception is that we live in a more dangerous world.

Criticism

There has been plenty of criticism of Pinker and his approach to data and science.

Here are my main points:

Simplistic, Post-Hoc Narratives Are Speculation & Storytelling

Several parts of this book are Pinker's speculations on "what could be happening" to explain this or that crime rate increase or decrease.

That may have some merit.
And can make for an interesting conversation, or an interesting first hypothesis to test.

But it's not scientific or empirical.

Also, I sometimes felt that Pinker over-simplified and over-attributed the cause of complex phenomena to overly simplistic explanations that may be part of the story, but are unlikely to be the full story.

Overall… Take this all with a big pinch of salt.

Naive Empiricism Sounds Scientific, But It's Not Great Science

A book that reviews data from, well… Before there were even written records, is bound to be flawed when it comes to numbers.

And even when analyzing historical records, the author can only analyze a *small* portion of reality. And when the data is available, the collection of that data is flawed for various reasons.

However, the author does not address these concerns and prefers instead to give a semblance of science to his own hypothesis (which, BTW, is a hypothesis I agree with).

Nassim Nicholas Taleb, author of "*The Black Swan*" and "*Fooled by Randomness*", has cast some serious doubts over Pinker's methodology.

Pinker, in a very un-scientist-like fashion, replied trying to shove one up Taleb in a response titled "Fooled by Belligerence", and that wasn't very pretty (note: there was a link but Pinker has taken down the page).
Frankly, I would have expected better from Pinker. Taleb attacked him ass-holish style, but that's Taleb.
Pinker replies like a different type of bully: the "smart alec type" (also see: archetypes of dominance).
Sapolsky, in his wonderful book "*Behave*", also criticize Pinker, both for his ideological stance and for his (lack) of data analysis.

I also think Pinker's numbers are unreliable.
However, even if I agree that Pinker's methodology and numbers are unreliable, it doesn't necessarily mean that his thesis on the decline of violence is also wrong.

Check out this article on the cognition process:

- The three pillars of wisdom

> How to Learn: The Three Pillars of Mastery

Doesn't Consider That *Potential* for Mass Destruction Matters (Nuclear Weapons)

Steven Pinker does not weigh strongly enough on what, in my opinion, is a major deterrent to wars among major powers: the *cost* of war.

Nuclear war is a common example.

But even without nuclear missiles, war today is far costlier than it's ever been.
That's a major deterrent to start any war. So war may not start for cost-benefit accounting, and not necessarily that we've all become "more civilized".

I recommend this article on naive self-help (the part on naive empiricism):

> Naive Self-Help: 10 Most Dangerous BS to Avoid

Idealism and Poor Numbers

I quote Hanlon in *The Cambridge Handbook of Evolutionary Perspectives*:

> For Pinker, the crucial turning points are the invention of printing, the Age of Reason, and the Enlightenment. North American intellectuals frequently offer idealist explanations that magnify the importance of Great Books and intellectual movements, something we might call the "humanist fallacy."
>
> It is not easy to improvise oneself as an historian (…).
> Pinker relied instead on large "data sets" compiled by people – Rudolph Rummel and Matthew White – who were not themselves conversant with criminal archives. They relied on books, in English exclusively (…) fantastically exaggerated, which had the effect of magnifying the decline in violence over the centuries.
>
> Another weakness was to place the low homicide rate of the eighteenth century on a different level than today's rate, forgetting that without the advent of ambulances, cell phones, and advanced surgical teams working in operating rooms, today's rates would be comparable to those of recent centuries past.

Review

The Better Angels of Our Nature seeks to quantify a trend that, looking at history alone, seems to be moving toward a less violent, more cooperative civilization.

As a history student, I had the same feeling, including an even more obvious general trend towards greater technological and scientific development, and human empowerment.

However, while I still believe the trend is real, it's not necessarily because of Pinker's data and analysis.

How to Avoid Being a Social Burden

Lucio Buffalmano · 1 September 2018 · Archived copy · Original

Party poopers are a form of social burden, and nobody wants them around.

They spoil the party, dampen the mood, and end up being social burdens for everyone around.

By the end of this article, you will know exactly how not to be a party pooper.

- SUMMARY

What Is A Party Pooper

This is a definition of a party pooper:

> A party pooper is an individual who takes value away from either people or social gatherings.
> The party pooper lists among his top skills the ability to make people want to move away, to make social situations akward for anyone around, or to suck the fun out of any group.

Taking value away means that the party pooper ends up being a social reject.
Albeit that might have to do with the way he looks, most of the time it's because of how he behaves.

In this article, I will use interchangeably the words social burden, social reject, and party pooper to identify the same patterns of behavior.

Behavior of Social Rejects

And here is how the social rejects manage to make their presence highly unwelcome to any social groups:

1. Poor Hygiene

This is the most obvious.

Nothing makes people want to move away like smelly or dirty individual.
Bad breath also counts.

Have you ever noticed the scene of drunk people speaking right in the face of some poor fella, with the drunk getting closer and closer while the poor fella backs away?
That's how social rejects behave when they drink too much.

If you tend to bad breath, carry mints.
If you have braces and food tends to get stuck, carry a toothbrush in the bag or go rinse your mouth from time to time.

Example of food residue in your teeth:

2. Terrible Fashion

Bottom line:

The better you look, the more welcome you are.

With a few exceptions.
In social relativity we explained that social value is relative to the group, so for example looking awesome in a suit might not make you the most welcome guest at a goth party.

But, on average, looking good in any type of attire will still make you more welcome even in very different social groups.
And, as a rule of thumb, the worse you look, the less people want to be around you.

On average, the more hipster, narcissistic, vein, or fashion-conscious the crowd is, the more your style will matter, and the more ruthlessly they will cut you out if you don't fit their definition of "cool".

The same principle applies to marketing and product placements BTW.

Here is an example from Sex And The City:

In Samantha's opinion, the "nobody in a tracksuit" carrying the bag devalues the bag. That's the exact same

influence that a poorly dressed social burden devalues his host group.

3. Interrupt Rapt Conversation

Party poopers join groups where people are engaged in deep conversation and are not looking for anyone else to join.

In this case, they either get thrown off the bus (example below) or, if the people speaking are too nice to drop him, they will get in and be hated for it.

Edit: see PU for the example.

4. Dampen The Mood / Off Sync Irony

The party pooper makes things awkward by being out of sync with the group's mood.

If the group is low energy, they enter too high-energy.
And if the group is too high energy, they bring the mood down.

Usually, it's better to go higher energy in a low-energy if you can bring the group's mood up.
People indeed don't go out to be bummed out and reflect on world troubles usually.
They go out to smile, socialize, meet new people, and generally have a good time.

Example from "Crazy Stupid Love":

Coming low energy or introducing sad and depressing topics is the stereotypical behavior of the party pooper.

However, social burdens, and being socially unintelligent, rarely manage to improve the group's mood.
They try to liven up the mood too early, at the worst possible moment, or by bringing people down. Family Guy makes fun of this behavior in its Kool-Aid skits.
Or this is what a party pooper might say:

> **Party pooper**: come on people, wake up, we're going to have fun, and you're acting like a bunch of dead zombies

The party pooper does not understand that you don't make people feel good by treating them like crap. That way, the group will only want to isolate him.

5. Asking Too Much Without Giving

One of the most common ways people make others want to run away: asking for stuff without giving anything in return.

The rule of thumb is that the higher up you go in the social hierarchy, the more people will want a piece of your success (or a piece of you).
But the people high up are getting tired of those asking for stuff.

And it's especially annoying when the social burden has nothing to offer in exchange (theory of social exchange).

6. Hovering Around Groups

You know those guys who stand at the fringes of your group or your conversation, hoping against hope to be introduced?
And then, when you keep on talking, they stay there and never go away?

Yeah, those… Those are great examples of social rejects.
They don't understand that they are not welcome and make everyone in the group feel awkward for *forcing* them to

make him look like an idiot.

How do you avoid this?
Only approach groups that are open to you.
If you stand near them and they don't welcome you or if you are standing near and there is no pause in the conversation for you to join, then keep moving.

An option to scout for people to talk to is to stand at the edge of a social gathering, but in a corner where people cannot see you so that you don't lose any status for being seen on your own. From there observe who is open to new people and conversations and then go say hi (learn body language to make the scouting easier).

7. Awkward Comments

There are a million ways to make things awkward and put people on the spot and I cannot give you them all here.

Many of them include discussing socially what is not supposed to be said, asked, or done in social settings.

However, some examples are:

1. Asking a girl out in front of a group
2. Revealing someone's secret in front of others
3. Mean jokes about someone in the group
4. Asking intimate questions publicly
5. Sexual advances to someone in the group
6. Revealing someone's group crush (especially if the crush is in the group)

Here's an example from 500 Days of Summer:

Also, read:

- Handling awkward social situations
- Defending people from social assault

8. Not Taking Hints

Here's a quick story to show what I mean by party poopers not taking hints:

I remember many years ago.

It was a hot summer day in Italy.
One girl, let's call her Summer was in the car talking and making out with a local older guy. Her girlfriend stayed with me, a friend of mine, and a friend of the guy in the car.
Let's call him Smart.

Smart kept asking me and my friend what we were up to and what we were going to do.

That seemed a strange question, but we didn't make anything out of it.

He asked again soon later, and then he said he should probably get going.

But he stayed there.

Then he finally lured us away and told us if we could please go and leave him alone with the girl.

Me and my friend were not taking the hints that we should have left the two of them alone.

Talking about a social burden becoming a sexual burden :).

Well, at least we had the benefit of being young and stupid.
Some adults though never understand that there are times when one should just leave.
It can be two friends who want to have their own conversation.
Or two lovers who want to move forward.

When in doubt: ask, or say that you're thinking about going.
If they answer something along the lines of "OK", they're being nice and want you to go.
And if you just leave, you can't be too wrong.

Example: Annoying Interviewer Doesn't Take Hints

The interviewer of Robert Downey Junior doesn't realize that the interview is being a slow-motion crash.

He just cannot get the social hints:

> **Interviewer**: (doesn't get the obvious signs that the actor is getting irritated)

9. Trying Too Hard

Trying too hard is one of the most obvious social blunders of the party pooper.

It can take many forms, including:

- Trying to crack jokes even though people are obviously not finding them funny
- Pretending to know what they're talking about
- Not sharing the group's culture but trying any way to fit any
- Interjecting with nothing of value (or with value-taking comments)

As a rule of thumb, when you have nothing of value to add, you are usually better off listening, nodding, and asking questions than to try and say anything.

And when you just don't fit in the group you are usually better off to move on.
Remember: the long-term solution to a happy social life is finding groups where you can be yourself and where you're accepted for who you are instead of trying to fit in with groups to which you don't belong to.

This scene from Gran Torino is a good example of a social reject trying too hard. In a social situation, he might not be assaulted quite like that, but most people will think he's an idiot nonetheless.

10. The Socially Inept

Finally, this last category of party poopers encompasses the whole category of the socially oblivious and socially challenged.

These are the far too common guys who:

- Stick with the same person for far too long
- Talk for way too long
- Tell flat stories that have no punch lines
- Talk about themselves too much
- Takes over the group and takes it nowhere
- Zoom in one single person making it awkward for everyone

You can read some examples in this article on a group conversation.

SUMMARY

Party poopers do two things:

1. Bring down the mood
2. Take away social value

In this article, we reviewed the most typical behaviors with which social burdens make socializing worst for

everyone.

Avoid these behaviors, and you will never be a party pooper in your life.

Do Good and Evil Overlap? A Heroes & Psychopaths Analysis

Lucio Buffalmano · 2 September 2018 · Archived copy · Original

Do good and evil overlap?

Do heroes and criminal psychopaths share the same personality traits?

More than one author and researcher speculated that was the case.

This post will delve into the literature to provide clear answers to the above questions.

Are Psychopaths Heroes?

In his book *The Antisocial Peronalities* David Lykken provocatively proposes that psychopaths and heroes share a common root.
Lykken, a pioneer in the study of psychopathy and antisocial personalities, says:

> I believe, in short, that the hero and the psychopath may be twigs on the same genetic branch

This is a theory of successful psychopathy referred to as 'Moderated Psychopathy Model', and Lykken thought of parenting as the moderator effect:

The Lykken model of antisocial genotypes. Redrawn from Lykken (1995, p. 11). Copyright © 1995 Lawrence Erlbaum Associates, Inc.

In general, it's also not uncommon sometimes to relativize evil and ascribing it to circumstances, rather than innate predispositions.

But is it true?
Are there little differences between people?
And are criminals more likely to be heroes?

This article digs deeper into the overlap between psychopathy/evil/heroes, and the relativity of evil.

What's a Psychopath

Psychopathy is a mental illness and the exact definition varies.
Wikipedia defines it as:

> A personality disorder characterized by persistent antisocial behavior, impaired empathy and remorse, and bold, disinhibited, and egotistical traits

Despite the common public perception, not all psychopaths are out-of-control criminals.
The high-functioning ones can better control their impulses even if they feel little for the people around them. And they enter into relationships, hold jobs, and can form families.

Psychopath's Mask

The high-functioning psychopaths "wear a mask" to blend in and often have families and jobs.

Individual cases rarely provide strong evidence, and much more so when anonymous and online.
But out of curiosity, I asked a self-identified psychopath on Quora about the idea of 'wearing a mask.' They described it as a persona constructed to blend in with others.
Note: This is a single anecdotal account and should not be taken as representative of all psychopaths.

> **Me**: Thank you! I'm curious about when you wrote on "wearing a mask". Do you mean to play the part and pretend to have feelings and empathy?
> **Psychopath Individual**: Indeed. It is a persona constructed to blend in with everyone else.

This is in line with general research.
Psychopaths typically show a marked deficit in conscience, empathy, and guilt. While there may always be some exceptions, these traits are generally diminished compared to non-psychopathic individuals.

One can expect that a lack of conscience and empathy, even in high-functioning psychopaths, removes a psychological inner brake against predation.

High Crime Incidence

Dr. Stephen McWilliams writes that psychopaths are around 1% of the US population and makeup around 25% of the inmate population.
This paper suggests that "93% of adult male psychopaths in the United States are in prison, jail, parole, or probation."

Even though these statistics may seem on the high end, the overarching consensus is that psychopaths commit more crimes and more violent crimes than non-psychopaths.

These patterns suggest a potential challenge to the simplified narrative that heroes and psychopaths share key moral traits.

Heroes vs. Evil

A hero is an individual who goes incurs personal costs to help others and contribute to society.

It's this idea of not caring about consequences, which seems to be shared by low-functioning psychopaths and heroes, that has led some to speculate the two may be similar.

What's Evil

While 'evil' may sound simplistic, we can properly define to make it meaningful.

We use the word 'evil' for people with a complete lack of disregard for others' well-being, no conscience, no empathy, and who actively harm others either for their own gain or for their own pleasure (sadism).

That *might* include psychopaths.
The lack of conscience that characterizes psychopaths often removes one inhibitor to evil, but not all psychopaths are evil.

And not all evil individuals are psychopaths.

In recent years there have been a few papers criticizing the link between psychopathy, violence, and recidivism. But they bring little data and they run against a much larger body of evidence that does link psychopathy to a much higher incidence of violent behavior (Scott McGreal).

When Good and Evil Intersect

It does seem that the positive heroes have a set of personality traits that make them more likely to get in trouble and cross into the "bad side of the river" a bit more often.

According to Andrea Kuszewski, a behavioral therapist writing for Scientific American, people who are more likely to engage in acts of heroism are also more like to be:

- Impulsive
- Argumentative
- Rule breakers
- Authority-challenging

As you can see heroes are not likely to be good, quiet, and peaceful the way a Dalai Lama or Gandhi would be (albeit Gandhi was allegedly abusive with his wife).

But a bit more similar to a character such as Indiana Jones or Han Solo.

However, that is not to say that good and bad are very similar.
And that is not to say that psychopaths are also heroes.

Common Traits of Heroes & Psychopaths

Heroes and psychopaths do have some traits in common, including:

- Low impulse control (acting without thinking of consequences)
- Boldness (remaining calm in threatening situations, associated with self-assured and assertiveness)
- Sensation seeking (engaging in risky practices for the thrill)
- Fearlessness

Much of the overlap indeed seems to be in the "ability to take bold and uncommon actions", including putting themselves in danger of facing long-term consequences.

Research on Heroes & Psychopaths

Here is some academic evidence to help us make sense of this topic:

#1: Psychopaths and Heroes From Same Branch

A study by Smith, Lilienfeld, Coffey, and Dabbs aptly called "Are psychopaths and heroes twig off the same branch?" set out to investigate Lykken's hypothesis.
And it says:

> (…) These findings raise the possibility that some psychopathic personality traits are modestly associated with heightened levels of heroic altruism (…)

Let's unpack it.

Overall traits related to fearlessness, fearless dominance, and boldness had modest positive correlations with heroic actions.

Traits related to disinhibition also showed mixed results. Impulsive non-conformity showed modest positive correlations. And traits such as 'carefree nonplanfulness' showed modest negative correlations.

Measures of antisocial behavior and delinquency had some of the strongest correlations in the surveys, and antisocial behavior and delinquency showed moderate positive correlations with heroism.
Scott McGreal, commenting on the survey on Psychology Today, notices that the survey doesn't say *when* the antisocial behavior happened. Based on more research and data, he speculates that it seems likely that the antisocial behavior happened early in life.

Some evidence points to the contrary, and extraordinarily brave heroism was unrelated to personality dimensions (Walker, Frimer, & Dunlop, 2010), including those associated with psychopathy (Benning, Patrick, Salekin, & Leistico, 2005).

However, overall, there seems to be some truth to the claim.
Fearless Dominance is also associated with engagement in occupations involving high levels of physical risk (Lilienfeld, Latzman, Watts, Smith, & Dutton, 2014), suggesting that some individuals with psychopathic traits may channel their propensities for venturesomeness and risk taking in prosocial directions.

Conflating 'good' aspects of psychopathy with antisocial psychopathy

But one of the biggest risk here is conflating the potentially more positive aspects of psychopathy, with the more antisocial ones.

In the original study itself, **core psychopathic traits related to meanness (ie.: 'coldheartedness') showed small to moderate *negative* correlations with heroism**.
And Miller & Lynam (2012) found that the trait of fearless dominance measured by Smith et al. is only weakly related to antisocial behavior, which may undermine the link between heroism and antisociality.

#2. Sensation Seeking and Psychopathy

Recent research suggests that there is a strong correlation between antisocial behavior and sensation seeking.

Sensation-seeking is the tendency to engage in risky practices such as unsafe sex, excessive drinking, drug abuse, and reckless driving.
And there is some evidence -but far from final- that sensation seeking might also be linked to pro-social behavior and heroism.

For example, Israeli war veterans decorated for bravery were higher in sensation-seeking than non-decorated veterans.
However, I personally would be very wary of considering war decorations as a sign of pro-social behavior.

Scott McGreal says that people who score high in sensation-seeking see risks not only as exciting opportunities but also as challenges that they can cope with.

Naturally, that can lead to an increase in both anti-social and pro-social behavior.

#3. Psychopath & Heroism In First Responders

The study Psychopath & Heroism In First Responders investigates the relationship between psychopathic traits and heroic behavior in emergency workers VS a control population.

There was a small positive correlation between antisocial personality disorder and heroism (similar to the first paper that found that a history of antisocial behavior has a small correlation with heroism).

But among the supposedly psychopathic traits, only boldness and fearlessness were positively related to heroism (and only in the community sample, not in the first responders).

Within the first respondent population, meanness and disinhibition were negatively correlated to heroism and other altruistic behavior.

Research Conclusions

Although the research is not very deep, it seems that the overlap between heroism and *some* psychopathic traits is limited.
The fact that one of those traits is fearlessness says little about the link with psychopathy because, by their very nature, most heroic acts *require* some fearlessness.

Differences: Psychopaths Are Not Heroes

Albeit there are some commonalities, the differences may be even larger.

Lykken claims that empathy -the capacity to empathize with others' pains and feelings- is the main feature that differentiates psychopaths from heroes.

However, there is more.
Psychopathy can include several traits that are antithetical to the concept of heroes.

- Meanness
- Lack of empathy
- Lack of remorse
- Cold-hardheartedness
- Interpersonal antagonism
- Selfishness

Selfishness in particular may stand in contrast to heroism.
Psychopaths are driven by personal gain and personal wins against others.
That does not make psychopaths positive heroes.

I also asked a self-identified psychopath about whether they would risk themselves to help others. Their response, 'Certainly not, we're very selfish', aligns with the general understanding that psychopaths prioritize personal gain.

This is a single perspective, but it aligns with general tendencies of psychopathic self-interest.

Short-term Heroes vs. Lifelong Taking

While it's possible that the boldness/fearless aspect of psychopathy may promote 'heroic' behavior in the short term, the 'full suite' of psychopathic features still tends to promote a life history that's more self-serving, and potentially predatory.

Write Widiger and Crego in *The Handbook of Psychopathy*:

> Although it is not difficult to imagine a psychopathic person without a criminal record (…) it is perhaps difficult to imagine a psychopathic person not having a history infused with unethical, predatory, and other disreputable acts.
> Skeem and Cooke (2010) made a distinction between criminal and antisocial behavior. "Criminal" behavior is

> sanctioned by the legal system, whereas "antisocial" behavior is more inclusive (…) "Snakes in suits"may not in fact break many laws, but they significantly bend, massage, and work the rules to an unfair, self-serving advantage.

Conclusions: Some Heroic Behavior, But More Generalized Selfishness & Taking

In summary, Lykken's initial insight has some merit, but it's simplistic, only partially valid, and, in many important aspects, incorrect.

Specifically, **the fearlessness/boldness facet that some consider related to psychopathy can promote heroic behavior** more than in non-psychopathic ones, especially compared to more fearful and inhibited people. But not everyone considers boldness to be the 'core' of psychopathy, and **the 'full psychopathy suite' comes with more facets that promote selfish and predatory behavior** rather than heroism.

An extreme version of the belief 'psychopathy promotes heroism' may be naive.
Excessive relativism is a distortion of reality and, potentially, a weakness that increases naivete and increases the odds of predation.

TPM's Mission: Making Good People 'Selectively Bad'

At TPM, we explore how fundamentally good individuals can strategically cultivate traits often labeled as 'bad'. Not for exploitation, but to protect themselves, stand up to predatory behavior, and as strategic tools for self-

advancement.

I believe indeed that the world needs fundamentally good people who know how to be bad. Otherwise, the lever of power will always go to the most unscrupulous, unethical, and immoral of individuals among us.

This research strengthened the view that the possible overlap between good and bad shouldn't extend to the point where we confuse the two. Ultimately, people with a good predisposition are more likely to help others and add value. People with a predatory predisposition are less likely to support others and more likely to *take* value.

Bullet Summary

- Leverage compassion both in interpersonal and internal communication
- Express how you feel with "I" statements instead of "you"
- Voice your needs and requests both non-offensively but clearly
- Look for win-win and full satisfaction instead of compromise

Full Summary

Communication is a major part of everyday life and of our relationships.
If we want to function well with people, we need to learn to communicate effectively.

Avoid These Violent Communications

- Moral judgement (insult, criticism, labels)
- Judgmental words
- Demands (you must)
- Comparisons (violent)
- Accusatory words

The words we use impact the way we behave.
O.J. Harvey studies the world literature looking for how often words depicting people as "good" or "bad" would come up.

He found out that countries with a larger usage of bad words also had more incidents.

My Note: Correlation is Not Causation
This doesn't say much, however. Correlation is not causation and it might as well be that more violence leads to more negative words and not the opposite.

Labels, for example, impair our observation skills because they imply a judgment (ie.: "liberal" or "conservative").

Nonviolent Communication's Goal

The goal of nonviolent communication, or NVC, is to:

> help us communicate our feelings clearly by observing objectively, identify feelings, and communicate with compassion.

The components of nonviolent communication are:

1. Observations
2. Feelings
3. Need
4. Request

Example

Imagine as an example that your son left his toys all across the floor.
You would not start yelling at him right away (of course :).
Instead:

- first you observe the situation;
- then you ask yourself how it makes you feel (angry, frustrated, worried for the family's safety?);
- next you identify what need you have (clean house, safe environment?);
- finally you ponder for a second what's the best way to voice your request in a way that influences them without hurting them.

For example:

> Son,
> when I see your toys spread across the kitchen's floor
> I feel frustrated because I need our house to be clean and safe.
> Do you think you can pick up your toys and take them to your room when you are done playing?

Starting with "I" instead of "you" is a staple of communication manuals.

Observation Without Evaluation

Observing without evaluating is one of the keys to nonviolent communication and one of the most difficult steps to master.

For example the phrase: "Mark always comes late at work" already implies an evaluation.
Rephrasing it in a way that is object would say: "Mark does not arrive before 9am".

Another example, even more relevant for relationships, would be:

> You never to listen when I speak to you

Instead, it's better to be specific:

> The last two times I tried to talk to you about it you left the room

Ask Yourself: What Do You Want

The author talks about creators and victims, which is basically what most other resources refer to as internal vs external locus of control.

You go from victim to creator by asking yourself what you want.

Take Responsibility

Taking responsibility means that you don't blame anyone else for your own feelings.

What someone does is a stimulus, but it's never the cause of our response.
Our response is up to us, and our overall emotional well-being is up to us.

Also read:

- Meditations by Marcus Aurelius

Example

Imagine that someone tells you:

> You are the most selfish person I met

Sounds harsh, right?

There are a few ways people normally react to strong accusations:

1. Change self-narrative, blame themselves and feel depressed
2. Get angry or defensive, lash out and blames back

A better reaction though would be to walk through your own feelings and verbalize them.
For example:

> I feel offended and dejected when you say that because I have really been trying to take your needs into account

This response will clarify your own feelings and get you more easily down the road of resolution.

The last and best option of them all would be to put your ego aside and ask for clarification:

> OK. What makes you say that. Do you think I'm selfish for something specific that I have done?

And later you can add:

> How do you think I could show more consideration for you and your needs

When you use this type of communication you will often find out that people will self-soothe and calm down because they feel heard and understood.
Powerful stuff.

Communicate Your Needs

Marshall Rosenberg says that many of us are not skilled at communicating our own emotions and needs.

That leads people to passive aggression and grow anger and resentment.

The best you can do, both for yourself and the people around you, is to communicate as directly as possible.

Use Positive Language to Verbalize Your Request

Similar to communicating our needs, voicing our request should be done as directly as possible.

The author says that a great way to cause less defensiveness as possible in the listener is to communicate what you want them to do instead of what you want to stop doing.

Positive language also helps to make your needs clearer.
For example, if a wife tells his husband not to spend too much time at work, he might not be sure what she means. Does it mean he is stressing himself too much or that she wants him to spend more time at home with her?
Positive language avoids misunderstandings.

Nonviolent Communication For Self Talk

Marshall Rosenberg says that can use nonviolent communication to talk to ourselves as well.

Way too often indeed we label ourselves negatively and we are way too harsh.
Instead, the next time you are being judgmental towards yourself, focus on your unmet needs.

How to Listen Well

To listen well Nonviolent Communication recommends the following:

- Listen empathically (try to feel what they feel)
- Don't try to cheer them up
- Don't offer immediate solutions or advice
- Ask questions
- Repeat their last words (it will lead them to expand and clarify)
- Paraphrase what they said to make sure you understand

Real-Life Applications

Use Positive Language Instead of Negative One
One of the biggest takeaway for me is to use positive language for what you want people to do, instead of what you *don't* want them to do.

CONS

Bad Battering Example
I feel that using the example of a man beating is wife for communication is wrong and underlines how many people do not understand the psychology of abusers.
Most abusive relationships have nothing to do with bad communication and you only fix them by distancing yourself from the SOB.
Also, in general, watch out for relativism: there *is* a difference between good and evil.

Examples Were a Bit Simplistic at Times
Some of the examples are a bit simplistic and too "easy". I would have liked to see some harder communication challenges to crack.

PROS

Empathic Approach For a Better World
I liked how the book stresses the importance of clearly understanding our own feelings and striving to understand others' feelings.
It might sound touchy-feely… And that's exactly the mistake that most do.
If everyone read and applied the lesson from Nonviolent Communication we would certainly live in a better world.

Review

Nonviolent Communication is a good manual on effective communication.
I can recommend it both for general communication and for communication within a relationship.

Psychopath Free: Summary & Review

Lucio Buffalmano · 3 September 2018 · Archived copy · Original

Psychopath Free (2015) explains the psychopath's strategies to control partners.
It's based on the author's own experience, plus what he has learned networking and helping other psychopath survivors. Ultimately, this book is a guide to help people who have been -or are- in a relationship with a psychopath.

TPM Note: This book offers a highly instructive first-hand experience, yet victim-framed and lacks scientific grounding
We encourage readers to complement this book with more rigorous scientific guides on narcissism or psychopathy, and to consider self-development to become less naive, more power-aware, and more resilient.

Overview

- Psychopaths feel nothing, but they fake emotions to make you fall in love and hook you in
- It starts with love and idealization, then they turn the tables on you, and then they dump you
- Psychopaths feed on unhealthy needs: cure those, but don't become a dark person

Notes

Jackson MacKenzie says that getting involved with a psychopath is a dark journey that will take you into depression, rage, loneliness, and suicidal thoughts.

But it will also open your eyes to human nature, society, and your own self.
And ultimately, it will heal you and make you stronger.

Psychopath Free is a book to help you along that journey.

The Author Refers to 'Psychopaths' as 'Manipulative Individual'

The author says that a psychopath is a manipulative individual.
They are completely devoid of empathy and intentionally harm others without any feeling of remorse or regret.

The author says that in psychopaths behave the exact same way as sociopaths and narcissists.
Their relationship, says the author, follows the same pattern:

1. Idealize
2. Devalue
3. Discard

TPM Note: Imprecise and incorrect
'Sociopaths' is not an actual diagnosis and while psychopathy factor 1 may include narcissistic traits, it's also very different from psychopathy factor 2. Many psychopathy factor 1 may not get attached in the first place.

> Manipulation: Techniques, Strategies, & Ethics

Spotting Toxic People

Psychopath Free has a list of 30 points to spot and recognize toxic people.

Here are the ones that I found most relevant:

- **Gaslighting** and crazy-making (deny their lies and manipulative behavior)
- Always your fault (you're too sensitive or crazy)
- Can't understand you (you're always explaining your feelings)
- Hypocrisy (high expectations for you that they don't meet)
- Lying and excuses
- Focus on your mistakes (and ignore their own)
- Selfishness
- Need for attention
- Provoke emotions, then accuse you of being too emotional/jealous
- They have cheering fans that adore them (and exes and potential lovers)
- Encroach your boundaries
- Disrespect you
- Withhold attention (and undermine your self-esteem)
- Expect you to read their mind (if plans changed, you should have guessed it)
- In the beginning, constantly initiate communication
- They seem to be fascinated about you
- Positively compare you to others in their lives, BUT
- Later on, negatively compare you to others in their lives
- Your qualities become your faults (albeit that happens to "non-psychopaths" too)
- Cracks in their masks (fleeting moments when they look completely different)
- Easily bored
- Surrounded by former lovers and potential mates
- Pity plays and "poor me" stories

- Push/pull (showering of attention, then ignoring you)
- Sacrifices on your end, but little on their end
- Early humble and sweet appearance turns to arrogance

The Psychopath Relationship Cycle

The relationship stages with a psychopath follow a pattern of three stages.

1. Idealization Stage

In the idealization stage, the psychopath makes their target believe they have met the love of their lives.

The author calls it “love bombing”, including constant praise, make you the center of their world and constantly texting first. He is just making that stuff up to hook you in.

The psychopath will try to convey a few key feelings to strengthen his hold on you:

1. We are so similar
2. We have the same hopes and dreams
3. We share the same insecurities
4. You’re so beautiful
5. I’ve never felt like this before
6. We are soul mates

Once you are fully hooked, the psychopath moves to the second stage.

TPM Note: No strong evidence was found for narcissists ‘Love bomb’
As leading narcissism researcher Keith Campbell states in his book. Love bombing also doesn’t jibe well with personalities who prioritize power, since it gives power away.

2. Devaluing Stage

The first step of the devaluing stage is testing.

The psychopath wants to make sure that you are fully under his spell.
He might go radio silence for a few hours and days when he was previously always texting you.
Or he might use dirty words in bed to test your reaction.

When you react, he will say he was just busy and imply that you’re too needy or jealous.

Of course, he orchestrated everything on purpose.

During the devaluing stage the dynamics change: he is not chasing you anymore. Now you are chasing him.

You start to be afraid that he might be losing interest, that he might be pulling away.
The threat of breakup is indeed always in the air after the idealization phase.

You are terrified of that possibility and will try your hardest to be on your good behavior, walking on eggshells.

The psychopath makes you feel that it's you who is ruining everything, and you start believing indeed that you are too needy, jealous, and "not good enough" for the psychopath.

You crave his approval.
You hope that if you can only change your behavior or if you can only prove to him how good you are, then he will love you again the way he used to.

The psychopath will actively funnel your internal fire.
He will use a few tried and tested techniques, including:

- Gaslighting (lie and then deny his lie; make you jealous and accuse you of being crazy)
- Silent treatment (letting you stew on your own bad feelings)
- Triangulation (joke with an ex, flirt with someone new)

TPM Note: This denotes target dependency and low self-sufficiency, not just 'psychopath strategies'
It's a two-way streets. It's neediness that co-contributes to 'making you fearful for the relationship to end'. The other person's manipulative tactics rely on that foundational neediness.

3. Discard Stage

Eventually, the psychopath will dump his victims for a new and fresh target.

MacKenzie says that they will do it in the worst way possible.
If you're traveling to see them, they will dump while you're in transit. If you're going through a tough time, they'll probably dump you right in the middle of it.

They will jump right to the next target, leaving you a mess while they go about happy and carefree.

The author says they will make it a point to hurt you and to show you happy they are now.
Why?

MacKenzie attempts his own explanation:

Why They Destroy You

They destroy because psychopaths are obsessed with winning.

A psychopath at the same time despises weak victims who beg while at the same time enjoying their power over them.

Their obsession with social dominance also wants to make sure they are getting a better partner. And what's the best way than to harm and impair the previous ones?

And, finally, they hate you.
You remind them of what they don't have: love and empathy. They feel superior for not having those feelings, but they also must fake those qualities day in and day out.

Gaslighting and Projection

Gaslighting is not always obvious.
Sometimes it's just about denying a small event or denying ever having said something.

It increases as you drift more and more into a typical abusive relationship.
They will deny the obvious, while you repeat to them over and over exactly what they said. Only to realize though that you sound petty.
They look calm, and you look increasingly nervous and on edge acting, indeed, a bit crazy.

And in case you can present actual evidence, the psychopath will punish you with silent treatment and withdrawal.

Psychopaths' Targets

Psychopaths settle for targets who don't truly see their nasty behavior.

And the ones they dump are the ones that catch on their games, even if that means they will act crazy and wild.

Here are some characteristics of the best targets for psychopaths:

- Givers
- Insecure people who find self-worth in taking care of others (co-dependent partners)
- Feel happy to make others happy
- Conflict avoiders (set aside issues to maintain a semblance of harmony)
- Passive-aggressive (people who won't stand up to them)
- Forgivers (forget and don't behold grudges)
- Strive to see good in others
- Looking for life-long partners

Psychopaths Put You on the Defensive

The author says that the psychopaths will accuse you to put you on the defensive.

It's because when you defend yourself, you seem guilty by default. And even if you're not actually guilty of anything, when you defend your own opinion and assumption start to change.

It's difficult not to defend sometimes if you are not used to this type of behavior.
How can you not defend yourself when your partner, the one who supposedly loves you, believes you're a bad person?

Once you're on the defensive the psychopath can relax and sit back while you bring about your own submission and emotional demise.

> **Psychopaths feed on unhealthy needs, not everyday kindness**

Criticism

This will be a long list of cons because I had quite a few reservations.
However, keep in mind that I am always more critical of (potentially) great and life-changing books and there is much good in Psychopath Free.

Unscientific, Imprecise

The author presents his book as the description -and solution- for a relationship with a psychopath, sociopath, narcissist, histrionic, or borderline personality disorder.

Obviously, these are different personality disorders with different characteristics, different behavioral patterns, and they require different approaches.

Lacks in Logic Sometimes

Just as an example, the author says that an element that makes the breakup so painful is that the next target gets from the psychopath something that you never got.

The author implies that the next target *factually, always* has it better than you.
But that's a statistical impossibility because it would mean psychopaths always move towards better and more serious relationships.
Obviously, that's rarely the case.

'Victims' Profile' Misses the Real Key: Easy Targets (Low Power)

The author suggests this when he says that these toxic dynamics feed on 'unhealthy needs'. Later, he also suggests that victims may have been passive and submissive for too long.

He is absolutely correct, that was key, and there are more crucial traits that boost the odds of becoming a victim, including:

- Lacking experience
- Naive/idealistic
- Insecure attachment
- High neediness / low self-sufficiency
- Isolated/introverted
- Potentially low sexual market value, few options

These are all symptoms of the same source: **the targets most at risk are lower power.** Please note that by no means is this to suggest that the blame lies anywhere else than with the perpetrators.
Instead this is an empowering realization, because it also suggests the best solution: boosting mental and social power.

Lists Obsessive Behavior as 'Typical'

The author discusses the "typical behavior" of a psychopath's victim, which includes stalking-like behavior. I don't know how typical it actually is, but it seemed like the textbook's wrong approach to a breakup.

Psychopath's Descriptions Are Contradictory

First, it says psychopaths know how to touch you, give you great sex, and have a tribe of adoring fans.
Then it says that in the beginning you pity them and you feel like helping them (note: this seems more aligned with vulnerable narcissism).

Which one is which?
They don't seem very compatible descriptions, and if it's two different styles, the author should have made that clearer.

Some Claims About the Author's Website Raise Questions

The book talks a lot about the forum the author has founded and I checked it out when I first wrote this review. The forum is closed to new members and had this notice:

> PF has grown from a small website into a thriving community with millions of monthly visitors

I checked PF's traffic with a popular tracker at the time, and it wasn't anywhere near what was claimed.

Some Valid Insights
We always appreciate and value first-hand experienceo on this website (it's one of our core pillar for accuracy).

Review

Although weak on science and rigor, *Psychopath Free* offers a valid, first-hand, arrowing experience of an emotionally destructive relationship with a potentially psychopathic or sadistic individual.

While this is no excuse for the abuser, the author doesn't list the target's own weakness as a major vulnerability for such predation. One may notice that being a loner, closeted and without prior relationship experience, and potentially with an insecure attachment style, may have created a vulnerability cluster. And it may have sent out 'exploitability signals'.

That being said, we are happy if this book can help anyone avoid the same experience, or recover from one. And hopefully our website on personal empowerment can also offer some useful guides.

Toxic People to Avoid

At the highest level, a toxic person is a subset of a 'taker', such as someone who takes more than they give, and makes you worse off.

Toxic people are often described as emotionally draining, stuck in an endless cycle of negativity and who drag everyone around them down.

Don't try to fix them, because the vast majority of the time you can't them.

Here are some of the most toxic personalities you must avoid:

1. Emotional Vampires

Emotional vampires act and believe as if everyone has to pander to their problems and emotional needs.

Your issues don't matter because, well.. Theirs do.
They never stop to wonder if they are bothering you, or if you have something else to do. In their mind, you are on this earth to act as their emotional tampon.

There are several types and layers of emotional vampires:

- Conversation hoggers (you can't get a word in)

- Victims (always in trouble and need your help)
- Validation seekers (want to hear how good they are)

The Good Girl has an example of some of the worst kinds of emotional vampires.

That's a mix of emotional vampire dom, drama queen, and addictive personality.

2. Addictive Personalities

You can be certain of two things in life: death and that an addict will always try to get without giving.

Addictive personalities tend to get addicted more than others, to *all* kinds of substances:

- Cigarettes
- Alcohol
- Food
- Drugs
- Sex
- Gambling
- Thrills

You name it.
And they're always looking for the next fix.

Stay away from these toxic people unless you want to see the ugly effect of addiction and pay for their next fix (and the one after that, and the one after that…).

3. Drama Queens

Everything is drama in the life of a drama queen.
They have one problem after the other, and they love blowing things out of proportion.
If one problem miraculously gets solved -rarely thanks to their initiative- another one looms even larger.

Don't even try to help them out or recommend them a course of action: they have an approach of importance to life. You just wouldn't understand how hard it is, they will say.
It's not like they can fix it, you know.

They prefer complaining and complaining.
Their life, the war on TV, the economy, their spouse…

Drama queens will never change, they attract drama or they make it up.
So unless you enjoy drama yourself, stay away.

4. Evious-Bitter

These are the people who are jealous of those who have it better.

Of course, those others don't have it better because they worked harder or because they were good.
Nope.
They got lucky.
Or cheated, or slept their way to their promotion.

These toxic individuals show their hands with backstabbing, backtalk, spreading rumors, and mean comments.

Also, read:

- **Is your boyfriend very jealous, or paranoid-abusive?**

5. Narcissistic

Narcissists have low empathy, and it's all about them.

They live in a world of appearances, and think of themlseves are better than they aer.
And if you couple that with weak ego, you understand why they are always seeking confirmation.

To keep up their image of high status, this brand of toxic people obsesses with what others think and with the external signs of wealth and power.

Notice her attention to form and her vanity.
And of course her reaction to her daughter's news. Even her daughter's pregnancy is about how it negatively affects *her*.

6. Sociopaths & Psychopaths

Sociopaths and psychopaths can be openly violent.
But they can also be hidden and sneaky.

They are extremely selfish, they feel no empathy or regret, and are obsessed with domination and winning.
This makes for an explosive mix.

Indeed, they often see life as a big chess game.
And the people around them are the pawns they will try to move -or destroy- with their games and machinations.

Possibly sociopaths and psychopaths are some the most toxic individuals on this whole list.

Regina in Mean Girls also presents narcissistic and sociopathic traits:

6.2. Vacuous, High-Functioning Psychopath

The high-functioning psychopaths and sociopaths pretend to have feelings to better integrate (and play their games).

But they are vacuous underneath, and remain unable to attach and empatahize.

> What do you mean. That's a question right there.

LOL, that says everything you need to know.

Being Vacuous can be a reaction to abuse experienced as a child. A good movie for this type of dynamics is the movie Mysterious Skin -but it's a difficult movie to watch, you've been warned-.

8. Chronic Liars

Sometimes there are good reasons for which even honest people need to lie.

But chronic liars are different. They don't lie because they have to. And sometimes not even because it's good for them.
Chronic liars just lie all the time.

Sometimes it's simply counterproductive to lie… And they'll still lie.

Are you waiting for them?

They are almost there, just a couple of blocks away.
They don't show up in the next 10 minutes?
They're just *one* block away now…

And once they get there, no they didn't lie about their location!
They were late because of traffic or because they'd been held up.

Chronic liars are toxic because a life with them is a life of second-guessing, doubting, and continuous fighting.
The dynamic will be you accusing and yelling and them denying. A relationship of cat and mouse, and you will soon lose all respect for a mouse who can't talk straight.

You can't have a relationship with chronic liars.

Finally, chronic liars who are very good at lying, also tend to have a strong gaslighting effect on people (ie.: make you feel crazy).

9. Power Obsessed

Power-obsessed people see every feedback, argument, or decision as a battle they need to win.

They can never admit they're wrong and they have huge trouble accepting even the smallest input from the people around them.

Do you want to change the channel on the TV and they weren't even watching?
Just a minute, they first need to finish hearing something.

Do you need them to make a detour to pick up the cleaning?
Not today, they need to rush home to make an important -and nonexistent- call.

Men with a power obsession always know better and always need to get it their way.

Women most often fall prey to power-obsessed men because they confuse their initial steam-rolling ways for strong leadership.
But it's not strong leadership.
These men are in many ways similar to abusive men and make for an impossible life.

Also, read:

- Power-hungry men

10. Passive Aggressive

Passive aggressive people don't have the courage to be direct and don't have the strength to set boundaries.

They will never complain, but they will keep building resentment inside.
Eventually, resentment will start spilling in ways normal people would have never seen coming:

- Huge explosions bringing up years of wrongdoing you had no idea of
- Small acts of insubordination you don't see the point of
- Backhanded compliments
- Secretly being happy for your troubles
- Scheming and plotting against you
- Undermining you in front of others

11. Hypersensitive & Weak Egos

People with weak egos are the everyday version of toxic people.

They go over the moon with compliments -forgetting that compliments mean nothing-.
And they swing the opposite side for every minor criticism. They get defensive, attack, or go berserk on a full-blown identity crisis.

A relationship with weak-ego people is very difficult because you always need to mince your words and think hard about how you can deliver the feedback.
But no matter how hard you try, they'll still get hurt and do nothing with your feedback.
Except for hating you just because you said it, of course.

Borderline personalities have particularly weak egos with wild mood swings.

Dealing With Toxic People

If you have anyone remotely resembling the toxic people on this list, detach yourself.

Detaching yourself is always the best solution.
But when that's not possible, here are a few alternatives:

1. Play the same game on them

The best defense is the attack.
For example, to a toxic individual always asking for stuff, ask the same back:

> **Toxic Person**: hey, do you have 50 I could borrow
> **You**: damn you beat me to it, I was just thinking of asking you the same. Suppose you don't have a 20 to spot me then?

If they badger you with their problems, cut the interaction short:

> **Toxic Person**: and then they did this X and Y to me, can you believe it, unbeliavable…
> **You**: yeah I can imagine. Look I'd like to stay and chat, but I need to go now

Alternatively, you can start talking about yourself. See how they react. Do they bring the conversation back to them all the time?
They have no social skills -and couldn't care less about you-. You don't need those types of friends.

2. Close your body language

While they speak:

- Cross your arms
- Stand further back
- Point your feet away
- Make little eye contact
- Check the time

Then when you speak, open up again.
Basically, here you are using your body to play the same game on them: a game of selfishness.
It's a terrible race to the bottom of course, but as long as it helps you get away from toxicity, be it.

3. Get busy

Pretend your phone is ringing, tell them you gotta run, say you got no time, and mention you're in a rush.
Use one excuse after the other until they understand you're not there for their toxic behavior.

4. Get away – and stay away

No, really, the best solution is to get away.
If it's someone in the family, reduce contact.
There is no shame in scaling back with a narcissistic mother or a psychopathic father.

They have done enough damage already and there is no need for more.

11 Types of Toxic Relationships

Toxic relationships suck, don't they?

They poison your life and yet, sometimes, people don't even realize they are in a toxic relationship.

Well, here is a rule of thumb for you: good relationships make you happy and fulfilled more times than they make you sad, depressed, or disappointed.

Anything else likely has some shades of toxicity.
This article presents you with 11 types of toxic relationships to help you troubleshoot and learn.

Toxic Relationships

To begin with:

What is a toxic relationship?
This is a high-level definition that will include *any* type of toxic relationship:

> A toxic relationship is a relationship that, on net balance, subtracts from your general well being.

It might not be as easy as it seems to assess whether your relationship fits into that description, though.
The reason is that most toxic relationships are not always all bad and pure evil. Most toxic relationships also present some good -or kind of good- moments during which partners dupe themselves into believing that things are not that bad, after all.

Don't be a self-duping fella, though. Check out here, and if you see any hint of these in your relationship, start planning how to move on.

#1. Abusive Relationship

The abusive relationship is the poster child of a toxic relationship.

It's not always true that it takes two to tango, and in abusive relationships, the abusive partner can be the one responsible for *all* the toxicity.

Both genders can be abusive, but the sad award here goes to men: the majority of abusive individuals are men.

Abusive relationships can be violent, but not all of them are.
Some emotionally abusive relationships look perfectly normal on the outside. The abuser can be a professor, a doctor or a polished-looking office worker.

Example

Here is one non-physically violent example from The Breakup.
His way of disrespecting her publicly is verbally violent and emotionally abusive.

#2. Psychopath / Sociopath Relationship

Not every single relationship with a psychopath leads to a toxic relationship. But when they do, they often cause immense pain.

Sociopaths are obsessed with social dominance and winning and they see the world as a big chessboard. And you might be a pawn in it.

It's possible they will fake feelings and pretend to love you only to make *you* fall in love with them.
Their relationships usually follow a known pattern:

1. **Idealization** (bring you up and make you believe you two are soulmates)
2. **Devaluation** (turn the tables: they stop coming after you and start devaluing you)
3. **Discard** (they move to the next target, sometimes dropping you in the most painful way possible)

If you want to read more there's a book with a great description of a sociopath relationship called Psychopath Free.

Example: Framing Him As An Abuser

Most psychopaths and sociopaths are men.

But there are some women too.
The movie Gone Girl is a great example of one.
And this is a real-life gone girl:

#3. Narcissistic Relationships

If you like emotional shallowness and selfishness, then pick a narcissistic partner.

Narcissists have a grandiose sense of self -often not backed by reality-, and believe the world revolves around them. They are all about appearances and what others think of them.

Narcissists also lack empathy.
Indeed, they only care about you as long as you can help their sense of grandiosity.
The most narcissistic of narcissists also only care about their children when and if they can help their own sense of grandiosity. That, of course, can have devastating effects on the children's psyche.

Narcissists are also manipulative and play plenty of games.
You cannot develop a relationship based on mutual knowledge and appreciation and you cannot have a deep or even a normal, but real emotional bond, with a narcissist.

> Manipulation: Techniques, Strategies, & Ethics

Example

There are a few different kinds of narcissists and there several good movies that portray them.
This one is from American Beauty.

Notice the distance between them, both physical and emotional. He is acting rather crazy of course, but that's also the point: she is not one bit concerned about what's happening to him. Or God forbid, how to reconnect with him.
And she could care less to keep her daughter out of their problems.
Indeed, as soon as her daughter walks in, she tries to use her to pile up pressure on his husband.

#4. Scorecard Relationships

Keeping tabs means keeping score as to who has done what.

Don't get it wrong here: most healthy relationships *do* entail a give and take (law of social exchange).
However, the focus in great relationships is on giving and the pleasure of giving. And the partner does the same.

The give and take thus happen naturally because both are happy to be giving.
John Gottman's research confirms that the happiest relationships do not keep score.

The relationship becomes toxic when the focus instead is on what we get. Giving only becomes a tool to get something, and that's a draining, poor relationship to be in.

#5. Mutual Assured Destruction

Mutually assured destruction (MAD) is a term borrowed from military strategy.

And in a relationship, it's the most toxic way of keeping score.

The mindset is: "you hurt me, so I hurt you back". And it keeps on going forever. Or until one destroys the other.
These relationships lack an adult and lack a partner who is mentally strong enough to stop the nonsense.

Example

The movie The Break-Up shows a lot of mutual harm.
Especially after the actual break-up:

Warning: MAD is rather common during divorce proceedings. Women also tend to stay stuck in “destruction mode” longer than men. That’s why a prenup can be a smart choice.

#6. Competitive Relationships

Great relationships are mutually supportive.

One partner wins, and he wins for the team.
Poor, toxic relationships instead see the partners trying to tear each other down.

Often it’s the man who starts it.
It stems from internal insecurity, and he starts the competition to feel superior and in charge. The woman is then forced to do the same to defend her dignity and/or to stop the onslaught.

The men who engage in competitive devaluation have usually a fixed mindset and weak egos.
To fix this dynamic, it often helps to:

- Develop a growth mindset
- Develop a resilient ego

Example

Here is a great example of what a competitive relationship looks like:

He also always and only refers to his wife as “beautiful”. And he says she looked exactly like the woman he wanted.
Another sign of narcissism.

#7. Downward Spiral Relationships

In the downward spiral, one partner self-destructs and the other follows suit.

This is an all too common toxic relationship among drug addicts.
One partner does drugs or starts doing drugs and then introduces the other to the drug scene.

In the beginning, all seems great.
The new experiences, the excitement of the forbidden, and walking the path together all make for memorable feelings.

The partner introducing the other to the new experiences takes on the role of the shepherd and leader.
If it’s the man, it’s very exciting for the woman to have him lead her into a new path, and she can come to idolize him (see Christiane F for a movie example).

Then they keep going down together, each dragging each other down.
It often entails lots of drama and possible escalation into violence (see Sid and Nancy).

Example

The song we found love in a Hopeless Place is about a downward spiral type of toxic relationship until she finally breaks free.
And he keeps spiraling down.

#8. Toxic Relationship Dances

Toxic dances are relationships where one partner takes on a role that only exists in relation to the other.

Not all dances are toxic relationships.
For example, the man taking a more traditional male role and the woman taking a more traditional female role is not toxic.

However, there are instances where dysfunctional relationships become toxic.

Here are some:

- **Authority & Rebel**: one partner lays down the law and the other undermines it
- **Parent & Child**: one partner plays the wise and rational side, the other the clueless baby
- **Saint & Sinner**: the saint rescues and the sinner gets in trouble (dependent/codependent)
- **Chaser & Runner**: one partner seeks intimacy and contact, and the other runs for independence
- **Planet & Sun**: one partner demands and expects, and the other caters to every whim (often in narcissistic relationships)

Example

Here is an example of a parent-child relationship dance from Sex And The City:

Read more here on dysfunctional dances:

- Toxic relationship dances
- Anxious-avoidant trap

#9. Never-Ending Bickering

Gottman's research says that conflict is not always bad.

However, two conditions must be met:

- You argue well
- You keep a 5:1 balance of positives to negatives

It's difficult to keep a positive balance when you are arguing all the time.
And you cannot argue well when there is criticism, defensiveness, stonewalling, and contempt.

Contempt is the worst of them all.
Contempt communicates that we feel our partner is inferior and not good enough. It's an emotion of superiority and disgust, and disgust is the opposite of love.

When contempt enters a relationship a vicious circle starts which results in divorce in more than 90% of the cases.
And divorce is often better than a toxic relationship.

Example

The argument in Forgetting Sarah Marshall has lots of contempt, both verbals, and nonverbals:

https://www.youtube.com/watch?time_continue=55&v=RvNuTuiKyIo

> **Her**: 'Oh, I'm Aldous Snow. Bullshit, bullshit, bullshit. 'No, no drinks for me, thanks. 'Bullshit, bullshit, bullshit.'

That's a lot of contempt there.

#10. Power Struggle Relationships

Some individuals, most often men, are power addicts.

Being a power addict means that every little suggestion, argument, dispute, or feedback is distorted into a war.
A war that he *needs* to win.

Power addicts aren't always direct about it though.
Sometimes they just make up excuses to delay or deny you so that you can't "win" with your request.

Maybe you want to change the channel on the TV and they aren't even watching.
But they reply: "wait a second, I need to hear this"

Or maybe you ask him to take you to the dry cleaner on the way home.
And they speed towards home saying "sorry I really need to run home to make an urgent call".

They make up stories because they *need* to have the last word.

Some women fall for the power addict because they confuse their steam-rolling approach for strong leadership.
It's not strong leadership, though. And most certainly it's not good leadership.

Power addicts make for truly toxic relationships, and refusing influence has been shown to be a leading indicator of break-ups.

#11. Emotional Roller Coaster

The big question:

What really keeps people in a toxic relationship?

It's the roller coaster effect.

Some people indeed do not really want to get out of a relationship.
Some partners are perversely attracted to their toxic partners.

And what causes that attraction is the roller coaster of feelings.

When a toxic relationship can drag you down, down, down and then take you up, up, up, that's extremely addictive to our brains (something we mentioned in how to drive him crazy).

Not all toxic relationships present a roller coaster of feelings and emotions, but those that do are the hardest to break free from.

Example

The Oscar-winning "La Vita E' Bella" presents an avoidant/anxious toxic relationship with the typical roller coaster effect:

Notice all the drama, how devastating it is for her.

But then… He comes back and rescues her.

When he rides back, she forgets all the nastiness that preceded it.
She forgets it was *him* who abandoned her there.

Now, she feels that he is her rescuer in shiny armor.
And that he is the only one who can make her feel great.

Getting Out of Toxic Relationship

How to end a toxic relationship?

If the advice was as simple as “just end it”, toxic relationships probably wouldn’t exist at all in the first place.

Some life roadblocks can get in the way.
Children, low self-esteem, fear of repercussions, lack of options, financial dependency, or social pressure are just but some of the obstacles to breaking free from a toxic relationship.

However, as a rule of thumb, human psychological biases often make changes seem much scarier and more difficult than they actually are.

Indeed usually, under heavier scrutiny, most of the roadblocks can be removed or mitigated.

Research for example says that a divorce is better for children than growing up in a house with a bad relationship.
And tackling a lack of options and financial dependency is the same as saying that you are going to improve and upgrade yourself.

What about social pressure?
People who pressure you to stay in a toxic relationship are not the people you should listen to.
They either don’t care about you or don’t know what you’re going through.
In either case, they should have no say in what’s best for you.

> **You can’t fly with the eagles if you keep hanging with the turkeys.**
> **Break free.**
> **The quicker, the safer; the earlier, the better.**

Sociopath Signs

The best line of defense against a sociopath is realizing early before you get involved.

And then *avoiding* getting involved at all.

Look out for these signs:

1. Gaslighting

Gaslighting is the “technique” with which psychopaths make their partners act and feel crazy.

Gaslighting can start small.
They might say something, then deny they ever said it.
And you will wonder if you imagined it.

Or they will manipulate you to make you jealous, angry, or on edge.
When you naturally get emotional or overreact, you are too sensitive, bipolar, or “crazy”.
You will look at your own emotional behavior and tell yourself “maybe I am too emotional indeed”.
You will start taking more and more of the blame for any problem, as you get sicker and sicker and the sociopath controls you more and more.

That’s the essence of gaslighting.

Gaslighting Video Example

Here is an example from the movie “The Goodfellas”:

Gaslighting Power Play

Adelyn Birch provides an overview of this dynamic.

First, the sociopath will make you emotional.
Then, they will accuse you of being emotional and put you on the defensive.
As you get more emotional they will stay calm and collected while you will look more and more, indeed, a bit too flighty.

Looking at the difference between you and him you will think you are going too far. At that point, you will begin to calm down, retreat and possibly apologize.

When you apologize they will possibly play offended and hurt. They might drag it over for a while just to hurt you even more.
And finally, they will “pardon you”.

When they forgive you, they effectively take the power position.

They first stirred you into going wild, then made you feel irresponsible, and then they took the parent role who grants absolution.

You feel terrible, vanquished, and maybe even a little bit grateful for pardoning you. And for accepting you for the crazy one you are (again, gaslighting).

Here are the steps:

1. Make you emotional

2. Accuse of drama
3. Forgive you (power position for them)

See here for more on gaslighting:

> What Is Gaslighting? 17 Signs (& Solutions)

2. You're Explaining Simple Feelings That Shouldn't Need Explaining

If you find yourself trying to explain how you feel, the options are two:

1. You might indeed be highly sensitive (Borderline Personalities are)
2. He cannot understand your feelings

As a good rule of thumb, it's always good to look at ourselves before pointing fingers.
But if you are explaining very basic and normal reactions, then you have a big red flag here.

Sociopaths do not feel the same way you do. They don't even have the feeling you're trying to explain.
If they stare at you with a blank expression, you might be staring at a soulless individual.

Similarly, if you find yourself explaining the basics of social interactions and the basics of common respect, something is wrong.

3. He Demands a Lot While Giving Little (Hypocrisy)

They ask a lot of you, but provide none of what they demand of you.
That includes demands for faithfulness while they themselves often cheat.

Example

Harvey Keitel plays the part of a sociopathic pimp in the movie "The Pick-Up Artist".
He demands fidelity while being extremely jealous and violent:

4. There Are Constant Lies and Excuses

Sociopaths lie continuously, often even for small stuff there would be no point to lie about.
That's what befuddles many partners of sociopaths. "What's the point of lying about that", they wonder.

Well, many sociopaths are pathological liars.

Of course, being sociopaths if they get caught they have no remorse.
They might get angry though, or give you the silent treatment to "punish you" for having uncovered their lie.

5. They Always Draw Attention to Your Mistakes

Once you are out of the initial idealization phase, any small mistake of yours won't go unnoticed.

But they don't like being criticized when *they* make something wrong.
Sociopaths, manipulators, and toxic people don't like taking the blame.

They are quick to turn the conversation back to you, especially to remind you of whatever small mistake you had done.

> Manipulation: Techniques, Strategies, & Ethics

6. You Wonder if They're Normal

Sometimes you will wonder if they're normal.

Or human.

They dread being found out for not having human feelings and conscience.
This is probably one of the reasons why they make it a point to make you believe that *you* are not normal.

Sociopath Relationship Example

The character in "American Psycho" has no feelings about breaking up with his girlfriend, and for a normal, empathic person, he looks "strange":

7. He is Selifh and Attention-Seeking

The world revolves around them.
They demand constant attention and adoration.

That's why they often have a small crowd of cheering fans.

You won't notice in the beginning though: they only crave attention from you.
But as the relationship moves forward they will be less and less reliant on you and more and more looking outside the relationship for validation.

This is also part of their evaluation process, and if you are hooked, it might be very painful for you.

8. You Are Playing Detective

If you have never been the jealous type before and now you are researching and stalking them, that's another sociopath sign.

The reason why you are playing detective is because they are giving you a reason to be suspicious and distrustful.
Sociopaths do it on purpose sometimes: they want you on edge.
They want you to suspect their involvement.
It proves to them they are controlling you. And they enjoy that.

9. They Have a Small Band of Admirers

Sociopaths often have a few people around who like them and applaud them.
The sociopath might be using them for favors, money, attention, or… To make you jealous and increase their appeal.

Sometimes you are the only one who can better recognize them because you are the only one really close to them.

And if they are exes, chances are they are very undiscerning or very low-quality people.

10. You're Afraid Of Fights to End the Relationship

If you are afraid that any fight might spell doom for your relationship, chances are you are already hooked.

And they're taking advantage of it, keeping you on your toes and controlling you through your fear.

Sociopaths surreptitiously -or openly- threaten to end the relationship.
When they don't threaten to do so directly, their *behavior* does the talking. Their behavior communicates that they don't care much anymore about you and the relationship.

This is part of their "dread game", and they are playing cat and mouse.

Dump them yourself: it will hurt less.

- **Psychopaths' control techniques**

Sociopath Emotional Distance Example

The American Beauty bedroom argument scene looks like a sociopath trying to own another bigger sociopath (or a normal man, him, finally standing up to a narcissistic woman)

11. They Started Having a Contemptuous Attitude

This is part of taking the judge's role in the relationship.

In this case, a negative judgment.

What does it mean, in simple words?

They criticize you with an air of superiority.
They have a smirk on their face, or a look of mild disgust as if they were challenged.

Teasing can become a mainstay of your relationship, but it's often not funny teasing. It's biting and hurtful.

At this point, you can start to feel resentful and the relationship has started becoming a truly toxic relationship.

12. They Withhold Attention

Another sign of sociopaths is that of using attention as a test and control tool.

When you do something wrong when they want to punish you or simply when they want to feel powerful and hurt you, they will go radio silent.
The first time they do it and you chase them worried and scared, they know they have you.
And they will relish it.

13. They Expect You to Read Their Mind

Some sociopaths might not communicate basic information, but they still expect you to know what they haven't even said.

This is part of their overblown sense of importance and of their entitled mentality.

14. You Know Something is Wrong, But You Want Them to Like You

If you said yes this is a big sign that you are in a toxic relationship.

If you realize there is something wrong with your relationship, you have finally caught up to some of their games -and to the reality of things-.
But if you still want them to like you, they have their fangs in you and are deeply controlling you.

15. There Are Lots of Crazy or Abusive People in Their Past

Another big sociopath sign is when they tell stories of crazy people in their past.

Violent parents, bipolar exes, crazy exes who still want him, abusive bosses… Is it possible that the whole world is stacked against them?
Or maybe *they* are the crazy ones?

Also, make no mistake, you might be the next crazy one they'll talk about.

16. They Make You Jealous Through Other People (AKA: Triangulation)

While in the beginning all their attention was on you and they had eyes for nobody else, in the middle of the relationship they will do their best to make you jealous.

It might start with their exes popping up, FB flirting with mysterious girls, remarks from other women, etc.

They are trying to plant the seed of doubt in your mind, making you more and more insecure.

If you want to play the game, read this article on how to make him value more to respond in kind.
However, just be aware that the only solution is to move forward and leave them behind.

Manipulative Behavior Example

Regina George in Mean Girls is the poster child of a manipulative sociopath.

Of course, you might not have such an obvious, glaring example -but it happens too!-, but the concept is the same

Read more on manipulation and dark psychology:

> Dark Psychology: 7 Ways to Manipulate People

17. They Pursued You With Abandon (AKA: Love Bombing)

First off:

some types of womanizers also pursue with abandon, and they're not necessarily psychopaths.

But love bombing, as it's often called, *can* be a big red flag that you are dealing with a sociopath.

Love bombing is their twisted plan to make you fall in love.
For example:

1. Mirror your dreams, hopes, and fears
2. Writes you first and all the time
3. Move every fast
4. Compliment you all the time
5. Say they've never felt like this before
6. Imply or state that you TWO are soulmates

They are fully fascinated by you.
And you love it.

… Until you don't anymore.
Watch out.

⍰⍰♂ Lucio's note: Never seen any evidence for love bombing
Research couldn't find it in narcissists (Campbell, 2020) and, as far as I'm aware, there is no evidence in other dak triads either. It's more pop psychology than proven psychology. It also doesn't seem logical that high-value men would use this tactic. I remain unconvinced

18. They Compare You to Others

In the beginning, they will be comparing you favorably.

You are the best thing that has ever happened to them.

Maybe you are giving them new hope in life, or maybe they are so happy that you are making them forget their terrible exes.
Also, watch out specifically for physical and body shape compliments: sociopaths are often very superficial.

But in the devaluation phase, the comparisons start to become negative.
Sometimes what were your best qualities become your major faults. Their exes weren't so bad after all and maybe… You just don't compare all too well with them.

Now if you are hooked an interesting thing will happen: their criticism will push you to prove yourself to them. You are putting up a desperate effort to win their love back.
Don't even try or hope though. The truth is that they never loved you. It's not about you: sociopaths cannot love.

19. Some Behavior Doesn't Add Up (AKA: Cracks in Their Mask)

High-functioning sociopaths and psychopaths wear a mask.

They *pretend* to have feelings, they *pretend* to understand your feelings and they *pretend* to be nice and kind.

But they are putting forth a persona.
They *don't* have feelings, they have *no* empathy for you -and for anyone else for that matter- and they are *not* kind.

However, even the best actor sometimes will slip.
Their mask will come off, and then you will be able to peer behind it.
When something does not add up, take notice: it might be the sign of a sociopath.

20. They Are Easily Bored And Need Stimulation

Sociopaths are easily bored.
That's one of the reasons why they surround themselves with people and why they engage in machiavellian games: they need constant new stimulation.

21. They Try to Make You Feel Guilty

Some ilk of sociopaths will leverage your sense of guilt or your willingness to help others.

If that's the case, their bad behavior is always justified by their hurt and their pain.
Who's the culprit? Abusive parents, an ex who really hurt him, or sometimes you who is being so mean to them.

Also, see here:

- **Text example and analysis of guilty tripping** (or pity play).

22. There Is Lots of Drama in Your Relationship

Sociopaths might *say* they hate drama.
And yet there is always so much drama in their life. And now, there is a lot of drama in your life too.

Drama is one way in which sociopaths fight boredom.
If you've never had much drama in your life, but now you always do, then it should be easy to pinpoint the culprit.

23. You're Experiencing Emotional Roller Coaster

There are often wild emotional up and downs in a relationship with a sociopath.

When they have been too mean, they will get closer again so that you keep staying under their thumb.
Or maybe they treat you differently in public and in person. They might be mean and disrespectful in front of a

stranger and then reel you back in behind closed doors.
Or be nice in public only to treat you with contempt in private.

Sociopath Roller Coaster Example

Marcello Mastroianni in La Dolce Vita is an example of an avoidant with an anxious partner.
Notice her emotional swings.
She is in the dumps *because* of him. But when he shows up again, she feels like he is her savior.
The only one who can make her feel great.

Warning: Be especially careful with emotional roller coasters, because they are emotionally addictive

24. He Is Becoming Your Entire Life

Do you find yourself spending all your time with him and thinking all the time of him?

This could be the greatest love story ever.
Or the biggest heartbreak ever.

Tread with caution.

25. You're Enjoying Great Sex

Some sociopaths and abusive men use sex as a tool to make their targets swoon for them.

They make it a point to do it well, to make you come, and to make your fantasies come true.
Sometimes, sociopaths and psychopaths will push the boundaries of sex and push you to do sexual acts that are new to you.

Sandra Brown says that a few psychopaths will also dominate or demean you during sex to increase their power and control.

26. They Are Arrogant

Sociopaths might be humble and unassuming.
But that's part of the persona they put forward to make them more likable and approachable.

As the relationship wears on they become more and more themselves: arrogant and mean.

27. They Gossip, Demean, and Backstab Others

Sociopaths often dislike "normal people".
And strong jealousy for people more successful than they are.

They will gossip and talk behind people's backs. In the beginning, you might feel special for hearing their confessions.
You might even start disliking or resenting some of the people they talk about.
And that's part of their game: recruiting more people on their side.

But their side is always switching. And it's very possible they will be doing the same about you.

28. There Are Lots of Games and Manipulation

To a sociopath, relationships are a string of games and manipulations.

Here are some of them:

- Put you on the defensive (and when you explain yourself you sound guilty)

- Make you feel guilty
- Use you to make another woman jealous
- Use another woman to make you jealous

Sociopath Mindset Example

The movie “Gone Girl” is a good example.

If you’ve seen it, you know what I mean.
And if you think it’s just a movie, here is a real-life example:

Sociopaths are amoral, and see you as a pawn.
That lady in the video saw her husband as a green card and a money provider.
When she thought she had no more use for him, she fabricated a story to get rid of him, and take all of his belongings.

29. When You Corner Them, They Talk Nonsense (AKA: Word Salad)

Sometimes you might manage to back a sociopath into a corner.
For example, you might have final proof of their wrongdoings.
Or you read this article and tell them exactly what they are up to.

In that case, they might come up with what *psychopath survivors* refer to as a “word salad”.

Word salads are illogical conversations that go nowhere and only serve to confuse you, muddle the water, and possibly put you on the defensive.

They include:

1. Going back to previous topics that were already discussed and resolved
2. Bringing up old wrongdoings of yours
3. Condescending tone to make you overreact
4. Accuse you of their own wrongdoing to make you overreact
5. Switch personality and techniques to confuse you
6. Play the victim

Finally, if you keep your cool and keep pushing and pushing, you will see the face of a sociopath you have never seen before.
They lose their cool and will watch them implode as they struggle to regain control.
That’s great news for you: you are breaking free of their control.

Word Salad Example

Donald Trump is a world-class master of word salads:

Notice how, while saying little, he manages to go from accused to the accuser

30. Your Feelings Are Telling You Something Isn’t Right

Last but not least: listen to your feelings.

And listen to me when I say this.
It’s not a good relationship if you are:

- Walking on eggshells afraid he might leave you

- Being disrespected
- Always defending yourself
- Wondering if you are crazy
- Trying to appease him
- Desperate to like him
- Plotting how to win him back
- Having wild mood swings you've never had before
- Depending on him for 100% of your happiness
- Being anxious (especially if you weren't before)
- Crying and apologizing all the times
- Afraid he might get violent

More Psychopath Signs

Finally, these traits have been found to correlate with psychopathy:

- Caffeine addiction
- Night owl circadian rhythms (ie.: sleeping late)
- Not yawning when others yawn (which most emphatic people normally do)
- Talk a lot about sex, money, and food ,(and little about family, religion, and spirituality)

One Question to Spot Sociopaths

Credit to Susan Cain for this genius question.

Cain says that empathy and a sense of proper are one of the key elements to a happy and healthy relationship.

What's one of the best ways to test empathy and respect for other people?
It's how embarrassed -or not embarrassed- people can get.

Being embarrassed by certain behavior or situation means we care.

And sociopaths and psychopaths will never be embarrassed.

So here is your question:

> **What was the time you were most embarrassed?**

Then watch how they react.
Normal people will know exactly what you mean. Maybe start getting embarrassed right away as they feel the pinch of their embarrassing memories.
Some people will be happy to share embarrassing stories as it helps them share their burden -and laugh about it-.

But a sociopath doesn't like that question.
He will take longer to reply because they need to make up a story.
And chances are their story will feel off.

If you are in doubt, ask for two stories.
If they can't come up with two stories that normal people would be embarrassed by, you have a major early sign he might be a sociopath.

Limitations of This Article

Some sociopaths have become good at hiding their true colors.

If they have been at it for years, chances are it won't be easy to spot them. And your task won't be any easier if you don't have any experience with sociopaths, psychology, or abnormal personalities.

This is a conversation I've had with a psychopath on Quora as I explored this topic deeper:

> **Me**: Thank you! I'm curious about when you wrote on "wearing a mask". Do you mean to play the part and pretend to have feelings and empathy?
> **Psychopath**: Indeed. It is a persona constructed to blend in with everyone else.
> **Me**: I see. Do you think that age relates to how good one person becomes in molding that mask? Has anyone ever realized you were wearing a mask?
> **Psychopath**: Yes, age means more experience. Nobody has ever realized I was wearing a mask so far. But time will tell

As you can see, it's not always easy to see the early signs of a sociopath.

However, the sociopaths who are most likely to fly under the radar are also the sociopaths who are least likely to wreak havoc in their life. Indeed, many sociopaths have a normal life with families and hold jobs.
But don't expect emotional intimacy with them.

Bullet Summary

- People will love you when they perceive that you care about them
- Don't hide the company's problems: you'll gain trust (and everyone knows anyway)
- Treat the people leaving well and the ones staying will keep working hard

Full Summary

The book starts with some biographical details about Ben Horowitz, which I will skip here.

Become a Man: Put People Who Matter First

I particularly liked the moment when Ben Horowitz realized he wasn't doing enough for his family, and that he had to do more.
He says:

> I had to stop being a boy. And become a man. I had to put first things first. I had to consider the people I liked

> most before I considered myself.

That for me was one of the deepest moments in the book.
Isn't that really the moment when we become grown-up, responsible, and wholesome men?

Little later he adds:

> I started being the person that I wanted to be

If you take one thing away from this book, let it be those two bits.

Fire Compassionately But Quickly

When you need to fire someone, do it and do it quickly.

Don't let rumors spread, don't let people be terrified.
And do it compassionately.

> If you treat the people who are leaving unfairly, those who stay will never trust you again.

This part really resonated with me because I became an estranged, internal enemy of the startup I was in when it unethically fired some of my colleagues.

The Persuasion Moment That Saved the Day

Ben Horowitz was dealing with an angry customer who wanted to get rid of him and his services as quickly as possible.
Ben says:

> Frank, I will do exactly as you say.
> I've heard you loud and clear.
> This is a terrible moment for you and for us. Can I use your phone, I will call the team to give instructions.
> But before I do, let me ask you one thing, if my company made the commitment to fix all the issues, how much time would you give us.

The answer was 60 days, and Horowitz saved the company right there and then.

Share Every Burden

As a CEO you won't be able to share all the burdens you have.
But do share all the ones you can.

The more people on an issue, the more likely you will solve it (and the less stress on you).
Also, read:

- Vulnerability is Not Power

Be Transparent About the Company's Problems

There might be a tendency among CEOs and upper management teams to keep the issues secret.

But that's the wrong approach, says Ben Horowitz.
For three reasons:

1. Trust
2. The more people on a problem, the better
3. Bad news travels fast anyway

Finally, you want to have a culture that is open to problems.
Build a culture that awards people for getting problems in the open where they can be solved.

The maxim of "don't bring me a problem if you don't have a solution" is toxic. It leads people to hide all the issues they cannot solve, which are the ones most likely to wreak havoc.

> My single biggest personal improvement as CEO occurred on the day when I stopped being too positive

Another big lesson learned is to stop trying to be always positive.
Also, read:

- Principles by Ray Dalio

Hire Executives Suited For Your Current Growth Stage

Hiring executives from big firms because you *plan* on being a big business is the worst idea.

Look for executives who have *grown* companies to the stage you want to go instead.

People, Product, Profits: In That Order

Take care of people first because they build the product, and people and products together will give you profits.

Keep Great Employees

… Especially when things are not going well.

The other employees will perceive it as an indicator of the company's imminent demise.
Worst of all if they go to another company you are friendly with.

People will see it as an act of betrayal, and will wonder "what kind of CEO is this if he can't keep his own friends from poaching people?".

How to Minimize Politics

Ben Horowitz found two strategies to minimize politics:

1. Hire people with the right ambition
2. Build processes for known issues and don't deviate

Furthermore:

- Watch out for what you say -and say as little as possible-

The right type of ambition is seeking success through the company's success.
The wrong kind of ambition is seeking personal success and career development regardless of the company.
A manager only seeking to further his own status is extremely demotivating for good employees: why should they keep working to advance their selfish manager's career?

Building processes means for example that you have a structured way of assessing salaries and salary increases.
And that you pick a defined structure for job titles (and don't think it's a silly formalism).

The executives' salaries involve the board of directors.

Rebel Employees: The Enemies Within

The Hard Thing About Hard Things shares some very good psychology on why some employees might become internal enemies of the organization.

These are some of the top reasons:

1. Feels disempowered
2. He's fundamentally a rebel
3. Too naive and believe that everything wrong is management's fault

I found this part really good and I wish he had even talked about it longer because it's something that few other leadership books mention (Robert Greene does it a bit in *The 48 Laws of Power* and *The Laws of Human Nature*, and I do a lot here as well).

Also, read:

- **Toxic employees**

Institute Manager-Employees 1:1 Meetings

Horowitz says that managers' and employees one on one meetings are very important.

Employees should set the agenda and not the other way around and managers should do 10% of the talking and 90% of the listening.
That makes people feel heard and helps spot problems early, while also spreading good ideas.

This is even more important with introverted employees, says Horowitz.

Peacetime VS Wartime CEO

Most management books describe peacetime CEO.
But when the company is going through life or death moments, you need a wartime CEO.

What's the difference?

Peacetime CEO: is reasonable, respectful, minimize conflicts, and thinks long term. He follows protocols and makes contingencies and backup plans.
He is interested in the company's culture and reads and promotes activities aligned with the culture.

Wartime CEO:— has no time for conflict minimization and protecting egos. He is obsessed with the immediate dangers and opportunities.
He violates protocols, allows the situation to define the culture, and has no backup plans.

Quote

> **It's the moments where you feel most like hiding or dying that you can make the biggest difference as a CEO.**

Real-Life Applications

Stop Trying to be Positive
You're not fooling anyone when you try to spin every single bad news into a positive one. Be honest instead about the company's issues and challenges.

Whatever the Chances, Your Task is the Same
Whether you have a 50/50 chance or 1 in a 1.000 your task is the same: make the most to make that chance a reality.

CONS

Some War Jargon
This is a bit of a pet peeve of mine, so don't like it as a real con.
I'm not a big fan of using war jargon when discussing business.
Being a CEO is not going to war. And doing better than a competitor is not the equivalent of killing them. There is quite a bit of that in this book.

Happy to Hire a Psychopath?
The author tells the story of a candidate he loved. When a reference came in negative not only it didn't raise a red flag, but it convinced the author the new guy was the perfect hire.
What did the reference say? That the candidate had said to a report "bring me the numbers or I'll put a bullet through your head".
Frankly, if the author was happy to hire such an individual, I wouldn't fully take his autobiographical word for his management style. I would like to hear what his reports had to say.

She Pronoun
I found the use of the "she" pronoun awkward. At times it just felt unnatural, a bit like Trudeau calling mankind "people kind" (cringe).

One and Twos types of CEO
The author discusses CEO succession introducing the psychological differences between type one and types two CEOs.
I didn't find it either relevant or helpful in relation to CEO succession.

PROS

Keeps it Real
Horowitz keeps it real when he says that there is no one solution for difficult situations and difficult questions.
I like that approach of keeping it real instead of trying to play the oracle.

Ethical While Talking Straight
I liked a lot Horowit's attitude of talking straight while still being ethical.
Good stuff (and looks like it works too).

Great Psychology
There is some good psychology here. I particularly liked his mention of employees who can start working against the organization when they are natural rebels.
That stuff is true and deep and I haven't seen it anywhere else.

Review

The Hard Thing About Hard Things is an OK book and in between a memoir and a management book.

As for any autobiography, I'm skeptical about the full veracity of the content -at least when it comes to the author himself-.
Also, I wasn't happy to read that Horowtiz has been linked to some shady funding of tokens and NFTs with his venture capital firm.

Back to the book, I think it can be a good read for CEOs of fast-growing companies.
If you aren't or aren't planning to be in that position, you might read something else first.

Delivering Happiness: Summary & Review

Bullet Summary

- Don't follow pleasure (the next high), follow a higher purpose (meaning of your life)
- Focus on one thing, and be the best in the world at it
- Don't hire for bottom-line profit, hire for culture (and you'll get long-term profits)

Full Summary

Delivering Happiness starts with an overview of the tiger Asian families' culture and how they use their children as bragging tools.

Then Tony Hsieh goes on to describe how he evaded his musical studies duties and how he went about his first entrepreneurial ventures as a young boy.

All stories are hilarious and highly instructive, but for the purpose of this summary, I will skip them.

Starting As Unhappy Employee at Oracle

Tony Hsieh started at Oracle with an easy job that paid good money.
And in the beginning, he was glad about it: good money and little work.

However, common to many people with an entrepreneurial mindset, he eventually realized it wasn't making him happy.

And as his side business started taking off, he quit focusing on LinkExchange, his first company.

LinkExchange Success

After he sold LinkExchange to Microsoft for 265 million dollars he was a rich man.

He went on a cruise, partied with his old pals, and then started exploring other interests.

- Poker (he got into poker and learned that if you apply a set of math rules you'll win in the long run)
- Rave culture (loved techno raves' dancing culture: everyone talks to everyone without ulterior motives and people, a symbol that it's possible to make the world a better place)
- Trader (and lost lots of money)

Poker and Business

The author learned that in poker you can make a lot of money if you sit at a table with tired people and lots of chips.
But at poker, you can only pick the table.

In business, you can invent a new table or make the table bigger.

LinkExchange Lessons Learned

Tony Hsieh realized that when he hit 100 people the culture changed.
They were hiring people for all the wrong reasons, he says.

Yes, they were smart and motivated, but most of them had the following in mind:

- Work a few years, then move to the next resume-building company
- Get rich and retire

The author learned that hiring people and taking care of the culture was crucial to build a company where people could be happy to work.

The author also wasn't very happy after he sold the company.
The money was good, but he had lost a reason to work hard for.

Zappos Competitive Advantage

The author says that Zappos' competitive advantage, in his opinion, are three:

1. Brand
2. Culture
3. Pipeline

All the rest can and will be copied.

Zappos Strategy

Through the course of *Delivering Happiness,* the author makes it clear what he focused on to make Zappos a success:

1. Wow the Customers

Zappos' strategy was to "wow" the customers.

2. Be The Best at One Thing

They wanted to be the best at something crucial and important instead of trying to be good at different things.

And they picked customer service.

They once called customer service as a test/prank and complained they couldn't order a pizza. And the customer service rep helped the caller order a pizza.

Exception: in Zappos' case though the customer wasn't always right. If they mistreat an employee or abuse the system, then they would "fire the customer" (the same concept in *4h Work Week*)

3. Don't Outsource Customer Care

Customer care was too important for Zappos and they never thought of outsourcing it. They thought about building a center in the Philippines or India, but they never thought of not owning it and running it themselves.

4. Let Your Product do The Marketing

Don't spend money on marketing, but reinvest it into making your product and your N.1 priority the best in class.

That will do the marketing for you.

In Zappos' case, it was customer service.
Not just good customer service reps, but the whole process. From free shipping to free returns to making contacts easy.

The author realized that over the lifetime of a customer at least once they were going to get in touch.
And they wanted to build relationships, one customer at a time.

5. Culture: Build a Tribe

After his first experience, the author focuses on culture and not building a company with a "tribe" spirit.

Hsieh believes that people in the best companies have interactions outside the office as well.

They didn't hire people that would make a difference on their bottom line simply because they weren't a good cultural fit.
That's not how most companies operate, and that's why most companies don't have a great culture, says the author.

5. Values

Zappos wanted to codify its culture in a set of values.
That set of values would then serve also for making hiring decisions.

Also, read:

- Corporate manipulations

Best Decisions Are Bottom Up

The author believes that the best decisions are made bottom-up, by the people who are closest to the issue and the operational details.

The role of the manager, he says, is to remove the obstacles for people to operate.

Never Lose Sense of Urgency

The author says that becoming great is a constant, never-ending effort.

You should never stop striving to become more efficient and going things better and better. Don't settle because good is the enemy of great.

And never lose your sense of urgency in improving and moving forward.

How to Be Happy

The author says that whatever your goal is if you ask yourself why a few times, we all want it because it will make us happier.

And it makes sense then to study a bit the science of happiness, which is particularly important since we are very bad at guessing what we actually like.

For example: achieving our final goals will not sustain our happiness.
What's the answer then?

Happiness Framework #1

Happiness is the result of:

- Perceived control
- Perceived progress
- Connectedness (amount and depth of your relationships)
- Vision / Meaning (being part of something bigger than yourself)

You can apply them to your business as well like the author did at Zappos.

Happiness Framework #2

The second framework is based on Maslow's hierarchy of needs.
Once the basic needs of people are met, then higher ideals such as belonging and meaning matter more.

In business, it means that increasing the salary is rarely the best way to make employees happy (read more with *Drive* by Daniel Pink).

Happiness Framework #3

There are three levels of happiness:

1. **Pleasure** (chasing the next high, it's hard to maintain and it's the shortest lasting)
2. **Passion** (flow, where peak performance meets peak engagement; second longest lasting)
3. **Higher purpose** (being part of something bigger that resonates with you; longest lasting)

Most people chase pleasure thinking that once they can sustain it, they will then get to passion and maybe a higher purpose.

Instead, it would make sense to do the opposite and start with a higher purpose.

Happiness and Business

I loved the final tying of happiness to the business.

Delivering happiness makes the point that when you can bring happiness and fulfillment into the very fabric of your organization, then you have laid out the foundation of a sustainable business.

Quotes

On not settling for good enough:

> **We must never settle for good enough, because good is the enemy of great**

On happiness and money:

> **Money alone isn't enough to bring happiness. Happiness is when you're actually truly ok with losing everything you have**

On chasing passion, not money:

> **I had decided to stop chasing the money, and start chasing the passion**

Real-Life Applications

Make Progress Steps Smaller
Make your progression steps within the company smaller and more staggered so as to give people more of a feeling of progress.

Keep Sense of Urgency
If you want to get great, always keep a sense of urgency in moving forward.

When You Snooze the Alarm Too Often It's a Bad Sign
I liked how Tony Hsieh realized that he didn't like working at his company anymore when he snoozed his alarm six times.
That's an awesome indicator.
I used to have the same feeling in my previous jobs.
Now I wake up happy and excited.

CONS

Too Much Meat on The Grill
Albeit interesting most people probably didn't need to read all the details of tiger Asian families and the author

cultivating worms.
The poker foray could have been sorted too.

Huge Zappo Ad
The second part of the book turned out to sound like a huge advertisement for Zappos.
Some bit felt a bit like bragging too.
Their huge parties with tutu dancers, fireworks, and "you name it, we probably have it" was reminiscent of *The Wolf of Wall Street* attitude.
And the people who "tried to sneak in to enjoy the fun", well… That's how all catered parties are.

Grandiose Speaking
I changed my mind after I finished the book and read about the author's research on happiness. But as I listened to the audiobook, some statements sounded way too overblown.

> We were part of a bigger movement, it was no longer just about Zappos, we were helping to change the world
>
> Collectively, this marked the beginning of the next leg of our journey to help change the world
>
> We had announced to the world
>
> Zappos is about delivering happiness to the world

After I finished the book, I got the author's point of view. But as I read them it felt a bit narcissistic.

Paternalistic and patronizing?
This idea of engineering a workspace to make employees happy feels somewhat paternalistic and somewhat patronizing.
Not necessarily a bad aim, but it feels like communists who wanted to tell people how to behave so they could all be happier.
If you think of the example of the customer who called to ask about a pizza, to me it feels unfair to put on the customer service employee the expectations that he couldn't just tell the "customer" he's got the wrong number.

PROS

Deep Wisdom!
Such deep wisdom is in this book to build great companies.

Groundbreaking Message
Building companies to maximize fulfillment and happiness is a revolutionary idea.
I was trying to make the same in my Toastmasters club and Delivering Happiness gave me a framework that I hadn't thought of myself.

Review

Delivering Happiness is an awesome book.

It tackles a bit too many topics maybe and I think the first autobiographical part was unnecessary.

I still loved it, but I am afraid that some might miss the great ideas in the midst of so many different threads.

Just think of the title itself: I would worry that many will discount Delivering Happiness as a non-business book.

I hope that's not the case.
Because Delivering Happiness is a must-read for people searching for happiness, entrepreneurs, and business leaders alike.

Sexual Communication by David DeAngelo: Review

Lucio Buffalmano · 8 September 2018 · Archived copy · Original

Sexual Communication is a dating program teaching men how to communicate with men. It focuses on flirtatious communication.

Contents

- Bullet Summary
- Summary
- CONS
- PROS
- Review

Bullet Summary

- Don't give women what they want (answer questions with questions, tease them, flirt)
- When women test you, don't take it personally but think to yourself "oh yeah, very funny"
- Joke with women that you will get married and then later joke that you are going to divorce them

Summary

DeAngelo says that when it comes to sexual communication many of the rules of normal communication are reversed.
For example, being nice will not make women like you, and pursuing someone will not increase your chances of getting them

Four Steps Process to Sexual Communication

DeAngelo says there are four steps to sexual communication:

1. Sparking the attraction (approaching a woman, flirting, opening)
2. Building sexual tension (cocky and funny, arrogance)
3. Amplifying the attraction (two steps forward and one back; leaning back; taking your time; take her home then leave the room)
4. Physically advancing (smelling, kissing)

Don't Ask but Tell Her

Asking and pleading are weak.
Lead instead.

And tell her what to do.

Show You're Selective & Judgmental

Don't be too judgmental, but do communicate you have standards for what you accept.
Standards communicate that you have options and are a high-quality man.

For example, you can say that only certain kinds of people get into your flat.

Women Are Biologically Designed to Cheat

DeAngelo says that because women are most attracted during ovulation, they are biologically designed to cheat. However, heightened attraction doesn't necessarily mean they will cheat as they might simply have more sex with their partners.

Test From Women

Women will always test.
DeAngelo says that you shouldn't take it personally these days he just laughs when a woman tests him.

But he doesn't give many more details.

Never Answer All Her Questions

Don't answer with serious replies, it's incredibly boring.
Answer questions with questions instead.

> why do you want to know?

If she asks you what kind of job you do, say she couldn't handle the answer.
Or that it's top secret.

If she asks what car you drive, say you drive a spaceship.
Or a ridiculous car.

If she asks you if you will take her somewhere, say no and that you will take her somewhere else at a different time.

And try to answer in ways that implicate her.
For example, if she asks "what are you doing on Friday" tell her "why, were you planning to invite me on a date".

Don't Be Controlled

If she says she doesn't like something, do it more before you stop.

She doesn't like the stations? Turn the volume up. Don't go full ahole and can change it later, just show you're not to be controlled by her.

Cocky Funny

As *The Game* showed, David DeAngelo was big on cocky funny and still is.

The secret is to be cocky PLUS add irony to it.
If you're just cocky, you'll appear insecure and arrogant. If you just use funny, then you'll come off as being an entertainer.

Be Territorial

If she wants to drive your car, say she can't…
If she picks the remote at your place, say "women don't touch the remote in my house".

It's not about being domineering and controlling, that's weak.

But when you are territorial, women feel safer.

Steal Her Frame

Joke with her first that you are just a sex object to her.
And tell them first that you two are just friends.

Evolution of Showing Off Goes Awry

Men evolve to impress women to the point where they can drive themselves to extinction.

Peacocks, for example, attract women with their huge colored tails (also read: *The Mystery Method*). However, that tail also makes it more likely they will not survive. The same goes for big horns.

Interesting theory, albeit in no way connected to sexual communication.

CONS

- **Many Off Topics**

Too many unnecessary off-topic.

- **A bit slow rhythm**

The rhythm was a bit slow with some repetitions. It reminded me a bit of this character from The Goodfellas:

- **"I have a friend who… "**

David DeAngelo often resorts to this sentence. There is nothing wrong with it, but it feels like you are listening to someone at a bar and you're not sure whether that friend exists or not.

- **DeAngelo's Signature Cocky Funny a Bit Overused**

Deangelo was the first to come up with cocky funny, and I think that's an awesome way of approaching interactions.

However, it has its time and place.
In my opinion, he overuses it.

In another product, he says "think of a cocky funny answer for everything". For example, when a woman asks him what he does, one of his stock replies "oh funny you ask that, I'm a slave trading business". I'm not saying that's not good… At times. But not every time and personally I'm not a huge fan of it.
Some of the examples sounded dangerously close to cheesy pick-up lines.

PROS

Some Good Examples of C/F
There are a few good examples of being flirty and using cocky/funny

Review

I wasn't impressed by this program.

It's fluffy and disorganized and the good examples of flirting and cocky funny are too diluted and not worth the time to go through the whole program.

In the end, the actual bits of sexual communication were maybe 10% of the course, and it's not really sexual communication, but more like flirty communication.

The 5 Most Overrated Books Ever

Lucio Buffalmano · 10 September 2018 · Archived copy · Original

Are you curious about some of the worst overrated books of all time?

You have come to the right place.

After *the worst books ever,* this list is about the most *overrated* books of all time.

Please note: overrated does NOT (necessarily) mean bad.

Being overrated can sometimes be a surprising indicator of quality indeed.
To be overrated in the first place means that a book must have sold a lot, become very popular, or heavily influenced culture and people.

Indeed for this list overrated means that the book's sales, success, or notoriety has outstripped its value, content, or usefulness.
OR, alternatively, the book's notoriety has become so great that people are failing to see some of its flaws in them.

Here are the top 5:

Contents

- #5. The 48 Laws of Power
  - What makes The 48 Laws of Power so popular?
- #4. David and Goliath
- #3. The 4-Hour Body
- #2 Outliers
- #1. Think and Grow Rich
  - Update:

#5. The 48 Laws of Power

[image]

Robert Greene is one of my favorite authors.

And *The 48 Laws of Power* is a very good book and a great read.

However, it became so famous that the hype has outstripped the content (it's the opposite instead for his other books *The 50th Law* and *The Art of Seduction*).

The examples of power moves in this slightly overrated book are all classical history. And sure people haven't changed, but it's not as powerful as giving us an actual video, or a more modern example that we have all witnessed.

Also, some of the laws are very theoretical and hardly applicable.
Take for example:

- Re-create yourself
- Assume formlessness

What's one supposed to do with them?
They are too theoretical. You put the book down and you enjoyed the read, but you haven't really gained a much greater understanding of power dynamics.
Or, equally important, how you can apply the principles.

This is, BTW, one of the reasons that prompted me to start ThePowerMoves: good demand for this kind of information but not so much quality content (and BTW, The 49 Laws of Power *is* an example of quality content).

> Quote: (..) Act like a king to be treated like one

That quote is an example of the power that will, more often than not, backfire. Unless you have first built yourself into someone who can also produce the results of a king, that is.

See Lucio's take on Robert Greene:

What makes The 48 Laws of Power so popular?

Part of it simple drive.

People want to succeed and want to find an edge.
Or a shortcut.

But there's something else:

- **Robert Greene's writing mastery**

Robert Greene makes each law compelling and memorable.
He crafts artfully assembled sentences that make you smile as you ponder the depth of the brutally cold reality they describe.

Want an example?

> "Slay the overbearing father, disparage his legacy, and gain power by shining in your own way".

How could anyone not be enthralled by reading about that?

- **Marketing**

The 48 Laws of Power had a big marketing machine behind it that helped propel it forward.
Fake or semi-fake news such as "banned in American" prisons was part of the marketing machine.

- **Thirst for power -with little resources-**

There are very few resources on power and power games.

Well, today there is an even better resource :).

> 48 Laws of Power VS Power University: Which One Should You Pick?

#4. David and Goliath

[image]

David and Goliath is yet another Gladwell's best-seller.
But it's also one of those books that if you asked me what it's all about 3 months after I read it, I wouldn't be sure.

It's disjointed, and the central story of how the odds were on David's side in his fight against Goliath makes no sense.
You can watch the underwhelming Ted talk about it and see it for yourself.

Overall, a feel-good book with some good ideas and uplifting underlying optimism.
Do read it, but make sure you read the fundamental books first.

> Quote: (..) The powerful are not as powerful as they seem – nor the weak as weak

Except maybe, sometimes, they are…

#3. The 4-Hour Body

Like all other books on this list, *The 4-Hour Body* is not (too) bad.

And if you live and breathe the Ferris way of life, you'll love it.
But if you don't live and breathe the Ferriss style, chances are you'll be left scratching your head.

What's Ferriss style, you might ask?
The Tim Ferris way of life is over-geekiness applied to self-improvement.

Ferris looks for the "hack", the latest tech, the last bit of possible optimization.
And then recording and comparing everything (often forgetting that correlation is not causation though).

> Take 4 grams of X, order 7 milligrams of Y, drink the shake at 7:05… Then compare and record the millimeters of your penis erection to yesterday's erection…

That's how the 4-Hour Body sounds.
Minus the penis part.

But not so minus the penis as you might imagine.
Indeed in this nutrition manual for math PhDs, Ferris even throws in his surefire way to make a woman orgasm.
And he does it in the perfect "hack and measures" Ferris' style: tested and measured to the square millimeters of contact (three square millimeters in this case, and I'm not joking). For an overall time of 15 minutes of perfect efficiency.

She got off a perfectly timed orgasm. Ferris got off measuring the whole process.
Everyone's happy.

> Quote: (..) I had just taken my total testosterone from 244.8 to 653.3 ng/dL (nanograms per deciliter), while cutting my estradiol (estrogen) in half

… That's just another day for Ferris preparing lunch :).

See Lucio's take on Ferriss:

#2 Outliers

[image]

Another Gladwell book on the most overrated book list.

I hope the author won't stumble here any time soon :).

It's nothing personal indeed: the books are good.
Some are *very* good.
And some parts are *awesome*.

Now back to this post.
Why is Outliers overrated?

Consider this:

> Spend 10.000 hours doing something and you will reach the top in whichever field you've picked.

Does it make sense to you?

If you have a critical mind, red flags will pop up all over the place.

What about your initial talent, the type of discipline you're training for, *how* you train, how passionate you are

about it, the competitiveness in the field, etc., etc.?

Obviously, it's quite silly to set an amount of time and say that you will be an expert if you train for that long.
And yet that's exactly what *Outliers* popularizes.

Anders Ericsson, the author of the original research that the "10.000 hours rule" takes inspiration from, had to write a whole book to set the record straight (*Peak*, the best book on the science of performance).

Outliers, like some other Gladwell books, is 4-5 stars for captivating and entertainment value and a bit less for factual, applicable, and reliable information.

> Quote: In fact, researchers have settled on what they believe is the magic number for true expertise: ten thousand hours

LOL.
"Have settled", "they" (those bunch of crazy number crunchers, you know..).
Way to twist reality and misinterpret research, a heavy-weight competitor for the title of the biggest pop-psychology myth ever.

#1. Think and Grow Rich

[image]

With 70 million copies sold, *Think and Grow Rich* is the absolute N.1 best seller in the self-help category.
Ever.

I've never heard anyone daring to criticize this sacred monster of self-development.
And to be fully frank, it's a groundbreaking book and I personally also took one major lesson learned from it.

But except for some of the wisdom in it, I felt *Think and Grow Rich* was a colossally overrated book.

What made it unpalatable?

First, of course:

1. Quackery Sold as Science (Ie.: LIES & BS)

Hill writes of his own *personal takes* on the law of attraction, infinite intelligence, faith, and desire.

And that's cool.

What's not cool is when he sells his ideas as facts and science.
Which is exactly what he does.

He flaunts "evidence" where there is none. He attributes scientific rigor to mental lucubration that is neither falsifiable nor provable.

And when not even Hill can muster the courage to claim scientific rigor for his mental constructs, he says that "science will prove" -LOL-.

2. Money Focus (And Nothing Else)

Take anyone whose only focus in life is "getting rich" and chances are you have just met someone with unaddressed psychological issues.

Indeed most -albeit not all people chasing money are on a fool's hunt. A few lucky ones will realize it when they actually get the money.

For all the rest, Think and Grow Rich provides validation to keep doing the wrong thing. And it will keep them from facing their real issues.

The Scrooge McDuck-ian exercises of DESIRING money as deeply as you can (caps from the author) and visualizing yourself *touching* the money are particularly misguided and ill-conceived in my humble opinion.

3. Full of Power Moves: Teachers' Frame, Smart Alecking

Like an oracle dictating the latest commandments, Napoleon Hill writes in a very dogmatic tone.

Which is probably one of the ingredients that made Think and Grow Rich so popular.
People have a tendency to obey charismatic men who speak with convictions.

Why Nobody Dare Criticize It: The Spiral of Silence

The Spiral of Silence is a social theory postulating that when most people in a group accept something as true, then single individuals are loath to voice disagreement.

So, to avoid being black sheep, the disagreeing individuals silence themselves.

The funny thing is that, once an idea takes hold, there can be many disagreeing individuals. In extreme cases, a large portion or even a majority of the group.
But nobody speaks up, and everyone continues to perpetuate the lie.

The bigger, more accepted, and more praised an idea or product becomes, the stronger will be the pressure on the individuals *not* to voice their disagreement.

And this is what I feel is happening with *Think and Grow Rich*.

A funny skit on the "silencing power" of the Spiral of Silence:

And please note that I myself was a victim of this spiral of silence.

On my first read, I tried hard to find the positives in this book and downplayed my criticism. I wanted to tell the truth, but “without going overboard” and while seeking bridges with the majority of praisers.

Quotes:

> There is plenty of evidence to support the belief that the subconscious mind is the connecting link between the finite mind of man and Infinite Intelligence (now if he had only provided one such evidence…)
>
> The reality of a “sixth sense” has been fairly well established (“fairly well” LOL)
>
> So far, science has not discovered where this organ of the sixth sense is located, but this is not important (of course not). The fact remains that human beings do receive accurate knowledge, through sources other than the physical senses (“the fact remains”, LOL)
>
> The time will come when the schools and educational institutions of the country will teach the “science of prayer.” Moreover, then prayer may be, and will be reduced to a science (“time will come when… ” Nice move from Hill to look like an oracle ahead of his time)

The above quotes wouldn’t be enough to get you a passing grade on a high school science test. But they made the job of selling 100 million copies.
In a way, that’s also the beauty of the human experience :).

Snakes in Suits: Summary & Review

Lucio Buffalmano · 11 September 2018 · Archived copy · Original

Snakes in Suits (2006) examines the type of high-functioning psychopath that is not necessarily violent and who instead of a jumpsuit dons a suit to make it to the top of their organizations.
Psychopathy experts Hare and Babiak analyze the damage these career psychopaths cause to companies and employers and offer some (limited) advice to employees and HR departments.

Bullet Summary

- Psychopaths can be your colleagues
- They manipulate people to accrue power, for example by pitching them against each other (divide & conquer)
- Psychopaths are attracted to bigger, dynamic corporations with little structure and supervision
- They are unfit to work in teams: don't share information and are often happy to see others fail

Full Summary

About the Author:
Robert Hare is a Canadian psychologist and researcher, and recognized as one of the most renowned names in psychopathy research. Hare is also the author of "*Without Conscience*"and a chapter in *The Handbook of Psychapthy*.

Psychopaths Can Climb The Corporate Hierarchy

The big question is:

Can psychopaths climb the corporate ladder?

The typical answer was that it's unlikely because they lack the ability to work in a group, and the staying power and the work ethics that fuel a corporate climb to the top.

This is the same theory that Martha Stout espouses in *The Sociopath Next Door*.

However, says Hare, their research proves the opposite.
There are four reasons, the authors say:

1. Psychopath traits make them seem attractive candidates on job interviews (charm, charisma)
2. Psychopathic behavior may look like leadership qualities (taking charge, making decisions, and making others do what you want)
3. Business today is more fast-paced and "leaner and meaner" making the environment more suited to psychopaths
4. Environments that are high-risk and fast-paced attract more psychopaths, and there are more such businesses today

Snakes in Suits makes the point that psychopaths *can* sneak into corporate structures and potentially remain undetected for a long time.
During that time, they can acquire lots of power and create much harm. This is a point of view with which Dutton, author of "*The Wisdom of Psychopaths*" also agrees with.

For more on the research, read:

- **At the top, it's psychopaths and Machiavellis**

Where Psychopaths Work (& Don't Work)

The authors say that psychopaths won't seek employment in smaller and tightly controlled firms such as a family bakery and they won't like rigid and highly structured bureaucracies.
They are rule breakers and wouldn't function well in them.

They don't usually work on jobs that require routines and structures. They don't have work ethics and don't believe in an honest day job for honest pay.
It's difficult to picture a psychopath working 5 or 6 years in a routine nine to five hoping to become a manager.

This is not to say they never work in routine or dead-end jobs, but it's very likely their performance will be poor, self-serving, unreliable, and possibly entered with made-up qualifications.

Where Psychopaths Work

Think of:

- high-pressure sales
- predatory repair people
- pump and dump stock promoters
- Internet scammers (Tai Lopez manipulation techniques)
- fraudulent counselors
- shady professions of all sorts

Psychopaths Commit Lots of Crime

Both male and female psychopaths commit more crimes and their crimes tend to be more violent than those of other criminals.

Psychopaths make up about 15% of the prison population. And many of the remaining 85% can be described as sociopaths or having an antisocial personality disorder, similar to but often confused for psychopathy.

Some people with APD are psychopaths, but many are not. APD is much more common than psychopathy (2 or 3 times more common).

Lack of empathy, grandiosity, and shallow emotions are not necessarily diagnosed with APD.

Aggressive and malignant narcissists, such as narcissists with antisocial behavior, are also difficult to differentiate from psychopaths.

Psychopathy Doesn't Necessary Make People Criminal

Just having a psychopathic personality disorder doesn't automatically make someone a criminal.

Some lead seemingly normal lives without making waves with obvious crimes.
But they still cause emotional, economic, and psychological pain.

They don't make warm and loving parents and children or family members.
And they don't make for reliable friends or colleagues.

For Psychopaths, Other People Exist Only for Them

Psychopaths have a huge sense of superiority and sense of entitlement. They think nothing of taking property that belongs to others.
They believe other people exist only for their own pleasure and well-being.

And since they see most people as inferior, weak, or too easy to deceive, many psychopaths believe that their victims deserved what they got.
In some extreme cases, they will say that they are doing a favor to the victim by allowing the victim to support them.

The people around are only valuable until they can provide something.
Once they are no more useful, the psychopath will discard them at once.

Psychopaths Have Little or No Emotions

Psychopaths' emotions are poorly developed and weak at best. But they do understand that others have something called "emotions".

Some psychopaths will take the time to learn emotions to better manipulate their victims.
But they do at a superficial level and good observers can sometimes tell the difference.

Also, see:

> Manipulation: Techniques, Strategies, & Ethics

Psychopathy is Both Nature and Nurture?

It's both.

But a better question would be how much either nature or nurture accounts for.

Genetics seem to account for at least 50%.
The environment will have a tough time overcoming what nature has provided, say the authors.

The 5 Phases of Psychopath's Ladder Climbing

Snakes in Suits present five phases of a psychopath's climb on the corporate ladder:

1. **Entry** (job interview faking previous employment, awards, and using charm)
2. **Assessment** (how useful you are, either an easily influenced pawn with informal influence or a patron with formal influence to protect against attacks)
3. **Manipulation** (positive information about themselves and negative information about others)
4. **Confrontation** (discard pawns and use patrons)
5. **Ascension** (take the patron's position)

Of course, all employees try to understand the power structure and take advantage of it.
But the psychopaths do it with the aim of little intent to provide anything. And they have no loyalty to the company or teams.

Psychopath Have Good Grasp of Human Psychology

Many psychopaths seem to be very good at understanding and leveraging human psychology.
The authors say it's not sure if it's an innate talent or if they simply work harder at it.

Their biggest challenges are individuals with strong personality traits such as dominance, assertiveness, and narcissism.

These guys, narcissists especially, are the least likely to seek assistance and guidance and they are most surprised to find themselves conned.

Psychopaths Are Poor Team Players

Even the most well-behaved psychopath won't be able to form good teams. They can't collaborate with others, especially with those whom they see as adversaries.

Psychopaths want to see others fail as that's more likely to make them look good.
They don't share information to keep the advantage, and when they share information it's often with an ulterior motive.

The authors say that the same is true for Machiavellians and narcissists.

Superficially Good at Communication Skills

Some psychopaths are very good socially, at least at first blush.

Often the skills are more superficial than real.
They talk confidently, they are not afraid of self-promoting, and they go straight to the people with power, seeking support.
Since they don't feel social pressure, they are freer than most other people, so they can jump in at any time.
And they rely on the fact that a confident delivery will often obfuscate the actual message.

And since they don't have feelings and boundaries, they can easily switch personalities to fit the situation.

But Not All Psychopaths Are Smooth

However, not all are smooth operators.

The non-smooth relies on bullying, coercion, abuse, and humiliation (also read: meatheads in "The 7 Archetypes of Dominance").

"*Snakes in Suits*" is not about these guys, but keep in mind that if the smooth approach fails, the smooth psychopath can resort to bullying, threatening and aggressive tactics.

Spotting a Psychopath at Work

1. Verify all information on a CV (psychopaths lie)
2. Check references
3. See examples of work
4. Pay attention to facial expression and emotional communication: psychopaths are often either too shallow or overacting
5. Stick to facts, don't fall for the charming chit chat
6. Don't expect HR to make a psychological diagnosis
7. Don't count on your abilities to detect lies: even people trained in spotting lies are as bad as non-trained ones. Don't guess but look at corroborative evidence

Dealing With Psychopaths

1. Learn as much as you can about psychopathy
2. Avoid labeling anyone as a psychopath (you can't make a diagnosis, and it might lead to litigation)
3. Knowing yourself or the psychopath has an advantage by knowing you better (your weaknesses, your fears)
4. Understanding your utility to psychopaths (what can they see in you?)
5. Understand your hot buttons (ideally you will realize you're being pushed in real-time and won't even show a reaction)
6. Understand how psychopaths manipulate people
7. Build and maintain strong relationships with superiors and colleagues (psychopaths like spreading rumors and "dividing and conquering")
8. Keep delivering great work (a psychopath boss will use poor work against you)
9. Keep a spotless reputation (the more people can stand by your good work and ethics the better)
10. Discard first impressions (they tend to be positive with psychopaths)
11. Avoid psychopathic bonds (read are you dating a psychopath) and be careful of those who want to isolate you
12. If there is any abuse, seek help immediately
13. Work through your feelings of shame (if you are being conned, at the beginning you'll be ashamed. Don't!)
14. If you're the boss, do the best you can
15. Consider leaving

Real-Life Applications

Watch Out for Superficial Charm
Watch out for the people around you who are charming and flattering.

Take Notes of People Who Push Your Buttons
Pay particular attention to people who are able to push your buttons. The first time you should see it as a blessing so you can work on your own self-awareness.

CONS

- **Inductive Reasoning at Work?**

The author seems to imply that even psychopaths that live a seemingly normal life cause emotional and psychological pain with their behavior.

But how can he be sure? Hare has mostly studied criminal psychopaths. Maybe he simply has never run into a psychopath that does not cause (much) pain.
He knows much better than I do, for sure, but I had to raise this question. As Taleb says in *Fooled by Randomness* the fact that you've never seen a black swan doesn't mean there isn't one.

Actual psychopaths are convinced Hare is a victim of confirmation bias. But then again, they might be biased.

- **Sometimes Contradictory**

Some examples of psychopaths doing well in sales didn't add up with the fact that psychopaths don't really plan on doing much for their companies.

- **Jerks and Psychopaths (??)**

I didn't get the last section talking about how jerks are more successful with women than nice guys.
How's that connected to psychopaths?
Also read: "why psychopaths seduce more women" and "how psychopaths manipulate and control women".

> Psychopaths' Sexual Strategy: Marauders of Sex

- **Sensationalist**

I find Snakes In Suits to be a bit sensationalist in the way that it wants to represent psychopaths as these effective, cold-blooded machines with a target for the top spot.
Some are, but many others are just plain dumb as well.

- **Potentially Overstate Psychopaths' Ability to Gain Power & Wreak Havoc**

I don't doubt that many men and women high in psychopathic traits can gain power and do gain power in many organizations.

However, by focusing only on how they can acquire power and much less on the traits that undermines psychopaths' ability to advance, the book may overstate the phenomenon.

In my opinion, Snakes In Suit exaggerates the power and ability that most psychopaths have to climb ladders.

For example, Jordan Peterson, author of *12 Rules for Life*, states that psychopaths climb hierarchies much less than people think because 'psychopaths must move from place to place'.

I believe the truth may be more in the middle.
Psychopaths climb hierarchies far more than Peterson may believe. But Robert Hare may fail to acknowledge that p**sychopathy is on a spectrum. And lower scorers can also add value to the organization.**

PROS

Great Overview
It's a great overview not just of psychopaths at work, but about psychopaths in general.

> **Those who seek power are invariably the least fit to hold and wield it**

Review

Snakes in Suits is a good book, but I expected a bit more given its popularity and given the author's credentials.

I have to wonder if Hare, who mainly worked with criminal psychopaths, might not be a bit biased.

After all, he draws his experience from the worst subset of psychopaths. Does he really have much experience with white-collar psychopaths?

With that in mind, I found "*Snake in Suits*" a very instructive and enjoyable read, albeit a bit light on data.

Why It Matters

Whether Trump is a sociopath or not, is a very important question.
Because:

1. The US is the most powerful, nuclear-armed country
2. If a sociopath can win a democratic election, what does that say of society?

To me, the second question is even more important than the first.
Because fingers crossed, chances are good that will go through the Trump years without a war.

But what about the millions of countries, counties, cities, businesses, and organizations the whole world over?
Aren’t they *all* liable to be run and mismanaged by sociopaths?

Probably so. But let’s not get ahead of ourselves.
Let’s go step by step.

What’s a Sociopath

A sociopath has no empathy for other people.

He is very selfish and has little of the feelings that usually make people add value to society.

Such as:

- Has no conscience (no sense of right and wrong)
- Has no empathy (ie.: doesn't care if you suffer)
- Has no remorse (can cause harm without feeling bad)
- Feels no guilt

Contrary to psychopaths who have very little emotions, sociopaths do get emotional.
Indeed, they are impulsive, aggressive, and prone to emotional outbursts and fits of anger (Dr. Scott Bonn, Criminologist).

Obviously, Trump could not be a psychopath as he is too emotional and thin-skinned.
He does have little empathy, though. Just as an example, he allegedly -and personally confirmed- that he used his father's funeral to pitch a crowd of real estate brokers on his new building complexes (New York Times).

The World is A Game

On top of lacking empathy for others, sociopaths are supremely selfish.

They are known for seeing the world as a big chessboard (*The Sociopath Next Door*). The pawns and the pieces on that chessboard are the pieces that they move, manipulate -and sometimes get rid of- to get what they want.

In a sociopath's world, you might as well be the pawn.

> Manipulation: Techniques, Strategies, & Ethics

Can Sociopaths Make Good Leaders?

Mitchel Anderson writing for the theteeya makes the point that a sociopath could hardly be a good fit for a fiduciary role.

Someone in a fiduciary role indeed should act in the best interest of the people he represents.

So the question here is simple:

> Can someone who doesn't care about anyone but himself serve the best interest of the people?

Some authors made the point that psychopaths can make good leaders.
But I disagree. I couldn't possibly see here how the answer to that question could ever be a yes.

Indeed to sociopaths, you only matter depending on what you can do for them.
What you have done in the past, is quickly forgotten.

This means that if Trump is a sociopath, he feels no obligation to the people who elected him.
Not even to his own voters, whose utility is nil after the elections.

Also, read more on the dark psychology of leadership here:

> Dark Psychology: 7 Ways to Manipulate People

Trump & The Signs of Sociopathy

Now let's see how Trump scores against a few known sociopath traits:

1. Superficial Wit & Charm

You might not like the guy, but one of the reasons why he has so many adoring fans is that he can be charming and he certainly looks charismatic.

Here are some examples:

2. Compulsive Lying

This one probably doesn't need any videos for confirmation.

What I find most telling though is that Trump routinely lies about facts that have data and statistics that people can easily check:

Psychologist Craig Malkin says that Trump might be at a stage where he needs to bend reality to fit with his aggrandized vision of himself.

3. Inflated Sense of Worth

This is what the Mayo Clinic lists as one of the top signs of sociopathy:

- Arrogance, a sense of superiority, and being extremely opinionated

Does it sound like someone you might have seen on TV? ⍰

4. Impulsiveness

To use Trump's beloved hyperboles, there has never been a more impulsive president:

5. Word Salad

Word salad is not an “official” trait of antisocial personality disorder.

However, it’s how “survivors” of psychopath/sociopath relationships commonly refer to it (MacKenzie, 2015).

Word salad is a mixture of old stories, accusations, excuses, and plain nonsense that you are most likely to encounter when you cornered a sociopath with evidence of their wrongdoings.

When that happens, the sociopath has lost his manipulation edge and is now struggling to reclaim it.
To me, a great example of word salad is how Trump entered the debate right after the sexual assault scandal:

6. Aggression

Often high functioning sociopaths keep their latent aggression under wraps.

However, when their manipulative, more socially acceptable ways fail, they can resort to threats, bullying or even violence.
And violence is often visible in Trump’s world.

On terrorists, he said the US should “take out their families“.
He often punctuates his speeches with references to destroying, military power (an “armada” sent towards North Korea), or sometimes just plainly beating someone:

Unluckily, he also threatened the use of military force (more than once) and, scariest of all, nuclear weapons: S.

Vindictiveness

Vindictiveness is a subset of violence for sociopaths, and Trump has shown plenty of that too.
In this video, he bashes Rosie O’Donnell with unrelenting hatred.

And in this other video, I show you how Trump went out of his way to punish Macron after Macron had tried to stand up to him.

6. Machiavellianism

Finally, Trump is a supreme manipulator.

If Machiavelli had written *The Prince* during these years, he would have probably written extensively about Donal Trump -I surely will in the book I’m writing :)-.

Trump is a master at unhinging his opponents, looking dominant, and coming across as the most powerful man in any social exchange.
As a matter of fact, he makes it a point to always look the most dominant.

What Do Psychiatrists Say

Dr. Bandy Lee — a forensic psychiatrist — has met with members of Congress to express concerns about Trump’s mental state and fitness for office.

Lee leads the National Coalition of Concerned Mental Health Experts, an ensemble of mental health professionals who are worried about the potential consequences of Trump’s leadership.

Dr. Lance Dodes, professor of psychiatry at Harvard Medical School and a fellow member of the National Coalition of Concerned Mental Health Experts says:

> Donald Trump’s speech and behavior show that he has severe sociopathic traits.

> The significance of this cannot be overstated. While there have surely been American presidents who could be said to be narcissistic, none have shown sociopathic qualities to the degree seen in Mr. Trump. Correspondingly, none have been so definitively and so obviously dangerous.

Lee, Dodes, and the National Coalition's positions are not without criticism though.

Dr. Jeffrey Leiberman, the chair of Columbia University's Department of Psychiatry, says that commenting on Trump's mental health as a psychiatrist is both unethical and imprecise.

Unethical refers to the Goldwater rule. The Goldwater rule discourages clinicians from making diagnoses of public figures that they have not directly examined.
Imprecise because, well, you can't really diagnose a patient without a close examination and structured tests.
And finally, Leiberman says, it's a political statement to diagnose a political leader (read the full statement here).

Personally, I would add that anyone who has read any books on sociopathy will find shocking parallels between the examples depicted as sociopaths and Trump (see "*Confessions of a Sociopath*" and, most of all, "*Without Conscience*").

Is It Fair to Diagnose Trump?

I personally believe that it's ludicrous to call "ethics" and "fairness" into the equation when the president brags about the efficiency of his nuclear arsenal ready at his fingertip.

It's *not* a political statement caring and worrying about the potential consequences of a president who threatens nuclear war.
It's what every good and sensible person should do.

What I am worried, about is something else instead:

How Do You Impeach a Sociopath...

… with the nuclear button?

Overall, we should always question whether a leader is fit to serve the people or not.

However, I would make the point that questioning Trump and trying to remove him from office might have unintended consequences. And it might risk causing more harm than good.

When a sociopath who has lost touch with reality feels encircled, he might indeed act in two different ways:

1. Make sure to bring down as many people as he can with him (ie.: a war)
2. Purposefully cause a global emergency to ride out his personal troubles (ie.: a war)

It's not such a far-fetched thought.
It's simply how the mind works in some borderline cases.

As we have already seen in history:

Historical Examples of Cornered Sociopaths

When the war started going south for Nazi Germany, Hitler *accelerated* his genocide machine by diverting more resources to it.

And his last order was to destroy all infrastructure in Germany, a clear example of "I'll take everyone down with me" (Nero Decree).

In the last days of World War II, rather than facing the shame of defeat Japanese military major Hatanaka attempted a coup d'etat. The idea of some military high commanders in Japan was to "keep fighting until the last man, until the last house".
Such as: if I must go down, I'd rather bring everyone and everything else down in total destruction.

Muammar Gaddafi is another typical example of the dangers of cornering a sociopath who's lost touch with reality. He called the protesters who later overthrew him rats and vowed to turn the country into hell rather than surrender.

Now one thing that these people had in common was this: they didn't have many other options. And they didn't have a nuclear option at their fingertip.
And don't you think it's at least plausible they would have used a nuclear option if that had given them even the slightest chance of winning? Or simply the chance of just hurting their enemies?

I believe they wouldn't have thought twice about it.

That's the reason why, paradoxically, I think there might be more to fear from a politically dying Trump than 4 years of unencumbered Trump.

Personally, I would approach the demise of a sociopath with the nuclear button very carefully.

Hit Quick, Hit Silently

A slow legal impeachment is dangerous because Trump could logically see his end coming. And he could carefully plan his diversion plans.

Personally, I believe that the safest way to overthrow a dangerous leader is with a coup d'etat from behind the scenes.
Like in the old days.

Why It Matters Beyond Trump

Hopefully, fingers crossed, we will ride out of this mess without any catastrophe in sight.

But unluckily, as I mentioned in the beginning, this goes well beyond the US elections.

Robert Hare, Psychopathy researcher and author of *Snakes in Suits*, suggests that similar dynamics are at play in every single business and in every single organization the whole world over.

I would like you to reflect on it.
A world where anyone with the temperament of Donald Trump and with a complete lack of conscience can reach the levers of power is not the best world to be in.

We can do better.

I am a big believer that to make this world a better place we need people who are fundamentally good but who know how to be bad.
Fundamentally good people who, when facing evil can switch off their morality and play the same game.

If Sanders, Jeb Bush, or Clinton herself had been better prepared to play the game, Trump would not be president.

Niccolo Machiavelli said:

> ***A good person is ruined among the great number of people who are not good***

He was right.
And when bad people win and good ones lose, we *all* lose.

A better world is a world where more and more empathic people can meet evil with evil. That's a world where power goes to better leaders.
And that's a better world to live in.

A good idea, for now, could be to resist voting to endorse the person who looks most charismatic and/or dominant.
And pick the best and most empathic one instead.
And my second invite to you is to learn to be selectively bad so that we can all win together.

Cheers my friend.
And don't let the sociopaths win :).

SUMMARY

We cannot answer for sure whether Trump is a sociopath or not.

It's impossible to make a diagnosis without an in-person visit, and it's highly unlikely that Trump will ever consent to such a diagnosis.

However, it's not far-fetched to think that Trump is indeed a sociopath. He has shown several signs of antisocial personality disorder on more than one occasion.

The 6 Best Book Review Sites for Non-Fiction Books

Lucio Buffalmano · 14 September 2018 · Archived copy · Original

We list on this page the best book reviews websites available.

Methodology
This ranking is based on 500+ book reviews that we published and that we researched beforehand, comparing how others reviewed them and with a focus on:

- Critical thinking
- Reviewer expertise and track record
- Bias, incentives, and manipulation risks
- Usefulness for high-performing readers

Note: We focus on non-fiction books, mostly focusing on psychology, power, strategy, seduction/dating and men's self-empowerment.

Site	Strength	Weakness	Best For
Amazon	Volume	Unreliable/gamed	Quick sentiment

Intro: A List for Ambitious Men

Most book review sites are written for bibliophiles, hobbyists and fiction readers. This list is different.

If you are a high-agency man, your time is your most limited resource.
You don't need "flowery prose" or "star ratings" from average readers; you need a **Strategic Vetting** that tells you if a book's logic is sound and empowers you, or if it's "naive self-help" that wastes your time.

Below is an audit of the best—and worst—sources for high-stakes non-fiction intelligence.

#6. Amazon

You might have heard of this one :).

Amazon is the most popular book review site.

I make a stop on Amazon for almost *every single book review I write*. First of all, because I get affiliate links from Amazon :). And once I'm there, I also always visit the review section.

With time I have learned the ins and outs of the system, and this is my opinion on Amazon as a book review site:

Pros

- Quantity of books: there is a review for almost any book out there
- Quantity of reviews: plenty of reviews for each book
- Sorting: I love the option of sorting by stars or by highest voted

Cons

- **No expert reviewers:** anyone can review on Amazon. That's a bigger issue for information products than for, say, a vacuum cleaner.
- **Average rating = average of average folks**: most people are average, and few are experts. Average people are less likely to be power-aware, logical, and critical thinkers. And they're more likely to fall -and mistakenly provide high ratings- to useless naive self-help
- **Swayed by fans/hater reviewers**: at Amazon, you don't even need to buy a book to review it. I'd be surprised if lots of reviewers didn't even read the book, but only vented their opinion or supported a friend/idol (or trashed an enemy)
- **Most fake reviews**: since Amazon is mostly there to sell books, and not to review them, it also happens to be the most targeted by fake reviews. Including, of course, from the author themselves
- **Smaller book reviews are completely unreliable**: albeit all books have fake reviews, the less popular ones are the easiest to swarm with fake reviews
- **Confirmation bias**: people tend to buy what they like, so you get more fans and fewer critical reviews
- **Not really a book review site**: finally, Amazon reviews are *not* a content reviews section. Many conflate the book quality with the Amazon or seller service. You'll often see 1-star reviews complaining about the book handling, shipping, or status. Those add up in the final rating.

I'll give you an example that covers a lot of the cons of Amazon as a book review site: the book *The Secret*.

The Secret is a book that tells you *not* to work on your dreams and goals. Anyone in his right mind who wants to achieve his goals wouldn't know what to do with such advice.
But The Secret is a best seller and it has a sky-high rating.

People who buy The Secret are probably already the law of attraction aficionados, so their ratings are as credible as Trump supporters on Trump's mental fitness (or Clinton supporters on her pay-per-play habits, let's not be partisans).

Overall:

A solid, all-season place to get book reviews from all sorts of readers. Just keep in mind the shortcomings (and the high number of fake reviews).

#5. Google Books

Google Books is smaller than Amazon, but I found the book reviews to be slightly better and more objective.

As an open, grassroots project, it has many of the same advantages and disadvantages as Amazon.
Such as:

Pros

- Higher quality reviews compared to Amazon

Cons

- Easily deceived, especially for smaller books. If you read a book like Published you will realize that in an open system, lots (most?) of the reviews can be fabricated.

#4. Goodreads

Goodreads is a social network of book reviews.

The idea is just awesome: you can write your own reviews, exchange opinions with friends, or simply just follow people you trust.

Pros

- You know the reviewers
- You can better target subject matter experts compared to Amazon/Google Books

Cons

- **Facebook of books**: I joined it with the idea of only following reviewers I liked, but I immediately got friend requests from pretty much all the Facebook friends who were also in there :)
- **The best reviewers are not there**: not all the top reviewers are on Goodreads because they have their own websites

#3. Derek Sivers

A successful entrepreneur and later solopreneur who lives life his way, Sivers reviews books without affiliations.

Pros

- Does not mince words
- He's been a successful entrepreneur: he has the results to back his business book reviews

Cons

- No categories: summaries are all mixed on a single page, going from history to biographies to self-help

#2. Nat Eliason

Nat applies good logic and critical thinking, and he's not afraid of calling things like they are.

I find that we often agree on many books -with some due exceptions-.
I discovered Nat's website recently and I will soon be going through some of his top book picks that I haven't yet read.

#1. The Power Moves

We review books through the lens of Power Dynamics and Social Engineering,

Pros

- **The BS-Filter:** We cross-reference claims against empirical evidence and real-world effectiveness

Cons

- **More limited offering**, we focus on power, strategies, seduction, psychology and smart men's empowerment

Low-Utility Sites for High-Achievers

Site Type	Best For…	ROI for High-Status Men
Amazon / Goodreads	General Popularity	**Low** (Too much noise/fake reviews)
NYT / Kirkus	Literary / Prose	**Zero** (All fluff, no tactics)
The Power Moves	**Power & Strategy**	**Higher** (Actionable Intelligence)

I didn't find the following book review websites to be very good sources for prioritizing your reading list:

The New York Times

The New York Times reviews read more like a book themselves than book reviews and it sometimes focuses on literary merit and 'narrative' rather than actual content. That is useless for a man who needs to extract insights, frameworks, or strategies.

Most Book Review Websites

Most book review websites are for people who want to sit with a cup of coffee, a blanket on their feet, and a cat nearby.

These websites cater a lot to people who "read for reading's sake".

That doesn't fit my goals and my audience's goals. We read to improve, develop and move ahead in life -of course, most of us also love reading too, but it's not the *only* motivator-.

General book review websites include:

- Kirkus Reviews.

- BookLikes.
- BookPage.
- Omnivoracious.
- Bookreporter.

Pros:

- You can find quality men and quality women for good, loyal, and stable partners

Cons:

- No for high achievers: reading for reading's sake is not for highly driven people

How to Use Book Review Websites

I often read reviews before I start reading the book.

It helps me prepare my mind for the information I am about to absorb, which makes my reading and my knowledge acquisition all the more efficient.

I also read reviews after I read the book, especially so when I'm not sure I fully got the message.

On my after-the-book review reading, I look for the following:

- Criticism of the book (some imperfection I missed?)
- Opposing information (what are other theories in the field?)
- Similar books (which I might get)
- Is the book still valid (or are there new current thoughts and/or studies that disprove the book?)

What to Look For in Site Book Reviews

To make your reading efficient, you should find book review websites that give you clear and concise information.
I especially look for reviews that highlight:

- Main concepts in the books
- Main drawbacks
- Criticism (from the reviewer or from the rest of the literature)
- And finally: does the reviewer recommend the book?

That's why for me it's so crucial to trust the reviewer.
I need to trust the reviewer almost, and sometimes even more so, than the author of the book.

That's why I'm not the biggest fan of Amazon reviews.

And that's why I don't like book reviews from big newspapers -like The New York Times-.
They all tend to be too flowery, long, and unstructured.
You finish reading the book review and you're not even sure: did the reviewer liked the book or not. Does he recommend it or not?

I'm not looking for a literary piece.
I'm looking for information that makes my knowledge acquisition as efficient as possible.

Bullet Summary

- Don't believe that women are more valuable than you are
- Be protective of her, but put yourself first
- Show strength and confidence: women don't like vulnerable men

Full Summary

The Manual is divided into two parts: theoretical information and more practical information.

Contrary to most dating coaches, W. Anton says that knowing the theory is more important.
Once you internalize the correct mindsets, your actions will follow naturally.

Men and Women Are Equally Valuable

The author says that our society tells us that women are more valuable.
And that's why men chase women, buy them gifts, and generally treat them like a hot and rare commodity.

He says it's because putting women first is good for society and societies that cherished women beat those who didn't.
So today we only have societies that idealize women.
The culture in our society is to kiss up to women, but that's not effective in actually sleeping with women.

My Note: Simply Not True
This is made up of evolutionary psychology.
It's not true that men and women are equally valuable, and it's not just socialization and culture, but also nature.
Also, read:

- **Sexual marketplace dynamics**

If you want to be good with women, the author says, you need to ditch that mindset that women are more valuable and put yourself first instead.

My Note: Adopt Correct Mindsets
There is nothing wrong with the understanding that women are on average more valuable than average men.
As long as you aim at becoming a high-value man, you don't need to worry about the average.

There are Different Standards of Beauty for Men and Women

W. Anton says that men and women are judged on a very different set of standards.

It's not that men are more visual, it's that all that matters about a woman are her looks. To reproduce effectively she needs to be a female, young, and have a good body.

For men, it's different. For men being young is of no significance.
A man to be attractive must be born a male and be less vulnerable than females.
And the latter is not a quality you can see in a picture.

My Note: Not fully true
The overall point he makes is not fully wrong: women are more heavily judged simply on the basis of looks.
But it's not true that looks or age don't matter in a man: they still do.
Also, read:

- **The sexual market value** (of men and women)

And that's why, the author says, your height or looks matter little to women.
It's more about making them feel safe and secure and being strong.

Be Strong

W. Anton says that from an evolutionary perspective protection is the number one priority during pregnancy.

And that's why women are attracted to men who look stronger and less vulnerable than they are.
So, sorry Brene Brown, but it looks like to get women, men can't really be vulnerable :).

My Note: there are exceptions
I do agree actually that men shouldn't look too weak.
However, this is also a generalization. Some well-placed insecurities and vulnerability can make men even more attractive (read: seduction techniques you wouldn't think work).

Be Confident

The author defines confidence as:

> The ability to appear certain by tolerating uncertainty. To be dominant, optimistic, and courageous with women, and never act intimidated by them.

I fully agree with the second part.
I don't buy into W. Anton's first part of the sentence though. Indeed, he stresses and repeats that confidence is about

appearing to be certain.
Even when you're not.

Trying to show yourself certain even when you're not will make you look like an idiot when eventually you are found out for a blowhard who didn't know sh*t.
In those cases, you are better off relying on the strength of a philosopher's frame. Also, read:

- **Frame control techniques and examples**

Be Selfish

The Manual makes the point that to attract women you have to put yourself first.
It's not about being domineering and controlling, and you should actually be protective. But not to the point that you are inconveniencing yourself.

I kind of agree here.
However, don't make it a big rule. If you are a cool guy, a good act of chivalry could easily give you a point.

Also, keep in mind that taking care of others is a major leadership quality (*Leaders Eat Last*). And women love leaders.

Don't Explain Yourself

I liked this insight on not explaining yourself.

The author says that insecure people volunteer explanations for their actions or motives. Telling people why they did what they did or said what they said.

Get rid of it because it's very insecure.
Women will test you and sometimes try to push you on the defensive. But you must remain steadfast.
Also, read:

- **How to deal with women's shit tests**

Be Charming

The author says you shouldn't go overboard to make women laugh, entertain or, God forbid, play games (like *The Game* teaches).

And he makes a very good point.
He says that studies telling people that women like men who make it laugh have it backward. It's not that women like men who make them laugh, it's that women simply laugh more with men that excite them.

I don't think it's that straightforward and some good banter, especially initially, helps.
But Anton had me nodding there: a very very good point I had never thought of.

Also, read:

- How to be charming

Be Happy

The Manual makes the good point that happiness attracts women.
I would add that happiness attracts everyone, but that still holds true.

Be happier indeed :).

Hide Your Player Status

W. Anton recommends you do not brag about being a womanizer or wanting to enjoy many women.

P.S.: see here on how to brag effectively:

> How To Brag Without Bragging: The Covert Brag Technique

There is nothing special for the woman being one in many and it means you are no longer selective.

They might still be attracted to you, but it will be harder for them to trust you. And if you cannot make them comfortable and come across as trustworthy, you won't go far.

The point, he says, is that women want men that other women are interested in. But not men who are interested in all women.

That's quite genius there and deserves a quote:

> **Women want men all women want; not men who want all women.**

Communicate Directly

A big tenet of "*The Manual: What Women Want*" is direct communication.

And in the dichotomy "cold approach VS social circle", Anton prefers the cold approach.

He says you should always:

- Go straight for the woman you like (make a beeline)
- Do not talk and make friends with her friends
- Tell her you found her attractive
- Tell her you want to see her again because you find her attractive

Also, read:

- How to approach a woman

> How to Approach a Girl: 9 Science-Based Steps

Women communicate indirectly

However, women communicate the opposite way: indirectly.
So you should look for the significance behind her words. For example "my feet hurt" means she wants to sit down. Or if you are at home, you can interpret it as a green light for a foot massage.

Real-Life Applications

There are quite a few applications to real-life from The Manual.
But the one I liked the most is this:

Attempt but Don't Lose Interest
It's OK to attempt to bring a woman home early, but don't lose interest if your attempt fails.
I find that after a woman's initial refusal, I lose a lot of interest and that hasn't served me too well. I will heed this suggestion whenever it fits the situation.

CONS

Poor Evolutionary Psychology
There is some made-up evolutionary psychology that the author pitches for facts.
For true facts, pick one of these:

- Best evolutionary psychology books

Some Bro-Science Typical of Low-Level Manopshere Blogs
The Manual has some of the stereotypical, negative manosphere traits.
Such as:

- It starts with the bro science of evolutionary psychology
- Some anger towards women (it says that most feminists are lesbians, but I doubt that)
- Says that money doesn't matter (money won't hurt you for sure)
- Some typical alpha-male posturing:

> (…) the majority of the public consists of unattractive people who would rather not hear that they are unfit for survival or at the mercy of genes.

Indeed, by simple mathematical properties, it's true that most men are average. However, I am not particularly fond of how the author describes it.

He then goes on mocking "clueless researchers" for sitting in labs donning white coats while studying women. Again, he is social-climbing on others to look better.
Honestly, the author could have done a better service to the readers if he had actually *read* some science before talking about science (something nobody forced him to talk about it and he could have just based his book on his personal experience).

Some Bad Dating Advice
In my opinion, The Manual has quite some bad dating advice.
Including:

- Invade personal space

The author recommends that if you want to talk to a woman in a group, you should walk straight to her in spite of whatever is happening in the group.
He says:

> By doing this, he completely invades the personal space of the group, interrupts the conversation (..) demonstrating his confidence loud and clear.

That's not confident, it's socially inept, and it also demonstrates a major lack of social intelligence.
And while it can be attractive in some instances, social intelligence is a highly prized quality by many women -especially high-quality women-.

- Approach from the front and never from the side

Instead, research shows that women prefer being approached from the side.
Anton also says that it's ideal if a woman has not looked at you before your approach. Terribly wrong. Read how to approach a woman for the full science of approaching.

- Style is highly overrated

Really?
In my experience instead, it's highly underrated.

- Walk with her if she's in a hurry

There are situations where you can follow a woman wherever she's going. However, more times than not you risk looking like a follower, a social burden, and a man with little to do.

- Make your first meeting as long as possible

I disagree. You're better off ending yourself instead of letting it sputter and having her eject.

- Try to kiss on a first date

Anton says that you must kiss a woman before you sleep with her.
Of the last 20-30 women I have been with, I think I only kissed a minority of them before having sex.
And since Anton seems so into "being alpha", *Alpha Male Strategies*, who markets his style as the alpha-male prototype, says that "alpha males don't kiss".

Less Good Life Advice
The author seems to suggest that all men chase an "imaginary need for status", good careers, and accomplishments for women. He says that once men learn instead how women think and how dating works, then they won't care

anymore for their jobs.
It seems like the author is suggesting men should not have their own dreams or mission in life, and should not strive to improve their lot. But a ma who is not striving to move forward in life is at high risk of becoming a low-quality man. Even if he is successful with women, if he *only* chases women, that's more like a lower-quality fuckboy.

Men who go places don't (only) do it for women. Some men are driven and hungry for success in all areas of life, sometimes independently of women.

And finally, there are some men who never had problems getting girls, and that's why they are free to also focus on other areas of life.

PROS

Some Great Gems
W. Anton had more than a few awesome gems here. Some I already mentioned. A couple more are:

- People refer to nations as female so that men are happier sacrificing themselves for them
- Expressions of helplessness are attractive in women as it highlights vulnerability (feminine) and youthfulness (reproductive value)

It's also a helpful read for *too-nice guys*, and there are several funny lines.

Review

The Manual is certainly an interesting read.

It will teach a lot to pure beginners and *too nice guys* putting women on a pedestal.
But also more experienced can come out of it with a couple of great new ideas.
I did have a couple of unexpected "aha moments" and I am very glad I read The Manual.

However, I also had many "this doesn't make any sense" moments.
And several "this is not true" and "this is counterproductive" moments.

Overall, mixed with the good bits there is too much made up bro-science and some bad advice. And I don't feel I can recommend it The Manual to all audiences.

The Complete Idiot's Guide to Verbal Self-Defense: Summary & Review

Bullet Summary

- Verbal abuse has physical consequences: never tolerate it
- Prevent abuse with good posture, confidence, self-love, and spotting abusers as early as possible
- Some techniques for dealing with abuse: stare at them in silence, laugh about yourself, yell and scream, and tell them their behavior is unacceptable

Full Summary

The Complete Idiot's Guide to Verbal Self-Defense also deals with the very basics of voice confidence, body language, and posture.
But since you can find that information anywhere else, we will skip it here.

Verbal Abuse Has Physical Consequences

Lillian Glass blurs the lines between verbal and physical abuse.

Indeed, if physical abuse has psychological and emotional consequences, verbal abuse also has physical consequences.

There Is No "Only Kidding"

Abuse is abuse, and there are no jokes when it comes to verbal abuse.

The “it’s only a joke” line is just the way with which people hit you while covering their backs.

By adding “just joking” they are denying their own attack, basically robbing you of your ability to hit back or get offended because, “hey, they didn’t mean it, it was just a joke”.

Verbal Vampires Want to Know Everything About You

For Lillian Glass verbal vampires are those people who want to get as much information and energy out of you but give nothing back.
The author says you should stop sharing about yourself.

Level One Abusers: The Annoying Ones

Glass differentiates between two levels of abusers.
The first-level abusers are annoying but not necessarily destructive.

Here are the types of level-one abusers:

- **Shock ’em and rock ’em**: say something crazy to get a rise out of you. They may actually like you but are psychologically immature
- **Sarcastic/sadistic**: they use irony, but they also know there’s nothing funny with it because they are always dark and gloomy
- **Verbal hammers**: they never let up
- **My dog’s bigger than yours**: they need to get a leg up on you by parading their bigger wins
- **Trashers**: sarcastic/sadistic they’re gloomy and dark, but they’re direct about it
- **Sugary fawner**: make you lots of compliments to get something from you
- **Backhanded complimentors**: say something nice followed by something nasty
- **Self-consumed**: only discuss what they care about

Level Two Abusers: Dangerous Ones

The level of two abusers are not just annoying by can be dangerous for your health

- **Interrogators**: never stop asking your questions
- **Meddling**: enjoy telling you what to do
- **Condescending/dismisser**: they know it all and brush off your recommendations
- **Sneaky underminers**: undermine you behind your back
- **Yellers/screamers/ragers**: they communicate like an erupting volcano
- **Guilt-producing accusers**: they use guilt to try to control you
- **Liars**: not telling you the truth communicates disrespect toward you
- **Verbal icicles**: they withhold their words and you never know how they’re feeling and what they’re thinking

Also, read:

- **How to handle people who undermine you**
- **Handling guilt-tripping**

Why People Abuse You

Glass lists a few reasons why people would abuse you, including:

- Envy

- Self-sabotaging behavior: this is the case of people with low self-esteem
- You remind them (unconsciously) of someone
- They mistrust people (including you)
- They don't like you/you don't like them (and it shows)
- They're miserable and want everyone to feel the same
- Competition (for example when one partner improves)
- I had it bad, now I want you to have it bad too

Love Yourself

Glass stresses a lot the basics of prevention, going from good voice to posture.
And one of those basics is loving yourself.

When you love yourself and you have high self-esteem, you are less likely to become a victim. And you are more likely to naturally stand up for yourself and enforce your boundaries.

Verbal Defense Techniques

- Silent, expressionless stare
- Silent, expressionless stare + look of disgust
- The naked truth: tell him the real truth about him
- Fight fire with fire: use the same techniques
- Laugh about yourself: if you laugh about yourself, he won't have anywhere else to go
- Hugh-hush: if he keeps talking and criticizing, hush him like a little baby
- Excuse me? Are you talking to me?
- Verbal explosion: start yelling
- "This is unacceptable"

The author makes the point that you never go physical, threaten to use violence, or threaten their livelihood (Ie."I will ruin you").

Real-Life Applications

Don't Verbally Abuse Children
Be especially careful not to sound too critical or harsh to children. It can mark them for their lifetime.

When You Improve You Make Enemies
I found particularly deep the point that when a partner improves the other might get abusive because he/she feels threatened. This can happen with partners and friends.

Don't Stare: Move Your Gaze
The author makes a good point that you shouldn't be staring on end into people's eyes. But move your gaze from one eye to the other, then to the whole face, then to the face then again to one eye.
Indeed, people who keep staring at you without ever moving their gaze are weirdos.

CONS

Diagnosis from Afar
Recalling interactions from her clinic the author often makes diagnoses of people she's never met. That's not how diagnoses are supposed to be carried out.

Too Many Overlapping Categories
The categories of abusers and abusive styles are too many in my opinion. They overlap a lot and it's not helpful to just add more and more categories.

Too Diluted
There is a lot of repetition that is highly unnecessary in my opinion (what the chapter will be about, key takeaways, what we have just talked about, etc.)
Furthermore, I don't think it's very helpful to go into voice tonality, voice exercises, and posture in a book on verbal self-defense. Yes, those parts are important, but anyone who's serious about self-development will tackle those independently and they want a book on verbal self-defense to be deep and strictly about verbal self-defense.

Bad Advice on Voice
The author recommends you breathe from your mouth, which my favorite voice coaches discourage.

PROS

Some Valuable Advice & Techniques
There is a lot of great stuff in the book. The idea of never going nuclear and threatening to take someone's livelihood for example, was great.

Sounds Important Warning on Verbal Abuse
I appreciated that Glass takes verbal abuse and the consequences and dangers it entails very seriously.

Review

A bit diluted, but overall it's a good resource to learn about verbal abuse.
And it's an OK resource to learn how to deal with verbal abuse in terms of power games.

There were some really good gems that I used for Power University, and that's always the greatest compliment I can pay to an author.

The Dangerous Case of Donald Trump: Review

Lucio Buffalmano · 19 September 2018 · Archived copy · Original

The Dangerous Case of Donald Trump is a book by 27 psychiatrists and psychologists who assess and analyze Trump with one big question in mind: is it safe for the world to have Trump as US president?

Bullet Summary

- Trump might be a pathological narcissist (possibly a malignant narcissist) and a sociopath
- But the question is not Trump's psychiatric diagnosis (many US presidents had psychiatric disorders), but whether or not he's dangerous (and he might be)
- Short term it would be safe if the military did not act on possible Trump's orders (as it happened in the final days if Nixon's administration)
- Long term, we need presidents to undergo mental health checks like military personnel have to

Full Summary

There are too many authors for me to keep track of the audiobook, hence I will refer to "authors" without specifying names.

Trump Might Be Hedonist

Present hedonists live in the present moment without much thought of the consequences of their actions.
A present hedonist will say whatever it takes to increase his self-esteem and prop his ego, no matter what's real or

not and no matter what's dangerous and what's not.

The author guesses that Trump stopped his emotional growth at age 13.
Without therapy, present hedonists do not mature beyond their age of trauma.

Extreme present hedonists have impulsive thoughts that lead to impulsive actions. Sometimes digging their heels to avoid the consequences of their actions.

When in a position of power, it's the people around the extreme hedonist that have to scramble to make up for his initial impulsive actions.

As a present hedonist, Trump is unfit to be a president.

Trump Might Be Narcissist

More than one author stressed Trump's narcissism.

Narcissists have a huge ego that always needs feeding and recognition.
However, they actually have a very fragile ego. That means they cannot handle criticism.

They also see other people as simply mirrors: only useful as long as they reflect the special view of themselves that they so long to see.

Narcissism Scale

Craig Malkin says that on a scale from 1 to 10, being between 4 and 6 is actually healthy.

The vast majority of healthy people do feel a little special, even if only privately. They are more optimistic, happier, and more consistently confident than people on the lower end of the scale.
And executives in the middle of the scare are rated as far more effective than those with too little or too much.

In that case, it's a slightly unrealistically positive self-image. Imagine it like slightly rose-tinted lenses: they change the perception of the world around you, but not so much as to change reality.

Moderately narcissistic teams are far less depressed and have even better relationships.

Narcissism is bad though when you are at either end of the scale.

However, one author says: **almost all presidents would score high enough to be considered narcissists**.
However, the more it raises, the more likely it is that it becomes counterproductive and leads to behavior such as stealing, breaking the rules, extra-marital affairs, and cheating (on taxes for example).

Pathological Narcissism

At the heart of pathological narcissism lay three dangerous "EII":

- Intolerant (acting as the world owes them)
- Exploitation (using people to make them feel special, no matter what it takes)
- Empathy-impaired (ignore the feelings of everyone else because only their needs matter)

Types of Narcissists: Trump is Grandiose

There are many types of narcissists, and the ones we are more familiar with are the extrovert types. They are known as "obvious", "overt" or "grandiose" in the research.

This type of narcissist seeks and craves the spotlight.
And Trump is this type of extrovert, loud narcissist.

Trump Presents Bullying Behavior

I quote here as it's very interesting:

> Relational aggression, often referred to as emotional bullying, is a sneaky type of bullying that manifests as social manipulation.
> (…) Goal is to ostracize others to gain social standing and to control others

Indeed, I can convene Trump has shown at times a type of behavior that could be considered bullying.

Is Trump a Sociopath?

The first author makes the case that Trump might be a sociopath.
A sociopath does not have impaired empathy, but a total lack or almost total lack of it.

When narcissism and sociopathy combine, they form a pattern called malignant narcissism. They are so driven by their desire to be special that everyone around them is just a pawn for their self-aggrandizing.

Lack of Self Esteem

Trump lacks self-esteem, which leads him to take action to prove himself to himself and to the world.

My Note: This Might Be Incorrect
There might be some truth here, but it's not presented correctly. As psychologist Baumeister shows, abusive people have big egos, but *fragile* self-esteem.

Flight or Fight State

Trump can devolve into survival mode at a moment's notice.
He has little calm in-between states and is often attacking and counterattacking as if his life depended on it.

Trusts Nobody: Constant Warring Mindset

Trump doesn't trust anyone.
And he sees the world as a place of sharks where you are either a victim or you victimize others.

Mentally Ill Leaders Aren't Always Ineffective

Craig Malkin says that equating mental illness with incapacity stigmatizes the mentally ill and is not always correct.
Instead, what's key is a danger to themselves or others.

A diagnosis of NPD (narcissist personality disorder) does not by itself mean that a leader will be ineffective.
Steve Jobs likely had NPD (abusing staff).
He was probably a high-functioning NPD, such as he could maintain "good enough" relationships and keep his outbursts from completely blowing up the workplace.

Functional Impairment Should be Measured

Craig Malkin says that instead of measuring mental illness, we should be measuring functional impairment.
Such as how much their mental state -or illness- allows them to manage their tasks, their relationship, and their feelings when it comes to decision-making without causing danger to themselves or others.

NPD can lose touch with reality in ways that can become dangerous.
For example, when reality does not allow them to be admired and recognized as they crave, they need to "bend or invent" a reality in which they remain special.

When that happens, narcissists become dangerously psychotic.

Malkin makes the point that Trump might be at this stage as he denies having said statements that are on record and can easily be checked.

Dangerous is Not a Psychiatric Diagnosis

We shouldn't worry whether Trump is mentally ill, but if he is dangerous.
And dangerous is not a psychiatric diagnosis.

One does not need to be mentally ill to be dangerous, and the association between violence and mental illness is tenuous.

Trump Relationships (Father, Wife, Daughter)

There were also some golden nuggets on the relationship between Trump and his father, Trump and his daughter, and Trump and his romantic relationships.

Some authors say that Trump shows some traits which are in common with abusers as well. For example, overreacts when he feels his ego threatened.

With his daughter, Trump said that if he wasn't happily married and his father, he would date her. And seemed to go happily along with a radio host telling of Ivanka that "she is a piece of as*"

Real-Life Applications

Let's All Be Less Complacent
We have enjoyed a few centuries of democracy now and we might have grown complacent that it's a safe system to guarantee peace and prosperity.
But two centuries is nothing.
And we shouldn't be complacent about it.
Let's all remind ourselves that it's our duty to contribute to a prosperous and peaceful world

CONS

Sometimes Feels Politically Biased
Some passages sounded politically motivated.
A Jewish doctor discussing how the most conservative fringes of his family think and behave, for example.
Or I quote another example here:

> (…) And offered loving support to those who suffered hatred.
> (…)
> That's us, that's the United States of America

I cringed a bit there.
We didn't need an author who pretends to speak for a whole nation.
We wanted an expert's opinion on mental health. With evidence and video examples, I can check, please.

Lawsuits And Protests as Evidence?
Sometimes I find very shaky grounds on which to "accuse" Trump that had little to do with a clinician's opinion.
For example lawsuits of sexual harassment. Lawsuits cannot serve as evidence. Just consider that in the US millionaires are simply easier targets to make a quick buck.
Or another bit in the book mentioned about the protest against Trump's victory as the largest in US history. Again,

that says nothing.

Fluctuating Quality
Some authors wrote incredibly deep pieces that enlighten the readers and taught me so much -Craig Malkin was my favorite-.
But some other authors were not as engaging and deep.

Some Weak Accusations
Sometimes it felt as if the authors were just out to tell us how "bad" Trump is.
Most people knew that.
I think The Dangerous Case of Donald Trump would have strongly benefited if it had only been about impartial analysis.
For example, speculating on how Trump would have performed poorly on the Cuban missile crisis shouldn't have any place here.

Same Topics Over and Over
As every new author takes over, they sometimes repeat topics that other authors have already said.
For example, we didn't need to hear about the Goldwater Rule more than once. And we didn't need to hear that military personnel must go through mental examination but the president doesn't.
It's true, and it's important, but once was enough and would have saved time and space to make the book even more popular and widespread.

At Times Unscientific & Unprofessional
I quote what one of the authors -one of my favorites BTW- says:

> Hitler, Kim Jong Un and Vladimir Putin know doubt all fall into the category of malignant narcissists.

The underlining is mine of course because, ehm, well… No doubt?
Psychiatry is not an exact science. And anyone giving a diagnosis from afar, to someone whose language they don't even understand is bound to come across as (highly) unscientific.

PROS

Great to Understand Psychology
You really get a lot of different opinions on the same person, which makes The Dangerous Case of Donald Trump a fantastic resource to learn more about psychology, psychiatry, and mental disorders.
Loved it!

Great to Understand Narcissism
Since so many authors suggested Trump might be affected by NPD, you get a lot of comments on narcissism from high experts in the field.
Also not bad for sociopathy.

> **Trump's aim is not accuracy, it's domination**

Review

I listed a lot of cons, but I enjoyed *The Dangerous Case of Donald Trump*.

Both as a warning against the dangers of an unfit president and to learn more about psychology and psychiatry.

I'd like to use the last sentence of this article to sound a warning to us all.
Because I can see in myself and in many others around me, the dangers of complacency. It's not written anywhere that a democratic leader cannot cause a disaster.
And it's not written anywhere that the West will keep staying peaceful and prosperous.

But it's up to each one of us to make it possible for us to avoid worldwide disasters and we all move forward together.

Let's all remind ourselves that it's our duty to contribute to a prosperous and peaceful world.

- SUMMARY

How Women Make Men Obsessed

These are advanced techniques to make men chase and obsess.

Many of them also work on women, though.
So sometimes you will see examples of men using these techniques on women. It's all good: the dynamics are the same.

So let's start:

#1. Deny Him First

People want what they can't have.

And women have been unconsciously knowing and using this physiological trigger long before Cialdini codified it in his seminal book *Influence*.

Indeed, when you deny him, you shake him from the foundation of his ego. Many men at that point will want to prove you wrong and show you how good he actually is.
And the chase begins…

Example

Aurora in "Terms of Endearment" uses this technique with her body language:

She denies him without even uttering a single word the moment she starts walking away.

Risks of This Technique

Quite simply, he might not pursue you again.

Some men are proud and have a big ego, and not only they might stop chasing you, but they might actually actively dislike you.
Men who dislike you still keep chasing you, but more from a position of "I'll bang her just to show her than disappear".

Some other high-quality men are just too busy to chase, and they prefer focusing on women who are into them -and women who play fewer games-.

Also, this technique works best when men outnumber women in quality and/or quantity. But that is not the case in the West these days.

#2. Make Him Jump Through Your Hoops

Denying him is risky and he might just disappear.

So to improve on that technique, you show him there is a "light at the end of the tunnel".
But he must deserve that light.

When you prod him, you tell him what he must do better.

And you imply that he needs to step up his game.
For example:

> **You**: Oh that doesn't work with me mister

Or

> **You**: You must be doing better than that

Or more direct:

> **You**: I like you, but I prefer gentler man. Can you be a bit more gentle please

Have you noticed what these all have in common?
You kinda deny what he's doing *right now*, but you also show he's in with a chance.
Indeed, **the secret to making him chase you while jumping through your hoops is to show him that, if he plays it well, he can (eventually) get you**.

This is less risky than outright denying him, which in my opinion makes for a better alternative.

Example

Ryan Gosling has a dominant version of this technique.
You want to have the same effect of having him chase you and prove himself to you. But you want to be more gentle:

Risks of This Technique

Since you setting yourself up as the prize and *telling* him how to get you, this technique shows a lot of confidence and resolve.

But that's a double-edged sword.

Some men will be intrigued that you're laying the gaming cards right on the table.
But some others might be annoyed that you're taking the driver's seat. These men are usually socially smart enough to see the game, but not socially smart enough to turn the tables. They might just leave the table instead.

And the most driven and socially smart men?
If they want to play, they will turn the table on you. If they're more looking for a serious and collaborative relationship, they might take this game as a sign that you don't like them too much and/or you're not a collaborative partner.

#3. Disappear: The Vacuum Effect

Another sneaky way of making him chase you is to disappear right when he expected you to be there.

For example: take two days to reply to his text after a great date.
Or if you're talking a lot already, go radio silent for a whole day.

You can make it as early as after a first date if it was really good (example below).
But usually, it's safer a bit later in the interaction.

Danger:
He might see through the game playing and simply refuse to play. Or he might misread your momentary withdrawal for lack of interest.

#4. Use Push-Pull

This is a technique we discussed in how to make him crazy about you.

The idea is similar to the vacuum but at a faster pace.
You compliment him and be all affectionate, and then you're distant and indifferent all in the same evening.
Or you criticize him and drive his morale down, and then build him back up saying he's "still" the best you ever had.

Danger: socially smarter men might see through it and dump your game-playing a*s for engaging in it. And if you do it too much some more rational men might see it as a sign of instability.

4.1. Sexual Push-Pull

The push-pull is extremely exciting also when it's sexual in nature.

A good example of push and pull is a woman who wants to resist (push), but who is too excited to resist (pull).
This is a good example of sexual push and pull:

#5. Enforce Your Boundaries

Yes, enforcing your boundaries makes me chase.

It's micro-chasing, but it's the type of chasing that makes men want a relationship.

Whenever he mistreats you, babies you, belittles you or teases a bit too hard, draw your line in the sand.
He will feel compelled to apologize and win you back. And he will realize that you are a high-quality woman who

does not accept bad behavior -or bad relationships-. And that's wife-material, right there.

Example

Karen in "The Goodfellas" draws her line in the sand with much power and emotion.

Depending on your character, this might be *too* powerful and emotional, but it's a good example to understand the dynamics.

Not accepting bad behavior communicates you expect to be treated well and fairly. And guess what good and serious men will want to do? To treat you well and fairly.

#6. Cry... And A Knight Will Show Up

Yes, the old damsel in distress.

Don't roll your eyes, this is about what works, and the damsel in Distress is an old classic because it works (Smith, 2017).
It awakens the "protector" instincts and you will gain femininity points.

Crying also works in relationships. Men are susceptible to women getting upset as they feel like they are responsible to appease them (John Gottman).

Danger:
If he cares about you, crying will really work magic. But if he doesn't, you only become a bigger burden. As a rule of thumb, best if you don't do it too early and without a good reason.

6.1. Show Signs of Exploitability To Awaken His Protector's Instincts

In "scientific dating strategies" we reviewed the "exploitability signals".

Exploitability signals attract both male vultures looking for easy prey, and "good men" looking to protect and invest.

With a little tweak, you can get the best of both worlds: raw sexual attraction, and men falling head over heels to provide.
Here is a great example:

She mixes exploitability signals with "selectively hard to get" signals, asking to only date men who will still be around.

Super effective.

Read more here.

#7. Show Your Naughty Side

Why showing your naughty version makes him chase?
Well, you should know this one.

There is an old saying where I come from.
And my area is not very well known for its finesse, so pardon the French:

> A hair of pussy pulls more than a cart of oxen

I suppose back when the saying started women weren't shaving much :).
The figurative meaning is that the *sexual* pull of a woman is the strongest pull one can exert.
And there is a lot of truth there.

Research from evolutionary psychologist David Buss also proves that one of the best and most reliable techniques to make men chase is to hint that you are primed for sex (Buss, 2016).

The best way to do it is not with direct sexual invites but through teasing.
Here is a good example:

The girl in the above text often flirts with that style. And I used to think about her more than I would otherwise think of her because I associate her with sex.

And of course, you can keep using this technique after you've had sex already.
The below is not your typical flirting text.
But I wanted to show it to you as an example of how many women have the wrong mindset when it comes to chasing, honesty and sexuality:

Did you think that it was "too much" and she made it too obvious she was into me?

If so, you might still be stuck with the mindset of "don't show your cards and pretend you're not that into him".
But **her raw sexual honesty made me so much more excited about seeing her**, made me quite horny, and also drew me closer to her.

In the short run, it did give me more power -and if you don't want to do that, you could take the "fantasy" bit off-. But in the long run, it increased her power.

Even today, as I was looking for this old text, I got horny and would have gladly chased her if she wasn't in a solid, happy relationship :).
On the other hand, men have little fantasies of women who hide their sexual drives and attraction.

Risks of This Technique

As a rule of thumb: **sexual hints that make men chase in the short term make women poorer candidates for the long term** (ie.: men will chase for sex, not for relationships).

That's why I only recommend being sexually more direct if you've already had sex with him -like the second text example-.
Otherwise, keep it at a teasing level -like the first text message-.

#8. Pretend to Disappear (False Takeaway)

This is a very good, neat technique to make him chase you.

The early pick-up artist used to call it a "false takeaway" (Neil Strauss, 2011), and it consists of you physically walking away, or emotionally withdrawing.

This is best used when he has done something wrong, and it's a good alternative to the "enforcing your boundaries" that we saw above. This one is more suited for less assertive women, and for women who prefer a more submissive and feminine style.

Whenever he does something wrong, withdraws. Or move away.

You can supercharge this power move if you leave before sex and while you were getting physically and emotionally closer, maybe at this place, right when he thought he was about to get it.
Some of the women I want the most are the ones that left or interrupted our relationship right before physical escalation, or in the middle of emotional intimacy, right when I was getting to like them.

Example

This is an example from the movie "Under the Tuscan Sun":

Notice that not only she chases him, but that he has a strong emotional impact on her

Risks of This Technique

If you use it when there is no real reason, you will look emotionally manipulative.

And while it works best with men who are high in power and who want to possess you and control the relationship, it can also backfire the most with those men.
Some of them will become obsessed, and turn into stalkers. You will not want to see them again when they started behaving like that, but they will, and they can become a threat.

#9. Stay Mysterious

Have you ever noticed how much people hate knowing the end of a movie?

Review websites go to great lengths to plaster "spoiler alerts" because people get really angry when they know what's going to happen.
And they lose interest in watching the movie altogether.

That's why you don't want to be a movie with a known ending.

Never tell him that you are going to have sex after a certain number of dates, or days.
Never say that you are going to do it when you go back to his, or you ruin the anticipation and his feeling of conquest.

Even about your life, don't be an open book, but keep some mysteries.
Be a developing story

#10. Be (Somewhat) Difficult to Get

The common advice here is often wrong.
It's not the woman who is hardest to reach who makes men chase the most.
The woman that men chase the hardest is the woman who is *mildly* available (Walster et. al., 1973).

You must use some judgment here and tread carefully.
If you are too unreachable, he might end up with more available women. And if you initiate contact too frequently, he might lose interest.

Also, read:

- Proven dating strategies for women

#11. Tell Him You Don't Want a Relationship

Warning: this is risky.

That being said when you say you don't want a relationship, some men will think there must be something wrong with them.
They will think they are not good enough to make you want to be in a relationship.

Result?
They will chase even harder.

The obvious risk here is that some other men who want a relationship will just take your word for it and look for better alternatives.

Risks

Example

The movie 500 Days of Summer is a good example of a man who chases her even harder the moment she says she doesn't want a relationship.

Danger:
"not needing a man" has become such a popular crying battle and such a common aspiration for some women that some guys have grown tired of these antics.

#12. Look Inexperienced, Madonna-Like

Men want to have sex with the whore, but want to marry the Madonna (Madonna-whore complex).

So while earlier we said you can make him chase sex by acting very sexual, you can also make him chase a relationship by acting.
Here are a few ways to do it:

- Say you only do "serious dating"
- Seem uninterested in sex and men
- Never have sex on the first two dates

- Keep your partner count low, and reveal it strategically
- Don't do any sexual crazy stunts the first few times you have sex

Danger: some men prefer experienced women as they see the virgin-like woman as puerile. However, these men are a minority.

#13. Jolt His Life, Make Crazy Memories Together

Many of us secretly crave more excitement in our lives.

If you can live some micro-adventures with him, chances are that he will want more of you in his life.
I will never forget the woman who took my hand and started running to make it on time and reach a shop that was almost closing. And I'm sure some women will never forget our whirlwind romances together.

Even just being lively and silly will make some want to chase you because you a breath of fresh air in their lives.
This works particularly well with men who are older, more sedentary, more boring, or who secretly miss some spontaneity in their life.

Example

It doesn't have to be anything crazy.
Running under the rain while holding hands and slightly intoxicated is enough.
Or running through a museum like in the movie The Dreamers:

Risks of This Technique

This might not work with some of the most rational men out there.
Well, let's be precise, with some of the most *rationally looking* men it will work even better because they are secretly craving for some release.

But a few of the most soulless, boring ones might not see any attractiveness in the wilder and "crazier" side of life.
But maybe you don't want those guys? :)

#14. Make Him Compete With Other Men (AKA: Triangulation)

This is what Greene calls "triangulation" in *The Art of Seduction*.

It's quite obvious, isn't it: put him in a race and he'll race harder to win.
Also, you will look more in demand -scarcity principle-, which further drives him forward.

However, be careful with triangulation. It's very easy to do this wrong in any setting other than in real life.
The best is having a man flirt with you in person while you do not flirt back (nearly as much as him).

Danger: do it too much, too early, and you look like a floozy. Or like a game player.

Example

This is an example of doing it wrong:

She probably realized later that it was not the best strategy and tried to get some points back.
And it was a very good move to get some points back indeed, but overall still a net loss.

#15. Reach Out Less Than He Does

You knew this one.

This is the #1 advice any publication provides.
It's not wrong though, but it can easily backfire if you do it too much.

The secret is to give, but not so much that you become bored.

Otherwise, another very, very mind-fu*king strategy is to give a lot, build him up for the whole initial phase, and then withdraw.
That's the sociopath way though, and it's more something you need to guard against than something you should actively do.

A technique I prefer instead, which is also far healthier, is to build up the relationship together. You give something, and expect him to do the same. Then you keep on building one step each until you have a great relationship.

Also, see:

- **Make him chase the healthy way**

#16. Threaten the Break Up (AKA: Games of Chicken)

Warning: only use sparingly, and if there is a good reason.

Avoid constantly and directly threatening to end the relationship. That's low-quality and high-quality men who will run away (especially those with a secure attachment style).

The correct way of deploying this technique is with this frame:

> If he is not giving you what you want, like for example exclusivity, or an official status, you make it clear that you are not getting your needs met. Since you like him, you hope he will turn around.
> But if he doesn't, you will have to move on.

It's an attitude that he either chips in and moves things along, or you will look for some other high-quality man who will fulfill your expectations.

You can convey it with your attitude.
But if the attitude is not enough, then don't be afraid of being direct with your request:

> **You**: Mark, I have a great time with you, and I really like you. At the same time, I don't do sex outside of committed relationships and I am looking for something more serious and, potentially, long term.
> I would like to know where do you stand on this.

#17. And If You Broke Up, Make Him See You Happy

If you break up, make sure that he sees you:

- Happy
- And with another man being "friendly"

Just don't make it too obvious.

Make it seem like you're just living your life. And that guy around you, don't make it too obvious either.
He might be a new lover. Or your ex might still make it on time… If he only chases you hard…

Warning For Women: Don't Make Him Chase You

Please note:

All the above techniques on making him chase do work and are based on solid psychology.
BUT they only work with certain types of men, and can backfire with smart men (especially the ones who read our work).

I have said it on this website more than once.

Data and game theory show that in the Western world with more high quality women than men techniques designed to make you scarce and make him chase are often more likely to damage you than help you.

You should be aware of the risks and limitations before embarking on any game designed to make him chase you.
You can read more here:

- Do men really enjoy the chase?

And here is a good example of how dropping all the games and showing your beautiful self, interest, and attraction included, can work better than any "scarcity-based" games:

You can read the whole forum entry here.

Bad Advice on Making Men Chase

There is a lot of “feel-good advice” out there for women.

Two examples:

- **The high-quality woman that men chase endlessly knows her real attraction isn’t physical.**

That’s Mark Rosenfeld, writing for The Thought Catalogue.
And that’s also a lie flying in the face of plenty of scientific evidence: physical attraction is an important driver of attraction.

- **Focus on your life and career and be confident**

You *should* be focusing on your life and career and be confident, but don’t expect that it will bring you more and better options.
Women who follow this advice without learning human nature are at higher risk of staying single (and sometimes bitter).
Indeed, research shows that men *say* they want women who are smarter and more successful than they are. But they don’t really *pursue* those women.

However, you can still have a great career and still be a pursued feminine woman.
Not easy, but possible.

SUMMARY

Overall, I recommend you focus less on making men chase, and more on moving the relationship forward together.

However, there are times when knowing the dynamics and techniques of making people chase can work in your favor and still be part of a healthy relationship.

This article has given you a few techniques you can still put in your dating arsenal and use when the right occasion presents.

And of course, hopefully, it has helped you to better understand men, psychology, and people in general.

Cheers!

The Lucifer Effect: Summary & Review

Lucio Buffalmano · 22 September 2018 · Archived copy · Original

In *The Lucifer Effect* (2007) Zimbardo argues that good and evil coexist in the same person and that the circumstances around us will dictate which one will prevail. By knowing better how the circumstances influence us, we can all make sure that good wins out.

Bullet Summary

- There are both good and evil in the world
- The barrier between good and evil is nebulous
- It's possible for angels to become devils and vice versa
- The conditions around us can be more important for our behavior than our personality
- **To prevent crimes of obedience: assert personal authority and take full responsibility for your own actions** (a foundational value of this website)

Full Summary

The Lucifer Effect speaks at length of various experiments and circumstances. I will focus instead on the main takeaways here.

Moral Disengagement Breeds Evil

Most people, most of the time, are moral.
But imagine morality like a gear shift, and like a gear shift, it can go neutral.

When that happens, there is no more morality to stop our actions, and if our car persona happens to be standing on a slope, we can easily go downhill and do things that we wouldn't otherwise do.

How do we disengage morality?

Well, four major ways, according to my understanding of The Lucifer Effect:

1. Deindividuation (loss of self in the group's dynamics)
2. Dehumanization (we don't consider our victims to be humans and "like us", so morals don't apply to them)
3. Anonymity (people commit more crimes when they can stay anonymous)
4. Diffusion of responsibility (the more the people, the less we feel responsible for helping or for inflicting pain)

Plus:

1. The neighborhood effect: run down in the Bronx and clean and neat in Palo Alto (broken window theory)
2. Time pressure (if we're in a hurry, we are less likely to help)

Failing to Recognize Porosity of Good and Evil Invites Evil

Zimbardo says we all want to construct a simple world where good and evil are opposite.

But they are not.

Our Western societies also tend to induce us into mistakes as they glorify the individual and the individual choices (dispositional approach).
But the individual acts in a bigger social setting, and takes on different roles within his life.

If the social setting and the roles he takes on tilt a certain way, they can overpower otherwise moral and ethical people.

This is important, because when we fail to understand how we can all produce evil, then we invite evil

> **To prevent evil, we need to learn evil**

How Evil Is Created

Zimbardo lists a few steps that have been shown to overpower personal ethics to induce evil acts (based on the Milgram experiment)

1. Pre-arrange a form of contractual obligation
2. Give them meaningful roles to play where they can activate previously learned responses
3. Use rules and remind them that "rules are rules and must be followed"
4. Change the semantics from "hurting someone" to "helping the experimenter/science/country"
5. Create diffusion of responsibility (they won't have to take final responsibility)
6. Start small and build up to bigger acts of evil
7. Increase the steps in small amounts so, that each step seems almost like the last
8. Start rational and just and when you act evil people won't recognize the difference
9. Make the costs of quitting high
10. Offer an ideology of a lie to justify the evil acts

Hence, the ways to stop the crime of obedience are to assert personal authority and take responsibility for one's actions.

The Stanford Experiment

Zimbardo spends a lot of time discussing his own famous Stanford Experiment.

Students who started as normal and mentally healthy human beings soon began to change as they started embodying

their characters of guards or inmates.

The prisoners became passive and submissive. They learned helplessness.

The guards on the opposite started acting mean and evil.

As things spiraled out of control, several prisoners had to be released early and the whole experiment had to be stopped because it was taking on a very bad twist.

One prisoner had an emotional breakdown.
The prisoner later recounted saying he was faking it to be released. But Zimbardo says he just made that up because he felt ashamed of breaking down.

Abu Ghraib Was Predictable

Zimbardo draws a parallel between his Standford experiment and the scandals of the Abu Graib prison where US military personnel abused -and recorded the abuse- local civilians.

The author says that it wasn't a case of "bad apples".
They might have been good people on different occasions. Indeed, similar abuse happened in the UK military as well, and it included a former war hero.

He says the responsibility should be looked at in the system that made it possible.

I couldn't agree more that it's the system that we should look into even more than the individuals' faults.
However, I didn't personally find the "systemic analysis" to be too enlightening for me here.

Corporate Evil

Zimbardo makes one more point which I love.
He says that organized systems can sometimes produce evil as a byproduct of legal or operational frameworks which do not take into account an ethical framework.

A system can produce evil as a byproduct of pursuing its goals of profits, ideology, or end results.

The author also talks about "mediate violence", such as situations where authority can inflict pain without physical assault.
Such as by firing, giving bad reviews, yelling at an employee, undermining, etc.

Also, read:

- **Corporate manipulation**
- The myth of emotional intelligence

Ethical Disobedience For a Better World

This is by far my favorite chapter and something I strongly believe in.
We should all wonder if the authority that is giving us orders only has the title of authority or also the moral compass to be in charge.

Always take responsibility for your actions.
And always look critically at authority.

> **In life, always take responsibility. It also helps the world being a better place.**

Banality of Heroism

The author finally says that as much as there is the possibility of evil and we can witness evil in daily circumstances, heroism is the same.

There is a hero in each one of us.

Turns out, Bowie was right. We can be heroes. Just for one day.

> **Heroes are everyday people like you and I**

What is The Lucifer Effect

The Lucifer Effect in psychology alludes to the fact that all human beings can commit cruelty under certain conditions.

As a website on psychology, games people play and the darker side of socialization and human nature, good and evil is a topic I explored a lot.
Also, take a look at:

- To be good you need to be bad
- Good and evil: are heroes a twig on the branch of antisocial personality?
- 12 Rules for Life

The hero's motto:

> **I did what everyone could and what everyone ought to do**

Great stuff.

Criticism of Stanford Experiment & Lucifer Effect

The Stanford experiment has been vociferously criticized.
The name itself is a misnomer, as the lack of scientific rigor does not make it an experiment, but as the author himself admitted, more of a demonstration.

The results of the "experiment" have not been replicated in similar successive experiments and I invite you to read this article which is the dialogue between Brian Resnick and Zimbardo. It's an incredibly interesting article.

Zimbardo says at one point:

> The single conclusion is a broad line: human behavior, for many people, is much more under the influence of social situational variables than we had ever thought of before.
> I will stand by that conclusion for the rest of my life, no matter what anyone says.

Would he stand by that conclusion for the rest of his life if he were presented with contrasting evidence?
I don't think a scientist should ever say he will stand by it for the rest of his life.

I also found it sad for science in general that Zimbardo didn't want to hear about a colleague of his with a different opinion.
Zimbardo answers the question of whether he thinks the critics might not be in good faith:

> I'm not saying good faith. That's what their claim to fame is the importance of social identity.

As I said in another article, scientists should look for the truth.
When a scientist stops searching for the truth, he is not a scientist anymore.

However, Zimbardo also makes good points in defense of his experiment.
This is what Zimbardo says, describing the guards' brutality:

> Were these acts of brutality—and their striking parallels with real-world prison atrocities—nothing more than a function of social demand characteristics in a fraudulent "sham" study, as Blum and other critics have argued, or do they tell us something important about human nature?

My opinion is that the Stanford Experiment has been overblown.
But Zimbardo is right: the circumstances around us are very important in determining how we will -and whether we will act like good people, or like not-so-good people-.

Also, read:

- The replication crisis
- Psychology myths

The Genovese Blunder?

The Lucifer Effect also talks about the famous Genevose stabbing where 38 witnesses didn't lift a finger -or a phone- to help a woman who was being assaulted -repeatedly and at different times- in the street.
Well, turns out the story was largely made up.
The New York Times which ran the original story also admitted to mistakes and inconsistencies in the original article.

Real-Life Applications

Keep Your Moral Compass
We can do things we don't want when we crave to belong or when we let others dictate our actions.

Assess Others Realistically
And like Dalio says: learn to love and appreciate reality. And appreciate reality means that we can overestimate our ability or people's ability to stand up to evil. An ounce of prevention and preparation can go a long way.
That also means building systems and organizations that are evil-resistant.

Assess Your Group & Use Mental Energy Against Groupthink
Research shows that going against public opinion takes a cognitive toll on our brains. Keep that in mind next time you disagree with a group and be prepared to prepare that cognitive price.

Assess Your Leaders & Use Personal Power Against Obedience
This is a fundamental step to avoiding organized evil.
Also, see this article and this video:

CONS

Could Have Been Briefer & "Denser"
I find *The Lucifer Effect* to contain important wisdom that's crucial for our whole civilization. But it gets lost in too many details.
The description of the Stanford Experiment lasts 5-6 chapters and I didn't feel I needed all of that. The same few themes repeat over and over through different events and experiments while a briefer description of one and a simple mention of the rest would have sufficed.

Why Women Stay in Abusive Relationships
The author says that starting fair and just and only later becoming unfair and evil creates confusion and people don't realize the change. He says that that's the "reason why abusive women stay with abusive spouses".
But that's a vast oversimplification.

PROS

The Lucifer Effect Can Improve Humanity
This is wisdom that can make the world a better place. Let's all learn from it and apply the principles to prevent abuse and evil.

Great Self-Development Message
I find The Lucifer Effect to contain a great message that encompasses both personal development and human development as a whole: asserting personality authority and taking responsibility for moral actions will make us better human beings and will prevent crimes of obedience.
And it will make it more likely that we will help out.

Review

The Lucifer Effect is a great book.

I think it's a pity that Zimbardo's Stanford Prison Experiment and the psychology replication crisis may taint this fantastic book in some people's eyes.

On the con side, listening to this book wasn't the best experience because it can be convoluted at times and should have been cut in some parts. For example, unnecessary details on the Stanford Experiment might lead people to miss the important point Zimbardo makes.
And I don't think *The Lucifer Effect* is edited for mass appeal, which might make it harder to digest for the masses.

And that's a pity because this is a *very* important topic.

In a way, *The Lucifer Effect* is what we advocate with The Power Moves. Personal power and responsibility for a

better self and a better world.

And this is a message we both share:

It's only with individual empowerment that we can prevent crimes of obedience group-led atrocities.

The Dating Playbook For Men: Summary & Review

Main Takeaways

- You can't wait for a woman to make you happy: you must build your own fulfilling life
- Love yourself. Work on yourself because you want, not because you're not good enough (you are)
- Take lots of action
- Never change yourself: be you and look for a woman with whom you naturally get along

Notes

The Dating Playbook For Men spans self-help, dating, sex, and relationships. I will skip the relationship bit.

The Grounded Man

The author talks about the "grounded man", which would be his version of a high-quality man.
The grounded man:

- He knows what he wants
- Takes action towards his goals
- Has something more important going on in his life than women
- Does not sacrifice his self-worth for the attention of a woman
- Has a strong set of values that he lives by

- He does not *need* a woman, he wants a woman

The first two chapters basically discuss the grounded man and push the reader to look at himself and ask: are you living the life you really want?

The key, says Ferebee, is to care less and less about what others think of you.
Admit it, he says, you are on your own.

> **The more you value yourself the more people will value you**

Be Happy Without a Woman

The author says that some men are looking at external factors, including women, to make them happy.
But a woman will never make you happy.
Nothing external will ever make you happy as a matter of fact.

You have to find your own why. That is something that motivates you and gets you up in the morning

Happiness, says the author, is living in integrity with what you value. And they have to be your *values*. You need to live by your own rules to be happy and fulfilled.

Also, read:

- **High-value men**

Be In Love With Who You Are

The author stresses the importance of linking yourself.

You must love and appreciate who you are. You choose to grow and develop, but because you choose to, not because you need it.

Reading a book like *The Dating Playbook For Men,* says the author, shows that you don't allow your ego to get in the way of your personal growth.
And that puts you already in the top 1%.

I tend to agree here, and self-acceptance is something I stress here:

- **The 9 fundamental laws of power**

Don't Prove Yourself

The author says that you shouldn't prove yourself to women.
Some men try to talk women's off on how good they are, or "trying to show higher value" as some *pick-up artists say*.

The author instead says that beauty should not be enough for you.
You should check if her values match your value system, and if she doesn't, she's not girlfriend material for you.

Also, read:

- **Passing shit tests without passing them**

Don't Try to Get Women to Like You

Indeed, The Dating Playbook For Men advocates that you don't even try to get all women to like you.

You should always be yourself and be on the lookout for women who vibe with who you are.

Always Be Having Fun

Life is short and we must live it to the fullest.
Bring that child together into this life and enjoy yourself.

People want to be around people who enjoy life.

Jerks *and* Good Guys

Andrew Ferebee says that women want both jerks and good guys… In the same guy.
Women want when who respects them and can be nice to them. But also men who can assert themselves and impose themselves when the situation calls for it.

He says that many men want the girl next door who's pretty, but can also get nasty in bed.
Well, women want the same thing for men.

And I agree.

Take Action

Andrew Ferebee says that to get good you must take a lot of action.
Going out two nights a week should be your minimum.

He recommends bars and clubs because that's where you get the highest density of women and where you can get the most interactions per hour.

How to Approach

After the self-help part, the author goes into how to approach women.
He says that if it's weird you should acknowledge it openly. For example: "I'm really shy" or "I know it's weird but.. ".

Try to make her talk more than you talk, but when you do pose some questions, make sure you don't fall into interviewing mode, with one question right after another. Instead of using questions, think of using statements.

Try to keep talking for longer so that you can build a connection.
Very quick interactions with phone numbers, says the author, don't go anywhere.
And when you exchange phone numbers, make sure you stay one minute longer after the phone number.

Seed The Date

The author says you will meet more women on a date if you seed the date during the interaction. For example, you could ask her: what's the best place in town to go for under 25 Dollars?
Then you can invite her to that place (my note: I don't like this method).

Social Skills First

Andrew says that before getting into seduction and women, you should focus on your social skills and your understanding of social dynamics.

I totally agree, and it's the same about power: first, learn social skills, then think about power.

Texting

The author says that if you got her phone number early in the night, text her during that same night. For example: "what are you doing" or "where are you".

If you cannot meet her right that same day, the goal is to build rapport (my note: agree much here, it's difficult

building rapport via text).
As a rule of thumb, keep your text as long as hers or shorter.

Read more:

- Text flirting
- What to text when she doesn't reply
- Texting a flaky girl

> **Great texting cannot solve bad interactions**

Date

The author recommends dates in the evening or night, going for happy hour, yogurt, or coffee. He recommends you pay and sits side by side instead of across from each other.

Change venues whenever you can and when you want to invite her home just say that you're going back to your place for a couple of drinks and she should come with you.
If she refuses, don't get fazed by it or you'll ruin the date. Just keep enjoying the time together instead.

Real-Life Applications

Avoid Social Date Events
I loved one of the reasons why the author recommends

Make The Drink In Front of Her
I couldn't help but nod and confirm that this is small but genius advice. More than one woman told me that wouldn't have drunk if I didn't make the drink in front of them or opened a new bottle.

If You're Taking Her Back to Her Place…
… Ask her to use her restroom to get inside.

CONS

Maybe not Deep Enough in Dating Advice
From a book titled "*The Dating Playbook For Men*," I was expecting a lot of techniques and dating strategies. There are some, but it falls a bit short in the nitty gritty in my opinion.

Sometimes I Disagreed
The mindsets are very good and the dating advice is good more times yes than not. But still, there are a few recommendations that very much fall flat in my opinion.
For example, the author recommends you don't make the phone number your goal. Very true. And then he recommends that to ask for her phone number you say "let's exchange contact real quick". With the "real quick" which supposedly "increases conversation rate". It sounded contrived to me and came from a mindset that *does* make the number the goal.

Or:

- He recommends you keep sending texts from the moment you agree on a date till the day of the date, which I also don't agree with.
- "Never skip foreplays", while I hold more a belief that you should always walk the shortest line possible towards the first time you have sex, and often you can get there without foreplays and even without kissing

Some Opinions Presented As Facts
Sometimes I felt as if the author based his attraction theory on what fits his narrative rather than what's actually grounded in reality. For example, he says that you should move ahead in life. True. And then he adds "women are attracted to momentum more than success. Well, are we sure?

Pep-Talkey
At times it feels a little bit too much like a pep talk. "You are enough", "you are perfect as you are" etc.

Upsell
There is quite a bit of upsell in The Dating Playbook For Men.

PROS

Holistic Approach to Self-Development
I'm not a fan of dating books talking about self-help. But it's still important, and Andrew hits the nail on the head on that topic.

Very Good Insights
Andrew Ferebee shares a lot of solid advice and he gets lots of stuff right.

Good Psychology
The author has a good grasp of psychology and the psychology of dating.
For example, he says that sex is the ultimate form of submission for a woman, which indeed is a shrewd observation.

Review

The Dating Playbook For Men is 50% dating knowledge and techniques and 50% self-help content. In a way, it's not too dissimilar from the very popular *Models.*

Personally, I prefer books to be laser-focused on a specific topic, but that's also a matter of preference.

Overall, this is a very solid book.
It has both good self-development content and good dating advice.

10 Social Skills Activities to Get Good With People

Lucio Buffalmano · 24 September 2018 · Archived copy · Original

Are you looking for social skills activities that will help you make friends and get better with people?

Great! By the end of this article, you will know exactly:

1. Which activities will improve your social skills
2. Why and how
3. How to prioritize

At The Power Moves, we specialize in *advanced* social skills that give you status, respect, and attraction.
But those advanced results are built on the foundations of good social intelligence. And these activities help you improve your social skills, while also making friends.

Let's dive in.

Contents

- Social Skills Activities
  - #1. Martial Arts
  - #2. Toastmasters (Public Speaking)
  - #3. Eye Contact Experiment

  - #9. TV and People Watching
  - #10. Throw a Party
- SUMMARY

Social Skills Activities

The following are social skills activities that help people become more socially effective and confident.

#1. Martial Arts

You cannot get good with people if you are afraid of them.

And although this is not the most common issue for people with underdeveloped social skills, it's common enough to warrant your attention.
Ask yourself:

- Are you afraid of others?
- Do you fear enforcing your boundaries?
- Are you always giving way to others?
- Does the fear of other people's judgment paralyze you from doing what you want?
- Do you avoid picking up the phone in public places?

- Are you afraid that someone might get angry or violent because of negative feedback or complaint?

The above are all indicators that you might be physically afraid of people.

Now don't get me wrong: at times being physically afraid *does* make sense. And most people *do* feel physically afraid at least some of the time. But it's unhealthy when it's too much, when it happens too often, and when it happens in social settings where there is very little to fear.

What you will learn:

- Getting hit is not the end of the world
- You can defend yourself (even as a smaller, weaker, and slower person)
- Most people, even fighters, don't wanna fight
- Finally, you will remove your fear of people

Note: if you are not physically afraid, then you can skip this one and read more about how to overcome social anxiety with martial arts. And of course, I shouldn't need to say this, but violence sucks. The goal is not to be afraid, *not* to become a meathead.

#2. Toastmasters (Public Speaking)

Public speaking is one of the most common fears in the world.

Indeed, someone famously said that most people would rather be in a funeral casket than delivering the eulogy.

But this is a very limiting fear for someone who wants to enjoy an enriching life full of social activities.
The fear of public speaking is not just stopping you from speaking on a stage indeed. The fear of public speaking is stopping you from speaking to any group of people.

Why do we fear public speaking so much?
It probably stems from our fear of being judged by the group, which might then lead to ostracism and isolation.
And eventually, to death.

However, that's a highly maladaptive trait and you shouldn't accept it.
Delivering a bad speech, saying something everyone disagrees with, or even collapsing and fainting on stage will not lead to any terrible consequences today.

And I can guarantee you this: taking up Toastmasters as a social skill activity will be a huge, huge improvement not only in your social life but also in your overall confidence and happiness.

What you will learn:

- Introducing yourself to groups
- Speaking confidently to groups
- Asking questions and contributing to your company's meetings
- Cracking a joke in the presence of some strangers

#3. Eye Contact Experiment

Bottom line:

you cannot improve your social skills if you are afraid of looking people in the eyes.
And even if you are not afraid of looking staring into people's eyes, this is an awesome social skills activity to push the boundaries of your comfort zone.

The eye contact experiment has become a popular social skill activity in many cities, with both meetups and Facebook groups.
Check your local meetup and sign up for one.

And if it's not there?
Well, go ahead and create one.

What You Will Learn:

- How eye contact affects people
- Holding eye contact with strangers
- Remove the fear of prolonged eye contact
- It can be very helpful in your romantic relationship too

#4. Bar Hopping (Solo)

There is comfort in numbers.

Going out in groups is like having a base camp.

Do you feel observed? A girl shoots you down? A guy you like is with another girl?
Well, At least you got your friends to retreat to and regroup.

But going out alone?
Nope, you're alone pal.
If there are no places to sit, you're standing all by yourself.
If a girl rejects you, you got nobody to go back to.
And of course… The fear of being a wallflower that people will laugh at. Will you even find someone to talk to or will you look like a loner the whole time?

Indeed the first time I started going out by myself I felt obliged to talk to someone. Because being by myself, I

would look weird, I thought.
So in the beginning I forced myself to be social, to talk to people.
And I learned that the more you do it, the more social you become and the easier it gets in the evening. Which is quite a revelation if *you're an introvert*.

However, with time, my biggest conquest was of *overcoming* the need of talking to anyone.
Now I can enjoy an evening out without talking to anyone.
It's a freeing sensation, trust me.

To start going out by yourself I recommend you go to clubs first.
It's easier as fewer people are talking and sitting and there is always the dance floor to dance (or look at).

Bars are a bit more difficult as people are more "expected" to talk, mingle, and be with friends, so tackle them later or be prepared to be a bit trickier.

What you will learn:

- Personal confidence
- Social resilience
- Overcome fear of judgment
- Ultimately, you gain huge personal freedom

#5. Dance Classes

To get good with people you have to overcome your discomfort with physical proximity.

It's a rather common discomfort for many, and you can notice it when people step away from others or when they refuse to come close.
It's particularly common when people have fewer clothes on, and indeed it often overlaps with discomfort with sexuality.

And dance classes will get you more comfortable with physical proximity and sexual vibe.

What you will learn:

- To be comfortable with physical proximity
- Not to step away from people
- Hold your own and stand your ground
- Physically defending your space from possible intruders
- Sexual comfort

Unless you're playing a sexual cat-and-mouse game like in this video from The Goodfellas you should always avoid walking backward.

#6. Improv Classes

I am a Toastmasters guy.
At the time of writing actually, I am the president of the largest and most successful Toastmasters club in Berlin.

I am not *as* afraid anymore of public speaking.
However, I am *still* afraid of going on stage with zero preparation to talk about something I have no idea of.

Improv classes will not only remove the last stage fright in you, but it will also make you an overall more confident communicator.

You're afraid of approaching a girl? Well, after some improv classes, you know that you can come up with something on the fly. And even if you can't come up with anything, you've probably experienced that it's not the end of the world.

Improv comedy can get really weird, so if you're not into comedy, you might want to mix it with non-comedy improv (Toastmasters has those too):

What you will learn:

- Grow comfortable approaching people
- Confidently tell a non-rehearsed story (without fearing you will miss the punch line)
- Grow more comfortable approaching members of the opposite sex

#7. Acting Classes

This is a great social skill activity to improve one of the very basics of communication: nonverbal communication.

Many people who are not good at socializing indeed are poor at understanding how people feel. And that's because they don't pick up on major non-verbal cues.

Acting classes will teach you to read facial expressions and to use your facial expressions better.

What you will learn:

- Read other people's nonverbal language
- Use your body language to support your communication
- Make your communication congruent and stronger
- Increase your self-awareness

Overall, you will become a more holistic communicator and you'll learn to better read social dynamics on the fly.

#8. Action, Action, Action: Any Social Activity

Once you have removed your major fears and you have laser-focused on your biggest areas of improvement, it's time to broaden your social horizons.

Feel to go to all the social events you actually enjoy.
But make sure they are varied so you get the benefits of different social environments (Leil Lowndes calls it scramble therapy).

Two or three times a week do some of the following:

- Meetup groups of topics you like
- After work drinks
- Bars/clubs
- Speed dating
- Sport activities
- Networking events
- Concerts

What You Will Learn

- Enjoy all different kinds of social gathering
- Socialize for socialization pleasure
- You will shift your identity from loner / socially challenged to an apt social person

#9. TV and People Watching

You probably know the recommendation of watching TV with the sound off.

It's a valid one, but I don't actually think you necessarily need the sound off.
I have learned hugely with the sound *on*, and I think the audio can often give more value anyway. After all, tonality is huge to understand people.

I would personally start paying particular attention to difficult social settings.
Like dating TV series where people pick or reject others or games with winners and losers.
Or arguments.

As you learn the more extreme versions of facial expressions and body language, you can then move to the more subdued daily ones.

For the daily ones, I find bars to be particularly useful.
Watch how people approach others, and how they are introduced, and try to guess what they're feeling (nervous, annoyed, excited?).

What You Will Learn

- Take the acting classes lessons to daily life
- Learn the nuances of human expressions
- Improve your empathy and emotional intelligence
- Predict how people feel and how they will react

i'm watching you pal

#10. Throw a Party

Finally, it's time to go from attendee to organizer.

It will require a whole new level of social skills. Indeed, as you move from socializer to organizer, leadership qualities are needed.

You are now the host and not only need to speak to people, but you need to make sure that people are having a good time and everyone is enjoying themselves. You will need to step in to get the wallflower talking, and you might need to make introductions and help groups out of sticky social situations.

This is your final crowning though.
Once you can be a good host, chances are that you are well on your way to becoming a social master.

What You Will Learn:

- Leadership skills
- High-quality woman / man traits
- Higher social skills like
  - Helping people out of sticky social situations
  - Throwing rude people under the bus
  - Dealing with underminers
  - Fending off social climbers
  - Dealing with overly dominant men

SUMMARY

To learn social skills, focus on your major weaknesses and fears first.
If you are really afraid of something, the best technique is usually to expose yourself to it a little bit little, small step after small step.

As you remove the major fears you are not socially challenged anymore but simply move to the “not socially skilled stage”, which is where the majority lies.

From there on, you can focus on honing your skills until you become a social master.

A Return to Love: Summary & Review

A Return to Love teaches readers to connect with infinite love -God-, and find strength and inner peace.

Bullet Summary

- You don't need to follow a specific religion to experience God and infinite love
- We are all bound by God and infinite love
- We can experience God when we allow ourselves to let go

Full Summary

Marianne Williamson says that to experience more happiness, satisfaction, and fulfillment we need to allow all-powerful love in our life.
All-powerful love means embracing God, but it doesn't necessarily have to be a Christian, Muslim, or Buddhist God. Love encompasses any religion.

Unhappiness Stems From Fear

The author says that we are raised in a culture based on fear and competition. We fear not getting good enough grades, not getting enough jobs, and not being able to provide for ourselves and our families.

But fear is a vicious circle, and fear begets more fear.
To embrace love we need to break fear's negative circle.

The problem is even bigger in the West, where our culture is extremely competitive and individualistic.

Ego is The Enemy

Our ego makes us act selfishly and make us chase status and power.
Following our ego might lead to material success, but it will rarely lead to happiness.

We Need to Overcome the Notion That Love Is Naive

Worst still, our western culture has a core belief that too much love is naive.
And the idea that being too loving will set us up for failure and pain prevents us from enjoying pure, unadulterated love. Both in romantic and non-romantic relationships.

We're All Bound in Love

The author embraces Carl Jung's idea of the collective unconscious.

In the collective unconscious, we are all bound spiritually. It's only our physical bodies that keep us from realizing that we are all connected.

You Don't Have to Put a Name on It

Williamson says that some people can refrain from embracing love because they are skittish about the word "God". But you don't have to put a label on it, and you don't need to call it God.

God Enters Us When We Can Let Go

Some people convert to God when they are at a very low point in their life.

And the usual cynics then say that they converted to religion because they are at their weakest and they need something to hold on to.

But **people sometimes convert to God during their most difficult moments not because they are weak, but because they are finally able to let go**.

It's that uncluttered mind, free of fear and resistance, that God is finally able to touch.

Those who can give themselves to God join a much greater power, bigger than themselves and bigger than any other single human being.
That's what happened to George Foreman:

Let Love in Your Heart for Better Relationships

Looking at people through God's eyes means looking at others looking for the best in them.

Embracing God and love for God in your life will also make you less dependent on others. You won't be as needy, and that can make for better relationships.

Williamson also says that when you're hurt or angry the best course of action is often to let go of the pain and hatred. Hatred only breeds more hatred.

Welcoming God in Your Life

There are three steps to allow God and infinite love in your life:

1. Empty your mind to receive from the universe
2. Pray to God and ask for guidance
3. Surrender your thoughts and let God take over

The author makes the case that helping and focusing on the now will help you connect with God and welcome love in your life.
For more on meditation also read:

- The Power of Now

- The Untethered Soul
- 10% Happier

Real-Life Applications

Let Go, Focus on Inner Light
I think the message of letting go and focusing on your inner spirituality is quite powerful and can do a lot of good for many people.
Even highly driven people can slightly adapt and let go of all things they can't control to focus on what they want to achieve.
Powerful.

CONS

Love Can Conquer All?
I found some parts of A Return to Love to be a bit simplistic and, yes, naive.
Empathizing with prisoners will work wonders with *some* of them. With the most inveterate it won't do a thing instead.
Actually, it will only allow them to take advantage of you.
Also, read Good and Evil, *The Sociopath Next Door*.

Prayer Cure AIDS?
At times the author makes claims that are unverifiable and pitches her opinion as facts when, well, they are not really facts.
If you can manage to go beyond those incongruousness though, you'll be able to enjoy the deeper wisdom of A Return to Love.

PROS

Powerful Philosophy
I believe that following part of Williamson's advice can do a lot to help people improve their lives…

Review

I had to let go of my anti-new-age blinders to get the most out of A Return to Love, but I'm grateful I managed.

I don't fully agree with all of the book and I won't necessarily apply most of it right away.
But reading it with an open mind was a powerful experience in open-mindedness and acceptance.

Anything You Want: Summary & Review

Bullet Summary

- Self-awareness is important for good business and good life: what makes you happy?
- Prioritize your business decisions based on what will benefit your customers
- You don't need "change the world visions": you can do great if all you want is to do what you love while making enough to live

Full Summary

About the Author: Derek Sivers is an entrepreneur who launched and then sold a successful tech business during the Dot-com era and then focused on doing things he likes, without caring about money.
He describes himself as an introvert and a bit of a loner, and one of his quirks is that he takes pride in answering all emails people write him. I wrote to him by the way and I can testify that his claim of replying to everyone is indeed true -albeit it's one-line replies and, for full disclosure, I've heard a fellow entrepreneur say he's got an automated system for quicker replies :)-

What Makes You Happy?

Anything You Want talks a lot about happiness and the intersection of money, business, and happiness.

One of the keys to getting all three of them right, says Derek Sivers, is to understand what makes you happy, what you're passionate about, and what makes you unique.

Once you know that, you will have a huge advantage in finding and doing what really stimulates you. It's going to make your highs higher and it's going to help you and guide you through the tough times.

Sivers uses a rather popular image in the self-help literature to help you figure out what you want: think you're nearing the end of your life.
What do you regret you haven't done? What do you wish you had done more if you hadn't let yourself get caught up in the pettiness and small things of life?
Then do more of what you really wanted to do.

It's Either Hell-Yeah or No

This is a concept similar to *Essentialism* and *The One Thing*.
In a nutshell, it says that you either do something because you really love it, or don't do it all.

I find this is a great way to prioritize in life and make the most of your time.

You Don't Have to Change The World

We live in a world where everyone is aiming for the moon.

Indeed several books, like *Bold* and *The Magic of Thinking Big* want you to believe that you should have outsized goals to succeed.

But Derek Sivers says that you don't really need any ambition to change your field -or the whole world- with your business.
Sivers for one, never had such grand ambitions. And he did just fine.

Similarly, if you only want to pay your expenses or free your time, that's a very valid goal.

My Note: I really loved this part. I want to be and do the best I can, share the best information possible with this website, and sell the best information-based products you could find. Yet, I don't really care about making huge bucks.
All I want is the freedom to do what I love.

Also, read:

- **A value-based business**

Persist With New Ideas

The concept Derek Sivers has of entrepreneurship and ideas is similar to Jay Samit's "zombie idea" concept (read *Disrupt You*).

Such as, yes, keep persisting, but not on the same ideas. But keep persisting in generating projects that add value and improving on them.
Do the bare minimum and then show it to the world. Get the feedback and keep working on them if they're good or move to the next thing (similar to *The Lean Startup*).

Keep Your Business Plan Simple

Sivers explains that there is no need to make your business plan long or full of jargon. You won't make a better impression, but a poorer one if you try to embellish it.

Keep it simple instead and keep only the high-level figures in it.
That's all you need in the beginning -and that's all you know often: the rest you figure out as you go-.

Define Your Target – And Say No To Everyone Else

The author says that once you define your target audience you should keep it large enough that you don't come to

depend on one single customer or modify your product for one single customer.

But at the same time, you remain focused on your values and target audience so that you stay true to your goals. As you grow successful you will receive more and more requests, and it's not only OK to let some requests go unfulfilled, but that's exactly what you should do sometimes.

For example, the author received a lot of solicitations from music executives who wanted their latest hottest talent on his website CD Baby.
But he always refused because he designed his website for musicians *without* a label.

You Don't Need Big Money

The author says that you don't need much money to get you started.

It's not money that makes the business grow, it's the value added to helping people.
So start helping out.

As a matter of fact, being low on cash can boost your productivity and become an advantage (also read: *The Obstacle is The Way*).
You will build your business on the foundation of a lean company based on your vast knowledge, creative problem-solving, and maximizing resources.

Make Decisions Based on Your Customers

When you have to make decisions, always ask yourself: what do your customer want and need?
Then do what's best for them.

If Troubles: Move to Next Idea

If you are struggling to keep your business afloat, it might mean you need to move on.

Every business fixes a problem, and if that problem disappears, then it's simply time to change. Worry not: as long as you keep adding value people will be happy to come to you.

Delegate While Keeping an Overview

Derek Sivers says that not learning to delegate is a crucial mistake for self-employed people.

You need to free your own time to focus on the strategic vision and grow.
Or maybe because in the future you want to take time off or dedicate yourself to something else. Sivers echoes a bit of *The E-Myth* when he says that a good business is a business that you can leave for a year and come back to find has grown without you.

The author makes a good point that you should let your employee know that you delegate to them because you trust them.
This helps develop a culture of trust and faith (also read: *Drive*)

But the opposite is also a common problem: delegating too much. Make sure you keep a system that allows you to keep an overview and approve the most critical decisions.

> **Trust. But verify.**

Do It If You Like It

I love this part.

Derek Sivers says that if you really like doing something by yourself, you should probably do it even though that could mean doing it less efficiently, a bit more slowly, or a bit more expensively.

Real-Life Applications

Don't Get Spiteful
You will eventually stumble upon a customer who will scam you or try to rip you off. Don't let that poison you to the point that you take it out on all customers or that you change your business in a way that would penalize many of your customers.

Prioritize Fulfillment
Chasing money will hardly make most people happy.
If you enjoy a lot doing something, it might make sense for you to keep doing that. Even if it might mean slightly less explosive growth or even making less money.

Review

I vibe deeply with Derek's philosophy and that's why I really loved "*Anything You Want*".

Reading this book reminded me of the English saying "preaching to the converted".
It's in a way similar to *The 4-Hour Workweek*, but less geeky, more philosophical, and, well… It comes from a guy who's built a relatively big business and who, in my opinion, has a lot of credibility for putting his money where his mouth is.

Overall, I could recommend this book to entrepreneurs. But, most of all, I can recommend it to solopreneurs, as they are called today. It's especially good for introverted solopreneurs and people who want to live life their way, on their own way.

Braving the Wilderness: Summary & Review

Bullet Summary

- We all seek to belong, but **we shouldn't allow our need for belonging to drive us into sectarianism and ingroup/outgroup dynamics**
- We are often lonely once we become part of a group of like-minded individuals
- **Real belonging starts not with a group, but within ourselves**: self-acceptance. Then you belong everywhere

Full Summary

About the Author: Brene Brown is a social researcher and has become very popular in the latest years thanks to the huge success of some of her books and TED Talks. She is also the author of "*Daring Greatly*", her biggest success, and "*The Gift of Imperfection*".

We All Look for Belonging

Belonging is one of our primary needs, and it can be deeply painful when we don't find it.

Brene Brown seems to know it well as she shares her childhood stories of not being welcome among whites and being only half-welcome among blacks.
But when she'd show to her blacks' classmates' houses she could still remember, as a four years old, the shock of their black parents in seeing a white girl.

Not Belonging in Our Family Is Worst

But worst of all is when you don't feel like you belong in your own family.

Brene Brown desperately wanted to be part of the cheerleading squad. Her mom had been a cheerleader in that

same school and her father had a start football team.

She practiced non-stop and went on a two weeks liquid diet.
She actually excelled at her trial performance but was told she just wasn't cheerleading material.

Unluckily, it wasn't just the cheerleading team that Brown didn't feel like belonging to. Her own parents voiced their disappointment and she felt rejected in her own family.

That led Brown to drinking problems.
She joined the AA anonymously and her sponsor told her she'd better go to Co-Dependent Anonymous for a better relationship (read *co-dependent no more*).
But even there she was spurned.

My Note: If you experience the same, check out this book
If you have had a similar feeling of rejection from your own family, I recommend the book Will I Be Ever Be Good Enough. It goes much more in-depth and it will help understand the deep-seated reasons for perfectionism and/or self-destructive behavior stemming from a lack of love and acceptance

Deep-Seated Belonging Problems

But Brene's drinking problems and co-dependent relationships were only the symptoms of her internal wounds.
And she only overcame them when she addressed and tackled her emotional wounds.

How We Can Feel Like We Don't Belong

There are many ways in which people can feel like they don't belong.
The most common are:

- We wanted to join, but the group spurned us
- We tried so hard to gain someone's acceptance, but we didn't manage
- We managed to join the group, but we don't feel a connection and we feel like outsiders

True Belonging Means Belonging to Yourself

True belonging happens when you *stop* trying to gain the acceptance of others.

Fitting in means that you change yourself to be like the group you want to be part of.
When that happens, you won't be experiencing real connection because you don't show up being true to yourself.

Belonging instead means accepting who you are, being who you are, and having the people around take you for the real you.

I quote Brene here:

> The spiritual practice of believing in and belonging to yourself so deeply that you can share your most authentic self with the world and find sacredness in both being a part of something and standing alone in the wilderness.
> True belonging doesn't require you to change who you are; it requires you to be who you are.

The Wilderness Meaning

Brene uses the wilderness because it's both scary and tempting.

The wilderness is what lies outside our comfort zone.
It can be something new, something we are avoiding, or a place where are forced to confront our uncertainties and

vulnerabilities.

It's different for everyone. It might require you to engage in introspection, spiritual learning, or personal development.

To keep going in the wilderness you must learn to engage in *difficult conversations* and motivate yourself not by fear, but by joy.
And you will learn to trust yourself and others and to show up as you really are: trusting and vulnerable.

Developing Trust & Vulnerability

Both trust and vulnerability are qualities that we can all learn to develop.

Brene Brown lists seven qualities that will make us trustworthy:

1. Be reliable
2. Own your mistakes
3. Respect boundaries (read how to enforce boundaries)
4. Keep personal and confidential information safe
5. Make decisions with integrity
6. Be non-judgmental
7. Be generous

We're More Divided Now That We're United

There was a time when we believed that the Internet was going to build a "global village" that would make us all closer and more united.

Instead, it only made it easier for like-minded people to stand with other like-minded people. It's tempting to try to find belonging among those who think like us. But often the result is that it entrenches our ideas and might make us more extreme and bellicose.

And certainly more divided.

Brene Brown indeed makes the case that inside groups of like-minded individuals, we isolate ourselves from the world and we are all more lonely than ever.

For true belonging, we need meaningful connections and not factions.

Braving the Wilderness Quotes

On using respectful language:

> When people call the president of the United States a pig, we should reject that language regardles of our politics and demand discourse that doesn't make people subhuman

On sub-human language:

> When we hear people referred to as animals or aliens, we should immediately wonder, "Is this an attempt to reduce someone's humanity so we can get away with hurting them or denying them basic human rights?

On not tolerating dehumanization:

> We must never tolerate dehumanization—the primary instrument of violence that has been used in every

> genocide recorded throughout history.

On accountability VS dehumanization:

> Dehumanizing and holding people accountable are mutually exclusive. Humiliation and dehumanizing are not accountability or social justice tools, they're emotional off-loading at best, emotional self-indulgence at worst. And if our faith asks us to find the face of God in everyone we meet, that should include the politicians, media, and strangers on Twitter with whom we most violently disagree. When we desecrate their divinity, we desecrate our own, and we betray our faith

On the importance of understanding each other even when we disagree:

> People often silence themselves, or "agree to disagree" without fully exploring the actual nature of the disagreement, (…) deepen misunderstandings, which can (in turn) generate resentment

On looking inside instead of outside:

> Stop walking through the world looking for confirmation that you don't belong. You will always find it because you've made that your mission. (…) The truth about who we are lives in our hearts. Our call to courage is to protect our wild heart against constant evaluation, especially our own. No one belongs here more than you.

On the necessity to avoid changing yourself just so that you can belong:

> If I get to be me, I belong. If I have to be like you, I fit in

On ultimate personal enlightenment:

> **You are only free when you realize you belong no place—you belong every place—no place at all. The price is high. The reward is great**

Deep, wise words.

Real-Life Applications

Stop Trying to Fit In
Fitting in with this or that group won't do a thing to make you feel better and more connected. You are much better off knowing yourself and belonging to several different groups through human connection (VS a connection through ideology).

Connect With People, Not Ideology
What I learned and liked the most from *Braving the Wilderness* is that we should connect with people through human empathy and not through ideologies.

CONS

Conjectures & Buzzwords Instead of Analyses: This is Not Research!
The author often uses the term "research" in her writings.
But this is not scientific research *in the least*.
I personally very much dislike any attempt to position as research what's not research. Research is not the ultimate truth, so there is no need to present one's theories as research-based!
Indeed I liked many of the author's theories and conjectures and agree they're valid for many cases. *But it's not scientific*.

Jumping to Conclusions From Conjectures (or Meaningless Data)
Brene uses voting patterns to say that people have surrounded themselves with like-minded peers.
She says that today 80% of Americans live in areas that overwhelmingly voted either for Donald Trump or Hillary Clinton. I wouldn't consider that any valid set of data.
Or she connects the bottling up of anger to mass shootings. But many other Western countries have the same culture as the US and don't go on a shooting rampage (Brene as a hunter and gun owner might want to consider gun culture here).

I, Me, Mine
The author's work often gives me the feeling to be lot about "me, me, me".
It doesn't have to be a con, she simply draws heavily from her experience in a way.
Yet at times, it feels as if these books are a self-therapy session of an entitled individual who's showing off her success to the world.
I don't think it's so relevant to tell us how much her husband loves her. Many of her readers might not find such a man. And I didn't think her personal story of success and Oprah's appearances are very relevant to the audience for example.

"Accept Thyself" Double-Edged Sword
I have said the same in all other of Brene's books, including *Daring Greatly* and *The Gifts of Imperfection*.
Accepting oneself to me is a double-edged sword that might stop people from chasing their dreams and goals with the passion, drive, and hunger that we sometimes need to succeed.
By choosing to "selectively not accept" where we are, we can muster more power on our side. And no, that does not mean we must lower our self-esteem. I don't accept my current situation and have very healthy self-esteem.

Into The Wilderness Metaphor
I am not particularly fond of the "wilderness" imagery, as if everyone was supposed to go on a dark and dangerous journey of self-discovery.
One, not everyone's path to self-discovery will be wild. And two: why should it be so dark anyway?

PROS

Deep Wisdom on Dehumanization: Join In
Brene Brown hits the nail on the head when she says that dehumanization has allowed the worst atrocities to happen.
It's a similar message in *The Lucifer Effect*, but I feel that Brown has gone more deeply than a book that was theoretically dedicated to exploring evil.
Brene Brown's *Braving the Wilderness* also presents a deep, engaging, and powerful antidote to hatred and dehumanization.

Life-Changing Message of Self-Belonging
I found Brene's message of self-belonging to be enlightening. It added a new

Review

There is a part of me who loves Brene Brown's work and a part of me who feels it's goody-good over-analyzing which is specific to the author's life and not highly generalizable.

I think getting into Brene's work to get the most out of it requires that people be selective for the great wisdom it contains while at the same time staying critical of what they should not pick up.

For example, in Braving the Wilderness I particularly loved the idea that you should belong to yourself first and foremost.
That's enlightening and it added a new layer of understanding of myself. It's something I was unconsciously doing already, but it gave me a new goalpost to strive towards. And it made me certainly a wiser man.

But then advice on anger and extreme self-acceptance falls a bit flat on me (read: how to leverage pain and failure). Sometimes I have the feeling that Brene's work might serve as a balm instead of fuel for high achievers.

Overall: great, great work. Absolutely recommended.

Built to Last: Summary & Review

Lucio Buffalmano · 27 September 2018 · Archived copy · Original

In *Built to Last* author Jim Collins presents his research on what differentiates visionary companies, such as companies with a long track record of superior performance, from average or "just good" companies.

Bullet Summary

- Visionary companies have purpose, values, and culture handed down from generation to generation
- They attract and retain people who believe in the same values and thrive within the ranks
- They allow their employees to experiment and try out new things

Full Summary

The so-called "visionaries companies" surveyed in Built to Last include Walt Disney Company, Marriott Hotels, Merck, Sony, HP, and Johnson & Johnson.

The top companies often described as "visionaries" were then compared to companies in the same industries and with similar products which were described far more infrequently as "visionaries".

The authors then analyzed both groups to find out what the differences were.
Built to Last is the product of that research.

It's Not About Great Ideas & Top Leader

Companies that last are not based on ideas.
Ideas come and go. Some that seem good will work great and some that seem OK will work great. But few of them will ever keep delivering big profits for decades.

Sony indeed not only wasn't born with any good idea, but it had *no* great idea.
The founder started a brainstorming session after launching the company to evaluate possible business ideas.

HP also had no specific idea but experimented with lots of stuff that today would sound farcical.

It's not even about great charismatic leaders at the top. The top leaders are very often modest and down to earth.

Great companies are great organizations that churn out great leaders and great ideas continuously.
The great product of these companies is the product itself, the organization that allows them to keep producing

great ideas, great products, and great people.

The Immutable Core of Lasting Companies

Lasting companies are built around an immutable core.
What's the core?

- Core = Values & Purpose

Purpose.
The purpose is the main reason why a company exists.
Disney's purpose for example is to bring happiness to millions.
The purpose is a guiding star, it's not ever something you're done with and gets done with. You always strive and keep producing towards that purpose.

Values.
Values are company specific and they are all about who you are.

Culture.
Values shape the culture of a company, and companies that are built to last have a very strong culture. Even a cult-like culture.

Purpose & Ideologies
Great companies have a great purpose than simply producing a product. Great companies put that purpose and vision before the bottom-line profits (also read *Start With WHY*).
They form ideologies that go from generation to generation so that retiring leaders don't take their culture with them.

Continuous Improvement
While the ideologies stay the same, the manifestations of those ideologies always change. Great companies always strive to come up with new ways of fulfilling their purposes.

Continuous Experimentation
Visionary companies allow their employees to experiment. This isn't indeed just Google. 3M for example does the same, and the Post-It, a blockbuster for the company, was the result of an employee's pet project.
Compare it to Norton, a similar company in the same industry, which actively discourages employees to pursue interests outside its traditional product line.

The Changing Parts

The core stays the same in great companies, while other elements change over time.

Goals
Collins uses the acronym BHAG, which stands for "big hairy audacious goals". The concept is similar to *Bold* and *The Magic of Thinking Big*, such as designing big goals that motivate people who are 100% committed to realizing them.

One example, which is a very popular one in management textbooks, is the moon landing -albeit many believe it never actually happened-.
But also the 747 plane from Boeing is an example of a BHAG.

Never Good Enough
Comfort is never the goal for companies and people who want to achieve great goals and accomplish great things. Great companies always have a hunger for more and more.

Recruits Stay Only if They Fit

Since the culture is somewhat cult-like new recruits either fit in and thrive or leave soon.
Walt Disney was a particularly severe example of cult-like culture. To fit in with the culture of family fun they would not hire men with facial air for their parks and anyone cursing in the presence of the founder would be fired on the spot.

CEOs Are Bred and Groomed
Companies are built to last groom their leaders internally. They always have a lot of talent to choose from because employees are highly engaged and are given a lot of free reins to experiment and learn.
They also tend to plan in advance their new CEOs, with GE choosing Jack Welch's successor seven years before Welch retired.
Jack Welch was only the most famous BTW, but GE enjoyed a century of Welch-caliber CEOs.
In contrast, non-visionary CEOs are often hired externally, don't groom the next leader, and sometimes, Collins & Porras say, even hinder any possible competition (also read *Snakes in Suits*).

Visionaries Companies Walk the Talk

While most companies boast and brag about big values, visionaries companies actually take steps to live those values.

Real-Life Applications

Work For Visionaries Companies
Why would you work for a company that doesn't allow you to go beyond your role description? If you are reading here and trying to become a better man, you also deserve a better boss.

Envision a Company, Not a Great Product/Idea
Instead of focusing so much on an idea or a product, focus on building a great conduit for great idea*s* and product*s*.

CONS

Unscientific
This is a study of correlation. They take one successful company and then look for the differences with less successful companies and say "oh, here is what's different, here is why visionary companies are better".
I believe that's unscientific and prone to all kinds of errors and biases.

Long and Repetitive

The wisdom is great and valid. But it could have been delivered in a shorter format.

PROS

Good Wisdom
It all makes sense and many a board member and CEO would gain reading these pages.

Review

The theory is there and even though I said it's not highly scientific, I also believe that pretty much everything *Built to Last* says makes sense.

However, few companies are actually willing and able to walk the talk.
Up to you if you want to beat an awesome company that lasts, delivers, and adds more value than any other company in your industry.

The No Asshole Rule: Summary & Review

Lucio Buffalmano · 27 September 2018 · Archived copy · Original

In *The No Asshole Rule,* author Robert Sutton analyzes the impact of assholes in the workplace.
The author says that while some skilled asshole can provide short-term benefits for the company, they are highly poisonous to morale and culture, and companies should never tolerate them.

Bullet Summary

- Asshole behavior can provide some benefits for the individual as we mistake aggression for high status
- However, assholes poison the environment and leave people and companies worse off
- Assholes are often cowards as they abuse down the organizational hierarchy and brown-nose upward
- Some companies tolerate assholes because they might be talented

Full Summary

About the Author: Robert Sutton is a researcher and professor of management at the Stanford University School of Engineering. He holds a Ph.D. in organizational psychology.

What's an Asshole

Robert Sutton that we are all assholes *sometimes*, and in certain periods of our life.

However, the certified asshole is the one who constantly bullies or puts others down and leaves their victims angry, humiliated, or afraid.

Since their behavior is continuous, their effect is also cumulative, and even low-reactive people can start feeling their bite after a while.

Also, read:

- **How to be a GOOD asshole**

> How to Be A Good Asshole

12 Actions of Assholes

You can spot an asshole from the presence of these daily behaviors:

1. Personal insults
2. Invading personal territory
3. Uninvited personal contact
4. Verbal and non-verbal threats and intimidation
5. Sarcastic jokes and teasing
6. Scornful emails
7. Public shaming or status degradation
8. Undermining someone's social status
9. Interruptions
10. Two-faced attacks
11. Dirty looks
12. Treating people as if they were non-existent

However, the main rule of thumb is this: how do you feel after the encounter? Do you feel oppressed, humiliated, or overall worse off?

Also, read more here:

- **The asshole social strategy**

Lick Up, Kick Down

Often assholes can keep living in the organization or even advance because they treat customers and superiors well and reserve their worst behavior for people lower down in the organization.

Assholes Are Bad for Business

Assholes lower the morale of the organization and lead to disengagement in the environment where they are left free to act.

It has a huge on the organization as people are more likely to quit, take days off, talk behind people's back,s and even steal.

When assholes get in positions of power their ability to devastate the work environment increases.

> **Assholes are bad for business**

Why Businesses Tolerate Assholes

Some businesses and organizations tolerate assholes in the name of their apparent bottom-line impact or their talent and skills which makes them difficult to replace.

Sutton, however, says that in the long run, it's always damaging for the company to put up with assholes' antics.

He says that anyone who cannot get along respectfully with the people around should be considered incompetent no matter their amount of skills or talent.

And the company culture should be clear that all employees deserve to be treated with fairness and respect.

The payoff for the business is higher loyalty and employee morale.

Big Power Differentials Breed Assholing

Sutton says that the rule of thumb is:

the greater the status difference between managers and employees, the more the bosses tend to disrespect lower-ranking employees.

Thus, to reduce and discourage assholing behavior businesses would do well to reduce the status differentials and flatten the organization, potentially also decreasing the pay difference between employees.

Asshole Behavior Can Grant Short-Term Benefits

The author says that aggressive and threatening behavior can provide some benefits in the business world. A bit the same way it would work in wild animals or in a mafia organization.
Sutton says this happens because **our brains associate aggression with high status**.

However, this doesn't mean that an organization should promote assholes or that asshole behavior is good. Indeed, behavior that can help win over a rival manager or team seldom translates into advantages to the whole organization (also read *Snakes in Suits*).

Furthermore, assholes are more likely to drive away the very best of the employees, those with options and greater skills.
This ensures that the organization bleeds talent and turns into a toxic, talent-poor environment.

Promoting an Asshole-Free Workplace

As we've mentioned before, flatter hierarchies and lower pay differential help.

Founders and upper management can also help by fostering a culture that restrains internal competition and fosters cooperation.

Subtler approaches also include replacing aggressive and warlike words and phrases such as "enemy", "battleground", "trenches" and similar.
Using pronouns such as "we", "us" and "our" instead of "I" and "me" can help remind people that we're all together in it.

However, the biggest rule is to get rid of assholes ASAP. If you let them fester, it might be too late: they drive the great people away and hire and attract other assholes.

> **Dealing with assholes means getting rid of them ASAP**

Avoid Assholes – Or You Might Turn

Sutton says that if you keep hanging with assholes at work, you will eventually start behaving like one.
For example, he realized that he started treating his wife worse while he was employed in an asshole-infested team.

If you can't change jobs, at least try to reduce contact with the assholes.
And I particularly liked Sutton's recommendation of increasing your emotional distance from the asshole.

Also, read:

- Dealing with an asshole boss
- How to deal with a boss screaming at you
- Signs of a bad boss

Real-Life Applications

Use Assholes (or Distance Yourself)
I agree with the author saying you should keep your distance from people disrespecting others or trying to get under your skin.
However, as the guy behind a website called The Power Moves, I'd actually welcome you to use the occasion to also spar with them and hone your power moves skills and social dominance understanding.
It's too good an occasion to let it slip.

CONS

Lack of Details and Coping Strategies
While most of the analysis is good, there is a lack of powerful coping strategies. This is not a how-to book or a power move resource for you to destroy or learn how to effectively disable assholes.
It's not also highly detailed in the analysis of social dynamics of domination and aggression.

PROS

Well Researched
The No Asshole Rule is not just a personal opinion, but it's a well-researched and data-backed work that I appreciated.

Good Psychology
I liked Robert Sutton's psychological analysis and understanding of the phenomenon of workplace bullying and aggression.

Review

The Asshole Rule is a quick and helpful read.

Personally, I find that a blanket “no to assholes” might be more of a moralistic stance than a highly realistic one. And I’m not sure that more asshol-ish behavior might also not lead to long-term success, in certain industries.

I wish I had seen some advice on how to handle assholes.
But if you want to learn to play the asshole game against assholes this might not be the right book for you (this website is).

But I recommend The No Asshole Rule to people who are responsible for business culture. And to those who want to understand better overly aggressive, dominant, and overall unpleasant people.

The Marshmallow Theory: Is Waiting the Key to Success? (Book Review)

Lucio Buffalmano · 27 September 2018 · Archived copy · Original

The Marshmallow Test (2014) is a psychology book detailing the story of the famous, same-name experiment on self-control, delayed gratification, and their link to personal success.

TPM Takeaway: The time horizon impact of life strategies
Human decision-making is a conflict and tradeoff between short-term gratification impulses and long time-horizon. However, **it's not true that waiting is superior and it depends on context.**
Waiting within a long-term horizon works when the odds of larger future rewards are high, but immediate consumption works when rewards may disappear. In general, for most men in civil societies, extending time horizons works, but not always.

Overview

- Children who were able to resist the urge of eating the treat showed higher concentration and scored higher on SATs
- Self-control is genes, nurture, and also the context
- We can increase our self-control with techniques and mind re-framing

Marshmallow Theory

The Marshmallow Theory refers to the idea that **delayed gratification**—the ability to wait for a larger future reward instead of taking an immediate smaller one—is a key predictor of long-term success.

It originates from Walter Mischel's "marshmallow test", where children were given a choice:

> One marshmallow now, or two marshmallows if they waited 15 minutes.

The follow-up studies revealed a surprising pattern:
Children who were able to wait tended to do better later in life—academically, socially, and even in terms of health and career success.

What the Theory Suggests

- **Self-control is foundational:** The ability to delay gratification is linked to executive function and emotional regulation.
- **Environment matters:** Later studies showed that children's trust in the reliability of adults (and their environment) also plays a big role in their decision to wait or not.
- **It's not just about willpower:** Cognitive strategies (like distraction or reframing) can improve impulse control—skills that can be taught and trained.

Related Concepts:

- **Impulse control**
- **Executive function**
- **Future orientation**
- **Trust in authority/environment**

Is It True?

The marshmallow theory is valid, and the ability to delay gratification is an important trait for long-term success in many environments, but not all. And it may not be as important as it was originally thought.

Read our criticism section for more.

Notes

The Marshmallow Test details the famous experiment involving children's capacity to resist temptation. It then expands on the importance of delaying gratification and how we can improve our *emotional intelligence* to delay gratification.

How the Test Worked

This is how the marshmallow test worked:

The children would first pick their favorite treat. The researcher then would tell them they would leave the room and they could either have the treat now or enjoy it later once they'd come back.

The researcher also told the children they could call them back if they couldn't wait any longer.
And then, they would leave them alone and observe.

Later in Life

Children who resisted for longer were better at concentrating as adults, scored higher on their SATs, and were better at maintaining personal relationships.

The children who were able to resist showed more activation in their prefrontal cortex, while those who ate the marshmallow right away showed more activation in their ventral striatum, which is linked with pleasure and

addiction.

Self-Control vs. Urges

We have two systems in our body and mind: one that instantly reacts to the environment -and wants to eat-. And one that controls and, if necessary, restrains our behavior.

The author calls the former system “hot system” and the delaying strategies the “cold system”.

When we engage in activities that distract us from the stimuli, we are engaging in the cooling system.

The hot system is ready to grow from birth, but the cooling system is only developed during childhood. And this is one of the reasons why very small children find it harder to resist: they haven’t developed cooling and coping mechanisms yet.
Children under four indeed usually don’t have any cooling systems. But the cooling system can keep developing until we’re adults.

Self-Control is Genes, Nurture, & Context

As for many other personal traits, self-control is partly genetic and partly environmental.

For example, the authors say that a parent can teach children distracting techniques by handing them a toy when he’s upset.

But self-control is also environmental. For example, sexual restraint doesn’t necessarily mean that the same lack of control will be exhibited in different environments and situations.

However, here is the most interesting thing for me: **if you think self-control is limitless you’ll be able to control yourself much better**.
This is another great example of how our own beliefs shape our reality.

TPM Note: Unstable environments prime for immediate gratification
In some contexts immediate gratification works better. This is also related to fast life theory, also linked to psychopathy. Children in unstable and risky environments are primed for faster life and immediate gratification to secure early reproduction.

Teaching Children Self-Control

The authors have a few tips for teaching children self-control:

- Reward effort (not outcome, as also recommended for a growth mindset)
- Be consistent
- Teach that actions have consequences (good actions lead to good results and vice versa)
- Be a good role model
- Teach them to always give their best
- Teach “what if”: “if my hand moves towards the sugary food, then do X to distract yourself”

Personally, you can also:

- Focus on the long-term meaning and consequences
- Distance yourself from the source of temptation

Does the Theory Hold?

As it’s been the case for many classic psychology experiments, the marshmallow test has received criticism and

faced some replication issues.

The researchers were clear that a bigger sample size could reduce the link between the delay of gratification and overall success in life.

And they were also clearly not advocating any policy changes because being able to delay gratification in children wouldn't necessarily mean they would be more successful in life.

Yet the experiment became so popular that, as is sometimes the case, it has taken on a whole different significance. Namely, that children who could control themselves were going to do great things in life and that children who could not control themselves were doomed.

Of course, the reality is often slightly more complex than that.
Indeed, the original marshmallow experiment has several drawbacks, including:

- Some children might obviously be less interested in sugary treats than others
- Children in the tests were few
- Children in the test were all from Stanford University: either children of professors or students
- Poorer children might have a predisposition and drive to consume faster

Indeed, when the study was replicated, it was found that:

- Success of the marshmallow test at age 4 predicted success at age 14 with a correlation that was 50% smaller than the original test
- Correlation almost vanished when taking into account intelligence and family background

Addendum: Replication with broader samples shows weaker effects

In short:

- **Watts, Duncan & Quan (2018)** conducted a high-powered replication using a much larger and more diverse sample (from the NICHD study).T
- They **did find a link**, but **the effect became much smaller** after controlling for:
  - **Socioeconomic status (SES)**
  - **Parental education**
  - **Home environment quality**

Tyler Watts, who replicated the test, sums it up as follows:

> Take two kids with same background, parenting, ethnicity, gender and cognitive ability and their ability to delay the marshmallow gratification matters little.

That means that the ability to delay gratification is not a unique lever but a consequence of a much bigger picture. And the second study shows that teaching children how to delay gratification might not have such a major impact on their lives.

Conclusion: The ability to delay gratification **is not uniquely predictive** of success—it's one factor among many, and heavily influenced by environment.

Trust and context matter more than we thought

Kids from less stable environments may eat the marshmallow early **not due to poor self-control**, but because:

- They've learned that **delayed rewards often never arrive**.
- They're **rational actors** in an untrustworthy environment.

This makes sense from an evolutionary psychology perspective as recent theories have also suggested.

Conclusion: The marshmallow test is as much about **environmental trust** as about individual willpower.

Cultural variation

- In some cultures, **group conformity or respect for adults** may alter how children respond to authority and delayed rewards.
- Delayed gratification may be **less predictive in non-Western societies**.

Bottom Line: What the Science Now Suggests

The marshmallow theory is *partly* true: The ability to delay gratification can be helpful when rewards are certain, and it reflects executive functioning that are often important for long-term success.

But:

- It's not destiny
- Outcomes are mediated by socioeconomic context, trust in adults, and learned behavior
- Training, context, and support matter more than just willpower

The Marshmallow Test is a good book on a famous experiment and later theory that showed that impulse control supports delayed gratification and is an important element of long-term thinking and long-term success.

Like many other classical experiments, the marshmallow test has been called into question by the replication crisis.

While some of the criticism is valid, we must be cautious not to throw away the baby with the bathwater. The ability to resist urges and temptations is a crucial factor for one's level of long-term success and fulfillment.

The bottom line is this: long-term success often requires some short-term pain. And that's the message we agree with: for a better tomorrow, learn to bite the bullet today.

However, for long-term success, you also need more. See, for example:

- Power intelligence
- Competence and high value
- Smart cooperation

Ego Is the Enemy: Summary & Review (Ryan Holiday)

Bullet Summary

- Ego blinds us and inflates our sense of worth, distorting reality
- When ego and pride get to us, we lose track of what really matters and what we need to focus on
- There are many techniques to avoid ego-take over, including being eternal learners and paying homage to everyone who's helped us along the way

Full Summary

About The Author:
Ryan Holiday is a popular author of several self-development books. He learned from Robert Greene and helped Greene write *The 48 Laws of Power*.

What's Ego?

This could be a definition of the harmful type of ego that Ryan Holiday wants to warn us against:

> Ego is the unhealthy belief in your own importance

The 3 Phases of Ego

Holiday divides Ego is The Enemy into three phases, with the ego playing a different role in each one of them:

1. **Aspire** (talk less and do more; drop the 10.000-hour rule: it takes infinite time to master)
2. **Success** (ego gets big here and undermines your own success)
3. **Failure**

Make It, Don't Fake It

Ryan trashes the idea of "faking it till you make it".

Make it instead, focus on becoming so good that you don't even think about faking it.

It's the ego that wants you to fake it. It's the ego that wants to look good and successful and looks for the *trappings* of success instead of real mastery.

Ambition VS Egoism

Ryan Holiday distinguishes between ambition and egoism.

Ambitious people strive to excel in their field and be the best they can be, regardless of whether they become famous and receive accolades and congratulations.

Egoists instead chase after fame, popularity, and accolades, whether they are actually skilled at what they do or not.

How to Control Your Ego

Here are a way tips and mindsets to control our egos:

- Eternal learner: remind yourself that there is always something new to learn
- Know that mastery is an eternal pursuit (sweeping the gym floor every day)
- Find someone more skilled than you are to learn from
- Teach to beginners
- Trust others and learn to delegate (our ego stops us from delegating by telling us we're the only ones who can perform well)
- Share recognition with others (often they'll do the same back)
- Think, recognize, and say thank you to all the people who supported you

Pride Prevents Us From Bigger Achievements

Pride and ego are connected but different.

Pride helps us justify our ego, and tells us how good we are after a major success that we've had.

However, pride blinds us to new opportunities and room for improvement.
Pride makes us defensive when someone criticizes us or shows us that we could do better. And instead of looking at reality and ways we could move forward, we get busy defending ourselves and bragging about what we've done.

Find Purpose, Not Passion

Ryan Holiday notices that we are constantly bombarded with the message of “finding our passion”.

But, he warns that “finding our passion” is often a fool’s quest.

Holiday proposes purpose and realism instead of passion.
What’s the difference? The purpose is passion tempered with a healthy dose of realism and perspective.
The realistic side is always checking in and making sure that we are moving forward on the right track.
Because achievement cannot rely on daydreamers.

> Achievement’s foundation lay on realism, not daydreaming

Rein Your Ego When You Encounter Sabotage

Ryan says that it’s almost a given that as you strive valiantly towards your goals, you’ll meet not just total indifference, but possibly even covert or open sabotage.

Some people will indeed go out of their way to make you fail.

It’s easy then to be sidetracked by incredulity, hurt ego, or even reactive impulses of revenge.
But that’s exactly when you need to stay calm, put your head down and get on with the most efficient and effective work you can produce.
You can’t afford to be jerked left and right by your ego.

Stay The (Un-distracted) Course

This concept is what Ryan refers to as Euthymya, which would roughly translate to “tranquility”. It’s the tranquility of following your path without worrying about distractions.

Live in Reality

Contrary to the very popular advice these days of the “reality distortion field” and “law of attraction” Holiday recommends you focus on reality and don’t allow your mind to create abstract versions of reality.

Here Holiday ties realism back to the concept of pride.

Pride will take an actual achievement, but unrealistically blow it out of proportion. This tendency will make us forget the reality of the situation, and that’s always that there is so much more to do.

> Live with the tangible and real, even if—especially if—it’s uncomfortable

The Danger of Success

Success is especially dangerous when it comes to ego.

When you become successful the tendency is to tell your story in an embellished form. The struggles you’ve overcome, the demons you’ve conquered, and the accomplishments seem all but obvious given your immense talent.

You keep telling that story to people and to yourself and your talent becomes your identity and your accomplishments become what you’re worth.

And that’s when you get trapped.
You become scared of trying something new and of being found lacking because now your story is that of an almost infallible being.

Instead, always keep telling yourself the truth, remind yourself of your lowest moments as well and stay grounded

by taking pride in being an eternal learner.

Ego Makes You Approval Seeking

Finally, ego makes you a slave to others by making you seek the approval of others.

People with an outsized ego are not really focused on results, self-control, and achieving self-mastery. They are after accolades and hand-clapping.
And they are eternal approval seekers.

Focus on What's Important to You

To live a fulfilling life you should focus on what really matters to you.

If you don't know what's really important to you, it's easy to be swayed in life by shining toys and money. And indeed this is especially true with money.
Because if you don't know how much you need, the answer with money is always the same: you need *more*.

And chances are that as you chase money, your quality of life will suffer.

Ego Destroys Great Teams

As teams become more successful, the people in it grow and become stars.

But as their sense of self-importance grows bigger and bigger, they start claiming and fighting for the spotlight all for themselves.

That breaks the team and rarely leads to more success.
Take the example of the Lakers with Kobe Bryant and O'Neal. The bickering between the two eventually led to a breakup and O'Neal leaving the team, which interrupted a streak of 3 championships in a row (you can read the account of their trainer Phil Jackson in *Eleven Rings*).

Instead, realize that your strength comes from your team, and the more you push your team up, the more they will push you further up.

All the Dangers of Ego

Ryan says that ego is responsible for a lot of our failures, undoing, and overall ineffectiveness.
Because of ego:

- We delay doing what we should do
- It poisons our relationships as we seek to hog the spotlight
- It blocks us from thinking long term
- Encourages us to be greedy, which rarely makes us happy and fulfilled
- Shifting blame: when things don't go well, we rather blame someone else

Ego is The Enemy Quotes

On ego is the enemy:

> Your ego is the enemy—it blocks us from improving by telling us that we don't need to improve. Then we wonder why we don't get the results we want, why others are better and why their success is more lasting.

On the silliness of "passion":

> The critical work that you want to do will require your deliberation and consideration. Not passion.

On overcoming entitlement mentality:

> Who can afford to be jerked around by impulses, or believe that you're God's gift to humanity, or too important to put up with anything you don't like?
> Those who have subdued their ego understand that it doesn't degrade you when others treat you poorly; it degrades them.

On teamwork:

> Soccer coach Tony Adams expresses it well. Play for the name on the front of the jersey, he says, and they'll remember the name on the back.

On doing your best:

> Your potential, the absolute best you're capable of—that's the metric to measure yourself against. Your standards are. **Winning is not enough. People can get lucky and win. People can be assholes and win. Anyone can win. But not everyone is the best possible version of themselves.**

Amen to that.

Real-Life Applications

Ground Yourself In Reality
Take with a pinch of salt all the literature telling you to "build your own reality". They make a great point when they talk about beliefs and focusing on your goals, but never, never forget to also firmly ground yourself in reality.

Be Aware of Your Ego

Be aware of how your ego is either helping you or hindering you toward your goals. Indeed, I agree with Ryan: ego can be a major drag on a happy, successful, and fulfilling life.
I would also like to add though that you can leverage your ego instead of just getting it out of your way. Check out Ultimate Power.

Don't Build Your Own Cage
As you get successful, don't make your story, and don't teach from a place of greatness. Otherwise, you build your identity around perfection and that will become your own cage (*fixed mindset*).

Don't Shift Blame & Play Ostrich
Once our ego has grown, we can find it hard to accept and own failure. And that's when we hide, rage, and shift blame. Don't allow your ego to ever grow so big that you cannot face failure. We all fail, it's all about how we react to it -or act *around* it-.

Develop Ego Resilience
Develop a growth mindset and an antifragile ego.

> The bigger the ego the harder the fall

CRITICISM

My main criticism is around the concept of "ego is the enemy".

It's not.

It's a poorly developed ego that is the enemy.
But a good ego supports you:

Ego Is Needed And A Healthy Ego Is Good

Ego is important to a happy, fulfilled, and successful life.

Even focusing on achievement alone, ego allows us to compete, strive to reach our goals, and do our best to surpass our past achievements.

Some psychiatrists even say that narcissism in moderate doses is positively correlated with healthy self-esteem and positive personality.

However, *Ego is The Enemy* focuses on those instances when the ego doesn't help us anymore and stands in the way of our success.
It doesn't mention how ego is important or helpful, and how "attacking" the ego can lead to more harm than good.

Even ChatGTP knows that:

The idea that ego is inherently bad and must be eliminated, as argued by Ryan Holiday in "Ego is the Enemy," is a matter of perspective. Research and psychological theories suggest a more nuanced view:

Arguments Against Eliminating Ego

1. **Healthy Ego:** A balanced ego is essential for self-esteem and personal identity. It helps individuals set boundaries and pursue goals.
2. **Psychological Resilience:** Some degree of ego strength is necessary for resilience and coping with life's challenges.
3. **Motivation:** A moderate ego can drive ambition and achievement.

Arguments for Reducing Ego

1. **Humility:** Reducing ego can foster humility, improving relationships and openness to learning.
2. **Collaboration:** Lowering ego can enhance teamwork and empathy, leading to better collaboration.

Feasibility

Completely eliminating ego is neither realistic nor advisable. Instead, managing and balancing it to avoid arrogance and narcissism while maintaining healthy self-esteem is a more practical and beneficial approach.

Some Jumping to Conclusions

The author leverages a lot of historical examples to make his points, and I like that.

However, I didn't like the determinism with which some examples were presented. For example, did Napoleon overreach because he believed in destiny?
Maybe, but we don't know that. And there could be a million other reasons why he over-stretched, including hubris, lack of knowledge of Russian winters, etc., etc.

The more scientifically-minded among the readers will find a few of those examples to be a bit of a stretch.

PROS

Great Wisdom
Those who seek to become the best versions of themselves will find a lot of wisdom in "*Ego Is the Enemy*".
And learning about our own ego is a necessity for those who want to move forward in life.

Ryan's Realism
I absolutely love Ryan Holiday's real take on life.
He doesn't BS you with stuff like "love, love, love, and people will love you".

Review

Ego Is The Enemy is a good book if you disregard the bellicose approach to ego in general and redirect it to the worst expressions of ego only.

In that sense, it lists several ways in which the ego can indeed be a hindrance to a happy and successful life.

Maybe it's no coincidence that Ryan's mentor was Robert Greene, author of *The 48 Laws of Power*: he is great at writing best-sellers.

I have to admit the title of the book, "*Ego Is the Enemy*", made me a bit skeptical.
I know some people truly have the mindset that you need to "destroy your own ego", and I think that's wrong: you don't need to "destroy" your ego. I think you should *use* and recruit your ego and then it can become your ally instead of your enemy (read: the power of the antifragile ego).

However, that's not what Ryan really meant.
He is not recommending anyone to "destroy" one's ego.
He simply focuses on all the ways that ego can impair us and stop us from what should always be our number one goal: being the best possible version of ourselves that we can be.

So, do I recommend "*Ego Is the Enemy*"?
Absolutely.
Ryan delivered another awesome gem to guide us on being the very best versions of ourselves.

The Effective Executive: Summary & Review

Lucio Buffalmano · 28 September 2018 · Archived copy · Original

The Effective Executive teaches corporate executives how to get the most out of their time and effort with foundational strategies of prioritization and time management.

Takeaways

- **Effectiveness is learned**: study it and practice and you'll become effective
- **Start by analyzing your current use of time**: how do you spend it? Make it more efficient and consolidate it
- **Focus on contribution and results, not on effort**

Notes

About the Author:
Peter Drucker was a management consultant and author who penned no less than 39 (!) books.
The Effective Executive was first published in 1966, and it's mostly aimed at executives of big corporations.

Eight Practices of Effective Executives

1. **Ask what needs to be done–** focus on what your company needs and will make the biggest impact on your goals
2. **Ask what's good for the organization –** focus on what's good for the company, not yourself or other executives
3. **Create an action plan –** action without planning can be harmful
4. **Assume responsibility for your actions –** assign responsibilities and take ownership of your action items
5. **Communicate your plan–** both up and down the chain
6. **Seek opportunities –** threats avoid problems, and opportunities increase the bottom line

7. **Make your meetings productive –** meetings are either productive or a waste of time. Make meetings effective and end them on time
8. **Go from "I": to "we" –** It doesn't matter what's essential for you too. Instead, what's necessary for the company is what matters

> **A meeting is either productive or a total waste of time**

Effectiveness Can Be Learned

A central tenet of *The Effective Executive* is that effectiveness can be learned and should be learned. Indeed, an effective executive must learn to be effective.

You need to lead by example, and you can only demand efficiency if you first learn to be efficient yourself.

Time Management

The number one priority of effectiveness is managing your time well.
To do that you must:

1. **Track your time**: to learn where you spend it
2. **Manage your time**: eliminate the unnecessary, prioritize, and outsource
3. **Consolidate your time**: put large blocks of focus time together

Simple yet great idea: Simply by tracking you will improve your effectiveness.
Why? Because you won't want to write "1h wasted on the YouTube cat videos" :)

Build on Strengths

Effective executives focus on what they can do well.
This is the idea:

> Make your strengths so strong that you weaknesses won't matter anymore.

With an important caveat: unless your weaknesses are moral and ethical, in which case you need to address them.

Similarly, effective executives focus on what their teams and the people around them can do well. They delegate based on people's strengths and delegate tasks in a way that compensates for their own weaknesses.

Put Things First

Prioritization is the essence of effectiveness. Always start with the most urgent and important task.

One Thing At a Time

Multitasking is a myth.
The effective executive focuses on the most important task first until it's done. That's the secret of those who seem to be doing so many things, Drucker says, they do them one at a time.

Learn What to Say No To

On top of prioritizing and doing things one at a time, learning what to say no to is as important as choosing what to dedicate yourself to.

For more on effectively saying no, read:

> 5 Techniques to Say No (Polite, But Effective)

Demand More of Yourself

Our growth is highly dependent on the demands we place on ourselves. Effective executives demand a lot of themselves.

Focus on Contribution

People who rise through the rank don't focus on their tasks, but they always ask themselves "what can I contribute" and "how can I help the organization move forward".

Drucker says that those who focus on the effort are always junior employees. And those who focus on contribution are top management material.

Listen First, Speak Last

Listening first is a staple of many communication manuals.
Next though, you also want to speak with authority. See:

- **How to act and talk like an executive**, and be promoted to executive roles

Real-Life Applications

Focus on Contribution
To me, the biggest and most helpful tip from *The Effective Executive* is to focus on contribution. To move away from your tasks to doing and providing whatever it is that will move the organization forward.
When you equip yourself with that mentality, you have the mentality of a CEO.

Track Your Time

I like the idea of tracking your time as a tool to increase your efficiency. It can be an effective tool to eliminate waste.

CONS

So Successful That You Will Know Much of This Stuff
If you have been reading about self-development, a lot of "*The Effective Executive*" advice won't be new to you. But it can serve as a good reminder.

Bannister Effect Myth
The Effective Executive perpetuates the self-help myth of the Bannister effect, which is more of a psychology feel-good story than reality.

PROS

Many of The Basics of Effective Time-Management Are Here
Most of the basics on how to be efficient are here.

Review

What can I say, "*The Effective Executive*" is a classic with raving reviews, but it didn't make a huge impression on me.

There is nothing wrong with it.
But I personally didn't find anything groundbreaking, either.

Even if all the tenets are true and make sense, they are not new to anyone who's been around self-development for a while.

Also, as the founder of a website on Power Moves, I'm not a huge fan of laws that look good on paper but seldom apply in reality.
For example "do what's good for the company" leaves a bit "meh" when we know there are plenty of examples of people who got successful by doing the opposite.

Originals: Summary & Review

Bullet Summary

- Produce lots of work on your way to a masterpiece (instead of focusing on doing one only perfectly)
- Always question the status quo: it was created by people like you and people like you can change it
- Become an expert: don't be the guy who "does the artist" without knowing squat about anything

Full Summary

Originals are co-authored by Sheril Sandberg as well, author of *Lean In*.

There are plenty of examples in the Originals.
I find the examples to be interesting but too based on correlation to be real proofs for the theories.
Hence, I will skip most of them here.

How Originals Are Different

The author says that there are two paths to success: conformity and originality.

Originals have the same fears and the same doubts as conformists. But what differentiates originals is that they take action in the face of fears and doubts.

Why is that so?
Adam Grant makes the point that they know in their hearts that failing is better than failing to try.

How to Hone Your Creativity

Originals present a few major ideas to improve our effectiveness in our creative endeavors. These are the ones that I liked best:

- **Question the default -and reject it if you find it better-**

Questioning the default starts with curiosity, such as pondering why the status quo even exists.
Keep in mind that the rules and the status quo are set by people, and they can be improved by people -and you- as well.

A study of customer representatives found that people who used Firefox or Chrome were happier and more effective on the job.
The simple fact of rejecting the default browser meant that those people looked for better alternatives to the status quo.

My Note: This is meaningless and does not imply causation
That study says nothing about correlation or causation.

- **Protect your downside**

While you might think that entrepreneurs necessarily take a risk, you can differentiate between risk-it-all entrepreneurs and risk-averse ones.

And a study of entrepreneurs revealed that those who kept their day job instead of going broke, for example, were 33% more successful.

- **Develop domain experience – then broaden it**

Contrary to popular belief originality really thrives on experience.
Domain experience allows the originals to see patterns and improve their intuitions. The “eureka” moments are much more reliable when they come from an expert.

However, when you develop deep and continued expertise in one field only, you tend to become defensive and have difficulty changing.
And that’s why you must combat that by broadening your interests.

For example, scientists who also engaged in artistic pursuits were several times more likely to win the Nobel Prize.

- **Become an idea machine**

In the creative arts, quantity equals quality.

Albeit most people assume that there is a trade-off between quality and quantity, it turns out that quantity is one of the most predictable paths to quality.

- **Procrastinate on purpose**

You can increase your creativity by taking a break before starting your task.
This happens because when you start a task and finish it, your mind stops thinking about it. But when you start a task and then interrupt you let it “marinate” in your mind and allow it to connect laterally with other information in your mind.

Real-Life Applications

Produce Lots of Ideas
I really loved learning the concept that to do great work you need to produce lots of creative ideas. I'd like to see some more research on it, but for now, I take it for good as it does make some sense indeed.

Get Angry *For* Something (Rather Than *At* Someone)
If you vent against someone you get angrier and your rage will accomplish little. If you get angry for something you can channel that energy into something more productive.
For example, in creative endeavors or in making it possible nothing similar will ever happen again.

CONS

Not Really Scientific
There is very little empirical evidence here.

Highly Reliant on Correlation
Originals rely heavily on correlation to explain things. For example, it says that because Nobel prize winners who engaged in both arts and science were more likely to win the Nobel prize, then that must mean that broadening your interests makes you more successful.
Or it says that Leonardo didn't finish the Mona Lisa for 15 years as an example of effective procrastination. But that is *not* proof that procrastination is effective.
That is terrible evidence. Also, read:

- Fooled by Randomness
- The Black Swan
- How to Lie With Statistics

Jumped To Conclusions With Dalio's Bridgewater
See our review of *The Fund*.

Bad Advice on Psychology of Persuasion
The author recommends that if you want to have your idea accepted you should start with the negative aspects of it. That will make you a more credible source.
But anyone who's studied psychology knows that's a gross over-generalization. What's effective is highly contextual

and depends on the type of audience you're facing.

PROS

Some Awesome Ideas
There are some great ideas here for people who are looking to improve the quality of their work.

Review

Originals is an OK but not great book that ultimately fails to either leave any significant mark.

Adam Grant, the wonderboy of academia, is really good at packaging pop-psychology books that sell.
And he knows that to do that, he must entertain his readers, rather than share actual empirical evidence.

In that sense, *Originals* is similar to Malcolm Gladwell's books.
It takes some (unpublished or obscure) social science research and seeks to apply it to daily problems in life.

That approach is interesting and piques people's curiosity.
And, if successful, it's potentially useful in the sense that it may provide a novel take or solution.
However, when the goal is to impress and entertain, truthfulness often pay the price.
Meaning, the book is a good past time, and not effective.

And being a non value-adding past-time, to me, is the ultimate sin of pop psyhcology

So, is it *Originals* the good type of pop-psycholgoy, or the bad type?

Let's say that it's neither, really.
Just an OK book that you can probably skip.

The One Minute Manager: Summary & Review

Lucio Buffalmano · 28 September 2018 · Archived copy · Original

The One Minute Manager (1982) is a guide for managers on how to maximize time and employees' morale in the most time-efficient way possible.
Based on the idea that managers are very busy, it recommends short and quick appraisals to keep employees happy and motivated.

Bullet Summary

- Pick a few key goals and make them easy to measure and short to write -and to review!-
- Give quick and accurate praise every time you see a positive performance
- Give prompt and accurate criticism while making sure the employee feels valued

Full Summary

About the Authors: Kenneth Hartley Blanchard gained a Master of Arts in sociology and counseling and a Ph.D. in education administration and leadership. He also founded The Ken Blanchard Companies with his wife to provide leadership training to corporates.
Patrick Spencer Johnson was a physician and author, also famous for his children's books and for the best-selling "*Who Moved My Cheese*".

Avoid End of The Spectrum Extremisms

At the end of the spectrum, there are two types of managers who get it wrong.
They are the managers who:

- Never tell employees what they're not doing good to preserve the relationship
- Only speak to employees to correct them and tell them what they're doing wrong

Define Short and Clear Goals

Define goals with your employees that are each 250 words or less.
When you define goals so clearly and briefly you can review them in one minute or less.

You also need to keep the total number of goals manageable, or you might end up with too many goals to keep track of.
One easy way of doing just that is to focus on the 20% of tasks that will give you 80% of results (Pareto principle).

Give Immediate Positive Feedback

Most managers give feedback only when something is wrong. This creates the wrong impression and can genera unneeded resentment and anger.

Instead, give quick praise -"one minute praise"- immediately after the employee has done something well.

Employees feel that you care about their work and contribution. It encourages them to keep up the hard work.

Employees see that someone cares about their work, and the positive reinforcement pushes them to do and deliver better and better work.

Give Immediate Criticism

Similarly, as immediate feedback, if something is not done or delivered to your satisfaction, you should let the employee know right away.

Give criticism that is fair and precise as soon as you see work that is sub-par.

Ken Blanchard says that the key to giving criticism that does not poison relationships is to give negative feedback while still communicating that, overall, you still value the employee's work and contribution.

You do it by giving the criticism fair and square and then adding that they are valuable employees and they're doing well in other fields.

One-minute criticisms are effective because the employee feels that they are being reviewed fairly and timely.

Let Employees Know They'll Be Reviewed

The author recommends that before giving one-minute feedback you let the employees know they will be reviewed. if you don't, they might feel like you are spying on them.

My Note: Telling "I'm going to review you" might feel odd
I don't fully agree here. As a manager, your role *is* to look at their performance. To me, it feels much more invasive if someone would tell me "now I'm going to review you".
Much better is to go about your life and then simply notice and catch good or poor performance alike.

Real-Life Applications

- **Give Criticism Right Away**

The biggest takeaway for me is to give the criticism right away. If you don't, you are basically allowing passive aggressiveness to poison your life.
You will grow resentment while the other person has no idea why.
In the workplace, that might lead to firing someone while the person had no idea they were doing a poor job. And that's how workplaces can turn toxic without even anyone having any bad intentions.

- **Give Positive Feedback**

It's true what the author says: many do not communicate their appreciation. And that's all goodwill that is lost.

CONS

- **Letting Employees Know You'll Evaluate Them**

The authors recommend you tell people that you are going to evaluate them.

But that feels somewhat odd because the job of a manager *is* to keep oversight on people.
There should be no need to say that.

When you tell them once again you're going to evaluate them, that feels very micro-managing to me and akin to a power move. A bit as if to say "watch out, I'm watching you now".
Not a great people's strategy in my opinion.

PROS

- **Good Advice**

The advice is very very good. Easy to implement, clear, and very effective. Thumbs up, great.

- **Simple and Clear**

Many books could take a leaf out of The One Minute Manager. Clarity and simplicity make the message stronger.

Review

I was a bit put off by the tile thinking that was a marketing ploy for rehashed information.

Instead, while it might not break any new ground, it focuses on simple and yet key advice that many managers would do very well to implement.
And not only the manager, but we could also all learn and gain hugely in giving prompt and clear praise and criticism.

Bullet Summary

- Address your limiting beliefs
- Always be flirting
- Use cocky and funny: be cocky and then take the edge off with humor

Summary

About the Author: David DeAngelo, whose real name is Eben Pagan, was an early pick-up artist and then turned dating coach and marketer during the first wave of pick-up artists entrepreneurs, which included RSD founder Tyler Durden.

Limiting Beliefs

If a belief is limiting you, you can challenge it by thinking of any experience that disproves it. Or you can amass

experiences that disprove it.

Empowering Beliefs

Consistent effort CREATES luck.

Fundamentals

Newcomers always look for the routine or the sexy trick. But there are no silver bullets. Learn and master the fundamentals instead. Focus on them before you even start thinking about the fancy tricks.

Assert Own Reality

When you assert your own reality you are the dominant one in it.
Build your own reality where others are a guest in it.

Beliefs of Successful Men

A high-quality man has the following beliefs:

- I put myself and my life first
- I don't let women gain control over me
- I deserve high-quality women
- I'm indifferent to the outcome
- I'm in control and don't let outside events control me
- I don't tolerate disrespect to myself, my time, or my property
- I'm a catch
- I judge people on character, not looks or possessions

Look at Body Language

Pay attention and learn body language because it accounts for 93% of communication

My Note: Partially true
This is only partially true. That study is one of the most misunderstood and misquoted studies ever. Also, see self-help myths and pop-psychology myths.

High Novelty Seeking

High novelty seekers get more action. Try new things, go for more experiences, and take risks.

Approach Anxiety

There are four major fears when you approach a woman:

1. Embarrassment
2. Rejection
3. Verbal confrontation
4. Physical violence

To overcome fear, imagine the worst possible outcome and laugh about it.

Also, read:

- Cold approach strategy

> Cold Approach VS Social Circle (VS Tinder): Strategies

CONS

- **Lots of Theory & Little Seduction**

Deangelo talks, I quote “your DNA spontaneously comes apart and half of it goes to make sperm”. Little later “sex is a very economic game. A woman produces one egg per month”.
Deangelo even starts reading passages live, which felt way too theoretical for me.

- **Slow Rate of Speech**

Deangelo is slow and often repeats the same phrases twice. That might work to make it seem more important and deeper, but for those who are looking for efficiency, it only makes the whole product that much longer.

- **Overuse of Cocky Funny**

It felt like a few of the lines here were just one little step forward from cheesy pickup lines.

- **Light In Terms of Techniques and Details**

Whenever it comes to techniques the program feels to be lacking.

For example in approaching difficult situations, the author lists a bunch of approach types but gives little examples and little wisdom on each.
And just so you know, among those approaching types there is “entertain her with magic”, which I don’t think is very effective.

- **Didn’t Like Some Advice**

In my opinion, some of the seduction advice was not that good. For example, Deangelo shows some of his texts when she doesn’t reply or when he’s chatting online.

It seemed a bit childish to me and went nowhere.
Also the “fun” of sending the picture of an ugly guy… Definitely not my thing.
If a woman were to send me a picture of an ugly woman to look better in comparison I’d think she’s a low-quality woman or has very low self-esteem if she needs to make fun of others trying to look better.
That’s the definition of social climbing, and it’s not high-quality behavior.

Review

The Advanced Dating Technique program is a long program with interviews, questions from the audience, and lots of talking.

I haven’t taken extensive notes as I listened and little struck my fancy.

There are quite a lot of limiting beliefs, but it’s not as deep as dedicated self-transformation programs like in Tony Robbins’ *Personal Power II* for example.

And the second part on actual seduction I found it a bit watered down, not too unlike DeAngelo’s Sexual Communication.

The whole program was too slow and too discursive in my opinion for those who are looking for quick implementations of seduction techniques.

I now tried a couple of different products from DeAngelo and didn’t vibe with them.

But DeAngelo has been an early move he's been a very successful entrepreneur at what he's done. I think one can learn plenty from him.
You give it a shot and maybe you'll have a different experience.

The Signal and the Noise: Summary & Review

Lucio Buffalmano · 29 September 2018 · Archived copy · Original

The Signal and the Noise is halfway between a book on statistics and a book on human psychology and biases. It helps readers understand the human mind's limitations when it comes to numbers, probabilities, and forecasting.

TPM Takeaway: Don't Trust Too Much Forecasters and 'Experts' Predicting the Future
With social media and AI slop people drown in noise, mistaking volume for value and confidence for competence. Overconfidence and sometimes the use of numbers and trends can be manipulative. You win by identifying the 20% of signals that actually move the needle.

Takeaways

- Forecasts are difficult in many human endeavors
- More data can only add noise: in complex issues better focusing on a few reliable signals
- Watch out for those who seem too confident: they're more likely to be wrong

Notes

About the Author:
Nate Silver is an American statistician, writer, and entrepreneur. He is a Special Correspondent for ABC News and the founder and editor-in-chief of FiveThirtyEight, which he later sold to ESPN.

1. Don't Trust Predictions of Complex Systems (Like Economic Predictions)

There are so many economic indicators and so much data and historical data that we might guess economic predictions are accurate.

But they're not.

To begin with, the GDP predictions we often hear are actually part of an interval.
For example, a GDP forecast growth of 1% means that economists are 90% sure that the growth will fall between 0.5% and 1.5%.
But even interval predictions are rather poor.
Indeed from then, 1968 economics have been wrong with their interval around half the time.
Not only are they bad at predicting economic growth, but they are also overly optimistic in their own predicting

abilities.

And economics is even worse at predicting depression.
Out of 60 depressions worldwide, and a single year ahead of time, economists were only able to predict two of them.

Why Are Economists Such Poor Forecasters?

Because the economy is influenced by a staggering amount of factors, and they are all interwoven and interdependent.

Since many of these factors are interdependent, it's even difficult to define causality.

Nate Silver then turns to analyze the failure to spot the 2008 financial crisis. For more on behavioral economics also read:

- The Undoing Project

2. Use Logic, Not Just Data

Having more data might not be the solution to better forecasting.

Indeed **just adding more data might lead to false positives and show correlations where there is none**.
For example, for 30 years the Superbowl seemed to have a strong correlation with the stock market.
It reached a point where the chances of that relationship being a mere chance were 1 in 4.700.000. Yet, it was simply chance.

Indeed, having more data can often only increase the quantity of noise, which makes it even harder to spot the signal.

TPM Note: Always combine logical analysis with science
As part of our 3-pillar system

Weather Forecast Example

Long-term weather forecast is such an example.

Models with hundreds of data points failed spectacularly and models with humans who tried to pinpoint more meaningful signals and used less data fared better.

Instead simpler models that only take into account CO2 in the atmosphere and CO2 projections did much better.
One single signal is highly correlated with global warming, and that's all you need.

3. Use Bayes' Theorem to Avoid Over-Weighing Latest Info

The author introduces the Bayes Theorem to help us overcome our natural biases and embrace a more data-driven approach.

One of our *psychological biases* is that of over-weighing new information and discounting the old information we had.
The Bayes Theorem instead considers all information and puts each one of them in perspective as we keep adding more data points.

4. Spread Your Data Sources

Political scientist Philip Tetlock began to notice which type of forecasters turned out to make more accurate predictions.

He realized that those who were right most often had a different approach: they would combine many pieces of data together.
Instead, the ones who were not nearly as successful would rely on one big idea or fact.

My Note: This might seem in contrast to what was previously said
But I think it's only an apparent contradiction.
The poor forecasters were probably watching only one big signal that wasn't well correlated to their predictions.

Hedgehogs and Foxes

Hedgehogs are people who rely on one big idea or claim.
They are brasher and seem more confident. Sometimes they claim they know the truth and can look very charismatic.

Foxes instead look at all the information available and tend to look past ideologies. They change their opinions if the data changes.

Hedgehogs are much more "media-friendly" as they garner much more attention with their confidence and brashness. However, they are also much more often wrong. Indeed their chances of getting it right are just a little greater than pure chance.

Sigmund Freud is a good example of a hedgehog.

5. Don't Try to Beat the Stock Market... Copy Lawmakers

The author says that beating the stock market is difficult because it tends to be relatively efficient.

Most of the trades are done by large institutions that do indeed analyze stock fundamentals, so the link between prices and fundamentals tends to be corrected.

There is however, one group in the US that is rather good at beating the stock market. And those are the members of Congress, who tend to fare 5-10% better than the market returns.

Congressmen also have insider information through lobbyists and, of course, direct effect on the market through legislation.
A coincidence?

How to Predict a Bubble

Nate Silver still proposes a couple of ways to predict if the stock market is nearing bubble territory though:

1. **A sharp increase in stock prices** (if S&P 500 increased at double its long-term average over five years, 62% of the time it ended in a severe crash)
2. **P/E ratio** (if it's much higher than the long-term average of 15 you have a good indicator that a bubble is forming)

However, it's not irrational for many money managers to keep buying as a bubble is forming. When the market goes up and they make money, they reap big rewards.
When the market collapses, they either only lose their job or nothing. And since everyone's buying, it's unlikely they'll be singled out as the guilty ones.

Real-Life Applications

- **Watch Out For Finding Meaning in Patterns**

Someone said we humans are pattern-making machines. However, those patterns are often made up. So watch out

for not reading too much into patterns.

- **Watch Out for Charismatic & Confident Forecasters**

People who seem super confident in their own predictions are often also more likely to be wrong. I repeat: overconfident people are more often wrong.

CONS

Longish
The Signal and the Noise could have been briefer.

Repetitive
Lots of concepts repeat and could have been combined.

Review

"*The Signal and the Noise*" may be one of the best books on statistics and forecasting available for the general public.

It sits at the convergence of numbers and psychology, and reminded a bit of Nassim Taleb's work.

Hooked: Book Summary & Review

Lucio Buffalmano · 29 September 2018 · Archived copy · Original

Hooked studies “addictive products” and explains what entrepreneurs and marketers can do to make their own products addictive.

TPM Strategic Audit: Win The Dopamine Arms Race
Hooked is a dual-use manual for **Social Engineering**. For the entrepreneur, it provides the ‘Hook Model’—the industry standard and goal for building high-retention, habit-forming products. For the high-agency man, it’s a **Vulnerability Assessment and self-defense tool,** exposing the psychological triggers that hijack your attention and monetize your loss of productiviy. Wisen up and don’t let them win. **Reclaim your focus.**

Bullet Summary

- Get other users to provide the first triggers for you: you get free ads and network effect
- Make the first action to engage with your product as simple and quick as possible
- To make addictive products give variable rewards

Full Summary

About the Author:
Nir Eyal earned an MBA at Stanford University and founded an advertising business with some of his fellow students placing advertisements on Facebook. Eyal grew interested in psychology and behavioral engineering, and “*Hooked*” is the result of his research.

How Habits Form

Habits form through repetition, and the more you do them, the more automated they become.

Indeed repeated action forms pathways in our brains. And those pathways will stay there even when we manage to stop a habit.

That’s why, sadly, most alcoholics will start drinking again within one year of finishing a detox program.

The Most Successful Products Form Habits

Products that become habits in their users have a marked advantage over the competition.

Users use them more often and stick for the long term. Sometimes forever.
Even if it's not always good for the users, the habit-forming products will keep exercising a strong pull over the users that will make it hard for the user to ditch.

Habit-forming products also have high entry barriers.
For a new product to take its users, it must be *much* better.
And sometimes even when they are markedly better it's still not enough.

Take the QWERTY keyboard, for example. It is by far not the best, but no other keyboard layout can usurp QWERTY's stronghold among its users because that would mean getting used to a new layout, and it's not going to happen any time soon.

The Hook Stages

Nir Eyal says that for a product to hook its users, it needs to go through four stages:

1. **Trigger**: the event that makes us try the product (initially it's external, then it becomes external)
2. **Action**: what do we need to do to use the product
3. **Reward**: deliver pleasure
4. **Investment**: what we give in exchange for pleasure (ie.: money, time, information)

1. Triggers

The trigger initially is external because we don't know about the product.

But over time the pleasure of the reward builds internal mental triggers.

The most frequent internal triggers are emotions, and most often negative ones. Such as boredom, loneliness, confusion, or fear.

However, the reward is often able to give a positive jolt (often a dopamine hit).

Once we get that dopamine a few times we form pleasure links between a certain action and a reward we get.
Over time we will automatically repeat the cycle over and over by ourselves.
When that happens, we're hooked.

The more popular and catchy a product becomes, the more the trigger can be started by other users. Social networks, for example, add people thanks to the invitation from already existing users.
Free advertisement.

2. Action

To take action an individual must be sufficiently motivated and able to take action.

To be effective a trigger must offer a simple choice of action. The simpler the action to perform, the lower the entry barrier, and the more people will perform the needed action.

3. Rewards

What makes people really hooked is the itch for the reward. The itch is more important than the reward itself.

And the best way to hook people and keep that itch strong is with unpredictable rewards.

A reward which is always present, and always the same, grows us bored.
It's the anticipation and excitement of unpredictable rewards that hooks us.

Think of Facebook for example. You check it looking if there is a red notification of a like or a message. But it's not always there, and that's one of the key variables that keep us going back for more.

It's similar to when we scroll our feed. Lots of time is just boring stuff. But sometimes we'll find something awesome that makes us laugh, excites, or even bother us or saddens us.

4. Investment

When we invest in something we feel it's more valuable.

And investment also works to justify in our mind that what we invest in must be worth it.
So if we've done something many times we tell ourselves that it must be valuable.

Two Questions for Ethical Concerns

Producing and working on products that get people hooked can raise some ethical questions.
Nir Eyal proposes two questions to test if your habit-forming concept is ethical or not:

1. Does your product enhance people's lives?
2. Would you use the product yourself?

Real-Life Applications

- **If You Wanna Get Stuff Done: Don't Get Hooked**

If you're a high achiever who wants to be productive and get things done, you must control your hooking machine. Get un-hooked at unproductive stuff and get hooked on what drives you towards your goals.

CONS

- **I wasn't convinced about the investment stage**

I wasn't convinced by the fourth stage of forming habits. So people get hooked to, say, Facebook because they "invest" scrolling on their feed?

It doesn't seem to make much sense to me.

I think that if you prod people for answers, they are quite honest that scrolling on their Facebook feed is pretty much useless.
It's just that they can't help it.

PROS

Good Overview of How Apps & Social Networks Work
Hooked is a good book to understand how some apps and most social media hook people in.

Short and To The Point
Little time and space waste. I appreciate that.

Review

Hooked is an OK book on what makes certain products addictive.

While it's a valuable overview, more psychologically-informed readers may not find much new ground broken. The author also writes more from an entrepreneur perspective rather than an expert on neurobiology, and I wished for more practical examples and guides, including in how to stop being hooked.

Bullet Summary

- Invest in your future: be willing to make no money today for a bigger tomorrow
- Continuous improvement: look what others are doing well
- Experiment: try out new ideas, you rarely can know in advance what will work

Full Summary

About the Author:
Sam Walton was an American businessman and entrepreneur. He is best known for founding the retailer Walmart Wal-Mart grew to be the world's largest corporation by revenue and the biggest private employer in the world.

The Humble Beginnings

Sam Walton was born in 1918 in a lower-class family. His parents didn't have much but always took proper care of him.

His father was a hard-working man, but he never managed to start his business because, out of pride, he refused to take out a loan.

Lesson learned: there is nothing wrong to take a loan if it helps you move forward toward your goals.

The Hard Work

At a young age, Sam Walton helped his mother in the milk business. He would milk the cow and then go out and sell the bottled milk.
In 7th grade, he took his first official job delivering papers in the neighborhood.

Walton attended college and never stopped working to finance his studies.
Indeed he even managed to expand. His papers delivery business became a small business where he hired new delivery men.

Lessons learned:

1. Hard work pays off
2. You can make a good income as long as you provide value.

Walton's First Shop

In 1945 Sam Walton opened his first discount shop.
He was doing well, but he was always looking for ways to do better.

And he took ideas from all over the place. *Especially* from his competitors.

Back then checkouts used to be scattered around the store. But when Sam saw a store that only placed two checkouts at the front, he loved the radical idea.
He immediately did the same and saved money reducing the number of cashiers. And he made it more efficient.

When visiting a supplier Walton noticed the staff huddling together and cheering at the beginning of a workday. He loved the idea and immediately did the same in his new flagship store.
The "Walmart cheer" was born.

1962: The First Walmart

Walton was a very successful man in retail.

But it was relatively late, in 1962 that he introduced Walmart. In one of his usual journeys observing competitors and other retailers, he became convinced that discount stores were the future.

In a way, Walmart was another experiment for Sam. Walmart indeed was ugly to start with, but the question for Walton was: would shoppers shop strictly because of the lower prices?
It turned out, they would.

Put Customers First

Walton always wondered what he could do to make shopping better and easier for customers.

When he realized that farm families drove into town on Saturday to stock up he analyzed their behavior. They would need to go to different stores that were small and specialized.
They'd need to find parking each time, and all stores would close early.

He answered with bigger, one-stop stores, long opening hours, and free and abundant parking.

Lower prices and a better shopping experience was the best way to attract customers in Sam's mind, and he never stopped looking for ways to improve on both.

Putting Small Business Out of Business?

Sam Walton's stores were so successful that every time he would open a new one in a new town, local smaller shops would go out of business.

That drew a lot of criticism from Walmart.
But Walton had a different philosophy: if customers shopped at Walmart it was because Walmart gave people a better experience.

Walton indeed wasn't afraid of other big retailers: he thought that competition improved their acumen and made Walmart better.

The Big Discounts

It was in trying to lure customers away from a local Kmart that Walmart came up with its first big discount tactic. The local manager wanted to make a big promotion on laundry detergent but to get the prices down he needed to order 3.500 cases.

At this point, Walton thought that was crazy.
But he finally got around that the idea could have worked and went ahead with it.

And big orders for lower prices have since become Walmart's modus operandi.

Lesson Learned: lower your prices to sell more and you still come out with a bigger profit.

Price Wars

In Little Rock, a new Kmart opened and tried to lure customers away from Walmart, again, with low prices.

Walton gave the order that everything in Walmart has to be as cheap or cheaper than the Kmart's items.
During the ensuing price, toothpaste reached an all-time low of 6 cents when Kmart finally gave up.

Lesson learned: every time a new competitor moved into town Walmart had to push its prices as low as possible.

Employees' (Mis)Treatment

Walton always put customers first.

But **initially, he didn't put *employees* first**.

One day in 1955 a store manager called Sam to say he'd raised his stores' employees' wages from 50 cents to 75 cents. These were pitiful wages even back then -less than 5 dollars in 2018 terms-. But Sam was unmoved. He told the store manager to immediately cancel the raise and restore the lower wages because he hadn't hit his goals yet.

However, Walton changed their idea after a trip to England in 1971.
There he saw a store that would list its employees as "associates", and he began thinking that it'd be wonderful if Walmart could consider employees as associates instead of employees to be managed.

He also grasped here a fundamental truth: if he treated his employees well, they'd treat his customers well.

Upon his return to America, he decided then to call his employees associates and he started a cash and stock sharing so that all employees could take part in Walmart's success.

Invest, Invest, Invest

Walton was making good profits with Walmart, but he didn't let his money grow.

Or, God forbid, enjoy a lavish lifestyle.

Instead, Walton used the proceed of his stores to open up new stores.

During the first 8 years, Walmart was considered by some a failure because it was financially treading water. Instead, it was expanding and leveraging its earning power.

Walton's Mistake: Walmart's Power Moves

Usually defining moments for companies happen in their early stage.

Instead, it happened much later for Walmart. In 1974 the company was doing so well that Walton decided he could enjoy an early retirement.

He promoted Mayer, one of his two vice president executives to CEO, and stepped aside.
But he soon realized that the company split in two: one favoring Mayer and the other side favoring the other VP.

Two years later the internal faction was becoming so big that Sam met with Mayer to claim his CEO job back.
But Mayer left together with *dozens* of top-level managers who supported him.

Walmart's stock prices fell so low that Walton worried whether he'd be able to even salvage the problem.
But he quickly hired new managers and convinced David Glass, an old friend, to replace Mayer.

David Glass turned out to be awesome in the post and a major help in rescuing Walmart and pushing it to even higher heights.
He was indeed later nominated CEO of Walmart.

Sam Walton Personality

1. **Frugality**: Sam lived in a normal middle-class family. No sportscars, no big mansion
2. **Continuous improvemen**t: Sam always looked for ways to do better. He always visited other shops pondering what he could improve for Walmart
3. **Start & fix along the way**: Walton didn't start with beautiful stores. The first Walmart was ugly. But he knew he could fix that later
4. **Prioritize**: Sam was happy to start with very ugly stores because he went by priorities. Beauty wasn't the top

priority. Getting wares cheaply was

5. **Try new things**: Walton wasn't afraid of trying new crazy things to see if they would work
6. **Think long term**: like Jeff Bezos, Walton was happy to enjoy little earnings to invest in the future
7. **Life is unfair**: early on a major setback showed Walton that life is unfair

Real-Life Applications

- **Look What The Competition is Doing Right**

This is the biggest takeaway for me.
Most people put their egos ahead and look at the competition to gloat about what they're doing better.
Instead, Walton would strictly look at competitors to see what they were doing well.

- **Watch Out for Power Struggle**

When Sam promoted one of his VP as CEO a power struggle erupted.
Always watch out when you need to promote one person out of a small pool of candidates as people will naturally be jealous.
Learn power dynamics and office politics.

- **Watch Out When You Demote Powerful People**

Taking the job away from Mayer when he was the CEO was a risky move. Nobody takes demotions from a power position lightly.
Always watch out for who you give power to -and how you can take that power away in the most efficient way possible-.

CONS

- **Autobiographies Have Obvious Limitations**

As an autobiography, you have to keep in mind that Walton might have a tendency to embellish his own story.
Indeed I think he would have come across even better if he had put some more third-party criticism.

- **Caring for Associates?**

Honestly, at times all the words of affection and caring for the "associates", or employees, sound a bit empty marketing speak.
Of course, Sam Walton might have really believed in what he said, but that stands a bit in the way of Walmart being one of the richest corporations and one of the lowest-paying employers in America.

Also, read:

- Corporate manipulations

> 12 Ways Companies Manipulate Employees (W/ Examples)

PROS

- **Treasure Trove of Mindsets of Success**

In today's tech world it would be easy to discount *Sam Walton: Made in America* as yesterday's success story.
Instead, it's jam-packed with mindsets of success. It might be one of the biographies in which I've learned the most

so far.

Review

Sam Walton: Made in America was such a great read.

It would be easy to discount this book as irrelevant for many for the younger generation, or for many tech entrepreneurs.

After all, what's got a retailer to teach?

Well, it turns out: a lot.
The mindsets are the same whether you're in tech, retail, or arts.

And this is probably the biography I have enjoyed and learned the most from so far.

I am starting to see a trend among those who build multi-billion dollar companies.
The trends I'm seeing are:

- Life for the company: always at work, only live for work
- Frugality
- Investment in the future at the cost of fewer earnings today
- Always be learning
- Experiment with new ideas
- Money is *not* the sole or prime motivator

Great learning stuff.
Even though I'm not a big fan of a life *only* for work, I learned hugely from this book. I can only recommend Sam Walton: *Made in America.*

Winning: Jack Welch's Approach to Leading High-Agency Businesses (Book Review)

Lucio Buffalmano · 30 September 2018 · Archived copy · Original

In *Winning* author and famed General Electric CEO, Jack Welch teaches all he knows about running a record-breaking corporation. Welch shares how to be a great people leader, and how to establish a corporate culture that encourages innovation and team spirit.

TPM Note: Welch is the prototype of a successful, high-agency CEO
Jack Welch engineered a corporate ecosystem designed to aggressively filter for excellence and terminate mediocrity. This is the blueprint for Aggressive Differentiation—the process of identifying, rewarding, and retaining "A-Players" while treating "C-Players" as a tax on performance that must be eliminated.

Main Takeaways

- Foster a culture where people feel free to contribute their ideas and speak their mind
- Organizations have top, bottom, and average performers: know who stands where and treat them accordingly
- Make your mission concrete and measurable; embody and enforce the values to accomplish your mission

Notes

About the Author:
Jack Welch is a legendary former CEO of General Electric (GE). In his 20 years tenure from 1981 to 2001, he increased GE's evaluation by 4.000%.
And when he left the company he received a severance package of 417 million, a record-breaking payment.

Foster Culture of Candor

Jack Welch says that most of us have a culture of telling small lies for a quieter life.

For example, we don't tell our friend he's getting too chubby, or we wouldn't say that our mother's cooking was terrible.

But that culture of small lies for a quieter living can be destructive in an organization.
An organization should have a culture of free talking.

Unluckily that's not the case for most businesses. In most businesses, people hold back and don't voice their opinions and ideas.
And that's an immense waste of brainpower.

My Note: Ray Dalio approves
This principle is similar to the culture of "radical open-mindedness" from Ray Dalio's Principles and to "Radical Candor" by Kim Scott.
Jack Welch says that it's the boss who must talk about candor, demonstrate it himself first, and reward it.
He did so by instituting what came to be called "workout" sessions.

Work-Outs

GE would organize groups of 30 to 100 employees to discuss opportunities and better ways of doing things.
The key? They were anonymous employee meetings without bosses.

Bosses would only show up in the beginning and promise that they would give an immediate answer, on the spot, to 75% of the recommendations and ideas.
And they would resolve the remaining 25% within a month.

Basically, GE would force bosses to address the proposals of their employees and allow employees to speak without fear of retaliation.

Work-outs sessions led to an explosion of productivity, says Welch.

The 20-70-10 Approach to Human Resources

Jack Welch says that people management is one of the most important tasks of any manager and organization.

The "20-70-10" rule refers to percentages of the total workforce, and it means that:

- **20% = performers**, give them recognition, training, and compensation
- **10% = poor performers** and should go
- **70% = average**, you should strive to keep them motivated and lift them into the 20%

Welch encourages managers to differentiate employees according to the 20-70-10 rule and manage them accordingly.
At GE, managers actually had to rank employees on the 70-20-10 scale. "Managing accordingly" means **promoting and rewarding the top 20% and firing the bottom 10%**.

Develop A Rigorous Evaluation System

Jack Welch says it's paramount that evaluations are not done subjectively and on an ad-personal basis.
You must establish an objective evaluation system and rate your employees against it.

Sure, coming up with an evaluation system won't be easy, but that's not an excuse not to do it.

Flat Organizational Chart

Everyone should know fully well who they report to and what their responsibilities are.

But also go for as flat an organizational chart as you can afford.
Welch says that the more layers, the more vices, bureaucracy, and issues you will have.

Hire Well, Fire Fair

There is an abundance of good people around, but you must make sure you're able to spot them.

Welch says that the very first test is making sure that candidates possess the following three traits:

1. **Integrity**: they must be candid, honest, and reputable
2. **Intelligence**: doesn't mean Ivy League, but you want a smart workforce
3. **Maturity**: ability to cope with failure, and that mix of confidence and humility that comes from experience

Once you make sure a candidate possesses the three traits above, you should hire people who are positive and optimistic. People who are excited about working for you and can lift people's moods up.

I found it particularly interesting that Welch adds more crucial traits for senior management hires. One is "authenticity", or being who they are without wearing a mask. And the other is "heavy-duty resilience".

Heavy-duty resilience means that someone has been knocked down and beaten up badly, but bounced back to run even harder.

Institutionalized firing

Welch has been criticized for instilling a very competitive culture.

When every year the bottom 10% of performers are let go, there is naturally some fear in some employees.

But Welch says that firing staff instead should be done on the basis of performance evaluation systems. With a fair and objective evaluation system, it should come as no surprise to anyone that someone is being let go.

How to Be a Leader

Winning by Jack Welch has very good recommendations on how to be a good leader.
Here are some that I particularly liked:

- **Develop people**: leadership is about developing people
- **Exude contagious positive energy**: be a shining beacon of inspiration, help people stay optimistic and confident
- **Gain people's trust**: give credit, act fairly and honestly
- **Make the tough call**: sometimes leadership means making tough and unpopular calls. Don't shy away: you're not a politician up for re-election
- **Rock the boat**: it's your duty to chase possible issues and to push people to action
- **Celebrate**: make a big deal out of wins and achievements, give credit, and celebrate

Also, read:

- 13 laws of leadership, based on sound social-psychology

Concrete Mission and Values

The mission statement is your goal, and the values refer to how you plan on achieving your goals.

Many companies have vague missions and values that mean nothing, while Welch says both need to be crystal clear.

For example, GE's mission was to be number one or two in every business they operate in. That's clear, descriptive, and measurable.
Values need to reinforce your mission and make it possible you will achieve it.
In GE two of them were: "be intolerant of bureaucracy" and "see change for the growth opportunity it brings".

To show that you truly value your values, reward people who live by them, and punish those who don't. People will respect that you are serious about them and you will attract and retain people who live your values, instituting a self-reinforcing cycle.

Above all, **make sure your leaders live and breathe the vision**.

Strategy is Following Through Your "Aha Moments"

Welch says that your strategy is not a complex academic matter or rocket science.
It's all about coming up with "aha moments" and following through them with the right people.

Coming up with aha moments is the senior management's responsibility. The best way to come up with the strategy is to gather the senior management and analyze the market, the competitors, and the current trend.

Once you decide on a course of action, it's all about putting the right people behind you to make it happen.
For example, you need dreamers and visionaries for innovation and you need efficiency experts to cut costs.

In sum:

1. Look for "aha moments"
2. Staff the best people to realize your "aha moments"
3. Relentlessly chase the execution of your "aha moments"

Always Look For Best Practices

To always keep improving Welch recommends you are always on the lookout for best practices whenever you can spot them.
And even when you implement them, make it the company's religion to always keep working and tweaking them.

How to Change

Sometimes change is easy, like in death or glory cases.

But most of the time, most people naturally resist change.
To make change easier you should make a business case of why change is necessary or why it makes sense to do it now. Then communicate it relentlessly.

You could still have people resist change, and that's something you can't accept because resistance can kill your efforts.
As an employee, **resisting change is one of the biggest political mistakes you can make**. As a manager, says Welch, you must get rid of the people who resist change as early as possible.

Put in charge of the change those who are enthusiastic about the idea and promote and hire the people who will get behind them.

In sum:

1. Make sure everyone knows why you're changing
2. Hire, promote, and put in charge those who are excited about the change
3. Get rid of those who resist change

4. Always look and see new opportunities for change

Dealing With a Bad Boss

First of all, Welch recommends you ask yourself if the problem is you or the boss.
Ask yourself if your boss is a jerk only with you, or with everyone else.

I was surprised to read Welch saying that **9 times out of 10, sitting with your boss to talk about your issue will only hurt you**.
He is right indeed, and when I read that part my respect for Welch went up: this guy doesn't dole platitudes and says it how it is.

Lastly, ask yourself if the boss will be around for the foreseeable future. If he is, it might be good for you to change jobs.
But if you decide to stay, then stop complaining: you are there by choice.

Jack Welch Criticism

Jack Welch has been a controversial CEO.
In my opinion, some criticism stems fomr Welch's polarizing figure:

1. Direct and opinionated
2. Staunch free-market supporter
3. Staunch Republican, sometimes

Couple that with his “hack and slash” approach to making corporations lean, and you are bound to have a controversial leader.

Anyway, here are a few criticisms that have been leveled at Jack Welch:

John Maxwell in *21 Irrefutable Rules of Leadership* says that the true measure of a leader is how well the organization fares after the leader has departed.

Welch seemed to embrace that rule when he said that his work should be evaluated 20 years after he left GE. But so far GE hasn’t been doing that well.

Much of GE’s growth came from its involvement in financial services, and that, of course, didn’t fare well during the financial crisis.

Simon Sinek in *Leaders Eat Last* makes the case that leaders should care about employees, and he’s very critical of Welch.
First of all, he puts Welch’s performance in perspective. He says that during the 20 years of Welch’s tenure, the whole S&P 500 enjoyed a huge bull market, and all companies grew a lot.
Second, Sinek points out, Welch fostered a culture focused on short-term gains to appease Wall Street. He would push employees for continuous earning growth, and that pushed employees to cut corners.
That’s a culture very effective for short-term gains, but a recipe for long-term disaster.

Real-Life Applications

- **Fire Publicly When You Need to Send a Message**

Jack Welch says that when someone embroils you in a scandal because of unethical behavior you want to send a strong message to say that type of behavior is unacceptable. Instead of letting them go for “personal reasons” you should fire them publicly.

- **Don’t Set Goals At The Beginning of The Year: You Don’t Have Enough Information Yet**

Don’t set growth goals in stone at the beginning of the year.
You want to measure results compared to your market and the competition -stretch goals-, and you want to leave budget for possible opportunities that arise along the way.
You can use the same principle for your personal goals: my goals indeed are in constant motion.

- **Assume the Crisis is Worse Than it Seems**

Skip the denial phase and imagine the crisis is worse than what you imagine. That way you make sure you will tackle it appropriately. You want to expose and define the problem before anyone else does.

- **Try Different Jobs to Find One You Like**

Doing what you like has a huge positive impact on your life.
Think of what matters to you, then try a few jobs you think might fit. Keep iterating until you’re happy with what you found.

CONS

- **Money Is The Main Motivation?**

Winning seems to consider money as the main driver to reward and motivate people. While money is important, many people -most?- are actually not primarily motivated by money.
You can read more in *Drive* by Daniel Pink.

- **Most Suited For Big Corporations**

This is not necessarily a con, but just to make you aware: *Winning* is mostly tailored to winning in big corporations. The rules can be different in start-ups and one-man shows.

PROS

- **Great Wisdom on Leadership**

There is more wisdom on leadership in *Winning* by Jack Welch than in most books I have read on leadership.

- **Awesome How-To Guide**

Winning is not just filled with lots of wisdom, but it also provides a how-to guide for managing results.
And it's not just useful to CEOs, but also for people who want to understand what they need to do and provide to move up the corporate ladder of effective organizations.

- **Great Wisdom on Politics & Career Strategies**

Jack Welch is not one to hide behind political correctness.
He tells it how it is, and that makes a great book to understand office politics, career strategies, and how to become an executive.

Review

Winning is a fantastic book on agentic, goal-oriented management for men who want to be honorable, but also put the mission first.

Warren Buffett says that *Winning* is the only management book you'll need.

I don't particularly vibe with Welch's "up or out" policy, I can see a point in which heavy turnover hampers team cohesiveness. And I can see how it might start poisoning the work environment with fear and individualism (VS team-spirit).
But I can see why Buffett lauded *Winning* so lavishly.

I thoroughly enjoyed Winning and found much, much wisdom in it.
This book is really, really good.

If you want to build a business, if you want to be a leader, or if you are looking to learn more about what you must do to rise through the ranks, I can only recommend this book.

Bullet Summary

- Decide what your values and principles are: that will be your "moral compass"
- Find out what is important for you, the objectives you want to achieve in life
- Draft your goals based on your moral compass and your objectives
- Always prioritize and put first what's important to you

Full Summary

About the Author: Stephen Covey, the author of First Things First, is also the author of *The Seven Habits of Highly Effective People,* which is one of the best-selling books ever in the self-help genre.

Find Out Your Values

Putting first things first means executing not based on "general priorities" or on "what comes first".

But it means taking the time to think through what your values and principles are.
That's your internal compass.
And you should always use your internal compass when considering your tasks.

Decide What's Important to You

To decide what's important for you Covey invites the readers to picture the future they want.

From that future, you would like to have, walk backward and outline the steps you need to take today to reach your destination.

Once you know what steps you need to take today, you also know what's important to execute.

Set Goals Congruent With Your Values

Once you know what's important to you and what your values are, you can set your goals.

You want to set your goals in a way that you will achieve what matters to you while still staying true to your values.

To Covey, that makes the difference between goals that are reached and leave you unhappy versus reaching your goals while you are fulfilled and satisfied.

Differentiate Urgent VS Important

Once you know your goals, you will be able to escape the mistake that most people do.

Covey says that most people do first what they think is important and urgent.

However, urgent and important are often *not* the same thing.

And if forced to choose between doing what's urgent and what's important, most people pick urgent.
People feel important and in demand, if they are rushing from one thing to another, and tackling the urgent novelty we get an adrenaline rush which makes us feel energized and alive.

Why You Should Pick Important

Covey makes the case that we should pick important over urgent more often.

Why?
Because **important tasks are what lead to long-lasting happiness**.

Especially when urgent is not also important and would have little consequences, we might all gain turning them down more often.

Real-Life Applications

- **Don't Compartmentalize Your Life**

I agree with the idea of not seeing your life as independent silos of "work", "family", "friends", "hobbies" or whatever else you have.
Indeed I believe that if you need to make different compartments, you're probably not happy with some of them.

CONS

- **Unnecessarily Long**

The principle and idea behind First Things First are crucial. However, it could have been delivered in a much shorter format.

- **Somewhat Bland**

While the concepts of First Things First are good, they are also rather obvious if you have been reading about self-development for a while.

- **Contrived Prose**

The writing is often unnecessarily complex and contrived. And sometimes just plain poor.

- **Sometimes Proselytizing**

I had the feeling "*First Things First*" indirectly tried to inculcate certain goals and ethics into the readers.
An example of "important tasks" is time with the family, for example, as if that were important to everyone. And it recommends valuing interdependence and cooperation instead of independence and competition.
Yeah, I agree for great relationships, that's true. But it's not a good career strategy, so it depends.

PROS

- **Simple Yet Deep Wisdom**

The idea behind First Things First has the potential of improving many men's lives.

Review

Peter Drucker, an author of *The Effective Executive*, first came up with the sentence "*first things first*".
Stephen Covey takes that same idea and builds a whole philosophy around it.

I find that First Things First is especially useful to all those people who have not taken the time yet to reflect on what's important to them.
If you haven't done it yet, this is an absolute must and it will be a life-changer.

And for all the others who have taken the time to think about what's important for them, it serves as a powerful reminder.

However, as powerful as the concept is, I find the book too long and verbose.

Good to Great: Summary & Review

Lucio Buffalmano · 1 October 2018 · Archived copy · Original

In *Good to Great,* author Jim Collins investigates and explains the secret sauces that make great companies great.

The Strategic Verdict: Great on institutional excellence but naive for individual success
While the "Hedgehog Concept" is a potent tool for success, the book's "Level 5 Leadership" theory can confound quietness for competence, correlation for causation, and the company's (possible) benefits with individual success.
Core Value: 7.0/10 (Essential for understanding corporate "idealism"). **Strategic Utility:** High for **Focus**; Low for **Power Dynamics**.

Overview

- Find one thing you can do better than anyone else and stick to it
- Focus on hiring and keeping the best people
- Foster a culture where people feel free to speak their minds and where problems are addressed head-on

Notes

About the Author:
Jim Collins is an American researcher, author, speaker, and consultant. He earned his bachelor's in Mathematical Sciences at Stanford, worked a year and a half for McKinsey, and then return to Stanford to get an MBA.
Colling focuses on business management, business excellence, and business sustainable growth.

Methodology of Research

With *Good to Great* Collins wants to explain how to join the ranks of the elite companies.

To do so he examined US public companies and divided them into three groups. The main differentiator between each group was their stock market returns:

- **Good to great companies**: companies that went from the market average return to 3 times or greater the market returns
- **Direct comparison companies**: companies that stayed "just good" despite having the same shot at greatness
- **Unsustained comparison companies**: companies that briefly became but slid back to mediocrity

Let's see how they did it:

Hedgehog Tactic: Do One Great Thing, Over and Over

Think of the continuous competition of the hedgehog versus a fox.

A fox tries many different tactics to eat the critter, but the hedgehog always has the same powerful answer: curl up in a spikey ball.
And he wins over and over.
He can win with such high reliability because he has found one effective method of defense that he is so good at.
He doesn't need anything else, he simply repeats what he's great at.

And that's what companies that go from good to great do.
Companies that go from good to great have found the one thing they can excel at.
Here is what they ask themselves:

- What will we be passionate about?
- What will we be the best in the world at?
- What is one key performance indicator we should concentrate on?

The Hedgehog Realization

The title is actually incorrect.

It's because, Jim Collins explains, companies didn't usually wake up one day and said: "this will be our thing".
Great companies found their winning strategy randomly but stuck with it.

Sure, in retrospect and from the outside it seemed like a huge shift.
But there usually is no new strategy, launch event, or mission statement change. Instead, the push in the new hedgehog direction was a sum of tiny steps.
Each step delivered better results and further justified and motivated people to keep going until a full-blown strategy became obvious.

One example is Zappos, which focused on selling shoes while delivering the best customer experience.

Poor Companies Try Without Sticking

Comparison companies instead did not strive to consistently build momentum in one direction.

Their method instead is to throw everything and "see what sticks". They try several different changes, but since the following results are underwhelming, they change again and try something new.

New Tech Is a Means to An End

Companies that make the leap from good to great see new technology simply as a means to an end, not as an end in itself.

They have one strategy and one goal, and technology simply helps them get there faster.
And if the technology wasn't helping them towards their goal, they didn't even adopt the new tech.

Underperforming companies instead saw the new technology as a threat or as a competitive advantage in itself and scrambled to adopt it without an overarching plan.

Lesson learned: use technology as a facilitator for your goal, not as a goal in itself.

Level 5 Leaders: Great Leaders = Great Companies

Jim Collins refers to leaders of great companies as "level 5 leaders".
A level 5 leader:

- Great people, leaders, and team players
- Fanatically driven toward results
- Want to see their company succeed *even after* they're gone
- Share credit and shoulder the blame
- They are modest and understated
- Most often come from within the organization

By contrast, **two-thirds of underwhelming comparison companies had CEOs with huge egos**.
These ego-driven leaders didn't seem to care much about what would happen after them and often had no succession plan.

Sometimes, highly charismatic leaders are also counterproductive when that means that people don't have enough space to air their concerns and ideas.

TPM Note: This doesn't mean that modesty promotes leadership!
It only means that in Collins data, some top companies seemed to have more modest CEO, but it's unclear how Collins measured modesty. And even then, these companies were only 1% of the sample. Instead, as Pfeffer notes in his criticism to this book, **narcissism and several dark triad traits seem to facilitate leadership acquisition.** Research on narcissism also suggests it may be beneficial in some circumstances and valuable within an 'optimum balance'.

Hiring Great People

Great companies make human resources a priority.

They want to put the right person in the right position, but they focus more on who to hire than what to hire for.

They never hire the wrong person even when they badly need professional skills, and hire more great people even when they don't have a specific opening for them.

When they spotted the wrong person they acted immediately *to keep their workplace as**ole free*.

Three HR rules:

1. When in doubt, don't hire
2. When you know you need to make people changes, act quickly
3. Put your best people on the biggest opportunities (not problems)

Lesson learned: put the right people in the right position and winning is almost assured.

Stay Realistically Optimistic

I particularly liked this part of "*Good to Great*".

Collins says that great companies confront reality even when it's ugly. But even when things seemed to go all wrong,

they still retained unwavering faith that somehow they would make it and come out winning.

For more on the science of optimism check out our positive psychology overview.

Lesson learned: success requires confronting the ugly realities while never losing faith.

Foster A Culture of Openness

To make sure people don't hide from the truth great companies have a culture where people are free to express worries, concerns, and problems.

This is the same concept that Jack Welch's *Winning* refers to as "candor" and Ray Dalio's *Principles* refers to as "radical open-mindedness".

Rigorous Self-Discipline

Companies going from good to great have strong self-discipline in pursuing their hedgehog strategy.

They work hard and single-mindedly on their goals.

However, this must be a culture institutionalized in the company that people are *willing* to adhere to.

Indeed when the culture is mandated top-down by a tyrannical leader, companies might enjoy a brief spell of greatness, but that usually doesn't last.

An example is Stanley Gault, the CEO of Rubbermaid. A self-styled "sincere tyrant", he took the company to new heights. But soon after he left the company lost 59% of its value because no real culture was established.

3 Levels of Discipline

To summarize what it takes to go from good to great, Collins says it's a discipline at the three key levels:

- **Disciplined people**: great people focused on excellence and the hedgehog strategy
- **Disciplined thought:** honesty and openness
- **Disciplined action**: unrelenting focusing on what matters, putting first things first

Real-Life Applications

- **Stay Realistically Optimistic**

I particularly loved what Jim Collins calls the "Stockdale Paradox".
Such as staying grounded in reality while you keep being optimistic about the final result.

I find this concept to be immensely helpful since in the past, with the "self-esteem movement", self-help used to be full of "feel good" and "reality distortion" BS.

The truth is that to move forward in life you must look at reality. But it's also true that you must keep your faith, confidence, and self-esteem even when things are not great.

Hence, you must do both: **believe you'll eventually prevail *while* you also stay hyper-realistic**.

CONS

- **Is There No Recipe to Follow?**

The moment I read that great companies had no initial strategy was the moment I thought Good to Great was an exercise on theory with limited applications.

Indeed, if poor companies just try different things without finding a great strategy and great companies *stumble* on their success… What's the difference between good and great?
Because if the difference is "chance", then what's the use?

- **Some Romanticized Accounts**

I found some stories to back the theories to be a bit "romanticized".
Darwin Smith, CEO of Kimberly-Clark for example, works on a farm during holidays and mingles with plumbers and electricians.

- **Stock Market Returns As Yardstick?**

Of course, it would be difficult for the author to find any data which is more readily available than stock returns to judge a company's effectiveness.

However, every time the author says that a company did well after X left or took office, I gotta wonder.
Did the whole market experience a bear or bull market? Did anything else occur? Was the market simply reacting to external events the company had no control over?

In brief: stock market returns to judge a company's effectiveness is only a good yardstick if you also consider what happened to the rest of the stock market.
And even then, are you sure they are not doing great because they are following strategies that work today, but that will doom them tomorrow?
Case in point: Fannie Mae and GE were examples of great companies.

- **Abundant Inductive Reasoning & Statistically Not Iron-Clad**

I personally felt that the scientific methods used for the analyses in "*Good to Great*" are not the best in class.
There is a lot of inductive reasoning here and lots of correlation (and correlation does not mean causation).
Be aware of the limitations.

Review

Good to Great provides provides valuable ideas on what makes companies effective, although its explanations raise some questions since analyses are largely retrospective rather than predictive, and the methodology on some traits wasn't fully clear.

In hindsight, quite a few of the companies listed as "great" in Jim Collins' book didn't turn out to be so great. I wouldn't take that against "*Good to Great*", though. As an old article in The Economist once said: "market domination is only a snapshot in time".

A bigger question mark from TPM's point of view is the leadership analysis, which seems to promote a naive model of 'success leaders are honest'.

But overall, it's a good book.

What I Know For Sure – Summary

About the Author: Oprah Winfrey is an American media entrepreneur, talk show host, and vocal supporter of female empowerment initiatives.

The Main Message: You Can Turn Anything Around

The overarching message of "*What I Know for Sure*" is that no matter how badly you feel your life is, you can turn it around.
It's your responsibility to do it though, and nobody else.
Complaining won't take you anywhere and only make things worse.

And as Oprah showed it, you can do it.

Early Childhood

Oprah didn't have a happy and easy childhood.

Her mother was an unwed mother and she felt shame and regret about her pregnancy. She hid it until Oprah was finally born in 1953.

Oprah grew up lonely and raised by two inattentive grandparents.

Childhood and Teens

By most people's standards, things not only didn't improve much for Oprah but got much worse.

Oprah was still alone and lonely.

And she was sexually abused for four years between the age of 10 and 14. She even got pregnant and hid her pregnancy until the baby was born.
The child only survived a few weeks before dying.

Hardships Made Her Stronger

However, **Oprah believes that the hardships and tragic events of her childhood also underpin her huge achievements**.

Loneliness taught her self-sufficiency, to depend on nobody else for love and happiness but on herself.
And she acquired the mindset that nobody was there for her. She would have to fend for herself.

Be Your Own Source of Self-Worth & Love

Even though as a young woman Oprah was very successful career-wise she was looking for validation through a man's love.

She didn't just want a man's love, she *needed* it.
In a particularly dramatic scene, Oprah once tried to stop a boyfriend from walking out on her by throwing his keys in the toilet.

My Note: Common low self-esteem issue
is rather typical behavior for women with low self-esteem and children who grew up without parental love. Also read: *Will I Ever Be Good Enough.*

Oprah makes the point that instead of depending on others we need to focus on ourselves as our own source of love and self-worth.
God, she says, has provided you with the ability to love yourself the way you deserve.

Implementing Gratitude in Our Lives

Like most people, gratitude didn't come naturally to Oprah.

And like most of us, she used to focus on what she didn't have.
What she didn't have and immensely bothered her, was a lean physique.

She tried all kinds of diets and was obsessed with staying thin. Then one day, after a health scare, she realized that she worried about how she looked instead of being grateful for having a healthy body.

And from that day on she changed.
She focused on what she had and she was able to love the image she saw in the mirror.

Overcoming Fear of Judgement

A major sticking point on her way to success was the fear of judgment.

Sometimes Oprah also expressed the opposite of what's fear of judgment for most people: the fear of being too successful.

It started in third grade when a teacher compliments her on the homework she had done.
That day she feared that her classmates would dislike her for being too arrogant. And that became her number-one fear for years to come.

Oprah believes that her weight gains were her unconscious way of saying "I'm not special". By being fat she would send the message that she was normal just like everyone else.

But by hiding her talents she could never win.
She would be anyway too much for some and not enough for others.
And she decided to focus on herself instead.
The only person she had to impress or prove something to was herself. When she adopted that perspective fear stopped controlling her life.

The Importance of Saying No

When she started hosting her talk show many people would show up at the studio asking for her help.

And Oprah would try to help everyone all the time.
At a certain point, it got too much to handle though and she had to wonder what was driving her to help more people than she could handle.

And the answer was that she wanted to be liked and that, again, she feared that people wouldn't like her if she said no.

Once she understood it was fear that drove her, she realized she had to learn to say no.
It wasn't easy for her also because, she says, in her childhood violence made it difficult for her to enforce her boundaries.

But the first step was to accept that she was a kind and caring person even if she needed to say no.
And she started deciding based on what she wanted to do.

Pursue Excellence to Beat Racism

African American activist Jesse Jackson once visited Oprah's high school and said that the best way to beat racism was to pursue excellence.

Oprah wrote that down and stuck it on her mirror so she would see it every day.

Let Go and Enjoy the Moment

Oprah Winfrey talks about one of the moments she was the most nervous in her life.

Dancing with Tina Turner.
She was so afraid she would ruin the show that she is shaking and uptight on stage.

But eventually, she was finally able to tell herself "this is your dream, enjoy or you will squander". And she finally allowed herself to let go of her self-consciousness and enjoy the moment.

This is the video of that performance:

What I Know For Sure Quotes

On using pain to achieve success:

> Turn your wounds into wisdom

On gratefulness:

> Be thankful for what you have; you'll end up having more

On cultivating happiness:

> The more you praise and celebrate your life, the more there is in life to celebrate

Real-Life Applications

When Everything's Against You: Pursue Excellence
Whenever people or society are against you, whenever people want you to lose, whenever the cards are stacked for you to lose… Your answer must always be: *get so good they can't ignore you* (in Oprah's words: pursue excellence).

CONS

- **Sista-Science**

Sista-science is my way of spoofing the expression "bro-science", such as science that is not proper science but personal intuition or some bits of pop science mixed with personal opinions.

Oprah's conclusions on emotional affairs and why people cheat feel a lot like bro-science.
There is research and evidence in those fields, so we don't have to "guess" for answers.

- **Some Platitudes**

The advice on "depending on ourselves" for our own love is a popular one -the popular book *The Mastery of Love* is an example-.
However, attachment theory shows that we can all be more confident when we have a strong partner to be attached

to.

- **Some So-So Dating Advice**

Oprah says that “if a man wants you, nothing can keep him away”. It’s an awesome book, but don’t take that one at face value.
Also read: the 8 most common women’s dating mistakes.

PROS

- **Great Message of Hope**

What I Know for Sure delivers a great message of hope for anyone who has been through is going through a difficult time.

- **Powerful Life Advice**

You can’t argue with life advice such as “enjoy the moment” and “celebrate more and you’ll more to celebrate”. That’s true and it’s life-changing.

Review

By reading “*What I Know For Sure*“, I got the feeling that Oprah has a tendency of jumping to conclusions without second-guessing her judgment enough.

However, I also believe that she has developed strong self-awareness.

And I think that’s one of the positive sides of What I Know For Sure: it deals with fears and insecurities that many of us have, and it can help grow our sense of self-awareness.

Overall, I could recommend What I Know for Sure to almost anyone, but *especially* to those who had a difficult childhood or are facing difficult times.

But whether you should read it or not also depends on whether you like Oprah or not, though.
If you like Oprah, you will like the book.
If you don’t like Oprah, you might learn a thing or two… But you’re better off spending your time with some other authors you like

The Invisible Gorilla: Summary & Review

Bullet Summary

- We can't always fully rely on our cognitive functions
- Intuition, being based on our cognitive functions, can't always be trusted
- Many of us tend to overestimate our capabilities and skills -especially those with little skills!-

Full Summary

About the Authors: Daniel James Simons is an experimental psychologist, cognitive scientist, and professor of psychology at the University of Illinois Christopher F. Chabris is an American research psychologist and professor of psychology at Union College.

Second-Guess Your Intuitions

Chabris & Simon say that sometimes self-help books tell us to trust our intuitions and gut feelings.

They make the case instead that our intuitions have many limitations and we shouldn't be trusting our "gut instincts" all that much.

This seems to be a reference to pop psychologist Malcolm Gladwell and his theory of "thin-slicing" in "*Blink*"

We Believe We See More Than We Do

Usually, we notice what's unusual.
But that also means that **we miss a lot of what appears to be usual.**

And if we are very intent on observing or paying attention to something, then we are likely to miss also something *very* catchy, conspicuous, and unusual.

The authors, for example, devised the gorilla experiment.

They told people to count how many times the players pass the ball to each other.
Then they would have a man dressed as a gorilla walk smack in the middle of the experiment for 9 seconds and beat his chest.
A full half of the people were so focused on counting the ball passes that they didn't notice the gorilla.

We See What We Expect to See

Similarly, sometimes we are so focused on looking for a specific item that we fail to see anything else happening around us.

The authors say that 65% of car-motorcycle accidents happen because cars turning into driveways fail to spot the motorcycle.
It's not that they weren't looking, but they were looking for *cars*. And they failed to recognize the oncoming motorcycle.

Our Memory Is Not Accurate

The author's survey revealed that 47% of people believe memories don't change.
And 69% believed that memories are like videos accurately portraying all that actually happened.

But that isn't the case.

We forget a lot, obviously.
But sometimes we also make up memories.

Some other times we remember without important details.
And other times we remember *adding* some details.

For example, one experiment had students read 15 associated with sleep like "slumber," "drowsy" and "tired."
However the word "sleep" wasn't there, but when students were told to recite the words they read, they inserted "sleepy" in there.
That happened because we are more concerned about meaning than exact words.

Failure of Source Memory

Another interesting phenomenon related to memory is the "failure of source memory".
That happens when people tell a story that happened to them but that actually never happened to them.

It simply happened to a friend of theirs, or they heard it a few times, and they make it their own.

Deceitful Self-Confidence

More than half of people believe they are smarter than the average.
Which of course makes little sense since 50% would be average or below.

What's most interesting though is what came out of a survey of chess players.
Chess players are ranked internationally along with a point system. And the majority of them thought they were underrated by at least 100 points.
And the interesting point: **the lower the skills of the players, the more they thought they overestimated their skills**.

More Confidence Doesn't Mean More Skills

But unluckily, **the more people act self-confident, the more they tend to believe and trust their skills and knowledge**.

A famous experiment at the University of Rochester showed that doctors that gave a prescription without looking up the disease were rated as more trustworthy than doctors who didn't look up the disease.
But the doctors who took the time to double-check were right more often.

This is one of the reasons why charismatic men tend to draw such a major following: they look secure and people trust them.

We Know Less Than We Think We Do

The more we are familiar with something, the more we believe we "know" it.

However most people failed to accurately depict the functioning of a bike, and probably most of us have no idea how a toilet actually works.

We also tend to overestimate our understanding of a topic if we receive lots of information about it.

However, lots of information can often lead us astray as we get lost in the noise of the short term -also read The Signal and the Noise-.

We See Causation Where There Is None

Humans look for patterns.
And end up seeing a lot of them. Often, where there are no patterns at all.

We are most at risk of seeing non-existing patterns when two events happen at the same time.
Then our brain immediately goes "ah, this happened, it must be because of that".

Also, read:

- Fooled by Randomness

The Invisible Gorilla Video

This is a video of the famous experiment.

Half of the people who were instructed to count the ball passes hadn't noticed there was a gorilla walking right in the middle of that group.

https://youtu.be/LZYLBTeMT6g?t=3s

Real-Life Applications

- **Beware of Over-Confident Individuals**

Those who looked overly confident are either really well prepared or… They might just be super wrong.

- **Don't Trust Those Who Believe They're Underrated & Underappreciated**

It's often those with the lowest skill level to believe they deserve more and that they are being unfairly judged.
Of course, also keep in mind this might not *always* be the case and of course, many *can* indeed be unfairly judged.

CONS

- **Needless War on Intuition?**

The authors take aim at intuition right from the title.
However, the biases they talk about do not necessarily disprove intuition or its usefulness.
It feels that it's an unneeded war against intuition. And, at the end of "*The Invisible Gorilla*", there is no strong case against intuition.

- **Too Long**

The invisible gorilla experiment was an interesting one, and the other experiments the authors describe are also interesting.
But it feels padded and "*The Invisible Gorilla*", the book, could have all been briefer

PROS

Some Good Insights
Even as an avid reader of psychology, I learned a couple of good things. Like why so many cars fail to see motorcycles.

Review

The Invisible Gorilla builds on a famous experiment to make a larger case on human cognition and biases.

For most people with a keen interest in psychology, some of the content will not be new.
But I found a few new tidbits here and there.

Bullet Summary

- When kids have a tantrum, don't attack them or minimize their feelings but acknowledge them
- Talk and communicate about the rationale behind your rules
- Never give your children negative labels

Full Summary

About the Authors: Elaine Mazlish (1925 – 2017) was an American parents' educator and author. Adele Faber studied theater and drama before earning her master's degree in education. She then studied children's psychology and made a professional career in the field.

Introduction

"*How to Talk So Kids Will Listen,*" says that blaming your children for your parenting woes is the wrong approach. Instead, you should focus on improving your communication with them.

With better communication, you can improve their behavior, your relationship with them, and very possibly even improve their future.

Faber and Mazlish propose a model based on listening, sharing your feelings, and respecting your kids.
Here are a few takeaways from "*How to Talk So Kids Will Listen*":

Acknowledge Their Feelings

The authors say that many times children don't listen because parents fail to acknowledge their feelings.

Imagine for example you're shopping at the mall and your 5 years old begins to complain he is hungry.
You tell him to wait and he gets louder:

> I am hungry. I want food now

As the kid raises his voice many parents would raise their voices back telling him to be quiet.
But most kids won't listen and only get noisier.
The authors say that much of children's behavior is tied to how they feel, and when we fail to address it he feels ignored and spurned. He cannot understand why he should behave when he is feeling bad and you fail to address his concerns.

Instead, address the underlying cause of his misbehavior:

> I can understand you are. It's been a while since breakfast, eh?

Remember that the same rule of honesty applies to communication with children. Don't pretend you understand it is a tantrum if you don't.

How to Acknowledge Their Feelings

A mistake many do in communication is to minimize people's feelings. Telling them it's nothing, that it's OK, that they can get it replaced, or that they will smile about it tomorrow.

This is bad practice with adults already, and it's even worse with children.

Instead, you want to take people's feelings seriously. Pace their own reality. If they cry because a sticker got unstuck don't tell them it's nothing, but try something like this:

> It's terrible. One of your favorite sticker ripped. And now your album is not a perfect album. Sure, we can get another sticker on top, but right now it's broken. I can imagine how upsetting it is. If I would get a scratch on my new car I would very upset as well.

When you can make kids feel understood they won't have as much a need to keep crying and misbehaving.

But remember: **all feelings can be accepted but certain actions must be restricted**.

Steps to Acknowledge Kids' Feelings

1. Listen quietly and attentively
2. Acknowledge with one-word answers ("uhm.." "I see")
3. Give the feeling a name ("annoying", "what a shock")
4. Provide his wishes in fantasy-land ("If I had a magic wand I'd make a burger appear", "I wish I could make the rain stop")

Explain the WHY

Sometimes children will throw tantrums against your rules.

Imagine your kid is resisting the bedtime rule and wants to stay up for longer.
The first thing you would do is to explain the reason behind the rule:

> When you stay up late you will be tired in the morning

Then you can offer more information as to why that's a bad thing. For example:

> When you are tired in the morning you will not have energy for school and you will find it difficult to focus and concentrate

But what do you do when your child refuses to listen?

Don't Punish but Enlighten and Instruct

The authors say that punishment leads to an escalation of anger.

Your child is also more likely to grow bitterness towards you, making it more unlikely he will listen in the future. And in some cases, children fail to see the connection between punishment and wrongdoing. When that's the case, punishment is utterly useless in helping them learn.

My Note: It's potentially harmful, not just useless
Continuous punishment when the kid fails to see the connection between punishment and wrongdoing can lead to learned helplessness

Here is a better approach the authors recommend with the example of a child coming home late:

1. Speak to her child about why she came back late
2. If they complain about being grounded, ask why they'd feel mistreated
3. Explain the rationale behind the grounding: you are concerned about their safety
4. Talk about possible solutions you'd both be happy with
5. Come to an agreement
6. If they fail to follow up with the options you agreed, take the necessary precautionary steps

Let Them Make Their Own Mistakes

It's uncomfortable seeing our children doing mistakes and struggling when we feel we know better or we could help them quickly.

Yet it's often best to let them find their own answers and solutions.
The authors say that you shouldn't always intervene when you see them struggling to tie their own shoelaces.

In extreme cases of children wholly dependent on you, they will grow a feeling of helplessness and worthlessness. The children of overbearing parents feel infantilized and violated. Like they are not allowed to be themselves.

Here are a few ideas the authors propose:

1. Let them make their own choices whenever the consequences are not dire
2. They can learn to coordinate their free time and homework duties as long as they do them
3. Encourage them to seek advice outside the home, from their teachers or spiritual leaders
4. Make peace with his struggles: struggles are how people grow

How to Praise Effectively

The authors offer a few pointers on how to give effective praise:

1. Don't say they did great, say you really liked what they did
2. Praise selectively and when well earned: too many praises will lose their values
3. Don't hint at past weaknesses

4. Never use negative labels

The danger with negative labels is that the children will start believing in them and they will never manage to shake them off.
Labels can also become self-fulfilling prophecies when children start believing in them. Wouldn't it be a pity if your child started living up to your label of "lazy", "slow learner" or, worst parenting of all, adjectives such as "stupid"?

Video-Summary

I particularly liked this summary on Youtube:

Real-Life Applications

Make People Feel Understood
Don't tell people "it's OK", but let them express their feelings. Help them express their feelings and if you truly understand what they're going through vibe with them and/or offer your own similar story.
More on communication:

- Crucial Conversation
- Difficult Conversation
- Nonviolent Communication
- Four communication mistakes men make with women
- Effective group communication

CONS

Some Examples Are "Easy-Level"
Some of the examples depict rather well-behaved children that immediately improve their behavior.
I like to see realistic scenarios and harsher scenarios: when you can deal with the worst, you will walk on the easy.

PROS

Solid Principles That Work
Overall, the ideas and psychology behind "*How to Talk So Kids Will Listen*" are solid and effective.

Review

My communication with children has been rather limited, so take my opinion with a big pinch of salt.

Overall, "*How to Talk So Kids Will Listen*" seemed a good book from my point of view.
At times I wished it would make the case for stronger leadership. My opinion is that you are the parent, and that role comes with duties, difficulties, and heavy responsibilities.
Those responsibilities require that sometimes it's your way even if kids don't approve. And that doesn't have to be necessarily disrespectful.

However, overall, this is a great resource for parents, soon-to-be parents, and anyone who wants or needs to communicate effectively with children.

Dangerous Personalities: Summary & Review

Lucio Buffalmano · 2 October 2018 · Archived copy · Original

In *Dangerous Personalities*, author and former FBI agent Joe Navarro describes four dangerous personality types, together with advice on what we can do to defend ourselves.

Bullet Summary

- **Be aware** of your physical surroundings and who you get emotionally close to
- **Take warning signs seriously**, hunches and early red flags are important signals
- **Predators have no conscience**, moral or ethical stops. Stay away

Full Summary

About the Author:
Joe Navarro is an American author and former FBI agent. He is also the author of the body language manual "*What Every BODY Is Saying*".

Introduction

The four dangerous personalities Navarro describes are:

1. Narcissist
2. Predator
3. Paranoid
4. Unstable

1. Narcissists

Narcissists believe they're above the law and above society's rules.
They will lie, cheat, or even kill if it's in their best interest.

Joe Navarro says that an example of two narcissists are Kenneth Lay and Jeffrey Skilling, the men behind the Enron

scandal.
Lay and Skilling cooked Enron's books and encouraged their 20.000 employees to invest in Enron, resulting in thousands of people losing their life savings.
What makes them narcissists, says Navarro, is another typical narcissistic trait: entitlement. The two of them believed they were entitled to get every single (stolen) penny.

Barnie Madoff is another example of dangerous narcissism, highlighting a sense of superiority and a lack of empathy.

Defense:

Let them know early on that you won't tolerate disrespect

2. Emotionally Unstable Personalities

Emotionally unstable personalities are like victims searching for an oppressor.

They store and remember wounds, whether real or imagined and use them as ammunition.
Emotionally unstable individuals have a huge need for love but little ability to maintain a healthy relationship. You can find a lot of them in cults because they offer unconditional acceptance without the need for building a solid relationship.

My Note: Is This BPD?
it feels to me here that Navarro is describing a borderline personality disorder.

Also, read:

- Walking on Eggshells
- Anxious attachment style

Defense:

Don't get dragged down into their emotional drama.
Be especially watchful they try to blame you for it. If you're in a relationship with it and they continuously threaten suicide, harm, self-harm or hold the relationship hostage, consider moving on.

3. Paranoid Personalities

Paranoid personalities see threats everywhere and from anyone.

President Richard Nixon was paranoid.
Navarro says that we can see it by his growing list of enemies and in his claims that he couldn't confide with anyone.

Hitler was also paranoid, as he managed to string together 2.000 years of unconnected events to build a case against Jews.

Navarro says that paranoia was beyond Paul Jennings Hill's homicide of Dr. John Britten. Hill, a right-wing Christian extremist, believed it was OK to murder doctors performing abortions in order to save unborn children.
And paranoia can lead people to join hate groups such as KKK and Aryan Nation.

My Note: I don't think paranoia is the main reason to join hate groups
Sure paranoia can lead someone to join hate groups.
But so does ignorance, past wounds, a need for (toxic) bonding, personal failure, and, as well, hatred.
I don't see paranoia as a major reason to join hate groups.

Defense:

Keep your distance if they try to recruit you into their false vision of reality. Do not try to change their minds as there is no changing these people's minds.
If the solution to their false beliefs is violence distance yourself and consider alerting the police.

4. Predatory Personality

Predators have no conscience.

They are cold, remorseless, and completely indifferent to the harm they cause.
This is the kind of mind that makes serial killers.

It seems here that Navarro is describing low-functioning psychopaths. Also, read:

- Do good and evil overlap
- Sociopaths signs
- Psychopath Free
- The Psychopath Test
- Snakes in Suits
- The Sociopath Next Door

Defense:

They will try to control you and coerce you. It might be physical, mental, or both. Distance is the best solution.

Comorbidity and Traits Overlap

Sometimes the traits of dangerous personalities can overlap.
Navarro says that one trait has the tendency of heightening the others, and only makes individuals more dangerous.

Ask yourself the following:

- Do they negatively affect your emotions?
- Do they behave antisocially, unethically, and erratically?
- Are they manipulative?
- Do they often act impulsively and out of control
- Do they have a strong need for instant gratification?

Tips for Avoiding Dangerous Personalities

- Establish boundaries and enforce your boundaries
- Stay active during the day: highest rates of violence occur between 8:00 p.m. and 2:00 a.m
- Keep emotional distance before you get to know people very well
- Always be aware of your physical surroundings

Real-Life Applications

Stay Watchful
As much as you look left and right before crossing the street, always take stock of your physical surroundings. And simply be aware there are some dangerous people out there.

CONS

Overall, I found *Dangerous Personalities* to be somewhat similar to *Emotional Vampires* in that it seeks to popularize the complex psychology of personality disorders.
But there were a few elements I didn't like, including:

- **Stigmatizing & Fear Mongering**

Navarro says that a dangerous personality can be nice but not good because being good means having honorable intentions.

I find that's a very broad brush with which to paint emotionally unstable people.
I have had relationships with emotionally unstable people, and while at the height of their emotions, they could have been dangerous, that doesn't make them mean or devoid of goodness.

- **You Can't Diagnose People From Afar**

In "*Dangerous Personalities*" Navarro diagnoses people without ever having met them.
How can it say for example that Enron's Jeff Skilling and Kenneth Lay were narcissists and not, say, sociopaths?
That really made the book seem more like an attempt at grabbing people's attention than a book that sought to be accurate.

- **Sensationalism Makes It Poor Psychology**

Dangerous Personalities may come across as sensationalism-seeking.

I wouldn't personally consider emotionally unstable people to be highly dangerous. I wouldn't even consider people manipulating others with suicide threats to be highly dangerous, since they rarely follow through (and self-harm is not as dangerous as others-harm). And of those who kill themselves, the vast majority don't take any other lives with them.

- **How Were Dangerous Personalities Picked?**

I gotta wonder how narcissists and emotionally unstable made the list of "dangerous" personalities.

- **Designed For Laymen, But Ends Up Only Being More Confusing**

People who have been reading or know about mental disorders will be put off by the labels and category-lumping.

Predators, for example, are sociopaths, psychopaths, and possibly malignant narcissists.
And emotionally unstable are histrionic and borderline.

But the author does not identify his categories by these names, and I must wonder if that will help the layman or further confuse him.

PROS

Good Book to Make People More Alert
Dangerous Personalities can serve to raise alertness on the dangers that some personalities can pose to us and to the people we hold dear.

Review

I loved Navarro's previous book *What Every BODY is Saying,* but *Dangerous Personalities* left me lukewarm.

Sure, a book that was going to analyze famous events and personalities looking for a diagnosis wasn't going to be medically 100% accurate, we knew that.
But I fear that approach might only confuse people, who will go around making random diagnoses of the people in their lives and labeling "dangerous" people who aren't really dangerous and who maybe actually need help.

Yes, it was an entertaining read, it taught me a few things and it strengthened a few concepts. But in my opinion, it's a pop psychology book looking for sensationalism, and as much as it can help someone, it can also harm others.

What I did like, though, is that sensationalism in this area of life can be helpful.
"*Dangerous Personalities*" can help awareness of the dangers of this world, and that evil does exist.

Bullet Summary

- Don't wait to be successful to be happy: be happy to be successful
- Shawn says that happiness is the joy of striving after our potential
- We can raise our baseline level of happiness

Full Summary

About the Author: Shawn Achor is an American author and entrepreneur, and also famous for his advocacy of positive psychology.
Achor arrived at psychology with a slightly uncommon path. He received his master of arts in Christian and Buddhist Ethics, then was a teaching assistant to Tal Ben-Shahar's popular "Happiness" course. And from then on, he deepened his passion and expertise in the topic of happiness and mental well-being.

Be Happy to Be Successful

Most people chase money and success to be happy.

But these people, have it backward.

Shawn Achor says that decades of research prove the opposite is true: **happiness leads to success much more reliably than success leads to happiness**.

It's best to be happy and let success and money derive from your positive states.
How can that be?
That's the case because happiness and positive states of mind are powerful performance boosters. They give us more motivation and physical and emotional health and they make us more energetic and creative. And that translates into success.

To quote the author (I edit for brevity):

> **Our brains are hardwired to perform at their when they are positive.**

So please don't wait for tomorrow's success to be happy, but start right now. You will be happier today and you will increase your chances of success.

Happiness Makes Us Healthy

Happiness is often not the result, but the cause of good health.

Tests show that happy individuals are better off at fighting cold viruses. They have fewer symptoms and actually have fewer viruses in their bodies.
It seems like the happier you are, the stronger your immune system.

My Note: Correlation is not causation
do be happier. But correlation is causation. What if happier people were happier because they were healthier and stronger?

Another study linking happiness levels and the lifespan of a group of nuns showed that there was a seven-year difference between the happiest and saddest nuns.

And another study even showed that happiness predicts lower blood pressure and heart rate.

Bottom line: a happy life is a healthy life.

Happy People Outperform

Turns out, a smile on your face makes you perform better.

A study asked children to do a series of tasks.
But they asked one group to think about something that makes them happy before starting. Result? The children primed for happiness completed the tasks both more quickly and with fewer mistakes.

Similar studies reached similar conclusions with adults. Even when mimicking a business deal negotiation.

Bottom line: feeling bad puts you at a massive disadvantage. Being happy raises your level of performance.

Happiness Is A Stress Antidote

People who watch videos that induce joy recover from stress more quickly than those who watch neutral or sad videos.

Psychology refers to this property as the "undoing effect", such as the ability to recover and erase previous unhealthy or negative states.

We Can Become Happier

Here's the great news:

studies confirm that we can permanently raise our happiness baseline and adopt a more positive mindset.

While scientists once believed happiness was mostly hereditary, today we know that we have far greater control over our emotional states and well-being than previously thought.

We will always have up and down, but we can raise our baseline so that we can enjoy higher highs and higher lows.

Again, yes you can become happier. The happiness advantage is available to everyone who puts in the effort.

How to Be Happier

And now the juicy part. How to exercise our happiness advantage and become happier?

#1. Meditate

Monks who spend years of meditating grow their prefrontal cortex, which is the part of the brain most responsible for the feeling of happiness.

But don't worry, you probably can start getting good benefits much quicker. Research shows that regular meditation can rewire our brains for a permanently higher level of happiness, lower stress, and even improved immune functions.

You can start with just ten or fifteen minutes a day.

#2. Find Something to Look Forward To

Anticipating future rewards lights up the same pleasure centers that the actual reward will.
Even just *thinking* of watching our favorite movie can raise our endorphin levels by 27%.

#3. Perform Acts of Kindness

Acts of altruism decrease stress and increase our mental health.

#4. Create an Uplifting Environment

Our environment and surroundings can have a huge impact on our mindsets and well-being.

Make your environment a positive and uplifting one, take a break during the day, and spend 20 minutes outside in good weather.

And watch less TV.
Studies show that watching less TV can make us happier. And the correlation is even higher with violent media -and TV is filled with negative and violent reports-.

5. Exercise

Physical activity has a strong impact on our mood.

Exercise releases endorphins, but it's not just a short-term fix.
A study showed that 45 minutes of activity three times per week increased the mental health of depressed patients for more than six months.

Indeed a study shows that movement is more effective in curing depression than anti-depressant medications.

6. Spend Money (On Experiences)

Who said money can't buy you happiness?
It can!
Just make sure you don't spend on "stuff" but on experiences. Here are six smart ways of spending your money to maximize happiness:

- Experiences over stuff
- Many small pleasures instead of a big one
- Spend money on others
- Buy now, enjoy later: buy a treat and eat after your workout and book your holidays way in advance. Delaying consumption creates positive anticipation
- Spend money to buy time: for example, pay to clean your house
- Buy happiness-boosting activities: invest in yourself, get a personal trainer, join a class, book a trip, go to the movies, eat at your favorite pizza place, etc.

7. Exercise a Signature Strength

Doing things you are good at and leveraging your strengths and skills will also make you feel happier.

Here are a few ways of using a signature strength:

- When you're in need of a happiness shot, revisit a talent of yours and use it.
- Exercise a trait, value, or strength of character that is part of who you are: even better than a skill
- Use your signature strengths daily: the more you use it, the happier you become."

Focus on Positives

Our brain cannot hold two feelings and thoughts at the same time.
This means that if we focus and think about the positives in our lives we won't have space to think about negatives. Even if all that's happening around us is negative.

Shawn says that we need at least 3 opportunities for each threat we perceive. Above 6:1 is too much and we might have too Rosy an outlook. Below 3 we might focus on threats too much and pick up more on the negatives of life.

This is an old concept that already Marcus Aurelius' Meditations stressed two thousand years ago. However, that doesn't make it any less effective.

The Happiness Advantage makes the point that **we can train our brains to focus on the positives**.
Here is an idea on how to do just that: every evening write down three positive things that happened to you during the day.

Focus on Growth After a Failure

After a failure or negative event, we can usually follow three different paths:

1. No change, and you end where you started
2. More negativity
3. Use adversity and failure to become even stronger

Also, read:

- How to leverage pain and failure

How to Build Habits

It takes little energy to keep a body in motion.
But it takes lots of energy to get started.

It's not much different than forming habits and the respective neural pathways in our brains.

The key to keeping our habits going, says Shawn, is to make it as easy as possible to repeat the habit every single day.

And the inverse is true for habits you want to stop: make it hard to keep them up!
Move into a flat with smoke detectors where you can't smoke inside and it's freezing cold outside.

Internal Locus of Control

In a nutshell, an internal locus of control says that we are in control of our own life.

To flesh it out a bit more, a huge driver of happiness, confidence, and emotional well-being is the belief that we are in control of our life and that we are the master of our own fate and life.

People with an internal locus of control are also more productive at work and in life.
Psychologists say that these gains in productivity, happiness, and health have less to do with how much control we actually have and more with how much control we *think* we have.

How to Regain Control

When we're very stressed and can't keep up it can be difficult to feel like we're on top of things.

What to do then?

Put your negative emotions in writing. Brain scans show that putting your negative emotions into words diminishes their power.
Then focus on micro-tasks you can execute. Doing the first step will get you going and accomplishing small tasks will give you confidence.

Lesson learned: acquire and develop a belief that you are in control of your life and only focus on the things you can control. And worry not about the ones you can't control.

Get Social Investment

The more social help and support you get, the happier you are.
Try to build a solid network of people around you.

The Happiness Advantage TED Talk

Real-Life Applications

There is really a ton of incredible life-improving wisdom here.
Here are a few gigantic takeaways:

- Don't consider happiness just mood: it's your new work and life ethic
- Force yourself to scan the world for positives and write them down every day
- Reframe failures as opportunities for growth
- Don't let limiting beliefs shackle you
- Believe that your action directly affect outcomes and you can reach the goals you want (internal locus of control)

CONS

- **Marketing-Talk**

The first part of the book is to talk about how great the book will be.
A bit of *Pre-Suasion* is good, but I felt it was too long.

And it just sounded silly at times, like the expression “cutting-edge science”. As a guy who’s been working in tech a bit, we always had to laugh at the buzzword “cutting-edge technology”. Until we started seeing a new level of cutting-edge tech: the “bleeding edge tech”. Now those guys took it to the next level of cutting-edge frontier :).

In my opinion, that type of language in a book that wants to be grounded in science is out of place.
Not because science must be “serious”, but because “serious-sounding” increases authority, and people are more likely to be swayed by sources that they perceive as being authoritative.

- **Could Have Been Briefer**

It was longish and drawn out.

- **Seven Principles Not Best Layout**

I didn’t think the layout of the seven principles was very clear. I believe The Happiness Advantage could have enjoyed a better structure.

PROS

- **All-Around Great Wisdom**

A lot of deep wisdom here, leveraging solid research.

- **Life-Changing Advice**

I have read several positive psychology books. But this is the best one I have read so far.

Review

Shawn is not a psychologist himself, which lowered a bit my expectations before I started reading “*The Happiness Advantage*“.

But I had to change my mind: this is one of the best books on positive psychology, including the *ones written by actual psychologists*.

What makes "*The Happiness Advantage*" stand out is the extreme focus on practical advice.

This book doesn't only help to make the readers happy, but also the people *around* the readers happier. Because remember: with your happiness, you have the power to make others feel happier too.

When Another Girl Flirts With Your Boyfriend

Handling a woman who is flirting with your boyfriend is a very difficult social situation to handle.
Only the best, most socially skilled women can do it well.

Why?

Because this what most women do:

1. **Overreact**, and you look aggressive, bitch, defensive and possibly, more into him than he's into you
2. **Do nothing** and you send the message that you are weak -and at that point, she might as well go for your boyfriend-

This post will help you to put the bitch back in her place without falling for either of those two extremes.

First of all though, always make sure it's not all in your mind.
A bit of jealousy can even help the relationship, but excessive and unjustified jealousy only ruins them.

Once you are sure it's not just you but some girl is actually flirting with your boyfriend, then it's time to think strategically:

#1. Don't Go Wild In Public

If you snap at the flirting floozy, you are likely helping her out.

You are helping her shore support on her side while you're destroying your value.

It's usually very easy for her to say they "were just talking".
And that's what it will look like most people.
Worst is that men are often clueless or insensitive enough to indeed confirm the floozy's version.
When that happens, she wins on all front:

- She drives a wedge between you two
- You look like a crazy jealous bitch
- And your boyfriend even takes their side :S

Avoid any scene in public.
You only got much to lose.

#2. But Don't Pretend It's OK

At the same time:

Don't pretend you're cool with everything if you're not.

Stuffing anger inside builds resentment leads to passive aggression and will only spoil your relationship.

See an example from Sex and the City:

And unless you're being cunning and it's part of a larger strategy, **don't be a friend with the flirter: she's not your friend**. The most aggressive homewreckers might interpret your friendliness as a sign of weakness, and as a green light to go ahead.

Also, avoid telling your boyfriend everything is OK if you were not happy with his behavior.
Talking about your jealousy might be difficult, but pretending all is OK not only kicks the can down the road, but it might make the problem worse.
He will think it's OK to keep doing what he was doing, and you will grow more and more resentful.
That's exactly what the homewrecker wants. Don't give her that win.

#3. Do Get Wild in Private

In spite most advice tells you to avoid making scenes, it's OK to run slipshod on the flirting floozy… *In private*.

You don't have to, of course.
But you can.
It's only in public that you must remain calm and collected.

But when you confront her when she's alone, then you're going for the clean killer job.
It's just you and her. And if she runs her mouth around… It's her word against yours.

#4. If You Can Stop Her Easy – Stop Her

Getting angry in public is a big no-no because the risk of looking socially uncool is very high.

But if you can stop her in a sexy, adroit way while you expend little effort, then it's OK.

Case in point:

Why did it work well here?

She's sitting comfortably and her boyfriend has his arm over her. The threat instead is all alone on the outside. By blocking her way it's easy to keep the threat at bay while she's standing out there in the cold.
What can she do?

If she perseveres, she'd look thirsty, overly aggressive and she would easily be socially ostracized by anyone else who's watching.

You can do the same in similar situations, such as:

1. The people around are all on your side
2. You are sitting or leaning against a bar and she's on the outside
3. Your boyfriend is hugging you
4. You are very self-assured your boyfriend will take your side

#5. Join Ther Conversation

If you are far away, join the conversation and test the water.

Don't necessarily introduce yourself as the girlfriend as that might seem very defensive. **Use it as a test instead, and see if your boyfriend will introduce you as his girlfriend instead**.

If your boyfriend doesn't introduce you as her girlfriend, you can communicate so with your behavior.
Standing closer than social distance, putting a hand on his arm when you are asking something, or using an insider joke will all send the sign that she's intruding.

Then, once it's obvious you two are together, notice how she reacts.
If she keeps flirting once your relationship status is obvious, then you know that she is disrespecting you.

#6. Step In With Another Man

Few things will radically shift the dynamic as you walking on your boyfriend and another girl with a couple of men on the prowl.

They are like hound dogs who are going to go after the woman, and free your boyfriend from the threat.
Showing up with a couple of guys also sends a strong message to your boyfriend, and it shifts the dynamics in *your* favor.

What if you don't have any male friend nearby?
That's when you come up with a power move.

Tell one or two guys there is a cute female friend of yours you'd like to introduce and waltz in.

#7. Mark The Territory

This is a very standard response.

And it's very effective.

It's things like hugging him, kissing him, holding his hand.

It can come with a slight downside though, as it might send the message to your boyfriend that you are afraid of competition. Some men are happy about that as it confirms in their mind that they have power in the relationship.
Some honest men are a little bit put off by that behavior, because they think you shouldn't need to do that.
And yet some other men might be reminded of how much they miss freedom -even when they don't really miss it-.

So unless you're really going great together, or using "mark the territory" as a sort of game you both run on each other, don't overdo it.

#8. Flirt With A Couple of Guys (Make Your BF Come to You)

Here is a more powerful version of territorial pissing.

Make your boyfriend take action for you.

You go in and then once you feel that the time is right, ask him to do something *for* you or *with* you.
Maybe you need to sit down, or you want to go get a drink. Or he needs to introduce you to someone.

When you are able to move your boyfriend with you or, even better, have him move to do something for you, you send a super strong message.
The message is that: he is *talking* to you, floozy. But he takes *action* for me, you floozy.

And since action trump words: 1 for you; 0 for the floozy.

#9. Use "Us VS You" Body Language

This can be very easy to execute and packs a devastating wallop on the floozy.

If the two of them are talking on in front of each other -as people usually do-, you enter the conversation by standing to the *side* of your boyfriend.
This sends a super strong message "us" VS "you". "This is us here, and then there is… Wait, there is nobody else".

See an example from the movie "Spread":

The way the woman enters the scene clearly says "I'm with her, I'm supporting her, and you're standing on the outside". Message received loud and clear

What if She Knows You Two Are Together?

Let's not sugarcoat it.

If she knows the two of you are together, she is an enemy.
She is communicating one of the following:

1. **Wants to get under your skin or hurt you** (that's why you keep cool in public)
2. **Does not respect you or fear you** (that's why it's OK to confront her)
3. **Wants to steal your boyfriend**
4. **Needs the ego validation of having men into her** (these types of gals usually sleep with men but don't steal boyfriends)

What to do with these type of women?

Some women try to befriend the aggressor.
That can work very well with men. But it doesn't work nearly as well with women, unluckily.

How you act with these types of women depends on your relationship and on the level of threat she poses.
Working behind the scenes to keep your boyfriend away, which in literature is a form of "mate guarding", can be a very effective technique.

If you are more on the aggressive side, a private conversation where you clearly tell her to stay away can also work well.
Show her that keeping up with her adulterous ways will cause direct troubles and you might give her a good reason to stop.

Indirectly helping her to find another man might also work if she's looking for a boyfriend.

What If Your Man Enjoys It?

First of all, it's not the end of the world.

Because that doesn't necessarily mean all that much.
Indeed most men *would* enjoy a woman hitting on them.

Unless he's a celebrity most guys don't get hit on that often. So, in a way, it's understandable, and common, that he could be all elated about it.

That said though, it's definitely a positive signal that is missing if he doesn't draw a line.
Because *there are* men who understand what's happening and who are strong and sensitive enough to put your well-being ahead of their ego validation.

But if he doesn't, hold your horses and avoid attacking him as if he had already eloped with the woman.
If the two were just chatting and laughing, that's still within the confines of acceptable behavior.

The Ideal Situation

We have examined a few effective actions you can take when another woman flirts with your boyfriend.

However, the ideal situation is you doing nothing and your boyfriend doing all the action.

He should step back from the flirtatious woman, physically and/or emotionally, and draw the boundaries.
A few ways he could do that:

- Drop the GF line
- Introduce you as her girlfriend
- State how happy and satisfied he is
- Take a physical step away from the touchy-feely floozy
- Move towards you

And of course, if he really wanted to go overboard and sink her:

- Kiss/hug you in front of her
- Tell her she's so cool that he should totally introduce her to a single friend of his

Of course not all men do that.

Some boyfriend sees the opportunity of another woman flirting with them as a way to assert (sexual) superiority on you. Some others will enjoy the ego validation or the social boost they're getting for the evening.
They rarely realize when they are being played like a pawn and rarely understand that they are actually *losing* value in the process.

And what would really boost their value would be to gracefully but clearly deflecting her.
Just like this guy:

Teaching Your Boyfriend

Finally, you can explain to your boyfriend what's happening. Explain what he is getting out of it in terms of ego validation and that you expect more of him.
If that fails, the reverse question rarely fails:

> **You**: how will you feel when another man will hit on me and I will go along with it?

Then monitor his reply and the successive behavior.
You never know, from that bad experience your boyfriend might even learn how to become a higher quality man.

SUMMARY

A flirtatious woman hitting on your boyfriend can be a highly emotional situation.
Especially if she's an attractive one and especially if he seems to gloat on it.

The first and most important step is to refrain from making a public scene.
Even if you want to take him aside to only berate him, don't do it while you are still out as everyone will pick on it.

For the rest, follow this guide and, most of all, teach your boyfriend what's the proper behavior.

Statistically speaking, you should be most worried if it's two old friends meeting again.
And the worst of all if it's two old lovers meeting again.

If she's just a random girl, take comfort in knowing that the chances of the two of them sleeping together are objectively very low.

Full Summary

About the Author:
Donald Trump is an American magnate and businessman. He started out in real estate, then expanded into media and show business, and he eventually entered politics.
However, it's unclear whether Trump wrote the book himself or whether it was his ghostwriter, Tony Schwartz.

Introduction: He Does It For The Pleasure

If you get the latest version the introduction is from Trump himself and he uses that space to make a political point. I will skip that part and go straight to the juiciest bit. Here is the quote from the original version:

> I don't do it for the money. I got enough. Much more than I'll ever need. I do it to do it. **Deals are my art form**. Other people play beautifully on canvas or write wonderful poetry. I like making deals. Preferably big deals. That's how I get my kicks.

And now let's start:

Passion For Work is Key to Success

Donald Trump opens the book by explaining how much he works.

He usually arrives at the office by 9 and leaves the office by 6. Up until here, it might sound like a typical employee workday. But he rarely stops for lunch and when he goes home, he often continues making and taking calls until midnight.
And it goes on all weekend as well.
He makes at least a dozen meetings a day and at least 50 calls.

Trump also has his own special version of "mindfulness" and focus on the present.
He says:

> I try to learn from the past. But I plan for the future. By focusing exclusively on the present.

And, most of all, he wants his work to provide fulfillment. He says:

> **That's where the fun is. If it can't be fun, what's the point.**

How to Get to The Top

Trump says of his style of deal-making:

> I aim very high and then I just keep pushing and pushing and pushing to get what I'm after. Sometimes I settle for less than I thought but I still end up with what I want.

#1. Deal With the Top

Trump says that at a certain point at the beginning of his career, he wondered why so many of his deals fell through.

Then he realized that it was because he wasn't dealing with the top guys. **Anyone in an organization who's not the founder or at the top is an employee**.
And employees won't fight hard to make things happen.

They'll speak to their boss, and if their boss says no without even looking at it, they'll drop it.
Employees fight for their salary, bonus, or salary increase, *not* for making things happen.

#2. Think Big

Trump says:

> Think big. I like thinking big. To me it's simple: **if you're going to think anyway, you might as well think**

> **big**. Most people think small. Because most people are afraid of success, afraid of making decisions. Afraid of winning. **And that gives people like me a great advantage**.

What a shark mindset.

That is why Trump didn't exactly follow in his father's already successful footsteps. His father was a developer of affordable and rent-controlled housing in New York boroughs.
But Trump wanted Manhattan and Fifth Avenue, the central locations.
He wanted to build something big and monumental.

The quote of this part:

> **I could earn a modest return. But then again, modest isn't my favorite word**

#3. Total Focus

Trump says that one of the keys to thinking big is total focus. He says:

> I think that one of the keys of thinking big is total focus. I think of it almost as a controlled neurosis, which is a quality that I've noticed in many highly successful entrepreneurs.
> They're obsessive, they're driven, they're single-minded. And sometimes they're almost maniacal, but it's all channeled into their work. **Where other people are paralyzed by neurosis the people I'm talking about are actually helped by it**.
> I don't say this trait leads to a better life, or a happier life. But it's great when it comes to getting what you want.

Trump is talking about the single-minded focus on "more, more, more" and "win, win, win".

#4. Protect the Downside

If you know my summary, I rarely quote straight from a book.
And yet I find many passages of The Art of The Deal so compelling that it's hard not to quote them.

> It's been said that I believe in the power of positive thinking. In fact, I believe in the power of negative thinking. I happen to be very conservative in business. I always go into the deal anticipating the worst. If you plan for the worst—if you can live with the worst—the good will always take care of itself

I agree, and I have grown to consider this mindset such an important part of the success that I added it to my "Ultimate Power" eBook (now part of Power University).

> **Protect the downside and the upside will take care of itself**

#5. Don't Gamble

Protecting your downsides also means you don't gamble your money.
Trump says:

> People think I'm a gambler. I've never gambled in my life. To me, **a gambler is someone who plays slot machines. I prefer to own slot machines**. It's a very good business being the house.

As Warren Buffet said: "gambling is a tax on ignorance".

#6. Keep Your Options Open

An effective technique with which you protect your downside is by maximizing your options.
Always keep several balls in the air, says Trump, because invariably some deals won't happen, even when they seem very promising.
And, it might happen, sometimes it won't make sense for you to pursue a deal another ball in the air becomes more promising.

Similarly, when a deal happens he always thinks of several different approaches to make it work.

This is an exchange Trump has with a real estate broker:

> **Donald Trump**: The bid sounds low. If you can get them higher, I might be interested.

But then, he adds:

> The truth is, I really don't wanna sell the yard at any price. To me those 100 acres overlooking the Hudson river are the best undeveloped real estate site in the world.
> On the other hand, I don't want to rule out anything.

#7. Ask Everyone for Opinion – But Not Consultants

Trump believes in his instincts and he rarely hires consultants or "number crunchers".
While he admits they are the best in their business, he sounds slightly disparaging towards an experience he had with McKinsey for example.

On the other hand, Trump believes in asking opinion to people.
For example, if he's thinking about buying a property he asks the people living around the area. He asks the cab drivers. He asks about crime, schools, and shops.

He says he's learned more from conducting his own research that way than from hiring any consulting firm. That way, with a feel "on the ground", he can then build and use his own instincts.

This approach, Trump says, is quicker and action-oriented. Consultants take a long time and a lot of money for a result that has little or no conclusions.

Further, Trump says:

> When it comes to making smart decisions, the most distinguished committee working with the highest paid consultants doesn't hold a candle to a group of guys with a reasonable amount of common sense and a lot of money on the line.

#8. Look After Your Money

Trump believes in spending what you need to spend -and what you have to spend-.
But not more.

And he believes in looking after his expenses and not throwing money around.

He learned from his father that every penny counts. Because "before too long, the pennies turn into dollars.
He says:

> To this day, if I feel a contractor is overcharging me, I'll pick up the phone, even if it's for $5k or $10k, and I'll complain. People say to me, "what are you bothering for, over a few bucks?"…
> My answer is that the day I can't pick up the telephone and make a 25 cents call to save $10k is the day I'm

> going to close up shop.

And then another great quote:

> The point is that you can dream great dreams. But they'll never amount to much if you can't turn them into reality at a reasonable cost.

#9. Take Care of Appearances

Trump makes the case that how you present your assets makes the whole difference.

I loved this quote so much that I recited it more than once in my life.
Says Trump:

> I can always tell a loser when I see someone with a car for sale that is filthy dirty. It's so easy to make it look better. It's no different in real estate.

He then adds it wasn't applying as much in NY where people would buy almost anything. But it's a mistake to be lulled by good times: markets always change.
And as soon as there is a downturn, cleanliness becomes a major value.

On another occasion to make his site look busier and faster-moving, he gave the order to find all the available bulldozers and make them move around on fake tasks.

#10. Get Great People and Push Them Hard

Trump says that a huge of what brings success is getting the best people and then pushing them to do their best job.

He says:

> My philosophy is always to hire the best from the best.

He adds later:

> Hire the best people from your competitors, pay them more than they were earning and give them bonuses and incentives based on their performance.
> That's how you build a first class operation.

Even if his ex-wife Ivana Trump who was managing his castle, says:

> The castle is doing great. But I still give Ivana a hard time about the fact that it's not yet number one. I tell her she's got the biggest facility in town, so by all rights it should be the most profitable.

Trump seems to have a business-like approach to his intimate relationships too. He loves the fact that Ivana is "almost as competitive as he is", and then adds: "I can say this much: I wouldn't bet against her".

That's probably not the approach for what most people would consider a good relationship.

Stick With What You Know

On a deal that seemed good on paper, Trump pulled out at the last minute because he didn't have a good feeling about it.
He says:

> That experience taught me a few things. The first is to listen to your gut, no matter how good something looks on paper. The second is that you're generally better off sticking with what you know. And third that sometimes the best investment are the ones that you don't make.

Get Leverage: Provide Something Others Want

Trump says that if the other party realizes how badly you want something, you're dead.

The best place to negotiate is from a position of strength, and you get that with leverage.
Leverage means to have something the other party wants. Or better yet, *needs*. Or, best of all, simply can't do without.

That's not always the case of course, and that's where imagination and salesmanship come in: convincing the other party it's in his best interest to make the deal.

Trump provides a few great examples in *The Art of the Deal*. My favorite was his move with the founder of Tiffany.

Leverage Information Advantage

Trump was often able to scoop up deals because he had information that the other party didn't have.

Trap Your Opponents

Then he would try to get a commitment before the other party would catch wind of the situation.

For example, when he was buying the land for Trump's tower, he signed a letter of intent. When the seller put on the contract the usual "prior to board approval" clause, he gave it back to him saying nonchalantly that he wanted to sign the LOI to move quicker.

Then, once he had the letter of intent, he later threatened to go to court when the seller wanted to back out of the contract.

Since the seller needed cash, Trump had them.

It's About the Best Deal, NOT the Location

Trump says that buying properties is not about location.
He writes:

> Perhaps the most misunderstood concept in all of real estate is that the key to success is location, location, location. Usually, that's said by people who don't know what they're talking about. First of all, you don't necessarily need the best location. What you need is the best deal.

Of course, if you have a great location you might need less promotion. But a bad deal in a great location is still a great deal.
And you can further enhance an area where you've done a great deal with great promotion.

Trump's Approach to HR

Trump's philosophy is that if you catch someone stealing you must go after him very hard.

However, he made an exception once.
Here was the power move genius: Trump had an extremely capable supervisor who'd also make sure nobody under him would steal.

However, that was also because he was a con-man himself with a tendency to steal.
But Trump thought: I only need to keep an eye on *him*, and he would make sure everyone under him does not steal.

So he kept him on board.

How to Deal (or "use") the Press

In the course of *The Art of the Deal* Trump uses and leverages the press in many different ways.
Let's see:

#1. Spin Questions into Positives

Trump says it's best to give truthful answers to the press and not to get defensive.

But you will always get asked tough questions, and what you do at that point is spin around your answer to give something positive.

He says:

> Instead, when a reporter asks me a tough question, I try to frame a positive answer, even if that means shifting the ground.
>
> For example, if someone asks me what negative effects the world's tallest building might have on the West Side, I turn the tables and talk about how New Yorkers deserve the world's tallest building, and what a boost it will give the city to have that honor again.
>
> When a reporter asks why I build only for the rich, I note that the rich aren't the only ones who benefit from my buildings.
> I explain that I put thousands of people to work who might otherwise be collecting unemployment, and that I add to the city's tax base every time I build a new project. I also point out that buildings like Trump Tower have helped spark New York's renaissance

I have already noted in the past Trump used this technique in How to Win a Debate. You can see him using the defense against his allegations of sexual misconduct:

And of course, also check out:

- Basics of frame control
- Frame control techniques

#2. Promote With Bravado

Trump says he uses bravado to promote.

> **I play to people's fantasies.**
> People may not always think big themselves, but they can still get very excited by those who do. **That's why a little hyperbole never hurts**. People want to believe that something is the biggest and the greatest and the most spectacular.

Basically what he's saying here is that otherwise timid people love a leader who sounds self-assured and larger than life.

"Playing to people's fantasies" is a law that Robert Greene borrowed for his "*The 48 Laws of Power*", by the way.

#3. Use Sensationalism for Coverage

Sensationalism and bravado will also give you bigger coverage:

> They're always hungry for a good story, and the more sensational the better (…) The point is that if you are a little different, a little outrageous, or if you do things that are bold or controversial, the press is going to write about you.

#4. Denigrate Competition

Trump says he is very competitive and he'd do nearly anything to win -without legal bounds-. Sometimes that means denigrating the competition, and that's what he would do.

In *The Art of The Deal*, Trump talks about a few interesting public power moves he pulled to score a win.

In some of those cases, picking a quarrel not only served to eliminate a competitor but also to promote a site he was working on.

#5. Use Press as Pressure Point

Trump also used the press to put pressure on people.

For example, he was about to scoop up a great deal in Manhattan for a piece of land where he would later build his Trump Tower.
But rumors began circulating *before* he signed. He was afraid that competitors would rush in and drive up the prices.

So when the press called him up asking if he had bought, he said "yes".

Trump also says that the press works particularly well with politicians.

How to Leverage Threats

Trump is trying to help an old woman who is about to lose her farm to bank repossession.
He calls the banker to see what he can do, but the banker replies there is nothing he can do, the farm is going to be auctioned and no one is going to stop it.

"That really got me going", says Trump.
That's his reply:

> You listen to me, if you do foreclose, I'll personally bring a lawsuit for murder against you and your bank on the ground that you harassed Ms Hill's husband to his death.

All of a sudden, the bank officer sounded very nervous and said he'd get right back to Trump.
Trump says:

> Sometimes it pays to get a little wild.

It does indeed.

Deliver the Goods

Trump says that a big show is important, but ultimately you also gotta deliver the good.

He uses the examples of two presidents: Carter and Reagan. They had the guts and balls of aiming high and that's what got them there. But eventually, people started catching up on the fact there was little substance behind them.

Trump's Not Impressed by Academic Credentials

Trump says he was not particularly impressed by academic credentials.
He realized there was nothing particularly awesome or great about his classmates at Wharton.

What he got the most out of it, was the paper degree. To Trump, it doesn't mean much, but it means a lot to a lot of people he does business with.

Modern Art is PR

Trump tells the story of an artist friend of his and how he made 25k in a few minutes. He took buckets of paints and splashed them over canvases on the floor.

That was it.

Plenty of collectors wouldn't know the difference between a 2 minutes splash job and paintings he really cared about.

> I always thought that a lot of modern art is a con. And that **the most successful painters are often better salesmen and promoters** than they are artists.

Then Trump keeps joking that the art world is so ridiculous that knowing what he knew might make his paintings even more valuable. Not that he was ever going to find out anyway… People weren't even going to be able to tell the difference.

Show Strength With Aggressive People

Trump discusses his experience with a very tough and domineering teacher in military school.
And he discusses how he "played him".
It helped he was a good athlete -which showed competence, I'd add-.

But mostly, Trump says, he finessed him in two ways by showing:

- He respected his authority
- But he didn't intimidate him

These guys go for the jugular when they smell weakness, but if he saw the strength that wasn't trying to undermine him, he'd treat you like a man.

Test People

Trump says he likes testing people.

For example, he knew of a lawyer with a reputation for being a tough guy. Trump was looking for a tough lawyer. Instead of asking him if he was tough, he tests him by saying:

> I don't like lawyers. All they do is delay deals. They're always looking to settle instead of fight.

When the lawyer "proved" his toughness, he told him what he needed and then hired him.

When talking to a young lawyer who looked even younger, he told him:

> I'm not so sure that a lawyer as young as you are can handle a project like this.

Trump knew he was a good guy when he replied:

> To tell you the truth Mr. Trump I've never had a client as young as you who could afford my bill.

A good way of passing the shit test.
And Trump respected that.

And Don't Forget to Enjoy Life

Finally, Trump says:

> Have fun. I don't kid myself. **Life is very fragile, and success doesn't change that**. If anything, success makes it more fragile. Anything can change without a warning. That's why I don't take things too seriously.

And more:

> Money was never a good motivation for me, except as a way of keeping score.
> The real excitement is in playing the game.
> I don't spend too much time worrying about what I should have done differently or what's going to happen next. If you ask me exactly what the deals I'm about to describe all add up to in the end, I'm not sure I have a very good answer.
> Except that I've had a very good time making them.

Best Quotes

Plenty of quotes are *already* in this summary.
But here are a few more:

> I hate law suits and depositions. But the fact is that if you're right, you gotta take a stand. Or people will walk all over you.

On Parties:

> Frankly, I'm not too big on parties. Because I can't stand small talk. Unfortunately, they're part of doing business, so I find myself going to more than I'd like.
> And then try hard to leave early.

On politicians and money:

> Eventually I realized politicians don't care about what things cost. It's not their money…

On the casino business:

> I like the casino business. I like the scale, which is huge. I like the glam. But most of all, I like the cash flow.

On getting steady:

> I dated a lot of different women by then. But I never got seriously involve with any of them. But Ivana wasn't someone you'd date casually. Ten months later, we were married.

Talking about an architect working for him:

> She is a classic. She has a mouth that won't quit. Which is probably why she's so good in sales. I like to tell her that she must a very tough woman to live with.

The unspoken rule among Gs:

> He tells me he has a deal he'd like to discuss. He doesn't say what it is, but with certain people… You don't ask.

On easy returns:

> Even by making this relatively minor things, I could earn at least a modern return on my investment. But then again, modest is not my favorite word.

On partnerships:

> In every partnership, you're only as strong as your weakest link.

On New York real estate:

> (…) this is particularly true in New York real estate, where you are dealing with some of the sharpest, toughest, and most vicious people in the world. I happen to love to go up against these guys, and I love to beat them.

On incompetence:

> Dishonesty is intolerable. But inaction and incompetence can be every bit as bad.

On cost-conscious realism:

> You can dream great dreams. But they'll never amount to much if you can't turn them into reality at a reasonable cost.

On skyscrapers and money:

> Skyscrapers are machines for making money. He meant it as a criticism. I saw it as an incentive.

On people's strategy (and having a man open up to him):

> There are times when you have to behave aggressively. But there are also times when the best strategy is to lay back.

On giving:

> What I admire most are people who put themselves on the line.
> I am not terrible interested on why people give. Because their motivation is rarely what it seems to be. And it's almost never pure altruism. To me what matters is the doing.
> And giving time is far more valuable than just giving money.

And finally.
What's next?

> Fortunately, I don't know the answer. If I did, it would take the fun out of it.

And:

> **The dollar always talk, in the end.**

Criticism

Who really wrote it?

Tony Schwartz, the co-author of *The Art of the Deal*, has been very vocal and critical since the publication.

He said that with this book he put "lipstick on a pig" and in another interview he said that if were to write the book again it would probably be titled "the sociopath". (A label that Trump's niece also used).

Both Schwartz and the Random House head Kaminsky, the publisher, said that Trump wrote nothing of the book.

Is This Really Trump?

This book shows a level of introspection, self-awareness, and zen that you'd wonder if the Trump we see as the president is the same Trump who wrote this book.

To begin with, there is no in-your-face self-promotion in *The Art of the Deal*.
He even says he learned not to act on impulses, and that chance and randomness helped him get what he wanted.

Is this the same guy that some authors diagnosed as a dark narcissist?

Did he change? Was he painting himself in a better light here?
Or is it true that Trump wrote little of this book?

On the other hand, I do see a lot of typical Trump here.

His take on art, for example, or his typical power moves.

Some PR management

For example, spinning his plan of sheltering homelesses as charitable rather than a move to force the last holdout residents.

But if you can read between the lines, you'll only learn more about Trump, and the psychology of certain personalities.

Some Ethical Grey Areas

In some passages, Trump shows the deal shark that he is.
For example:

> Developers are suicidal, because banks are foreclosing them. It's a great time for a smart buyer.

But most of all, it's when he wanted to let homeless people inside a building to force the last owners to sell low, that it crosses the line.

Real-Life Applications

This book is very applicable, from mindsets, to strategies and techniques.
Here's a midnset I liked. After the loss of his UCFL, Trump says:

> I wasn't happy. But I was relieved. My attitude is do your your best. And if it does't work, move on to the next thing.

That's a very positive, healthy attitude.

PROS

Deeper Than Most Give It Credit For

The psychology and the philosophy behind *The Art of The Deal* are outstanding.

Trump's analysis of the neurosis that leads to success is spot on, as his philosophy on enjoying because life is uncertain.

Trump makes a lot of reflections here which are actually quite deep. For example, he discusses of people who will never find out about their talent because they simply never tried -for lack of good fortune or courage, he says-.

Interesting Childhood Stories

There is a lot here to understand what Trump is all about.

Sometimes you have to peep through the cracks though, as he's likely trying to give a more positive impression -as everyone else would of course!-. For example, he says he was very aggressive in school, even giving a black eye to the music teacher :S

Great Sales and Marketing Training

Some of the marketing and sales techniques in *The Art of the Deal* are best in class.

I particularly loved the way Trump frames his Trump Tower as the "place to be". His competitor shot himself in the foot by lowering the prices and leaving Trump Tower the upper section of the market.

Then, Trump used “hard to get” techniques to sell space which made people want it even more.

Review

The Art of the Deal is a great book to understand both Trump and the mindsets of an overachieving type of man.

It’s also a good wake-up call for some too-nice guys, and the strategies it shares offer some more limited but still valuable learning opportunities.

Trump is a unique kind of man.
Trump sees life as a competition, that’s obvious. When he realized that people in Manhattan drank a lot he thought that, as a non-drinker, “he was going to have a big advantage”.

Unfortunately, there may be bias involved when it comes to juding this book.
Some may not like Trump.

I find him entertaining and his approach worked well to boost his family’s wealth, become famous, and take him to office. However, some research suggests that certain personality traits can be a liability in leadership roles that require more selflessness, long-term collaboration and diplomatic nuance
Edit: this was originally written a long time ago and turned prescient.

But I loved this book, and I truly didn’t expect to agree so much with Trump.

The Art of the Deal isn’t just deal-making and power moves, but also life philosophy.

It’s packed with great mindsets. And it’s entertaining, with powerful quotes and hilarious expressions that will make you smile -ie.: the Italian who looked like a WASP-.

It presents little of the Trump we see today.
I will not weigh in on whether or not Trump actually wrote it and if it’s a realistic portrait of Trump back then.

But whatever you think of Mr. Trump, but “*The Art of The Deal*” is the crowning masterpiece of over-achieving deal-makers.
This is *The Prince* of deal-making.

How to Lie with Statistics: 9 Steps to Spot Bias (Book Review)

Lucio Buffalmano · 8 October 2018 · Archived copy · Original

"*How to Lie with Statistics*" (1954) is a wonderful book on how Machiavellian marketers or politicians can use statistics and numbers, to provide an impression of "objectivity", while instead manipulating and swaying people's opinions with half-lies or falsehoods.

Full Summary

About the Author:
Darrell Huff was an American writer and freelance journalist, penning both magazine articles and several books. He is most famous for "*How to Lie With Statistics*", and it seems like he knew a thing or two about lying with statistics. Huff was allegedly paid by the tobacco industry to ridicule the evidence against tobacco smoking and health problems. Basically, **Huff was using his own techniques to lie and manipulate**. Alex Rheinart explains that Huff was also commissioned to write a follow-up book to defend the tobacco industry and discredit the growing body of evidence against the health effects of smoking.

So let's learn how to lie with statistics so that we will never fall for it.

1. Introduction: Learn The Basics

The ideal sample is:

1. Large

2. Measures only one trait while controlling the other
3. Removes all sorts of biases.

Such a sample is hard to obtain, and most “statistics” instead have all sorts of biases. *How to Lie with Statistics* lists a few of them.

2. Statistics Biases

The following biases are some of the most common and highly disruptive biases when measuring a sample:

#1. Asking People

People tend to answer what makes them look good. Or with what they wish they’d do, or with what they would like to do.

They will not always answer instead with what they actually do.

Even when you meet a fella who wants to tell you the truth and nothing but the truth, will he be able to remember exactly what you’re asking for?

Thus if you ask people what they actually like, they will rarely come up with the truth.

#2. Self-Selection Bias

Many studies are flawed by design.
For example, if I send a questionnaire out most people replying will be people who maybe have more time to reply.

If I ring people’s doors to ask a question, it will be people who are more often at home. For example, unemployed people, and people who don’t travel much.

Even if I stop people in the street I will end up selecting friendlier or more agreeable personalities.

#3. Pleasing the Interviewer

Whenever I ask a question about touchy subjects, there might be an in-built bias to please the interviewer or to try to look ‘good’.

#4. Small Sample Biases

It’s easy to come up with true statistics that mean very little -or that are deceitfully misleading-.

For example, if you wanted to prove that a medication is very effective in curing a cold, you could assemble many small samples. Then you can measure how long it takes to get better in each.

Since the samples are small, normal variation will likely give you a group that, by chance, healed quicker.
And you can publish the result of the group that fared the better

#5. Intervening Factors Biases

Another issue of comparing statistics across countries or times and, in general, in real life, is that of intervening factors that it’s difficult to account for.

For example, one study once linked milk to cancer because countries that consumed more milk had a higher incidence of cancer than countries with low milk consumption.

Darrell Huff explains that countries with more milk consumption were also richer and lived longer. That by itself can explain the higher incidence of cancer. And if you also factor in that cancer is more likely to happen in old age, that could explain the difference in cancer rates. Milk notwithstanding.

3. Changing of Meaning

Sometimes bureaus change their description or what a word means or a word comes to acquire a totally different meaning.

So for example when you calculate the number of “farms”, you should adjust for the changes in the census, because what is considered today a “farm” is not the same as it was fifty years ago.

4. Manipulating the Charts

There are many ways to “massage” your charts:

- **Raise the starting point**

To show bigger improvements you can make a chart start not at zero, but at the latest number in your data set.

For example, if you want to show an improvement from 20 to 22 and then 23.5 and you start your chart from zero, the improvement will look small.
But if you make the chart start at 20, it will look like a huge change.

- **Leverage Volume**

If you want to show the increase in something -say, salaries- a fair way would be to use bar charts that only change in height.

If you want to make the increase look bigger though you can use geometrical shapes. Say for example you choose the icon “bag of money” to show the salaries increase.
When you increase the height of the bag of money you don’t just change the height, but you also change the width. The result is that your bag of money will acquire a total area that is 4 times bigger, not twice.

- **Don’t Label the Axis**

Another trick is not to put measures and labels on a chart.
Make the reader draw his own assumption and if the chart looks impressive, he will make favorable assumptions.

5. Proving Without Proving

This one is almost pure marketing.

Say that you cannot prove that your new drug helps cure a cold. But you can prove that it kills thousands of germs. Maybe even more than your previous drugs. Maybe 30% more?
It might not do a thing to help people overcome a cold, but it certainly sounds good.

Or advertisers could say that physicians smoke brand X of cigarettes more than any other cigarettes.
But does that mean anything?
Physicians might not have much insider knowledge of “healthier cigarettes”. As a matter of fact, there is no such thing as healthy tobacco.

6. Percentage Increases/Decreases

When people talk about an increase of 10%, you should always wonder: increase compared to what?
The previous month, the previous week?
And was it an increase across the board or did they pick a figure that increased the most?

Also, people who want to give different impressions can easily switch from percentages to whole numbers depending on which one sounds better.

The percentage drop is even easier to massage.

For example, describing the move from 13% to 10% as “a drop of 3 percentage points” sounds much better than “a decrease of 23%”.

Cherry-Picking the Best Figure

Similarly, you can express the same fact by calling it in many different ways, depending on what your goals are and what sounds more impressive -or less scary-.
For example:

- 2% percent return on sales
- 12% return on investment
- 5 million profit
- 35% increase in profits

7. Correlation Is Not Causation

And here is the big one, one that I have been criticizing in so many of my book reviews.

Many publications use correlation to imply causation.
Take for example the famous case of “studying leads to higher salary”. While that makes a lot of sense, it’s not so straightforward.

Kids who go to college are disproportionately bright and rich.
The bright and rich would have likely earned more than non-college degree individuals even *without* a college degree.
And it’s not true that “the more you study, the more you earn”.

The most dishonest individuals can also look for a correlation and then plug a cause that works well for them.
Politicians do it often. For example, a recent US president took the crime statistics of a single US city where crime had increased and blamed Democrats for it.

Also, read:

- Fooled by Randomness

8. Biased Averages

There are three different types of averages:

- **Mean:** add all values and divide by the total quantity
- **Mode:** most common value in a data sample
- **Median:** value in the middle of the sample

Data Point	Description	Example (Salary)
Mean	Average (Total / Count)	$120,000 (Skewed by CEO)
Median	Exact Middle	$45,000 (More realistic)
Mode	Most Common	$35,000 (Entry-level)

In normal distribution —as it's often the case for human traits— the three will be similar to each other. But in data sets with irregular distributions —for example, income and salaries— they will be very different.

And the biased statisticians can pick the one that most suits their needs. Or simply use the most common mean when the mean hides a very different reality. For example, a CEO could say that at company X the salaries went up 40% in the last 10 years. But he wouldn't say that they went up 1% for doormen and security, 5% for low-level employees, and 30% for the C-suite.

9. How to Critically Approach Statistics

Darrell Huff proposes five questions we can ask ourselves to analyze whether statistics are not misleading us:

- **Who Says So?**: The first question you should analyze is the source. Is the source inherently biased? Is it an advertisement, does a researcher want to defend his theory, does a newspaper want to sell more with a sensationalist story?
- **How Does He Know?**: How did he conduct the research? Is the sample big enough? Did he send a questionnaire, did he stop people in the streets? What could be wrong with that?
- **What's Missing?**: What other influences have not been taken into account? Was there a large control group and does the author mention it? If the author is using percentages, does he also give the raw numbers for a more complete picture?
- **Did Somebody Change the Subject?**: Changing the subject happens when we move one result to a similar, but actually different environment.

For example, a politician critical of how expensive prisons were for the public said it would cost less to house inmates in a hotel than in Alcatraz. However, he changed the subjects from "total costs of inmates daily" to "daily charges of a hotel". Of course, the latter does not include surveillance, food, healthcare, rehabilitation, etc.

- **Does it Make Sense?**: Sometimes statistics can make no sense. And the fact that we're dealing with numbers should not lead to a suspension of common sense.

One example from Darrell Huff is the following: "Since life expectancy is only 63 years, it's a sham and a fraud to set the retirement age of 65 because virtually everybody dies before that." Even in the 1939-1941 period that wasn't true and just by looking around one could have realized it was wrong.

Sometimes old truths can be taken for granted even when they're not true anymore. A major appliance company right after WWII was planning on making smaller appliances to accommodate the declining birth rate. Then one of the guys looked around and realized that he and his friend were not planning to have fewer children. Just looking around would have revealed that wasn't true, but everyone was taking old statistics as gospel.

The last example is that of "plotting the results ad infinitum". We see a trend and some poor statisticians will plot the results in the future. But trends rarely continue forever.

I see examples of this all time, and even intelligent authors don't realize it makes no sense. For example, when

Goleman in "*Working With Emotional Intelligence*" said that each increase in EQ means an increase of x amount of income. But that makes no sense, because EQ is a bell curve, and you can't keep adding points forever. Furthermore, adding 1 point when you're around the middle is very significant. But adding one when you're already more emotionally intelligent than anyone else will mean little because you're already at the top.

> **Proper treatment cures a cold in 7 days. But left to itself it will hang on for a whole week.**

Real-Life Applications

Always Critically Read Data
Don't be ready to believe the numbers "because they're numbers". Anything can *be bent to fit propaganda* or a biased individual.

CONS

- **Don't Stop at The Criticism, Even Flawed Statistics Can Be Valuable**

Some people start to learn how to apply critical thinking skills but stop at the first level of critical thinking.

Such as they are able to pinpoint the limitation of this or that piece of evidence
But they don't realize that even imperfect statistics can add some value compared to not having any statistics at all.

Even flawed statistics might be a strong warning signal or it may capture an important trend.

For example, the author criticizes the statistics that women who attend college marry less than the national average while men who attend college marry more. Instead of dismissing that result, one should ask if that makes sense and why it's happening.

And there are very good reasons why that is the case!
Also read: a scientific approach to dating and why successful women fail at dating.

PROS

- **Great Education Against Cheats and Power Movers**

The more people read books like this, the fewer people that are easy to dupe and swindle.
And that will make for a better world to live in.

- **Short and To The Point**

No fluff, no repetition: I love it.

Review

How to Lie with Statistics is five stars, must-read book for those who aren't aware of the pitfalls and "sneaky tricks" that hide behind statistics -ie.: most people-.

I believe that books such as "*How to Lie with Statistics*" will make for a better world because critical thinking skills are so crucial to an empowered, civil society.
The more people read it, the more we will we can think critically, assess claims better, buy better, and even vote better.

It's also good for a psychological understanding in a way. With "*How to Lie with Statistics*" you will learn how our mind can unwittingly make wrong connections.
And, of course, it's great for power moves. Because you will learn how unscrupulous researchers, companies, and journalists can willfully manipulate data to sway people.

Full Summary

About the Author: Elliot Aronson is an American psychologist and researcher. He helped refine the theory of cognitive dissonance and has received several prizes and awards for his work and research, and he has taught,

among other universities, at Harvard University.

Introduction

I was almost afraid of summarizing The Social Animal.
There is so much great information in this book that you can't really summarize it.
Consider this to be an appetizer.

Social Psychology: A Definition

Elliot Aronson defines social psychology as:

> "the influences that people have upon the beliefs, feelings, and behavior of others".

We Like to Think Highly of Ourselves

One of our major goals as human beings is to maintain and enhance a positive view of ourselves.

The self-serving bias is such an example. We think that others' success is often because of situational circumstances but we think our success is because of the disproportional qualities we have.

Basically, **we take credit for the good and deny the bad**.

Conformity & Individuality

Aronson defines conformity as:

> A change in a person's behavior or opinions as a result of real or imagined pressure from a person or group of people

In the face of conformity pressure, individuals tend to avoid voicing their dissent.
On occasions, individuals go with the flow of the majority even when they otherwise have strong personal reservations.
Depending on the situation individuals might even deny what seems incontrovertible evidence of the truth if the group does the same (Solomon Asch experiments on line lengths).

Over the course of twelve judgments, three-quarters of the individuals conformed at least once with the majority even in the face of clearly wrong opinions.

Brain scans showed a lot of activity in the amygdala among the people who resist. The amygdala is associated with pain and emotional discomfort, telling us that going against the group is painful.

Factors That Increase Conformity

There are many factors that can increase or decrease conformity, including:

- **The unanimity of the group**:3 people in the group same effect as groups of 16
- **Presence or absence of other dissenters**
- **Prior commitment to the truth**: only 6% conformed VS 25% without commitment
- **Accountability**: people held accountable for accuracy had less conformity
- **Requests for accuracy**: accountability and request for accuracy are more powerful together
- **Self-esteem**: high self-esteem people are more independent
- **Self-assessment of status**: how secure the individual feels in the group, which higher security linked to higher

independence
- **Culture**: conformity more prevalent in collectivist societies
- **Gender**: small difference but women are consistently more conformist
- **Group traits**: experts, high social status, similar or different from the subject

> **Doing crazy things doesn't necessarily mean you're crazy**

Does Conformity Change Minds?

It depends.

In the case of Asch's experiment of guessing the length of a line, group pressure only changed *public* opinions, and *not* what people believed to be true.

However, Leon Festinger says that when reality becomes more complex and uncertain, people rely more and more on "social reality".
When reality is difficult to assess indeed individual conforms to the group not out of fear of punishment and exclusion, but because the group supplies the only viable information (experiments on littering in a parking lot to show conformity to social norms: people kept the place clean if it was clean).

Elliot Aronson proposes not to use the term "conformity" which is too general but using instead three terms depending on the response to social influence:

- **Compliance**: conforming out of fear, bending to power
- **Identification**: we are attracted to the person or group, and want to be the same (and the opposite: if we don't like we're less likely to conform). Works mostly if we don't have strongly held opinion on a subject
- **Internalization**: we wholeheartedly agree and identify with the group or source of influence. The credibility of the source is important here

It's an important difference.
In compliance, the behavior changes only until the group or threat is present (albeit permanence can be increased with a commitment to stay within the group and if we discover our changed behavior is good for us).
For example, I might say in public I don't like a political candidate but then vote for him in private. In identification and internalization instead, the behavioral change is permanent.

Conformity and Letting People Die

Elliot Aronson talks at length about conformity and diffusion of responsibility in reviewing the famous cases of the Kitty Genovese murder and the Darley-Latané experiments.

He says that it's possible for people to fall ill in the middle of a crowded street with nobody helping. That's another case of conformity, and it happens because:

- People look at others to see if it's serious, and if nobody acts nobody will
- If someone's on the floor already people think that if nobody intervened there's no need to
- We don't need to feel guilty if we can keep on walking

Help will be less forthcoming if:

- It's difficult to assess the seriousness
- Helping is costly or dangerous (people are less likely to help bloodied victims)
- You don't think you can actually help

- You will be stuck with the situation for long

The tendency to help can be increased:

- People can help easily
- Helping will have a strong and direct impact (fewer people help when pain is intense because they don't think they can do much)
- If there is a sense of "shared meaning" (ie.: camping where people feel like kindred souls)
- It's difficult to move away (ie.: in a subway car VS the street)

The Power of Advertising

Aronson explains how the power of advertising is highest in children, but they quickly catch on.

Skepticism goes up not just with age but also with education. However, that's not to say that skeptics are immune to commercials.

Usually, there is a relationship between exposure, or how often we are exposed to a commercial, and to how much we believe it to be true.

Aronson says that candidates who spend the most money on TV commercials are also most likely to win the election

My Note: Causation or correlation?
This was a major flaw in The Social Animal for me as the author didn't question the causation here.
For example, he didn't consider that politicians who get more donations to run ads are also already more likely to win.

The Central and Peripheral Routes to Persuasion

There are two ways to persuasion: weighing arguments with facts and figures or in a "less judicious" manner. Aronson doesn't exactly use the terms here, but it seems like the old argument of "logic VS emotions".

And we are more susceptible to the peripheral routes than we'd think.
For example:

- Slogans that rhyme convince us more
- Clever nicknames (ie.: "death tax" to convince people against succession tax)

Communication Persuasiveness

Aronson says that there are three major variables that command the persuasive power of communication:

1. The source of communication (who says it)
2. The nature of the communication (how he says it)
3. The audience (to whom he says it)

1. The Source

People will ask themselves the following questions when it comes to influencing:

- Does he have anything to gain (even an unattractive or immoral person can be persuasive with nothing to gain or something to lose)
- Is it trying to influence us
- Is he attractive or likable (we associate attractiveness of communication with the message)

Liking's limitations: Elliot Aronson explains that athletes can influence the cereal we eat and beautiful women can get us to agree on an abstract topic. But it's unlikely they influence us on, say, the presidential candidate or the morality of abortion.

The author summarizes the research on the source of communication as such:

> Individuals who are both expert and trustworthy influence us. Trustworthiness (and effectiveness) can be increased if he argues a position opposed to his or her self-interest and does not seem to be trying to influence our opinion. People we like can strongly influence where trivial opinions and behaviors are concerned, and even if it is clear they're trying to influence us and profit by doing so.

2. The Nature of Communication

The research is far from conclusive, but it seems the case that an emotional appeal is more powerful than a logical one.

- **Fear works if the receivers have high self-esteem**

fear can make people more likely to act or less likely. It depends on the receiver's self-esteem.
People with negative self-images want to crawl into bed instead of taking action. To help everyone take action, make the message scary but make people feel they can do something about it, and then give clear instructions on what to do.

- **Fear fails with abstract threats**

Fear fails with abstract threats. Global warming, for example, has failed for years to rally the masses because it has no face.
If we could put a face on global warming like Bin Laden was the face of terror, it would be easier to get people to take action.

- **Personal examples and experiences trump data**

People are more influenced by one vivid, clear personal example than by lots of data.
For example, instead of giving data on the benefits of insulating their house, it was more effective to tell people "adding up all the cracks you have a hole the size of a basket. Wouldn't want to fix a gaping hole in your kitchen?"

- **One-sided or two-sided arguments?**

Presenting two sides shows more objectivity, but also that the issue is controversial.
On average the more well-informed is the audience, the less they'll be influenced by one-sided arguments (and vice versa). On average the more one person is leaning towards the argument of the communicator, the more the one-sided argument will be effective (and vice versa).

- **Strategizing on order of presentation (go first or last?)**

Speak first if the election is several days away and you speak back to back (the primacy effect of your speech will ruin your opponent's subsequent speech and the latency effect of your opponent's speech is mitigated by the far away election).
If the election is imminent and there is a coffee break between speeches, speak second (the primacy effect is mitigated by the break and the latency effect is strongest with the election nearby).

For a complete guide on when to go first or last, check this post.

- **What if the Message is Highly Discrepant With Beliefs**

When people disagree with the message, the beliefs of the audience will change the most if the communicator has

high credibility -because they can't discredit him-.

When the communicator has low credibility he will influence people the most when the discrepancy between the audience's beliefs and the message is small -otherwise, it would be easy to discredit him-.

3. Audience Characteristics

- **Low Self-esteem individuals are more easily influences**

An individual with low self-esteem is more easily influenced than high self-esteem people. Low self-esteem people are less likely to experience internal conflict between themselves and the communicator and more likely to go along with the speaker.

- **Political Orientation: conservatives struggle with uncertainty**

Conservatives have a greater need to manage uncertainty and threats and are more influenced by appeals to fear and black-and-white arguments.
The author says that liberals respond to more nuanced and fact-based arguments.

- **Prior Experiences**

What happens before the communication impacts the influencing power of communication. Eating good food or being in a good mood are more conducive to influence.
Telling people that there will be an attempt to influence decreases the influencing power (also read: *Pre-Suasion*).

- **People Want to Protect Their Freedom: Don't Push**

The author says that pushy salesmen induce a reaction from people to re-assert their freedom and avoid doing what they're told (explicit social pressure is different from implicit one).

- **Focus On The Message (or distraction)**

People who were distracted during the influencing message experienced more changes in their opinions.

- **Amount of Information: KISS**

Adding too much information can dilute the power of the message.

How to Resist Influencing Attempts: Inoculation

Elliot Aronson says that it's possible to "inoculate" people from influencing attempts the same way we inoculate people from flu: with a small dose exposure.

Just like with virus vaccines**, when people are presented with a watered-down message that they can refuse themselves, they are more able to resist a bigger influencing attack later on**.

The author makes the point that the previous American policy of promoting American values and denigrating communism wasn't helpful. It would have been better to teach students the pros and cons rather than simplistic sloganeering.

I quote the author as this is very powerful:

> The person who is easiest to brainwash is the person whose beliefs are based on slogans that have never been seriously challenged.

We’re Not Rational: Psychological Biases

The Social Animal delves a lot into psychological biases as well.
By now psychological biases have become such a popular hit in pop-psychology books that I will skip them here.

The most interesting for me were these:

- We all think we are smarter and better than the average
- **Loss aversion**: loss-based messages are more powerful than gain-based ones
  Edit: Not true on loss aversion
  And subsequent research showed that gain frames can work better, depending on context. See more in the*Routledge Handbook of Persuasion*
- **Confirmation**: We seek confirmation of our initial hypothesis, we confirm it and we feel certain about it (and it’s often wrong)
- **Hindsight bias**: “we always knew it, it was obvious”
- **Personal Responsibility**: we assign personal responsibility for outcomes that are otherwise difficult to explain (ie.: most people will think that a subject who hasn’t gotten anything at the flip of a coin worked less hard. Blaming the victim is strongest in people who believe the world is fair!)

Put Your Best Foot Forward

Is it true that you should start with your most impressive feature first?

Yes, it is.

When it comes to forming impressions the primacy effect -what comes first- powerfully trumps what comes in the middle and what comes last -the latency effect-.

Elliot Aronson says it’s for two reasons: the first item prepares us for what comes next, and we tend to give a positive spin to all the rest. And we pay less attention to what comes after.

Memory Failures

Memory is a reconstructive process.

Often we change memories to reflect the image that we have of ourselves.
For example, when we believe that something is good for us and want to start adopting it, we might remember having done it more often in the past (Example: brushing teeth).

Sometimes people can even “recall” memory that never truly existed.
This is one of the reasons why Elliot Aronson states that the majority of self-reported sexual abuse stories might not reflect reality.
The reason is that repeated instances of traumatic events aren’t usually forgotten.

Behavior is NOT Personality

Subtle situational variables often have an outsized impact on our behavior.

That also means that our behavior is not always and necessarily a reflection of “who we are”, but it’s more a

consequence of the specific situation we are in.

Usually, when we judge our own behavior after a mistake or non-flattering event, we “know” that it was situational. But when we observe other people’s actions we tend to attribute their behavior and their results as a direct consequence of their personality traits and “who they are”.

Similarly, we assume that people’s attitudes are a great indicator of their behavior in a way that discounts the situational variables.
And we see attitude-behavior relationships even when there might be none.

Social Roles Influence Behavior

Individuals have many social roles in life which will lead them to behave in different ways depending on which roles they have.
Of course, when we observe just one of their behavior we generalize to their full personality and believe they are much more homogeneous than they actually are.

Cognitive Dissonance

Cognitive dissonance (Festinger, 1957) is so important, and with so many deep ramifications that you should devote some time to make sure you understand it.

Elliot Aronson defines cognitive dissonance as:

> a state of tension that occurs whenever an individual simultaneously holds two cognitions (ideas, attitudes, beliefs, opinions) that are psychologically inconsistent.

The driving force behind cognitive dissonance is cognitive discomfort, and people will try to convince themselves (and others), change opinions, or justify their actions in a way that will make them feel good.

The theory of cognitive dissonance does not see human beings are rational creatures, but as rationalizing human beings.
That means that we are not so much motivated to be right, good, or fair, but to *believe* we are right, good, and fair.

Looking for confirmation

Once we make a decision on something, we try to insulate ourselves from cognitive dissonance by only looking for information that confirms our good choice.

It’s not uncommon for example that people who bought a car go back to enjoy the advertising material for that car.

And we also change the way we remember things to protect our decisions.
Jones and Kohler found that people tended to remember plausible arguments agreeing with their beliefs and implausible arguments for the opposite opinion -which would strengthen their belief in the correctness of their decision-.

> **We are rationalizing creatures more than rational ones**

Self-justification trap

When our behavior is inconsistent with our beliefs we will change our behavior, our beliefs, or the meaning of our behavior to avoid cognitive dissonance.

For example, when the US administration decided to bomb North Vietnam they ignored the intelligence saying that heavier bombing was useless and was only strengthening the communists’ resolve.

The way out of the trap is to bring in advisers who were not involved in the earlier decision -and thus immune to cognitive dissonance-.

Foot-in-the-door technique

One way to leverage cognitive dissonance in changing opinions and behavior is to make people commit to a small course of action first.

This helps people feel committed to the cause and when a bigger request is made later on cognitive dissonance will pressure people into accepting the larger request.

The bigger the gain/loss the bigger the dissonance

Imagine a situation where cheating would give you a huge advantage. If you decide not to cheat, you will become a much stronger and more vocal supporter of honesty.

This is because since you had to forego a big gain because of honesty, now you need a bigger justification for it. Your justification is that cheating sucks and must be punished severely and honesty is the only way to go.

Internal & External justification: achieving long-lasting change

Imagine we commit an immoral act.

We could go two ways to justify it to ourselves -and potentially to the people around-: external or internal justification.

External justification seeks “excuses” and extenuating circumstances in the world around us. We were tired, we were pressured, someone gave us a big wallop of money, etc.

But if it’s difficult to find an external justification, then we will change our own internal beliefs to align action with beliefs.
This is very important because it means that **if you want someone to truly change their beliefs forever you should let them take action or commit to something without any major reward**.
That way, without any external excuse for their behavior, they will change their internal beliefs. In short: the smaller the reward, the greater the attitude change.

Similarly, bigger threats to influence behavior do not change long-term behavior as much as smaller threats.
And working hard towards a goal makes that goal all the more attractive (justification of effort).
However, putting a lot of effort into something also means that we will try to convince ourselves that we are happier with the results, For example, people who spend a lot of time and money to get in shape might try to convince themselves that the results are good.

Amplifiers of dissonance

Dissonance theory says that the biggest attitude changes will happen when:

1. **We feel personally responsible for our actions** (we can’t blame anyone else)
2. **Our actions have serious consequences** (the stakes are higher and we can’t move on and forget)
3. **Self-esteem is at stake** (we really need to protect our ego, and people with high self-esteem experience more cognitive dissonance when they do something cruel or stupid)

That means that people with low self-esteem will find it easier to commit immoral actions.

Related to the third point, narcissistic personalities with an overblown sense of self get angrier and more aggressive when their ego is threatened.
Cristina Salmivalli and her colleagues though suggest that high narcissistic self-esteem, is not genuine self-esteem

but stems from insecurity. This type of paper-thin self-esteem is present in bullies.

My Note: True, also see Roy Baumeister
Baumeister indeed explains that people most likely to lash out violently have big but fragile egos.
Also see: *Evil*.

Justification of Cruelty

To avoid cognitive dissonance people who commit or have to commit cruelty try to blame the victim in order to reduce cognitive dissonance.

Ironically, the more good people want to be and the nicer they think they are, the more they need to frame the victims as terrible people,
And the higher their self-esteem, the more they need to blame the victim -lower self-esteem people already see themselves as not-so-great people so their need to offload blame is smaller-.

- The Lucifer Effect.

When cognitive dissonance undermines us

Imagine your resolution was to quit smoking.
But you didn't manage and started smoking again after two weeks.

That could be a blow to our ego, to try and fail.
So to protect our ego we would downplay the importance of the resolution and the seriousness of smoking.
We would look for confirmation that smoking isn't so bad, that "everyone does it" or we could take a daredevil approach of "you only live once".

This is a very maladaptive approach: we'd be happier in the short run, but in the long run, it will make us unhealthier and will also reduce the chances we'll ever try and succeed again.

What's a better alternative?
Probably it would be to lower our expectations of success.
Instead of going cold turkey, we could try to half the amount of cigarettes.

How We Skirt Cognitive Dissonance By Not Paying Attention

Sometimes we avoid cognitive dissonance by not paying attention to what we're doing.

Elliot Aronson says that's the case for example with condom use. Most people know it makes sense to use condoms and we should all be using them.

But when they don't use a condom they fail to even consider the possibility of putting on a condom. They are in a state of denial and hypocrisy.

How do you get people to take action when they already believe it's the right thing to do? Aronson came up with a clever experiment to make people confront their own hypocrisy.

Physiological Effects of Cognitive Dissonance

Under certain conditions, cognitive dissonance can have physiological effects.
For example, make hungry and thirsty individuals less hungry and thirsty.

Cognitive Dissonance or Simple Observation?

We have seen how easily people can change their opinions based on their actions.

But how do we know that they are experiencing cognitive "pain" and not simply looking at their behavior and simply changing their own perception in a calm and dispassionate way?
Indeed that's what Bem proposed.

And it turns out, in some circumstances, there is little cognitive discomfort indeed.

Elliot Aronson says that we change opinions without discomfort only when we don't have a clear belief, to begin with.
But when we do have a fairly clear opinion or belief, then the discomfort and the threat to our self and ego do come into play.

Aggression: Nature or Nurture?

It seems clear that aggression has an instinctual component.
But it's not entirely based on instincts either. There is evidence showing that culture and situational variables influence our aggressive responses as well.

For example, primates who are induced into an aggressive state will attack… Unless they're in the presence of the alpha male of the group. In this case, they will flee.

Is Aggression useful?

There is a current of thought believing that limiting aggression would also limit our human achievements -for example, Jordan Peterson, author of *12 Rules for Life*-.

For example, the drive behind "conquering space", "attacking" a mathematical problem, and "mastering" a science are all in a way connected to aggression.

Elliot Aronson though says that's a mistake as it uses too large a definition of aggression. He defines aggression as "*an intentional action aimed at doing harm or causing pain*".
Thus, says the author, **equating aggression and hostility with advancement and achievement is to confuse the issue**.

And the world needs a different breed of people. He quotes Loren Eiseley when he pays tribute to our ancestors but then also says:

> The need is now for a gentler, a more tolerant people than those who won for us against the ice, the tiger, and the bear

I really liked this part, it makes a lot of sense to me.

Violence Breed Violence

Answering with violence and aggression with violence and aggression is likely to lead to a self-reinforcing cycle.

Retaliation almost always exceeds the initial offense because the pain we receive feels more intense than the pain we inflict.
And even if we induce more pain than we received, we will justify each increased round of aggression by blaming the victim and convincing ourselves that they deserve it all.

Also behaving aggressively increases testosterone, which in turn contributes to further escalation.

> **There will never be a war to end all war**

Gender and Violence

Women display much lower physical aggression but they seem to engage in more forms of social aggression.

Nikki Crick and her associates call it relational aggression. This includes activities such as:

- Spreading false rumors
- Isolating
- Malicious gossip
- Ruining someone's reputation

Is the difference in gender aggression style biological or cultural?
Evidence points to both biology and culture.

For example, Australian women showed greater evidence of physical aggressiveness than Swedish and Korean men.

Alcohol and Aggression

Alcohol works as a disinhibitor. It reduces social fears and makes us less cautious.
But there is more than that.
Alcohol also makes us more socially stupid. When something happens we respond to the earliest and most obvious cues and miss all the subtleties.

So for example, if someone steps on our toes we react to the pain as if it were purposefully inflicted instead of considering the situation and the excuses that we received.

More Inhibitors of Aggression

More contributors to aggression are:

- Pain and body discomfort (more aggression in the heat)
- Expectations are high but we get blocked
- We are drawing near our goal but something stops us
- There is hope for change (hopeless people accept even the worst of conditions)
- Perceived social unfairness (exclusion, taunting, humiliation, and rejection. Example of Columbine)
- Exposure to violence (even on TV or by seeing guns laying around; mostly effective on those who already have a disposition for aggression)
- Anonymity
- Violent pornography (normal pornography is harmless)
- Children seeing aggression rewarded (but aggression punished might not work as disinhibitor and might be better not to show violence at all)

Disinhibitors of Violence

- Personal responsibility
- Accountability
- Punishment (but applied judiciously in the context of a warm relationship)
- Child education to internalize values that denigrate violence and aggression
- Using empathy to stop the dehumanization process (empathy-training exercises in children to identify other people's emotions lead to a sharp decrease in aggression)

Do Violence and Sex Sell?

Aronson says that sex and violence can hog all the attention to themselves and overshadow the product.

My Note: No final answer provided here
fair enough, but *can* overshadow the product is not a final indictment. That's not to say, indeed, that sex and violence cannot be deployed effectively to sell.

Violence to Attract Attention

The Social Animal dedicates space to the question of violence and rioting to attract media attention to social injustice.
Aronson says that in an apathetic society, it can work to attract attention indeed. However, violence rarely leads to rectification of what was wrong.

> **There will never be a riot to end all injustice**

Prejudice

Many authors say that the best way to change our beliefs is to expose ourselves to many instances that prove our beliefs wrong.

However, Elliot Aronson makes the point that's not the case.

Bombarding people with facts that prove their prejudices wrong won't change the prejudices but only create new mental subcategories -ie.: "intelligent black guy", and "female good with numbers"-. Basically, they tell themselves they are just running into exceptions.

Two Forms of Sexism

One form of sexism antagonizes women. The other one seems benevolent and seems to favor women but is actually patronizing.

Prejudice Acts Both Ways

Prejudice can work against minorities but sometimes also discriminate in favor of minorities.

We Are Predisposed to Prejudice

Stereotyping is not necessarily and always an act of abuse, and it's not always negative either.

Often it's simply how our mind works. And it's a system of organizing and simplifying otherwise complex information about our world.
Sometimes the information would be too complex for our brain otherwise, and even when it might be not, we still have a tendency to save as much cognitive power as possible.

However, the specifics of prejudice are learned.

Causes of Prejudice

Elliot Aronson says there are five basic causes of prejudice:

1. Economic and political competition
2. Displaced aggression
3. Maintenance of status or self-image
4. Dispositional prejudice: some people have a greater tendency to hate (authoritarian personality)

5. Conformity to social norms

Stereotype Is Strongest in Uncertainty

Stereotypes are strongest in ambiguous situations and when we don't have clear answers and information.

In ambiguous situations, people tend to choices and attributions consistent with their stereotypes.

How to Reduce Prejudice

Elliot Aronson dedicates a long chapter to prejudice, what affects prejudice, and how to effectively combat prejudice.

Here is how to reduce prejudice:

1. Equal-status contact without economic conflict (ie.: state-sponsored housing)
2. Inevitability of contact (leverage cognitive dissonance in accepting the situation and seeing it positively)

However, the ideal scenario is rarely present, and the following increases prejudice:

1. Economic conflict (private homes with minorities and whites believed their house values would go down)
2. Competitive settings like de-segregated schools where minorities started at a marked disadvantage (blacks and latino increase hostility towards whites partially as an attempt to regain lost self-esteem)

Liking, Loving and Interpersonal Sensitivity

Elliot Aronson introduces the chapter with a slight, entertaining dig at Dale Carnegie's "*How to Win Friends and Influence People*".

Indeed, praise does work in making people like us as long as it doesn't come across as manipulative and the praiser is not in a position to benefit from coddling us.
Not only do we feel manipulated, but also like the praiser is attempting to limit our freedom by trying to trap us.

It's similar to receiving favors.
And with favors, it's often more effective to get people to make favors to us than not us doing favors to them (remember justification of effort? They will convince themselves that we must be very deserving fellas).

Aronson summarizes the findings by saying that **praise and favors do not always have a positive effect**. How they impact liking and influencing depends on the situation.

Flaws make us more attractive

The pratfall effect explains how we will "too perfect" individuals more after they make a mistake. But we will like average people less when they make mistakes.

Confidence and Gullibility

Evidence suggests that the more insecure we feel, the more we will like people who like us and compliment us. People with low confidence will also seek less attractive partners because they want to minimize the risk of rejection.

People who are more secure of themselves are less needy and less easily swayed by a smooth talker.

Social contact makes us healthier

Social exclusion and rejection cause physical symptoms while social contact can make us physically healthier.

We like most people who grow to like us

We like people who like us, but even more, we like people who grow their opinion of us. Thus starting from the negative and going into the positive is more powerful than always staying positive.

To be effective though the change must concern the same traits and it must be gradual (ie.: happening over time).

Falling in Love

People fall in love with those who are near them.
The major factor of love is proximity.
The second most important one is similarity (in values, attitudes, beliefs, and personalities).

Intimate details make us closer

Sharing intimate and personal aspects of ourselves, both positive and negative, helps the development of close relationships.

> **Honest self-disclosure strengthen relationships**

Honesty Best Medicine for Relationships

If all the wisdom in The Social Animal weren't enough, Aronson drops another life-changing gold nugget when it comes to relationships.

He says that humans seek "gain" and novelty. But in love relationships that are always stable, there is little to gain because our partner already loves us.
And there is much to get hurt about because our partners are so important to us that a small criticism can take us down.

How to cure this conundrum?
Honesty and authenticity!
Honesty is the key to long-term relationships, says Aronson.

Why?
Because with honesty we can get real feedback that will give us a bit of that "loss and gain" experience that keeps the relationship fresh. It won't allow us to take our partners for granted and it will keep the relationship from becoming dull and boring.

Real-Life Applications

There is so much information here if you want to maximize your effectiveness with people. For example:

- **Take Away Excuses to Make People Act**

To increase donations to a non-profit an experiment was added to the pitch "even a penny will help". The effect was extremely powerful because it took away the excuse of "I don't have much money". People donate more and even gave bigger donations.

- **Link to Self to Retain Information**

We have an egocentric memory. Such as, we remember better what we think is related to us. Thus, when you want to remember something, relate it to your personal experience and ask yourself what it means to you and/or how you can use it.

- **Leveraging Cognitive Dissonance**

To induce positive attitudes toward an object or opinion, get people to commit themselves to the object or opinion. If you want people to harden or soften their moral attitudes, respectively tempt without them committing or tempting them enough that they commit the deed themselves.

- **Speak First to "Destroy" Your Opponent's Presentation**

When you speak first you imprint people with your message. When your opponent starts speaking they are still thinking of your speech, and that "pollutes" your opponent's presentation.

- **Don't Be Afraid of Criticizing: it Gains Admiration**

The Social Animal shows that negative evaluations increase the admiration we feel for the evaluator -as long as it's not evaluating us :)-.

CONS

Even great books like *The Social Animal* can have a few cons:

- **Sometimes jumping to Conclusions**

At times while "*The Social Animal*" I felt like it was jumping to conclusions, making the inference sound obvious truth when it wasn't.

For example, the author says that US residents in the South have a bigger sense of honor and are more likely to get into gunfights because in the past a reputation for being tough was useful to protect their kettle. Well, that *might* be the case indeed, but how can we be sure?

Later it says that our mind is predisposed to stereotyping -and thus prejudice- because our ancestors needed to quickly assess friends VS foes, members of a friendly tribe, and members of enemy tribes.
Again, these *evolutionary psychology* explanations are mental lucubrations that do *seem* to make sense, but they are *not* science.

- **Doesn't Always Ask Difficult Questions**

I feel that at times the author doesn't stop and ask the difficult questions. For example, when he discusses racism his position always seems to be that "we are all the same".
What if instead he asked if there were even the tiniest inborn differences among different ethnical groups?

Or he talks about violent pornography perpetuating the "myth that women enjoy rape". The vast majority of women *don't* enjoy rape, but it's a fact that many women want more dominant men and that some women have sexual fantasies revolving around sexual aggression and domination.
I feel "*The Social Animal*" could have made a footnote for some of those thornier aspects.

- **Not Always Purely Scientific**

The author at times jumps in with his opinion and views.
Sometimes that's great, like for example when he weighs in giving his own opinion on the research. Some other times, it felt a bit moralistic for a scientific text.
An example is the criticism of a society showing how violent solutions are both predominant and violent like for example Arnold Schwarzenegger and James Bond becoming (negative, in his opinion) cultural icons.

- **Small Samples in Scientific Method Explanation**

The last chapter of "The Moral Animal" is dedicated to explaining the scientific method in social psychology. The author explains that the correct method is to have two random groups which will make sure that we can only measure one variable.

However, he does not talk about the size of the groups, and sometimes his examples are based on small samples. With small samples it's quite possible that the two groups won't be homogenous at all, with one group presenting, say, many more individuals who are richer, smarter, aggressive, or whatever you have it.
As *How to Lie With Statistics* explains, small sample sizes are prime examples of wrong conclusions.

- **Slight Political (Liberal) Bias?**

At times it feels like "*The Social Animal*" presents a slight liberal bias.
For example, it introduces the F-scale of authoritarianism where F stands for "fascist" and doesn't address the criticism. It also only enumerates the "cons" of authoritarian personalities, like insecurity, being highly dependent on parents, and suspicion.

And just to be clear: I think what Aronson says is true and enlightening. But without also adding criticism and the advantages of an authoritarian personality -and there should be some?- the text seems less balanced.

P.S.: I read that previous versions were even more strongly politically on the left.

- **Change Behavior Instead of Attitude**

Changes in attitude can lead to changes in behavior. But it's difficult to change attitude with, say, education.
It might be easier to change behavior to change attitude.

- **Too Long on Some Topics, Ignoring Others**

If the book wanted to be more of a textbook, I found it to expand too much on certain topics and too little on some others.
For example, the racial issue is most relevant to the US and I would have liked all the space on race and prejudice to go to some other big issues of social psychology.
But that's up to personal preferences of course.

PROS

The Moral Animal is the best social psychology book I have read so far. And one of the very best books I have read on psychology.

- **Great Overview**

One of the biggest advantages of "*The Social Animal*" is that you get a solid overview of the whole field of social psychology.

- **Wisdom With Little Fluff**

Little stories and little fluff but lots of wisdom. Just like I love it.

- **Great Influencing Manual**

This is more great material in influencing here than in many books on the influence that I have read.
Also read: best books on influence and persuasion

- **Deep Relationship Wisdom**

There is more wisdom on relationships in "*The Social Animal*" than in a few dedicated relationship books I have read.

Review

The Social Animal is simply the best and most comprehensive book on psychology available today.

The amount of wisdom and information in "*The Social Animal*" is simply staggering.

That doesn't mean you won't need any other book on the topic: if you're hungry for knowledge, you do.
But if you're in a hurry and want a good overview, then pick this one first and the rest when you've got time.

The Social Animal (Brooks): Notes & Review

Lucio Buffalmano · 15 October 2018 · Archived copy · Original

In *The Social Animal* author David Brooks explains fundamental psychological concepts via the story of a man and a woman, seen developing throughout their lives, from birth to death.

Bullet Summary

- We overestimate the importance of money for happiness and underestimate relationships. Research shows that relationships are the most important determinant of happiness (deep relationships and good marriages on top)
- What we think of ourselves often bears little resemblance to what others think. Always ask for feedback
- What makes our brain so special is the ability to handle abstract, “fuzzy” representations of reality and compare them

Full Summary

About the Author: David Brooks is a journalist and a political and cultural commentator.

Humans Are Too Complex for Schemes

Humans are too complex for neat progression and boxes of meaning.
Maslow does the same, but **the latest research casts doubts on the idea of simple progressions the way Maslow describes**.

My Note: I’m so grateful for this!
The Maslow hierarchy was always a pet peeve of mine.
Introduced and presented all over the place, with so few people who ever questioned how good of a model it was to actually understand people and human behavior.

Science of Love

People tend to end up with people who live nearby and tend to choose spouses with similar intelligence.
And an important way of measuring someone's intelligence, says David Brooks, is through vocabulary. The author says that we have so many words to impress mates.

A few more interesting tidbits:

- **People seek the highest possible return in the dating marketplace**
- **The richer he is, the higher his sexual market value, and the younger the spouse**
- **A woman's attractiveness is a great predictor of the husband's income**
- **Men can compensate for their qualities**
  - Shorter men can be more successful than taller ones if they earn more (Dan Ariely calculated by how much)
  - A black man should earn more than a white one to do well
  - Asian men need to earn more than white ones to have the same level of attractiveness
  - Also read: **sexual market value hacks**
- Women resist dating outside their ethnic group much more than men do
- Men are more romantic
- Women have a better sense of smell

Bodies More Important Than Faces

Men rate women with attractive bodies and unattractive faces consistently more highly than attractive faces but unattractive bodies. The body takes precedence because it's more important for reproduction.

And while men look at cleavage, women look for signs of trustworthiness.
My Note: albeit it's not wrong, this is also a gross oversimplification.

Also, read:

- The science of dating

Relationships

- Marital satisfaction is U-shaped: happiest in the beginning, unhappiest when children are adolescents, then climbs again
- Social skills are not connected to IQ (only 5% of IQ explains *emotional intelligence*)
- Women react more strongly to relationship stress and men to assault on their status
- Relationships are the biggest determinant of people's happiness
- Extroverts are happier than *introverts* cause they have more relationships

About Sex

- Men have higher sex drive which stays more constant but dips because of an unclear, invisible understanding of their partner's menstrual cycle
- Women's sex drive is influenced by many variables
- Religious women experiment less but their desires are the same.
- Women are attracted by female and male bodies, her body lubricates even while watching animal sex
- Women's sexual tastes are more influenced by education than men's (educated women are more likely to perform oral sex and experiment)

- People with one recurrent sexual partner are happier than people with multiple sexual partners

Human VS Machine Thinking

David Brooks says that the human mind works differently than a computer because it's capable of "fuzzy thinking". Such as we make up "gists" of what things are and we can make patterns.

Once we make up gists, we can make lots of things with them.
We can connect dogs with wolves, we draw parallels between cats and dogs because we can think that "this is sort of like that". We use our neuro-imagination to draw parallels.

It seems easy but it's very complex.
Taking two things that do not exist -our gists- and comparing them to a third thing -a description of something- that also doesn't exist is something a computer cannot do.

Attachment Styles

David Brooks says that there is no one best parenting style.
As long as the parenting is coherent and predictable, then the attachment will probably develop a secure attachment style.

Avoidant attachment children tend to have a parent who are emotionally withdrawn and psychologically unavailable. They don't communicate well with children and don't establish rapport.

The attachment styles of children also predict how good their relationships will be.
Also, read:

- Dating as an anxious attachment
- The anxious/avoidant trap

Flight or Fight Natural Tendencies

Some people tend to flee stressful situations. Some others have a bigger tendency to fight.
The author repeats a few studies on performance saying that top performers train to learn and improve while mediocre ones train to have fun (also read: *The Talent Code*).

The high achievers also do one thing they are good at and do it over and over again (*Good to Great*).

The Social Animal Quotes

On learning the world VS adjusting to the world:

> We spend much of the first halves of our lives trying to build internal models that fit the world and much of the last halves trying to adjust the world so it fits the inner models

On human intelligence VS machine learning:

> We are smart because we are capable of fuzzy thinking

On school VS "passion" (I disagree with this):

> School asks students to be good at a range of subjects, but life asks people to find one passion that they will follow forever

On failure:

> Much of life is about failure, whether we acknowledge it or not, and your destiny is profoundly shaped by how effectively you learn from and adapt to failure

Real-Life Applications

- **Don't Trust Neat Theories of Categories**

Humans are very complex.
Neat theories that put things in order and inboxes are often too big simplifications of reality to even help us understand ourselves.

For example, the Maslow hierarchy looks neat with its order of needs. But, as David Brooks says, research shows it's more complex than that.

- **Watch Out for Status Inflaters**

Status is not objective.
Some people are status inflaters, they trick people into perceiving them as having higher status than they actually are.

Some people punch below their weight instead, for example applying to jobs they're overqualified for because they're afraid of competition (or because they find comfort in "winning").

- **Ask People for Feedback**

There is little overlap between what people think of themselves and what others think of them. Thus, always ask people for feedback!

CONS

- **“The Social Animal” Book Title**

Honestly, I have put off the use of the title “*The Social Animal*” since there is already a book with that name by Elliot Aronson.
The two books are also somewhat similar, providing an overview of many different studies on people and psychology. I wonder what Aronson thought of that.

- **Introduces Research Without Digging Deeper**

The author introduces several pieces of research but rarely tells us anything about those research.
For example, *The Social Animal* talks about *the Marshmallow Test*, a very important study, but also a study that has been effectively criticized recently, which other studies failing to replicate part of the initial findings.
Hence, you must take this book with a grain of salt sometimes.
The same goes for *Grit* and *Emotional Intelligence*.

- **Sometimes Sensationalist**

In the description of the neurons, we get the usual spiel of “possible” connections among neurons which is higher than the particle of the universe. That really tells you nothing.

- **Sometimes Correlation Mistaken for Causation**

I saw in “*The Social Animal*” several issues of correlation for causation.

For example, the author says that people with one recurrent sexual partner in a year are happier than people with multiple sexual partners.
However, it fails to take into account that people with multiple sexual might be driven by an internal “dark push” that makes it harder for them to stop (also read: psychology analysis of womanizers).

PROS

- **Great Concept**

The idea of narrating the lives of two people and explaining it through studies and psychology is a very good one. I believe it added value and made David Brook’s work stand out from all the insignificant, *journalist-penned pop psychology books* that add very little value.

- **Sometimes Funny**

A few jokes here and there will make you smile. It’s always good to laugh, even when you are busy deepening your knowledge

Review

I’m ambivalent about *The Social Animal*.

There were a lot of golden nuggets and many interesting tidbits that I had never heard before, and I love that.
There were also a few pop psychology “myths” that the author didn’t go to the bottom of.

The structure of *The Social Animal* is its biggest peculiarity.
The idea of going through two people’s lives to investigate the human-animal in different periods of its life is fascinating.

Basically, a linear approach instead of the usual vertical one.

However, I'm not sure how the final product works well. Not because Brooks did it or didn't do it well. But I wonder on a more general level if such a broad undertaking might not just be too much to chew for a single book. I felt that "*The Social Animal*" touched upon extremely interesting topics but it could not stop long enough to go deep enough.
Obviously, the author needed to move on with the story.

Overall though, I am glad I read The Social Animal and took away quite some novel wisdom.

Sperm Wars: A Misleading Classic of Evolutionary Mating Theory

Overview

- Women can gain by pitching one men's sperm against the other with back-to-back sex with different partners
- The strategy of focusing on fewer children can be more useful than going for quantity
- When you're poor daughters are better and sons are better when you're very resource-rich (thus, the Chinese did it wrong for decades)

Notes

About the Author:
Robin Baker studied zoology and earned his Ph.D. with a thesis on the evolution of the migratory habit in butterflies.
He later left the academic world to focus on his writing.

Note: Skipping the Stories

Sperm Wars introduces lots of stories that go along with the theory.
Some of the stories are interesting, some even funny and, some have been noted, can also function as entertaining

soft-porn reading.
I will skip the stories for this summary.

The Arms' Races Between Sexes

Sperm Wars paints a somewhat bleak picture for those like me who see genders as complementing each other. Instead, it shows Robin Baker shows how males and females in a relationship can have major incentives in tricking and deceiving one another:

- Women hide their fertile days because:
  - She can more easily deceive her partner if she wants to cheat
  - Keeps her partner interested in her at all times
  - Confuses herself as much as her partner, leading to more routine sex
- Women are more likely to have extra-marital affairs during ovulation
- Men ejaculate more when they have been away from their partner (unconsciously preparing for possible cheating and sperm wars)
- When women change partner she almost always moves up

The No-Fapping Big Lie

There is a big craze around the Internet on "no-fapping". Interestingly, Robin Baker says that it's a lie that men and religion impose on men to defend themselves from single men.

The author makes a big case that masturbation helps in sperm wars because it "cleans" the pipe of older and less lively sperm. Instead, a man who masturbates has more lively sperm which is more suited to engage and win sperm wars.

Note: Probably true
Eric Castle from the Mayo Clinic says that masturbation doesn't have such a big effect on conception.

Cheating Tendencies

Sperm Warms says that women are much more likely to have sex with a man who is not their partner during their fertile days and is much less likely to use contraception (data for this statement is missing).

Soon after the cheating, however, there is a tendency for her to run back to her long-term partner.
Reason why?
So that she can be inseminated by both and thus promote sperm competition.
Let the best ejaculator win.

What's Important to Have Big?

The author says that penis size matters little in sperm competition.

Instead, the testes' size matters a lot as more sperm gives a major advantage in sperm competition and increases the chances of fertilizing the egg. Especially in non-monogamous species, which is why males of non-monogamous species have larger testes.

The author says women are interested in their buttocks more than the penis and muscle (*Body Language of Love* confirms this).

Also, read:

- Sex at Dawn

Quality As Important As Quantity

The author says that in poor conditions where many children die, people tend to produce lots of offspring.

However, Baker says that a strategy of focusing on fewer children and nurturing them properly, and giving them more resources is equally effective.
One single child can also work, but it's very risky as it can fail spectacularly if the child fails to reproduce.

A balance between investing in resources before having children and actually having children is important.

Poor People Get Cheated More

The author suggests that poor men get cheated more.
Men of higher wealth and status instead obtain partners earlier, reproduce earlier, and are more likely to do the cheating.

Read more on cheating, faithfulness, and infidelity:

- How to overcome infidelity

- Why people cheat

- How to pick a loyal partner

People Pick Gender of Children Depending on ROI

Poor people are more likely to have a daughter because daughters are more likely to guarantee reproduction -and you can be sure that the child is hers- and are more likely to marry up.

It's best to have boys for high-status couples instead because men with lots of resources can have multiple children that they can all cater to.

And indeed, Baker says, that's what we see: American presidents, for example, have 60% of sons.
It's not yet clear how women can "decide" which gender, but it seems to be the woman who achieves the gender bias.

My Note: Small sample size
the theory might be good, but the example is not. I believe that the number of presidents' offspring is too small to derive any meaningful data.
Different researchers have reached different conclusions here, so this might be true, but I'm not 100% sure as of now. If it's true, it's by a small-ish factor.
Also read: *Fooled by Randomness* and *How to Lie With Statistics*.

Rape & Prostitution

The author says that rape and prostitution can both be effective strategies.
Indeed prostitution might have been so successful on our part that, in a way, we are all sons of bitches (that one had made me chuckle :).

There are also many drawbacks though, including the risks of disease.

The author wonders how come rape is not more common since it can actually be successful.
One of the reasons is that it's risky. It often involves a physical fight and also a high risk of retribution from possible partners, family, or tribe members.
He postulates that most men can become rapists given the conditions because most wars, which provide a safer

environment for rapists, show widespread raping.

Once a woman has been raped, it might be good for her to conceive though, and the author says that a woman is more likely to conceive from rape than from routine sex with her partner.
The author also makes the interesting claim that women often stick with abusive men who successfully raped them because they "proved their strength" (VS a man who tried but didn't succeed).

> **Prostitution has been so successful that, in a way, we are all sons of bitches**

What Men & Women Like

Men mostly look at the beauty, age-related to fertility- and reproductive fitness.
Women look a lot at status.

My Note: Depends
As Aronson explains in *The Social Animal* women also behave like men and look at beauty mostly when the status is the same or difficult to assess. Otherwise, they go for status.

Crucially, and this is what I credit to Sperm Wars the most, is the notion that **men respond to traits such as weakness and dependence which can indicate fidelity**.
Also, read:

- **Sexual market value**
- Sexual market place

Strategies for Reproductive Success

The author says that men are much more similar to themselves than women are to other women.
However, they also pursue four different strategies for reproduction:

1. Bisexuality
2. Sperm warfare specialization
3. Avoiding sperm warfare
4. In between avoiding and engaging in sperm warfare (the majority of men)

The strategies tend to be in equilibrium in society.
Basically, **it's not true that everyone should try to be as "alpha" as possible**. Because there are enough sperm warfare specialists a strategy of monogamy can be equally or more (or less) effective.
It seems best instead to pursue your strategy also based on your biological predisposition.

Long-Term Relationships Can Be Most Successful

Although few people pursue a lifetime of pure monogamy, most find success in long-term relationships.
Amongst the advantages, there is that of not getting caught cheating and much, much lower risk of diseases.

Sperm Wars Criticism

I have researched this book, and studied dozen more evolutionary handbooks by high-authority institutions like *The Cambridge Handbook of Evolutionary Perspectives on Sexual Psychology*, or the *Oxford Handbook of Infidelity*, just to name two.

The concept of Sperm Wars has become very popular, and many researchers mention Robin Baker.
So Baker is no lightweight and he enjoys at least some recognition among scholars.

That being said, I didn't come out of this with a lot of trust in this book and its conclusions.

Here are some notes:

- Robert Martin, a biology Ph.D., writes in Psychology Today that there is "humans have no special biological adaptations to cope with sperm competition".
- **Killer sperm is, at best, unproven**: Studies show inconclusive results on "killer sperm" in both humans and animals
- A study suggests that sperm traits are female-inherited, which means that male competition won't affect sperm as directly as Sperm Wars implies
- **Non-paternity rates are much smaller:** The author reports that 10% of children are not fathered by a long-term partner. That's a lot -albeit it would still leave 90% of faithful cases-, but it's also not true. If you take DNA tests as a father because you are not sure, then your chances of not being the father are around 1 in 3. But on the overall population the median among estimates is 3.7% (and even lower for those fathers who don't have any suspicions) One of the sources is here and another one here)

Conclusions of Criticism

We most likely evolved several adaptations to increase our odds of conceptions, and these adaptations may include competition with others.

Sometimes men and women also have diverging interests, and we can expect there a 'sexual arms race'.

However, the war of the sexes is nowhere near as bad as the author makes it out to be and for most couples there is probably larger scopre for cooperation than deception -albeit cheating while the other partner suspects nothing can also lead to high rewards in such a system-.

Same goes for 'sperm wars'.
It likely played a role in human evolution and still partially do. But not nearly as badly as the author says. There is also no proof -and so far it seems more likely no than yes- that "killer sperm" and "blocking sperm" even exist.

It may be worth noting that Baker also wrote some novels regarding sperm competition. This may suggest a personal fascination with the topic that may lead him to for beyond what a rigorous scientific approach would warrant.

Real-Life Applications

Learn Nature, Then Choose What to Follow
I think a great takeaway here is that nature can be fucked up and that a lot of our evolution can be maladaptive as well.

Thus, learn biology, and then reflect on what you really want and what's really good for you and the people around you.
Because that's not necessarily what our prime urges might push us into.

CONS

- **Unproven Claims Presented as Fact**

I really wonder why the author presents claims that are unproven and highly speculative without warning the readers about their very nature. He could have easily told they were speculation and he would have avoided so much criticism.

Was it a case of looking for sensationalism?
To remain in the biological realm I would call such choice maladaptive.

- **Homosexuality / Bisexuality Explanation**

The author tends to explain almost every behavior in light of "better suited for procreation", which in my opinion is a very common mistake that does not take into account that, when so thousands and thousands of traits are interplayed, a lot of behaviors and mutation are just purely out of chance.

However, out of all the theories in Sperm Wars, the one on homosexuality as a maladaptive offshoot of adaptive bisexuality made the least sense to me. I won't go into details but it seemed a rather poor theory to me.

- **No References**

Attention: the author makes it clear that Sperm Wars won't leverage references because it's the popularization of his other work, Human Sperm Competition, which is heavily referenced.
However, as a guy interested in both the practical application of science and the science itself, I would have liked an in-between version.

- **Confuses Correlation With Causation**

The author says that since rape is common during wars, then men must all have a tendency to rape.

However, there is also a correlation element, such as men who go to war are more likely to be violent themselves maybe?
And of course, a situational element, where an environment full of violence can lower the bar for more violence.

PROS

- **Instructive Read on Sex Arms' Races**

If you have not read many books on evolutionary biology Sperm Wars can be a shocking eye-opener.
In a good way.

- **Good Resource for Understanding People**

There are many good concepts here, and you will learn a lot about *psychology and human behavior*.

Review

Sperm Wars shares some deeply insightful content but also, unfortunately, quite a few unfounded claims that cast some shadows on the whole.

That makes it difficult to rate this book.
Part of me loved it and it had a lot of new information that led me to a deeper understanding of the arms race to reproduction.
But it also has a lot of conjectures, key disproved information, and no scientific reference.

When I first read it, I almost wished the theory was true because it presents such a beautiful and elegant theory that explains things so well.
But beauty and elegance are not synonymous with truth.

Overall, I would give *Sperm Wars* four stars for the value it provided me the first time I read it, and zero stars for scientific to warn readers that they must do their own research with this book.
And a big strike against it for scientific integrity: some information in "*Sperm Wars*" is highly misleading. And the author does nothing to warn the readers his conclusions are highly speculative at best and either unproven or with plenty of discordant evidence available.

Bullet Summary

- Stop using “playing politics” as a pejorative for other people: we all do it and it’s a key tool to success: so you better get good at it
- Realize that your boss will have a major impact on your life: make it a priority to have a good relationship
- Make friends, not enemies

Full Summary

About the Author:
Marie G. McIntyre is a carer coach specializing in career advancement and success, and she runs a consulting service for people seeking advice.
Her approach is that politics are nothing “bad”, but a normal aspect of work and life. A normal aspect, as well as a crucial one for your career goals.

The Organizational Facts of Life

Marie says that the sooner you accept the following realities, the faster you will go down the road of positive realism in the workplace (and in life):

1. Organizations are not democracies
2. Some people have more power than others
3. Virtually all decisions are subjective
4. Your boss has control over much of your life

5. Fairness is an impossible goal.

Forget Fairness: Look for Leverage

The author says fairness doesn't exist and you should look for leverage instead.
She points at a few key levers for leverage, including:

- **Power of results**

Strong political power boosts your results and strong results boost your political power.

- **Power of knowledge**

When you become the repository of sought-after information and expertise your power increases exponentially.

- **The Power of Attitude**

Friendly, helpful, and cooperative. The type people *want* to work with.

- **The Power of Friends**

Here it is for you, simply and life-changing: make friends, not enemies.
Friends and allies increase your leverage, fights, and enemies decrease it.

- **The Power of Empathy**

When you can make yourself a trusted person who can listen to people, keep secrets, and possibly dispense some good wisdom you will develop a strong network of trusted confidantes.

- **The Power of Network**

Your network is the total sum of the people you can call for support, help, or information. As someone said, your network is your net worth. Also read: *Never Eat Alone* by Keith Ferrazzi.

Political Games

The author outlines a few typical "political games" people tend to stick with, including:

- **Suck-Up Players**

Their strategy is to have the best possible relationship with the boss by kissing up to him, pampering him, and always agreeing with him.
It's often not a good strategy as many managers are not looking for sycophants and these games often come across as spineless.

- **Control Players**

They resist what others are telling them to do, either because they are dominators and enjoy telling others what to do, or because they naturally resist and resent outside influence.
Too much control game often degenerates into useless power struggles

- **Shunning Players**

They isolate and ostracize people from their group for being different or for not conforming to the rules.

- **Put-Down Players**

They are rude to others so that they can feel better about themselves.

- **Scapegoat Players**

They always offload the blame to someone else. Their colleague, the customer, and the other department.

Also, read:

- Archetypes of political players, and how to deal with them

How People Commit Political Suicide

Marie McIntyre says there are a few patterns with which people kill their own chances in the workplace.
Some of them are:

- **Becoming the problem**

When you complain a lot, adopt an adversarial attitude, or constantly create problems, then you are only on your superior's map in connection to a problem.
And when that happens too often, then *you* become "the problem".
And corporate life tends to be short for people who become the problem.

- **Negative self-talk**

When you develop negative self-talk and the connected victim mentality, it's easy to start seeing the environment as toxic and your colleagues and bosses as unfair enemies.
Then you begin to treat them accordingly and it becomes a self-fulfilling prophecy that leads to your demise.
Instead, break the negative self-talk and

- **Foolish reaction to change**

The author says that you can either embrace change, look for another place to work, or be a pain in the butt and possibly become the problem. The choice is yours.

Also, read:

- **Political landmines you need to be aware of**

Is It You, Your Boss, Or Is It Just a Toxic Environment?

The author dedicates a portion of *Secrets to Winning at Office Politics* to recognizing whether the problem is you or the environment you're in.

She talks about the attribution error, which is a *psychological bias* that leads to blaming others for our problems.

To do a correct analysis the author recommends you take n objective, dispassionate look at the environment around you. Are your colleagues happy? Or is everyone complaining and keeping a "cover your ass" (CYA) file?

If you realize you are in a toxic environment the author invites you to change workplace or you can easily transform into a toxic person yourself.

The Four Ps of Power

The author highlights four Ps that you need to address and improve upon to increase your power and political clout.

They are:

- **Power Assessment**: Look at your situation and ask yourself how you can improve your leverage position
- **Performance**: how can you make your organization more successful?
- **Perception**: How can you make your work, projects, and results more visible to the higher-ups?

- **Partnerships**: How can you make more friends, allies, and supporters?

The author outlines very good ideas on how you can improve each one of them.
I particularly liked the idea of improving perceptions, for example by making a report or monthly update of your daily tasks, thus giving them more visibility.
The author was in HR and she started recording and categorizing the complaints they would get from employees, thus providing a pulse check to upper management which she eventually presented to upper management.

Parent, Child, and Adult Role

The author says that power issues often grow out of the parent and child role that people take in relation to others -instead of the adult role that we should all take-.

Upward relationships become difficult for those who see the manager as a parent because they will either react rebelliously or be submissive and overly compliant.
The author writes:

> Rebellious employees tend to be oppositional and anti-authoritarian, just like two-year-old and teenagers.

Taking the child role with colleagues results in one of the following:

- Competitive child who needs to win
- Self-sufficient child who plays alone
- Bully who pushes people around

My Note: Great observation
I love the explanation of the child's role in terms of over-compliance and rebellion.
This is also a great insight from the *transactional analysis*.
But the lateral relationship with colleagues seemed quite a stretch and it didn't convince me fully.

Parent & Child Managers

Parental managers come in two flavors:

- **Dominating**: overuse direct authority with orders and harsh reprimands. Employees respect authority but usually don't like tyrants.
- **Smothering**: see themselves as attentive and scrupulous, but employees usually see them as annoying micro-managers

Child managers instead are afraid of managing people because they are afraid of being too domineering and not being liked.

Rules For Long-Term Success

Finally, I found Marie's final rules for long-term success to be very good:

1. **Be honest and ethical in all your dealings with people.**

We're not living in tribes and many of us don't live in small villages anymore. But, eventually, your good or bad reputation will spread. And if people can't trust you, there goes your credibility and leverage.

2. **Believe in yourself. If you don't, why should anyone else?**

Insecure people commit all kinds of political faux pas.

3. **Believe in your work.**

It will make a difference in your results, your attitude, and your joy for life.

4. **Do the best job you can.**

Most people don't do the best job you can. It seems crazy to high achievers, but that's also an advantage of them: it's easier to climb the ladder.

5. **Keep your commitments.**

So simple and yet so life-changing to help establish a strong reputation.
On the other hand, if you want to remain in the limbo of nobodies, miss deadlines, be sloppy, and don't keep your word.

6. **Be a pleasant person.**

We see people who can give us good vibes and we avoid those who give us bad vibes.
Be a person that people want to be around and your stock can only go up.

7. **Feel true respect for everyone.**

This is something that you can't fake until you make it.
It must come from a place of genuineness.

Real-Life Applications

- **Don't Let Politics Distract You From Results, But…**

Don't allow politics to suck all your energies away from your deliverables. People saying "it's who you know, not what you do" are rarely powerful and accomplished. Your results are one of your best and strongest tools for political power.

- **… Do Learn Politics**

However, politics can make your life and your ascension much easier -or quite impossible-. Learn to play the political game.

- **Expose Yourself to Read People**

Learning to recognize and deal with different people and personalities is one of the most important skills you can learn to increase your political power.

- **Dump Your Complaining Friends**

If you spend too much time with people who complain about work, make no mistake: that's no support group. That's a bitching club that will keep you stuck, unhappy, and politically powerless.

CONS

- **Could Have Been Briefer**

Some concepts repeat a few times and I feel the book could have been condensed a bit.

- **Sociopath Label**

The sociopath label is applied a bit too freely.

- **Freudian Labels**

I loved some explanations of power issues in terms of Freudian terms. However, as it's often the cause of Freudian theories, it can lead to the over-explanation of every issue in terms of childhood experiences.

PROS

- **Great Overview of Career Strategies**

A very good book to get an overview of common political mistakes, and career strategies for personal success.

- **Great Psychological Profiling of Office Player**

I very much enjoyed and liked Marie McIntyre's psychological profiling of different kinds of office players.

Review

When I picked up "*Secrets to Winning at Office Politics,*" I thought I was going to get some sort of "hand to hand" combat guide to do well at work.

But this is not *The 48 Laws of Power* applied to work, and that's also its strength!

The author skips many of the power players to focus on general power principles and the core fundamentals of what matters to get ahead: make friends instead of enemies, and deliver great work.

I can recommend *Secrets to Winning at Office Politics.*

Bullet Summary

- Sexual evolution shaped us the way we are more than anything else
- There is an inherent war of the sexes between genders, but the war within sexes is equally strong (both mitigated by a mutual gain in cooperation)
- By our nature, women are coyer and men more sexually aggressive. To deny it, or to deny that men and women are different, is an utter failure of understanding humans

Full Summary

About the Author: Matt Ridley studied zoology and focused on the mating systems of different birds. He earned his Ph.D. researching the sexual habits of pheasants.
He later moved on to become a science journalist, moving between business engagement and scientific writing.
He is also the author of "*The Origins of Virtue*".

Reproduction Is Everything

Everything evolved to make reproduction more efficient.

People who developed traits and behavior that made them more likely to reproduce passed on their genes.
Therefore, anything that increases the chances of reproduction was passed on at the expense of everything else.

> **It's about REPRODUCTION of the fittest, not SURVIVAL of the fittest**

Conflict Trumps Cooperation

The balance between cooperation and conflict is a great theme of the human species.
Ridley says that the appearance of selflessness is misleading: animals are serving the interest of their own gene.

Selection Within Most Important

The selection within the species, says Ridley, is more important than among different species.
Why so?
Simple: you don't need to run faster than a cheetah, you only need to run faster than another member of your tribe.
And **you are already smarter than all other animals, but what matters is how much smarter you are compared to other humans**.

The author says that humans haven't yet had a society where competition is good for the whole.
And it's the same for genes in a pool of genes. Every gene only "wants" to get into the next generation (note that as Dawkins explains that "willingness" is of course figurative).

Sex & Diversity

The author says that sex is burdensome.
However, it evolved because it provides a genetic advantage thanks to the variability it bestows.
Since each child will be different than each parent and also different by the simple average of the two, he will make sure that evolution keeps happening.

Sons Are Higher Risk

Sons can provide more benefits to their parents because if they do very well they can reproduce more than daughters.
But if he is not a competitive son then it's more likely he won't have any offspring at all.
Women instead are "safer" as they tend to reproduce even when they are not at the top of the pack.

Indeed high-status couples have more male children.

The author also says that more dominant women and more emotionally independent women gave birth to boys more often.

Why Men Want to Sleep Around (And Women Not As Much)

The sex that carries a baby for nine months has less to gain with extra mating.
The sex that can have as much sex as he can and always gain instead naturally likes to sleep around.

On average, says Matt Ridley, it's true that **men are after quantity and women are after quality**.

How many men are after quantity depends on how much they invest in their children (male parental investment, check *The Moral Animal*). The less they invest, the more they want to mate with… Pretty much any female.

What's "Quality"?

Quality is not such a straightforward issue.
In species that do not help the female rearing children, quality is purely on personal traits. But i**n species that contribute to raising children, then quality also means having lots of resources**.
Thus, it's difficult to be a high-quality man for human females without having any resources.

> Lover VS Provider: How to Pick Your Best Strategy

Fighter or Lover? Depends on Whether Women Choose

The author says that when women have a say in their choice of mate fighting becomes less relevant for men.

Such as: **fights matter when women don't have a choice** and the female always goes to the winner.
But in species where women choose, fights among men matter less.

So pick your seduction style carefully:

> 10 Types of Male Seducers: Pick Your Niche!

Selection Can Be Random!

I really loved this part of *The Red Queen.*

The author first wonders why so many animals have crazy ornaments and colors, and wonders why.

He introduces two different theories:

1. Fisher says that women choose mates that look handsome independently of indicators of genes
2. The good-gene theorists say that women only pick those handsome men because it's a display of good genes

Overall, it seems that women do pick random beauty traits that have little or no connection to health.
The first shift towards a certain trait happens randomly maybe, but then as more women start liking that trait, it becomes a self-fulfilling prophecy.

What's the Human Mating System?

The author wonders: are we monogamous, polygamous, or what?

He says there are 5 ways to answer this question:

1. **Study modern people directly** (monogamous is the answer)
2. **Look at human history** (powerful men enslaved concubines)
3. **Look at modern simple societies** (they're less polygamous than early civilization and less monogamous than our current society)
4. **Study apes** (men's testes are not large enough to be as promiscuous as chimps but larger than fully monogamous gorillas)
5. **Compare humans with other high social structures** (as it teaches us that we're designed for a system of

monogamy plagued by adultery)

Why We *Tend* Towards Monogamy

The author discusses the size of testicles, previous societies, and data to infer that females tend to be monogamous with instances of cheating.
Men push for polygamous societies but most of the time they also go (or settle) for monogamy.

Even in polygamous societies, the author notes, humans form bonds, and even kings with hundreds of concubines usually elect one woman as the N.1.
The author mentions some theories saying men prefer younger women also because they tend to form longer bonds, while chimpanzees don't care about the age of their sexual partner.

However, it might be foolish to talk about humans having a mating system at all. **Humans seem to very much to adapt to the prevailing opportunity.**

So contrary to what the church might say, or what some liberal books such as *Sex at Dawn* might suggest, the truth is that we adapt and be a bit of everything.

What's pretty much stable instead is that the male is the seducer and the woman is the seduced.
And we share this pattern with most of the animal kingdom.

What Mating System is Best?

A polygamous society represents a victory for a few men and a loss for many.

Anti-polygamy laws might do more to protect men than women (women would gain by taking a super resourceful-rich man even as a fourth wife).

The author says that we became monogamous because having one single father to help with the children helped to rear the child. But if the wealth discrepancies grow, then we move toward a polygamous society.

Is It True That Matriarchal Societies Are Peaceful?
The author says that yes, it seems to be the case that if most women have it their way, then societies are more peaceful.

Sex Arms' Race

The author also delves quite some time into the popular and interesting topic of the sexual arms race.

For example:

- Men ejaculate more when they have been away from their wives
- Women keeping a provider and sleeping with a hunk
- Women are more likely to be unfaithful if the marriage is going badly
- Unfaithful women have less high fertile types of orgasms (albeit my quick research found no evidence for "type of orgasms" that facilitate reproduction)
- Women have sex with their lovers when they were more fertile

Also, read:

- **The tools of human sexual conflict**

> Sexual Conflict: How Men & Women Fight The Sex War

Sexual Differences

This means that unfaithful women are more likely to father a child from their lover.
Which makes sense to me, otherwise why would they have a lover in the first place?

In their sexual fantasies, 50% of women say they never switch partners, while men say the same only 12% of the time. But women much more fantasize about sex with a familiar partner than with a stranger as compared to men.

If you are interested in infidelity (and in finding a faithful partner) here are a few good links all based on scientific research:

- How to overcome infidelity
- Why people cheat
- Emotional infidelity: what is it and how it happens
- How to pick a loyal partner

Why You Don't See When Women Are Fertile

There are a few major theories to explain why human females, contrary to most animal species, hide their most reproductive days:

- Hide fertility from him so he sticks around to make love to her
- She hides it so that it's easier for her to sleep around
- He cannot be sure he was the father which helps her protect the children from infanticide

This makes the woman the chooser because if she wants competition she should advertise her fertility and let the competition ensue. By hiding it instead, she can play around better.

Men Seek Beauty, Women Status

Matt Ridley says that experiments repeated all over the world show that women place more value on status and resources while men give more importance to beauty.

The interesting thing is that higher-earning women value the earning capacity of their husbands more, not less than low-earning women. Seems to be a case that high-quality women want even higher quality-man (also see: a practical guide on female hypergamy).

Women also look for and love qualities that are indicators or likely to lead to status and resources.
They universally love, for example, dominance and appreciate status symbols such as expensive cars and clothes.

Also, read:

- **Sexual market value**: an overview
- **Sexual market place**

> The Sexual Marketplace: Overview of Intersexual Dynamics

Men Are Different Than Women

Matt Ridley takes aim at the modern tendency of some to deny the differences among genders, or to ascribe all differences to nurture.
He says that it's not all nurture, but also nature, that women are more nurturing (at least towards infants) and men aggressive.

He says that four differences stand out in all repeatable tests:

1. Girls are better at verbal tasks
2. Boys are better are mathematical tasks
3. Boys are more aggressive
4. Girls are better at some visual tasks (reading characters and moods) and boys at others (reading maps)

And gays are more like women than heterosexual men in some of these respects.

Differences Between Races are Negligible

The author says that the differences among races are much smaller than the differences between genders. Something that I also always believed, he says that what makes people similar is much stronger and runs much deeper than what makes us different.

He says that the differences are so small that it just makes more sense to study what makes us similar instead (and what makes men and women different).
Also, read my article in a similar vein:

- Why intercultural communication is a waste of time

> **It's human universals, not differences that are truly intriguing**

The Red Queen Quotes

On reproduction being all it matters:

> Reproduction is the sole goal for which human beings are designed. Everything else is a means to that end.

On the reproduction of the fittest

> Evolution is more about reproduction of the fittest than survival of the fittest

On status, sexual success, and female hypergamy:

> Which woman would not rather be John Kennedy's third wife than bozo the clown first

On men wanting to be polygamous:

> **In most societies men strive to be polygamous but few succeed**

On some hard-hitting sexual truths:

> Men are more violent and women are more nurturing. I'm sorry if this is a cliche', that can't make it any less factual.

On genes' importance:

> I find it hard to believe that the fact that 83% of murderers and 93% of drunk drivers are males is all due to social conditioning alone

On human constants being more important than smaller differences:

> To a martian, an anthropologist studying the differences between races seem like a farmer studying the differences of weed in his field. A martian is far more interesting in the typical weed plant. It is the human universals, not the differences that are truly intriguing.

Real-Life Applications

Women Are Not Highly Promiscuous… But Watch Out
Albeit women are not highly promiscuous, they might still gain by keeping a provider and cheating with another man.

CONS

- **Some Wrong Generalization**

The author says that even in apparent acts of selflessness animals are serving their own genes. And yet I bet we could think of thousands of cases where that's not the case.

He also says that power in current society does not predict mating success -just look at childless Hitler, so consumed by ambition to be childless, he says-. That's not based on any data and I for one believe it's the opposite. Also, what has Hitler to do with it? One example says nothing.

- **Wrong Information on Kamikaze Sperm (and possibly more)**

The Red Queen takes for good the theory in *Sperm Wars* that humans use "kamikaze sperm" to attack other men's sperm in the vagina.
As we have already seen in Sperm Wars' review, there is no evidence for killer sperm.
Also, the author mentions a study of men and women watching sex scenes and says that women were not aroused by gay scenes. I remember the opposite and that women got lubricated at *any* sex scene.

- **Some Unfounded Assertions**

The author says "evidence suggests that women are slightly better than men at running countries". What *evidence* suggests that? Albeit I believe that might even be true, I'd be really curious as to how that evidence has been collected -and I suspect hasn't-.

- **Competition Not Good For The Whole?**

The author repeats a few times that selfish drives trump altruistic ones.

And that might be true. However, I feel he often pushes the envelope too much. For example when he says that a society with free competition is not good for the whole.

And yet look around yourself.
Your computer, your cellphones, your clothes… Everything you see around you was motivated at least in part by competition and a healthy selfish drive.

- **Sometimes I wished For More Depth**

In discussing research on how dominant women give birth to more boys and submissive women give birth to more daughters, the author comments on the "dominant/submissive" label: "whatever that may mean".
I know it's difficult to define, but some readers might have liked to know how it was measured exactly.

Also, the author quotes a rather popular study saying that one inch in height equates to 6.000 in yearly income.

But that makes no sense if you think about it: sure an inch for someone who's 2.2 meters tall won't add much value -and quite possibly *subtract* value-, right (law of diminishing returns).

- **Some Wrong Conclusions**

The author says that the mating system (monogamous or polygamous) depends on how much a woman stands to gain by marrying a man with another woman or by picking a less well-off single man. And that depends a lot on how wealth is distributed and if other women can prevent the sharing of their men.
The author then says that in spite of men being active seducers, they are spectators on whether a society is monogamous or polygamous.
But that makes no sense, because legal framework and wealth distribution is also, of course, heavily influenced by men in society.

- **Sometimes Repetitive**

A few concepts, like men who stand to gain by mating with many females, repeat several times across The Red Queen. Since it's such a simple concept, I think it could have been briefer by explaining deeply but once and for all.

- **Mixing Animals & Men**

The Red Queen goes back and forth between humans and animals.
Fair enough, we are animals and this is not even a con. However, it's a warning for people who are mostly looking at what sexual evolution means for humans: they will have to wade through quite some examples from the animal kingdom.

PROS

- **Great Overview of Sexual Dynamics and Sexual Power Dynamics**

Matt Ridley provides a very valuable and rare service these days: the overview of a well-learned, critical, and smart man.
He reviews evolutionary psychology of course, but he also touches on psychology and ethnology. His critics of Margaret Mead and his harangue against Freud and Skinner all provide the reader with high-quality learning.

- **The Scientist's Humility**

The author says:

> Half of the ideas in this book are probably wrong. The history of human science is not encouraging. Galton's eugenics, Freud's unconscious, Durkheim sociology, Mead's culture-driven anthropology, Skinner behaviorism, Piaget's early learning and Wilson's socio-biology. All appear in retrospect to be riddled with erros and false perspective.

However, I very much disagree with that. Just because something was wrong in the past, it doesn't mean we'll keep committing errors (also read *Fooled by Randomness*). And eventually, little by little, we get closer to the truth.

- **True Scientist's Disdain for PC**

Ridley approaches science as a scientist should.
He says for example:

> Not that racial and cultural differences can't exist. As much as a black man has a different skin color than a white man, so it's also quite possible that he also has a different mind

And more than once he goes against the grain of society saying that men and women are much different by their very genders.

Review

The Red Queen is a great book.

I have written a lot of cons, but I always hold great books to a higher standard.

Some parts I felt like I could have written myself.

And if you haven't yet read much about evolutionary psychology, The Red Queen will be an eye-opener.
And I leave you with one of my favorite quotes from Matt Ridley (and there are many):

> I sometimes feel we are fated never to fully understand ourselves. Because part of our nature is to turn every inquiry into an expression of our nature. Ambitious, illogical, manipulative and religious.

Overview

- Work with your boss, but never make it seem like you're working with him
- HR and bosses want you to believe the workplace is like a family. But you better not buy that.
- Too much of a thin skin won't allow you to maximize your potential and too thick a skin won't allow you to develop a deep connection. You gotta be closer to the thick skin, but not all the way

Notes

About the Author:
Dan Rust is a career coach and public speaker.

#1. Observe… Without Getting Emotionally Involved

Dan Rust says that to understand people you have to look at them without getting too emotionally involved and without attaching labels to them.

The moment you label someone "nice" or "jerk", you start avoiding them, or looking for confirmation… Or don't look much at all. And you decrease your ability to really understand that person.

> You can't get inside someone else's head until you get out of your own

Over time you will develop a realistic understanding of people that will become your "baseline" for your observations. Once they deviate from that baseline, you know that you need to pay attention.

The author says that 83% answered they know their colleagues "well" or "very well" in a recent survey. Yet they

couldn't answer basic questions about them.
But to master workplace poker, you need to know the players.
You need to know what's important to them, how driven are they, how introverted/extroverted they are, and what they think of the company and the boss. Even meet their spouses any time you can.

#2. There is No Family At Work

Businesses love to talk about human resources and some bosses love to talk about their employees like family (as in Onward, the story of Starbucks).

Well, don't buy that BS.

Employees don't really matter: it's their output that matters.
And when it comes to downsizing, there is no family.

So don't be the laid-off employee who thought he was in a "family".
There is no family at work: families don't have an HR department, laws, and etiquette. And families don't fire people, not even when things go terribly wrong.

There is nothing wrong with it, it's just the nature of things.

Also, read:

- **Corporate lies and manipulations**

#3. Extreme Corporate Cultures

Dun Rust reviews different types of corporate cultures, and differentiates five of them:

- **Cult of personality**

It revolves around the ego of a key decision-maker or founder, with Marissa Mayer and Donald Trump as two examples.

To survive in these companies understand that everything revolves around the boss and everything is about propping up the boss. Understand what he wants and likes, but know that whatever you do it might never be enough.

- **Culture of Contraction**

It's a culture of paranoia where people are always watching their backs.

- **Coliseum Culture**

It's those environments built to maximize the competition among employees. You will see ranking and scorecards to keep employees striving for the top.

- **Perma-Grin Culture**

These are cultures where everyone must smile and keep a positive attitude.

- **Inbred Culture**

Companies have been around for a while, with leaders who have been in the company for decades. They take pride in their insular environment and in "how we do things over here".

#4. Maximizing Your Output

Workplace Poker also has a deep, extremely valuable chapter on how to perform at our best.

Some of the information I take away:

- Schedule a block of work of 90-120 minutes
- Take a short 15-minute break between sessions (not longer or you'll have trouble getting back to your task)
- Enjoy a late afternoon nap of 20 minutes

#5. Strike A Balance Between Emotional Thin-Skinned & Bulldozer Thick Skinned

Some of my favorite parts of *Workplace Poker* were in the author's description of personalities.
Particularly I enjoyed the descriptions of what Dan Rust calls "Velcro Butterflies" -very touchy and sensitive to rejection- and "Teflon Rhinos" -nothing penetrates their thick exterior-.

There are a lot of advantages to being thick-skinned, including:

- Rejections don't slow you down
- Not intimidated by influential and powerful people
- Ignore useless criticism
- Persevere through obstacles
- Accept no excuse
- Drive yourself and people around very hard

However, there are also some drawbacks.
Not allowing the "bad stuff" in also often means that rhinos don't let the good stuff, which makes it harder for them to develop deep and genuine connections.
People also often feel "railroaded" by their intensity and directness and they choose to avoid them.

In the continuum, **the most successful people tend to be on the thick-skinned side, but without going to the extreme**.
In the face of rejection, they acknowledge the pain and they're honest with themselves when they feel the fear of rejection and judgment holds them back.
People who hit the ideal sweet spot also learn to be less reactive, overcoming the butterflies lashing out -internally and with passive-aggressive style– and the rhinos' shutdowns.

Extreme Rhinos: extreme rhinos tend to do well… For a while. But their extreme overconfidence eventually leads to major mistakes and missteps and to spectacular crashes and burns.

#6. Think Well Of Your Steps

Some people "go with the flow" and tell themselves that "every mistake is a chance to learn".

Sure, that much is true, but you should still think deeply about important decisions in your life and strive to maximize your potential -and diminish your mistakes-.
What do you choose for your college, first job, career changes, or industry changes… They all have major impacts on your life.

Some mistakes the author lists:

- Being drawn to the novelty and possibilities and not considering the drawbacks of a new job
- Need to move away from mistakes by changing job
- Impatience of moving on and seeing only the positives of a new job

#7. Working Your Boss

Dan Rust has some great tips on how to improve your relationship with your boss.
This is just an appetizer:

- **Let him see you work**

If you are too quick on your work though, there is a danger it might seem like it wasn't complicated enough. You want your boss to think you are quick, *not* that the job was easy.
The solution is to "romance" the process and sell it as part of your personal branding.
A good way of doing it is to mention the difficulties you have had and overcome in the process:

> Hi, I am done with the job. It wasn't easy to find all the information so I asked Brian from accounting. Some of the figures were missing, but fortunately I could secure a meeting with Cristina and she filled me in on the missing data.

If you finish ahead of time and now are free, say something like this:

> I just wanted to let you know that I finished the project ahead of schedule, so I have some extra capacity. Do you know of anyone who could use my help?

This is a double yummy: he gets to know you are done early, that you want to help, and that you respect him so much to ask him first. Now he will put you on what he thinks is the priority, thus further increasing your visibility.

- **Let him know you take extra work**

before deciding to help someone on a project you should mention it to your boss. Something like:

> I'm planning to help Donna on the Mayfair project, but I wanted to run it past you first just in case there are other projects that you think should be a higher priority, or need a little extra help.

- **Don't let them see you sweat**

If you are having real challenges, it's best to work on your weaknesses on your own and not let your boss see your mighty struggles.

I remember my very first as a project manager. I had taken over a project way too big for my knowledge and sent the wrong email to all the "important" stakeholders in CC. The previous project manager, who was still responsible for it was furious. He called m up and reamed me on the phone.
As he screamed on the phone, I just kept repeating, calmly "yes. Yes. You're right. Aha. That makes sense".
Then I picked up my mobile, called him, apologized, and told him I wasn't comfortable with his tone.
Why did I do that move?
Because my boss was sitting nearby. And he never got to know of my blunder.

Real-Life Applications

- **Go To Company Events**

Always take part in company events, go to after-parties, mingle, and make new friends. It's not only an opportunity to make friends and deepen your network, but also to observe colleagues in a more natural event.
It was always eye-opening for me to see how your colleagues operate when drunk -and you might even get laid ;)-.

- **Leverage Your Subconscious For Judgement**

The author says, righteously, that most of what you read on body language in the media is designed to grab attention more than to enlighten on the subject. The biggest misconception is that specific movements have a specific meaning behind them, but that's often not true.

Instead, take a brief look at someone and then look away. Chances are that your unconscious will be better at a snap judgment than a conscious look trying to "decode" single gestures.

- **Be Careful Not to Take All The Blame**

Taking the blame is what leaders do. It's what John Maxwell says in *The 21 Irrefutable Laws of Leadership* and what the Navy SEALS Willink and Babin say in *Extreme Ownership*. And they are right.
But many people are not in a position to safely do that, points out Dan Rust, and I couldn't agree more. Make sure then that you don't let other responsible people off the hook if that would mean career suicide for you.

- **Don't Give Space to Enemies**

If you have an enemy at work, *too nice people* will keep a lot of distance out of discomfort. But this gives them room to maneuver against you. It's best instead to stay very close to them.
Without being aggressive, show you're not afraid, show they're not getting under your skin, and show them they better drop it… Because you are no easy target.

CONS

- **Some Unneeded (& Pointless) Evolutionary Biology**

The author writes:

> In our natural state there are no fat (or even pudgy) humans because they get caught and eaten by predators. There are no unmotivated or disengaged natural humans because, again, they get caught and eaten by predators. And there are no dumb natural humans because, well, ditto.

I don't particularly agree with that.
The "natural state" is not this perfect environment where everyone's fit and smart.

- **One Historical Exaggeration**

To introduce his "Patton style" the author describes Patton as fighting insurmountable odds. He writes:

> Patton's army had many new and poorly trained soldiers, inadequate equipment, uncertain information about the enemy's positions, unpredictable weather, and scarce medical supplies.

That makes no sense to me when you consider Patton was fighting an enemy -the Germans- who were in full retreat and in much worse conditions (plus "unpredictable weather?").
Anyway, this is not a big con, but you know I'm retentive :).

PROS

- **Deep, Meaningful Content**

I have read many books on social games and workplace politics. And I have the say, the depth and value of content Dan Rust shares in *Workplace Poker* is really impressive.

- **Deep Psychological Insights**

Very good and deep insights, at the level of *some of the very best psychology books available.*

Review

Workplace Poker is the best book on career advancement that I have ever read at the time of writing this review.

Dan Rust not only tackles the games and politics but also the mindsets of winners and the keys to top performance.

And if that weren't enough, Dan Rust is also a master storyteller, which makes "*Workplace Poker*" not only a treasure trove of information but also a truly pleasurable read.

The Manipulated Man: Summary, Review & Criticism (Esther Vilar)

Lucio Buffalmano · 1 November 2018 · Archived copy · Original

In *The Manipulated Man* (1971), author Esther Vilar argues that women contribute nothing to society and, contrary to what feminists believe, women are not oppressed but shrewd manipulators skilled at controlling men for their own benefit.

Bullet Summary

- **Women manipulate men to take care of them**
- **Men happily oblige because they don't know any better** -thanks to indoctrination and societal pressure
- At the core, **women are stupid and men are the only ones who move society forward**

Full Summary

About the Author:
Esther Vilar studied medicine at the University of Buenos Aires and emigrated to West Germany in 1960 to continue her studies in psychology and sociology. She worked as a doctor for a year and then had a string of jobs before making a name for herself as a critic of the feminist movement.

1. Men Have It Bad, Women Have It Good

Vilar says it's the opposite of what feminists say:

It's *men* who "have it bad" and women who enjoy an easy life.

For example, Vilar points out that:

1. **Men go to war, women do not** (or don't have to)
2. **Men retire later** *in spite they have a shorter life expectancy*
3. **Men have no say in whether or not to have a child** (women decide whether to abort or keep it)
4. **Men support women** (the other way around is exceedingly rare)
5. **Men work all their lives** (women temporarily)
6. **Men are poorer than women**

My Note: A mix of truths (albeit still generalizations), and an unsubstantiated claim

Some of these statements were true, or partially true at the time Vilar wrote.
At least when looking at society in general, rather than looking at individuals.

Some of these claims are still true today like men having little say on whether or not to have a child.

But for "men being poorer" there was no data and I have no idea how she came up with that.

I'm personally also unconvinced by her conclusion that "women have it easier".
In my opinion, it would be equally possible to make a list of why women have it harder than men.

At the end of the day, life is what you make it to be and what you focus on. And it's not written anywhere men *have to* work harder all their lives, or "have it worse" than most women do.

2. Men Are Intelligent, Women Stupid

One theme of the book that some readers are speechless about is Vilar's claim that men are strong, intelligent, and imaginative while women are weak, unimaginative, and stupid.

My Note: Some unsubstantiated claims
It would be easy to dismiss this claim as "nonsense", yet I believe it's only fair to give it a proper analysis, which we will do in the "criticism" section.

Women:

- Are happy to do house chores because it's "at their level"
- Will not pursue sciences even when given the opportunity and freed of house chores
- Couldn't care less about politics
- Only have material demands, never intellectual
- Are not embarrassed by men's intellectual superiority because have no ambition there
- Only care about what immediately impacts them
- Are unemotional: they just pretend of having feelings

Men:

- Are intelligent
- Advance the sciences
- Are interested in technical machinery

3. Men Shouldn't Treat Women Like Equals

Men often mistake women as being at their same level, says the author.

So they give them the right to vote (ugh!), access to universities, and try to free them of house chores by inventing all kinds of systems and machinery.

But women still don't do what men thought they would do.
They don't go into politics, they don't advance the sciences and they don't busy themselves with any meaningful intellectual pursuits.

4. Women Enslave Men

Another theme of *The Manipulated Man* is women's enslaving of men.

But one might wonder: if men are intelligent and women mostly stupid, how can they enslave men?

To this contradiction of sorts, Esther Vilar replies that **women enslave men by leveraging their stupidity and looking childlike**.
Men feel compelled to look after women because… Who would it otherwise?

The second pillar of enslavement is society-conditioning.
Men simply grow up with the idea of having to take care of women and they never challenge it.
And society then self-reinforce that idea. If a man doesn't work, provide, and take care of a woman, then he is considered a failure.
The pressure then keeps him there, working even in jobs and positions that he despises.

The third pillar is indoctrination.
Who takes care of children?
It's women, and women indoctrinate them into the ways of society, such as: taking care of women.

Read below for Vilar's list of 'control tactics'.

5. The Emancipated Female: Rare, & Barely An Exception

Esther Vilar finally makes an exception to the rule of parasitic women's style of living.

The exception is the "emancipated" female.
However, the exception is more appearance than reality, as the author proceeds to dismantle the idea of emancipation.

She categorized emancipated females as follows:

1. Has to work because he can't manage to sustain her
2. Cannot have children
3. Is ugly
4. Is actually emancipated
5. Has a particular interest in a certain career

Only beautiful women can be truly emancipated because an ugly woman has no sexual market value, no leverage, and never really had any other option.

The emancipated female still takes advantage of the system though.
To begin with, it's easier to rise quickly through the ranks for the simple fact that she is a woman. Since there are so few women around, she stands out.
And still, she makes a big show of how hard it is being a woman in a man's world and how many headwinds she had

to face.

The women who actually achieve a lot provide great help for the majority of women who keep living on a man's dime.
They can point their finger at them and say "look what I have given up (to stay at home and be with you)".

How Women Enslave Men

1. Conditioning from childhood
2. Social conditioning: it's masculine to work, feminine to do nothing
3. Pressure from society (not providing is seen as a failure)
4. By looking silly and child-like on purpose (leverage his protecting instincts)
5. Pretending that housework is difficult
6. With their stupidity, they become inscrutable to more intelligent beings
7. Make him feel smarter and stronger (and like they can't do stuff themselves)
8. With sex (she needs it less than him)

I agree that women have developed several tools for controlling men.
But so have men, which is part of how the sexed engage in sexual conflict.

However, I disagree with the idea that women always win, and by default.
Sometimes women are also victims and manipulated, and not always the manipulators.
Men also play games and manipulate, after all.

Criticism

I loved "*The Manipulated Man*".

And for when it was written, it was brave, courageous, and provided a much-needed counterweight to feminism.

Yet, there is also much to criticize:

1. Tin Foil Hat Level of Conspiracies

Conspiracy theories sometimes are correct.

But rarely so when they paint against the grain of human nature and social dynamics.

Here are some conspiracies in The Manipulated Man that left me a bit cold:

1. **Women manipulate male children into serving other women ➡** but women handicapping their children runs against evolutionary pressure
2. **Women all pretend that house chores are dull, but they actually like them ➡** data? Evidence? Surveys?)

3. **The press all conspires to paint men as rapacious wolves ➡** a "WIIFT" is missing. What's in it for the press to *conspire* against men?

I don't think there is any "female design" to indoctrinate men, and I don't think the press all converge into sharing an ideology that is good for one gender and terrible for another.

Why would male journalists want to handicap themselves?

Sure, some of them do it because it's a sexual strategy. But it's a weak form of sexual strategy, and many men are aware of that.

Also, **I don't buy the idea that people can be so easily manipulated into doing things that are obviously bad for them**.
If you do your own research you will realize that influencing people to take action that goes against their beliefs and interests is far from simple (check *The Social Animal* for example).

2. Staying at home only good for her?

The author paints the choice of staying at home for the woman as only good for her and her selfish needs.
And it never really considers that it might actually be good for everyone.

Instead, here is a possible different view: it's good for her, it's good for children, and it's good for society too since those children grow up with more supervision.

And that means, in turn, less crime, better education, and a better future for them and society.

I'm not saying this is *the* truth, I'm only saying that the choice of the woman staying at home is not as simple and clear-cut as the author makes it out to be.

3. Overall, poor understanding of human nature & power dynamics

The Manipulated Man is genius as it is politically incorrect at times.

For example, when it explains that (many) women are not interested in intellectual pursuits and focus instead on what's practical and useful (for them).

However, in other passages, it is equally poor in *basic psychology* and human understanding.
For example, the author says that women don't care about men and only want to impress other women. She says women dress up for other women, not for men.

So here I say it: **it's just plain wrong of Esther Vilar to say that women don't care what men think**.

Women *do* care, and care a lot, about what men think.
As a matter of fact, we could probably say that what men think, for women, is a matter of procreation and non-procreation and, therefore, a matter of life and death.

4. Factually wrong in several instances

The complete lack of scientific basis in "*The Manipulated Man*" surfaces in several factually wrong passages.

For example, I quote:

> (..) But women are not capable of the unconditional love a child should have. This can easily be proved. Women only care for their own children, never those of others.

And:

> Without any emotion – love, hate, or malice – she is bound to the man who works for her.

The assertion that women have no emotions or feelings is nonsense.
If that were the case, women would all be classified as psychopaths. But they're not.

5. Fails Basic Social Dynamics Principles

The Manipulated Man never stops considering the transactional element of human social dynamics.

Esther Vilar never considers that the "contract" between men and women is just another transaction, which often results in both parties being, if not really happy, at least "cool with it".

And some men are actually happy with the non-written contract of "I support you, you take care of the house and let me have sex".
While some other men are actually pimping it by giving women resources while banging them without any hustles.

Instead, she lumps all men-women relationships into the category of "women manipulate men".
And that's taken me to the other critic:

6. Simplistic view of society

The gender roles and society described in *The Manipulated Man* are extremely simplistic and very black and white.

It's reminiscent of communism and Marxism.
And indeed the people who glorify this book are often part of their own cult.

All nuances are lost here.
Reality is complex, exceptions abound, and people have countless and sometimes even competing drives… Any black-and-white theory is almost bound to also be wrong in many aspects.

6. The "women are stupid" assertion

To be clear: it's not true that women, on average, are less intelligent than men.

However, it is a fact that men are responsible for more scientific discoveries and groundbreaking new products.

Many women indeed are eminently practical and, *on average*, less interested than men in philosophical theories, scientific pursuits, and new discoveries.
And some women are indeed content to settle for less and let their men do the work.

That much is true.
But *not* that women are stupid.
There is no real difference in IQ between men and women.

7. The "Women Bad, Men Good" Nonsense

It's true that men pursue more scientific discoveries and are more active in advancing society.

However, it's also true that they pursue more weapons of mass destruction and start and engage in more destructive endeavors that set society back.

In a nutshell, men both build more and destroy more.

So far, overall, the trend has always been towards more advancement than setbacks.
But it's up to all of us to keep it that way.

The Manipulated Man Reception

The Manipulated Man is a recommended reading in male-rights movements such as Red Pill and MGTOW.

On the other hand, it has, of course, managed to royally piss off feminist movements, with the author receiving a number of death threats -which is shameful-.

If you speak German, this is a video interview of Esther Vilar with Alice Schwarzer, a famous feminist leader in Germany (a nation where feminism is huge).

Schwarzer told Vilar that she is not only sexist but also fascist.

https://www.youtube.com/watch?v=y24CRiaOly8&t=181s

Calling people who disagree with some aspects of feminism “fascists” is a typical feminist power move

The Manipulated Man Quotes

These are some of the most shocking, entertaining, eye-opening, or utterly nonsensical quotes I have found in the book (I let you pick which is which):

On the wedding ring as branding:

> Apart from a wedding ring – worn to show that he is being used by a particular woman for a particular purpose – a proper man wears no ornaments.

On “the system” screwing up men:

> No matter what a man’s job may be – bookkeeper, doctor, bus driver, or managing director – every moment of his life will be spent as a cog in a huge and pitiless system – a system designed to exploit him to the utmost, to his dying day.

On men stuck working for women:

> (…) but he will never be able to say, Ì’m bored. I want to do something else!’ The woman who is exploiting him will never permit him to look for something else.

The definition of “woman”:

> What is a woman? A woman, as we have already said, is, in contrast to a man, a human being who does not work.

On women growing more stupid as they age:

> Women do not use their mental capacity: they deliberately let it disintegrate. (…) It is not essential for their survival. Theoretically it is possible for a beautiful woman to have less intelligence than a chimpanzee and still be considered an acceptable member of society.

On prostitution:

> By the age of twelve at the latest, most women have decided to become prostitutes. Or, to put it another way they have planned a future for themselves which consists of choosing a man and letting him do all the work. In return for his support, they are prepared to let him make use of their vagina at certain given intervals.

On women's practical nature:

> A woman takes interest only in subjects that have an immediate personal usefulness to her. For example, if she reads a political article in the newspaper, it is highly likely that she wants to cast a spell on some political-science student, not that she cares about the fate of the Chinese, Israelis, or South Africans.

On men being better even at typically female jobs:

> If one wishes to have an unusual culinary treat, generally one will not find it at home but at a restaurant, where, of course, the chef is male (LOL)

On men stupid enough to fight women's wars:

> Without thinking, men fight women's wars, father women's children and construct women's towns. Women just sit back getting lazier, dumber and more demanding – and, at the same time, richer.

On men unable to see women for the stupid beings they are:

> (…) are incapable of seeing women as they really are: with nothing else to offer but a vagina, two breasts and some punch cards programmed with idle, stereotyped chatter;

On using prostitutes instead of women:

> It would be more economical for a man to satisfy his sexual needs with a prostitute instead of rushing into marriage ('prostitute' in the conventional sense – strictly speaking, most women belong in this group).

On women and animals:

> Women live an animal existence. They like eating, drinking, sleeping – even sex, providing there is nothing to do and no real effort is required of them.

On the nonsense of "female instinct":

> Unfortunately, this famous feminine instinct is really nothing but a euphemism for statistical probability. Women interfere and give opinions about everything (..) According to the law of averages, their forecasts will be correct now and again.

On women attending college to find a husband:

> If a woman leaves the university with an engagement ring on her finger, she has earned her degree

Real-Life Applications

Don't Become a Butler
Watch out for the tendencies of women to task men and watch out for the rather common pattern of men doing everything for their girlfriends and wives.

CONS

Please read the "The Manipulated Man Criticism" section for a more in-depth overview.

- **Misogynist & Often Too Harsh**

I found some paragraphs and passages' tones to be way too harsh (and needlessly mean). For example:

> they (women) have a choice – a choice between the life of a man and the life of a dimwitted, parasitic luxury item.

Or:

> (…) women are good for almost nothing.

- **Nasty View on Some Professions (Doctors)**

The Manipulated Man says that men are in a certain line of work because of female manipulation.
Doctors are one such example. I quote:

> The fear of being rejected by society must be considerable. Why else will a doctor spend his life opening up nauseating growths, examining and pronouncing on human excretions? Why else does he busy himself night and day with people of such repulsiveness that everyone else is driven away?

I found that description very nasty. What if a doctor took pride in helping people? Is there no altruism in *The Manipulated Man*'s world?

PROS

Can Be Eye-Opening
For men who have been buying too hard into the idea of having to provide for women, this book can be an eye-opener.
If they can move past their normal, knee-jerk pushback, that is.

Hard, Un-PC Truths
I have to hand it to Esther Vilar, she shares some unpopular truths. But the fact that they are unpopular doesn't make it any less true.
Some examples:

1. Women don't need to be intelligent (at least the attractive ones)
2. Many relationships are indeed a non-written exchange of sex for support
3. Many women do position their relationships with men serving them
4. Some emancipated angry women end up being so for lack of options

Review

This is one of those (few) books that it's really, really hard to rate.

The Manipulated Man has some genius content that you won't read elsewhere.
And it can be eye-opening and useful to some men, helping them break free of relationships where they act as servants more than partners.
Even to men who have not been running around for women, it could still further open their eyes to some intra-sex dynamics.
It's a great read after No More Mr. Nice Guy, in that sense.

On the other hand, it's also terrible in many other areas.

From a mindset point of view, by painting a world where women have it easy and men do not, Esther Vilar provides an easy valve for men who want to complain.
Complaining might be simply a bad mindset of learned helplessness, or actual misogyny.

Scientifically speaking, *The Manipulated Man* is farcical. And it also fails in its understanding of basic facts of human psychology, including *evolutionary psychology*, and the true dynamics of the sexual marketplace.

Women don't have the power they have over men only because they're good manipulators.
Women tend to have more power because, on average "sperm is cheap and gestation is not".
It would be too long to explain here the power dynamics of the sexual marketplace, but, in many areas, Esther Vila simply spreads misinformation.

In a nutshell: **The Manipulated Man can be eye-opening, but it can also be a virus of misinformation**.

I would give it:

- 4.5 stars for groundbreaking view on women manipulating men into "butlering" them
- 0 stars for scientific rigor, general misogyny, social and psychological mishaps, sweeping generalizations

That being said, would I recommend you read *The Manipulated Man*?
Yes, totally.

Get ready to discard a lot of information, then delve in and avoid becoming some bitch's butler :).

The Female Brain: Summary & Review

Lucio Buffalmano · 2 November 2018 · Archived copy · Original

In *The Female Brain* (2006) author and researcher Louann Brizendine explains how the female brain works, and what's so peculiar about it when compared to the male brain.

Bullet Summary

- More than 99% of male and female genetic code is the same, but that 1% impacts everything and makes a big difference
- Men are more about rank and open aggression, and women are more about building relationships and putting themselves at the center of that web of relationships
- Women's neurological reality changes much more than men's both with age and menstrual cycle

Full Summary

About the Author:
Louann Brizendine received her B.A. in neurobiology from Berkeley in 1976, attended Yale School of Medicine, and completed a residency in psychiatry at Harvard Medical School. She is both a researcher and professor at the University of California.
She definitely has the academic credentials.
In 1994, Brizendine also founded the UCSF Women's Mood and Hormone Clinic, where she had to chance to gather much data on women and biology.

Introduction

Dr. Brizendine starts *The Female Brain* by saying that at the time of her studies, all subjects of research and studies were males.

When she inquired the professor about it, the answer was that “women are too fickle because of their menstrual cycle and would pollute the data”.
She set out to change that.

Differences Between Women and Men

- Women have 11% more neurons in brain areas for language and hearing
- Emotions and memory formation areas are bigger in women
- Women are better at expressing emotions and remembering details of emotional events
- Men remember as well only when the amygdala is activated (if fear and danger are present)
- Women are better at reading emotions
- Men have larger cores of the most primitive part of the brain: the amygdala which registers fears and triggers aggression
- Men will go quicker from 0 to a fight while women tend to defuse conflict
- Men are on average 20 times more aggressive than women (just look at the prison’s population)
- Women have better social skills and emotional intelligence than boys
- Women have more up and downs than men
- Men have more activity in visual processing areas (and that’s why they fall in love, at first sight, more than women)
- Women are more sensitive to touch in the release of oxytocin, which causes bonding
- Men need to be touched 2 to 3 times more to maintain the same level of oxytocin
- Men and women feel anger in the same amount, but:
  - Men have bigger amygdalas where anger is processed
  - Men have more testosterone to stimulate and heighten response to anger
  - Women have relatively bigger pre-frontal cortex to control that anger
  - Women override their anger response with fear of retaliation and conflict aversion to keep the relationship
- However, when a woman acts on her anger, her faster verbal circuits unleash a barrage of words that a man can’t match (scientists speculate)
  - Men are not as good in verbal production and that might cause frustration and escalation of fights (which might lead to physical reactions)

It’s Not True Women Are Less Good At Math

The author mentions the (in)famous speech of Harvard’s president Lawrence Summer, who in 2005 said that the differences in performances between men in women in the sciences are biological.

Louann Brizendine instead says **that women are under-represented in math and sciences not because they are less capable, but because their interests lie elsewhere.**
Sciences are more solitary professions, and women are more drawn to professions that allow them to connect.

Women Are All About Social Harmony

The author says that women are programmed to keep social harmony.
And keeping social harmony is a matter of life and death for women even in the 21st century.

The author brings examples from children as well as adults, explaining that girls play as a means to connect, while men make the game center stage (and in turn, the game becomes a means for social rank, power, and defense of territory).

Men also have verbal production which is more about aggression and status. They brag, command, override others' time to speak, etc. They do not avoid conflict and aggression and competition is part of their genetic makeup.

Women Also Seek Power (In Their Own Feminine Way)

Don't be fooled by the lack of aggression and conflict.

It doesn't mean that female brains are not wired to use everything in their power to get what they want.

They simply use a different weapon and defend a different territory: relationships.

The female's goal is to organize the world in a web of connections so that she is at the center of it (and that's why the friend-zone is a real thing).
And she walks a fine line between making sure she's at the center of her world of relationships without souring those same relationships.

The aggression in women is just different and, in many ways, more subtle.

> **Power matters to both sexes. We just approach it differently.**

Women Are Obsessed With Males' Attention

Women during puberty start shifting their focus and attention to becoming sexually desirable. And they become obsessed with being attractive to boys.

Girls Compete for Male Attention

The teenage years also bring about heightened competition among women, especially for male attention.

They use subtle tools such as spreading rumors to undermine a rival. That way they can cover their tracks and hide their real intention -ie.: "I wasn't trying to be mean, I'm sorry"-.

The author mentions Mean Girls and those who think that's just a movie, they probably should learn to observe better.
I remember some female classmates of mine during middle school. One liked me and somewhat chased me, but I just couldn't respect her when I saw her games of shunning and exclusion towards another girl.

Female Self-Esteem Is Based on Relationships

Interesting golden nugget here:

Women's self-esteem is based on maintaining positive and intimate relationships with others.

Men's self-esteem, on the other hand, is based on being independent of everyone else.

One of the biggest stressors for women is losing their intimate relationships.

Women Better at Spotting Lies to Catch Men

The author mentions a speculative evolutionary biology theory postulating that women got better at emotional intelligence to catch men's lies.

The argument goes that men who were good at telling lies had an advantage in reproducing, and women who were better at emotional intelligence and spotting those lies had an advantage by not falling for those lies.

Cheating & Genes' Shopping

The author mentions a theory that is well known to people who have been reading about *evolutionary psychology*: cheating for genes' shopping.

Brizendine says that women want to settle down with a nurturing man. But once the house is secure they have a "biological urge" to seek around men who have the best genes.

Also, read:

- **The tools of sexual conflict**

My Note: Evidence somewhat lacking
however, the author cites "female birds" to back her claim. And well, birds are not really humans, are they?
We have already reviewed this theory on Sperm Wars. The conclusion is that "gene shopping" does indeed exist, but it's far more limited in humans than some sensation-seeking publications suggest.

Women who are in adulterous relationships orgasm less with their partner. And since orgasm can help insemination, women seem to unconsciously want to "help".
That's why, the author says, men seem to care so much about whether or not their woman reaches an orgasm: it can be a signal that she is being faithful.

My Note: Little evidence here
This theory provides no real evidence. If a woman is having an adulterous relationship it can easily be because she likes the other man more, right?
And liking him more could be the explanation for the orgasm instead of "helping" him fertilize her.

Criticism

As might be expected for a book that purports to be all about biology, but isn't, "*The Female Brain*" has received quite some criticism.

A Nature review tears it apart for being highly unscientific and moves three major criticism against its content:

1. It overstates the differences
2. It's unscientific and of overall poor quality
3. It focuses too much on hormones without considering the system that secrets and "reads" those hormones

The New York Times review doesn't go as far as stating that "*The Female Brain*" is unscientific but makes the point that the lacking bibliography simply doesn't allow the reader to judge for themselves.

Innatist Bias?

Brizendine acknowledged that maybe she went too far on innate differences in the sexes. She says that "Males and females are more alike than they're different" because, she adds, "after all, we are the same species."

And my personal point of view is that there are brain differences between men and women, and those differences can in turn be encouraged and "expanded" -as it often happens- or discouraged by culture.
The book might exaggerate a bit the differences and forgets to mention that we are talking about *average*, which means that the high variance present in the individuals can easily "buck the trend".

I feel that was Brizendine's biggest sin: not presupposing enough, and enough times, that she is talking of "*on average*".
When you don't say that, people get easily triggered.
Especially in this day and age, where people *still* prefer to hear that boys and girls are, after all, almost the same (she the "tabula rasa" bias)

Real-Life Applications

Love & Exclusivity Lead to Orgasm
The author says that exclusivity in a relationship can help women reach orgasm because it removes one important worry from their lives, and allows them to relax.

CONS

- **Not 100% Scientific**

There are several studies and research quoted, but also several anecdotes, evolutionary biology speculations, and her own experience in the clinic. That's always a rather bad sign for me because personal experience, especially when not systematically tracked, is prone to all kinds of biases.

- **Bit Unstructured**

I found that some information repeats, like for example women and social skills or women and their interest in developing and keeping positive relationships.
I would have preferred a structure more based on clearly defined topics instead of a more free-wheeling one.

PROS

Great Overview of Differences
The book provides the reader with an accessible format to understand some basic differences between men and women.

Review

The Female Brain is a good book with much to learn from.

There are several imperfections in "*The Female Brain*" -some of them outline above- and, overall, it's not as scientific as we would expect from a woman of Brizendine's academic background.

However, in spite of much criticism and some flaws, most major assertions are, on average, accurate to anyone who's been reading and observing human nature.

Thus, this book can give readers a very good overview of the psychological differences between men and women.

Overall, we can recommend *The Female Brain*.

Overview

- Focus on yourself and the life you want instead of what people around tell you to get
- The high standards you have for others, have them for yourself first
- Never be ashamed of being a man and never be ashamed of your own sexuality

Notes

About the Author:
"*The Book of Pook*" is a collection of forum entries published by Pook in the forums of Sosuave.com.
Pook is a nickname, and nobody knows exactly who the man behind the nickname is. Except for a few tidbits of information, like his job as a DJ, Pook always maintained anonymity.
The "Book of Pook" has not been published by Pook himself, but someone gathered all his posts and put them together.

Introduction

The Book of Pook shares its wisdom through parable-sounding stories, fancy literary devices, and lots of dialogues. I will tease out the wisdom here without any of the flowery language.

Approach

Here are some of Pook's rules on approaching:

- **Make it fun for yourself** (when he started doing it fun for himself his interactions improved and he wasn't afraid anymore)
- **Don't make her your object of desire before approaching** (or it will induce anxiety)
- **If you see her every day, be patient instead of overly aggressive**

And finally, what has become a mantra in the community:

- Rejection is better than regret

Also, read:

- Strategies to approach women
- Step by step guide to effective approaches
- Cold approach power dynamics

> Cold Approach VS Social Circle (VS Tinder): Strategies

Mindsets

- As you think, you shall become (taken from "*As a Man Thinketh*")
- The greatest risk is avoiding all risks
- Control testosterone, don't be controlled by it (like jerks are)
- Keep an air of mystery: don't reveal much of yourself (great for shy and introverted)
- The high standard you have for a girl must first be applied to yourself
- Don't put all your eggs in one basket: always have a backup
- Success is a habit
- Don't think that getting a girl equates to success, and getting rejected will not equate to failure

Relationship Management

To enjoy a good relationship:

- Accept and live your masculinity
- Enjoy her femininity
- Don't accept but challenge her indifference
- Punish disrespect and reward good behavior (basics of operant conditioning)

Also, read:

- How to maintain control in relationships
- How dominance gets you girls
- How leadership gets you girls

Female Mindset

When it comes to the female brain, The Book of Pook says that women:

- Love being treated like a little girl
- Love being objectified by men they like
- Don't care about philosophy and big mental constructs
- Use meaningless words: judge them by their actions instead
- Love being fucked when you have *your* pleasure in mind (instead of hers)

Also, read:

- **Games women play**
- Games women play to get relationships

Rules of Being a Man

1. Make your dreams and passions your priority
2. Don't walk on eggshells: never apologize for being a man
3. Strive to win at what you do
4. Solve problems instead of blaming
5. Don't prove yourself to anyone but yourself

Also, read:

- The traits of high-quality men

> **You only need to prove yourself to yourself**

Rules of Life

- Respect is all. Walk away from any signs of disrespect
- Sexualize your presence, go for women romantically, not as a friend
- Trust your gut
- Always believe and act like you are the catch
- Believing you're the catch cures neediness
- **Focus on improving yourself, not getting the girl**
- Improvise and change: don't be constrained by routines
- Think like someone great to become a great someone
- Make it fun with women, keep boring philosophical talk for your friends (or yourself)
- Imitating the jerk's behavior won't work: imitation is suicide, and you gotta find your own way
- Take care of yourself: look good, workout, eat right, wear nice clothes
- Don't give her too much attention (don't be always available, don't always text first, be willing to flake)
- Learn and adopt dominant body language
- Be ambitious, build your life the way you want it to be

Women Prefer Being A King's 10th Wife, Than A Peasant's First

This is one of Pook's most famous quotes.

And women may indeed be better off being with a high-status man, even if a "one of many", than being the pedestalized woman of a lower-status man.

Quoting from The *Oxford Handbook of Evolutionary Psychology and Romantic Relationships:*

> some theorize that **women would actually be better of as junior wives to very rich men than sole wives to poorer men** when disparities in resources are especially great, with implications for women's intrasexual mating competition

This is a basic consequence of the social exchange nature of mating markets.

See more here:

- Mating market dynamics

> The Sexual Marketplace: Overview of Intersexual Dynamics

The Book of Pook Quotes

On female hypergamy:

> Women would rather share a successful man than be attached to a faithful loser.

One one-itis:

> Either go for MANY or go for NONE. If you go for ONE you will become an AFC.

On "good girls":

> The 'innocent, nice girl' is often the horniest and likely uninnocent.

On the qualities that women prioritize (see the post on SMV for the science of what women want)

> Many women consider your looks, your career, what you can offer them, before your integrity and character.

On female's practical nature:

> Woman's sole mission is union, either for pleasure or the fruits of children. She cares nothing for your philosophy and all except to either use it to catch interest in a guy or to enthrone herself.

On sexual objectification:

> Women, in sex, desire to be treated as an object and relish it.

On mind before anything else:

> In order to be successful in the world, you must be successful in your mind.

On focusing on yourself and your own happiness and fulfillment:

> "I know how to get laid, make money, get a girlfriend and build a career. *And yet why am I not happy?*" "Because," Pook continues, "*My entire life has been focusing on everything except me.*"

Criticism

Preacher Attitude (teacher's frames)

In many of his posts, Pook speaks as the wise dispenser of truths, enlightening the world with his words.

That charismatic preacher attitude can give you lots of followers.

But more empowered men who already achieve dating success and are at least at knowledgeable as Pook may find those teacher frames grating.

Personally, I also find it narcissistic (see the "smart alec" in "archetypes of dominance").

Made-up 'Laws of Nature'

The Book of Pook sometimes refers to "laws of nature" to sound more authoritative.
That fits well with the guru image he wanted to portray, but I rarely found them to be real "laws of nature".

Literary Bloat & Fluff

Many enjoy the "purple prose" of flowery, ornamental writing.
I personally find it time-wasting, pompous, and unmasculine.

I like information straight up, with lots of wisdom, backed by data, experience, and a deep understanding of human nature.
Hopefully, all three are combined.
And that was not the case here.

Generic & Average Advice Better Fits Beginners

The parable style is good for mindsets. But not for specific, deep pointers on how to exactly change, act or behave.

Example:

> Be a guy, talk like a guy, act like a guy. Do action things.

What are "action things?". And how exactly are they going to help men? Masturbating also requires action but it might not be very helpful.

Empty Pep Talks Are

Pep talks are OK for beginners, but more masculine men and advanced operators find it empty.

For example, "*The Book of Pook*" says:

> I bet when you were a kid, you were a natural Don Juan.
> I bet you got all the girls in the sandbox. As a child, you knew how to treat women (..)
> Some of these factors include that you….
> -KNEW there was MALE and FEMALE.
> -Realized girls had cooties and could destroy a guy (…)

This makes no sense. Most young children aren't natural Casanovas (and I'm 100x times more effective as an adult).

Sometimes Contradictory

The Book of Pook sometimes seems more intent on coming up with a memorable quote and a beautiful sentence

than actually delivering information in a systematic, coherent fashion.

For example:

> All men are called to be leaders, even if it is not to guide other men you are meant to guide your own household, protect it, and keep your wife and children from the paths of error, defending your fruits of Nature from the locusts and storms of Time.

Basically, Pooks tells men to be the provider, which is the opposite of Pook's own advice of focusing on yourself and being a player.
I don't disagree with either, but they just don't sound very compatible.

PROS

- **Holistic Approach to Life**

The very best aspect of The Book of Pook for me is that it invites the readers to apply themselves to build the life of their dreams, take care of themselves, and overall enjoy a good and happy life.
Women should be an addition to that life, and he even considers it a fair choice not to have any women at all in one's life.

- **Groundbreaking**

Pook has been a groundbreaking influence.
He has been a great influence on the MGTOW (men going their own way) movement and on the red pill as well.

- **Misogyny-Free**

Overall, I really liked the fact that Pook really seems like a guy free of any misogyny.
He invites people to build their dream life and enjoy women but without any of the ugliest attitudes of some fringes of the manosphere.

- **Pook Sounds Knowledgeable**

Sometimes a few passages made me think that Pook is actually very knowledgeable about seduction and seduction strategies.

For example when he says that beginners should kino and touch a girl, but that very advanced and attractive men can, and probably should go, without touching.
I agree with that. The idea is that when you don't touch her and there is a lot of attraction, it can work like an erupting volcano when you finally start attacking each other.

Review

The Book of Pook delivers many valid insights that at the time of writing were both advanced and unique, but dispersed in a lot of noise that dilutes the content.

That makes it a challenging book to properly review.

It's been a book that has helped change the game, in some ways.
Pook was one of the first to tell men to focus on themselves, to stop looking at women like notches around which to base their self-esteem, and to apply high standards to themselves first.

But it also has a lot of generic content, redundant information, and even contradictory or counterproductive advice.

Overall, I feel that ***The Book of Pook*** **is great for beginners, while more advanced men can skip the full book.**

Key Takeaways

- **There is no "the one"**: there are countless partners with whom you can have a great relationship
- To control the relationship: **need her less than she needs you**
- **Entertain several different women at once**: it gives you an abundance mindset ('Plate theory')

Summary

About the Author:
Rollo Tomassi is one of the leading voices in the male-focused online community known as the "Red Pill".
The "Red Pill" focuses more on the intersexual sexual dynamics and sexual power dynamics of the more general male self-development.
Rollo Tomassi is also the author of "*Preventive Medicine*", "*Positive Masculinity*", and "*The Player's Handbook*".

Our Review of Rollo:
We find Rollo Tomassi could improve his critical thinking skills and address some personal biases to provide better analyses and strategies.
Read more in our full analysis:

> Rollo Tomassi: Red Pill Guru, Or Misogynistic Bias?

1. Quit Oneitis & Internalize This: There's No "The One"

The definitive dictionary of power defines oneitis as:

> The tendency for an individual to pedestalize one woman and feel like she is "the one" and it's either he gets her, or he is desperate

Oneitis is an old concept harking back to the very beginning of pick-up and manosphere (check *The Game*, *The Mystery Method*, and David DeAngelo).

In short, oneitis refers to men who obsess over a single, specific woman.
So you would say that a **man suffers from oneitis when he loses his mind for one woman and thinks she's so awesome that he must absolutely be with her or he's ruined.**

Rollo suggests that this is in part due to the mistaken belief of "The One", such as there is a woman (or a man) out there who is just right for you.
And you "just" need to find her.

I agree with Tomassi here: this idea makes no sense whatsoever and it should be so obvious that we don't need to discuss it any further :).

I don't think there is much connection though between oneitis and "the one" mindset. Oneitis relates more to chemical reactions and lacks options than to beliefs.

2. Control The Relationship By Not Needing Her

Tomassi borrows a concept from social dynamics called "Principle of Least Interest" (Waller, 1937).

And it means that "the person who needs the other person the least, controls the outcome".

Tomassi says that whether or not you want to see relationships through the lenses of power dynamics or not, it doesn't matter. The power dynamics will be at play anyway.

And, well, I couldn't agree more :).

On the other hand, this is also a potentially toxic approach.

My Note: Partially true if powe is the goal, but potentially toxic if the goal is win-win
Many elements determine power in a relationship.
But a focus on "needing her less" can lead win-lose or lose-lose approaches. The *APA Handbook* on relationships

for example says a power-first apporach makes you less satisfied in the relationship.
For more, read:

- **Relationship power dynamics**: the basics
- **How to maintain power and control** (the effective way)

> 5 Ways to Maintain Power & Control in Relationships

3. Don't Just Be Yourself: Grow

You know the old self-help mantra, right?

It's:

> Just be yourself

Tomassi criticizes that approach and invites the readers of *The Rational Male* to focus on growth and self-development to become a high-quality man.

He uses his own example, of what happened to him when he started truly working on himself.
He went from "worst, bottom-scraping beta" to rockstar and alpha father. What you do with your life and who you become in your life, says Rollo, is up to you.

That's true indeed.
Also, read:

- Mindset: The Psychology of Success
- How to develop a growth mindset
- Ultimate Power

> **The danger is not aiming high, but aiming low and achieving it**

4. Date Several Women (Plate Theory)

Plate Theory equates plates with women and says that **men should not commit to a single woman and instead keep their options open** (ie.: spinning several plates at once).

Tomassi doesn't say a man should never commit, but he does recommend not doing so before 30 or before he fully understands the lifetime value of men and women, what he really wants from life, and the dynamics of the sexual marketplace.

Writes Rollo Tomassi:

> A man is as confident and valuable as his options. This is the essence of abundance mindset – confidence is derived from options.

> The Sexual Marketplace: Overview of Intersexual Dynamics

Spinning Plate for Abundance Mentality

Spinning different plates doesn't mean that he must be sexual with all of them, or that he must keep spinning them

all.

The idea is to have several different leads to help you internalize the idea that there are many women out there, that many women can suit you, and that you don't have to take cr@p from any of them because you can easily be next to her.

Spinning Plate for Best Girlfriend Choice

Spinning plates allow men to gain more dating and female knowledge, to discern low-quality women from high-quality women and, when he wants, it allows him to make a more informed choice.

Indeed, I would add that quantity is not antithetical to quality. **Quantity is an enabler of quality**.

And when you want to stop with a woman, you know that it was a choice you have done based on options and knowledge, and not on desperation.

> Quantity enable quality

Be The Prize

Rollo Tomassi also says that the attitude that you are the prize of the relationship must underpin your plate spinning

When you are the prize, women will also accept non-exclusivity more, because, says Tomassi:

> Women would rather share a successful man than be sadddled with a faithful loser

Which is a quote he attributes to Pook (read *The Book of Pook)*.

5. Unplug & Take The Red Pill

Unplugging or "taking the red pill" is common red pill parlance for "coming to see things as they really are".

In this case, it would be men dropping the mistaken assumption from society and embracing the manosphere theories and tenets.

Rollo Tomassi says there are typical stages of the red pill awakening:

1. Denial – refusing to let go of previous beliefs
2. Anger – awareness the pill makes sense, anger at society for feeding wrong ideas
3. Bargaining – trying to keep some old beliefs
4. Depression – the red pill can be a tough one to swallow
5. Acceptance – becoming a knowledgeable, healthy rational male

6. Strategize With Value In Mind: Men's SMV Increases, Women's Decreases

Our current culture pretends that men and women are the same.

But that's crap, implies Rollo.
And nowhere is this more visible than in the sexual marketplace.

Women reach their peak at around 23 YO, while men are just starting their ascension, peaking at 36.
Tomassi says:

> At age 23, while a girl is enjoying her prime value, a man is just beginning to make his own gradual ascent. By age 36, the average man has reached his own relative apex. It's at this phase that his sexual/social/professional

> appeal has reached maturity.

And while women's market value is mostly a consequence of their physical attractiveness, male attractiveness is only one factor.
Thus a rich 50YO will be more value than an average, run-of-the-mill 30YO. That can hardly be the case for women.

> Sexual Market Value: A Practical Analysis

My note: Misleading for men
At 36, most men haven't reached maturity but their *peak*. While a 23-year-old woman loses sexual appeal as she ages, new 20-somethings enter the dating market—and **most 35+ men in the West struggle to attract women in their early 20s.** Top men do not struggle, but they're not the norm, but the exception.

Women Are Duped Into Losing Strategy

Tomassi also seems to suggest that the current cultural climate of women being the same as men leads them to the mistaken assumption that "they have time".

But when they reach their 30s after they spent their early 20s partying they eventually realize, sometimes too late, that their value is dropping fast.

I tend to agree with that.
Also, read:

- **Dating for successful women**

7. Keep a Woman's Interest By Displaying Value

Tomassi says you should never say it outright that you are seeing other women.

You should make it clear though if you're not ready for commitment or you are stealing her time.
And lying to get women is what low-quality men do.

Tomassi recommends:

- Sub-communicate with your behavior that you have options
- Don't be too available
- Don't be there for her during the weekends

Also see:

- **How to display value**

https://thepowermoves.com/value-signaling

Be Careful of Hypergamy

And remain high-status or you'll lose her interest to hypergamy.

Hypergamy means "marrying up", referring to the supposed tendency of women to always want higher value men.
For a balanced and scientific overview of female hypergamy, see:

> Stop Whining About Hypergamy (& Do This Instead)

8. Pass Shit Tests to Prove Your Value

Women test men to determine one or more of these factors:

1. **Confidence –** first and foremost
2. **Options –** is he into me or am I his only option?
3. **Security –** is he able to provide long-term?

Also, read:

- **How to pass the female shit test**

> Shit Tests Power Dynamics: 8 Ways To Win the Game

As a general rule though, I recommend testing women instead of focusing on passing her tests, since **it's the person who tests the other who has power** -also read "the judge role in power dynamics"-.
Some tests for women:

- **Ask women this crazy question**: and test their moral mettle (alumni only)
- **Tell women to leave a tip**: see how much and if they leave any
- **Tell her "got get that baby"**: see how she reacts (alumni only)

9. Control Frames Like The Alpha Buddha

Listening to The Rational Male I was curious to see Corey Worthington's interview, which for Tomassi exemplifies "alpha male behavior".

It's awesome indeed:

My Note: Not the best example of an alpha male, though
It's a funny interview, and he's impressive for his age.
But there are better examples.
For example, saying that he won't remove his sunglasses because they're famous sounds like an excuse to deflect social pressure. Higher power would "*because I don't want to*". Or to push her on the defensive with something like: "*I'm not telling you to remove your shirt am I, so why are you telling me what I should or should not wear*".

Also, read:

- **Frame control techniques**

10. Follow The 9 Iron Rules of Tomassi

Tomassi lists 9 iron rules:

#1 Frame is everything

Control the frame, but don't give the impression you are consciously doing so.

#2 Never share your sexual partner's count

Albeit Tomassi does so in the book, and it's 40 :).

In my experience though, most women don't care about it anyway. And if they asked, they never pressed me for a final number.

#3 Don't wait for women who make you wait

Any woman who makes you wait for sex is not worth it.

I couldn't agree more, except for fringe cases like very religious or virgins until late in life.

#4 Don't ever live with a woman you're not marrying

Either you're married or you're going to within six months.

I disagree with this one. Living together is an important test ride.

#5 Never allow a woman to be in control of birth control

LOL, this one had me smiling. Use a condom, guys!

#6 Women are incapable of loving a man the way he expects them to

I'm not sure about this one.
What exactly is the way a man expects to be loved?

#7 Develop new relationships: don't fix broken ones

Your time and effort are better spent looking for new ones than fixing the unfixable ones.
I agree. Albeit sometimes it can be difficult to know what's "unfixable". See here for some help on relationship diagnostics.

#8 Never help a woman figure out why she won't f*ck you

This rule says that in the current paradigm, women are the sexual selectors but you shouldn't flip the script there and be the prize of the relationship (honestly I missed the connection between the title of this rule and its content)

#9 Never self-deprecate

Don't self-deprecate or try to appeal to her sympathy or sense of guilt.

It's easy to do self-deprecation wrong.
But it's OK to self-deprecate when your qualities speak for themselves, or when you are coming across as too good (see: availability and self-rejection).
Also, some women -"women who love too much"-, love to fix strong but troubled men.

> **Women ask for Mr. Dependable but fuck Mr. Exciting**

The Rational Male Debunked

There is plenty of great advice in *The Rational Male*.

Especially for beginners.

But that's also the limitation: it lacks refinement for more advanced men.

Here is all the criticism of "*The Rational Male*":

1. Unsubstantiated & Inaccurate Claims

Several claims are unscientific, factually inaccurate, and even illogical.

Some examples:

1.2. “Women obey the imperative of fucking the alpha man while marrying the nice guy”

“Imperative”?

What does it even mean?

That’s already a red flag for lacking rigor.

Women, like any other living organism, seek to get the best they can get.

Women’s strategies are complex and context-dependent.
They’d rather pick an alpha male who commits, if they can -and high-quality women, can-.

And while in some cases women may choose a high mate value man for children and gladly get another man to invest -‘dual mating strategy’-, it’s not as widespread as the author implies.

Obvious data on **non-paternity rates disprove Rollo’s “female imperative”.** Or, at least, they disprove that women are *successful* at executing the strategy.
Data is hard to find, the median estimate of cuckolded men is 3.7% (One of the sources is here and another one here).

That means that 98+% of women father children from their “official” partners.
The data does not support the idea that most women are acting on the imperative of getting genes from an alpha and getting support from a beta.

Among men who took a DNA test suspecting they were not the biological father, 1 in 3 were cuckolded (meaning 2 times out of 3 they are the actual father).

There would be more to opine, but the evidence is already strong.

Update: Rollo’s Answer

He didn’t expressly say he was answering to TPM (an expected power move).

But chances are he was.

And Rollo said that our criticism is wrong because you should also include women who had children from other men and remarried.
And *then* you’d get at around 40%.

Albeit this new take has some merit, it’s still wrong because those new male partners aren’t necessarily providing for the whole family and they may have children on their own.

Finally, investment in mothers with children may be a mating effort, not an investment in children.

Finally, a mother who remarries is not always winning investments, but she’s failing as a mother and putting her children at increased risk.
Studies show that stepfathers in the household is the single greatest risk factor for child neglect and abuse, including higher incidence of infanticide (Dalay & Wilson, 1988).

1.3. Women Are Incapable of Loving (??)

My experience differs.

And I can’t help but wonder here: **are these authors expecting a woman to love them as their mothers would**?
Like unconditional love, no matter how naughty -or useless- he is?

Then it’s not women’s fault if they had wrong expectations.

2. Misunderstanding of Basic Scientific Principles & Logical Fallacies

Rollo says:

> I completely disagree with idea that women will only fuck (or want to fuck) one guy at a time. I could outline several women I know from experience in this (…)

To begin with, this is straw-manning: whoever said that "women will only fuck one guy at a time"?

Second, this is called inductive reasoning, such as looking at a few cases and generalizing to the whole population. It's prone to all kinds of personal biases and rarely leads to good conclusions.

For the record, there are plenty of women who enjoy casual sex. And still, women want to sleep around much *less* than men want to (Ridley, 1993).

2.2. Increasing sex partners not a risk for VDs (wrong)

To make the point more sex does not mean higher risk, Rollo says:

> In my lifetime I've had sex with over 40 women and I never once caught a venereal disease (..)
> I can also point to men I know who contracted Herpes from the only women they'd ever had sex with. (..) you can equally be a rock star and tap hundreds of women without any consequence and you can be a virgin saint and contract a disease on your wedding night

To begin with, I'd hope Rollo used a condom at least some of the times.

When it comes to what I partially agree with him: the fear of VD might be overblown and VDs should not be your (main) reason to decide for monogamy.
But that quote above is the equivalent of the "95 YO who smokes two packs of cigarettes a day, hence cigarettes are not bad" fallacy.

The danger is also that **the more the woman is OK with not using a condom, the higher risk she is**. Sometimes I even use it as a test. I pretend I'm not using any condom and see how she reacts.

2.3. Monogamy serves women's interests (not fully correct)

Rollo writes:

> Monogamy as a goal is a tool of the feminine imperative

That's not true.

Rollo confuses what's good for a sizable sub-group, with what's good for the whole group.
But there are no groups in dating and intersexual dynamics -or in life in general-.
There are *individuals*.

A high-status man suffers from monogamy because he could more easily get more women.
But **a high-status woman gains from monogamy because a high-status male will be under pressure to commit to her**.
And a lower status male gains with monogamy because the cultural expectation helps him get a woman (see Kanazawa, 2007).

In chart:

It's low-status men who gain most from monogamy

2.4. Women manipulate men to not take care of themselves (illogical)

Rollo says women tell men that "looks don't matter" so that men won't take care of themselves.

Why would they do so?

Because, Rollo says, it allows women to keep having sex with the alpha males they are attracted to while still being able to rely on the resources of their less attractive partners.

It's an imaginative theory.
But imaginative doesn't make for "accurate".
And it doesn't stand to logical scrutiny.

Anyone with a basic grasp of intersexual dynamics would agree that women gain if all men cared more about themselves because they'd have more to choose from.

See more on games that women play here:

> 10 Nasty Games Women Play (Women, Stop These!)

3. Made-up, pop-evolutionary psychology (storytelling, opinions, & fervid imagination)

Rollo often references *evolutionary psychology*.

But it's seldom evidence-based.
Instead, storytelling, opinions, and personal biases sold as facts are the bane of "*The Rational Male*".

Personal conjecture can be valid as hypothesis.
But hypotheses must still be logical.

The authors' hypothesis sometimes lack logic.

4. The Male-Side Bias Fails to Provide A Good Overview

This is what David Buss says:

> Popular explanations blame patriarchy, masculine hegemony, and toxic masculinity <— this is the feminist point of view
> Manosphere bloggers, on the other hand, blame women who seek sex with "alpha chads" (high-status males) and exploit lower-status men who are "betas" for their investment <— this is the red pill point of view
> There is some truth to each of these contrasting accounts, but also ways in which they lack explanatory depth.

Basically: manosphere bloggers are the feminist equivalent.

I agree with that, albeit the red pill is probably closer to the truth than the opposite camp.

So allghouth there are good analyses in "*The Rational Male*", I believe it fails to provide a good overview of dating and dating power dynamics.

Why?

Because **Rollo Tomassi has a strong male bias** and, I suspect, an anti-women bias as well.

For example, Rollo focuses on the games women play, and men falling for them.
And there are certainly women who dupe men.
And women, in general, are better and very effective at controlling relationships.

Also, see:

- Female Domestication: how women control men in relationships

But the view of men played by women is simplistic. Men play their own games.
Both genders, at times, seek to take advantage of one another.

The way I see it, you can't pass for an unbiased analyst sitting at that table and laughing at blatant gaslighting:

4.2. The focus on the female dual sexual strategy misses the male's counterpart

Rollo Tomassi focuses on the dualistic female dating strategy (AKA: alpha fucks, beta bucks).

But he fails to see -or mention- that men also have a dual strategy (Wright, 1994).

The male dual strategy is this:

> Marry the pious girl and fuck the floozy

This dual strategy, when taken to an extreme, results in the Madonna-whore complex.

5. An Over-Generalization Fest on "Women Nature"

Tomassi has many categories for men.

There are "alphas", "alpha providers", "beta who don't know the rules", "red pill men who opened their eyes" etc.

But women all seem to be the same.

All are driven by their biology the exact same way.
All playing games and all looking for an alpha to inseminate them and a beta to take care of them.

I found this over-generalizations one of the major drawbacks of “The Rational Male”.
It’s also not very informative, because not all women are created equals and different women have different tendencies for cheating.

I’m not the only one to feel this way.
The “almost colleague” guys over at Charisma on Command feel the same:

> **Charlie Houpert**: (…) the rational male Rollo guy and (…) he was like women are irrational and women are like this.
> I was like yes and so are men and i feel like the narrow focus it’s just a common tactic that I’m startirng to notice.

It was a great interview, by the way, check it out.

To be clear, men and women are different and, as Jordan Peterson says, are particularly relevant at the extremes.
But Rollo Tomassi still makes the two genders more different than they are, and *over*-generalizes.

Also, read:

- Signs your partner is cheating
- How to find a loyal partner

This Rational Male Is Quite Irrational

In brief, it’s funny:

the rational male tries hard to self-frame as rational, but there is way too much personal bias to be truly “rational”.

Call it, if you want, “rational posturing” -similar to alpha male posturing, a common thing in the manosphere-.

Some Fragile And/Or Weak Mindsets

Example:

> View this post on Instagram
> A post shared by The Power Moves (@the_power_moves)

CONS

Besides the more factual rational male debunking, some of the cons include:

Lots of Misogyny Red Flags

I don’t say this gladly.

I know it’s potentially bad for business since quite a few men reading here are from red-pill communities.

But still, I could sense a misogynist bias in “*The Rational Male*“, as well as from the author in general.

For example:

> Since we live in a feminine defined reality, women's game is not considered subterfuge, it's simply how women are, or the feminine mystique

Feminists say the exact same thing… Except that, we live in a female-repressive society.

Or:

> Women are utterly incapable of loving a man in the way that a man expects to be loved by a woman. (…) Men believe that love matters for the sake of it. Women love opportunistically.

It feels at times as if The Rational Male frames women as generally machiavellian and conniving. And generally more so than men.

He hides behind the fact that "men adn women are different", which obviously are -duh!-. But it's funny how **in Rollo's analyses, women differ from men in mostly *negative* ways**.
That's a definition of misogyny (Forward, 1986).

A video-analysis for more:

Generic, Catch-All Dating Advice Lacks Refinement

On TPM we caution against "catch-all" advice and we prefer nuanced, context-based approaches.

Generally speaking, catch-all advice is often beginner-level advice.
And to get to the next level, you truly need to move beyond it.

Also, see our analysis on the "limitations of alpha male game".

Some of the advice I disagreed with includes:

Writes Off The Provider Strategy (Which Can Be Effective)

The author doesn't seem to consider that being a provider in a monogamous relationship can be a valid dating strategy and/or life choice for (some) men.

Again, I am NOT saying monogamy is good and you should go for it: I am happily single and *not* considering marriage.
But I am saying that not all men who decide to enter 1:1 relationships are stupid or irrational.

This is funny, in a way, since Rollo, married and still married tells men not to get married.
While me, single and never planning on marrying, tell people that it's a fair choice to enter a serious and potentially monogamous relationship, if they so choose.

Also, read:

- **Alpha male game**: pros and cons
- **Lover and provider sexual strategies**: which one should you choose?

And see:

Refusing the "let's just be friends" ("LJBF")

The idea behind not being her friend is sound.
But rejecting the "let's just be friends" sends the wrong message.

Ie.: it makes you sound butthurt and like you *really* wanted her as GF.

Instead, I recommend men say: “Sure, we are friends and we should stay friends”. Then never contact her again and be too busy she contacts you.
Or check out here how to handle it via text.

This isn’t just my opinion, by the way.
Research has shown that friends are well-positioned for mate poaching and that boyfriends and husbands have good reasons to be worried about their friends (the obvious caveat: friends must be attractive).

The “be as mannish as you can be” to get laid (fails the “law of optimum balance”)

Tomassi says men must be masculine to attract women.

That’s most certainly true… Up to a point.
The law of optimum balance also applies to dating.
And studies suggest women *do* have an upper limit and there is such a thing as “too masculine” in attraction.

Green in *The Art of Seduction* also explains that a touch of femininity can help disarm women’s defences.

Soso Advice for Relationships

I agree with developing options and being the leader of the relationship.

But, as for everything: balance.

Gottman’s research shows that men resisting women’s influence have worse relationships.

Reading “*The Rational Male*” it felt to me like the leadership advocated in there was more of a “my leadership against you”.

“Needing her less” can also be a double-edged sword.
If you approach relationships with one foot out, then… Be a man and don’t get into a relationship at all.
Also, read “how to maintain attraction“:

> 5 Ways to Maintain Power & Control in Relationships

Some of These Mindsets Might Lead to Low-Quality & Abuse If Taken To An Extreme

Psychology research shows an overlap between men who buy into male superiority, men who seek power, and abusive men.

Men who buy into the idea of male superiority feel less of a man when they are not in control or when their wives outclass them in some meaningful way (ie.: earn more, speak better, higher education, etc.).

And to protect their ego they can lash out to “re-assert” their dominance.

Note:
I am NOT saying this is the case for the author, for the Red Pill, or for most of the advice in “*The Rational Male*“.
But *some* of the mindsets behind “*The Rational Male*” series might make abusive relationship dynamics more likely.

Also, read:

- **How male pride can lead to domestic abuse**

Low-Power, Victim Mindsets

Some takes from Rollo are disempowering.

How can you be empowered, and still believe that you're a victim of this supposed "feminine imperative that governs the world"?

Feminine Imperative Governing the World (?)

Many legal systems, in many Western countries, favor women in divorces.

But the "feminine imperative" shaping cultures and "feminine indoctrination" making men puppets is something I disagre with.

It's both a simplistic view of a complex world, *and* disempowering.

"Men VS Women" Frame Can Lead to Anger & Bitterness

The theme seems to be one of men VS women and their feminine society.

Rollo Tomassi's work seems based on the idea that if one gender wins, the other must lose.

To borrow from game theory, this is a 'defection mindset'.
And defection strategies make the pie smaller for all -and is a poor strategy for long-term relationships (Axelrod, 1984; Ridley, 1996; Malhotra, 2007).

But, as the latest *APA Relationships Handbook* outlines, **there is much overlapping interests and much scope for win-win cooperation, which is why pair-bonding evolved and spread**.

Also see the "empowered individualist" article:

> Empowered Individualism: Why the Individual Must Come First

PROS

- **Can Be Eye-Opening For Beginners**

Rollo Tomassi can be eye-opening for many men who haven't yet put 1 and 1 together.

But also some men who settle down too early, look at monogamy as the only option, never realize the risks of marriage, or lack any basic power awareness around dating power dynamics.

- **Good Analysis of SMV**

Good albeit not perfect analysis of the sexual market value and how it changes depending on gender and age.

- **Some Great Reflections on Feminism & Femininity**

I quote here with some smaller omissions for brevity:

> *The characteristics that define masculinity (..) are now the aspirations of women to the point that ridicule of the feminine female is the order.*
> *(…) not only does this put undue, unrealistic ideals upon them, but also devalues the merits of their own femininity.*

100%.

- **Good Read to Understand Games & Manipulation**

Especially women's games.

- **Great Busting of Some Myths**

For example, that ‘looks don’t matter’ and that ‘women are as sexual as men’.

Neither of these are true -albeit men can do much to work around looks.

Review

The Rational Male is a great entry point into basic principles of intersexual power dynamics, dating strategies, and ‘red pill’ philosophy.

It’s not easy to evaluate in a single sentence because it mixes great content with some poor assumptions.

Overall, much of what Rollo Tomassi is true, to a certain extent.
In my opinion, it’s the generalization of those principles, together with the extremization of some of the women’s tendencies that leads to a distorted picture.

Do I recommend you read “*The Rational Male*“?
Absolutely.
But I also recommend you do so with a critical mind.

Takeaways

- **Embrace your masculine energy** (or feminine energy if you are a woman)
- **Find your purpose**: respect everyone, but follow your purpose first (and before her)
- **Don't wait for a future moment to be happy**: your moment to embrace is always *now*

Notes

About the Author:
Born as David Greenberg, David changed his surname to Deida.
His biography seems a mix of medical background with more ascetic practices, such as developing yoga techniques for intimate relationships.

Find Your Life's Purpose

David Deida recommends you know what you are on this earth for and that you *find a WHY* for your existence.

He recommends you **go to a quiet place and think.** Think about who you are, what's important to you, and where you want to go. Do it for as long as it takes until you find your purpose.

He says that your woman will test you to see if you found your WHY and if you are serious about it. She wants to know that you can stay the course and **she doesn't want to be your first priority in life**.

She will also prod you and test you to see that your happiness does not depend fully on her and that all your eggs are not solely in her basket. But deep down, she wants to relax and let herself in your direction and leadership.

> Shit Tests Power Dynamics: 8 Ways To Win the Game

Put Your Purpose First

Deida writes:

> Admit to yourself that if you had to choose (..) the perfect intimate relationship or achieving your highest purpose in life, you would choose (..) your purpose.
> (…)
> Tell your woman that you love her, but you cannot deny your heart's purpose. Tell her that you will spend 30 minutes (…) in absolute attention and total presence, but then you must return to carry on your mission

The idea of finding one's purpose has become a central tenet in the manosphere.
Also, see:

- The Tactical Guide to Women
- The Rational Male
- Alpha male strategies

Embrace Your Masculine Energy: Polarization Attracts

David Deida's book is heavily based on the male and female energy of the yin and yang philosophy.

Both men and women have both male and female energy within them, but for a harmonious, passionate, and successful relationship there has to be a balance where the man embraces his masculine energy and the woman embraces her feminine energy.

When neither genders embrace their gender-specific energy the relationship lacks passion. When one gender is not embracing their energy, the other partner is forced to make up for it.

A man who does not embrace his masculine energy is forcing the woman to act more like a man.
And **a man who embraces his masculine energy allows the woman to celebrate her femininity**.

Indeed, if you want more femininity or masculinity in your partner a great way is to increase your gender-specific energy and purge yourself of the opposite gender-specific energy (ie.: be less feminine as a man and be less masculine as a woman).

Deida says:

> If he spends more time in the mirror and his own radiance and life force makes him happier than his woman she will be upset (..)
> If he spends more time combing his air than he spends receiving radiance, then there is no polarity.

My Note: Exceptions apply in seduction
Narcissistic men and more feminine men can be very successful with women. Just listen to the song "You're so vain" and you will hear a woman who fell desperately in love with a narcissist who was all about his own image.
Also see: "archetypes of lovers".

> 10 Types of Male Seducers: Pick Your Niche!

The Masculine Traits

You need to define your own masculine traits, but The Way of The Superior has a few pointers:

- Lead the relationship
- Find a life purpose
- Live his own personal truth
- Stick to his value
- Live with integrity
- Seeks freedom
- Faces his fears

Also, see more examples in "alpha male traits" and "how to be an alpha male":

> How to Be An Alpha Male In 10 Simple Steps

Embrace Her Drama

David Deida advises men to welcome their women's drama, embracing it with love and a good spirit.
He says:

> You can't escape the tussle with the feminine.
> Learn to find humor in the unending emotional drama the feminine seems to enjoy so much. The love that you magnify may realign her behavior, but your effort to fix her and your frustration never will

He must seek to understand what she really needs because women will rarely say what they actually need. And t**he vast majority of the time her turmoil stems from not feeling loved**.
As *most relationship books* advise, Deida says you must listen to understand, not fix.

My Note: Generic advice is terrible advice. What if she's a drama queen?
I think that telling men they must endure a woman's drama can be counterproductive. Some women are troublemakers and the drama leads to toxic relationships.
See for example borderline personality disorders, or bad personality matches with the anxious-avoidant trap.

See instead a different approach to handling relationship drama:

https://odysee.com/High-Status-Dominant-Man-Handling-Drama—Example:f7341b3eb09580b6e367ca53ebc42a653eed2280

Women also use drama as a way to control men, or as a manipulative relationship game to acquire power, so I actually don't recommend men to "embrace drama".

> Female Domestication: How Women Control Men & Relationships

For Real Passion: Let Go, Ravish Her

The Way of The Superior Man embraces love in its most animalistic aspect.

Deida writes:

> When was the last time you really ravished your woman? That is, when was the last time you really "took" her, savagely, lovingly, with no inhibition whatsoever?

He makes fun of “neutral” loving:

> If you want real passion, you need a ravisher and a ravishee; otherwise, you just have two buddies who decide to rub genitals in bed.

The female can do her part by letting go of her sense of direction to allow her partner to exercise direction (ie.: be the leader in bed).

Finally, Deida says I’m sure not without some criticism by some of the readers, that “the difference between rape and ravishment is love”.

> **The difference between rape and ravishment is love**

Leverage Sexual Energy: Don’t Release

Deida puts it gently, but in practice, it’s about delaying coitus.

He says:

> Third level man walks away from her without consuming the desire

Albeit I wasn’t really sure what this “third level man” meant, he advises men not to peak during intercourse and to keep that energy to stay hungry and motivated during their life pursuits.

To enjoy sex without coming Deida says:

- Relax your muscle instead of tensing them. When your face contracts, relax it, when your breath gets short, breathe deeply
- Focus more on your partner than on yourself

My Note: But also focus on yourself, sometimes
this is something that I did a lot when younger. I used to ejaculate less because I made it more about her. If you’re not ejaculating because you make it too much about her, then it’s not coming from a good place (read: No More Mr. Nice Guy). If you do it consciously to keep your sexual energy, then it’s OK. Otherwise ravishing and coming are not mutually exclusive of course-

Face Your Fears, Do Your Best (& Get Friends Who Do The Same)

Deida exhorts the readers to do their best in life, to go after their grand vision, and to be intolerant of mediocrity.

Men should have friends who do the same and who help and push each other. With love and caring, our friends should hold us to our highest standards and nudge us towards facing our fears and pushing our limits.

Real-Life Applications

- **Pursue Your Goal, Not Duties**

It's easy to get distracted by to-do lists and duties others pile on us. But it's up to you to make sure that your duties and tasks align with your goals. Otherwise, you're a puppet on someone else's strings.

- **Stop Putting Contingencies on Your Happiness: NOW Is Time to Be Happy**

Don't think that once you reach X you can relax, be happy and enjoy life. It rarely works that way. Your life is now, now is the time to be happy.
As David Deida says: every moment waited is a moment wasted.

> **Every moment waited is a moment wasted**

CRITICISM

Accepting Drama Is For INFERIOR Men

I don't believe that you should "embrace drama" and that "the love you magnify may realign her behavior".

That's not effective advice for men who wish to retain masculinity, power, and leadership.

Deida writes:

> **A superior man sees his woman's moods not as a curse, but as a challenge and an amusement**.
> There are many ways to creatively deal with her moods and help her to open. Tickle her. Take off your clothes and dance the watusi. **Sing opera for her**. Make animal sounds. Shout at her louder than you ever have and then **kiss her passionately**. Press your belly into her until she melts. Lift her off the ground and spin her around. Occasionally, talking with her helps, but not as often as humor and physically expressed love

This is saying to “lift her moods when she gives you drama and shit”.
That’s a terrible approach, in my opinion, rewarding bad behavior and the opposite of what one should do.

Unfounded Conclusions: Sexual Chemistry = Bad Relationships?

The author says that the woman who most turns you on sexually will turn you off for the rest of your life.

I’d like to know based on what he says that.

So, for a happy relationship in Deida’s words, one should pair up with partners whom they *don’t* find sexually attractive.

Convoluted Gospel-Sounding Woo-Woo

The Way of The Superior Man, a bit like *12 Rules for Life*, has some good ideas. But in my opinion, they get lost, and not amplified, by the rhetorical embroidery.

Here is an example:

> Her gift, if she is a good woman, is to test you with her darkest moods, over and over and over, until your consciousness is unperturbed by feminine challenge, and you are able to pervade her with your love, just as you are here to pervade the world. In response to your fearless consciousness, she will drench your world in love and light.

Ehm, what?

I think the content, teased out from the text, could work well for some men. But put it like that, it’s more about sweet-sounding prose than about delivering concrete wisdom.
If the author wished to keep it like that, which is OK because it does sound beautiful, would have at least added, after or before, the meaning in plain English.

“I want you my bitch”

That was just so corny in the audiobook.

And don’t fall for the ‘dominant sounding approach’.

It’s lower value chasing behavior.

Woo-Woo & Unscientific

The concept of polarization between masculine and feminine makes sense for certain traits and behaviors, but the way it’s represented her feels shallow, unscientific, and not entirely accurate in its generalization.

I quote the authoritative *Cambridge Handbook on Sexual Behavior*:

> Looking at selected pop psychology books and ancient civilizations is not the best way to understand the differences and similarities between men and women – instead, we need to turn to scientific evidence

And that’s even without getting into the various sweeping generalizations that sometimes just feel plain illogical.

Deida says that ‘variety is feminine’, but instead it’s men who enjoy more sexual variety and score higher on thrill-seeking.

Even “*Men Are From Mars, Women Are From Venus*” was superior in its stereotypes and generalizations.

PROS

Reconnect With Your Dark Desire

Review

I'm not the best reviewer for new age and spiritual texts.

I like information straight up, clear, concise, and accurate. That's not what you get in spiritual texts.

And I didn't like "*The Way of The Superior Man*".

Too convoluted, too many teacher frames, and too gospel-sounding.
To convince me, one should say something that makes rational sense, that I experienced, that *you* personally experienced, or that is supported by evidence.

Unluckily, the author doesn't even provide his own experience and examples to back up the facts.

I felt like it was a mumble jumbo of gender generalizations and watered-down manosphere packaged in a cool-sounding but information-poor new-page format.

Moving beyond the writing style I did like a lot of concepts and some of them are very profound and life-changing. What I found most interesting Deida's elevation of animalistic, carnal desire to a Godly, sublime experience.

But overall, I prefer "King, Warrior, Magician, Lover".
Give it a try, and let me know what you think.

Overview

- Charisma is something we can all learn
- Charisma is presence, warmth, and power. Too much warmth = too nice, too much power = arrogant and distant
- There can be some downsides to charisma like jealousy and isolation: use vulnerability

Notes

About the Author:
Olivia Fox Cabane earned two degrees in law, but then started getting into social skills and charisma because she was just too bad with people. She had to learn charisma and social skills and, eventually, turned to teaching others how to learn charisma and social skills.

Introduction

We can all learn charisma.

You don't have to be naturally outgoing or handsome. Indeed charisma will make you make your more attractive. And introverts can be very charismatic as well and it's actually an advantage for certain forms of charisma.

3 quick tips for charisma boosts:

1. Lower the intonation of your voice at the end of the sentences
2. Reduce your speed and quantity of nodding
3. Pause for two seconds before you reply

We Assess First: Friend or Foe, Intentions & Power

Olivia Cabane says that upon first meeting someone we want to assess whether they are friends or foes.
And whether they have the power to act on those intentions.

That's true, and based on this innate human drive, we also derive one of our basic laws of power here.

Also, read:

- Mix the power with warmth

> Power Strategy 101: High-Power / High-Warmth

The Three Elements of Charisma

The three elements of charisma for Cabane are:

1. Presence
2. Power
3. Warmth

Power without warmth is impressive but can come across as cold, arrogant, and standoffish. Warmth without power can be likable and can come across as subservient and eager to please.

I agree with that.
Also, see:

- Mix the power with warmth
- Signs of submissiveness you need to avoid
- Signs of power you need to adapt

Presence

Presence of being aware of what's going on.
When we are not present in the conversation or in the environment it shows that we are not charismatic.

Here is how to acquire more presence:

- Learn presence with meditation
- When your mind wanders focus on your breath or toes to come back to the present

Power

Power is the ability to affect the world around us, whether it be by influence or power over others.

You recognize power based on:

- Appearance
- Other people's reaction to us

- Body language

Warmth

Warmth is the goodwill we have towards others. It says whether we want to use our power to help others or to harm them.

Obstacles to Presence, Power & Warmth

The following are common obstacles to unleashing our presence, power, and warmth:

Physical Discomfort

Physical discomfort affects our mental states which in turn affects our expressions, body language, and social skills performances.
To combat physical discomfort:

- Wear clothes that fit well
- Eat well
- Get all the rest you need
- Recognize: take a moment to notice if you're tense
  - Fix it: fix what bothering you
  - Reframe it: see it in a different light. How is it good, how can you use it?

Mental Discomfort

Anxiety, dissatisfaction, self-criticism, or self-doubt make you uncharismatic

Fix uncertainty like this:

1. Lie down, close your eyes, and relax
2. Take 2 or 3 deep breaths. Imagine the air in, then exhale all your worries
3. Imagine a benevolent entity of your choice (God, Fate, the Universe, etc)
4. Imagine they come to collect all your worries
5. Feel the weight being lifted off
6. **Avoid comparisons**: you must stop yourself every time you compare yourself to others
7. **Avoid self-criticism**: we perceive imaginary attacks as real ones

Self Doubts

- Impostor Syndrome: we don't believe we are good enough for our tasks
- Knowing that most people feel the same way can help reduce their power
- When you feel nervous remind yourself it's normal to be nervous

Overcoming the obstacles

Chapter four of *The Charisma Myth* is all about overcoming obstacles.
Olivia presents a three-step process:

1. **Destigmatize Discomfort**
   - Realize discomfort is normal
   - Realize everyone feels the same way

    - Stop trying to stop the discomfort
    - With 7 billion people, know that many feel the same way: it's a communal effort and you're not alone
    - Think of people who have gone through it before, especially those you admire
2. **Neutralize negativity**
    - We are programmed to focus on negative outcomes: combat them by focusing on positives
    - Remind yourself that you may have a more negative representation of reality
    - Thoughts are just brain electrical impulses: knowing it makes it easier to dismiss them
    - Name negative experiences and depersonalize ("there is a shame" instead of "I'm ashamed", also read Daring Greatly)
    - Imagine the whole world and slowly zoom towards you: you're not alone
    - Consider times you've previously felt the same and done well
    - Neutralizing is not the same as suppressing: don't try to suppress negative thoughts!
3. **Rewrite reality**
    - Imagine what's good about your negative situation
    - Imagine all the future positive scenarios this negative one will create

In a nutshell, when you are in uncomfortable situations:

1. Shake and remove physical discomfort
2. De-dramatize: the feelings are normal because that's how the brain is wired
3. De-stigmatize: millions have felt and are feeling the same way
4. Neutralize: your thoughts have a negative bias and may not be accurate
5. Re-frame: think of how what's happening is or will be positive or how you can make it positive right now

Remember, one of the most charismatic things you can do is to get comfortable with discomfort. The best approach to do it is to lean into the discomfort instead of denying it or trying to suppress it.

Stretching your comfort zone

- Hold eye contact for longer than it's comfortable
- Violate personal spaces
- Hold the elevator for everyone, enter the last face towards the people
- Start a conversation with a stranger

Exercises to get comfortable with the uncomfortable:

- The best way to do this is to delve straight into it rather than try to deny or suppress it.
- This allows you to achieve full presence (a highly charismatic trait) as well as provide sensations to focus on rather than how unbearable the situation is
- Learn to stretch your comfort zone by putting yourself in uncomfortable situations. (I.E attempt to hold eye contact longer than is comfortable, violate your personal space bubble a little bit)

Creating Charismatic Mental States

Olivia Fox Cabane proposes many techniques to control our mental state.

Visualization

- Visualize a time you were confident and crushed it

  - Imagine every detail of that situation
- If you're about to go through something such as a big speech:
  - Visualize yourself being highly confident and winning over the crowd
  - Imagine receiving a giant 20-second hug from someone you care about: it will release oxytocin which calms the flight or fight response down

Gratitude

Gratitude is the antidote to resentment, neediness, and desperation

- When a minor annoyance bothers you, take a minute to appreciate your health, life, decent weather, design, and texture of buildings, etc.
- Imagine yourself from a 3rd personal view, and write all of the positive things you can observe

Goodwill

Goodwill is great for becoming warmer

- Find three things to appreciate about someone
- Visualize people as wearing angel wings

Self Compassion

- Self-confidence is our belief in our ability to do or learn something
- Self-esteem is how much we approve or value ourselves. It's a comparison-based evaluation.
- Self-compassion is how much warmth we can have for ourselves. It's based on self-acceptance

Studies show **it's healthier to focus on self-compassion rather than self-esteem** because it's not based on others.

- Exercise: List 5 ways you already care for yourself when you're having a hard time
- Exercise: take several deep breaths; imagine someone who loves you; let them tell you that you are forgiven and that everything about you is perfect, everything down to your imperfections. Even as you are right now, you are perfect.

Using Your Body to Change Your Mind

Our mind affects our body language, but the opposite is also true.

- Use propose posture, take up space with confidence poses, and smile
- Chose your music carefully: it heavily affects your mood

Charismatic First Impressions

People like those who are similar to us. In both speech, demeanor, appearance, etc.

- Wear clothes similar to those that you want to attract
- Develop a good handshake (and avoid overpowering alpha male handshakes)

Break The Ice

- Compliment something someone is wearing.
- Ask an open-ended question, ie.: "What's the story behind that, where is it from, etc."

- Using lingo that relates to what they are interested in (same as Leil Lowndes recommends)

Graceful Exits

- Don't linger until it's weird: leave on a high note
- Offer them something when you leave
- Don't worry about what you said, or what to say: A MIT study shows that **how you make them feel matters**
- If you need to save someone from a conversation, focus your warmth and charisma on the person who's going to lose and ask"I'm really sorry, but X is needed to do Y, would you mind if I take them?". This gives them the impression they had a say in the matter and avoids hurting their feelings.

Speaking and Listening with Charisma

To listen with charisma be present, don't interrupt, and process what others said for two seconds before speaking.

To speak with charisma

- Speak about positive topics
- Make people feel good when you speak to them
- Find positive connotations
- Take a compliment in full: don't negate and don't say "it's nothing" or you make the person who gave you the compliment feel they were wrong to compliment you
- "You can get more friends in two months by becoming truly interested in other people than you can in two years by trying to get other people interested in you."-Dale Carnegie.
- Use metaphors and create images
  - But don't use images when discussing negative things.

Deliver High Value

- Speaking to someone means you demand time and attention. So you must deliver on it
- Make what you're saying entertaining
- Give interesting or helpful information
- Find a way to arouse good feelings

Voice Power

- Speak slowly, and slowly
- Pause frequently
- Lower intonation at the end of sentences
- Smile: it heavily affects how you sound and speak

Charismatic Body Language

Mirror Body

- Mimic the motions of those you are speaking to: it creates a sense of trust
- Be selective: if you copy all weird body language you will arouse suspicion (and some motions may be gender-specific)
- Use variations in amplitude. If they go big with a motion, maybe go small.

- Only do what's comfortable
- Don't mirror someone who is angry: break them from their angry pose by handing them something or something, then move into a non-angry one.

Be the Big Gorilla

- Envision a big gorilla and move like it
- Don't be concerned with mild collisions when you walk with confidence

Regal Posture

- Imagine James Bond: doesn't fidget, doesn't look to earn approval
- Don't reassure or please people you speak to. Assume that you are already bringing enough and that they have to bring the rest.

Don't Overdo It

- Now that you are conveying power, be careful not to overdo it, as you might intimidate some people
- Keep soft eyes
- Tilt your head down just a bit. This seems respectful and makes you seem more knowledgeable

Difficult Situations

To deal with difficult people:

Divide and Conquer

- Don't try to win over a big group of people at once.
- Understand which strategy you want to use with each person.

Make them Rationalize in Your Favor

- Use the Benjamin Franklin effect: ask someone to do you a favor and it will make you seem more likable (cognitive dissonance as per Festinger, 1957).
- Ask for their opinion, which will make them feel more valued
- Find a way to remind them of a past time they helped out, and attempt to praise them for the warmth they had for doing that
- Find a way to present your idea as based on their previous idea or action

Expressing Appreciation

- Show appreciation by saying stuff like," You did a great job!" rather than "Great job!"
  - Appreciate specific traits and action
  - Remind people they had a choice with you, and express gratitude. That will further make them happy with their decision.
- Show people how their involvement has helped: they will feel driven to help support it.

Delivering Bad News

- Increase comfort as much as possible
- Have distractions such as items for them to fidget with, candlelight, or background music

- Prepare yourself to come from a place of compassion when you speak

Presenting With Charisma

- Make the core message as simple as possible (ideally in one sentence)
- Use stories with characters similar to the audience
- Start on a high note and end on a high note: don't end with a Q&A
- Stand with a wide stance
- Arrive early to study the stage and own it

Delivering Criticism

- Find a comfortable and quiet environment
- Get specific with your criticisms
- Depersonalize: let them know it's about their behavior, not them
  - "When you wait till the last possible minute to work on the presentation, I get nervous." is the proper critique. "Why do you feel the need to wait till the last possible minute?" Is not
- Start on a positive note, such as bringing up their accomplishments
- End on a positive note.

Types of Charisma

There are four types of charisma:

1. **Focus**: Elon Musk, is all about presence. Listening and zooming in on what people say making them feel listened to and understood. The risk is little warmth and coming across as submissive, don't use it when you need to be authoritative and need immediate compliance
2. **Visionary**: Steve Jobs, great to make people believe you, requires you to project full belief in what you say and full confidence you can achieve it. The vision should ideally include something for good
3. **Kindness**: Dalai Lama, primarily focused on warmth, great to create an emotional bond and make people feel welcome; avoid when you need to be authoritative
4. **Authority**: The most powerful of them all, based on status and confidence. Stalin and Mussolini leverage authority and charisma. They are not necessarily likable, like Michael Jordan. The risks are that people will not tell you the truth because they're too intimidated

Different styles better suit different personalities and different environments.

CRITICISM

Charisma Types Are Not Scientific Categories

There is no known scientific, universal, or widely accepted definition of 'charisma'.

And that is all the truer for Cabane's four types of charisma. **They may be a useful practical framework as long as they make sense to you, but they are not established** empirically tested categories. They are Cabane's own conceptual model.

Other authors may define or categorize charisma differently, so we should not assume these are the only—or fundamental—types of charisma.

These May Be Forms of *Power*, Not Charisma

At Power Moves, we would also question whether these are truly different *types of charisma*.

We see them more as **different forms of interpersonal power and leverage**. Focus creates leverage through attention and making people feel understood; Visionary charisma through the ability to mobilize people around a vision; Kindness through goodwill and social bonds; and Authority through status and perceived power.

In other words, what Cabane calls different types of charisma may be better understood as different mechanisms of influence and interpersonal power. For us, the more fundamental question is not *"What type of charisma do you have?"* but *"What gives you leverage over the interaction, and why do people respond to you?"*

Sometimes Had to Question the Effectiveness

The author recommends one of her clients go with a very graphic mantra to get the people in his organization to comply.
And adds about her choice that "it's harsh, but it works".

However, that's not always true. As Elliot Aronson very well explains, harsh messages can have the opposite effect

unless the audience has high self-esteem, can act on the recommendation, and knows how to act on it.
For a book on so much good stuff on psychology and influencing, that was an important detail I needed to point out.

Clinton Asking Janitors For Foreign Policy?

I also had to question both the effectiveness and source veracity of Clinton supposedly asking staffers and janitors of the white house for recommendations on foreign policy.

Clinton is a typical example of how to be charming, but that behavior seems everything but effective or charismatic to me.

Body language advice on 'being a gorilla'

> Imagine You're A Big Gorilla Charging Down The Street

I found that advice on body language to be only seldom effective, as it fails the law of balance.

Review

The Charisma Myth is a good book combining the author's theory on charisma, exercises, and lots of practical tips.

If you are familiar with NLP techniques, Tony Robbins, body language, and social skills, some of the content will not be new to you.
But Cabane still manages to add unique takes on charisma, though here at The Power Moves we may refer to that as social strategies, rather than necessarily 'charisma'.

9 Signs of Frenemies: How to Spot a Frenemy

Lucio Buffalmano · 20 November 2018 · Archived copy · Original

Frenemies are jealous and resentful when you win, and secretly happy when you lose.

Unluckily, frenemies are so common that you most likely have some in your life.
Luckily, this post tells you how to recognize the signs of a frenemy, and how to handle them.

This guide helps you do just that:

Contents

- 1. Jealousy for your achievements
- 2. Secretly relishes your failures
- 3. Underhanded ways to hurt you
- 4. Talk negatively behind your back
- 5. Conspicuous absence of 'likes' to your positive status updates…
  - … Or they make negative comments
- 6. Ask lots of questions without (good) advice
- 7. Passive-aggressive sabotage

1. Jealousy for your achievements

Unfortunately, frenemies can be family members as well

Frenemies don't see themselves as in control of their life and their success, and they take little action toward bettering themselves.

Their personal successes don't come from their own advancement, but from the *comparative* advancement that takes place when people around them fail.
When you fail, it provides them with a relative advancement within their own circle of reference, it makes them feel good by comparison, and it gives them something to gossip about.

Their "strategy" to feel good then is to see you fail, to make others feel like you failed, and to make yourself feel like you're failing.
Here is how they do it:

- **They devalue your achievement**

Some of the most extreme and out-of-control frenemies can't control their jealous tongues.
And they will comment off the cuff that your achievement was "OK", "lucky the top performer wasn't there" or "well, you finally made it, you've been training so hard for it" as if to say why did it take you so long.

- **They avoid complimenting you on your achievements**

They will not compliment you when you win, or they will do it with a tense face and a fake smile.
If they are part of the audience, their clapping will be barely audible: they don't want to add a single decibel to the sound of your success.

- **They blame you for their failures**

When people blame you for their failure or say that they achieved less because of your actions, that's a strong sign that they see the world -and the relationship with you- as competitive.
You can never be real friends with these people, frenemy is the only possibility.

Here is an example:

> **Frenemy**: If you hadn't done X, I would have won

I have personally heard this format a few times, and it never failed to identify a frenemy

2. Secretly relishes your failures

Signs include:

- They want to know more
- Can't hide a smile
- Bring the topic up again

And of course, **frenemies can't empathize and will not help**.

Real-life example:

> **TPM**: Help us save the channel. If TPM was ever helpful to you, share it with a Tweet on this thread
> **Him**: I was wondering what happened there lol

Not only he doesn't help, a missed opportunity, but adds a "lol".
It was the last thing I found funny at that time, so it's an uncalibrated reply *at best.* Most likely, it's the sign of a frenemy.

Here is what an empathic friend would have replied:

> **Smart empath**: I was wondering becuase I check it often. Sorry to hear man, I can imagine the mess they're creating for you. There is so much value there, the least I could do was to also share how much it helped me. Keep moving and I know TPM will emerge even stronger from this

Now that's a great message that mixes empathy with optimism and power.
The best of both worlds.

3. Underhanded ways to hurt you

Since they must keep a semblance of friendship but deep down they also want to hurt you, frenemies heavily engage in passive aggression.
For example:

- **Complimenting someone else to hurt you**

The more astute players will devalue their frenemies not by attacking them, but by raising the value of their

opponents.

Here is an example from Meet The Parents where a compliment to one ends up being an obvious dig to someone else:

If your "friends" seem to often end up praising your opponents, it might be a sign they're not a friend at all.

- **Delivers hurtful remarks masqueraded as "humor"**

Hurtful humor is one of the main ways frenemies let out their spite.
You know how this one goes. They make a hurtful remark and then they hide behind the "I'm just joking" shield.
Read: how to deal with mean jokes.

- **Delivers underhanded compliments**

Delivering compliments that seem nice on the surface but that are actually thinly veiled attacks.
For example:

> **Frenemy**: Good job. When you can pull yourself together you're not that bad

Obviously this one suggests that most of the times you *can't* pull yourself together.

Or, as Robert Greene notes in The Laws of Human nature, praising the money you made with your success, thus implying it your venal streak and degrading your work to a mere money-grabbing scheme.

- **Delivers destructive criticism masqueraded as "feedback"**

Frenemies will look at opportunities to sink you.

They make it sound like a duly correction, or even like a bit of advice.
But the meanness in it is bursting at the seams.

This is an example from a WhatsApp group of mine. We were talking about GDPR:

But if you take care of developing an antifragile ego they're actually doing you a favor here: the more criticism you

get, even mean criticism, the more likely it is you can improve.

4. Talk negatively behind your back

Frenemies are very open about your shortcomings… Just not in your face.

But they will run their mouths to your group, your other friends, and just about anyone with whom they can assault your social status.

Frenemies love gossiping (at your expense)

- **They hurt you by reporting "what that other person said"**

You can often spot a frenemy because they will be all too happy to report something bad that someone said about you.

Of course, they won't agree with it, but deep down you can see a twinkle in their eyes that they are overjoyed at the chance of hurting you.

5. Conspicuous absence of 'likes' to your positive status updates…

Try to run this experiment:

Showcase a big win or an achievement of yours on Facebook. Then notice who likes it and who comments on it.

You might think that a "like" is easier to fake than a compliment, but **many frenemies are so paralyzed by envy that they can't even bring themselves to like your status update**.
If you ask them later on if they saw your good news, of course, they will say they haven't been using FB all that much and missed it.

But the biggest giveaway is this: they don't like your update but they inbox you for more info.
If that's the case, reply late and vaguely.

… Or they make *negative* comments

Look at this example.

I uploaded a picture to celebrate this website hitting 5.000 visitors a day.

I knew that the lamb saag looked dangerously like a human waste… And I wanted to see who would point that out.

There was enough in that picture and status update to say something positive. Or to make a joke about the dish's look and *then* add something positive.

Instead, look at this comment:

He's happy for me, BUT… Delivers a negative comment

I love finding out who my frenemies are.
In this case: two birds with a stone: the snide commenter, and the frenemy who liked the snide, without liking the picture.

6. Ask lots of questions without (good) advice

People who are interested in you and happy to help will ask lots of questions, but they will also *share* their own experiences and *give* you good advice.

Frenemies will also ask you lots of questions, only to:

- Gain more intel about you
- Hope you have negative news
- Relish your negative news

They ask you, almost afraid that your answers will be positive, and they won't give you any (good) advice.

If your news are negative, they'll secretly be happy and tell you that "it's OK and you will do fine".
Frenemies will never tell you to get up on your feet and get working because that's what makes you successful. And they don't want that.

Instead, they will provide bland feedback, useless "support", or even harmful advice.
Like in Mean Girls:

"So adorable" – she hates it. Typical frenemy.

7. Passive-aggressive sabotage

If they often end up hurting, sabotaging you, or otherwise decreasing your performance, you have a strong indicator you're dealing with a frenemy:

Deliberate "mistakes" to damage you

This one belongs to the very worst category of frenemies and the ones you absolutely, positively must remove from your life.

Here is what a deliberate mistake would look like:

> **Her**: Jenny! I'm so sorry honey! I forgot to tell you this is an all white party. They won't let you in like that

Yep, she just forgot, how scatterbrained of her.

False "mistakes" to hurt you

They might say something means about someone… Only to realize you're friends with them, or they're just like you.

> **Him**: Ahah of course nobody wants to date him, look how ugly he is, he is balder than a bowling ball! (turning to you and trying to make the people around laugh at you)
> Oooops, sorry man, didn't mean to offend bald people

He surely didn't mean it…

Also see:

- **Emotional manipulation**

> How to Spot Emotional Manipulation and Protect Yourself

8. Nice words with incongruent body language

Some frenemies will smile and talk nice to you.
But their body language will betray their real emotions.

This whole exchange of shoe-shaming from SATC screams fake and frenemy to the core:

When you can spot a similar pattern in your friends… There is probably no friendship there.

9. They make you feel worse off

This is the biggest telltale sign.

ESPECIALLY if you have grown some power-awareness -if you're not, be careful, you may not even realize who the real friends and frenemies are-.

However, chances are that you may still feel at least positively or negatively after interacting with someone.

If you feel negative after interacting with someone, that's what we define here as a "taker".

Takers take from you.
Taking can be anything. From money, to psychological well-being, to emotional support, to simply taking time.

If you feel worse after interacting with someone it's time to cut them off.

The evidence is clear: good friends make you healthy.
But poor friends make you unhealthy.

Don't do that to yourself.
Cut off the frenemy.

Also read:

- Toxic people
- How to spot a taker

Fighting Frenemies

Should you fight a frenemy?

Not openly.

I wouldn't approach a frenemy with a fighting mindset at all.

First of all, you don't have anything to gain and it will displace your energies from something better.
Life is not meant for fighting frenemies.

And second, frenemies are a normal part of life.
It's simply how many people are wired, and wherever you go chances are that you will deal with at least some of them.

The only exceptions are environments of super high-quality people where everyone is going after their own dream and goal and where everyone is more focused on *self-development* than on social climbing and pushing others down. Try to move into such an environment and spend less and less time with the frenemies.

But if you really want to fight your frenemies…

How to Fight Frenemies

Alright, I've given you the peace & love spiel.

Now, if you really wanna fight them here is how:

- **Play the same game back on them**

Whenever they attack you, don't stand here like thunder from a clear sky hit you, but hit back.

Here is an example of the bald offense:

> **Him**: Ahah of course nobody wants to date him, look how ugly he is, he is balder than a bowling ball! (turning to you and trying to make the people around laugh at you)
> Oooops, sorry man, didn't mean to offend bald people
> **You**: I don't know if he's ugly maybe he's got the moves. Something that wouldn't hurt Mr. Pudgy here (touch his belly or pinch his arm).
> Oh, guys, I always wanted to ask you this but always forgot..

Note that touching is also a sign of dominance which will make you come easily on top.
And now it's difficult for him to retort without escalating. But escalating would mean he shows his ugly face, and in either case, you win.
The last sentence there moves on -always a good idea after you deliver a strong blow- and shows leadership qualities.

- **Rub your success on their faces**

In the example of the party, find a way to get in anyway. Then be the diva in the place of the white sheep.
Remember, with frenemies **the very best revenge is runaway success**.

- **Shame them**

A good technique is to shame them for their behavior.
You can do so by going meta and explaining what they are doing, or by giving them more rope to be even nastier, so that they can show themselves for who they truly are.
Also see: dealing with people who undermine you.

Assessing Frenemies' Danger

Even if you decide not to fight them but to minimize contact, which I hope you will, it's still good practice to assess how dangerous they can be.
This is the rule of thumb. When they go for:

- **Direct attacks**: they feel superior to you and are trying to intimidate you OR they're very dumb and not dangerous
- **Indirect attacks**: they feel weaker than you are or are sneakier and socially shrewd. They're potentially more dangerous

Direct attacks can be more unsettling but at least the competition is out in the open.
With indirect attacks, you're never sure what they're up to and what rumors they're spreading. Watch out.

Frenemies change over time

Frenemy is not a constant.

We only have frenemies who are around our own level of success, achievement, and social status.
Too high up, and they're in another league. Too low down, and they're not a threat to our ego and social status.

That means that if you are going through a rough patch and a frenemy of yours is going strong he won't see you as competition anymore and you'll drop off his frenemy radar.

That guy won't be a frenemy… Until you get back on your feet.
Or until he gets back on his knees.

So the best way to get rid of frenemies? **Move ahead in life and leave the frenemies in your dust**.

However, that won't remove frenemies forever unluckily.
As you move ahead, new frenemies who before thought you were too beneath them will pop up.
And in a way, the more successful you become, the more you will attract envy and jealousy. And the more you will see the ugly face of fren-dom.

Welcome to planet Earth.

So smile, don't get too hung up on frenemies. And to paraphrase someone:

Many frenemies, much honor.

Emotional Vampires: Summary & Review

Lucio Buffalmano · 21 November 2018 · Archived copy · Original

Emotional Vampires (2000) describes five types of toxic personalities in a professionally accurate fashion, but in simple words, and teaches readers how to defend themselves against antisocial, histrionic, narcissistic, obsessive-compulsive, and paranoid personalities.

Bullet Summary

- Not all vampires are mean: they're "just" hollow
- When you are at your weakest vampires don't see someone in need of help: they see an opportunity
- Vampires are childish: they see their needs. But they don't see yours. That can make them dangerous.

Full Summary

About the Author: Albert Bernstein is a clinical psychologist, speaker, author, and business consultant. He focuses on dealing with difficult personalities, a topic he often explores on his website.

Intro

The "vampires" of Albert J. Bernstein are some of the most renowned personality disorders:

- Antisocial
- Histrionic
- Narcissistic
- Obsessive-Compulsive
- Paranoid

Each of them is driven by an immature and impossible need that, to them, is the most important thing in the world. But to most people, it only serves to make their lives a living hell (if they allow the vampires to do so).

The difference between emotional vampires and other disorders is the impact on people's lives.
Writes Bernstein:

> When people are driving themselves crazy, they have neuroses or psychoses. When they drive other people crazy, they have personality disorders.

I love a good and simple summary :).

1. Antisocial Vampires

Antisocials hate boredom.
They love parties, sex, drugs, and rock 'n' roll. And in their pursuit of excitement often end up breaking both laws and social conventions.

Protection Against Antisocial Vampires:

Recognize them before they turn on the charm: check their references and their past. What they've done in the past is the best reference for what they'll do in the future.
Get to know them well before you open your heart or your wallet.

2. Histrionic Vampires

They live for attention and approval.
Drama is their keyword. In all sense: what you see is not what you get and they make a big fuss out of everything. Looking good is their specialty, and all else is an unimportant detail.

- Think they never do anything unacceptable (either mistakes or immoral thoughts)
- Their behavior is more directed at fooling themselves than fooling you
- Many self-help gurus and public speakers are histrionics
- Seductive histrionic may hit on your BF or hit on your GF not to steal them but for the attention

3. Narcissistic Vampires

They live out their grandiose fantasies of being the most talented, most skilled, smartest, and all-around best people in the world.
Writes Bernstein:

> It's not so much that they think of themselves as better than other people as they don't think of other people at all.

- If they can't win big they find small ponds that let them be big fishes
- They find people whose need to be needed makes them feel adored
- Superstar narcissists have super high standards which don't accept failure from them and the people around
- They hate passive aggression but attract it because of their aggressive ways of dealing with failure
- Expect loyalty and can spend quite a bit to get back at people (exactly what Trump says in The Art of The Deal)

> **Narcissism means never having to say you're sorry**

Protection Against Narcissistic Vampires

They don't do much of anything that isn't self-serving. But if you can manage to tie your interests to theirs, then it's possible they will take you places.
If your boss is a narcissist, says the author, your success and happiness are contingent upon indulging their every whim. Do that, or move I'd add.

> **Narcissists wear expensive watches so they can look at them when someone else is talking**

4. Obsessive-Compulsive Vampires

They're somewhat opposite to antisocials: they are addicted to safety.
The way to achieve safety is by full control over everything and scrupulous attention to detail.

- Take long to make a decision
- Will rarely if ever show appreciation
- Confuse process with the product: how things get done can become more important than getting it done
- Puritans and perfectionists are obsessive-compulsive
- They kill visions: don't listen only to them when it comes to big ideas

Writes the author:

> For people who only want everything to be right, Perfectionistic vampires can cause an incredible number of things to go wrong

5. Paranoid Vampires

They see patterns and things that others can't.
But since they see a bit too much, sometimes what they see is true and they come up with a new theory or foil a dangerous plan. But other times it isn't and they just drive themselves -and the people- crazy.

- Their goal is to reduce ambiguity in life
- Search for "truth" and explanations where there might be no simple truth
- Live by concrete rules and expect others to live by them as well
- Search for evidence of deviation, and they usually find it
- Moralists, visionaries, theorists (and goo therapists) have a touch of the paranoid

Protection Against Paranoids:

If you are hiding something, they will find it. Tell the truth.

How Emotional Vampires Trick You

Emotional vampires use the same techniques as hypnotists.
They are:

- **Misdirection**: focus attention on them, not on what they're doing
- **Identification**: they identify the most likely victims who are most likely to give them what they want
- **Isolation**: they isolate victims from others
- **Control**: they use your own desires to control you
- **Alternate reality**: they create illusions based on what you want and need

- **False choices**: put you in a bind where one choice seems impossible. And leverage the fear of negative consequences being bigger than the consequences

And this is how you recognize the danger signs of hypnosis:

- **Deviating from standard procedures**: if you find yourself doing unusual things for someone, watch out
- **Thinking in superlatives**: when you think of someone as “best” and “most”, it’s a warning sign
- **Instant rapport**: it’s usually the result of someone presenting a fake persona just you would like to meet one
- **Lack of concern with objective information**: if you feel sure about something without concrete proof, watch out
- **Confusion**: if you feel confused don’t do anything until you figure out what’s going on

Healthy VS Personality Disorders

The author asks: if emotional vampires are a bit like children, what does it take to be a grown-up?

Well, the answer is this:

- Perception of control: emotional vampires see themselves as victims of fate, “things happen” and they don’t learn from mistakes
- Feeling of connection: becoming an adult means learning to live by the social rules:
  - Other people are the same as I am: empathy is what maturity is about. To vampires, other people only supply their needs
  - What’s fair is fair: vampires’ idea of fair is to get what they want
  - Others have the right to deny me: vampires believe whatever they want should be given to them regardless of how others feel

Finally, the author says that to grow is to do things that are difficult. But at this one, vampires are better. Because of their immaturity, they operate at the edges of creativity.

Dealing with Emotional vampires

Emotional vampires lack integrity. They are hollow inside.
When they give you something or offer help, they usually have an agenda.

They are most dangerous when you need something and your guard is down. Where most people would then see someone in need, emotional vampires see a golden opportunity.

> **Emotional vampires see your weakness as an opportunity**

The best strategy to contain them is what you’d use on children:

- setting limits
- arranging contingencies
- being consistent
- keeping lectures to a minimum
- rewarding good behavior and ignoring bad
- occasionally putting them in time-out

Emotional Vampires Aren't Evil: Just Immature

Emotional vampires are not necessarily evil, says Albert Bernstein.

But their immaturity leads them to operate without distinguishing much between what's good and bad (and what will be good and bad for the people around).
He says:

> Emotional Vampires are not intrinsically evil, but their immaturity allows them to operate without thinking about whether their actions are good or bad.
> Vampires see other people as potential sources for whatever they happen to need at the moment, not as separate human beings with needs and feelings of their own.
> Rather than evil itself, vampires' perceptual distortion is a doorway through which evil may easily enter.

These are the mindsets that can make them dangerous:

- My needs are more important than yours
- Rules apply to others, not me
- It's not my fault, ever
- I want it now
- If I don't get my way, I throw a tantrum

My Note: sure, they are not *necessarily* evil, but some can be.
And sometimes the distinction can only be one of semantics, with the effects being exactly the same.

Real-Life Applications

Cultivate Your Weirdness & Rebellion For Creativity
The author says that creativity cannot be turned on and off like a water tap.
Creativity comes from rebellion and it's only called creativity when it produces something useful. Other times it's called "being weird" or "having a bad attitude".
People who like things as they are don't create anything new.

CONS

- **All Greatness & All That Work Is From Personality Disorders?**

It seems like the author ascribes all that is good in the world to personality disorders:

> Though there is plenty of narcissism without greatness, there is no greatness without narcissism

Of obsessive-compulsives, he writes:

> Without Obsessive-Compulsives none of the world's difficult and thankless tasks would ever get done, nothing would ever work the way it should, and none of us would do our homework, ever

Of antisocial vampires:

> Most of history's great deeds of exploration, financial daring, and physical courage have been done by people who would meet the criteria set down here for Antisocial vampires

I don't know how other readers felt, but to me, it felt like "normal" people without personality disorders do very little for this world. They don't advance the world, do little thinking outside the box, and present little fringe behavior.
That's not necessarily wrong per se, but as of now, I am just not sure that's correct at all.

- **Can You Really Generalize For All of Them?**

The descriptions of each personality disorder are superb. But when the author generalizes to all of them, I gotta wonder: can you really generalize about such different personalities?

- **Pathological Giving Because of Male Dominance?**

In the chapter on histrionics, the author writes:

> This pattern of pathological giving, though not specific to women by any means, does correspond to what has been expected of females throughout thousands of years of male domination.

I disagree that "thousands of years of male domination" pushed any woman into giving.

- **Not All Undiagnosed Illnesses Are Made Up**

Talking about histrionics the author says that they "invented the undiagnosable illness". This might confuse histrionics with hypochondriacs. And I felt that a note saying that undiagnosed does not equate to somatization could have helped.

PROS

- **Insightful**

The information is top-notch.
While reading, I could exactly point out to a few people in my life and clearly understand their pathology.

- **Simple & Practical**

While the information is from a high-quality, professional source, Emotional Vampires is laid out in simple terms for everyone to understand -and put to use-.
Anyone, with any level of previous knowledge, can learn and improve their social skills with Emotional Vampires.

- **Hilarious**

Albert Bernstein writes with humor and lots of innuendos. And that helps to make Emotional Vampires a real pleasure to go through.
His “narcissism means never having to say you’re sorry” cracked me up and is just one of many examples.

Review

Emotional Vampires is an outstanding book to get a quick overview of some common psycho-pathologies.

Like the more famous Dangerous Personalities, it popularizes complex psycho-pathologies, but it does so in a simple fashion that turns out to be very effective and helpful.

But it just happens to do so very well. It’s one of the best, clearest books you can read to get an overview of some of the most common personality disorders.

The more academic type might scoff at the mundanity of the descriptions. But “*Emotional Vampires*” does a great job of marrying accurate information with a format that is easily accessible to anyone.

Highly recommended to every non-medical reader out there who wants to understand personality disorders.

Best Red Pill Books

Lucio Buffalmano · 22 November 2018 · Archived copy · Original

Most ‘red pill book lists’ online are either marketing fluff, manosphere echo chamber, or ideological propaganda. This list is none of that.

Here, ‘red pill’ means **truth**: the uncomfortable, politically incorrect, but *useful* insights about power, psychology, human nature, and intersexual dynamics.

The books below are the ones that open your eyes and make you more effective in the real world. Some come from the manosphere, some from academics, some from social science, and some from authors who’d never label themselves “red pill” at all.

That’s the whole point: **truth isn’t owned by any camp**.
If a book reveals reality, it’s red pill—whether it comes from a feminist, an economist, a political scientist, or a dark-triad researcher.

This is the definitive reading list of the best red pill and manosphere books:
curated, vetted, explained, and linked to full summaries and reviews.

Note: Personally reviewed and constantly updated
Every book has been personally read, vetted, and reviewed by Lucio. This is not a list compiled by someone who just looked up the more popular books. And this page is **continuously updated** as new, high-quality titles emerge.

14. Anatomy of the State

By Murray Rothbard

Summary

For those who've always considered the government a provider of safety and stability… This is the red pill for you.

It's really short and to the point, and comes also in audiobook form, so it should be easy to go through.

The author presents state and state leadership as power players who seek to maximize their own well-being.

Take the anarcho-capitalist, free-market bits with a pinch of salt, though.
While the former is solid power dynamics and potentially eye-opening, the latter is either untested or dubious.

> Quote: A robber who justified his theft by saying that he really helped his victims, by his spending giving a boost to retail trade, would find few converts; but when this theory is clothed in Keynesian equations and impressive references to the "multiplier effect," it unfortunately carries more conviction.

13. The Gervais Principle

By Venkatesh Rao

Summary

Absolutely loved *The Gervais Principle*.

Albeit the analysis may be simplistic and overly cynical, it's still one of the best books to open your eyes to corporate manipulation (<- and that one is the best post to understand corporate manipulation, BTW).

Rao, wittingly or unwittingly, even describes the dynamics of becoming a top-dog sociopath as a red pill awakening process:

> Quote: "The image is derived from Plato's allegory of the cave, which I won't get into here. Suffice it to say that it divides people into those who get how the world really works (the Sociopaths and the self-aware slacker Losers) and those who don't (the over-performer Losers and the Clueless in the middle)."

12. The Dictator's Handbook

by Bruce Bueno de Mesquita
Summary | Amazon

Originally, this spot belonged to "*The Prince*" by Machiavelli.

In a way, consider this position as shared between the two books.

The Prince heralded as the first treatise of political philosophy and realpolitik, is a classic.
It has boatloads of wisdom, but it's not an easy read.

Same for "*The Logic of Political Survival*", which is the book where de Mesquita shares all his data, and deeper logic.

So I gave the official spot on this list to "The Dictator's Handbook". In theory, it's a guide on how dictators operate to acquire and maintain power. But in truth, it explains the power dynamics of politics and how incentives of personal gain and power truly determine policy.

"The Prince" and "The Dictator's Handbook" are red pill power dynamics applied to politics.

> Quote: "Everyone sees what you appear to be, but few experience who you really are"

11. The 48 Laws Of Power

[image]
by Robert Greene
Summary | Audiobook | Print

Now, here is a book and an author that needs no introduction.

I must preface it with a warning: **getting into power reading books requires that you first understand basic social skills**.

I see hundreds of men who jump into power without basic social skills, and the results are disastrous.
See an example here:

Source: 48 Laws of Power subreddit (recovered thread)
That was so common that I dedicated some time to pick The 48 Laws of Power Apart.
Plus, I modernized with current examples and then did an article on the bad applications of the laws.
See here:

- Updated 48 Laws of Power
- Misapplications of the 48 Laws of Power

Even more important if you're looking for real-world skills:

- **48 Laws of Power VS Power University**

> 48 Laws VS Power University: What's Best to Advance In Life?

Now, back to us.

How is “The 48 Laws of Power” useful?

It’s useful to understand the darker, self-interested side of human nature.
And of course, it drops a substantial amount of gold on the unspoken rules of socialization.

> Quote: *“Strike the shepherd and the sheep will scatter”*

10. Why Women Have Better Sex Under Socialism

By Kristen Ghodsee
Summary | Audiobook

You might be surprised to see this book here.

Why?

Because the author is a feminist.

But hear me out before you close the page.
The truth is rarely to be found wholly in one camp alone. And rarely one faction is 100% right and the other 100% wrong.

So to truly understand intersexual dynamics, or to truly understand anything, really, you should look at both camps with as much of an open mind as possible.

For true red pill enlightenment, let *truth* guide you, not ideology, gender belonging, or what you wish to see.

And Ghodsee has a point when she says that men, as a group, have an incentive to keep women down.
The patriarchy is *vastly* overblown by feminists. But it’s not *fully* made up, either.
As much as some (male) researchers like to scoff at it, the patriarchy the feminists talk about has a backdrop of

truth. And the backdrop of truth is that **since most men cluster around the average, most men *do* need women to be powerless and poor** (or those men would never get sex, since women want men who are *more* than they are).

Many men *do* want to keep women powerless because it increases their sexual odds of mating.
Powerful women are bad news for lower-quality men. When most women also have power, then those women wouldn't want any of those men who are now beneath them (see "female hypergamy").

Ghodhee makes a good case that men want capitalism with restricted female access to resources because that gives them an advantage.
And she's right.

Unluckily, except for what I've just described and a few more important nuggets of wisdom, the book as a whole is only average as it's weakened by heavy feminist and leftist biases.

> Quote: "*Ultimately, this thing we call government, is not inherently good or bad, it is a vessel that is steered by those who happen to control it at any one moment in time*"

9. Leadership BS

By Jeffrey Pfeffer
Summary | Audiobook

Leadership BS is the antidote to, well… All the leadership blue pill BS that happens to be the majority of the leadership industry and book.

This book brings you back to earth on how things most often *are* -rather than "how it'd be cool they were"-.

> Quote: Go home and throw out the numerous leadership books—or better yet, give them to career competitors.

8. The Unplugged Alpha

by Orion Taraban

Summary

The Value of Others looks at dating and relationships from a social exchange and behavioral economics point of view.

Taraban's book dethroned from this position *The Unplugged Alpha*.
The Value of Others is less focused on practical takeaways for men and sometimes lacks a deeper understanding of short-term dating dynamics. But it provides a deeper analyses and a broader overview.

> Quote: *People don't want relationships, they want value*

7. The Millionaire Fastlane

by MJ DeMarco
Summary | Audiobook[image] | Kindle

The best red pill book on personal finance bar none.

The two biggest takeaways:

1. The paradox of practice: It tears apart the "I will make you rich" courses and books. MJ says that the only way those guys are getting rich is by.. Selling said courses.
   They don't know squat about getting rich in any other way. If you want to learn from them, learn how they *sell* the courses, not what's *in* the courses.
2. Saving & Investing is for suckers: The central tenet of the personal-finance literature is the famous "compound interest".
   DeMarco flips the script claiming that compound interest is trading invaluable time today for distant (and uncertain) riches (a distant) tomorrow.

I couldn't agree more with both of them.

> Quote: *Dump the damn job. The job sucks*

Update: Unscripted

Unscripted is the second book by the same author, revisiting many of the same themes, and expanding on them. If you have to choose between one, I think *Unscripted* may be more comprehensive -and more practical, too-.

6. The Evolution of Desire

By David Buss
Summary | Amazon

If the red pill is about truth, here is an idea for you:

Skip all authors with manosphere or feminist backgrounds -they're biased against the opposite gender-.
Skip all authors with too strong a sense of belonging to specific groups or ideologies (any group is a set of "basic rules" set in stone is an ideology).

And pick a book based on science and evidence, instead.
"The Evolution of Desire" perfectly fits the bill.

There are many *evolutionary psychology books* I could recommend.
But if I had to pick just one, "The Evolution of Desire" is the briefest and most compact overview of intersexual dynamics.

You can get the juiciest content on these articles for free:

- The sexual market value
- The sexual marketplace
- The intersexual conflict

Or just go for this website's ebook, which is a mix of experience, on top solid science (next entry).

> Quote: *"Desirable people are always outnumbered by those who desire them"*

5. King, Warrior, Magician, Lover

By Robert Louis Moore & Douglas Gillette
Summary | Amazon

Even more than a "red pill book", this is a typical "manosphere book".

It's all about reaching the full potential of a man, with the King being a high-power, value-adding leader.

Similar to "King, Warrior, Magician, Lover", are also:

- The Way of Men
- The Way of The Superior Man
- Tribe: On Homecoming and Belonging

But, in my opinion, the above three are lacking when compared to this classic.
"The Way of Men" relishes into the *shadow* of the warrior, promoting factions and fights on other tribes. "The Way of The Superior Man" is too woo-woo and weak on science when it comes to the stereotypes of feminine and masculine. And "Tribe" is too heavy on "initiation and belonging", trumping healthy individualism.

When I first read "King, Warrior, Magician, Lover", I was almost angry. Angry at myself for having read it so late.
Of course: it always makes sense to start with the classics!
Much of what it means to be a good King and a good Warrior also reflects much of The Power Moves value, whereby "to be good, you need to know how to be bad".
Equally, the good Warrior uses his destructive drive to wage war on what needs to be destroyed.

> Quote: The Warrior is often a destroyer.
> But the positive Warrior energy destroys only what needs to be destroyed in order for something new and fresh, more alive and more virtuous to appear.
> Many things in our world need destroying…

4. Seduction University

By Lucio Buffalmano
Overview | Checkout

Obvious disclaimer:

I am the author of this course.

But there is a reason why it's here.
It features higher than Buss because it has the same scientific grounding as Buss, plus personal experience (Buss is not a player :).
And it features higher than the red pill books because it's more scientifically grounded and just better at being your guide for better dating because it focuses on strategies, techniques, examples, videos, and step-by-step processes.

Seduction University leverages the best insights about sexual dynamics (both intrasexual, and intersexual), sexual power dynamics, and what's been proven to work to actually seduce and maximize your dating success.

> Quote: *"Effective processes are the main difference between the talker, and the effective slayer"*

3. The Wisdom of Psychopaths

by Kevin Dutton
Summary | Audiobook

"The Wisdom of Psychopaths" has lots of negative reviews online.

And it couldn't have been any different.

After all, telling people that amorality, drive to power and ruthlessness can provide an edge in life was bound to ruffle some feathers.

Yet, we do know that dark-triad men get laid more than the average man.
And we've shown that Machiavellianism and ruthlessness help you get to the top in business.

Dutton is clear that it's not boundless psychopathy that provides an edge in life.
It's *low to medium* doses of psychopathy *plus* the ability to decide where and when to be pro-social or ruthless that provide an edge.
And both Dutton and I espouse the theory that it's possible to be "good psychopaths", such as to use psychopathic traits without harming innocent people -or even to add value to society-.
As a matter of fact, I have long said on this website that to be good, you need to know how to be bad.

Machiavelli said it first:

> A good person is ruined among the great numbers who are not good

So, yes, there is plenty we can learn from psychopaths. *Especially* if you want to be a force for good.

Also from Dutton:

- The Good Psychopath Guide
- Sorted! How to Get What You Want in Life (The Good Psychopath Guide II)

> Quote: 'There are two things that rises at the top: the cream, and the scum".

2. Decoding The Gurus

By Chris Kavanagh and Matthew Browne
Review

A large chunk of famous people are dark triads.

And so are most gurus, influencers, and various personalities who seek to teach others.

Including many in this very same list.

Decoding The Gurus is the best available resource to understand the guru phenomenon.

And to help you get rid of your very human tendency to believe, look up, or subordinate yourself to them.

(Our website also does the same, BTW).

Do you know Scott Adams?
If you do and don't see the narcissism and red flags, let this be your wake-up call:

> Quote: I'll issue a spoiler upfront. We looked at some people and some are particularly irritating to look at. Jordan Peterson series spring to mind (…) I think **it is some achievement that Scott Adams is by far the person I disliked the most** that we've covered and I'm really going to struggle to say anything about him, **because he's such an a**hole** (..) he's an a**hole

1. When Men Behave Badly

by David Buss
Summary | Audiobook

Don't let the title fool you:

It's not a tirade against men -if it were, trust me, I wouldn't have put it here-.

David Buss is a true scientist, and quite impartial -albeit just a bit more male perspective would have made it even better, to be honest-.

Indeed, the very first thing he says is that both feminists and manosphere bloggers do get something right. But they both lack a deeper understanding -and an unbiased view- of intersexual dynamics.

And we agree with that.

If you want to learn about sexual conflict and the more cheating, amoral, and manipulative nature of intersexual dynamics, this is your book -as well as the course below, which is more on the practical side-.

And as a testament to Buss telling just how it is, look no further than this quote:

> Quote: Are these acts morally abhorrent? Absolutely. Few things seem more evil than directing abortion-inducing blows to a pregnant woman's belly. (…) Evolution by selection operates according to the ruthless currency of relative reproductive success. It is indifferent to the suffering of individuals. It is indifferent to our moral evaluations. Just as evolution has created male lions that kill the baby cubs sired by their rivals in order to bring a new female back into estrus, human males may have evolved a circumstance-contingent psychology that inclines them to brutalize incipient offspring sired by rival men.

Bonus: Power University Course

By Lucio Buffalmano
Overview | Reviews

Power University isn't technically a "red pill book"—it's a course.

But when seeking an edge in life, a course with videos, quizzes, and self-assessments may help you absorb and apply concepts better than a book.

PU is also not designed to reveal red pill truths, but to **leverage red pill truths to achieve goals.**

Full disclosure: I'm the main creator of Power University.
Still, it tops the list because customer feedback aligns with red pill insights, like this one:

What's a "Red Pill Book"?

Intersexual dynamics is one of the major topics of the red pill, so this list prominently features the best books on intersexual dynamics.

But "red pill" also refers to any deep and truthful wisdom that people don't openly talk about. Truths and realities that, for various reasons, society either hides or refuses.

In its wider meaning, "red pill' refers to anything that helps us reach a higher level of knowledge and/or effectiveness by going beyond the mainstream information.
This reading list embraced that wider meaning of "red pill".

Some people say the Red Pill can bring to the surface uncomfortable truths which can make people depressed. But I never bought that.
I think that anything "Red Pill", by definition, makes us more effective human beings. And that, in my book, will always mean empowering, not disheartening.

Somewhat outside of the TOP 10, but popular red pills books:

The Rational Male – Preventive Medicine

by Rollo Tomassi
Summary | Audiobook

Rollo Tomassi is one of the most popular voices in the red pill community.

If you're a beginner, then the first book "*The Rational Male*" provides an overview of the most foundational red pill framework of dating and intersexual dynamics.

I preferred "Preventive Medicine", since the first one was a bit basic for me.

Rollo's take on games women play, the true meaning of women's manipulation attempts, and how women control providers are good starting points.

At the risk of losing readership though, I gotta raise a warning: the bitterness and covert misogyny of authors like these aren't good for you.

> Quote: *"Men need to man up is the battle cry of every single woman older than 30"*

The Manipulated Man

[image]
by Esther Vilar
Summary | Kindle | Print

This is pure shock and awe ped pill therapy.

Not for the faint of heart and not for beginners: it will raise *cognitive dissonance* alarm bells left and right.

Unluckily, as much as Vilar's work hits like a kettle of gunpowder, it also comes from a place of little understanding of sexual marketplace power dynamics.
Vilar fails to see that (many) women not working and (many) men working is often a fair deal that most men enter *willingly* because average women have higher sexual market value than average men.

In the wrong hands and at the wrong time, "The Manipulated Man" might push some men into the wrong path, fueling misogyny, a defensive mindset, and "fearful defection", such as giving up on relationships -or women- just out of fear of losing.

This is a pity because it's true that women, just like men, may manipulate their partners. And that's especially dangerous for men who are not aware of those inborn tendencies.
Female manipulation should be put into a wider frame of sexual conflict and manipulation, which cuts both ways.

Intro: Science of Jealousy

Evolutionary psychology suggests jealousy is hardwired in humans.

Quoting from The *Oxford Handbook of Evolutionary Psychology and Romantic Relationships:*

> romantic jealousy is part of the suite of psychological mechanisms promoting intrasexual competition to maintain—rather than simply attract—longer-term mates, and both sexes report high levels of jealousy (Buss, 2013; Scelza et al., 2020).

Some jealousy is not just normal, but *good* for relationships.
Relationship researcher John Gottman says that no jealousy whatsoever is often the precursor of a breakup.

However, as for most things, **there is an optimum balance of jealousy and too much of it is becomes maladaptive and toxic.**

Unfortunately, jealousy seems to be flat bell curve with fat tails of extremes. In simple words, too much jealousy is relatively common among men.
Bloshinsky in the latest *Cambridge Handbook of Male Sexual Adaptation* claims that jealousy accounts for far more cases of family violence (e.g., spouse and child abuse) than social class, poverty, alcohol, or drug addiction combined.

Jealousy must be taken seriously because it's also a leading cause of stalking and murder.

Signs of Jealous Paranoia

These are the signs that a jealous boyfriend is going too far:

1. He Chased Hard And/Or Invested a Lot

Jealous paranoids play to their victims' fantasies of being taken care of.

This is something that some women crave at a subconscious level.
For some others, it's a similar experience as being swept off their feet.

These men are often very proactive in the relationship, including early on, and do so without being asked.
To some women, it can feel like a God-sent gift.

With so many men who play games, it can feel like a refreshing change.
You don't need to bend over backward to make him invest in you. He does all the chasing himself!

2. He Is Dominant (Even If Protective-Dominant)

Take this example by Wenda Patrick in her book Red Flags:

> Jessica is (…) impressed by his assertiveness.
> Not only does he order for both of them and select the wine, but also he demands that the waiter send back Jessica's steak when it is prepared incorrectly.
> Jessica perceives Richard's taking charge of the situation as comforting because it demonstrates that he can take care of her needs.

Sounds like a dream man?

See how it evolves:

> As their relationship develops, Richard quickly establishes himself as Jessica's sole source of support. He takes over paying the rent for her apartment and convinces her to quit her job because his income can support them both.

Guess how it evolves after that?

Richard is a controlling, jealous-paranoid man who makes Jessica's life a nightmare.

3. He Always Finds Faults in You

Paranoids are to lies and inconsistencies as perfectionists are to mistakes.

There is never "honest enough", there is never "enough proof". They will always be on the lookout for the smallest hint of duplicity and deceit.
And they will find it!
Not because it's necessarily there, but for the simple principle that people usually find what they are looking for.

No normal living gal can live up to a paranoid's standards of purity and honesty.

4. You're Never "Honest Enough", You're Never Showing Enough "Proof"

You provide all the proof you can, you tell the truth as truthful as it can be.

Yet, it's never enough.

Understand: if that's the pattern of your relationship, it's not you. It's that your boyfriend isn't just a jealous boyfriend. He might be paranoid. Or abusive-paranoid (the line is often blurred anyway).

5. He Says Someone Hurt Him In The Past... Badly

Take their pain seriously, and always give the benefit of the doubt.

But also be aware that's exactly how emotionally abusive men operate. They make stories of hurt in the past to control you with your own guilt.
And if you show yourself to be too understanding, they will use it against you: "How dare you tell me that, don't you know how hurt I was"?

6. His Punishments Are Never-Ending

Paranoids believe in punishment.
In eternal punishment.

If you have done a misdeed, don't expect them to forgive and forget. It will always be about "that time that you did X… ".
Again, this is a hallmark of some types of abusive men as well, so watch out for men whose impulse to punish is too strong.

7. He Says That If You Love Him, You Will Listen and Comply

This is a typical "double-bind" game.

Here is how it works:

> **Jealous boyfriend**: OK. Where did you go for lunch
> **Her**: Why are you asking me, I feel oppressed always having to explain
> **Jealous boyfriend**: if you feel oppressed to explain something so simple, then you don't love me

Then you have another sign of abusive-paranoid.
These are double binds and emotional manipulation to steamroll you into compliance, and they do *not* happen in healthy relationships.

8. He Isolates You From Friends and Family

Paranoids may try to isolate their victims to control them better.

If you find yourself spending more and more time with him and less time and less time with your friends, ask yourself this: was it he who was pushing and maneuvering for isolation?

If yes, you have another big check mark.

Also, read:

- Signs you're dating a Sociopath
- Psychopath Free

9. He Chases You Back After You Breakup

Paranoid often wants you back.
Especially if you ended it.
Often this has more to do with vengeance than with love, and that's another big sign of abusive behavior.

Of course, sometimes even healthy boyfriends will want you back. The difference in your past relationship.
Did he present the above 6 signs? Then the fact that he wants you back is only the confirmation that he was not a "normally jealous boyfriend", but an abusive paranoid.

It's best not to be too polite here, as they will easily confuse politeness and friendship for rekindled love.
When you go, be gone.

Dealing With Toxic Jealousy

Most women try to reassure their boyfriends that they haven't been up to anything wrong.

But that's the wrong approach.

It shows the jealous boyfriend that all their questions are appropriate and that they will receive an answer.

1. Nip It In The Bud

As soon as the jealousy creeps up, she should douse the flames with plenty of water:

> **Her**: Matt, may be overreacting here, but it sounds like you're checking up on me, and that's kind of frightening. Let me tell you this once and forever: I'm a one-man woman. As long as we're dating, you can be sure that I'm not seeing anybody else. You don't need to check up on me.

2. Answer Big Questions – Not Little Ones

The big question is this: are you faithful?

Answer that one honestly. If you're not faithful, then break up.
If you are thinking about being unfaithful, then tell him that he is destroying the relationship.
And if you don't want to be together anymore, then end it.

But once you answer honestly, then refuse to answer all the small questions like "what did you do at 7:15 PM".
There are never enough details anyway, they only fuel more questions, more doubts, and more jealousy.

The only way you can win the jealousy game is by refusing to play it.

3. Don't Compromise, Don't Agree to "Tests of Love"

Some jealous boyfriends might ask you to provide "proof of love".
Such as moving in together, calling at a certain time, providing GPS locations, etc.
Do not!

The problem is in their paranoia, not with your actions.
No matter what you do, they will always find a reason to be paranoid.

They might try to cajole you by saying that's exactly how they were hurt in the past and now they need that reassurance and then they will be fine.
Most likely, it's a slippery slope.

Don't you trust me?
Then OK, consent to their first request -as long as it's small- and see what happens.

If a second "proof of love" and request for control follows, that's it.

4. Don't Try to Deceive Him & Don't Lie

Don't think that a small fib will spare you pain and questioning: it's a very short-sighted strategy.
As we've already seen, these guys are hound dogs and are quite likely to find out about your lies.

And the more lies a jealous boyfriend catches, the more he will feel justified in his jealousy (or paranoia).

5. Put Them in Their Own Double Bind

This is a frame control technique.
Take the example of dialogue above:

> **Jealous boyfriend**: OK. Where did you go for lunch
> **Her**: Why are you asking me, I feel mistrusted always having to explain
> **Jealous boyfriend**: If you feel mistrusted to explain something so simple, then you don't love me
> **Her**: No, it's the opposite, if you love me, you will trust me and you will care for me as long as I don't do anything that hurts you directly. This is not caring JB

Then stick to your guns: if he loves you, he must show it by not trying to control your every move.
The good thing is that many paranoids have a strong moral code, and this technique will work wonders.

6. He Might Be Sick, But He Can't Make you Sick

If you have been with him for a while, you might have come to accept that, yes, "he is a bit sick".
And that might be the case. However, you need a mindset switch here: the fact that he is sick does not mean he is allowed to make you sick.

7. My Way or The Highway

I usually don't recommend people threaten the end of the relationship.

But it can be an effective technique to "give it a last shot".
It looks like this:

> **Her**: You jealousy is ruining our relationship. And it's also ruining my life and I can't allow that. Either you trust me to be faithful or we cannot go on like this
> **Him**: Are you threatening to break up with me?
> **Her**: I wouldn't use the word "threat", but you need to stop this witch-hunt. Because, if you cannot, then yes, I'm afraid I won't be able to go on like this

If you are not sure whether to break up or not, read this:

- How to overcome relationship ambivalence

Avoid Vicious Circles

A really toxic pattern can start when he questions her about her feelings.

In the beginning, she still loves him and swears him so.

But because jealous paranoid boyfriends never get enough reassurance, he will keep asking and asking, pushing her farther and farther away.

Ah, how ironic that his own need for love will actually kill her love.

The problem is that once she has started with the pattern of saying "I still love you", she will likely keep saying so even as she drifts away, making the final breakup all the more dramatic.

He will accuse her of lying, stringing him along, and killing him on purpose.
When it's not working anymore, be honest. Just say it.

Abusive Jealousy In Gay Couples

Jealousy is not limited to men, of course.

Women can be jealous, too, and jealousy can be very vicious and violent in same-sex relationships.

Claire Renzetti who studied lesbian couples, notes indeed that the ego threatened in same-sex relationships is even stronger.

Not only someone flirting with the abuser's spouse is a threat to their control, but it's also an ego threat to their self-esteem because they could have been interested in both of them, but they choose their partner.

Also, read:

- What to do when someone flirts with your boyfriend
- What to do when someone flirts with your girlfriend

As reported by Baumeister, the violent lesbian typically wanted to be the boss and the dominant partner, but found herself falling short in either money or education.
Hitting her partner was a way to claim the dominant position she craved but didn't feel she could claim on other bases.

How to Stop Being a Jealous Boyfriend

Improving is possible.

Valentola and colleagues in the latest *Cambridge Handbook of Sexual Psychology* state that therapy of pathological jealousy may not lead to abrupt changes, but improvements are possible.

If your form of jealousy is on the paranoid end of the spectrum, it won't be easy for you to contain yourself.
This section will be difficult, but it can help:

1. Accept Your Reality

Accept that you:

1. See more than most people see and much of what you see is not true. There is no shame in that
2. Are too jealous, and that's ruining your relationship: taking responsibility is the man's job, so do it

This is difficult. Very difficult. All paranoid resist and cling to the idea that their suspicions and the patterns they see are real. But if you can manage to start double-guessing yourself, hats off to you: you are taking huge strides.

2. Check Reality: Hire a Detective

Now, some girlfriends do cheat.
It might be a minority, but it happens.
This will be very atypical advice, but to clear the air, hire a detective.

Don't do the "research" yourself: if you are paranoid, it will only drive you crazier. You will find "proofs" and inconsistencies all over the place.
Put it in the hands of a professional, and be done with the results.

3. Come to Terms With the Worst-Case Scenario

If a detective still doesn't help, what about this final liberation: imagine she is indeed cheating you.
She is sleeping with another man.

Big whoops.

You weren't her first (probably), and if your relationship won't last forever you won't be her last anyway -and it won't if you keep all that paranoid behavior up.
It's not the best scenario, but it's not the end of the world either.

3.2 Switch Mindset

Now I'll be blunt.
If you're badgering her with endless questions, secretly checking on her, and if she has to report her routines to you, then you're being an abusive prick.

Stop acting as if she *owes* you her whereabouts and coordinates.

As a matter of fact, stop acting like she owes you fidelity. Nobody owes you anything, especially if you keep acting like an obsessive jealous friend. That's an entitlement mentality and you're only pushing her away.

Focus on being the best partner you can be.
Then maybe you can expect something in exchange. Not now. As an abusive obsessive partner, you have no right to make any demands.

4. Test for Paternity

It's safe to assume that men developed jealousy because jealousy would make it harder for them to raise children that are not theirs.
So go to the source of the problem: will the children be yours or not?

Albeit non-paternity is rare (median estimates at less than 3% for non-suspecting men), it can help assuage super jealous boyfriends to test for paternity.
Yes, chances are your girlfriend or wife won't like that, but if it's the only way to reassure you, then it can be good for both.

Test it and get it over with.

5. Forgive and Move On

Paranoids tend to turn small betrayals and small lies into huge castles in the sand.
They weave stories around it, they mull over small transgressions and make them as big as Saturn.

Know yourself: know about this tendency and consciously stop your train of thoughts when you see it's taking you in that good old rabbit's hole.

How Jealous-Abusive Relationships Start

> **Jealous boyfriend**: So, how was your day off?

She thinks back on her hectic yet banal day.
She'd like to share something meaningful, but there was really nothing worthwhile to share: cleaning the flat, grabbing lunch with her sister, getting her nails done, and then running for some groceries.
Sure, her sister is thinking of a divorce, but she made her promise not to say anything about it so she can't say that:

> **Her**: The usual. You know, errands. Stuff like that. Nothing special.
> **Jealous boyfriend**: Yeah, I figured you must have been busy
> **Her**: Yeah, quite a bit, it's funny how you end up being busier on your free days eheh
> **Jealous boyfriend**: That's why you didn't pick up the phone
> **Her**: Yeah, I was having lunch with my sister, she wanted to talk about some girl stuff, that's why I called you later
> **Jealous boyfriend**: Yeah that was quite a long lunch

Jealous boyfriends often start small.

Later on in the relationship he will not take such a long detour and his questions will be much more direct and in the worst cases even aggressive.
But in the beginning, you're not even sure if he's just curious or jealous…

> **Her**: She's going through some stuff, yes
> **Jealous boyfriend**: What else did you do
> **Her**: Nails, cleaning the flat.. And some groceries
> **Jealous boyfriend**: OK. Where did you go for lunch
> **Her**: Uptown, near her office
> **Jealous boyfriend**: Was it just you and her?

Now it's getting a bit intense, her voice goes up, as if it finally hits her he might be jealous and checking up on her:

> **Her**: It sounds like you're checking up on me
> **Jealous boyfriend**: Ahaha no, I'm just curious, that's all

At this point, she is actually glad and flattered that he cares. And deep down, she also likes that he might be a bit jealous.
She doesn't know yet if it will be a recurring pattern.

Still, as long as it's a few questions, she thinks she can live with it.
The first time it will dawn on her that he might be a paranoid jealous boyfriend is when he will come up with something out of the ordinary. For example, this same conversation will become:

> **Jealous boyfriend**: OK. Where did you go for lunch
> **Her**: Uptown, near her office
> **Jealous boyfriend**: Oh, that's funny, I was driving in front of your place today and your car was parked there…

When that hits, it's more than just a big warning.
If your first proof is that your boyfriend is not just jealous, he's jealous paranoid.

Jealous Boyfriends & Abuse

Some women enjoy jealousy and control in the beginning… And then they realize too late they are fully embroiled in an abusive relationship.
And at that point, it's definitely not so nice anymore.

SUMMARY

Jealousy is normal, even healthy and it can help relationships.

Unluckily, some people confuse "too much of a good thing" for a minor offense. Instead, when jealousy becomes paranoid jealousy the relationship is well on its way to becoming abusive.

This article provided you with the warning signs to spot when too much jealousy is a leading indicator of an abusive relationship and a few ideas on how to fix it.

1. Relax & get in the mood

An environment conducive to sex and romance will always help women to orgasm and get into the mood.
Dim the lights, switch on the candles, put on good music.

Most of all, though it's a frame of mind that you want to convey: that sex is natural and good. You want to provide an environment of safety where she can trust you and where she can be herself and let go.
Be the chaperone of that world of pleasures: take her hand and let the dances begin.

2. Warm her up

Imagine the clitoris as the final prize of a journey, not the beginning.

Start kissing her inner thighs and slowing moving to her vagina.
Then kiss her lick the labia and the area around her vagina.

Feel free to look at her here, but avoid any inquisitive look as if to ask "is this OK".
Look at her with lust and passion.

Then go up to her lips as well. Kiss her.
Kiss her with her vagina juices still on your lips: show her that during passion there is no disgust (but be prepared not all women will like this: be quick to get the hind and keep going without breaking the mood).

3. Tease your way to the main dish

Make it a bit of a tease.
Build your way up to the clitoris, groan as if you're just about to go for it.

Then go right back to kissing her thighs and then slowly again to the vagina.
If the mood is right she will be begging you to begin eating her pussy in earnest.

4. Use your fingers

In the beginning, use your hands to caress her, running her around her side, touching her breasts, her legs, her thighs.

Penetration is not strictly necessary: you can successfully eat pussy without ever going inside.
However, it can be a bonus. In my experience, even women with no vaginal sensitivity prefer cunnilingus with fingers-action.

Don't stick your fingers inside too quickly though. You can begin playing with the entry of her vagina as soon as you start seeing her pussy getting moist.

When she is ready, enter her and use your finger either to stimulate her G-spot or to simulate a penis action.

G-spot Stimulation

To stimulate the G-spot, your palm must face upward and you must look for a spongy area that feels different from the surroundings of her vagina wall.
You can stimulate it left and right or with a "come here" motion.
Some women will recoil with you find it: it's not a bad sign, but it means it's too early. Go back to it when she's nearer orgasm.

Penis-Like Motion

If you use your fingers to stimulate a penis, start slowly, without pulling the fingers fully out. And accelerate as she nears the orgasm.

5. Eat her out: focus on clitoris

Alright, we have explained enough that to eat pussy well you need to prep it up, make her comfortable, build your way to it and tease her.

All appetizers are important, but the main dish is the main dish. And the main dish of your pussy eating marathon is the clitoris.

The clitoris is what will most likely and most reliable give her an orgasm.

The Clitoris is Very Sensitive

The clitoris is a highly sensitive area. The tongue is good for it because it's soft and naturally moist. However, some women might still recoil if you attack it too early or too aggressively.
Another good reason to warm your way up to it.

6. Get into a steady rhythm

Once she is moaning deeply and you're fully focused on the clitoris, don't switch. It's not the time to tease anymore.

Most women prefer a steady rhythm that accelerates as nears peaking time. But if you are getting tired and find it difficult to get quicker, focus on keeping the steady rhythm: she will love it as well.

7. On the home stretch: keep going

Some women will get hotter and hotter when they near the orgasm. They will quiver and move, some even try to pull back or swaying their hips.

Keep it steady, don't let her go and don't stop!
She wants you to finish her off now.

Don't ask questions when she is nearing the orgasm:

Note: unluckily both YouTube & Vimeo are quite conservative and this video got flagged by the community of prudish.

8. Ease down once she reaches the orgasm

This is where penetrative sex differs from cunnilingus.

With penetrative sex, you can keep going and give her multiple orgasms.
But with cunnilingus you want to stop because many women switch from a positive sensation on their clitoris to a negative, even painful one right after orgasm.

In doubt, stop.

9. Enjoy yourself

Sex is pleasure.
Giving pleasure is pleasure and making love is the best activity in the world.

Relish the moment, ravish her and lose yourself in pussy.

Pussy Eating Position

Most people think of a missionary position when eating pussy.
And that's all fair and good.

Here are a few variations for you to consider though:

- **She standing**, him on his knees: this might feel demeaning to some men. But it's a good way to start sex. Imagine she's coming off the shower, freshly shaved and half-naked. You attack her while on your knees and

then transition to horizontal

- **Sitting on his face**: I'm not a big fan of this one as it feels less in control and your movements are also impaired. But don't knock it off until you tried it…
- **She standing**, him laying down –like this–
- **Doggie style licking**: Get her down doggy style and lick her from behind. Make sure she's thoroughly clean if you know what I mean -and avoid if you're not sure-
- **69**: eating pussy properly during a 69 is easier said than done. And that's exactly the reason why you should challenge yourself to it.

Quick Tips to Eat Pussy

Here are a few more guidelines:

- **Cut your fingernails short**: this is really important, *especially* if you use your fingers inside of her with a penis-like in & out motion.
- **Warm-up your hands**: if you have a tendency to get cold hands during winter, warm yourself up first. A great simple way is to wash your hands with hot water
- **Wash your hands**: it's basic hygiene, and it will also help some women relax and feel more comfortable. Don't be the guy women have to remind basic hygiene to
- **Praise the pussy**: tell them her pussy is turning you own, but even more: show it
- **Ask what she likes**: some rules apply to almost all women, but there is huge variance among women -much more so than among men-. So ask her what she likes
- **Experiment**: women often don't know what they like. And some don't feel comfortable sharing. So experiment and discover

When it comes to bear, some people say not to keep a stubble for men.
I have a stubble most of the times and no lady ever complained. You're not rubbing your cheeks against her after all -albeit you might. Now *then* it might better not to have a stubble-.

Eating Pussy Mistakes

- **Making it a chore**

I remember years ago when it was about to end with an ex-girlfriend of mine.
She complained that I looked bored. I was indeed and all I wanted to do was "repaying her the favor". From there it quickly devolved into an argument.
Worst cunnilingus ever.

If you do it, do it passionately.
Otherwise, don't it at all.

- **Asking questions during cunnilingus**

Unless you're a very beginner, try not to ask questions.
Most guides tell you to "ask her", but the truth is that rational verbal interaction during sex and orgasms douses the flames. It's like saying that you don't have enough chemistry, and people who are overcome by passion and lust usually don't discuss rationally while doing it.

Try to go off based on her reactions instead, and if you still have questions, there is always after sex to talk.

- **Badgering before she's lubricated**

If when you're about to insert a finger in her pussy you notice it's not yet well lubricated, wait, and work with your tongue a bit more.
The worst you can do is to hard-finger a dry vagina with violent up and down motion.
A penis on a dry vagina is unpleasant enough, but fingers are worst (only topped by fingers with long fingernails).

Pussy Licking FAQ's

Here are a few common questions on cunnilingus:

- **Is it better to give orgasm with your penis or with your tongue?**

To answer with man-speak: is it better to drive a Ferrari a Porsche?
It depends on the model, the driver and what you feel like. Both are great and it's best to have both.
But the Ferrari is just that little better.
Orgasms with your penis are the Ferrari: some women might deny it, but making her come with your penis is superior. At the very least, she will hold you in higher esteem.

- **Does cunnilingus provide strong orgasm?**

Absolutely.
Women can experience several types of orgasm. To keep it short -but admittedly at the cost of being imprecise-, we can differentiate two main types of female orgasms: vaginal and clitoral.

Vaginal tend to be more powerful, with some describing it as "deeper". Vaginal orgasm, in some women, is more elusive. Clitoral orgasms are a bit easier to reach, and eating pussy tend to give clitoral orgasms.

- **I hate eating pussy, do I have to?**

No, you don't have to.
However, it's a great skill to have.

Why should I learn to eat pussy?

Countless reasons, including better and more diversified sex life.
Also, there might be a time where you don't feel like having sex and want to give her an orgasm. Or you want to last longer and switching to cunnilingus will give you some time off.

- **Do women like their pussies being licked?**

Absolutely.
I have never met any woman who said no to cunnilingus and never heard any woman saying they don't. Some never tried it, but that doesn't mean they wouldn't like it.

Women who refuse might be self-conscious.

- **What if she passes gas?**

Hopefully, she will pull you up if she has to. If she is pulling you up, it might be a good idea to actually *go* up :).
However, some women will also pull you up when they're hot and steamy because they want to be penetrated.

Technical Aspects of Eating Pussy

Here are some more technical aspects for beginners.

1. Where is the clitoris

The clitoris is here:

CRW09 [CC BY-SA 3.0 (https://creativecommons.org/licenses/by-sa/3.0)], via Wikimedia Commons
On the first licks place your thumb ride above it and pull the skin up so you can lay it bare.

Don't get too hang up on pictures and anatomy though: you don't need it.
When you feel a little bump with your tongue, that's the clitoris.

The clitoris will also enlarge when aroused, and you might not even need to pull the skin up.
I remember a woman once saying "oh my God I was so horny, have you seen how big my clitoris was".

2. Early Licks

It's OK to straight for the clitoris to give her a quick jolt of excitement before you even remove her panties.

At the very beginning the labia of the vagina will be closed in resting position, looking like this:

Evoluke [CC BY-SA 3.0 (https://creativecommons.org/licenses/by-sa/3.0)], from Wikimedia Commons – Cropped
To be sure you find the clitoris, separate her labia and lick with an upward option: you will surely lick the clitoris that way.

How to Last Longer In Bed: The Full Guide

Lucio Buffalmano · 24 November 2018 · Archived copy · Original

It's good to last longer in bed, right?

Being able to keep going and going at will, and then release when you feel most like it.
Well, it turns out there are many ways to control your erection and ejaculation to last longer.

Many men can last longer with her on top. Try it out.

- The Holistic Approach: Healthy Life

1. Make Sex The Norm: Fuck More

If you have just started having sex, sex is still something “out of the ordinary for you”.
Your mind and body are reacting to the novelty by taking advantage of it as quickly as possible.

This what your subconscious mind is saying:

> **Your subconscious mind**: Quick! Impregnate her!
> **You**: But I’d like to last longer
> **Your subconscious mind**: are you kidding me? The last time you had sex was 1 year ago… With an inflatable doll. This is our chance, shoot now!

You don’t need any crazy technique to overcome this issue: time and quantity of sex will naturally silence that voice.
Your nerves will placate and you will slowly but surely settle down into a longer-lasting routine.

2. Stop-Start Method

This is a very popular method to last longer in bed.
It consists of having sex in fit and starts: thrust few times, then stop. Thrust a few times, then stop.

It works, but if this is your only method and you don’t do anything else during the stops, it makes the overall sexual experience less natural and passionate.
And it could be harder for her to reach an orgasm. But add some position switching and it works wonders.

3. Distract Your Mind From Sex

An old classic.

Take your mind off the sex with deeply un-arousing thoughts.
You will reduce the pleasurable sensations you are experiencing and it will make you last longer.

This is the technique that Marshall uses in this episode of How I Met Your Mother:

Right, that’s something to also keep in mind: don’t indulge in too much bone-killing thoughts or it might just work too well :).

4. Switch Positions

This is one of my favorites.
It allows you to stop while at the same time being dominant in bed.

Instead of just stopping indeed: change her position.

A typical session of mine looks like this: begin by bending her over and penetrating her from behind. Then go missionary on the bed. Follow with a doggy style. Then make her go on top.
Finish it from the back with her flat on her belly.

You don’t need to follow the same steps of course, but definitely do switch position.
Hell, they don’t even need to be all sex positions. Stop and kiss!

4.2 Do It In Positions You Don't Like

When you feel like you're more at risk of coming, do it in positions that you least like.

I'll come out of the closet: I don't particularly enjoy blow jobs. Then if I didn't want to come, I'd make a switch with her giving me head.
Think of positions and sexual acts you don't particularly love, and do more of those.

5. Break Through The Wall. Then Coast

You know that feeling you get when you start moving very quickly, and very quickly you're short of breath?

There is an expression in Italian for this: "rompere il fiato".
It doesn't have a precise equivalent English, but the best translation would be "get into your stride".

When you start running and before you get into your stride it feels like you're done after one minute, right? It feels like you just don't have it in you anymore.
But that's not true.
You have it in you to go on *for hours*.
It's just a matter of enduring and outlasting those "short of breath" moments of intense difficulty. And then you get into your rhythm and coast.

It's the same to lasting longer in bed.
You need to overcome those key moments when you're almost about to come. That's the moment to slow down, change position, squeeze your snake… Whatever it takes until you hit your stride.

6. Add Non-Penetrative Sex To The Menu

It's reductive to think of sex as just penetration.

Especially if your worry is to last longer for her because women don't see sex like men do. They have a wider, more holistic view of sex that goes beyond pure penetration.

Engage in more foreplay, kiss more, use your tongue and fingers… Then even if the penetrative sex won't last as long, it's not a problem. Because it's only *one* item on the menu, and the overall sex *did* last long.

7. Make Her Come First

If you fear of not lasting enough in bed is to make her orgasm, then what about making her come first?

Do lots of foreplay, learn to give proper head, use your fingers… And then go for it with your penis after she's done. She'll be very happy that you will not last too long :).

8. Do It Romantically: Slow Down

The hotter the flame, the faster it burns.

There is a direct connection between how quickly he goes, and how soon he peaks. A quicker tempo can overload the tip of the penis with stimuli, which leads to the inevitable ejaculation.

A slower rhythm stimulates the tip of penis less, allowing him to last longer in bed.

> He who goes slowly, goes far

9. Train Your "Hold Back Muscles" With Kegel Exercises

Kegel exercises are a series of exercises to strengthen your pelvic floor muscles.

Stronger pelvic floor muscles, in turn, will help you hold back more easily and last longer.

The biggest hurdle with Kegel exercises is to actually find those muscles as it's not as simple as doing curls.
But it's not that difficult either.
Do this to find them:

1. Stop urination mid-flow (but don't it as an exercise per se)
2. Try to lift your penis up vertically in front of a mirror and make sure you're not using abs and glutes' muscles
3. Tighten the anal muscles you normally use to prevent passing gas

Then your exercises will be about contracting and releasing those muscles, several times a day. Start laying down on a mat first as it's easier. And then you can do even while seating. At the office… Or while reading ThePowerMoves :).

10. The Nice Guy Solution: Make It About the Performance

It's funny.

When I started having sex the thought of how to last longer in bed never even crossed my mind.
As I matter of fact, I had the opposite problem: how to come.

It was because all my focus was on making it a good experience for her and showing my prowess.
This is a mindset that Robert Glover discusses in No More Mr Nice Guy. Such as that some men make it too much about the woman. So much so that they forget about themselves and the pleasure of sex in itself.

Needless to say, that's not a good solution if you go all the way.
But, if you can move the focus from the sex to the physical performance, it can be of help.

11. If You're Too Horny: Masturbate

A common issue that stops men from lasting longer in bed is that they are too horny.

Being horny is good, but when that horniness translates into quick ejaculations, not so much. A method as old as the penis itself then is to masturbate with frequent intervals so that you never go too "quick shooting caveman".

12. Practice Lasting Longer With Masturbation

Since you're there, you can use masturbation as your training ground.

When you're about to peak, try all the methods.
Try:

- Breathing deeper and relaxing
- Contracting your pelvic floor muscles
- Squeezing the tip of your penis
- Slowing down
- And even switching imaginary position

You will get to know yourself more and will understand what works best for you.

13. Cialis / Viagra / Medication

For many men, the idea of lasting longer is not so much not to ejaculate, but to keep having sex.
And they want to avoid ejaculation because when they come, they lose the erection.

Well, if that's the problem, then Viagra easily fixes the erection issue.
And it's undoubtedly effective to keep going. It can also be of great psychological comfort knowing that in the worst case there is still effective medication out there.

However, don't make this your go-to solution.
First, work on yourself and use all the methods here, which are natural and work wonders.

14. Extended Pleasure Condoms

There are several makers on the market of "extended pleasure condoms", here is one example on Amazon.

They use chemicals such as Lidocaine and Benzocaine that work like localized anesthetics. They numb the tip of your penis and reduce the sensations. Reduced sensations allow for longer lasting sex sessions.

The downside is that they might reduce your sensations too much, so you need to find the right balance. If you want to use this method, you could try removing some of the chemical lube with a little rinsing.

15. The Squeeze Method

It consists of grabbing your penis and squeezing the tip of it just when you're about to peak. It can work… But not always. When it doesn't work, it completely ruins the ejaculation by taking all the pleasure out of it.
And it kills the mood.

Learn how it works and use it when needed. Just don't make it your only and main tool.

16. Get Drunk

I put this one as last.
But it's not a "last but not least case" as this is the worst long term technique for lasting longer. For obvious reasons :).

But that's not to say that it doesn't work.

Have you ever heard of “whiskey dick?”.
Some call “whiskey dick” the lack of erection due to alcohol consumption. But whiskey dick is also the inability of coming during sex.

I remember years ago coming back home with a hot girl from a night out at a club.
She was a true club queen and of the hottest girl I had ever been with.
And yet… I banged her to sleep like in the Marshall video above… And I didn’t even come!

Yes, if you have good erections alcohol works.
It’s the same concept of the extended pleasure condoms: alcohol is a suppressor and it decreases your sensations.
Except it’s not localized and runs through your whole body.

I shouldn’t put this warning here, but just to be sure: don’t use this as a long term solution.

The Holistic Approach: Healthy Life

Mens Sana in Corpore Sano.

That’s the millennia-old secret wisdom.
The Romans knew it, and it means “a healthy mind in a healthy mind”.

Eat well, exercise, meditate, rest and have plenty of sex,
And chances are you’ll never again look again at an article on how to last longer in bed.

Does He Like Me? 31 Scientific Signs He Does

Lucio Buffalmano · 25 November 2018 · Archived copy · Original

Let's be honest with each other right off the bat:

until he openly says so, or until he takes concrete steps to make thing happens, you cannot be 100% sure whether he likes you or not.

BUT, if you learn to read the signals, you can get a pretty reliable idea of whether he likes you or not.

These 31 signs are good indicators that he *does* indeed like you.

1. He Shows Off

Research shows that men attract women's attention by showing status and social power.

Some of that peacocking is effective.

However, keep in mind that some men aren't nearly as smooth.

For example, they may brag too much or too obviously.
Or they may seek to attract attention in stupid and boorish ways:

- Brag about their money
- Get aggressive with other men in front of you
- Blast their car stereo

The list of all the stupid stupid things men believe are impressive to women is rather long.
But whenever he does something "strange" in front of you, consider it might be a ploy to impress you and get your attention.

2. He Gets Slightly Aggressive ⚠

This might sound nonsense to some women -and, it is :)-.

But some men aren't skilled at the dating game.
Sp they can get aggressive with their friends, or even aggressive towards you.

In young men that aggression can manifest in games where he takes advantage of physical games to hold you or restrain you -a slightly more advanced version of the old "pull her air" kindergarten game-.

Still, also take this is a red flag.

3. He Moves Closer

Men who like you will try to reduce the distance with you.

They will sit close to you, press their leg against yours, and find an excuse to hug you

Exception: some will do the opposite and avoid you. Either because they are playing a shunning game or because they are too shy.

4. He Pays You Compliments...

Very simple: if he is complimenting you, he is trying to win your favors.

However some men will try to be less obvious about their compliments, and instead of telling you they like you, they will say they "love your sense of style".

5. ... Or He Criticizes You

Some men will completely try to avoid compliments in an effort to seem higher status.
And they might instead do the opposite and criticize you.

This is a power move to lower your self-esteem that the *old pick-up artists* called "neg".

6. He Looks For Opportunities to Touch You

The *APA Handbook of Psychology* includes physical touches in the signs of flirtation.

Men who like you will try to make some physical contact.

They might touch your arm while making a point or place a hand on your back when they tease you or flirt with you.

When more inexperienced, they will touch you wrong and treat you like one of their male friends.

For example:

- High five you
- Shake hands (with too much power)
- Put their arms around your neck like one of the boys

Even though sometimes awkward, men who take a lot of opportunities to make physical contact are sending you a positive message of appreciation.

7. He Flirts With You

Men who are a bit more well-versed with women will find great ways to flirt with you and make you laugh.

He might:

- He jokes that you like him
- He hints at the sexual
- He frames you as a "dangerous" woman
- He tells you that you're trying to seduce them or other men

8. He Makes Fun of You

Making fun of you is a middle way between the "aggression" we saw earlier and flirting (done badly).

The game, at the core, is actually not that friendly: he wants to socially dominate you, lower your status, and position himself above you.
However, it's still a sign that he likes you.

9. He Gives You Lots of Attention ...

Some men make no effort to play the dating game, conceal their cards, or flirt well.

They just put it in your face instead. Not their penis, of course, but their interest.
They will:

- Fully focus on you, even with other people around
- Looks at you all the time
- Make you one question after the other

- Listen raptly to your stories
- Drop conversation with others if you enter the group

Sometimes they look slimy in the process. However, with these guys, your answer to the question "does he like me" is pretty obvious: he does.

10. ... Or He Ignores You

There is a (terrible) Italian song whose lyrics seemed to tell my story as a teenager.
It goes:

> I pretended not to give a damn
> To be more interesting
> But now I am really…

That's what boys will do.
They will ignore you on purpose to play the mind game that they are not interested in the (hopeless) to draw you in and make you pursue her.

If you notice that some men are being a bit too taciturn around you, avoiding you just that little bit too much, then they might be doing it on purpose.

11. He Tries to Make You Jealous

An old game that I bet you played as well.

If he makes a show of him with other women, looks at you while he talks to other women, and generally tries to show off "options", then he is interested in you.

What he's doing here is trying to inflate his sexual market value, parading his opportunities and trying to make you chase.
In simple terms: he is showing off for your you and yes he likes you.

12. He Gets Nervous

As much as you wondering "does he like me", guess what other men are wondering?
Exactly, the exact same: "does *she* like me?"

However, men are more in the hot seat than women are.
Men are expected to make the first move, ask her out, and make things happen.

That makes a lot of men rather nervous.
So when you spot stuttering, blushing, and nervousness around you, these are all signs that he likes you.

Here is an example from Crazy Stupid Love doing his (awkward) approach:

13. His Friends Talk to You About Him

The last date I went to was with a girl I met at a party of a common friend.

This common friend, believing he would help, started talking me up and telling her what a great catch I was.
He thought that was going to help. He wasn't really.
But that's how a lot of (clueless) friends will help you answer the question "does he like me".
They will:

- Talk him up
- Ask you what you think of him
- Tell you that you two look cute
- Suggest you two should go out
- Discredit him

About the last one? Of course, some friends are jealous and aren't really friends but frenemies. But that's also a good indicator that he likes you :).

14. He Badmouths Other Men

Now here is another power move men will play when they like you: they will talk badly about the "competition".

What they are trying to do here is to lower other men's statuses to look good in comparison.
He is selling himself to you, showing off, and it's a big sign that he is into you.

15. You See Him Often

Some men are direct, they don't waste time and don't beat around the bush.

But some others prefer circling around their prey for longer, entering your mind and your social circle before they even hint at wanting to enter anything else.
This is the approach Robert Greene espouses in *The Art of Seduction*.

These guys might start stopping at the bar where you work, eat where you usually eat, or walk the streets of your commute.

Many years ago I saw a girl I went on a date with.
She was walking across the street though and I was on the other side. Well, guess what? I turned back, ran in the opposite direction, then crossed the street much further away, and then… "Just happened to walk right into her".
We got together later on and she never knew what I had done.

The point is: if you start seeing them often then coincidence would warrant, then there might be something.

16. He Connects With You On Social Media

Men rarely add other men they've just met on Facebook.

But they do often add women they like.
A connection on social media is often a sign that they want to be closer. And not in the digital sense…

17. He Likes Your Pictures

There is a new way for Generation Y and Generation Z to show love and affection.
And it's to like her pictures and her status updates.

If he comments on your status, knows about your cousins and aunties, and asks you about your last trip, then it's a clear sign he's been stalking you. And that he likes you.

19. He Remembers And Asks Questions, Or...

Men aren't as good as women at remembering people-related details.
And they tend to be selective with their attention. So if they remember what you said and ask follow-up questions, that's a good sign.

20. ... He Doesn't Remember What You've Just Said 10 Seconds Ago

Some men will be too nervous to be talking to you to even remember what you've just said.

They will ask you the same question again, ask you clarification about something you've just said or forget your name for five times in a row. This is a sign that he is nervous and that he likes you.

21. He Helps You Out

Most men's main dating strategy is to show women that they are reliable men that you can depend on.
Helping you out is their way of showing that yes, they're there for you and that they make great long-term partners.

Neil Patrick Harris in the movie "Gone Girl" is an extreme example of how men who want to be providers for her behave:

22. He's Always Free For You

If he is always available when you ask something it means that either he is a good Samaritan, that he has nothing to do, or… That he likes you.

Most likely the third though.
When men make time for you, they show you that you are a high priority for them. Big sign.

Do you want to be triple sure? Ask him to do something together on a big-match day.

23. He's Jealous of Other Men

Jealous behavior is a sign of possessiveness and he wants more than just friendship.
It's not the sign of a very high-quality man to be jealous before the two of you are even together, but alas.

If he:

- Says you deserve better than the guys you're dating
- Gets defensive when other men talk to you
- "Rescues" you from strangers

These are all signs that he likes you.

24. He's Always Ready to Chat

Most guys don't want to chat with women they don't like.

So if he is always happy to answer and chat with you, chances are he is also fantasizing about you.

Does He Like Me? Yes! When Signs Are Obvious

And these are more obvious signs that can almost reassure you that yes, he likes you:

1. He approaches you

2. He asks you out

3. He tells you that "you deserve so much better"

4. He double-texts you

5. He is disappointed if you can't meet him

6. He tries to get you alone

7. He tries to have sex with you

Male Signaling

On average, men are easier to understand and decipher than women.

To answer the "does he like me" women's question Greg Behrendt and Liz Tuccillo, former consultants for the Sex And the City show, wrote a blockbuster book to basically tell women that men are simple and direct.

Albeit they chose a somewhat depressing name with "*He's Just Not That Into You*", the core message is simple: it's easy to tell if a man likes you or not.

Here is the video from the Sex And the City show that gave birth to that book:

However, as for most things people-related, there are plenty of exceptions in dating.
And some men tend to be less direct and less "easy" to decipher than others.
Often men who make it more complicated for you are:

1. Shy
2. Younger
3. Inexperienced

From these types of men, you can expect less direct messages and somewhat more scrambled communication.

Focus on Helping Him Like You!

Finally, instead of focusing on reading mysterious signs, avoid the mistake most women do: being too passive in the dating game.

Indeed in difficult dating markets the more assertive daters, will win making it easy for them to understand you're into him. This is a good strategy and the only mistake that can happen is that she *thinks* her signs are obvious but she won't catch them.
It happens more often than you think because men are often rather daft.

Then there is the second type of woman.
The who plays hard to get.
Maybe they have read *women's dating literature* and get schooled on "feigning disinterest" in an effort to make him chase. This technique can work if he is on a hard pursuit. But it often backfires because men end up with the women who *show* their liking.
Because men are afraid of rejection. And they prefer to go with women who also like them.

What does that mean to you?
You must make it safe for him to do something: *show* him you like him!

Smile at him when he looks at you, and create sexually charged moments with silence and eye contact… Touch him while speaking.
Unless he's completely clueless, then he will know:

Just don't look at your own hand when you touch him, which screams insecurity, and you'll do great :)

7 Steps to Sleep With Thai Women

Lucio Buffalmano · 26 November 2018 · Archived copy · Original

Thinking about meeting Thai girls and getting laid in Thailand? .

I've been in your shoes before. Many times.
Look somewhere else for temples and food. But if your goal is to sleep with Thai girls, this guide is for you.

I write this article based on first-hand experience, having been to Thailand many times, dated Thai women both in Thailand and in the West, as well as having been an acute observer and listener of other people's experiences, including coaching men to achieve their dating goals in Thailand.

Strategy, Value & Honor Note: Be better than a sex tourist!
This guide analyzes the asymmetric Sexual Market Value (SMV) and cross-cultural mating strategies related to Thailand. While the article's focus is on achieving intimate outcomes, full consent is always implied and only the minimum first step. TPM promotes a life of personal empowerment, optionality and honor. We distinguish between the "high-value strategist" and "low-quality tourist".

First, a reminder: you have sex with Thai girls the exact same way you have sex with all other women.

But these tips will help you to maximize your potential:

Contents

- 1. Use Your Higher Mate Value
- 2. Avoid The 'Farang Jerk' Trap
- 3. Dress Well, Display Status
- 4. Leverage Dating Apps
- 5. Move Fast
- 6. Prioritize DTF Girls (if you seek short-term)
- 7. Never Lead With Money

- Bonus: Don't Mislead, You Can Sleep Around Without Lying
- Thai Girls Traits
  - Physically In Shape
  - 'Flatter' In Breast and Buttocks
  - High Variance In Quality
  - More Traditional & Supportive
  - Traditional & Compliant, Including In Bed
  - Phone Addicts
- Thai Girls: Easy, or Wife Materials?
- What to Expect In Thailand
- How to Date High-Status Thai Girls ('Hi-So')
  - How to Date Any High Quality Woman

1. Use Your Higher Mate Value

Foreigners and white men enjoy a sexual market value boost in Southeast Asia, meaning: you become more attractive (good SMV boost).

If in your home country you have lower relative SMV, for Thai women you are still better than local average men. If you are average, you become attractive man. And if you are a high-value man, your sexual market value goes through the roof.

There are several reasons for this, including that foreigners are perceived as:

1. Wealthier
2. Higher status
3. Smarter / better educated
4. More masculine & ambitious

Contrary to what some say say, money is only *one* reason why foreigners are popular in Thailand.
Indeed, you don't need money at all to get laid in Thailand. **I spent more money dating in Europe than in Thailand**.

For many Thai women, white men are also a status symbol.
Some women, and this is true across East Asia as well, are proud to have never dated a local guy -up to you what to think about that-.

Men who fail to realize their increased value miss many opportunities.
Don't do the same: act and behave like the high-SMV hunk that you are.

Limitation: Thailand and Bangkok have been overrun by tourists, so moderate your expectations. You won't be a unique snowflake in the age of globalization (unless you go *really* remote).

In Summary: you are of higher value in Thailand, act like it.

2. Avoid The 'Farang Jerk' Trap

Unluckily, there are some bad apples among tourists.

Jerks, strong of the currency exchange and the "white man boost", get even "jerker".
They go on a power trip and believe that "rude" is how you display power.

Locals put up because they need tips, and so these jerks don't even realize the ceiling of their behavior.
They may date a bit because of the SMV boost and they will think they're "slaying it".
But they repel the highest quality Thai women.

Differentiate yourself from these fools: understand the difference between a high-quality man and an asshole.
A high-quality man is knowledgeable of his value, moves fast, and demands respect. But he also respects people and makes it a women for the women he dates.

In Summary: Be confident and high power, but also warm

3. Dress Well, Display Status

Most tourists in Thailand wear shorts, ugly shirts, and flip-flops—no wonder many guys believe you need money to date well.

Sure, it might be comfortable, but if your goal is intimacy with Thai women, then don't be a slob and dress the part.

I remember being out with a friend in Thailand who wanted to meet up with a nurse he was seeing. I was with him and his girl was somewhere else with a girlfriend. So it seemed like a good fit. Typical of Thai girls, she asked him to send them my picture.
He did.
Her reply?

> **His Girlfriend**: Wow

My friend seemed even slightly jealous.
But there was nothing to be jealous of. I'm not a "wow" guy *in the slightest*. The only thing I had going on for me was an awesome white shirt in a world of ugly T-shirts.

In Summary: if you want to sleep with Thai women, dress like someone who sleeps with lots of women (ie.: well).

4. Leverage Dating Apps

Dating apps allow you to take maximum advantage of your value boost and cast your net wider.

As per the point above, upload a couple of pictures where you are well dressed, ideally looking cool and powerful with a suit and tie. I met a few women who were not sure whether to meet me or some other guy and then chose me.
Always the curious and investigative type that I am, I asked to see the profiles (and conversations) of those guys. I was shocked at how hunk-like some of them were. Rugby players, big gym types, and plainly handsome men.
But I had well-dressed pictures.

Go for something similar:

Well dressed but with a smile so you don't look stuck-up
Again, this is not the West.
Some Western girls will think you're trying too hard, but it works wonders with Thai girls in Thailand.

In your description, avoid saying crap like "traveler", "adventurer" or "globe-trotter". You already have "white guy" and "exotic points", you don't need to play those games to inflate your value. You *will* look try-hard by stressing your "lover" qualities.

Write instead something like:

> "busy man who prefers a coffee or drink to long chats :)".

This way, without coming across as abrasive, you make it clear you're not into long chats and prefer meeting in person.

In Summary: to have sex with Thai girls, take pictures in good clothes, and cast your net wide with dating apps.

5. Move Fast

One of the advantages that foreign men enjoy in Thailand is that they are almost automatically considered sexier than local men.

When it comes to providers, friends, or lovers, it's far easier for you to be considered a fast-moving lover.

That means, in practice, that you can allow yourself to move faster.
And that's exactly why money often doesn't even come into the picture.

Here is a good approach:

1. Check in advance your hotel doesn't stop guests
2. Meet close to your hotel
3. Propose you grab a drink and go back to the pool

4. Go to your room instead (say nothing, most of them know what's up)
5. Start kissing their neck
6. Move to the bed

If you prefer instead finding a long-term girlfriend, read this post:

- Lovers VS providers: choosing your best dating strategy

In Summary: meet up, and aim to go straight to your place.

6. Prioritize DTF Girls (if you seek short-term)

DTF stands for "Down to F*ck." In psychological terms, you are looking for women with **High Sociosexuality**—those comfortable with uncommitted, short-term sexual strategies.

If you take full advantage of your high-value status, you have lots of options.
And the advantage of having lots of options is that you don't need to put up with delay games, investment requests, "chase me" games, etc.

Simply **next the gold diggers and time wasters and move to better prospects.**

In Summary: to sleep with Thai women, ruthlessly cut through the time-wasters to focus solely on the ones who want to sleep with you.

And if your goal is to find a quality girl?
There is plenty of that as well :)

7. Never Lead With Money

Money changes the nature of dating.

If you 'throw' money on Thai girls, you move from a sexy foreigner to a guy who must pay for intimacy -NOT

sexy-.

Avoid it.
Cut off women demanding money or gifts and stick with the women who like you for who you are. *After* you get together, *then* you're more free to invite them fo whatever you lie.

Exception: if you're very wealthy and don't care to throw around money, then it can be an effective and genuine approach to dating.

In Summary: don't make it about the money, make it about the two of you.

Bonus: Don't Mislead, You Can Sleep Around Without Lying

There is this idea among some white men that Thai women expect dating to lead to something serious.

I don't know if I've ever heard anything more stupid. Most women adapt to the man's approach and are not stupid. If you move more like a player, they know full well what's up.

But sometimes you meet a more traditional girl though and, because of less-than-ideal verbal communication, a misunderstanding might happen.
So if you don't want anything committed, avoid chatting with them too much or text too often after sex.

As a matter of fact, it can be a good idea to actually show that you're not long-term material.
You can hint at it, say it straight up, talk about your travel plans, or even be open about your other Tinder and Line chats.
They will see it and understand:

She saw my texts and understood it was a one-time thing
But this shouldn't be an issue. When you're not too available, women will understand without having to have any "conversation".
Sometimes in my life, I have had some great connections and kept in touch against my better judgment (one more example here), and that wasn't a great idea.
The truth is that it's almost impossible to have a "special connection" with a woman you have sex with and keep it

“as friends”. One of you is bound to fall and want to do more.
When you’re in doubt, be clear (and you’ll find out most of the time they know what’s up):

“I know in first time when meet you at condo” LOL

Thai Girls Traits

Thai women tend to be:

Physically In Shape

Attractiveness depends on personality and tastes.

In terms of “exotic beauties”, I would probably place Thai girls below Koreans -who enjoy bigger bosoms- and Kazakhs -who enjoy the mix of high Mongolian cheekbones and white Russian beauty-.
But above Japanese and Chinese.

Even women with *good* curves, will consider themselves “fat”.

Thai girls are awesome, both in personality and body, including great chest and booties. And yet they consider themselves as fat and “too fat for Thai guys”.
Looks like Thai guys *really* like thin :).

These attractive Thai women convincingly called themselves “fat”

‘Flatter’ In Breast and Buttocks

Locker-room talk mode on: I always thought of myself as more of an ass guy.

However, you realize how important breasts are when you find yourself with a *really* flat-chested woman. Completely flat is different than small breasts.
It’s a strange, androgynous feel that 100% straight men won’t enjoy.

And Thai women, often thin, also have a higher incidence of flat chests than other nationalities. Some of them keep a bra anyway so you might miss on it.

And, like many other Asian women, the incidence of flat asses is far higher than among white women and, obviously, than among black women.

Not my type. But I know some guys who like it

High Variance In Quality

The Thai women that will sleep with you fast aren't the highest quality for long-term.

Culture and nurturing also matter, and this is true anywhere in the world.
Unfortunately, women raised more in poverty tend to adopt a faster life strategy (Ellis, 2009) focused more on short term: short-term uncommited intimacy, fast consumption, little saving, and higher risk for disloyalty.

English also tends to be poor.
I met women from online dating only to find out she was talking through a translator and could not speak English. I attended one of the best Toastmasters in central Bangkok and even there I couldn't find a single girl with good English -including one who had lived in the US for years :S-.

Of course, please, never forget this as for everything else, this a general tendency, and you can always find plenty of exceptions.

More Traditional & Supportive

Thai girls have traditional roles, and see themselves as supporters of the male figure. It won't be a rare occurrence that Thai women will offer to cook you food or bring you food from their places.

It's common for Thai women to give and invest early on in the relationship

Traditional & Compliant, Including In Bed

There is a bit of a cliche that Asian women are more submissive.

Well, as it's often the case, cliches have a backdrop of reality in them. And Thai girls in bed tend to be more submissive -and passive-.
To put it with the words of what one Thai woman once told me "do whatever you want to me".
LOL, I bet you now really want to get a Thai girl don't you :D.

Phone Addicts

These days you'd be hard-pressed in finding any girl -or anyone really- who's not addicted to their smartphones.

Yet, Thai women are also addicted to pictures. If you date one, get ready to delete a lot of meaningless selfies, food pics, "just woke up" bed pictures, and lots of Line GIFs (Line is the local Whatsapp BTW and it's much better).

Thai Girls: Easy, or Wife Materials?

The hookup culture in Thai big cities is strong.
Thailand and Thai girls have a reputation for "easy sex", and for good reasons. If you're a white tourist, you will meet plenty of girls who will quickly and easily come back to your place.

But that might be misleading: Thai women are quite extreme in their sociosexuality distribution. Indeed, as much as there are many easy-to-sleep-with women, **there are also more reserved and sexually inexperienced Thai women than in the West**.

Of course, more reserved Thai women are also more hidden: you're not gonna meet them in bars and clubs.

You need more social circles to meet more reserved and more wife-material Thai girls.
Day game is also good, but you need to be good at overcoming the strong initial resistance of more conservative and shier women.

However, traveling in search for 'loyalty' is fraught with risks and men must be power-aware to avoid traps.
I highly recommend this video on how to do safe 'geomaxxing':

What to Expect In Thailand

Thai girls are awesome and Thailand is fantastic.

But, as for anything, there are pros and cons.
This is what I don't like about traveling to Thailand:

Some street harassment

Your white skin may be attractive to many women, but… Not just women.

Street vendors, pimps, and various hustlers can get annoying.
Taxi drivers will slow down and some will even honk if you refuse to look at them.

And all rickshaws and tuk-tuk drivers seem to think every white man needs a lift.

And that's not even to mention the street ladyboys (Kathoey):

Ladyboys hustling

Guys, if you are not into ladyboys, watch out.

There are many, and many are distinguishable from women.
They like foreigners of course, so you're a target for ladyboys.

If you like them, you're in luck.
If not, well… Be careful.

Note: there is no hating on ladyboys here and this is not a space for hating on anybody. They can be as wonderful as anyone else.
We refer to the behavior of *some* of them in the streets of Thailand.

Read here how to spot ladyboys.

A toxic dynamic of power, dependency, & deception

Do you know the toxic dynamics in an abuser and abused relationship?

The abuser is stronger, on paper. The abused provides a facade of niceness while fighting back with passive aggression and covert power moves.

That's the macro-level dynamics in Thailand: foreigners are higher power and locals are kind and love their money.
But behind the fake niceness of the "land of smiles", Thailand is ready and happy to swindle tourists.

Many "bad" tourists & 'sexpats'

With millions of tourists, there is everything in Thailand.

From couples to female solo travelers to the thriving community of digital nomads in Chiang Mai.

However, there is also a seedy underbelly to Thai tourism.

Many foreigners are only there for low prices and prostitution. Including, sadly, underage prostitution.
Even some of the most popular massage clubs in Bangkok have underage women -though they say they're 18. Yeah, sure-.

For example, thousands of German retirees live in Phuket and Pattaya, which have become open-air brothels.
Not wanting to shame-attack anyone. But it's a fact that many low-status men end up in Thailand, and we wish better for our readership.

How to Date High-Status Thai Girls ('Hi-So')

There are more dating opportunities for men in SE Asia, Thailand included.

However, the advantage *inverts* with higher-status Thai women, locally referred to as 'Hi-So'.

A high-so Thai woman has power and status and has traveled the world. She won't be impressed just because you're white -and maybe repulsed by the negative stereotypes

Average Westerners in Thailand are *below* the Western average.
They may be good catches for lower and middle-class local women, but they don't have any extra appeal for higher-status ones.

Instead, Westerners face a prejudicial stigma with higher-status women.
This is a classic example of Negative Social Signaling. Because the 'sexpat' demographic has saturated the lower-tier market, high-status Thai women use defensive filtering to avoid being associated with tourist-level dynamics.

These 'sexpats' often date lower-class, party-types, or 'darker' women who unluckily are still stigmatized as 'less appealing' in Thai culture.

It's different in, say, the Philippines.
The Philippines experiences widespread lower socio-economic conditions, so the fewer foreigners there are more appealing across the board -including higher status women-.

But because of the general low-value of many white expats, **Westerners face a stigma of sleaziness and lower**

standards with the higher-class Thai women. As a group, that frames them as lower value for the upper class.

Of course, you're reading here, so you're better than that.
But in a society that values conformity and social approval, high-class Thai women may still have reserves in fear of being judged as promiscuous.

Solutions:

- **Become *locally* high-status**
- **Socialize and meet via social circle**
  - Socialize within chambers of commerce and the likes
- **Dress well, but match it with good income** or you're framed as a 'gamer PUA-type'
- **Learn Thai**
- **Display you're different & above the average expat**. That must become part of your 'game'

How to Be Vulnerable As A Man, Without Looking Weak

Lucio Buffalmano · 27 November 2018 · Archived copy · Original

Some self-help gurus say that vulnerability is key to strength, connection, and interpersonal success.

But is that really true?

In reality, vulnerability is a double-edged sword.
Used wisely, it can be a powerful tool.
Used in the wrong context, it can destroy respect, status, and attraction.

In this article, we break down the truth about vulnerability—when it works, when it backfires, and how to use it strategically.

Let's dive in.

What's Vulnerability

> **Vulnerability is the courage of showing up and be yourself, without a mask, and with all your flaws.**

If the definition sounds fuzzy, it's because it is.
Brene Brown made vulnerability popular in self-development with her best-selling "*Daring Greatly*" and several podcast appearances.

However, she never defined it precisely. So let's see some examples of vulnerability to gain more clarity:

- Talking about your weaknesses
- Speaking of what embarrasses you
- Sharing an unpopular opinion
- Standing up for yourself

And vulnerability is also:

- Confessing your love
- Crying in front of people
- Asking forgiveness

Basically, **every time that we put our ego on the line and do something that might hurt us, we are being vulnerable**. When we risk embarrassment, public criticism, and, the big one when we risk *shame*, we are being vulnerable.

Vulnerability takes courage. Sometimes lots of courage. And people admire the courage of vulnerability.
That's what the vulnerability pundits say, at least. And well, they're (often) right.

So… Should you be vulnerable?

Sometimes, yes.
We've already seen it can be used against microaggressions, as a technique for frame control, and to shame others into more value-adding behaviors.

But should you *always* be vulnerable?
Absolutely not.

The Drawbacks of Vulnerability

Vulnerability has two main drawbacks:

- **Vulnerability displays your intentions**, and you don't want to always be an open book
- **Vulnerability can be a display of weakness**, and you don't always want to show your weakness

When that weakness is "too much", critical, or not shown and perceived against the backdrop of a stronger, powerful frame… Then you move away from "admirable vulnerability" and into "pathetic weakness".

> **There is a thin line between vulnerability and pathetic weakness**

I will now show you a few examples of vulnerability done wrong.

1. You Can't Be Vulnerable If You Want to Lead

Vulnerability often backfires both in gaining status and leadership, and in *keeping* it.

As Blau points out in his seminal text *Exchange and Power in Social Life*, calling attention to one's weakness signals the withdrawal from status competitions (Blau, 1964).

And vulnerability can also undermine an established leader.
Call this the '**commander's burden**'.

Being a good leader often means displaying the confidence and strength that you want your team to embody.
And sometimes means keeping your weaknesses to yourself.

This will not be very popular to say, but it's inherent to leadership power dynamics.

In this example from Smokin' Aces, Bateman, the man in the hotel room is supposedly the leader.
But when he overshares his insecurities, he comes across so slimy that he becomes disgusting:

> **Vulnerable leader**: I'm pretty much a pantywaist. I don't say this to be self-deprecating.
> I don't have much of an opinion of myself. I'd much rather be like you guys. Dog-pile of piss-poor physique on top of a small cock and hereditary alcoholism

His "vulnerability" sends him straight from leader to a slimy guy not deserving to lead.

This is an especially bad case of vulnerability because he *exaggerates* his flaws and because they have just met, which compounds the issue.

But the principle still applies: **people in leadership positions don't always have the luxury of vulnerability in front of those whom they lead**.
The harsh truth of leading people is that most of the time, you need to keep your personal worries and weaknesses to yourself.

When you share your full self with your subordinates, *at best*, they will think of you as "one of us". And you can't be "one of them" with your subordinates. You are *not* one of them: you are the leader and the one giving them tasks.
And at worst, you lose all authority and respect.

2. You Can't Be Vulnerable In Result-Based Organizations

So you can't be too vulnerable as the leader.
Maybe you can be vulnerable with your superiors?

Well, a little bit more maybe.
But still, not so fast.

In any result-based business, too much vulnerability gets you easily labeled as a softy or crybaby.
Look at this example from Platoon:

> **Red**: (looks like he's about to cry, with a begging attitude) Bob, I gotta bad feeling… (high-pitched voice) I don't think I'm gonna make it outta here.. You understand what I'm saying to you?

You can bet he lost much of his boss's respect when he showed his vulnerable, scared side.

3. You Can't Be Vulnerable Upon Meeting Someone

Anything you do during the first phases of getting to know someone will have outsized consequences.

Why?

Because people naturally tend to extrapolate information and generalize it to your whole persona.

Even just a 20 second "opening up" about the hardship of life in the first 2 minutes of conversation will have people unconsciously slap a negative label on you.

In short: **vulnerability during introductions and early socialization is a big no-no.**

4. Some Masculine Roles Don't Allow For Vulnerability

Some roles do not and *cannot* accept vulnerability in themselves and in others.

High in competence professions like doctors or external consultants can lose authority when too vulnerable.
Charismatic leaders during uncertain also need to show unwavering conviction
And army officers also should avoid vulnerability.

Showing vulnerability when you have one of these roles or when you are interacting with one of these roles will almost automatically harm your status.

Showing vulnerability when you have one of these roles or when you are interacting with one of these roles will almost automatically murder your status.

Here is a good example of vulnerability shown to an individual in an invulnerable role from the movie *Paths of Glory*:

> **Officer 1**: (crouches on the floor, crying and sobbing)
> **Officer 2**: (trying to preserve officer's 1 status and reputation) Act like a man. There will be a lot of dignitaries, newspapermen out there. How do you want to be remembered?

The roles of army leadership allow for little or no vulnerability

Please note, this doesn't mean that army leaders are invulnerable or "stronger".
They are just as strong -or as weak- as anybody else.
It simply means that the *expectation* in those environments is that you need to hide your vulnerability. And **people who don't hide their vulnerability lose all their social status** in those roles and organizations.

And it means that if you want to move ahead in those organizations, you gotta play the "hide your vulnerability game".

Vulnerability In Dating

Brene Brown in "*Daring Greatly*" shares the story of a young fella who embraced her vulnerable advice.

After dating a girl for several months, this is what happened (the dialogue is my own making from the story):

> **Him**: I love you
> **Her**: You're awesome, but maybe we should start seeing other people

The young fella went back to his dorm and told the story to his roommates. This is what happened (dialogue is mine adapted from the story):

> **Roommate 1**: What were you thinking man
> **Roommate 2**: Women only like men who run the other way
> **Him**: I was daring greatly
> **Roommates**: (nodding) Right on dude

Brene goes on saying that (I paraphrase for brevity):

> Vulnerability is not about winning or losing. It's about courage. Vulnerability is subversive and uncomfortable. Even dangerous at times.

Vulnerability in this case made the poor student lose, I'm afraid.

Vulnerability might not be about winning or losing.
But if you also want to win, then you would be well served to learn when vulnerability is *not* the most effective alternative.

Example:

> **Girl**: what are you looking for?
> **Guy**: It's probably hard to believe, but I've never been in a relationship before, I've never had a girlfriend (…)

I admired that guy. And I respect him.

But that male respect does not translate well into an effective dating strategy.

He didn't need to say that he has never had a girlfriend.
That *might* lead some women to want to take care of him and make him their baby-lover.
But it's a minority of women and you need to have lots of other qualities.
And if you don't have them or don't want to be a "babied lover", then don't spill all the beans that so much lower your status.

Vulnerability In Relationships

A few relationship authors advise couples to open up about their struggles and insecurities.

As much as I believe in supportive and loving relationships and as much as I love and appreciate honesty, sadly I don't think you can always be open about everything and anything.
At least not without some consequences. And not without losing power, status, and, potentially, attraction.

Please note that losing power, status, and attraction, are also bad for the relationship, not just for you.

So vulnerability done wrong is a lose-lose.

Let's see some examples.

Example of Bad Relationship Vulnerability

Here are some examples that I paraphrase from a relationship book.
It's a couple fighting because of his jealousy.

Here is the dialogue the author suggests:

> **Him**: This is not easy to talk about, but I want to try. I know it's not cool and I don't know what's wrong with me but I was feeling some jealousy tonight. You and Matt, you seemed quit close. Both intellectually and physically. I felt hurt and lonely.
> You know, I have been getting chubbier lately, developing a paunch. I need some reassurance. Do you still find me attractive?
> I would love it if you'd look at me the way you seemed to be looking at Matt.

This was an otherwise great book.
And still, the author missed basic dating psychology. The author says that such vulnerability would improve the relationship and even make him stronger.

I disagree.
That's bad vulnerability. This is not about momentary weakness. This is deep insecurity and nonexistent self-esteem, a big turnoff.
The relationship wouldn't be stronger and her respect for him would tank.

If he wanted to share his jealousy, it would be OK, but I would do it like this:

> **Him**: Hey, I need to talk to you about something. The way you were talking and joking with Matt, that felt like flirting to me.
> I didn't like it and it made uncomfortable.

He might have even shared that "it hurt him", which *might* be OK, depending on the type of relationship they have -if he's the leader and highest value, he would likely lose some value-.

But all that part that "he needed reassurance", that's the equivalent of asking her "baby me please".
And some relationships *can* work that way. But it's more relationships of equals -or her above him-.
Not relationships where the woman admires him and thinks the world of him and not relationships where she feels like she married the best possible catch.
Not those.

Sometimes vulnerability only gets you babied!
And here is another example of doing vulnerability all wrong, from a female perspective:

> **Her**: After the birth of our child I can't seem to get in shape anymore. I have been 15 kg heavier and I can't manage to shed it anymore. Those tiramisu cups are too good for me to give up.
> And worse of all… You don't seem to look at me like you used to.
> I'm feeling ugly and unattractive. Even at work, my colleagues are not flirting with me anymore. Not that I care about that, but it's another signal that I am not as attractive.
> Can you hold me please?

There is nothing wrong with her sharing her need to be held. Quite the opposite.

Sharing worries about her weight, which depends on what personality her partner is, especially after she adds that "she can't manage to shed it and those tiramisu caps are too good". Men tend to be stricter than women, and *especially* driven men.
My first reaction there would be to ask "how hard have you really tried".

And adding that other men find less attractive is completely unnecessary.

Vulnerability in Relationship Examples

Yes, women control most relationships.

But they don't respect much the men who let themselves be controlled.

Maintaining attraction in relationships, especially for men, has a lot to do with remaining the leader of that relationship.

Here is an example of vulnerability done wrong in a relationship:

> **Him**: Yeah, it's about the fact that my book is a big fat f**king failure. You know, I already feel like sh*t (…) I'm sure this is all really sexy

> **Her**: (takes the lead)

He loses the leadership of the relationship, and he loses relationship power. And yes she will respect him less.

Same woman, a different way of expressing vulnerability.
In this example, he might gain some points:

> **Aleksandr**: What if it's not enough, eh? (opens up about his worries)

Aleksandr looks much more masculine in his vulnerability.
He is in a time of crisis, but he doesn't show irreparably low self-esteem.
Instead, he is the kind of successful man, with lots more success potential, going through a tough, high-pressure time. That's the type of men women want to help because they're likely to deliver once back on their feet.

Evolutionary Theory of Vulnerability

The truth is, there is also a lot to gain from hiding our vulnerability.

It's because there is much to gain in hiding weaknesses that hiding weaknesses is the "default setting" for most people.

Just think about it, in a world where everyone is good at hiding vulnerabilities, the person who admits too much vulnerability will naturally look weaker and dumber and, comparatively, less attractive.

On the other hand, in a world where nobody manages to hide their vulnerability, the first human being who managed to hide theirs would look comparatively stronger, brighter, and more secure. A real catch.

Hiding vulnerabilities can also people secure a higher mate value partner. And that's the exact reason why people hide weaknesses.
Instead, showing too much vulnerability without being able to also market one's good qualities can lead to a worse partner.

And that's what the peddlers of vulnerability fail to warn people about: vulnerability *can* be damaging when misused.

How to Be Vulnerable – And Effective

There are situations where vulnerability can make you more relatable, improve your relationships, and even make you look stronger and sexier.

Here is when vulnerability works:

1. Admit fears when everyone else has the same fear

When everyone else has the same fear, admitting it first actually makes you more leader-like.

I remember once sitting around a table when the book "*Games People Play*" came up. I said right away that I had to go through it so slowly because it was "way too F complex".
People burst out in laughter and one guy admitted: "man, I'm glad you said that, it was the same for me".
If nobody had shared the uncomfortable truth, we'd all been left with a big lie and failed to really connect.

2. When you're strong, a weakness makes you more relatable

Research shows that when people who seem "too good" make a mistake or show vulnerability, they are much more

like.

This goes back to the example above on jealousy.
It can be OK to admit jealousy if you are an otherwise relatively secure, relatively fit, relatively well-off person.
On the other hand, the worse you are compared to your partner, the more vulnerability is likely to damage you because your partner will unconsciously think "I can do better than this".

3. In *momentary* weaknesses

An otherwise strong personality having a moment of weakness, then building themselves back up is extremely endearing.

Women love it as well in men, as it's the type of Byronic man that only needs a bit of their "fixing", which hopefully will make him dependent on him as they get to keep an overall awesome guy.

4. When it shows an emotional, appealing human side

Vulnerability can show our human, emotional side.

Women love it when it comes from a man who seemed always so strong and in control.
Here is The Godfather:

> **Godfather**: I killed men. I killed… I ordered the death of my brother. He injured me (starts sobbing) I killed my mother's son. I killed my father's son (starts crying)

5. To gain trust and make others open up

Revealing a weakness first can be a strategic move to make people comfortable and help them open up.

Especially when people seem to put up a wall against you, revealing your weakness first can be the best way to *show* that you provide a welcoming and open environment where to share without judgment.

5.2. To 'share back' after others shared their vulnerability

Don't force this and don't invent stuff.

But if you can relate something similar, then studies find that it increases trust.

6. When your vulnerability doesn't stop you

You know those public speakers who say "My knees are shaking and I'm super nervous" and yet they look like they own the stage?

That's the type of vulnerability people *love*.
Make yourself the kind of person who delivers and people will love you for your weaknesses and honest vulnerability.

7. In supportive, intimate close relationships of equals

Finally, let's admit it: a relationship where you can really be yourself is awesome. If you develop that kind of relationship with your partner, then be your vulnerable self.

However, these relationships should be partnerships of equals.
If he or, more rarely, she is the leader of the relationship, too much vulnerability on the leader's side will result in a decrease in admiration and respect.

Don't get angry at me for saying it. Don't hate the players. And actually, don't hate the game either. That's just the way it is. That's just the way we're wired.

8. In "scorched earth" power moves

What's this?
Well, see check the power dictionary for a definition, and see here an example:

- Vulnerability to checkmate an aggressive superior

9. When you have the power to own your moment of weakness

> View this post on Instagram
> A post shared by The Power Moves (@the_power_moves)

> **Man**: (shows his broken heart on camera)
> **Host**: (laughs)
> **Man**: (looks up with disappointed face) Come on, are you really gonna laugh right now?

Absolute G.

SUMMARY

Vulnerability in the sense of "showing up" and "risking embarrassment" is foundational because you cannot succeed without risking failure.
Learning to act despite the risk of failure and embarrassment makes you a stronger, more agentic and goal-oriented man.

But vulnerability can as easily backfire and *weaken* you when it's uncalibrated.
Socially, **vulnerability works best with a backdrop of high power and high value.**

- Summary

1. She listens to you with her head sideways

Allan Pease says that tilting one's head is a sign of attraction.

And research confirms that women do it during flirting.

In some contexts, showing her neck is also a sign of submissiveness, sub-communicating that she accepts your leadership and higher dominance.

2. She asks you questions and fills in the pauses

If she asks you lots of questions she either likes you or she's making up her mind about you.

To differentiate between the two:

1. Any question she can think ⍰ she likes you
2. Questions about you, your past, your possessions, your exes ⍰ she's making up her mind

With the former, she's either smitten, anxious, or 'wanting more' from you -including just wanting to listen you talk.

If the latter, she is weighing you up for a role in her life.

3. She is interested in what you say

Don't flatter yourself: you might not be the most interesting person in the world.

And that's great news!

Because with her attention she is trying to let you know that she wants something more than your sweet-sounding words.

4. Holds her head on her hand

Imagine a position where she holds her head in one hand -picture below- or both her hands together.

It's as if she were putting her goods on display.
She says "Here is my face, here are my lips… You may kiss them".

5. She laughs at your terrible jokes

Research shows that women laugh to get men's attention.

Laughing during social interactions obeys standard social power dynamics.

Women don't dignify lower-status men with much attention -or laughter-. If she laughs at your jokes, it means she considers you a worthy dating option.

6. She 'Preens' and fixes her hair

What's "preening"?

It's prepping herself up and "showing the goods", such as:

- Straightens up emphasizing her breasts
- Tilts her hips to show her curves
- Hikes up her skirt and shows her legs

- Adjust her clothes
- Fix her hair
- Applying make-up or lipstick (especially if while looking at you)

If you are at a bar or in any place where you can approach her, she preens to get your attention.

7. Acts like a baby

Whenever one gender regresses and plays the baby, it's a sign of a strong intimate bond.

And sometimes, a willingness to be dominated.
When women act like babies with you, it's a sign that they want a big daddy to take care of them ;).

Baby behavior includes:

- Giggling
- "Escaping" from you
- Covering her face
- Hide-and-seek games
- Acting out
- Peekaboo games

8. She seeks more (lone) time with you

One of the most powerful -and helpful- signs of attraction is when she's helping you move the interaction forward. And the more intimate that time is, the stronger the sign is.

That includes:

- Moves you somewhere secluded
- She stays when her friends leave
- Tells her friends she's cool with you
- Refuses the obligatory "girlfriends going to the bathroom together thing" to stay with you

At that point, you don't need to wonder "does she like me", because she is communicating to you, loud and clear, that she does.
So get moving, because attraction has an expiration date and you must strike while it's hot.

9. She handles cockblocks for you

You don't need to worry about cockblockers with more assertive women who like you.
Because they will be doing it for you.

This is basically another form of being alone with you and sends an even stronger message because she is willing to fend off external threats to make it happen.
And that's a strong statement of attraction.

See an example from 500 Days of Summer:

So don't be an idiot and don't even engage the cockblocker: she's already cast her vote and you've been elected :)

10. She protects herself

This might sound counter-intuitive, so hear me out.

While the more confident and assertive women will open their bodies, the more submissive and reserved ones might close them.
This is nothing but another sign of submissiveness.

It's as if she were saying:

> "*you're the dominant one here, go gentle on me*".

Now when you see this sign of attraction, you have gotta be careful: it *might* be a positive sign, but it can also be she is generally submissive, or also possible, **it can also mean that she is attracted, but not yet comfortable**…
If she likes you, you can probably get together by pushing it a bit, but to be even safer -and make her feel safer!- talk a bit more. Connect with her a bit more.

Then, as soon as you notice her opening up and smiling more, you can make your move.

11. She moves backward while looking at you

She is re-enacting a dominant-dominated dynamic that usually ends up in bed (prey-predator dynamic).

Go on the assault brother, she wants you in.

12. She is angry… But she's actually excited

When women are executed but are not getting the cigar, so to speak, they often get cattier.

So when you see:

- Fake angry, but can't hold smiling when you tease them
- Angry for no apparent reason

Then it can easily be because they like you.
Another strong indicator of sexual chemistry is when you sexually tease them or jokingly objectify them, and they

get fake angry. But they're actually glad you're doing it.

Case in point:

Sometimes, there can be a fine line between anger, excitement, aggression, and sex. If you want to enjoy some speedy seduction and steamy sex, you have to learn how to walk that tightrope.

13. She draws attention to your nether region

I remember many years ago, sitting on the couch at my place with a Kazakh girl (I seem to remember) beside me.

She was nervous and exhibited closed body language. So I thought to take it easy and slow.

Then she crunched over, analyzing and commenting on how great my belt buckle was.

That's when I realized I was taking it *too* easy :).

She doesn't care about your jeans, belt, or buckle my friend… She cares about *un*buckling.
Or, well, lemme fix that: hopefully you have nice clothes and she *also* likes your belt. *And* what's lying beneath :)

In any other similar situation in which a girl is drawing attention to your nether region, it's a glaring sign that she likes you (sexually) and you gotta get moving.

14. She draws attention to *her* erogenous zones

As we mentioned earlier, while more reserved women close down, more assertive and sexually confident women open up instead.
And that can include pointing to the erogenous zones of her body.

They might touch her uncovered bellies complain about the cold, fix their decollete… Or let a hand hang right between her legs.
Catch the drift…?

15. She shows her neck

Do you like vampires?

Most women do.

The act of biting on her neck is more than just a sexual hint: it's sexually arousing.

Vanessa van Edwards says that showing the neck releases pheromones. We're not too convinced of the pheromones prat, but showing the neck is a value cue for interest because it displays submissiveness.

Similar messages are:

- Placing a hand on her neck
- Running her fingers on her neck

16. She touches you

If while talking she looks at opportunities to touch you, then you have another huge indicator of interest.
For example:

- Laughs and reaches for your arm with her hand
- Places her hand on you to emphasize a point
- Touches your arm (and maybe asks if you've been working out :)

The *APA Handbook of Nonverbal Communication* says that **touching the knee is a strong indicator of her interest.**

Here is a good example:

Another powerful sign of attraction within a group is when a girl gets up to go to the bathroom or get another drink, and she touches you briefly.
That's the equivalent of saying "I'm going to come back to you".

17. She makes you horny: sexual tease

Some women, the master seductresses among them, are masters of sexual tease.
The sexual tease is basically telling him:

> I might be ready for it… Will you be man enough to come take it?

That's the kind of sexual provocation the top coquettes go for.
It's like waving the red flag in front of the bull.

When you find yourself horny in a way that you'd like to f*ck her hard, almost as if to deliver punishment, then you know you're dealing with a master coquette.

Don't go thinking it will always be as obvious as Sharon Stone crossing her legs. I mean, it might be, but more

frequently it will be something like this:

- Raising her eyebrows
- Slightly wetting her lips
- Touching the side of your leg, below your belt
- Flashing one eyebrow only

Notice the slight tease of this win, pure sexual tease:

18. She jokes a lot with you

Similar to the sexual tease, but with less sex.
As much as guys flirt with women they like, so women flirt with men they like.

19. She is nervous

You might think that men are the only nervous ones asking "does she like me".

But women equally obsess over "does *he* like me".

And if you spot signs of nervousness, chances are that she likes you. A lot…

You will see this one, especially from younger women, inexperienced women, and women who think you're out of their league.

If that's the case, you have to put her at ease, and let her feel that yes, she has a shot with you because you like her too.

And, ideally, quickly move forward.

Speaking of nervousness, the *APA Handbook of Psychology* also includes coyness as a signal of interest.

20. She asks you if you have a girlfriend

Oh boy, this is a big sign of attraction.
Any girl who asks about your relationship status is interested in changing that relationship status.

Never answer this question with a joke such as "nah, girls don't want me". Women get worried at that one instead of laughing and you will break the mood.

Instead, avoid answering too directly and hinting that you might be free. Especially tonight, if she wants to come back to you just for a drink.. ;).

21. She tells you of her relationship woes

Careful here, because:

- You're either in the friend zone
- She wants YOU to be her bofyriend

But if you're a cool friend, you may still have a chance. Sexual chemistry will increase when she complains -and maybe cries- about her current relationship.

That's how some women end up having sex with friends and sometimes even gay friends.

Basically, 8/10 a woman complaining about her boyfriend is really bad news… For her boyfriend. And a strong sign of attraction for you.

The biggest sign is, of course, when she sends you a message out of the blue saying her relationship is going very badly. That's like saying "I need rebound sex".

22. She asks you if you know any single guy

Women don't usually ask men to make intros.

If she asking you for a friend of yours she is actually asking about you.

23. She tells you of her ideal guy… Who sounds a lot like you

If she tells you about her ideal and said ideal guy sounds a lot like you, then you don't need to ask yourself "does she like me".
She is basically telling you.

Now, guess where I'm from…

24. She comments on your pictures and statuses

Usually, it's men who do this -and do it all wrong of course-. And when it's women who do it to you, it's a big sign she is interested in you.

25. She hints you two should spend time together

People don't ask to spend time with people they don't like.

So any time a woman hints at spending time together, especially the two of you of them alone, that's a strong sign of attraction.
It can be a coffee, lunch, or a request for help because "you're so knowledgeable" about something.
They're all signs that she is helping you move the interaction forward.

An example from the movie The Terminal here (and raise your hand if you'd gladly take that opportunity with Catherine Zeta-Jones):

26. She gets physically close

Says *The Handbook of Relationship Initiations*:

> Research on nonverbal communication shows that intimacy and liking are conveyed through forward body lean, smiling, eye contact, close proximity, direct body orientation, and frequent gesturing, among other signals (see Burgoon, 1985).

Most signals are about her getting closer and showing comfort.

Same if she is looking for opportunities to get close to you, hug you, and touch you.

Especially telling are all situations where sexually erogenous areas come in direct contact. Pressing her breasts against you, or crotch her against your leg for example. All signs she's excited by you.

27. She asks your friends about you

People don't ask about people they don't like.

If a girl is asking your friends about you, she likes you.

Sometimes, she will try to hide her feelings though because she's actually happy to let you wonder "does he like me".
And she will try to gather intel about you "under the radar":

28. She's available for you

If she's always available to talk, hang out, or text, there is little wondering "does she like me", because it's clear that she does.

29. She tells you you look good

I cannot count the number of men I'd like to slap in the head when they ask me if a girl is into them and they tell me that the girl is complimenting their looks.

Heck! She is *telling* you she likes you, what else does the poor girl have to do?
Of course, she might play the "we're still friends" cards if you're really friends, but she still likes you. So keep going.

This is what a girl was telling a guy who was asking me for advice:

> **Her**: You're such a handsome guy
>
> **Her**: (talking about a girl he had started seeing) You can do better than her
>
> **Her**: (talking about her interest in engaging her vagina a bit more) Ah, I have spiderwebs down here
>
> **Her**: I like a guy who slams me against the wall

And he asked me what he should do with her…
Here is a tip: if she is telling you what she likes, maybe you should try doing that.

30. She lets you know she is single

Women who tell you they are single do it for two reasons:

1. They feel bad about it and need to get it off their chest
2. They want you to change their relationship status (and get their clothes off their chest)

More often than not it's the second.

31. She texts you a lot

She texts you a lot and often writes first.

This is a big sign of attraction, and you should move the conversation ASAP from texting to in-person.

And from in-person to your place.

32. She sends you long texts

The length of texts is an indicator of investment which, in turn, is an indicator of interest.

And a woman who is investing in you is doing so hoping you do the same. If you like her, don't stand there wondering "does she like me", invest back in her and escalate investment together towards the bed -and maybe a relationship-.

33. She sends you her pictures

She sends you hot pictures of herself -or pictures she deems as hot anyway-.

Cheap move. But still a sign that she likes you

It's possible that she asks you what you think of said pictures. Even sneakier -and funnier- if she sends you made-up pictures and says "just woke up".

If you want to get together with her, don't fawn at her picture but don't ignore them either (like I've done in the picture above).

Show appreciation or, alternatively, you can go the sexual way and tell her "you don't know what I'd do to you now". The risk though is that she will feel like she "has you" and that you have nothing better to do than sexting. And sexting is not a high-value man's pastime.

34. She drunk-text you

There is a saying in Latin:

> In vino veritas

Meaning "in wine lies the truth". And if she's inebriated the truth is this: she thinks about you.
Any drunk or high texting, and possibly even fake excuses of drunk-dialing, are all major signs that she likes you.

35. She looks down, then up

Looking at you and then down is another sign of submission.

Which, in turn, is often a sign of attraction -but not always, don't confuse fear with attraction!-.

Angelina Jolie does it often when she mixes together the coyness and the vixen:

Does she like me? More Cues She does

More verbal and nonverbal cues that signal attraction:

- Looking over the raised shoulder
- Talks to her friends but looks over at you
- Speaks to her phone loudly when you're near (a nervous reaction as she tries to get your attention)
- Talk to her phone while she's looking at you
- Looks at you sideways
- Tags her jewelry while looking at your or speaking to you (especially the necklace)
- Dangle her shoes, going in and out with her feet (mimicking another in and out)
- Goes up and down with her hand on the glass or the stem of the glass (seen this twice, always ended up well)

Look at a similar example here, fondling with a pen:

Great and realistic scene. Also, notice how she walks backward and "protects" herself. Read more in "dominance and seduction" and "leadership and seduction".

- Invades your personal space (she wants to get physically closer)
- Shows the inner side of her wrists or arms
- Caresses herself
- Feet pointing towards you
- Pupils dilate
- Looks up to you
- Mirrors your body language
- Strikes pose (wants to be admired and to increase her value in your eyes)
- Shows off her goodies (straightens up, shows her leg or her breast)
- Asks you if you have a condom (she's agreed to sex, just want to have it safe)

Theory of Female Signaling

Assertive women make it easier for you.

Some other women though -including the ones who read women's dating literature either signal too subtly, or "play disinterest" to make him chase -an often bad idea by the way-.

The goal of subtle signals is to gain power.
It frames the situation like it was *him* who wanted her, and not the other way around.

And, as with any covert power moves, subtle signals allow her to deny any intent.

Elicit Real Signs of Attraction

Finally, instead of wondering "does she like me" and reading body language and hints like a detective, try to *elicit* those signs.

Help her like you!

Display high value, dress well, show social confidence and status… And more and more women will want to be with you.

We have one full course that helps good men gain more women's attraction.

Summary

Reading the signs of attraction requires a good knowledge of body language and emotional intelligence.

Don't forget though that **the biggest priority is making yourself into a man who *elicits* signs of attraction**. Such as becoming a high-value, attractive man.

Then, you can start enjoying more and more signs of attractions coming your way. This post helps you read and internalize all the signs of attraction so that you will never have to wonder again "does she like me".

Hypergamy Explained: Realpolitik, Mating Value & Power

Lucio Buffalmano · 1 December 2018 · Archived copy · Original

Hypergamy is a female drive to seek partners who possess higher levels of status, resources, or personal efficacy.

In the realm of **Social Power Dynamics**, hypergamy acts as a primary market force. It influences how individuals negotiate their value in the sexual marketplace and determines how attraction and leverage fluctuate within long-term relationships.

While often misunderstood—or dismissed by ideological narratives—hypergamy is a clinical reality of human evolution. This article moves past the "gender war" rhetoric to provide a technical analysis of what hypergamy is, how it governs intersexual power, and how a high-status man can leverage it to his advantage.

Tom men win because women would rather pick them. Lower status men struggle because same-value women demand better men for their more costly and valuable reproductive system

Intersexual Dynamics in a Nutshell:

- **The Leverage Gap:** Women seek men who are "more" than they are (Hypergamy).
- **The Status Trap:** Men who offer "same-status" value often face lukewarm attraction or rejection.
- **The Power Inversion:** While women hold the "gatekeeper" power at the bottom and middle of the social pyramid, **Top Men** hold the ultimate leverage at the apex.

That's the preview.

What's Hypergamy: A Definition

Female Hypergamy refers to a mating preference for partners who rank higher in a dominance hierarchy (status, wealth, intelligence, or physical prowess) compared to her own level.

To put it simply, women are attracted to men who are "more than they are".

What women include in that "more than they are" can vary depending on her personality or circumstances but, often, includes income, power, social status, intelligence, and looks.

Some people deny hypergamy or try to frame it as a misogynistic construct.
But **hypergamy is real**, it makes sense from an evolutionary point of view, and many studies support it (eg., Buss, 2008)

Denying hypergamy means not understanding the basics of evolution and human nature.
However, some manosphere communities only focus on *female* hypergamy, and with a tinge of misogyny.

So let's learn better.

Hypergamy & Dating Dynamics

Let's imagine society as a big pyramid.

Actually, let's draw a simplified version of two pyramids:

At the bottom sit the people with the least status, looks, and resources.

Intersexual dynamics dictate that at the lowest level of the pyramid, women have more power than men because women's reproductive system is costlier, scarcer, and more valuable.

Lower-status men would be happy with same-status women. But women don't get too excited with their fellow low-value men.
In the middle of the pyramid, women still have more power than middle layers men.

Overall women, being the demand in the sexual marketplace, have more power when it comes to dating and relationships.

However, **at the top, the power relation inverts, and men become more powerful**.
Top men become more powerful -by far more powerful-.

In terms of potential for attracting mates, for men, power and resources matter more than looks to get to the top of the pyramid.
Few if any models can out-fuck an average-looking tycoon -possibly even an ugly one-.

This all goes back to biology.
Since men don't have to wait for almost a year to reproduce again, they can impregnate several women a day. In the case of ancient kings and some modern-day tycoons, that's exactly what happens.

Women instead carry the full burden of procreation both in time and resources. Men *can* take care of their offspring, but women *must*. This means that women are far more concerned with securing help and resources than men.

That is the core of female hypergamy.
When resources are scarce, hypergamy grows more pronounced. However, as we will see later, we are *not* living in such an environment today,

Hypergamy and Monogamy

Evolutionary psychology is clear:

> From a reproductive point of view and in society with vast differences in resources, it's best for a woman to be the 10th wife of a king than the first wife of a king (Kanazawa and Miller, 2007).

It means that **strict monogamy *reduces* the power of highly attractive and successful men**.
Because that super top guy could otherwise freely and openly have his own harem.

Monogamy can increase the power of attractive women because there will be lots of pressure on their highly successful male counterparts to commit to her (plus the legal system helps them in case of separation).

Monogamy is also good for average men because average women will spend less time eyeing high-quality men who, on average, end up with high-quality women.

And for very poor-quality men?
Well, those fare poorly in almost any relationship system.

However, the institution per se does not have unlimited power. Institutions and laws follow culture more than the other way around. And it's more the *distribution* of resources that influence hypergamy and monogamy.
And it functions like this: **the more skewed the distribution of resources is, the higher hypergamy pays off and becomes the norm**.

On the other hand, the more well-spread the resources are, the less hypergamy drives women's behavior.
In that case, women prefer having a guy just for them, and similarity and "love" strengthen monogamy -albeit humans rarely are 100% monogamous anyway, and especially not men-.

Does Hypergamy Apply to Wealth or Genes?

Animals differ on "male parental investment", such as how much males invest in their partners and in helping raise the children.

Human males are around the middle of the scale when it comes to male parental investment. They don't invest as much as women, but they invest quite a bit.
This is crucial to understand dating and hypergamy.

In nature, the female of species who cannot expect any help from the male counterparts *only* mate based on genes (ie.: looks, physique, prowess, cunning, and any other attractive trait).
Meaning: when women cannot get any help to raise offspring, they mate based on genes and attraction.

But attraction is not simply what *she* likes but, in good part, also what *other* women seem to like.
Why?
Because she wants offspring that can also find a mate to further procreate.

Thus, **female attraction is highly social**: what she likes is heavily influenced by what other women seem to like. This is why there is also a strong cultural element on what women find or don't find attractive. Looks are a proxy for how likely it is that he -and in turn, his children- is able to impregnate other women.

But now the hypergamic twist.
Some male species do help females raise children. When that's the case, females who can expect help from males also screen men on their resources *and the availability of those resources*. Commitment is the measure of the availability of those resources.
This is true for human females, who seek proof of love and caring as a sign of commitment.

Women are not just attracted to resources per se, but also to behaviors that are likely to lead to power and resources such as drive, dominance, strength, intelligence, etc.
We can speculate that one of the reasons why women don't like men whose lives revolve around them is because those men are less likely to climb dominance hierarchies and amass resources (ie.: too focused on them means less focused on other life endeavors).

6 Feet, 6 Pack, 6 Figure: She Wants it All (?)

In any negotiation, the best result you can get is 'everything'.

Women seek *both* good genes *and* abundant resources.

Some researchers and authors speculated that women pursue two different and separate dating strategies in the sexual marketplace: good genes from sexy men and resources from rich men.

However, the two strategies are *not* different and do not run in parallel. A woman seeks both, and she'll be happiest with both good genes and plenty of resources.

A woman may prioritize one or the other depending on goals, circumstances, and life phase -partying or settling down-.
And, in some rarer cases, she may seek to get both from different men.

6 Pack VS 6 Figure: Which Wins?

When she cannot have both, studies suggest that **women give more weight to status than looks**.

When the status is similar, or when the status is more difficult to glean -as it's often the case in rich Western societies-, they prefer looks.

Of course, there are many influences at play, including her temporal frame -short-term VS long-term-, and the

environment.
In dire environments with few resources, resources take center stage.
In most modern societies looks fare comparatively better.

This is why many Western women say they don't care about money.
Sure, sometimes it's virtue-signaling, but still: you don't hear it nearly as often from women in poorer countries.

Are Men Also Hypergamous?

Evolution shaped women to be hypergamous because it's good for them.
And for the species.

But evolution equally works on men, of course.

Men also seek to maximize their sexual returns.
However, what maximizes male returns is different than what maximizes female sexual returns.
So **"male hypergamy" looks much different than women's hypergamy**.

This is because, evolutionarily speaking, and contrary to women:

1. **Men gain from sex with lower SMV women**: because of a disparity in casual sex returns between the two genders. Most men are happy to have sex with lots of women, including some lower-value ones
2. **Men don't need women's resources**: since men don't get "stuck" with gestation and child-rearing

So, obviously, it's not like men care less about her money or status because they are "nicer" or "less manipulative".
Men and women simply have different incentives, including different opportunities for cheating and manipulation.

Men developed equally self-serving strategies, so don't use hypergamy to hate women. Hate the game, if you want, but not the players.
Or, much better, simply learn to enjoy the game.

Men's Version of Hypergamy: Younger, Hotter, More

Male hypergamy has been proven (Buston and Emlen, 2003).

It's a case of a study confirming the obvious everyday life where men lust after attractive women. Often, young, and more attractive than they are.

Best of all, if there are several available.

That's male hypergamy.

As per female hypergamy, men's sexual drives aren't bad per se.

Hell, **male hypergamy built our civilization** (see forum entry)!

Just look at how hard many men work to climb dominance hierarchies and accumulate resources.
Men work harder than women to actualize their own hypergamy.

In simple terms:
Male hypergamy trade status, power, and resources for looks. Female hypergamy trade looks for status, power, and resources.

Does Hypergamy Lead to Cheating?

I sense that Red Pill authors discussing hypergamy are driven by the fear of being cheated on.

Some blogs, and even some (slightly more) scholarly books such as *Sperm Wars*, often misquote the statistic that "30% of children are not fathered by their partners".
Although it's not a totally made-up number (see the 25% and 30% studies, for example), they are cherry-picked and misleading.
These publications quote statistics such as the ones from fathers who tested their children because they doubted their paternity. Obviously, that's either silly or in bad faith because it's not a representative sample (also read *How to Lie With Statistics*).

Fear sells well after all, and it works to create communities. The gold old ingroup VS outgroup, with the outgroup being mean and untrustworthy and "us" being good, you know.

But back to us now: what about actual research?
Michael Gilding estimates the non-paternity rates at between 0.7% and 2%.
Other estimates, in the cases of fathers who are confident of being the actual fathers, it ranges from 1.9% to 2.9%.

Let's say that, on the overall population, it's from 1% to 3%. Can be lower if you feel secure with your spouse. And *much* higher, around 1 out of 3, if you're not sure (but watch out you're not being paranoid).

Now don't get me wrong, these are still *high* numbers in my opinion, but they're far from the scare-mongering, finger-pointing, and slut-shaming of some manosphere authors.

Bottom line:

Non-paternity is part and parcel of human mating.
But not nearly as common some authors suggest.
As a matter of fact, it's more likely for *men* to cheat. *Especially* if he is of high status.

Who Gets Cheated?

Studies show that it's men from the lower classes who get cheated the most.

And that makes sense from a hypergamy perspective: women seek men from higher social classes. And men from lower classes simply have a lot more men who score higher than them.

So here is your first clue about not being cheated: **to reduce your risk of cheating, be a high-status man**.

Well-respected theories in evolutionary psychology also postulate that women who cheat are sometimes after better genes -the "sexy son" hypothesis.
So being smart, handsome, athletic, healthy, etc., etc. also helps.
Researchers point out that higher risks of non-paternity also happen in non-married couples, couples who are often physically distant, and couples with concurrent partners (no shit Sherlock, eh? :).

Factors That Limit Hypergamy

Many factors limit real-world hypergamy, boosting the odds of stable relationships.
The main ones are:

- **Female hypergamy is capped by her SMV**. Basic social exchange theory postulates that individuals seek the best they can get *based on the limits of their own mate value*.
  This is why most men don't approach the most attractive women (Huston, 1973) and most women don't chase the top 1%
- **Female hypergamy is limited by top men's preference for top females**: higher-status men prefer good-looking women first. And for long-term, they also prefer good-looking *and* high-quality women. Studies show

that men are almost as picky as women for relationships (Swami, 2015). That also limits women's upward mobility.

- **The scope for switching is limited by "switching costs".** Only *significantly* higher mate-value men are worth a switch and a marginally better man doesn't warrant mate-switching (Buss, 2021). So if your relationship is solid, she's not going to leave you for your friend because he's 10cm taller, speaks one octave lower, or makes 5k more.
- **Good relationships protect against hypergamy** (Gottman, 1999). As one woman said to couple therapist Shirley Glass: "*how could I have an affair, I share all significant events with my husbands. I'd immediately have to run and tell him*!"

And as well:

- **Western countries' safety nets decrease financial hypergamy (and the need for a man)**. When the state ensures her and her offspring's survival she doesn't need to rely on richer / more powerful men (Ghodsee, 2018).
- **Higher equality in modern societies decreases hypergamy**. I quote the *Oxford Handbook of Evolutionary Psychology and Romantic Relationships*: "*Homogamy (…) has been rising (…) Studies have shown that in America during the period of 1970s–2010s, assortative mating increased economic homogamy*"
- **Women's wealth shields against financial hypergamy**. Women's success in many Western countries alleviates the "need" for resources
  BUT that means hypergamy shifts to *attractiveness* (Moore, Cassidy, Law Smith, & Perrett, 2006) and, we can guess, to high SMV alpha male and smooth lover types
- **High-power women date more like men**. Says the *APA Handbook of Social Psychology*: "*women in nontraditional gender roles—perhaps those women high in occupational prestige—display a mating psychology shifted toward that of men*"
- **Homogamy offsets hypergamy**: homogamy is the tendency to marry partners who, in some important ways, are similar to how we are. Research (Byrne et al., 1966), shows that individuals prefer similar partners, especially when women evaluate *long*-term partners (Regan et al., 2000).
- **Infatuation decreases hypergamy**: contrary to what some authors seem to imply, the obvious truth is that women *do* fall in love. Researcher John Gottman says that women in love are like wearing blinkers when it comes to other men (Gottman, 2016). Something I've also personally experienced.
- **Personality matters**. Yes, some general tendencies apply to most women. But personality matters and some women care comparatively less about status or looks

So, yeah… If you're sufficiently "cool", you can chill :).
And if you're not… Work on that instead of complaining.

A VW Golf is enough for most women – and 90% of men can afford one in the West

Thank God for Hypergamy

The above mitigating factors do not completely cancel out women's hypergamy.

Yes, in the end, she wants a great man.
And she'll be happier with a somewhat higher-value man.

And thanks, God!

Women wanting better men are great for humanity.

If you're not OK with that, you can find plenty of women with low hypergamy (or who cannot *actualize* their hypergamy).

They may not just be great partners themselves, though.
Be my guest.

Benefiting From Hypergamy

Guys shouldn't focus too much on hypergamy.

To begin with, because you can't control it.
Second, it does not matter as much in most Western countries.
And third, because it makes you come across as insecure.

Learn more here:

> **Lucio**: top 10% men love hypergamy

High-power and life-effective men date more and better thanks to hypergamy.
And even if they enter a relationship, hypergamy keeps women attracted.

SUMMARY

Female hypergamy became popular in some manosphere circles.

But I find that it's sometimes discussed with too much misogyny and too little science.

Plenty of data and research suggest that women *do* like men who are "better" than them: hypergamy is real.

But since women are constrained by their own sexual market value and richer Western women have enough money on their own, boys and girls often date each other around the same socio-economic class.

And since nature developed pair bonding to make us stick together (for a while), they often also end up happy (for a while).

Bottom line:

Focus on becoming a high-status man who can *profit* from hypergamy instead of becoming a man who *complains* about it.

We teach how in **Power University**.

How To Text a Girl: 3-Texts Process to Get Dates

1. Set The Date in Person

This is about how to text girls, not "how to ask girls out via text".

Why not?
Because there is an easier, more effective way. And that's the good old "in-person" way.

via GIPHY

2. Send an Ice-Breaker Text

You will send the first text a few hours after having met her, and ideally within the same day. If you're busy and you forget, just do it ASAP as soon as you remember.

The very first text you will send is a simple “nice to meet you” type of text.
It serves a few key functions:

- Breaks the texting ice
- Opens the new communication channel
- Reminds her your name
- Saves your number in her phone (if she hasn’t done it in front of you)

Simple and effective.

Plus the comment on her dog invites a further reply

First Text Examples

Here are a few first texts examples:

- Nice meeting you X –(your_name)
- Pleasure running into you X, I hope Y (whatever she was doing) went well :) –(your_name)
- Nice meeting you X, save my number –(your_name)

A quick mention on the last one: you will use it when she hasn’t saved your number in front of you. When that’s the case, this message has the great advantage of her following your lead: exactly the type of relationship you want.

Otherwise, I like the second a lot. It’s short and considerate at the same time and often elicits a response.

2. Second Text + Date

The second text that you will send her will:

- Show you remember her
- Tell me something more about you
- Possibly ask for the date already
- Overall, confirm that you’re a well-adjusted man

The structure is:

1. Write her name
2. Ask and/or comment about what she said (her weekend or plans)
3. Add some information about you (possibly something interesting)
4. Move to schedule the date

If you can make her 3 & 4 consequential great (ie.: I tried this amazing coffee place, when are you free so I can show it to you), but it doesn't necessarily have to.

Second Text Examples

> **You:** *Hey Jane, how are you, I hope your Sunday zoo turned out awesome! Did you see the pandas? :D. I left early Friday and then worked all weekend, daaamn. Only positive: being productive feels good! :).*
> *On our coffe, how's your schedule this week? Except of Monday and Wednesday I'm open so far, lemme know your free days and we'll set it up.*

- Make her part of the text match your part (or your part slightly longer is OK)
- Balance "I" with "You"
- Don't be afraid to make your 2nd text slightly longer

3. Confirm The Date Text

One of the biggest rookie's mistakes is to believe that just because someone said something, it's going to happen. Instead, on the day of the date, send her a text to confirm the appointment is still on. I usually do so in the morning if the date is in the evening.

Date Day Text Example

Something like:

> **You**: *Hey Vivian, I wanted to quickly confirm for today. See you at 7pm at Subway X*

At the time of writing this guide, I'm not 100% sure which one of the two options to recommend to you. The first is more dominant and some girls like it.
But to some other girls, it can feel annoying that you're dictating and taking her time for granted without taking them into consideration.

How to Text a Girl: Special Tricks

These are some good psychological tools that will increase your chance of meeting up:

1. Ask Her if She's Safely Back Home

Here is a simple, neat trick to increase the chances she will reply to your text ten folds: ask her if she has gotten safely back home.

This is an extremely helpful technique because whether she replies or not to your first text makes a huge difference. You will indeed few women who haven't replied to your first text.

2. Make a Small Change to Assume The Confirmation

One issue with setting up dates in person and then confirming via text is that:

1. Time passes and things (and emotions) change
2. She might not write the date down on her calendar
3. People are not very likely to stick to oral commitments
4. Written commitment has much higher follow-through rates

How do you use this information to make sure your date sticks? Well, here's the trick that I use:

Send her a text changing the time of the meet
Then ask her "OK for you"?

It will do a few great things for you:

1. Remind her of the meeting in written form
2. Make her confirm in written form
3. Show you're busy and in demand (many demands on your time)
4. Let her follow your lead once again

You change the time to an insignificant amount, like half an hour, so that it won't make any real difference, but that

will reach the above four goals.

Alternatively, if changing the time even by a small amount is not possible, send her a text specifying the exact location. Your goal is to have her confirm that yes, it's OK.
Something like:

> **You**: *Hey Christina, do you know Subway X at all? It has many exits, so let's make Exit B Tuesday at 7pm*

3. Straight to Date Text

If your first meeting went very well, you can combine the first message into the first greeting and into the dating confirmation.

When to Text Her: Timeline

When texting a girl properly, timing is everything.

Some elements of timing you can't control unluckily. You don't know what she's doing and sometimes all it takes is an unanswered text at the wrong time of her day and your chances sink.

However, you shouldn't worry about what you can't control. Your task is to maximize your chances, and this timeline helps you do just that:

> **You**: *Pleasure to have made your acquaintance, Jane ;)* – (your_name)

[3 hours later]

> **Her**: Great to meet you too L

[16-36 hours later]

> **You**: *Hey Jane, how are you, I hope your Sunday zoo turned out awesome! Did you see the pandas? :D. I left early Friday and then worked all weekend, daaamn. Only positive: I feel good when being productive :).*
> *On our coffe, how's your schedule this week? Except of Monday and Wednesday I'm open so far, lemme know your free days and we'll set it up.*

[30 minutes later]

> **Her**: *The pandas were sooooo cute! :D. How about Tuesday evening?*

[20 minutes later]

> **You**: *Pandas are the best :D. Tuesday is good, let's say 7pm at X, good for you?*

[15 minutes later]

> **Her**: *Yes, see you then!*

[10 minutes later]

> **You**: *Cool, see you Tuesday Jane, I wish you a good night :)*

[5 minutes later]

> **Her**: *Good night!*

[Tuesday, 11 AM]

> **You**: *Good morning Jane, I wanted to quickly confirm for later at 7pm, are you still up for it? See you later.*

[20 minutes later]

> **Her**: *Yes, see you later, right outside the subway*

[5 minutes later]

> **You**: Let's meet on the square at exit A, it's easier to find :)

Power Move Note: I never like girls telling me where we should meet, I correct just to take the lead. Consider doing the same.

[Tuesday, 6:30 PM]

> **You**: Hey Jane, are you on time?

[Tuesday, 6:35 PM]

> **Her**: *Just a few minutes late, on the way!*

[Tuesday, 11:35 PM]

> **You**: Hey Jane, I had good time with you, I wish you a good night

[Wednesday, 00:15 AM]

> **Her**: *I had a good time with you too, good night!*

How to Text Her In Difficult Situations

And now let's get into what is possibly the most interesting part of this guide. The special situations and some psychology of texting.

1. She Replies But It Goes Nowhere

When it takes her too long or she gives you nothing: call her. It shows you mean business and will force her to come up with an answer.

Here is one such example:

And right after the call:

Note: I didn't use her name in this example. It was my mistake because I hadn't saved her number right away and later forgot.

2. If She Proposes Alternatives: Refuse

If she proposes you an alternative to the two of you meeting on a date, think of it this way:

- Does it help the two of you get together, yes or no?

Any time it's "no", refuse.
But don't give up.
See this example:

3. When There Is No Time: Push

There are some situations where you are either leaving the place or she is leaving.

In those situations, it's done or die, so all the rules on not chasing go out the window, and double texting and pushing are fair game.

In this example, she was leaving in two days, and my "let me know if you can make it" forces her to say yes or no.

4. If She Flirts, Don't Go, Caveman

It won't happen often, but some women will test you a bit with sexual stuff.

My recommendation is that you don't take the bait here and do not go caveman.
That's what most guys would do, and they reveal their cards too quickly.

Only escalate sexually by text if you can meet her right away or if you can keep the sexual emotions riding high for a long time -which is not easy-.
Otherwise, emotions will come crashing down and rarely she'll be excited to meet you later.

Notice that I don't let her down by avoiding the topic altogether.
I validate her and give her a reply that makes her feel wanted. But my answer doesn't go overboard. It builds a sexual atmosphere but more in a sensual way, without going, caveman.
And then goes back to normal.

P.S.: if a girl is talking to you about other men it's either you are in the friend zone or… She likes you. If there is sexual chemistry, it's a strong sign she likes you.

Also, read:

- Text flirting full guide

And here is a good video on text flirting:

5. If She's "Spontaneous": Cut That Crap

Some girls will eventually drop you the "spontaneous" line. They like being spontaneous or they will meet you "spontaneously".

Don't let them get away with that. Two bad things will happen if you accept it and check back with them later:

1. You allow them to stall you

2. They get in control of the interaction
3. You chase them when you check in on their “spontaneous” schedule

What to do then?

You pin them down, right there and then, on proper behavior. Proper behavior, of course, is to plan and make it happen.
If the girl likes you, or often even if she’s uncertain about you, she will like you more right after you pin her down (of course :).
See a case in point:

Note: better doing it jokingly than sternly. It’s easy coming across the wrong way in the text.

also read:

- What “spontaneous” really mean

5. If She Blows Up: Good!

Sometimes you will make a bit too mean of a joke, or she is a little bit too touchy. Or maybe she’s just very invested in you and what you say matters a lot to her.

Whatever the reason, it’s not an uncommon occurrence that some women can get snippy or even hurl some insults at you.

Here’s how you handle it:

1. Don’t reply right away (or you look reactive)
2. Let her stew on her mistake (make her fear she alienated you)
3. Do NOT take a step back or apologize

Not too dissimilar from “handling a boss yelling at you“.

However, remember this: **anger and sexual excitement are often two sides of the same coin**. You can even piss off women on purpose, but it's more of an advanced technique.

However, this is "how to text a girl", and you cannot release that sexual tension while texting.

Depending on the relationship between you two, you can avoid replying. And depending on how aggressive she was, you can demand an apology (and if she was really out of order, you should).

In the example below, I realized I had done a mistake: she WAS trying to impress me. So I didn't demand an apology but struck a conciliatory tone instead.
However, notice how all the three points above still apply:

6. What If She Cancels The Date?

What if she texts you to cancel the date?

If she cancels in advance and sounds apologetic about it, it's OK.
Tell her "no problem", then drop it and call her a few days later to ask how are things and reschedule.

If she cancels on the same day, without warning you in advance or in a curt manner, I recommend you do not reply.

And some of them will turn around:

7. If She Complains You Move Too Fast, Reframe It

For example:

Calls VS Text

The last word on calls VS texts.

When the topic of “how to text a girl” comes up, there are usually two camps: “you don’t text, you call her”; and “texting is better”

As usual, any black and white answer is wrong most of the time.
There are times to call and times to text.

On average though, yous should prioritize texting.
The reason why? It’s not just about what you like, but what most women like.

And most women nowadays prefer texts, especially so with people they aren’t yet too close with.
One of the reasons some men say you should call is because it shows you’re not afraid. And Aziz in Modern Romance says that indeed many men are afraid of calling. But here is the twist: many women are afraid of picking up!

So what happens, often, is that you call to show you’re a direct, “brave” man and she ends up dodging you. And if you two are not close, a single time of her dodging you spell doom for your chances in 90% of the instances.

This is one of the reasons why I recommend you stick to texts.

Unless… Unless she doesn’t reply twice in a row. Then try to go for a call, but please expect your call might not be extremely well received :).

Other exceptions when to go to for calls:

- Her texts are super brief
- You cannot manage to pin her down on a date
- She calls you first (don’t go back to texts if that’s the case)
- You call her, she picks up and it goes well (stick to calls afterward)

The Texting Commandments

1. You shall text with an objective in mind
2. You shall not be her chat-pal
3. You shall not send too long texts
4. You shall think before you text
5. You shall not get sidetracked by her questions
6. You shall ask her out quickly
7. You shall make it easy for her to say yes
8. You shall not accept friendly invites
9. You shall assume she will say yes
10. You shall confirm the date on date-day

And here is a diagram of how to text a girl well:

Summary

This is a simple and effective process to text girls.

It's not meant to make you spend a lot of time texting, but in taking you from texting to dates.

No, it won't *completely* remove any instance of flaky girls, non-replies, and go-nowhere texts. But it's as close as possible to transform those phone numbers into dates and lovers.

How Women Control Men: The Secret Psychology of Relationship Power

Lucio Buffalmano · 3 December 2018 · Archived copy · Original

Women control men—it's a critical dynamic fueled by personal benefit and often enabled by men themselves.

From frame control to psychological manipulation, power frequently shifts without awareness.

This guide is your complete breakdown of **why women control men,** the specific tactics and **techniques** they use, and how to recognize, counter, and **defend against these moves** to maintain power, and improve your relationship.

The TPM Female Relationship Control Model
A behavioral framework describing how control shifts in relationships through value positioning, moral authority (judge role), emotional pressure (drama/nagging), behavioral compliance (tasking), and identity enforcement (shame). The model explains how acceptance of covert frames leads to psychological and material investment, internalization of standards, and long-term power asymmetry.
This article is a neutral analysis of recurring relational dynamics. It does not claim that *all* women or *all* relationships follow this pattern. Our goal is to help readers maintain respect, attraction, and **win-win relationships**. For the sake of balance and completeness, remember that **men also employ their own distinct set of tactics to influence their partners**.

Intro: Domestication Dynamics

Few women are the official "relationship leader"—but they're often de facto leaders and wield greater interpersonal influence.

A typical woman controls the relationship this way:

1. **Be the prize**, or the higher value partner
2. **Demand his investment** to make up the value imbalance ('compensatory investment')
   - Tasking to direct his investment and execute her priorities
3. **Set the foundational frames** of what's good/bad
   - Drama & nagging to control his behavior against her standards
4. **Be the judge** dispensing emotional rewards and punishments
   - Blaming, criticism & shaming when he fails to conform
     Ie.: 'You're failing as a man' frames

Women control the *deeper* levels of the relationship—and men *react* at the *superficial* levels.

Deeper layers exert deeper influence, so you must focus on them

Men don't challenge the deeper layers and:

- **Accept she's higher value**
- **Accept the non-written rules** that they must serve and provide
- **Accept she's the judge** of good/non-good behavior and relationship quality

Let's see exactly how that happens:

1. Emotional Pressure (Nagging & Drama)

Drama and nagging serve to increase his commitment and mold his behavior.

In Brief:

1.2. Nagging

Nagging is a long-term, semi-permanent behavioral-shaping tool.

It works in part through conditioning of reward and punishments (behaviorism): do what I like, and you make me happy (and maybe get the cookie); don't do what I like, and you fall from my grace and get my nagging wrath (negative reinforcement).

I quote clinical psychologists and Ph.D. Harriet Braiker (a woman, BTW) verbatim:

> Nagging is the human equivalent of shock grids to the rat.

Eventually, he internalizes the rules.
When that happens, nagging puts a "voice" in his head that makes him feel in the wrong when he doesn't follow the rules –*her* rules-.
And, eventually, he *does* follow her rules:

> **Him**: for years now she has insisted that I sit when I urinate (video of him sitting to urinate)

Nagging sets the priority of what's important. It says "change who you are".
Just like water molds rock over the years, so long-term nagging is low-intensity pressure that, over time, sculpts the man just like she wants him.

1.3. Drama

Drama is a concentrated, shorter-term compliance tool.

If nagging sets the priorities of what's important, **drama sets the priorities of what's *urgent***.

Nagging says "You're not OK", while drama says "What you are doing *right now* is not OK, move your ass *now* to change it".

Here is a drama example:

> **Her**: (emotional, yelling, shoving him) Hooooneey, go, do something (points towards where he needs to go)! Harry! Hurry! <— Drama + tasking
> **Him**: (takes action)

Drama also **increases his investment and breaks his frame**.
Faced with drama, most men *react*, lose power, invest more… And fall into her frame.

Instead of, say, walking away or telling her to quit the drama, they follow her lead and get emotionally ensnared.

The secret of drama is emotions.
Emotions with a self-righteous attitude that assumes she's right.

Since men don't use this tactic, they fail to see it for what it is: a power move.

Most men take ownership of her drama and make it *their* priority to fix it.
When that happens, they accept the unspoken frame that it's their duty to serve her.

2. Authority Hijacking (Blaming & Criticism)

Blaming and criticism are verbal aggression tools that frame the attacker as higher power.

Most men, unaware of power dynamics, defend themselves, and sub-communicate the following:

1. Admits guilt
2. Confirm she's in charge
3. Confirm it's his duty to make her happy

Imagine the following:

> (Enters home, places 2 bags of groceries on the kitchen table and she looks through the bags)
> **Her**: OMG where is the cheese! Didn't I tell you this morning to get the cheese? I can't believe you forgot it, it was such a simple task! How am I going to cook without the cheese!

Since he made a mistake, many men defend themselves.
The problem with defending is that it does not address the real issues: her aggressive tone, and the covert frames.
The covert frame is that he is responsible for serving and executing her tasks (and doing so properly).

Poor reactions also include:

1. **Make excuses** (terrible)
2. **Try to fix the superficial issue** (bad: it doesn't address the *main* issue, the disrespect)
3. **Escalate** (so-so, it's still reactive)
4. **Ask her to calm down** (bad)

How to Deal With Blaming

Here is how you handle blaming instead:

> **Her**: (attacks him)
> **You**: I am not comfortable with your tone

You don't address the perfunctory cheese issue but, calm and collected, you go to the crux of the matter.

> **Her**: What do you mean my tone, what are you talking about, you didn't buy the cheese!
>
> **You**: I forgot the cheese, true. But how does that give you the right to be aggessive and nasty <— Own the mistake and address the bigger issue

Then, hold your frame it was nasty, and you don't accept it.
After you gain control, THEN you can address the deeper issue:

> **You**:
> It's not about the cheese, but about us.
> Cheeses come and go, but *how* we deal with each other stays.
> And nasty communication makes for nasty relationships. NOT what I want.
> I want a healthy and respectful relationship.
> (pause)
> Is it clear?

With that, you addressed the power dynamics: you are *not* a punching bag for her anger.

Now you can move to the root causes of *this* particular issue.

Assign her priorities back to her

What's important to her but not to you is her responsibility.
Tell her that if it matters to her, she should handle it, as you have your own priorities.

3. Setting the Frame & Moral Authority (Judge & Shaming)

Shame is the superpower of the judge's role.

When women use shame in a relationship, they attack something that every man feels deeply inside: what it (supposedly) means to be a man.
Some of the most powerful attacks on manhood are:

- Unsuccessful
- Weak
- Impotent
- "Pussy"

In relationships women can leverage shame to cage men into provider roles.

It's often easy for women to do that.
Society still sees and nudges men to be providers.
And several psychologists noticed that many men have an inborn drive to defend and provide (Smith, 2014; Miller, 2015).

That's good for society -for example, children benefit from a man's support-.

However, **women often enlarge the scope of "what it means to be a man" to fit what *they* want and need**.
So providing becomes:

> **Her**: I'm unhappy. Make me happy (or you're not a real man)
> **You**: OK, let me try some monkey dancing

> **Her**: Protect me. Buy a house in the good part of town (or you're not a real man)
> **You**: OK, working hard on that promotion…
>
> **Her**: Make me satisfied (or you're not a real man)
> **You**: OK, I'll try harder

Holly Elkins's boyfriend even committed the worst crime with this game.

Of course, providing for a woman is great *if part of a balanced give and take.*
High-quality providers in healthy relationships do more good to society than players.

But many men focus on their duty to give, without thinking about their right to ask back:

> **Tom**: I want to walk away from all this work I hate, it's destroying me <— He is suffering
>
> **Wife**: I bet on you <— ⍰⍰ Don't b*tch. I bet on you to provide a luxury lifestyle for me, don't disappoint me!
>
> **Tom**: She bet on my relentlessness, so I had to find a way <— All his work was to make his wife happy

Tom is a good guy.
But he still suffered her decision not to have children while he wanted them.

There is a big difference between a relationship leader and high-quality man who *chooses* to provide for a kind woman, and a submissive guy (or a clueless guy being manipulated).

4. Behavioral Compliance (Tasking)

Tasking is the most visible means of control.

Many women will start tasking early on to test his mettle.

For example:

- *"Can you hold my bag?"*
- *"Pass me a napkin"*

- "(Pointing at the tip box) *That's for the tip*"

The more he executes her tasks, the more likely it is he will commit and invest. Thus, tasking is a screening tool for providers.

Cognitive dissonance (Festinger, 1957) suggests that the more he complies, the more he believes it's the right thing to do
And he will rationalize his actions (Eagleman, 2011) telling himself that "she must be worth it". So task executions confirm and strengthen that she is 'the prize' of the relationship.

Tasking may also start later, though.

If you're high-status and socially confident, she didn't dare to try controlling you -and you probably rebuked early attempts-.

But a woman's domestication attempts don't stop.

And tasking, together with all the other control tools, will start when *she* is power-up.
Ie.: after commitment, moving in together, or after marriage.

Also see this article on power stages:

> Relationship Power Dynamics: Strategies & Insights for All 9 Stages

Example: Nagging + Tasking + Drama

Notice her attitude, and how hard it is for him to resist:

> **Her**: (high emotions, dramatic approach) I went to the market, I cleaned this entire condo, and I've been cooking for the last three hours. Come on, help set the table
> **Him**: Don't you wanna finish it yourself?
> **Her**: Set the table!

Her conviction and righteous attitude make her frame iron-solid.
She speaks as if it's a foregone conclusion that she is right and he is wrong.

He *seems* strong and independent, but he is *re*-acting.

It's more of a mother/child dynamic.
The mother knows what's right to do and he's being a rebellious kid not living up to her righteous expectations.

5. Value Signaling (Prizing)

Female domestication is more effective when she positions herself as the relationship prize.

If she convinces him to be higher value, then the human innate sense for social exchange dynamics pushes him to 'make up for the difference'.

For most women, it's not hard to be the relationship prize.
General mate value dynamics tell us that most women ARE higher value than most average men.

So the first solution for you is simple: to avoid being domesticated and less attractive, work on your mate value.

P.S.:
Our mission is exactly that.
We help good men become more empowered, confident leaders.

Why Do Some Women Seek to Control Men?

The question comes naturally to any inquisitive mind.

Why do women work so hard to control men and take the reins of the relationship?

It all goes back to biology, evolution, and male parental investment.
We'll simplify for brevity.

Male parental investment measures how much males invest in their offspring.

Matt Ridley explains that in species where the male does not invest, females only care about his genes.
She does not care about his resources, fidelity, or investment because she can't get them anyway.

In the animal kingdom, human men are in the middle of male parental investment.
Meaning: men invest in their children, but *not always*, and *not as much as women*.

So here is why women want to control men:

Women seek to control men to ensure they will provisioning and support and for women and children

We can *speculate* that women who better controlled men have been more successful over evolutionary time.
They had more children who survived and thrived, and spread their "controlling genes" far and wide.

And that's why women's approach to relationship control is the norm, rather than the exception.

Even without evolutionary arguments aside, life is just better and easier for a woman who can control her man.
And that may provide an additional incentive for seeking control.

Men Also Seek Control... But Differently

Of course, evolution exerted the same pressure on men.

Men who could better influence and control their partners also out-reproduced men who failed to influence.

Men's control is different, though.
And it's more centered around ensuring her sexual fidelity (Buss, 2021).

Much more has been written about male control, including in academic textbooks.
I find that reassuring for this article's thesis.

Proof of one gender control can at least suggest the other gender may be doing the same -both for gaining an edge, and as part of a co-evolutionary sexual arms race-.

In brief, men tend to control more for fidelity, and women tend to control more for continued provisioning.
And we can expect both genders to also develop strategies to escape that control.

As preliminary supporting evidence, Buss confirms that some men hide some resources.
And that women's jealousy is more emotional, in fear of losing his investment, while men's jealousy is more sexual in nature (Buss, 2016).
We're now waiting for brave psychologists to test the rest of this article's theses.

Domesticated Men: Less Sexy, But More Useful

Over the long term, women's control of men is an act of domestication.

He goes from free-grazing wild beast to cart-pulling ox.
Semi-neutered ox :).

A domesticated man is less attractive and sexy.
Higher-status men are less likely to be domesticated. Hence, **successful domestication signals that he is not a high-value man.**

So men who fall for the domestication process cannot maintain long-term attraction.
And they may also have to worry about her loyalty, since women prefer higher-status men.

Full Summary

About The Author: Robert Greene is a popular writer of *books on power*, psychology, life strategies, and people's strategies.
Albeit not a psychologist himself, Green distinguishes himself for the depth of his understanding of human nature - particularly the "darker side"-.
Robert Greene is also the author of "*The 48 Laws of Power*", "*The Art of Seduction*", "*Mastery*" and "*The 50th Law of Power*".

About the "Laws of Human Nature"

Greene has always taken the time to research his books thoroughly. In the case of "*The Laws of Human Nature*", it took a whole 6 years.
And expectations were sky-high.

Drawing from different disciplines and from the most desperate authors such as Ramachandran, Kahneman, and Jung, Greene says:

> Consider the law of human nature a code book for deciphering human nature.

Introduction

Robert Greene says that modernity might lead us to believe we are transcending human nature.

But the opposite is true: we have never been more enslaved by human nature as we are today.

Our emotions have only been heightened by social media, and viral news makes it all the easier to inflame hearts and evade rationality. And it's easier than ever for manipulative politicians and leaders to manipulate us.

> Manipulation: Techniques, Strategies, & Ethics

And look at our tribal tendencies, which digitalization has only made easier.
Now we can find our little groups and insulate ourselves with groupthink and herd mentality (see "red pill analysis" as an example).

The aim of "*The Laws of Human Nature*" is twofold:

1. Help people judge others more effectively while making it difficult for the more destructive types to harm you
2. Learn your own human nature for true self-development

> We are all cut from the same cloth, and we all share the same tendencies. The sooner you realize this, the greater your power will be to overcome the negative traits within you

#1: Master Your Emotional Self

> **The Law of Irrationality**

We think we are rational, but we are not.

To achieve our potential, we need to learn how we are irrational and reactive to the world.

Ask yourself where your irrational drives come from.
Why are you angry, why are you being resentful?

Greene talks about the 2008 financial crisis and expands on psychological biases.

The author says that history shows there have been men of great rationality, which are proof that yes, we can be rational and increase our chances of success by becoming more rational.

> The longer you can resist reacting, the more mental space for actual reflection

#2: Transform Self-love into Empathy

> **The Law of Narcissism**

Narcissism has been on a steady rise in the last decades and it has climbed to record highs with the latest generations.
We are all a bit narcissistic. But your goal is to move to a *healthy* narcissism.

To do so, you must be honest with your self-absorption: don't dupe yourself that you're altruistic

Healthy narcissists are driven and focus their drive outward, they incorporate feedback and recover quickly from failures and setbacks.

In his usual historical examples, Greene talks about Stalin. Stalin came to loathe his closest friends because he had to play a charming game with them. And why should he be charming with anyone?

This is an important lesson about how power can turn friendships into enemies.

> Turn off the internal monologue to tune in to the world

#3: See Through People's Mask

> **The Law of Role-playing**

Humans are consummate actors, we all wear a mask and we all learn how to lie.
We adapt ourselves to our groups and we are so good at acting that we don't even realize we do.

In this chapter, Greene goes into body language, but the value of learning language from a book is limited.

Also, read:

- The Mask of Masculinity

#4: Determine the Strength of People's Character

> **The Law of Compulsive Behavior**

Character is a primary value when evaluating people to work for or partner with.
Their characters matter more than their charm, intelligence, or charisma.

The strength of someone's character comes from the core of someone's personality. It comes from genetics, good parenting, mentors along the way, and continuous improvement.

Strong characters stem from a feeling of personal security and self-worth.
They:

- Can take criticism and learn from experience
- Don't easily give up because want to get better
- Not insecure about their personal status, they can subsume their interests to that of the group

Weak people:

- Are overcome by circumstances
- They're slippery and evasive
- Don't improve much because they can't take criticism

Try to test people's character by making a joke, criticizing them, or giving them a challenging task. And associate only with strong characters. Put the strength of character above intelligence and charm.

Accept Your Character

Robert Greene says that we all have a rather strong and set character through our genes and childhood. Refusing to accept it is refusing to influence it.
Instead, we need to learn how we are wired and then we will have a certain control to smooth our edges.

#5: Become an Elusive Object of Desire

> **The Law of Covetousness**

Instead of focusing on what you want, focus on what others want, on their repressed desires and fantasies.

What you offer should be new, unfamiliar, and exotic. Or at least, presented as such.

#6: Elevate Your Perspective

> **The Law of Shortsightedness**

Keep a long perspective, and avoid being pulled by new trends and new shining objects. Stick with what you start and prioritize based on your long-term goals.

#7: Soften People's Resistance by Confirming Their Self-Opinion

> **The Law of Defensiveness**

As Carnegie says in *How to Win Friends*, to be interesting, be interesting. Make others the focus of attention.

Similar to Chris Voss, To influence people Robert Greene recommends you stop trying to push them. Instead, take a step back and assume an inferior position. Ask them for advice, and make them feel good.
Make a small favor for them, and induce them to reciprocate.

Don't remind them of the favors you have done for them in the past. It doesn't make them feel grateful, it reminds them of their dependence on others and we want to feel independent.
Instead, remind them of what they've done for you in the past. Confirm their self-opinion as good people.

Also, read:

- What's in it for them
- What's in it for them examples

#8: Change Your Circumstance by Changing Your Attitude

> **The Law of Self-sabotage**

You are not a pawn, you are an active player. Mind and body are one, and one influences the other.

Don't see yourself as limited by birth: think that you can grow and improve.

Also, read:

#9: Confront Your Dark Side

> **The Law of Repression**

We all have a dark side, but most of us mask it.

Greene uses Carl Jung's terminology of "the shadow", which consists of all that we try to deny about ourselves and that we regret.

But denying and hiding it causes a whole host of problems. Depression and anxiety come from not being our true selves, from always playing a role.

We internalize all the ideals of our culture such as "being nice" and having pro-social values, which are often

necessary for the smooth functioning of our society. But in the process, it pushes a big part of our personality into that repressed corner that Jung called the shadow.

Greene instead welcomes the reader to include our dark side in who we are, to accept it and to use it for good and to fuel us towards our goals.

For more on the dark side also read:

- To be good you first need to be bad
- 12 Rules for Life
- Relentless

You often recognize people with a repressed dark side by their exaggeration. Too much masculinity, for example, betrays a yearning to be dominated.
Or too much saintliness, hiding their sexual appetites or their hunger for power.

Here is how to introduce the shadow within ourselves:

- **See the shadow** (look for opposite traits in yourself, emotional outbursts, insecurity)
- **Don't run from it** (the tendency will be to run away: don't)
- **Embrace it**
- **Use it** (to fuel your hunger)

#10: Beware the Fragile Ego

> **The Law of Envy**

We always compare with one another, and it rarely leads to good results for us.
Learn to develop your self-confidence from internal sources instead of comparisons. And deflect the envy by drawing attention away from you.

We disguise our envy to ourselves because that would mean we have to admit our inferiority. So we blame instead the system, bad luck, unfairness… Or the object of our envy himself.

Also, read:

- How to spot a frenemy

Do the following to overcome your own envy:

- Move closer to them (and you will see they have issues and problems just like anybody else)
- Compare with those who have less to reduce envy and increase gratitude
- Practice "mitfreude", the happiness for your friends
- Transmute envy into a desire for emulation and raise to their levels
- Admire others as a sign of human nature's potential

#11: Know Your Limits

> **The Law of Grandiosity**

We all have a need to feel superior to others. But the more successful we get, the more superior we feel, and that creates a disconnect with reality that can easily become our downfall.

- Come to terms with your grandiosity needs
- Concentrate energy: focus deeply and completely on one thing
- Practical grandiosity: focus on goals that stretch you but that you can reach
- Let loose your grandiose energy

#12: Reconnect to the Masculine/Feminine Within You

> **The Law of Gender Rigidity**

Greene says that we all tend towards the feminine or masculine, but we have both.
When people go too far in repressing the opposite gender within them, they will leak out in a caricature form.

And it's often the people with internal conflicts who lean too strongly towards one gender while trying to suppress the other.

Greene says that hostility towards the opposite gender is stronger in men.
It's born out of a sense of insecurity and he says it's possibly because of the hostility men feel towards their mothers for a time when they were fully dependent.

The author invites the readers to **embrace the opposite gender within us**, which will unleash double the power (and will help us better connect with each other).

#13: Advance with a Sense of Purpose

> **The Law of Aimlessness**

Similar to what he recommends in *Mastery*, Greene invites younger readers to explore and try different things to find their passion and purpose.

The biggest obstacle you will face in pursuing your purpose is those drudging moments of difficulties, pain, and boredom.
Greene says you should learn to get into the flow, and once you experience it, you will become addicted and always want to come back to it.

#14: Resist the Downward Pull of the Group

> **The Law of Conformity**

This was by far my favorite chapter.

Here Greene goes a bit into *social psychology* and sociology.

We are attracted to numbers and groups, we like losing ourselves in the group's energy.
But we also have an urgent need to fit in. We like to tell ourselves we are independent, but we are not: the people around us exert pressure on us, and instead of denying it we should leverage it.

Differences among groups are often exaggerated to create stronger feelings of "outgroup/ingroup" and of similarity among the members.
Don't fall for the tendency of denigrating your enemy: see him for who he is, and learn from what he does better.

> We must come to the conclusion that the primary group we belong to is that of the human race.
> Anything else is regressive and far too dangerous.

#15: Make Them Want to Follow You

> **The Law of Fickleness**

The Laws of Human Nature is a great book.
And this chapter on leadership stood out for the quality of its psychological dissertation on leadership.

Leadership is always built on a dichotomy, Greene says. On one side, people want to be led and they look up to a great and strong leader.
At the same time, they resent him. They resent his position, the power he has, and the power he has *over them*.

People in power though see only the smiles, and they mistake it for unending approval. When they make a mistake and people will be clamoring for their heads, they are taken by surprise.
They shouldn't, it's just the normal release of aggression and pent-up resentment that is channeled against the leader.

As a leader, you must be seen working harder than everyone else, says Greene.
Also, read:

- How to be a leader
- Best leadership books
- Leadership and power for women

Greene also recommends that it's better to start tough. You always have time to show your soft side. But if you start soft, people might think of you as a pushover.

#16: See the Hostility Behind the Friendly Facade

> **The Law of Aggression**

Our culture, civilization, and society tend to repress our most aggressive instincts.
But we all have it, it's what made us the apex predator on earth, and instead of repressing it, we should *use* our aggression.

Also, if you don't, you will be run over by those who do. Aggressive people tend to obsess over the objects people, which is a sign they want to swallow them whole.

Take stock of physical obsessions, like anger in being overtaken or always wanting to be front and center.
Case in point with Trump:

Fight the aggressive types indirectly, and avoid making them feel not in control, which is their greatest fear.

Also, read:

- How to leverage your dark side
- The Art of The Deal

#17: Seize the Historical Moment

> **The Law of Generational Myopia**

Ibn Khaldun was the first to come up with the idea of "generations" and "generational cycles".

Every generation has its spirit, its peculiarities. Like individuals, they will also have their shadow and their

repressed yearnings.
Often, like individuals, they swing in the opposite direction of their most repressed feelings.

The generation you are born into shapes the way you are, and presents unique opportunities for you.
Greene recommends you don't go completely against the grain or you will end up isolated and in trouble. Instead of bucking the trend, it's best instead to redirect the flow of your generation.

#18: Meditate on Our Common Mortality

> **The Law of Death Denial**

We all try to avoid thoughts of death, but it's a mistake.
Death is there, whether you like it or not. And to echo the sentiment all across *The Laws of Human Nature*, Greene invites the readers to use and leverage reality rather than trying to fight it or forget it.

Meditate on your death so that you will make the most of your time, instilling a sense of urgency in your purpose and goals.

Also, read:

- How to leverage your mortality for life

Real-Life Applications

Accept people for who they are, not for what you want them to be
Don't project your emotions onto them, and don't try to change who they are.

Watch out for fake illnesses to control you
Partners sometimes can fake or exaggerate illnesses to force their partners to play by their rules.

Criticism

Albeit "*The Laws of Human Nature*" is possibly my favorite book from Greene and *one of the best self-help books ever*, there is still some criticism to be mentioned.

Let's start from the author:

> **Lucio**:
> Robert Greene doesn't have the deepest experience on social power dynamics and seduction.
> And his work tends to be low in empirical evidence.
> Howerer, he has a deep grasp of human nature. Far surpassing many psychologists on this topic. And especially so when it comes to the darker side of human nature.
> His focus on that dark side also makes Greene stand out in the mass of (naive) self-help books to deliver some of the most striking, unique, and helpful self-development books available

Some criticism now relating to *The Laws of Human Nature*:

1. Very Freudian

I find Robert Greene to be *very* Freudian.

Much of what the personality traits he ascribes to childhood and parents and he often invites the readers to investigate people's past.

I am not too sold on that.

And neither are revered psychologists such as Martin Seligman.

2. Sometimes Poor Interpretation of Events

In a few instances, the laws and recommendations are based on wrong assumptions.

For example, Greene says we should try to better understand trends and future events. Wolfgang was so good at predicting the future, tells, Robert Greene. He even predicted the unification of Europe, which started happening after WWII!

But that makes no sense.

Wolfgang didn't predict anything, he simply *said* something would happen.

And on a long enough timeline, whatever you say is bound to happen. I can say today that "Europe will divide once again", and on a long enough timeline, it's quite likely that I'll be right (sadly).

Also read: *Fooled by Randomness.*

3. Too Many Personality Types

If we were to count the personality types of *The Laws of Human Nature* we'd probably end up close to one hundred.

I love a good psychological analysis, but they seemed a bit too many and the descriptions were not always deep enough to warrant their own category.

4. Personal interpretations presented as truths

The Goldwater rule says that psychiatrists shouldn't attempt to diagnose people from afar.

Well, Greene also fortunatley is not a psychiatrist, because he also diagnoses long-dead individuals :).

That's totally fine and I appreciate his courage to speak like many of us would speak in everyday life. But he presents his diagnoses as obvious, foregone conclusions.

Even if our armchair diagnoses are right, and sometimes of course they are, they shouldn't be presented as foregone conclusions.

And, after all, it's a power move to sound more authoritative: remove all "maybes" and people will follow you (charismatic leadership style).

5. Lacks Coherent Narrative & Structure

The Laws of Human Nature gives career and workplace advice (coddle to your boss) under the chapter on group dynamics.

The content was great and I even took notes for potentially adding something to Power University. But it felt like an offshoot, without a good narrative around it. The book would have benefited from better structure.

6. Exaggerated, Unrealistic Historical Examples

Some of the famous Greene historical examples are exaggerated and add a lot of bombast for (possibly) marketing and mass appeal.

For example, here is an example to explain the importance of reading body language: a woman sits at a doctor's practice and the doctor asks her: "does your husband know about your affair?". He knew by watching her signs of nervousness and the way she said "hi".
As *plenty of body language experts explain*, you cannot jump to that type of conclusion without being wrong more times than not.

Another example is Haig.
Greene says that Haig rose through the rank playing one of the games that he so well describes until the point when he became chief of staff and told the cameras "I am in charge here".

But just look at the videos and it seems like Greene embellished the facts:

Haig did not say "I'm in charge", he said, "I'm in control… *Here* at the White House, *pending* the *return* of the vice president, if something came up I would check with him, of course".

Big difference.

7. People Don't Change? Well, Sometimes, They Do...

Greene says that people don't really change.

And I'm glad he says that because the current trend in self-help over-state the case for change.

Most people don't change indeed, and some traits are notoriously hard -or impossible- to work on.

On the other hand, some people DO change.
Not only in skills, which are obviously improvable, but also in mindsets and behaviors.
I can see how I changed myself, my mindsets, and my behaviors.

And it's not just my opinion.
Longitudinal research also tells us that people DO change over time.

PROS

- **Great Analyses**

I won't list a hundred pros because one suffices: *The Laws of Human Nature* displays a depth of analysis on the human nature that few other texts can match.

And that's what I like about Greene: he understands people and psychology to a degree that few other authors have matched.

Review

I guess I can count myself as a big fan of Robert Greene.

I loved most of his books.

And "*The Laws of Human Nature*" ranks up there with Greene's very best work.

The Laws of Human Nature is different than his previous work, though.
It's more holistic and more self-focused. It's about how we all are, our shortcomings, and what we can do to most past our limitations and develop ourselves.

In that sense, it's the ultimate self-help book grounded in psychology.

I took away several notes and I almost felt bad to eventually delete the file from my phone.

Whether you want to improve yourself or better understand people, *The Laws of Human Nature* makes for a great read.

Ambivert: What It Means, & How to Become One

Lucio Buffalmano · 4 December 2018 · Archived copy · Original

Are you introverted or extroverted?

If you struggle with that question, it's possible that you are an ambivert.

- SUMMARY

What's an Ambivert

An ambivert is an individual with the traits of both introversion and extroversion.

Basically, an ambivert is in the middle of the extroversion continuum.

Carl Jung was one of the first to discuss the "middle" of the road between introversion and extraversion.
And albeit Jung didn't use the exact word "ambivert", he said that ambiverts account for the majority of the population.

More recently, Adam Grant found confirmation for Jung's theory when around two-thirds of his research subjects didn't identify themselves as either introverted or extroverted.

Extroversion Is a Spectrum

Extroversion, like many other psychological traits, is a continuum.

And what Jung and Grant noted makes a lot of sense if you think about it: in most distribution curves there are more people in the middle than at the opposite ends of the spectrum.

However, numbers can be misleading here.
People who *really* are in the middle, which we could call "purebred ambiverts", might not be the majority. Maybe around 20% of the population.
And most people will still lean more toward one end of the spectrum or the other.

That's why it's important to realize in which direction you lean the most.

Ambivert Traits

It can be frustrating to hear “it depends”, right?

You’re looking for answers but instead of clear-cut, black-and-white answers, you get that annoying, noncommittal “it depends”.

Welcome to the life of an ambivert.
Introverts and extroverts can clearly tell you whether a social situation is either fun or overwhelming, but for introverts, it depends.

For example:

- extroverts get energy from social settings, they want to interact with people and look forward to interacting with people.
- Introverts lose energy from social settings and prefer quiet time and solitude. They crave their own time

But ambiverts?
Sometimes they crave their alone time. And if they have been alone for a long time it can get difficult for them to “warm up” to people and social settings. But **once they are warm up, ambiverts can love social interactions**. And they can look forward to meeting and mingling with new people.

Signs That You’re an Ambivert

Here are some statements that ambiverts would agree to.
I:

- Enjoy a party, but then want to go home
- Like attention.. sometimes, depending on the context and mood
- Enjoy conversation (like extroverts) but not so much small talk (like introverts)
- Find it difficult sometimes to assert me
- Can be very reserved in some situations
- Prefer meeting new people with people that I know around
- Can find me in both extroversion and introversion descriptions
- Am excited about going to social events, but find it a bit intimidating in the beginning
- Enjoy lone time, but it can get too much after a few days
- Think before I speak (unlike extroverts), but don’t have problems putting thoughts into words (like introverts)
- Adapt to the people around (listen with talkers and talk more with silent people)
- Can get lost in a conversation (like an extrovert) as much as in my own thoughts (introvert)
- Sometimes mistrust people, but other times I can open up very easily

If you can recognize yourself with many of the above statements then, yes, chances are that you’re an ambivert.

The Ambiverts Advantage

For a long time, I had considered extroverts to hold an advantage over introverts.

After all, people are essential to success, and if you love interacting with people, then it’s easier for extroverts to make friends and build alliances, right?

Well, no, not really.

Ambiverts actually fare better with people.
By being in the middle of the spectrum, they have an easier time understanding, adapting, and interacting with everyone.
As we saw in the guide on how to find a perfect roommate, it's very easy for introverts and extroverts to end up hating each other:

Topic	Extroverts	Introverts
Eating	Want to eat together	Want to enjoy food alone
TV / Sport Events	Watch TV and sport together as a shared event	Watch the match alone (and comment it on an online forum)
Use of common spaces	Camp out on common areas (and hope roommate will come out)	Stay in the room (hoping roommate will get the fuck out so *they* can go out)
Feelings towards the other	• weird • slippery • always avoiding me • doesn't like me	• "too much" • overbearing • all over me • likes me too much

But ambiverts?
They understand and get along with everyone.
This makes it easier for them to be a social chameleons and to connect and bond with people.

Larry Kim indeed found that ambiverts are more adaptable and better mold the context and the situation.

Ambiverts are also more:

- **Emotionally Stable**: Hans Eysenck, the psychologist who first used the "ambivert", says that they avoid the extreme hypersensitivity of introverts and over-dominance of extroverts
- **Socially Intuitive**: Daniel Pink says that ambiverts have a better intuition of social intricacies such as when to speak and when to listen, when to push, and when to step back
- **Resilient**: While extroverts and introverts suffer in environments that do not suit them, ambiverts can do well both in difficult social settings and in long stretches of lone time
- **Empathic**: By sitting in the middle, it's easier for them to understand both introverts and extroverts. This ability tends to make ambiverts also less judgmental

Ambiverts Sell Better

Take a profession that most people consider people-related and that, to be good at, you need to be good at relating to people.

That profession is sales.

Usually, you'd think that extroverts are the best suited for a sales job. Instead, a study found that ambiverts generated 24% more revenue than introverts and a whopping 32% more than extroverts.

Source: Adam Grant
Since I have been in sales for several years and I have seen all types of sales personalities, this is what I suspect happens: extroverts, so in love with the socialization process, end up focusing too much on *socialization* rather than on *selling*.
And **extroverts' eagerness to talk makes them poorly suited to getting to know the prospect and selling to the prospect in a way that meets his needs**.
So in love with their own voice, they end up monopolizing the conversation. They overwhelm the prospect, listen too little, and do not position their product in relation to the customer's needs.

The ambivert instead, says Grant, strikes a better balance between enthusiasm, assertiveness, and the inherent need for listening that a good sales process entails.

Adam Grant also conducted a meta-study on the link between extroversion and income, and the result was that there was *no* connection.

What Influences Your Ambiversion

As an ambivert, you are liable to move up and down the extroversion scale.

Some factors that will influence your extroversion levels are:

- Location
- How well do you know the people
- How "socially warmed " you are
- Who is around you (you probably prefer some known people)
- How long you have been alone
- How long you have been socializing

Depending on how the situation and your mood change, you can present strong extrovert tendencies or strong introvert attitudes.

Can You Become Ambivert

Can you become an ambivert?

Sure you can.
And given that there are several advantages to ambiversion, you probably want to.

I started as an introvert and now I have moved more towards an ambivert middle.
And I'm not alone. I have read of *more people* going through the same development.
I still love my own time, my peace, and my quietness. But I also look forward to socializing, especially when there are some people I know in the audience and people that I like.

But, since I learned how to socialize well, I also love interacting with total strangers. As a matter of fact, I sometimes look forward to making new acquaintances and entering new social worlds.

You can also go from extroversion to ambiversion, but the following tips are more suited for introverts:

1. Increase Your Social Skills

The big secret to becoming more ambivert is to simply get better with people.
Then you will make friends more easily, you will know you can trust yourself to have a good time and you will know that you can excuse yourself at any time if you don't enjoy the interaction.

Also, read:

- Activities to get good with people
- Group conversation
- How to avoid being a social burden

2. Develop A Positive Social Circle

When you have people you like around you, you will love interacting with them and you will naturally start behaving like an extrovert and thinking like an extrovert.

Socialization will become more pleasurable and you will look forward to it.
Going out to meet them will be a pleasure, seeing them will be a pleasure, and meeting new people in the presence of the people you already like will become easier.

On the other hand, avoid toxic people, frenemies, and anyone who doesn't uplift you and doesn't want the best for you.

Also, read:

- How to spot frenemies
- Dealing with underminers
- Toxic people
- Signs of toxic relationships

3. Pick The Right Places

There will be places and locations that you enjoy.
And there will be places and locations that you loathe.

The solution?
Simply, increase the former and limit -or exclude- the latter.

If you don't like clubs and noisy bars, avoid them or you will always end up retreating into your shell and telling yourself "I'm just bad with people".
And since you're there, maybe your party friends are not the best fit for you while you're still fully on the introversion end of the spectrum.

On the other hand, if you are very much extroverted, you should probably avoid places that fit introverts best or you will always tell yourself "I need noise and people" and you'll never tone down your extrovert extremes.

4. Pick The Right Jobs

The stress therapy of "doing the opposite of what we like to grow and adapt" is a failed one.
It's best instead to stretch ourselves with small steps.

Here are a few professions where Ambiverts perform well and that will help you gradually move toward the middle of the spectrum:

- Sales positions

As we have seen ambiverts are very good at sales. And as a salesperson, I can tell you that a lot of time is spent on preparing a presentation, entering data, and managing loose ends: it's not all about talking to people.

- Negotiation

Same for sales: ambiverts are good both at imposing their needs when they need to, and listening to the other party when they have to.
Both are fundamental skills for effective negotiation.

- Management

Bosses who talk too much and don't listen to their reports don't make for great bosses. And managers who hide behind big screens to create a barrier between themselves and their teams are not usually the most loved and effective leaders.
The best managers know how to walk that line, and being in a managerial position while you try to be the manager you can be will stretch you toward that good middle ground.

- Teachers and educators

Teaching and education also require a mix of lone work to prepare the lessons, listening to students, and speaking time. Another great profession for ambiverts.

Criticism of Ambiversion

There have also been critics of the concept of ambiversion.

Both criticisms below raise good points and, to understand yourself and gain deeper self-awareness and emotional intelligence, it's important that you understand them before you're too quick to jump into the "ambivert bandwagon" (yes, it's becoming a thing :).

Love Socialization But Get Drained: Still Introvert

For example, some psychologists say that if people enjoy socialization and talking to others but do get drained and need to "recharge", then they are not ambiverts.
They are simply introverts who enjoy socializing.

Love Socialization But Get Overwhelmed: Still Extrovert

Susan Cain, in her book *Quiet: The Power of Introverts* says that people who are very sensitive to external stimuli tend to be introverted.
However, there is a different approach to it. And the different approach says that sensibility to external stimuli and extroversion are two very different things.

Highly sensitive people get overwhelmed by external stimuli. Too much light, too loud noises, too many people… It can all get too much for them.
However, that has nothing to do with extroversion.

So you can have an extrovert who gets easily overwhelmed, but that doesn't mean that he has an "introvert touch" and that he is an ambivert.
It simply means that he is an extrovert who happens to be highly sensitive.

SUMMARY

Ambiverts sit around the middle of the extroversion continuum.

At the core of their strength is **social adaptability**. If you are an introvert, that's great news for you.
If you are not yet one, you can train yourself to take the edge off of your extremes, and your quality of life -and quality of socialization- can increase dramatically.

Alpha Female: 10 Types of Power Women

Lucio Buffalmano · 7 December 2018 · Archived copy · Original

Alpha females are high-power women who often also are high-value and have high social status.

Being a high-powered woman is not easy.
But the best alpha females can combine femininity with power.

This article shows you the different types of alpha females, and how you can spot them -or *become* one-.

The Types of Alpha Females

These are some of the main types of alpha females:

1. Sexual Alpha Female

The sexual alpha female is the woman who is comfortable with her sexuality and is not afraid of *leading* all her interactions with a constant vibe of hinted -or not so hinted- sexuality.

She might add a touch of (fake) baby innocence, naivete, and even madness, like Marilyn Monroe.
All extremely powerful in driving men crazy.
Look at Monroe's facial expression, a mix of orgasms, madness, and the promise of never-ending sensual abandon:

At the extreme end of sexuality, she can be "all in your face". This alpha female revels in making people socially -and sexually- squirm in her presence.

Think of Sharon Stone and her "leg crossing" in Basic Instincts.

Don't confuse her with the histrionic...

The sexual alpha female should not be confused though with the *histrionic* woman, who puts on an act of sexual abandon to fill her craving for attention.

The difference between the histrionic and alpha females is all in the results.

While histrionic women spin their wheels in sexuality and go nowhere in life, the top sexual alpha female knows how to leverage her sexual power to go where she wants to go and get what she wants to get.

The High-Functioning Sociopath Alpha Females

Most high-functioning female sociopaths have a strong sexual charge and fully leverage their sexuality for power.

Sharon Stone is in Basic Instinct the Hollywood representation of a high-functioning sociopath.
In this forum entry, I describe my romance with a high-functioning alpha female sociopath:

- **Seducing an alpha female**

Fake Sexual Alpha Female

Another easy-to-confuse low-quality variant is the woman who always introduces talks, and jokes referencing sex.

The alpha female *owns* her sexuality and uses it to get what she wants and to put pressure on the people around her.

The low-quality, wannabe alpha female instead *hides* behind sexuality. She has the rebellious streak of a child and she is nervous and insecure.

Madonna at Letterman was one such example:

Confidence and power are not synonymous with “fame” and success, and you can see there is no real confidence and power there.

2. The Butch Alpha Female

Pardon the name, no intention of being offensive, but it just makes sense.

The butch alpha female resents the femininity of some women, resents the social pressure of “having to conform to feminine ideals” and she makes it a point to stress her un-femininity.

The butch alpha female is often politically far away from the mainstream. She can be a hard-core feminist, a no-global, or even a militant in a subversive group.

Usually, men don’t like butch alphas… Unless she’s hot.
In this case, her masculine traits can make her all the more fascinating to some men.
Including making her the darling of men hiding homosexual tendencies, as Robert Greene brilliantly points out in *The Art of Seduction*.

Uma Turman in the movie “Beautiful Girls” plays a butch alpha female:

Notice her exaggerated, un-feminine movements.
Making fun of the guy’s bald head, a typical one-upping male game, and then kissing that head, an overly-dominant move.
Then jumping across the bar like a male teenager, and later pouring shots like a truck-driving barfly.

3. The Alpha (Fe)Male

When the alpha female completely leaves behind her feminine traits, she assumes all the qualities -and limitations- of the alpha *male*.

When that happens, it’s the female genitalia that qualifies her as an alpha female, but from a social power point of view, she’s otherwise playing by male rules.

These women are very rare.

When you read in the history books of women leading armies or taking up arms, they sometimes are alpha (fe)males.
And some other times they are exaggerated and romanced works of literature where they served more as inspiration for the armies than actually leading the fighting themselves.

Joan D'arc, leading armies, is a historical exception (and likely wasn't nearly as feminine as this portrait)

4. The Feminine Alpha

The feminine alpha is a woman who apparently shows no interest in power.
Except for securing a man who *does* hold power, that is.

But don't go thinking these are gold diggers.
These are high-quality women who get high-quality men, as simple as that -and no, this is not an endorsement of Donald Trump below, but power certainly boosts a man's prospects-.

Many wives of tycoons, high-quality men, and super-driven men are feminine alphas.
They take a step back and avoid the limelight unless they really have to.
But when they have to… They do it with class and tact.

Feminine alphas, together with sexual alpha females, are the most lusted for women, albeit by different cohorts.
Feminine alphas tend to appeal more to high-quality males while sexual alphas slightly more to the masses -but then again, the appeal is so broad on the male population that there is a huge overlap-.

Our political credos notwithstanding, Melania Trump is a feminine alpha female
Trump has explained it better than I could:

> **Interviewer**: you said that women have one of the great acts of all time. The smart ones act very feminine and needy, but inside they're real killers.
> **Trump**: I feel that the smart ones are the ones that really go out and do it, without waving the banner of women's liberation.

Exactly right.

5. The Ultimate Alpha Female

The ultimate alpha female combines the assertiveness and cunning of her male counterpart with the femininity and sexual energy of her female side.

Her ability to switch from "in need of protection female" to the assertive hard driver makes her a versatile player who can get a man to do the hard work for her and lead herself when she has to.

Old-school, highly driven, and successful women were very good at this.
Their hunger and fierce independence allowed them to go toe-to-toe with their male counterparts.
But living in a more repressive, male-dominated, and not yet feminist-imbibed society they *had* to develop their femininity.

Sophia Loren always struck me as a woman who could flawlessly marry the two sides.

Please check this picture and look at those tiger eyes. Dripping lust for pure feminine power. She mixes the sexual, the assertive, and the feminine all into one.
Spectacular.
Heaven must be a place guarded by Ultimate Alpha Females :).

Recent Example

More recently and to have a visual reference, the character of Pam Grier in Jackie Brown is a good example.

Going from sensually chill:

Too assertive and cut-throating:

But even more, I like the portrait of Claudia Cardinale in “Once Upon a Time in the West”.

See the analysis and video here:

- **Alpha female in the Wild West**

6. The Charming Alpha Female

The charming alpha female has mastered social skills to a T.

She revels in social environments and no matter her age, she’s always the queen.

But she’s not a club queen or a big group entertainer: her biggest power lies within small groups or one-to-one conversations.
She talks to you and makes you feel like you’re the only one in the world.

The charming alpha female smiles warmly like she’s really happy to see you. When she asks you how you have been she puts a hand on your arm to emphasize the emotional bond. And then she floors you when she asks about something you really care about, something you’d never think anybody would remember in a million years.
But the charming alpha female does because that’s her power: people.

Everyone loves her, and everyone thinks the world of her.

Similar to the feminine alpha, She is perfect to go along with a high-quality man, since she complements him well. They won’t quarrel over who’s in the leadership role and she makes for a great partner to accompany him to functions, balls, and gala dinners.

Charming alpha females defy age, a constant issue for more sexual females, because their power is not based on either aggression or looks.

But then again, don't listen to me, I have a soft spot for a smart and feminine woman with great social skills… :).

7. The Behind The Curtain Mistress of Puppets

These are the women who *officially* defer to a man… But who *actually* controls him?

Most women control their relationships anyway, but with alpha males, it's not always as easy.
It takes indeed… An alpha female.

The game of control of influence among alphas can actually end up being an up and down of emotional swings, male obstinacy to subdue an unconquerable woman, and a game of chicken as to who needs the other the least.
But alas, she exerts huge power over him.

Cleopatra with Mark Antony is one of the most famous historical examples. But, more recent and better documented, Josephine also had Napoleon eating out of her alpha palms.

And, of course, mistresses behind the curtains might be much more frequent than we think. But we'll never know because these alpha females know that their power is strongest when those curtains keep them in the dark.

8. The Driven Alpha Female

Driven alpha females are women with big goals, ambitions, and passions.

Sometimes they put their own personal life on the back burner and don't start families. And if they do, they still keep working on their goals and dreams… *Hard*.

Oprah is another example, albeit sometimes she overdoes it:

"Driven" alpha female doesn't mean that she has to be any less feminine, though.

Mother Teresa was also a driven alpha female.
An example for us all, she shows us all that you don't need to be aggressive or overbearing to lead the change that you want to see in the world.

9. The "Pussy Power" Alpha Female

On the fringes of the alpha females' galaxy lays the pussy power alpha females.

I call them "pussy power", which sounds endearing, but it's not really a healthy form of power.

Growing up with feminist ideals they see themselves as the banner carriers of pussy power in a world of (repressive) men.
They make it a point that they "don't need a man" and (secretly) harbor resentment against a world that is (still) dominated by men (in their opinion at least).

They do use their sex appeal, more and better than butch alpha females, but contrary to the Ultimate Alpha Females many of the Pussy Power gang haven't developed their femininity quite as well and powerfully.

This is a huge pity as they don't realize that by dropping the combative mindset and embracing their full femininity they might live a happier, freer life –*and* get double the power-.

They can flash boobs and asses, especially if it helps to sell. But they do so in a more aggressive fashion as if to scream to men:

> "*you'd like it, but you don't get any. And I might as well give it to another woman. Who needs a man anyway*".

I don't mean disrespect towards the subject of this example, and I don't know her well enough, so take it simply as the first example that came off the top of my head.
Lilly Singh felt to me was leaning towards the pussy power alpha female:

Unneeded appeal to "girl love" and generalizing the behavior of a few idiots to the whole male population are sometimes signs that bitterness has crept in and mental radicalization has taken place.
That's when an otherwise top-notch alpha female becomes a darker, "pussy power" alpha female.

10. The Abrasive (Fake) Alpha

Finally, a special note goes to the "fake" alpha women.

These are women who yell, subdue, and aggress.

They are mostly value-taking aggressive women, and they often struggle to remain at the top because of their uncalibrated and largely poor social skills.

Similar to the histrionic woman, behind a facade of confidence and determination they over-extend and crash and burn in a fiery ball of fury, fire, and smoke.

Sometimes these women are straight-up *sociopaths*. Women in sex professions such as hookers and strippers tend to grow rough around the edges and end up *looking* like alphas, but not always high-quality ones.
They seem strong and hard-driving, but their flare-ups make their lives more difficult than they should be -both for them and for the people who share their lives with them-.

Tyra Banks had a famous Fake Alpha Female moment:

This is *obviously* not submissive and it's clear she's the leader of the pack. But it's not a "high-quality alpha female leader".
It's out of control, and abusively aggressive.
Most high-quality, emotionally stable people would frown upon disapproval.
Top-quality (female) leaders don't behave like that unless there is a *real* reason or an emergency.

Signs of Alpha Females

Female expressions of power are often different than male expressions of power.

It often ends up being more indirect and subdued.
And also the signs you need to watch for more are more indirect and subdued.
Here are some of them:

1. Other Women Point at Her

When they are standing in a group, you will notice that most other women turn towards one particular woman with their bodies or their feet.
That woman is often standing in the center, and she is the alpha female of the group.

Whenever there is a lull in the conversation or when people are not sure what to do, the other women will look at the alpha female.
See here an example from Mad Men (girl in blue who says “Lovely to see you”):

https://ody.sh/N7hOP7ou5y?t=277

2. Other Women Follow Her Cues

Humans are *social animals*, both men and women. But women, even more so.
This means that women are very attuned to what the group says and does and, most of all, to what the alpha female says and does.

3. Punishments and Rewards

The alpha female makes the rules within the group. And while most women would not say anything or simply let a mistake slip, they are not afraid of stepping in.

Example from the now-classic Mean Girls:

4. Alphas Can Socially Destroy Other Women

In the case of really powerful alpha females, they can single-handedly decide on who’s in or who’s out, who gets a nice social boost, or who gets the boot.

For fairness to Tyra, here is another example where she cracks the whip in an extremely effective way -albeit possibly too ruthlessly-:

(some videos are kept in our programs)

5. When The Alpha Leaves, There is a Big Shift

Here is an interesting social phenomenon and a good way to understand the social standing of the alpha in the group.

When a group member leaves, little changes.
But when the alpha leaves, the group dynamics change abruptly.

If the group loved the alpha female and she was the glue of the group, there will be a sudden drop in social interactions and everyone will be looking around for the new leader.

But if the group hated the alpha, there will be an increase in smiles and social interactions. It’s as if the group was finally liberated of a tyrant and now they can finally be themselves.

5. Hatred & Drama Among Two Women

Alphas can co-exist… Barely.

You might see instances of two women at the top who start a partnership and rule together.
Or you can see a big flare-up where they contend for the top spot and both hate each other.

However, the final alpha female is always the one who stays. And the one who leaves has just relinquished the top spot to the real alpha female.

Samantha Jones should be on any list of alpha females :).

6. They take charge when you approach one of her hens

God this one has annoyed the hell out of me more than a few times.

You approach a shy girl in her group because you like her… But guess who replies? The meddling alpha female of the group of course.

I specifically remember once when I was talking to a shy cute girl and she liked me. And I liked her too.
And then the alpha female stepped in asking me questions and interrupting our flow. In the beginning, I was confrontational with her hoping the shy girl could step up to "reclaim" me.

So I told the alpha female I was having a good conversation with her friend and if she didn't mind we would like to keep it that way, one-to-one.
But nope, she stayed there and the shy girl was too shy to step out of her alpha's long shadow.

So I tried to be more friendly towards her alphaness, but she would still monopolize the conversation and step on the poor shy girl's toes.

In the end, Miss Alpha did not "allow" her hen to exchange contacts.
Talking about beyond annoying alpha females :).

How Women-Express Power

We can't do a proper article on alpha females without first prefacing it with some female power theory.

Louann Brizendine, author of *The Female Brain* says that women in new situations will not look for pecking order like men do, but for connections.

Indeed, while men are more focused on top-down hierarchy, women tend to have a more social approach to power: they look for alliances.

Punishment and dominance are more subtle and happen more in terms of social inclusion or social exclusions (the "shunning game" is a typical female political game).
Indeed some authors said that while men have an "up and down" approach to power, women more often present an approach of "in or out".

Wide Variety of Alpha Females

There are a few different ways of being an alpha male.
But they are not too dissimilar.

There are far more ways to be an alpha female.
And they can all be very different.

This goes back to the different styles of dominance and the differences between genders.
A man can hardly use a female style of power and be considered an alpha male.

But a woman has more leeway.
She might use very feminine ways of wielding power and she'd be an alpha female.
Or she can use more typically masculine ways of wielding power. In that case, she would not be considered a feminine woman, but she'd still be an alpha female anyway.

The Role of Alpha Females

A good, strong group of women needs an alpha woman.

When there is no alpha there is no conductor. The players look around, waiting for someone to take the lead, but nobody steps up.
Group conversation is poor, stalls, or is hijacked by social burdens who shouldn't be leading in the first place.
But without a leader, there is little the group can do to regain its footing: it's at the mercy of the events -and of poor improvised conductors-.

The alpha female instead functions as the main conductor. She dictates the music (topics), the tempo, and the mood.
In difficult social situations, she will carry the day. If one of her girlfriends is in difficult waters, she will step in to socially rescue her. If someone interrupts, she will throw them off the bus.

If she is a bad alpha female, it will be a bad dance.
But if she is good, everyone gets to play and have fun.

Walking The Alpha Line

The alpha female is not an easy role.

It's more difficult than being an alpha male.

An alpha female has the tough job of "walking the line" between the more assertive and controlling male traits and the more typically reserved female ones.

If she goes too into the male traits, she can become gender deviant. And nobody would say so in the current political climate of PC, but the truth is that most people -and men- would condone and accept a man for being too aggressive.
But most people -and men- are much less likely to grant the same benefit to women.

In my opinion, this is one of the reasons why Hillary Clinton lost the election -or you can read her own excuses in *What Happened* if you prefer-. She went too much into the masculine.
It might not sound fair, but the reality could care less about what we think is fair and unfair.

Furthermore, if alpha females care about it, going too much on the male side lowers her sexual market value and comes at a cost in dating.

However, walking the line is not impossible.
Much respect and much spoils are to be earned for those women who venture and succeed.

SocialSelf Course Review: Is David Morin's Work Worth It?

Lucio Buffalmano · 7 December 2018 · Archived copy · Original

SocialSelf is a platform founded by David Morin to learn and improve social skills to make friends and enjoy a good social life.
Awkward to Awesome is one of the offered social skills courses where David Morin teaches socially struggling men and women how to be more socially confident and successful.

About the Authors: David Morin & Social Self

David Morin is the founder of SocialSelf, a platform dedicated to helping people improve their social skills and build meaningful connections.

He started SocialSelf out of a passion for making interpersonal psychology accessible and practical for everyday use.

Before founding SocialSelf, David had a successful venture and exit in Sweden, but realized that true fulfillment came from bonding with others, and helping others enhance their social lives.

The SocialSelf platform positions itself as a resource for men who are not naturally extroverted. So the approach is not the high energy typical of some other platform and courses like Charisma on Command's *Charisma University* or RSD's *Blueprint Reloaded*, but **a quieter approach that best fits introverts**.

Here are some tips from one of the courses we reviewed:

Don't Brag... Unless You're Trump

David Morin says that bragging is bad and doesn't work, but he also tackles some exceptions (and what might look like an exception).

For example, you might think otherwise by looking at popular people who brag (like Tony Robbins, for example). But they're not popular because of their bragging but *despite* it.

However, David Morin says it kinda works for Trump because he's on stage and there the rules change.

Indeed, those "friends" are likely to disappear soon when the popular braggart falls out of grace.

In general, we agree with Morin that bragging is not good.
However, there are ways to make bragging work:

- How to signal value
- How to brag effectively
- How to display value in dating

> How To Brag Without Bragging: The Covert Brag Technique

Group Conversation

There are videos of actual group conversations, with David's written comments on what was good and what was wrong.

I absolutely loved that part.

It also included videos of sharing food, and here is a good tip there:

- when you're eating, ask a question *before* you take a bite, so you don't create awkward silences while you eat

⍰⍰♂ Lucio's note: also consider not thinking of silences as awkward, but as natural lulls. Be comfortable with silences, and silence will be comfortable for all

How to Decrease Social Anxiety

To decrease social anxiety, focus on your speaking partne,r which will get you out of your mind and erase the fear of being negatively judged.

PROS

- **Real-life footage**

I never liked courses with people speaking in front of a camera. Especially not social skills courses, where people, in my opinion, should learn by watching real-life footage.

So when I saw that David Morin actually organized a gathering with real-life interactions to use for his course I thought that was pure genius.

I want to do the same one day.

- **Good basic information on social skills**

"From Awkward to Awesome" covers most of the basics of socialization with good information for social beginners.

- **Chance of asking questions**

Some social skill courses tell people to "write an email" if they have any questions or they *create a private group* where "alumni" can talk to each other.
With David's course instead, you can leave a comment right below the video to reach straight to the authors (albeit my comment didn't get a reply, but I was probably a bit of a special case :).

- **David Morin walked the talk**

David shares his story as an awkward person himself and not very socially talented.
That makes him a great teacher for the socially shy and the beginners who are looking to get a better grasp of the unwritten rules of socialization.

CONS

- **Some interactions were a bit at a superficial level**

Some of those interactions were a bit too surface-level and small-talk-ey for my taste.
That's a matter of personal opinion of course and maybe the fact they were filmed didn't help people to loosen up.

- **Skips the 'darker aspects of socialization'**

While on our website and courses we include topics such as manipulation, red flags, and dark triad strategies, David Morin and SocialSelf focus more on general social skills.

- **Less focused on social power dynamics**

Which may make it more challenging for typical nice guys to gain status and respect. Especially when moving within more competitive contexts.

SocialSelf vs. The Power Moves

Both frameworks sit under social skills, but they aim at different outcomes.

SocialSelf focuses on getting along, smoothing interactions, and making friends.
TPM, instead, focuses on using social skills strategically to move ahead, gain leverage, and shape outcomes.

Same arena, different game.
Read more about these two different approaches in:

- Social Skills vs. Power Skills

Or watch this video:

> **Lucio**: Social skills are about **communion**, fitting in, and being liked. Power skills are about **agency**, moving upward, and being respected and attractive

Socialization's 'Darker Side'

SocialSelf also approaches relationships from a place of honesty and genuineness, something we appreciate.

Where we depart, is that we believe that knowledge and mastery of the 'darker' side is still necessary to lead a successful and quality life. And this remains true, and it's probably even truer, for men who want to *avoid* manipulation and be instead 'honorable men', an approach we also champion and prefer.

We also develop traits like power intelligence and skills like strategic thinking that apply not only to socialization, but to achieving goals in general.

Social Self	TPM (Power-Aware Self)
Focus on social skills	Focus on power skills
Goal: Seek belonging	**Goal:** Seek agentic goals (ie, status, influence, and attraction)
Lifestyle: Social	**Lifestyle**: Able to 'walk alone' if preferred
Risk: Staying too nice, overlooked, and failing to attract or maintain attraction	**Risk**: Staying too calculative, overly focused on power dynamics
Upsides: Socially skilled, enjoy a happy social life	**Upsides**: Gain confidence, job promotions, and date around

What's right for you?
Answer these questions:

- **Beginner and not interested in getting ahead?** Go with SocialSelf.
  David Morin and his team are great. If you then seek more 'results', consider TPM.
- **Ambitious smart man with enough social skills?** Consider TPM to achieve goals

If you're ambitious but still poor at social skills, check this article:

- Should beginners start with power or social skills?

Review

SocialSelf articles and courses are solid, and David Morin is a good teacher who knows what it takes to go from wallflower to enjoying a fulfilling social life.

Specifically, *Awkward to Awesome* is unlike anything I have seen since it's real-life footage of an event.

The videos cover most of the basics when it comes to conversations and social skills, including storytelling, social status, introducing yourself, etc., etc.

David Morin also seems a genuine guy, which is not always the case with people in the social, dating, and self-help industry.

Morin's approach to social skills is quite different from The Power Moves.
We focus more on gaining confidence, status, respect, and attraction.

David Morin and SocialSelf focus more on a happy and fulfilling social life.
Less 'as a leader' or 'alpha male', and more of a happy group of people who like each other.

I think both approaches are valid and they must not be mutually exclusive, but can be complementary.

What Are Frenemies? How to Deal with Them and Thrive

What Are Frenemies

A frenemy is someone you know and interact with, but who has not your best interest in mind.

But deep down, something feels “off”.
Often, it’s because they are jealous, envious, or overly competitive.

A frenemy can be a colleague, someone you may call a friend or, sadly, even a family member.

More manipulative frenemies maintain appearances and may pretend to be warm and supportive.
If they’re good, they may succeed in hiding their uglier feelings of resentment, envy, jealousy, and anger.
So they may fly under the radar for quite some time.

But even if successful, they never want the best for you.
Frenemies are sad when you win.
And they are happy when you lose –schadenfreude-.

Sadly, frenemies are so common that they may as well be the norm rather than the exceptions.

Signs of Frenemies

Here are typical signs of frenemies:

1. Jealous of your achievements
2. They find underhanded ways to hurt you
3. They talk behind your back
4. They don't like your status updates
5. Lots of questions without (good) advice
6. Passive aggressive sabotaging
7. Nice words with incongruent body language

How to Deal With Frenemies

Here are a few ways to deal with frenemies.
Remembering that frenemies are often suffering a hurt ego, focus first and foremost on the N.1 solution here:

1. Make Them Friends (Not Frenemies)

Surprised to see one as the first item?

Well, let me remind you of two things:

1. More friends mean more power
2. Frenemies are often frenemies because of crushed ego

Sometimes people become frenemies because they don't feel like they can access your high value.

These frenemies are the like the fox in Fedro's fable: the fox says the grapes are not good, but it's only because he can't reach them.
But lower those grapes for the fox and he'll immediately love them.

Example: Bring Along, Instead of Bragging

Here is a real-life example for you:

Imagine a friend of yours gets rich and brags about how cool it is to drive Ferrari, eat caviar, and bang bitties.
Then he asks you "and how are you doing man?".
How would you feel?
Maybe you'd turn a bit into a frenemy.

Now imagine this other scenario: a friend of yours gets rich.
And he invites you to see his Ferrari. Then he takes you for a ride… And then lets you drive it! Now a smile creeps up on your face, it's the first time you drive a powerful sports car, and all thanks to your friend!
Then you two go out, and since he's just become a millionaire he pays for your dinner… And then invites you to a nightclub full of hot pieces of asses. All on his dime for old times' sake.

I bet you're not so likely to turn into a frenemy now, are you?
On the contrary, you are probably extremely thankful. He is your new hero!

What's the difference?
The difference is that the second guy made his value accessible to the friend. **And when you build people up, friends don't turn into frenemies**.

Now you might not want to let everyone drive your car and pay for dinners out to everyone. And indeed you

shouldn't.
But there is a simpler way: be friendly and raise people's status. As a matter of fact, to avoid jealousy, **the better you become, the more warm and friendly you should become**.

And once you start showing a welcoming side of your character and raising the social status of the people around you, you will see that most of the frenemies will U-turn.

But, of course, not all frenemies can be converted.

Some are just too spiteful, angry, and vengeful. Some of the hungriest and most driven folks don't see you as "above them" and any overtures will only make them feel worse.
"who does he think he is", they will think when you offer to share your wins.

Here is how to deal with the more difficult ones:

2. Don't tell them directly they're "bad friends"

Unless it's a spouse, a family member, or a proven good friend who mysteriously changed, don't confront them directly.
Direct talk is helpful *sometimes*, but counterproductive most of the time.

What will likely happen is this: they will deny their games and jealousy and they will resent you even more.

3. Don't tell them you're not friends anymore

Some guides online recommend you officialize the ending of your friendship.
I can't think of anything more stupid to do.
Officializing the end of your friendship is akin to officializing the beginning of a new relationship: that of an enemy.

If you can avoid being friends, then end the friendship with a good old fading:

4. Pretend you didn't notice their maneuvers

If you can't fade them and if their underhanded maneuvers are not damaging, pretend you don't notice their snarky remarks and underhanded tactics.

The feeling that they can't get to you is poison to them.

5. Ostracize them from your social group

The goal here is to:

1. Let everyone else realize what people they are
2. Not letting the frenemy know you're ostracizing them

Frenemies are full of hatred and jealousy, it won't take them long for people to notice.
Your job is to make that process faster and smoother: you want everyone to think badly of the frenemy and highly of you.

To do that, you will keep being warm to everyone, frenemy included. As a matter of fact, increase your charm and charisma so that everyone can notice the huge difference between you two -ie, a high-value woman or man VS a spiteful one-.
Take advantage of all the occasions in which they will over-extend themselves with their envious remarks to highlight their game for everyone -read how to deal with an underminer on how to do just that-.

6. Use them for motivation

If you have been stung by a frenemy's backstabbing or snide you know it can be quite upsetting. Use that emotional surcharge to move ahead in life.
Once you'll be far ahead, then you'll only have to do the psychological work on your side to forget them.

> **The best revenge is a runaway success**

7. Play the game

Feed them slightly negative news not to make them too jealous while you build your political power and move ahead in life.

When you're ready to move forward and get rid of them, it will be swift and final.

Also read:

- **How to outplay a manipulator**

8. Cut them off (fade them)

This is the most important step.

The *APA Handbook* on relationships says that friends are healthy.
UNLESS they're bad friends.
Poor friends and toxic people are UN-healhty.

Keep this in mind: the poison that frenemies bring into your life makes you worse off.

You don't need that.

However, we still recommend being strategic.

Don't cut them off abruptly or that may turn them into enemies.
Instead, fade them.

Fading someone means slowly but surely disappearing from their lives.

It works like this:

- Pick less and less of their calls
- Answer late to their texts. If they reply quickly, answer at an hour when they aren't likely to be texted back.
- Say that yes, you should catch up eventually… you're just so busy these days and traveling often.
- When you meet, tell them you can only meet at X time (time that works for you) for X amount of time (no more than one hour) and at X place (a place which is convenient for you).

Then rinse and repeat until they fade out of your life.

If You're The Frenemy

Dear readers,

To become the best possible people we can be, we need to face reality.
And reality says that we all have a dark side of bad feelings, repressed emotions, and secrets we would rather not share.

But worry not: we all have it.

Some of us have a bit more, and we might even be born with it. According to psychoanalyst Melanie Klein certain people are prone to feel envious.
She recognized it in babies as babies who showed a greedy attitude in hogging their mothers and resenting their fathers and siblings.

I can't go back that far with my memory, but I wouldn't be surprised if I was such a baby.
But here is the good news: we can all overcome it. I am in the process of stamping out any frenemy feelings from myself.

Here is how:

- Develop an antifragile ego
- Develop a growth mindset
- Own your dark side
- Remind yourself that successful friend make you more successful
- Develop your own goals, chase relentlessly and all else will matter less

And here are a few more techniques that Greene recommends in The Laws of Human Nature:

- Get closer -and you'll realize it's just people with nothing special-
- Compare yourself with those who are lower than you as well
- Turn envy into a desire for emulation
- Admire high achievements as a sign of human potential

When Frenemies Are Your Family

You would hope that frenemies are limited to people from your outer circle, right?

Well, in an ideal world, there would be no frenemies at all.

But of course, you know that we don't live in an ideal world. And sometimes our frenemies are the people who can hurt us the most: our own family members.

This deserves its own section because in some cases family frenemies can really scar people psychologically and for life.

When the frenemy is a brother

Evolutionary psychology tells us that among kin there is a natural, non-written battle as to who's getting more resources from their parents.

Sometimes that means pleasing their parents more, getting higher grades in school, or, of course, trying to paint the other brother(s) and sister(s) as unworthy.

Many of these relations normalize once you are an adult, once you are out of the family nest or once either of you stops depending on your parents' resources and approval -weaning off approval takes longer, and sometimes a whole life is not enough-.

The best way to address it is to first become an adult yourself.
Then helping your kin get closer to your parents, take a step back and act very warm and loving with your brothers and sisters.

When the frenemy is a father

It's a sad reality of life that in some rare cases, a frenemy can be a parent.

Most of the time it happens to same-gender children.

For some fathers, it's the fear of losing the "lion's position in the house".
If you are the child, you can make it easier on your father by showing respect and keeping him in the top dog position. Even *nominally* keeping him there is often enough.

Some other times the frenemy relationship with a father happens because he doesn't see in you the traits that are important to him and/or he doesn't see himself in you.
You see, mothers *know* that you are their child. But when a father sees nothing of himself in you, a nasty process of emotional rejection can take place.

You should never try to appease your father as that would mean living a life that is not true to you.
And you should not display the opposite but actually equivalent reaction, such as trying to prove him wrong by doing the exact opposite of what he wants.

What you can do is try to explain the dynamic of what's happening to him and that you love him but that he is ruining your relationship with that behavior. You love and have your own way of living life.
Wouldn't it be wonderful if he could accept you as you are, because you love him just the way he is?

Alternatively, you could do therapy with him.

It works with some fathers.
With some, it doesn't and they'd never join a therapy with you. You have done your best.

When the frenemy is a mother

Having a frenemy relationship with a father is terrible.
But with a mother, it's even worse. The impact they can have on the psyche of their children is disastrous.

Mothers sometimes fear losing the position of queen of the house. They can be especially jealous of the father/daughter relationship.
She will try to put you down, criticize you, and drive a wedge between you and your father.

In some other cases, and the two often overlap, the mother can resent the youth and opportunities their daughter is enjoying.

For example, if the daughter is traveling and enjoying an easy life, you can recognize a frenemy mother by the comment she makes on you "party all the time like a floozy".
If you have a rich husband she might say that you "go through life squandering other people's money" and "what are you going to do if he leaves you?"

In some cases, mothers will flirt with their daughters' boyfriends and in extreme cases sleep with them or, it happened to, make out with them in front of their daughters.

These are usually highly narcissistic mothers.
In case it's not full-blown -narcissism is on a scale-, you can talk to her or do therapy.
But if it's full-blown narcissism, there is usually no changing it.

The work you must do here is on your side, and it's mental.
You must first understand the impact it's had and it's having on you. Then work on yourself to make yourself independent of your mother's unhealthy effects.
Once you are independent, you can resume the relationship.
But if you still get nothing good from it and only pain and abuse, you can consider cutting contact forever.

If you are in this position I can recommend the wonderful book *Will I Ever Be Good Enough*.

Here is an example of a narcissistic mother who is more concerned about her appearance than her own daughter's

pregnancy:

You can notice her reaction: the reaction of a daughter who is still dependent on her approval but cannot get it.

The Psychology of Frenemies

Frenemies are common because it's human nature.

We are at the same time both *social animals* and egoistical, self-serving machines.

Our friends, often, are both allies *and* competitors (David Buss, 2019)
When we look at ourselves we don't do so objectively or by comparing ourselves to our previous selves. But we look at ourselves *in comparison* with others.

That means that when a friend of ours is going places and doing amazing things, on one side he is doing well for himself.
But from our subjective point of view, he is also making us feel bad. His successes are a constant reminder that "we are not OK".

In a way, **the phenomenon of frenemies is a consequence of ego-protection**.

A more dangerous twist that frenemies can take is not to look within themselves at all, but to blame the object of their frustrations. This is how many hate groups feed themselves.

The Sociology of Frenemies

The success of our friends have very real consequences for our lives.

Just imagine this situation: you are making 50k a year, the most in your social circle. Men think you're very good at your job, women want you and you feel like a big shot.
Then more and more people start getting 80k-a-year jobs.

And one of them lands a 120k promotion with a top employer. He's on fire and it looks like he might one day lead that company.

In theory, that's good for you because they can help you secure future jobs and you know that options are power. But they are also making you comparatively worse in your group. People don't look up to you anymore, they don't come to you for career and life advice and women don't want you nearly as much.

See where I'm going?
Frenemies are the norm because the success of our friends can make us worst off. Their successes are pushing us down in the social rankings.

Note: saying it's normal it's NOT the same as saying you shouldn't do something about your frenemy's feelings. As a matter of fact, you should do your darn best to rid yourself of jealousy and freudenschade. They are ugly feelings and they poison you.

The Closeness Rule

People, usually, do not develop envy and jealousy for people who are either too far up or too lowly beneath.
If a guy is a first-level manager at his company, he doesn't usually develop frenemy feelings towards the CEO or Jack the door guard.

Why is that so?
Well, to begin with, from a social point of view, the people in our social circle are usually the ones who are around the same level.

Similarly, geography plays a role because far away people are not in our social circle. We don't feel in competition with someone who is doing our exact same job but at the other end of the world (unless you're competing in the digital space *maybe*).

And from a psychological point of view, people compare themselves with people they know and people who are in the same situations: those are the guys you can beat and those are the guys who can beat you.
Similar people are our competition, not the people far up or far down. And similar people end up being our psychological yardstick to reward us if we are beating them, or to punish us if they are beating us.

In a nutshell: **frenemies only develop with people who are near us**, both from a geographical point of view and from a "station of life" point of view.

Frenemies change over time

As a consequence of the closeness rules, it derives that frenemy is not a constant.

If you are going through a rough patch in life and a friend of yours is going strong he won't see you as competition anymore and you'll drop off his Freudenschade radar.

That guy won't be a frenemy… Until you get back on your feet and go up to his level.
Or until he's on his knees and comes back down to your level.

That creates an interesting phenomenon.
You might have a mentor one day, or some high-flying friends. They seem nice and kind to you, albeit they baby you just that little bit.
But then you start getting better and better… Until you start approaching their level. And maybe threatening to surpass it.
And then, you can either have an open enemy.. Or a frenemy.

That's why Greene in *The 48 Laws of Power* says "never outshine the master". Only outshine him when you don't need him anymore.

SUMMARY

Frenemies are a normal part of life because it's a normal reaction to who we are as humans.

If you are a frenemy, your task is to work on yourself to develop your mental side. That way you will become a better -and stronger- human being.

If people around you are frenemies, try to make them friends if you can. If you cannot, cut them out of your life. And if you cannot cut them out your task is to neutralize them as much as possible until you can remove them from your life or outgrow them.

Full Summary

About the Author: Joe Dispenza has no Wikipedia page, but we know he is a chiropractor, the author of several books on meditation and self-healing, and somewhat of a self-help guru.

Introduction

The central idea behind "*You Are The Placebo*" is that, since Placebos do work by affecting our minds, we can learn to act on our own bodies the same way a placebo works.

Crazy Placebo Stories

Much of the book, and especially the beginning, is about crazy stories of placebo effects, both positive and negative effects.

For example, a man diagnosed with cancer and told he was going to live only a few more dies, soon died.
But the autopsy revealed that it was not cancer and neither pneumonia he had contracted that killed him.
Basically, the man died because everyone around thought he was going to die.

Another example is a group of elderly who improved their health by immersing themselves in the atmosphere of

the years when they were young.
Simply thinking and feeling young, makes them younger.

My Note: Good stories, but not statistics
Stories are great and they were all impressive. However, stories are also misleading -read "*How to Lie With Statistics*"-.
I would have preferred some general statistics as well.

Why Your Mind Can Change Your Body

Joe Dispenza says that if you can envision a future with full conviction, you can change the expression of your genes, reorganize your cells and change and heal yourself.

The author also mentions quantum physics and, since matter and mind are not separate, it's scientific that you can change matter with your thoughts.

You Are The Placebo Meditation

Your meditation should last between 45 minutes and one hour.

If you need to do something later, set an alarm 10 minutes before you need to get going so you don't end abruptly. The timer will also help you to get rid of the time distraction: once you set the time, forget about both the time and your task list.

To change your mind, your meditative experience must be greater than the past experiences that are conditioning you.
You must feel inspired, invincible, and get goosebumps.
It's more important to believe that your prayers have been answered than to do it every day.

These are the meditation steps:

1. **Induction** for 10 to 15 mins (relax and get into an alpha state, focus on "space" instead of things, don't visualize but try to sense, for example where your nose is)
2. **Stay in the present moment** for 10 to 15 mins (disconnect from your body, from past and future to go where all possibilities exist)
3. **Change your beliefs** for 20 to 30 mins (make new decisions with such intensity that their power is great than your neuro-conditioning, "your task is to move into your new state of being" and you should get up that you feel completely different)

If it sounds fuzzy, well, the book's explanation was fuzzy for me.
Especially for the third part, it wasn't very clear.

If you're not experienced Dispenza recommends you do the first part for a week, then one and two for a second week, and then all together in the third week.

- The Power of Now

You Are The Placebo Criticism

I haven't found much on the web regarding Joe Dispenza.
This website is highly disparaging but offers little proof.

David Gorsky, Ph.D., suggests that using a placebo without medicine to alter physiology can be dangerous.
He says that subjective improvement sometimes stands in the way of objective non-improvement, which is idiotic in cases in which we have good medicine to treat the issue.
That makes a lot of sense.
He says that a placebo without lying to the patient has been ineffective so far.

Of course, that might not necessarily mean it will stay the same, or that it cannot work in a few cases. And if it can work in a few cases, maybe we can increase the chances that it will.

That's basically the idea behind You Are the Placebo.

My opinion is that the science behind "*You Are The Placebo*" is spotty.
Dispenza repeats "neurons that fire together wire together", which is a *well-known neuro-phenomenon*, but his interpretation of quantum mechanics to self-healing seemed much less scientific to me.

But hey, one doesn't necessarily need science to be helpful.
It's possible that something is helpful but science still needs to catch up with scientific measurements.

BUT… At least we need proof.
This leads me to the second issue with this book.

No Proof for Biggest Statements

The author tells the story of a woman who could see with her eyes closed.

She would wave back at the author with her eyes closed and eventually also be able to see behind her, at 360 degrees, with her eyes closed.

It actually made me angry that the author didn't record it and/or offer any proof for it: if he is onto something so life-changing it's his duty to show proof of it so that more people can get that kind of help.

The fact that there was no proof either for that story and for many other stories in the book is bound to arouse suspicion.

And it's not about being suspicious, it's about a critical approach that it's our duty to keep as readers.

Good Stories But Less Statistics

The stories are great and very telling.
Yet, stories can be misleading. I would have preferred some statistics on the effects of placebo on top of the stories.

Please note, this criticism is *not* to say that Dispenza or "*You Are The Placebo*" do not contain positive information. *They do*.
But it's just no more, and no more scientific, than all the rest of the "positive thinking crowd" has been saying for a long time now.

The Positive of You Are The Placebo In One Video

Look at this video and you will realize why I am ambivalent about this book.

Some pompous sounding reference, a great gift of gab but… Little science behind it.

Yet, what he says *can be* very helpful.

Yet, what he says about obsessing over the negatives and the past issues is true. *The habits of our mind* do make who we are. And we should all take care of seeding and harvesting positive thoughts.
As usual, take the good out of it, and drop the bad… And possibly don't throw too much money into it :).

Real-Life Applications

CONS

Sometimes Feels Like an Ad
At times *You Are The Placebo* feels like an ad for the author's seminars. And a bit of an upsell. In the end, the author says that you can either do your own tape for meditations or… You can buy his recordings.
To be fair the author also explains how to do your own tape. But since few are going to record their own instructions, it also works as a neat sales technique.

No Science
The "science" behind this book feels very "woo-woo" and there is a glaring lack of proof.

PROS

Positive Advice on Working on Our Thoughts
The information on meditation and working on our thoughts can be very empowering. Positive Psychology, as well as cognitive behavioral therapy, has proven that changing the way we think does change how we feel.

Review

You Are The Place is based on positive thinking and the law of attraction.

Albeit all those books claims some sort of (woo-woo sounding) science behind them, You Are The Placebo aspires to more science since Dispenza prefaces his name with a “Dr.”, and it indeed offers some more real-life examples, some experiments, and factual stories.

However, more science and stories did *not* equate to more proof, and You Are The Placebo offered very little to quell the doubts of the most critical thinkers.

Placebo works, meditation, and self-healing are extremely interesting topics that I want to address deeper. However, I didn’t find You Are The Placebo to be a good source for a good, dispassionate discussion on either topic.

I would give it 5 stars for the positive change it can make in people’s lives. But I can’t give it more than three because **big claims require big proofs and I haven’t seen many of those**.

Full Summary

About the Author:
Erik von Markovik is a Canadian “pick-up artist”.

Neil Strauss’ book “*The Game*” says Erik worked as a magician before making a name for himself in the first online forum boards dedicated to “pick up”.

Erik von Markovik then started coaching and selling seminars to teach men how to meet and attract women, and he reached wider notoriety when Neil Strauss’ book “The Game” first came out.

Over the years, Mystery has faded somewhat into the background. Some say he lost control of his company after a legal battle, more entrepreneurial folks took over the industry -see “*RSD* by Tyler, and more natural and effective approaches took over.

Introduction

Erik von Markovik, AKA “Mystery”, says that the purpose of life is to survive and replicate.
To survive people learn martial arts (the art of war). To replicate, they can learn Venusian arts (the art of love).

The mystery method is divided into three phases with three phases within each. For a total of 9 steps.

The Mystery Method 1st Phase: Attraction

A1: Opening

Approach the group and make yourself the center of attention
Here are a few key characteristics of this phase:

- **Peacocking**: using flashy and attention-grabbing clothes and features to attract
- **3-second rule**: approach within 3 seconds of seeing someone you like or you talk yourself out of it and/or lose your chance
- **Canned opener**: the PUA of the days relied heavily on canned openers and opinion openers (ie.: asking questions about weird stuff)
- **False time constraint**: say that you can only stay for a bit to avoid coming across as clingy and/or like you’re going to hound them
- **Neg**: a backhanded compliment or a light insult to lower your target’s self-esteem and show that you are not impressed
- **Body rocking**: bob back and forth to give people the idea that you might be leaving soon (my note: careful how you do it, it can look silly if poorly executed)

Also, read:

> Cold Approach VS Social Circle (VS Tinder): Strategies

A2: Female-to-Male Interest

Create attraction with one of the following techniques:

- **Demonstrate high value**: signal high value to show you're a high-value man, through:
  - stories
  - magic
  - routines
  - humor
- **Cocky funny**: the style of David DeAngelo
- **AMOGing**: the techniques to deal with an alpha male if he tries to cockblock you, or if he tries to undermine you
- **Push and pull:** do a compliment, then take it away. Show interest, then take that interest away

Also, see:

- Types of cockblockers (and how to deal with each)
- Sexual market value
- Sexual market value hacks

A3: Male-to-Female Interest

1. **Confirm interest**: If all goes well, she will show signs of interest. Confirm by reading the body language that she interested in you
2. **Qualify her**: Once she shows interest in you, you want to qualify her and
   1. **Go beyond looks**: show that you appreciate her for something beyond her looks

Also, see:

- The female signs of interest

Mystery Method 2nd Phase: Comfort

The goal of comfort is to make her comfortable with your presence.
You want to start the comfort phase when you are alone with her.

C1 – build rapport

In this phase, you will be talking about you two and about life.
You want to create rapport and a sense of common understanding.

The Mystery Method, again, focuses on a lot of routines to use such as:

- The Cube: it's a story you tell her, and then you read her personality based on the answers she gives
- Esp Routine: make her guess a number between 1 and 4, and tell her it was "3"

Also, read:

- How to bond and connect

C2 – build an emotional and physical connection

The goal of this phase is to double down on the emotional connection and start getting more physical by touching her more

1. **Touch her more**: you want her to start being comfortable with your touches
2. **Calibrate your touches**: if she likes it, touch more. If she pulls back, stop and talk more before going for the touch again

The early pick-up artists used to have problems with "how to kiss girls".
Eventually, Neil Strauss, AKA by his nickname "Style", came up with a routine for that one too:

- Evolution phase-shift routine: tell a story of how animals start having sex, and kiss her as you tell the story starting from the forearm to the neck till you reach her lips (my note: this always sounded extremely corny and contrived to me)

Also, read:

- 4 ways men touch women wrong

C3- Intimacy

To start intimacy, you must be in a sexual location, and you start the process of intimacy by first making out.

My Note: You might even skip making out
Just like *Alpha Male Strategies* says, making out might not be necessary for sex.

The Mystery Method's 3rd phase: Seduction

S1 – Foreplay

Before you begin with the heavier sexual stuff, Mystery reminds us that you must have built enough comfort.

The less comfort you have, the more last-minute resistance (LMR) you will face.
And if she is very uncomfortable with you, you can also get a full-out rejection.

S2 – LMR

Mystery dedicates one whole phase of his Mystery Method to dealing with LMRs.

The methods include:

- **Freezing her out**: ignore her and pretend you don't care anymore about her. The idea is to have her come to you once you stop pursuing her.
- **False takeaway**: you pretend you are about to leave to make her come after you

Here is an example of a false takeaway:

Personally, I'm not a big fan of the "freeze her out".
And the false takeaway puts the whole seduction on the line. It can work, but it's too risky considering that you are so close to the finish line.

Read here for more effective techniques for LMR:

> 10 Ways to Overcome Any Last Minute Resistance

S3 – Sex

This is the last step, and what the whole mystery method is built around: reaching sex.
However, the better you make that experience, the more likely it is that the woman will want to see you again.

Criticism

There is much good advice in *The Mystery Method*.
It was also a forerunner and the first modern book to bring Machiavellian strategic thinking into seduction.

I wouldn't be surprised if Mystery is very effective at getting groups' attention. And that may also lead to meeting and picking up women in those groups.

Mystery is also generally right that many attractive women are not alone *in night venues*, so **Mystery's method of social status-seeking qualifies as good advanced game, and it's a valid approach for clubs.**

But there are important drawbacks.
Let's start:

Mystery Was NOT Effective: 8h Rule & Average Results

There, I said.

Now let's explain it.
Mystery was a forerunner of the game. He was the best… In the crowd, he was in.

But get some dating experience, and learn to read between the lines… And you'll see the cracks.

Here is what you can glean from *The Game*:

1. **Mystery said you need 8 hours to sleep with a woman, but successful players know it's NOT TRUE**. Anything faster is "a fluke", said Mystery, while doing *club* game, which is often even faster
2. **Mystery seduced few women** at his "Project Hollywood" *despite going out every night*. The quality is also debatable (you can find Katya's pictures)
3. **Mystery lost his girl to "Herbal".** Katya played him, made *him* fall in love, lived free at his place, then cheated on him *with his friend*
4. **Mystery was collecting 'go-nowhere numbers'**. He declared that "phone numbers are wood" at 'Project Hollywood'. Why? Obviously, because his numbers weren't going anywhere

♂Lucio's Take: **98% of my seductions wrapped up within 3 hours**

Lucio:
While Mystery proposes longer courtships, even calling faster seductions 'flukes', my experience has been the opposite.

Women can feel bonded, safe, and attracted within 1h *if you do it well.*

Consider that I'm also less attractive than Mystery. And **I did it *repeatedly*** with attractive young women.

Edit:
Mystery has been doing the podcast rounds in 2024.
In one of them a young guy calls on a podcast, says he's got the skills down and he can get women back to his place within an hour. Mystery starts saying "That's now how it's done". Guy replies "I've done that repeatedly".
Hilarious.

Mystery Method Is Not The Most Effective Dating Approach

Good systems do two things:

1. Simplify a complex world
2. Provide practical guidance to achieve results

While Mystery method was valid for a first attempt at codifying succession, it may not have stood the test of time.

Indirect -& Slow- Game As Default Approach

The whole Mystery Method is based on games and hiding interests.

There is little room for being direct or simply liking each other and/or just having strong sexual chemistry.

Acting on that chemistry or verbalizing your liking for someone when it's obvious you both like each other can be much more powerful to move faster.

Not For Introverts: Groups & Night Game Focus

Mystery is all about groups.

I was shocked to hear a recent podcast, with a 50-year-old Mystery, talking about the "myth" of opening a girl by herself.

Here is this supposed "master", calling a "myth" what I have done many times over.

And, even if you haven't done it, it's just logical:

What's stopping you from opening and seducing a girl 1:1, rather than via groups?
If anything, it's gonna be faster!

Mystery, relying so much on "opening and merging groups", is also mostly about night venues.
He says that for the first 5 minutes, he talks all the time, even rambling.

By definition, it tends to be a highly social, high-energy type of game.

And that means that the **Mystery method is not good for introverts or men who don't like night venues**.

To me, it's a HUGE limitation.
Also because many of the best women don't do bars and clubs.

Fails 1:1 Dating

I suspect that Mystery needs 8 hours to sleep with a girl because he goes for group attention first, rather than woman's seduction**.**

Mystery's approach of holding court works for first impressions *in social groups*. But that could be his issue in making women feel bonded 1:1.
Research on narcissism supports this: early charisma when holding court, but struggling 1:1 in intimate settings.

This is not to say you must drop 'group game'.
But it's to say that you don't necessarily need group game. And if you do, you're more effective switching to something different when you're 1:1 with a woman.

I mostly do 1:1 approaches and dates, for example.
And I can make most women open up fast, either over food only, or at a second venue for a smoothie/drink. Then invite home, and close.

Some So-So Techniques

Some concepts, in my opinion, are context-dependent.

For example "demonstrating higher value" through stories.
Can be great.

But with some women, it can be better to let them talk.

"Body rocking" can also easily make you look like somewhat of a weirdo with ADHD.

Negging is a great concept, but lower value

The neg per se a good idea, and it can work well.

I use it sometimes, too:

And see the full explanation here.

However, not to be used at all times as your baseline behavior.

The power dynamics of the neg is that **the neg only works when the man is lower value than the woman.**
The neg may help make up that difference. But it's much better to NOT be lower value in the first place.

I see where Mystery is coming from though: in clubs, attractive women almost always have more power than men.

But negging will backfire if she thinks you're a cool guy.

More Mystery Method Limitations

Skipping the pop-psychology takes on evolutionary psychology and focusing on practical techniques:

Some good concepts don't generalize to all contexts: you need calibration

Some ideas are good in principle or in some situations, but not good to adopt as your baseline behavior.

For example, being the center of attention at parties or in groups can work great sometimes.
It will certainly get you lots of, well, attention.

But attention does not equate to results.

Often it's best to be the silent guy who only focuses on the girl he likes.

Also read:

- **The myth of high-energy**

Mystery takes some good ideas to the extreme, where they turn unhelpful

Some concepts are great and were groundbreaking.

Like peacocking, for example.
Peacocking, as in "being seen" or standing out, is *great*.

But early Mystery has been known to take it too far to be effective with many high-quality women.

See an example of Mystery being too extreme:

> **Conan**: (shames Mystery for looking like a clown ⍰)

PROS

- **Helpful to beginners**: For its time, the Mystery Method might have been an eye-opener for many readers. And I suppose it can still be, for some
- **Good fit for party lovers**
- **Many valid concepts** of dating power dynamics, including:
  - Nudging her to show interest
  - Qualifying her
  - Qualifying her for something different than their looks
  - Rewarding her for good behavior
  - The time constraint

For all of them though, one should know when it's the right time to use them, and when it's better to go direct and honest.
For example, there is no point in telling women you'll leave soon if they are happy that you're there.

Review

The Mystery Method is an important book for pioneering a movement and introduced several valid concepts and techniques, but it's not the most effective tool for successful modern dating.

If you're anything like me, not particularly extroverted or clubbing-type, then Mystery Method won't suit your personality.

Tribe: Is Man's Nature Tribal, & Our Future Tribal? (Book Review)

Lucio Buffalmano · 10 December 2018 · Archived copy · Original

Tribe (2017) is *a manosphere and self-help book* in which author Sebastian Junger highlights the flaws of our modern civilization which, in his opinion, is making us more comfortable, but also unhappy and unfulfilled.

Bullet Summary

- We all have a need to belong and connect, but modern societies don't provide it and we are all sicker
- Egalitarian societies have lower levels of mental illness
- Crisis, including wars, bring people to a more tribal and collaborative mindset, and suicides and mental illnesses decrease
- Individualistic societies push people to act against the common good

Full Summary

About the Author: Sebastian Junger holds a bachelor of arts in cultural anthropology. He has worked as a journalist and, later, as an author of several books.

The Agricultural Revolution

Sebastian Junger says that the agricultural revolution first and the industrial revolution later changed two fundamental things in the way humans live:

1. Accumulation of personal property allowed people to act more individualistically
2. People live independently from any communal group

The author says that more individualistic choices end up being harmful to the community. And that today people can go a whole day -or a whole life- living among millions without ever feeling part of any community. Basically,

being fully alone while being among millions.

And while happiness cannot be measured, mental illnesses can. And modern societies have seen a huge rise in mental illnesses.

Money Bring More Mental Issues

Sebastian Junger says that countries with big income disparities are at a much higher risk of developing mood disorders.

People living in urban areas are also more likely to develop depression and women in the most affluent families were the most likely to experience depression.

A survey among lawyers also found that the most overworked and successful corporate lawyers were less happy than their more chilled public defendant counterparts.

Self-Determination for Happiness

Junger mentions the self-determination theory, which holds that to be happy humans need to feel three things:

1. Competent in what they do
2. Authentic in their life
3. Connected to others

These are intrinsic values that far outweigh extrinsic values such as money and social status. But our society focuses on extrinsic values, says Junger.

Tribal Society Enforced Sharing

The author says that tribal and ancient societies punished egocentric individuals who acted against the common good.

“Failure to share” was punished as severely as theft and murder, says the author. But modern society doesn’t have a similar check.
Today taking from others is simply called “fraud” and not sharing is the norm. He then compares modern executives who would be punished in hunter-gatherer societies.

My Note: The madness of tribal crowds and the rose-tinted glasses
In Tribe there is a description of an old pictorial image of a man struck by several arrows.
The author says that “execution was common in the past towards men who tried to control disproportionate resources”.
That image didn’t evoke in me any good feelings of groups caring for their members, but the actual brutal opposite. And it felt like Junger was wearing some truly distorting rose-tinted glasses. As Friederich Nietzche said, madness in crowds is the norm. And we shouldn’t be supporting that madness.

Initiation for Males Was a Good Thing

The author says that because our society doesn’t provide initiation for men anymore, men are seeking it in different forms.
They haze on each other, drive too fast, and act recklessly to show that they are ready to be men.

My Note: I don’t think initiation would cure all those ills
I think it’s simplistic to think that an initiation ritual would eliminate all risk-seeking behavior.

Tribe Book Criticism

I enjoyed the book, but there is much, much that I disagree with.

Are we supposed to miss war?

Sebastian Junger presents statistics and stories to show that people are closer during extremely difficult times such as war.

He quotes individuals who said they were all happier during wars and all closer and more united. I quote:

> I asked Amatasovic if people had ultimately been happier during the war. “We were the happiest” Amatasovic said. And she added “and we laughed more”.

I’ll be highly critical here, but this is the rhetoric and mindset of fascists.

Yes, maybe *Amatasovic* was happier.
And maybe she laughed more.

But what’s the point?

I’m sure the author didn’t mean that wars are good, but it sounded dangerous like putting rose-tinted glasses on some of the most atrocious times of human history.

As my grandmother said about WWII: “may those times never come again”.
I take more responsibility than my grandmother: it’s up to us to never make those times happen ever again.

“Back Then Was Better” Bias

To me, the whole book sounded a bit like the typical rose-tinted view of the past when “things were better”, which is a common bias of naive self-help.

Unfounded Conclusions

The author describes a scene from an old cave painting of possible execution.

And then talks about how foraging tribes punish males who tried to control a disproportionate share of the group resources.

I don't see how the author could make such a connection between the two, and I think it's simplistic to think that the group simply acts in the interest of all its members. It's more complex -and sometimes darker- than that.

Anti-Capitalist Sentiment

Junger says that the agricultural revolution allowed people to act more individualistic which, in turn, means acting against the common good.

I personally strongly reject that idea.
I don't think that acting individualistically necessarily means acting against the common good.
It's a complex topic, but capitalism can often -but now always!- harness individualistic pursuits to improve everyone's lives.

Seems to Encourage Violent Demonstrations

The author says:

> There are occasional demonstrations against economic disparities like the Occupy Wall Street protest of 2011. But they were generally peaceful and ineffective. The racial demonstrations (..) led to changes in part because they attained a level of violence that threatened a civil war

Again, the author seems to pitch tribalism and violence against other "tribes" as the way for a more just and fair society.
I disagree with that point of view.

Like Elliot Aronson says in *The Social Animal*, "*there will never be violence to end all violence and protests to end all injustices*".

Naive Idealism

I found some passages to be idealistically empty.

The author, for example, says that because foraging tribes need to share food for their own survival, they have adopted communal ways of living. When one man tries to take control of the group, other males will stop him. And that, he says is:

> Clearly an ancient and adaptive behavior that tends to keep groups together and equitably cared for

That is reminiscent of the "noble savage" of Rousseau, and to me, it's always sounded like a naive idealization.

I highly recommend two articles here.
The first is on naive self-help:

> Naive Self-Help: 10 Most Dangerous BS to Avoid

And the second that I especially recommend if you're attracted to this "tribe ethos" is this manifesto of personal empowerment:

> Enlightened Self-Interest: Making of The Ubermensch

PROS

I have been highly critical so far.

Yet, I am glad I have read Sebastian Junger's *Tribe*. And I learned a few more things.

- **I learned that it's overseas wars that psychologically harm soldiers the most**

Israelis fighting to defend their homeland -or supposed homeland- had low levels of PTSD. But Americans shipped overseas to fight wars they have no idea about, among troops that have little in common with each other, had higher levels of mental issues.

- **Great book to understand people's need to connect**

Tribe is also a great textbook to understand humans as social animals. To understand our need to connect and belong.

Review

Tribe is a good book that makes valid points about human nature, and particularly human nature. Where it fails from our point of view is in turning analysis into idelogical aspirations.

Junger sees men as part of a tribe with long-lasting traditions to adhere to, while **we see empowered men carving the life they prefer as *individuals*, being bigger than any tribe.**

I can agree with its central idea: that modern society is a trade-off. Yes, it does offer lots of comforts and a safer existence, but we pay the price with more mental issues and a lack of communal living and emotional connection. However, I *completely* disagree about the balance of that trade-off.

To me, the tradeoff is positive.
This is a society of freedom, there is something for everyone. Even for those who want more communal living.

And I also disagree with Junger's interpretation of the past.
Whenever he criticized modern society for undoing the past, I thought that was a great thing.

No more "initiation" for young men?
Great!
Who wanted to be "initiated" into a culture they didn't have any choice?

No more executions by a hundred arrows against those who did a mistake by "trying to get too much of the shared resources?"
Great!
No more crowds madness.

I suppose Sebastian Junger prefers collectivism somehow.
While I just don't see individualism as a necessarily bad thing. Especially when that individualism provides those individuals more freedom to live life however they please.

See:

> Enlightened Self-Interest: Making of The Ubermensch

In a way, "*Tribe*" echoed the manosphere approach to male tribalism and it reminded me of *The Rational Male* and, even more, of *The Way of Men* by Jack Donovan. "The way of men" for Donovan is to band together to defend (and attack) men from other tribes.

I find the "tribal" mentality backward, dangerous, and harmful to all.
It's not just a male thing, of course.
It's the same BS that we see in feminist books where the tribe is composed of women -see *Lean In* where Salzberg invokes the support of other women for the simple fact of being women-.
And to me, that's the opposite of what civilization, progress, and self-empowerment are about.

Self-empowerment is not about joining a gang and being "initiated", self-empowerment is about becoming your own man and deciding which groups you want to join -if any-.
Again, please read this foundational article on individualism.

I think there is much to learn from *Tribe* by Sebastian Junger. But I also think it can lead people astray on the wrong kind of idealism.

No, I don't think we need more tribalism.
We need *one* single tribe that embraces *not* all the people close to us, but *all* humanity and *all* forms of living.
As Robert Greene says in "*The Laws of Human Nature*", our only belonging is to the human race. Anything else is backward and way too dangerous.

Tribe Book Summary: Is Junger's Philosophy Right For Men?

Tribe by Sebastian Junger explains how our tribal instincts are making us all unhappier in our impersonal and individualistic modern societies. I find Tribe to be a great book to understand humans as social animals. But not nearly as good in its interpretation of the data and rose-tinted view of "tribes".

Lover, Provider & Friend: The Truth of Men's Sexual Roles

Lucio Buffalmano · 11 December 2018 · Archived copy · Original

Lovers, providers, and friends are the three main roles with which women classify the men who pursue them.

Most men date as providers.
But a sizable minority uses a "lover strategy" or a "friend strategy".

This article explains the '2 + 1′ main male sexual strategies', and that their success is largely dependent on sexual market value.
Let's start:

- SUMMARY

1. Lovers

Sex first, later we'll see
Lovers present themselves as sexually attractive men.
They showcase their experience and knowledge of women, their success with women (pre-selection), and, possibly, the promise of great fun between the bedsheets (Cashdan 1993).

Lover Category: An Explanation

From an evolutionary psychology point of view, men are around the middle in male parental investment (Trivers, 1972; Wright, 1994).

In a nutshell, that means that men don't just give out sperm, but they invest in their women, offspring, and intimate relationship.

The lover's strategy is to remove all the support and *only* give sperm.
Lovers avoid any investment because:

1. **They have good genes**: so they can avoid providing anything if they don't feel like
2. **Don't have resources to offer**: so they present themselves as lovers because they don't have other options
3. **Don't make their resources available**: they willingly avoid investing in any way, so they can be lovers (this can be an avoidant personality, a player, or a dating strategy)

The Rationale Behind The Lover Strategy

The appeal of the lover's sexual strategy is that, if executed well, it can lead to quick, "no strings attached" sex.

That makes sense: women indeed tend to move slower with boyfriend candidates.
When women want a boyfriend, they want that boyfriend to stick around. And to make him stick around, she might try to make him invest, chase, and wait for sex.
Those strategies can indeed increase the chances that he will stick around after sex -but I don't necessarily

recommend women that course of action because cool men don't like this game and it works mostly with lower-quality men-.

So if he removes himself from the provider and boyfriend candidate and if he is sexy and cool, then she might take him up for the fun of the sex -and, potentially, for the unconscious desire of getting his genes-.

Of course, there is no such thing as a strategy that always works best. It depends on the woman, on the situation, and on the guy.

Furthermore, not all lovers are good lovers. And we can divide between "low quality" and "high quality" lovers.

Low-Quality Lovers

Let's get back to that previous example from the Red Pill poster.

The mistake he does is in the generalization.
And generalizing that lover equals a high-SMV man.

But that couldn't be further from the truth.
As for anything, there are different levels at which a dating strategy can be implemented.

And albeit it's true that lovers *tend* to be more sexually experienced and socially skilled, that's a vast generalization.
And there are plenty of low-quality lovers out there.

The Movie The Pick-Up Artist from 1987 is an example of a low-ish quality type of lover.
The one who pursues women and *thinks* of himself as a lover, but who actually doesn't really get laid:

He runs around like a kid, acts like a creepy entertainer, and he fails to truly attract any woman he talks to

And you can still go much lower in the lovers' category.
In a way, a junkie who fucks another junkie woman is also a lover. He has nothing to give, cares more about his next hit than the woman, and he does not invest in any way (because he can't).

Needless to say, you don't want to be in this category.

High-Quality Lovers

High-quality lovers are high-value men.
They may even have plenty of resources, but either are not too willing to share them or don't even put them on the table.
Alternatively, they might not have resources but are very skilled, socially charming, and very attractive.

They put their good looks, game, and any other sexually attractive quality on display. And might actively disqualify themselves from the boyfriend's role.
But since they are overall high-quality men, women still like them.

There are plenty of examples of high-quality lovers and this is one of them:

(see SU for private videos)

Nothing Guarantees You to Always Win

A high-quality lover is a thing of beauty.

But of course, there is no silver bullet out there, and not all women will want to take up lovers on their offer.

A few women are adamant in asking for resources and/or investment. These can be super driven towards a relationship, women who have ridden enough penises and want to settle down as *gold diggers*, or *extremely* principled and religious women.

Some other women might be worried about their reputation and some others, of course, might simply not like the guy -subjectivity still plays a role, even when one is an objective high-value man-.

However, there are plenty of women who will take the lover's offer and enjoys a good life.

If you are interested in more resources:

- Psychology of womanizers

Drawbacks for The Lovers

Lovers tend to be very hit-and-miss.

If it works, it works fast.
If it backfires, there is no turning back.
That makes it a high-reward, high-risk strategy. And at times, in social circles where he has time and a reputation to take care of, a more prudent approach might serve him better.

Another risk is the after-sex: if it happened too quickly, he pushed too much, and/or if he is not good to bond and connecting with her, she might write him off as a one-night stand.

2. Providers

I haven't even seen your Red Corvette yet, but… I'm interested
If the lover is the man who gives sex and little more, the provider gives sex and *more*.
The provider is the man who is able and willing to invest.

What's "investment"?

Investment can be money, emotional support, help with their career, etc., etc.
For most guys, investment is the mix of all of them, and more, that comes with a relationship.
It includes time, emotional support, help, and, often, a commitment to exclusivity (exceptions apply, see below).

Basically, the provider is the typical guy in a relationship.

The Average Provider Guy (& The Exceptions)

The provider role is an often misunderstood role in the dating community.
Again, there are good reasons why.

It's because *most* providers are average guys with little of the exciting qualities of lovers and, as a matter of fact, few resources to share as well.

The provider role indeed is the main default role for most guys.
Probably around 70%-80% of men's main default role is a provider.

And of that 70%-80 % of men who go the provider route, 80% of them cluster around the average.
For simplicity, we will discuss the extremes here. But keep in mind that the average is far closer to the lower end than to the top.

See here for dating and sexual exceptions.

Low-Quality Providers

Serve first, sex maybe later. Maybe, we'll see about that. Just keep serving for now.
The majority of providers with regular office jobs are average, and since they are all interchangeable, we could probably cluster 80% of providers in the lower band.

From the same movie of the previous Ryan Gosling example, here is the example of a provider in the low to the middle range:

> **Carl**: I thought I did everything right. Got married, had kids, the house… What do I get for it? I get cuckholded

But even here, we can go much lower than Cal.
There are guys in menial jobs, minimum wage, and, of course, the guys who borrow to seem like better providers.
Have you ever heard of the guys who rent a supercar, max their credit cards, and blow a whole month's salary on an evening out with their special gal?
Exactly, those…

In the movie "Gran Torino" Clint Eastwood is grooming Thao to become more of a provider.
Look at this scene where Eastwood lends him the Gran Torino:

Eastwood is probably actually hurting Thao.
In an effort to "impress" the girl, he implies that he must work harder to provide for her, thus underlying the value disparity between him and her.

The White-Knight Provider

A specific sub-type of low-quality provider is the so-called "white knight".

A white knight is a man who idealizes her princess and bends over backward to do anything she needs because "she's the queen" and it's his duty to serve her.

That's also a terrible mindset and a bad position to be in: these guys enter the relationship in what's one of the weakest positions possible.

And some women are very willing to help them along the way.
See an example here.

And read more here:

- The betaization process
- Games women play
- I'm the prize power move

High-Quality Providers

Two areas make a provider a high-quality provider:

1. Personal value
2. Resources

The higher you go with both, the higher the overall provider quality of the guy.
And the two are not separated as some might think: studies prove that **more money makes men more attractive**.
And of course, making money also often requires a lot of attractive traits, including personal drive and resourcefulness.

Some former high-quality lovers who want to stop sleeping around also can make for high-quality providers.

Supertop Providers

However, there is an upper bound limit you can reach with personal value alone.

To reach the super upper echelons of top high-quality providers you will need lots of resources.

The super top providers are the guys who open the tab and let everyone in their group have a good time.
They throw money around, everyone loves them, and when they leave with a chauffeured car or their own Ferrari they don't even look at the tab: they are enjoying the hot girl in their arm, and couldn't care less about the few thousands they've spent.

The movie "Showgirls" contains an example of a top provider:

Driving Ferrari and getting a BJ while pouring champagne. Classic.

This is also the territory of powerful tycoons.
Silvio Berlusconi is an example of a provider at the far end of the spectrum.

Modern tycoons are the equivalent of the old bygone days of kings and monarchs. At that level, getting sex becomes very easy and it's often not even about providing anymore. **Getting laid for top providers is not about providing, but it's about the *experience* of their lifestyle**

Indeed at the far end of the provider spectrum, for the men who enjoy that lifestyle, **excesses of providing turn into lovers/players** (as well as a target for fathering his kids).

However, many super-rich men don't end up having sex with countless women. Men who get very rich are often driven by a mission that goes beyond women -and women can become a distraction for outsized achievements-.

Flashy Displays of Wealth Turns Providers Into Lovers

When a man shows off *lots* of wealth, he is playing less in the provider category and more in the lover category.

A study found out indeed that flashy displays of wealth lead observers to consider him more of a "fling" sort of man and less of a "long-term provider".
This is called "conspicuous consumption".

In brief: **flashy displays of wealth increase his lover status.**

The unwritten contract there is this: come with me, I'll splurge on you, give you a night of luxury, and then you're free to go.

I'm not a fan of this style, but it goes to show that, at the top, the roles blur.

Drawbacks for The Providers

Average providers, such as most men, will be screened and qualified (much) harder.

Entering a relationship moving slowly as the provider often also means that it will be more of a relationship of equals when it goes for him or, more often, that she is the prize.

Also, she might end up playing the Madonna role during dating. That might even mean that she will never show her true colors and never really be herself.

3. Friend

"Hmmm… You're still having all those fights with Cristina? You could get so much better you know…"

“Friend” has taken a really bad rep in the male dating world.

It has gone mainstream with the term “friend-zoned“. The friend-zoned man is a man who spends time with a woman in the hope of eventually dating her, but whom she has no intention of ever dating.

This is a dynamic that, indeed, happens relatively often. And it’s a terrible situation to be in.

But, again, this is a generalization of the worst type of friend applied to the whole “friend” population.
“Friend”, per se, is a neutral word.
And along with the clueless friend-zone idiots, you also have cool guys who just happen to have fun with female friends.

Let’s dig deeper to come out of generalizations and misunderstandings.

Who is a Friend?

Friends tend to be somewhat less exciting than lovers and not as available as providers.

They can cheer her up, listen to her, and share good times together.

They might be interested in a relationship with her, but they don’t necessarily have to be.
He might be a *nice guy,* but doesn’t have to be.
And he might be at her beck and call, but he might as well not be available at all.

As you can see, a friend can really be anything because, well, it’s a very generic term.
So let’s dig deeper.

Low-Value Friend: The Orbiter

The low-value friend is the “friend” that the manosphere usually refers to.

These guys typically hang on to her because they are interested in sexual favors and, even more often, in a relationship.

Since all relationships entail an exchange, if his value were zero or even negative, she probably wouldn’t want him around.

Indeed low-value friends have *enough* value that they don’t embarrass women when they tag along *and* enough value to offer some sort of help and support.
But they don’t have enough value to have sex with -lover category- or be in a relationship with -the provider category-.

Basically: **a low-value friend’s sexual market value is not negative, but not high enough for sex or boyfriend candidates**.

If low-value friends are not discerning enough, which they often are not or they wouldn’t be low-value in the first place, they can end up exploited by some women.

Neil Patrick Harris in Gone Girl is the example of a friend who is being taken advantage of:

High-Value Friend: The Mate Switching Option

A high-value friend is a high-value man that she’d consider a great partner.

In some cases, he’s a great socialite who can bond with her.
He may be smart and with great advice.
Or he may be just attractive, “cool”, or high-status.

Maybe all of them.

Research presented in the latest *Oxford Handbook of Female Adaptations* confirms that:

1. **Women prefer friends with the same quality of a good mate**
2. **Friends are often favored for long-term partners** over strangers
3. **Friends are well-positioned to get a woman with a boyfriend**

And the *Handbook of Relationship Initiation* acknowledges that among cross-sex friendships, there is some sexual tension.

Of course, as we understand here, these are true for high-value friends only.

This is an example of sexual energy between friends (author's videos in our products).
That long pause you hear is everyone being aware of that tension.

Sexually-Charged Friends

At the top of the sexual chemistry, the two "friends" avoid being alone because they both know the risks.

Sex with old-time friends who have always been attracted to each other releases long-running, pent-up sexual attraction coming off all at once.

Should You Refuse Female Friendships?

Some men who pursued a woman refuse friendships as a matter of honor.

Rollo Tomassi, popular red pill author, and author of *The Rational Male*, recommends men to always reject the offer of friendship.

I think instead that makes men come across terribly butthurt.
And if you apply the "never befriend a woman" advice, you'll end up with lots of male friends and little contact with real women.

There are many benefits of having female friends.
Here is how both men and women rate the benefits of friendship:

Source: Bleske, A., & Buss, D. M. (1997)
OSF= opposite-sex friendships and both genders see it as more beneficial than same-sex friends.
Opposite-sex friendships are a great way of learning about the opposite sex's thinks, which is very helpful for your mating efforts (Buss, 2016).
Makes sense, no? If you want to seduce women, it helps to be familiar with women and know how the *female mind* works.

Friends & Social Circle Game: The Connectors

Wouldn't it be cool to have models enter your life without ever cold approaching?

Enter the power of the "connectors", or "super-friends".

Connectors achieve great dating success, as well as sometimes life success, by befriending, socializing, and entering the social circles of high-value men, as well as very attractive women.

The connectors make it a point to be *friends* first. They make lots of high-quality people, including women. And, eventually, some of those women they keep meeting will like him and naturally move from friends to dating and, potentially, relationships.

This guy here is a *great* example of a man who has built abundance in his life with both business opportunities and women by making it a point of being a friend first:

> **Michael Sartain**: question is, how do I get out of the friend zone? Point is, I'm not trying to get out of the friend zone. I keep going out, and they keep me introducing to more people
> (…) doing all these things that a friend would do, while still being an alpha male

For men who are good at connecting and socializing, this can become a lifestyle choice where the man has an endless supply of attractive women.
Of course, this method only works if you plan on staying in the same place for the long run.

Drawbacks & Risks of Friends

Connectors, of course, are the exception.

And successful connectors need to be based in big cities with lots of high-quality people and successful women.

So unless you are a top-notch connector in a top city and unless there is huge sexual chemistry the friend position has the lowest value in the sexual marketplace.

He has been around for a while, she knows him and if she hasn't found him exciting so far, what are the chances that it's going to change any time soon?

Most "normal" guys should avoid dating with a friend-first strategy.

Why Guys Get It Wrong

There are two ways of getting it wrong:

- **Too naive**, like most guys
- **Too "red pill"**, which lacks nuance and sometimes is too cynical

The naive guys have no idea of effective dating strategies, their own positioning, and of, course, no idea of sexual market value.

The red pill crowd tends to fall for the "alpha f*cks, beta bucks", where the "lover rocks, provider is beta".

This is not completely wrong, but also a huge generalization and overall bad sexual marketplace theory.

Just look at this example below:

(self.TheRedPill)

Read some recent posts about struggles to get the sex part going (zero sex after 10 dates). Thought this would help...

Even if a woman isn't on the prowl, she'll scan her surrounding environment for allies, enemies, new threats and opportunities. Upon meeting a guy, she instinctively begins a process of qualifying and disqualifying. She'll categorize a guy as either a LOVER, LOSER, PROVIDER or FRIEND.

Lovers attract. Losers repel. Providers are those marriage-material Plan B guys she keeps in reserve, and Friends are the dependable, utilitarian guys or emotionally-supportive girlfriend substitutes she enjoys having around, but has no sexual attraction to.

> **Red Pill guy**: Providers are those marriage-material Plan B guys

As it's often the case with the red pill, he's not completely wrong.

But he's also not right because he fails the nuances (plus, it may be a case of what I call "alpha male posturing" (and this is why you must quit the posturing).

The red pill take implies that all providers are lower value.
But, probably, **albeit as a group lovers are higher mate value than providers, plenty of providers are higher mate value than lovers.**

This is something the *Oxford Handbook of Evolutionary Psychology* also mentions:

> The second major assumption of the dual sexuality hypothesis is that (…) men with high-quality genes pursue mainly a short-term mating strategy (…) and their willingness to provide paternal care is low.
> This assumes that (…) men who can provide paternal care lack cues of genetic quality. Such an assumption is, however, likely to be unfounded.

I disagree it's "unfounded".
A good case can be made that it's well-founded *at a group level*. But unfounded when *over*-generalized.

Quality is The Differentiator

If you have noticed, there is a thread running through the dating strategies.

And that thread is that the high-quality guys do well across all dating strategies.
And poor guys do poorly across *all* dating strategies.

In atypical seduction techniques that work we saw the example of Grant Cardone, who chased his wife for a year.
He was pursuing a provider strategy and chasing hard.
Yet, he won her over because, overall, he was still a high-quality guy going places.
That's because **it's the man who makes the sexual market value, not the role**.

Look at this sexual market value chart divided by male positioning:

Basically what this article explains is simple: be a high-quality guy and you will date successfully with whichever approach you choose.

Low-Quality Player is Worst Option

The second consequence of our analysis of sexual market value across dating strategies is this:
