Lower-level guys fare badly across *all* dating strategies, but the lover is the worst role for them.

Why?

Because a low-quality lover has nothing.
He has low value as a lover, cannot provide enough value to even be around her, and he has no resources whatsoever.

The SMV Power Scale

Here is the ranking in the sexual market value that I assign to each male positioning:

1. **Value negative** (she actively avoids him)
2. **Low-quality lover / Nothing** (has nothing of value or negative value, she doesn't want him around)
3. **Average Friend** (can provide support, and might have a chance, but can be taken advantage of)
4. **Average Provider** (can provide support and "good enough" genes)
5. **High-quality friend** (raises her status, might introduce potentially good prospects)
6. **Good Lover** (can provide good genes but little support or he's not willing to support)
7. **Top Provider** (high-quality man with resources with which he *could* take care of many different women and good genes to boot)

For biological reasons **at the top of the pyramid power and resources matter more than looks** in terms of his power of sleeping with lots of new women.
Few if any models can out-fuck an average-looking tycoon -possibly even an ugly one-.

The Best Is... The Best of Both

These categories are on a continuum, of course.

Assuming anyone could do as they please, most men would like to play around, at least for a part of their life.
But most men would also enjoy a relationship with a great partner.

Few me would never wish to sleep around, not even one bit, and few men would swear off seeing a woman more than once:

Most men are on curve. Most men would love to sleep around more, but would also like to keep seeing a great woman

Ultimately the most attractive man is this:

The most attractive man is the man she sleeps fast with like a lover, feels comfortable with like a great friend, and who she hopes may be turned into a great boyfriend.

This man takes the best traits from all of the different roles.
Especially from the provider and the lover.

Look at this text a woman sent me:

What she's describing is a mix of provider and lover traits. And that's why she kept writing me non-stop.

I am not high at anything, I just got lucky in that example above.

But the principle is that at very high levels and at very low levels all strategies are similar.

Low-value players chase women unsuccessfully just like low-value friends are orbiters and low-value providers don't find a girlfriend.

Instead, a top provider has also all the traits to be a top player. And a top player has all the traits to amass resources and be a top provider or a top friend -if he wanted to.

Because, again, it's the man behind that strategy that makes the most difference.

SUMMARY

The dating strategies of lover, provider, or "friend first" are the three most common dating strategies men deploy.

For men interested in finding a romantic partner the "friend first" is the least time-efficient and effective.

Entering as a lover first and as a provider/stable partner later is a good strategy and can give him more power at the beginning of the relationship. But it has higher risks.

The provider first is the most typical strategy, relatively safer -as long as she likes you.

But for a great relationship, you want to be high quality in all of them: lover, provider, and friend.

Deep Work: Summary & Review

Lucio Buffalmano · 13 December 2018 · Archived copy · Original

In *Deep Work* (2016) Carl Newport suggests that the solution for higher productivity, more free time, and higher life satisfaction lies in acquiring the skills for "*deep work*", such as the single-minded focus on work that allows us to do more, in less time.

TPM Power Note: Productivity and competence are power—but not enough.
Newport risks overselling productivity competence while underplaying strategy, positioning, and workplace politics. Besides Newport relying on some pop-psychology, the truth is that you must also *market* your skills, compete effectively, self-promote, and navigate power dynamics to turn competence into real-world results.

Overview

- Deep work -the ability to focus and immerse yourself in a task- is the only work that will advance your life, career, and achievements
- Train your deep work skills: the more you do it, the better at it you get
- Design a life with habits and routines built around producing deep work
- Deep work is taxing: once you've done enough, stop working. Otherwise, you're wasting time on shallow work

Notes

About the Author:
Cal Newport holds a Ph.D. in computer science from MIT. He is the associate professor of computer science at Georgetown University and the author of several self-improvement books on productivity and competence.

Introduction

Deep Work is divided into two parts: the first part tells you what deep work is and why you need it.
The second part explains how to learn it as a skill and how to implement it in your life.

Deep Work Definition

I will quote Cal Newport here:

> Deep work is the ability to focus without distraction on a cognitively demanding task. It's a skill that allows you to quickly master complicated information and produce better results in less time.

Deep work creates value for you and for the world.

Shallow work is the opposite.
It works on simple tasks and/or those you perform distracted, and which tend to create little value to you and the world.

Basically, you want to do less shallow work and more deep work.
Here are some examples of shallow work.

Shallow Work Examples

- Checking emails
- Replying to texts that add no real value
- Checking your Facebook feed
- Updating your status
- Interacting with various push notifications
- Checking your phone
- Important work but distracted

Do less of the above.

Why You Need a Shallow Work Shield

Cal Newport makes the point that our current society seems to push people towards more shallow work.
Just think of the following:

- Open office spaces with constant interruptions
- "Culture of business" where running around is seen as productive
- Expectations of fast response on all communication channels
- Push notifications of all kinds
- Addictive social media is built and designed to trap your mind

Basically: the world is pushing you into shallow work. But if you are driven and want to deliver big results, you need to buck the trend.

That is why if you want to achieve it is so crucial that you build the skill and culture for deep work.

The Elements of Deep Work

Here are the major elements of deep work:

1. **Single-tasking**: multi-tasking is a myth, it decreases your productivity. Do one thing at a time
2. **No distractions**: set blocks of time where you don't allow yourself to be interrupted
3. **Intense focus**: the more you're into the task, the more and better you will deliver
4. **Staying power**: the longer you can stay at it, the deeper you will go

Don't Switch Tasks: Attention Residue Phenomenon

Cal Newport discusses the phenomenon of attention residue.

Attention residue is the "mental contamination" that different tasks produce on each other.

Imagine you are writing a post on the best lessons learned from the book Deep Work. But you crave a distraction and want to quickly check the emails.

Giving in to the distraction takes you away from your immersion in the task of writing and interrupts the flow.

Now imagine in your inbox you see two emails.
Once you decide to reply right now, it further takes you away from the mental cycles that are needed to write a good summary.
The second one, you can't deal with it right now and you go back to writing.

When you go back to writing you need to "warm-up again" from scratch. And the email you could not reply to is still lingering in your mind as your next "to-do task".

Now you need time to get into the writing mood again, and your mind is "polluted" by the task you've just finished in the past and the one you still have to do in the future.

Meaning for you? Stick with one task.

Attention residue is the reason why you should not constantly switch between tasks but rather stay focused on a single one for as long as possible.

The Skills for Deep Work

Deep work is a skill that you can increase with training.
The more you do it, the better you get at it.

Cal Newport says there are two key components you need to develop to increase your deep work:

1. **Concentration skills**: the ability to fully focus on your tasks
2. **Beating the craving for distraction**: unless you overcome your brain's craving for a quick distraction, you will never get into deep work

And of course, the two are heavily interconnected.

How to Develop Deep Work Skills

Cal Newport proposes four rules to get good at deep work:

1. **Work Deeply**: you need to structure your life around deep work. Divide your days into time blocks. Each time block is for doing one thing and one thing only

2. **Embrace Boredom**: it's when we are bored that the craving for distraction gets us the easiest. You must train yourself to stick with a task long after it's gotten boring. To help fight the craving for distraction don't fill your day with tasks but leave out some time where you allow your mind to relax, wander and recuperate
3. **Quit Social Media**: they are designed to pull you away from deep life and they are the kings of distractions. Quit them for 30 days and see if your results will improve
4. **Drain the shallows**: look at your day-to-day work and remove all the unproductive tasks. The example is a company whose productivity went up after they removed Friday from the workweek: employees just were focusing more during the other days to get the same amount done

Finally, Cal Newport recommends we develop routines that support deep work.

Habits and Routines for Deep Work

The author says that we have a limited amount of willpower.

My Note: Is willpower really limited?
It's an open issue, read more about pop psychology myths-.

That's why we should strive to conserve our willpower for what really matters.

One way of wasting willpower is trying to combat distractions.
If we don't *develop good habits* that support our deep work, we will be using our willpower trying to wrestle our attention away from shallow work, social media, cat videos, and all other distractions.

How to conserve willpower?
To avoid wasting our willpower, we should develop a lifestyle that supports deep work.
Cal Newport proposes four different alternatives:

1. **Monastical lifestyle**: cut off all distractions
2. **Bimodal monastic**: you alternate periods of monk lifestyle to a "normal" life
3. **Rhythmic monastic**: you partition your days for deep work -ie.: 9 to 5 and leave the evening off-
4. **Journalistic monastic**: you fit deep work into your schedule any time you can

Also, see:

- **Monk Mode**

Rest And Sleep Well

Finally, you need to rest and sleep enough.
Plenty of research from different fields shows that getting enough rest and downtime does not take time away from productivity but *enables* deep work, concentration, and productivity.

Not getting enough rest and downtime is harmful to your productivity.

Here is why you need rest and downtime and how to use it:

1. **Plan downtime to recharge your batteries**: downtime is a bit like plugging your phone into mains. It's simply something you have to do to keep enjoying all your top functionalities. Plan it into your days
2. **Use downtime for inspiration**: our unconscious has more power than our conscious mind. By taking breaks or going for walks we can leverage the power of our unconscious to come up with ideas and solution
3. **You waste time working too long**: deep work is highly taxing and our capacity for deep work is limited (4 hours on a whole day for masters with chunks of 60 to 90 minutes). Any work that we do outside of our (current) capacity for deep work is most likely going to be shallow work and time-filling

To make downtime an integral part of your life Cal Newport recommends that when you stop working, you stop working *for good*.
No more checking emails, no WhatsApp group with your coworkers, and no mental cycles spent on work.

The proof that it works?
Cal Newport finishes work at 17:30 and rarely works weekends.

> **Productivity is about depth of work, not amount of time**

Real-Life Applications

Plenty of life-changing advice in this book:

- **Get Rest – Or You're Wasting Time**

This concept is simple and yet it's crucial for many agentic men to grasp.
Much of the time we spend "working" is wasted time. Once you can't stomach deep work anymore, you are better off stopping to work because you're not really doing much anyway.
Do something else.
Improve your intimate relationship, work out, listen to music, and do something you're passionate about. Or yeah, check your social media too maybe.
But stop wasting time on shallow "work".

- **Say No to Distraction -And Yes to Passion-**

Saying no to distractions is hard. But it's all the hardest if you are trying to give your attention to something you don't love.
That's why it's crucial in life that you give your deep work time to something you love. Say no to distractions, but only to say yes to what you love.

On the techniques for "saying no to people", see:

> 5 Techniques to Say No (Polite, But Effective)

- **Use Your Unconscious for Groundbreaking Ideas**

I loved the concept of using downtime -and your unconscious- to come up with new ideas. You can take a break from your work and go for a walk to let your mind wander.
Or you can also meditate with a piece of paper nearby and then quickly jot down new ideas that come to your mind.
I have had some of my best ideas while meditating.

Deep Work Video Summary

And here is a Deep Work video summary with some of the examples I haven't touched on in this summary and review:

CONS

Not Always Accurate on Latest Research

Deep Work makes ego depletion -such as the idea that our willpower is limited- a central tenet for its recommendation.

However, the concept of ego depletion has been called into question.

Not hearing counter-arguments reduces the authority of the author for critical readers like myself.

Social Media Bashing

The author says he is not telling you to abandon social media.

BUT… Then proceeds to spend a good portion of the book in what sounded to me a lot like social media bashing. I find it unnecessary.

The author says that social media ruins most people's productivity. And that may be true -albeit even there, did he measure that to be sure?-.

But *most* people aren't going to maximize their efficiency anyway -and maybe not everyone even should seek that-. *Most* people were watching TV before social media, listening to the radio before TV, and loitering before the radio. The point is: people who don't care about maximizing efficiency will always find something to do that is *not* work.

Driven people instead are more likely to find a way to be productive, no matter what technology is available. And they're a lot more likely use social media for good.

Social media can be a bane or it can be a tool you can leverage. It's up to us how we use it.

"*In Today's World You Need…*" Fallacy

Have you ever noticed that so many speakers use this format:

- "In today's world you need X"
- "In today's world you can't allow yourself to be X anymore"?
- "Today it's more difficult than ever"

Then you read that book when it's a few decades old and you smile.
And you realize how hollow those sentences are.

The truth is that no matter the world and era you live in you can always do more and be more and you should *always* strive to be better no matter in which period you live.

That's why I didn't particularly enjoy Deep Work's recurrent references to "today's world".
I don't think we need more deep work *today*.
We need more deep work today, as much as we will need more deep work tomorrow, as much as we needed deep work yesterday.

Sometimes Extremist

At times, it felt to me like *Deep Work* was being extreme with its tenets.

From deleting social media to not checking your phone if you are waiting in line to not checking the Internet if you need a piece of information.

I can't think of not using the Internet while I write: it helps me write better, research information, double-check resources, and write better reviews.

The idea of not checking your phone while waiting in line also seems like an unnecessary time waste. You can use that downtime to reply to what you need to reply to.

PROS

I won't list a bunch of "pros" here for a simple reason: **it's the concept of Deep Work that is life-changing**.

When you develop your skills for deep work you can do more and better with less time. More results together with more free time, fun, and better relationships?

Review

Deep Work is a great book, with a simple, yet foundational proposition: making your work time matter.

Deep Work is not revolutionary in any way as it repeats a few well-known concepts of productivity. BUT.. It combines some research with personal experiences and insights to make it valuable.

The changes that *Deep Work* inspires lead to what Cal Newport calls "Deep Life", such as a life free of distractions and meaningless tasks. A deep life has deeper work, deeper relationships, and deeper satisfaction.

Never Outshine The Master: A Case Study

Lucio Buffalmano · 13 December 2018 · Archived copy · Original

This article is a case study for The Law of Power N.1 “never outshine the master”, from Robert Greene‘s *The 48 Laws of Power*.

It also deals with other foundational laws of power, such as making friends instead of enemies, setting up collaborative frames instead of antagonist ones, and the importance of political intelligence within work-related teams.

⍰⍰ For the complete book guide, see the main **48 Laws of Power guide**.

  - Keeping Good Boss Relationships
  - Lessons Learned 1: Make Allies, Not Enemies
  - Lesson Learned 2: Develop Competence
- When You Should NOT Be Inclusive
- When It’s OK to Do a Power Takeover
- SUMMARY

Hubris Can Be Your Downfall

In a few instances in your life, you might have the power to lead groups.

And sometimes, you might even feel like you have the power to *replace* any leader above you and do a “power takeover”.

A power takeover happens when someone from a lower power position overthrows the leader and imposes himself as the new group’s leader.

However, more times than not, it’s more about the *feeling* and the hubris to challenge authority than actually having the power to do so.
And that’s how many driven men with an otherwise brilliant future end up crashing and burning.

People who fail to realize the risks of challenging and embarrassing their bosses *reduce* their political power.

This is exactly what happens in the example we will analyze.

Never Outshine The Master

The scene we analyze is from the movie Platoon.

This group has two different types of authority: the formal authority which is the lieutenant, called Wolfe, and the de facto authority, which is the sergeant, going by the name of Barnes.

The lieutenant has the official authority of rank.
The sergeant has the authority of subject matter expertise, meaning he is the expert on how to wage war.

Barnes is also aggressive and domineering, while the lieutenant is younger, more submissive, and looks the least

confident of them all.
Thanks to his aggressiveness and knowledge, Barnes ends up controlling the group.

However, he makes one mistake.

Let's watch the video:

The Mistake: Over-Dominance Makes Enemies

The mistake Barnes does is that he uses too much force to wield his power.
And that puts him on a collision course with Wolfe.

There is a quote from Alain Prost, a Formula 1 racer, and he said:

> My aim is to win by going as slow as possible.

It's similar to power.
You want to set up your interactions in a way that you can get people to follow you by using the *least* amount of brute force you need.

Why would you want to do that?

Because when you rely on brute force alone, you give you up the other form of influencing: the one based on people *wanting* to obey because of intrinsic motivation or because they admire you.

If you bellow orders like you are their Gods and they are ants, you will grow resentment while at the same time decreasing the goodwill.
The more that resentment grows, the more people will hate you and want to get rid of you.

Better instead to power protect.

Making The Boss Your Enemy is Peak Ineffectiveness

This is what happens to Barnes.

He is the most dominant person in the group, that's for sure.
But he made an enemy out of his boss. That's a position that, for anyone, is hard to keep for a long time. Stung by the embarrassment, chances are high that the lieutenant will want to get rid of him on the first occasion.

Even within the group, Barnes' position is not likely to be as strong following his display of dominance.
When he put himself against the lieutenant the group knows that Barnes has an enemy. And even if Wolfe is a weak enemy in terms of personality, is he a powerful one in terms of ranks?
And they know that the lieutenant might want to get rid of Barnes whenever he can -and that he *can* do it by virtue of his rank-.

This is a similar mistake that a few generals committed during the Obama administration. They got all haughty and mighty based on the troops they commanded but failed to realize they also needed political support.
Result?
They got fired.

Keeping Good Boss Relationships

In this example, Barnes could have easily stayed the undisputed leader of the group *and* avoided any personal squabble with the lieutenant.
All he needed to do was to help the lieutenant save face.

How could he have done that?

For example, he could have prefaced his orders by saying

> **Barnes**: if the LT agrees we do this, this and that

Then all he had to do was look towards the LT expecting a nod or a “yes”.
Of course, Wolfe would have confirmed, he knew that Barnes was the most respected man, the most experienced one, and the one in the best position to decide.

Another option for Barnes was to give his orders and then look toward the Wolfe and ask him:

> **Barnes**: Do you agree with it?

Most likely the lieutenant would have said yes.
Or if Wolfe was more emotionally intelligent, he could have asked a question back or added some perfunctory details just to seem like he wasn’t following 100%.
And that would have been OK: Barnes would have still been the leader. And the lieutenant would have probably been grateful that Barnes saved his face.

Barnes position in the group would have grown stronger, not weaker.
The group would know who’s the real leader while they would also know that Barnes has no enemy in the lieutenant, but a puppet who listens to him.

Huge power boost for power even within the group’s ranks.

Lessons Learned 1: Make Allies, Not Enemies

The problem of imposing your will, throwing your weight around, and, even worst, going against official authorities, is that you make enemies.

The boss won’t say anything if he’s intimidated by you and he knows you’re stronger -as it was in the example from Platoon-.
But he will maneuver behind your back to torpedo you.

Similarly, if you impose your will within your group, you can rest assured resentment will rise.
They will keep following your orders because they have to, but they will be waiting for your downfall -and very happy to contribute to it-.

This is a common issue for many power-hungry, driven people.
They watch movies like The Godfather or Scarface and get heady believing that destruction is power.

But the real reason why people like Scarface crash and burn and people like The Godfather got successful is that the latter has made many more friends than enemies.

> **Make friends, not enemies: friends are power, enemies will be your downfall**

Lesson Learned 2: Develop Competence

There are several reasons why Lieutenant Wolfe was so easily jumped over, including typical submissive signs, younger age, and lack of confidence.

But the main one is that he was a green-horned, inexperienced fella who knew nothing. And Barnes was knowledgeable and competent on how to run war -or at least, he acted like it-.

This leads to our second lesson learned for strong leadership: you must develop competence and subject matter expertise.
Competence will give you the respect of the people who serve you.

When You Should NOT Be Inclusive

Inclusivity and democratic leadership can shore up your power by creating a web of alliances and by building goodwill.

But in a way, it's similar to the concept of vulnerability as we talked about in "vulnerability is not power".
The truth is that inclusivity is powerful when used at *the right times*.

The rule of thumb is this: **a powerful leader being inclusive is even more powerful while a weak leader being inclusive is perceived as even weaker**.

And even when you are a powerful leader, there are important exceptions when *you have to impose your will.*

These include:

- **At the beginning of your leadership**

Especially for *people who are too nice* at the beginning of their leadership, it's best to err on the tough side than on the "nice" one. This is because, as we said, a strong leader who is inclusive is more powerful.

But if people have been perceiving you as weak and not possessing strong leadership qualities, then inclusivity can be seen as a sign of weakness, fear of taking decisions, and fear of telling people what to do.
It's best to show strength in the beginning instead.
When you are a bit tougher at the beginning you can, later on, show that your inclusivity is out of magnanimity, not fear.

- **When the group has no clue**

One of the great advantages of inclusive leadership is that by including more people in the decision making you leverage *the power of a larger mastermind* and you are more likely to reach good decisions.

However, if the group or your counterpart has no idea about the subject, you are better off *explaining* your decision rather than asking for opinions.

That's because you would most likely have to override all their suggestions and they might feel spurned and rejected. Avoid it by deciding, explaining, and letting them *grow* into people who are worthy of being included. But they must earn that position.

- **When the group is lost and is looking up to you**

When the group is lost and they are looking up to you, that's not the time to pose questions or be democratic. They are looking for leadership.
For strong leadership.
That's the time to tell them what to do and *show* them the course of action.
And these are *exactly* the times that will buy you goodwill when things are going well.

- **During times of crisis**

Times of crisis require charismatic leadership and a strong leader.
The group will be more than happy to follow without being included.

- **When you're facing a challenge**

When someone within the group or from outside the group is challenging deferring to the group or, worst of all, to the challenger, will be perceived as a sign of weakness by both the group and the challenger.

When facing a leadership challenge it's time to put your foot down and show why you're the leader. And you must defuse that challenge.

Basically, here is the power move rule when it comes to inclusivity:

> Always be inclusive when things are easy and decisions matter little.
> Take full reins of command when things are uncertain and when you need to shore up power during a leadership challenge.

When It's OK to Do a Power Takeover

A power takeover is fine… As long as you can pull it off effectively.

Do it effectively, here is what needs to happen:

1. You can remove your boss
2. The group supports your takeover
3. Those above your boss are likely to accept it
4. Your boss is in no position to take revenge

Ideally, you are taking the power from a leader who was ineffective, incompetent, or hated.
That's the example I talk about in "how to neutralize a bad boss", and if you can rally the troops in your support and put enough power on your side, you will be welcome as the savior.

Just make sure you act the part of the savior once you're in charge and don't become little tyrant N.2 (or little incompetent N.2 :).

SUMMARY

As a rule of thumb, inclusive leadership will make people want to follow you.
And that's the hallmark of great leadership: when people *want* you as the leader and they *want* to follow you.

You can't always be inclusive of course.
But whenever you can, that should be your goal.

The worst possible person you can leave out of the decision-making is your boss. Whenever you jump in front of your boss, that's the definition of a golpe.

And whenever you execute a golpe, there is only one good way to do it: by taking out the leader, eliminating his power to take revenge, and taking his position.
Any other option, sooner or later, is likely to end badly for you.

Becoming Supernatural: Is Joe Dispenza Legit?

Lucio Buffalmano · 15 December 2018 · Archived copy · Original

Joe Dispenza is a chiropractor, healer, and ascetic, and in "*Becoming Supernatural*" (2013) he teaches readers how to change their bodies by using their minds.

This article will provide you with a review and criticism of both the book and Joe Dispenza's general approach.

Contents

- Bullet Summary
- Full Summary
  - Introduction
  - You Can Change Your Future
- Joe Dispenza Review
- Real-Life Applications
- Becoming Supernatural Video Review
- CONS
- Dispenza Review

Bullet Summary

- We all have the ability to be supernatural
- By entering the quantum field of "unlimited possibilities" you can manifest the future you want

Full Summary

About the Author: there isn't much biographical information about Joe Dispenza. We know though that he is a chiropractor and an influential self-help author, and he runs seminars to teach people how to self-heal. He is also the author of "*You Are The Placebo*", and "*Breaking the Habit of Being Yourself*".

Introduction

Joe Dispenza says that we all have in us the ability to be supernatural.

As a matter of fact, we are supernatural by nature, but we need to learn to unlock that power. Dispenza invokes meditation as his tool of choice for doing what he refers to as "the uncommon".

He says that we have the capacity to tune into frequencies that takes us beyond the material world and hook us into streams of consciousness and energy.
Once you learn to make your mind work at that higher level of frequency, then you can intentionally change your body's chemistry.

At that point, it's possible that you can heal yourself.

Typical of Dispenza's work, Becoming Supernatural purports to marry the mystical to science. The author says that changing our bodies with our minds is scientifically explained by quantum physics.
When we learn to access the quantum field, then we access a "field of unlimited possibilities", as he calls it, because we leverage quantum physics. Quantum physics notoriously states that sub-particles are not in a defined spatial position but possess qualities of both matter and energy.

Becoming Supernatural also presents a lot of stories and anecdotes on the power of self-healing.

You Can Change Your Future

A topic central to Joe Dispenza is that we all live pains of the past by reliving them over and over in our, which brings us further pain.
Instead, he says we should do the opposite, and live in the present our future blessings.

Dispenza says that if you feel and embody the present high-frequency emotions like gratitude and love for future events, then you are likely to live that future.

On top of envisioning a healthy body, Dispenza said that we can envision material possessions as well, which sounds a lot like the law of attraction.

For more on the law of attraction also read:

- The Secret
- You Can Heal Yourself

For more on the power of thinking also read:

- The Power of Positive Thinking

- Think and Grow Rich

Joe Dispenza Review

There is little online on Joe Dispenza.

If you search for "is Joe Dispenza legit", you will find a critical-sounding thread on his own forum's website, but the page has been moved.
This website sounds aggressively disparaging but offers little proof, and these days it's way too easy to leave a

smearing review against otherwise innocent people.
The Reddit community at "IsThisBullshit" is overall critical but, again, that doesn't say much.

From what I gathered, much of the criticism of Becoming Supernatural echoes what I have already said in *You Are The Placebo*.

Joe Dispenza says that writing this book is a risk for him and his reputation.
He says that "certain people", including people in the scientific community, might call his work pseudo-science.

He used to care about what those people would think, and he tried to have them approve of his work. Then, eventually, as he realized that his work was changing lives and that he could never win the approval of the scientific community
So he simply stopped caring.

In a way, it's fair that someone stops pursuing the "approval" of a category that refuses to believe in his results.
I think Joe Dispenza shouldn't stop or change the direction of his work and research to appease anyone.
I will go even further: we *need* people who don't allow the rigidity of a given set of beliefs to shackle the human potential of finding new and better ways of doing things.

On the other hand, I can't help but think that such a stance can also be an easy cop-out.
It could even be used as a ploy to point fingers against an out-group to further stoke the support of the in-group of followers (ingroup-outgroup is a well-known sociological phenomenon that can be used to convince people and you can read here how Tai Lopez uses it).

The scientific community calls people who profess science but offer little proof "pseudo-science" (or pop-psychology in the social sciences).
Personally, I wouldn't even call it pseudo-science. If you can't offer proof that is replicable and falsifiable, then *it's not science at all*. Simple.

The burden of proof lies on those who claim a scientific background to their theories. If you don't provide scientifically falsifiable data, then you are not doing science and you should not call your work scientific.

I haven't seen much scientifically falsifiable data in Becoming Supernatural.
The data has been proven in the author's own (expensive) seminars.

If you can't provide scientific backing, it doesn't mean that your work is not good and it doesn't mean that your work is not of high quality and life-changing.
It simply means that it's not scientific.
BUT, if your work is helping people, then I believe that it should be in your best interest, and in the interest of the people, and it should be your moral duty, to document and offer proof of your results so that more people can take advantage of it.

If you don't and if you keep claiming scientific rigor, then it's normal that some people will get suspicious.

The fact that those seminars are expensive, private endeavors, albeit not constituting any proof against Dispenza, have to make a critical mind seek even more solid proof.

Overall, my opinion is that the science behind Becoming Supernatural is spotty. I leave instead an open mind and open heart on affecting -and changing- our physical bodies with our minds, but I don't appreciate authors who try to pitch scientific rigor when there is none (yet).

> **Big claims require big proofs**

Real-Life Applications

I sounded very critical in this review, but there are still big takeaways for me that we could all heed more:

- We are often more powerful than we think we are
- Meditate is good (read: The Power of Now)
- Think positive and be grateful: it will do you a lot of good both mentally and physically

Becoming Supernatural Video Review

Here is a critical review of the book:

And there are more like that.

CONS

On top of the criticism offered above, here are some more relative to the text in itself:

Too Long & Repetitive
Becoming Supernatural could have been briefer.

Truisms
Dispenza says that he has proven that common people can do the uncommon. However, that doesn't say anything. It's a truism.

Big Words & Generic Statements
There are a lot of big words that sound profound and deep but end up leaving you with more confusion rather than more clarity.
Some generic expressions also don't help to pinpoint what we're talking about. Starting from the title for example, what's "common" and what's "uncommon"?

Upsell for Seminars
Sometimes I had the feeling that Becoming Supernatural pitched a bit too strongly the seminars and ended up being a teaser for booking a seminar seat or the meditations' audio files.

Dispenza Review

I would give this book higher ratings and I would applaud Joe Dispenza's work in exploring new paths.
IF he didn't try to present his work within a scientific frame.

Giving a scientific label to something you are not proving scientifically and/or not allowing independent scientists to replicate must be, by definition, pseudo-science.

That's NOT to say that what Dispenza teaches doesn't work.
I do believe that what you think *does* shape you and there is much good you can take from Dispenza's work.
But as of now, the way the author and the way Becoming Supernatural position itself does not win my stamp of approval.

Women's Tactics to Get Men's Commitment, & How to Respond

Lucio Buffalmano · 16 December 2018 · Archived copy · Original

Women try to get men's commitment in many ways.

A few women are honest and direct about it.

While some others deploy nasty dating games to make him invest, as well as manipulative relationship games to make him stick around.

This post will focus on some of the most popular games and techniques women use to make men commit.

Contents

- Commitment Games
  - 1. We Are More Than Just Sex, Aren't We?
  - 2. Move Your Ass You Son of A Bitch
  - 3. I Give You Mine You Give Me Yours
- More Commitment Games
- Why Women Play Commitment Games
  - Men Must Get Ready for Commitment Games
- Are Commitment Games Bad?
- SUMMARY

Commitment Games

In honor of Eric Berne, founder of transactional analysis and author of *Games People Play*, I will use a similar nomenclature for women's commitment games.

Below are three of them broken down in detail.
Further down is a list combining all the dating games women use for commitment.

1. We Are More Than Just Sex, Aren't We?

You will see the WAMTJSAW when the man and the woman have been having sex for a while -or for just a few times- but there is still no official status or the |conversation" hasn't taken place yet.

Her aim is to prove, with facts, that the two of them are more than just sex.

She can't make him wait for sex now that the relationship is already sexual, and making him invest and making him chase become much more difficult in this relationship phase.

However, she can withdraw sex. At least temporarily.
Indeed, if she can get to spend time with him without having sex, then he implies, with action, that he wants more of her than just a vagina.

Enter the game "We Are More Just Than Sex, Aren't We?".
See one example here:

We will just talk. Smiley face :)

Answering The WAMTJSAW Game

Once you understand the dating power dynamics you also understand where she is coming from.
And you have no point in getting angry or worked up.

As a man striving to be a high-quality man and as a budding master socialite, your answer must take into account both what you want, and what *she* wants and needs. That's what leaders do: they take an "us" approach.

Action-wise, you have three options here:

1. Refusing to meet without sex
2. Meeting with reserve

3. Letting her have it

Refusing to meet is like a slap in the face that says that you indeed only see her as a piece of meat and that you don't want a relationship.
But even if you don't want a relationship, I would discourage you from going down that road. It doesn't mean you have to meet, but you should at least have the courtesy of clarifying your position and explaining to her that you don't want more than sex.
At that point, she is free to decide.

Number three is your tacit consent to a relationship and, basically, you let her win the game.
I personally don't recommend this one either because it lets her win with a rather underhanded tactic. It sends the message that games are a good way for her to get what she wants.
Even if you want a relationship, there are better ones.

I recommend instead two different options:

1. Meeting with reserve
2. Meeting and escalating to sex anyway

This is an example of meeting with a reserve, from the same previous conversation:

You must be watchful here of how you walk this tightrope: you want to deflect but without sounding like you don't want her around without sex -yes I know there are different ways of having sex dear reader, but I have my preferences :)-.

I like this approach, positioning it as if having her around without having sex would be too hard for you.

Also, I was going to have a conversation with her about this, but in person. I didn't like the way she set the whole meeting up and then only mentioned sex as if it was an afterthought. Sex is *not* an afterthought between two people in a budding relationship, meeting only a couple of days a week and with strong chemistry.

Finally, don't forget the last option: making her come to your place and escalating to sex anyway -as long as the

"issue" was not a real and serious issue, of course-.
Just make sure you treat her well afterward and it's still a win-win.

2. Move Your Ass You Son of A Bitch

MYAYSOB is a rather nasty game.

It consists of parading other options and leveraging jealousy to compel him into action.
Here is one example:

Her message in this case communicated

> "*move your ass to get serious you SOB cause there's men who are willing to wine and dine me… And I might pick one of 'em*".

After I prodded her, she probably felt like she had made her point clear enough and that going forward would have created too big of a rift.
She probably also didn't want to risk overplaying her hand and come across as nasty.

And that's why she presented me with a candy.
This whole game, including the last candy, certainly didn't gain her any points.

Dealing With MYAYSOB

One of the reasons why it's great getting good at reading social dynamics is because we can become discerning about the people we accept in our lives.

If you see nasty games *before* the relationship, what do you think is going to happen *during* the relationship?
These are the same type of women who will threaten to break up, "go out and party" (implied "meeting someone"), or worst of all… Divorce you and take all you've got :).

High-quality alpha females tend to be more direct with their requests. High-quality but submissive women might

not be as direct, but they have one thing in common: they avoid the nastiest games.

The women you need to protect the most against are the ones who are smart and assertive enough, possibly also attractive and hot… But who doesn't have morals and ethical qualms?
Like in this example.

I recommend you test women who play these types of games. Ask them questions, don't offer them a relationship for as long as you can, and see what they come up with.
Then, if you want to give it a try at reforming them, you can tell them something like this:

> **You**: *why are you telling me that. Why are you telling me of your date*

Then, it's time to bust your PIMP hand and show that you don't take that attitude lightly. You do want to push her on the defensive here:

> **You**: *that was totally unnecessary, why do you feel the need to say that*

Then you want to shame them a bit:

> **You**: Frankly, I think it's rather nasty of you to parade others dates you are having. I am very disappointed in you

Then, if you think they are worth it, you can introduce how you see a healthy relationship and see if she can fit your standards.

3. I Give You Mine You Give Me Yours

IGYMYGMY… That really worked out well as an acronym didn't it?

I don't have a text or a video to show you, so you're in for a story treat:

A girl I was seeing worked as a real estate agent, showing flats around.
One day she was showing a flat to a guy. Now you would never guess, but this guy was a surfer and underwear model.

You can imagine my excitement as she recounted the story :).

Well, you would never guess what happened, but The hunk asked her this:

> **Hunk**: Would I offend any guy inviting you out for dinner?

At that point, I wondered if I would have ever heard that story, had she said yes :).

But well, since she actually told me the story, she turned him down.

See the message here?
First of all, she is communicating that yes, there is someone who might get offended -me-. And people who get offended are emotionally invested. Thus, if I confirmed, I would have also implied that we are probably moving into "serious territory".

And second, what is she doing?
She is giving me her commitment.
But since most relationships entail an exchange, she is indirectly also *asking* me for a commitment back.

It's a much, much nicer and gentler version of MYAYSOB.

It's basically saying:

> **Her implied message**: "*I'm giving you my exclusivity in spite of great options out there. What are you gonna do, Lux? Are you going to give me yours too, or what?*"

Dealing With IGYMYGMY

As per usual, your reply will depend on whether or not you're OK with a committed relationship.

If you are interested in a relationship, I would avoid telling her "you did well". And I would also avoid "thank you". Better instead to make a mental note that she is offering you exclusivity and she likes you. And to jump straight into the "conversation", explaining where you stand and your possible future together.

Then let her work a little bit to reel you in.

If you are not interested in a relationship I would avoid doing what many guys would do here, such as telling her "*why didn't you say yes*".
That's brutal and really uncalled for.
You need to go into the hard conversation here and explain you're not looking for a relationship. Next, you know what you gotta do: put that nice fish back into the sea.

Here is how it went between us:

> **Me**: "OK" (very nonchalantly)

A long pause ensued. She looks down. Then she finally blurted:

Her: "*aren't you glad I said no*?"

You can imagine how it went from there.
Between us, I just checked her Instagram. Damn, she looked awesome in that Christmas party dress (if it weren't for some idiot beside her :).

More Commitment Games

Different women have different ways of pushing men into commitment.
Some of them are the following:

- **Waiting game**

The waiting game, unless she is dealing with a super relationship type of guy, is a rather bad strategy to get a commitment.

- **Play like a man and feign disinterest**

This is the strategy that one very popular *dating book for women* recommends.
I think that a risk/rewards analysis makes it a retarded strategy -I explain why in the women's dating literature review Pussy Power-.

- **Dropping hints**

Dropping hints is another typical technique. It can take many forms, ranging from "my girlfriend just got engaged" to "it's San Valentine in one week".
Hints are very simple, but not too bad: most men will get what women mean and she avoids any nastiness.

- **Shaming** ("you're the only one who can't commit, look at your friends!")

Not a very good option.
It puts her *hard* in the chasing position, it leads to a lot of fights and if he gives in it will rarely be the start of a great relationship.

- **High-pressure games** (threats, jealousy, ultimatums)

IGYMYGMY we saw earlier is an example of the larger category of "high-pressure games", which also includes threats and ultimatums.
I recommend women not to use high-pressure tactics and men to women's high-pressure games as a warning sign of worse to come.

Why Women Play Commitment Games

Women play commitment games because, often, they need to.

Some women ask directly, and that's good, but not all women are as assertive or as vulnerability-resistant-. It's only normal that some women will resort to some less direct games.
That's not a bad thing, and it's actually a quality many men seek and appreciate.

Most relationships follow a known and relatively predictable pattern of power.
And after sex and prior to official commitment, it's one of those rare phases where he has more power than her.

At that point, unless he volunteers the commitment, it's her who needs commitment the most. And all the games we have seen here are trying to achieve the same goal: make him commit.

Spending more time together says "we are more than just sex". Parading other suitors says "hurry up to commit". And "I am giving you commitment," says "will you do the same?".

Men Must Get Ready for Commitment Games

After sex happened a few times with a woman and before commitment, men usually are in a "rest" phase.

They got the sex they wanted, and now they feel like it's done and dusted. And they can take it easy. If they were dining and wining her, now they might try to meet more often at home.
If they were making her a lot of gits, now they might slow down with their giving. And if they went the lover way and never invested much in her. They might be lulled into believing it will always stay like that.

But it rarely "stays like that" and it's only the calm before the storm.
Women are more pragmatic and work more on a biological clock: not all, but most women will eventually try to tie him down and, later on, will work to domesticate him once in the relationship.

Are Commitment Games Bad?

Not necessarily.

As already seen, they can simply be the signs of less assertive personalities and that's a feminine quality that many men seek and appreciate.

They *can* be nasty, of course, and we saw one such example.

But some other commitment games are actually a very good sign.
The **IGYMYGMY is an example of high-class game**.

It's a very nice and gentle game to nudge the relationship towards commitment.
And it's exactly what I advocate women do in this previous article on escalating mutual commitment. It gives first, and then giving prompts more giving in return in what becomes a virtuous cycle.

If done well, it also leverages what Cialdini calls *The Law of Reciprocity*, which is a nice bonus to increase compliance in the receiver.

SUMMARY

When sex has happened a few times and exclusive commitment hasn't happened yet, most women will get antsy.

They want to progress things into a more serious and committed relationship, and while some will ask directly for it, many others will resort to games.
Games are not necessarily nasty, but they can be.

And men should watch out for what kind of games they will use: they are most likely a great predictor of how they will behave in the relationship.

Recommendation for Men & Women

Women should ask directly for commitment or use gentler games.
Men should only accept direct requests or kinder games. Nasty games and coercive tactics are a bad omen. He should consider her, not girlfriend material, or, at the very least, put her under heavier scrutiny.

I'm OK – You're OK: Summary & Review

Lucio Buffalmano · 17 December 2018 · Archived copy · Original

"*I'm OK – You're OK*" (1967) introduces transactional analysis to the general public.
Thomas Harris, the author, shows readers how to apply PAC to our daily social interactions, how to self-analyze ourselves, and how to learn to become more discerning, rational, and empowered human beings.

Bullet Summary

- We all born with a default "Not OK"…
- … But we have the power to change our "Not OK" status into "I'm OK"
- Learning how our inner Child and Parent work is how we strengthen our Adult, our mind, how we get rid of games, and improve our relationships

Full Summary

About the Author: Thomas Anthony Harris was an American psychiatrist. After receiving his M. D. from the Temple University School of Medicine, Harris joined the navy, to which he returned after he completed his residency and where he made a good career until he became Chief of the Psychiatry Branch of the Navy. He later opened his own psychiatric practice in Sacramento.
Harris was a good friend of Eric Berne, founder of Transactional Analysis and author of the popular book "Games People Play". Harris disagreed with Berne on a few concepts, but was overall a major proponent of Transactional

Analysis.

PAC: Parent, Adult, Child

Transaction analysis postulate there are three distinguishable modes within each one of us that we use to process information and respond to the stimuli around.
These are the parent, the adult, and the child.

- **Parent**

The Parent is the collection of all that the child has recorded during his early years of life. All rules, admonitions, and limitations belong to the parent.
Harris says that since the children's lives depend on the parents, everything from them is recorded as "true".
If the parent sends discordant messages the child might partially block out the parent, which is weakened or fragmented.
If the parents were very intense in their rules, it might be harder for the adult to question and abandon those rules later in life.

- **Child**

Since the child has no words in his early years most of his recollections are feelings.
The child, dependant on the mother, is always looking for signs of approval or disapproval. The child has no way to understand what causes approval or disapproval, which frustrates him and leads him to conclude: "I'm not OK", which is hardwired in our brains and cannot be canceled.
Same for the parents, adults can be transferred back to the child in grown-up transactions.

- **Adult**

The adult grows as the child seeks answers for himself. He realizes there is different data from what is taught by the parent and what is felt by the child.

I quote Thomas Harry here:

> The adult is different from the parent, which is judgemental in an imitative way and seeks to enforce sets of borrowed standards, and front the Child, which tends to react more abruptly on the basis of prelogical thinking and poorly differentiated or distorted perceptions'

The parent taught and demonstrated life. The child felt, wished or fantasized. The adult finds out.
The adult has the power to examine the child to see whether or not the feelings are appropriate to the present or if they don't serve him well anymore and are simply responses to archaic Parent data.

Thomas Harry says that a secure youngster is one who finds that most Parent data is reliable: They told me the truth.

The Four Life Positions

Transaction analysis says there are four positions an individual can find himself in:

1. **I'm Not OK, You're OK**: the default of all children
2. **I'm Not OK, You're Not OK**: if the mother is cold and non-stroking or aggressive and brutalizing. An adult locked in this position rejects stroking and emotional connection from everyone else in life. Sounds a lot like scarring children with low self-esteem.
3. **I'm OK, You're Not OK**: children of abusive parents, while recovering from wounds, can switch to a criminal stance were they see themselves as OK, but they parents -and later the world- are not OK
4. **I'm OK, You're OK**: this is the only conscious position and a decision we make.

I'm Not OK, You're OK is the default position for many. And the default position of every child.
If the child very early thinks "I'm not OK", he also concludes that his parent, the big provider of all his life needs, must be OK.

Once we feel that we are not OK in a world of OK people, that's when we play games, says the author.
Games people play are a form of relief of the "Not OK" position.

I'm Not OK, You're OK is a position which can be changed *once it's understood*.

Parent & Child Play Games

The author says that one of the reasons why parents and children play games is because the outcome is predictable.

There is a certain security in games, even the ones that harm us and our relationship.

When the adult is in charge, the outcome is not always predictable. There is the possibility of failure. Or of success. But it's only the adult that gives us the opportunity of changing and developing.

Thomas Harris says that all games have their origin in the childhood game of 'Mine Is Better Than Yours'. Back in our childhood years as it is the same in our grown-up years, it brings momentary relief from the Not OK position.

Parent & Child

Thomas Harris goes on to explain what are the cues of parents and children. The parent looks judgmental and the child looks at the parent's mercy.

He says:

> When we blame and find fault, we replay the early blaming and fault-finding which is recorded in the Parent, and this makes us feel ok, because the Parent is ok, and we are coming on Parent. Finding someone to agree with you, and play the game, produces a feeling well-nigh omnipotent.

Complementary Transactions and Crosses

Thomas Harris explains that when transactions happen between the same modality -ie. parent to parent or child to child- they can go on indefinitely.

Uncomplimentary or crossed transactions can cause troubles and communication stops.
Here is a classical example from Eric Berne:

> **Husband**: Dear, where are my cuff links?

This is an adult stimulus as he seeks information.
If the wife answered as an adult, she would reply:

> **Wife**: In your wardrobe I think

But if she's had a rough day she might reply in ager:

> **Wife**: Where you left them!

That's a parent reply.
If she had replied:

> **Wife**: Why do you always have to yell at me?

That would have been a child response.

A person who is dominated by the “Not OK” child tends to read all the stimuli as attacks and as a reflection of his low value.
The “Not OK” position is not to be found solely on the responses of course. It can also hide in the opening message.

For example:

> **Husband**: Where did you hide my cuff links?

The overall communication sounds adult, but secondary communication here is in the word hide, which comes from the parent.
At this point, the wife can decide how to reply.
If her “Not OK” child is hooked, chances are she will go off at the “hiding” insinuation.

Aroused feelings, says Thomas Harris, is a sign that the child has been hooked.

Strengthening Our Adult (& Overcoming Inner Child & Parent)

When we have no idea about our inner Adult, Child, and Parent, the result is a “contaminated adult” and we often resort to substandard behavior that does nothing good for us and for the people around.

There are a few ways with which we can strengthen our adult:

1. **Learn to read the signals** when our parent or child has been hooked
2. **Restrain the automatic & archaic responses** of parent and child
3. **Pause**: give time to the adult to come trough
4. **Question your Parent and Child data**: ask yourself if your old data is true, if they are appropriate responses and if they are serving you well. The very process of questioning is the Adult in action

The more we get to know the content of our Parent and Child, the more we can separate them from our Adult.
And the more we separate the three, the more we develop and strengthen our adult and we free ourselves up.

Thomas Harris says that this is the home remedy of “sorting yourself out”.

The last step, once you learned to sort yourself out, is to do this:

- Learn to see the PAC in others

That’s the equivalent of increasing your emotional intelligence.
It’s what George Thompson in Verbal Judo refers to when he says that the biggest skill of learning verbal judo is to non react to the emotional communication of others.

Types of Transaction

Transaction Analysis divides human to human exchanges into six types:

1. withdrawal
2. rituals
3. activities
4. pastimes
5. games

6. intimacy

Games are a particular type of transaction that has two different characteristics: an ulterior motive and a payoff. The famous book Games People Play by Eric Berne is actually only focused on Games, a very specific part of transaction analysis.

My Note: This helped me understand "Games People Play"
this was super helpful to put some things into perspective. While I previously didn't consider Games People Play to be a good book, I then re-evaluated it again. And I will eventually read it again now that I have a broader understanding.

Withdrawal, rituals, activities, and pastimes, keep people apart and stand in the way of an emotional connection (also read: turning towards based on Gottman's research). Games make the relationship combative.

Intimacy Is Only Possible With "I'm OK"

The author also discusses relationships and how we can improve our intimate relationships.

He says that there is no simple way to define intimacy, yet we can say that **intimacy is only possible when coming from an "I'm OK, You're OK" stance**.
And when:

- There are no games
- The Adult is emancipated

The Hippies Example

There are many awesome examples across "I'm OK, You're OK", here is one I liked:

> A clear social example of this phenomenon is the hippie movement. The flower children extolled a life of Child-Child transactions. Yet the dreadful truth began to become apparent: It's no fun to do your thing if everybody else is only interested in doing his thing. In cutting off the Establishment they cut off the Parent (disapproval) and the Adult ('banal' reality); but, having cut off this disapproval, they found they had also cut off the source of praise.

Children With Child-Dominated Parents

When parents are dominated by their children, they can end up into struggles with their own children.

Writes Thomas Harris:

> If the Child in the mother has a strong not ok position, and it is easily hooked by such life hitches, or obstacles, or disappointments as the obstinate behaviour of a small child who also has a not ok Child, the way is open for a take-over by the Child in the parent, which triggers a regressive sequence of events with more and more archaic circuits taking over in a screaming game of 'Mine Is Better' with mother winning the final round with 'I Am Bigger'.

Finally, he says:

> Summarily, we may say that the solution to the problems of all children, regardless of their situation, is the same solution that applies to the problems of grownups. We must begin with the realization that we cannot change the past. We must start where we are. We can only separate the past from the present by using the Adult, which can learn to identify the recordings of the Child with its archaic fears and the recordings of the

> Parent with its disturbing replay of a past reality.

Thomas Harry goes on to discuss PAC with teenagers, for which I invite you to get the book.

Psychoanalysis Is Parent-Child Transaction

Harris is highly critical of Freudian psychoanalysis.

He says that it recreates a Parent-Child dynamic that lasts for a long time.
Transactional Analysis instead has simpler and more clearly defined concepts, works quicker, and holds the patient responsible for what happens in the future no matter what's happened in the past.

I like that approach.

He says:

> Even if the Adult in the individual gets him to the psychiatrist's office, the Child soon takes over and a Parent-Child situation develops. The patient's Child expresses feelings and anticipates a relationship with the psychiatrist's Parent in the transactions of the first hour. The psychoanalysts refer to this as transference – that is, the situation provokes a transfer of feelings and related behaviour from the past, when the patient was a child, into the present, in which the Child in the patient responds as it once did to the authority of the parent. This unique transaction is fairly common in life, and there are elements of it present in any contact with authority, as, for instance, when one is stopped by a highway patrolman. Psychoanalysts maintain that the patient has improved when he has succeeded in avoiding this kind of transfer of feelings from childhood. At this point in analysis, the patient does not have to pick and choose what he is going to reveal about himself to his analyst. In other words, the patient no longer must be afraid of the analyst's Parent. This is referred to in traditional psychoanalysis as overcoming resistance.

But the author says that normal psychoanalysis is slow while Transaction Analysis skips both transference and resistance.
He says that slapping people with a "diagnosis" does no good, and I also agree with it.

Religions Are Parent-Child Transactions

Says Thomas Harris:

> Central to most religious practices is a Child acceptance of authoritarian dogma as an act of faith, with limited, if not absent, involvement of the Adult.

Since religious people have in the religious dogmas such a strong parent within them, they are often anxious in scorekeeping their behavior against the parent's dogmas.

The confession of the Child to a religious priest says "I'm sorry, I'm not OK, please forgive me, I'm awful".
Confession without change is a game, says Thomas Harris.
Instead, the confession of an Adult makes a critical assessment of where change is possible and looks for ways to make that change happen.

He also further discusses the games that "sinners" play in relation to religion, all of which are extremely interesting.

PAC & Power Relations

I found it very interesting, and highly relevant to the topics I write here on The Power Moves, that some people resist giving the parent role in relationships.

Thomas Harris says:

> Some parents unknowingly undermine treatment efforts because they really do not want to give up the Parent-Child relationship(..). Their position of power is threatened when the adolescent starts operating in the Adult; unless the parents are equally Adult, the transactions will cross.

And more:

> These parents see autonomy in their youngster as a threat to their control of him and may decide they liked it better the way it was, before treatment. Familiar miseries may seem more comfortable to frightened parents than the risk of trusting their teenager to develop his own inner controls.

Awesomely deep!

I'm OK – You're OK Criticism

As a book that helped me better understand the world, myself and actively helped shed some parental baggage and improve, well… I aam a bit of cheerleader.

Yet, "I'm OK – You're OK" also presents a lot of mistakes and generalization, as does Transactional Analysis in general.

The moment transaction analysis tried to shoehorn every behavior into its model, it became obvious that not everything fits into it.
And that's how it is for most models: reality is too complex to fit it all into one simplified model.
So when transactional analysts represented alcoholism as a "life script" for example, they only made themselves sound a bit ridiculous (see: rational wiki).

"I'm OK – You're OK" also presents plenty of exaggerations. It ends up sounding a lot like cheerleading for the method instead of presenting facts and ideas.

And that's not how a scientist should approach things.

And, finally, Harris is critical of Freud.
But Transactional Analysis falls for the same mistake: jumping to conclusions with no evidence.
How can transaction analysis say that "children are born with a default "not OK""?
I for one believe that many children selfishly put themselves at the center of the world, are very optimist -Martin Seligman proves it-, and can also have very high self-esteem.

Real-Life Applications

The real-life applications of I'm OK, You're OK are multiple and potentially life-changing. Including:

- **Learn to see the child in you**

Are you still dependent to mother, seeking her approval?
Or are you dependent on someone else, seeking their approval? I someone getting under your skin, and you are you reacting too aggressively?

Those are all signs you are engaging them from a child position.

- **Learn to see people taking a parent role against you**

In life, you might cross your path with people who are trying to take a parent role over you, to make you feel guilty or make you act as they wish and please.
Learn to see the signs of a judgmental parent.

- **Are you still listening to old parent data (ie.: values)?**

Your parents might have taught you values that are not good for you to obey. Examine them and drop them.

- **Learn to see the child in others**

As you learn to approach life with your adult first, learn to see the child in others.
Are they dependent on you? That gives you lots of power and leverage over them.
But if you want a more equitable relationship, you might not want to engage people as children, but help them develop their adult and have adult-adult relationships.
Also read here.

CONS

- **Jumping to Conclusions**

Rather typical of many psychoanalysts, Dr. Harris often jumps to conclusions without prefacing that he has no data to back it up and that it's a hunch more than a certainty. For example:

> The motility which gives birth to the Adult becomes reassuring in later life when a person is in distress. He goes for a walk to 'clear his mind'.

Linking motility of the child to reassurance and later the "going for a walk" of the adult as a way of regaining certainty is certainly plausible, but it seems a huge stretch to me.

- **Fitting The World Into The Model** (instead of the other way around)

One of the reasons why I'm not a big fan of relying too much on models to describe reality is that people often end up stretching reality just to fit into their model.

Which is what happens sometimes for this text as well:

> Once I observed an eleven-year-old, nonverbal, autistic boy evidence the seeming perception of the I' M NOT OK-YOU'RE not ok position by an intense, repeated hitting with his fist, first his counsellor, and then his own head. It was as if he were acting out his view of life: You're not ok and I'm not ok. Let's smash both of us.

To me, this is extremely interesting, but also sounds like a possible instance of over-interpretation.
The boy might simply have problems that are not (necessarily) a consequence of "I'm Not OK, You're Not OK" position.

- **Some Important Correction Need to Be made**

The book makes some obvious mistakes that, in light of more recent development, we know not to be true.
For example, it says that psychopaths develop from a position of "I'm OK, You're Not OK" following battering. But that's not true, psychopaths are born.

- **Unrealistic View of "I'm OK, You're OK" Not Playing Games**

Albeit transaction analysis should be all about games, it's simplistic in its approach that "I'm OK, You're OK" people don't play games.
I don't buy this idea of "purity" once everyone is "confident enough in his own skin" that he doesn't "need" to play games".
Some people might play *fewer* games, that's true. And maybe, fewer nasty games. But it's not zero.

- **Dogmatic**

"I'm OK You're OK", like many old-school psychoanalytical approaches, talks in terms of dogmas and ultimate truths. Even without the evidence.
Needless to say, I reject that approach -and it's not scientific-.

- **Sometimes Conservative**

Albeit it doesn't sound conservative as it's highly critical of religion, a few passages are very conservative and judgmental.
For example, writes Thomas Harris:

> Sexual intercourse without personal intimacy can only result in a loss of self-esteem. This is true also in marriage.

Who says that?
I don't think that's true at all. Or at the very least, certainly not true in *all* the cases.

PROS

Without listing all the pros and even considering its important limitations, transaction analysis and this book, in particular, are enlightening.

Something I haven't yet outlined and which I deeply appreciated is this:

Great Explanation of The Connection Between Internal Confidence and Games
I find the idea that people in "Not OK" positions play more games to be quite often true. Indeed one of the characteristics of high-value men and high-value women is that of playing fewer games and being more direct.
That stems from internal confidence and a higher self-esteem that allows them to show their true selves.

Review

I'm forever grateful to this book and to transaction analysis.

Not only it expanded my understanding and my own research on human behavior, but it also helped me understand myself much better.
And, in many ways, it cured me and upgraded me.

And even though it was never intended that way, I consider it a fundamental book to understand power dynamics.

Soft Power: The Key to Subtle Social Dominance

Lucio Buffalmano · 18 December 2018 · Archived copy · Original

Soft power is a critical arena for persuasion and influence in our modern world, shaping both interpersonal and international relations through attraction rather than coercion.

This concept underpins modern social dynamics because coercion is often illegal or ineffective, and leadership is based on people *accepting* to follow.

This article examines the dynamics of soft power, drawing on scholarly insights to provide a robust framework for understanding its mechanisms.

Social influence is neither mystical nor manipulative: it combines high value with advanced social skills

- SUMMARY

Intro

Chitty's experiential theory in *The Handbook of Soft Power* describes soft power as:

> Attraction-based influence, both intended and unintended, rooted in human experiences of cognition and feeling

Social influence operates subtly, relying on attraction and persuasion rather than coercion or physical dominance, aligning with soft power's emphasis on shaping preferences through appeal.

It functions at a psychological and social level, distinct from hard power's coercive mechanisms.

Human communication, encompassing verbal and nonverbal cues, prioritizes persuasion over physical confrontation. In contemporary society, power is predominantly *soft* power, relying on attraction and shared values rather than force.

In many interactions, one individual exerts dominance at a mental and emotional level, establishing the frame of reference for the relationship. This frame sets unspoken norms—what's acceptable, humorous, or desirable (setting 'cultural and normative standards').

How Soft Power Creates Social Influence

Socially influential individuals wield soft power because of a fundamental human drive:

People seek approval and appreciation from high-value, high-power individuals.

Approval from such individuals delivers an emotional reward, while disapproval inflicts emotional punishment.

To secure rewards and avoid punishment, individuals conform to the high-power person's standards, often willingly submitting to their influence.

In Power University, this website's flagship course, we term this dynamic "the judge." The term "judge" captures how dominant individuals wield soft power by establishing norms and evaluating others' compliance. **The socially dominant individual's soft power lies in shaping others' actions through their judgment**.

This is soft power because it involves minimal coercion: **the submissive party willingly adheres to the dominant party's norms, actively seeking their approval**. They desire to remain in the judge's favor, reflecting the notion of attraction-based influence.

Also read:

> The Judge Role: A Tool For Power & Control

How to Wield Influence With Soft Power

To exert social influence, three elements are essential:

- **High value/high power** (overlapping but distinct attributes)
- **Warmth** (overlapping traits that project friendliness and approachability)

The greater your capacity to inspire admiration, give, or evoke positive emotions, the more soft power you wield.

Also read:

- **Availability and value**
- **Warmth and power**

> Power Strategy 101: High-Power / High-Warmth

Here are practical steps to enhance your soft power:

1. Become a High-Value Individual

Higher personal value forms the foundation of interpersonal influence.

A high-value woman or high-value man naturally dominates social interactions, while a low-value woman or low-value man struggles to exert influence.

Personal traits and skills are interconnected, not isolated. Enhancing one attribute elevates others, creating a cumulative effect:

- Confidence
- Sexual attractiveness
- Knowledge & life wisdom
- Income
- Personal drive
- Competence

For instance, boosting competence increases confidence, income, and social appeal, reinforcing overall value.

2. Set the Frame

A frame is a set of beliefs, morals, and perspectives that shapes how individuals interpret reality and judge behavior, a concept central to soft power's normative influence.

Frames determine power because they establish:

Norms of conduct—what's fair, acceptable, or desirable—akin to imposing a legal system.

Setting a frame is akin to establishing your normative system, guiding others' behavior within your standards.

Adopting another's frame means conforming to their rules and values, often strategically set to benefit them. Recognizing frames is crucial for mastering social dynamics.

Part of mastering social dynamics involves identifying frames and determining whose standards govern the interaction.

Consider this scene from *Mrs. Doubtfire*:

Her frame deems the party frivolous; his frame views it as fun. Her stronger frame prevails, establishing her as the judge and him as the defendant, illustrating soft power's normative dominance.

Also read:

- **Frame techniques**

3. Foster Emotional Dependence on Your Rewards

Conversely, instill emotional apprehension of your disapproval.

The socially influential individual dispenses rewards and punishments based on their frame, reinforcing their soft power through emotional leverage.

In social influence, rewards and punishments are primarily emotional, aligning with French and Raven's "reward power" framework (French & Raven, 1959, as cited in *The Basis of Social Power*).

Rewards include:

- Compliments
- Acceptance
- Smiles
- Time with them
- Happiness

Punishments include:

- Withdrawal
- Criticism
- Scorn
- Disapproval
- Unhappiness

Unhappiness is particularly potent in close relationships with significant power imbalances. The dominant party's mere displeasure can prompt the submissive party to seek reconciliation, a dynamic prevalent in intimate relationships.

Women wielding strong social influence often need only express annoyance to elicit compliance, as seen in this *Scarface* example:

Tony possesses hard power, but Elvira's soft power dominates, ultimately controlling the relationship ('relational efficacy').

This pattern is common: women often control relationships through soft power, leveraging emotional and normative influence.

Caution: Judging power typically accrues to the more experienced, skilled, or high-value individual, but sometimes it goes to whoever assumes the judge role first. Avoid passively accepting others' frames.

Encourage Them to Prove Themselves

In judge-dominated relationships, the judged party often seeks to prove themselves, reinforcing their submissive role.

This dynamic cements the judge's influence, as the judged invests in gaining approval.

In this example, I position myself as the judge by framing a group of "adults" who engage with complex texts, implying she's not yet mature enough. This prompts her to prove her worth, reinforcing my soft power. Later, clarifying it was a jest fosters healthier dynamics, as manipulation isn't necessary for soft power.

Soft power doesn't require games; focus on core power principles for authentic influence.

Beware of Shaming (A Potent Soft Power Tool)

The judge role can escalate to harder power through "shaming attacks," which leverage coercive emotional pressure.

Shame attacks threaten social ostracism, evoking primal fears of exclusion, historically akin to a death sentence.

They employ terms like "evil," "treason," or "dishonorable" to marginalize the target.

Shamers often impose their ethical frames, assuming self-appointed authority without formal legitimacy, positioning themselves as arbiters of "good" against the nonconforming "other."

They frame their judgment as representing collective values, declaring:

> "This is what's right; you don't conform with *us*, so you're unacceptable."

Shame attacks can push targets onto the defensive, often conceding to seek forgiveness, a tactic that amplifies the judge's influence.

- Defending against shame attacks
- Dealing with judgmental people: Charlie Sheen interview

This interview exemplifies shame attacks delivered from a judge position, leveraging moral authority.

Shaming should be used sparingly to enforce collaborative norms, not domination, as it risks long-term relational damage. While some charismatic leaders use it, historical figures like Robespierre and Savonarola, who relied on shaming, faced dire consequences, underscoring its risks.

Robespierre's reign of terror and Savonarola's destruction of secular works in Florence, driven by shaming, led to their executions, highlighting shaming's volatile nature.

Avoid Identity-Based Shame Attacks

The most damaging attacks target core identities, exploiting deeply held values.

Identities vary, but common vulnerabilities include masculinity for men and beauty or femininity for women, as these are culturally significant markers.

While such attacks may be warranted in extreme cases, habitual reliance on them marks manipulative behavior. Ethical influencers avoid identity-based shaming, focusing on constructive influence.

4. Test Their Worth (& Assess Responses)

Testing, a term from pickup culture, involves:

> Assessing others' value to determine their suitability for you.

Soft power accrues to those who evaluate others.

Simple questions can serve as tests. In influential dynamics, responses aim to impress or avoid disapproval, not merely exchange information.

When the judged seeks to impress, they reinforce the influencer's dominance.

An example from *Meet the Parents*:

De Niro's direct questions intensify pressure, maintaining his judge role. Stiller's attempt to deflect with humor fails as De Niro reinforces dominance with "but you didn't pick it."

Testing can escalate to interrogation, as in this *Wolf of Wall Street* scene, where DiCaprio's character submits under questioning, highlighting soft power's evaluative strength.

Social Influence and the Parent Role

Some theoretical context:

The judge role overlaps with the parent-child dynamic in transactional analysis, particularly as interpreted by Thomas Harris in *I'm OK – You're OK*.

Teen rebellion often targets parental judgment, seeking autonomy from emotional influence, akin to resisting soft power's normative frames.

In adult relationships, **the judge fosters emotional dependence on their validation**, prompting investment and self-improvement to gain approval, much like children with parents. This dynamic is prevalent in romantic contexts, where women often wield judgment power due to higher power in the social marketplace

The parent role and social influence converge, as seen in this video:

This references Power University, offering practical social power strategies.

When the Submissive Party Rebels

Rebelling against a judge's influence without dismantling their authority keeps you within their frame, as the video notes, reinforcing their soft power.

Such rebellion reflects emotional dependence on their judgment, akin to resisting yet remaining under their

influence.

An example from the article on female relationship control:

His rebellion resembles a child's defiance of maternal authority, highlighting soft power's emotional hold.

Soft Power in International Relations

Soft power is equally pivotal in international relations, shaping global influence without military force.

Since the last major war ended in 1945, global power has been negotiated more through soft power than hard. The USA didn't have to invade any European countries: all the major European powers wanted to be on the Western, democratic side.

Western soft power attracts allies, and the free market makes them rich and powerful

And the same is true for most former USSR countries: they all looked West, rather than east.
The USSR was undermined from within, with soft power.

Resisting Soft Power

Soft power can be constructive, as in mentorship or guidance from trusted figures, fostering growth.

However, resisting manipulative or overbearing influence is crucial, such as from controlling figures or exploitative actors.

To resist soft power, do this:

1. Recognize the Dynamics

Identify when others attempt to assume a judge role, imposing their norms over you, a skill vital for social empowerment.

This article aids recognition. Certain phrases signal judge dominance, as shown here:

When encountering these, avoid overreacting or seeking justification. Reflect that they're assuming a judge role, preparing you to counter strategically.

2. Undermine Their Authority

First, mentally reject their authority. Then, challenge their influence by questioning their legitimacy or frame, dismantling their soft power.

3. Reject the Child Role

Avoid both compliance and rebellion, as both reinforce a child-like dynamic. Respond calmly and assertively, maintaining adult autonomy.

SUMMARY

Soft power drives social and geopolitical influence through attraction and persuasion.

It hinges on two pillars:

1. High personal value
2. Advanced social skills (encompassing persuasion, negotiation, and power dynamics)

High value attracts followers; social skills and strategies amplify influence. Mastering these principles empowers individuals and nations alike to influence others.

The Slight Edge: Summary & Review

Lucio Buffalmano · 19 December 2018 · Archived copy · Original

In *The Slight Edge* (2005) author Jeff Olson explains that the secret to becoming successful in life is repeating the small daily habits and actions, over and over. Then the compound effect will naturally carry you to success.

Bullet Summary

- Every day, do the actions that will carry you to success
- Do it consistently, day in and day out
- Do it even when it's boring, even when it would easier to do something else
- Positive habits compound over time, but so do negative ones. If you compound negative habits, you go in the opposite direction of success

Full Summary

About the Author: there is not much information about Jeff Olson online, but what's sure is that he is an American self-help speaker and author, and he is the founder and CEO of a cosmetics company.

The First Ingredient: Your Philosophy

Changing your philosophy in the slight edge mindset means changing how you see the daily, small things of your life.

Building to-do lists won't do you any good unless you change your mindset about all those actions.
And the correct philosophy is this: everything matters. Especially the small daily actions and habits which, over time, either build up to make you a success, or build down to lead you to failure.

The Choice: Up or Down. The Core of The Slight Edge

The core of the slight edge, and I quote Jeff Olson is this:

> Little productive actions, repeated consistently over time—add up to the difference between failure and success
>
> *Jeff Olson, The Slight Edge*

The Slight Edge will keep applying whether you want it or not, and it goes both ways.
If you get into the habit of doing what will move you towards your goals, day in and day out, you will surely be successful.
If you let yourself go and you snooze, eat junk food, and waste time, it will lead you in the opposite direction of your dreams.

Master The Mundane

Here is why you need to master the mundane:

1. Little daily actions are easy to do, but also easy *not* to do
2. Results are invisible (in the beginning)
3. Little actions seem insignificant (but they add up)

The small daily actions won't always be exciting. Sometimes they will be boring. And sometimes they might even be hard.
And they take time.
You will not get to see results right away. And that's exactly why most people don't do them

Mastering the slight edge means to learn mastering the daily and mundane. You don't start from the top right away, you need to get there, and getting there means repeating small little actions day after day.

Don't Fall For The Quantum Leap Mentality

People with a "jackpot" mentality don't apply the slight for exactly the reasons we mentioned above: it's easy not to do, it takes time and in the beginning results are unnoticeable.

It won't make no difference today whether I write this post or snooze. It won't make a difference whether I gorge at McDonald or I eat my usual healthy dinner.
But in the long run, you bet it *does* make a difference.

People who don't understand the slight edge pursue the big break, the quantum leap.
They seek opportunities to make one million today. Basically, **most people chase lottery tickets** that rarely yield the results they want -and often yield the *opposite* results-.

Slight edge people do get to experience quantum leaps. But only after they have been working at it for a long time. Basically, when you apply the slight edge your success will be in "brewing" mode for a while before it eventually explode -same concept Peter Diamandis talks about in Bold for diffusion of disruptive technologies-.

Start With a Penny

The Slight Edge advocates starting.

Yes, learning is important.
But action goes hand in hand with learning and reading.

The key to starting on your road to success is starting. No matter what you start with, you gotta start.

Two Life Paths: Threats or Possibilities

Successful people believe in the future and in a world of possibilities. They believe they can change their life. Unsuccessful people live life blaming others and they never take responsibility for their life.

Successful people shoulder a responsibility to make others successful.

Use Mentors

To shorten your learning curve Jeff Olson recommends you pick a mentor. A mentor should be someone who has already done what you want to achieve.
Make sure that he is a good role model that you can emulate.

Also read:

- Career strategies

The 7 Slight Edge Principles (Habits)

Here are five positive and powerful slight edge habits:

1. Show up
2. Show consistently
3. Cultivate a positive outlook (see the glass half full)
4. Commit yourself for the long haul (10.000 hours rule)
5. Cultivate burning desire backed by faith that you will make it
6. Pay the price (sometimes you gotta give up something)
7. Practice integrity (do the right thing even when nobody's watching)

What to Read After The Slight Edge

One of the core principles of the slight edge is that of continuous growth and improvement.

I especially loved the story of Olson speaking to a shoe-shiner who dreamed of sending her daughter to university but she couldn't afford it. She was an avid reader, but she only read novels.
And Olson wonders "what if she had read good self-development books instead?"
I couldn't agree more.

Jeff Olson quotes and recommends many books, including:

- The Happiness Advantage
- As a Man Thinketh
- The 7 Habits of Highly Effective People
- The Power of Habit
- Think and Grow Rich
- The Magic of Thinking Big

Real-Life Applications

The whole concept of the slight edge is transformative and something you should definitely apply to your life. There were a few more gold nuggets I loved though, including:

Make Happiness a Priority
The model that most people follow, such as "achieve the result and then be happy" has been proven over and over not to work.
Do the opposite instead: make happiness a priority which, in turn, will make it much more likely that you will also achieve your goals.
Slight edge + happiness = success.

Quotes

Here are a few great quotes I loved:

> How long will it take? Chances are it will take longer than you want it to—and that when the time arrives, you'll be astonished at how quick it seemed.
>
> *Jeff Olson, The Slight Edge*

> The Slight Edge is all about living in the moment
>
> *Jeff Olson, The Slight Edge*

> Be happy and the reason will appear
>
> *Robert Breault*

CONS

I think The Slight Edge contains a simple, yet foundational truth for a successful life, so take these cons as small pebbles in an otherwise great text.

- **Keeps Building Up Suspense**

The concepts in The Slight Edge are transformative, yet simple. But the author didn't simply deliver them in a straightforward fashion: he builds up to them and creates suspense. It's a good idea to make them more memorable, and sometimes it worked wonders. But some others sometimes I thought it was too much.

- **The Compound Effect Applied to Investment is Risky**

The compound effect is a truth of life and it's important.

However, I personally can't stomach anymore the compound effect applied to financial investment. One because it's everywhere, and second because it's not true.

Just think about it: does it makes sense that something will keep on growing *forever*? How can you rest assured the stock market will keep on growing from now until when you retired? You can't! So the "compound effect" presented as the safest way to become a millionaire is built on a lie (also read: Fooled by Randomness and The Millionaire Fastlane)

- **Sometimes Statistically Superficial**

This is nitpicking, but you know guys I'm a highly critical reviewer.

The author says that by analyzing the words in tweet messages they could predict health. But the doctor who introduced the study didn't predict overall health, he only measured the *correlation* with *one single* medical ailment.

I'll give you one example to show you how these correlations can be meaningless: jogging is likely to be correlated with a higher incidence of knee injuries, sprayed ankles, and dog bites. Does it mean jogging is unhealthy? Of course not.
Also read: How to Lie With Statistics

- **The Legacy Argument**

I'm really not a big fan of legacy. I feel it comes from an unhealthy place. It contains a lot of entitlement mentality with the idea of "being remembered", which sounds rather egocentric to me.
The truth is that, on a long enough timeline, nobody will be remembered. And that's fine.

- **Sometimes Repetitive**

The book could have been much shorter. Especially if you read a lot of self-development texts much of the information won't be new to you.
But repetition can also help people internalize the message better, so this one is very personal.

PROS

The Slight Edge goes at the core of success. Both in terms of achieving material success and an happier, more meaningful life.
That's all the "pros" you need :).

Review

The Slight Edge is an excellent, excellent book.

If you want to be successful, the slight edge is your formula.

It is in many ways similar in content to The Compound Effect, and both are excellent books because they go at the core of what it takes to be successful.

Alpha Male Posturing: Why You Must Quit That Sh*t!

Lucio Buffalmano · 20 December 2018 · Archived copy · Original

Alpha male posturing is the ensemble of behaviors that seeks to show off how "alpha" one is.
It includes exaggerated self-promotion, bragging, social climbing, status inflating behavior, and of course attacking others to feel better by comparison.

This article will show you why people do it, how it works psychologically and socially and, finally, it will give you a few pointers on moving past that value-taking mindset.

I feel so alpha.. As long as I can ridicule the betas.
Contents

- Alpha Male Posturing: A Definition
- Alpha Fucks Beta Bucks
- Alpha Male Posturing Example
- Psychological Payoff of Alpha Posturing
- The Bigger The Cuck, The Better I Feel
- Social Pay-Offs of Male Posturing
- Alpha Male Posturing Video
- Why Alpha Posturing is Weak
- When Criticizing Others is OK
- Moving Past Alpha Posturing
- SUMMARY

Alpha Male Posturing: A Definition

Here is a definition of alpha male posturing:

> Alpha male posturing includes all the behaviors and attitudes that seek to inflate one's own social status and self-esteem by creating an outgroup of "inferior" people to be attacked and ridiculed.
>
> *The Power moves*

Some Red Pill circles use various slurs to ridicule and frame 'non red pilled' as "inferior".
But most groups that develop an edge of toxicity always develop new epithets for the inferior groups.

The key in this definition is "inflating one's own value".
Because, at the core, alpha male posturing is nothing but an example of social climbing: it's about pushing people down so that I can pull myself up.

Alpha Fucks Beta Bucks

You have probably heard about this maxim:

- **Alpha fucks, beta bucks**

And if you've taken a walk on the red side of the underworld, you've probably come across terms such as "cuck", "beta" or "beta bucks".

As a matter of fact, you can barely get by a single post or article without being peppered with those labels.

For the record:

- **Cuck** means "cuckold", as in men who are so unattractive that their women cheat on them with alpha males or some lover-types.
- **Beta** means "beta males", which is a portrait of weak men as opposed to "alpha males".
- **Beta bucks**, refers to more boring and plain men who supposedly buy sex and get into relationships by wining and dining her (ie.: a pejorative word for a "provider role").

All these terms sound rather mean and, for their purpose, they have to be.
They have to be to serve the purpose of group-cohesion and psychological self-protection (ie.: they are so bad that and so different that I could never be one of them)

Let's see:

Alpha Male Posturing Example

I didn't need to dig much to find an example of alpha male posturing.

On the very first page of The Red Pill on Reddit I found the perfect example (original post here):

with her guests or friends. Dump her and the entire friendgroup because it's basically a bunch of 5's who think they are 8's. Don't see them for 4 months. Suddenly I see that this chick found a beta bucks and married him within 4 months at MOSI.

Basically, she was taking every opportunity she could find, get herself pissed drunk and use that to escalate, because 35 and knock-knock, nature is calling. But can you blame her? What would you do if you are reaching the end of your fertility window? In the end you stop caring, because you want kids, +50% of marriages end up in divorce anyway so that's a matter of time, so if you are a decent man with good looks and finances, have babies with him and see if it works out, because the state is in your favor anyway.

Her beta bucks is also a guy who looks good, probably has a good job, but doesn't put himself out there, doesn't try to pull any ladies in the bar or club, anywhere else. A really passive guy who has to rely on women to come on to him, because otherwise he wouldn't find anyone. And guess which women would come on to him? Those which are undesirable by men and not approached, so they need to do the approaching themselves.

The poster is describing how an ex FWB he was seeing -a “plate” as per Rollo Tomassi plate theory-, met another man and soon got married.

The message implies that the poster does not know the new guy, yet looks how much inferring he does:

1. Probably has a good job (ie.: stable and likely boring)
2. Doesn’t put himself out there (ie.: doesn’t try to improve)
3. Does not approach women
4. Is a really passive guy

Now, what is this poster actually doing and communicating?

What this poster is doing is this: he picks a random guy whom he doesn’t even know and **points finger so that he can look good by comparison**.
What’s not written but implied in this communication is this:

1. I didn’t need a good job to fuck that girl because I’m attractive
2. I put myself out there: I’m a brave alpha
3. I’m not a passive guy: I’m a brave alpha
4. Like me because I’m alpha

The game is this: **make someone else look shit so that I can look good by comparison**.
As we will soon see, this is an inherently weak game.

Psychological Payoff of Alpha Posturing

People posture for both social status and ego-massaging.

When we criticize others we also feel superior.
We get to be in the power position of judges, we get an ego boost from others nodding their head at us and we shore up our flailing self-esteem.

Here is the interesting phenomenon now: the original poster or commentator gets the biggest boost in terms of social status, but the whole community as well gets a boost in self esteem and a smaller social status boost by jumping on the bandwagon.
Here is how:

An Orgy of Ego Self-Massaging

By commenting and agreeing, everyone basks in the limelight of the original commenter.
They get to make the original commentator feel good and increase his status while they also get a small boost social status by following in his footsteps.

And everyone gets an equal boost in self-esteem by feeling superior the “cucks” out there.
Win-win… Or so it feels.

It’s often a cyclical ego-propping anyway. Today you post and I prop your ego by agreeing with you, tomorrow I post and you prop mine.

So you get a whole army of people all moving in circle and following in each others’ footsteps, building up each other’s self-esteem while they all point to the cucks in the middle of merry-go-round circus.

In a way, it’s a big online circus of emotional self-help.
Let’s all point out to an enemy out there and then let’s all feel better by making fun of him and up-voting each other.

The Bigger The Cuck, The Better I Feel

Here is another off-shoot phenomenon of posturing.

The worst and more ridiculous you can make your opponent appear, the better you feel.
Which is one of the reasons why these communities are no actually good for learning. The issues they discuss are designed to make them feel good, not to really examine, learn and improve.
This technique is similar to the strawman fallacy, where the attacker exaggerates the negative traits of the opponent so to score an easier win –a strawman example used by Tucker Carlson–

Look at this example:

An example to piggyback on OP's point.

BF/GF walking down the street, girl drops her bag of clothes (he probably bought for her). She says fuck then proceeds to yell at him. Why aren't you helping? Before bete even knows what's going on, he proceeds to apologize, but she's still mad at him because she's just mad and since her feelings can't be wrong it's his fault.

It's a small thing, but it just shows how easily a relationship can go south. If this instance becames a dynamic (e.he apolagizes to her all the time, she'll hate him and branch swing ASAP). All because she dropped her bag.

permalink save parent report reply

Notice that this example is so far out there you wonder if he is describing something he saw or if he's making it up as an extreme example.
Now of course, it *might* even be real, sure there are dysfunctional relationships with similar dynamics where the man accepts that kind of abuse.
Yet they are *rare*, and they are not the norm.
But by making it seem like the norm, the people in that community get to feel even more special.

And of course, with that black and white thinking they don't get to learn social dynamics and dating all that well.

Social Pay-Offs of Male Posturing

Social climbing is nothing new.
It happens in most social groups, and at all levels of abstraction.

Nations want to feel superior to other nations, men want to feel superior to women and different professions want to feel superior to other professions.
It's all the same game: build your own cool ingroup, point fingers towards an inferior outgroup, and feel good by comparison.

Basically it works like this: **if we can find a group of people who's inferior to us, we can then feel great by comparison**.
And if we can't find one, let's make one up!

And that's the addictive part that tribes offer to their members: the ego boost and self-esteem massaging of "tribe superiority".

This is a well known phenomenon in sociology and dictators of all times have used it to shore up political support, remove people's attention from more important issues or carry out ugly personal vendettas against this or that social group.

Prosecutions, progroms and lynchings are extreme examples that leverage similar dynamics of social climbing and posturing.

Alpha Male Posturing Video

I was looking for a video example on alpha male posturing, and then realized that this guy basically made a video caricature of one of the core messages of this post:

“The most alpha thing you can is to judge others to put beneath you to make yourself feel superior” LOL, nailed it!

Why Alpha Posturing is Weak

Posturing is weak.
And albeit “insecure” is often abused these days to criticize anyone we don’t like, posturing *does* often communicate insecurity.

One research for example shows that when men speak loudly, women rated them as more aggressive.
But, crucially, also insecure.
And that’s not attractive.

Alpha male posturing says the following:

- Communicates lack of deep confidence
- Social climbing says you’re nowhere near the top
- You look nasty to anyone who’s not playing posturing games

If we go back to the original definition of alpha male posturing:

Alpha male posturing seeks to *inflate one’s own social status and self-esteem* by creating an outgroup (..).
When you need external props and when you need to expand so much effort to pump your own ego and self-esteem, you are also inherently communicating that you need that self-esteem boost because you don’t have enough.
And that’s the definition of insecurity.

When we point fingers and try to look better by comparison, we are by definition engaging in social climbing. And when we engage in social climbing it means we are far from the top.

When Criticizing Others is OK

There are a few exceptions when criticizing can be used strategically to bond and connect with people.

I talk about such an exception in my article on making women compliment you. In a nutshell, when you strategically criticize someone far away in a way that you make you and a girl both feel superior, then you are indirectly complimenting her and creating an “us” frame which can help seduction.

In that case, and in a few other rare exceptions, fare game.

Moving Past Alpha Posturing

Moving past alpha male posturing means growing as men and persons.
It means reaching a point where our self-esteem is internally-generated and doesn’t need any nasty behavior for props.

Here are a few articles and resources to get you started:

- Moving beyond Red Pill anger
- On the fairness of women “having it so easy”
- Anti-fragile ego
- **Power University**

SUMMARY

This article showed you what (alpha male) posturing is, how it manifests, and why it exists.

If you see posturing behavior in yourself, don’t worry, there is no shame: it’s a natural human tendency -men more than women-.

But natural doesn’t mean “good”.
And if you want to move forward in life and develop yourself -like *really* developing yourself-, then you gotta police your posturing tendencies for a while and eventually most past it.

And since you’re here, drop the need for social status as well:

- The futility of social status

The God Delusion: Summary & Review

Lucio Buffalmano · 20 December 2018 · Archived copy · Original

The God Delusion is Richard Dawkin's seminal work in which he seeks to prove there is no God and that the world would be better off without religions.

Full Summary

About the Author: Richard Dawkins, studied zoology at Oxford. He has been a professor of zoology at Berkely and, later, at Oxford. Dawkins was Christian until his teenage years, at which point he dropped Religion in favor of the theory of evolution.
He is also the author of The Selfish Gene, and he's always been outspoken about his rejection of religion and agnosticism.
Or rather, as he puts it:

> I am agnostic only to the extent that I am agnostic about fairies at the bottom of the garden
>
> *Richard Dawkins*

Agnosticism Is Not 50/50

He says that the position of agnostic people who refuse to answer is tempting, but it's not correct.

Saying that you cannot answer does not make the odds 50/50. Whether we cannot know that my red is the same as your green does not make the chances 50/50, he says.

Basically, Richard Dawkins hints that agnosticism is a cop-out.
However, I wasn't too convinced by Dawkin's reasoning here.

Disproving God's Proofs

In the third chapter Dawkins discusses and, he says, debunks, the proofs that some prominent theologians brought forth during the millennia.

One of them is that if we go back in time there must a point where we cannot go back anymore, and that must be God.
Dawkins says that the idea of "regression" implies that God is immune to regress, which he challenges.

He also challenges the "design" theory which is the most popular these days. The design theory says that we are simply too complex to have evolved randomly.
Yet, says Dawkins, evolution proves just that: that it's not only possible, but highly likely.

Then he addresses the popular but flawed criticism against evolution which is the lack of "transition fossils". Quote is friend Matt Ridley, author of The Red Queen, Dawkins says that there are plenty of "transition" fossils.
And anyway, it makes no sense to speak of "transition" in evolution because we are always in transition.

My note: indeed the "transition" fossils argument makes no sense.

Who Made God: The Infinite Regress

Dawkins says that God presents an infinite regress that he cannot help us escape.
If we demand who created us, then a God complex enough to create musk ask the same question: who created him?

Dawkins says that the infinite regress proves that while God is not technically disprovable makes it highly highly unlikely.
I don't see how that helps explain anything though.

How Religions Got So Popular

Dawkins wonders how is it possible that religions spread so far and wide. And he makes the case it's a consequence of other traits that we posses.

He says that children listen and believe their parents because it best serves their survival chances.
However, that also makes them open to "external viruses" in the form of beliefs. Including religion, that thus replicates from one generation to another.

My note: it does make sense, this was a smart thought by Dawkins. Albeit I gotta question its true power and children are notoriously rebellious to their parents as well.

The God Delusion Criticism

Richard Dawkins wrote a remarkable book. Yet quite a few passages and arguments didn't convince me much. Including:

Religion Cannot be Criticized

Richard Dawkins says that religions enjoys protection from criticism in our society.
It's OK to discuss almost anything, but when it comes to religion there is this idea that it must be respected.

I think that partially is the case. But that's the case for so many topics today that I wouldn't really make it a
Furthermore, the idea that "we should all respect religion" also leads to much stronger attacks from non-religious and atheists.
Let's say it's a hot subject, but I wouldn't say it cannot be criticized.

Focus on Famous Personalities

Richard Dawkins spends much of the book talking about the religious beliefs of prominent historical personalities and scientists such as:

- Albert Einstein
- Thomas Jefferson
- Benjamin Franklin
- Adolf Hitler
- Josef Stalin

Albeit they are all interesting references and I enjoyed reading about them, I thought it was too long. And I really don't see how the religious beliefs of any single person could prove -or not prove- of the existence of God.

Strawman Attacks

In several instances during the course of the book I felt like Dawkins was attacking strawmen.

When he challenges the idea of God as both omnipotent and omniscient for examples he is talking a God who "intervenes" in human matters.
But that's only one interpretation of God that, frankly, is also the most childish and most easily disprovable.

I sense more strawmen with the people he picked to criticize. He talked and quoted at length of priests and theologians who were so bitter and aggressive that they obviously made too easy targets.
It's as if a priest decided to smear atheists by talking of his neighbor atheist who hates him.

Flimsy Evidence of Correlation Between Morals & Religion

I personally don't believe that if there is a correlation between morality and religion it's going to be strong.

But I was also not convinced by Dawkin's data, especially the one overlapping "red state" and crime.
That one is pure correlation and says little at best, and it's very misleading at worst.
Also read: Fooled by Randomness.

Religion the Cause of Wars.. Or Just a Factor?

Dawkins implies that religion is a major cause for divisiveness, animosities, wars, and violence.

Especially in the beginning, Dawkins seems to imply that without religions we wouldn't have had any crusades or terrorism.
I find that extremely simplistic.

By modern standards, the crusades were little more than field trips in terms of destruction. And we have terrorism of all kinds, not just religious.

Later Dawkins changes and says that religion, with its divisiveness, can feed on humans' natural tendencies of

forming ingroups and outgroups. And with that, I must agree.
I believe religion can be a factor, and in *some* cases it can be a major factor and driver of violence.
But anybody who says that religion is the main cause of wars and we would be very peaceful without has not really understood human nature.

Blames on Religion What's Human, Not Religious

Sometimes I feel like Dawkins commits a mistake many people commit; that of confusing human nature with the excuse that allows human nature to hide its real ugly motives.

The truth is that religion is often simply an excuse.
The early Christians didn't make much of gay people. Today, they do. Plenty of non religious people hate on homosexuals and they probably use some other lame-ass excuse as "it's immoral" or "it's disgusting" or "it's not a mannish thing to do".

Some "Proofs" Are Not Real Proofs: IQ VS Religiosity

Some of the proofs against the existence of Gods are not real proofs.

For example, what's the statistical *correlation* between IQ and religious beliefs and between education and religious beliefs should prove?

I think Dawkins should have been the first to say it was no final proof.

For example, at the extremely low end, animals have very low IQ and don't believe in God.
And a high IQ man like Jordan Peterson is very religious (albeit maybe Dawkins doesn't think very highly of Peterson :))

And we can't be sure that if we had 1.000 IQ levels then we wouldn't believe at a higher rate.
The truth about IQ measures is that we measure a very small range. And again, small ranges can be more misleading than enlightening.

The God Delusion Quotes

Plenty of awesome quotes from Richard Dawkins ranging from the funny to the deep, including:

> George W. Bush said that God told him to invade Iraq (a pity God didn't vouchsafe him a revelation that there were no weapons of mass destruction)
>
> *Richard Dawkins*

LOL you gotta love Dawkin's biting humor.
And more:

> If you die a martyr you will go to an especially wonderful part of paradise where you will enjoy 72 virgins.
>
> Spare a thought for the unfortunate virgins.
>
> *Richard Dawkins*

> Look carefully at any region of the world where you find intractable enmities and violence and I cannot guarantee that you will find religion as the dominant label for ingroups and outgroup, but it's a good bet.
>
> *Richard Dawkins*

And one wonderful piece of rational poetry here:

> We believe in evolution because the evidence supports it. We would abandon it overnight if new evidence arose to disprove it.
>
> No real fundamentalist would ever say anything like that.
>
> Not all scientists would change their mind as quickly, but they all at least pay lip service to it as an ideal–unlike, say, politicians who would probably condemn it as flip-flopping.
>
> *Richard Dawkins (edited for brevity)*

And the most famous quote:

> **We are all atheists about most of the gods that humanity has ever believed in. Some of us just go one god further.**
>
> *Richard Dawkins*

Real Life Applications

Question everything.
Including a book that tells you there is no God.

CONS

Sometimes it feels like a a bit too much anger transpires for believers and religious people.
For example a man wrote Dawkins saying that after he became an atheist his girlfriend wasn't any more sure about his moral standing.
Dawkins replied that as his girlfriend found out something about him, he too found out something about her and he'd have to wonder if he was too good for her.

I found that a bit judgmental.
I personally don't think that religiosity makes a huge difference between a high quality woman and a low quality one as it often comes with pros and cons.

PROS

Deep, well researched, well written and argued, even funny. Whether you like it or not, The God Delusion is solid work.

Review

Richard Dawkins makes some great points and *The God Delusion* is a worthwhile book to read.

My opinion is that, in the end, Dawkins didn't really "prove" there is no God.

He makes a compelling case against "human manifestations of religion" and the church, but that's rather easy to be honest.
And it's a far cry from proving anything.
I'm afraid, we are not going to find any proof about God's existence -or nonexistence- in any book.

How Spot and Handle Social Climbers: Examples & Solutions

Lucio Buffalmano · 21 December 2018 · Archived copy · Original

You've likely encountered a social climber. They're the person who seems to be constantly trying to get ahead, often by being overly friendly with those in a higher social class, dropping names, or subtly putting others down.

While the **social climbing definition** might seem simple, the **psychology of a social climber** is a complex mix of ambition and insecurity.

This article will not only help you understand **what a social climber is** and their common **characteristics**, but also reveal why their overt attempts at gaining status often backfire, harming them more than they help.

The harder you try to climb, the try harder you look

- SUMMARY

Who Are Social Climbers

Social climbers deliberately try to gain a higher social status by seeking higher status people, bragging, or putting others down and look better by comparison.

It's important to note that social climbers per se aren't inherently bad people.

High-quality men and high-quality women all seek to increase their social status.
And that's a good thing. It's what makes them high-value in the first place.

However, ***good*** **social climbingis calibrated and doesn't even look like climbing.**
The people we call social climbers instead do not have that calibration and may even *lose* status (Blau, 1964).

Bad Social Climbers

'Social climbers' has a negative connotation in common parlance, and refers to **social climbers who are too obvious or too aggressive**.

You could call these 'value-taking social climbers', defined as:

> Value-taking social climbers seek to raise their social status not by virtue of their qualities or by helping others out but by attacking, ridiculing, and generally by depressing other people's statuses.
>
> *The Power Moves*

This type of social climbing is *costly*, and you better stop it.

Types of Social Climbers

Here are some examples of social climbers:

1. Fake Complainers

Fake complainers exaggerate or outright invent problems.

However, their problems are never "neutral", but are designed to make themselves look good by making others look bad of course.

They complain of people asking them for money, younger guns seeking them as mentors, men or women hitting on them all the times, etc.

Here is one example:

That wasn't great acting but it's enough to see what I mean
Now that example is a bit theatrical for emphasis of course, but that's the gist behind fake complainers: pretend others are seeking you -and bothering you as they pursue- for some great quality of yours.

Among the fake complainers, we often see drama queens, highly emotional individuals, and borderline personality disorders.

Why Fake Complainers Fail

Most people don't rationally grasp what the social climber is doing, but most people will still instinctively dislike them.
Or, in the best-case scenario, they will instinctively know that they are not the highest quality people.

And that's because social climbers are rarely at the top, but almost always struggling for the middle-of-the-road social slots.

2. Posturing Climbers

Now here is another gem of social climbing tech.

The technique of the posturing guy is to finger at an imaginary straw-man enemy and accentuate his flaw and shortcomings and laugh.
The idea in the social climber's mind is that by criticizing someone people will think that he must be the opposite.

In principle the idea is not completely wrong: studies indeed show that critical reviewers are perceived as more intelligent than positive reviewers. And usually, people criticize those who are very different from them, thus the idea of "by making someone look like shit, people think I'm golden".

However, it doesn't really work like that in practice.
One of the main issues is that social climbers are often too obvious about their hidden agenda. We talked about in Alpha Male Posturing, and here was an example from that article:

with her guests or friends. Dump her and the entire friendgroup because it's basically a bunch of 5's who think they are 8's. Don't see them for 4 months. Suddenly I see that this chick found a beta bucks and married him within 4 months at MOSI.

Basically, she was taking every opportunity she could find, get herself pissed drunk and use that to escalate, because 1b and knock-knock, nature is calling. But can you blame her? What would you do if you are reaching the end of your fertility window? In the end you stop caring, because you want kids, +50% of marriages end up in divorce anyway so that's a matter of time, so if you are a decent man with good looks and finances, have babies with him and see if it works out, because the state is in your favor anyway.

Her beta bucks is also a guy who looks good, probably has a good job, but doesn't put himself out there. Doesn't try to pull any ladies in the bar or club, anywhere else. A really passive guy who has to rely on women to come on to him, because otherwise he wouldn't find anyone. And guess which women would come on to him? Those which are undesirable by men and not approached, so they need to do the approaching themselves.

"I'm saying he's "beta male", so you can infer that I'm alpha. Oh, P.S. I've never even seen the guy I'm ridiculing".

Why Fake Complainers Fail

Some postures are smoother and their game will work with people who are not very socially smart.

But with high-quality men high-quality women social climbing, falls flat.

At the end of the day, this is why posturing guys always fail:

> Nastiness qualifies the sender much more than it qualifies the receiver.
>
> *The Power Move*

3. Sarcastic Climbers

The sarcastic player increases his social status by looking smart… While he makes you look stupid.

You ask a normal, straightforward question and they reply with a joke at your expense. You make a comment about politics and they sigh, "Oh well, I suppose universal suffrage wasn't the best idea after all".

Why Sarcastic Players Fail

Sarcastic players might be the hardest to spot. Indeed, as long as they don't exaggerate, most people consider them

high-quality, smart guys who can quickly think on their feet.

However, although it will win the nod of approval of most people, the creme de la creme of the most socially attuned ones will still see it for what it is: a crack in the wall from which obvious signs of egotism and insecurity are seeping through.
And a stinking sense of superiority.

4. 'Look Down On You' Climbers

I had one such example just yesterday.
Here is how it went:

> **Friendly guy**: *"what are your goals for 2019*
> **Me**: *"bla bla bla"*

Now the social climbers started hovering around the group, and to be warm and inclusive I make space and then pass the question back to him.

Look how it went:

> **Me**: "And what about you, what are your goals for 2019
>
> **Social Climber**: Why, what's so special about 2019

See what his game is?

He is angling to show off that New Year's resolutions are "beneath him". Which might be, I also think most people do New Year's resolutions for all the wrong reasons.
But it's still trying to make *me* look bad and decrease my social status to make *him* look good and gain social status.

Now most people here would have gone on the defensive, which would have given him indeed a chance of winning and scoring social points.
Oh well, not that night and not with me, I suppose:

> **Social Climber**: *Why, what's so special about 2019*
> **Me**: *"It's a new year*

Said slowly, with the intonation of "It's… A new year… You dumbass"
And then proceeded to hold my frame it's normal and "good" to make the new year's goal which thwarted his weak attempt at social status climbing.

This is the tonality, facial expression, and attitude I am talking about:

Why Aggressively Superior Players Fail

Superior players are some of the worst.
Not only do they look aggressive and daft to everyone in earshot, but they also make enemies.

And the golden rule of social power is that you want friends, not enemies.

5. The Absentees' Climbers

Social climbing 'in absentia', derived from lating for 'while absent', is one of the easiest forms of climbing.

With this tactic, the social climber picks on someone who is not physically present to push him down while he pulls

himself up by comparison.

Social climbing in absentia tends to be mostly verbal because, most of the times, you can't turn your back or ignore someone who isn't there, but you need to mention them and talk about them.

Some examples:

Direct Attack Social Climb

- That guy is an idiot
- She's such bi*ch
- He's so incompetent

They sound like simple slanderous comments, but the hidden message is "I am better".

Storytelling

The story can then either show the social climber getting mad recognition he doesn't even care about or, worse, it will show the social climber belittling others and getting away with it.

Example: *"Everybody was lost, so I just took charge and saved the day"*

It can be either value-giving, or it can be value-taking when pushing others down.
Example:

> **Him**: (tells a story of a handyman who recognized him, and he's annoyed and demands that he just does his job and gets out)

The storyteller in the examples draws social value from the power dynamics of "you know me, I don't know you". He frames the handyman as one of the many (lower-value) people who pester him, while he has no time for such people because he's higher value.

Bragging is also common in storytelling, for example:

- *"Such a good game, I scored 3 and everyone was like "dude, you're a beast"*
- *".. Then I whipped it off and she went craaaazy"*

How to Deal With a Social Climber

Now on the other side of the equation: how do you deal with a social climber?

Here are a few great tips:

1. Ignore Them

If they do it not in front of you like in this case, ignore them.

When they engage in social climbing the really socially smart people see that.
Basically, social climbers are taking away their own value: let them do that.

When you recognize their behavior and address it you also dignify their action with your attention. You bring them to your own level.
Why bother.

2. Stop Them In Their Track

When people are using you for their social climbing effort, they are actively undermining you, and you should intervene.

Whatever they say against you, look at them like they said the most stupid thing in the world.

For example:

> **Social Climber**: (looking at someone else in the group, but referring to you) He doesn't know any better
> **You**: Mate… Why are you saying that. The way you speak you make me sound like I am an idiot and I am not cool with that.
> Why are you doing that?
> **Social Climber**: ? What do you mean, I just meant…
> **You**: No man, you said I don't know any better. I don't know why you feel like you need to treat people that way. Maybe it's some inferiority complex or something, but whatever it is, if you cannot talk to me politely, please don't talk to me at all.

Also read: how to throw people under the bus.

The last one is my favorite:

3. Explain Their Game

This is a technique we already spoke about in the Alpha Male Handshake.

It consists of you eloquently and openly explaining to everyone what they are up to.

Basically, you summarize this article explaining what they're doing it (pushing people down), why they're doing it (to gain social status) and why it's nasty (high quality people pull people *up*, not down).

If you execute it well, you will shame the social climber while at the same time shooting your own value through the roof.

4. Confront Them

While most guides, books and websites recommend you confont them, I don't actually like this option.

As I have stated many times already, the social climbers are actively harming themselves and they are jealous of you.
Going straight to them will not make them stop being jealous of you.

The only time I would recommend you confront them is when what they say is actually, really harming you (a minority of cases).

Otherwise, if you are angry, I recommend you use that anger to fuel you even further ahead.
Remember, the best revenge is always success.

Also read:

- Dealing with underminers
- How to spot a frenemy
- How to deal with people who are subtly rude

SUMMARY

We all have within us, and men especially so, the tendency to engage in social climbing.

There is nothing inherently wrong with it, unless it's poorly executed, or when it turns overly nasty.

It's much better instead to climb by virtue of your presence and value.
Because this is the rule of over-climbing:

> You social climb your status to the middle, never to the top.
>
> *The Power Moves*

The Madonna-Whore Complex: What it Means to You

Lucio Buffalmano · 22 December 2018 · Archived copy · Original

The Madonna-Whore complex is the tendency of some men to categorize women as either pious Madonnas, or as "too easy to bed", oversexed whores.

Most men, to varying degrees, inherited the Madonna-whore complex.
And is has a much bigger impact on our lives, dating, and psychology than most people imagine.

In this article, we review where it comes from, what is it, why it exists, and what it means to you.

It's often the same woman that different men, in different environments, categorize as "Madonna" or "wh*re"

Contents

- The Science
  - It Has Something To Do With Conservatism
  - It Has All To Do With Biology
- Are There Madonnas & Whores?
  - Madonna-Whore Continuum
- Men Should Discriminate
  - But Men Should Also Drop The Dichotomy
- Why Women Hate the Madonna Whore Complex
  - What It Means to Women's Dating
- SUMMARY

The Science

Freud said that the Madonna-whore complex arises from the male bonding with his mother, and other theories posit that it's a cold and distant mother that leads to males' Madonna-whore complex.

Neither theories are well-supported.

Instead, evolutionary psychology suggests it's part of evolved psychological preferences to maximize reproductive fitness and paternity.

Unfortunately, that doesn't mean it's adaptive, or good for you.
As for most things, there is probably an 'optimum balance' of effectiveness within which the complex is adapative, but turns *mal*adaptive at the extremes.

Furthermore, we contend here, unless it's well contextual and calibrated, it's also generally not good for your relationships.
As Richard Dawkins suggested, *selfish genes* don't care about how you feel.

It Has *Something* To Do With Conservatism

Many believe the dichotomy is a conservative thing.

And… That is part of it.
More than economical conservatism though it's about traditional values and "male parental investment".

Studies showed that men who invest in women are more jealous.
And, we can speculate, demand and prefer more "pious" women.

However, albeit conservatism may have something to do it with, it's not the full story.

And liberal men are not immune to the dichotomy.
They're just less *visible*, because:

1. Conservatives are more open about it
2. Liberals may hide it more
3. Players don't care because they won't marry her anyway

Furthermore, women who attack men on the basis of the Madonna-whore complex often do so by defining men as "conservatives" or "backward".
And that further pushes liberal men to hide and suppress their Madonna-whore tendencies.

However, when push comes to shove, you can rest assured: **most men, including liberals and womanizers, prefer to marry the least sexually experienced woman**.

Here is an example from Ted, a character in the series *How I Met Your Mother* who is otherwise portrayed as liberal and rather open-minded:

> **Ted**: But even if I meet the girl of my dreams right this second, I'm still one night and nine months away from having a family of my own. And that's assuming the mother of my children is a huge slut.

Ted is falling for the Madonna-whore trap.
Because a woman might want to have sex with him quickly, he labels her as a "huge slut".
A bit harsh, isn't it -and a bit low confidence in his own qualities, too-?

And Ted Mosby is portrayed as a rather liberal guy in that show.

Why is it that even libertines who deny Madonna-whore with *words* still obey it in practice?
It's because of evolutionary psychology.

Let's finally dig into it.

It Has All To Do With Biology

The Madona-whore is not really complex per se.

Being able to judge women on their openness to sex posed great advantages for our male ancestors.
I paraphrase Robert Wright:

> The Madonna-Whore Dichotomy is based on the idea that if women do differ in terms of the likelihood of cheating and sleeping around, then it makes sense for men to divide them into Madonnas and whores.
>
> And it makes sense for men to spread their genes sleeping with whores while they marry and invest in the Madonna who will never cheat on them
>
> *Robert Wright, "The Moral Animal"*

That's why it makes sense for men to gauge how open to sex women really are.
Men who could accurately assess women's "easiness" -or "readiness- to get down to sex, were more able to:

- **Impregnate the whores** -quicker to bed and who required less courtship and investment-
- **Marry the Madonna** -who will not squander their life investment with a bastard child-

We can speculate that those men who capitalized on their Madonna-whore complex maximized their investment per child and left behind more offspring.
Those offspring were also more likely to inherit the Madonna-whore complex.
And that's why we still have it today. It's a complex that yes makes relationships less enjoyable and which yes places a yoke on women, but which was been effective in passing on more genes. And as we already: genes don't care much for feelings.

Basically, the Madonna-whore complex is an inborn system for men that makes evolutionary sense.

Now the big question is: do women really differ on the imaginary continuum from Madonna to whore? And if it (possibly) served us so well during evolution, is it still useful today?

Are There Madonnas & Whores?

If Madonna-whore thinking evolved in men does it mean that women do indeed differ in their tendencies towards Madonna –feminine and nurturing- and whore -serial sexual seekers-?

In our articles on why people cheat and how to find a loyal partner we share countless studies showing that **women differ in their inclinations to cheat** (and the same is true for men of course).

In that sense, dividing women into "Madonna" (ie.: not cheating) and "whores" does make sense for men.

Writes evolutionary psychology researcher David Buss:

> Loyalty is important to men because it helps them ensure paternity. And **the single best predictor of extramarital sex is premarital sexual promiscuity.**
> People who have many sex partners before marriage tend to be more unfaithful than those who have few sex partners before marriage.

After all, let's not hide behind PC here: it's pretty obvious that there are "safer" women and there are more dangerous women when it comes to cheating, swindling, and running behind their men's backs –*and some women even write books on how to do it*-.

However, that is not to say that "safe" or "not safe" women are necessarily all that different when it comes to their attitudes toward sex and family life.
Indeed, dividing "Madonnas" from "whores" is an oversimplification and a form of black-and-white thinking.

And the reality, as usual, is more varied.
Sure, there are some women who are not interested in sex at all and there are women with little nurturing feelings, but *most* women simply present *both* sides.

Madonna-Whore Continuum

This is a case in which a continuum might be more confusing than value-adding.
Indeed there are virtually no women who crave sex and have zero interest in a great relationship, *plus* zero interest in a family.
And there are virtually no women who are crazy about child-rearing and relationships but have *zero* interest in sex.
In a nutshell: **the Madonna-whore dichotomy as two separate categories without overlap is bogus because most women are a mix of both**.

However, if we had to consider the net result of the two different tendencies, then most women will cluster slightly more on the relationship-nurturing side -at least as compared to men-.
Here is the chart as compared to men, who also rarely present extremes of "100% whore":

Men too can be thought of as "dads/Giuseppe" or "whores/players"

Men *Should* Discriminate

While I exhort readers not to be judgmental, I also encourage them to be discriminating.

Discriminating for everything: friends, business partners, and… Intimate partners.

People differ, and so do women.

There are low-quality women and high-quality women.

And there are many signals that tell you whether a woman is more likely to be faithful or not:

- **Traits of a loyal girlfriend**

> How to Find a Loyal Girlfriend: 99 Traits of Faithfulness

Somebody said that the most important investment you make in life is the person you choose to marry.
And I couldn't agree more.

However, here is the clincher: **the Madonna-whore dichotomy isn't the best tool to discriminate women**.

Keep on reading…

But Men Should *Also* Drop The Dichotomy

While I exhort men to discriminate for long-term partners, I recommend men drop the Madonna-whore in dating.

It's not the best tool to choose a great woman, and it's terrible for dating effectiveness.

Here is why:

Why It's Poor for Discriminating

People are more similar than different, and that's true for women as well.

Sure, certain types of women are more likely to cheat and sleep around.
And some types of women, together with certain specific traits, are more conducive to a safer, more loyal girlfriend.

But the Madonna-whore as a dichotomy rather than a continuum is unhelpful because most women have *both* sexual urges *and* nurturing feelings *at the same time* and the two are *not* mutually exclusive.

That means that if you find a woman with a high sex drive, it says little about her qualities as a mother or partner.
And the other way around is true: a submissive woman who is rather asexual and inexperienced doesn't necessarily make for a great wife, mother, or long-term partner.

Why It's Poor for Dating

A man who approaches dating with a Madonna-whore mindset will *expect* women to:

- make him wait for sex
- make him chase
- make him invest

And he will get *exactly* that.
You often get what you expect, in life -and especially so in dating-.

Indeed women are wonderful when it comes to adapting, and if he is probing for Madonna qualities, chances are that she *will* be a Madonna for him -ie.: play him-.
The best way to learn how she really is instead is by (pretending) to completely drop the Madonna-whore.

Actually, it's even better to play up her whore side: that's the technique of going the lover way and you get to know her sexual side quite quickly.
Here is an example from my text flirting article:

Men are better served by teasing out her “non-Madonna” side early on

Why It’s Poor for Relationships

When the woman is forced to enact a Madonna role, she must hide her more sexual side and pretend to be someone she’s not.

He will never get to know the real her and she will never get to be her real self.
A real bond and connection are impossible when people wear such thick masks of course, and that’s, in my opinion, a life tragedy.

As an ex-girlfriend of mine told me, one of the reasons she really liked me was:

> I can really be myself with you
>
> *Lucio’s ex GF*

Be the guy who allows her to be herself: drop -or tune *way* down- the Madonna-whore complex.

At the extreme, the dichotomy becomes so strong that men cannot have sex with their wives.
Then, it becomes a pathology.

Why Women Hate the Madonna Whore Complex

Women hate the Madonna whore complex.

And, in part, it’s for good reason: it places a huge yoke on them to act more like Madonnas while they have to hide their more sexual and aggressive side.

Look at this example from Sex And The City:

She is afraid he will think of her as a whore and won’t marry her

> **Charlotte**: Or maybe I do. I don’t know what I want. But I’m afraid if I don’t, you’ll dump me. And if I do,

> then I'll be the up-the-butt girl. And I don't want to be the up-the-butt girl, because I mean… **Men don't marry the up-the-butt girl. Whoever heard of Mrs. Up-The-Butt?** No, no, no. I can't. I want children and nice bedding, and I just can't handle this right now.

Charlotte would like to try it, but she is afraid that she will think of him as "the whore", and not get serious with her.
In simple words, Charlotte is worried about what the Madonna-whore complex means to her -and she might be right.-

So, yes, it's understandable that women feel caged -and judged– by a nonsense male instinct like the Madonna-whore complex -it's *their* complex, after all, what faults does a poor gal who enjoys sex have?-.

However, some women who take up arms against the complex sometimes fail to understand the actual reasons behind it and use it as a tool to shame men.
Take this example from an article on the first Google page for "Madonna-whore complex", blaming the "patriarchy":

It's true that the relationship suffers, but "patriarchy" has little to do with it
If you allow me, it's a rather typical feminist approach to focus on power and power dynamics while missing out on the true biological reasons for certain behaviors.

... But Still Obey It

In spite of many women resent the male Madonna-whore complex, they still abide by it.

And still seek to come across as Madonas thus, indirectly, confirming the existence of the Madonna-whore dichotomy (and contributing to keeping it alive in men's minds).

See an example here:

In spite she invited over from Tinder, she still hides her sexual intent and portrays a more Madonna-like image

What It Means to Women's Dating

Sadly for women, many men hold a too-strong Madonna-whore dichotomy.

That means that, in some cases, women will be forced to choose between a relationship with a man who sees her as a binary "angelic" or "evil" or no relationship at all.
Women who show their Madonna side and hide their whorish one will do much better with the following types of men:

- Men who invest a lot (believe in old chivalry ideals)
- Chase a lot (believes in fixed roles)
- Are proudly conservative (conservatives wear more masks)
- Are very religious (most religions see sex as sinful)
- Younger (tend to idealize women more)
- Less experienced
- Less educated

Whether or not it's worth it to pursue a relationship with a man big on Madonna-whore, it's up to her.

Please, please, stop putting me in a box

SUMMARY

The Madonna-whore complex is men's tendency to categorize women as either "wife material" -the Madonna- or as "sex material" -the whore-.

Albeit some men deny it, almost everybody acts and thinks based on the dichotomy.

I's generally a good thing to be discerning about women's faithfulness and nurturing skills.

However, the complex is also a limiting belief that oversimplifies reality and makes men less effective at dating and relationships.
Most women have a component of *both* Madonnas and whores.

But since most men will not move beyond the dichotomy, most women would do well dating with the dichotomy in mind.

Can’t Hurt Me: Summary & Review

Lucio Buffalmano · 24 December 2018 · Archived copy · Original

Can’t Hurt Me (2018) is David Goggins’ autobiography in which he shares his personal life, his mindsets, and his approach to life while rejecting any form of self-development balance.

Quick Review

Can't Hurt Me is an extreme real-life example of how a man turned pain and anger into motivation and drive.

We called it here "leveraging your dark side" here in the past, and it can be extremely useful.
It's also most certainly better than wallowing in pain without reacting.

But I largely moved past that stage of being driven by anger and pain.
And I find that it's both more fulfilling and equally effective to be driven by a willingness to build.

So **I don't recommend that most readers be anger or pain driven** if they can instead use more positive 'pull' approaches.
Call it a "pull" approach, being pulled by a drive to build, rather than a "push" approach, as in being pushed by pain and anger.

And **I wouldn't recommend going as extreme as Goggins** because extremes are ineffective (law of optimum balance).
While Extremes feel sexy and "badass", but even if you want to focus on effectiveness only at the detriment of your life, more thought-through strategies that include rest and breaks are often superior over the longer term.

Bullet Summary

- When you're thinking of quitting: **accept the pain and refuse to quit as a possibility**
- Push yourself daily to **do what you don't want to do**
- Week after week **expand the limits of your comfort zone** little by little
- **Use enemies and hardships as fuel for your motivation**

Full Summary

Intro

Life is unfair and the sooner you accept it, the sooner you can prepare for it.

The best way to approach it is with a "*Can't Hurt Me*" mentality.

Goggins says he was the ultimate underdog and the weakest man. And to survive, he had to develop his own mindset.
He wasn't looking for money, fame, or even a pat on the back. He was looking for fulfillment. And the only way to find was within himself -by going to war with himself-.

Unshackle Your Mind

David Goggins says:

> You are in danger of living a life that is so soft and comfortable that you will never realize your true potential.
>
> *David Goggins*

Can't Hurt Me is David Goggins' solution to push your boundaries and help you meet your true potential.

Mission 1: Write Down All Your Difficulties

David Goggins tells the story of his abusive father -a general style of abusive by my own estimations-.

And he exhorts readers to do the same: take stock of all the difficulties and hardships you faced -and face- in life. Including, he says if you had too easy a life so far and never had to push yourself…

Because, as he says, "you are going to flip that shit" (ie.: use your limiting factors to fuel your hunger and success).

I also particularly liked this quote of Goggins as he tells the story of his "solution" to school problems by cheating:

> I started cheating my ass off (…).
>
> It worked. (…)
>
> I thought I solved the problem while I created new ones by taking the path of least resistance
>
> *David Goggins*

Mission 2: Own The Truth of Your Shortcomings

Goggins talks about moving out with his mother to escape his abusive father.
He talks about racial hatred, money problems, and the "*mask of coolness*" he wore as a teenager to hide his insecurities.

The author says that our mind will always follow the path of least resistance and unless you learn to beat your own mind, it will always keep you "safe and stationary in life".

In this chapter, he says you must be brutally honest with yourself. Don't tell yourself you're "plumb" and that it's OK to be overweight if deep down you'd like to be slim.
Tell yourself you're fat.
Any self-improvement starts with brutal honesty.

Mission 3: Do All The Things That Make You Uncomfortable

In this chapter, David Goggins talks about pulling out of military training for medical reasons.
Diagnosed with sickle cells, he had a choice of staying in the training or quitting. And, faced with the first obstacle, he used the excuse to quit.

Officially, he didn't quit, but deep down, he knew the truth. And that bothered him and undermined his confidence.
If that would reply today, when he learned to control his mind, he says that "he wouldn't give two f*cks about sickle cells".

This is the chapter where Goggins sees an advertisement for Navy SEALs and realizes that there can be answers to suffering.
That was the first time in a long time that he was alive.

Goggins says you must do something that makes you uncomfortable and something that you don't want to do every day.
Even if that's doing your bed, ironing your clothes, or waking up early and going for a run.
Start small, then slowly build up.
That's how you callous your mind.

-David Goggins

Mission 4: Pick An Opponent & Beat Them With Excellence

Here Goggins talks about BUD and SEAL training.

He says that everything is a mind game. SEAL training is a mind game and people don't realize the gaming part in it until it's too late and they quit.

What's the mind game?
The mind game is that all pain eventually ends. And when you can understand that, it then becomes only a matter of enduring long enough.

Beating them with excellence delivering what they thought was impossible and showing yourself at your best while they are at their worst is what Goggins refers to as "taking their soul".

My Note: Stealing the Schedule
here is where Goggins steals the schedule file for hell week. Not cool in my opinion. And he does it with the other only black guy in the crew, definitely not helping the stereotypes he will later complain about.

Mission 5: Visualize Challenges, Why You're Doing It, What's The Fuel

Goggins says that SEAL training is about showing that you can handle much more than you think you can, and with that comes a change in mentality.

Goggins says that the callous mind can help you overcome the toughest moments.
Remembering what you've been through and how that strengthened your mindset can help you bypass the negative thought loops that kick in when you want to give in.
But when you accept the pain and refuse to give in or give up you engage the sympathetic nervous system -your fight or flight response- to change the hormonal flow. It's similar to when you don't want to run but then you go anyway and you enjoy it, and the author says that you can tap on that switch on call.

The reason why you want to push the hardest when you want to quit the most is to help you callous your mind.

You want to get to a point where not doing the things that you know you should do haunts you.
If you didn't go for a run on a given day, you want in the evening to be bothered by it. If you skip what you were supposed to be doing and it doesn't bother you, you're not there yet.

When you visualize you might want to visualize the final success, but it's important you also include the challenges, the reason why you're doing it, and the darkness which is fueling you.
You need to have those answers to be ready when difficulties will inevitably arise.

David Goggins says that to answer those questions you might want to slow down during intense exercise to think more clearly and then re-accelerate again.

Mission 6: Build Your Cookie Jar of Accomplishments & Use For Motivation

In this chapter, Goggins talks about pain as his reward for finishing the race. The pain was the reminder that he had done it, and he was proving to himself how strong and callous he was becoming.

He says:

> In the most painful time of my life, I saw the most beauty.
>
> *David Goggins*

He introduces his concept of a "cookie jar", which is the place where you put all of your victories and all the times when you show resilience and mental callousness.
When you need motivation, you can open the bookie jar and remind yourself of all the great things you have accomplished.
The cookie jar is not to make yourself feel good, it's to remind yourself what a badass you are so that you can use that energy when you need it.

Mission 7: Remove the Governor From Your Brain With Constant Incremental Growth

Goggins introduces the 40% rule. It means that when most of us feel like we are hitting our limits, we are only at around 40%.

But unless we learn to stay in the pain and push beyond the discomfort, we will always fall very short of our true potential.

Mission 8: Plan Your Life to Make The Most Out of Your Life

This chapter and the next were extremely interesting for a critical look into special operation groups.

Most people have a huge overblown image of special operations such as the Navy SEALs.
Goggins says that SEALs are more normal than most people would guess. They were living rather mainstream, Goggins says, a bit like the "accomplished Harvard" of the military.
Most of them after BUDs didn't want to test themselves by starting from zero. They'd rather hit the gym to get big instead of pushing themselves to the limit.

The author also implies some racism in the forces, reflecting that people are just people in whichever organization they are -he says he met Michael Jordan in his prime and it was a huge revelation when he realized he was just another human being-.

David Goggins was not interested in being the "aristocracy of the military". Settling down comfortably was not what he was looking for and that's why he went into ultra-marathons.
His stories are quite crazy here and the author encourages the readers to squeeze as much as possible from their

day.
A 40h workweek is a 40% effort he says, and that's mediocrity.

> The best way to overcome anything in life is to become a master of what you're afraid of.
> Become a master of your insecurities.
>
> *David Goggins*

Mission 9: Sustain Greatness by Staying in Constant Pursuit

Goggins here shows the mindset of the underdog in the military. When his feedback said he could have been more gregarious he reflects that indeed he was not "one of the boys".
"Of course, I wasn't", he says, "I came from nothing".

He thought that because he made it anyway, he was part of the group. But he realized he was part of the *teams*, not the *brotherhood*.

But Goggins uses the evaluation to swing in the opposite direction; if he was uncommon also among the uncommon, "so the f*ck be it".

Lucio's Note:
to me, this shows the strength and the drive that comes from the undergo, "not belonging" mindset.

Goggins goes to Ranger School here and compares it with the SEALs, which makes it a good reading for anyone interested in special operations in the US.

Finally, he talks about the overachiever mindset. He says that the over-achievers focus on what they *didn't* win, what they *didn't* manage, and what they missed. Even when they won hugely in their careers.

> It's easy to stand out among everyday people and be a big fish in a small pond. It's much more difficult when you're a wolf, surrounded by wolves.
>
> Torch the complacency you feel gathering around you, continue to put obstacles in front of yourself because that's where you will find the friction that will help you grow even stronger.
>
> Before you know it, you will stand alone.
>
> #Can'tHurtMe #UncommonAmongstUncommon
>
> *David Goggins*

Mission 10: Write All Failures, Learn From Them & Go At It Again

This chapter describes Goggins' quest to beat the pull-up world record, including the description of his failures. And it's to failures that this chapter is dedicated.

In the last chapter, Goggins talks about naysayers and jealousy from friends and family –frenemies-.
Your successes are dangerous to them. Only if they are good, they will use it as motivation to move forward.
And he wants to exceed even God's expectations of what he thought Goggins was capable of.

David Goggins & God

Finally, Goggins talks about his view of life, including spirituality. He believes in a God who knows everything and holds everyone accountable.

His biggest fear was not living to his full potential when he will meet his creator.

Real-Life Applications

Here are a few ideas:

- **Take Pride in Suffering**

Goggins says that motivation is cr@p. I mostly agree with it. Much better instead is building your whole ego and self-esteem around proven strategies that help you move forward.
Taking pride in your ability to suffer and endure is one such great technique.
Also read: the antifragile ego.

- **Triple Down On Your Weaknesses**

Now, this is a counter-intuitive recommendation as most authors these days recommend people to focus on your strength.
And that's the best approach from a point of view of maximizing your effort and output. But if you want to callous your mind and strengthen your resolve, then focusing on weaknesses is best.

- **The Mind Game of Endurance: All Pain Ends**

David Goggins says that people who quit the BUD training for SEALs fell for the illusion that pain would never stop.
But it does. It always does. It's difficult to realize it though during the peak of pain. And that's the mind game of endurance: taking yourself out of the pain experience in itself until you can outlast it.

- **Leaders Shouldn't Show Weakness**

David Goggins says that leaders can't show weakness.
I don't think that's always true, but it's *often* true. And it's a good reminder after the concept of "vulnerability" has become so popular and venerated with the work of Brene Brown (*Daring Greatly* & *The Gifts of Imperfection*).
Also read: vulnerability is not (always) power.

- **Admit Your Fears & Insecurities to Get Stronger**

We go back to the positive elements of vulnerability here.
Admitting your fears and weaknesses allows you to gain more strength and confidence.

- **Leverage Pain For Your Goals**

This is something I actually used myself. Both in my life and to launch The Power Moves.
See "leveraging pain".

Criticism

I enjoyed reading *Can't Hurt Me*.

And I used a similar strategy to motivate myself (see the video above).

But there are also many points I not only disagree with but that I believe are counterproductive for anyone approaching self-development.

In brief, most of our criticism comes down to the fact that *Can't Hurt Me* badly fails the law of optimum balance:

> The Law of Optimum Balance

1. It's Weak & Needy to Need Grueling Training For Self-Esteem

I'll make a bold, counterintuitive claim: this is not a strong mind, it's a weak mind.

Some people *need* to exercise or they can't feel good about themselves.
They'd lose self-esteem and fall apart without training.

A strong mind is more resilient.

Compulsive Exercise Isn't Power

Research back this up with a link to narcissism.
Narcissists exercise more, but have also higher rates of *compulsive* exercise, bulimia, and disordered eating thoughts and behaviors (Lichtenstein et al., 2017; Gordon & Dombeck, 2010; Dakanalis et al., 2015).

2. Extremes Are Unhealthy & Ineffective

David Goggins' approach to life may not be healthy.

The law of balance states that many positive traits are only good within certain levels.
After a certain point, there is a "threshold effect" above which "too much of a good thing becomes bad".

David Goggins, in my opinion, isn't necessarily an example of being driven but enters into obsession and, potentially, self-loathing.
See this chart:

Consider the possibility that Goggins might have not truly worked out his pain and abuse.
He might not be *driven* by pain and abuse, but **David Goggins might be *at the mercy* of his dark side**.

If you're in a similar position, I invite you to consider resolving your past issues before you emulate him.

Motivation On Top of Deep-Seated Issues

Goggins reminded of Liver King, another 'extreme guy' when he said:

> **Liver King**: When I talk about the 85% of the population that suffers from self-esteem issues, that's me. This is why I work myself to death in the gym, this is why I do 12 to 15 blood-burning workouts a week. Just to feel

> like I'm OK

There you are: thrashing his own body around "just to feel like he's OK".

Marrying The (Wrong?) Girl Just To Make A Point

Speaking of the thin line between being motivated or at the mercy of others, Goggins asks:

> I married the daughter of the man who called me a nigger, what does that say about me?

Well, it can say that you "showed" it to him and had your revenge.
Or… It can say that you let that person decide for you who to marry.

Since Goggins never spends a second talking about his wife and relationship, it may be a fair assumption that it's the latter and that he's not thrilled about his choice.

3. Disempowering Talking Down to Fans

Some people can gain from (Goggins') motivation.

If that's you: great.

I personally don't because I'm intrinsically motivated.

And **listening to someone constantly yell that you need to be more is disempowering** because the implied frame is that "you're not being enough".

Empowered men replied with a "fuck y*u" to that.

And, just like most any other "guru" out there, it's disempowering because they take a teacher's "I know better" frame. And assume that you don't know enough about how to live your life.
In Goggins' case, it assumes you're being too lazy, or that you need their yelling to make the most out of your life.

It's a mental covert power move that empowered individuals tend to reject.

Also, read more on teachers' frames:

- **Growth mindset power dynamics**
- Teacher's frame

4. Can You Immunize Emotional Pain With Physical Pain?

David Goggins says he "prepares" for that "call that his mother is dead":

> **David Goggins:** I'm training for the time when I get that two o'clock in the morning call that my mom is dead. Or something happens tragic in life I don't fall apart

But I'm afraid there is no amount of running that'll let you run away from that emotional pain in life.
You just gotta accept it, and go through it.

Running Away From Pain?

I gotta wonder:

Is David Goggins running for something, or is David Goggins running away from his pain?

Because Goggins' biggest challenge may be NOT to run more or longer, but to sit down and process his pain

instead.
And I don't know you, but it may be worth considering it may be the same for you.

Courage is having fear and doing it anyway, not removing fear

You can also see that much in the book if you read between the lines.

At a certain point, Goggins admits that he was afraid of going through BUDs again.
And it's normal. No matter how often you do something painful, you gotta accept there is no way to "callousize your mind". There will always be some fear and reticence in doing it again.

Courage is in pushing through that fear, not removing it.

And confidence is in knowing that, if push comes to shove, you can do it again if you must.
Not in doing it over and over again and still having to face the fact that you're still afraid.

5. You May Gain With More Positive Motivation (Pull Approach)

Goggins comes from a dark place and his coping mechanism is more darkness.

Similar to what Robert Greene says in *The Laws of Human Nature* I believe we need to learn and embrace our dark side. I believe it's necessary in the world (to be good you must first be bad) and helpful in life.

But I also think that when darkness and anger are your only drivers, then you are not using darkness but you are *being used* by them.

And there are other options in life, even for people with Goggins' background. Tony Robbins had similar abusive experiences as a child but turned super successful with a much more positive view of life. If forced to choose, I'd recommend the Robbins way.

Also, see Darryl Strawberry talk about this:

> Pain can lead you into greatness. But then, what comes after that? You're still in pain..

6. Antagonizing Yourself Reduces Your Self-Esteem

Even when talking about his own mind, David Goggins makes it into an enemy.

He says that "our mind has a tactical advantage" and he had to "go to war with himself".

But it's unhealthy to think of your inner self as an enemy undermining you.
You can't win if you're at war with yourself.

Antagonizing life as an enemy is... Weak &

In the first opening statement, David Goggins says that life is unfair and it will "f*ck you up". And the sooner you accept it, the sooner you can start preparing for it.

I disagree with that attitude, it's inherently negative and pessimistic.

7. The Bellicose Approach Makes You More Enemies Than You Need

Many other SEALs don't like David Goggins.

Part of it is jealousy, I'm sure.
Part of it might even be racism.
And part of it is because Goggins believed none of that BS nationalistic, militarist, and leadership manipulation.

But part of it is also Goggins' approach.

Goggins talks about BUD instructors as his enemies and "taking their souls".

I believe that mindset can be helpful but, as Goggins himself will admit, can also put you on a collision path with the people around you. Exactly what happened to Goggins when he antagonized his instructor.
To be effective in life, it's much better to have a good relationship with your boss.

And that, as Goggins realizes with good self-awareness, also cost him dearly at times.

In another instance, Goggins was sitting at a doctor's office talking about his diagnosis.
Goggins says he didn't want to show fear to avoid "showing his cards". I know that feeling, and I've been through it as well. But it's not a healthy approach: the doctor is supposed to help, you can only lose by thinking of him as an enemy.
The best you can do for yourself is to think of your doctor's appointments as opportunities to get healthier and to do your best to get the best support.

Edit:
Or just look at this video: **Goggins rages at the haters without realizing he is *making* his own haters.**

> **Goggins**: (ranting at the "haters") bitch you don't fucking know me (…) maybe it's a fat motherf*cker at home, lazy, with no distance or dedication. Maybe you're jealous. Who knows. But I'll guarantee you this: I'll be back better than ever

Frankly, it's an awesome video.
I truly like it, and it's a valid response and attitude toward haters.

On the other hand, as for everything, there are pros and cons.

That attitude is far more likely to grow your haters -and give them even more control over your life-.

And then, there's another issue with that approach:

8. Building Your Ego Around Strength Is Fragile

Listen to the video above.

Goggins says: I will be back better than ever.

The problem with that is that it's a lie.
It's simply a fact of life, and pretty much unavoidable that you cannot always come back better.
If you trash your body like Goggins you're almost bound to get injuries. Some of them will be serious.
And even if you avoid injuries, you'll get older and weaker. Even less smart… And you'll eventually die.

And that's OK… As long as you don't have a fragile ego built around "always being better and stronger and "more".

Because, if you do, you'll be ill-equipped with coping with any setback.

9. Masochism Covered As Drive

At a certain point, as Goggins describes in detail all his body punishments and his reveling in pain, I had to wonder if it wasn't just too much.

I see pain as a necessity to achieve something bigger, but at times it felt that it was a pain for pain's sake.
Sure, building a callous mind, but… I'd rather go through pain for as many benefits as possible, not just for the sake of pain.

10. Goggin's Cheating: An Ethical Grey Area

David Goggins earned my respect when he said that by cheating in school he was actually hurting himself.

But he lost it later on when he rather proudly tells the story of him and his other buddy stealing the schedule of hell week from the instructors.

A little later in the 6th chapter, he shares the story of two friends of his who cheated by impersonating each other. For a man who presents himself as an example to follow, that wasn't cool in my opinion.

PROS

- **Using pain for fuel**

"*Can't Hurt Me*" is one of the best books on turning pain into fire and fuel to forge ahead.

- **Example and showing the way to operate at the limit of human suffering**

Also one of the best books for operating at the limits of our capabilities and, ultimately, a great book to understand the mindset and psychology of the people who never stop and always ache for more.
In that sense, it's a great read back-to-back with *Relentless*.

Goggins is bigger -and smarter- than a SEAL

Some former SEALs never leave the military and make their former life their new ego and identity.

Those guys didn't enter the military, the *military entered their minds*.

Some others are stuck selling the SEAL brand and the war experience to push *books and courses on leadership*.

Goggins instead entered the SEAL as a job, did it, learned, and then moved on.
He didn't fall for the traps of nationalism, projecting his ego into the group, or developing his pride around "being part of special ops".

Finally, and most importantly, contrary to guys like Jocko Willink, Goggins never feel for the military manipulation and "great leader manipulation" -be that leader a man, or the image of a flag-.

I respect and appreciate that.

Review

Can't Hurt Me is a captivating and entertaining book on pushing one's limits.

However, at times it becomes "unhealthy pushing".

To make a parallel:

Imagine you own a car you love, and you land it to a friend.
He starts driving and keeps it stuck in 1st gear, full RPMs. Knowing that's not good for the engine, how would you react?
You'd tell him to knock it off because you care about your car and don't want to take it to the mechanics.
The same goes for yourself and your body: you also want to take care of your body and not push yourself to the hospital type of "limit" because that's stupid.

So sometimes I had to wonder where "drive" ends and "mental issues" may begin, as the line seems to blur at times in *Can't Hurt Me*.
The book may as well be titled "*Can't Hurt Me*, Cause I'm Hurting Myself to Death Already".

That is the reason why I warn the readers that this is a path that I wouldn't necessarily recommend to most people -

and not to the ones I care the most about-.
There is a lot of darkness and demons. And yes, darkness is an important fuel to achieve big in life, but it should *not* take over your life.
Also, you don't want to take over that combative mindset of "you against the world", since it's often not the most effective stance to influence people and get things done.
Use 20% darkness to give you a boost and for the rest be motivated by beauty.

Keep that in mind and enjoy *Can't Hurt Me* by David Goggins.

Disempowering "You're A Pansy" Frame

Finally, it's very disempowering to accept as "motivation" someone yelling on a camera how supposedly weak you are for not doing what he chose to do.

In all honesty, I believe that if you accept or enjoy that frame, you'll never be an empowered man.

Alpha males don't accept people telling them how supposedly beta they are.
And certainly do not elect them as teachers.

Check the **best books collection** or get the book on Amazon.

Can't Hurt Me: Lucio's Take

If you think you're pushing your limits, Goggins will show that you have probably so much more to go.

Shit Tests Guide: What They Are, & 8 Ways To Pass Shit Tests

Lucio Buffalmano · 26 December 2018 · Archived copy · Original

A shit-test is a social challenge to test and assess the target's confidence, intentions, and skills.

Shit-tests most often refer to dating and women's shit testing men. In this case, **a shit test is a tool for the chooser to evaluate the pursuer**.

By the end of this article, you will know all about shit tests.
Including how to "pass" them. Just like this:

This example shows the perfect mindset to pass shit tests. Keep reading…

What's A Shit Test

"Shit tests" are power moves and one-ups to challenge, test and assess others.

Although shit tests are a foundational element of social power dynamics, they are most often associated with dating. The term comes from the early pick-up artists (see: *The Game* & *Mystery Method*).

In dating **women use shit-test to assess a man's mate value and social skills and decide whether he's good enough for her**, or not.
To gain social status, men's respect, and women's attraction, you must "pass" these tests.

For this article we'll focus on women's shit-tests within dating contexts.

And here is one example of shit-testing in dating:

> **Her**: What's your name?
> **Him**: They call me Chip
> **Her**: Ohh, You can't get them to stop? <— Frames him as low status, clueless, and powerless
> **Him**: Ahaha that was funny

"You can't get them to stop" is a shit test because it frames him as low-status and powerless in his peer group.

It's also a one-up: she disrespects him and, unless he responds well, she socially dominates him.
When he laughs, he:

- **Agrees** to that disempowering frame
- **Let her get away** with the power move
- ***Rewards*** her for disrespecting him.

Women don't like lower-power men (hypergamy).
So, because of his lack of power awareness and skills, he's out.

Had he handled that well, he could have seduced her, instead.

Why Do Women Test Men

The reason is simple.

Women shit-test you because you are the offer, and they are the choosers.

Foundational dating dynamics dictate that in most dating situations, men start at a lower value than women (exceptions always apply, of course).

When you are the chooser, you shop around and test the merchandise.
It's basic self-preservation instincts: you want the best available for your budget -the budget being her sexual market value-.

That's the main reason.

But women also test men to "see what they can get away with" within relationships.

And some relish their power over men, including with public attacks:

> View this post on Instagram
> A post shared by The Power Moves (@the_power_moves)

> **Her**: (publicly rude to him)

What Do Women Test For

There are different theories on what women test men for.

For example:

- Women test for **confidence**, and proof they have **options** and can provide **security** (Rollo Tomassi, author of *The Rational Male*)
- Women test within the genders' arms race with men over-selling themselves, and women **ensuring those men are not posturers** (Chase Amante, author of *How to Make Girls Chase*)
- Women test for **strength** (W. Anton, author of *The Manual*)
- Women test to **find men who are better than they are** (Leil Lowndes, author of *Undercover Sex Signal*)

And scientists haven't said much yet as they still need to catch up :).

But the authors above are all right.
The specific reason can also change depending on circumstance, character, life phases, and interaction phases.

For example, upon first meeting, she wants to ensure you're not a weirdo.
Later on, she wants to test if you're as high-value as you portray yourself to be.
And a little later she wants to test if you could make for a good provider or a lover.
If she's looking for a relationship, she might also want to make sure you're not a player.

Avoid that shit test

Are Shit Tests Good for You?

There is some misconception around shit tests.

One misconception is whether shit tests are good or bad for you.

Dating coach Todd Valentine for example says they're good:

> **Todd**: (a shit test) it's a compliment and it's an opportunity

And, in many ways, he's right.
Shit tests mean that "you're still in the game".
However, whether they're bad or good depends on what level you're at.

To understand this point, let's go back to the budget analogy.

When something is "too cheap for her", ie.: a low-quality man, she won't be interested and won't even test it.

It's the merchandise -and men- around her budget and value that catches her attention and calls for some testing.
That tells us this:

It's **the men who fluctuate just around her value who get the most shit-tests**.

But what happens if she expected Fiats and instead a Ferrari is suddenly available?
Ie.: what happens if she gets a shot with a high-value man?
Then testing doesn't even enter the picture because she'll be busier trying to please him

Just imagine the following scene: Brad Pitt goes out of a movie premiere and tells one of the screaming gals that she can go with him.
Can you even imagine her shit-testing him on the way to his suite?

Exactly…

So it's not true that high-value women test more than low-value ones.
Women test depending on how their value relates to *yours* (and lots of PUA over-gaming makes women more dubious).

Shit Test Power Dynamics

When she is testing you, she is putting up hoops for you to jump through.

And people who put up hoops are the ones with power in an interaction.

From a perspective of power dynamics, **shit-tests say she feels more powerful than you**.
And when you're in a mindset of "passing" shit tests, you are confirming that indeed she has more power, and she has higher sexual market value.

This is why this article, and in a way, this all website, is all about how *not* to jump at all.

Dealing With Shit-Tests

Throw that shit test back!
In the beginning, I wrote "passing shit tests" as the title of this section for brevity and for SEO reasons.

But I just had to scrap it.

The idea of "passing" shit tests is a bad mindset to begin with.
One because it reinforces the idea that she is putting the hoops -and hence she is in the power position-.
And two because it conjures a "you vs me" frame, and we'll see later why this is often not the most effective way of seducing.

So let's get into it:

1. Ignore It

This is the all-season workhorse.

Whenever you can't think of anything good or whenever you don't feel it's worth your attention and effort, ignore it.

Bad joke, underhanded comment, frenemy trying to devalue you… Are women shit-testing you?
Pretend you didn't hear it, act as if it didn't register and you will show tremendous superiority.

Example:

> **Her**: *you said that? OMG, are you that kind of guy?*
> (pretending she didn't say anything, keeps going with the story)
> **Him**: yeah, and you won't believe what she replied, listen to this..

2. Own Who You Are

Women sometimes test men to check their roles.

Such as, either:

- Friends
- Providers / Boyfriends or
- Lovers

Men often fail tests because they have no idea what they mean.
And when they do, they still don't stick with one but try to fit the bill of what *she* wants. But since most of the time, they are also not sure what she wants, they hem and haw and, finally, end up looking weak and insecure.

Solution?

If you're hell-bent on getting her, pick what you believe she most likely wants and then commit to it.
Or, even better, **pick your role and own it.** Then, pick the type of woman you like, and then *you* shit-test women for what you want while being fully yourself.

Here is an example for each "role".
Lover:

> **Her**: I bet you say that to every woman
> **Him**: No. Only to women I find attractive
>
> *Lover Type*

"Reformed" lover:

> **Her**: I bet you say that to every woman
> **Him**: I used to.
> I used to be very active in dating -and with great results-.
> It was a great time, but now I'm looking for something different. Don't get me wrong, sex is still important, but she must great as well. What are you looking for.
>
> *Reformed Lover*

Provider / looking for more than casual sex:

> **Her**: I bet you say that to every woman

> **Him**: Why are you saying that
> **Her**: You look like a guy who would hit on a lot of women
> **Him**: *(looks at her, serious and slightly disappointed)* That's a bit offensive
>
> *Provider*

Men who know where they stand and are unapologetic about it look strong and confident.
Often, they turn the shit test right back at her without even trying, just by being themselves.
They end up socially dominating her, which is supremely attractive to women and is a preview of the bedroom physical domination that might come later.

3. Shame Her

I like this option.

Instead of playing the game, you shame her for playing games.

It's a powerful technique to stamp out games and combativeness from relationships but also works in earlier interactions.
Basically, you want to shame her for playing a "me VS you game" and make her follow your lead into a more collaborative "us in this together" form of seduction.

Look at Juan Antonio playing a similar game in Vicky Cristina Barcelona:

> **Him**: (after inviting them to travel with him, including having sex together) What offended you about the offer? Surely not that I find you both beautiful and desirable.
> (…)
> **Her**: Well, I can't guarantee the lovemaking because I happen to be very moody
> **Him**: Let's not negotiate like a contract. **I came over here with no subterfuge and presented my best offer** (= I'm being straightforward and honest, not playing any games, can you do the same?). Now I hope you will discuss it and give me the pleasure to take you with me to Oviedo.

That's the power of confidence coming from genuine and (positive) vulnerability: the man who doesn't need to hide and owns who he is.

Also, see this article on "enlightened collaboration":

3.1. Use "Collaborative Shaming"

Collaborative shaming is pure TPM's tech.

You can use it to turn a confrontational "me VS you" frame into a more collaborative one -with you as the leader, of course-.

See here one real-life example from the forum:

- **"I'm not that easy" shit test**

4. Own Her Accusation

Own her shit test, but *reframe* it.

Look at this example:

> **Her**: You are just looking for sex
> **Him**: I wouldn't call it "just". Sex is one of the pleasures of life and a strong sexual chemistry is very important

> to me

Now she is forced to agree (and comply with you) or to disagree and break rapport.
In either case, it's *you* who is testing her.

And own your shortcomings, too –example here-.

5. Put Your Foot Down

Women want confident, high-status men.

So they may use a power move to test him.

And **high-status men don't take disrespect**.

However, many men miss it because the disrespect can be very small.
In that case, it's also a test of his social skills and power awareness.

For example:

> **Me**: I like your style, you're very unique <— Compliment, it's a 'give'
>
> **Her**: Everyone is unique <— This is a micro-aggression (ie.: slightly direspectful brush-off).
> ⚠ If I agree, she dictates frame, I submit, and attraction decreases
>
> **Me**: I don't think so. Many people all look and think the same <— Sticks to his guns
>
> **Her**: True <— Agrees/submits ⍰⍰

See how that changed everything after.

And you must draw your line in the sand for bigger disrespect:

Always draw a big line in the sand with any personal disrespect
Never, ever accept disrespect.
You shouldn't even think "shit test", you should think "this is inadmissible".

6. Turn It Back On Her

Imagine this dialogue:

> **Her**: (haughty look, turning away) You're so into yourself <— ⍰ ⍰ 'You trying to be the prize'
>
> **Him**: Me? I'm so into myself? (turns to her, gets closer, louder but smiling) <— Counter-attack, dominance with warmth
>
> Look at you, with the slim fit biker jacket, (reaches out to her scarf) the Italian scarf, the coiffed hair (touches her hair)
> Yeah, nice try (pats her head) <— Babying power move ⍰⍰
>
> **Her**: (lowers her gaze, smiles) <— Pleased by the compliments… And that he 'won'

This an exchange I had on a date with an attractive woman, and a little later we went back to my place.
I cannot re-run the interaction to split-test it, but I'm confident this was the turning point on the way to bed.

7. Agree/Disagree & Amplify

This is a popular frame control technique in male self-development circles.

It's not my favorite but it can work for higher energy guys.

See "Power University" for more.

8. Focus On *Leading* The Game, Not *Reacting* to Her Tests

Here's the clincher:

The mindset of passing shit tests is inherently lower value.

Instead, **the ultimate stage of mastery and un-neediness rises above the game**.

At this stage, you see the games, but you're confident that your value will shine through, and slightly disappointed by game players. She's losing *you*, not the other way around.

The man who focuses on leading moves forward instead.
Look at this example:

I let her have the win
The man with the "pass the shit mindset" may go for a smartass reply such as:

- *Get in the queue and hopefully you'll get lucky*
- *I need to check my schedule*
- *Only if you buy the drinks*

But I don't need that.
Also, notice that "a couple of spots I'm sure you would love" is a type of text-flirting and a veiled hint at sex (his place) and sexual anatomy (G-spot).

9. Turn The Power Tables: Test Her!

The highest mate value men are not passing tests, but *fielding* tests.
They're overly worried about signaling value, because they expect women to also show off for them.

The better you become, the more *selective* you become.
And then it's *you* who tests others -and women-.

See some examples:

- **Shit-test for feminists**, and screen out the most bitter ones
- Ask women this crazy question (and judge them by their reply. Alumni only)
- If you pick up the tab, tell her to leave a tip (see if she does, and how much)
- Tell her to get something addressing her as “baby” (alumni only)

Don’t Confuse Shit Tests For Red Flags

Finally, burn this into your mind:

Some shit tests are red flags about her character.
When that’s the case, you don’t need to “pass” the shit test, you need to “pass up” on the b*tch.

See an example here:

This is not a shit test, this is shit behavior!
You can give her a couple of chances to change tack.
But, usually, these are low-quality women who make for bad dating and terrible partners. And you can do better.

How to Solve Shit Tests For Good

Shit tests aren’t about clever replies. That’s lower-level gaming.
They’re about power, frame, and who is evaluating whom.

Once you stop thinking in terms of “passing” tests and start focusing on leading the interaction forward, the dynamic changes completely.

That shift requires frame awareness, power dynamics literacy, and a unified seduction strategy.

That’s what **Seduction University** is designed to teach.

Lean In Review: Analyzing Power, Feminism & Reality

Lucio Buffalmano · 28 December 2018 · Archived copy · Original

In *Lean In* (2013) author Sheryl Sandberg shares her story and her views on gender issues and workplace inequalities, while also providing guidance and career advice for women.

TPM Strategic Note: The Feminist Power Play
This is an important text for serious students of inter-gender power dynamics. While Sandberg identifies real-world friction points, the work is biased toward a social re-engineering agenda that fails to account for biology, evolutionary psychology, and the hypergamic drivers of human attraction. By treating evolved traits as as if they were 'cultural bugs' the author's solution would only create different issues like relationship instability and a loss of sexual attraction.

Core Claims

- Women are naturally less confident and ambitious and should strive for more
- Society and men should accept that it's also men's duty to take care of children
- Women should stick together because that's more power

Summary

About the Author:
Sheryl Kara Sandberg is an American technology executive who worked at Google, and then at Facebook as the company's COO.
She also gained popularity and media exposure for being an advocate of women in business, and an outspoken commentator on gender issues.

Double Standard: Ambitious Women Are Disliked

The author says that society holds a double standard for men and women: men are expected to be aggressive and ambitious, and people don't usually hold it against them.
But when it's a woman, both men and women tend to dislike an overly ambitious woman.

Successful women are also seen with suspicion, and Sheryl Sandberg cites the experiment of similar CVs of successful men and women. But while the man's success was appealing, the woman's success was worrisome.

That much is true indeed, and it's one of the central points of my article the real reason why Hillary Clinton lost.

TIP: Negotiate With "We"
Since both men and women don't really like very assertive women, it's a good idea for women to negotiate from a "we" perspective rather than "I".

Also read:

- Masculinity vs femininity
- Masculinity

TPM Note: Sandberg identifies the "ambitious woman" penalty but skips most solutions.
See warmth and power and **How to combine power with femininity**

Women Should Assert More

A good chunk of the book is good psychology on the differences between men and women.

Sheryl Sandberg says that women tend to have less self-esteem and react differently than men to wins and losses. In victory, men are more likely to think they have done while women look for more external causes and "circumstances". In loss, women tend to shoulder the full blame and to think that they are not good enough while men look at external circumstances and at scapegoats (see: political players).

The author also says that women have a higher degree of impostor syndrome, such as the feeling of not being good enough for the role they have.

My Note: True, but should be done strategically
I agree that some women are too lacking in assertiveness and confidence to have a good career.
Sometimes though it felt like Lean In was exhorting women to become more like men. I would advise women instead to seek a balance. Also, see Fran Hauser's *The Myth of the Nice Girl* Or consider Robert Greene's approach in *The Laws of Human Nature*, recommending that men and women become aware of their pros and cons by merging the two genders' advantages into one.

Don't Let Family Planning Stop You

The author says that too many women allow family planning to curtail their potential and possibilities, often becoming a self-fulfilling prophecy.

For example, a woman thinking of having a baby might not apply for higher positions, turn down important projects, or outright refuse promotions.
What happens though is that having a baby often takes longer than most expect and in the meanwhile she is not growing -not herself and neither her career-.
When she eventually wants to go back to work, she should do so in a position that does not challenge her, which makes her less willing to go back at all.

Instead, Sheryl Sandberg proposes that before she is actually pregnant and must -or want- to go on maternity leave, she keeps growing and going for all the high visibility and stretch positions that she can.

I like this approach.

Lean In Criticism

There are good reflections and some great tips for women's careers in "*Lean In*".
But there is also a complete disregard for *basic psychology*, human nature, and biology driving the behaviors she criticizes. And I disagree with several of her conclusions.
let's go in order:

#1. Are Ambitious Women Disliked Or... ?

Sheryl Sandberg says that ambitious women are disliked.

She is not totally wrong.
But not correct, either.
It's women who look *overly* ambitious without any femininity that may be disliked.

Unfortunately, we'd add, and it's the same for men.

But the good news, which is what Sandberg does not talk about and which is most important to women, is that **women *can* be ambitious if they present themselves in the right way**.

Also, read:

- **How to combine power with femininity**

#2. Are Men & Women Equal for Child-Rearing?

Sheryl Sandberg notes that women are more likely to take work leaves when a baby is born.

Does anyone find that strange?

She also states that society should accept that it's OK for men to do child-rearing as well while the woman pursues

her career.
I'm not a big fan of "society should" do this or that, but I get her point.

But she never stops to consider that **mothers tend to be more important than fathers for children**.
Part of it might be culture, definitely, since children see their friends that are closer to their mothers and expect the same from them. Yet, culture doesn't develop in a vacuum. Cultures often stem from biology and inborn tendencies as well.
Women have historically taken care of children because, obviously, they deliver them and because, later, they suckle them.

That's one of the reasons why the maternal bond is usually stronger than the paternal bond. Saying or **implying the two parents are the same fails to account for biology and developmental psychology**.

To be clear: this is not to say that women *have* to keep taking care of the children. I'm pretty sure children can turn out awesome even with just their fathers.
But it says, again, that Sheryl Sandberg's "*Lean In*" fails to truly analyze -and understand- basic truths of life.
There is a reason why all societies show a tendency for women to take care of children and for men to take care of the providing.

#3. Misses Basic Human Nature & Psychology

Sheryl Sandberg's *Lean In* questions (complains?) the current gender split in top job positions, about double standards, basically, "how things are".

Yet the answers always seem to be a big "it's unfair".
It never questions whether or not there are deep reasons behind the current state of affairs.
It never considers different biology, psychology, and sexual needs.
It does not consider that **there are biological and sexual reasons why men are more driven**.
Men *need* to amass more resources for competing in the sexual marketplace and for securing a woman. Women don't have nearly as much of a need.

Male and female different drives and needs are often deep-rooted and they won't change because Sheryl Sadzerbg wiggles a judgmental finger with her recurrent "women/men should" and "society should".

For the sake of clarity: this is not to say that things should stay the same. Cultures change and, with time, our drives and nature changes as well -the latter *not* within our current lifespan though-.
But Sheryl Sandberg never addresses the underlying principles: she stops at the top layer. And that, in my opinion, fails to deliver meaningful insights and information.

For a better overview, see:

- **The real reason why men have more power**

#4. Is Equality of Outcomes True Equality?

Sheryl says that a sign of true equality will only happen when business ownership and business executive positions will be equally split between men and women.

To me, that's not a sign of equality in any way.
Equality is equality for opportunities, and then let the final "split" be decided by market forces and, even more importantly, by personal preferences.
And not, like the author says, by "committing to change the leadership ratio", which is deeply un-meritocratic.

Equality enforced by a 50/50 gender split is not equality, not a meritocracy, and not something a healthy society must strive for.

Since it's like more women *want* to stay close to their children as compared to men and since more men are *on average* more hungry for power and upward social mobility, it's likely that the split might not be 50/50.
But it doesn't have to be 50/50 to live in a society that provides equality of opportunity.

Again, this is another fundamental failure in understanding basic human nature.

#5. Men's Reactions to Women's Success Isn't Just "Ego Thing"

Sheryl Sandberg states that men fearing more successful female partners do so out of an "ego issue"

Part of it is ego indeed but, again, the author fails to question the reasons why that is the case.
Since most have it, then we need to look for deeper causes. And the deeper cause is evolution. Evolution shaped men that way. It's possible to speculate that men don't want more successful women because, deep down, they know that women would not respect them. It's a well-known fact indeed that women want men who are "more" than they are (female hypergamy).
And men, righteously so, are worried about partners who are "more" than they are.

Similarly, Sheryl Sandberg encourages women to marry men who are more "equals", again failing to realize that women really pine after men who are better than they are.

#5. Tribalist and Sectarian Approaches

I quote straight from the Lean In book:

> We need to look out for one another, work together, and act more like a coalition.
> As individuals, we have relatively low levels of power. Working together we are 50% of the world population and therefore have real power.
>
> *Quote from Lean In*

> We should strive to resolve our differences quickly, and when we disagree, stay focused on our shared goals
>
> *Sheryl Sandberg*

> There is a special place in hell for women who don't help other women
>
> *Lean In, quoting Madeleine Albright*

There is much more talk of coalitions and "common fight", including a story where the author expected an ally in another woman but felt betrayed when her colleague was hostile.
Now, being hostile sucks. But did she expect an ally just because it was another woman?

This is not good for the world at large because **tribalism almost always indirectly implies an out-group, an enemy to fight**.
But fighting against whom?

We don't need more tribes and hostility, we need more bridges and more empathy for fellow humans.

It goes both ways, of course, and we said the same for men who shared that mindset:

- The Way of Men
- Tribe by Sebastian Junger

Ultimately, the author does include also men, but it feels like it's a perfunctory olive branch. And of course, only for men who espouse her worldview.

Check our Manifesto of Individualism.

#6. Women Should Act More Like Men?

In the end, Sheryl's receipt for a "better world" is for men to be more like women and for women to be more like men.

I believe there is great power in acquiring cross-gender qualities and traits, but I believe it's best achieved while sticking mostly to one's own gender.
Why for example should women become men with a skirt when they can leverage their own strengths to achieve success, maybe even opening their own business instead of bending backward to fit into men's businesses?

Also, consider that women who become too masculine in the way Sheryl seems to recommend lose points in the dating arena, and that's one more reason why women tend to be less aggressive than men: it's a sexual strategy -also read strong women VS submissive women in dating-.
And of course, Sheryl Sandberg never warns women of the risks that being less feminine carries in the sexual marketplace.

CONS

For a more complete review read the "Lean In Criticism" paragraph. On top of that, I didn't like the following:

Shoulding All Over The Place
Lean In is huge on shoulds. What women should do, what men should do, what society should accept. I really don't like that attitude.

One-Sided Look to Discrimination
there are disadvantages to being a woman, for sure. And this book explored all of them and then some. But there are also advantages, and the fact that Sandberg barely mentions any is not a badge of impartiality.

PROS

There is much good in Lean In, including:

Good Text for Career Women
Lean In is a good book for women seeking a successful career, and the author knows a thing or two about a successful career.
For more, read:

- The businesswoman guide to success in male organizations

Some more wisdom on political savvy would have helped, but then again, "*Lean In*" wasn't meant as a career strategy book.

Some Valid Psychology on "Intra-Gender Competition"
I liked some of Sheryl Sandberg's analysis of women's animosity against women.
She says that many women who make it in a man's world resent other women and try to push them down.
That was on point.

Review

There are plenty of good analyses and tips in Sheryl Sandberg's "Lean In", but also important misunderstanding of evolutionary psychology, inter-gender dynamics, and some bias.

For a book that is so popular and so well written and for a woman who is so accomplished, I expected more in terms of psychology, sociological understanding, and even strategic thinking.
To me, there is a rather appalling lack of understanding of the basic principles of human nature.

Sharyl Sandberg says she's not a scholar nor a sociologist. It shows. But that's not an excuse to remain ignorant of the deeper picture.

Finally, same as I do for men exhorting men to "stick together", I also deeply regretted the sectarian mindset that women should "band together".

Tao Te Ching: Summary & Review

Lucio Buffalmano · 28 December 2018 · Archived copy · Original

Tao Te Ching is a book of ancient Chinese philosophy. Lao Tzu, the author, is one of the "founding fathers" of Taoism.

Bullet Summary

- Focus on the small things and the big things will take care of themselves
- Never underestimate your enemy: the underdog often has the advantage
- Seek the truth: even when it hurts

TPM Takeaway: Stealth power and invisible influence
This is one of the earliest manuals on Soft Power and 'Passive Influence'. It teaches the 'Art of the Underdog'—how to win by yielding and how to lead by following. We DO NOT advice to apply this as your baseline strategy because dominance is important for a man's success, but when you cannot dominate, stealth power may be the second best option.

Full Summary

Tao Te Ching is a collection of gold nuggets that serve as deep food for thoughts.
I will list here the ones that I liked the most:

Just Do What Needs to Be Done

> Just do what needs to be done, never take advantage of power.
> Achieve results, but never glory in them, achieve results but never boast, achieve results but never be proud, achiever results because this is the natural way.

> Achieve results, but not through violence. Force is followed by loss of strength. This is not the way of Tao. That which goes against Tao comes to an early end.

Perception of The Nature of Things

> That which shrinks must first expand, that which fails must first be strong, that which is cast down must first be raised, before receiving there must be giving.
>
> This is called perception of the nature of things.

Don't Try To Be: Just Be

> A truly good man is not aware of his goodness, And is therefore good.
> A foolish man tries to be good, And is therefore not good.
>
> A truly good man does nothing, Yet nothing is left undone.
> A foolish man is always doing, Yet much remains to be done.

This is a strong message for men who chase external guides for qualities that they should find within.
For example, masculinity. It's not masculine to learn how to be a man. It's better to think of it how to 'rediscover your manhood'.

Don't Get Attached to Material Possessions

> He who is attached to things will suffer much.
> He who saves will suffer heavy loss.
>
> **A contented man is never disappointed**.
>
> He who knows when to stop does not find himself in trouble. He will stay forever safe.

Later on, Laozi says:

> Therefore the sage seeks freedom from desire.
> He does not collect precious things.
> He learns not to hold on to ideas.

⍰⍰♂ **TPM's note**: This is an important aspect of mental power. Chase all the possessions you wish, but never become dependent or attached to them. The more attached you get to things, the more you stand to lose. The more they are just tools for you, the more antifragile you become.

Don't Be The Loud Mouth

Be the 'silent killer' instead, getting things done without talking about them.

> Those who know do not talk. Those who talk do not know.
>
> Keep your mouth closed.
>
> Guard your senses.
> Temper your sharpness.
> Simplify your problems.

> Mask your brightness.
> Be at one with the dust of the Earth.
> This is primal union.

Achieve Greatness In The Little Things

> Practice non-action.
> Work without doing.

And what I liked most:

> Achieve greatness in little things.

Furthermore:

> In the universe great acts are made of small deeds.
> The sage does not attempt anything very big, and thus achieves greatness.
>
> Easy promises make for little trust.
> Taking things lightly results in great difficulty.

While saying "the sage does not attempt anything very big" might seem in contrast to much self-help of today, which clamors for big goals, I think this is genius.

It's a message of consistency, such as that great things are achieved through small, daily actions.
Take the small things very seriously and the big things will come.

The Best Cure is Prevention

> Peace is easily maintained;
> Trouble is easily overcome before it starts.
>
> The brittle is easily shattered;
> The small is easily scattered.
>
> Deal with it before it happens.
> Set things in order before there is confusion.

And later on:

> People usually fail when they are on the verge of success.
> So give as much care to the end as to the beginning;
> Then there will be no failure.

The Art of Non-Action

The art of non-action is something that Robert Greene in *The Laws of Human Nature* describes as Eastern and feminine qualities of waiting for troubles to dissipate and for the enemies to destroy themselves.

> It is better to become passive in order to see what will happen.
> It is better to retreat a foot than to advance only an inch

> This is called being flexible while advancing,
> pushing back without using force,
> and destroying the enemy without engaging him.

And on one of the biggest sins one can commit:

> There is no greater disaster than underestimating your enemy.
> Underestimating your enemy means losing your greatest assets.

And on the force of desperation:

> When equal forces meet in battle, victory will go to the one
> that enters with the greatest sorrow.

This hints at the power of the underdog. Sometimes you should play up your underdog qualities.
Also, read:

- The Art of War

Be Like Water My Friend

Long before *The 48 Laws of Power*, Lao Tzu said it:

> Therefore the stiff and unbending is the disciple of death.
> The gentle and yielding is the disciple of life.
>
> Thus an army without flexibility never wins a battle.
> A tree that is unbending is easily broken.
>
> **The hard and strong will fall**.
> The soft and weak will overcome.

To me, this suggests that being "strong and unyielding" is often the cause of your downfall.
It's true, also considering that tough exteriors often hide internal issues.

A little later Laozi writes in Tao Te Ching:

> The weak can overcome the strong;
> The supple can overcome the stiff.
> Under heaven everyone knows this,
> Yet no one puts it into practice.

Seek Truth, Even When It Hurts

And finally, one of my favorites:

> Truthful words are not beautiful;
> beautiful words are not truthful.

This is similar to what Greene says in *The 50th Law* and what Ray Dalio says in *Principles:* learn to love reality, even when it hurts.

I wholeheartedly agree with it, and that's one of the reasons why I dislike so much the Law of Attraction as

espoused in books such as *The Secret*: it's a big, feel-good, empty lie.

TPM Takeaways

- Use indirect strategy when direct dominance is too costly
- Focus on results, not words
- Influence with prestige and buy-in, not force
- Be bigger than 'things' and possessions

CONS

Tao Te Ching is an outstanding text, but it doesn't come with some cons:

Cryptic
Like many old classics, *Tao Te Ching* is not the easiest read.
As soon as it starts, it differentiates between two "Tao": one which can be named and expressed, and the Eternal Tao, which is inscrutable.
Just to add to the complexities, it says that Tao is "darkness within darkness, the gate of all mysteries".
Just keeping things simple, you know :)

Low Dominance & Status
It's not a guide to gain status, leadership, or dominance, all qualities that are crucial for a modern man's success.

PROS

In the audiobook version, I had a lovely soothing voice, which made the whole experience a bit similar to The Power of Now: a mystic trip into wise-dom.

Review

The "*Tao Te Ching*" is an ancient text mixing spiritual concepts with plenty of valid strategies that work best in self-effacing cultures.

Part of its power and allure lies in its Messianic writing style that allow anyone to read in it whatever they want. As for TPM, we find it valuable, but our readership of ambitious men must be accompanied by more how-to guides to turn wisdom into results.

Check the **best books for men's empowerment.**

Eating Animals: Summary & Review

Lucio Buffalmano · 30 December 2018 · Archived copy · Original

Eating Animals is Jonathan Safran Foer's deep investigation into the animal food industry.
Eating Animals finally tries to answer the deep question of whether or not it's ethical for us to eat animals. And the answers stare deep into the soul of us all who are still eating animals -at least farmed and raised the way they do today-.

Contents

- Bullet Summary
- Full Summary
  - How We Got to Intensive Farming
  - Factory Farming & Animals' Torture
  - Dangers of Factory Farming
  - Are There Alternatives?
- CONS
- PROS
- Review

Bullet Summary

- Eating animals today is not only a food choice: it's a moral and ethical choice we all need to make
- Modern farming is often akin to torture for animals
- Eating meat is not intrinsically bad, but it's bad when it entails suffering -and today, it often does-
- We can all contribute to stopping this ongoing inhumanity

Full Summary

The book connects personal stories and childhood memories with Jonathan Safran Foer's investigation of animals as our source of food.

I won't go into the details here, but there is one quote that by itself is worth the whole book.
Her grandmother, a jew fleeing the nazis, was close to starvation but when a Russian farmer offered her food she refused it because it was pork.
When Jonathan Foer asked how could she refuse any food in a life-and-death scenario, how could any type of food matter?
And she replied:

> If nothing matters, there's nothing to save
>
> *Ms Foer*

Similarly, I would ask: if animals' suffering does not matter, then is humanity even worth saving?

How We Got to Intensive Farming

Foer says that prior to 1923 livestock was raised in small farms and their lives were not too bad.

But in 1923 Celia Steel got the wrong order. 500 chicks instead of the 50 she had ordered.

She tried to raise them indoors and… It was a success. So to speak. By 1935 she had 250,000 chickens. And in the 1930s it started becoming a widespread phenomenon. An industry.

Factory Farming & Animals' Torture

The modern practice of raising as many animals as possible in as little space and in the most efficient way possible is called factory farming.

The author, as much as I do, invites the readers to check pictures on Google to get an idea for themselves.

Foer goes into detail in describing the harsh existence of animals in factory farms. At times, it feels like they are centers for torture.

Dangers of Factory Farming

The author goes deep into the impacts of intensive farming, which is not limited to the moral considerations of animals.

Modern farms are huge polluters and they might easily become the breeding ground of the next pandemic.
The author talks about the Spanish Flu and how destructive it's been. A modern pandemic would be much *worse*.

Poor Quality of Meat

And don't go thinking that because it's "modern farming" and regulated you are getting quality meat.

Intensive farming produces crap meat -what would you expect anyway when the animals the meat comes from life in those conditions?-.
Animals are often ill and diseased. They eat poor quality, genetically modified food which is still mixed with other dead animals. And they are kept alive with massive doses of antibiotics.
We are eating meat full of drugs and antibiotics.

Are There Alternatives?

Foer is not a pie-in-the-sky writer and explains that going back to the old days with the current population -and with the current fewer workers in farming- is impossible.
Even if everybody wanted to buy from family farms, that wouldn't be possible. If we were to take all the family farms in the US, their output would not even be enough to satisfy Staten Island's population.

However, if consumers started demanding more animals' rights and buying only from selected farms, then the intensive farming industry would be forced to heed the change and adapt.

In the meantime, Foer has adopted his own solution: vegetarianism.

CONS

Here are a few things I liked less about Eating Animals:

“Back Then Was Better” Mindset
Foer seems to have a typical “back then was better” mindset. And attention, I am not saying that back then animals’ condition was not better. It might have been.
Yet at times, it feels like a bit of a rose-tinted glasses. I grew up in a rural area right at the passage between farming and the service industry, with plenty of leftovers from the old days.
The killing of animals was brutal. My grandmother’s way of killing chickens by pulling their necks was a nice way of going about it. I personally saw my grandmother’s neighbor doing it in much more cruel ways.
And that’s only one example and I won’t go into much more detail, but it certainly wasn’t good back then.

PROS

Eating Animals is one of the most humanist books in modern literature.

Can Make The World a Better Place
In my opinion, as the most powerful and as the only intelligent specie on the planet, we have a responsibility towards all other forms of life. Eating Animals takes that responsibility seriously as it should.
The more people read and understand it, the better the world we will live in.

Eye Opener
Do you know the people who mock PETA saying “People Eating Tasty Animals”?
Well, I’m not a vegetarian, but I’d really like to see who uses eating animals as a badge of honor after eating this book. Jonathan Foer’s work can help many people open their eyes to the ongoing torture that modern farming is.

Good Psychology
Foer provides good psychology on why most people keep eating animals. He says most people know it’s bad for animals, but we prefer distancing ourselves. And we conveniently forget how similar to us all animals really are.

Review

We are on our way to treating all human beings with dignity and respect. Much to go there, but we have done a lot. When it comes to animals though we are in the opposite stage: suffering is the norm and respectful treatment is the exception. This is legalized torture.

As humans, we have a responsibility to make sure that our planet has as little suffering as possible.
To me, it's ridiculous to think of going to Mars or becoming an "interplanetary specie" when we are still so backward on this Earth.

We are the most powerful and the only intelligent specie on this Earth. That does give us huge advantages.
But it should also give us responsibilities. As someone said, with great power comes great responsibilities.

And Eating Animals is a great step in the right direction to take that responsibility.

How to Be a 3% Man: Summary, Review & Criticism

Lucio Buffalmano · 31 December 2018 · Archived copy · Original

"*How to Be a 3% Man*" is a dating book for men by Corey Wayne in which he embraces the high-masculinity, alpha male approach to dating. Wayne's goal is to teach men how to behave and think like high-quality, top 3 percent men, so that they can date equally high-value and attractive women.

Contents

- CONS
  - How can chasing be feminine?
  - Lean Back, Spread Out, Say Nothing… Is It the Best Strategy?
  - Sometimes Black & White Approach
  - Women Have Different Values: No Empty Patriotism
  - Men Biologically Programmed to Mate With Dominant Women?
  - Alpha Males Set Definite Dates?
  - Alpha Males Don't Double Check Her Number is Correct?
  - Some Random, Unneeded Psychoanalysis
- PROS
- Review

Bullet Summary

- **Have your own mission in life**, a mission that goes beyond women
- **Don't be an open bo**ok and don't talk all the time: it's a fact that women prefer a mystery
- **Let her chase a relationship**

Full Summary

About the Author:
Corey Wayne is an American dating coach for men. He runs a YouTube channel with advice on dating, relationships, and "games".

1. Be a High-Quality Man

This is the very basis of Wayne's teaching.

If you want to meet high-quality women, be a high-quality man, with a high sexual market value.

The main thing I really liked about Corey Wayne is his focus on being a genuine, straightforward man.
Little games, little gimmicks, and no manipulation.

By the same token, while you want to be a high-quality man to attract high-quality women, Wayne advises readers to stay away from low-quality women.

> Manipulation: Techniques, Strategies, & Ethics

Refuse Devious & Dishonest Partner

He says that women sometimes learn to be dishonest from their parents and that much is true.
Also, read:

- Why people cheat
- Emotional infidelity: what is it and how it happens
- How to pick a loyal partner

I like to summarize it in this way:

> **Become the person you want to attract**

2. Go For What You Want To Be a 3% Man

This quote, modified by me for brevity, goes to the core of what being a 3% man means to Corey Wayne:

> *Women love a guy that is his own man despite what others think of him. A confident man who goes for what he wants in life without fear. A man that is centered, in control of himself, who has purpose, and knows where he is going.*
> *A woman wants a man she can't have her way with, and no matter what she says or does, she is not going to be able to sway him from his path or from his purpose in life.*
>
> *Corey Wayne, How to Be a 3% Man*

And this is how Corey Wayne defines an alpha male:

> *A true Alpha Male, a man who goes for what he wants and has positive expectations that he will achieve his goals, will choose his purpose and his passion over a woman if faced with the choice. Masculine energy, after all, is about purpose, drive, mission, succeeding, accomplishing, breaking through barriers, achieving goals, etc.*

3. Find Your Masculine Energy

Corey Wayne says that masculine energy is:

> Masculine energy is about drive, purpose, mission, succeeding, accomplishing, overcoming obstacles, and achieving goals.
>
> *Corey Wayne*

For Wayne that also means that if he must decide between her and following his mission, he will choose his mission.
And that's what, he says, women find appealing.

Also read:

- What is masculinity
- How to be more masculine

> How to Be More Masculine: The 10-Step Guide for Men

4. Prepare For & Respond to Women's Tests

Corey Wayne says that women will test you.
They will want to test you and push you to see whether you will cave in and show the strength that they wish you have.

Corey Wayne shares a lot of examples from his dating stories in "How to Be a 3% Percent Man".
For example, a girl called him before his date and said she had to do grocery shopping before their date. But Wayne told her he was going to be there at 7 pm and expected her to be there. When she said "I might not be here," he said, "then I'll take your mother out".

Personally, I think that approach can either work great, and make her very submissive, or it can backfire badly.
See a few different techniques for women flaking:

- **What to do when a girl cancels a date**

5. Treat Her Like a Lover

Treating her like a lover ensures that you don't end up being her friend.

How do you treat her like a lover?
While *nice guys never make a move*, the lover knows that the purpose of a date is to have fun, relax and, eventually, lead to sex.
The lover knows that leadership gets you the woman.
That's why they plan their dates in a way that is most likely to be conducive to sex.

There shall be no group dates before sex, no lunches, and no movies. The idea of a date is to bond together.

Finally, the lover is not afraid of walking away -the early pick-up artists used to use the "false takeaway' to make her chase. Also, read *Mystery Method*.

My Note: Lover or Provider?
Personally, I prefer the lover approach indeed.
But I think the provider can date equally well, and what's most effective for you also depends on your preferences and qualities.
Also, read:

- **Should you date as a lover or as a provider?**

Real-Life Applications

Most of "How to Be a 3 Percent Man" is highly applicable information to dating and romance.
A couple of ideas I really liked:

Write Down Your Ideal Woman
Write down, in minute detail, what your ideal woman looks like and what her personality is like.
Then write a letter to this person telling her exactly what you adore about her as if she is already in your life.

CONS

There is much I liked in "*How to Be a 3% Man*," but a few things I disagreed with, including:

How can chasing be feminine?

Corey Wayne says that chasing is the very act of submissive women and that's why men who chase are not successful.
Submissive women don't really take much action themselves. And the dating marketplace dynamics are pretty clear: women are the demand and men are the offer. For the most part, it's men who need to make the move. And that's why women rarely chase at the beginning of dating.

Lean Back, Spread Out, Say Nothing... Is It the Best Strategy?

With his number and detail orientation, Corey Wayne says that you should sit back, spread out and let women talk 78% of the time while you stay mysterious, say as little as possible, and never show your hand.

I agree that strategy often works to make her invest more *if* she already likes you.
But it can as easily backfire.
Women will not chase men who show zero interest in them. Leaning back and contributing as little as possible is at high risk of showing women that you don't want them, and they might easily write you off.

Much better, in my opinion, is to give something to keep her interest. Don't lean back but lean in if she does the same. Don't do your best to avoid talking but contribute and reward her for sharing and qualifying herself.

Sometimes Black & White Approach

The author takes some general tendencies that are true at a population level but extends them as blanket rules.

He has a very black-and-white view of men and women, in many ways not too dissimilar from Men Are From Mars, Women Are From Venus, and Deida's *The Way of the Superior Man*, which indeed he references.

However, as it's often the case, the reality is more variegated than "men are rational women are emotional".
And that's what was missing here: the fine details and important exceptions that make you go from good to great.

Women Have Different Values: No Empty Patriotism

Corey Wayne dedicates his book to "American Soldiers".
Fine.

Later on, he says that masculine means going to war to defend family -you don't go to war to defend the family these days- and country and she is more attracted to him because he was willing to sacrifice his life for the country (and for the family).
I very much disagree with that. Women are practical. Men's ideals matter little to women, and "patriotism" is the epitome of the typical male ideal, but *not* women's ideal.

Men who abandon them and their children to go die for an empty ideal of "country" might even gain some points in women's hearts.
But trust me that the men who will be gaining her vagina are the men who do not go die for some random abstraction and idealism.

Men Biologically Programmed to Mate With Dominant Women?

Wayne says that men and women are biologically programmed to mate with the most dominant member of the opposite sex (see: hypergamy).

He is right for women.
Women do want more dominant men. The most popular forum topic here is a girl asking how to meet dominant men.
And you can read here how dominance will help you with girls.

But it's not actually true that men seek the most dominant alpha female. Men seek women who are more submissive than they are. Some men like women around their value of submissiveness while some other men like much more submissive women.
But almost all men prefer more submissive women.

Alpha Males Set Definite Dates?

Sometimes I feel like Wayne is a bit stuck in the mantra of "be alpha, be alpha, be alpha" and he loses sight of what's most effective instead (which is not always "be as alpha as possible").

When he says to take up space for example, or to lean back or to tell women what to do.
But I also feel that behavior can break rapport with women. And it can come across as insecure sometimes because it's exactly the most insecure people who swing in the opposite direction to cover up their insecurities (see: alpha male posturing)

For example, he says that alpha males tell women where and when to meet in exact terms, without needing

confirmation. Yet I feel that's bogus and self-defeating because confirming reduces flakes.
When you can write on the same day telling her the exact spot where you will meet it serves as a powerful reminder and much-needed confirmation -also read how to text flaky girls and how to text-.

See an example here:

Does it seem "weak" to you? It seems very effective to me, instead. We met up, had a good date, and also ended up having sex

Alpha Males Don't Double Check Her Number is Correct?

Similar to the above, I feel that Wayne is too focused on appearing alpha rather than doing what works.

When he said you should not double-check that her number is correct, I think he meant you should not look like you are afraid she gave you the wrong number on purpose, which makes sense. Yet if you had a great connection it makes no sense to suspect she would give you a wrong number and it makes sense to double-check it's correct. I often call her right there and then to confirm and to let the save my number.

This is nonsense to me, and I highly recommend this article:

- **The limitations of alpha male game**

> Why "Dating Like An Alpha Male" Is Costing You

Some Random, Unneeded Psychoanalysis

There is random psychoanalysis sometimes.
I feel the author has a good self-awareness of how his parenting affected him, but I also feel he is not correct when he says that not hearing "I love you" necessarily makes children insecure. More than insecure, there is a tendency to make them feel approval-seeking, which is different (also read *Will I Ever Be Good Enough*).

PROS

I listed a list of cons, but there is also much that I liked from “How to Be a 3 Percent Man”, including:

Healthy Approach to Relationships
For the most part, Corey Wayne espouses a healthy win-win approach to relationships.
He stresses the importance of caring, being present and attuned, loving each other, and helping each other grow.
However, keep in mind that Wayne’s approach is more for relationships rather than for womanizers.

Holistic Approach to Seduction
Corey Wayne says that an attractive man is attractive to all women and what works with X woman is most likely to work with Y women as well. Despite the growing popularity of my article on how to sleep with Thai girls, that’s something I also deeply believe in.

Good Take on Vulnerability
As I said before, I feel Corey Wayne pushes too much the envelope on “being as alpha as possible”.
But I also liked his take on “not showing too much vulnerability” as that’s not attractive at all. Especially early on.
Also, read Vulnerability is Not Powerful.

Review

The more advanced students of social arts and social dynamics might find few blemishes in “*How to Be a 3% Man*“. But on the other hand, this is a wonderful book for the vast majority of men who want to cover many of the basics in one single book.

Corey Wayne is somewhat in between mainstream like Mark Manson –Models and *The Art of Not Giving a Fuck*– and the more “Red Pill” manosphere and pick-up authors such as *Alpha Male Strategies*, Rollo Tomassi, or W. Anton-.

However, I prefer Wayne’s work to Mark Manson’s as it’s more technical. And I prefer Wayne to some “Red Pill” author as he is free of bitterness towards women.

I personally found a few imperfections in “*How to Be a 3% Man*” -check the “cons” section-, but it’s an overall solid piece of work.
And for most normal people, that’s all they need to go from 20% to 70-80% and be fine.

or get the book on Amazon

Best Leadership Books

Lucio Buffalmano · 31 December 2018 · Archived copy · Original

This is a selection of the best leadership books that we personally review and examined.

Although it's called "best leadership *books*", it's actually a "best leadership *resources*" list, since it considers any source of knowledge such as videos, courses, or podcasts.

Note on selection: Every resource has been reviewed by Lucio Buffalmano
Unlike many 'best leadership books' lists online, every entry on this page has been analyzed through the lens of real-world power dynamics and social psychology. This ensures that the advice you see here isn't just 'popular' but strategically sound

14. Lean In

Summary | Audiobook

We don't support Sheryl Sandberg's 'help other women's angle because we find it divisive, tribalist, and un-meritocratic.

That being said, Lean In contains great wisdom for women in business.
Just one example: women should negotiate from a "we" position because assertive women are disliked across the board.

Dig deeper on these strategies in these posts:

- **How to combine femininity and leadership**
- The Businesswoman's guide to business success

> Feminine AND Powerful: 9 Tips For Women Bosses

> Leadership Quote: Done is better than perfect

13. How To Win Friends And Influence People

Summary | Audiobook

How to Win Friends and Influence People is not strictly a leadership book *per se*.
But it can help many current and future leaders understand that top-down "orders" often breed resentment and have little buy-in.

This is not to say that strong top-down leadership has no place: there are times and situations when it's the way to go -or the *only* way to go-. But as a rule of thumb, authoritarian leadership is not good for long-term performance -and, often, for the survival of the leader himself-.

Also read: saving face and never outshining the master.

> *Leadership quote*: Any fool can criticize, complain, and condemn—and most fools do. But it takes character and self-control to be understanding

12. Extreme Ownership

Summary | Audiobook

I'm not a huge fan of the work of former military personnel leveraging war and experience to sell books.

And it's not for moral reasons, but for the limited know-how to add value to the readers.
Such as, they have leadership experience, which is great, but often only in a very limited scenario, which is not good, and little knowledge of research literature, also not good.

So in some cases, it feels like they're selling hype to the civilian population who wants to buy some "danger" and "excitement" through vicarious living.

In this specific case, it also feels hypocritical -who took ownership of finding those weapons of mass destruction?-.

Anyway, let's now get to the content, and *Extreme Ownership* shares some important mindsets that leaders the whole world over would benefit from.
The title of the book itself is probably the main takeaway: leaders must take responsibility for everything which happens in their team.

> *Leadership Quote*: There are no bad teams. Only bad leaders.

11. The Leadership Challenge

Summary | Amazon

This is a top “manual” type of leadership, a great starting opint for any aspiring leader.

> *Leadership Quote*: Exemplary leaders know that if they want to gain commitment and achieve the highest standards, they must be models of the behavior they expect of others

---

10. Leaders Eat Last

Summary | Amazon

Leaders Eat Last is one of the best leadership books because if all leaders heeded Simon Sinek’s message we would live in a much better world.

Unlikely, it's inherently also naive if you take it as a how-to leadership guide because it refers to how the world *should* be.

Sinek says that leaders, by virtue of their positions, enjoy a plethora of advantages.
However, great leaders also need to shoulder the *responsibilities* of leadership, which include leading by example, eating last when food is scarce, and taking care of the people by shouldering the risks and downsides.

I don't fully agree with Sinek's assertion that leaders are not responsible for final results and I disagree with some of the "softer" approaches. In life, there also happen situations when an iron first is more needed.

That being said, *Leaders Eat Last* is a wonderful book and a must-read for anyone who aspires to be the best possible leader they can be.

> Leadership Quote: You can easily judge the character of a man by how he treats those who can do nothing for him

9. Eleven Rings

Summary | Amazon

If you are planning to lead top-performing teams, then you might learn a thing or two from the guy who has coached some of the most talented, motivated, and driven men in the history of basketball (including Michael Jordan, Pippen, and Kobe Bryant).

It's particularly interesting because some of the top athletes he coached didn't like each other and were quarreling for the leader's position in the team (Shaquille O'Neal VS Kobe Bryant) while some others were pure rebels by nature (Dennis Rodman).

Lots to learn about leadership here when it comes to super-driven individuals working together.

> Leadership Quote: the secret of managing is to keep the guys who hate you away from the guys who are undecided.

8. The 21 Irrefutable Laws Of Leadership

Summary | Amazon

My absolute favorite lesson is Law N.1, which Maxwell calls “The Law of The Lid”.
It states that the effectiveness of the leaders is the maximum threshold to which the team can operate.
I personally apply an even wider meaning to this rule. To me, it means that any leader must be in some form or respect “superior” to the team in some important and recognized trait.
That could be decisiveness, strength, wisdom, experience, or strength of values and beliefs (charismatic leadership).

I have indeed seen plenty of managers who could NOT keep good people in their teams because they were, simply, inferior individuals in core aspects of their personalities -including, crucially, in ethics and morals-.

In a nutshell, **to be a great leader, be a great man** (or great woman).

> Leadership Quote: leadership isn’t how far we advance ourselves but how far we advance others

7. Drive

Summary | Amazon

Drive can fix some of the most glaring deficiencies of managers' understanding when it comes to human nature.

All the information on *human psychology* and what motivates people is out there.
It doesn't require managers, leaders, or anyone else to reinvent the wheel. It requires some basic reading and not going through our lives with our eyes shut (figuratively).

"*Drive*" is one of the best leadership books because it provides one of the most important pieces *to understand human nature* when it comes to work, team performance, and motivation.
And it's this: extrinsic motivators such as salary and material rewards don't produce passion and motivation. On the contrary, they can crow out intrinsic motivation.
To learn more about the phenomenon also read *The Social Animal* by Elliot Aronson.

> Leadership Quote: control leads to compliance; autonomy leads to engagement

6. Delivering Happiness

Summary (review removed) | Amazon

Leadership has been linked to decisiveness, strength, and courage, and also to empathy and vulnerability.

But to happiness? Not so often!
This is why we propose this book: to offer a different take as a reminder that **morale matters** because it's linked to mental empowerment, the foundation of personal effectiveness.

> Leadership Quote: money alone isn't enough to bring happiness.. Happiness is when you're actually truly ok with losing everything you have.

---

5. Principles

Summary | Amazon

If you want to develop a culture that is all about growth, learning, and, ultimately, top performance, then *Principles* by Ray Dalio is simply the best organizational book available.

It's not easy to implement because the key principles of radical open-mindedness and radical transparency require a buy-in into meritocracy that goes beyond ego and personal fiefdoms of power.
In many ways, they go against the "default" human nature that most of us are born with.

Yet, by developing an antifragile ego and a growth mindset, we can all tap into what's our next stage of human wisdom and power.
And maybe, on the way there, build a multi-billion company as Ray Dalio did :).

> Leadership Quote: truth – more precisely, an accurate understanding of reality – is the essential foundation for producing good outcomes.

4. Underboss

By Peter Maas

Summary

What's so good about this book?

While all the others books here *talk* about leadership, Underboss *shows* you leadership.

Especially, you will learn from the failures of leadership, and the Machiavellian aspects of leadership.
And that makes it one of the best on this list, much more "real life" than bla bla bla on what makes a great leader.

> Leadership Quote: "It was a big disgrace for the family. A real black eye. You give him up in five minutes to the Genovese family? Would you want your father giving you up like that? That was a bad, bad move Paul made. A real bad move. You want to know your boss is going to fight for you tooth and nail

3. Radical Candor

By Kim Scott
Summary | Audiobook

If you're looking for leadership books that can help you in your business or in your team at work, look no further.

Kim Scott's approach is designed to develop top-performing teams via both radically honest feedback and personal caring toward the people.

It's best suited for best-performing companies and teams. You probably cannot use the wisdom of this book if you're in a company where office politics is the name of the day and if you're not yet a high-level manager. For that, read "best career strategies books".

But if you want to create the best possible working environment, where people can grow the most and where your work is performed in the most effective way possible, look no further.

Once again though, we must warn you about the naive-risk if you take this "how things *should* be book" for "how things actually are".

> Leadership quote: I once worked for a man who told me, "In every relationship there is a screwer and a screwee." Needless to say, I didn't work for him for long.

2. Leadership BS

By Jeffrey Pfeffer
Summary | Audiobook

A mandatory read especially after “Radical Candor”.

Leadership BS will bring you back to earth on how things most often are -rather than “how it’d be cool they were”-.

Also very much in line with this website and the work we do: describing how things truly are, so that you can be the most effective you can be, and achieve your goals.

> Leadership Quote: Go home and throw out the numerous leadership books—or better yet, give them to career competitors.

1. The New Psychology Of Leadership

By Alexander Haslam
Summary | Amazon

This book is heavy, long, full of academic research, expensive, and difficult.

But it's the most empirical book on the list. It's not a compendium since the authors also introduce their own concepts and theories. But overall, we found it to be the most instructive and insightul by a fair margin.

> Leadership Quote: Leadership that is grounded in shared identity will always win out over that which is grounded in ego.

Bonus: Power University

By Lucio Buffalmano
Overview | Reviews

Focus: Real-world power dynamics and goal achievement

Format: Multimedia Course.

Power University is relatively expensive, harder to consume casually (for example, at bedtime), and requires more mental effort.
But it can be a good fit for those who want something more immersive and strategic.

While the majority of this list focuses on the written word, **Power University** is included here as a living resource for those who prefer a multimedia approach with video examples as well.

The second major distinction is a focus on not only management, but also goal achievement, self-advancement and power dynamics, including how to *become* a leader, how to maintain respect and influence, and how to advance at work.

In practice, it can serve as a bridge between the research-heavy foundations of *The New Psychology of Leadership* and the practical execution required in corporate boardrooms.

Best for: Men who want an integrated, application-focused system that combines research with real-world scenarios.

Less ideal for: Readers who prefer a book format, people on a budget, and it is less tailored to women, as version 9.0 primarily focuses on men

Key Leadership Components:

- **Behavioral Modeling:** Video analysis of executive presence and frame control.
- **Organizational Politics:** The social and power dynamics of workplaces, teams, and boardrooms
- **Self-advancement:** Strategies for combining effective leadership with self-advancement in competitive environments (which standard books often gloss over)

> **Objective Note:** This is an internal resource, and we analyze it with the same critical lens as the external books on this list

---

Good Leadership Books

Outside of the TOP 10, but still with plenty of wisdom:

- **The One Minute Manager**: simple but good primer
- **Onward**: Onward embodies the spirit of the leader who is driven by passion and deeply in love with his craft, with a 'family approach' to this team (albeit I think employees shouldn't fall for that: your company is never your family)
- **The Hard Thing About Hard Things**: A golden nugget about the psychology and dynamics of "enemies within", such as the disgruntled employees who do little work and secretly undermine the team's efforts.
- **Good to Great**, on what distinguishes great leadership from average one (share credit and take blame; modest; want to see the company success even after they're gone)
- **The Five Dysfunctions of a Team**: One of the best leadership books to understand the importance of teamwork, trust among team members, and how the free flow of opinions and information differentiates top-performing teams from average ones.
- **Creativity Inc.**: Possibly the best leadership book when it comes to creative organizations and creative cultures.

The biggest takeaway for me: share the problems and the reasoning behind your choices. People will take ownership and will not waste time second-guessing what's happening.

- **Winning** If you want to model a hard-driving, results first and people-second type of leader, then Jack Welch is your man. Warren Buffett said it's the only book you'll ever need to read on management. I don't necessarily agree, but it's definitely a significant endorsement -and I also actually loved the book-.
- **The Truth About Leadership**: Kouzes and Posner are two big names in the leadership literature. And for good reasons: they write simply and without frills while going at the core of what it means to be a great leader. In this wonderful book, they boil it down to ten simple rules, all backed by research.
- ***The Dichotomy of Leadership***. Leadership has no extremes: it's about walking the line. A few great takeaways from this book, include that great leadership also means knowing when to follow, when to ask for more junior members' opinions, and establishing a good relationship with your boss even if you don't agree with him (or like him).

The Leadership Literature

Let me say this straight:

A good chunk of the popular literature on leadership is poor.

It's naive because it talks about how things *should* be, rather than how things *are*.
And sells what *sounds* nice, rather than what actually gets you in leadership positions and keeps you in power.

I highly recommend this article on naive self-help:

Monk Mode Changed My Life (Here's How)

Lucio Buffalmano · 1 January 2019 · Archived copy · Original

Monk Mode isn't just a trend, it's a tool of male success.

High-value men use it to cut distractions, eliminate weakness, and focus every ounce of energy on growth, status, and long-term wins.

In this guide, you'll learn exactly how to use monk mode to sharpen focus, build discipline, and transform your life — without burnout or isolation.

I'll also share how monk mode changed my life in ways that I would have never dreamed of. Monk mode gave me my dream business-mission and a life of freedom.

Let's dive in.

    - Highly driven: it's a must for you guys
    - When to Avoid Monk Mode
- My Monk Mode
    - Work, Work, Work
    - Productivity Gain

What Is Monk Mode

Monk mode is the deliberate elimination or scaling back of anything that doesn't move you towards your goals.

Many men use it for self-development and mental clarity, so monk mode for most men means the elimination of pointless social interactions, dating, unhealthy habits, and time-wasting social media usage.

Why Monk Mode Works

Monk Mode "works" because it boosts productivity by eliminating all distractions.

In a way, all highly productive people are in monk mode, they just might not call it that way.

Monk Mode works because it allows you to focus deeply on the few things that matter, and that's the definition of efficiency.
If you want to reach your maximum potential, then you must cut out unnecessary time waste and spend more time honing your craft -or yourself-.

Finally, monk mode will increase your resilience and independence. If you were able to cut people and pastimes from your life, what does it say about you?
It says that you're independent and self-reliant.
A good monk is his own man.
And that will shoot up your confidence and self-esteem.

> **Successful monks are their own men**

Monk Mode Example

Here is one example of monk mode: it was the 31st of December when I wrote the first published version of this article.

It was near midnight, and fireworks were raging in the sky.
Part of me wanted to go in the big square, celebrating with my nephew who's visiting town with his friends.

But I had bigger goals to pursue.

That was the perfect capping of my monk 2018: a year with little socialization, lots of work, and a turning point in my life for the positive.

The following chapter is about how monk mode has worked for me (so far).
Later, I will present you with the general theories on how to effectively enter monk mode if you are inclined to do so.

How to Start Monk Mode

Here are the steps to start a successful monk mode that yields results:

1. Have a Purpose

If you are starting a monk mode without a clear purpose, then I would ask you if you are running or shielding from something.
A monk mode must have something you want and need to focus on.

It can be a skill you want to deepen, a (side) project you want to work on, a mental state or confidence level you want to reach, but might even be a posture you want to improve -or all of them together-.
It can also be all together, but it must be clear and *focused*. General self-improvement must be with you for your life and doesn't necessarily need a monk mode.

Ideally, you will make your purpose a *measurable* purpose.

2. Plan Your Time

Plan in advance what you are eliminating and what you will be doing during that time.

This is especially important if you are trying to overcome small addictions in your life and if you're not used to solo time.

Once you said no to your games, socializing, drinking, or whatever, then they must stay forbidden -unless they're part of your relief valves, more on it later-.

Also, remember this: your plans **cut out what's wasteful, not what you don't like**.
If the two overlap, great, but otherwise you must cut what's useless *depending on your purpose*.
If you're trying to improve social skills, then your monk mode will be monk-only relative to your typical friends but you'll go out to meet random events. If your goal is to become a professional videogame player, then, of course,

video games are not a wasteful activity for you.

3. Cut Out Waste-Time

A monk can cut out two different time wastes:

- Cut useless socialization
- Cut daily time waste

A serious monk mode will seek efficiencies in both realms.
A *really* serious monk who wants to go places quickly will ruthlessly cut waste in both areas. Those are what I call "holed-in monks".

But you don't have to go extreme right off the bat.
At a very low level of intensity, a budding monk will seek to cut out smaller activities. For example, you can start cutting out "Friday happy hour" and "Saturday clubbing".

At very high-level intensities, the pro-monk will do the opposite. **The pro-monk starts from a clean slate by removing *everything* that does not directly serve his purpose.** Then, he will only add non-purpose related activities that are important for his physical health or mental sanity -monk mode can be taxing, especially for extroverts-.

However, you must be strategic when cutting down, because the tendency is to start off too extreme.
Imagine you want to make your car as fast as possible, and you want to remove all unnecessary parts to cut down on the weight.
Well, you don't want to be that driver who doesn't even enjoy driving anymore because there is nothing left except for the steering wheel and an extremely uncomfortable driver seat.

Cut down all unnecessary activities, *while still* keeping your sanity *and* a good quality of life.

If you can't manage to go full monk yet, it's OK. You can work your way up to higher levels of monkdom step by step.
And that will help develop your mental resilience.

4. Add Enough Physical Exercise

If you go on a high-intensity monk mode and you do desk-based work -which will be the case for most of us-, then you won't be moving much if at all.

That's very unhealthy unless you intersperse it with some physical exercise.

I exercise while listening to audiobooks to maximize *all* of my time. You might prefer taking a walk every once in a while or going all out with weights in the gym.
Whatever you do, don't skimp on exercise (and sleep).

5. Set Up Relief Valves

Monk mode, proper monk mode, can be highly taxing.

If you are planning to decompress then you are just chilling and taking a break, so don't call it monk mode because that's *not* monk mode.

In my case, for example, the social relief was the weekly Toastmasters meeting -which also helped my development with public speaking and leadership experience since I was the president-.
And my personal relief valves are small "goal-hitting" celebrations I do in between work when I order food I love and open a nice bottle of wine.

You will be looking forward to these small celebrations and they will make your day.

Some other times I just listen to music while eating and/or dance around instead of the usual audiobook.

These all helped me stay cheerful and mentally strong.

Monk mode develops a new superpower: independence

5 Approaches to Monk Mode

There are different ways of going monk:

1. Hourly monk

The monk of the hour only allocates a few hours a day to monk mode. This is more akin to "*Deep Work*" than to monk mode.
But if you do it consistently and while removing time waste, then it's also, in a way, a mini-monk mode.

2. Weekly monk

Depending on your work, you could pick weekends for your monk mode. Or the other way around.

I like this approach because if you want to work on social skills you will never completely go off the grid for long stretches of time.
And if you are a more extrovert type of guy, you will still get your fill of socialization and can keep the monk efficiency for as long as you want.

3. Seasonal monk

I like this variant a lot, and in good part, that's what I did by intensifying my monk mode during winter and relaxing it during spring/summer.

You can pick a few months of the year when you will do monk mode, and then go back to "civilian life" during the

rest of the year.

If you live in a cold country for example winter is a perfect period to go monk mode.

Bears and some animals go into hibernation, you go into monk mode. No wonder we've become the most dominant species in the world :).

4. Intermittent monk

Work your ass off, achieve some big milestone, and then pull the plug and take it easy for a while.
A life of high efficiency and mini-retirements spread all over is an awesome life if you ask me.

A friend of mine did this also while working for a big corporation.
He'd put in a massive amount of time that accrued on his holiday, and he'd deliver such quality work that nobody would dare bust his balls when he eventually took off for months.

5. Monk for life

For some people and for some lines of work, a forever monk mode might do the trick.
This is not my style though and not something I'd recommend for many types of endeavor.
What's the point of a 100%, forever monk mode if you're not going to enjoy the fruits with some of the people that matter the most to you -or who *will* matter the most-?

Also for most lines of work, it's best to maintain some people contact, which will keep you grounded and will sometimes provide much valuable input.

Is Monk Mode Right For You?

Monk mode will work at different levels depending on personalities:

Socially anxious: don't let it be your excuse!

Socially anxious men should NOT use monk mode to stay within their comfort zone and avoid the world.

It's OK to take a break if they are not being successful. But they must use the break in a way that will really move them forward. Studying theories socialization, meditating, taking up some good courses, and then going out there more centered and knowledgeable.

Introverts vs. Extroverts

Monk mode is surely easier on introverts.
Introverts recharge their batteries with alone time and they won't suffer nearly as much from socialization withdrawal.

Monk mode will be tougher on ambiverts and extroverts.
The good news is that they can manage to stay away from socialization and social time waste, they will come out of monk mode so much more powerful: they controlled their urge to socialize and talk. What else can they do?

Highly driven: it's a must for you guys

Monk mode is the bread and butter of highly driven, self-development-focused men.

They can zero in and get so much more done in so much less time.

Or all of them together. But not monk mode.

> **Monk mode requires no effort for the driven man: it's what he naturally falls into**

When to Avoid Monk Mode

Young men must prioritize social and life EXPERIENCE for optimal growth.

Watch this video to better understand why Monk Mode may not be optimal for young men:

My Monk Mode

My monk mode was an "85% social monk mode" and a "95%+ wasteful activities monk mode".

For most of the year, I went out only on Wednesdays to a local Toastmasters club where I was the president. Otherwise, I got groceries delivered at home, ordered takeaway food, and did the vast majority of my purchases online -of course-.

Exceptions were a small holiday in January, some dates, some rare walks outside, and some loose ends I was forced to take care of.

A big change compared to my past life.
As an introvert, I've always been comfortable on my own. And I never "needed" socialization much.
But since my past life entailed a "normal" office job, more dates and more women, more friends, and more outings, monk mode surely was a revolution in my life.

What have I been doing?

Work, Work, Work

I worked every day.
Including every weekend.
As a matter of fact, I worked every single day of the year.

Just to be clear, in "work" I include reading and researching, which are a big chunk of what drives this website. Sure, they are pleasurable for me, but so is most of the work I do. Monk mode is not supposed to be painful.

Some evenings I ended the day where I really looked forward to my habitual meditation because I was mentally exhausted, but I felt great.

Productivity Gain

I worked hard to make my time as productive as possible.

I listen to audiobooks while eating, and I started shaving my head with a razor instead of a clipper. How does that make me more productive, you might wonder?
Because the clipper is too noisy while I can listen to audiobooks using a razor! That's how crazy I've been in my quest to squeeze productivity from anywhere I can.

I also mostly structure my days around routines. Not every day the *exact* same, but *very* similar.

My cooking is also simplified: it's both healthy and simple to prepare.
And the single biggest productivity hack for me, as simple as that sounds, has been online groceries.

And 2018 is when I put The Power Moves on the map of men's self-development thanks to 1 post a day, many videos, and launching the first version of our course.

People Skills: Summary & Review (Robert Bolton)

Lucio Buffalmano · 1 January 2019 · Archived copy · Original

People Skills is a book on social skills by Robert Bolton.
Bolton says it's the culmination of 6 years of work and research on communication skills, and it focuses mostly on assertive communication

Contents

- Bullet Summary
- Full Summary
  - Roadblocks to Communication
  - Listening Skills
  - Submission – Aggression Continuum
  - Pay-Offs of Each Type
  - Assertive Communication
  - Conflict Resolution
  - The 3 Qualities of Great Communication
- Real-Life Applications
- CONS
- PROS
- Review

Bullet Summary

- Submission and aggression lead to sub-par lives: assertive communication is the only solution
- Empathy is crucial for good relationships and it's on a continuum from apathy to sympathy
- Avoiding conflict builds resentment: proper conflict resolution instead allows relationships to thrive

Full Summary

Robert Bolton prefaces *People Skills* saying that albeit interpersonal communication is the human specie's greatest achievement, most people communicate poorly.

Poor communication has heavy consequences, which include loneliness, emotional distance as well as overall personal effectiveness.

Roadblocks to Communication

There are

- Criticizing
- Name-calling, including putting down or stereotyping
- Diagnosing
- Praising Evaluatively
- Ordering
- Threatening

- Moralizing
- Excessive/Inappropriate Questioning: closed-ended questions are often barriers in a relationship;
- Advising
- Diverting: Pushing the other's problems aside through distraction.
- Logical argument: Attempting to convince the other with an appeal to facts or logic
- Reassuring

Judging

Criticizing, name-calling, diagnosing, and praising are all variations of judging our speaking partner.

Listening Skills

People Skills dedicates several chapters to listening.

Listening is a combination of hearing what the other person says and *involvement* in what he says.

Robert Bolton divides listening skills into 3 clusters:

- **Attending skills** (body language, eye contact, and overall reassurance that the listener is psychologically present)
- **Following skills** (door openers, encouragement such as "hmm-hmm), open questions, and attentive silence such as not trying to fill every single silence out of nervousness but letting the speaker have some time to add further thoughts)
- **Reflecting skills** (paraphrasing, reflecting feelings & meanings, summative reflections, all making sure you understand each other while communicating understanding and acceptance)

Clarity of understanding is fundamental for anyone striving for effectiveness in life.

> **Vague solutions to vague problems lead to ineffective action.**

Reflective Responses

Reflective responses help the speaker to open up and feel accepted. And eventually, more ready to hear your point of view.

Bolton says you should keep using reflective responses until the speaker:

- reaches the core problem
- explores and begins to understand his basic problem
- experiences your acceptance and accurate empathy

Sometimes people will give you questions that will not make it easy for you to let them open up.
Bolton recommends that you discard the question and reflect on the meaning of the sentence as if it were a remark.
Example:

> **Sean**: I thought about this and I have no idea what to do. What would you do?
>
> **Morris**: No easy, this one's really got you stumped!
>
> **Sean**: Totally. It's one of the toughest choices in my life.

In the above example indeed jumping in at his question would have been too rushed.
It was too early to offer an opinion, it's best instead to let the speaker fully come clean and share all his burdens and

thoughts. *Then* he *might be* ready. After what Burton calls the "additive responses" to share your opinion, you should do more listening and reflective responses.

Submission – Aggression Continuum

Robert Bolton says that a useful way of thinking about assertion is to place it on a continuum going from submission to aggression.

Submission – Assertion – Aggression

Robert Bolton touches a bit on the "*too nice*" syndrome.
I really liked it when he said that **the submissive individual is also disrespecting others because he implies they are not strong enough to handle a confrontation** and/or their own responsibilities.

This is how Bolton describes instead an aggressive individual:

> Almost always wins arguments, may speak loudly and may be abusive, rude, and sarcastic.
>
> Sometimes it feels like they're carrying a "chip on their shoulders".
>
> May berate clerks and waitresses for poor service, dominate subordinates and family members, and insist on having the final word.
>
> Tends to overpower others with the point of view that: "this is what I want; what you want is of lesser importance—or of no importance at all."

And here is instead the description of an assertive individual:

> Utilizes methods of communication that enable him to maintain self-respect, pursue happiness and the satisfaction of his needs, and defend his rights and personal space without abusing or dominating other people.
>
> While meeting his own needs, he does not violate the needs of others or trespass on their personal space
>
> True assertiveness is a way of being in the world which confirms one's own individual worth and dignity while simultaneously confirming and maintaining the worth of others.

Pay-Offs of Each Type

Each strategy often has its own physical and emotional payoffs:

Submission Pay-Offs

Submission is appealing to many because it avoids conflicts and because it's a way of getting people's approval. He also has fewer responsibilities, living in the shadow and protection of those who do take charge and responsibilities. If things go wrong, he has no decisions to take and no blame to shoulder. That way he makes no waves whatsoever and can live a "quieter life".
Finally, submission can sometimes be used to control others -the author quotes Friz Perls here-.

Cons of submission: the more indirect a person is, the less healthy he is.

Aggression Pay-Offs

A sense of power and control and, often getting things his own way.

Cons of Aggression: many behave aggressively because they feel weak and, in the long run, it does make them weaker by making lots of enemies (case in point here: smart leaders don't make enemies).

Finally, aggression tends to alienate people. Aggressive people often don't respect people who submit to them and

yet they fear an equal relationship.
But, romantically, dominant-dominated doesn't work well in romantic relationships either as the dominated individual will grow to resent the dominant one.

Also, read:

- Power Hungry Men
- How to Win Friends And Influence People

Assertion Pay-Offs

As you can imagine, the assertion is the best option the vast majority of the time.

Assertive people like themselves and have fulfilling relationships with interactions that release positive energy in both.

Assertion has few cons and it also reduces tensions and anxieties.

> **Listening and assertion are the yin and yang of communication**

Assertive Communication

Typical assertive communication contains three parts:

- Nonjudgmental description of the behavior to be changed
- Disclosure of the asserter's feelings
- Clarification of the concrete and tangible effect of the other person's behavior on the asserter.

This is a template for assertive communication, to be stated as succinctly as possible:

> "When you [state the behavior nonjudgmentally], I feel [disclose your feelings] because [clarify the effect on your life]."

Make your message factual and don't infer anything about the other person's motives, feelings, intentions, or personality.

Be Ready for Push-Back

Most people have a strong tendency to get defensive, so when you send an assertive message you are likely to experience a "pushback".

Robert Bolton dedicates a whole chapter to the "pushback phenomenon".
To handle the push-back Bolton introduces a six steps process:

1. preparation
2. assertive message
3. silence
4. reflective listening to the other's defensive response
5. recycling steps 2 to 4 as often as necessary
6. focusing on a solution.

Persistence, says Bolton, is a crucial aspect of assertion. People struggle to become assertive or they think it doesn't work because they give up too soon on the very first defensive response.

Conflict Resolution

Bolton says that conflict can certainly be destructive and harmful. Yet the absence of conflict is not positive either.

He quotes Gibson Winter saying that:

> Most families today need more honest conflict and less suppression of feeling (…) We cannot find personal intimacy without conflict…. Love and conflict are inseparable

My Note:
John Gottman suggests with his research that there are plenty of happy and long-lasting couples that don't really ever fight.
Yet, I suspect, Gottman measured couples who were not angry at each other and passive-aggressive. Because people who repress negative feelings breed resentment that hardly makes for happy relationships.

Conflict Resolution Method

Bolton's conflict resolution method has three steps:

1. Treat the other person with respect
2. Listen until you fully understand and can reflect content, feelings, and meanings
3. Briefly state your own views, needs, and feelings

Listening will make sure that you can focus on their emotions and help them overcome their heightened emotional state.

Bolton uses a wonderful example from Mark Anthony saving his own life with a speech using this method, great stuff.
Also, read:

- Crucial Conversations
- Difficult Conversations
- Verbal Judo

Different Ways of Dealing With Conflict

These are some common bad ways of approaching conflict:

- denial of the problem
- avoidance
- capitulation (builds resentment, also check 12 Rules for Life)
- domination (builds resentment and it rarely gets real buy-in)
- compromise

All of them might have a reason to be from time to time, but overall they are win/lose strategies and poor long term options.

Bolton says something very interesting I have also noticed:

> I have discovered that many of the less assertive people capitulate when lacking "position power," but they dominate when in a position that places them over someone else.

A much more helpful approach is instead to consider both people's needs:

1. Define the problem in terms of needs, not solutions
2. Brainstorm possible solutions.
3. Select the solution that meets both parties' needs
4. Plan who does what
5. Implement the solution
6. Check later how well it turned out

The 3 Qualities of Great Communication

Communication skills are crucial, but they are not enough and you need the right personality traits for effective interpersonal skills:

- **genuineness** (honesty and openness about one's feelings, needs, and ideas)
- **nonpossessive love** (accepting and loving people for who they are)
- **empathy** (seeing, hearing, and feeling things from their point of view)

Finally, the author introduces the apathy-empathy-sympathy continuum and explains how, again, virtue is in the middle.
Great stuff again and I invite you to get the full book for more.

Real-Life Applications

People Skills is all about practical applications in our day-to-day life. The most pressing takeaway for you guys is to find the sweet spot between submission and aggression.

CONS

I loved People Skills, yet I think that:

The "I feel" part of the assertion format can be out of place sometimes
Thanks to John I have also come to agree that Bolton's standard format is not suitable for all situations.
The "I feel" part for example is out of place at work, where you're supposed to be more factual and results-driven.
And it can also be best left out when

It Could Have Been Briefer
There are a lot of quotes and a few tangential topics that could have been removed.

More Examples
There are a lot of examples, yet some more examples could have taken the place of all those quotes and references and the book would have become a real "how to" of assertiveness.

Bad Generalization on Aggression
This is really a detail I'm nitpicking, but Bolton says:

> The widespread aggression in our society has made it increasingly dangerous to casually enjoy simple pleasures we once took for granted. The evening stroll in the park (..)

That has little to do with "widespread aggression", also taking into account that, as he says, the vast majority of people are submissive these days.

PROS

I cited and leveraged this book for Power University, so that says a lot about the boatloads of wisdom and insights it contains.
Not only the assertive communication part but also the psychology is enlightening.

Review

People Skills is a highly underrated book.

It's a manual of assertive communication and one of the best communication skills books I have read so far.

I also quoted it and leveraged it for Power University, which is the biggest compliment I can pay to any author since I only use the best of the best for Power University.

The major con is that Bolton applies his "assertive template", which includes very high levels of emotional vulnerability, even in situations that do not fit that tone -like the workplace-.
John correctly first noted this issue.

Edit: downrating (thanks to John!)
"People's Skills" has been downrated from 5 stars to 4.5 after John correctly pointed out that applying Bolton's format to all situations can lead to a lot of misapplications.
Please read more here:

Best Dating Books for Guys

Lucio Buffalmano · 3 January 2019 · Archived copy · Original

There are *countless* dating books for guys.

And countless courses, podcasts, blogs, and YouTube channels as well.

So, how do you choose who to learn from?
This is where this list of best dating resources comes in handy.

Someone could say that I am well-placed to help you prioritize your learning.
Together with plenty of personal experience in the field, I bring a decade of intense studies in *psychology*, *evolutionary psychology*, seduction, games women play -and manipulative games women play-, as well as social and power dynamics.

And here are the current best dating books for men:

Contents

- 13. Soulmate Sequence
- 12. Attract the Right Girl
- 11. Models
- 10. How to Be a 3% Man
- 9. The Man's Guide to Women
- 8. Alpha Male Strategies
- 7. Minimal Game
- 6. The Art of Seduction
- 5. Fundamentals of Female Dynamics
- 4. Swoon
- 3. How to Make Girls Chase
- 2. Mate
- 1. Seduction University

- Best Dating Courses for Guys
  - 4. Invincible
  - 3. One Date
  - 2. The System
  - 1. Power University
- Dating Literature for Guys: Overview
  - Wrapping Up

13. Soulmate Sequence

By Richard La Ruina
Summary | Amazon

Richard La Ruina explicitly says that he now writes as a happily married man who always preferred relationships to swinging.

So “Soulmate Sequence” tends to be slightly more geared toward providers and guys seeking a relationship.
La Ruina understands dating psychology and social dynamics, and the only reason the book is not any higher is because it’s not 100% focused on dating, but also on socializing, making more friends, networking, and even how to make a good impression on your soulmate’s parents.
Finally, it also contains tips for women, so it’s not exclusively a dating book for men.

On the plus side, if you want to learn how to have good conversations that flow naturally, then this one might have some of the best dialogue examples on this whole list.

> Quote: The key to all success in all social interactions, as I’m sure you’ve noticed, comes back to making other human beings feel good.

12. Attract the Right Girl

by Bruce Brian
Summary | Kindle

This is the only dating book for men I have read to truly turn the tables on dating.

Bryan does not focus on getting the girl, but on choosing the right girl. And he has tons of great advice on how it feels like when you truly meet a high-quality life companion.

For example, he says that a good woman will make you feel like you matter to her, and that what you do matters to the world.
That is true, and that's what I experienced in the only relationship I truly miss in my life.

when you meet that woman, he says, you will want to do things for her. He says:

> It's a strange feeling in which you'll WANT to take care of her and treat her like a queen.
> You'd fight for her if the situation called for it, and you'd gladly make the sacrifices necessary to ensure her happiness.

But don't worry, this is not a white-knight book.
Bryan says that the right woman will do the exact same for you, supporting you through your life endeavor physically and emotionally, taking care of you and of your castle.

Update: *The Tactical Guide to Women* approaches dating with the same angle but in a more thorough and scientific fashion.

> Quote: Dating an average woman that isn't a good match for you or who isn't highly attracted to you or interested in adding value to your life is actually WORSE than being single.

11. Models

by Mark Manson
Summary | Amazon

Models are in between a self-development text, a high-level "mindsets" text, and an actual book on dating strategies and techniques.

Indeed, the reason it's not featured any higher in this best dating books for men list is that it's a bit *too* general and "general public friendly".

What do I mean by that?
I mean that either because he really believes in it or in an effort to reach a wider general audience, Mark Manson takes a rather "safe" stance.
In simpler words: this book is a bit like "PC-dating advice".

He says for example that relationships are more fulfilling than sleeping around, that being honest is better than playing games, and that embracing vulnerability is the most powerful thing you can do
And those make most book reviewers nod in approval while making for wonderful Instagram quotes.

And it's not that they are not true, but… Not always.
Sometimes, or often, the opposite is true.
Too much vulnerability is bad, for example.
And it's also true that sleeping around can be great fun. And it can be better than relationships in certain periods of life and, for certain womanizing personalities, it can be better for, like… Ever.

Also, I'm ambivalent about Mark's message of "dropping all games and being honest".
That kind of message does not equip the readers with the knowledge and understanding of dating dynamics.
Because women *do* play games -just like men do, it's simply part and parcel of being humans-.

But still, *Models* is a great book coming from a healthy and secure mindset, and I can give it a big thumbs up.

> Quote: Challenge yourself to find the good and beautiful thing inside of everyone. It's there. It's your job to

> find it. Not their job to show you.

10. How to Be a 3% Man

by Corey Wayne
Summary | Audiobook

How to Be a 3% Man is the most popular book on this list, at least going by Amazon's reviews.

I found a few issues and blemishes in there, especially when it comes to the actual social dynamics and psychology of dating.

But there is a reason why it still makes its way into this best dating books for men list.
And it's because it covers most topics and most high-level mindsets from a position of genuine and in a way that will provide a big bang for the buck to the average guy reading it.

> Quote: Masculine energy is about drive, purpose, mission, succeeding, accomplishing, overcoming obstacles, and achieving goals

9. The Man's Guide to Women

by John Gottman
Summary | Audiobook

Many guys reading the "best dating books for guys list" want to date better because they want a girlfriend and a relationship.

Well, then these guys need to get a professional when it comes to relationships.
Because the Achilles' heel of the dating literature indeed is that often -but not always- the authors focus on "being alpha" while understanding little of relationship dynamics and what makes a relationship successful.

And that's why I put a decade-long researcher on relationships such as Gottman on this list.

His book mixes proper advice on understanding women with how to develop a strong, happy, and (hopefully) long-lasting relationship.

> Quote: News flash: Men, you have the power to make or break a relationship

8. Alpha Male Strategies

By Alpha Male Strategies
Summary | Audiobook

Dating is seen from a red-pill perspective.

That means that AMS not only condones but encourages manipulation and "stringing women along for as long as possible" because, you know… Women deserve it.
And of course, the old red pill tenet that "women are incapable of loving a man".

That being said, except for those two major drawbacks, this is a solid book.
AMS has a unique and very different approach from most other sources on this page. He focuses on a man's purpose, which should always be ahead of a woman.

> Quote: If you want your woman to submit to you in the bedroom, then you better damn well make sure she's submitting to you outside of the bedroom, it's that simple.

7. Minimal Game

By Aaron Sleazy
Summary | Kindle

Aaron Sleazy approach to games and dating is anti-PUA.

He says that men and women have been meeting, dating, and mating for all our history. This is something that comes naturally, and overcomplicating the process with complex systems and acronyms is going to move farther away from your goals, not closer.

Sleazy's approach is based on three simple, solid, and foundational aspects:

1. Maximize your sexual market value by working on yourself
2. Make yourself an interesting and attractive human being *who is similar to the women you want to attract*
3. Don't spam-approach. Target your approaches to women whom you like and who are most likely to like you

Why is it important to be similar to the women you like?
Says Sleazy:

> For the very most part you will meet women whose life has some connection to yours. Everything else is a pipe dream.

Maybe "pipe dream" is a bit on the hyperbole side, but it's difficult not to agree with Sleazy on the importance of similarity and market positioning.

Aaron Sleazy's approach to the game is simple, and especially well-suited for the layperson who does not want to become a "PUA" (Sleazy made a name of himself debunking the PUA industry).
Sleazy's approach is not about walking up to as many random women as you see.
It's about target selection. And dropping slight hints, and then seeing if they bite. If they bite, they like you, and you can take things further.

I like Sleazy's approach.

> Quote: Seduction isn't making someone do what they don't want to do. Seduction is enticing someone into doing what they secretly want to do already.

6. The Art of Seduction

by Robert Greene
Summary | Audiobook

Lemme say this right away:

"The Art of Seduction" is not the best go-to resource to date and seduce in the modern world.

Greene uses his typical flowery language that sells and markets so well to depict a slow-burning type of seduction that would perfect… On paper and if people had all the time in the world.
But in a fast-moving world, most of the time, you are probably better off with a quicker and more efficient "in or out" approach.

Robert Greene doesn't seem to be a womanizer himself indeed.
BUT, he is a deep connoisseur of human nature and psychology.

And no other dating book for guys goes so in-depth when it comes to the psychological analysis of seducers and in-depth psychology of seduction -including the dark psychology of seduction-.
Indeed, "The Art of Seduction" is a favorite of mine as one of the deepest texts when it comes to understanding not just heterosexual seduction, but also social seduction.

> Quote: There is too little mystery in the world; too many people say exactly what they feel or want.

5. Fundamentals of Female Dynamics

by Michael Knight
Summary | Kindle

Fundamentals of Female Dating, one of the very best dating books for guys, is a great example that the link between quality and popularity is a very tenuous one.

Indeed, albeit its great content, *Fundamentals of Female Dating* remains one of the most underrated dating books for men.

Well, at least now you know about it :).

> Quote: Persisting through adversity is what truly separates the men from the boys.

4. Swoon

By Betsy Prioleau
Review

Just like Robert Greene, Betsy Prioleau reviews some of the best seducers in history.

And in her groundbreaking analysis, she contradicts almost everything written by (male) dating coaches on this list.

Most dating coaches tell you:

- Don't invest
- Don't state your emotions and feelings
- Don't chase (and make her chase, see below)
- Don't compliment girls too much

And what do some of the best seducers in history do?
They wear their hearts on their sleeves, they pursue with abandon, compose poetry, and profess their devotion and intentions from the very beginning.

This book tells us that hard and fast rules don't apply and it's more about *how* and *who* does certain things.

And it's also more than a list of "Darwinian traits", the author explains, as she shows us example after example of successful seducers who were neither particularly attractive, rich, or dependable.

Swoon is more for advanced folks, though.
Most guys who want to improve their dating are probably better served with other books on this list. Operating like the seducers in this book is more for certain types of personalities, and it's a fine line between an effective seducer who wears his heart on his sleeves and makes women swoon… And a guy who comes across as desperate (or a stalker).

But for those who *really* want to understand seduction and seduction power dynamics, this is your book.

> Quote: Gamer convert Neil Strauss says he studied with pickup artists for two years to "become what every woman wants—not what she says she wants, but what she really wants." But he went to the wrong school. Real-

> world enchanters provide a different message as well as a different grade of woman from Strauss's sad assortment

3. How to Make Girls Chase

By Chase Amante
Summary & Review

Chase Amante started his website after having been involved in the early "pick-up community", back when it meant asking opinions, working groups, "negging" and learning "routines".

Chase's approach was simpler, more direct, more 'conversationally normal', and with a stronger focus on being a high-value man (although still downplaying some aspects of a man's sexual market value).
All combined with a solid understanding of *human psychology* and dating dynamics (=high mating intelligence).

It's been a while since "How to Make Girls Chase" was published and, as far as I am aware, it hasn't had any updates.
And despite that, it remains one of the best dating books for guys.

2. Mate

By Tucker Max & Geoffrey Miller
Summary | Audiobook

Tucker Max knows how to rack up a lay count.
And Geoffrey Miller knows the science of dating and attraction.

So… Do we get the perfect combo of both worlds?

Well, “What Women Want” is more oriented toward long-term relationships and better geared toward a provider style of dating.
But most guys don’t want to be pick-up artists, and that’s one of the reasons why “What Women Want” ranks so high on this list.

The second reason is that this is the best book to actually understand what women want, as it tackles the fundamentals better than any other resource on this list.
And since the basics account for 80% of your success, “What Women Want” gives you the biggest bang for the buck, in the shortest amount of time, at a price that is much cheaper than any other course featured in this list (including my own).

> Quote: If she just wanted to come, she’d have stayed home with a bottle of white wine, Fifty Shades of Gray, and her vibrator. If she’s with you, it’s because she wants more than just an orgasm. She wants a sexual connection. She wants to feel sexually desired.

1. Seduction University

by Lucio Buffalmano
Overview

Technically not a book, but dating is best learned with videos.

Seduction University bridges the gap between science, experience, power dynamics, and seduction.

What's unique about Seduction University is:

1. **Combining science with experience** (hundreds of papers are cited here and there are videos, dialogues, and texts examples all over it)
2. **Addressing dating and dating strategies both as a provider and as a lover** (most resources teach or recommend one *or* the other, but both work, and both have a place in men's life)
3. **Addressing power dynamics, manipulation, mind control, and games people play** (something that was sorely missing)
4. **Seduction**: most dating books and courses are about getting a girlfriend, or getting sex. But seduction is where it's really at

> Quote: Sometimes the difference between disgusted self-rejection and one of the best days of her life lies only in his emotional intelligence.

Best Dating Courses for Guys

Let's be honest:

It's difficult to learn dating and any social skills without being able to look at real-life examples.

Maybe you are sending off nervous vibes, or you are teasing too much, or you come across too submissive… But you will never know unless you see examples of submissive and effective behavior.

And that's where courses come in handy: they can *show* you videos.
So here is the list of the best dating courses:

4. Invincible

by David Tian

Summary & Review

David Tian seems to be mostly focused on the Asian population with his marketing, but the product and content are good for everyone.

He mixes Tony Robbin's material with concepts from "*The Art of Seduction*" (without crediting the latter),
Tian places a strong focus on fundamentals and he shows high mating intelligence with a good understanding of dating dynamics and *human psychology*.

The high price tag, the highest in this whole list, contributes to the weight down and doesn't help it feature any higher.
Plus the fact that it has few real-life examples.

---

3. One Date

By Chase Amante
Summary & Review

One Date is one of the best products when it comes to content and information.

No mental states, no "transformation", no colored pills or anything: just great content and information.

Chase introduces a new concept here, such as how to structure a date depending on the type of woman. So you get an "excitement" type of date, a "connection" type of date, plus a compliance-heavy type of date.

That rings very true to me and it's an important distinction to make.
On the other hand, if you want a long-term girlfriend, you probably should seduce following your own style and attract in your life the type of woman that best vibes with you.

I rate it "only" N.7 overall and N.3 in the course list because of the podcast/interview style, which I didn't particularly like -I think there are more efficient ways to deliver information on a course-.

Otherwise, big thumbs up for content and information: Chase and the team are great teachers.

---

2. The System

By Todd Valentine
Summary & Review

The System is here as a placeholder for Todd's work, and the same could be said of most of Todd Valentine's products.

To begin with, I really like Todd's attitude.
He masterfully mixes practice and real-world knowledge with scientifically sound, mating-intelligent information.

And the second advantage of Todd's course is that he shows the actual infields.
Todd is not a teacher who stays put in the class. He gets his hands dirty, so to speak, and puts his face where his mouth is.

Even as a non-beginner, I still could learn a lot and tweak my style in a way that further increased my effectiveness.

1. Power University

Fellas, you know this:

Women want men who are more than they are.
More dominant, more confident, more leader-like, more money-endowed.

In a word: more powerful than they are.

And that's where a complete course on how to gain not just attraction, but also status and men's respect is foundational in dating.
That respect you get from men is also respect you get from women. And it's a must-have antecedent to attraction.

Ie.: no respect, no attraction.

Get a free preview with our newsletter.

Dating Literature for Guys: Overview

The overall dating literature for men is spotty.

You ca find some good stuff, some *great* stuff, and also some not-so-good information.

The issue is that it's a field originally attracted men who were:

- **On the spectrum, with poor social skills**: jumped into seduction without good social skills
- **Bitter towards women**: and spreading misogyny
- **High dark triads**, doing all the classical things dark triads do, including selling half-baked courses

Worry not though, the dating industry for men has evolved massively, and today there is plenty of good advice. This article distills the best dating and seduction advice for men. And tells you why they're on this list, and what you are going to learn in each one of them.

Wrapping Up

You have just finished a list of the best dating advice for guys available on the market.

I only include products and books I have personally consumed -but I have consumed a lot, including almost all of the most popular names in the seduction space-.

However, I always remain open-minded to new entries.
This list, like all our other lists, is a work in progress that will always be updated.

Sign up for the newsletter or like the Facebook page for any updates.

Change Log

I removed "*Date-Onomics*", "*The Evolution of Desire*", and "*Attraction Explained*". All great books are based on solid science and research, but all the relevant and practical information is teased out in "Seduction University", so they were redundant.

I also removed "*No More Mr. Nice Guy*", since albeit it can be useful for some guys, it's not strictly a dating book for men.

Creativity Inc: Summary & Review

Lucio Buffalmano · 3 January 2019 · Archived copy · Original

In *Creativity Inc.* (2014) author Ed Catmull shares the secrets that he learned over 30 years as president of Pixar on how to develop a culture fostering innovation and creativity.

Bullet Summary

- It's the organization's task to ensure a culture that fosters creativity within the structure of a financially viable company
- There must be no stigma on failure in a creative organization
- You are not your idea: learn not to treat your ideas as if they were a part of yourself

Creativity Inc. Summary

Creativity Inc. contains a lot of stories about Pixar and Steve Jobs. I will skip them in this summary to focus instead on the condensed nuggets of wisdom.

Barriers to Creativity

Ed Catmull says that there are a few barriers standing in the way of creativity that people and organizational culture need to overcome:

- **Fear of change**

Clinging to the status quo and what's worked in the past.

- **Fear of speaking up**

A good culture that wants to foster creativity must make it easier for everyone to speak up, criticize, and share ideas. It's especially important in hierarchical organizations where lower-level employees can feel intimidated by

bosses and management.

- **Fear of failure**

The fear of failure, present in almost each one of us, stands in the way of trying, thinking, and executing new and daring ideas.

- **Fear of uncertainty**

Many of us tend to cling to the “devil we know” rather

Ed Catmull though doesn’t depict fear as an “always bad evil” -like in *Linchpin* for example-.
An appropriate amount of fear indeed also helps to keep the company financially sound and it can help us make good decisions.

The goal, he says, is to uncouple fear from failure:

> One of the biggest barriers is fear, and while failure comes with the territory, fear shouldn’t have to. The goal, then, is to uncouple fear and failure—to create an environment in which making mistakes doesn’t strike terror into your employees’ hearts

Removing Barriers Is Company’s Responsibility

Bringing fears to zero is probably not possible nor advisable.
But since most people’s fear are so strongly embedded, the need for most creative companies is to reduce fear and the fear of failure.

And reducing fears is the organization’s responsibility.

And that’s, in my opinion, the biggest added value of Creativity Inc: as the leader of a creative organization, Ed Catmull shares all his learning on how to foster an environment that is open to failure, to learning, and to the sharing of ideas.

Look For Solutions, Not Blame

When a problem comes up, companies with a healthy culture that fosters creativity look for solutions rather than blame.

A quick way to realize if your company has a bad mindset towards failure is to ask yourself what happens when a mistake is discovered. Do people shut down and turn inward? Or do they try to untangle the root causes of the issues? Do people ask what’s the solution or do they ask “whose fault is this”?

Leaders Must Give The Example

The best way to foster a culture that is open to mistakes and learns from them is through the leaders.

The leaders must give the example of admitting, analyzing, and learning from their mistakes.
When they do that, everyone around will feel it’s safe to do the same.

Honesty: Share the Problems

Ed Catmull says that by sharing problems and sensitive information you make your employees feel like owners of the company.

And when they are aware of the problems they also become part of the solution.
“Your employees are smart”, says the author, “that’s why you hired them”. and they know when you are delivering a

message that's been heavily massaged. They will be looking for the hidden meaning and spending energy on gossiping.

Similarly, when you deliver solutions to implement, share the thoughts behind the solution.

You Are Not Your Idea

A concept I love and which for me was the biggest takeaway from Creative Inc. is that we need to delink ourselves from our ideas because, simply, we are not our ideas.

That means that if we propose something and people don't love it right away or, shudder, are criticized and rejected, then be it because you are not your idea.

This is a very important concept for leaders because defending your idea is plainly dumb and it means that you will not (necessarily) reach the best solution.
Your goal, as Jay Samit also explains in *Disrupt You*, is to give your ideas the biggest and harshest criticism possible. That's the safest way to implement great ideas, not to waste time, and also to make people feel like part of the solution.

Ed Catmull doesn't say, but not taking criticism too personally is a consequence of a *growth mindset* -also read: how to develop a growth mindset-.

People Before Ideas

It's people who generate ideas and people who implement them. People always come before ideas.

And No Team Before Others

Catmull says that in unhealthy organizations groups believe that if their objectives trump the others, they and the company would be better off.
In a healthy culture, teams realize the importance of balancing competing desires.

Don't Push Too Hard on Efficiency

The author relates a few projects and solutions that were aimed at increasing efficiency. But they did not only not increase efficiency, but stifled creativity.

He says that efficiency, cost-saving, and standardization are part and parcel of business and should be pursued. But not without an attentive analysis, because when efficiency or consistency of workflow are not balanced by equally powerful opposing forces new ideas are not afforded the attention and protection that they need.
The emphasis is placed on safer projects that have proven to work well. It "feeds the beast" by keeping production going, but it does not lead to creativity.

I quote Ed Catmull here:

> So if your primary goal is to have a fully worked out, set-in-stone plan, you are only upping your chances of being unoriginal

Creativity Inc. Quotes

Here are some key quotes from Creativity Inc.

On problems and our incapability to always spot them:

> What makes Pixar special is that we acknowledge we will always have problems, many of them hidden from

> our view; but we work hard to uncover those problems, even if doing so means making ourselves uncomfortable; and that when we come across a problem, we marshal all of our energies to solve it.

On problem-focus rather than on blame and person-focus:

> The center of a healthy feedback system, we must remove power dynamics from the equation. You must enable in other words to focus on the problem, not the person

On collaboration:

> You must accept that collaboration brings complication

And this is possibly the best summary, right at the end of Creativity Inc.:

> *Unleashing creativity requires that we loosen the controls, accept risk, trust our colleagues, work to clear the path for them, and pay attention to anything that creates fear*

Real-Life Applications

As a leader:

Don’t Assure What You Can’t Assure
We all have a tendency to quell fears and make people -and ourselves- feel better at the moment. That can lead us to grant reassurance when we are not actually in a position to reassure.
Catmull, for example, promised that “nothing would change with Disney’s merger”. And that was the dumbest thing he ever said, he admits.

Be Aware of Lack of Information and Complexity
As the leader, you might think you know what’s going on or, worse, that you must act like you know what’s going

on.
And when things are going well we tend to think we are doing great. But sometimes it's just randomness and we must guard ourselves from the trap of convincing ourselves we are right -or acting like we know it all-.

CONS

I think Creativity Inc. contains a lot of golden nuggets on leadership and it's a must-read for anyone working in a creative organization.

Yet, it was not super enjoyable for me to listen to because:

It Could Have Been Briefer
I had the unabridged version, and I found it too long.

Too Many Details on Pixar and… & Jobs
I wasn't particularly interested in Pixar and the stories behind their movies, and there was quite a lot of that in here.

Wage Fixing Scandal
Ed Catmull has been at the epicenter of a wage-fixing scandal to keep employees' wages low.
This is why Power University makes the point not to really trust what owners and execs say.
Words are cheap, actions speak louder. But actions are often hidden, so look at where the personal interest lie.

Also, read:

- **Corporate and CEO lies you must be aware of**

PROS

Overall, Creativty Inc. is probably the best book on institutionalizing creativity at an organizational level.

Review

On the plus side, *Creativity Inc.* is one of the best books when it comes to running, leading, and structuring a financially viable company.

And there is also much wisdom from a leadership point of view -sharing the problems was one of my favorites-.

If you are not into Steve Jobs' life and personality, or into Pixar's movies and work, then the unabridged version might be a bit too long and detailed.

One Date System by Girlschase: Review & Summary

Lucio Buffalmano · 4 January 2019 · Archived copy · Original

One Date by Chase Amante is a dating course for men on how to meet, date, and attract women.
"One Date System" refers to the number of dates Chase recommends men to go through: just one single date, and seek to make sex happen within that first date.

Contents

- Review

Exec Overview

- **Focus on fundamentals**: they are your 80%
- **Balance value and attainability** to come across as high value, but she can get you
- **Test what kind of girl she is and date for her type**

One Date Summary

This review is for *One Date System* and Module One. I canceled the successive charges.

Focus on Fundamentals

Chase says that the two most important fundamentals are:

1. **Leading** (asking her on a date, to come home with you and making your move)
2. **Personal Fundamentals** (voice, body language, posture, fashion)

If you don't do anything else but focus on doing those two, you'll be successful.
The fundamentals are what make you a high-value man, with a high sexual market value.

Also, read:

- **Learn to get girls with leadership**
- **How dominance gets you girls**

> How to Lead A Woman In 5 Simple Steps: Create Trust & Attraction

VAC

VAC stands for:

- **Value** (your value)
- **Attainability** (how attainable your value feels to her if she can get you)
- **Compliance** (have her follow your lead, start building it soon, and escalate it)

VAC is foundational to Chase's model as he learned it from Sebastian Drake and further adapted it, developed it, and wrote about it.
But to get a girl to sleep with you, Chase says you should focus more on SAC:

SAC

SAC stands for:

- **Similarity** (she should feel you two are connected and somewhat similar)
- **Arousal** (if she's not aroused at all she won't be able to reach that point when she's ready to have sex)
- **Compliance** (if she's not compliant then she doesn't follow your lead until intimacy)

These are the three key core principles you should hit with a woman. Each woman will need more of one or the other, and you should structure your date and present yourself based on what she prefers.

You want to start with a connection, then some arousal, then compliance.

Thrill-seekers, novelty seekers, and high-energy girls might want more arousal, and they build that connection

through arousing activities.

To find out who she is:

- Ask her to do something small for you. If she does it, she's a compliance girl, if not:
- Do arousing stuff (flirting, teasing, banter, or breaking small rules)
- If the first two don't work you need to build a connection

> How to Build Deep Emotional Connection

You could see the SAC mode as going from most sexually switched off to readier for sex.
If she's not very compliant and does not respond well to arousal she needs more similarity and connection.

Chase says that the same girl might seek different values from different guys, but most girls usually need an emotional connection.

My Note: SAC is our 'power and warmth'
SAC seems to draw upon Fiske's research on competence and warmth.
We call it here 'power and warmth' as we believe it better describes the dynamics and better help students to internalize.

> Social Strategy 101: High-Power / High-Warmth

Breaking Rules & Arousal

There is a connection between how much a woman is sexually open and how impulsive and thrill seeker she is.

The more she is into arousing activities, the bigger the rules you have to break.

If she's not very sexually open, tone it down or you risk scaring her off.

The triggers for arousal in the brain are the same for risky and high-adrenaline behavior.
Risk and excitement are on the same wavelength, meaning that if you do something crazy together she can misattribute her excitement as sexual excitement for you -something Vanessa van Edwards also advises. It's kinda true, but also partially debunked pop-psychology-.

Such as **fear and excitement increase *either* attraction or repulsion**.

So it only works if she's *already* attracted.
Says Dr. Grande:

> **Dr. Grande**: Later on studies were done that showed that if an individual found someone to be unattractive before arousal **they would found them more unattractive after arousal**.

Chase also mentions some rules you can break, check the course for more details.

Signs She's Ready

At a certain point, dates shift mood and it means she's ready for the next step (going home, possibly).
Some signs are: smiling at you, getting closer, stop talking for a while, looking at you lustfully, touches you more.

Also, read:

- Signs she likes you

> Does She Like Me? 35 Proven Signs of Attraction (W/ Pictures)

Leaning In

Chase says that the old PUA advice of not leaning is not good.
If she likes you and you like her, you want to lean in, especially if she's sharing about herself and your connection is increasing.

In a way, it's about vulnerability: you put yourself out there and you give her the chance of doing the same.

Real-Life Applications

There are many gold nuggets I took away from One Date.
Some of them:

Don't Go Back to Previous Phases
If you go back to a previous phase of the courtship -ie: from the intimate spot back to the dance floor- it will feel like you two are moving backward.

Build Romance Back After Pauses
When you go back after for example the bathroom and she cooled off you want to cool off a bit too until you warm up again

CONS

Since Chase has produced some strong material in the past, the expectations for *One Date* were higher than for the average dating course.

One-date & lover approach: it's not a universal "best" strategy but it's dependent on context & individual

I agree with Chase: ideally, you get together on a first date.

And most of my sex from dating girls has come from the first date. So I'm all in with that ideal/model.

However, I don't believe in "one size fits all" approaches.

Strategies' effectiveness changes depending on people and contexts.
And I don't think the one-date and lover strategy perfectly applies to all situations, all girls, all cultures, or all guys' personalities.

Dating strategies, like most life strategies, depend on context.
For example, the lover strategy works best for attractive men, in more libertine cultures.
It works less well with more conservative women, and with less attractive men.
For some situations and for some guys, slower dating might actually be more efficient.

This is why I believe that taking one strategy and saying "this is what always works best" is wrong.

Also, read:

- **Should you date as a lover or as a provider?**

> Lover VS Provider: How to Pick Your Best Strategy

That article will give you a few pointers on what's most effective for you.

Lots of studies' quotes

Chase seems to position the marketing of One Date as scientific.

And to justify the science behind it, he often quotes studies.
I think a link in a written format is cool, but quoting lots of papers on a video takes a lot of time away.

Presenting yourself to her taste VS screening based on who you are

"One Date" is based idea of presenting yourself to the girl to fit what *she* likes.

One may refer to this as a "chameleon strategy", and it's somewhat of a manipulative technique and one of the games some men play.

If it's not *too* manipulative, then it can be an OK strategy and it's something I also tend to do naturally.

But the *opposite* philosophy of being who you are and screening for those who are like you is also valid.
And it's more valid if you prioritize great relationships.

Also read: "*The Tactical Guide to Women*", where psychologist Shawn Smith explains that to date well, and to reduce the risk of ending up with some low-quality or crazy woman, you should focus on screening *her*, rather than screening yourself at all costs.

Dripped Content

You only get access to the first module with the first payment.

Then you have to wait a month for the new module (and pay extra for it).
That's quite unwieldy and I like freedom. What if I want to skip some parts or finish everything in a couple of sitting?

Although I'm thinking of doing the same for Power University, I thought the timeline was too slow.

Default Purchase Locks In Monthly Charges

It was my bad that I didn't realize that 67 USD was *only* for the first module, but I was surprised when I found out that I was going to be billed on a monthly basis.

At an additional 99 USD/month, I wanted to stop at the first module, but I had to contact support to cancel the charges for the subsequent modules.

Can't Speed Up Videos

I'm used to watching videos at 2x, but you cannot change playing speed in One Date and Chase is definitely not a fast talker.

In the end, I had to record the videos while away from the computer and then play them back at the speed I wanted. That took me more effort and time than I wanted.

Podcast "Two Guys Chatting" Style

I didn't particularly like the interview and, sometimes, the chatting format. It feels to me like it's not very efficient to deliver information and dating strategies and techniques.

But some people might like that.

Female Model Didn't Make One Date Better

There is a paid model besides Chase in One Date videos, and I didn't find her to add value.

Chase sometimes asks her what she thinks. She goes unscripted, and often adds little value and in at least one occasion even contradicts Chase.

For example, talking about fashion as a fundamental, her comment was "Who cares".

Not the smartest comment to make when the producers claim that fashion is important.
It was a funny sketch, but she also broke Chase's frame and disempowered him—and low-power behavior is *not* attractive.

Small Detail On Protective Touch

Protective touch makes a lot of sense, but it somehow backfired in the video example.

There was a pedestrian crossing in the video and it would have been better to forge ahead or slow down, but still expect the car to stop since it was their right of way. It's usually best to claim your right of way when it's your turn to walk, lest you look overly cautious or too yielding (=submissive).

Discouraging Direct Approaches?

Chase seems not to like direct sexual openers much.
For example, he says that if you are sitting next to a girl and tell her she has amazing legs "that's going to be a long bus ride".

Makes sense :)

I see where he's coming from, yet I've had some good success with direct approaches.

Again, what he says is true for most situations, but direct sexual can work wonders in certain situations (we dig deeper in our trainings).

PROS

The information is great, so the whole course is a big pro.

- **Great Nuggets Even For More Advanced Folks**

For example, if she ends the date that's not good for you. What you can do then is to make light of it or you can ask her one more question and then tell her to head out. Smart move.

Another one was about compliant attitude. If one resolutely leads, it may work, but it's better if she clearly follows out of her own volition, and if you ask her to do things and she does it.

- **Some Good Psychology**

Breadcrumb effect, asking investment and increasing it, Benjamin Franklin Effect… A lot of psychology is about social influencing and goes well beyond dating as well.

- **Honest and Sincere**

Sometimes you read some guys writing on dating -and I felt the same with Chase sometimes too- and it feels like they have this attitude of "fuck her or you suck".

One Date is not like that.

It's very open about all times it doesn't work out and all the times it didn't work out for the producers. That's something most people will better be able to relate to and I liked it.

Chase Amante Development

Sometimes I felt that Chase could fall into black-and-white advice.

It was the case with paying for dates for example, or with not using FB.
Ie.: 'not paying (always) works better' and 'you're (always) better off quitting Facebook'.

And I saw where he was coming from and agreed with some of the social reasoning behind it… Yet the generalization is just that: a generalization (plenty of women I slept with through Facebook, for example, once even fixing a first bad date which is rare).

And paying for dates can work wonders if you can make it look like you have so much that you don't need to care for money (also read the article on successful providers).

But in "One Date", he seemed much more on the "it depends" spectrum here.

For example, in spite of it being marketed as "one date," he says that you can do it on more dates.
Or he says that if you get early or strong to rejections on LMR you can also discuss it rationally -instead of just emotionally and getting sexier-.
Those are exceptions, yes, but to understand the general dynamics it's important to also understand exceptions.

One Date VS Seduction University

One Date helps you at the tactical level with dates.

Once you're past the 'get dates' stage and you want to **attract, lead, and keep high-quality women**, that's where **Seduction University** comes in.

SU focuses on dating and relationship leadership, making women fall in love, and be a man women feel *lucky* to even have.

Check **Seduction University**.

Review

One Date is a solid dating course that advocates for a fast approach, aligning with my preferences and lifelong experience, and offers guidance and tips on how to best implement this strategy

You saw a lot of entries in the "cons" section there, and that begs me to repeat:

I run this website as the place where you can come to find top-notch reviews on anything related to people and life strategies.
To provide top-notch reviews, I always dig deeper into high-quality content.
And Chase usually delivers high-quality content.

One Date Format

The format of "two men interviewing each other in front of a camera" wasn't my cup of tea.

I believe a different format may have allowed Chase and his team to better showcase the depth of their knowledge and expertise.

It wasn't terrible, mind you.
And the information delivery was focused, without much time wasted on chit-chat.

One Date Material

Of all the male dating material I have gone through, Chase Amante feature around the top.

He is one of the guys who get the psychological nuances best, and who has the experience to connect the dots between real-world, and theory.

As of now his former ebook *How to Make Girls Chase* is one of the highest-rated dating books for men I have reviewed. So the expectation for One Date was higher.

I haven't gone through the whole course, but for the first part of it, I can say that I liked it.

Also see: **best dating resources for men**.

Assertiveness: How to Stand Up for Yourself – Summary & Review

Lucio Buffalmano · 4 January 2019 · Archived copy · Original

Judy Murphy's classic book on assertiveness is a short guide on how to become more assertive communicators. The full title is: "Assertiveness: How to Stand Up for Yourself and Still Win the Respect of Others".

Contents

- Bullet Summary
- Full Summary
  - What's Assertiveness
  - The Advantages of Assertiveness
  - Assertive VS Aggressive VS Passive
  - How You See Yourself Determines Your Assertiveness
  - Elements of Assertiveness
  - Assertive Messages Examples
  - Train & Push Your Limits
- Real-Life Applications
- CONS
- PROS
- Review

Bullet Summary

- Assertiveness is about demanding fair treatment
- Assertiveness is all about respect: for yourself and for others
- There is no magic bullet: you will have to try hard daily. But you can train at home and in easier situations

Full Summary

Judy Murphy starts with an important question:

What's Assertiveness

Assertiveness, the author says, is not about being liked.
Assertiveness is about standing up for your right to be treated fairly.

The Advantages of Assertiveness

There are many advantages to becoming and learning to communicate assertively, including:

- It gives you confidence and enhances your self-esteem
- It helps you gain respect
- Improves your decision-making skills
- Reduces bitterness when your needs and wants aren't met
- You become a better problem solver
- You gain the feeling you're in control of your life

Assertive VS Aggressive VS Passive

The author says that the difference between all three of them can be summarized with one word: respect.

Aggressive people do not show respect for others while passive people do not show respect for themselves.

Since assertive means respecting both yourself and others, says the author, you don't need to change your style whether you speak with a lowly service worker or with your boss.

How You See Yourself Determines Your Assertiveness

Judy Murphy says that how you see yourself determines how assertive you are.

People with low self-esteem and who see themselves poorly tend to have bigger difficulties in being assertive.
Similar to what happens in intimate relationships, people with low self-esteem allow others to trample their right because they don't see themselves as worthy of proper treatment.

Hence, to become assertive, you need to develop healthy self-respect.

Elements of Assertiveness

The author outlines four major elements of assertiveness:

- **Basic assertions**

Basic assertions are very basic statements of what you want, don't want, or feel like.
They can be something like "I want to go to the Italian for lunch" or "I'm talking to someone now, can I call you back?"

- **Empathy**

Empathy recognizes the needs and feelings of the other person.
One example is "I realize this can make you sad, but I need to tell you the truth"

- **Escalation**

Escalation means that you become increasingly firm, or explain the consequences of non-compliance while you also remain calm and rational.
Indeed, remember this: you escalate the conversation, *not* your tone or mood.

- **"I" and "me" statements**

Honestly, this one wasn't too clear for me, but it seemed like the typical "assertive" sentence structure, for example:

> When you call me stupid, it makes me angry and it does not want to make me deal with you. If you want to have a functioning relationship with me, I want you to use respectful words

The author says that you can use this format to avoid labels, accusations, or escalations.
For example instead of saying "you are rude", you can say "I feel like you are acting rude".

Assertive Messages Examples

The author goes on to present many real-life examples.
I will only present one here quoting the author, and it relates to a working situation where a colleague of yours is talking behind your back:

> Cristina, you seem to have a problem with me.

> We don't have to be friends, but we do have to work together.
>
> When you are openly hostile toward me, it is disrespectful and makes me feel negative about working together.
>
> As your colleague, I deserve your respect. I would like to improve our communication.
> I want you to know that I will no longer accept your aggressive attitude toward me.
>
> If it doesn't cease, I'll be setting up a meeting for us with Human Resources to discuss it further.
> I would appreciate it if you would consider how you speak to me and treat me with more respect

The author says the colleague is likely going to be shocked -indeed-. If she keeps doing the same or gets threatening or aggressive, your next step will be indeed to escalate the matter with HR. You defined your boundaries and if they keep being overstepped, then you have to escalate.

Train & Push Your Limits

The author says that most people are looking for a magic pill that will solve all their problems. She wished she could provide such a pill, but unluckily there is none.

She understands that position because she was here. And she tried hard and slipped many times and at times felt like there was no hope. But, she says, with persistence and practice you will eventually get better.

She also says it's normal in the beginning to overdo it and be a bit confrontational or aggressive.
It's because pushing yourself will require so much force in the beginning that you will naturally over-push it.
That's also part of becoming a more assertive individual.

Practice at Home

Because it's so difficult and because the tendency is to overdo it, the author recommends that you practice at home with a friend, or a family member, or in front of a mirror.

And you can use minor daily interactions where you otherwise would have let it slip, like with a wrong order, just to train your assertive skills.

Finally, the author says that you can learn by watching more naturally assertive individuals and role-modeling them.

Real-Life Applications

Role Play and Train in Front of Mirror
I liked the idea of role-playing and training in front of a mirror. Using smaller daily occasions to practice your assertiveness is also a wonderful recommendation.

CONS

I Didn't Like Some Examples
I disagreed with some of the communication examples.
Some didn't seem to be very effective to me, some were not the best possible options, and some were even slightly unethical.
For example in one of the case studies, a man calls a company to "assertively" ask for money back on an item that

is out of warranty. That's not assertive, that's aggressive.
Or, better, that's cunning and sly.

Some Misspelling
This is a detail, but there were several misspellings. From calling the book "audiobook" to "nerve-racking" to some sentences repeated twice.

PROS

Short & To The Point
I'm a sucker for a book that can share helpful advice in a short and concise format and doesn't waste any time. "Assertiveness: How to Stand Up for Yourself" is one such book.

Review

I didn't agree with some of the examples but I appreciated the structure and short format.

The Truth About Leadership: Summary & Review

Lucio Buffalmano · 5 January 2019 · Archived copy · Original

In *The Truth About Leadership,* authors Barry Posner and James Kouzes share their findings on what makes great leadership, as per the results of their own large-scale survey.

Contents

- Bullet Summary
- Summary
  - Fundamental Truths About Leadership
  - Leaders Are The People Closest to Us
  - Learning Leadership
  - Leadership Is a Matter of The Heart
- Real-Life Applications
- CONS
  - Surveys Are Not Great Data
  - Leadership Isn't (Only) A Matter of The Heart??
- PROS
- Review

Bullet Summary

- Leaders are the people nearest to us, not the big names and heads of companies
- Great leadership is great leadership regardless of generation or culture
- Leadership can be learned and improved upon

Summary

Posner and Kouzer start by saying that, although much has changed in the world and the generations are much different than the preceding ones, the concept of leadership has not really changed.
As the authors say:

> Good leadership is good leadership, regardless of age

Fundamental Truths About Leadership

The authors list a few key fundamental truths that emerged from their research:

1. **You have to believe in yourself:** before you can make an impact on anyone, you have to believe you *can* make a positive impact
2. **Credibility is the foundation of leadership**: others have to believe in you as well. Competence, your track record, and your ability to get things done is a key element of credibility
3. **Your values drive commitment**: what do you stand for? What do you care about? Leaders must be self-aware to provide (emotional) security in times of uncertainty. You must know your why, and to be credible you must make sure your values are aligned with your organization
4. **Focusing on the future:** if you don't know where you're going or what you're trying to achieve, how can you

ever lead? Leaders must be forward thinkers: spend time thinking about the future and talk about it

5. **Leaders need a team**: a leader cannot go at it alone and needs others. To foster a team a leader must do what's best for others, not for himself. Emotional intelligence is key and a good relationship with the team has been proven to lead to better results. If IQ is not accompanied by EQ it's more of a predictor of failure, says the author
6. **Trust rules**: trust is the glue holding the team together. To earn trust do what you say you will do and take responsibility for mistakes
7. **Challenge leads to greatness**: it's during challenging times that leaders can get the most out of their teams and achieve greatness
8. **Leaders lead by example**: as a leader, you must go first. You either lead by example or you don't lead at all
9. **Best leaders keep learning**: the best leaders have a growth mindset and strive to always improve
10. **Leadership is an affair of the heart**: trying to separate emotions from "business" and decisions is a mistake. Leaders are in love with their teams, company, products, and customers

Leaders Are The People Closest to Us

The authors quote statistics to make the point that we are wrong in thinking that the biggest leaders and influences are famous people or the people at the very top of the organizations.

The leaders who have the most impact might be people who are above or more advanced than us… But who are still very close to us.
77% of people said their role model was, in order, one of the following:

1. A family member
2. A teacher or a coach
3. A religious leader / religious community

In any organization, the leader who has the most impact is the direct bosses, and not the upper management or the CEO.

That means that chances are that you can soon have someone looking up to you as a leader.
What kind of leadership are you going to provide?

> **Someone is looking up to you right now for leadership**

Learning Leadership

The authors say that learning comes before good leadership. Learning is the master skill, and when you engage fully in it, you are bound to experiment with the thrill of improvement and the taste of success.

Here the authors talk about growth mindset –check Carol Dweck's book– and deliberate practice.

Leadership Is a Matter of The Heart

I must quote the authors here because it's just too beautiful and poetic:

> Nothing external is going to save us: not government, not companies, not technologies, not heroes on white horses. But imagine what can be done when people experience the power of the human heart.

And:

> Love is the soul of leadership.
>
> You don't love someone because of who they are. You love them because of how they make you feel.

The authors say that we businesses often try to make business something different than emotions and feelings, but they say that everything being equal we work harder for people we like.

That makes a lot of sense, yet I can see quite a few caveats to add here -read the "cons" section for a bit more details.

> **The purpose of leadership is to create a legacy, not a legend.**

Real-Life Applications

Make Sure Your Values Align to Your Organization
God, I can't stress this enough. Whenever my values were not aligned with my employer I was never motivated to do anything and I could have not led a bee to a honey-hive

CONS

Surveys Are Not Great Data

I loved The Leadership Challenge, it's straight and to the point, and what it ways makes sense.
Yet most of its data seems to come from surveys, and what people say is often much different than what they really feel or do.

Leadership Isn't (Only) A Matter of The Heart??

The author quotes Goleman and emotional Intelligence to make the point that great leaders demonstrate more affection to others and others to them.
That's what the authors refer to when they say that "leadership is a matter of the heart".

Yet *Emotional Intelligence 2.0* shows that while managers have high EQ, CEO have less EQ than middle managers.

Ultimately, leadership may sometimes include heart, but **leadership is much more about power and strategy.** Knowing when to 'show heart' and when to show strength makes the difference between a pushover leader and an effective one.

Also read:

- Machiavellians at the top
- Social cabliration

PROS

Simple, without any frills, The Truth About Leadership goes to the core of what it means to be a great leader.

Review

Kouzes and Posner, also authors of *The Leadership Challenge*, are big names when it comes to leadership literature.

And *The Truth About Leadership* does not disappoint: short and to the point, it goes to the core of what leadership is really all about.

That being said, we warn our ambitious readers that **leadership also requires power, social dominance, and smart social strategy.**

Joe Dispenza Reviewed: Pseudoscience, Influence, and Red Flags

Lucio Buffalmano · 6 January 2019 · Archived copy · Original

Joe Dispenza is a chiropractor and self-help author. He has become popular for his books, seminars, and talks on curing illnesses with thoughts and meditation.

Contents

- Joe Dispenza's Main Theory
  - Dispenza's Main Sources
- Joe Dispenza Critical Analysis
  - Lack of Scientific Evidence
  - Suspicious Reasons for Avoiding Academic Rigor
  - Suspicious 'Science-Sounding Appeals': Pseudoscience?
  - Suspicious Claims of Scientific Evidence
  - Merit of Dispenza's Methods
- Takeaway: Not Recommended

Joe Dispenza's Main Theory

Joe Dispenza's main theory is that your mind has the power to heal your body, and you can unlock that self-healing process by interrupting negative thought patterns and replacing them with positive ones. Dispenza sells seminars and guided meditations to help through this process.

Across three Dispenza's books that I've read, some common themes include:

- **Law of attraction**: By entering the quantum field of "unlimited possibilities," you can manifest the future you want

- **Thoughts are absorbed at a cellular level:** Dispenza says that by repeating the same thought pattern over and over again, people absorb it at a cellular level.
- **Past negative thoughts crystallize:** recurrent thoughts with feelings create states of being, and negative thought patterns create a negative states of being. With repetetition the negative state of being is conditioned, and we adopt negative states of being from past events that keep haunting us
- **You change negative states of interrupting negative patterns and installing new ones**: Become self-aware: to first change of your negative loops, create new alternatives with better thoughts, and emotionalize your thoughts
- **Meditations help you remove negative patterns and install better thoughts:** Dispenza offers seminars to help in this process

Dispenza's Main Sources

Dispenza draws from previous popular self-help concepts and systems such as 'law of attraction', 'positive thinking' and NLP, mixed with some more scientifically sounder principles from cognitive behavioral therapy.

Similar to Dispenza are:

- The Secret, for the 'law of attraction',
- You Can Heal Yourself, with Dispenza's exact same theory

For more on the power of thinking, Dispenza's concepts are included in:

- The Power of Positive Thinking
- Think and Grow Rich

Joe Dispenza Critical Analysis

For this review, we have read three Dispenza's books: *'Breaking the Habit of Being Yourself'* (2012), "*Becoming Supernatural"* (2013), and *You Are The Placebo* (2014).
We also watched several of his popular YouTube appearances with several different interviewers.

Lack of Scientific Evidence

Joe Dispenza claims scientific backing, but science either disproves or provides no evidence for his claims.

In *'Breaking the Habits of Being Yourself*' Joe Dispenza presents quantum physics as the scientific explanation for his methodology.
He says that thoughts are energy, and that energy and matterare one and the same.
Because they are the same, then it means that your mind (energy) can change the body (matter).

Dispenza says you can use your thoughts to change the matter of your body by entering what the "quantum field where all opportunities exist".

I am not aware of any evidence to back up such claims.

Example: Big Claims Lacking Evidence

In '*You Are the Placebo*', a book that is largely a collection of how powerful the placebo effect is, Dispenza tells the story of a woman who could see with her eyes closed.

She would wave back at the author with her eyes closed and eventually also be able to see behind her, at 360 degrees, with her eyes closed.
Unfortunately, the author didn't record it and/or offer any proof for it. That only raised my suspicion and, if

someone were to take the claims for true, the only feeling I can think of is anger and disappointment. If the author was truly able to deliver such results, it would be his moral duty to share evidence and methodology so that more people can get that kind of help.

Suspicious Reasons for Avoiding Academic Rigor

In '*Becoming Supernatural*', Joe Dispenza says that what he writes is a risk for him and his reputation.
He says that "certain people", including people in the scientific community, might call his work pseudoscience.

Dispenza says he used to care about what those people thought, and he tried to have them approve of his work. Then, eventually, he realized that his work was changing lives and that he could never win the approval of the scientific community. So he simply stopped caring.

It's fair for Joe Dispenza to pursue his own path without trying to appease anyone.

On the other hand, such a stance can also be an easy cop-out.
It could be an excuse for embracing and selling concepts that may not work, or at least theories that cannot be tested or proven.

It may also be a psychological tactic to increase support.
Point fingers against an out-group to stoke the support of the in-group of followers (ingroup-outgroup dynamics, see how Tai Lopez uses it).

Suspicious 'Science-Sounding Appeals': Pseudoscience?

In several videos and in '*Breaking the Habit of Changing Yourself*', Dispenza anchors his claims in quantum physics.

He claims that quantum physics underpins his concept of genetic changes through meditation.
And he talks about thoughts as 'energy'.

He presents little evidence or sources for these claims.

I want to be clear that no scientific backing doesn't necessarily mean that someone's work is ineffective or doesn't help people.
It simply means that it's not scientific.
However, **it's suspicious to try to claim scientific rigor without proper empirical evidence.**

This may as well be the definition of pseudoscience. If anything, some attempts at scientific evidence feel so clumsy that it may even barely qualify as pseudoscience.

The fact that such claims may help sell expensive seminars may also add extra suspicion about someone's motives.

Suspicious Claims of Scientific Evidence

> **Lucio**: These claims of prayers 'working in the past' seem nonsense to me

The worst red flags for me were trying to claim scientific evidence where I didn't see any.

Two examples from '*Breaking the Habits of Being Yourself*':

Example 1: The Prayer Impact on The Past

The scientific "proof" that thoughts and prayers can impact reality both in the present, future, and past was this article inquiring whether 'retroactive prayers' work.

Dispenza claims that prayers in the present affected outcomes in the past. But, the researchers used 'retroactive

prayer' as tongue-in-cheek.

To a critical mind looking for evidence, Dispenza's claim may sound ludicrous.
Think about it this way: I could "pray" today for a meteorite to hit the Earth, then I show you the evidence that a meteorite hit the earth millions of years ago and I tell you "see, my papers worked (in the past)".

If one believes in this kind of 'evidence', he may even believe in Santa Claus and the tooth fairy.

Example 2: Thoughts Change DNA?

In 'Breaking the Habit of Being Yourself' Dispenza quotes a study called "Modulation of DNA by Coherent Heart Frequencies".

This is an extremely interesting study showing that the heartbeat of people was able to alter the structure of DNA in terms of denature (unwind) or renature (wind).
You can read a review of the same study on this paper, where it says that heartbeats can also be detected by other people within 5 feet and cause physiologically relevant changes.

However, it's the heartbeats, which emit a light electromagnetic field, that changed the DNA samples.
Not the thoughts directly.

Joe Dispenza takes it to mean that *thoughts* can change the DNA, which is much different.
Dispenza then makes another big jump by stating that positive thoughts can change the expression of genes. And I haven't seen any science backing this up.

Merit of Dispenza's Methods

There is plenty of useful advice that Dispenza mixes with the more dubious ones, and none of them is any novelty in the self-help literature.

For example, it seems perfectly reasonable that our thoughts indeed impact our moods, that moods lead to action and reaction from the world around us, and that some people can indeed get stuck in negative thoughts.

For these people, the advice of interrupting negative thought patterns and focusing on more empowering alternatives is a valid approach that can genuinely help.

Some of Dispenza's advice, like the usefulness of 'knowing yourself to better change yourself' is also a truism that holds true, no matter how obvious it may sound.

Meditation is also a well-studied phenomenon with plenty of evidence to backup its positive effects. (That doesn't mean Dispenza's claims may not still be overblown though; check this beautiful piece on the matter by David Gorski, Ph.D., for example).

Finally, when it comes to real-life outcomes, the placebo effect is a proven mechanism. So even simply believing that something may help can truly have a positive effect on someone's mood and even health.

Takeaway: Not Recommended

Dispenza's public claims and books raise several red flags that undermine trustworthiness and authority, including false-sounding claims of scientific evidence, and some overblown claims of meditation's outcomes without evidence.

Pitching expensive seminars based on already shaky claims also adds extra suspicion about bias and motives.

Unfortunately, people who approach self-healing teachers can be in a position of need that makes them easy prey for confident marketers.

I personally enjoyed reading Dispenza's books, including '*Breaking The Habit of Being Yourself*', and there is plenty

of good advice from the author that could genuinely benefit many.

If one could consume Dispenza's work and books with a strong critical mind, it's possible he could benefit from it. However, some equally valid authors and books share the same wisdom, without as many red flags or 'upsell risks'.

So, all in all, we'd rather redirect our readers towards different sources.

Joe Dispenza Critical Analysis

For this review, we have read three Dispenza's books: *'Breaking the Habit of Being Yourself'* (2012), "*Becoming Supernatural"* (2013), and *You Are The Placebo* (2014).
We also watched several of his popular YouTube appearances with several different interviewers.

Lack of Scientific Evidence

Joe Dispenza claims scientific backing, but science either disproves or provides no evidence for his claims.

In *'Breaking the Habits of Being Yourself*' Joe Dispenza presents quantum physics as the scientific explanation for his methodology.
He says that thoughts are energy, and that energy and matterare one and the same.
Because they are the same, then it means that your mind (energy) can change the body (matter).

Dispenza says you can use your thoughts to change the matter of your body by entering what the "quantum field where all opportunities exist".

I am not aware of any evidence to back up such claims.

Example: Big Claims Lacking Evidence

In '*You Are the Placebo*', a book that is largely a collection of how powerful the placebo effect is, Dispenza tells the story of a woman who could see with her eyes closed.

She would wave back at the author with her eyes closed and eventually also be able to see behind her, at 360 degrees, with her eyes closed.
Unfortunately, the author didn't record it and/or offer any proof for it. That only raised my suspicion and, if

someone were to take the claims for true, the only feeling I can think of is anger and disappointment. If the author was truly able to deliver such results, it would be his moral duty to share evidence and methodology so that more people can get that kind of help.

Suspicious Reasons for Avoiding Academic Rigor

In '*Becoming Supernatural*', Joe Dispenza says that what he writes is a risk for him and his reputation.
He says that "certain people", including people in the scientific community, might call his work pseudoscience.

Dispenza says he used to care about what those people thought, and he tried to have them approve of his work. Then, eventually, he realized that his work was changing lives and that he could never win the approval of the scientific community. So he simply stopped caring.

It's fair for Joe Dispenza to pursue his own path without trying to appease anyone.

On the other hand, such a stance can also be an easy cop-out.
It could be an excuse for embracing and selling concepts that may not work, or at least theories that cannot be tested or proven.

It may also be a psychological tactic to increase support.
Point fingers against an out-group to stoke the support of the in-group of followers (ingroup-outgroup dynamics, see how Tai Lopez uses it).

Suspicious 'Science-Sounding Appeals': Pseudoscience?

In several videos and in '*Breaking the Habit of Changing Yourself*', Dispenza anchors his claims in quantum physics.

He claims that quantum physics underpins his concept of genetic changes through meditation.
And he talks about thoughts as 'energy'.

He presents little evidence or sources for these claims.

I want to be clear that no scientific backing doesn't necessarily mean that someone's work is ineffective or doesn't help people.
It simply means that it's not scientific.
However, **it's suspicious to try to claim scientific rigor without proper empirical evidence.**

This may as well be the definition of pseudoscience. If anything, some attempts at scientific evidence feel so clumsy that it may even barely qualify as pseudoscience.

The fact that such claims may help sell expensive seminars may also add extra suspicion about someone's motives.

Suspicious Claims of Scientific Evidence

> **Lucio**: These claims of prayers 'working in the past' seem nonsense to me

The worst red flags for me were trying to claim scientific evidence where I didn't see any.

Two examples from '*Breaking the Habits of Being Yourself*':

Example 1: The Prayer Impact on The Past

The scientific "proof" that thoughts and prayers can impact reality both in the present, future, and past was this article inquiring whether 'retroactive prayers' work.

Dispenza claims that prayers in the present affected outcomes in the past. But, the researchers used 'retroactive

prayer' as tongue-in-cheek.

To a critical mind looking for evidence, Dispenza's claim may sound ludicrous.
Think about it this way: I could "pray" today for a meteorite to hit the Earth, then I show you the evidence that a meteorite hit the earth millions of years ago and I tell you "see, my papers worked (in the past)".

If one believes in this kind of 'evidence', he may even believe in Santa Claus and the tooth fairy.

Example 2: Thoughts Change DNA?

In 'Breaking the Habit of Being Yourself' Dispenza quotes a study called "Modulation of DNA by Coherent Heart Frequencies".

This is an extremely interesting study showing that the heartbeat of people was able to alter the structure of DNA in terms of denature (unwind) or renature (wind).
You can read a review of the same study on this paper, where it says that heartbeats can also be detected by other people within 5 feet and cause physiologically relevant changes.

However, it's the heartbeats, which emit a light electromagnetic field, that changed the DNA samples.
Not the thoughts directly.

Joe Dispenza takes it to mean that *thoughts* can change the DNA, which is much different.
Dispenza then makes another big jump by stating that positive thoughts can change the expression of genes. And I haven't seen any science backing this up.

Merit of Dispenza's Methods

If one could consume Dispenza's work and books with a strong critical mind, it's possible he could benefit from it. However, some equally valid authors and books share the same wisdom, without as many red flags or 'upsell risks'.

So, all in all, we'd rather redirect our readers towards different sources.

Socially Awkward: Signs & Fixes (W/ Video)

Lucio Buffalmano · 7 January 2019 · Archived copy · Original

Are you afraid you might be socially awkward?

Or do you know you are and want to know how to stop being socially awkward?

In either case, you have come to the right place.
By the end of this article, you will know what is socially awkward and, if you are, you will know how to stop it.

Sadly, social awkwardness is a leading cause of bullying

  - #3. Seeks Arguments (Instead of Consensus)
  - #4. Breaks Rapport
  - #5. Is Visibly Nervous
  - #6. Lacks Emotional Intelligence
- Summary

What's Socially Awkward

Some guides online define socially awkward as a person who is nervous and creates embarrassing social situations.

But I hold a different view.

Some socially awkward people are *not* nervous.
They are not shy, they are not introverted, they are not embarrassed… And many of them have no idea they are being socially awkward in the first place.
Indeed the most disruptive social pariahs are confident and lout.

To include also those awkwardly confident fellas, this is my socially awkward definition:

> Socially awkward is that person who makes social interactions difficult, painful, embarrassing, or generally unpleasant for the person or group of persons he is interacting with.

Socially Awkward Is Not Shy

People who have become good at spotting social dynamics can easily recognize socially awkward individuals.

But if you are still developing your *emotional intelligence*, then it's easy getting confused and to think of "shy" as socially awkward and "outgoing" as socially competent.

But it's not always that simple.
There are plenty of loud, outgoing, socially active people who are *still* very socially awkward -below there are examples-.
The difference indeed is not in how socially active they are but in their social intelligence.

Signs of Socially Awkward Individuals

Here are the signs and behaviors that characterize socially awkward individuals:

#1. Inadvertently Offends Others

Respecting oneself and others is the definition of assertive communication.
And it's also one of the most basic and important rules of socialization.

Some of the worst socially awkward individuals fail to understand it and engage in one or more of the following:

- Cut people off
- Shout to be "better heard"
- Hijack the conversation
- Make mean jokes that embarrass people or make them cringe
- Make politically incorrect jokes that are badly out of place
- Verbally threaten or abuse others

In this example, Vaynerchuk lacks basic etiquette and breaks rapport with Seth Godin:

Aggression and disrespect not only make people and bystanders feel awkward but at the extreme end also potentially make them feel threatened.

#2. Spoils Group Conversation

Group conversations are the worst time to be socially awkward because among the group a silent, tacit agreement takes place among everyone.

And it's this one:

> **Group**: (thinking) This guy really doesn't get it. When he is he leaving so we all can be cool again?

The socially awkward individual does the following to alienate everyone around him:

- Monopolizes the conversation
- Asks personal questions that put people on the spot
  - Ie.: "how much do you make", "did you guys have sex" etc.
- Fails to understand he is boring the group
- Brings everyone down
- Always brings the conversation back to him or his topic
- Zeroes in on one person and leave all others out

I recently analyzed a "socially awkward" attempt to join a group conversation.
And it's from Ivanka Trump at the G20.
Look at the video:

She is being awkward because she stands too far, jumps in too early, and displays many signals of nervousness. You can read here the whole analysis.

Do This Instead:

Understand that group conversations are seldom about conveying meaning.

Group conversations are most often a "social lubricant" to collectively bond and/or have a good time.
And, finally, people don't care about your stories and opinions that much, really.

Also read: a step-by-step guide to group conversations and effective conversation starters.

#3. Seeks Arguments (Instead of Consensus)

We all have a tendency to push back on ideas that run against our beliefs and cause us cognitive dissonance (Festinger, 1957).
And we also all have a tendency to want to show off.

But while the socially smart resist the temptation and seek to understand and look for commonalities, the socially awkward sees it as an opportunity to show off his "superiority".

The worst kind of socially awkward individual makes it about winning rather than socializing.
Here is an example from Family Guy:

https://www.youtube.com/watch?v=DYKScQ3gn2I
Don't be that ass

Example: Awkward Dating

The impact of seeking arguments is even more disastrous in dating scenarios:

> Many years ago I went back to a girl's place with a bottle of wine as we chatted and flirted along the way.
>
> That must have been an easy one, right? Well, it should have, yes.
>
> But when she aired her very left-wing opinions on genders, gypsies, and "integration policies" this dumbas*

> escalated what was a bonding conversation into a discussion (super un-sexy).
>
> I started explaining why my ideas were "right", and I wanted to prove it. I wanted to win.
> Of course, there are no winners in those scenarios, only losers.
> Rapport was shattered, romance was gone… And an icy awkwardness descended until I went home in my hand's company soon after :).

Do This Instead

Switch your mindset from fact-finding, winning, and showing off to building people up, making friends, and finding commonalities.

#4. Breaks Rapport

Socially awkward individuals engage in social climbing and posturing without even realizing how obvious it is.

To show off their superiority one of their most powerful tools is "NO".

A "NO" is a conversation stopper and communicates you fully disagree, that you know better and that the two of you are miles apart.

"I'm Better Than You" Awkwardness

A "NO" is also often a power move in the sense that it gives soft power and authority to the person using it. At the price, of course, of rapport, harmony, and conversational flow

I'll give you a real-life example.
A friend of mine wanted to recruit me for a start-up she wanted to launch. We had a brief phone conversation, which went a bit like this:

> **Her**: (…) *That's the idea basically*
> **Me**: *I like it! Sounds like raising some capital for marketing will be needed to get early traction*
> **Her**: *Not really, it's more about partnerships..*
> **Me**: *Yeah, that too, both are important. Maybe central Europe is a great market to start with*
> **Her**: *No, it's best to..*

Power analysis: I don't answer with "OK" because that would be an admission of submission.
I confirm what she says, then raise my opinion to her opinion's level adding *both* are important.
Then I move to another topic to take the pressure off and avoid an escalation: I am trying not to make this awkward.

But again she keeps "NO-ing" me -probably 3 times during the conversation-.
With every NO she communicates that:

1. I have no idea what I'm talking about;
2. She knows more;
3. She's the one calling the shots.

Finally, she makes it extremely awkward because it becomes obvious that if we disagree so much… Why the hell is she even talking to me?

"You're Wrong" Awkwardness

A "NO" is particularly terrible when people reach out to you with a compliment, a gift, or a bonding message.

Opening with a compliment, in certain situations, is an act of submission and vulnerability.

Receiving a “no” embarrasses us and makes us want to exit the conversation, wondering how could we have been so stupid in initiating it in the first place.

Do This Instead

What to do then?
Unless they are offensive, back-handed frenemy-style “compliments”, you always accept the compliment, even when you’re not too sure you fully deserve it.

#5. Is Visibly Nervous

Humans have mirror neurons that make us feel what others are feeling.

That means that when we are very nervous and when we feel awkward, chances are that we make others feel awkward as well.

Milton from Office Space is a good example of social awkwardness stemming from social anxiety:

The exceptions here are socially confident, socially smart, and high self-esteem individuals. They won’t be feeling awkward just because *you* feel awkward.
But of course, they are the exception (get Power University to become one)

Do this Instead

Well, obviously try to relax.
But if you can’t, don’t try to hide your nervousness. It might seem counter-intuitive but the awkwardness springs mostly from the friction between hiding it and pretending it’s not there while it’s actually plainly obvious to everyone.

When you can instead confess you are being nervous, you allow people to relax. And you show yourself for being vulnerably courageous.
It’s now in the open and he doesn’t even seem nearly as nervous and awkward after all.

On a date, there is nothing more chilling and relaxing than a woman admitting that she is a bit nervous.

Also read: how to overcome social anxiety.

#6. Lacks Emotional Intelligence

This is the catch-all of social awkwardness.

If you look at the video example from above, the awkwardness is all in failure to understand each other:

They are not communicating with one another, they are communicating *past* each otter.
Everyone has their own script and they are going through it regardless of what the other says or feels.
The two managers there fail to listen to Peter, they fail to listen that he has taken care of it and that he needs no guidance.
And they obviously fail to see how frustrated he is.

People who lack emotional intelligence:

- Don't understand when people need to go "deeper"
- Fail to realize the obviousness of why routines and pick-up lines don't work
- Believe that "winning" is a good social strategy
- Can't read body language and nonverbal cues and take words at face value
- Don't understand where personal boundaries lie
- Lack empathy and don't understand how others feel

No Emotional Intelligence, No Real Relationships

Failing to empathize and understand one another has deep, far-reaching consequences that go far beyond social awkwardness.
The biggest consequence is that without emotional intelligence you will never have great relationships.
As a matter of fact, you won't even have "good" relationships.

Look at this example:

Seth Godin wants to discuss important questions he cares about. They relate to him and his life and they are perfect occasions to go deeper.
But Gary Vaynerchuk lacks emotional intelligence and fails to realize it.
Vaynerchuk is forcing Seth Godin to conform to his style of relationships: superficial and emotionally shallow.

What To Do

Emotional intelligence is a key ability that you need to cultivate.
If you have none, there is no easy fix: you need to basically start learning people from scratch.
That's the bad news. The good one is this: it's very possible!
This website offers a great guide because that's a process that I have gone through myself (through the years).

For more examples of creating a deep connection, check how to develop a deep emotional connection

Summary

Socially awkward individuals lack emotional intelligence, social intelligence, and, sometimes, even empathy.

That's the root cause of the issue, which then finds several different expressions of "daily social awkwardness".

In some people, the issue is compounded by a lack of confidence and nervousness which, in turn, makes others feel nervous as well.

If you want to know how to stop being socially awkward, this is the deep solution: increase your emotional intelligence and your understanding of social dynamics while you keep training in real life as well.

The Black Swan: Summary & Review

Lucio Buffalmano · 16 January 2019 · Archived copy · Original

The Black Swan (2010) is a book on probabilities, risks and humans' psychological biases. Nassim Taleb, the author, also teaches readers how to avoid common mental pitfalls and becoming better, more rational thinkers.

Exec Summary

- History, the world and our lives are dominated by unlikely, large and unexpected events
- Most people, mistakenly, focus on the likely and probable
- We all see patterns and causality where, in reality, there is a lot of randomness

Summary

The Black Swan, especially in the last chapters, present more mathematical and technical details which, for the most part, I will skip in this summary.

This is my best introductory quote to The Black Swan:

> In this (personal) essay, I stick my neck out and make a claim, against many of our habits of thought, that our world is dominated by the extreme, the unknown, and the very improbable (improbable according to our current knowledge)–and all the while we spend our time engaged in small talk, focusing on the known, and the

> repeated.
>
> This implies the need to use the extreme event as a starting point and not treat it as an exception to be pushed under the rug.
>
> I also make the bolder (and more annoying) claim that in spite of our progress and the growth in knowledge, or perhaps because of such progress and growth, the future will be increasingly less predictable, while both human nature and social "science" seem to conspire to hide the idea from us.

1. What's a Black Swan

Here is the definition:

> A black swan is a highly improbable event that catches most everyone by surprise and can potentially disrupt human activities or create havoc.

Conversely, a highly expected event *not* happening is also a black swan.

Nassim Nicholas Taleb says that a small number of black swans explain almost everything in our world, from religions to historical events to our own personal lives.

As the world became more complicated and interconnected, the potential effects of predictable events decrease, while the potential effects of black swans have further increased.

> **A black swan is a low probability, large impact event**
>
> *Nicholas Nassim Taleb*

2. You Cannot Measure Black Swans

Black swans, by their own nature of being so unlikely and lying outside most people's grasp, are extremely difficult to measure and compute.

The umeasurability of black swan and the human tendency of discounting their very possibility, is a central tenet in the book.
Nassim Nicholas Taleb has had first-hand experience in a field highly susceptible to black swans and yet theoretically full of data and measures.
That field is finance and trading.
Taleb mocks and taunts the mathematical models of investment banks, saying they all operated under the false assumption that there are tools to measure uncertainty.

The author says that many models of portfolio and risk management exclude the possibility of a black swan.
This was the case for Long Term Capital Management, where the Nobel-prize winning founders, so sure of their mathematical models, loaded up on risk and created a time bomb.
At the very first black swan, within a few years of its inception, LTCM risked taking the whole financial system downturns out that "long term" is relative :)-

Bell Curves Deviations Promote Black Swans

I feel the title is either wrong. or misleading.

Bell curves don't directly promote black swans.
But drafting bell curves or thinking in terms of bell curves may contribute to making them more unexpected and, potentially, disastrous.

Taleb's point anyway is that bell curves measure the normal and the average, and they ignore the large deviations

and the unexpected.

Training for Failure

Taleb says that organized sports that forbid certain moves make trained athletes weaker to unexpected events. Fighters for example train with rules, which makes them more vulnerable in a street fight because they are trained not to expect illegal moves.

> Those who win the gold medals might be precisely the most vulnerable in real life.
> In real life, you don't know the odds. You need to discover them.

A Wise Man Knows He Doesn't Know Anything

Taleb promotes a focus on "anti-knowledge", such as a focus on what we don't know.

He says we should not try to predict black swans, but adjust to them. And when we adjust to them, we can position ourselves not only to limit the downsides but also to take advantage of possibly positive black swans, which Taleb calls "serendipitous black swans".

> **We need to adjust to black swans' existence instead of naively trying to predict them**

Read more on naive self-help:

> Naive Self-Help: 10 Most Dangerous BS to Avoid

3. Recognition Is Random As Well

Nassim Taleb says that recognition, awards and rewards often don't really go to the people who helped the world the most.

For example in the aftermath of the 9/11 attacks people who got the glory were those who were *seen* as performing heroic tasks or those who gave the *impression* of performing heroic tasks.
Taleb says one example of the latter category is Richard Grasso, chairman of NYSE who "saved the stock exchange" and received a huge bonus for it. What did he do exactly? Ring the trading bell on television.

But we don't see and don't reward those who actually worked behind the curtains to prevent catastrophic events. So we reward the central banker who is presiding on a recovery after a recession, but never the central bank who helps prevent a recession.

Sometimes we actually *punish* those who help prevent a catastrophe because their measure can create bottlenecks or cost money.

Great People Were Lucky

One of the most, hardest-hitting theories of Taleb is that of randomness of rewards.

We live in a society that glorifies the individual here in the west, and we like to think that windfalls are always deserved.
But Taleb makes the very credible point that, more often than we realize or care to admit, **success and who we choose to remember or forget is rather random** –Einstein has displaced so many others equally deserving, says the author-.

Just to be clear, he does not say that successful people are not talented, but simply that they are less uniquely talented than we think.

And I find that to be a liberating and empowering message.

One of the most famous and criticized notions from The Black Swan is that, simply by randomness in a large population, you are bound to have successful traders. But that success might have nothing to do with talent. He says that in a large enough population you will have a Warren Buffet or a Ray Dalio, but that doesn't necessarily mean they must be talented and/or that their results will keep being that good over the centuries.

My Note: Warren Buffet bets on bullish America, but what if turned bearish?
Buffet indeed is mostly long, and he bets on the stock market going up and the economy doing good.
The economy has done great during the years he's traded. Would he do as well during prolonged recessions? Who knows…
And again, this is not to accuse Buffet, he is a legend and I respect and admire him.

4. Anecdotes and Quotes Are Not Evidence

Nicholas Nassim Taleb talks about the tendency of narratives to be built around influencing and convincing instead of searching for the truth.

He says:

> (…) I call this overload of example "naive empiricism": a succession of anecdotes collected to fit the story do not constitute evidence.
>
> Anyone looking for confirmation will find enough to deceive himself -and no doubt his peers-.
>
> (…) By searching you can always find someone who made a well-sounding statement confirming your point of view. And on any topic it's possible to find someone who said the exact same opposite.

5. The Triplet of Opacity

Nassim Taleb also deals with history in his Black Swan Essay.
And he doesn't just say that we can't predict the future, but also that our understanding of past events is highly flawed.

These are what he calls "the triple of opacity":

- **The illusion of understanding**: we think we know what's going on but the world is more complex (and random) than we realize
- **The retrospective distortion**: we only see events after they happened, and they seem clearer and more organized than they actually are. Our mind "explains" and connects events that are actually random.
- **The overvaluation of factual information:** especially at the hands of authoritative and learned people, who think they have the tools to make connections and predictions. Even more dangerous, because "the more intelligent the person, the better sounding the explanation"

Taleb says that "nobody really knows what's going on", and he lays out a few great examples for each point.

Narrative Fallacies

Taleb says we all engage in simplification of the world that often turn out to be distortions more than simplifications. And on top of distortions, in those simplifications, we all leave out the black swans.

6. Mediocre Stand VS Extreme Stand

Some professions and that are scalable and produce few winners and masses of losers (extreme stand).

And some professions and fields are not scalable and are more equalitarian (mediocre stand).

Authors and book sales are one example of the extreme stand, where the biggest authors sell thousands of times more than the thousands of average selling authors combined.

Average human height and average weight are examples of mediocre stand, and they can be easily measured with a bell curve.

It's in extreme stands that the black swans are most disruptive. You can lose or make a fortune in a single day or in a single unexpected event.
Taleb refers to the two as being victims to the "tyranny of the collective" or "tyranny of the accidental".

Be Careful of "Scalability"

Nassim Taleb would actually recommend people to pick a profession that is not scalable.
Scalable fields are very risky because they present huge disparities between efforts and rewards. They are dominated by a very small amount of giants and an army of dwarfs struggling to make ends meet.

Extreme Stand and Knowledge

Dealing with mediocre stand means that you can more easily measure the whole population by looking at a few hundred cases.

But in extreme stand, measuring a few hundred cases will likely tell you very little. If you take earnings for example, the chances you will pick a Bill Gates in your sample are very slim, but the people like Bill Gates exert a huge influence on the world.

Knowledge in extreme stands grows slowly and erratically with the addition of new data. Sometimes it changes extremely, and possibly at an known rate.

In Taleb's opinion financial markets belong to extreme stands -albeit your investment manager doesn't know it, he adds :)-.

7. News Make You Understand *Less* of The World

I could not agree more with Taleb when he talks about the media often confusing people about the world instead of helping them understand.

The author says that the media falls for the bias of looking for causes to random events, but makes the process even more credible -and dangerous- by using an army of fact checkers to give n appearance of thoroughness.

He says:

> It's as if they wanted to be wrong with infinite precision instead of accepting being approximately right… Like a fable writer.

Media brings the sensational and the black swan to the fore, which leads us to overestimate its impact, while it leaves in the dark all the other black swans, leading us to severely underestimate them.

Nationalities Narratives

Taleb says that in looking for causes we often fall into the "nationality" narratives, such as assigning a cause to someone's behavior that hinges upon their nationality or their background.
He says that sex, profession, and social class are much better predictors of behavior and personality than nationality.

He also adds evolutionary psychology as another popular field where people go hunting for causes, and I could not agree more -and be equally annoyed by-.

8. Black Swan and Rational Limits

Taleb talks about how we are liable to exaggerate the risks of known black swans, such as terrorism, and radially underestimate the black swans that we know nothing about -most of them anyway-.

He also introduces system 1 and system 2 thinking from Thinking Fast and Slow by Kahnemann and The Society for Judgment and Decision Making, which I will look into becoming a member because it sounds awesome.

The Round-Trip Error

Taleb calls the round-trip error the tenedncy to confuse "no evidence fo black swans as evidence of no black swans".
That's system one at work, and you have to make an effort to use system two and correct the initial mistake.

9. Snake Oil Humanitarians

This is another of Taleb's theories that also long been a pet peeve of mine.

He says that politicians throw money at publicized disasters. But to do so, they divert funds from equally important causes and who says which cause is more important?
Exactly, there is no real study behind it and no really well-thought theory. It's just a publicity, media-driven stunt sometimes.

Again, we focus on what's visible, but not on what's unseen.
And, the author says, these unseen consequences can be, and generally are, more meaningful.

> It was so noble on their part to do something so humanitarian, to rise above out abject selfishness.
>
> Did they promise to do so with their own money? No, it was with public money.
>
> (…)
>
> Have the guts to consider the silent consequences when standing in front of the next snake oil humanitarian

10. Risk-Taker Genes: Be Aware of Risks

Taleb says that we have inherited the genes of those who took risks, which makes us often more risk-seeking than it's actually warranted.

He says he is not against risk, but against the encouragement of uninformed risk-taking.
We take risks often not out of bravado, but out of ignorance and blindness to probability.

Says Taleb:

The fools, the Casanovas, the blind risk-takers, are often the ones who win in the short term.

Of course, in a black swan environment, one single rare event can come up to shake up species after a very long run of fitness.

11. Black Swans and Evolution

Some people have a tendency to see evolution as this magical invisible wand that moves species towards better and better states.

Nothing could be further from the truth.
As Taleb says:

> Evolution is a series of flukes. Some good, many bad. You only see the good. But in the short term it's not

> really clear which traits are really good for you.
> (…)
> This idea that we're here, that this is the best of all possible worlds, and that evolution did a great job seems rather bogus.

Quotes

I absolutely love Nassim Taleb's writing style and many of the quotes made my listening day :).
Some of them:

> Black swan logic makes what you don't know far more relevant than what you do know.

On "experts":

> Our inability to predict in environments subject to black swans (..) means certain professionals, while believing they are experts, are in fact not.
>
> Based on their empirical records, they dont know more on their subject matter than the general population.
>
> But they're much better at narrating. Or worst at smoking you with complicated mathematical models.
>
> They are also more likely, to wear a tie.

On wars and avoiding wars:

> Who is more valuable, the politician who avoids a war or the one who starts one and is lucky enough to win.

On "fuck you money":

> This is sometimes called "fuck you money," which, in spite of its coarseness, means that it allows you to act

> like a Victorian gentleman, free from slavery.
>
> It is a psychological buffer: the capital is not so large as to make you spoiled-rich, but large enough to give you the freedom to choose a new occupation without excessive consideration of the financial rewards.
>
> **It shields you from prostituting your mind and frees you from outside authority–any outside authority.**
>
> (..)
>
> Note that the designation fuck you corresponds to the exhilarating ability to pronounce that compact phrase before hanging up the phone.

I personally especially enjoyed the injections of Nassim Taleb's humor across the book, for example:

> Line up a thousand of authors, or people begging to be published who call themselves authors instead of waiters.

About an intellectual discussion he was having in Italian:

> He was so charismatic, so convinced and convincing that, although I could not understand much of what he said, I found myself fully agreeing with everything.
>
> (…) At some point during his speech he turned all red with anger, thus convincing me -and the audience- that he was definitely right.

I also love his biting, irreverent irony, for example:

> Creatures with the largest cortex have the largest intelligence.
>
> We humans have the largest cortex. Followed by bank executives, dolphins and our cousins the apes.

On "John Nash" hype, and game's theory inability to predict anything:

> (..) in which the most notorious player is John Nash, the schizophrenic mathematician made famous by the film "A Beautiful Mind".
>
> Sadly, for all the intellectual appeal of this method and all the media attention its practitioners are no better at predicting than university students.

On philosophers VS "normal" human beings:

> You can also see masses of tourists, laughing at the caricatures that lower-level primates represent.
> Now imagine being a member of a higher level species, say a real philosopher, a truly wise person. Far more sophisticated than the human primates

Real-Life Applications

Therapeutic Applications of Black Swans Rationalizations
Taleb says that our tendency to rationalize events in a way that seems obvious can make us feel guilty for what happened.
"I could have done X" or "I should have seen that coming" are poisonous thoughts that cause unnecessary suffering. Taleb proposes to fix it with a narrative of unavoidability. Tell yourself it was bound to happen". He says that writing daily diaries is a great way of acquiring that mentality.

Don't Feel Guilty for Extinctions
Some of us today carry a feeling of guilt for what "we are doing to the world and other species". But, the author say, species have been going extinct for millions of years, they always have and always will. And we don't have to feel guilty for it.
Life is simply much more fragile than we think.
Also read: don't fall for the guilt-tripping culture.

Watch Out for News and Pundits
Experts sometimes know little more than normal people when it comes to predictions. And news often confound you instead of making things clearer.

Watch Out for Those Who Refer to The Past for Future Predictions
Talking about commentators who like to say that "New York will always come back because it always has", the author says:

> I'm sure that Carthage and Jerico had their own no less eloquent pundits saying "our enemies have to destroy us many times but we always came back more resilient than before"

CONS

I recognize some of the criticism leveled against The Black Swan such as diverging, digressing, and going off-topic. But to me, those are no real cons.
This is a work of philosophy as well, and I enjoyed those digressions because they added value most of the time.

However, I disagreed with the following:

Too Much Randomness?

Albeit I agree with much of what Taleb says, I find that sometimes he ascribes too much to randomness. Talking about how many manuscripts The New York Times rejects, he says "imagine the thousands of literary geniuses we will never hear about".

Yet, I have to wonder if there are really that many literary geniuses.
maybe there are, but I'm not convinced.

Disregards the Tendency for Quality to Rise to The Top

The author discusses how a scientist and researcher can become famous and highly esteem simply by randomness circumstances and a lucky initial break.
Albeit that makes a lot of sense and nobody ever considers it enough, I also believe there is a (strong?) tendency for the cream to rise to the top. And that tendency has also the power to buck a few unlucky breaks along the way.

The Gulag Mistake

Talking about the human fallacy of looking for a cause, one of the examples the author provides is that of the rise of the Russian mafia who was brutal because hardened by their "gulag experience".

Albeit I agree with the concept, that connection is a bit up in the air

He uses the example of rat labs to say that hard experience weakens the rats instead of making them stronger. However, he does not acknowledge that it's not just about physical deprivation, and suffering has shown to potentially alienate people from ethical and moral considerations.

The Later You Are, The Longer it Takes?

The author says that when a project is late, most people expect it to be closer and closer to completion the more time passes by.
But instead, he says, once you are beyond the deadline, the more time passes the further in the future the completion date moves.

However, that didn't make sense to me, not rationally nor mathematically.
If it were true, there would be an acceleration towards infinity, and that is simply not always the case -albeit it might be with certain projects that were impossible to begin with, but those are a different case-.

The More Bankruptcies, The Better?

The author says that an often under-appreciated advantage of capitalism is that corporations that go bust are transferring wealth to the citizens.

I can see where he's coming from and that's very smart and I had never thought about it.

Yet, I'm not sure I fully agree or that you can apply that to the majority of corporations. Many companies simply fail because their products are not good enough.
Thus, they didn't make a favor to anyone but they *wasted* resources.

Wrong & Terrible Example of The "Italian Boy"

Taleb talks about the story of an "Italian boy" who captured everyone's attention for, in the author's opinion, all the wrong reasons. The name of that kid is Alfredino Rampi.

It's not true the boy was saved, unluckily.
And I feel it was the wrong example to make his point because that story *is* incredibly heartbreaking.
I wasn't alive, and yet I will never forget the story of Alfredino.

It's the story of a boy who fell head first in a well, narrow and deep. The rescuer and everyone around could hear his cries for help and his tears. Rescue operations went on for days, also on live TV.
In spite of everyone's best efforts nobody managed to save him.

Alfredino died in a well in the most tragic, heart-wrenching circumstances. And that, in my opinion, makes it a terrible example Taleb picked to make his otherwise valid point.
And I extend a prayer to Alfredino (and all others who are suffering)

PROS

As I type these words I'm still needing to emotionally state shift from that Alfredino Rampi story which always affects me deeply to think of.

That being said, this book is wonderful.
To me the pros are both practical and intellectual:

- Better understanding of life, the world and reality
- Improving one's own rational and critical thinking
- Increased confidence understanding that successful people are no better than you
- Better decision making through better understanding of risk and probabilities
- Increased quality of life cutting out the noise

To Read After The Black Swan

Here is what I recommend reading after The Black Swan:

- Fooled by Randomness
- Antifragile
- How to Lie With Statistics

Video Review

Review

I understand how Taleb can be a divisive figure.

One of the top reviews on Amazon says that The Black Swan is “too demeaning of others”.
Some reviews complain about digressions and circumlocutions.
Some others call Nassim a conceited author, criticizing almost everyone but himself.

I can see where those reviews are coming from because, in a way, they are true.
Yet, it’s exactly those points that make a deep deep philosophical text -albeit with practical applications- into a masterpiece that is also a pleasure to read.

And yes Taleb does sound conceited at times, but he is so open and so frank about it that you just can’t help but laugh along.
Furthermore, he does have the chupatz to walk the talk, which makes him the perfect villain or, better yet, the perfect anti-hero: the Robin Hood of modern academia.

This is a very personal review because I could have written almost everything Taleb says myself -if I only were as smart as he is, that is :).
And I feel Taleb is a kindred spirit.
From his background to which he refers to “Mediterranean” to his historical references to his language skills going beyond English to his rebellious, slightly anti-social biting humor.

But mostly, I feel very much close to his pursuit of a life free of financial and mental chains.
Here is what he says on “fuck you money”:

> It shields you from prostituting your mind and frees you from outside authority–any outside authority.
>
> (…) it literally cured me of all financial ambition–it made me feel ashamed whenever I diverted time away from the study for the pursuit of material wealth.
>
> I wanted to become a “flaneur”, a professional meditator. Sitting in cafes, lounge, unglued to desks and organization structures, sleep as long as I needed, read voraciously, and not owe any explanation to anybody.

This exactly how I feel and that’s why I am pursuing my own way of “fuck you income”.

As you might have guessed by now, I can highly recommend The Black Swan.

Men Explain Things to Me: Summary & Review

Lucio Buffalmano · 16 January 2019 · Archived copy · Original

Men Explain Things to Me is a collection of essays by Rebecca Solnit, and it is considered to be a feminist manifesto.

Contents

- Bullet Summary
- Full Summary
  - Murder is Extreme Authoritarianism
  - Women Taught to Defend, Men Not Told Not to Offend
  - We Win Together
  - Men Harassing Women Are At Large
  - Volunteer Police Force
- CONS
- PROS
- Review

Bullet Summary

- Violence does not have a race, religion or nationality but it has a gender: and it's the male gender
- But, of course, there are plenty of good men
- We win together

Full Summary

About the Author: Rebecca Solnit is an American writer, author, and journalist. She received a master's degree in journalism and writes about different topics including gender issues, the environment, and politics. She said her father was an abusive man who hated women.

Murder is Extreme Authoritarianism

The author says that murder is at the extreme end of authoritarianism.

Authoritarianism is the belief that a man has the right to decide what a woman should or should not do.
With murder, he decides whether you live or die.

My Note: In some cases, it might be. But not always
I don't fully agree here.
There are different kinds of motives behind murders. Jealousy, fit of rage.. There are different situations and in my opinion, authoritarianism is not a major or prominent motive.

The author says that it can happen also if she is obedient, because the desire to control is not assuaged by obedience.
And it's a form of entitlement mentality: the entitlement to inflict suffering and deaths.

The author goes on to list a few examples of abusive men who assault or killed their spouses -or former spouses- that wanted to leave them.
Also read:

- Signs of abusive relationship
- Psychological analysis of abusive men
- Is your boyfriend too jealous and controlling?

Women Taught to Defend, Men Not Told Not to Offend

Talking about rape, Rebecca Solnit says that university courses teach women how to prevent and avoid rape, but nobody tells men not to rape.

The author says that's part of rape culture.

My Note:
Well, she might have a point indeed, but it still makes no sense to me to say that's part of "rape culture". For two reasons:

1. It's so obvious one should not rape that everyone should know. It's the same reason you don't tell an adult "don't kill", because everyone knows it
2. It's unlikely that rapists would change behavior based on obvious recommendations

It's like complaining because nobody tells thieves not to steal. They would steal anyway.

We Win Together

I was very pleased to read the author portray feminism as "together" instead of the all too common "women VS men", which I cannot stand either when it comes from women or from men.

I quote her:

> Women's liberation has often been portrayed as a movement intent on encroaching upon or taking power and privilege away from men, as though in some dismal zero-sum game, only one gender at a time could be free and powerful.
>
> **But we are free together or slaves together.**
>
> Surely the mindset of those who think they need to win, to dominate, to punish, to reign supreme, must be terrible and far from free. And giving up this unachievable pursuit would be liberatory.

I could not agree more.
Also read:

- The Fundamental Power strategies for life (developing win-win relationships is one of them)
- Power-obsessed men
- Accepting influence

Men Harassing Women Are At Large

The author cites a few cases of beating, harassment and stalking in which men are rarely prosecuted and often free soon after the facts.

I have to convene here that stalking is an issue that few legislatures tackle well.
And it's not easy to tackle at all. How do you prevent stalking for example before a real crime is committed? It's not easy.
But sure we must try.

Volunteer Police Force

The author refers to “volunteer police force” as to the army of people who, also thanks to the Internet, seek to “keep women in their place” (she is indirectly referring to The Red Pill as well).
She says this is part of the larger “rape culture”.

I thought this was a very deep food for thought and indeed there might be an element of fear and/or thirst for control that pushes men to crack down on women.
The accusation was there, but I didn’t see much deep psychological analysis to back up her point of view (if you wanna see one, read this analysis of the Red Pill).

CONS

Poor Data and Statistics
The data and statistics in “Men Explain Things to Me” seemed to me more like headline-grabbing style data rather than data stemming from well combed and well put together research.
For example: “*a woman is beaten every 9 seconds in this country*” says very little to me.
How many men are beaten, how many children, how many people in general?
Good data would compare violence against women to violence in general, but that’s not what was done here.
The statistics thrown out like that is meaningless -also read How to Lie With Statistics-.

The Genies Are Not Going Back… You Sure?
The author says that social conquest and victory are forever and there is no going back. I very much disagree.
Not only because it’s not written anywhere that one cannot back, but because empirical evidence from history shows the opposite.
Iran went back to the veil, the world plunged back to the Middle Age and we are still stupid enough to wage plenty of wars.
No, genies do go back.
And that’s why it’s our duty to make sure they stay out and that we pull out more of them.

Little Original Content

The book spent, in my opinion, way too long on Strauss Khan's, Virginia Wolfe and anecdotes.
I was expecting some original work and thoughts, but some of the content was more like a commentary or criticism of past events.

Victim Mentality?
At times, I feel there is some victim mentality here. When the author talks about all women knowing the feeling that "this is not their world" to me feels like disempowering, victim mentality.

PROS

What I liked most of "Men Explain Things to Me" is the bridge-building element of it. It's a book about positive change, not a book against men.

Actually, it goes even one step further, saying that we win together. And that, won me over.

Review

I have reviewed a few anti-feminist books such as The Feminist Lie and Men on Strike and was really curious to read on some influential feminist work.

I have to admit: I approached "Men Explain Things to Me" thinking I wasn't going to like it.
Well, I don't think it's the best book ever for gathering information because of weak data, over-reliance on anecdotes, and the usual gleaning over of gender differences in biology and psychology.

But overall, I actually enjoyed "Men Explain Things to Me".

The Little Book of Stoicism: Summary & Review

Lucio Buffalmano · 2 February 2019 · Archived copy · Original

The Little Book of Stoicism (2019) is a concise, yet deep overview of Stoicism. Jonas Salzgeber's goal is to provide the reader with a manual choice for an enlightened, Stoic life.

Bullet Summary

- Stoicism is a practical philosophy on how to live well
- The modern positive philosophy is basically confirming (and repeating) what the old Stoics applied thousands of years ago
- We're responsible -and capable- of controlling our happiness despite what happens around us

Full Summary

Jonas Salzgeber begins *The Little Book of Stoicism* by saying that he learned all kinds of subjects in school.
All kinds of them, except, well… How to actually *live* well.

And that's exactly what the ancient world philosophy used to be helpful for: a practical school of thought to help people lead better lives.
Stoicism was one of the best schools when it came to groundbreaking ideas on self-empowerment. And Salzgeber sets out to explain to his readers, in simple words, plain English, and with practical examples, what Stoicism is all about.

Stoicism: An Overview

Stoicism is a *practical* philosophy on how to improve our characters, control our mental states despite external circumstances and, overall, live a good life.

So much was stoicism a practical philosophy that **stoics saw themselves as warriors of the mind**.
What really mattered for stoics was how well you could apply the principles to make a real difference in your character and in the quality of your life.

After a long dark age in which Stoicism fell by the wayside of philosophy, it's now finally staging a comeback into

mainstream self-development.
It started with Viktor Frankl, author of *Man'sSearch for Meaning*, and got more impetus thanks to popular recent authors such as Ryan Holiday.
Positive psychology, by accident or by influence, is also helping the spread of Stoicism by confirming with "recent" studies what Stoics have been saying and practicing millennia ago -Salzgeber says a good start on positive psychology is "*The Happiness Advantage*" by Shawn Achor-.

Whatever is happening to Stoicism though, this truth won't change: it's an incredibly helpful philosophy and you can only improve your life when you will start practicing it.

The Stoic Happiness Triangle

The Stoic Happiness triangle could be a registered trademark of Jonas Salzgeber.
He devised it as a tool to explain Stoicism in a way that it's easier for the new students to remember and understand some of the basic tenets of Stoicism.

At the center of the triangle is eudaimonia, which is the ultimate goal of the philosophy: a thriving life.
The three angles of the triangle, partially reinterpreted with my words for brevity, are:

- **Arete**: strive to always express your highest self
- **Selective focus**: focus on what you can control, and take the rest as it comes
- **Take responsibility for your mental state**: you are responsible for how you feel. Whatever happens around you cannot impact you negatively unless you allow it

Jonas calls the "tower of strength" the decision of not giving outside events power over you, and I could not agree more.

This is of course not an easy task.
As a former mentor of mine once told me, it's a "mountain without a peak". Such as, it's a life endeavor. You get better and better yet never really reach a finish line.
Your Stoic pursuit is a never-ending journey.
But that's also the beauty of it: since it's such a sweet journey, walking the path is a reward in itself.

You Must Only Do Your Best

This is one of my favorite concepts -and there are *many* great concepts-.

Salzgeber says that you will never be perfect in all you do.
And that's OK.
Sometimes you won't even *know* what's the best thing to do, let alone be perfect at it.
And that's also OK.
Your goal is not perfection. Your goal is "only" to act with your best intentions and to do your best, given the constraints of your current knowledge and circumstances.
"Just" do your best. No less, no more.

Do It For Your Values, Not For An External Prize

Salzgeber says that we must strive to be our best selves for ourselves and for the pleasure of withholding our values.

Chances are that we will also reap more life benefits when we strive to do our best.
But we should never do it for the befits alone which, if they happen, are only the cherry on top of the pie.
This also ties back to focusing on what you can control: the reward is not under your control. Your actions are.

How to Become a Stoic

Salzgeber dedicates a major portion of his work to teaching the readers how to become practicing Stoics.

He lists 55 different practices to get you well on your way to making you a happier, healthier, and stronger human being.
They are all great, and here I pick a few I particularly liked:

- Art of Acquiescence: Accept And Love Whatever Happens

Instead of fighting, aggressing, pushing back, and complaining… Try accepting instead.
I believe this is an important message in a world of self-help that sometimes seems to perversely yell to people that "you can change anything".
Yeah, maybe you can change quite a few things. But maybe you can also accept a few of them and move on?
And especially for those things you can hardly change, the art of acquiescence will definitely help improve your life.

I particularly liked Jonas' words when he says:

> I try to accept everything as if I had chosen it

- Win at what matters

Here the author exhorts focusing on what really matters to us and spending our time wisely.
Because many of us live like we're going to live forever, squandering our time only to realize too late that we're running late.

- Equanimity game

Here's the author quote Brian Johnson, a guy whom I also love and listed in my "*best free book summaries websites*" list.
The equanimity game consists in catching your mind going into negative or unproductive states and see how quickly you can get back to a healthier, happier, or more productive state.

The equanimity game is like training for your mind.
And the result is a stronger mind and a happier life.

- Take action

The author reflects on how many of us allow rude behavior to go on unchecked while we bottle up our anger and steam inside… Instead of simply asking the person to fix their behavior.

That's very true and something that most of us can improve on. Especially the more passive-aggressive ones. You can read more on 8 Keys to Eliminating Passive-Aggressiveness, Assertiveness: How to Stand Up For Yourself, and People Skills.

Real-Life Applications

The Little Book of Stoicism is all about practical applications:

Enjoy Things In Life Without Becoming Materialistic
Salzgeber says that Stoicism is about enjoying the beautiful things that life has to offer without clinging to them.
And I loved that.
This idea of loving and enjoying life, including material aspects of it, but without descending into a hedonistic treadmill of consumerism is a concept I hold dear.

De-link Happiness From External Circumstances
A crucial tenet of Stoicism is that of not allowing external circumstances of dictating our moods, happiness, and mental states.
A real power of strength, as the author puts it.

Everything's Training
I love the idea of looking at life as a big training. It helps develop a growth mindset, lowers the pressure, improves your performance and, finally, it increases your ability to learn from your mistakes.

Stoic Quotes

The Little Book of Stoicism has a plethora of awesome ideas and great quotes.
These are some of the quotes I liked most.

On going after truth, not dogmas:

> Zeno (founder of Stoicism) is our friend. But truth is an even greater friend.

On Stoicism as a Philosophy for Life:

> Just as there is no use in medical study unless it leads to the health of the human body, so there is no use to a philosophical doctrine unless it leads to the virtue of the human soul

On focusing on process more than on results (this also reminded me of the role of luck and chance in life as in *Fooled by Randomness* and *The Black Swan*):

> The wise man looks to the purpose of all actions, not their consequences; beginnings are in our power but Fortune judges the outcome, and I do not grant her a verdict upon me

On starting on your Stoic journey:

> How long are you going to wait before you demand the best of yourself?

There were a few passages that made me chuckle, for example:

> The idea of Stoicism (…) is finding its way back into the lives of ordinary people like you and me (no offense).

On freedom, materialism, and happiness:

> You don't need more and more stuff. You need less. And you'll be freer.

And finally:

> **True wealth lies in wanting less**.

CONS

Not Fully Agree on Forgiving & Kindness
Albeit I love and wholeheartedly agree with 98% of what the author and Stoicism profess, in that 2% there is what in my opinion is a bit too much of a "live and let live" or "water off a duck's back" type of attitude.
The idea of not fighting back when you're treated meanly is one that I respect and that has a place in life.

However, I see pushing back on both meanness and on the assholes of this life as not just something you do for yourself, but something you do for the world at large as well.
That's one of the founding credo of this website. But then again, I write on a website called "the power moves" :).

Some Repetitions Sometimes
The author says that the story of Hercules bears repeating. I'm more the type of reader who likes streamlined texts with no repetitions whatsoever. So at times, I thought the book could have been condensed a bit further.
But this is a con that you will find in most of my book reviews, and *The Little Book of Stoicism* is well within reason. Especially if you consider the vast amount of wisdom it packs in what's, after all, still a small package.

PROS

I thoroughly enjoyed The Little Book of Stoicism, and I think these are some of its biggest pros:

- Kettle powder of great mindsets

There is a crazy high amount of concentrated life-changing wisdom here.

- Wonderful overview of Stoicism

If you want to get an overview of Stoicism, from its history to its most life-changing ideas, this is your book.

- Simple and practical

Salzgeber shows a knack for simplifying great ideas. The Little Book of Stoicism will clarify this wonderful philosophy even to complete beginners.

- Highly effective self-help manual

Finally, *The Little Book of Stoicism* is one of the best self-help manuals available.
The author starts it off by saying that school doesn't teach you how to live, and by the time he ends it he does a great job of filling in for our educational system :).

Review

I read The Little Book of Stoicism in one fell swoop on a long-haul flight back to Europe.
And albeit sitting in a cramped airplane is not most people's definition of a good time -especially when children sit nearby :)- this book made it a really enjoyable flight.

For the sake of disclosure, I must say that this is probably the first review where I have been in touch with the author before reading the book.
But I also feel confident that I can keep my impartiality in my reviews.
I respect my readers, my website, and my values too much to do anything else but write high-quality reviews -and that includes no favoritism-.

The Little Book of Stoicism is a great read and I can highly recommend it.
If one were to ask me what they should read to understand stoicism, I would preface my answer saying that I'm not the biggest expert in the field. And then the first book I would recommend to them is The Little Book of Stoicism.

Fundamentals of Female Dynamics: Summary & Review

Lucio Buffalmano · 2 February 2019 · Archived copy · Original

Fundamentals of Female Dynamics is a dating advice book by Michael Knight that explains how dating and female psychology works.
I found it to be one of the *best dating books for guys* I have had the pleasure to read.

Contents

- Bullet Summary
- Full Summary
  - Women Are Attracted to Confident Men, Not Assholes
  - Healthy Entitlement
  - The Formula for Dating Success
  - Passing Congruence Tests
  - How to Generate Attraction
- Real-Life Applications
- CONS
- PROS
- Review

Bullet Summary

- What makes you successful at dating makes you successful at life
- Be a man people would want to associate with: the women in your life will be a reflection of your life
- Walking the line between wanting her but not needing her and showing that interest without trying to buy her affection is the intersection where dating success lies

Full Summary

Fundamentals of Female Dynamics mixes self-development content with high-quality dating advice.
Here are some of the many passages which I enjoyed:

Women Are Attracted to Confident Men, Not Assholes

Michael Knight says that high-quality women -or any woman who has had a decent childhood for that matter- won't be attracted to assholes per se.

But assholes do possess some attractive qualities such as confidence and self-esteem which makes them much more popular than, say, unconfident nice guys (also read *No More Mr. Nice Guy*).

Also, read:

- **How to be a GOOD asshole**

> How to Be A Good Asshole

I also liked Knight's take on the "neg", an old pick-up technique consisting of delivering a veiled insult to women you liked (read *The Game* and *The Mystery Method*).

He says that insults are not attractive per se, but it's the male communication that he is not dependent and needy of her approval that is attractive.
And that's why he recommends men should not be filtering their thoughts.

I agree with Knight and I can't help but quote him here because he says it better than I ever could:

> The types of women for whom you actually need to become an asshole to attract are the same ones that you should probably avoid
>
> *Michael Knight*

Also read: women like avoidants, not assholes.

Healthy Entitlement

The author says that unhealthy entitlement is to believe that you have the right to be with a woman.
This unhealthy sense of entitlement leads men to "prove" to women that they are better, and engage in what I call "one-up games" (read "combative relationships").

Healthy entitlement instead is to believe that there is no reason why you are not good enough to be with a woman.
A healthy sense of entitlement entails the belief that you are no special. But neither are the people, and the women, around you.

The author further delves into a very good analysis of the mindsets of taking action.

> Persisting through adversity is what truly separates the men from the boys.
>
> *Michael Knight*

The Formula for Dating Success

The author, an engineer by studies, concocts, shares, and explains one of the coolest formulas I have ever seen -and that even a math-challenged like myself could still understand-:

> N= W · fd · fi · G · fa · fl
>
> N= Number of dates

W= the number of women in your environment;
fd= the percentage of those women you find attractive;
fi= the percentage of women you interact with;
G= your "game constant", or your personal level of attractiveness ranging from $0 \leq G \geq 1$
fa= percentage of women who are available;
fl= percentage of women who are not made inaccessible by external circumstances

The author divides the constants into those over which you have direct control and those over which you don't have direct control on. And he says that, in the end, dating is also a numbers game.

Passing Congruence Tests

The author has a chapter on what creates women's attraction which he calls "The Four C's of Female Attraction (Cleanliness, Confidence, Congruence, Consistency).

I especially loved the part on the congruence test, also referred to as "shit tests" sometimes.
He says they are a form of flirting, and I partially agree.
And I liked how it advises the readers on effective ways of handling them. Especially when he links them to

relationships and how important it is for men to enforce their boundaries in long-term relationships.

> Shit Tests Power Dynamics: 8 Ways To Pass Shit Tests

How to Generate Attraction

The author says that there is no magic pill to generate attraction, and I like his honesty.
Yet, he still provides 8 good rules on how to help generate attraction. I invite you to get the full rules and descriptions.

A few book concepts I like are not forcing a bond and connection, not qualifying yourself, and not trying to impress.

> Confidently, unapologetically and assertively show your honest intent to a woman while simultaneously remaining outcome independent
>
> *Michael Knight*

Real-Life Applications

Don't Buy Women's Drinks As An Exchange
Knight says that buying a drink in itself is not the issue. It's the possible exchange of "my drink VS your time" that might be an issue.
If you can pay for drinks without triggering that exchange, you're all good. If it's very early in the interaction and you're not sure you can, better not to buy.

Fear of Rejection is Maladaptive: Overcome It
The author says that our fear of rejection stems from our ancestral environment of living in tribes.
In this day and age, it still makes sense to have our cavemen wiring in social circles such as office and family. But in a bar in a big city or a mall downtown?
Not so much. There it's not only not nearly as helpful, but it can also be actively harmful.

Don't Convince Logically
Knight says that a terrible mistake many men do is to try to convince women *logically* that they should be together. But that rarely, if ever, works.

Say That You're Nervous Instead of Trying to Hide It
If you're very nervous and it shows, you're better off saying rather than trying to pretend it's not there.
I agree and this is an example of positive vulnerability.

Show Your Interest
I fully agree with the author that when a woman shows interest in you, you should show interest back as well. This is something I also recommend to women in my article on mutual escalation and making him invest.

Show Her You Won't Judge Her For Being Herself
Another crucial mindset of high-quality men that leads to great relationships.

Aim For an Enjoyable Learning Process
The author says that to achieve sustainable growth and improvement, you should make your process enjoyable.
He says that "a key to making a plan sustainable is learning to enjoy the process".
I agree.

Persistence Can Work… If You're Outcome Independent
Again the author drops another pearl that goes against much common dating strategy advice when he says that, if

you can manage to be persistent while being outcome independent, then it can work.
This is something I talk about as well in uncommon dating techniques that work.

CONS

Sometimes Disagreed On Causes and Psychology
Sometimes I didn't fully agree with the author on a few analyses.
In my opinion, he seems to not give enough credit to the usefulness of resources in attracting women -read the traits that matter in the sexual market value and high-quality providers for more-.

Sometimes Disagreed on Nature VS Nurture
The author says that women (and men) who bought into the "standard narrative of dating" expect you to dine and wine them.
I don't believe much in "cultural narratives".
I believe it's more an innate drive in women to make sure he will provide and stick around more than a cultural narrative.
Similarly, I don't believe that it's a cultural narrative of double standards that makes women appear as sluts, but it's a natural consequence of the quite natural Madonna-whore dichotomy.

Some Small Typos
An editor might have caught some small typos. But again, I'm not big on typos either :).

PROS

I really enjoyed Fundamentals of Female Dynamics and I agree with much of what the other says.
These are some of the best features:

- Great analysis

Albeit I don't agree with everything -obviously-, I find the author to have a very good grasp of dating dynamics and of psychology. This is something that is rather uncommon in the dating industry.

- Genuine

Knight espouses and teaches a very genuine form of dating and self-development.

- Dating advice for high-quality men

The author himself says that what it takes to be successful in dating is what will make you successful in life.
I agree, this is the type of approach that makes high-quality, securely attached men.
And he manages to convey those traits very well in his work.

In Knight's words:

> Lead a life that you are proud of, and thus a woman who shares your values would be proud to join.
>
> *Michael Knight*

Review

For full disclosure, this is only the second review I have ever written where I have been in touch with the author before reading the book, which was kindly provided by the author himself.

However, the dynamics of how we got in touch say everything about the quality of this book.
I was writing my review for *How to Be a 3% Man* and, as it's often the case, I was searching for other reviews

online..
That's when I stumbled upon Michael's work. I agreed with a lot of what he said and I thought his analysis was uncommonly deep and spot on.
That's when I reached out to him.

When I finally could get myself into the book a few weeks later, my first impressions were confirmed: I loved it. Unluckily, *Fundamentals of Female Dynamics* is also proof that popularity is not a good indicator of quality. Too many more popular titles either can't hold a candle to this concise text or share sub-par, sometimes even counterproductive advice.

On the other hand, good for you who are bucking the trend and reading this review: now you can get your hands on this little pearl :).

In a nutshell:
I loved *Fundamentals of Female Dynamics* and it's now one of my top recommended dating books for men.

The Power of a Positive No: Summary & Review

Lucio Buffalmano · 3 February 2019 · Archived copy · Original

"*The Power of a Positive No*" (2007) teaches readers how to say no and how to be more assertive in negotiations as well in life.

Contents

- Bullet Summary
- Full Summary
  - No Enables Yeses
  - Why Saying No Is Difficult
  - The Three Approaches to Saying No
  - Solution: The Positive No
  - Steps to a Positive No
- Real-Life Applications
- Great Quotes
- Also Read
- CONS
- PROS
- Review

Bullet Summary

- "Nos" are necessary for the "yeses" of your life
- Find and communicate what you must say yes to before you deliver your no
- End with a yes to find a mutually satisfactory agreement

Full Summary

About The Author: William Ury is an American anthropologist, academic, and negotiation expert. He is one of the co-founders of the Harvard Program on Negotiation. He also co-authored the negotiation classic "*Getting to Yes*" and "*Getting Past No*".

No Enables Yeses

The author says that our nos enable our yeses.
You cannot avoid saying no to some things in life if you want to say yes to what really matters to you.

In this sense, learning to say no enables you to live a fuller, richer, happier life by prioritizing what's important.

Why Saying No Is Difficult

The author says that saying no can be difficult because it sits uncomfortably between the exercise of your power and the nurturing of your relationships.

My Note: True, plus there are further sources of discomfort
I think Ury is right.
However, the "fear of no" goes deeper in my opinion. The difficulty in saying no for many arises from different

psychological sources as well. Fear, submission, lack of self-esteem, and fear of judgment, are also major stumbling blocks for people who have trouble saying no.
Also, read "No More Mr. Nice Guy" and for a deeper approach check out **Power University**.

The Three Approaches to Saying No

The author says there are three main approaches to saying no:

1. **Accommodate**: say yes when you wanted to say no
2. **Attack**: a poor, destructive way of saying no
3. **Avoid**: try to avoid any commitment, neither yes nor no

The accommodation is an unhealthy yes because it neglects our real interests and buys a false temporary peace. In the long run, it's likely instead that it will do the opposite by growing our resentment and our discontent and it will make us more and more passive-aggressive.

Solution: The Positive No

A "normal" no starts with a no and ends with a no.

A positive no instead begins with a no and ends with a more conciliatory tone.
Often, it can end with a yes.

The key to a positive no is respect.
Respect for yourself *and* for the other individual.

Example of Positive No

How does it actually work?
Take for example a ma who needs more time off from his parents to have more time with his own family.
He would say something like this (adapted from the book):

> Mom, I have a family as well, and they need me. I want to spend more time with them.
> I will not be coming to visit every weekend anymore.
> I propose to find a solution so that we can spend some time together while I also spend the necessary time with my family.

1. The sentence starts with a matter-of-fact assertion and a declaration of intent (1. express your yes).
2. Then it delivers a final no (2. assert your no)
3. And it proceeds to seek a solution that will make everyone happy (3. propose a yes).

Steps to a Positive No

The steps to a positive no are:

1. Prepare your positive no

1. Uncover your yes
2. Empower your no
3. Respect your way to yes

2. Deliver your positive no

1. Express your yes
2. Assert your no
3. Propose a yes

3. Follow through on your positive no

1. Stay true to your yes
2. Underscore your no
3. Negotiate to yes

The author dedicates a chapter to every single step.

Real-Life Applications

Here are some of the major takeaways I took with me:

- **Base Your No On A Yes**

One of the biggest mistakes is that we ground our “nos” and refusals on what we are against. And that is more likely to lead to escalations, push-backs, and angry feelings.

Instead, we must ground our no, and deliver our “nos”, starting from what we are saying yes to.

For example, instead of saying you don’t have time for coffee with a friend, say you must spend all your time to finish an important project. Then say that’s the reason why you must say no to a coffee right now.

This is a simple, yet huge takeaway to revolutionize our communication.

- **Give Benefit of Doubt**

To make your communication easier, you might give people the benefit of the doubt.
For example, if they get into the pool without showering first, you might approach them saying that the sign that it’s mandatory to shower before getting into the pool is a little difficult to see.
It helps them save face and gives them a second chance to choose proper behavior without feeling like they lost.

- **If “No” Is Difficult: Focus on Yourself**

The author says that sometimes delivering a “no” can be difficult because we want to try to make it as sweet as possible on the receiver. That’s a way of “managing their reactions”, but their reactions are not up to you.

Your focus should be on delivering a “no” which is honest, frank, and respectful. How they react is not up to you

- **Let People Rage**

Sometimes your “no” will be met with anger. Don’t backtrack right away and don’t attack. They are probably going through the stages of acceptance and need time to accept your decision.

- **Empathize, Don’t Sympathize**

Sympathizing, or feeling their pain might lead you to drop your position. Instead, empathize, which means to show you understand them.

Great Quotes

On respect:

> Even in the face of the other's provocations, keep showing respect, remembering that you give respect not because of who they are but rather because of who you are.

This is not a motivational quote, but you can get enough of them by opening your FB or Instagram :).
This one made me laugh and it was so cute that I wanted to share it with you:

> Once I was watching the film Hook with my daughter Gabriela, then five years old.
> In one scene, Captain Hook says vehemently to Peter Pan, "I hate you! I hate you! I hate you!"
> My daughter looked up and commented: "He shouldn't say that. He should say, 'I don't like you but I'll play with you sometimes.'"
> The wisdom of opening a door is known to five-year-olds but often forgotten in adulthood.

Also Read

If you find this content interesting, then you will also find these books or lists of best books interesting:

- People Skills
- Difficult Conversations
- How to Win Friends and Influence People
- Verbal Judo
- Crucial Conversations
- Never Split The Difference (more on negotiation but great wisdom on communication psychology)

CONS

Sometimes Some Exaggerations
This is really unconnected to the content, but sometimes I felt the author exaggerated a bit too much on the examples.
Talking about a Cold War crisis he referred to "total annihilation" and "end of the world" scenarios. But as much as nuclear war would prove tragic and disastrous, it wouldn't necessarily lead to "total annihilation" of every form of life or of every human.
This is nitpicking, but I'm very big against generalizations and exaggerations :).

PROS

I loved this book because of the great wisdom it contains on proper and effective communication.
As well:

Great Real Life Examples
The Power of a Positive No helps you learn with a lot of examples. Exactly like I like it :).
And some of the examples Ury shares are very helpful when it comes to communication and influencing.

Great Influencing Techniques
Remaining calm as Hugo Chavez raged and went through the stages of acceptance: genius.

Review

I absolutely loved The Power of a Positive No: it has boatloads of great wisdom, wonderful examples, and real-life applications.

It's a great text to improve your communication, increase your influencing skills, and, as well, become a more assertive individual in life.

- Review

Bullet Summary

- Clear boundaries are essential to a healthy lifestyle
- Christians struggle with boundaries in fear they won't be lonely
- People who can't respect your boundaries were taking advantage of you

Boundaries Full Summary

About the Author: Henry Cloud is an American Christian author. He holds a BS in psychology from Southern Methodist University and a Ph.D. in clinical psychology from Biola University.

Boundaries Derive From God's Nature

Henry Cloud and John Townsend say that boundaries derive from the very nature of God.
God is a distinct being, separate from his own creations as well and he is responsible for himself. He tells us what he likes and dislikes, who he is, and who is not.

God gives us his own boundaries.
No, he doesn't set limits on what people can do, but he sets his standards. And when they behave outside his standards it's like he is saying "you can be that way if you want, but you can't come to my house".

Emotional Distance is Temporary Boundary

The author says that emotional distance is a temporary boundary for when you need to be safe, but it cannot be a long-term state or solution.

The author says though that it's good to keep your distance and emotional distance if you have been in dysfunctional relationships or abusive relationships.
And you need to make sure you see concrete signs of sustained change before even thinking of going back and opening yourself up again.

Also, read:

- 7 types of abusive men
- Abusive paranoia

Boundaries to Save Relationships

The author says that people put up with a lot to be in a relationship because our need for relationships is one of our biggest needs.

But it should be the opposite, he says.
He asks poignantly:

> How many marriages could have been saved if one spouse had followed through on the threat "if you don't stop drinking.. " or "hit me" or "yelling at the kids" I will leave until you get some treatment.

Don't Help Those Who Don't Learn

Henry Cloud introduces the law of cause and effect as a natural law that gives you the fruits of what you sowed.
And if you sow badly by drinking, smoking, and spending more than you earn, than chances are you will reap poorly.

But the law can be suspended when people keep helping and intervening to prop up the individual who keeps repeating the same bad behavior over and over again.

Sometimes this happens in codependent relationships, but in introducing the law of responsibility, the author says that people must be responsible for themselves.
And helping irresponsible people does not help them and drags you down.

Set Boundaries Or Resentment Will Grow

People who fail to set boundaries are likely to grow to loathe the people who overstate their unstated boundaries.
The author mentions people who say nothing for decades and then "express" their feeling by filing for divorce (this made me chuckle).
Or parents who "love" their children by giving their everything and giving in all the time while the children grow up feeling unloved. then those parents wonder "after all I've done?"

This is not too dissimilar from what Jordan Peterson says in *12 Rules For Life*, whereby parents who allow children who disrespect them eventually grow to resent them.

Also, read:

- Overcoming passive aggression
- How to enforce boundaries with powerful people

> **Adults live within their means and pay for their own failures**
>
> *Henry Cloud*

If Someone Asks You for Money

If people who are always in trouble ask you for money this is what you can say:

> I'm sorry you lost another job this year. But I won't lend you any money until you pay back the other loan. However I'm available to talk for support.

Boss Employee Relationship Troubles

A boss-employee relationship can trigger authority complexes in some individuals.
A boss can evoke unresolved authority issues with a parent or a teacher.

These people tend to overreact and feel they have been put down when the boss gives feedback or asks for something to be done differently.

To have boundaries, the author says, means to take responsibility for your own transfers (note: "transfer" is a phenomenon in psychology by which the patient projects love or hatred towards an authority figure).
Look within yourself and wonder why you have such strong reactions. Do they remind you of your mother or father?

My note: So true
This is very deep indeed. I have a quiz to check if you have this issue in Power University.
Also read I'm OK you're OK.

Competitive Feelings

Similarly, too strong competitive feelings at work might be unresolved issues from a childhood struggle with a sibling.

Did Your Family Make You Feel Guilty?

The author says that some people have difficulties setting boundaries because their parents and family of origin made them feel guilty for defending their own space.

People who grew up in these families still feel guilty for setting up boundaries as adults.

Boundaries Attract High-Quality People

The author says that a funny thing happens when we start setting our boundaries.
People who cannot accept our "nos", the people whom you probably don't want in your life, will disappear.
And you start attracting high-quality people who can accept your "no" instead without resorting to anger, manipulation or taking it personally.

Not taking things personally is also a hallmark of people with a growth mindset. Read here how to develop a growth mindset.

Also, read:

- High-quality women
- Low-quality women
- High-quality men
- Low-quality men

Boundaries Quotes

On being an adult:

> To be an adult you must live within your needs and pay for your own failures

On truth and knowing yourself:

> There is always safety in the truth, whether it be knowing God's truth or knowing the truth about yourself.
>
> Many people live scattered and tumultuous lives trying to live outside of their own boundaries, not accepting and expressing the truth of who they are.
>
> Honesty about who you are gives you the biblical value of integrity, or oneness.

On people who don't respect your boundaries:

> Boundaries are a "litmus test" for the quality of our relationships.
>
> Those people in our lives who can respect our boundaries will love our wills, our opinions, our separateness.
>
> Those who can't respect our boundaries are telling us that they don't love our nos. They only love our yeses, our compliance. "I only like it when you do what I want.

Real-Life Applications

Own The Problem
If you don't like your job, if you are working too much overtime, if your job is driving you crazy, you must do something about it.
Stop looking at yourself as a victim and own the problem.

CONS

Independently of one's religious creed and fully respecting Cloud's writing, knowledge, and beliefs, I always wish for more data, more psychology, and fewer scripture references.

PROS

There is some good wisdom in *Boundaries*.
I especially liked the analysis of the authority issues some people have -I know I have it- and the analysis of codependent relationships.

And the idea that people who don't respect your boundaries are there to prey on you is also in line with the philosophy of this website.

Great Audiobook Version
The reader of the audiobook version is a top speaker. Great vocal variety, great dialogues, great tonality.. Really gives life to the book and it feels like listening to a play.

Review

Boundaries have great psychological depth and, if you're religious, this is your N.1 book to draw your boundaries, learn to say no, and become more assertive.

Henry Cloud is a licensed psychologist, and it shows.

If you're not religious, you might find all the scriptures' references off-putting.
Boundaries are peppered with Biblical references. In my opinion, it was too many.
But I still enjoyed the good-quality content.

The Art of People: Summary & Review

Lucio Buffalmano · 4 February 2019 · Archived copy · Original

In *The Art of People,* Dave Kerpen teaches readers how to increase their people's skills and build strong and functioning social relationships.

Contents

- Bullet Summary
- The Art of People Summary
  - The 11 Skills to Master The Art of People
- Real-Life Applications
- CONS
- PROS
- Review

Bullet Summary

- People skills start by understanding yourself first
- Learning to understand people is key to getting along with people
- Make sure you put people in positions where they can excel

The Art of People Summary

Dave Kerpen starts telling his story of showing up to parties with Jessica Alba and Paris Hilton and being paid 5 to 10k just for being there.

Yet, he was miserable.
LA's jet-set is not the best place to build connections, he says. And he realized that to be happy, and successful both in business and in life, you need to be good with people.

I couldn't agree more.

The 11 Skills to Master The Art of People

Here is the list of the 11 skills to master the art of people:

- **Understanding yourself**

The author says that the Myers-Briggs personality test, one of the most popular tests today and one espoused by Vanessa van Edwards in *Captivate*, is actually a poor test for people's attitudes (and *he's right*).

The author says instead that the best personality test is the Enneagram of Personality.

The author says that self-awareness is the fundamental building block upon which *the art of people* is built and you can't get good with people unless you learn about yourself first.

- **Understanding people**

To understand people, you must listen more and ask deep questions.

Like for example "what's the most exciting (personal) project you're working on right now", "if you had enough money to retire, what would you do today", "if you weren't doing what you're doing right now what would you be

doing and why", "who's been the most important influence/role model on you", "if you could choose to do anything for a day, what would it be".

The author also quotes the famous statement from Dage Carnegie, author of "*How to Win Friends and Influence People*":

> **To be interested be interesting**
>
> *Dale Carnegie*

- **Meeting the right people**

The author recommends wearing something "strange" and "attention-catching".
This is an old technique that the pick-up artists called "peacocking" (*The Game*, *The Mystery Method*) and Leil Lowndes called "What's It" in *How to Talk to Anyone*.

I have never been a big fan of this theory. I believe that you can catch attention without wearing red or orange shoes.

I liked here his suggestion on leveraging LinkedIn, such as: write all schools, organizations, and activities you've been part of, adding everyone you know, ask for intro through LinkedIn instead of directly inboxing.

Also read: conversation starters and pick-up lines.

- **Connecting with people**

Always accept the drink or candy that you are being offered.

The author says that showing your authentic self is a great way of connecting with people.
He recounts a story of him not being able to fight off tears and crying on stage, as it happened to more executives right after.
They all bonded with each other and remembered that event as a courageous, life-changing day.

My Note: I agree, but I also need to warn the readers that vulnerability is not always your best choice. Also read: vulnerability is not power.

- **Influencing people**

To change people's minds avoid the sales pitch.

Dave Kerpen explains that you people don't like being sold to.
Instead, focus on storytelling. It allows you to share about yourself and it allows people to connect with you at an emotional level.
It's not a technique, it's more authentic.

- **Changing people's minds**

Don't tell people it's your idea, ban "I have an idea" or "I have a great idea".
Let them believe it's their idea instead. You can do it by feeding broad or vague strands they can flash out themselves to feel like they did it.

Finally, the author repeats a big mantra of sales books: to ask for what you need.

> **You never get what you don't ask for**

- **Teaching people**

Don't tell people how to do something, show them.

One of the keys to teaching well is to first understand what people are good at. You can spend years teaching something to someone who's not suited for the job. They will be able to teach you in a matter of weeks if it's something they're naturally good at and love doing.

- **Leading people**

Dave Kerpen says that a leader must only do three things: 1. setting a vision for your team; 2. making sure you have the right people sitting in the right position in your team, 3. making sure you have enough resources and money to succeed.

Also read: best leadership books.

- **Resolving conflicts with people**

The author recommends hiring slowly and firing fast.

People stay in dysfunctional relationships and abusive relationships for way too long. Much better to get out fast when you see the signs that relationships aren't working.

- **Inspiring people**

Inspiring the audience is about them, not you.
They don't really care about you, you must make it about them.

The author also says that when he started sharing inspiring quotes his social media following exploded.

My Note: I am not a big fan of "inspirational porn". It's empty and not the best use of your time in my opinion.

- **Keeping people happy**

The author recommends you come up with surprises and thoughtful gifts.

Another good idea similar to *Never Eat Alone* by Keith Ferrazzi is to introduce people who can be helpful to each other and mention their strengths.

Also read: The Happiness Advantage and The Happiness Project.

Real-Life Applications

Ruthless Prioritization
The author borrows the name "ruthless prioritization" from Sheryl Salzberg, author of *Lean In*, and I love the concept.
It consists of shaking ends at the beginning and at the end to signal the allotted time, going straight to the point, providing value, and doing and saying no more than necessary.

Call The Bluff
If you think someone is bluffing you should call the bluff and test their hands. Maybe they are not bluffing and then you will have an indicator they might be trustworthy. But if you realize they are bluffing, then you know what you are dealing with.

Don't Criticize Publicly
The author recommends never to criticize people in front of others. It leads to shame and resentment.
Instead, set out a 1:1 meeting and praise publicly.

CONS

"Contact Me & I'll Answer As Soon As I Can?"

Personally, I always felt odd when an author said that.
Who can make that promise?
And how can you make that promise if you want to build *meaningful* relationships, which take time and can hardly be done via Twitter or Linkedin?
It sounds more like a technique to get more followers, to be honest, so the author can write:

> The #1 LinkedIn Influencer of all time in pageviews, ahead of Bill Gates, Jack Welch, Mark Cuban and Barack Obama

That's not my style.
But probably in social media speak it might be proof of something. Though of what, I'm not sure.

Be Happy or Be Right? Relationship Power Dynamics
I disagree with this mantra of some men that in a relationship you can either be happy or right. To me, that's weak sauce. Also, read female relationship control.

Poor Example of Feedback Sandwich Technique
I think the sandwich technique to give out feedback does not work well. Everyone knows it and nobody listens to the positive part because they all know it's a fake construct to actually deliver the bad part.
To do better, check out *Thanks for The Feedback*.

Sending Private Inspirational Content?
Dave Kerpen shares how to grow your audience by sharing helpful and inspirational content (EEI: educational, entertaining, inspiring).
I'm not a fan of inspirational content, but fine.
However, I really didn't like the recommendation of sharing good content privately. I think it's overbearing. And busy people would probably not react too well to receiving even more personal messages of content *they didn't ask for*.

Don't Seek to Convince But Change Your Mindset?
The author tells the story of an argument he had with his wife and that instead of convincing her he finally changed his mindset only for his wife to eventually come around and agree with him.
I don't agree with that attitude though.

PROS

A good overview of social skills and some good tips.

Review

I got a few great new ideas from The Art of People.

I didn't agree with a few tips and recommendations but overall I think it's a good book.

- PROS
- Review

Bullet Summary

- Eat less sugar and refined carbs
- Exercise
- Get sleep, sex, and reconnect with the people around you

Full Summary

Own the Day, Own Your Life describes what an ideal, typical day would look like.

The idea is not to live your life perfectly on *one* ideal day but to move towards that ideal with healthy choices *every* day.

So let's start to see what a perfect day looks like.

1. Water, Light, Movement

As soon as you wake up, do the following:

1. Drink water (or, ideally, the water cocktail below)
2. Stand in the light for 5 to 10 minutes
3. Exercise (any kind of movement will do)

Morning Cocktail Mineral:
Filtered water
3 grams of sea salt
squeezed lemon

Water at room temperature and make sure the salt dilutes and does not stay at the bottom.

My note: Brita may be useless
the author recommends the Brita filter, yet some sources say that Brita filter often end up *increasing* bacteria counts (read the study here) and its health effects are disputed.
I'm still debating whether or not to buy a Brita, but I'm more leaning on the no side.

2. Breathing & Freezing

In this section, the author talks about breathing to oxygenate your blood and ice showers.

Here is the breathing:

1. Inhale through the nose deep into your belly
2. Exhale naturally
3. Do it until you're light-headed or feel tingling in your extremities

Light-headedness and tingling sensations are signs that your blood is oxygenating. Usually, 30 breaths are enough, but for some people, it takes up to 50.

The shower part was way too complex and long in my opinion, mixing the deep breath, hot water, then super cold for a minimum of 3 minutes, and then hot again.
the author recommends having a friend with you because you might faint and if there is water in the floor of your shower it's even risky you might drown.

Too complex for me.
A healthy life should also be a simple life to follow. If it starts getting full of complex habits and rules to follow, it becomes a chore, and I don't always see the added health benefits to add more complexity to your life.
So I will stick with my few seconds of cold showers :).

3. More Fat, Less Sugar, or Skip Breakfast

The author talks about the bonehead "war on fat" that we waged for decades and how wrong it is.
It's not fat that is harmful, but it's sugar.

My Note:
Sugar is not really harmful if it's consumed in moderation.
Also, the author says he likes smoothies for breakfast but in other health books I enjoyed the recommendation was not to go for smoothies because they break the fibers in both fruits and vegetables.

3. Supplements

Aubrey Margus sells supplements, so I made sure to take his supplements advice with a grain of salt.

The NHS also says most adults don't need supplements

In the end, out of all the supplements he suggests, I narrowed it down to the following:

- **Vitamin D** (if you live in regions with little sun during winter)
- **Pro-biotics**
- Possibly Melatonin

Magnesium might also be useful for you but not for me as I eat lots of nuts. Iron might be useful for you if you don't eat enough meat.

5. Drive Time, Alive Time

In this chapter, Margus talks about how much time we all waste on commutes. And, worst of all, what a nasty impact it has on most people's moods.

He recommends instead you practice mindfulness.
Keep your eyes open, see everything but focus on nothing.
Let elements, other cards, and pedestrians enter your field of vision, notice them but don't lock your eyes on them.
Stay on the overall picture.
Keep breathing with your belly, and become aware of everything.

Also, read:

- The Power of Now

6. The Power Plants

The author says that nicotine, caffeine, and even cocoa leaves have a place and can be useful.
Just not the way that most people use them today.

He does for example use caffeine and nicotine in the form of patches or chewing gum when working late.

Later he will also say that it's possible to enjoy marijuana and wine, as long as you don't exaggerate.

7. Doing Work & Finding Your Mission

Finding your mission means that you will not just one day, but every day in your life.

The author talks about flow and how he reaches flow (for more on flow and peak performance read Flow: *The Psychology of Optimal Performance*, *Grit*, *Deep Work*).

The author also talks about how he uses oil scents as an anchor. He says that if you get into flow while scents are wafting in the room you can replicate that experience later with the scents first.
I'm not a big believer in this technique and it feels like adding unnecessary complexity, such as preparing the oil scent, and it makes you, in a way, an addict.

8. Eat a Weird Lunch

This chapter is another good overview of healthy foods.

Eat proteins
The author recommends proteins (grass-fed beef, wild-caught salmon, free-range eggs), fibers (chia,

asparagus, avocado, greens, onions).

Go for slow carbohydrates
When it comes to carbs, go for “slow” carbs.
Carbs that are metabolized more slowly include: quinoa, sweet potatoes, fermented or sprouted grains, and some fruits.
Fibers also slow down the absorption of carbs.

Use prebiotics
No, it’s a misspelling :).
Prebiotics are food that helps your already existing gut bacteria thrive, and they include: raw asparagus, raw garlic, raw leek, onions, almonds and pistachios, and blueberries.

Probiotics
Probiotic food adds bacteria to your gut.
Good probiotic food includes sauerkraut, greek yogurt, and dark chocolate.

Omega-3
Chia, wild-caught salmon, mackerel and sardines, grass-fed beef.

Antioxidant
Eggplant, grapes, berries, tea, wine, chocolate, garlic, broccoli, brussels sprouts, cabbage, black rice, turmeric, and black pepper.

Finally, the author says you should diversify your meals.

9. The Power Nap

Aubrey Margus is a big proponent of the power nap.

And so am I, for that matter :).
Power naps are one of the reasons why I hate office jobs so much: almost nowhere can you take a power nap -and the other reason is the artificial social hierarchies-.

The author mentions a study that compared the effects of caffeine, more sleep time at night, and a power nap on people’s level of concentration. And guess which one won?
The power nap.

Binaural beats
In this chapter, the author also goes into binaural beats, which he says it’s his N.1 favorite bio-hack.
The author uses them for his power naps.
The idea behind binaural beats is that they hit sound different sound frequencies in your left and right ear which can affect how you think and feel.
You can find a few of them on YouTube and there are also apps available: remember to use headphones though.

My Note: I haven’t tried binaural beats yet.

10. Training

This is what the author proposes:

- Mobility and flexibility – 15 minutes
- Cardio – 10 minutes
- Muscular endurance – 8 minutes
- Strength – 5 minutes

- Power – 3 minutes (maximum force workout)

After training it's also the best time to enjoy a wine or some cannabis. The author enjoys this time to connect with people as well.

11. Dinner

If there is a time for bread, that is for dinner, and after the workout.

Chocolate
The author also talks about chocolate here and popcorn. He says that most chocolate bars today are not real chocolate but add dairy and a ton of sugar which makes them unhealthy.
Natural chocolate is a healthy food and you should consume it. As long as it's in its natural state.

Popcorn
Popcorn is similar, with commercial brands adding highly unhealthy trans-fats and omega-6 vegetable oils.

Tell Yourself Positive Things About the Food You'll Eat
What you think and what you tell yourself about the food that you are about to eat will influence how your body will receive that food.
So think positively about the food you are about to eat, think that it's healthy and it's going to nourish you.

Eat Slow & Chew Well
Digestion starts in your mouth. People who complain of stomach pain are often fast eaters.
Instead, eat slowly and chew your food well.

Foods to Help You Digest
Foods that help you digest quicker include pineapple, papaya, and ginger. Ginger can help you digest up to 50% quicker.
Since Margus prepares his perfect day with sex in mind, digesting quicker will help you get over the "fullness" feeling quicker and, later enjoy a fuller feeling in your pants quicker (referring to guys here of course).

Avoid Gas-Inducing Food
If you have sex as an appetizer in mind, then it's best if you avoid foods that make you full of gas.
Avoid or limit the fermentable types of fibers like legumes, Brussels sprouts, and asparagus.

Dessert: Slow Down Sugar Intake
Your goal is always to slow down the absorption of sugar. And the two best foods to help you slow it down are fat and fiber.
That's why a sweet dessert after a high-fat meal if you must have that dessert, is the best solution. Add cinnamon for further sugar intake slowdown.
The author also recommends stevia and monk fruit as healthier options for sweeteners.

Go For a Walk
Low-intensity physical exercise after a meal also helps to drop sugar levels.

12. Hangover Cure

Aubrey Margus doesn't recommend you exaggerate with the alcohol of course, but he knows that sometimes it will happen.
This is what to do when you go down a bit harder on that wine:

1. Re-hydrate: drink lots of water, 1 liter, until you pee twice
2. Use molybdenum supplements, 300mcg evening and morning
3. Green tea like matcha balances out glutamate

13. More, Better Sex

To improve your sex life, here is the Own the Day advice to increase testosterone:

- Eat fat
- Get sleep
- Lift heavy

Marcus Aubrey says that it's crazy that in America people talk about "getting lucky" and "scoring" with their own partners. He recommends sex every day and trying something new.

Avoid pornography as it's unrealistic and focus on your partner.
Oh, and lastly, all the advice on not masturbating is bogus.

14. Reduce Stress

Marcus' advice to reduce stress is to limit the tasks and work-related activities to the ones you really need and to increase the time for yourself and the ones you love.

His mantra is: do it well or don't do it at all.
Also, read:

- Essentialism
- Deep Work

> **Do it well or don't do it at all**

15. Sleep

The author says that our ancestors probably didn't sleep for 8 hours straight but slept multiple times during the day at different intervals.

You can do the same if you can afford but, in any case, you should stop stressing about how many hours you sleep per night.
You can focus instead on your 90 minutes of sleep cycles per week, which will make it easier to manage and remove the pressure from every single night.

16. Bring it Home

Here Margus talks about visualizing, the placebo effect -including Dispenza's work– and our need for community and tribe -including *Tribe* by Sebastian Junger-.
I partially agree with what he says but found several major flaws in both the two books he mentions.

He says there are four keys to positive and compelling action:

1. Know what and how to do it
2. Believe it will work
3. See the value in what you're doing
4. Get support from the people around

Real-Life Applications

Avoid Cold Beverages With Your Meal
I loved this recommendation as it was a mistake I often did.

Lots of liquids are not good with your meal anyway. And cold ones further hamper and slow down your digestion.

Eat Fat & Fiber With Sugar
If you must eat carbs, eat them with fat and fiber.

CONS

Albeit I liked "Own the Day, Own Your Life", there were also some parts that didn't convince me.

Geeky, "Bio-Hack" Approach to Life
Most of all, it's the geeky approach of measuring grams, repeating the "process of maximum health" and dividing foods into "bad and good" that I'm not a fan of.
And the "bio-hack" half-baked solutions that come with it.
Let a nutrition Ph.D. tell you why it's BS:

> **Layne**: quit believing the bio-hacking BS

Use Inefficient Tools to Eat Slow?
I didn't like the recommendation of using less efficient tools to force yourself to eat slowly. If you know that you should eat slowly and chew well, then eat slowly! No need to handicap yourself to follow through on something you know you must do.

Masochist Sex Advice
I didn't particularly enjoy the recommendation of "having to try something new" and experiencing pain and S&M. I think that's up to people's tastes and preferences.

Some Made-Up Evolutionary Psychology
The author says that our ancestors slept at different times of the day. However, he has no way of knowing that for sure.
It's an opinion, an informed opinion at the very best, but not a fact.
He also says that we are "*programmed to love others and even sacrifice ourselves for the good of the tribe*", which is simplistic evolutionary psychology at best (*see here the best books on evolutionary psychology*).

Sleep Advice Is Too General
The author provides readers with a sleeping target to reach. But sleep is very personal and different people need different times. It's not good, in my opinion, to give a general, catch-all target.

Unnecessary "Bro Swearing"
All the swearing reminded me of "*The Subtle Art of Not Giving a Fuck*": good content, but all the swearing just felt try-hard "trying to sound cool".
Especially saying "goddamn miracle" was really unnecessary in my opinion.

Some Historical "Evidence" Was Forced
The author uses the example of Sparta as an example of a culture of sacrifice, virtues, and strength that underpinned its success.
That's preposterous.
Athens kicked Sparta's asses multiple times and in the course of history, it's been much more powerful and influential without any of Sparta's militarism.

Some Over-Optimization Advice Like Sleeping With the Dominant Hand on Top
The author says that to maximize your safety you should sleep on the side that leaves your dominant hand on top.
Why? So that if an intruder breaks in then you're at your most ready.
But people move during their sleep. And you just gain a split second for an event that will probably never happen in

your life -while you might be sleeping on the side you like least for a lifetime-.

PROS

- Compact
- Packed with actionable advice
- Overall semi-sensible
- Very good overview of health and nutrition

Review

Own the Day, Own Your Life is a good book with a "life optimization" flavor.

However, the typical demonizing of "bad foods" and the misplaced hyping of "good foods" is misleading.
And the overselling of supplements leads me to take one star off.

At times, I also felt the recommended habits were a bit geeky, overly complex, and overly-engineered approach to living.
See more here.

https://thepowermoves.com/biohacking-porn/
But it's still a good book.

Overall, *Own the Day, Own Your Life* is a solid resource to provide an overview of a healthy and "optimized" living approach to life.

Covert Power Moves: How Men Lose Status & Attraction, Without Realizing (& How to Fix It)

Lucio Buffalmano · 7 February 2019 · Archived copy · Original

Most men go around life socially blind.

They lose status, respect and attraction… And don't even realize it.

Most people may refer to this as **covert aggression**, but it's different.
At TPM, we've identified a more nuanced phenomenon: the **Covert Power Move™**. While covert aggression isn't an obvious attack, even if covert, a power move is often disguised as a neutral interaction.

By the end of this article, you'll see why 'aggression' is just the tip of the iceberg.

Covert Power Moves™ Defined (TPM Concept):
Behaviors or statements that appear neutral, friendly, or supportive, but subtly increase the actor's power while disempowering the target. Unlike traditional aggression, covert aggression, or passive aggression, covert power moves can disguise themselves as compliments, encouragement, apologies, or neutral interactions, allowing the actor to 'retreat under cover' and deny ill intent. Covert power moves can disempower even when not intended to harm.

P.S.
Here's what a student of ours said about this concept:

J[redacted]a... Jul 9, 2021, 9:20 PM (16 hours ago)
to The

Thank you very much, Lucio! Wow, the guide is extensive. I can't wait to read it.

I also want to thank you for creating the The Power University. It has really been an eye opener for me on so many levels. I'm only 10% in. I especially find the aspect of subtle and hidden power moves totally mind-blowing. I haven't recognized them before, in others and in myself. I have only felt the result of it, within myself; hidden agression and being too nice. And that is just so painful! I am practicing your knowledge in many of my relationships now because I want them to be better. I feel so lucky to have come across your work Thank you for teaching me the most valuable currency in life.

> **PU alumnus**: Eye-opener (…) the subtle and hidden power moves totally mind-blowing (…) I feel so lucky (…) Thank you for teaching me the most valuable currency in life

By the end of this article, you will also learn the same.

Here are 3 common covert power moves:

- 4. “You Can Do It”
  - Case Study
  - 4.2. “Keep Up The Great Work”
- Understanding Covert Power Moves
  - Covert aggression is convenient for the attacker
  - They disempower you, even without ill intent
  - Calibration and smoothness are key

1. “I Was Busy”

General rule:

⚖ **The more people are too busy for you, the more subservient to them you are**.

Sub-communication:

> ⍰ **I was busy (with more important things) to take care of your (less important) thing**

It’s even worse if the topic is personal or about meeting.
Then YOU are a low(er) priority

Even if they were genuinely busy it’s disempowering.

Think about it.
Would anyone be too busy for:

- The boss at the job they love/need
- The dream man they want to be forever with
- The friend they admire

Exactly.
It’s not about busyness, but about priorities.
“I’m too busy” ⍰ “you aren’t high enough a priority”.

Similar expressions are:

> I didn’t have time
>
> I had to take care of a few things
>
> I meant to get back to you, but then a few things came up…

Case Study

Imagine:

> **You**: Hi Gina, I wrote you the other day to schedule a coffee
> **Her**: Yes, sorry I was crazy busy these days

It's a terrible text because it thread-expands her non-reply.
Now, let's analyze common responses:

Bad Responses

- **What were you busy with?** It thread-expands on the reasons to avoid you. If "busy" was an excuse, it forces her to lie
- **OK, when are you free?** Chases too soon. Sub-communicates you're always free for her, while she's *not* free for you

These also commit this huge exchange mistake:

⚠ **Don't ask without leverage or you turn into a value-taker to avoid**
Not being free for you = no leverage (yet). When you ask without leverage, you dig deeper into the value-hole. You become a value-taker to avoid.

Better Responses

Here's how a more power-aware man could respond:

- "***No worries, life happens***". You don't dig deeper. But you're still one-down
- ***"All good, sorry I didn't follow up***". Implies you're also busy. Good for business as well
- "***All cool. I just got back in town and wanted to ping you***". Implies you weren't waiting around for her and got your own life
  - + "*How have you been*", great technique to move on fast after a power loss. And reminds her that she's not traveling to cool places like you

And a real-life example:

> **Me**: speaking of food, let's do a coffee or a meal together one of these days
> **Her**: Ok if I'm not busy
> **Me**: LOL that sounds like game playing :D
> **Her**: ahaha what do you mean?
> **Me**: you know, like "I'm busy, I'm hard to get… Chase me" :D

1.2. "Sorry I didn't reply"

Here are the possible responses ranked in terms of effectiveness:

Clueless	Smarter	Power Mover
No you didn't ☹	*All good*	*Same :D.. just got back from a crazy world tour (share picture). How have you been!*
I was waiting for you	*We all get busy*	*Better that way, I was a monk during our launch phase ⍰. Thankfully we're done now! (share pic of champagne celebration).*
Why didn't you	*Yeah, life can get hectic sometimes. I heard (her employer name) pushes you guys hard ⍰*	*Reply…* (pretend don't understand)*? Oh right (you just remembered her). Sorry I'm really bad with names..* (fake embarrassed)*?*

⍰⍰ The "power mover" overdoes it. It's reactive, "power bean-counting", and too high-investment

⍰ Handle It Eagle Style: Empathize Or Ignore

The most "un-needy" approach ignores or empathizes.

Something like:

> **You**: all good, everyone's so busy in this city :)

Leave it to her to show interest and re-initiate.
If not, on to new opportunities.

2. “I’m Sorry”

General rule:

⚖ **The more people are “sorry”, the more you’re framed as the victim**

And, in general, the person who can hurt or harm the other the most has more power.
That’s why apologies often disempower you.

Imagine these situations:

> **Her**: Honey, I’m sorry you felt hurt that me and Max spoke at the party
>
> ⍰ Sub-communication: *I’m sorry (that you’re so afraid of losing me)*

And:

> **Coach**: I’m sorry that I yelled at you in front of the team
>
> ⍰ Sub-communication: “*I’m sorry that I (can) yell at you (while you have to take it) in front of the team (and ruined your reputation… Because I can ruin your reputation).*

And a video example:

> **Him**: “I’m sorry for what happened (…)
> I called you an asshole, I kicked you out, I called you a whore… I’m sorry “

He reminds her that he kicked her out (dominant) and that he made her feel bad (powerful).

⍰⍰ ⍰ Notice her reaction: completely ignores it, and moves on with her new frame.
Perfect.

The Made-Up Sorry ⍰

Some people invent reasons to say “sorry” just to disempower you.
A good way to both check it and downplay it at the same time:

> **Her**: I’m sorry if I was rude to you
> **You**: If you were rude, don’t do it anymore. But I didn’t even notice

Read more here.
⍰ Another example here.

Case Study

In general:

- **Display you weren’t too hurt or bothered**
  - Minimize the time spent on the “sorry” to avoid expanding on a negative.
    ⍰ Remember: you’re NOT the type of guy to be “sorry” for

- **Focus on their mistake more than your hurt**
- **Focus on expectations & solutions** to ensure it won't happen again. Crucial in closer relationships

Examples

Valid approaches include:

- … <— Say nothing, nod or just say "OK". Let them stew in the doubt of whether you accept or not
- ***All good, I'm doing great. Anyway, I've heard that…***
- ***I forgive you*** <— A power move that shifts the power from them to you. YOU had the power to forgive or not, and decided to
- ***⍰ It's not about sorry or not sorry. I expect better*** <— This fantastic judge-style response shifts the focus to your high expectations, sub-communicating high-value

⍰ Example

If you have leverage and someone was inconsiderate, don't be afraid of being assertive. For example:

> **Me**: I don't know what to do with your sorry. I'm looking for a woman who shows up

She *did* show up next time.
And she even quit playing the games she was playing. Still not enough to make for a great LTR, but still much better for as long as we dated.

⍰ Calibration

Note: This is a high-pressure response.
Use it only when the other person has shown a strong disregard for you or your time. In a healthy relationship, this would be over-assertiveness (Value-Taking).

Please don't think ALL apologies are bad:

Apologizing is often a good sign

Due apologies are green flags of good character.
To recognize good apologies VS bad ones, see Power University.

"Sorry" Re-Empowers You If:

- **Repeated and/or heartfelt**
- **Accompanied by fear** of losing you
- **Accompanied by concrete actions and** reparations
- **Costly**, through effort or their own disempowerment
  Ie.:
  - Public apologies
  - Traveling to meet you
- **From higher-power people** who aren't expected to apologize to lower-ranks

Example:
A high-ranking legal expert in our business yelled at anyone.
She did it to me, too. But she came to my table to apologize while I was at lunch with a colleague. That was a meaningful apology because she was much higher rank than I was.

3. "Well Done"

How does this LinkedIn post feel to you?

> **Him**: She has done an amazing job (…) For that reason, we are giving her an opportunity to work in Brazil for the next 3 months

This is patronizing.

It puts off high-power men.

> ⍰ **Sub-communication**: I'm the judge of her work and becuase she made me happy, we give her this little, time-limited reward (but if I judged her job poorly, she wouldn't get anything)

The power is all on him.

It's like a dog's treat.

The gift is conditional on you executing *his* tasks the way *he* likes.
Stop doing the job the way he likes, and you're out of treats.

How about Alex finds her job in Brazil for as long as she likes?

⍰⍰ **Your approval first**
It's OK to feel emotionally validated by awards and rewards.
But remember: you're bigger than any employer. And the approval that matters the most is your own.

⍰ Case Study

Think about it, and we'll review it in the case studies lesson in Power University.

4. "You Can Do It"

Such as:

- You can do it
- I believe in you
- Go there and smash it

⍰ Sub-communication:

1. **Their encouragement is helpful**. It empowers *them*, not you
2. **You *need* their encouragement**. It disempowers you
3. **They're above you**, or more advanced because people below don't encourage superiors
4. **The end result is crucial**: often a disempowering mindset (see "Ultimate Power")

Even worse are encouragements like:

- **Be confident / strong / cool**

Which sub-communicates you are not confident / strong / cool enough.

A colleague once told me before a sales call:

> **Him**: Don't be afraid, remember that he shits and farts just like anyone else

Superficially supportive and encouraging.
But opened the mentally disempowering "fear" thread. And implied I likely was afraid, disempowering me to everyone in earshot.

Case Study

1. **Don't say "yes I will be"** because that confirms that their encouragement was, at least, fair to give
2. **Careful denying you're not worried**, especially if you are. Denials still expand negative threads and seed

doubt. Better to avoid altogether

3. **Ignore / make little of it**. A very detached “thanks”, without looking at them, can do

Or:

4. **Make fun of the uselessness of the “encouragement”**. Ie.: “*Yes, I was actually planning on going there scared sh*tless, but thanks for reminding not to*“.

4.2. “Keep Up The Great Work”

The speaker:

- **Self-frames as judge** of your work
- **Self-frames as experts** to judge
- **Places you below them**, or at least not above them since lower-status people don’t usually judge superiors

However, since it’s a stock sentence, don’t necessarily make too much out of it.

More techniques in PU.

Understanding Covert Power Moves

In simpler words, a covert power move is…

Anything that disempowers you, but that on the surface seems neutral, apologetic, or even friendly.

Some power moves are obvious, and anyone can recognize them as attempts at asserting dominance.

But cover power moves are more hidden.
Sometimes they’re “jokes”, tests, or hide behind conventions or truthful sounding statements.

Because they’re covert, many men miss them.

It’s in the sub-communication that you lose status, respect, and attraction

Most men don't even understand the basics of power dynamics and social power dynamics, after all.
Let alone if they can understand the more advanced stuff.

But, as they say, **life doesn't care about your ignorance.**
You still lose power, status, and attraction.
And fail to assess characters.

Covert aggression is convenient for the attacker

Although not all covert power moves are aggressive, some can be.

Covert aggression is convenient for the attacker because it can be highly damaging, with little risks and costs.

Quoting from *The Oxford Handbook of Evolutionary Psychology and Romantic Relationships*:

> Compared to direct tactics of overt aggression, third parties can more easily dispute as to whether indirect, covert tactics were intentionally meant to harm
> (…)
> are less likely to open aggressors up to revenge and third-party retaliation, making them ideal for actors aiming to avoid costly injury (Bjorkqvist, 1994; Krems, 2016; Vaillancourt, 2013)

Ie.:

- **Indirect attackers can deny the attack**, or deny ill-intent
- **Indirect attackers face less revenge or retaliation**, often because the victim didn't even realize the attack

They disempower you, even without ill intent

The covert power moves we focus on harm you.

However, people aren't always ill-intentioned.

Some people project their disempowering mindsets onto you.
Or they may be clueless and don't even realize they're disempowering.

So don't conclude that every covert power move is a red flag.

Also, many covert power moves are *both* honest, *and* disempowering.

Calibration and smoothness are key

Handling covert power moves requires slightly more advanced skills.

Dating for High-Value Women: 5 Myths Debunked With High-Value Male Psychology (Start Here)

Lucio Buffalmano · 8 February 2019 · Archived copy · Original

⚠ **Archived, but timeless: This page was written when TPM served both men and women.**
While TPM now focuses exclusively on helping men gain power, respect, and attraction, we're keeping this page available for women who still want psychology-based dating strategies that include the perspective of ambitious, high-value men.

The dating advice on this website may be different than what you are used to.

And that's because **most dating advice for women is unscientific, generic, and coming from teachers with limited experience and limited knowledge of male psychology**.
In a nutshell: a good chunk of your typical dating advice for women is a crapshoot.
Sometimes good, sometimes good *with certain guys and situations*, and oftentimes counterproductive.

Contrary to most "dating tips for women" you find online we ground our approach in psychology, data, research, and quite a bit of personal experience.

Below I list some of the most common myths, together with advice for a better approach.

Contents

- #1. Make Him Chase
- #2. Make Him Invest, While You Give Little
- #3 Feign Disinterest (& He Will Chase More)
- #4 Wait… As Long As Possible for Sex
- #5. Men Want Independent Bitches
- #6. Be Successful… And Men Will Come
- Getting Your Facts Straight
- Proper Dating "How-Tos"

#1. Make Him Chase

But who chases…?

This is the N.1 dating advice for women: you should make him chase.

The idea is that the more he chases, the more he will commit to you.
And there is some truth in that, you can read here how to make him chase.

However, it's generic advice and it's poor for high-quality women. This advice mostly works with lower-quality men and in very specific situations.

The rule of thumb is this: men who are lower quality than you will chase you.
Men around your same sexual market value will most chase you if they are clueless.
Higher-quality men will not chase you, but move on.

> Read More

#2. Make Him Invest, While You Give Little

But who invests without getting anything in return?

The second most popular advice is to make him invest as much as possible.

Things such as: picking you up, paying for dinner, doing you a favor, etc.

The idea is that the more he invests, the more he will like you and the more he will commit.
And there is much truth in that.

However, same as for chasing, **it's mostly men who feel they're not good enough who will try to "buy" their difference away**.

Here Is How to Balance Investment Right

#3 Feign Disinterest (& He Will Chase More)

…But know the risk: that he will end up with your more available girlfriend

Feigning disinterest is nothing but a form of making him chase more and invest more.
Yes: they are all connected.

In modern society, **feigning disinterest doesn't work too well** because there are more high-quality women than men, most men have a fragile ego and most men are not ready for a long and drawn fight to her heart (and vagina).

Also, read:

- **Value and availability**: it's a better strategy to be high value and "barely attainable"
- **Selectively hard to get**: this is the best of both worlds. You combine a "hard to get strategy" together with making him feel special for being the chosen one

#4 Wait... As Long As Possible for Sex

Opens in 3 months' time

Again, not fully wrong.

But, again, a huge generalization that sometimes will work and, many other times, will backfire.

Here are some better "rules of thumb" for you:

- Wait if he's conservative
- Wait if you're in a conservative culture
- Wait if you have deeply ingrained beliefs about waiting
- Go for it if you're in a whirlwind romance
- Go for it if you have great chemistry and passion is running high
- Go for it if you have been on a long nice date and sex feels like the "coronation of a splendid time"

If you have sex early, you can use the "selectively hard to get strategy". And let him know that you don't usually do that. That way, not only early sex won't take any points away, but he will actually feel special (and hopefully you're not lying).

When to Delay Sex (& When Not To)

#5. Men Want Independent Bitches

… Except it's wrong more times than not…

This advice comes from women, almost never from men.

In part, this is intrasexual manipulation.
And in part, it's wishful thinking from very driven women who wished that strength wasn't a handicap in the dating market. And I can totally understand that.

Of all the most typical advice here, this might be the most potentially dangerous one.
It's true that there are a few women who are "too nice". But it's really only a few of them. And many of them will still just do fine when they meet the guy who's ready to commit (the girl who used to drop unreturned gifts at in my mailbox is now happily engaged with a much better guy than I am, without ever becoming any bitchier).

In short: only very few women would benefit from the advice of "toughening up".

More women instead could benefit from the opposite advice.
How to be more feminine, how to make men want to care for them more, and how to be able to seek and turn relationships into win-win.

As Aziz says in The Tao of Dating:

> *Respect for female strength does not translate into male attraction*

At the end of the day, whether we like it or not, more feminine and more submissive women have more dating options.

This is not to say that strong women have no chance.
For example, the strong woman is better suited to finding a more submissive man and controlling the relationship. These relationships tend to be more stable and last longer.

However, if you want to have more options, including with high-quality men, then it's best if you learn the whole spectrum: from the driven and strong woman, to mellow and supportive.

How to be Powerful, Yet Feminine

#6. Be Successful... And Men Will Come

Well… Partially.

But this is a double-edged sword.

To begin with, some men will avoid more successful women out of fear that they will overpower them.
And successful men have lots of options and don't necessarily go after other successful women.

Psychopaths do target successful women, especially when they seem lonely and out of options.
But you're better off avoiding those.

In short, while successful men attract women, success and good careers don't work nearly as well for women.

Like it or not, successful women are still required to be feminine, independent of how successful they get.

- Review

Bullet Summary

- Highly sensitive people have a highly sensitive nervous system
- HSPs see and feel social and environments cues earlier than most
- But HSPs also get overwhelmed quicker when there are too many stimuli

Full Summary

About the Author: Elaine Aron, Ph.D., has been a researcher of love and relationships.
Her book, The Highly Sensitive Person, has been the result of five years of research and was the first -an so far still the only- big popular book that discusses the psychology of highly sensitive people.

Throughout the course of this summary and review we will also use HSPs as an abbreviation.

Highly Sensitive Person: Overview

A highly sensitive person has a highly sensitive nervous system. It's a trait which is probably inherited, and it means that:

- You're aware of the subtleties in your surroundings
- You are easily overwhelmed in highly stimulating environments

Being **a highly sensitive person has both advantages and disadvantages**. In our Western culture though, it tends to be interpreted more negatively.

Once over-aroused, HSPs are not very sensitive and understanding anymore because they can get overwhelmed and need to disconnect and be alone.
Non-HSPs instead become more understanding of others in highly chaotic situations.

HSPs Statistics

Based on a sample size of 300 people the author says that 20% were either extremely or "quite" sensitive", 22% were moderately sensitive and 42% said they were not sensitive at all.

The author comments that most people are not sensitive, and that's why many HSPs can feel uncomfortable around people "pumping their radio" or yelling.

My Note: The statistic says little
This statistic is small and says very little. It seems to be self-reported and it's really not clear what "quite" is supposed to mean.
However, it might give us a rough idea and it makes me think that HSP is a spectrum trait, like extroversion.

Environment's Variables on HSPs

The author says being an HSP is not a fixed constant and can change over time.

For example, after a month in a remote cabin, everyone can become more of an HSP and most people become more sensitive as they age.

The author also says that most people have a highly sensitive side to certain stimuli or in certain environments.

My Note: Most is not all
This "becoming more sensitive with age" is relative. I was much more of an HSP as a kid than I am now.
Indeed, I have lost and/or overgrown some HSP traits like emotional sensitivity.

Finally, individualistic and more socially aggressive cultures such as the US provide worst environments fro HSPs

Possible Difficulties Growing Up

The author says that many highly sensitive people had parents, teachers, and sometimes doctors who wanted them to "overcome" their high sensitivity, and it's possible they had a more difficult childhood as compared to non-highly sensitive peers.

HSPs Children

HSPs children under stress tend to produce more cortisol, tense up their vocal cords more leading to higher pitches.

Elaine Aron here talks about attachment styles and the importance of having a secure attachment style.
You can read more on attachment styles here:

- Attachment styles overview
- Secure attachment style
- Anxious attachment style
- Avoidant attachment style

Genders of HSPs

The author says there is an equal split of male and female who are HSPs. But since men are “not supposed to be HSPs”, they can encounter more difficulties.

HSPs in Society

The author says that HSPs tend to be more cautious and conscientious. They think about the possible alternatives, the dangers and the risks.

HSPs tend to be the ones who tell the more aggressive counterparts to take it easy and think things through, which at times can make them unpopular.

HSPs often take “advisory” roles such as historians, writers, artists, judges, philosophers, theologians, therapists and teachers.

The author calls the historically more gung-ho individuals “warriors”.

My Note:
I very much disagree with this division of society between “HSPs and warriors”.
The author makes the point that HPSs are sometimes perceived as being weak and that’s not the case. But then she seems to have a superior attitude towards non-HSPs and I disagree.
And I say it as a mild HSP.

Thriving As An HSPs

Elaine Aron says that it’s important for younger HSPs -and older as well- to stay out in the world and trying new things.

However, the author also warns on striking a balance on not withdrawing too much and not pushing yourself too much either.
She says that withdrawing too much, like some HSPs do, might not be the correct answers because stressors, to an extent, will always be there.

It’s better to learn a coping mechanism to better deal with life, instead.

She says that HSPs can find their own spot in this society and be successful at their own pace.
Habituation is a process that works for everyone, HSPs included. Habituation is the repeating of a certain action which, over time, becomes easier and less stressful

Sleep & HSPs

Elaine Aron says that HSPs need more good sleep than non HSPs.
HSPs take longer to adjust to jet-lag and do worse with night shifts and mixed shifts.

Here are some tips that apply to everyone and to HSPs in particular:

- Respect your circadian rhythms and sleep when you’re sleepy
- Remove pressure from sleeping: tell yourself you’ll just lie there with your eyes closed
- If too many thoughts rush through, read or do something
- If you are experiencing sleep deprivation, take more vacations, periodically.

Social Skills for HSPs

One of my favorite parts of “The Highly Sensitive Person” is Elaine Aron’s analysis of social skills books and courses.

She says that **many social skills courses and books are written by highly extroverted, non-HSPs people who encourage everyone to be more like themselves**.
They talk about “working a room”, “being the center of the attention”, “winning over a crowd”.
You shouldn’t strive to be more like them.

The others are psychologists who sometimes talk about “curing” and “conquering”, which can make HSPs feel flawed.

You don’t have to accept the extroverted definition of social skills, such as “working a room”, “never allowing an awkward silence”, “always having a great comeback”.
You should indeed find your own way to social skills like “talking seriously”, “listening well”, “allowing silences during which deeper thoughts can take place”.

The author instead recommends you work on your over-arousal and appreciate your introverted style.

Also read my review of Charisma University.

> **Refute the social skills definition of extroverts**

HSPs At Work

HSPs don’t like to mingle, go for after-work cocktails and play politics.

That can make them look suspicious, or lose points.
Elaine Aron recommends that you, formally or casually, let people know of your good feelings about them and you let your superiors know about how much you love your job and care about the company.
Also read: how to develop a fruitful relationship with your boss.

My Note: Skipping company’s parties can be harmful
I often avoided company parties and sometimes it costed me in office politics and work relationships.
People often fail to understand that your commitment to *work* and your goodwill for coworkers does not necessarily translate to your commitment in s*pending time* with them.

The author also mentions The Prince by Machiavelli and recommends you learn some of the games people play and the social dynamics of the world around you.
This is your website for that :).

For Employers

HSPs tend to be conscientious, good with details, loyal, thoughtful of the needs of customers and clients and often gifted.
In short, they make for wonderful employees.

They dislike aggressive self-promotions, so you must be watchful you don’t overlook them when considering promotions.them when it’s time for promotions.
HSPs perform poorly when you are watching over their shoulders, so avoid “keeping an eye on them’

Since they are so sensitive to the social environment, they can also function as canaries in the coal mine to give out early warnings of impending troubles.

HSPs & Relationships

Elaine Aron says that while some HSPs tend to fall in love harder than others, some others rarely do because they have an avoidant attachment style.

But she also adds that “rarely” is not never and when they do, they can fall in love very hard.

On average, HSPs tend to be more prone to love.

The author also discusses the role of self-esteem on love, and for more details you can read self-esteem and relationships.

Sex

HSPs might be more sensitive to sexual stimulation which might make HSPs sexual lives' more satisfying and require less variety.

However, the author is guessing here and she says she cannot say for sure.

The HSPs Emotional Roller Coaster

HSPs relationships can become an emotional roller coaster as the HSP seeks intimacy and then needs space.

What happens is that the HSP gets close and spends time with his partner, but then gets overwhelmed and needs time on his own.
That leads to a close-distant dynamics which can lead to relationship turbulences and can look very similar to an anxious-avoidant trap (check the article, it's very good).

Don't Deny Your Darker Side

The author talks about Jung's "shadow" concept, something Greene also talks about in The Laws of Human Nature.

Elaine Aron says that HSPs can have a bigger tendency to reject and deny part of themselves.
For example, their strength, power, or the capacity of being tough. Some deny their anger, their need of being alone, or their need for others.

There are plenty of resources on this website to strengthen your assertiveness, including Power University and the following books and articles:

- Drawing boundaries with powerful people
- To be good, you must be bad
- Boundaries
- The Power of a Positive No
- People Skills

Real-Life Applications

Don't Mis-Diagnose HSPs
HPSs are around 15-20% of the population. That's quite a few people, and they can be easily confused for shy, fearful, weak and, of course, introverted (read Quiet: The Power of Introverts for more on introversion).

Use Music Consciously
The type of music you listen to affects anyone, but especially so HSPs. Don't listen to arousing music when you need to decompress.

Watch Out For:
HSPs can be more sensitive to medications. and they might fall more easily for the latest guru, shaman or snake oil salesman.

CONS

Some Doubtful Sociological Analysis
The author says that the world is, for better or for worse, under the control of increasingly aggressive cultures. She says that it's normal because when two cultures come into contact the more aggressive "naturally takes over". That's not necessarily true, or the world would be evolving progressively towards more and more aggression, which is not the case -also read The Better Angels of Our Nature or simply look at Athens VS Spart, with Athens often beating Sparta militarily and, even more so, culturally and in terms of overall influence-.

Some Made Up, Rose-Tinted Glassed History
The author says that the aggressive Indo-Europeans took over pacific cultures which had no wars, slavery, monarchy, or domination of one class over another.
This is just "LOL" to me.
Sounds like a naive view of "everything was heavenly until those bad guys arrived". In my opinion, it rarely if ever works like that.

Read on naive self-help:

> Naive Self-Help: 10 Most Dangerous BS to Avoid

Chapter on Spirituality
The chapter on spirituality seemed a bit out there to me and not necessarily relevant to HSPs specifically.

Some Diagnosis From Afar
Sometimes the author diagnoses people without ever having met them. For example, she says of Vitkor Frankl, author of "Man's Search for Meaning": "Frankl, an obvious HSP".
Well, maybe he was. But "obvious… " ?

PROS

Groundbreaking Information on HSPs
The Highly Sensitive Person can be enlightening for HSPs who were not aware of them being HSPs.
And it can improve their quality of life.

Social Skills Courses Analysis
I absolutely loved Elaine Aron's take on social skills courses and advice. I couldn't agree more: introverts and HSPs should not try to follow extroverts' advice.

Review

The "Highly Sensitive Person" has been a groundbreaking text.

As a possible HSP myself, it was also highly instructive. It's possible that I me better than most at reading social cues because of my HSPs traits.

I recommend "The Highly Sensitive Person" to those who think they could be HSPs, to people living with HSPs, to educators and employers, and to everyone who wants to understand people and human nature.

I Hate You Don't Leave Me: Understanding Borderline Personality Disorder (Book Review)

Lucio Buffalmano · 9 February 2019 · Archived copy · Original

I Hate You Don't Leave Me is a guide to understanding borderline personality disorder. It explains who borderlines are, how they feel, how they behave and, very helpful for their relatives and spouses, how to best deal with them.

Contents

Bullet Summary

- BPDs are impulsive and have wild mood swings
- BPDs have troubled interpersonal relationships
- Over time BPD tend to improve, and improve even quicker with good therapy

Full Summary

> Borderline individuals are the psychological equivalent of third-degree burn patients. They simply have, so to speak, no emotional skin. Even the slightest touch or movement can create immense suffering
>
> *Marsha Linehan*

Incidence of BPD

Some studies say that around 6% of the US population suffers from BPD, but Jerold Kreisman says that figure

might be an underestimation.

Among patients seeking psychiatric care, between 15% and 25% are diagnosed with BPD, making it one of the most common of all the personality disorders.

Comorbidity & Similarities

BPD present similarities, and sometimes coexists with: depression, anxiety, bipolar disorder (manic-depressive), schizophrenia, somatization disorder (hypochondriasis), dissociative identity disorder (multiple personalities), attention-deficit/ hyperactivity disorder (ADHD), post-traumatic stress disorder, alcoholism, drug abuse (including nicotine dependence), eating disorders, phobias, obsessive-compulsive disorder, hysteria, sociopathy.

90% of BPD present at least one more other major psychiatric disorder.

BPD Criteria

One individual is diagnosed with BPD if he presents 5 of the following 9 criteria:

1. Frantic efforts to avoid real or imagined abandonment
2. Unstable and intense interpersonal relationships going from extremes idealization and devaluation (also known as “splitting”)
3. Lack of clear sense of identity: unstable self-image or sense of self
4. Impulsiveness in potentially self-damaging behavior (spending, sex, drugs, reckless driving, binge eating)
5. Recurrent suicidal threats, or gestures, or self-harming behavior
6. Severe mood shifts and instability in reaction to day-to-day events (intense episodic sadness, irritability, or anxiety)
7. Chronic feelings of emptiness
8. Frequent and inappropriate displays of anger
9. Transient, stress-related paranoid ideation or severe dissociative symptoms (unreality or paranoia)

The author says that these 9 symptoms can be grouped into 4 categories:

1. Mood instability (criteria 1, 6, 7, and 8).
2. Impulsivity and dangerous uncontrolled behavior (criteria 4 and 5).
3. Interpersonal psychopathology (criteria 2 and 3).
4. Distortions of thought and perception (criterion 9).

However, Jerold Kreisman warns, people shouldn’t make the mistake of considering each symptom as its own constellation: they are all related and they all move together like pistons in an engine.

In a nutshell, life for the borderline is a relentless emotional roller coaster with no apparent destination.

Degrees of Borderline

Jerold Kreisman says that some researchers suggest changing the definition of borderline to move from a “yes” or “no” to a more modular definition.

Such as, to make the BPD a spectrum disorder (like introversion and HPS, albeit neither of those are disorders of course).

This would make sense because there are different “levels” of being a BPD. Some function better in society while some others struggle more and present more marked signs.

It's A Mix of Nature & Nurture

Causing BPD is a mix of genes (nature) and (nurture) life experiences.

Says Jerold Kreisman:

> The available evidence points to no one definitive cause—or even type of cause—of BPD. Rather, a combination of genetic, developmental, neurobiological, and social factors contribute to the development of the illness.

Many studies have also found a history of severe psychological, physical, or sexual abuse in BPD.

Borderline Relationships

Borderlines cannot stand loneliness and desperately seeks relationships. Even when they feel mistreated by others, an abusive relationship is better than loneliness.

Relationships for borderlines tend to be, like their life, a difficult emotional roller coaster.
Writes Jerold Kreisman:

> Too much closeness threatens the borderline with suffocation. Keeping one's distance or leaving a borderline alone—even for brief periods—recalls the sense of abandonment he felt as a child. In either case, the borderline reacts intensely.

Borderline's behavior is also incompatible with loving and stable relationships.
With their erratic behavior and their need and fear for intimacy at the same time, they often end up repelling the people with whom they most want to connect.

In this sense, borderline's relationships resemble a lot the anxious avoidant relationship trap (check the article it's very well done), with the borderline alternating between an anxious (craving intimacy) and an avoidant (running away from intimacy) attachment style (read here an overview of attachment styles).

The "I Love Him" Fallacy

The need for physical closeness to avoid chronic loneliness can push the BPD into serial sexual relationships with disappointing -or even violent- results.

BPD, with their fragile ego and low self-esteem, often repeat the same mistakes and go back to their abusive exes. Their dependency is often disguised as passion, and you will hear the BPD justify their destructive behavior by repeating "because I love him".

Co-dependent Relationships

The BPD unrealistic goal is to find a perfect partner-caregiver who gives it all and is always ready to tend for them.

The quest often leads to partners with complementary pathology leading to toxic relationships and destructive relationship dances.
If she is a BPD for example, she can end up with an insecure man who displays fake confidence and needs a helpless partner to feel strong and in control (also read: codependent no more).

Warning:
When a partner needs you "down", he will resist all your attempts to improve and get better.
In a codependent relationship, your partner is needy and desperate.
If you want to really improve, consider breaking the relationship.

Testing For Commitment

The author says that the threats and the rage are sometimes a way to test for commitment (not to be confused with shit tests during the courtship phase).

The Workplace for The BPD

Albeit BPD have major difficulties in their personal lives and personal relationships, they can function well at work.

Indeed, as long as their job is well structured, it can work as a sanctuary from their turbulent personal lives.

They don't function as well in highly competitive or random and unstructured jobs.
A highly critical supervisor can also make the hypersensitive BPD overreact and fly in uncontrolled anger (remember that the BPD is hypersensitive to rejection).

Job Hopping

The constant BPD's quest for happiness and contentedness often leads to changing the environment around, which often includes people and jobs.

Genders & BPD

BPD is prevalent in both genders at roughly the same rate, but the severity of the symptoms is greater among women.

Borderline's Gullibility?

Cults and sects appeal more strongly to the borderline because they yearn for direction and acceptance.
They also have a tendency to idealize, which the charismatic cult leader is all too happy to fulfill.

The borderline is also very vulnerable to black and white thinking and depicts reality as either "good" or "evil", something that is also often present in cults.

Unstable Self-Image

The borderline goes from a high opinion to a destructive self-assessment in a matter of hours, sometimes based solely on a single feedback or a silly mistake.

Borderlines tend to have a fixed mindset, such as, they believe that their traits are carved in stone and they are either great or idiotic. And they switch between the two at the drop of a hat.
Read here how to develop a growth mindset.

Most of BPD's self-esteem is achieved by impressing others, so pleasing others becomes critical to the BPD's own self-love.

A Bit Like a Child

The borderline experiences life a bit like a child, with the same intense emotions and perspectives.
And the same fears of abandonment.

Also read transaction analysis for child-adult exchanges and I'm OK-You're OK.

Unable to see his world through adult eyes, the borderline continues to experience life as a child—with a child's intense emotions and perspective. When a young child is punished or reprimanded, he sees himself as unquestionably bad; he cannot conceive of the possibility that the mother might be having a bad day. As the healthy child matures, he sees his expanding world as more complex and less dogmatic. But the borderline remains stuck—a child in an adult's body.

Sexual Freedom is Bad for BPD

Strict cultural norms provide a safer, more structured environment for BPD.
Periods of great freedom, less structured relationships and open sexual mores are more difficult for the BPD to handle.

The shifting role patters for women might be one of the reasons why women have a higher incidence of BPD's symptoms, says the author.

Dealing With BPD

Jerold Kreisman introduces here his " SET" paradigm to communicate with BPD.
SET sands for:

- **Support** (I statements, ie.: "I am sincerely worried about how you are feeling")
- **Empathy** (ie.: "you must be feeling really awful")
- **Truth** (emphasize the BPD is ultimately responsible for his behavior)

Support statements must help the BPD feel like she is cared for, which is something she struggles with, since the BPD feels like she needs to earn acceptance again and again.

This is Jerold Kreisman example of a response to a suicide threat:

> I recognize how bad you are feeling and your wish to die. I know you said that if I cared at all for you, I should just leave you alone.
> But if I cared, how could I possibly sit back and watch you destroy yourself?
> Your communication of your suicidal plans tells me that, as much as you may wish to die, there is at least some part of you that doesn't want to die. And it is to that part that I feel I must respond. I want you to come with me to see a doctor to help us with these problems

After the immediate danger Truth statements can focus on the destructive patterns the BPD falls into and the need -and opportunity- for them to address them.
You must remind the BPD that she must take responsibility and not blame others.

Prognosis Of BPD

BPD tends to improve over time, with or without therapy.
Therapy helps accelerate the improvement rate though.

Classical psychoanalysis is best avoided because it's an unstructured environment in which BPD do very poorly.

Most other approaches work, albeit it's difficult to pinpoint which one works best.
Jerold Kreisman describes them all and I invite you to get the book for more details.
The most important element, anyway, is a good and trusting relationship with the therapist.

Medication tends not to be helpful long term, but can be used for short term relief.

Real Life Applications

Handling Suicidal Threats: Take Them Seriously
Often, the suicide threats or suicide attempts are not a wish to die but rather a way to communicate pain and a plea for attention and intervention.
Addressing it can result in continuous confrontations, ignoring it can result in death.

Accept Feeling Bad
BPD add to their woes by "feeling bad about feeling bad". The author recommends BPDs accept feeling bad as a more constructive approach to improving themselves.

CONS

Psychoanalyzing Historical Figures
The author provides a prompt diagnosis to several movie characters and historical figures.
That's not really a scientific or prudent approach in my opinion. He should have at least prefaced that diagnoses saying they are far from accurate.

Tattoos An Indicator of BPD?
The author says that the societal increasing fascination with tattoos and piercings may be a reflection of borderline tendencies in society.
To me, this is an example of seeing connections where there are likely none (read "Fooled by Randomness").

Some Poor & Irrelevant Social & Historical Analysis
There is some bad social analysis in my opinion.
For examples, writes the author:

> the looming possibility of a catastrophic event—the threat of nuclear annihilation, another massive terrorist attack like 9/11, environmental destruction due to global warming, and so on—contributes to our lack of faith in the past and our dread of the future.

I think you can pick any era and list a hundred reasons why people should “lose faith in the past and dread the future”.

PROS

Instead of listing all the pros, this is simply the best overview of BPD I have ever read.

10 Male Dominant Archetypes For Status, Respect, Attraction

Lucio Buffalmano · 11 February 2019 · Archived copy · Original

There are different ways of being a socially dominant, respect-worthy man, without being a jerk.

Having helped thousands of good men become empowered men who earn status, respect, and attraction, we are experts on the topic.

And with this article, we give the main types of dominant males.

Let's dive in:

Contents

- 1. Meatheads (Physical Dominance)
  - ⍰Self-Defense
  - 1.2. Drill Sergeants
  - ⍰ Self-Defense
- 2. Smart Alecs (Holier Than Thou)
  - Examples
  - ⍰ Self-Defense
- 3. Masters of The Universe
  - Examples
  - 3.2. Flashy Masters
  - ⍰♟Self-Defense & Strategy
- 4. Jesters
  - Example: Russel Brand
  - ♟⍰ Self-defense & Strategy
- 5. Charmers: The Power of "Smooth"
  - Examples
  - 5.2 (Social) Seducers: Charmers on Steroids
- 6. Authorities: The Power of Excellence
  - Examples
- 7. Charismatics: The Power of Confidence
- 8. Cold-Blooded
  - Example: Putin VS Obama
  - ⍰ Self-defense
- 9. Dominant Extroverts: Life of The Party
  - Example
  - 9.2. The David: Hat Trick of Dominance, Warmth, & Energy
- 10. Made Man
- What's Best & What Should You Pick?
  - Learn more

1. Meatheads (Physical Dominance)

Dominance with the (unstated) threat of violence.

Violent men belong to category.

But it's not just gangbangers and criminals.
Many dominant men in civil society also present a layer of physical intimidation.

Take Trump and his infamous handshakes for example.
And of course, sometimes that mask of civility can comes off and display the real bully behind the facade.
Like with former congressman Grimm:

> **Congressman**: Let me be clear to you, if you ever do that to me again I'll throw you off this fucking balcony
> **Interviewer**: (defensive, retreats) Why, why, I just wanted to ask you
> (…)
> **Congressman**: You're not man enough, I'll break you in a half. Like a boy

Cons	Pros
Less effective in society	Effective with timid opponents
Constant intimidation = lots of enemies	Fast results (when it works)
Risky (escalations, ostracization, revenge, etc.)	

⍰Self-Defense

- ⍰ **"Threats don't punch"**. So keep your cool

See Power University's lesson on physical threats

1.2. Drill Sergeants

You get many drill sergeants in army barracks and sports teams.

But, sometimes, you'll get shades of drill sergeant in business as well.
And, sadly, in some families too (see controlling and abusive men).

Somehow people find their yelling entertaining.
So TV shows bank on the allure of unbound, limitless dominance and authority:

⍰ Gordon Ramsey

Cons	Pros
Top talent flees (brain drain)	"Effective" with some lazy asses
Squashes creativity & improvement	Total control
"Little yelling rooster" effect	Quick obedience
Volatile personalities may lash out	

⍰ Self-Defense

It's a game of respect within the theatrical disrespect:

- Never be intimidated, BUT
- Respect their authority
- Love the game
- Push yourself hard
  - Excel in the drills, ideally.
- Display (inner) strength

If you dislike the organization -or don't appreciate being yelled at-, move.

2. Smart Alecs (Holier Than Thou)

If meatheads say "I'm physically stronger", smart alecs say "I'm mentally stronger".

They hide behind a facade of knowledge, but don't be swayed. They are playing the dominance game just like every other power-thirsty individual.

Examples

- ⍰ Seth Godin
- ⍰ Ben Shapiro

- Alan Greenspan:

Notice the arrogant "I know better than you" expression

> **Her**: Well, you are romantic Catherine so you can be excused about objective discussions <— ⍰⍰ you're "feelings first", naive, can't be taken seriously

Cons	Pros
No good friends	Looks intelligent
Ineffective at persuading	"Effective" at winning debates
Ineffective in getting high-value men's buy-in	Access to high-power circles (philantropist/genius relationship)
Poorer leadership outcomes	"Effective" at getting under people's skin
Toxic in relationships	Covertly bully others without being blamed ⍰ ⍰⍰♂

⍰ Self-Defense

- Remain calm (or they'll say you get emotional because you're losing)
  - Don't get physical in civil society (or they'll frame you as too-stupid-brute who can't talk. A gaslighting experience.)
- Undermine their "intellectual power" & get under their skin. Say they're:
  - Posturers, without real intellectual achievements
  - Have little reputation in their field
  - If successful, he peddles watered-down stuff to the masses

> **Corona**: I will buy you and put you in my garden to write books, maybe you'll manage to sell one <— Frames him as a failed intellectual, a posturer
> (…)
> **Smart alec**: Illiterate <— Smart alec power move

🡅 ♟
After landing the perfect blow Corona should have said Mughini was spiteful and angry because the "truth stings". But he let himself be pulled into a verbal brawl without clear winner.

⍰ Growing past your smart alecking

3. Masters of The Universe

They're the "alpha types" with:

- Social dominance
- Confidence / hubris
- Success

Examples

- Donald Trump
- Jamie Dimon, who said he would beat Trump because he is "as smart and as tough as he is". But I'm pretty sure Dimon thinks he is both smarter and tougher.
- ⍰ Wall Street type in The 25h Hour

More on the aggressive side:

> **Mylett**: If someone spoke to my son like I speak to these people I'd rip their heads off

Cons	Pros
Fragile ego if self-esteem relies on success only	Successful approach to life
Over-dominance win-lose = poorer relationships	Attractive

3.2. Flashy Masters

They:

- Talk loud

- Dress snazzy
- Challenge others
- Make a big show
  - Create drama
  - Staged beefs
  - Provoke

Examples

- Conor McGregor
- Muhammad Ali
- Andrew Tate

Cons	Pros
Puerile/childish	⍰Monetizes attention
Condemns you to keep winning (or you become a big-mouthed clown)	Can shortcut to success
Polarizing: many haters	Polarizing: many followers (but many losers :)

⍰♟Self-Defense & Strategy

- Ignore their big talk if it's not your style
- Ignore them if you're above them
- Focus on work
- Beat them with results (rather than talk)
  - Talk after you beat them
  - If you're past your prime, retire and deny them the upset

4. Jesters

- High energy
- Loud
- Mischief

Their weapon is sarcasm, covert aggression, and social embarrassment

Example: Russel Brand

> **Interviewer**: (serious question)
> **Russel**: (ignores, makes a show, disempowers the interviewer)

Cons	Pros
Not the highest power	Break rules others must obey
Limited scope	"Humor" provides convenient cover for attacks
Less attractive (exceptions apply)	

♟⍰ Self-defense & Strategy

1. Don't pretend you're having fun if you aren't
2. Don't play the same game if you're not experienced
3. Don't escalate (unless it's well called for)
4. Don't kiss up to them or try to get their attention

Instead:

1. Enjoy their show if it's good
   - Take yourself less seriously if you're the target
2. Ignore them
3. Act normal
4. Escalate and draw your boundaries IF they overstep

⍰ **Jesters and dominance styles**

5. Charmers: The Power of "Smooth"

Social seducers

Examples

- George Clooney (more jester-like)
- Bill Clinton (higher power)

> **George**: (smiling, joking, building people up)

Cons	Pros
May require extraversion for longer-stretches	Attractive
	Win-win
	Versatile
	Everyone likes you

5.2 (Social) Seducers: Charmers on Steroids

They are charmers on sexual and/or romantic steroids.

A bit less "friendly smooth" and a bit more flirting and sexual innuendos.

Example from Catch Me If You Can:

> **Abagnale**: (confident, strong eye contact) My name is Frank Taylor. I'm a copilot for Pan Am. I'd like to cash this check here, and then I'd like to take you out for a steak dinner.
> **Her**: (overwhelmed, immediately spellbound)

Of course Hollywood overdoes the reactions.
But the concept is valid.

Cons	Pros
Depreciates fast	Powerful (when it works)
High risk	
May require good looks	
Small target population	
Other men may dislike you	

6. Authorities: The Power of Excellence

The power of authorities come from their rank, expertise, and the value they add.

As per social exchange principle, the more value you can give, the more power you wield.

Examples

- Any confident skilled man
- Any confident expert

> **Wolf**: (curtly tasks them)
> **Vincent**: Please would be nice
> **Wolf**: Come again? Set it straight Buster, I'm not here to say please, I'm here to tell you what to do (…) you better fuckin' do it and do it quick.
> I'm here to help. <— Switches to a giver frame, good move
> If my help's not appreciated, lotsa luck gentlemen. <— Lays out his leverage with the value he has to offer

The Wolf can be curt and dominant to two killers because they need his expertise (and because he acts and moves like a respect-worthy man).

Cons	Pros
Limited to the domain of expertise	Makes money
	Supports confidence

7. Charismatics: The Power of Confidence

Charismatic leaders have:

- A mission (in business and work)
  - Trust they can achieve it
- Confidence
- Intensity

Tesla: piercing eyes of conviction

Cons	Pros
High-power men may see you as competition	Most people flock to charisma
Analytical men need to see some hard skills	Attractive

8. Cold-Blooded

They could smile now, kill someone in half an hour, and don't feel a thing.

They can unsettle others with their presence, social pressure, or with "off" vibes.

Example: Putin VS Obama

Obama is taller and leads the most powerful country.

But he still ended up power down in 1:1 interactions:

> **Putin**: (serious and straight faced, never laughs, sometimes angry and always intense, lets silences heap pressure on people)

Note:
It's a valid style even for "good men", for example when pursuing important goals.

Cons	Pros
No "emotional intimacy"	Feels "highly effective/professional"
Less attractive	Effective to make others fear you
	Gains respect

⍰ Self-defense

- Lower your warmth
- Don't fill the silences
- Be more deadpan/less expressive ⍰

⍰ **How to deal with cold-blooded men**

9. Dominant Extroverts: Life of The Party

Dominate with impudence, energy, and "friendly dominance"

Similar to the jester, but less sarcastic, more physical, and higher in power.

It can turn more value-taking with one-upping and social climbing, so:

⍰ ⍰ Only push down lower-status people.
⍰ Better yet: bring the fun, without pushing anyone down ⍰⍰.

Example

From "Il Sorpasso":

Notice:

> **Him**: (takes both arm in arm) <— Friendly and dominant
> You look Spanish <— Statements keep more control
> **Her**: Yes…
> **Him**: Ah, I got it right, the granny must have been joking around with a bullfighter <— LOL ⍰. Shatters personal boundaries with a racy joke

And:

> **Her**: You've never written us
> **Nephew**: Yes…
> **Him**: Yeah eh, he's a rascal this nephew <— Jokingly piles up, but also diffuses tension

And:

> **Her**: You'd always run through the house as first thing, do you remember?
> **Him**: (jumping in) <— Reclaims center-of-attention
> sure, he even told me about it <— Prevents the "family-only" talk and becomes "family insider"
> go on, make your run through the house. <— Host power move, frames him as a little kid
> Friendly kid, he's a good guy <— "Good judge" power move

And:

> **Him**: Uncle Miche', such a "piece of woman" (gesticulates) <— Player self-frame
> I'll tell you later <— Pulls Michele up, worthy of his "men's only talk"

⍰ Aggressive Push-Pull

1. Boundary-breaking power move (push)

2. Cover, or rapport-rebuilding kindness (pull)

Note:

⚠⚠ He does not pull back “Occhiofino” because he’s the lowest-status man
⚠⚠ Different tonality for pushing (helps him get away with it)

Cons	Pros
Requires extraversion	Great fun
Can rub the wrong people off	Good for parties
Poor for professional, rank-based organizations	Charisma on steroids

9.2. The David: Hat Trick of Dominance, Warmth, & Energy

This is the best way to pull-off high-energy, while staying dominant and high-warmth.

Only pulling others up, with a real-life example that beats any movie:

> **Davide**: (dominant, loud, vulnerable, and extra warm. Hugs men, holds their hands, pulls people up, and steals the show)

⚠ Full analysis here (scroll down for David’s style details)

10. Made Man

The calm and confidence of the top dog, with little to prove.

Cons	Pros
Poorer higher-energy environments	Respect
Poorer in newly-forming groups	Admiration
You must earn those stripes to be congruent	Best mix of respect, fear, and prestige

What's Best & What Should You Pick?

Different styles suit different personalities, situations, and different stages of life.

Also, keep in mind that **power is the common glue among all the different dominant types.**
You can't be ANY of these if you're a passive, low-confidence, submissive man.

And you'll do great in any case if you're just high-power and respect-worthy, without any specific style.

But if you prefer a style, or an inspiration, I recommend you decide depending on your personality.

On average, the more masculine type who speaks and moves less is more powerful, influential, and authoritative.

I recommend borrowing some moves and skills from social charmers and charismatic.
But with a masculine edge and incorporating the timeless principles of power.
That gives you status, respect, and attraction.

Charisma on Command: Review & Summary

Lucio Buffalmano · 12 February 2019 · Archived copy · Original

In *Charisma on Command* Charlie Houpert dives deep into charisma and explains how to become more charismatic.

Contents

- Bullet Summary
- Summary
  - The Elements of Charisma
  - The 12 Charismatic Convictions
  - Leading The Charismatic Way
  - Command Attention: Don't Just Be Interested
  - Action Plan
  - The Is No Single Moment
- Real-Life Applications
- CONS
- PROS
- Charisma on Command Review

Bullet Summary

- Charisma can be learned
- Start with the conviction that whatever happens, you will be fine
- Allow yourself to be your real self

Summary

Charlie begins *Charisma on Command* by sharing some of his personal stories and how he became interested in charisma.
He says he was not extremely bad with people, but also not a naturally charismatic and outgoing personality.
He got down to learn people's skills though and he now shares that information with the world -and on Charisma on Command-.

The Elements of Charisma

The key elements that compose charisma are the following:

- **Conviction** (the belief that things will work out fine)
- **Energy** (bring high energy, uplift people)
- **Presentation** (the marketing, how you present yourself)

Steve Jobs is one of the examples of conviction.
But, says the author, there is no secret formula you can replicate for conviction, you simply have to believe that you can do it and, even if you fail, it will be fine. That way, you can give it your best shot with full conviction.

An example of high energy is **Will Smith**.

And the presentation is about style, posture, voice, and, among others, storytelling. Charlie Houpert dedicates a

whole good chapter to storytelling.

The 12 Charismatic Convictions

The author identifies 12 charismatic convictions:

1. I'm OK, I will be OK
2. I care more about my character, not others' opinion
3. I have impeccable integrity (albeit Donald Trump is also charismatic)
4. Don't try to convince others to agree or follow you (that's needy)
5. Communicate your purpose
6. – 12. The charismatic person dares to go there first

Charlie says to be more concerned about your character than your reputation, albeit I agree with Robert Greene in *The 48 Laws of Power* and would keep an eye on the reputation as well.

Leading The Charismatic Way

I really liked the way Charlie Houpert approaches leading. He says that before even thinking of "rallying the troops", leadership begins at a much smaller scale.

You begin by saying what everyone else is thinking first and doing what everyone else wants to do but don't dare. You lead by breaking social rules that are standing in the way of better connecting with other human beings. And by being yourself even when that means looking goofy or silly.

My Note:
On looking goofy, silly, or sharing a weakness, I need to raise the same red flag I raised with Daring Greatly, The Gifts of Imperfection, and The Mask of Masculinity: too much goofiness, too much show of weakness and vulnerability is not good.
Also, read:

- Vulnerability is NOT (always) charismatic

I do very much agree with Charlie though when he says that bringing up the topic of money, sex, and relationships is a leader-like, charismatic thing to do.
And I also agree with his "touching more than most people do", "use honest praise more than most people do" and "communicate how you feel even when it's not the nicest thing to say".

In Charlie's words:

> The charismatic person is attractive because he is whole.
>
> If you want to demonstrate charismatic qualities, don't deny any aspect of yourself. Don't shy from the truth. Live with integrity. Do what amuses you. Say what you think. Share what you feel. Don't wait for anyone's permission. Don't seek anyone's validation.

Command Attention: Don't Just Be Interested

I liked that Charlie Houpert had the courage to call into question the most famous quote from the sacred monster of social skills' textbooks: *How to Win Friends and Influence People* by Dale Carnegie.

He says that "to be interesting, be interested" works at a dinner party, but in most other open social events, it falls flat.
I agree with that, there are times when you need to do some more of the talking.

Charlie talks about being the center of attention but then turning the spotlight on the people around you as well, with which I also wholeheartedly agree.

Action Plan

The final chapter is an action plan to put together everything Charisma on /command shared and embeds it in your life and in the new natural you

Day 1: Foundations
Day 2: Eye contact (soft gaze on both eyes, don't fix on one eye)
Day 3: Smiling
Day 5: Storytelling
Day 6: Voice
Day 7: Incantations
Day 8: Dress
Day 9: Gesticulations (this Tony Robbins example)
Day 10: Messing around
Day 11: More eye contact
Day 12: Touching
Day 13: Positivity
Day 14: Revisiting charismatic mindsets
Day 15: Take stock of honesty and trust

I must quote Charlie Houpert here:

> This is about character. About trust. Charisma is a comfortableness with the world. We feel it when we sense that someone is real. We trust their actions and feel we can let our walls down with them. We trust them and we trust their intentions. The foundation of that trust is honesty. Honesty first with oneself. Then with the world.

Day 16: Genuine compliments
Day 17: No filler words
Day 18: Get loud
Day 19: What are you stressed about?
Day 20: Vocal range
Day 21: Messing around (again!)
Day 22: Shining on others
Day 23: Posture
Day 24: Killer eye contact
Day 25: Gesticulations, posture, and touching
Day 26: Slow your speaking
Day 27: Energy and incantations
Day 29 – Having fun, messing around
Day 30 – Assessment

The Is No Single Moment

Do you know how people sometimes say "that was the moment when I realize that.. " or "that was the moment I became.. "?

Well, I always smelled BS when people say that, which feels more like marketing than reality.
That's why I loved Charlie Houpert when he said:

> People often ask me the moment I realized I had made a huge leap forward in my presence and charisma. The truth is, there is no single moment.
>
> *Charlie Houpert*

Real-Life Applications

Look At People In The Eyes While Speaking
The tendency is often to look away while we speak. Make it a point to look at people in the eyes while you speak to them with fewer breaks that most people normally take.

Always Address An Audience With "You"
If you are presenting or delivering a speech, don't address people as "people" or "you guys", but use "you", as if you were speaking to each single one of them. This was a very good tip.

CONS

The main con for me is the first one:

- **Charisma Requires High Energy & Loud Voice… Really?**

This is one of the elements I disagree the most with the author. He says that you need to be loud and bring the "high energy".
That is true… *Sometimes*. But it's not a general truth. Not for social skills, social power, or charisma.
As Olivia Fox Cabane explains in *The Charisma Myth*, there are many types of charisma, and most don't entail high energy and booming voices (one example of quiet charisma is Elon Musk).

Charlie is NOT that extreme, but the advice on touching, loudness and smile remind me of this Family Guy skit:

Also read:

- **The myth of high energy**

- 7 Types of Dominance (check the last one, The Godfather, who is obviously highly charismatic)
- How to be charismatic (with the different types of charisma)
- Charisma University Review (the course by Charlie Houpert)

- **Most Links Have Expired**

I was really curious to see some of the videos Charlie references to, but the links were mostly expired.

- **Overlap With Tony Robbins**

Charisma on Command exercises, such as anchoring
(Tversky & Kahneman, 1974) and changing states are taken from Tony Robbins as in *Awaken The Giant Within* and *Personal Power II*.
That's not necessarily a con, Robbins and the exercise is great, but maybe a clearer reference to the original author would have been nice.

- **Some Pop-Psychology Not Deeply Researched**

The author quotes a popular study on how the simple act of smiling makes us happier. Yet that study failed to replicate.
Here is a quote:

> The combined results from 1,894 participants were inconsistent with the findings reported in the original study. The data provided no evidence that inducing participants to have particular facial expressions led them to rate the cartoons differently.

Interesting enough, Charlie and Ben addressed this point in their podcast:

I don't necessarily agree with their conclusion that science can't be trusted so it's best to leave it out.

Bad science can't be trusted, and lower trust should be awarded to low-power studies. Otherwise, science is a wonderful tool to explore reality and tease out effective strategies and approaches.

On the other hand, I agree that science shouldn't be your be-all, end-all tool.
I've read plenty of books written by scientists who tried to extend their theory or results to real-life, and their lack of personal experience translated into some really poor advice.

Also see:

- The three pillars of knowledge

https://thepowermoves.com/three-pillars-of-learning/

- **Frames' War Mentality**

Charlie Houpert is not a "frame domination" kind of guy, and I appreciate that a lot.
But there were a couple of instances where that type of "war of frames" mindset showed up. This example:

> Every interaction boils down to two sets of beliefs banging into one another. The beliefs with greater conviction win.

It might be due to the fact that Charlie started out as a dating coach. And this is a very popular mindset in manosphere circles and older pick-up artists (see *The Game* and *The Mystery Method*). I don't think that's a great mindset to keep at all times, though.
Frame negotiation or reframing might be more effective techniques in many circumstances.

If you think about it, what can a “frame war” mindset give you?
Battles and combative relationships, of course. That’s why I prefer a different approach.

Read more here:

- **Frame control techniques**

PROS

Lots of Wisdom
There is lots of great advice in Charisma on Command.

Compact & Practical
NO time wasting, no repetitions, no BS: Charisma on Command is brief, practical and dripping with good information and advice. Exactly how I like it.

Charisma on Command Review

Compact, great content and highly practical. I loved the book Charisma on Command.

I disagreed with a few crucial points, namely that Charlie Houpert presents one type of charisma as if it were the only way of being charismatic or the best one.
He recommends high energy, to speak louder, to lift people up, and he says:

> I remember the first time someone told me I was the most extroverted guy they knew.

As a more introverted type of person, I don’t think people should force themselves to be more extroverted or high-energy.
I believe that *introverts*, ambiverts, *highly sensitive people*, and quieter people should find their own way of mastering social skills and not follow the extroverts’ diktat of loud speaking and a used car’s salesman smile plastered on their face.

That being said, everyone can learn and improve with Charisma on Command.

Trust Me, I'm Lying: Summary & Review

Lucio Buffalmano · 13 February 2019 · Archived copy · Original

"*Trust Me, I'm Lying*" (2012) is a sort of memoir/confession diary of Ryan Holiday, a self-referred "media manipulator".

Contents

- Bullet Summary
- Full Summary
  - Techniques to Manipulate Media
  - HARO Is Self-Promotion
  - Is The Web (Dis)Empowering?
  - Degradation Ceremonies
  - The Link Economy Degrades Information
  - Corrections REINFORCE The Original Mistake
- Real-Life Applications
- CONS
- Review

Bullet Summary

- The current digital media system has poor quality or non-existent quality controls
- That makes it prone to easy exploitation. And that's bad news for (almost) all of us
- The news is all about sensationalism to get your clicks and sell your time to advertisers
- The best marketers are Machiavellians who manipulate the media to sell

Full Summary

"*Trust Me, I'm Lying*" is divided into two sections: the techniques to manipulate media and the consequences of a media system and landscape which is so easy to manipulate.

The whole book is peppered with personal experiences and Ryan's commentary, which is the real added value of "*Trust Me, I'm Lying*".

Techniques to Manipulate Media

Qw quickly reviews here the Machiavellian techniques by Ryan Holiday describes to manipulate the media.

As a note, Ryan uses the term "blogger" to describe any kind of digital interaction with an audience, going from an actual blog to a tweet to a bigger news portal.

- **Help pay bloggers' bills**

Help a blogger who is starting out, and they will remember later on when you need some coverage.

- **Tell bloggers exactly what they want to hear**

Bloggers don't really look at facts.
Indeed, sometimes they start with a story already in mind and are only looking to cherry-pick quotes to fit their

narratives.

If you want to be cited and quoted, don't tell them facts: tell them what they want to hear.
Another technique is to pass them something that looks and seems juicy like a (fake) "leaked document".

- **It doesn't have to be good, it just has to be shareable**

The news you publish and the information you pass to bloggers must not be good or, God forbid, true. It must be "shareable".

Gloom doesn't get shared, but anger does. Positive and surprising emotions are shared.
Reasonableness and neutral emotions don't get scared.

> **If an article or quote doesn't get shared, does it even exist?**

- **Tricking their readers is key**

This technique is basically what's today called "clickbait".

Clickbait means using an attention-grabbing headline that might or might not be connected to the full article.
However, once the click has happened, the ad impression has been delivered and the blogger is happy.

As a media manipulator, you should approach bloggers the same way they approach their readers.
Give them a sense of mystery, raise a feather-ruffling question, and see them do the same as their readers.

> **A great article is no more valuable than a clickable poor one**

- **Sell so they can then sell**

The rules have changed in online media.
Bloggers are not looking anymore for loyal readers: they are after the ad impression's "smash and grab".

Sensationalism and scoop are the new keywords and golden graals of modern digital publishing.
Sex, scandal, hatred, extremism, sensationalism… This is what sells, and this is what you must give them.

> **Bloggers steal your time to sell it to advertisers**

- **Killer headlines**

Headlines are the equivalent of first impressions.
Actually, even more: with the news you don't get a chance of changing anyone's mind if they don't click first.

Information that can't be turned into a killer headline is not worth publishing, so you must help the blogger make a killer headline.

> **Perusive readers are no better than accidental readers**

- **Page views are king**

Bloggers and journalists are under pressure to produce as much content as possible.
They are low paid, and often their pay is tied to how much revenue and clicks they can generate.
It's a hard and difficult pressure environment to work on, and that means they will really appreciate it if you can help them get some traffic. So when they write about you, share their news on your personal and company's blog.

- **Use sound-bites**

Bloggers need a high churn of information. That means that deep and well-thought information does not work: you must share with them sound bites.

> **Bloggers take the audience at their worst and make them worst**

- **Fake it when necessary**

Most news and articles are dull… Unless you can help the bloggers find an "interesting" angle to take.
If that means exaggerating or bending the truth, then be it. Everyone is doing it anyway.

HARO Is Self-Promotion

HARO is a tool to connect journalists with expert resources.

In theory.

In practice, Ryan Holiday says, it's a tool for self-promotion that looks like research.
It's also the perfect tool to cherry-pick quotes from experts -or so-called experts- to fit the journalist's narrative.
The blogger receives a lot of quotes and opinions and he can just sift through them to pick the ones he likes the most to reverse-engineer the piece that he had *already* decided to write.

My Note:
I should know something about it :).

Is The Web (Dis)Empowering?

Since much content on the web has been engineered to consume your time and get your clicks, Ryan Holiday says that the myth that the web is empowering is just that… A myth.

The web is another huge time-sink.

My Note: I don't fully agree
The way most people use the web is a time-sink.
But it can also be tremendously empowering. Internet certainly did make my life much better -even before ThePowerMoves.com-.

Degradation Ceremonies

From a psychological and sociological point of view, Ryan Holiday raises a few important points on the darker drives of human nature that lead people to gang up, bully, harass, and abuse others.

He calls them "degradation ceremonies", and people find a perverse sense of joy and accomplishment in tearing apart someone else.
By building a monster, it makes us feel better to be "normal" or "better than them".

Snarky writers, says Ryan Holiday, are afraid of being criticized and laughed at, so they lash out first.
Attacking makes them feel stronger and in control.

And, of course, jealousy also plays a role. But hitting back at snarks is difficult because the moment you hit back you descend at their level, how they got to you, and give them importance. So they are free to spread their gall and hatred.

The Link Economy Degrades Information

Ryan Holiday quotes the creator of the expression "link economy" and he says that guy is an idiot.
The link economy is one of the main drives of rubbish journalism.

It creates a system of distributed responsibility similar to the subprime mortgage crisis, where everyone takes care of short-term gains while producing rubbish content.
“Don’t believe me? Here is a link, go check the resources”. But nobody checks them and the rubbish piles up.

> **The link economy is designed to confirm and support, not to question and correct**

The link economy has changed the system from what’s happened to what someone has said.

Google’s Backlink System is Bogus

Here Holiday makes a great point I wholeheartedly agree with.

One of the biggest contributing factors to Google’s SERP position is backlinks. The idea is that if a page gets linked to a lot, then it’s high quality. But there is nobody to check and ensure quality, so you can get pages with nice pictures to attract a lot of backlinks, which in turn helps the whole website.

But, at the core, the backlink system is not based on quality but on what’s shareable.

Corrections REINFORCE The Original Mistake

Ryan Holiday lists many instances in which unscrupulous bloggers published wrong information and later refused to withdraw the article.

Often the correction comes in a new post that only a fraction of the readers who read the initial wrong information read.
Or it becomes an update at the bottom of the article with the wrong headline staying exactly the same.

From a psychology point of view which is most interesting to this website, however, I learned of a study showing that corrections often reinforce the original mistaken article.
Those who saw the correction remembered and believed even more strongly in the initial mistaken claim.
This is because the correction re-introduces the initial claim into readers’ minds and forces them to re-run it, which reinforces the association.
We’re not only bad at remaining skeptical, but we are also bad at correcting plainly wrong information.

Real-Life Applications

If you are in the publishing industry, there is a lot you can learn here. A few golden nuggets:

Take Control of Your Wikipedia page…
… Or someone else might, and you never know what they are going to write. And just so you know, journalists all rely on Wikipedia.

Learn "Media Speak" to Increase Your Critical Thinking
Here are a few rules to keep in mind as you read and listen to the news:

- When you see "leaked" or "official document", know that some random guy or a media manipulator emailed the blogger with a probably fake or made-up document.
- When you see "breaking" or "we'll have more details as the story develops" know that what's in the news has not been double-checked and it's the equivalent of made-up rumors.
- When you read "sources tell us", know that those sources are rarely vetted and they are desperate for attention.
- When you read "exclusive" know that the source has cut a deal for favorable coverage. And that he probably gave that "exclusive" to other websites as well.
- When you read "we reached to so and so", know that they sent an email 2 minutes before publishing long after they had already prepared and finalized the article.
- When you see "updated" know that there has likely been very little editing and someone just copy-pasted some new lines from some other random sources (see link economy)

CONS

I loved and deeply enjoyed "*Trust Me, I'm Lying*", but there are a few points I need to raise:

- **I'm Not Too Convinced of "Manipulations' Effectiveness"**

Reading "*Trust me, I'm Lying*" you might get the feeling that we live in a world where smart manipulators can get

people to write whatever they please to influence public opinion.
But I see the world as a bit more chaotic and random (see *Fooled by Randomness)*.

He talks a lot about his campaign for the Tucker Max movie which, in the end… Resulted in relatively poor performance -a relative commercial flop-.
That to me says a lot about the limitations and complexities of being a media manipulator: you're not the master of puppets. You're just an actor… In a play full of actors. And your influence is bound to be limited.
Indeed, as Holiday admits, the system can end up turning against you, and "it feeds on itself".

- **These rules don't apply to all websites (anymore)**

These rules don't apply to all digital publishing and websites. It's not true anymore today that a "persuasive reader is the same as an accidental one" since Google likely measures bounce rates, dwell times, and other indicators of quality interaction with the users.

The same goes for the article's length: Google prefers longer articles for SERP placement.

It might still be true for more news-heavy sites though.

Review

I really enjoyed "*Trust Me, I'm Lying*".

I don't believe like Ryan Holiday seems to believe, that back in the days of TV it was better. As a matter of fact, I believe today it's much better.

But it's still a wonderful insider's view of the digital news publishing industry.
As Ryan Holiday says, whether you see it as a weakness or as an opportunity, depends on you.
But I hope that even if you see it as an opportunity, you won't use it for really bad causes.

And for all of those who don't work in the digital blogosphere, this is still a wonderful book to increase your critical thinking, distance yourself from the rumors mill that the news is, and, even more deeply, to better understand the world and human nature.

As Robert Greene, author of *The 48 Laws of Power* said: "self-interest is the currency that runs the world".
And the media landscape reflects a system of warped, toxic self-interest that doesn't add up to do good for the whole.

Alpha Male Body Language: 7 Poses to Gain Status

Lucio Buffalmano · 14 February 2019 · Archived copy · Original

What does the body language of an alpha male look like?

If you have that question in mind, this article is for you.

This post will show you exactly what dominant body language looks like, without becoming a caricature or a total asshole.

Contents

- 1. Take Up "Enough" Space
  - Sit Comfortably
  - Stake Your Claim (without overdoing it)
- 2. Head Parallel To The Ground
  - Eye Contact: Keep The Gaze Up
- 3. Make Yourself Comfortable
  - Lock In
- 4. Adopt Open Body Language
- 5. Move Purposefully, Quit "Self-Soothing"
- 6. Adopt Good Posture
- 7. Walk High Power
- 8. Stand Still: Let Others Orbit Around You
- 9. Let Others Come to You
- 10. Bonus: Use Nonverbals
- Calibrate!
- The Golden Alpha Rule: Be Congruent

1. Take Up "Enough" Space

Principle:

⚖ **Dominant men take up space while submissive ones make themselves smaller.**

The *APA Handbook of Nonverbal Behavior* states that body openness and expansiveness in adults are positively related to dominance (J. A. Hall, Coats, & LeBeau, 2005)

As for everything, **to maximize your social effectiveness you must use balance and calibration.**
⍰ Guess where these 3 are most appropriate:

⁉️ 1 and 2 good for bars and getting attention. Too much for work (unless you're top dog). Reclining with just one arm is a good mix

Sit Comfortably

Principles:

- Knees and feet shoulder-wide or slightly more
- Cross legs with "figure four"
- Stay comfortably upright

⁉️ Examples:

1. Shoulders ⍰⍰, head could be more upright, legs too feminine
2. Shoulder and head ⍰⍰. Legs fit the “hipster/metrosexual vibe” but not masculine
3. Upper body ⍰⍰, legs could go down more straight
4. Great for hoods and male friends. Too much for workplaces and can feel try-hard

⍰ Good examples:

1. Upper leg could be more parallel to the floor. But good
2. Great overall, but uncomfortable position. Only keep it briefly, then you can stand up

Stake Your Claim (without overdoing it)

Ie.:

Feels “overdoing it territory”

2. Head Parallel To The Ground

General body language principles:

- **Straight head** is the perfect mix for most situations
- Chin jutting forward challenges others
- Chin tucked in with aggressive eye contact/expression readies to fight
- Head hanging low is submissive

A slight chin-up for men is OK.
Strike a good balance:

Too forward leaning

Straight

Too backward leaning (just off)

Eye Contact: Keep The Gaze Up

General principles:

- Keep your gaze straight
- Hold eye contact “appropriately long enough”

And the direction of breaking eye contact is also important.

- Break eye contact to the side or upward
  - Downward is submissive
  - Upward is dominant

⍰♂**Lucio’s Take**: Learn and then chill

Lucio: Gaze “straight up” feels unnatural to me.
I keep a straight head, good posture, and walk with purpose.
I don’t mind a slightly lower-pointing gaze: it’s better to take in the environment.
In safe areas I know, my gaze is out of focus. It sub-communicates confidence and self-sufficiency.

Also powerful:

High-Intensity Gaze When Focusing

See-through people

Similar to the “out of focus” I like:

⍰ **More about the “see-through”**

3. Make Yourself Comfortable

General principle:

⚖ **Physical comfort sub-communicates mental comfort.**
Including confidence and a sense of control over the environment.

Lock In

Principle:

⚖ **The more uncomfortable they are compared to you, the more power you gain**

Some ways to lock in:

- You sit, they stand
- You recline against a bar, they stand
- You sit on the inside of a booth, they’re outside
- You’re on the quieter side of the sidewalk (close to the wall), they’re on the outside
- …

⍰ Yours truly:

4. Adopt Open Body Language

General principle:

- ⚖ Close body language sub-communicates fear, defensiveness, and discomfort.
- ⚖ Open body language sub-communicates confidence, and comfort.

Many examples online for closed VS open poses.
Besides the basics:

- Touching the tie
- Checking the time
- … Any “excuse” to cover your body

⚠ Defensive body language can become permanent over time.
If this is you, fix:

- Scrunched posture
- Hunched head
- Rounded shoulders

⍰⍰ See Power University for the group analysis

5. Move Purposefully, Quit "Self-Soothing"

We can cluster body language signals in:

- Signs of **comfort** VS
- Signs of ***dis*comfort**" (AKA "displacement signals")

Comfort is associated with confidence, social confidence, and control over the environment.
Discomfort, is the opposite.

How do people signal discomfort?
It often comes down to touching and self-covering.
While studies show that touching *others* is more dominant, touching the self signals low confidence.

Therefore, minimize "self-soothing" and "displacement signals" such as:

- Touching yourself
  - Face or back of the neck
  - Scratching itches
  - Wringing hands
- Playing with jewelry
- Opening up the collar of a shirt
- Rocking on your toes
- …

6. Adopt Good Posture

Albeit good postures is not a must for alpha males, it's still important.

And, generally speaking, high-quality men have better posture.

Common posture issues:

1. rounded shoulders
2. head leaning in
3. hunched back posture

Careful with:
⚠ Over-compensating poor posture
⚠ Over-doing good posture when everyone is chill or spreading out
⍰ Example: Bieber seemed unnaturally straight, sticking out like a sore thumb

⍰ **Posture & posture exercises** (PU alumni only)

7. Walk High Power

Quick tips:

- **Shoulder sway** is masculine (similar to Bond's video above)
- **Gap between legs**. Don't overdo, but don't press them together either

See PU for more.

Parallel Feet or "Outward Pointing"

"Outward" is masculine, parallel is more refined.

Bad joints, crass behavior, but masculine

Look Ahead If Fast, "Take In Environment" If Slow

High-power slow is:

- ⍰ I own my time, don't have to hurry for anybody

- Slight smile for “happy with the world and who I am” vibe
- Eyelids lower to sub-communicate “contentedness and comfort” ▯ Example

High power fast is:

- ▯ I’m on a mission (get out of my way)
- Look straight ahead

▯ Daniel Craig in Specter:

Tips

1. **Walk on a high-power song** that makes you feel a boss. Learn the movements, then replicate them without song. ▯▯♂ My go-to song was “*I wanna be your slave*” by Manneskin
2. Image yourself James Bond style, gun holstered inside your jacket.

Or think of swords sticking out straight, on a straight back to help your posture:

8. Stand Still: Let Others Orbit Around You

General principle:

⚖ **Alpha males don’t move for others because others move for them**

Castiglione calls it “Sprezzatura”, and it’s basic Social ROI, true for assigning tasks and having people execute. But also for how bodies move during normal socialization, and for the sub-communication of power via “stillness” of movement.

It’s explained by the Social ROI matrix:

The king/alpha male gets high returns, with less effort

And it's why on this website we caution against the "high energy approach" championed by many social skills coaches.
High energy can work, in the right environments.
But it's easy to overdo it and become the low-status jester.

In Power University we also teach how to be high-energy *and* high power.

9. Let Others Come to You

Alpha males do not *actively* seek attention.

Or, at least, they do not seem like they are -alpha males can be Machiavellian, of course-.

Actively seeking attention is more feminine and "BPD-like".

However, **alpha males get attention as a consequence of being the highest-status men** in the group.

That attention, in turn, sub-communicates power and "top dog status".
It goes back to the fundamental laws of power.
Having people around you communicates they need you and want you.
They want to talk to you, be around you, get your opinion, your approval, f*ck you, or be seen with you.

Notice how Trump, a man focused on being the most powerful and dominant man in the room leverages this principle:

> **Hillary**: (bolts off stage like a schoolkid)
> **Trump**: (remains grounded and lets everyone else come to him)

⍰⍰♟ Who looks presidential?
Easy: Trump is already acting like the alpha male in charge of the country. Hillary instead looks like she may be a

bit too nice to protect people's interests.

10. Bonus: Use Nonverbals

Less expressive men can also be dominant.

But nonverbals are high-power because they are low-investment.
Such as, it's high power to communicate whole sentences without a word. Or to make others crack under pressure without saying anything.

And research shows that emotional expressivity is attractive in dating.

Facial Expressions

A calibrated balance is often the most effective.

For example, no smiles are cold and broad smiles communicate warmth. But slight smiles are higher power (Wang, Mao, Li, & Liu, 2017) while *still* communicating enough warmth:

⍰ Crazy Stupid Love

> **Her**: That would not work on me
> **Him**: (Stares at her with slight smile ⍰) <— ⍰⍰ "It sure will"

♟ **Perfect dating move**
No words could top that. "Of course that would work on you" would make her deny, and arguments are *very* unseductive.
⍰⍰ He fails with "it's obvious that you like me"

⍰ Disappointed:

Sub-communication⍰⍰ “I’m disappointed, and you deserve no words”. Pressures others into explaining without a single word

⚠ Careful because facial expressions can be feminine or passive-aggressive.
In PU we explain the difference.

⍰ The “Inquisitive Look“

⍰ from an ex-girlfriend during early dating:

> **Me**: What about Enrico
> **Her**: (looking tense) Enrico, what do you mean
> **Me**: Enrico, don’t you remember?
> **Her**: (getting worried) No…. Did I say Enrico in my sleep? <— ⚠ This can frame me as jealous (and lower-value mate guarding. Not good)
> **Me**: … <— ⍰⍰ I ignore and stay silent to sub-communicate I’m NOT worried
> **Her**: (growingly worried) OMG, I don’t know if I said it in my sleep, I have no idea who is Enrico
> **Me**: (sideways glance, pursed lips, slightly corrugated eyebrows) **<— this is the inquisitive look**
> **Her**: … I’m sorry, I don’t know, I really have no idea how Enrico is, really Luc…
> **Me**: Enrico is the name of the breakfast we had last time
> **Her**: Ooooh ahaha true, OMG I was thinking I said it while sleeping, I’m sorry! Ahaha yes I would love an Enrico ahah <— ⍰⍰ Excited and exaggerated laughter as tension release

This exchange sub-communicated (and expanded) this: “I’m very into you and I’m afraid of doing anything that may jeopardize us”.

Use pauses and facial expressions for a similar effect: high power and “cool”, without any attack.

Hand Gestures

⍰ Example:

> **Judy**: (spins her hand to say “go ahead”)
> **Guy**: (speaks)

⍰⍰ Use hand gestures for self-defense.
For example, raise your hand and speak louder to subcommunicate you’re not to be interrupted.

Hand-Tapping

To sub-communicate patience running out, or demand faster action.

 Confrontational, from The View.
Less confrontational but more powerful from Bush:

> **Bush**: People understand that (slams his hand on the table) the House of Representatives needs to pass (…)

Tapping on their body can also be more benign "affectionate dominance".
Imagine your woman beats around the bush, and you want to get going.
You can tap on her side as if to say "Come on baby, wrap it up".

Hand-Tapping Self-Defense
Keep talking, raise your hand or touch their arm and look at them, as if to say "One moment".
If it's your boss raise your hand as if to say "Sorry, got ya", nod, and add a smile.
If you were wasting time, cut to the chase in any case.

Calibrate!

General principles:

1. **Mind your rank**
   - Lower rank: allow superiors to be more dominant as a beginner
   - Higher rank: march your rank with body language
2. **Mind people's property & space**
3. **Be more subtle in high-society**
4. **High-power, without being a d*ck**. Keep an appropriate balance for your goal, don't make enemies:

Case study: too dominant, invading personal space

I leaned against the gate of a kart track beside the owners.

I knew it was too much, but wanted to test things out.

…

See Power University for Lucio's real-life examples.

Calibrate to culture and environment

Touching oneself and others is also cultural and environment-dependent.

For example, Allan Pease in *The Definitive Book of Body Language* compares Italian and English cultures.
People in Rome touch each other hundreds of times. But in the UK barely touched each other at all.

The Golden Alpha Rule: Be Congruent

Here's the harsh truth:

Low power behavior will always leak out until you develop the *mind* of a high power man.

And because of the leakage principle™, when signals are incongruent, people always trust your lower value leaks more. And they feel like you're a **poser**.
It's a simple law of value signaling: lower value leaks are more credible.

That's why at The Power Moves we start with the mind first, as per our foundations of self-empowerment. And we ensure our alumni internalize these mindsets in **Power University**.

Also see:

- Archetypes of high-status men
- High-status behavior
- High-status speaking

Better yet, internalize these principles to apply them with maximum congruence:

How to Be More Dominant and Socially Confident: A Guide for Top-10% Men

Lucio Buffalmano · 16 February 2019 · Archived copy · Original

How do you become a dominant man without being a jerk?

True dominance isn't about aggression or bullying. It's about **projecting confidence, asserting yourself**, and **commanding respect** in a way that others respond to.

And when done right, **effective dominance** helps you gain **status, respect, and attraction**—whether in your career, social circle, or dating life.

As the leading resource on social power dynamics, we've taught thousands of good men how to develop high-status behavior. In this guide, you'll learn **10 simple but powerful behaviors** that show you're a **confident, dominant man**—without ever overcompensating or trying too hard.

Contents

- 1. Lead
  - 1.2. Move First
  - 1.3. Lead Your Dates (Dating)
- 2. Strategic Host Behavior™
  - 2.2. Address The Group

- 7. Defer With Power
- 8. Stand Your Ground
  - 8.2. Stand Your Jokes & Comments
  - 8.3. Stand Your Physical Ground
- Develop Effective Dominance™

1. Lead

Dominant men are leaders.
And dominant behavior enhances perceptions of competence regardless of actual competence (Anderson & Kilduff, 2009).

Leading signals social confidence and high status.

1.2. Move First

⍰⍰ **Lead when entering new venues**. Many men feel uncertain. It’s your opportunity to provide leadership

General principle facing uncertainty:

⚖ **Lower-status men look around while dominant men take initiative**

Ie.:

- Speak up
- Greet newcomers
- Walk first

⍰ Example:

> **Tony**: (Starts walking up the stairs) <— While people are tentative in new environments, Tony (over)-confidently leads the way on his first time there
> **Omar**: (Annoyed, rushes in front and brushes Tony)

🡅♟ **Strategic Considerations: let your superior go first**
Tony bulldozzes upward, without political considerations. This is dominant, but may not be *positively* dominant. Advancing while maintaining relationships is often more effective.

⍰ **PRO Tip**: **As an official leader, leverage group expertise for the best response**
Involve your best experts to craft the best response and you'll be a more effective leader.

1.3. Lead Your Dates (Dating)

Effective dominance is crucial in dating.
And one of the most effective ways to combine dominance with dating success is to lead forward, and adding warmth.

Some ways of displaying win-win leadership include:

- Move her away if a fight erupts
- Guide her
  - hand walking in front
  - Arm in arm
  - Hand on her lower back
- Help her get up

⍰ Example:

> **Him**: (offers his hand to help her up)

⬆♟ Not just gallant, but effective
Letting her go first sets the frame that it's also *her* decision to leave together. Prevents future games and increases attraction. Plus, it's the mix of leadership and gallantry women dream of (and a healthy approach to maintain relationship leadership and attraction). This is *effective* dominance.

Video in Power University.

2. Strategic Host Behavior™

Host Behavior™ refers to behaviors and frames that signal authority, expertise, or ownership in a given environment—physical or social—while guiding others—often projecting power subtly through kindness and service-oriented prosociality

Host behavior is perfect Effective Dominance because they're often **automatically dominant *and* warm.**
Some typical host behavior:

- ***"After you"***, when through doors or boarding/exiting
- **'Follow me' gestures**
- ***"You can sit here"*** invites
- **Checking in** with people, ensuring they're doing well
  - ⍰ Ask '*How is your night going*' or '*How was your X*', and you lead from the first move

Good host behavior is high power and high warmth because the host leads, while also caring for others.

Leader: (invites in, rotates towards the forward direction) After you
Follower: (focusing on the leader)

⬆ ♟ Great mix of power and warmth
He looks halfway between guest and direction. The guest, focused on the leader, yields control of the environment. This is also *effective* dominance.

2.2. Address The Group

Whenever appropriate, address the full group and you almost automatically become high status.

A great way to do it is with 'service leadership', for example:

- **Get the check first** ➡ Count how much it is for each, announce it to all
- **Propose a place** to higher-status individuals, decide ➡ Announce it to the group.
- Open Google Maps first ➡ **Lead the group**

⍰ Over-doing The Host: Obama VS Putin

Remember: balance and calibration.

If they guide you *without* being hosts, it's a power move.
But if they're genuine hosts, they're doing their job. Act high power, but don't steal their role.

Obama tried to take the host role:

> **Obama**: Where would you like to sit (shows Putin the way)
> **Putin**: (walks from behind, shows Obama where he can sit) <— Curt, but forced to do it to defend his genuine host role

⬆ ♟ Strategy: let Putin go first

Obama was ahead, but unsure what to do.
He could have:

- Let Putin go first through the door saying “after you”
- Strategically slow down or stop near the banquet to let Putin catch up
- Say “T*hank you for this*” to self-frame as being served
- Casually ask “*Looks amazing, where shall we sit*” <— The simplest and most natural solution is often best

⍰ 2.3. “Show” The View

A common power move among politicians.
Example:

> **Trump**: (opens up pointing to something on his left)
> **Macron**: (opens up and tries to Make Trump follow on his left)

Macron did it because he “played at home” in France.
And Trump did it because he’s Trump :).

3. Assign Tasks

Principle:

⚖ **Powerful men tell others what to do (task) and low-power men execute.**

⍰ 3.2. Reject Tasks When Disrespectful

Dominant men task others even they *lack* formal authority (see “types of political players“).

However, **you lose status when others task you without authority.**
And you lose even *more* when they’re not respectful (ie, without “power protecting“).

You must defend your boundaries—lest you lose status, respect, and attraction-.

In this example, a guy reached out to me as the president of the local Toastmasters:

⬆ ⍰⍰⍰He had no right to task me like that because of social exchange dynamics.
We provide free self-development opportunities. So it's on *him* to make it easier on me. Cherry on the pie: his tone.
P.S.:
He was SUPER friendly in person. That always happens after dominance showdowns.

See more on tasking and executing strategies:

- **How to maintain power while performing other people's tasks**

> 10 Ways to Maintain Power When Executing Orders

More in PU ⍰.

4. Minimize Visible Effort

Remember the social ROI matrix:

⚖ Less effort for more reward = more power

Ie., it's more dominant to:

- **Invest less** than others in the interaction/relationship
- **Speak less** while getting the same attention/buy-in/execution
- **Move less** while others come to you

4.2. Let Others Come to You

General principle:

⚖ **Lower-value seeks higher-value**

> **Hillary**: (bolts off stage like a schoolkid)
> **Trump**: (remains grounded and lets everyone else come to him)

⬆♟ **Trump looks the "presidential part"**
Hillary's actions raise doubts about her ability to protect voters' interests.

⚠ **Careful with high-energy attention-seeking**
⍰ Get attention without looking like you chase it or crave it.

⍰ 4.3. Use Pauses to Exert Social Pressure

General principle:

⚖ **Confident men handle silence and tension better than less confident men.**

⍰ Example:

> **Him**: (Intense) What do you love about it

> **Her**: (Gets tense. Pours her heart into her reply)

⬆ ♟ THIS is effective "vulnerability"
After he's shown power, *then* vulnerability makes him "positively safe". See 'how to do vulnerability right'.

4.4. Use Nonverbals

Negative nonverbals are especially dominant.
Disapproval for example sub-communicates failure to meet your standards.

▯ Video examples

▯▯Watch out. Facial expressions can be passive-aggressive instead of dominant.
Power University explains when to use and when not.

5. Low Emotional Investment Signaling™

Investment Signaling™ refers to strategically controlling how much time, energy, or resources you use in interactions. High-investment signaling can display financial abundance and increase 'social credits', but *emotional* investment signals eagerness and frame yourself as lower value, whereas **low-investment signaling conveys independence and higher value**.

Principle:

⚖ The less invested party signals high self-sufficiency and value, while the more invested party chases and sub-communicates lower-value

Longer texts, over-texting, or initiating more often as in the previous examples all signal higher investment.

▯ Example:

> **Her**: (emotionally highly invested)
> **Him**: (emotionally uninvested, leaves)

⬆ Many of the most attractive cinematic figures of power masculinity displayed lower emotional investment.

6. Touch Others (When Appropriate)

Principle:

⚖ **The higher the power, the more the freedom to touch and move closer**

Welcomed touching is high power but win-win.
Unwelcomed touching and 'invasion of space' are domineering power moves.

As *The APA Handbook of Nonverbal Behavior* states, 'more dominant men touch others more, and will invade personal space more, than less dominant men' (Knapp & Hall, 2010).

⚠ **In doubt, avoid touching**
Touching and personal distances are contextual. Since it's not strictly necessary for status or respect and it's easy to overdo it, avoid it if in doubt.

6.2. Touch With "Affectionate Dominance"

These can be "motherly touches":

- Patting
- Cheek pinching
- Face touching (Brando in *The Godfather*)
- Temple kissing (Trump on Macron)

▯ Example:

Tony Robbins: (laughs, kisses his temple) I love you son of a bitch (pats Gary on the belly)

♟ **Gary does OK ignoring, but touching back would have been better**
Gary doesn't let that sidetrack him ▯▯.
Better yet: 1. Touch Robbins back saying "*Thanks*" but without looking at him; 2. 'Say "*but seriously though*" to demand Robbins pay attention; 3. Move on

6.2.3. "Fix" Their Looks or Personal Items ▯▯

Since this is something couples mostly do, it's a power move from anyone else.

- Preening
- Fixing shirt collar
- Adjusting tie
- Removing lint
- …

Power players use fixing as an excuse for a power move.
▯ Example: Trump with Macron.

▯▯ Even when value-adding, encroaching personal space is still a power move.

▯ **PRO Tip: Power-protect before helping**
Ie.:
1. Do it privately rather than publicly
2. Ask "*May I*"
3. Justify your move, e.g.: "*Bro, there is a lint, lemme remove it*"

▯ 6.3. Defend Against Inappropriate Touching

For example:

- **Touching personal stuff without asking**
  - ⍰ Touch them back to even the scores. If they take *from* you, resist it

- **Taking some of your food**
  - ⍰ Say '*Ask for it bro (I'd say yes, but ask)*'. Or highlight it with humor if they're higher status '*Yeah keep up the dominance displays*'

Some domineering men may try to intimidate you via third parties:

- **Bullying someone else**, including "jokingly"
- **Raging** in your presence, kicking a chair
  - ⍰ Mobster in Carlito's Way slaps a chair

⍰ Never be intimidated
Display that you're unaffected by opening a new topic or talking to someone else. If you can, make light of it. For example, 'chill bro' or one-up with a joke such as 'that chair took some mean beating'.

A good self-defense example is in Power University.

⍰ 6.4. Lead Affectionate Displays With Friends

Confidence and dominance are NOT synonymous with pushing others down.

Instead, we highly recommend using your dominance to lift others up, and develop good win-win relationships.

Be the first to initiate friendship gestures with your friends for the best of both worlds:

> **Leader**: (opens up his arms for a hug)

🡅 ♟ Great mix of power and warmth
⍰⍰♂ I also often initiate a hug with my friends

7. Defer With Power

This is crucial for all beginners:

You can be a subordinate AND still be confident and respect-worthy.

> **Alonzo**: (confidently asks for permission) OK?
> **High-power underling**: (turns towards the decision-maker slowly, quietly, and with purpose) <— Defers with high power composure. EFfective dominance calibrated to the lower status role

⍰⍰♟Notice the slow speed, the silence, the purposefulness.

8. Stand Your Ground

8.2. Stand Your Jokes & Comments

> **Dr. No:** Do you know much about guns, Mr. Bond?
> **Bond**: No (looks away). I know a little about women (looks straight at him, holds the silence)

8.3. Stand Your Physical Ground

Principle:

⚖ **Lower-status men move for higher-status men**

Ie.:

Low Power	High Power
Steps out of the way	Walk straight or take half a step. Expect others to give some space
Moves sideways ⍰	Stays straight
“Slinks in” half-open doors	Open doors fully. Push sliding doors open when in a rush
Crunches over when it drizzles	Walks straight (cause you’ll get wet anyway)
Waits on escalators or apologetically squeaks by	Nudges & reminds people of his right of way

⍰ Nudging for your right of way

In Power University Lucio shows how to do it in real life.

Develop Effective Dominance™

> Effective Dominance™ refers to **balanced and calibrated dominance** to achieve the benefits of high dominance, while avoiding commonly associated costs such as loss of prestige, antagonizing high-value people, or social exclusion

Dominance follows the law of optimum balance and calibration: it’s great when calibrated, and when within an ‘optimum continuum’ that depends on context and goals.
When dominance is too low, you move into ‘too nice guy’ territory. And when it’s too much and uncalibrated, you become aggressive, overbearing, and obnoxious, creating issues both interpersonally and in social

hierarchies—people dislike you, isolate you, or actively confront you.

Effective Dominance looks at dominance amorally, and refers *only to optimal behavior to achieve goals. That may,* unfortunately, include coercion or bullying tactics, at times.
For that reason, we usually prefer an *Honorable* Dominance™, which adds an ethical layer of preferring win-win, uplifting, and avoiding bullying others, even when doing so could benefit you.

Dominant Conversations: 10 Ways to Speak With Power

Lucio Buffalmano · 16 February 2019 · Archived copy · Original

Want to dominate a conversation and **speak with confidence?** Anyone can learn to speak with dominance and confidence—without becoming a jerk.

At The Power Moves, the #1 resource on social power dynamics, we've helped thousands of men become more confident and positively dominant.

This article shows you 10 communication strategies to dominate conversations with assertiveness and poise—without ever becoming a jerk.

Let's dive in:

Contents

- 1. Lead The Conversation
  - 1.2. Control The Tempo
  - 1.3. Control Emotions
  - 1.4. Control The Tone
- 2. Enforce Boundaries
  - 2.2. Defend Your Right of Speech
  - 2.3. Defend Against Power Moves
- 3. Pursue Your Conversational Goals
  - 3.2. Confirm Common Understanding
  - 3.3. Ask Questions, Expect (& Demand) A Reply
  - 3.4. Push Through to Make Your Point
- 4. Teach
  - 4.2. Give Feedback
  - 4.3. Judge
  - 4.4. Correct And Contradict Them (when appropriate!)
- 5. Control The Frame
  - 5.2. Answer From Your Frame
  - 5.3. Summarize & Close
- 6. Dominate Removing Words
  - 6.2. Use Pregnant Pauses
  - 6.3. Wield Pressure With Silences
- 7. Be 'Positively Aggressive' (when needed)
  - 7.2. Speak Over Others
  - 7.3. Cut People Off
  - 7.4. Criticize & Attack
  - 7.5. Push Others On The Defensive
- 8. Display Rationality & Logic
- 9. Speak With Charismatic Conviction
- Bonus: Use Dominant Expressions
  - Use Loaded Keywords

- Learn More

1. Lead The Conversation

Powerful men dominate conversations by controlling the:

- **Tempo** (rate of speech and topic duration)
- **Tone** (happy, sad, serious, etc.)
- **Scope / Topic**
- **Frame**
- **Contributions** (who speaks)

⍰⍰ To lead with warmth get to know people:

- **Ask questions**
  - Genuine questions to get to know people, combining power and warmth
  - Probing questions when something feels off (e.g.: *'Why would you do that'*)

1.2. Control The Tempo

Expressions for dominating conversations include:

- *Go ahead*
- *Get to the point*
  - *Let's focus* <— more power-protecting
- *Slow down*

1.3. Control Emotions

General principles:

High Power	Low Power
Set the emotional tone	Adapts
Tasl & results first	Relationship & feelings first
Anger can happen	Never show anger
Emotionally stable	Mood swings
Can-do, “there is always a way”	Can’t do

⍰⍰ Group conversations can differ.
Strategically men won’t chase attention like jesters.

1.4. Control The Tone

Great example of attractive conversational dominance with a woman:

> **Her**: My spies told me you were quite a regular at Studio 54 <— Hypes it up
>
> **Him**: ⍰ <— ‘Whatever’ attitude, displays superiority
>
> **Her**: That must have been an amazing time
>
> **Him**: ⍰
>
> **Her**: Why don’t you tell me about that
>
> **Him**: I rarely think about the past. What I care about is what can happen today. Tonight. What may happen tomorrow. <— Sets his frame with intellectual dominance
> Yes? <— “Feeds the yes” to end with an agreement and rebuild post-victory goodwill ⍰⍰
>
> **Her**: Yes <— Accepts his worldview and power

🡅♟ Go for mature intellectual dominance as an older man
The man who’s been there, done that, centered and unflappable. He does not change state for her: *she* adapts to him.

For powerful conversations with girl, see:

- How to lead in dating
- How to be positively dominant and confident in dating

2. Enforce Boundaries

Powerful conversation is dynamic and dyadic.

Meaning, it isn’t just how *you* speak, it’s also how you react to *others.*

Dominant speakers may try to cut you off, undermine you, or disempower you.
You can’t let that happen:

2.2. Defend Your Right of Speech

Raise your hand with a serious expression to reinforce your words

2.3. Defend Against Power Moves

Ben knows how to handle his Charisma on Command cofounder:

> View this post on Instagram
> A post shared by The Power Moves (@the_power_moves)

> **Ben**: (talks)
>
> **Charlie**: (laughing) But can't answer every single question <—- Derisive, disempowering
>
> **Ben**: Nono <—- Blocks, defends his frame and speaking time
> But I'm just thinking, I'm just thinking <—- Insists and talks over until he "gains the floor"
> (…) <—- Explains why his original observation is valid

⬆️ ♟I prefer a lower intensity approach, but it's solid ⍰⍰

3. Pursue Your Conversational Goals

Dominant men get things done.
If they have an objective, they pursue it.

3.2. Confirm Common Understanding

Ensure that teammates or subordinates understand:

- ⍰ "*Did you get it?*"
- ⍰ "*Is it clear?*"
- ⍰ "*… OK, if not clear please ask*"

The most dominant form tells them to repeat.

3.3. Ask Questions, Expect (& Demand) A Reply

The *Routledge Handbook of Communication Skills* reports that asking questions is dominant.

However, you lose power if you ask and others don't reply.

And while low-power men accept brush-offs or non-replies, higher-power men insist to get what they want.
It becomes a mini power showdown.

⍰ Example:

> **Her**: Well, thanks, I got one now <— Vague
>
> **Him**: You went out this morning and bought a gun?
>
> **Her**: Well, let's say I got one, OK? <— Brush-off
>
> **Him**: (ignores the brush-off) Somebody loaned it to you? <— Asks again as if it were the most normal thing in the world.
>
> **Her**: (replies) <— Still vague, but he got more info. And displayed power

♟ If you need to know, ask again
If he accepted her brush-off -say, laughing-, he'd lose power and respect (and attraction).

3.4. Push Through to Make Your Point

Principle:

⚖ Dominant men plow through interruptions while others get sidetracked

This is especially true for important matters and public speakers.
You're higher power than the crowd. But if they sidetrack you, you plunge at their level.

> **Theresa**: I've listened very carefully to…
>
> **Crowd**: (laughs) <—- Disempowering
>
> **Theresa**: (repeats louder, more dominant) <— ⍰⍰ I mean business and have no time for games

🡅♟ Repeat without the most damning part
Theresa smartly skipped "*I've listened very carefully*", the most contentious part.

4. Teach

Principle:

⚖**High-status men teach, low-status men learn**

And we respect teachers far more than learners.

Also see:

- Dominant teacher frames

> Why Teachers Disempower You (Teacher-Pupil Frames)

However:

⁉️♂ **Don't push lectures, make others *want* to learn**
Lecturers are annoying and needy. Make others *seek* your expertise. Use achievements or *sub*-communicate expertise.

4.2. Give Feedback

Feedback sub-communicates high-status and high expertise.

⁉ Especially dominant is to correct others' mistakes:

> **Host**: (explains his mission)
>
> **Sadhguru**: (corrects the supposed mistake) <— Power move ⁉️
>
> **Host**: (nods and looks in reverence) <— Too 'nice', relinquishes all intellectual authority

⬆ Dominant, but also too disempowering towards the host

⍰ Video

4.3. Judge

- **Give compliments** when appropriate
  - *"Good job"* <— ⍰⍰ I assess your work / you work for me
  - *"You're a good guy"* <— ⍰⍰ I judge your personality
  - *"He's a nice guy"* <— ⍰⍰ More dominant and dismissive if the recipient is present
    Trump does it often.

- **Criticize when appropriate**

At a higher level, powerful men judge people in general:

⚖ **High-power men set the frame of good/bad, and judge others accordingly**

See more in:

- Judge power dynamics

> The Judge Role: A Tool For Emotional Control

4.4. Correct And Contradict Them (when appropriate!)

Correcting and contradicting are obvious power moves to display conversational dominance.

⍰ Example:

> **De Niro**: Let me ask you a question Greg (…) Can you really trust another human being?
>
> **Greg**: Sure, I think so
>
> **De Niro**: No, the answer is you cannot <— Contradicts him and imposes his frame, no f*cks given

♟ **Don't overuse this.**
It breaks rapport, and hwen misplaces it signals lack of calibration.
Negotiating and redirecting are superior for influencing and persuading.

5. Control The Frame

Dominant men control the conversational frame.

At the most foundational level, they set the frame of what's right, fair, and "normal".

5.2. Answer From Your Frame

Mindset:

⍰ My answer is in my total control

"Yes" and "no" answers follow other people's lead.

To dominate the conversation start a new sentence from scratch:

> **Her**: Madrid first. Have you ever been there?
> **Him**: I've heard they don't eat dinner until midnight <—- Implies "no"

⬆♟ High power and 'cool'
"No" would disempower him. And would end the conversation.
Instead, he answers while maintaining power and keeping the conversation going. Plus, he sounds cool.

⍰ Video here.

Even higher power:

> **Cruise**: I'm sorry, first wave to the beach you mean the front?
> **General**: France! Satellite shows (…) <—- Implies "yes"

♟ Be more dominant with subordinates
⬆ "Yes" sub-communicates it's a legitimate question, inviting discussions.
Instead, he *implies* the "yes" with his explanation, and plows on. And with the louder dominant voice, he sub-communicates it's *not* a discussion.

5.3. Summarize & Close

Summarizes the conversation shapes the meaning.

Or, at least, you get a power boost with the last word.

⍰ Trump does it with Schumer and Pelosi:

> **Trump**: I will do XYZ, thank you (ends the discussion)

6. Dominate *Removing* Words

Remember the social power matrix:

Higher status men invest less by using fewer words (exceptions apply)

So communicate more non-verbally.
Bonus points, research also shows that higher expressiveness is more attractive (examples in PU).

6.2. Use Pregnant Pauses

Principle:

⚖ **Confident men hold the pauses, anxious men rush to fill them**

Good tips for when you have power:

- Sit with the silence (without rushing to fill it)
- Speak slow (⏸ "What I say matters")
- Use pregnant pauses for effect
- Wait 2 seconds before replying

⏸ The most famous cinematic example of "pregnant pauses":

> **Godfather**: Fredo, you're my older brother, and I love you <— Notice the collaborative frames
> (pregnant pause)
> But don't ever take sides against the family again.
> (pregnant pause)
> Ever.

6.3. Wield Pressure With Silences

> **Di Caprio**: (straight to business)
>
> **Banker**: Excusez-moi Jordan, Swiss custom requires 10 minutes of chit-chat before business can be discussed <— Seeks to set the rules. And frames Di Caprio as a brute "in the wrong"
>
> **Di Caprio**: … (stares at him)
>
> (Power showdown) <— Who conforms to whom determines who's in charge
>
> **Banker**: Yeah… Of course, let's get down to it. What would you like to know <— Conforms to Di Caprio, who's now the "de fact" highest status man

Social pressure creates fear or at least discomfort in the submissive party.
⍰ Example:

> **De Niro**: (direct, dominant questions with little warmth)
> **Stiller**: (nervous and over-reactive)

🡅♟ Stiller makes a joke to relieve pressure. But instead of accepting it -a friendly move- De Niro piles more pressure, culminating with the "but you didn't pick it" power move.

If Stiller wanted to defend, he could have said:

> **De Niro**: They say geniuses pick green…. But you didn't pick it
> **Stiller**: Who says it <— Question his authority

Then, he could have taken the judge role with "*Hmm, I'm not convinced. Anyway…* ".

⍰ 7. Be 'Positively Aggressive' (when needed)

Aggression is the darker side of dominance.

We don't recommend it as your standard approach.
It makes enemies, destroys social capital, and research also found that aggressive language is less persuasive.

BUT… There is a place and time for almost anything, and it can be useful for self-defense.

So, it's good to know when and how to be aggressive.

⍰ 7.2. Speak Over Others

Dominant and aggressive individuals trample your right to speech if you let them.

If you saw Trump's debates, it's shocking how many times he interrupted, spoke over, and robbed opponents of their right to speak.
And whenever others fought him, he won almost all the times.

⍰ Example:

> **Bush**: (speaks)
>
> **Trump**: (sticking his hand out as if to say "hold on") Excuse me Jeff, Jeff. I was…
>
> **Bush**: (tries to speak over Trump)
>
> **Trump**: EXCUSE ME! One second
>
> **Bush**: (lacking power and conviction) No..
>
> **Trump**: More energy tonight, I like that. Look… (keeps talking)
>
> **Bush**: I was asked the question (pointing towards the interviewer, hoping they'll intervene to save him)
>
> **Trump**: It was my obligation (finishes to make his point)

♟Jeb Bush too submissive and passive to be a leader
Jeb Bush was unprepared to deal with Trump at his level of dominance, aggression, and Machiavellianism.
He even smiles at Trump, who caps it all off telling Bush "Go ahead". And Bush starts speaking on cue like a puppet on a string.

⍰ 7.3. Cut People Off

Domineering men cut others off.

If others accept it, they confirm their lower status.

⍰ Example:

> **Sergeant**: Elias is a troublemaker… (gets interrupted, and turns to Barns)
> **Barns**: (louder, without looking at the sergeant) Elias is a water walker…

⬆ Barns hollows the sergeant's authority.

⍰ 7.4. Criticize & Attack

Criticism mixes aggression with judge powers.

⍰ Example:

> **Trump**: What a stupid question. What a stupid question that is (walks away shaking his head)

⍰⍰♟Dominant, but poor leadership
Trump made the mistake of telling her "I watch you a lot", subcommunicating what she says matters to him (narcissism plays a role there). We enocurage men to be high-quality, honorable leaders here.

Video here.

7.5. Push Others On The Defensive

The dynamics of attack and defense are a critical dimension of frame control.

The attacker controls the frame and dominates, while the defender reacts.

⍰ Example:

> **Defender**: And that's where the confusion is coming from
> **Aggressor**: There is no confusion

> **Defender**: (smiles nervously, keeps apologizing)

⬆ The defender isn't really sorry. He apologizes because he is out-dominated.

We see here once again that "dominant" is not always "good". The interviewer crucifies a guy without giving him any chance to speak (⍰ see full analysis here).

8. Display Rationality & Logic

Rationality and logic are associated with agency and masculinity, and also signal high value as cues of high IQ.

For example:

> *If we do X, we likely get Y—a logical outcome, as seen in…*

9. Speak With Charismatic Conviction

The pinnacle -or nadir- of dominant speaking are dictators, populists, and cult leaders.

⍰ Benito Mussolini:

> **Mussolini**: (confident, optimistic, pompous, loud, R-syllables mimic roaring, pregnant pauses) <— A public speaking genius

Mussolini says "(we declared war) to give a long period of peace and justice".
It's illogical, but it's persuasive to reframe aggression as 'just' and 'for the greater good' ⍰.

It won't convince empowered men, but works with disempowered followers.
They bask in the strongman's power and the (supposed) "group glory".

⍰⍰ Mussolini and many dictators mix a poetic use of language similar to Peterson, Jay Shetty, and Russell Brand.
BUT add dominance and power.

Also see:

- **Empowered individualism**: the ultimate guide for personal power

Bonus: Use Dominant Expressions

- (Yo) ***listen*** (to me)
- ***Wrong!***
- ***And you think there is nothing wrong with that?*** <— Judge power move
- ***No, answer my question***
- ***Sorry, I don't wanna hear about it right now***
- ***Tell me something more interesting***
- ***Shut up! / Silence! / Quiet!***

Use Loaded Keywords

The *Routledge Handbook on Persuasion* lists these 'power words':

God Terms	Devil Terms	Charismatic Terms
Fact	Communist	Freedom
Progress	Nazi	Democracy
Performance	Fascist	
Critical thinking	Deadbeat dad	
Empowerment	Terrorist	
Prosperity	Hate crime

30 Covert Emotional Manipulation Tactics: Summary & Review

Lucio Buffalmano · 17 February 2019 · Archived copy · Original

30 Covert Emotional Manipulation Tactics (2015) covers the manipulation tactics that sociopaths, psychopaths, and male abusers use to control women in intimate relationships.

Contents

- Takeaways
- Notes
  - Who Are The Manipulators
  - The Signs You're Being Manipulated
  - Manipulation Tactics
  - Beware of Emotional Highs and Lows
- Also Read
- Real-Life Applications
- CONS
- PROS
- Review

Takeaways

- Be aware of abnormally quick escalation of intimacy
- A loving relationship doesn't hurt you
- If you feel worse off and your self-esteem is disappearing, seek support

Notes

Adelyn Birch begins with an important distinction: "normal" manipulation VS pathological manipulation.

We all play the game of trying to influence each other, but there is a significant difference between pathological manipulators. **Pathological manipulators have no other way to relate to others and they cannot have a healthy and loving relationship**.

Also read:

- **Persuasion VS manipulation**

> Persuasion vs. Manipulation: Understanding the Fine Line

Who Are The Manipulators

The author says that the most skilled and dangerous manipulators are part of the dark triad, such as psychopaths, narcissists, and Machiavellian personalities.

They have no empathy and manipulate others for their own personal gain without a single care for the consequences

The Signs You're Being Manipulated

The author lists a few key signs to look for to understand whether or not you are being manipulated.

I interpret them and combine a few here:

- The joy of love has transformed into a fear of loss
- Your happiness is entirely dependent on your relationship
- You go from extreme highs to extreme lows
- You are unhappy more often than not but still fear losing the relationship
- Your relationship feels very complex and hard to explain
- You feel like you are responsible for ruining the best thing that happened to you -you're just not sure how-
- The relationship becomes an obsession, you over-analyze it
- You never know where you stand with your partner, making you anxious
- You often ask your partner if something is wrong
- You are often on the defensive, explaining yourself
- You developed issues with trust, jealousy, and insecurity
- You feel like you can't make your partner happy anymore
- You feel barred from expressing negative thoughts and emotions
- Overall, you feel less confident, secure, and intelligent… You've gotten worse
- You feel like falling short of your partner's expectations
- At times you can lash out with anger
- You bend over backward to make your partner happy

The caveat is if all your relationships have had a similar pattern, in which case you might want to look at yourself first.

Manipulation Tactics

Here is a shortened list of the manipulation tactics:

- **Intermittent Reinforcement**

Positive reinforcements, attention, and rewards on an intermittent basis.
This is the same dynamic that makes people addicted to gambling.

- **Negative Reinforcement**

Punishment or withdrawal when you do something the manipulator doesn't like.

- **Intentionally Cause a Meltdown**

The manipulator will back you into an emotional corner, cause you to melt down, and then accuse you of being crazy.

- **Shifting Focus**

When you bring up an issue the manipulator will try to turn the tables on you. For example, asking how you can be so mistrusting, or how you dared to go through his personal information.

The focus will often shift to your negative traits, and the manipulator will make it clear how unattractive he finds them.

- **Premature Disclosures**

Faking vulnerability by revealing personal information about themselves creates a false sense of intimacy.

- **Triangulation**

Placing -or making up- a third person between you and them to make you jealous.
The author also quotes Robert Greene's The Art of Seduction here.

- **Playing Victim**

Skilled manipulators blame the victim and/or pretend they are the victims.

- **Indirect Insults & Abuse**

They undermine your confidence with advice, suggestion, or camouflaged offenses.
If you address it or take offense, the manipulator will deny any wrongdoing and possibly blame you for always twisting things.
Also read: how to stop people from undermining you.

- **Guilt Tripping**

Making you feel guilty for not wanting to do something *they* want you to do.

You can see a real-life example of "guilt-tripping" that a woman used with me in this text:

And it *was* working.
I was feeling guilty, and also angry at the same time for the manipulation. People who are not aware of the game will only feel bad, without knowing why. And they might either comply or allow their whole day to be ruined because of the manipulation.

- **Shame**

Manipulators express disgust or make unfavorable comparisons to make you feel ashamed of yourself.

- **Lies**

Manipulators lie and pretend to have feelings they don't really have.
They tell you exactly what you want to hear and they make promises they don't intend to keep.

- **Crazymaking / Gaslighting**

Deny ever having said or done something they obviously said or did.
If you feel like you need to record your conversations, chances are that you are a victim of crazymaking.

A highly recommended focus article on gaslighting and covert manipulation:

> What Is Gaslighting? 17 Signs (& Solutions)

- **Minimizing**

They pretend that something they did was inconsequential. And you can rest assured they will do the same action again in the future.

- **Withdrawal as Punishment**

They withdraw emotionally as a form of punishment, also called silent treatment and stonewalling (my note: albeit stonewalling is not really the same).

- **Invalidation of Feelings**

Invalidation consists of rejecting, minimizing, ignoring, or even criticizing and making fun of someone's feelings.

- **Superficial Charm**

Manipulators have a superficial charm and charisma that hooks people in. But it's a superficial layer hiding an empty shell.

- **Intentional Forgetting**

Pretending to forget something important or something you cared about.

- **Traumatic One-Trial Learning**

They establish dominance with an act of intense anger or aggression. The idea is to train you to avoid confrontation or touching certain topics the manipulator does not want to address.

- **Belittling**

Belittle the victim's opinions, actions, or achievements with sarcasm, criticism, or jokes.

- **Put You on The Defensive**

The manipulator will oftentimes seek to create social dynamics where you are defending or explaining yourself.

- **Fear**

The manipulator instills fear in you, with the biggest fear of being the state or unstated threat of ending the relationship.
The author says that since the person who creates fear is also the only one who can relieve it, we end up giving all the power away.

- **Pity Play**

Manipulators take advantage of the fact that people with a conscience don't want to see others suffer.
The pity play comes in handy when they have been caught red-handed, and for example, they will tell you their wife is destroying them and they can't believe they're not able to love again with you.

- **Justification & Rationalization**

The manipulator makes up rational-sounding excuses for their bad behavior.
When you love and trust someone, the tendency is to try to understand them and explain their behavior away.
Manipulators use rationalization to help you do that.

- **Flattery**

Flattery is not always obvious and can be hidden and disguised.
For example, they can ask your opinion, or disagree at first and then come around, or compliment you to a third party knowing it will get back to you.
It's especially powerful when they flatter a quality you care about which is seldom noticed or appreciated: then you feel understood.

- **Love Bombing**

Rapid pace of intimate escalation, lots of texts, calls, gifts, and endless attention.
⁉️♂️ **Lucio's note**: There is no evidence for narcissists using love bombing (Campbell, 2020) and, as far as I'm aware, neither for other dak triads. Logically speaking, it's also not a technique high-value men would use. I remain unconvinced.
See here:

- **Trance & Hypnosis**

Trance is highly pleasing and can be induced with music, candle-lights, dance, massage, or slow sex.
Psychopaths, with their intense focus and stare, can help induce a trance.
Also, read:

- Music for trance and romance
- **Seductive environment for trance**

Also see:

> Manipulation: Techniques, Strategies, & Ethics

Beware of Emotional Highs and Lows

Adelyn Birch says that emotional highs and lows are addictive because the highs are fueled by dopamine, which induces euphoria.

During the lows, it's not like we want to detach ourselves, but instead, we crave going back to the high.
And that keeps us hooked.

The author says that learning theorists found out that intermittent reinforcement of rewards alternated with punishment develops the strongest emotional bond.

Says Adelyn Birch:

> Relationships based on intensity are actually the same as an addiction to drugs or alcohol. Interaction with your partner fosters a specific pattern of compulsive behavior and is not really an intimate relationship at all: It's an

> addiction, in the true sense of the word.

Since most manipulative relationships have more lows than highs and since the manipulative person is overall harmful, this is a trauma bond.

Watch out, because some of the most amoral and high-functioning psychopaths will use this purposefully to control you.
Please read this article on psychopaths' strategies:

> Psychopaths' Sexual Strategy: Marauders of Sex

Also Read

- Signs you are dating a sociopath
- Signs of abusive relationships
- 7 types of abusive men
- Anxious-Avoidant attachment
- Is it time to break up?

Real-Life Applications

Watch Out for Power Imbalances
The author cites Dutton and Painter's paper to make the point that powerful emotional attachment develops when there are intermittent good-bad behavior and a power imbalance.

CONS

I loved "*30 Covert Emotional Manipulation Tactics*", and my cons are few and limited:

Some Overlap
Some of these 30 Covert Manipulation Tactics overlap and could have been combined.

I Wasn't Sure About Some Statements
Sometimes I wasn't totally convinced about what the authors claimed. For example, she says that in intermittent reinforcement the more infrequently love is offered, the more addictive it becomes. I'm not sure based on what she says that's a very generic statement that says little and doesn't hold true.

Dangerous Personalities?
I was very surprised the author recommends Joe Navarro's "*Dangerous Personalities*" since I found that book to be low-level pop psychology and I actually recommend you skip it (on the other hand, I loved Joe Navarro's *What Every BODY Is Saying*).

PROS

- **Brief and To The Point**

Some reviewers complained the book is a bit too short. I could not disagree more.
This is the book that people in an emotionally abusive relationship can pick and get their answers from in a matter of a couple of days.

- **Deep Wisdom**

Even for a guy who has been studying and reading psychology for quite a while, I still learned something new here. And I love that.

Review

I really liked "*30 Covert Emotional Manipulation Tactics*" and I learned a lot reading it.

Specifically, it helped me to deepen my understanding of emotional abuse and the dynamics of power in relationships.

I also loved Birch's presentation of invalidation as an emotionally harmful behavior and her analysis of bonding through intensity and intermittent reinforcement.

In short:
highly recommended.
Both to those who fear being in an abusive relationship and to those who *want to better understand psychology* and relationships.

Brandwashed: Summary & Review

Lucio Buffalmano · 17 February 2019 · Archived copy · Original

In *Brandwashed* (2011) brand consultant Martin Lindstrom talks about the games and techniques that corporations and marketing departments use to persuade -or manipulate– consumers to buy their products.

Contents

- Bullet Summary
- Brandwashed Summary
  - Fear & Guilt
  - Fake Freshness
  - Does Sex Sell?
  - The Axe's Sex Perfume
  - The Brand Wave
  - Celebrities' Pixie Dust
  - Asian Countries Are More Brandwashed
  - The Most Powerful Persuader: Other People
  - More Brandwashing Manipulation
- Real-Life Applications
- CONS
- PROS
- Brandwashed Review

Bullet Summary

- Brands are everywhere and you cannot escape them
- Brands and marketing influence you in ways you are not even realizing. Pay attention and inform yourself.
- Ultimately the biggest influence is other people (who in turn are influenced by marketing though)

Brandwashed Summary

Martin Lindstrom uses lots of examples, anecdotal evidence, and plenty of humor. I will skip most of them in this summary.

Fear & Guilt

The author says that fear and guilt are the marketer's 1-2 punch.

And the easiest target for fear and guilt are mothers. Particularly new mothers.
For new mothers the world has become a new giant trap and, the author says, "you have never seen germophobia until you have seen a new mother".

Marketers exploit it by pitching sanitizers, humidifiers, car seats, bigger cars, digital monitors, and many more. Some of these products do little, and an excessive war on germs is possibly counterproductive by lowering the babies' immune systems.

But if mothers don't buy the latest technology, they feel guilty.

Finish Touch Food Ruse

Food producers exploit women's guilt with "finish touch food".

These are ingredients that are similar -or the same- as frozen or prepackaged meals, but by simply combining them themselves, she feels like she is being a better mother (for example: separate dough, mozzarella & tomato sauce to give the appearance of a home-prepared pizza).

Germophobia

Hotels put a thin sheet of paper on top of glasses and toilets to give the impression they have been sanitized and cleaned or, even better, that they have never been used before.

The author mentions a hotel worker saying that glasses are barely rinsed instead.

Fake Freshness

Martin Lindstrom says that many seals on the packaging are useless and only serve to give the consumer the (fake) feeling of freshness.

Heinz, producer of ketchup, leads people to believe that the ketchup bottle should be refrigerated after opening. That serves to give the idea that ketchup is prepared from fresh tomatoes, but it's not -and it doesn't have to be refrigerated-.

Restaurants, including sometimes some McDonald's franchises, use green leaves and fresh tomatoes and vegetables behind glass displays.
Smoothies stalls show fresh fruits even though they might not use fruits at all, and fruit juice packages place perfectly photoshopped fruit images on their carton -albeit they're more water and sugar-.

Shampoos and cleaning products also use fruit aromas, albeit they don't clean any better and don't even use fruits at all.

Placing frozen fish on ice cubes also increases sales, albeit the ice cubes do exactly nothing to increase the freshness and quality of the frozen fish.
In some countries, people actually believe that frozen food is fresher thanks to clever marketing pitching freezing as the best way to "freeze the freshness in time".

Does Sex Sell?

Lindstrom says that sex sells also within the same gender.

You can use appealing males to sell to men who want to be more like them -and, also, partially out of homo-erotic feelings says the author-.

He then analyzes the phenomenon of boy bands and says that they are all similar and also appeal to older women. The appeal for older women is not just sexual, but it's part sexual and part reminiscing of their teenage years.

My Note:
My previous knowledge clashes with what the author says.

What I had previously read was that women get subconsciously lubricated when they see any sex scene, from heterosexual to gay to even animal sex.
This was not the case for men.
But heterosexual men who presented the strongest disgust for gay male sex were often also the ones that got horny about it. A relatively well-known phenomenon in psychology is called "reaction formation".

The Axe's Sex Perfume

The story of the Axe sex perfume was one of the most captivating for me.

The marketing team of Axe started by finding out that the biggest male sexual fantasy is being in a hot tub surrounded by 3 or 4 naked women.

Then went out with different to study the different approaches they had when meeting members of the opposite sex.

Through a process of segmentation, they clustered men into six different psychological profiles:

1. **The Predator** (hides his insecurity with an air of bravado, uses high fashion brands, and is constantly on the prowl targeting lone women, hopefully, drunk women to whom he can lie)
2. **Natural Talent** (athletic, intelligent, cool. People like him, and women find him attractive. He is not deceptive)
3. **Marriage Material** (gentle, respectful, and self-confident, the kind of guy you want to bring home to meet the parents. Albeit women complain, there are many marriage material men)
4. **Always Good Friend** (closed gays and gays turned out in this category and many heterosexual guys who like women but whom women only want as friends)
5. **Insecure Novice** (clueless, they resemble the predator in that they make some women uncomfortable but they are more pure and less deceptive)
6. **Enthusiastic Novice** (clueless but come across as eager rather than creepy. They keep going as they try their best)

Axe targeted his product in the following order: 1. insecure novices; 2. enthusiastic novices; 3. natural talents

Here is an example of an Axe commercial:

And this is family guy spoofing the Axe commercial
In the end, the commercial worked too well and was bought too often and too much by novices that it came to be linked to losers and nerds.

The Brand Wave

When a brand becomes too popular, it can backfire as we saw in the Axe example.

When a brand becomes too widely adopted, it becomes in danger of falling into the "generational lap".
Such as, the new generation seeks to disconnect itself from the previous generation, and refuses to buy the same brands that their parents buy.

Celebrities' Pixie Dust

The author talks about the sometimes difficult dichotomy that celebrities need to walk. If they seem too poshy, people will dislike them. If they seem too "normal" and they spend too much time with their fans, they seem too normal and their magic will disappear.

Asian Countries Are More Brandwashed

Martin Lindstrom says that Asian countries are more Brandwashed than Western ones.

I agree with him.
He says it's because the culture, being more collectivist, places a higher emphasis on fitting and being part of the group.

Society and our friends play an even bigger role in inducing conformity and in shaping individuals' choices.

The author calls it "herd mentality", and while I loved his honesty, I think that cost him in terms of reviews and

ratings.

Russian-Chinese Insecurity & Brand Consumption

He says that brands are also stronger where money is “new”.

Those places, like Russia and China, are more insecure and they need brands and expensive brands to make up for their past.

The Most Powerful Persuader: Other People

Martin Lindstrom ends the chapter with what he says is the biggest persuader of them all: people.

We are social animals, and we look at what others buy and we listen to what others say.
Mostly, we tend to look up to people we admire and who have a strong reputation within our network.

More Brandwashing Manipulation

There are a few more marketing tricks and manipulations companies deploy, including:

- **Leveraging smell**

Malls and shops produce and release smells strategic to compel shoppers to buy.

- **Priming Children**

The author says that the younger we are when we start using a product, the more likely we are to keep using it for years to come.
Cookie Dough gives out freebies to pregnant mothers in the Philippines to prime children with the smell and taste of their products. Selling to children

- **Selling to children**

Young boys want to be superheroes and young girls want to be princesses. There you have Batman, Spiderman, and Barbies.

- **Leverage panic** (or stoke it) to sell “solutions” to the problems

One example is hand sanitizers placing their products as pre-emptive against an epidemic.

- **Sounds**

Some sounds evoke cravings, urges, and positive sensations. The sound of a baby crying, and a fizzling stake, are all positive associations that make us act.
The sound of a soda opening and being poured into a glass of ice cubes also provides strong positive associations. The author helped a brand of soda engineer the sound of opening their can which they later used in all commercials. When that sound is played at sporting events, the brand sees an uptick in sales, and people aren’t even aware why they bought the soda.

- **Addictive food**

The author talks about how food companies purposefully engineer their food to taste better and become more addictive.
The content of this section resembled *Fast Food Nation* and *Salt Sugar Fat.* And if you don’t know what I’m talking about, you definitely want to look into it.

- **Time**

Mentioning time in the sales copy helps sell better because we are reminded of our mortality and that we should better enjoy life while we're here.

- **Nostalgia marketing**

Nostalgia marketing is especially potent during uncertain times. Coupled with our tendencies of remembering our past as better and rosier than it actually was, we long to go back to a time of safety and security.
Companies are playing to the phantasy that the past was safer, more natural, and more secure.

- **Celebrities / Authorities**

When we perceive an authority giving advice the area of our brain responsible for the decision-making process shuts down.
Celebrities can help blur that line between expertise and authority and when they represent a product, we tend to believe them simply because they are successful using the product -or so they say-.

Real-Life Applications

Wearing Fake Brands Can Undermine Your Sense of Authenticity
In an experiment, women who were given fake goods cheated more than women who were given original goods. Wearing fakes can adversely impact the way we look at ourselves.

CONS

- Not Very Scientific

The author talks about focus groups "confirming his theories". Not only that's not a very scientific approach to finding out the truth, but focus groups can hardly "confirm" any theory.

PROS

- Eye Opening

Brandwashed contains some eye-opening content on the reality of marketing and decision-making.

- Great Psychology

Albeit it's not super scientific, I learned quite a few new things when it comes to people and psychology.
The analysis of the royal family was spot on. They need to walk a tight line of not appearing like common people while also not appearing to over-spend contributors' taxes.

Brandwashed Review

I felt some of the claims were unfounded, unsubstantiated, unscientific, or exaggerated.

However, there is also a huge amount of terrific, eye-opening information here.
Indeed I was very surprised that

Indeed, I was surprised that the overall rating of Brandwashed wasn't higher.
I think it's an underrated text and I recommend it to all marketers, smart shoppers, and to anyone interested in *people and psychology*.

Dark Psychology 101: Summary & Review

Lucio Buffalmano · 17 February 2019 · Archived copy · Original

Dark Psychology is an overview of the dark psychology of manipulation and brainwashing.
It reviews some key fields of study of "dark psychology" and offers a few points on how to use dark psychology for personal gains.

TPM verdict overview: slop content useless for smart, high-value men
Most 'Dark Psychology' books on the market are thin and unscientific. Many are written by anonymous pen names with no verifiable credentials. We audited several, including *Dark Psychology 101* and its sequel see if they hold up to real-world scrutiny. They are mostly slop marketed to beginners.
Beginners who want power and influence: **focus first on becoming a high-value man**.

Contents

- Dark Psychology Summary
  - Get to Know Your 'Dark Side'
  - Six Steps to Change Thought
- FAQs
- Scientific Dark Psychology Resources
- Review

Dark Psychology Summary

About the Author:
Michael Pace, a pen name, is the author of several books on "dark psychology" and manipulation. He also wrote "*Dark Psychology 202*", which is the advanced and expanded module of the "Dark Psychology" mini-series.

Get to Know Your 'Dark Side'

The author lists a few benefits of getting to know your dark side, including:

1. Become aware of how criticism of others is often a defense mechanism. Sometimes we accuse others of our own flaws.
2. Understand how your words sometimes hide fear and anxiety, jealousy and envy
   See: low power communication
3. Accept yourself fully
4. Freeing of guilt

When you become more self-aware, you learn the motivations behind your actions, you can better change and improve yourself, and you can better influence others.

Robert Greene, author of *The 48 Laws of Power* says the same, and we agree. Basically, **this is about self-awareness**, a genuinely useful concept.

Six Steps to Change Thought

The author says there are six main steps in changing people's thoughts that cult leaders use:

1. Ensuring that a person is not aware that anything suspicious is happening.
2. Creating a physical and social setting that is isolated <— **TPM Note:** A common manipulation tactic

3. Making the target feel powerless <— **TPM Note:** this only works if you have absolute control over the environment. Otherwise, it's more likely to backfire
4. Using punishment and reward to disassociate the individual from former behavior and lifestyle
5. Using reward and punishment for making the group and its ideals seem highly appealing
6. Exerting absolute authority over the targets <— **TPM Note:** absolute control obviously 'works' and doesn't require 'dark psychology', but it's unrealistic for most people

TPM Tactical Note: Low-practicality theory. High value, status, and power are the foundations
These 6 steps are standard in cult literature, but impractical for 99% of contexts. High-level influencers focus instead on soft power and frame control, making others believe the new idea is either great, or theirs.
'Dark psychology leadership' in daily interactions is less cult-like 'absolute authority' and more as being a charismatic, attractive, high-status man exerting emotional leverage from a judge authority frame.

FAQs

Should I read Dark Psychology books?

Not really. Most "Dark Psychology" books, including *Dark Psychology 101*, are thin, unscientific, and full of generic advice. Many of their 'techniques' are too obvious, frame you as a 'taker', and are especially likely to backfire with high-value men and women.
Ambitious men are better off focusing on becoming high-value, learning power dynamics, and studying evidence-based influence. Check the **Best manipulation books** and TPM's Dark Psychology Hub instead.

What are the 4 types of Dark Psychology?

There are no four types of dark psychology, and people often confuse it with 'dark tetrad' (DT), composed of **Machiavellianism, Narcissism, Psychopathy, and Sadism**. Machiavellianism is strategic manipulation for personal gain; Narcissism is seeking admiration and exploiting others; psychopathy is bold, remorseless and often predatory; Sadism is deriving satisfaction from others' discomfort.
Understanding these types helps you recognize and defend against 'takers' who make you worse off.

What is the dark theory of psychology?

There's no single formal "dark theory." Most books use the term loosely to describe the study of manipulation, persuasion, and coercion. TPM's approach emphasizes **scientific and practical understanding** — spotting manipulative behavior, protecting your influence, and using psychological insights for high-value action, rather than following unproven gimmicks.

Scientific Dark Psychology Resources

Dark psychology is simply the use of psychological principles for more manipulative and predatory ends.
For deeper insights into dark psychology, see:

- **Dark Psychology hub:** a primer on dark psychology
- **Manipulation hub**: a primer on manipulation
- **Gaslighting**: a primer on the pattern of behaviors that manipulators use to confuse victims and maintain power and control (and see gaslighting examples)
- **Dark triad psychology**: three traits often associated with psychological manipulation. See:
  - Psychopathy

- Narcissism
- Machiavellianism, potentially the closest to 'dark psychology' of the three

And finally, there is this website's flagship course "**Power University**", which is an overview of power dynamics and persuasion (including dark psychology).

> Dark Psychology: 7 Ways to Manipulate People

Review

Dark Psychology 101 is a very short text of below-average quality, lacking in theoretical depth and largely devoid of any practical takeaway.

The author builds up suspense, saying "how great this or that technique works", but then offers bland and generic advice completely devoid of evidence or examples. Lots of driveling, and a little information.
Potentially a 'dark psychology technique' to pitch his other books, but more likely to just undermine the author's credibility.

The smart and ambitious men who constitute our readership are better off looking somewhere else.

Check the:

- **Foundations of self-development** <— Beginners start here
- **Power intelligence**, and why it matters
- **Naive self-help**, so you avoid falling for hype over results

And if you really want to stick to dark psychology, then go with a more effective and scientific foundation:

- **What really is dark psychology**

9 Low Status & Submissive Behavior To Avoid

Lucio Buffalmano · 18 February 2019 · Archived copy · Original

Your **body language** and subtle **submissive behaviors** often speak louder than any words, silently killing your **status** and **power**. If you're wondering **how to fix submissive behavior** and stop being ignored, you've come to the right place.

As the leading resource on social dynamics, we've helped thousands of good men eliminate the **signs of submission** that undermine their value.

This guide breaks down the **9 low-status behaviors to avoid**—from over-deferring to a leader to **submissive body language signs**—and shows you exactly how to **assert power** and gain the **respect** you deserve.

Contents

- 1. Over-Deferring To The Leader
  - 1.2. Sucking Up to The Leader
  - 1.3. Monitoring the Leader
  - 1.4. Turning Toward the Leader
- 2. Deferring to The Group
  - ⍰ Leader Seeks Group Support to Isolate Enemy
  - 2.3. Adapting to Others' Mood
- 3. Defensiveness
  - 3.2. Sideways Body
- 4. Excessive Movement
  - 4.2. Excessive Nodding
- 5. Signs of Low Confidence
  - 5.2. Over-Compensating

- 6. Lower Value Sub-Communication
  - 6.2. Too Nice In Dating
  - 6.3. Chasing
- 7. Lower Status Sub-Communication
  - 7.2. Averting gaze
  - 7.3. Begging nonverbals
- 8. Excessive Social Fear
  - 8.2. Rushing Away
  - 8.3. Backing Down A Social Challenge (Looking Down)
- 9. Too Nice & People Pleasing
- Don't Forget… Signs of Low Self-Esteem
- Learn more

1. Over-Deferring To The Leader

Principle:

⚖ **High-power men act, submissive men *re*-act**

Deferring is expected, normal, and often *smart*.
But *over*-doing it is disempowering (and dishonorable), especially with average leaders.

Principle:

⚖ **Your leader sets your upper bound. The more you defer to poor leaders, the more you disempower yourself**

1.2. Sucking Up to The Leader

For example:

- Supporting him no matter what
- Excusing poor behavior
- Excessive laughter

Video here

Here's a better approach instead:

⍰ ⍰ Use the tight-lipped smile for non-funny jokes

Maintains rapport, and it's high power:

⍰⍰ "Wasn't funny, but I'm showing a smile for support"

1.3. Monitoring the Leader

The *APA Handbook of Nonverbal Behavior* confirms that low-status men look more at leaders.
And they avert eye contact when looked at by high-status men (Ellsworth, Carlsmith, & Henson, 1972).

Let's revisit the previous example from "The Wolf of Wall Street".
Notice the pattern of eye contact and gaze.

> **Underling 1**: (stares at the banker)
>
> **Underling 2**: (looks at boss and banker)
>
> (…)
>
> **Low-status**: (…) that kind, that kind of stuff.. (looks at the leader, nervous smile, nod) <— ⍰⍰ "I'm done, you high-status guys can take over

⍰ ⍰⍰ Learn and align, and there's no need for monitoring
Understand your boss: what he expects and likes, and reduce monitoring because you won't need to.

1.4. Turning Toward the Leader

Try to spot who and why displays submissive body language:

> **White lady**: (turns towards the men, and "his" man) <— ⍰ ⍰ "I'm just supporting cast"
> **Blue lady**: (engages her, without turning towards the men) <— ⍰ ⍰ "I don't depend on him"

⍰♟ Stand beside your boss for political gains, turn towards the speaker for power
Don't rotate towards your boss. Rotate towards the speaker. It's a better mix of power and political strategy.

Video here.

Also, read:

- Leadership and dating
- How to Become a Leader: step by step

2. Deferring to The Group

Classical Asch experiments tell us that many people conform to the majority even when they disagree.

However, not everyone conforms, though.
Social Psychologist Aronson explains that high self-esteem and high-status men are more likely to resist.

Meaning, low-status and submissive men are most likely to conform.

Principle:

⚖ **Empowered men lead, while submissive men follow the majority**

For example:

- **Over-seeking social support** for trivial matters
  ⍰ Example he looks around looking for social support. Better than fearful, but avoid it anyway
- **Withholding opinions** before others speak
- **Fearful scanning** after a joke or comment
  ⍰ Look at others *expecting* good reactions instead

⍰ Leader Seeks Group Support to Isolate Enemy

> **Leader**: (disempowering joke) What's it with you man
>
> **Red-head**: What
>
> **Leader**: How much did you pay for this brown rock <— Wants to ridicule him
>
> **Red-head**: What difference does it make <— Sees the trap ⍰⍰
>
> **Leader**: (looks away incredulous) <— ⍰⍰ "You're so dumb"
> What difference does it make? Diamonds are supposed to be colorless <— Looks around for social support
> (Laughs AT his friend) <— ⍰⍰ "You're so laughable dumb"

🡅♟⍰ Keep it with individuals, never the group
The redhead loses because he attacks the group, instead of Dillon-only.

♟Strong leaders handle it themselves
Using the group depletes social capital, and "siccing" the group for personal beefs is low-quality ⍰

2.3. Adapting to Others' Mood

General principle:

⚖ **Leaders set the mood, followers adapt**
And the faster you adapt, the more power you give away

> **Him**: That guy was like "don't let the door hit you on the vagina" <— His frame : "that's funny"
>
> **Her**: (distant and serious) Yeah I heard him <— Her frame: "it's not funny"

> **Him**: (decreasing laughter) I thought that was hilarious <— He adapts to her

⬆ ♟ **He adapted *slowly*** ⍰⍰
⍰ When you must adapt, adapting slowly is a great technique to maintain power.

⍰ Training Day example of extreme and disempowering adaption
This also comes down to emotional power dynamics, and frame control.

See:

- Frame control techniques
- Frame control basics

3. Defensiveness

In confident body language, we showed that submissive people close their bodies.

The same applies to socialization, including:

> **Her**: (makes herself smaller) I… I have two questions
> **Trump**: No it's OK
> **Her**: (hand on heart, arm over her body and crotch) But you pointed to me

Video here
⍰ Extra analysis on the video

3.2. Sideways Body

Even with the audio on mute, it's easy to spot the behaviors and body language of submissivness:

> **General**: (walks towards him full frontal)
> **Cruise**: (sideways body)

♟⍰⍰ Walk straight on when crossing path
Some men, especially in narrow aisles, angle away when crossing path with other men. Be mindful of it, don't overdo it.

⍰ Forum entry

4. Excessive Movement

The principle is:

⚖ Submissive men move for dominant men
Including movement to physically accommodate higher status men, or out of social anxiety.

> **Him**: (many and excessive head nodding, hand on heart, purpose-less gesticulation, reactive laughter, big "(too) nice guy" smiles)

4.2. Excessive Nodding

Compare:

> View this post on Instagram
> A post shared by The Power Moves (@the_power_moves)

> **Brad Pitt**: (nods up, once ⍰)
> **Interviewer**: (nods in bursts, frequently, too quickly, and with his whole body)
>
> The issues:
>
> - Too fast
> - Too often
> - Whole-body rocking (VS head only)

5. Signs of Low Confidence

Any behavior that signals low confidence is associated with submissiveness.
Including:

- Insecurity
- Tentativeness
- Social fear
- …

5.2. Over-Compensating

Overdoing feels suspicious, suggesting underlying insecurities.

Common areas people overdo:

- Masculinity <— Confident men don't overthink their masculinity
- Sexual innuendos <— Men comfortable around -and used to sex don't over-joke about it
- Jokes about (being) "gay" <— Straight men who are comfortable in their hetero sexuality and have no issues with gays don't over-joke about homoeroticism
- 'Flaws'

Principle:

⚖ **Timely and limited remarks about flaws show confidence. Too many signal unresolved issues**

⍰ Example from a dating coach:

Indian Dating Coach Tinder Bio:

> Married to a white girl, with a half-brown baby on the way. Just joking, I'm single. <— His many Indian and 'white guys/women' references reek of inferiority complex. "Married" also signals 'boyfriend type'

6. Lower Value Sub-Communication

Principle:

⚖ **Lower-value men over-invest to bridge the value gap**

⚠ **Don't over-invest ⍰⍰♂**
It signals lower personal value!

Ie.:

- **Over-give** give too much or without a reason
- **Over-compliment** without getting equal compliments back
- **Chase**, showing more interest than they show in you

6.2. *Too* Nice In Dating

There is a difference between nice, which is good, and servile, which is unattractive.

This is servile:

> **Her**: (drops glasses)
> **Viktor**: please, please, please please (cleans them against his shirt) <— Acts as her humblest servant
> (Follows her) <— Chasing

⍰ Only in a Hollywood movie an attractive woman would ask him out

Also see:

- Positive masculinity in dating

6.3. Chasing

There are a million ways to chase, and they also apply to making and keeping friends.

An obvious and common form of chasing is to send too many texts:

⍰⍰♂ I thought he was a baby who'd sulk the whole day without my reply

7. Lower Status Sub-Communication

While being lower status in some contexts is perfectly fine, you may still want to avoid over-signaling it.

7.2. Averting gaze

Especially during tense exchanges:

> **Schumer**: Yeah, lemme say something Mr. President (looks ahead and low, not at Trump) <— Trump stares heads on (predator). Schumer attacks verbally, but looks away.

♟ ⬆ Schumer did OK, looked at Trump a few times ⍰⍰
Turning for eye-to-eye convo would be uncomfortable and high investment, but a few glances displayed confidence.

Video here

7.3. Begging nonverbals

Video example and picture:

8. Excessive Social Fear

8.2. Rushing Away

> **Godfather**: Thank you so much, can I offer you something
> **Roberto**: (rushes towards the door, anxiousness escalates into a panic and struggles to open it)

⬆ ⁉ **Apologize and make up for mistakes without over-submissiveness.**
If you cross the wrong person be kinder the next time, bring a gift, and let your behavior be the apology. Alternatively, straight talk: *"I'm sorry* (hands up palms outward), *I made a mistake the last time. I respect respect-worthy men like you, and I didn't know who you were*".

⁉ **Move faster when needed, but with purpose**
It's good to be mindful of other people's time. Rather than rushing, think 'effective & purposeful'.

8.3. Backing Down A Social Challenge (Looking Down)

> **Man 1**: It's a free country (starts stare contest)
> **Man 2**: (holds for a while, then lowers his gaze to sip, and angles his face away)

Video here

⁉ Strike a good balance of speed and purpose
It's good to be mindful and respectful of other people's time. But you can move faster and purposefully, without rushing.

9. *Too* Nice & People Pleasing

'Kindness' from a self-confident man is an attractive trait.
It makes you prestigious.

But a low-confidence, low-status man being too nice signals weakness and social fear.

Too nice	Strategic higher power
Takes flyers because he can't say "no"	Smiles confidently and says 'all good', without taking the flyer
Stands if only one seat is free	Invites older people to sit. If they don't, he sits
Bears others despite wanting to go	Acknowledges, and empathizes, adds something uplifting, and says he must go
Agrees despite he disagrees	Validates, finds bridges, says he sees it differently, and then speaks his mind
Over-apologizes multiple times, overly servile	Apologizes once, looks in the eyes to make his point, and if needed makes it up

Don't Forget... Signs of Low Self-Esteem

Self-esteem is foundational.

It's the internal grounding that allows you to project an honest aura of power and confidence.
And with that inner confidence, you're congruent and remain true to yourself.

We address confidence and self-esteem in **Power University**.

Buyology: Summary & Review

Lucio Buffalmano · 19 February 2019 · Archived copy · Original

In *Buyology* brand consultant and author Martin Lindstrom introduces and explains the emerging field of neuromarketing.

Contents

- Bullet Summary
- Full Summary
  - Why Coca-Cola Outsells Pepsi
  - Making Product Placement Work
  - Subliminal Advertising Can Work
  - Shocking Anti-Smoking Messages Failure
  - Sexually Suggestive Advertising Bombs
  - Controversy Sells
  - Beauty Sells… Sometimes
- Real Life Applications
- CONS
- PROS
- Review

Bullet Summary

- We are largely irrational buyers
- Product placements don't work (unless it's a structural part of the story)
- Sex can help sell.. But can also eclipse and make us forget about the product

Full Summary

Martin Lindstrom begins Buyology by explaining what's one of his main research tool: the fMRI.

In a nutshell, the fMRI measures the amount of oxygenated blood in the brain, giving us a hint over which area of the brain gets activated.

Why Coca-Cola Outsells Pepsi

Martin Lindstrom talks about the famous blind experiment in which Pepsi was rated as tastier than Coke.

Malcolm Gladwell in Blink says it's because Pepsi is only better in smaller quantities.
But that's not the case, Lindstrom says.

The reason why Coca-Cola still outsells Pepsi is that people want to like Coke more.
Lindstrom says that the scans show a "tug of war" between the rational part of the brain who prefers Pepsi and the emotional one who prefers coke.
More often than not, the emotional side of the brain won out.

Making Product Placement Work

To make product placement, the product must make sense within the show's narrative.

If the product is not a perfect fit for the show or the movie, then it might as well be wasted advertising money.

Subliminal Advertising Can Work

Some famous reports that gave vast publicity to subliminal advertising have been fabricated or exaggerated.

You can probably hardly change people's deep-rooted beliefs with subliminal advertising, but it does work in increasing sales for a brand.

Subliminal advertising works indeed, but it depends heavily on our already existing internal associations.
It's indeed possible that a quickly flashing image triggers an identification in our mind before we realize it's happening but only if have already stored information in our brain about that image.

Flashing a smiley face VS a sad one for a split of a second on a video for example increase consumption of alcohol.

Letting Guard's Down on Subliminal Messages

Subliminal messages are particularly powerful because they reach us with our guard low.

When we see a log or when it's obvious to us we are watching an advertisement, the logical part of our brain is engaged and we put our mental barriers up.

For example, red Ferrari, Nascar cars and cowboy images all can easily remind people of smoking even without any logo on them because of the already existing association we have between them and the cigarette brands that latched onto them.

The interesting thing in these cases is that the messages went down unfiltered into people's brains.
Since they weren't rationally aware of the advertising, their "defenses" against advertisement and cigarettes weren't activated at all.

Shocking Anti-Smoking Messages Failure

The author discusses an antismoking message of people smoking and coughing blotches of fat on the table.

But the ad failed because people ignored the coughing and seeing other smoking lit up in their brain the areas that induce cravings -in this case, craving for smoking-.

Sexually Suggestive Advertising Bombs

Sexually suggestive advertising can be ineffective by "blinding" people to the logo.
This is an effect called "vampire effect".

Controversy Sells

The author makes the point instead that controversy sells.

Sometimes controversy and sell together sex sell, but Lindstrom says that evidence point to controversy being the most powerful contribution.

He also mentions American Apparel's success with the media, and you can read from their marketing director Ryan Holiday in "Trust Me, I'm Lying – Confessions of a Media Manipulator".

Beauty Sells... Sometimes

The author says that women can be turned off by extremely attractive models on advertising as they cannot relate to them.

A study showed that more natural and more relatable models in advertisement were more effective in brand association and recall.

However, sometimes beauty can help sell thanks to mirror neurons. The author uses the example of male models for male underwear.
Mirror neurons make us feel like the attractive people in the advertising.

My Note: Mirror neurons are controversial
Mirror neurons are an elusive and overblown pop-psychology myth.

Lindstrom says we are witnessing a convergence between perfect, natural, and relatable.

My Note:
Personally, I didn't find the author very conclusive here.

Real Life Applications

Don't Fall For Brand-Religion
Some brands managed to develop rituals and a cult-following which resembles in all aspects a religion.
Don't be duped into that.

CONS

Generalization
Sometimes I felt like the author generalizes too much.
He takes one single even and generalizes a rule saying "nope, it doesn't work".
But that it didn't work once doesn't mean you can make a rule out of it.

Lots of Threads But Little Conclusions
Buyology presents lots of different threads and ideas, but there is not much overarching structure.
And there are also little conclusions. Overall, it opens lots of topics but it doesn't make a strong point on any.
I can highly recommend The Social Animal for some more evidence-based and conclusion-reaching book on psychology, influencing and advertising.

fMRI Overselling
Lindstrom presents fMRI as the ultimate scientific frontier to dispense truths and he never mentions the limitations. In my opinion, that made him lose credibility for an otherwise good book.

PROS

Lindstrom brings a lot of new and fresh perspectives into the world of marketing and into the world the developing neuro-marketing.

Review

Buyology has very low ratings on Amazon, but I disagree with those ratings.

I found that Buyology contains extremely interesting information and deep reflection.
Not as good as Lindstrom's own sequel "Brandwashed", but good nonetheless.

Overall, it's an important book for anyone working in marketing.

How to Stop Being Unconfident In Conversations

Lucio Buffalmano · 19 February 2019 · Archived copy · Original

Low confidence in conversations is common among what we call here “good men”.

That’s a problem because **when you give too much power away in conversation you lose status, respect, and attraction**.
Others reject your leadership and authority *-even if you’re knowledgeable-*.

Research also indicates that using ‘powerless forms of speech’ can prevent you from being persuasive.

That’s why it’s best to remove all signals of low confidence from your conversations.

Luckily, we know how to do that because we helped thousands of good men do the same.
Let’s start with an overview from research:

Type	Sentence Example
Hesitations = uncertainty	*"Well, I, uh, you know, um, would like to borrow a dollar."*
Hedges qualify the utterance	*"I guess I sort of like you and kind of want to know you."*
Intensifiers fortify the utterance	*"I really believe that and agree with you very much."*
Over-politeness = subordination	*"Excuse me, if you wouldn’t mind too much, I’d love if you could please close the door.*
Tag questions weaken sentences	*"This is fun, don’t you think? Much more fun than yesterday, isn’t it?"*

And now let’s dig deeper with TPM’s wisdom:

Contents

- 1. Nervousness
  - 1.2. Filler Words
  - 1.3. Upward Inflection (Upspeak)
  - 1.4. Trailing Off
- 2. Defensiveness
  - 2.2. Over-Justifying
  - 2.3. Over-Minimizing
  - 2.4. Bowing to Social Pressure
- 3. Running For Cover
  - 3.2. Virtue Signaling Cover
  - 3.3. “I’m Joking” Cover
  - 3.4. “I Obey” & “I’m Not Allowed” Frames
- 4. Indecisiveness
  - 4.2. Beating Around The Bush

- 4.3. Flip-flopping
- 5. Over-conforming
  - 5.2. Confirming What Others Said
  - 5.3. Backchanneling Confirmation
- 6. Insecurity
  - 6.2. Ask Permission For Your Rights
  - 6.3. Over-Discounting
  - 6.4. Weak Attacks
- 7. Fawning
  - 7.2. U-Turning
  - 7.3. Approval-Seeking (Rushing In)
  - 7.4. Parroting The Leader
- 8. Over-reactive & Unmasculine
  - 6.2. Reacting More Than Others
  - 6.3. Losing Your Girl's Respect With Over-reaction
- Learn More

1. Nervousness

General principle:

⚖️ **Confident men are comfortable in social settings, while unconfident ones display signs of social anxiety**

Luckily, it doesn't matter how you feel.
As long as you remove the signs of social anxiety, you'll look confident.
And, little by little, also *grow* confident.

1.2. Filler Words

> **Big boss:** Speak as you might to a young child. It wasn't brain that got me here, I can assure you that
> **Junior**: Well, ehm…

⁉️ Avoid tail filler words
Pay attention to filler words *at the end* of sentences ❓

Careful With Over-Using...

- "I mean": an example here, notice "come on" used defensively
- "You know what I mean"
- "I'm like… "
- "And then I was like… " / "and then he went like…"

1.3. Upward Inflection (Upspeak)

Rising in pitch or volume similar to a question

> **Her**: Annie (upspeak), this is Becca (upspeak) my friend from work (upspeak)

1.4. Trailing Off

To progressively get quieter, without finishing the sentence

> **Low-status guy**: Yeah, yeah, french fries, “pomme frittes” ehehe, and that kind, that kind of stuff.. (trails off and looks at the leader)

♟ **Cut short, without trailing**
People trail off after realizing they spoke too long and/or are going nowhere.
Resist the urge. In the example above: keep the volume up, then add “Anyway, on to you guys (gesture towards the boss)“.

⍰ PUA approach trails off

2. Defensiveness

General principle:

⚖ **Confidence advances, submissiveness backtracks and defends**

In confident conversations, we saw that dominant men lead, ask questions, take the judge role, control the frame, and, potentially, interrupt and attack.

Well, unconfident men do the opposite.
They relinquish any control and justify and defend.

2.2. Over-Justifying

> **Cop**: You know it’s a 50km/h zone don’t you
> **Submissive**: (long face, low gaze)
> **Cop**: Then why did you speed <— Overstepping. He has no right to shame you
> **Submissive**: I didn’t see the sign and I didn’t realize, I thought I was going slower…

⚠ **Submissive *implies* guilt**
Misplaced submissiveness makes you look slimy AND guilty

Other options:

- ⍰ **Don’t self-snitch** and don’t admit
- ⍰ **Own it** Ie.: “I just sped officer”

⍰ ⍰ Remove “Because” To Retain Power

“Because + explanation” feels like you’re justifying to others.

⍰ Example:

> **Asker**: Why would you think that?
> **Low power**: Because… (provides a reason/justification) <—- Expends effort while the asker judges

But:

> **Asker**: Why would you think that?

> **High power**: Why would I NOT think that

2.3. Over-Minimizing

- I **just** meant
- I wanted to add this **little** thing
- I **only** want to clarify that…

Imagine a person speaking like that at a meeting.

Do you think he'd sound confident and authoritative, the type of man to advance at work?

Not really.

2.4. Bowing to Social Pressure

> **Owner**: Free apps!
> **Group**: (glares)
> **Owner**: I got free apps
> **Group**: (glares)
> **Owner**: What? (Opens up his arms) <— ⍰⍰ "What did I do wrong"

⍰⍰♟ **Approach it like *they*'re off**
⍰ = I'm giving you a gift, you have no reason to be a dick
⍰ *"What the hell is wrong with you guys"*

3. Running For Cover

A good use of covers is crucial in life.
However, when they're unneeded or when you overdo it, they reek of weaknesses.

3.2. Virtue Signaling Cover

> **Him**: If he doesn't want the child, he should not be forced to pay. Not that I would ever fight it, but… <— It's weak because it's clear he opposes it (and he'd rather fight it in court)

3.3. "I'm Joking" Cover

> **Him**: (mischevious joke) Nono, I'm joking <— Worst of both worlds. As*hole intent, with too nice guy fear

⍰⍰♂Guy I knew also did this for perfectly acceptable jokes ⍰.

⍰ **Read more here**.

3.4. "I Obey" & "I'm Not Allowed" Frames

- "*they* said I could do it"
- "I was told"
- "*they* allowed me"

They all sub-communicate “powerless flunky”.

⍰ ⍰ Strategic “offloading”
Use higher authorities to deliver negative news without paying the price. ⍰

For more on conversational influence, see the basics of conversational frame control:

> Frame Control Power Dynamics: The Basics

4. Indecisiveness

The *Routledge Handbook on Persuasion* refers to a class of ‘hesitant’ language as ‘powerless language’.

Here they are:

4.2. Beating Around The Bush

General principle:

⚖ Empowered men are direct, disempowered men are indirect

Examples ⍰

4.3. Flip-flopping

> **Waitress**: You all done here sir?
> **Him**: Ahhhh.. (she takes it away) yeah, yeah <— He only decides after the waitress decided for him
> **Her**: Oh, you don’t wanna finish that?
> **Him**: (looks back towards the dish) no, yeah, nonono, I’m fine
> (…)
> **Her**: the establishment owes him a sneaker
> **Him**: (looks at her) right, right. Well, I mean, I guess, you know…

♟⍰ Pause, think, decide
When unsure, keep the status quo (ie.: leave the dish)

Also read:

- How to be confident on dates
- How leadership helps your dating

5. Over-conforming

General principle:

⚖ High-status men shape the world around them, while low-status ones conform

5.2. Confirming What Others Said

> **Leader**: what do you think Tim?
> **Low-status**: I agree with what you guys said <— WHAT, exactly?

⍰ ⍰ High-power option for “nothing to add”

Say:

- *I’m not informed enough to add valuable insight*
- (pause 2 seconds) *I agree with what X said*
- *I don’t have a strong opinion on this*
- *I think it’s too difficult to say. I’d rather pick any option and improve as we go with the market’s feedback*

⍰⍰⍰If it’s teamwork, add that you’re eager to get going with the action.

5.3. Backchanneling Confirmation

- *Aha*
- *Uh-huh*
- *Mm-hmm*
- *Got it*
- *Understood*
- *Right right*

General principle:

⚖ **Moderate backchanneling increases interpersonal bond⍰⍰ but excessive backchanneling disempowers**
Over-doing it sub-communicates “flunky taking in orders”.

⍰⍰⍰ **PRO-Tip:** Switch “aha” for neutral “yeah” and “got it” or a high power “makes sense”

6. Insecurity

6.2. Ask Permission For Your Rights

Imagine a meeting among colleagues:

> **Colleague 1**: (chips in)
> **Colleague 2**: (chips in)
> **Colleague 3**: Yeah, can I share my opinion <— You’re equals, no need to ask

But remember that, as for most low-power expressions, context and situation make all the difference. Politeness as a high-status and credible man can enhance a speaker’s credibility (Bradac and Mulac, 1984).

For more, see:

- Power protection to learn when and how to respect others
- Social calibration, to lean when and how to calibrate

6.3. Over-Discounting

To lower expectations:

- *This may sound silly, but…*
- *(…) Sorry I’m just rambling aloud*
- *I hope this is not completely stupid…*

Lowering expectations is a great strategy *when used appropriately*.
Not when over-used ⍰.

General principle:

⚖ **Fragility is afraid of failing and looking bad, confidence isn't**

> **Her**: I didn't have a good look for today, I hope you don't mind
> **Her**: (…) I'm looking like a zombie

♟⍰⍰ Notice my strategic responses.
But I was also respecting her less and less

— ⍰ Confident men can do this to gain trust and grab attention
As for most things, there are exceptions. A smart use of 'hedges' can enhance persuasiveness (Durik et al., 2008). If you're already a credible speaker, you share openly when it's "just an (uninformed) opinion". And a pre-amble of "just sharing a crazy idea" can be a fantastic attention grabber.

6.4. Weak Attacks

Anger without conviction, intensity, or power is weak:

> **Frank**: What are you talking about now, come on you listen to me ah <—- "Come on" pleads. And "ah" is a reinforcing tail filler words. Both signal weakenss

♟ **If your anger doesn't intimidate, don't get angry.**
⚖ Anger that doesn't affect others disempowers you.

⍰ Example of weak pushback
~~Old example~~ (author's exclusive videos in PU)

⍰♂ “Empty yelling” loses you respect

Lucio: My boss yelled, “Do you think we’re a joke?” after I left before his meeting the day before. I said no, but his weak yelling confirmed *he* was a joke of a leader.

Also read:

- How to stop being passive aggressive
- How to become assertive

7. Fawning

General principle:

⚖ Leaders pursue goals, lower-status men pursue leaders

7.2. U-Turning

Genera principle:

⚖ Empowered men Low-power followers speak based on what the leader says

> **Low-status**: They suck, they’ll never win
> **Leader**: Actually, they bought some strong players, they’re quite good this year
> **Low-status**: Yeah, I didn’t really mean “never”, and…

⍰ PRO-Tip: Contradict them
As both a test and power move. Great for dating

7.3. Approval-Seeking (Rushing In)

Ie.:

> **You**: I thought it was terrible that you…
> **Submissive**: (emotional) Nooo, I didn't mean it that way, what I meant was <—- Rushes to clarify/justify and get in your good graces again

⬆ I had that exchange with an ex.

7.4. Parroting The Leader

> **Leader**: Mark you did great with X, it was…
> **Subordinate**: Mark did fantastic, my favorite was X <— What a concidence, just what the leader highlighted

⍰♂ Fawners Disgust Me

Lucio: Fawining is weak, petty, and fake.
I may use fawners for short-term support, but never rely on them. Turncoating is their MO and will be the next leader's bitches.

More ⍰

8. Over-reactive & Unmasculine

- **Over emotional**
- **Over-expressiveness**
  ⍰ Charlie example of exaggerated facial expressions
- **Over-excited & high-pitched**
  ⍰ F1 commentator sounds effeminate
  ⍰ Shaun share his SWAT experience with too high energy and a victim frame. Franzese shares the same story, calmly and with a cool guy self-frame
- **Mimicking women's voices or behavior**

⍰ Charlie mimics woman's voice

6.2. Reacting More Than Others

> **Guy 1**: Blew a whole fucking platoon to pieces. Bad shit
> **Guy 2**: Yeah, they got two lieutenants and captain
> **Guy 3**: Jesus (looks around) <— ⍰⍰ "I'm the virgin novice"

♟ ⚖ **Always err on the side of under-reaction**

⍰ Video here.

6.3. Losing Your Girl's Respect With Over-reaction

> **Him**: (laughs, "my God" intonation, emotional word salad)
> **She**: (silent and disappointed)

🡅 ♟ **Let her start the "sensitive topic"**
Or rause it strategically so you don't look overly affected.
⍰ Ie.: ask her what she thought about it.

PRO Tip: Focus on present
Avoid past & hypotethicals. Dwelling on what you can't change is lower value. Winners focus on present, future, and action.

The Psychopath Whisperer: Summary & Review

Lucio Buffalmano · 20 February 2019 · Archived copy · Original

In *The Psychopath Whisperer* (2014), Dr. Kent Kiehl describes in captivating prose his long-time studies and researches on psychopaths, and how he came to the momentous discovery that psychopaths are different because they have a different brain structure.

Bullet Summary

- Psychopaths become serial killers when they also present paraphilia
- Don't ever trust a psychopath: they are consummate liars and manipulators
- Psychopaths' brains function differently. Thus, most psychopaths are born psychopaths

Full Summary

About the Author: Kent A. Kiehl is a neuroscientist who dedicated his life to studying psychopathy. He is a professor at the department of psychology, University of New Mexico

The Profile of Serial Killers

Talking about a serial killer he was interviewing, Kent Kiehl reflects that he didn't fit the typical profile of a serial killer.

He says:

> Most serial killers are driven to commit their murders, usually in association with sexual dominance or sadism.

> Serial killers like Ted Bundy would meet criteria for psychopathy and they also have paraphilia, a sexual-based disorder like sadism.
>
> The drive to kill comes from the latter.
> The lack of emotions, empathy and guilt comes from psychopathy.
>
> When you combine psychopathy with paraphilia you get a very dangerous person.
> Fortunately, such people are very rare.

However, psychopaths who don't derive pleasure in killing or hurting others still can end up being serial kills when they get angry very easily and easily resort to violence.

Mass Murderers' Profile

Most mass killing are committed by individuals suffering from *psychosis*, not psychopathy.

Individuals with psychosis have a distorted perception of reality, sometimes hearing, seeing, smelling or believing things that are not real.
Indeed in his book "The Wisdom of Psychopaths" Dutton shares that the psychotic ward in prison tends to be more dangerous than the one housing psychopaths.

The most dangerous types of reality distortions when it comes to psychosis and murder are "auditory commands hallucination."

Not all psychotic patients commit crimes of course, but psychotic symptoms do increase the risk of homicides (44 times more likely than among non-psychotic individuals).

Schizophrenia is one of the main disorders associated with psychosis and albeit people affected with schizophrenia are less than 1% of the overall population, estimates say they commit between 5% and 20% of all homicides.

But if the psychotic patient receives cure, then the risk of homicide drops precipitously.

Psychopaths' Connection With Children

The author talks about psychopaths who didn't remember the names of their children or their date of birth.

He says that a lack of connection with their children is one of the most salient features of the psychopathic condition.

Parole Boards Are Ineffective

Parole boards are not very good at assessing the likelihood of prisoners to re-offend outside of prison.

A study, says the author, shows that psychopaths are actually more likely to convince parole boards to let them out. Which is an issue since psychopaths are more likely to re-offend than non-psychopaths.

Professional judgment from a psychiatrist and psychologist is also unreliable.

Scientists' risk assessment tools do better at predicting risks (some of the variables used are: age, gender of victims, types of prior crimes, age of first criminal behavior etc.).
Kent Kiehl's aim was also to help improve the risk assessment.

Prisoners' Manipulation

During his first stint in prison, the author fell victim of prisoners' manipulation before realizing what was on.

A huge and violent sex offender disliked Kiehl.
And a more friendly but equally aggressive one psychopath defended the author.

Except… It was all a ruse.
Both of them had organized the game to manipulate and eventually get something out of the Kiehl.

Kiehl realized and confronted the friendly psychopath, who eventually admitted the game.

> Manipulation: Techniques, Strategies, & Ethics

Prisoners' Power Moves

There were some interesting Machiavellian strategies to learn.

The author talks about Richie, an inmate who had recently arrived in prison.

While all other inmates were huddled to watch TV, Richie walked in the room in front of the TV completely naked. He went outside in the rain, then walked back in and went back into this cell.

All other inmates looked incredulous or pretended not to notice, but everyone noticed.

By acting crazy in front of everyone, the new inmate had shocked everyone and grabbed the initiative.

In the subsequent interview with Richie, the author reveals that Richie had done it on purpose. He wanted to make an impression right away and "establish himself".
"Even the big ones get nervous", said Richie, and if you don't establish yourself they think they can test you.

By doing crazy shit that people didn't expect, he would steal the initiative, get people to react and think about him. And by the very nature of his seemingly unstable behavior, people would think twice before crossing him.

Psychopath Traits Exist in All Of Us

Kent Kiehl says that psychopathic traits exist in all of us.

But fortunately, the distribution is skewed, meaning that most people have few of the traits and score low in each one of them.
Some more people score a bit higher and very few people score very high.

Misuse of The Word "Psychopath"

The author talks about how the word "psychopath" is misused often by both people and the media.
Sometimes it's used as a derogatory term, but not from a medical point of view.

Diagnosing A Psychopath

He then goes on to show how a psychiatrist would score a psychopath using Doctor's Hare psychopath scale (read: The Psychopath Test for a critic on the test).

He takes the only two killers of American presidents' history and scores both of them on the checklist.
This was a wonderful exercise both for those who want to become a psychiatrist and for those who just want to understand psychology and psychiatry better.

Don't Rely on DSM

The author says that the sacred book of American psychology, the DSM (Diagnostic and Statistical Manual of Mental Disorder) should only be your starting point.

He says that it's shaped by science, politics and economics. And not necessarily in that order.

It's also helpful to consult previous versions of the DSM to see how the definition has evolved -an why-.

Acquiring Psychopath Personality With Brain Damage

There have been reported incidents of head traumas in which patients with damaged paralimbic system became psychopaths.

Paralympic brain-damaged patients have problems with:

- aggression
- motivation
- empathy
- planning and organizing
- impulsivity
- irresponsibility
- poor insight
- lack of behavior controls
- decision-making skills
- recognizing nuances of voice and facial expressions
- apathy
- promiscuousness
- lack of respect for authority

sometimes:

- grandiosity
- confabulation

All of symptoms we find in psychopaths.

It's not so common to damage our paralimbic system. It can happen to football players who suffer repeated concussions for example.

All this led to one conclusion, later confirmed by brain scans: it's the paralimbic system that is the problem with psychopaths.

Female Psychopaths

There is not nearly as much research on female psychopath.

Part of the reason, is because there are fewer female psychopaths. Research suggest around one female psychopath every ten male psychopaths.

The rate of psychopath in female prisons is around 15% to 20%.

A Different Way of Reforming Psychopaths

The author discusses an important experiment with the most difficult youth psychopath offenders.

To begin with, punishment does not work equally well in deterring people from action. And it does not work well with most psychopaths.

My Note: intelligence may help psychopaths rationally avoid self-defeating behavior while computing the long term consequences. And that does not work with low IQ psychopaths.

The experiment's main idea was to break the cycle of violence that often sets in between psychopaths, guards and "correction" system (in connection to the guards the author also mentions The Lucifer Effect by Zimbardo).

Decompression Model

The correction system, with its escalating use of force and , was exacerbating the problem instead of helping it solve.
Kiehl says that the inmates, victims of the vicious cycle, become "compressed" and the only answer left for them is violence.

There is also a natural tendency for some people to resist control and authority, which contributes to the escalation.

The idea of the experiment was to gradually decompress the youth and help them develop pro-social bonds.

The decompression model was a big success.

Quotes

The Psychopath Whisperer is both informative as it is hilarious and entertaining.

I will list here some of the best and most ironic quotes.

Here talking about his first visit at the high-security prison:

> First steps into this new environment I smiled to myself that my first concern, a cavity search, had not come to pass as I went through security.
>
> I made a mental note to get even with the senior graduate student who had told me that cavity searches of new staff were common in Canadian prisons.

Talking about missing razor blades for shaving.

> “The inmates get razoers?”
> I inquired with a puzzled tone. “Yes”, she said laughing, “and they often disappear. I don’t ask where they go”.
>
> “I realized that doctor Ren was wise in telling me to sit closest to the door during my interviews”.

On psychopath’s characteristical traits and how they handle life in prison:

> Another difference between psychopaths and other inmates is that psychopaths don’t get distressed by being in prison.
> Most inmates get depressed when they get inside, and they find prison to be a stressful experience. A hallmark feature of psychopaths’ disorder is that they don’t get bothered by much of anything. They don’t ruminate and they don’t get depressed.”

On psychopath lying and you calling them out on it:

> Lying is common in psychopaths, so I have to trust my gut feeling and review his file again later.
> Because **you can’t trust a psychopath to be telling the truth**, you have to review all their files to review everyting they say.
> If you catch them to lie, you have to be willing to call them on it and see how they respond.
> Just sit in the chair closest to the exit in case you piss them off.

On a psychopath retelling the story of his homicide:

> Knives were flashed, but they were no match for Grant’s 9mm handgun.
>
> “Bambam, bambam, two down” he said, pointing is index finger and thumb in classic gun pose.
> “One of my better shooting days”.
>
> The words were spoken with such calmness, with such matter of factness that I wondered if they were true.
> The file confirmed it. Two shots center mass to both accomplices.

On psychopath’s grandiosity:

> Many psychopaths are so grandiose that they feel they can do a better job defending themselves than an experienced lawyer could do.
> Despite the fact that most of them didn’t finish high school.

On rumination, worrying and psychopaths never having OCD:

> Psychopaths never ruminate on anything.
>
> Rumination is a process that often contributes to depression and in extreme forms to obsessive-compulsive disorder.
>
> The process of rumination is often associated with some anxiety or subjective feeling of concern or worry, and this can help precipitate change in the individual in order to reduce the anxiety.

> The psychopath experiences none of this.
>
> Indeed, if you ask a psychopath if he has ever worried about whether he left the house with the stove on (a common problem among those with obsessive-compulsive disorder), he will look at you like you are an alien, in stunned disbelief.
>
> Psychopathy and OCD are at the opposite end of the spectrum.

On the case of psychopathy with a particularly low emotional intelligence:

> Brian rated some some of the stimuli with severe moral violation as far less immoral than everyone else rated them.
>
> in particular, Brian rated one picture of a man holding a knife against a woman's troat as low on moral severety.
>
> Later during the debriefing Brian confessed that he knew most people would rate that picture as "high" in immoral content, but he said he was not sure if it was "much of a violation".
>
> As much as he tried, it was abundantly clear Brian lacked the emotional connections that the rest of us take for granted.

Note though that as far I understood, this was the worst case of emotional intelligence impairment and most other psychopaths had at least some shred of understanding of how others would interpret emotions (and some also develop some attachment themselves, especially the non-severe psychopaths).

Real-Life Applications

Watch Out for Superficial Glib
Psychopaths speak quickly, animatedly, and often interrupt frequently. They can come across as quick-witted and likable, but the gut feeling is that "there is something not quite right".
Listen to that gut feeling. The more experience you make with both psychopath and people in general, the better your gut feeling tend to become.

Psychopaths Cannot Grasp Abstract Concepts
Psychopaths cannot understand metaphors, which makes metaphors and abstracts concepts a great test to see if you are dealing with a psychopath. The blank expression they give you is a major tell of a psychopath.
Read here more signs of sociopaths in relationships.

CONS

- **Maybe Less Personal Stories Could Have Made It Briefer**

Some stories were yes interesting but unneeded -like being held on suspicions of murder at the airport-.

- **One Million Dollar Calculation**

To compute the saving of the decompression model the author says that each person adds, on average, one million to the economy during his lifetime.
Then he proceeded to add up psychopath's murders, weighting them at one million each, to estimate the cost savings.

That's didn't make much sense to me.

To begin with, I suspect that psychopaths would kill mostly within segments of the population that are into shady business or not extremely productive.
Thus, an amoral commentator might say, it's all to be seen whether removing someone from a shady business actually increases the well being of the world.

Furthermore, in an overpopulated world struggling to contain emissions and pollutants, fewer people might do more good than more people.

- **"77% of Psychopaths Are In Prison".. Fact?**

The author says that 77% of psychopaths are in prison.

Then he adds "fact".

I would have appreciated some numbers to back it up and I don't like the word "fact" when dealing with statistics that, by their own nature, seem rather unreliable.

The psychopaths most frequently in prison are low functioning ones, and some of the high functioning ones might never get convicted or diagnosed to make it into the statistics.

PROS

- Best book to learn about psychopathy I have ever read
- Wonderful text to learn more about the intersection of abnormal psychology and criminality
- By learning more about abnormal psychology, you deepen your general understanding of "normal" people and psychology
- Deep reflections on the intersection between psychopathy, illnesses, the judicial system and the law
- Highly entertaining

Review

I learned a lot from "The Psychopath Whisperer".

It is not only highly informative, but also extremely captivating.

At times I just sat listening to the book as you would listen to a great triller or novel.

Highly recommended to anyone studying psychology and human behavior, psychiatry, and, of course, to anyone researching psychopathy or working with inmates.

Charisma University Review: Good, but Hungry Men Need More

Lucio Buffalmano · 22 February 2019 · Archived copy · Original

Charisma University by Charlie Houpert, is a social skills course aiming to teach the art of charisma.

At TPM, we've been on a similar mission to help good men not just become more charismatic, but more empowered and effective in all areas of life.

So here's a detailed review of Charisma University, including what it gets right—and where it might leave room for more.

Contents

  - Charisma University + Power University

About The Authors

- **Charlie Houpert** majored in philosophy, wrote the *Charisma on Command* book, and started out dabbling as a dating coach
- **Ben Altman** is the co-founder of Charisma on Command. Unfortunately, the two had a fallout and Ben isn't featured in *Charisma University* because he'd be a great role model for masculinity and power.

TPM's reviews™

SUMMARY

1. First Impressions

The first rule: don't try to impress.

Charlie says you must hit 4 key emotions to make a great first impression:

1. **Positivity** (light-hearted, fun)
2. **Trust**
3. **Respect**
4. **Show interest**

My Note: Not sure the order *must* be hit in sequence
These elements often overlap and unfold together. And for men, I'd prioritize respect over light-heartedness.

⍰ Example: Obama First Impression

I love that Charlie uses lots of examples, but didn't always agree with them.
Take this supposed example of charismatic first impression:

> **Obama**: (slaps a man on his shoulder for 6 times)

TPM Note: Obama overdoes it. It's not charisma, it's *dominance*
First off, this is more about asserting dominance than charisma. And while Obama is often a solid role model, these forceful pats are *overly* dominant.

⍰ Example: Jennifer Lawrence & Charismatic Vulnerability

Charlie says that revealing a weakness early makes you likable and charismatic.

That's situational.
If you come across as cool and high-power, a vulnerability makes you more attainable and relatable.
But **if you're not yet high-power, vulnerability only makes you a bigger loser**.

Look at the example in *Charisma University*:

> **Jennifer**: (shows "vulnerability")
>
> **Interviewer**: You're not worried about peaking too soon <—- power move!
>
> **Jennifer**: (looks up and raises her arm) <— Sub-communication ⍰ 'That was SO off'
> Well, now I am.
> (with annoyed tonality) God… <— Shames the interviewer

From TPM's point of view, ***Charisma University*** **fails to highlight the bigger lesson learned in this example**.

Jennifer wasn't just being vulnerable. She was a great social strategist by being vulnerable *at the right time*.
Her exasperated "God" was a high-power counter. It framed the interviewer as tactless and trying to undermine her moment.

Misplaced vulnerability can be insecure, submissive, or socially awkward.
Also read: vulnerability is NOT power.

> Vulnerability Is NOT Power: Don't Believe The Hype

Be More Interesting: Break Boring Rituals

Charlie recommends capturing attention when someone asks you typical, "ritual" questions.

For example, instead of replying "good" to "how are you", you say "jolly", or "never been better".

These can work in the right moments, but be careful not to overdo it, or you can come across as try-hard.

2. Confidence

The second module builds on Tony Robbins' work.

The exercise for confidence is as follows:

1. Think of a time you felt great
2. Move like when you felt great
3. Repeat to yourself an incantation (ie.: "I'm a f*cking God")

There were good tips in this module, but I'm not a fan of this approach for developing confidence.
While short-term 'whipping yourself into state' is useful, I prefer focusing on deeper fundamentals for long-term changes.

3. Expert Conversation

Charlie presents here the ground rules for having good conversations:

1. Don't think you need to have a master plan
2. Say what you think without filters: the more you talk, the more "ammo" for conversation
3. Make people laugh faster
4. Go deeper faster and discuss things people relate to the hardest (values, motivations, emotions)
5. Use your body more (gesticulate on a wider plane)

I liked Charlie Houpert's analysis of verbal expressions and body language mismatch.
For example, if you approach someone head on, you better speak straight, or else you look incongruent.

⍰ Example of Great Conversation: Will Smith

I once again didn't fully agree with Charlie's example of 'charismatic conversation':

> **Will Smith**: (stands up and runs circles around the table mimicking a headless chicken, eliciting laughter while looking goofy and silly)

TPM Note: "funny"… *Maybe*. But NOT masculine
While this 'jester approach' to social dominance grabs attention, I advise men to focus on foundational power and **avoid this over-the-top approach**.

For me, **Will Smith became respectable when he *stopped* dancing, sat down, and spoke with confidence**.
That Will Smith was respect-worthy, masculine, and leader-like.

4. Storytelling

Storytelling was Charisma University's best module.

The mindset of telling a story, says Charlie Houpert, is not to go from A to Z, but to calibrate to the audience's reaction.

Here is some good advice on telling a riveting story:

1. **Find an overarching question underpinning your story** (ie.: "what happens?" or " who was that guy stalking you"?)
2. **Drop a line to capture attention** (ie.: "oh my God, the craziest thing happened to me last time" or "you're gonna love this one guy")
3. **Tell the story in the present tense**
4. **Rising action: anything you say must contribute to the main point** (ie.: If your story is about you afraid of walking down an alley, everything you say must contribute to that suspense, for example sharing your feelings and shaking body)
5. **Expand the climax** (don't rush through the climax but expand it)
6. **Wrap up** (a piece of advice, a lesson learned, or a little joke)

Charlie also mentions that you tell stories about yourself to signal value and gain credibility, respect, or liking.
This was called "demonstrate higher value" in the dating literature.

5. Magnetic Presence

For magnetic presence comfort, confidence and power are crucial, says Charlie Houpert.

He stresses the importance of posture -his tip: imagine a hook pulling you up- and voice.

A couple more good ideas:

- Move people from one level of energy to gain influence
- Touch people more and let your hand linger for 1 or 2 seconds

⍰ Example: Terry Crews' 'Magnetic Entrance'

My disagreement forms a pattern: Charisma University examples are "over the top" personalities.
But this isn't the only—or necessarily the best—way to succeed socially.

See for yourself:

> **Terry Crew**: (enters dancing and yelling)
>
> **Ellen**: (unfazed, removes the pin from his chest) You danced so much your pin came out <—- Power move. Sub-communicates 'you *slightly* overdid that'

Is that a "magnetic presence"?
Maybe to some, but I'd advise that **it's best to learn to be "magnetic" without becoming a dancing monkey**.

Ellen's comment also framed Terry like a low-power jester.

Power dynamics is clear on this.
At parity of returns, lower effort is superior:

Social ROI matrix, part of 'Social Investment Model' (Buffalmano, 2026)

Low-Energy Magnetism

Charlie Houpert says that you can be magnetic with lower energy.

But most of his examples are high-energy. And he says that Marlon Brando's low-energy charisma works "only because it's scripted".
But Marlon Brando was a legend in real life as well.

See this example:

> View this post on Instagram
> A post shared by The Power Moves (@the_power_moves)

This is how a masculine man confident man behaves.
Not dancing around like headless chickens.

Also see:

- The Godfather analysis (a typical “low energy” charismatic man)
- Signs of social power
- Dominance archetypes

6. Leadership

This is the module I enjoyed the least.

It’s mostly one type of leadership: inspirational leadership, and draws heavily from Tony Robbins.
It felt tangential to leadership.

Our take on leadership emphasizes power dynamics, which we find often more relevant and practical.
We dig deeper in Power University, but you can check:

- Leadership 101
- How to be a leader
- Leadership power dynamics

> How to Be A Leader: 13 Laws From Social-Psychology

CONS

I enjoyed Charisma University, and I’m grateful to Charlie.
Many of our readers and community members found us through him:

That said, these are the cons based on how we approach social skills:

1. High Energy Approach to Socialization (Jester Risk)

Charisma has no universally defined or empirically tested measures.

So while one can list many ways of being charismatic, Charlie leans into high-energy 'charisma'.

Including jokes, "silly role plays", lots of laughing, loudness, etc., etc.
That works best in bars or clubs.
Even modern-day (2022) Charlie confirms that:

> **Charlie**: Especially in a bar / night club scenario, which I think is what I'm tending towards more

And for *those* places, he's right, high energy works well. But that makes it **less suited for men who are less into bars and clubs.**
And at higher risk of falling into a jester role.

Also, read:

- **The high-energy myth**

> The Myth of High Energy Socializing

2. Power & Status Are Higher Priority, But Not Covered

Our main "con" comes down to this.

While charisma is a form of influence and power, the foundations are different.
In our view, mastering power first is more important for men.

Charisma-related traits are only effective in achieving life-relevant goals IF you can also be confident, positively dominant, and strategic.

And by "life-relevant goals" I'm referring to *results* that most men want.
Such as:

- Dates & mates
- Social status
- Career promotions
- Networking with high-value men

Charlie suggests so himself on his podcast.
Him and Ben discuss what makes you attractive, and Charlie says:

> **Charlie**: Charisma on Command focuses on personality (but) If you're rich and powerful you can be a jerk and don't need to be attractive. (Power) it's what people respond most strongly to

Ben then says that charisma/personality is the quickest to change.
But it takes the same time to learn how to behave powerful and gain respect. And I think that's priority #1 for most men.

2.2. Charlie Himself May Refine His Approach For Status & Respect

I think Charlie has the "feel" for power dynamics.

In this example, I could see that he *felt* the disrespect.

However, I wished he had defended himself more strongly.

In this instance, Charlie's response leaned toward being *overly* accommodating, further empowering the attacker:

> **Graham**: (disrespectful)
> **Charlie**: (complies and losing power, status, and respect)

 Same goes for signs of naivete.

3. Could Be More 'Masculine'

I'm not even the biggest advocate for 'masculinity'.

But while charisma and masculinity are different, respect, status, and attraction often require a baseline of masculinity.

Charisma University's approach sometimes prioritizes energy and humor over this baseline. But many 'good men types' may benefit from more masculinity.

4. Some Examples & Role Models Were Poor

There are *plenty of* examples in Charisma University we agree with.

But some, including the ones we reviewed here, could be improved:

- It's not a "great first impression" to slap others like you're trying too hard to dominate them
- It's not "magnetic presence" to dance and shout -and then get "owned" by the host
- It's not "great conversation" to run around like a headless chicken

These examples may even take some men off-track.

Will Smith & Charisma

Will Smith himself, a frequent example of charismatic mastery, raises questions for me.

While charismatic in many ways, what's the value of this brand of charisma if it doesn't prevent cheating, public shame, or manipulation?

I'd rather have the power dynamics skills to get a better partner.

5. Teaches Men And Women As If They Were The Same

Charisma University targets both men and women.

Charlie and Ben say that it's largely applicable across cultures, and for both genders. Say Ben and Charlie:

> **Ben**: 95% of the lessons don't have to be modified, they just are for people (…) you don't have to modify it
> **Charlie**: 98% is going to be the same

I partially agree with the intercultural aspect.

But I agree less with the cross-gender applicability.

On average, **men benefit significantly more from power, dominance, and leadership.**

Women who talk louder and touch others may gain power, but lose femininity and pay a hefty social price.
Studies also show that.

Maybe that's why *Charisma University* felt low in masculinity.
You try to cater to both, and you end up with a sub-optimal middle ground.

6. Sometimes Reactions Over Results

Principle:

High-energy folks get more *reactions*, but higher-power folks get more *results*.

See an example on Charisma University's own sales page:

Charlie:

"That speech! I'm a professional speaking coach. I train speakers from all over the country. That was impressive. Where did you learn?"

At that moment, Vivian came running over to give me one of her big bear hugs and a kiss. All I could do was smile as he tried not to stare at her. I'd seen her have that effect on men before.

In the absurdity of that moment, I had to laugh.

> **Charlie**: Vivian came running over to give me one of her big bear hugs and a kiss. All I could do was smile as he tried not to stare at her

That "big bear hug" was disrespectful.

Charlie's passive acceptance cost him status and attraction. He should have assertively checked that, *not* reveled in it.

Just think about that:

You're socializing, and a random girl barges in and *interrupts while you're talking to someone*.
It's disrespectful to you, and to your speaking partner.

She did it because she felt confident Charlie wouldn't enforce his boundaries.

Finally, that woman was potentially "marking territory".
And boosting *her* social status displaying her power over the event's speaker -often high-status just for being on stage-.

Don't let people interrupt you and don't let your female friends use you for social climbing. It's low power and unattractive.

7. Lacks Scientific Backing

Ben and Charlie opened up about not using science:

> **Ben**: People say "do you have any studies to back that up".
> Well, I have my experience, the people I've coached, and watching other people. And that seems to me far more valuable than if I rely on a study

And I partially agree.
Great intuition and lots of experience are invaluable.

But science and experience are NOT mutually exclusive.
Charlie's later comments also show some room for improvement in understanding how science works.

Science *improves* intuition and experience with more data points (see our 3-pillars model).

PROS

Among *Charisma University's* pros:

- **Lots of Examples**

Charisma University has lots of real-life examples and good breakdowns. Just as I like it.

- **Good Overview**

Especially for those who prefer a party-style, extroverted, talkative approach to socialization.

- **Charlie Communicates Clearly**

Charlie is the "explanator in command" and a master speaker.
I learned even more from Charlie's presentation, than the material.

Charisma University: Lucio's Take

We liked Charisma University and it's great for younger beginners, but found it lacked key lessons on social power, status, and masculinity.

Course Provider: Organization

Course Provider Name: Charisma on Command

Course Mode: Online

Course Price: 597$

Editor's Rating:
3.5

Charisma University VS Power University

This table helps you pick the best for you:

Goal	Charisma University	Power University
Life usefulness		✅
Ease of learning	✅	
Status, respect, and attraction		✅
Speed of learning	✅	
Scientific		✅
Price	✅	

Or see here full comparison.

Charisma University is simpler and faster because it has a smaller scope.

By contrast, Power University is Lucio's life mission to provide a comprehensive system to turn good men into confident and competent men who win at life.
That intrinsically makes it a deeper, more robust, but also more challenging program.

So, in brief:

- **Go for Charisma University if you're an extroverted teenager who wants something quick and easy.** You trade smaller improvements for smaller investment
- **Go for Power University if you're serious about your self-development and want to achieve significant goals in life**

P.S.:
And if you're a "good guy", I also recommend PU.
Charlie may be a bit 'too good guy' himself to transform nice guys.

What People Say About CU & PU

Let's see what someone who tried both told us:

In the past I tried Charisma University but while I thought the content was good I didn't feel like it worked well for me for three reasons: 1) I found it difficult to turn the action guides into habits that stick, 2) the high energy style of charisma is quite exhausting for me, and 3) I feel like being quick to laughter and speaking through a smile etc makes me come across as low-power and makes people respect me less.

> In the past **I tried Charisma University** but while I thought the content was good **I didn't feel like it worked well for me** (…)
> the high energy style of charisma is quite exhausting for me, and (…)
> I feel like **being quick to laughter and speaking through a smile etc makes me come across as low-power and makes people respect me less.**

It's a public post from our forum.
And #3 is what we highlighted in this review.

And the same person, comparing *Charisma University* VS *Power University*:

#2 - May 30, 2023, 7:34 pm Delete Edit Quote

Hi Jack,

I first found TPM when I looked for reviews of Charisma University. I didn't look through anything else on the site though until months later.

After going through CU and realizing it wasn't for me I stumbled back here by accident and decided to join PU.

Needless to say, that was one of the best decisions I ever made.

Of course:

This is not to say that this person's experience applies to everyone else.
Charisma University may be better for *you*, so you must decide for yourself.

FAQs

Is Charisma University Legit?

Charisma University by Charisma on Command is a legit course on social skills.
Whether it's good for you depends on your level and your goals. While more advanced men may wish for a bit more refinement and depth, *Charisma University* can be great for beginners.

Is Charisma University Worth It?

Charisma University is worth it for people who love Carlie Houpert and want to learn the high-energy, extroverted approach to socialization.

Based on what the authors and their former COO disclosed, Charisma University wasn't worth $900 based on the high refund requests, and around half of their buyers ask for a refund at the current price of $600

Charisma University REVIEW

Charisma University is a good course on social skills.

While anyone can learn from it, it's best for younger men who prefer an extroverted, "high-energy" style for parties and fraternities.

The high-energy approach is a possible limitation, confirming what researcher Elaine Aron says:

> Most social skills courses and books are sold by high-energy extroverts, who teach the high-energy extrovert way to social skills.

It's good for introverts to learn to act extrovert, but quieter men can play their strengths.
After all, the silent type is often *more* powerful.

Charisma University + Power University

A good option for beginners could be to get *Charisma University* first, and then level up with *Power University*.

This is the approach this Redditor took:

I was still too afraid to talk to people on my own. So I came across two social skills courses. Called "charisma university" by Charlie houpert And "power university" by lucio buffalmano These two courses alone transformed my social life. I found out that charisma is actually a learnable skill. You don't have to born with it.and you don't need to be funny, for people to like you. How to nail first impressions. How to tell amazing stories. How to be apart of groups.how to maintain friendships. How to handle confrontational people. And most importantly, understanding power dynamics. Within a year I changed my life. My only regret is never starting sooner.

> **Redditor**: charisma university" by Charlie Houpert and "power university" by Lucio Buffalmano transformed my social life (…) most importantly, understanding power dynamics. Within a year I changed my life. My only regret is never starting sooner

Many Power University alumni indeed find that learning power dynamics changed their lives, and it got them great results (measured in our survey).

See if it's for you:

A New Earth: Summary & Review

Lucio Buffalmano · 23 February 2019 · Archived copy · Original

In *A New Earth* Eckhart Tolle presents spirituality as a new evolutionary level that humanity has to evolve into, if we want to survive and thrive. Or else, we will face possible extinction.

Bullet Summary

- The ego, or the belief we are what happens to us, is a major cause of pain and suffering
- Past events and pain haunt most people: you must let the past be the past
- Accept things as they are

Full Summary

Eckhart Tolle says that The New Earth will be either a transformative book or it will be useless.
Which one it will be, is up to the reader.

Enlightenment Is Detachment From Materialism & Ego

Tolle says that people identify themselves with their ego and with material possessions.

Transcending both is what all great religions and philosophies have been about, from Buddhism to Christianity.

Fear, greed, and a thirst for power have been the driving forces of untold devastation and pain in our history.
And they all originate from our ego: the desire of strengthening our self-image.

Religions Are Failing Us

To be precise, it's not religions that are failing us. It's our interpretation of religions.

Religions are great tools to lead people down the path of enlightenment, but the way people approach them today is

wrong.

Religions, from tools to help us rise above human dysfunctions, have become divisive instead of unifying.
Many preachers also have a poor approach towards sacred texts and rituals: it's "either you believe it, or you are wrong".

It's against this backdrop that new movements of spiritual enlightenment have started blossoming outside of religions.
Tolle believes that the big religions should embrace them or else they'll eventually die out.

My Note: Good point
I agree with Tolle here and this is what Richard Dawkins, author of "The God Delusion" has failed to address in his scathing text against religions.

Avoid Identifying Yourself With Things

Tolle merges a criticism of the human tendency to identify with the things we like and own with a criticism of modern consumerism.

He says brands sell us things we don't really need by lulling us into the false belief that "more" and "more expensive" equals "growth" and "improvement" (for the science of brand marketing read: *Brandwashed* and *Buyology*).

There are other forms of identification that might seem better but are equally harmful:

- Identification with body
- Identification with gender (a woman, a mother..)
- Identification with appearance (and we will suffer when looks fade)
- Identification with an abstract construct in our mind (internal chatter)
- Identification with results or what we think of events

There Is No Good Or Bad

Tolle also touches on a key tenet of Stoicism, which is that there are no good and bad events, but only what we make out of them.

> **The primary cause of unhappiness is never the situation but your thoughts about it**

Waking Up to The Illusion of Ownership

Tolle says most of us sadly only realize the futility of ownership on our deathbeds.

We should probably all strive to detach ourselves from material possessions before we are about to die.
But simply giving up things is often not the answer. Some people going down the road feel "superior" for giving up material possessions, and they are still playing the same ego-driven game.

Also, read:

- Leveraging Death for Life

The Core of Ego

At the core of our mistaken approach to ego is the identification between our thinking voice and ourselves.

Such as, we believe that we are the voice in our heads.

We then expand from there to believe we are our opinions, our choices, our genders, our cultural background, etc., etc.

This is a key concept in Tolle's philosophy which he also discusses in *The Power of Now*.
If you are interested in ego, you might also want to check out *Ego Is The Enemy* by Ryan Holiday, Antifragile Ego, and Ultimate Power.

Ego Never Stops

The ego "uses" you to get more and more. It's never satisfied and the power of wanting and desire is bigger than the pleasure of achieving and owning.

That keeps you running and struggling all your life… Until you realize too late how futile it all was.

What Tolle is referring to is a well-known concept in psychology called the "hedonic treadmill".

Being Right & Social Climbing

Eckard Tolle points out a few ways the ego manifests (and reinforces itself) in our life:

- Complaining
- Game-playing (check Games People Play)
- Criticism & underhanded compliments (typical of frenemies)
- Gossiping
- "Winning" through our children
- Being right (and making others wrong)

And, I would add, social climbing is another typical example of ego-driven, socially awkward, and low-quality behavior that too many people engage in.

Alpha-male posturing is an example of ego-driven social climbing and social attacks.
Here are a few real-life examples:

Moving Beyond Ego

Our ego creates much pain and many negative emotions that poison our lives.

To move beyond ego you need to become aware of it. And albeit not necessarily easy, that is all that you need to do.

Ego and awareness are incompatible with each other.

Awareness is the knowledge that your thinking self is not you, that your thoughts, your opinions, and your background are not "you".

You are a part of the universe, and the current manifestations of your thoughts, positions, opinions, victories, and possessions do not define you.

The Power of Transcending The Ego

Eckart Tolle's philosophical system also touches upon conflict resolution. Conflicts are often precipitated by the ego.

We need to win, we need to defend ourselves, we need to even things out, we need revenge.

Enlightenment instead is about rising above. If you transcend the ego, there is nothing to offend, there is nothing to it, there is nothing to take revenge for.

My Note: This will empower you personally
This is one of my favorite concepts of “A New Earth”.
In a way, “A New Earth” is also a book about power. When you can transcend the ego, you become so much more powerful.

> **Sometimes letting things go is an act of far greater power than defending or hanging on.**

The Mind In Our Body

Tolle talks about our mind influences our body. The stories that our mind tells us influence and condition our body, and they often do so in a negative way.

The author also focuses on how we let past events and emotions long affect us even though they are, by all means, gone and dusted and should be. He exhorts the readers to let go of past pains and negative emotions.

Tolle calls it “pain body”.

My Note: BS on “past generations”
I fully agree with Tolle that old events and clinging on to pain is harmful both for our mind and body. I disagree though that we carry the “pain of past wars and pains” from older generations.
The connection between mind/body is also the central tenet in Joe Dispenza’s work as well, check You Are The Placebo, Breaking The Habit of Being Yourself, and Becoming Supernatural (Note: I personally consider Dispenza a quack and snake oil salesman).

This Too Shall Pass

Realizing that everything is transient and that everything will end does not mean that we enjoy less our pleasures and more easily endure our pains.

It means that we can endure our pain more easily and enjoy our pleasures more.
Why?
Because we can finally let go of the fear of losing our happiness, our possessions, our “victories”…

> **You can lose what you have. But not who you are**

Real-Life Applications

Stop Expecting All Must Go Well
Tolle says that one of the reasons we are unhappy is that we expect success and things to go well.
This is a deep, entrenched entitlement mindset and it basically predisposes us to anger and unhappiness.
Let go of the belief that things must work out (and read *The Happiness Advantage*).

CONS

I really love Tolle's work and I loved "*A New Earth*". However, I see my task as a critical reviewer to point out all flaws.
So here they are:

- **Eckart Tolle's Reading Voice (Audiobook)**

Tolle's voice is droning and soothing at the same time.

That makes it perfect to read a meditation track or to induce a trance-like experience.

But not for reading a text where you want to clearly understand the words.
For that, you need better enunciation.

- **Simplistic, Rose-Tinted, Mistaken View of Evolution**

Tolle said life took the risk of moving to land from the comfort of the sea.

That really makes no sense from an evolutionary point of view: I have no knowledge of life being "comfortable" anywhere. Life was challenging in the sea as much as it was going to be on land.

As a matter of fact, it's much more likely that life expands where it's easier to live rather than where it's more difficult.

- **Are We At A Crossroad? Maybe Not…**

After a simplistic view of evolution, Tolle says that we are again at a crossroads today.

Our modern weapons and climate change mean that we either enlighten ourselves or we face destruction.

Again, I don't see a simple and well-defined "crossroad" of evolution: I doubt there are many well-defined "now or never" moments in evolution and, if they are, they only become apparent in hindsight.

Otherwise, saying "now or never" is just another (poor) effort at becoming a bigger pundit, garnering more followers, as well, as selling more. Basically, just another power move.

- **National and Racial Pain Bodies?**

Tolle says that since we carry the pain of our past, the pain body is larger among blacks, Jews, and nations that saw much devastation.

I think this is a big BS and it's also a dangerous victim mentality.
See: why you must stand up to the victim culture framing you as the oppressor.

- **Opinions for Certitudes = Some Woo-Woo Content**

Some of Tolle's ideas are revolutionary and immensely helpful.

Some others, like the pain body, are made-up opinions that deliver no good. He still presents them as unquestionable truths though.

- **Bad Scientifical Interpretations = Some BS Content**

Some others still, are his own "truths" of what is either not true (his views on evolutions) or the author's own opinion on debatable scientific theories.

For example, the author says the universe will contract again. But that's only *one* theory among many circa the future of the universe and, currently, not the most popular (indeed the universe is *accelerating* its expansion, possibly resulting in what's been dubbed "big freeze").

- **"Nature" Is In sync With the Universe?**

The author also says that "nature", contrary to humans, is in sync with the universe.

That's why few animals died during the 2004 Tsunami: animals could "feel" something was amiss.

When I read stuff like this I want to punch stuff :).
Animals die and went extinct by the millions because of natural disasters. There is no proof that animals can "sense' impending disasters and then again what the hell does it even mean "nature" and "animals"? that's so egocentric it hurts.
There are millions of species, some of which for sure can't feel shit.

We, humans, *are* part of nature.

And hello, the reason why so few animals died during the tsunami might have something to do with the fact that nobody counted them and/or that there weren't many animals in the heavily populated coastal areas.

PROS

A New Earth presents many ideas and concepts which can indeed lead to enlightenment and, as well, to a happier, more worry-free life.

- **You Are Not Your Thinking Voice**

I find this concept extremely powerful and potentially life-changing. When you stop believing and behaving like everything you think is "you", you can acquire an enlightened life poise.

- **You Are Not What's Happening to You**

By extension, when you can learn that what is happening to "you" is indeed not really happening to "you", but just "happening", you can then learn to step back and become a higher-functioning individual.

- **Great Ego-Analysis**

Very good analysis of the ego and the consequences of our egos.
Also great job in linking ego and some nasty social behavior such as gossiping, social attacks, and frenemy-like behavior.

- **The Secret of The Greatest Power Move**

Tolle didn't intend it that way, but if you are able to transcend or momentarily step back from your ego, then you acquire huge mental (and material) power.

Video Summary – A New Earth

This is a video summary touching on a couple of ideas I haven't analyzed here:

To Read After ” A New Earth”

Here are some books you will like:

- Tao Te Ching
- The Power of Now
- The Untethered Soul
- The Four Agreements
- The Power of Positive Thinking
- The Power of Your Subconscious Mind (didn’t like this one)
- Who Moved My Cheese
- Man’s Search for Meaning

Review

I really like the concepts and ideas in “*A New Earth*“. They are revolutionary.

What’s holding the book back, in my opinion, are Tolle’s examples, historical references, and own interpretations of evolution.
To any critical and intelligent reader, they are the equivalent of nails grating a chalkboard.

However, overall, I still recommend “*A New Earth*“. Especially to anyone who’s too into consumerism or too touchy.

Check the best books collection or get the book on Amazon.

Getting to Yes: Summary & Review

Lucio Buffalmano · 25 February 2019 · Archived copy · Original

Getting to Yes (1981) is a classic of negotiation literature.
William Ury and Roger Fisher, the authors, shifted the way the Western world thinks and teaches negotiation tactics and techniques, helping to go from a model of pure strength and power, to one of collaboration and win-win.

Takeaways

- Separate the problems from the people: attack the problem and respect the people
- Negotiate based on interests, not on positions
- Look for shared interests
- Be open to change opinion based on facts (if you want the other party to be open to your influence as well, which you should)

Notes

About the Authors:
Roger Fisher studied law at Harvard and later became a professor at Harvard Law School. William Ury studied anthropology and later dedicated himself to negotiation tactics. He is also the author of "*Getting Past No*". Both Ury and Fisher are co-founders of the Harvard Negotiation Project.

The main aim of Getting to Yes is to avoid adversarial negotiation (positional bargaining), clashes of egos, and escalation that lead to nowhere -or lead to lose-lose-.

Be Soft on People, Hard on Problems

The authors argue that most people fall into two different categories when it comes to negotiation: the soft approach and the hard approach.

The hard approach is assertive or aggressive and seeks to win. The soft approach is more concerned with the relationship, has difficulties saying no, and tends to be more associated with submissiveness.

The soft approach is great… When dealing with other soft negotiators.
However, it loses big when facing other hard negotiators.

My Note: So true, and goes deeper than just negotiations
True, that's why I make the point that people must learn the power moves of the bullies of this world.
Also read: to be good you must learn to be bad.

Finally, the authors argue that you don't have to choose between hard and soft.
You should be hard on the problems that your negotiation addresses while being warm and respectful towards the people.

Differentiating between the people and the issues is one of the key tenets of Getting to Yes and what the authors call Principled Negotiation.

> **Successful negotiation requires being both firm and open**

4 Steps of Principled Negotiation

Principled Negotiation is based on four steps:

1. Separate people from the problem
2. Focus on interests, not positions
3. Generate options for mutual gain
4. Insist on using objective criteria

1. Separate People From The Problem

In negotiations, it's easy for egos to get in the way.

When you identify people with positions -or problems-, it's most likely that negotiations risk to escalate and/or reach an impasse because you end up in adversarial negotiations.

In adversarial negotiations often people end up stuck not because the proposed solution is not good for them, but because they don't want to seem like they are caving in.
Separating people from problems also helps people save face, as recommended in How to Win Friends and Influence People.

- Clarify perceptions (reach common understanding of both parties' needs and goals, put yourself in their shoes)
- Recognize and legitimize emotions (emotions are a common source of adversarial negotiations and escalations: acknowledge them, let people vent and never take things personally)
- Communicate clearly (miscommunication, false assumptions, and lack of understanding are at the roots of depersonalization and adversarial negotiation)

The authors also stress the importance of listening and understanding, which is the principle of "seek to understand, then to be understood" in The 7 Habits of Highly Effective People.

When you talk about a problem you also want to separate people from problems and avoid "you sentences" which sound accusatory (also read how to criticize correctly).

> **Constant battle for dominance threatens the relationship**

2. Focus on Interests, Not Positions

When you focus on positions you blind yourself to alternative solutions and it's more likely that you end up in adversarial positions (ie.: my position VS your position).

While we seek to win with our positions, we can find many different to meet our interests (example: instead of "I want the window open VS you want it closed" it's "I need fresh air" and "you need to stay warm").

3. Generate Options for Mutual Gain

Here you seek solutions and alternatives for win-win and mutual gain.

If it's not necessarily mutual gain, it can still be the limitation of damage which, in many situations, is still a win-win (example: landlord agrees to pay back part of the rent rather than ending up in court is still a gain).

4. Insist on Using Objective Criteria

Using objective criteria and agreeing on fair standards is all the more important when the parties are in direct opposition.

These are the types of negotiations that are at the highest risk of becoming adversarial and laying out and adhering to fair standards and criteria will help keep the negotiations focused on the issues.

For example, you could say:

> **You**: Look, you want a high price and I want a low price. Let's figure out what a fair price could be.

Now you have a shared goal and you might mention a few ways to find out.

If the seller comes out with a certain price, ask what's the theory behind that price and frame it as a way of looking for the common goal of reaching a fair price.

Seek Alternatives: BATNA

BATNA stands for Best Alternative to a Negotiated Agreement and rests on the assumption that you are only as powerful and strong as the quality of your alternatives.

Fisher and Ury introduce BATNA talking about how weaker parties can negotiate with more powerful ones.
The key is investigating and developing alternatives. If they can find good alternatives, it can be a good idea to let their negotiating partner know, which will strengthen their position.

Sometimes for weaker parties, the best alternative will be to not reach an agreement at all.
If that's the case, they should resist pressure and walk away.

Dirty Negotiation Tricks

Most people respond to dirty tactics by doing nothing and hoping it won't happen again. It's usually not a good solution (Hitler-Chamberlain example).
Responding in kind is also not a good idea.

Ury and Fisher's solution is to draw attention to the trick and then negotiate fairer rules for the rest of the negotiation.

My Note: Sometimes you can strategically pretend you're falling for it
It's certainly a good solution… In some situations. But not the best in all situations. As Robert Greene says in "The 48 Laws of Power", sometimes it can pay to pretend you are falling for their trick.

If you are interested in dirty negotiation tricks I have a specific lesson on it in Power University which summarizes all the literature on negotiation, psychology, and manipulation.

Check:

- **Manipulative negotiation techniques**

> 20 Manipulative Negotiation Tactics

Real-Life Applications

There is plenty of genius advice in “Getting to Yes” and I have learned a few crucial tips that improved my negotiation skills.
Here are some:

- **Start With The Highest/Lowest Number You Can Justify**

It does make sense to go into a negotiation with the highest number you can justify without being embarrassed.

That’s because, in the absence of exact criteria, people will estimate how well they are doing based on how far they have moved from the initial number.

However, if you go too high, you risk not being credible. That’s why the authors recommend a number that you can somehow justify.

- **Mention Third-Party Sources When Making First Offer**

Since your first offer will be rather high (or low), and if you move too quickly away from it you lose credibility, the authors recommend you don’t take ownership of the first number.

How to do it?
Mention a third-party mentioning the price, or say “one factor to consider is..”, or you can say that a similar house elsewhere would sell for X amount of money.

That way, you don’t take ownership of the price, you don’t come across as an overly aggressive bidder and you leave yourself room from moving away from that number without losing face and credibility.

- **Aspire for Good Results**

There is a strong correlation between aspirations and positive results. So within reason, aspire for good results and expect a good outcome for your negotiations.

CONS

- **Potentially Naive as It Ignores Deception**

One of the reasons the book has become so popular could be that people like to read about win-win and cooperation. But ignoring deception and manipulation could make the work less realistic.
For example, says Schilling in his seminal *The Strategy of Conflict*:

> *Mutual accommodation ultimately requires, if the outcome is to be efficient, that the division of gains be in accordance with "comparative advantage"; that is, the things a player concedes should be those that he wants less than the other player, relative to the things he trades for. Each needs, therefore, to communicate his value system with some truth, although each can also gain by deceiving.*

- **Few Examples**

At times I wished for more examples.
There is one example which is genius, and that only whet my appetite for more.
A few more examples at that level, and Getting to Yes was going to be the best book on negotiation ever.

- **Text Negotiations Benefit Fast Talkers?**

The authors say that texts, being so quick, favor fast talkers. I don't see how that could ever be true since texts don't convey voice and slowing down the tempo is as easy as delaying your responses.

- **In-Person Negotiation Isn't Better With Power Imbalances**

The authors strongly prefer negotiation in person. And that makes sense. However, they don't mention that in negotiations where one party has much more power, the weaker party can often gain with some distance.

- **When Attacked: Sit Back**

When the other party attacks you personally, don't get defensive and don't attack back.
Let them take off steam and then move back to the common problem.

- **Do Build a Connection**

Building a human connection before getting into it is a great way to help negotiations flow smoothly.

And finally:

> **The most powerful argument is convincing them you're asking for no more than what's fair**

PROS

The basics of effective negotiation are here. And the example of getting back money from a rent-controlled apartment was genius.

Read After Getting to Yes

- The Power of a Positive No
- Difficult Conversations
- Never Split The Difference
- The Secrets of Power Negotiating
- The Art of The Deal
- Influence and Pre-Suasion by Robert Cialdini

Review

"Getting to Yes" is a classic of negotiation techniques, and for good reasons: it's a seminal book.

The biggest issue of many negotiations, in my opinion, is in getting into an adversarial position, and "Getting to Yes" is all about moving past that.

It's not as strong on "power moves" in my opinion but its main concepts of focusing on problems, common interests and not escalating bad behavior were revolutionary and are still the foundation of any successful negotiation.

Getting Past No: Summary & Review

Lucio Buffalmano · 26 February 2019 · Archived copy · Original

Getting Past No is a popular book on negotiation. It teaches how to negotiate when things get difficult, when it seems like you reached an impasse, or when your negotiation partner is refusing to negotiate.

Contents

- Bullet Summary
- Full Summary
  - The 5 Enablers of "No"
  - The 5 Steps of Getting Past No
  - You're Enough to Fix Bad Negotiations
  - Listen & Step Into Their Side
  - Reframe: Move From Positional to Problem Solving
- Real-Life Applications
- CONS
- PROS
- Review

Bullet Summary

- Put your ego away and focus on the goal
- Listen to them first if you want to be listened to later
- Make it easy for them to say yes and compromise
- Always (re)frame the negotiation as an attempt at finding a win-win ("**enlightened collaborator**" technique)

Full Summary

About the Author:
William Ury is an American anthropologist, academic, and negotiation expert. He is one of the co-founders of the Harvard Program on Negotiation and, based on what he learned on the HPN, he previously co-authored the negotiation classic "*Getting to Yes*".

The 5 Enablers of "No"

William Ury first addressed the causes of poor negotiations which are more likely to lead to a "no".

He summarizes them into five high-level stumbling blocks:

1. **Your Emotional Reaction**: When facing difficult opponents it's easy to take things personally and escalate instead of staying neutral and focused on the solution
2. **Their Negative Emotions**: Same for the other side. Great negotiation doesn't just handle their emotions, but also the other party's emotions
3. **Their Position**: Inexperienced negotiators negotiate from positions instead of general needs and outcomes (the difference is that there are many ways of achieving a good result when you focus on needs)
4. **Their Dissatisfaction & Skepticism**: People sometimes stick with uncooperative positions simply not to lose face or not to "lose" to you. Or because they don't trust you and are skeptical

5. **Their Power**: If they have much more power than you have, they might focus on winning or power-bending

> **If angry, count to 10 before you speak. If very angry, count to 100**

The 5 Steps of Getting Past No

William Ury lists five major steps for dealing with difficult negotiations, and they are:

1. **Go to the Balcony**: To control their poor behavior you must control your own. Take a break when things are getting intense instead of giving in or counterattacking. or find an excuse to take a break
2. **Step to Their Side**: They expect you to dig in, counterattack or refuse. Instead, listen, find a way to say yes, and acknowledge their points (acknowledging doesn't mean you agree)
3. **Reframe**: When they attack or criticize, don't say "no" or "but", but nudge them towards the challenge of meeting each side's needs. Don't teach but ask problem-solving questions
4. **Build Golden Bridges**: Once you're moving in the right direction, resist the temptation of pushing and cajoling. Instead, find ways that make it easy for them to say yes: save face and make the outcome look like a win for them.
5. **User Power to Educate**: If the other side still refuses to nudge and you might need to use power, do so to educate and never to punish or embarrass.
   Pushing people into a corner only leads to a lose-lose.
   Right after the display of power, go back to the golden bridge.

> **Focus on getting what you want, not on getting even**

You're Enough to Fix Bad Negotiations

It takes two people to escalate, but one is enough to avoid an escalation and bring it back to a more productive one.

When you overreact emotionally you become part of the problem.
Going to the balcony allows you to avoid those nasty escalations that lead to lose-lose arguments.

But going to the balcony also means that you avoid caving in when you feel the pressure is getting too high.
Your worst enemy is yourself: you can only make the concession you'll later regret.

> **You are the only one who can make the concession you'll later regret**

Listen & Step Into Their Side

Every human being has a deep need for recognition. By listening to them and acknowledging their point of view, you help them feel recognized and treated like human beings.

That greatly enhances your chances of negotiating for a win-win.

These are the steps to effectively step into their side:

- Listen
- Let them know you listen by paraphrasing what they said
- Acknowledge their point and feelings
- Apologize if appropriate
- Agree with all you can agree on
- Replace "but" with "yes, and… "

See here a case study on poor listening skills:

- Why Gary Vaynerchuck Has No Emotional Intelligence

> **Listening is the cheapest concession you can make**

Reframe: Move From Positional to Problem Solving

William Ury talks here about moving from positional negotiation (ie.: this is my position VS yours) to a mutual effort of problem-solving.
This is the key tenet from his other wonderful book *Getting to Yes*.

Whenever the other party goes into positional and confrontational bargaining, you must reframe it to a more helpful win-win approach. Here's how:

- **Ask problem-solving questions**

Avoid questions with one-word answers. For example, if you ask "can we make an exception to the policy" it's too easy for them to say no.
A question like "OK, what could we do to find a way here".

- **Ask "what if" and "what's your advice"**

To move towards possible cooperative options for agreement.

The idea is that you let them move towards the issue with their proposal instead of telling them.

- **Ask "what makes that fair"**

When they come up with a solution that is one-sided to move towards more independent standards of resolution.

- **Reinterpret negative behavior**

Whenever you get an insult and a comment, drop the insult and only focus on the positive side of the comment.

Alternatively, you can reinterpret what they said as if they meant whatever is useful to move the negotiation along.

Also, read:

- **Frame control techniques**

> **To change the game, change the frame**

Real-Life Applications

Some great, great power moves pills on this.
For example:

- **Blame the lawyer to gain time**

If you want to gain time but don't want to make it seem like you don't trust them or that you are indecisive, you can say that your lawyer insists on checking contracts out… "you know how lawyers are".
Or you can say "you put a lot of thought into this didn't you" and then you add "well I'd like to do the same", fold the proposal, and put it in your briefcase.

- **Paraphrase their point to make them feel powerful**

In the chapter on "stepping into their side," William Uryr says you must paraphrase their position.
When they can confirm or correct you, you also give them control and a feeling of control and satisfaction.

Great, great observation there, I had never thought about it before.

- **Propose alternatives for him to select**

When he chooses one of your options, it becomes his idea.
I might add here, it's even better if you allow him to flash out that proposal.

- **Reality testing questions instead of threats**

Instead of threatening, you can let them reach the conclusion of the nefarious consequences by asking "what do you think will happen if we don't agree" and "what do you think we will do".

If they still don't bite, you can end with a statement about what the consequences will be.
For example: "I got a job offer that would help me earn more. I'd like to stay here, I enjoy working with you, what should I do… "

- **Use force to instruct and teach, not to punish**

When you punish someone, you increase the chances of escalations, mutually destructive behavior, and lose-lose.

Instead, if you must use force, do it in a way that won't destroy your relationship.

Your goal is to show that not agreeing is the worst solution for them than agreeing.

Always remember to provide them with a way to save face when they go back to the negotiation table (also read: how to make friends and influence people).

> **Bring them to their senses, not to their knees**

CONS

Getting Past No is a wonderful book with little cons, but I could find a few blemishes:

- **Some Examples Were Too Submissive**

William Ury makes a great point that ego and thin emotional skin get in the way of effectiveness.

And I totally agree.
Yet a few times his characters' examples ended up being too lenient in my opinion.

A budget director, for example, tells a department's head that she had already put his name on the list of budget cuts. Without talking to him first.
In the example, he totally ignores her action and keeps focusing on a solution.
But her action was very disrespectful and she went over his head: that set a bad precedent. He should have definitely addressed that and defended his boundaries.

PROS

Among many pros:

- **All the basics of difficult negotiations are here**

All the basics of effective negotiation against difficult people are here.

- **Great examples**

There are plenty of examples in "*Getting Past No*", and many of them are really good.

Review

Getting Past No is a wonderful text on negotiation.

Many of the basics for dealing with difficult negotiators are here.

That doesn't mean that negotiating will become *easy*: moving past your ego, the central tenet of "*Getting Past No*", is not easy.

But once you know what's good, you can at least train towards it.

Controlling People: Summary & Review

Lucio Buffalmano · 28 February 2019 · Archived copy · Original

Controlling People (2002) teaches how controlling people think, what their needs are, and why they do what they do.

Contents

- Bullet Summary
- Full Summary
  - Controllers Are Afraid of Losing Connection
  - Backward Connection
  - Signs of Independence Are Threats to Controllers
  - Controllers Are Extreme Pretenders
  - Controller Are Highly Dependant
  - Controllers' Techniques
  - Stalking is Controlling
  - Control Through Ganging Up
- To Read After Controlling Men
- Real-Life Applications
- CONS
- PROS
- Review

Bullet Summary

- For controllers, intimacy means being one with themselves
- Controllers perceive their partners' signs of independence as threats
- Some controlling batterers really believe their partners "made them" violent because they see them as part of themselves
- Most controllers control and manipulate unconsciously

Full Summary

About the Author: I couldn't find much information about Patricia Evans and her background.
She seems to focus on abusive personalities and provides seminars and consultations on abusive relationships.

Controllers Are Afraid of Losing Connection

First of all, says Evans, we all try to control others to some degree, especially so in intimate relationships.

And when we are afraid, a degree of control makes us feel safer.
However, controllers take it to an extreme. And for them, controlling is always on.

Patricia Evans says that most controllers aren't rationally and consciously trying to control you.

They try to limit your freedom and shape your behavior because they are afraid of losing you.

In the controllers' warped mindset, an independent partner is a threat. To a controller, controlling equates to working on the relationship.

Backward Connection

Some controllers establish a “backward connection”.

A backward connection is typical of batterers and abusive men. Since they don’t perceive the difference between themselves and their partners, they really believe that it’s their partner who made them attack them.

Signs of Independence Are Threats to Controllers

Since controllers see their partners as part of themselves, signs of independence and own judgment are seen as a threat to the relationship and to themselves.

Other signs of separateness include:

- Having an own opinion
- Requests
- Thoughts
- New ideas
- Suggestions
- Questions
- Beliefs
- Objections
- ….

Even looking for government support to help the family when in need can be a threat to a controller.
It’s a sign of seeking independence, a sign of acting on one’s own volition.

The most interesting aspect for me though was that **controllers often target and devalue their partner’s most glaring gift or uniqueness**.
Because that gift, especially if creative, is the most important -and threatening- expression of their individuality.

Controllers Are Extreme Pretenders

Patricia Evans says that in many relationships there are pretenders and controllers.

Pretenders look for a dream and when they meet someone they project their own fantasies onto him or her.

Controllers are pretenders who will want to keep their fantasies alive by trying to adapt their partners to their dream.

Controller Are Highly Dependant

Controllers paradoxically see themselves as very independent, but in truth, they are highly dependent on their partners.

Also see:

- Codependent no more

My Note: Not sure I agree
I’m not sure I agree here.
George Simon, author of “In Sheep’s Clothing” says instead that controllers are *not* dependent on their partner as “many clinicians seem to believe”.
Controllers seek power and control, but they are able to move on and can function independently.

I believe the evidence shows that the truth is in the middle here: some controllers might be dependent. But many are not. It seems like psychopaths, tend not to be codependent because they don't form attachments.
See for example the difference between "cobras" and pit bulls" in "The Wisdom of Psychopaths".

Controllers' Techniques

Patricia Evans also lists a few "techniques" that controlling men use to keep their women emotionally weak and dependent on them:

- Devalue her
- Don't listen to her
- Listen in a distracted or preoccupied way
- Find fault in what she says
- Imply she should have known better
- If she complains, persuade she's too needy or demanding
- Have her listen to your troubles to explain why you can't listen to hers
- Say she doesn't appreciate what you do for her
- If you make more, say that gives you a greater right to decide
- Always ask for what she does in exchange
- Deny any imbalances in the relationship
- Ask rhetorical prosecutorial questions
- Deny you were criticizing but you were only asking an innocent question
- Imply she's overly sensitive
- Make her feel guilty for misperceiving your intentions and hurting your feelings

Stalking is Controlling

Stalking is controlling connection at a distance.

When the stalker gets a reaction from the victim, he feels connected to her.
Even if the reaction is negative, she is reacting to him, and he's now in her mind and they're connected.

Control Through Ganging Up

Ganging up with someone against someone is also a form of control and an unhealthy way of bonding.

Gangs often find a spurious reason to be together and a spurious reason to hate each other.
Patricia Evans says that hate is an excuse and that ganging up is a substitute for real bonding.

She also talks about hate groups, religious extremists, and Taliban states.

My Note: I couldn't agree more
I totally agree and that's one of the reasons I gave such low reviews to Lean In, Tribe by Sebastian Junger, and The Way of Men by Jack Donovan.
They all, in one way or another, cheered for ganging up.

> **They gang up in fear of standing alone**

To Read After Controlling Men

- 7 Types of Abusive Men
- Jealous Boyfriend or Controller?
- How Women Control Relationships
- Soft Power
- How to Make Him Value Her More
- Games Men Play in Dating
- Games Women Play to Get Relationships

Real-Life Applications

This is my own very personal real-life application and not endorsed by Patricia Evans:

- **Leave a controller**

The author mentions a few cases of men who willingly tried -and even managed- to overcome their controlling ways.
But as Lundy Bancroft, author of Why Does He Do That says, that's a tiny minority. And the majority doesn't change.

CONS

- **Complex**

I would have preferred a book more clearly laid out, with chapters and key concepts explained and flashed out.

It felt instead like a long, slightly disjointed talk.

- **Lots of Stories & Anecdotes**

At times it felt like it was a lot of stories and circumstantial evidence but not as much data and research.

- **People who define you are manipulative and controlling?**

I really have to disagree with this definition of controlling people.

Evans is talking about a specific controlling manipulative technique delivered from a judge role.

But what if those who define you are actually right, or at least somewhat right?
And what if they define you positively? Would that still count as controlling?
Enlarging the definition of "controlling people" and casting the net so wide seems to me like a witch-hunt a case of "crying wolf" a bit too often or, might even be, at times, being indeed a bit too touchy.

I often find people who define me highly annoying. Especially when they know little about me.
But I wouldn't define most of them as "controlling".

- **Providing justification for controllers?**

I don't say this lightly, but at times it felt as if the author wasn't taking a strong enough stand against controllers.

Understanding the psychology of controllers is great -that's what I'm all about-.
But are we sure that batterers feel one with their partners? And does that exempt them from also being violent assholes?

PROS

Some good insights on the mindsets and psychology of controllers.

Review

I had very high expectations for "*Controlling People*".
And there were some great foundational information and new perspectives for me.

Like, for example, the idea that controllers are extremely dependent and, often, believe they are actually working on the relationship.

However, overall, it was an OK read.
Maybe I had too high expectations, or I didn't really get some parts, but it left me wanting.

Bad Blood: Summary, Review & Analysis

Lucio Buffalmano · 5 March 2019 · Archived copy · Original

Bad Blood (2018) is a fascinating story of intrigue, power, Machiavellianism, and, most likely, what happens when a sociopath ends up at the helm of a company.
Carreyrou, the author of "*Bad Blood*", chronicles the story of Elizabeth Holmes, the founder of Theranos. When it became clear that Holmes lied on her company's technical capabilities, she went from the richest woman alive and inspiration for millions of businesswomen, to an international pariah.

Contents

- Summary
- Summary
  - The Big Unicorn That Came Back to Earth
  - Elizabeth Holmes' Great Idea
  - Theranos Never Really Had a Working Product
  - How Elizabeth Misled Kissinger, Murdoch Mattis & Everyone
  - From Bully to Angel
  - Is Elizabeth Holmes a Sociopath?
- Real-Life Applications
- PROS
- Review

Summary

- Wildly acclaimed media darling Elizabeth Holmes managed a company for over a decade without a functioning product
- Kissinger, Mattis, Murdoch, and plenty of smart men all fell for the lies and charm of Holmes
- Don't believe the hype of what the media sell

Summary

About the Author: John Carreyrou is a journalist, and was the first to uncover the lies behind Theranos and her founder Elizabeth Holmes. As it's often the case, he took a lot of flack for going in first but, eventually, he was vindicated.

The Big Unicorn That Came Back to Earth

I personally was surprised by hearing how actually big Theranos was since I had never heard about it before.

But it *was* big.
Theranos raised over $700 million of venture capital and at its peak had a valuation of $9 billion, making her founder Elizabeth Holmes a multi-billionaire.

The evaluation and money raised were based on false assumptions, optimistic projects, false data, and lots of lies and fabrications.

Elizabeth Holmes' Great Idea

Elizabeth Holmes, like many others, is scared of the needles that are necessary for blood tests.
And she set out to change the way blood tests are run: with a wearable patch.

Not only the wearable patch would render needles useless, but by keeping it on for a whole day, doctors could receive real-time information about patients.

It was genius.

On paper…

Theranos Never Really Had a Working Product

Of course, the product never really lived up to the hype.
And not even to the most basic expectations that a medical device should meet.

It's crazy to realize how far Theranos got without ever really having a working product.

It would be laughable… If it weren't for all the people who personally suffered the consequences.

People Were Mislead By Theranos' Analysis

Theranos' test analysis was unreliable.

But that didn't stop Elizabeth Holmes to guarantee their dependability. And the people who trusted her paid, sometimes, with their own health.

How Elizabeth Misled Kissinger, Murdoch Mattis & Everyone

Bad Blood is particularly interesting for me as a researcher of human behavior and, particularly, as a researcher and writer on power moves, games people play, and bullies.

Elizabeth Holmes duped a seasoned negotiator like Henry Kissinger General Mattis, who is the same guy who said: "be nice and courteous but always have a plan to kill everyone in the room".

Obviously, Mattis had no quote to defend against a smart manipulator, because this is what she said of Holmes:

> (Holmes has) One of the most mature and well-honed sense of ethics
> -General Mattis

But this is no indictment of Mattis or Kissinger.
After all, plenty of professional investors and big pharma companies had been duped into the lie and fraud.

Learn more on manipulation:

> Manipulation: Techniques, Strategies, & Ethics

From Bully to Angel

But as Bad Blood shows, Holmes was also a bully.
Just for not everyone to see.
For the public, she was the image of the revolutionary startup founder with a dream.
And she was a female with blue eyes, blonde hair, and a highly charismatic persona.

Here are some key passages of her big lies:

- **Elizabeth Playing The Fighter for Better World**

Elizabeth Holmes often played the role of the startup founder who is going to make the world a better place.

Listen to her saying:

> **Elizabeth**: We have a belief system that this is not about us or technology, this is about giving people a basic right

LOL.

- **Stirring Deep Emotions**

Holmes often mentioned the pain of sick people as a way of stirring strong emotions in the audience.

In her Ted Talk, which has since been withdrawn, she talks about her uncle, and how depressed she was when he got sick:

Then, she would frame herself up as the woman working to solve those problems.

But John Carreyrou explains that she was never in any way close to her uncle.
But that didn't stop Elizabeth from weaving a tear-jerking story that made it seem as if the two were so close.

- **The rebel against entrenched interest**

Here she is on Mad Money's show playing the role of the rebel who changes the world in spite of everything:

> **Elizabeth**: First, they think you're crazy. Then, they fight you. Then you change the world.

LOL, what a lying POS.
These are the people I think of when I started this website. The people we all need to be aware of.

- **The narrative**

Almost all businesses seek to weave a story in their marketing because that's what captures attention and that's what helps sell.

Holmes's narrative was that of the girl who was afraid of needles and who now fights for a better, cheaper, more inclusive healthcare system.

Look at her showing the letter from her childhood self:

- **The #GirlPower angle**

And you must love how she took the "GirlPower" angle to shore up support for her lying and cheating.

Here is what she says as Theranos became more and more embattled:

> "Until what happened in the last four weeks, I didn't understand what it means to be a woman in this space," she says, shaking her head. "Every article starting with, 'A young woman.' Right? Someone came up to me the other day, and they were like, 'I have never read an article about Mark Zuckerberg that starts with 'A young man.' "

What a conniving b*tch, and I bet many drank the cool aid and sided with her.

Here again, pushing the "female in science" narrative:

If you want to be a successful woman in business, ditch the sociopaths and check out "how to be a successful businesswoman in a male world".

- **The Steve Jobs references**

Elizabeth Holmes secretly invited parallels with Steve Jobs. Starting with the black turtlenecks to dropping out from Stanford going against the grain.

And, of course, the "reality distortion field" that ended up distorting reality… A bit too much.

In my opinion, she overdid her effort to be charismatic and sometimes ended up being spooky and eery.
She wanted to be charismatic in this video, but it ends up being unnatural and fake.

Since she didn't understand that, it makes me think that Elizabeth was emotionally challenged and lacking in basic social intelligence.

- **Lyin' till the end**

Elizabeth Holmes kept lying and going after the journalists and magazines uncovering her story until the very end.

This is one of the public interviews when the flames of the scandal were already raging high:

John Carreyrou says he could not sense any heartfelt apology here and there were no apologies to all the patients who had been hurt and fed a lie.

Is Elizabeth Holmes a Sociopath?

It's funny, during the whole book I kept thinking "God she's such a sociopath".

All the signs seemed to check and with her attitude, she reminded me so much of Donald Trump.
Like Trump, as described by Comey's book *A Higher Loyalty*, Holmes demanded absolute loyalty from the people around her and she would fire them on a whim if they didn't comply with her or with her distorted view of reality.

And like Trump and many other sociopaths, she was ruthless in accruing power and getting rid of anyone standing her way.

And then, towards the end, the author John Carreyrou says:

> A sociopath is defined as someone with little or no conscience.
> I'll leave it up to the psychologists to define whether Holmes fits the clinical profile, but there is no question that her moral compass was badly askewed

Real-Life Applications

- **To score big: actions must back ambition**

Alright, Elizabeth Holmes' actions and deceits are disgraceful. However, it's undeniable that she achieved a lot.

For me, a big revelation was when Elizabeth spent 5 days at her computer sleeping one or two hours per night as she researched SARS.

PROS

- **Well Researched**

We must mention the fact that the main woman, Elizabeth Holmes, is missing from the interviewees.
But Bad Blood is an extremely well-researched book. And, frankly, you might excuse me if I wouldn't very much trust anything Holmes has to say anyway.

- **Well Written**

The author manages to combine a descriptive and informative text with the pace and excitement of a novel.
The details he pays attention to, also often go at the core of the psychological profiles of the people involved.
Great job.

- **High-Quality Audiobook**

Some books lose a lot of value when their audiobook have low-quality narrators or bad voices.
It's not the case for Bad Blood: perfect narration and wonderful voice interpretations.

Review

Bad Blood is a wonderful investigative piece of work into the history -and the mind- of a highly ambitious woman.

You will learn A LOT from Bad Blood.
But not the way you'd learn from a self-help book: here you need to tease out your own lessons learned.

Here are a few of them:

- **Media narratives are meaningless**

The media loves to glorify -or destroy- people.
It sells well, and people, in general, love a myth.

Elizabeth Holmes was celebrated as the youngest, brightest self-made female billionaire in the world and graced the cover of all major magazines, including Forbes.

Then well.. Reality eventually caught up.

But consider that, many times, reality might never well catch up and we might all be celebrating some lying, conniving, callous sociopath.

- **Sociopaths Are Dangerous**

High-functioning sociopaths, the few that can manage to work hard and stay at things for long enough, can be very dangerous to deal with.

I discuss how to handle them in the workplace in my course Power University.

In Short: Bad Blood is a lovely book. You will learn a lot about human nature while also enjoying a story that reads like a novel.

Does Being a Sociopath in Business Pay?

It's a complex question, but in short: yes, it can work in your favor.
Especially if you can limit the more aggressive and antisocial tendencies and keep the narcissism, drive for power, and Machiavellianism.
I recommend you read "empathy VS sociopathy in business".

And I also recommend you read this article:

- **Corporate manipulations**

Check the **best dark triad books** or **get the book on Amazon**

100 Dollar Startup: Summary & Review

Lucio Buffalmano · 5 March 2019 · Archived copy · Original

The $100 Startup is about building a fulfilling life of freedom and meaningful work by doing what you love.
It's mostly about solopreneurship, but there are plenty of examples of solopreneurs who grew to hire small teams.

Was it good?
Yes, I absolutely loved it.

Contents

- Bullet Summary
- Full Summary
  - Exchange Freedom for Value
  - The Formula of Effective Solopreneurship
  - Nomadic is Great, But Focus on Work
  - One Page Business Plan
  - Fire Your Worst Customers
- Real Life Applications
- CONS
- PROS
- Review

Bullet Summary

- The pursuit of freedom starts by finding a way to provide value to others
- It's possible, and possibly easier than you think, to build a business
- People want the fish, not to learn how to cook. And don't sell features but benefits: people buy emotionally

Full Summary

Chris Guillebeau prefaces The $100 Startup saying that in this blueprint for freedom, you won't find "secrets", shortcuts, gimmicks or visualization exercises.

If you think you can visualize money and manifest them, put the book down, he says, because this is about practical things you can do to work your way to freedom.

BANG!
He spoke to my heart, and I was sold.

Exchange Freedom for Value

To get freedom, you must give something of value. Chris Guillebeau defines "value" as:

> You create value when you do something useful and share it to the world

The Formula of Effective Solopreneurship

The mantra of "follow your passion" is also half true.

Yes, your passion matters, but if nobody wants to buy what you're passionate of producing, then you can't make a living out of it.

The formula of effective solopreneurship is this:

- Passion & skill + usefulness = success

Nomadic is Great, But Focus on Work

Guillebeau says:

> Some of the failures relate to unrealistic expectations. Some people want the sun and fun, or the 300 dollars a day, without the work.
>
> Part of the allure of working from anywhere, many aspiring entrepreneurs focus much more on the "anywhere" part than on the "work" part.
> Since the "work" part is what sustains everything, it's best to focus on it since the beginning.

I couldn't agree more with Chris Guillebeau here.
If you go to the most popular world centers of "digital nomads", most people aren't making a dime on their digital businesses.

And I also loved what he says next:

> After all, the best thing about location independence is possibitliy. The fact that you can head off to Argentin or Thailand on a whim doesn't necessarily mean that you actually will.

BANG!
Possibility is indeed the most beautiful thing of location independence.

One Page Business Plan

Planning is important, but action tramps plan and most people spend way too much time on drafting a business plan.

The author instead invites in drafting your business idea or mission statement within 140 characters.
To simplify, think of your service and the group of people who will pay for it: put it together, and you have a mission statement.

Fire Your Worst Customers

Guillebeau says that a guarantee sometimes is not enough because it doesn't pay back the time wasted.
So he proposes to give a 110% price back guarantee, which is an idea similar to what Tim Ferris proposes in The 4 Hour Work Week.

The author also quotes Tony Hsieh, author of Delivering Happiness. Tony says that most people are honest, but there are a few who might try to take advantage of your guarantee.
You should stop immediately doing business with them.

Alternatively, you might try offering no guarantee at all and making it a big deal about it.
You will have fewer customers but more committed ones (and no complaint).

Real Life Applications

- **If you go for consultancy, pick a specific niche!**

Avoid “life coach” or “business coach”. Find a niche you can be an expert on and make sure your customers know what they can expect when they hire you.

- **Think in terms of shared beliefs and values**

I love how the author doesn’t recommend the usual marketing approach of segmenting your market by the old age/gender/location splits, but instead to think of your core market in terms of shared beliefs and values.

- **Focus on Bottom Line**

There are hundreds of vanity metrics and thousands of things you can do about your work and website that do NOT impact your bottom line.
Remember to act more in accordance with your ultimate goal: building a viable business.

Spend only on what has a direct relation to sales and income.

A board of director would never accept as “results” the number of likes on a post.
And neither should you :).

- **Share yourself, not others**

Talking about others will make you disappear.
Find a way to share your unique voice and opinion instead.

- **Only scale if you really want to**

Don’t feel forced to “scale”. Once you reach a good income, staying small might be the best way to maximize your life quality.

- **Work on making the business independent**

The author touches on the concept of working “on” the business instead of “in” the business.
This is an idea from The E-Myth Revisited, based on taking time off from the business to think and devise systems and processes to make the business independent from yourself.

CONS

- **Some generic advice**

“The 100 Dollar Startup” looks at many kind of different business, so some of the advice is necessarily vague and generic and might not be helpful to actually start a business in a specific vertical.

For example, the author says:

1. Choose a product or service
2. Build a website (consider WordPress)
3. Offer your product / service
4. Choose a payment method (consider PayPal)
5. Advertise / share your work

That’s true but it’s so general to the point of not being useful.
Or he mentions how to launch a product, but if you’re at that stage, you’re probably better off with some specific -like Launch by Jeff Walker-.

PROS

- **Great mix of advice and case stories**

I loved the idea of mixing solid advice with working success stories.

- **Emotional mission statement examples**

I really loved the example on mission statements translated into “emotional” versions.
Some of the were very good and it helped me a lot to overcome my innate distaste for “dry business statements”.
And it helped me in my own business.

Review

I reached out to the author through HARO when he was looking for side hustle examples and this website was still a side hustle (but I never heard from him :).

I see some parallels with Tim Ferris’ work here, but The 100 Dollars Startup is no knock-off.
It’s a good book with powerful case studies and solid advice.

I really enjoyed and can highly recommend to every buddying solopreneur out there.

Atomic Habits: Summary, Review, Criticism

Lucio Buffalmano · 5 March 2019 · Archived copy · Original

Atomic Habits (2018) is a comprehensive overview of habits, including how to start new ones, how to stop bad habits, and how habits can revolutionize your life (in the long run).

Contents

- Bullet Summary
- Summary
  - Small Daily Habits Make the Difference
  - Focus on Systems, Not Goals
  - Change Identity First
  - The 4 Steps of Habits Change
  - How to Make Habits Changes Easy
  - Choose a Field You're Good At
  - Push Until The End
- Real-Life Applications
- CRITICISM
  - Pop-Psychology Fest
  - Grifting for more?
  - Compound effect… Nonsense
- PROS
- Review

Bullet Summary

- **Small (atomic) habits compound over time** to lead to completely different lives
- **Make good habits easy to start and rewarding to finish…**
- … And **make unhealthy habits hard to start and painful to finish**
- Habits are built on repetition, not time!

Summary

Atomic Habits start with the same concept as "*The Slight Edge*" and "*The Compound Effect*": daily habits might seem small on a daily basis, but they compound to make big differences (except they don't always compound, but more often add up, including with diminishing returns).

Small Daily Habits Make the Difference

James Clear says that it's the small daily habits that compound over time to make the difference.

If you train today or not instead of binging on that chocolate cake it won't make a difference in your lifetime.

But if you skip training and keep binge eating for months, it will make a huge difference.

This is a well-known concept in the self-help industry.

If you don't understand that it takes time though, you might be disappointed during the first period of a new habit.

But you must have faith and stick through (also read Think and Grow Rich for more on faith).

> **You don't rise to the level of your goals, you fall to the level of your systems**

Focus on Systems, Not Goals

I liked the idea behind "systems above goals" in Atomic Habits.

It's not so much because systems will naturally take care of the goals, but it's because of *who you become* with the systems.

Here is why you should focus on the systems:

1. You will soon revert to your old self once you "achieve" your goal
2. Winners and losers have the same goals: it's the systems that make the difference
3. Goals can lead to a warped approach to happiness (ie.: "I'll be happy once I achieve it")

In the words of James Clear:

> Goals are good for setting directions. Systems are best for making progress.

Habits are not about getting something: they are about becoming someone

Change Identity First

James Clear differentiates between outcomes, processes, and identities:

- **Outcomes**: what you get
- **Processes**: your habits and actions
- **Identity**: who you believe you are

To effectively change your processes and habits, you should strive to change your identity first.

Once you choose an identity and then become that person, you naturally start acting in accordance with your identity.
And the results will follow.

However, identity and actions are interlinked.
As a matter of fact, we often set our identities based on our actions. That's why it's important that we show up even when we're not feeling it: because that will help build our identity.

Of course, it takes time.
But every time you follow through, it's a new vote of confidence in your identity.

The 4 Steps of Habits Change

Atomic Habits revisits the same habit loops of The Power of Habit, such as:

1. **Cue:** we see, hear, think, or remember something
2. **Craving**: we start looking forward to the reward we get
3. **Response**: you act (the actual habit)
4. **Reward**: you get your reward (good taste, filled stomach, etc.)

However, what's new in Atomic Habits and what's one of the biggest added value is James Clear's explanation of

how to make your behavior change easier.

How to Make Habits Changes Easy

Here is how you can make it easier for yourself to change habits:

Step	Good Habit	Bad Habit
Cue	Make it obvious	Make it invisible
Craving	Make it attractive	Make it unattractive
Response	Make it easy	Make it difficult
Reward	Make it great	Make it terrible

To make the cue easy you can leave “reminders” around your house. To follow through with healthy eating, for example, you can find a restaurant that will deliver healthy and good food.

And to make a cue invisible you can make a rule to never have in your house any soda, for example. Then you won’t have a “drink the soda” cue.

#1. Make it Obvious

Making the habit obvious has several steps:

1. **Implementation Intention**: decide on a time, place, and location and say “I will (do X) at (X time) in (X location)
2. **Habit Stacking**: do one good habit after another, and once you start with one it will be easier to keep going
3. **Environment Design**: shape your environment in a way that will help reinforce good habits and eliminate bad ones

The environment is key, says the author, because our willpower is limited. People who successfully master their habits focus more on making it easy for them than on fighting their own urges.

#2. Make it Attractive

And here are a few ways to make a non-inherently pleasurable habit easier to start and stick to:

1. **Temptation bundling**: do something you like while you engage in an activity that is harder to stick to
2. **Reward yourself**: do a pleasurable activity after your more difficult action and you will look forward to doing the hard task to get to the good stuff
3. **Pick the** right people: join people, groups, and cultures where your desired habit is the norm
4. **Habit swapping**: there are many ways of addressing the underlying need and you can probably swap an unhealthy habit with a healthy one (for example: go for a run to let go of steam instead of drinking)

#3. Make it Easy

The easier it is to take action, the more likely the habit will stick. Remember, it’s not about willpower, it’s about developing a system that makes your habits easy.

1. **Drop Perfect**: showing up consistently is more important than doing it perfectly
2. **Law of Least Effort**: always look and engineer the simplest way that you can start and act on the habit you want to build. Reduce friction by joining a gym on the way to work and only watching TV after you say the name of the TV program to increase friction and reduce thoughtless watching
3. **Two-minute rule**: at the beginning, your habits should be easy to follow through. Start small and built over time

4. **Extra friction**: makes it impossible to waste time on bad habits. Ask your partner, for example, to change the password on your social media and don't get it back until the weekend

#4. Make it Rewarding

The first three steps increase the chances that you will perform the action. Increasing the reward instead will make it more likely that you will repeat the behavior and, hence, turn it into a habit.

James Clear recommends you use a habit tracker for a few reasons:

1. They create a visual cue
2. The progress you see is encouraging
3. Checking boxes of "I did it" lists is satisfying
4. They provide stronger proof that you are changing your identity

And, finally:

- Establish a punishment for skipping the habit

It's possible you will skip a few beats and stop a streak. When that happens, start again ASAP.

Choose a Field You're Good At

I enjoyed James Clear's reflection on nature VS nurture and hard work and genes.

Basically, he says that with hard work we can all advance, but if we choose a field where our natural abilities support us the most, then we will achieve success more easily and we will stick to our habits more easily.

> **Genes don't determine your destiny: they determine your area of opportunity**

Push Until The End

As habits become routines, they become less interesting and we get bored. That's when you need to stick through them if you want to achieve high levels of success.

> **The greatest threat to success is not failure but boredom**

Real-Life Applications

Focus on repetition, not on time!
In spite of what snake-oil salesman Tai Lopez says, habits are not built over time but over repetition.

Focus on Identities
this is something I often also repeat. Focus on identity first and foremost. Also, read The Antifragile Ego.

CRITICISM

Pop-Psychology Fest

Many of the anecdotes smell of half-bogus to me.

And there is plenty of poor pop-psychology.

Just an example:

- **Heroin & veterans to break bad habits (myth?)**

James Clear says that the veterans who used heroin in Vietnam didn't become drug addicts at the same rates as non-veteran addicts because of the different environments.

Let me preface that I'm not familiar with the full study and I haven't reviewed it.
However, it felt to me like a possible jump to conclusion and not necessarily true.

For example, non-veterans heroin addicts may end up using heroin because of a particular affinity for drug use,
Or they may end up to heroin because they're already addicted to other substances.
Finally, non-veterans heroin users may just have a higher addictive personality in general compared to the vets.

In any case, I think it would have been better to dispel those doubts.

Grifting for more?

I guess buying the book is not enough.

So:

- **Constant references to the website**

It's OK to reference the website. Once or twice. But doing it so often makes people feel like they are missing a lot of they don't follow the website. think

- **Email required for add-ons**

James Clear says he's humbled and proud about the size of his… Mailing list.
And to get all the bonuses he mentions in the book, you need to sign up to, guess what? His mailing list.
I find it very annoying. I don't want to sign up to no mailing list I am "forced" to sign up to and from which I'll immediately unsubscribe anyway.

Compound effect... Nonsense

This idea that your effort compounds over time just as it happens with interest is BS.

Or, at least, it's BS in many human endeavors.

In truth, **in many human endeavours continued effort hits a point of diminishing returns**.
Weight training, for example, boosts muscle mostly during your first year, and then becomes diminishing returns.
Same goes for work and business, where working every day on a bad idea won't automatically turn into a successful business. Instead, poor early results maybe the signal that it's not a great idea.

Obviously, this is not to say you shouldn't maintain effort over time. But it means that you must be smart and strategic in what you invest in, rather than simply hoping that compound will one day magically turn you into hulk or a billionaire.

PROS

- **Best overview of habits**

Atomic Habits is the best book on habits I have read so far.

- **Sensible author**

I liked James Clear's take on genes and hard work. He doesn't push no silly "you can do anything" narrative and tells it how it is.

- **Helpful and Practical**

Follow the ideas of this book, and… You're on your way to your new and more successful you.

Review

Atomic Habits is the best book on habits I have read.

Unluckily, there are many of the usual pop psychology tropes, nonsense anecdotes, and rhetorical devices typical of self-help.
But it's almost impossible to get a mainstream self-help book without those these days.

To me personally, it wasn't super useful.

BUT… I can see why it can be helpful to some.

It's far more practical than the previously most popular book on habits, "*The Power of Habits*" -which I always found to be more theoretical than practical-.

It repeats a few well-known concepts for anyone who's been around self-development, but it ties it all together well within the topic of habits and success.

Tony Montana Teaches How to Get Power (Scarface)

Lucio Buffalmano · 5 March 2019 · Archived copy · Original

This article analyzes the fictional Tony Montana character looking for the personality traits that facilitate the acquisition of power.

At The Power Moves, we are experts in men's empowerment to gain status, respect, and attractive mates.
So if you're wondering 'how to be like Tony Montana', this article tells you exactly what the main Scarface traits are.

⚠ **Note of caution:**
Tony Montana met an early demise because some of the same traits that facilitated his ascension also set him up for failure. While many men look at Scarface as an icon of masculinity, our strategic approach may be a better model for men interested in honor and long-lasting success.

Contents

- 1. Be Bold
- 2. Always Be Leading
- 3. Be Ruthless
- 4. Be (Street) Smart
- 5. Have Boundless Ambition
- 6. Be Hungry For Success
- 7. Have a Sense of Entitlement

- NEGATIVE TRAITS
  - 1. It's a Big Gamble
  - 2. The Hunger Stems From Sense of Inferiority
  - 3. Relationship Muppet
- SUMMARY

1. Be Bold

Boldness is a crucial characteristic to skyrocket upward and gain power quickly.

Timid men hem and haw and they miss all the chances for quick ascension. Sure, they might slowly and steadily get there, and that approach might be even advantageous in many cases, but they don't go up as quickly as Tony Montana does.

You can clearly see the difference in mindset between Tony and his appeased bosses.

In the case of Tony Montana that boldness often becomes impulsivity, as he acts and reacts *too* quickly and hastily.

1.2 Be Ballsy

Balls, courage, and daredevil are a subset of boldness.

You can hardly be bold without being courageous. And if you're afraid, sometimes you must force yourself to act anyway.

There are many instances in which Tony Montana's display of fearlessness allowed him to move ahead quicker. This example is particularly interesting from a power perspective because it allows him to go from defensive to aggressive:

2. Always Be Leading

If you want to get power without waiting, you gotta *lead* to the top because nobody will carry you there.

Tony Montana always takes the lead.

He walks in first, he speaks first, he jumps on the deal and opportunity and he takes responsibility ("I go on the streets for you, one milli here, on milli there..).

Tony Montana is a man of action.
But notice that he still expects his partners to do the menial tasks for him. That's a hallmark of power: don't do for yourself what you can let others do for you.

Get the Power!

3. Be Ruthless

People are not going to make way for you and many are not going to be happy about you overtaking them.

At times, you'll need to be ruthless.

In the criminal world, ruthlessness might as well be a necessity to go up very quickly (but it can also help in business).

Tony Montana is plenty ruthless.

At times, he has trouble containing his mean streak with the people dearest to him as well.

Unluckily, ruthlessness and intimidatory tactics are not confined to the criminal world and they can provide an edge in business and politics as well.

Donald Trump is ruthless, and many sociopaths that climb to the top are ruthless, if you read the book Bad Blood Elizabeth Holmes, was mean and ruthless and Albert "chainsaw" Dunlap was ruthless, with some sources describing him as a psychopath.

These guys all crashed and burned and Trump is possibly in the process of crashing and burning, but before burning, they burned plenty of people along the way.

And that is one of the reasons why I always repeat that if you want to be good, you have to learn to be bad first.

This world needs fundamentally good people who know how to be bad.

I started ThePowerMoves and this channel in the hope that more people will receive this message and join the "be bad to be a good movement".

Anyway, let's move on.

4. Be (Street) Smart

Whenever you see someone going to the top, rarely it's a case of violence and terror alone.

To become a linchpin, you almost always need some skills and intellectual abilities as well.

Obviously, Tony Montana wasn't book smart and while he might not have been the smartest criminal ever, he was far from stupid.

Several scenes show us how is able to see the power moves much more clearly than the people around him:

And this other scene shows us how Tony has a much better sense of his own value.
Again, compare the different attitude of Tony to his friend Manny:

In this other scene, Tony Montana shows a great understanding of human psychology and leverage.

Omar wanted to get the money and the coke from Tony to look good on the big boss.
but by holding both money and cocaine, Tony knows he's got the leverage to go straight to the big boss Frank.
Stupid people let themselves be exploited. Smart ones know when they have the power to back up their big demands.

Finally, most low-level criminals and most non-criminal poor people as well, behave more like animals when it comes to impulse control and immediate gratification.
They see something they like it, they take it, they eat, they drink, they spend it, and tomorrow… Well, we'll see about tomorrow.
To better understand this phenomenon that differentiates successful people from non-successful ones, also read *The Marshmallow Test*.

There is one crucial moment in Scarface where Tony Montana shows he can take a loss today in exchange for a bigger gain tomorrow.

Many violent men with no brains here would have taken the money here, partied, and felt they had "hit big".
Not Tony Montana.
He's in to go to the top.

5. Have Boundless Ambition

You don't reach the top without ambition and without a strong drive.

Self-help is a huge industry, and it's very helpful, yet there is only ONE major element that stands above all else to achieve high levels of success. And that is drive and ambition.

And if you want to skyrocket to the top quickly, then you need boundless ambition

6. Be Hungry For Success

What's the difference between boundless ambition and drive for success?

Well, there are many ways of being driven. Some men get sidetracked in their life by pursuing lots of short-term sexual adventures.

But while men who reach the top can also enjoy women and other passions on the side, they are usually driven first and foremost by winning, money, or dominating their field of choice.

You can see here the difference between Tony and a few other characters in Scarface:

The higher your drive and the fewer distraction you have, the more you can achieve.
This is why the MGTOW movement in many ways, makes sense. And that's why monk mode can be a life-changer.

If you want to fuel your growth and success though, even better than pretending there are no sexual distractions, is to *leverage* your sexual drive for non-sexual achievements.
This is what in Napoleon Hill refers to as "Sex Transmutation" in *Think and Grow Rich*.

7. Have a Sense of Entitlement

There is also another important trait that many individuals with boundless drive and ambition possess, and that is an exaggerated sense of entitlement.

A sense of entitlement without skills and hard work is an extremely negative trait that just by itself dooms men and women to be low-quality individuals.
Get rid of your sense of entitlement unless your skills and hard work match your entitlement or, even better, far exceed it.

But when it's coupled with skills, bold actions, and relentlessness, then a sense of entitlement is crucial to gain power and skyrocket to success.

5.2. Despise Your Boss

People with boundless ambition and a sense of entitlement also often have authority issues.

And if you want to get power as soon as possible, that's not a bad thing. You just need to keep it under wrap until you have enough power to overthrow him.
If you do it too early though, like Robert Greene says in *The 48 Laws of Power*, you're toast (see here an example of out-dominating the boss).

If you're the boss, watch out. Overly ambitious individuals will often work to undermine you (see Berlusconi's example here).

Scarface was obviously going to be a bad "employee" for any boss.
And this is what Frank never realized. Albeit it was rather obvious.
Frank was really bad at reading and understanding people, and he paid the ultimate price for it.

NEGATIVE TRAITS

Should you then be more like Scarface?

Well, it's not up to me to tell you how you should you be, but also consider the downsides:

1. It's a Big Gamble

This is not literal gambling but bold action often ends up being the equivalent of gambling.

Don't think that because Scarface was successful then it was necessarily "worth the risk", that's the idiotic way of assessing risk.
You assess risk not by looking at single instances, but by looking at the most realistic probability distribution you can find.

And a more realistic probability distribution is something like this:

And for every ultra-bold man who makes it to the top, there are probably 10 or so who died trying.
In the case of the criminal world, that might as well be literally drying.
Even for those who get on top, **rapid growth too often does not equate with staying power**.

Think about many histories of explosive growth to the top.
Scarface is a fictional character.
But George Jung, El Chapo, Pablo Escobar, and similar, are not. Like Scarface, they have all been immensely successful… Until they weren't anymore and died prematurely.

Take Pablo Escobar, the most famous of them all.
He ended up killed like a stray animal, a fugitive in poor and tattered clothes, and with policemen taking pictures

next to his lifeless body.

That same hot-headedness and boldness allow for skyrocketing growth but also often set the stage for the undoing of too hot-headed individuals.
A gambler's attitude can get you lots of power very quickly. But rarely allows you to keep that power.
It's inherent in the mathematical properties of gambling: it doesn't do well in the long run.

The smartest ones instead change their attitude once on top and move from a meathead to a quieter, more calculative style.
Or they might completely change their business model, *like 50 Cent has done for example*.

2. The Hunger Stems From Sense of Inferiority

The drive that Tony Montana shows is partially fueled by a sense of inferiority.

Tim Grover in *Relentless* says that most overachievers are driven by a dark side.
That dark side can be insecurity and a constant need to make up for what you perceive is a shortcoming of yours.

We see several instances in which Tony Montana clearly shows a sense of inferiority.

For example, he seems to have a problem with rich white men, which is a feeling that I have also seen, several times, in some immigrants or minorities.

Some psychologists even speculate that modern Islamic terrorism is partially driven by a feeling of inferiority, and I believe there is a lot of truth in that.

Being driven is simply a trait. It's not necessarily good per and it's not necessarily bad per se.
However, when that drive comes from a sense of inferiority or hatred, then it usually makes for a poorer quality of life and for poorer mental health.

A sense of inferiority is also a thumbscrew that allows people to easily manipulate you.

And that is exactly what happens to Scarface in his relationship.

> Manipulation: Techniques, Strategies, & Ethics

3. Relationship Muppet

Highly driven men with a feeling of inferiority have an emotional hole that never gets filled. They have a constant need of proving themselves to themselves and to the world (see: David Goggins).

One way of proving themselves to the world is through a so-called trophy wife.
These men wish they could exert control over their women, but Smart and manipulative women feel the deep insecurity and use it as a thumbscrew to keep their men emotionally dependent.

The result is a constant tug of war and a highly unfulfilling relationship where, most of the time, she ends up controlling the relationship and exerting most of the influence.

Watch this example and notice how she is the one who wields soft power in the relationship:

Also, read:

- How women manipulate and control men

SUMMARY

Ultimately, getting power and skyrocketing upwards the way Tony Montana did is more of an exception than a rule.

You might still be successful doing it, but he's still not the type of person that most people would look up to.

He was not a good role model and he was a poor leader by almost all accounts. Even in his own relationship Tony Montana was not a leader.

In this regard, I see a lot of parallels with Donald Trump.

Primal Leadership: Summary & Review

Lucio Buffalmano · 8 March 2019 · Archived copy · Original

In *Primal Leadership* (2001) Daniel Goleman argues that the number one trait of any good leader is his emotional intelligence, and his ability to connect and engage with his followers.
The book is also famous for Goleman's six types of leaders, whom he describes in detail.

Contents

- Bullet Summary
- Full Summary
  - The 6 Leadership Styles
  - The Best Leadership Style
  - When to Use Which Leadership Style
  - Examples of Leadership Styles
  - Resonant Leaders Embrace Emotions
  - Learning Leadership
  - Learning Leadership Styles
- Real-Life Applications
- CONS
- PROS
- Review

Bullet Summary

- We can recognize 6 different types of leadership
- Each style has its place, but you must limit the commanding (bossy) and pacesetting (only accepting high-performance) ones
- You can learn leadership and leadership styles, and you should strive to master several of them

Full Summary

About the Author: Daniel Goleman is not a psychologist himself, but a journalist and a best-selling author.
He is most famous for the concept of Emotional Intelligence that he detailed in his best-selling book "*Emotional Intelligence: Why It Can Matter More Than IQ*". The concept of Emotional Intelligence has had more success among the general population than among scientists and psychologists, who struggled to measure it (and even debated whether or not it even exists as a separate construct).
Daniel Goleman also wrote "*Working With Emotional Intelligence*" and "*Social Intelligence*".

The 6 Leadership Styles

According to Daniel Goleman, we can identify six styles of leadership:

- **Visionary**: the leader who rallies the troop behind his grand vision and dreams
- **Coaching**: helps develop people over the long term
- **Affiliative**: focused on harmony and human connections
- **Democratic**: hears everyone and builds consensus

- **Pacesetting**: demands and expects excellence and results
- **Commanding**: bellows order and demand immediate compliance

The Best Leadership Style

I can almost hear you asking: so, what's the best leadership style?

Well, each one is "best" depending on the situation, but Goleman says that pacesetting and commanding should be limited in time and space or they will poison the environment and lead to poorer results.

However, the author also clearly says that **the best leaders are the ones who can switch from one to the other depending on the situation**.
This is a concept I fully agree with and which I also apply to the submissive-dominance scale in Power University.

The best mixes of leadership styles are the following: authoritative, affiliative, democratic, and coaching.

When to Use Which Leadership Style

Here is an overview of the pros and cons:

- **Commanding / coercive**

While it's poisonous in the long run, it can be effective during disasters where a quick and energetic response is needed, during turnarounds, or with difficult employees.

It's very bad for keeping great employees though.
As Daniel Goleman says:

> Who wants to work for an SOB?

- **Visionary**

It can work well when the business is adrift.

It's not effective when working with a team of experts who know more about the leader.
In this case, they can become disillusioned and cynical about the leader.

- **Affiliative**

The strong focus on encouragement and praise helps the team's mood, but it can allow for poor performance to go unnoticed.

When the affiliative style does not provide corrective feedback or criticism, it can leave employees wondering.

- **Democratic**

It makes people feel heard and understood. But when it's too much democracy and less decision-making, people can feel like they are in a leaderless organization.

And when decisions take too long, it can result in many meetings and little decisions.

- **Pacesetting**

A leader who sets high standards and *shows* he meets and exceeds them is highly motivating for those employees who are equally competent and self-motivated.

Other employees who are not as good can feel overwhelmed and they can end up resenting him.

- **Coaching**

It works great when the leader is competent and well-learned and employees want to learn from him and want to improve.

It doesn't work nearly as well with unmotivated employees or with employees who don't want to change and improve (and with employees with a *fixed mindset*, such as employees who don't even believe they can even improve).

Examples of Leadership Styles

The author talks a bit about Al Dunlap.

Al Dunlap is *a self-styled psychopath*, who was "good" at turning around businesses by slashing the workforce, but who could not manage to run one well to save his life.

Goleman also talks about Jack Welch, the legendary CEO of GE and author of the management book "*Winning*". While most people think that Welch was a domineering boss, Goleman says that most people misunderstand him. Welch got *famous* for being a commanding boss, but few realize that he delivered with a different style. Welch was only commanding at the beginning of his tenure. And once he turned around GE, he later settled into a more emotionally intelligent leader.

Resonant Leaders Embrace Emotions

Daniel Goleman uses the term "resonant leaders" to describe leaders who understand human nature and leverage their emotional intelligence to connect with people and get the most out of them.

Resonant leaders *embrace* emotions and humanity.

Of the four leadership styles we saw earlier, resonant leaders are:

- visionary
- coaching
- affiliative
- democratic

Dissonant leaders instead don't understand or actively try to cut out the human side of business.

Of the four leadership styles that we saw earlier, dissonant leaders are:

- pacesetting
- command / authoritative

Learning Leadership

Can we learn leadership skills?

Absolutely we can, says Daniel Goleman.
It will take time and dedication, but you can learn it.

Learning Leadership Styles

We can also change leadership style, but we are not going to change that just by sitting in a classroom.

Competencies part of emotional intelligence like empathy and self-regulation are linked to the limbic system, which is not the rational part of our brain.
To change the limbic system, we need to unlearn old habits, develop new habits, and repeat them over time until a new neural pathway is formed (neurons that fire together wire together, says Doidge in *The Brain That Changes*

Itself).

Real-Life Applications

- **Stay Upbeat and Positive Under Stressful Situations**

Leaders who can stay positive and upbeat during stressful and difficult situations radiate positive resonance.

- **Stronger Self-Management Wins The Frame**

Goleman says that when two people with different emotional states meet there is a tug of war at an amygdala level. He says that when a confrontational person meets an unflappable one if the unflappable one keeps his cool, he ends up changing the confrontational person's attitude.

Goleman is basically talking about frames and about frame control.

CONS

- **Some important questions are left unanswered**

The author is a big promoter of emotional intelligence -and so am I-. However, Travis Bradberry notes, while EI rises along management lines, it drops in CEOs.
See the results of his study on this chart:

Why is that so?
What does it tell us?

Does it say maybe that when action and directions need to be set EI is less important?
Those are the important questions I wanted to see tackled. So I did it myself. See: does emotional intelligence truly help you reach leadership positions?

- **One research backing most of the book**

Personally, I'm skeptical of generalizations "based on research" when it comes to identifying human behavior.

What research? What did it measure? How many people participated? And how many studies do you base your conclusions on?
Those are the questions I always ask myself.

And most of "*Primal Leadership*" reference one single research.

PROS

Primal Leadership, for me, has been a seminal text in classifying the different styles of leadership.

Review

The first part of Primal Leadership is wonderful.
Worth a 5/5.

And it gets a thumbs up from the Harvard Business School as well.

The second part starts getting duller, verbose, and fluffy.
It lost me on several occasions.
I had to listen to it twice and still I didn't get much out of it.
In that sense, it reminded me of *Social Intelligence* from the same author: lots of talk, little substance.

Do I recommend it? Yes, get the most out of the 6 styles of leadership and if the rest doesn't speak to you, skim through.

The Dichotomy of Leadership: Summary & Review

Lucio Buffalmano · 9 March 2019 · Archived copy · Original

In *The Dichotomy of Leadership* Jocko Willink and Leif Babin apply the law of optimum balance to leadership, and fix a few crucial mistakes and misunderstandings from their previous best-seller "*Extreme Ownership*".
In this new book, the authors affirm that there are no extremes in leadership, but many dichotomies. And you need to learn to walk that line right in the middle.

- PROS
- Review

Key Takeaways

- A leader must walk the line between extremes
- You must care about your team, but be ultimately responsible for the team and mission, which are bigger than any single individual
- Being a great leader also means being a great follower (respecting your boss and listening to more junior members who might know more)

Summary

About the Authors:
Jocko Willink and Leif Babin are two American retired soldiers who deployed in the Iraq conflict.
They went on to produce a few books on leadership dynamics and mindsets, most notably "*Extreme Ownership*", and transitioned into management consulting.

Introduction

The Dichotomy of Leadership starts off with Jocko Willink and Leif Babin's previous leadership best-seller: Extreme Ownership.

The problem with that book, the authors say, is in the title itself. Great leadership is never extreme, but always about walking a fine line.

The Dichotomy of leadership teaches the readers how to walk that fine line.

Own It All, But Empower Others

This is basically about walking the line between taking personal responsibility but also delegating work.

While the leader takes ultimate responsibility and ownership, he also gives responsibility and ownership.

Ultimately, says Leif Babin, the task of the leader is to make himself unneeded in the job by helping the people around to step up to the plate.

Resolute, But Not Overbearing

Sometimes you must enforce the rules, demand compliance, expect high standards, and crack the whip.

But some other times inflexibility on smaller details that carry no strategic importance will only destroy morale and lower your "leadership capital".

"Leadership capital" rests on the idea that there is only a finite amount of power that any leader possesses. And using it on inconsequential matters is throwing it all away in the most ineffective way possible.

Prioritize all those areas that matter instead and demand excellence in those areas, not necessarily *making a perfect bed in the morning*.

When to Mentor, When to Fire

Leaders must take responsibility for underperformance and do all they can to teach, mentor, and help.

It comes a time though when you realize that no amount of training, helping, and coaching will help.
And there are even more critical times when underperformance puts the mission or the team at risk.
That's when a leader must fire and replace.

> **Most underperformers don't need to be fired, they need to be led**

Disciplined, Not Rigid

A leader must follow the rules that make sense, not all the rules no matter what.

Discipline is not a set of rules that never change, discipline is keeping and following the good rules and changing and adapting those which don't make sense anymore.

A Great Leader is A Great Follower

The authors recall situations in which they pushed to have it their own way only for the sake of not looking weak.

But, ultimately, that not only led to poorer decisions but also weakened the leader's position in the eyes of the team.

A leader who can't admit when there are better alternatives and solutions and when there are other people who have better answers is a leader who is endangering the team and the mission for his own ego's sake.

Finally, this chapter says that great leadership also means supporting and building a good relationship with your

boss even when you don't like him or don't agree with him.

Plan, But Don't Overplan

There is a saying: if you want to make God laugh, make a plan.

Well, the authors, of course, don't recommend you don't plan but warn the readers against *over*-planning.
You cannot plan for every possible and conceivable contingency, so you should only plan for the most *likely* ones.

Humble, No Passive

Most poor leaders and leaders who had to be fired didn't have a problem with tactical competence.
But they weren't humble enough.
They couldn't take criticism, take ownership of their mistakes, or check their ego to learn and grow.

Humility is not passivity though.
They say:

> When SEAL leaders had to be fired from "leadership positions in a platoon or task unit, it was almost never because they were tactically unsound, physically unfit, or incompetent. It was most often because they were not humble: they couldn't check their ego, they refused to accept constructive criticism or take ownership of their mistakes."

Aggressive, Not Reckless

Aggressive can be a quality, but it must be weighed against critical thinking and risk assessment.

Real-Life Applications

- **Help your people understand their deficiencies**

A leader owes it to make it clear to the underperformer where his deficiencies are so that he can work on correcting them.

- **Channel your aggression**

Aggression can be good but, again, it's another element of the dichotomy of leadership.

And sometimes waiting it out is the best option.

I loved this passage in "*The Dichotomy of Leadership*" and I will quote the authors:

> Getting angry at others is ineffective, losing temper is a sign of weakness.
> The aggression that wins in the battlefield, in business or in life is not directed towards people, but towards solving problems, achieving goals and accomplishing the mission.

- **Know when to follow**

If a more junior member or a report knows better than you, it's your duty to listen to him.

- **Leadership is love… And making the tough decisions**

This is has become a mantra of this website: love is at the core of real leadership.
And sometimes that love means you need to make tough decisions as well.

CRITICISM

🤔Lucio's Take On Jocko Willink

> **Lucio**: Great guy, too much of a jingoist. Be aware of those potentially small-minded drawbacks and the tendency for glorifying weapons and wars, and he's a great guy to learn from, and even look up

These cons are not only about the content, but they take a holistic approach.

I guess some will disagree or dislike the reviewer for the following.
But alas, I don't write articles to be liked :).

I respect both Jocko Willink and Leif Babin, and my criticism is *of* the content and some of the ideas they express, not of them.
See this article for the full review:

> Great Leadership Is Great Manipulation: Jocko Willlink Case Study

Some "Military Small-Mindedness", Humanity Needs to Soar Higher

I know many people won't appreciate reading this, but I felt that "*The Dichotomy of Leadership*" presents the typical small-mindedness of military personnel.

What I'm talking about?

The glory, the war to defend this or that value and, the "platoon of brothers above all else" and, of course, the defense of whatever "great nation" they represent.

As I already criticized other books for similar content (*Lean In, Tribe*, and *The Way of Men*), I believe that this mindset is the *cause* of much pain in the world, *not* the solution.
Including pain for yourself. Those are the manipulative values with which governments get you to barter your life for oil.

Unluckily, they're also effective.
See some of the cult leaders dark psychology techniques:

> Dark Psychology: 7 Ways to Manipulate People

Tribal Fanaticism

At times it felt that The Dichotomy of Leadership was the celebration of fanaticism.

From the camaraderie of dying for the platoon to the story of the kid shot on the pavement whose only request is to stay in the platoon.

To me, that story might be the sign of deep manipulation, and potentially some emotional issues, not the sign of a balanced and high-quality individual.

The "Bad Guys" That Must All Be Killed

In my opinion, the hallmark of fanaticism is to believe that one is 100% right while someone else is 100% wrong.

And I wonder if it ever crossed those people's minds that maybe, just maybe, the "good guys" don't march in an invading army coming from far away, failing to find ANY weapon of mass destruction, leave the region a huge mess and *still* think they did a great job.

Sometimes self-promotional

Sometimes it felt to me like the words and expressions were unneededly exaggerated or self-congratulatory.

For example:

> Our four laws of combat have helped radically improve the performance of teams and organizations -large and small- across the United States and internationally, in nearly every industry in the business world, as well as military units, police and departments, charity organizations, school administrations and sports teams.

I'm sure their "four laws of combat" have been helpful to many, but it felt like it was a big blowing of one's own horn.

Boys Will Be Boys... Need To Grow Up, Though?

Some passages felt like you were in front of kids playing tin soldiers or teenagers watching action movies.

The proud tales of "devastating firepower", the joyous descriptions of weaponry, the self-congratulatory nicknames… It makes you think on wars and some men's tendency to engage in "unneeded wars".

I understand this feeling, I do.

I also have had it. A lot.
But it can be dangerous very much value-taking.

One passage as an example:

> (…) unleashed the most ruthless and lethal barrage of fire you can imagine. Despite the intensity and violence of close urban combat I couldn't help but smile.
> Damn, I love those guys, the Big Tough Frogmen who carried…

I warmly invite you to read the article on enlightened individualism to soar higher than the empty -and dangerous- "allegiance to the flag":

> Enlightened Self-Interest: Making of The Ubermensch

PROS

- **Good Wisdom on Leadership**

There is a lot of wisdom on the reality of leadership here.
Basically, making sweeping generalizations is impossible (and wrong), because great leadership, like most other things in life, is about balance.

- **Good Reflection on Vulnerability**

After Brene Brown and *Daring Greatly* many people have taken a bad view of vulnerability.
The Dichotomy of Leadership is a good reminder that a leader can sometimes ill-afford being vulnerable (also read: Vulnerability is Not Power).

Review

The Dichotomy of Leadership presents a few of the limitations typical of soldiers' fanaticism and army brainwashing.

Things such as "our great nation", "we're good, they're bad", "fighting a holy war for these great values", etc. Etc.

As I talk about in "corporate manipulation", and in "manipulation", that's the manipulation that makes you give up your life for… For what, exactly?
Sometimes behind the values hides the self-interest of some politicians and arms producers.

However, once you move past that, some of the content here is great.
Particularly, I enjoyed the passages on aggression and the personal stories on working with weak bosses as I could relate there.

Dark Psychology 202: Summary & Review

Lucio Buffalmano · 9 March 2019 · Archived copy · Original

Dark Psychology 202 is an overview of the disciplines and techniques of manipulation.
It doesn't go deep and doesn't have any eye-opening wisdom on dark psychology, but it could serve as an overview.

Contents

- Full Summary
  - Anchor Yourself With Positive Associations
  - Make it Seem Easy
  - Hurt People With Confirmation Bias
  - Self-Serving Bias
  - Be Liked
  - Build a Following
  - Act As An Authority to Be An Authority
  - Approach Wars Like You're Right
  - Stir Doubts
  - Start Rumors
  - Tell Elements of Truths When Lying
  - … And More
- CONS
- Review

Full Summary

Here are a few good ideas:

Anchor Yourself With Positive Associations

> Reward someone handsomely for doing something for you. You may need to offer this reward a few times to make the conditioning stick. Then, you can basically set this on autopilot. Once a person associates you with a reward, they will have a pleasant association with you.

Make it Seem Easy

> Make something seem easy when it really isn't. Using a casual tone will often set people at ease and make them think that something is not a big deal.

Hurt People With Confirmation Bias

> How can you use this confirmation bias to your advantage? One way is in psychological warfare. If you know that someone believes something ugly or disparaging about himself, you can keep showing him evidence that confirms his belief to hurt him.

Self-Serving Bias

Self-Serving Bias Self-serving bias causes people to attribute their successes to their own internal skills and talents, and then blame their failures on outside circumstances.

You can use self-serving bias to get people to turn against each other and convince a person that someone else is a terrible person.

Be Liked

As simple as it sounds, this might be one of the deepest and most powerful tools for influencing.

Cialdini, an author of *Influence*, popularized as one of his six key principles of influencing.

Build a Following

Among many "just OK" and "meh" paragraphs, there were a few great nuggets of wisdom.
Here is one:

> The modern world of social media can also help you spread trends more easily. You can influence people to fit your ideas and to do what you want if you appear to have enough followers.

Act As An Authority to Be An Authority

> You can become an authority figure just by acting like one. If you act like you know what you are doing and you are in the right, people will listen. Being assertive and even aggressive can get you a lot of respect. Then, people will obey you and do what you want.

Approach Wars Like You're Right

It's funny, I am just done reviewing "*The Dichotomy of Leadership*" where I scathingly criticized the authors for believing they were in the right against "the bad guys", and now I gotta nod at what Dark Psychology 202 writes:

> Approach this war as if you are in the right. Whether you really are or not does not matter. Who is really judging?

For more on manipulations see:

- Political manipulations
- Manipulation: a guide

> Manipulation: Techniques, Strategies, & Ethics

Stir Doubts

> For instance, if you are trying to make someone think more negatively and hurt her self-esteem, you might hear her say, "I feel really good about this! I think it might go well." Ask her, "What makes you think that this will go well? Have you entertained the possibility that it might go wrong? Are you prepared for things going poorly?" You chip away at her self-esteem while appearing like you are simply caring and trying to keep her from getting crushed. Beautiful.

Start Rumors

Quoting *The Art of War*, *The 48 Laws of Power*, and recommending Machiavelli, the author says that reputation is everything.

And one way of destroying a reputation is by starting rumors:

> Spreading rumors is one of the best ways to get others to do your dirty work for you. You can start a rumor but claim that you heard it from someone else. Rumors spread like wild fire with little help. Everyone will participate in the gossip mill.

Tell Elements of Truths When Lying

The more truth you put in a lie, the easier it is to seem honest (and to keep track of your own lies).

... And More

Many more of the suggestions were techniques that *psychopaths* and abusive men use in their relationships.

They weren't as detailed as other texts and, most of all, I abhor these men and "techniques".

They are a high way to becoming a low-quality man (or low-quality woman): avoid them at all costs!

CONS

- **Not Detailed**

Dark Psychology 202 covers a lot of ground but is not detailed in any of it.

- **Some Advice is Bad**

Some of the advice is generic and thrown out there without any context can easily

For example, the author explains how to lie on a date to seem like you're rich. But that's not necessarily good either to start a relationship or to get laid (also read lovers and providers).

Some other advice makes you look like an obvious frenemy, a backstabber, or a social climber.

- **Some Bad Psychology**

The author writes:

> In order to motivate a person, you must offer them some sort of reward. That reward needs to be something that they really want or need.

That's generic and, often, not even true. A reward crowds out intrinsic motivation (read *Drive* and *The Social Animal* for more details).

Review

Dark Psychology 202 is a huge step forward on the author's previous *Dark Psychology 101*.

There is some good stuff here, and even some great reflection.
But you have to wade through a lot of diluted content, bad generalizations, basic stuff, and even some bad advice.

The uninitiated might find more revelations and ideas, but there are probably better texts out there to learn psychology.

> Dark Psychology: 7 Ways to Manipulate People

First, Break All the Rules: Summary & Review

Lucio Buffalmano · 11 March 2019 · Archived copy · Original

First, Break All The Rules is a management book based on a Gallup study involving more than 80.000 managers.

TPM Strategic Takeaway: This is a rare data-backed look at what actually drives performance—but it misses the power dynamics behind it
The findings are valuable, but top performers don't just 'create good environments'—they control incentives, allocate attention strategically, and build high-performing alliances.
Mostly, what's missing here is also that top performers who advance are also power-intelligent, 'positively' calculative, and strategic.

Contents

- Notes
  - The 12 Questions for Performance
  - Open-Ended Questions to Hire Well
  - You Can't Learn Success From Failure
  - Play Favorites
  - Don't Promote: Find the Right Fit
  - People Don't Change: Leverage Their Uniqueness
  - Great Teams Have Great "Is"
- Real-Life Applications
- Review

Notes

Buckingham and Coffman base many of their findings in "First Break All The Rules" on Gallup's research of 80.000 managers.

There are limits to questionnaires of course, but given the magnitude of the research and the size of the responders, the findings are nonetheless significant.

The 12 Questions for Performance

A positive answer to the question below increases employees and organizational performance.

A negative answer adversely impacts the individual and organizational performance.

1. Do I know what is expected of me at work?
2. Do I have the materials and equipment I need to do my work right?
3. At work, do I have the opportunity to do what I do best every day?
4. In the last seven days, have I received recognition or praise for doing good work?
5. Does my supervisor or someone at work seem to care about me as a person?
6. Is there someone at work who encourages my development?
7. At work, do my opinions seem to count?
8. Does the mission/purpose of my company make me feel my job is important?
9. Are my co-workers committed to doing quality work?
10. Do I have a best friend at work?

11. In the last six months, has someone at work talked to me about my progress?
12. This last year, have I had the opportunity at work to learn and grow?

Open-Ended Questions to Hire Well

The authors say that the best questions to ask at interviews are open-ended.
When you ask them, you should not telegraph any direction.

The direction candidates take is the most telling predictor of their future behavior.

Hire for Talent

Skills can be learned and knowledge can be taught.
The raw material that can hardly be learned or taught is talent, and great managers hire for talent.

There are 3 types of talent:

Buckingham and Coffman break talent into three categories. Striving talents – the "why" of a person. Why they do things, their drive, why they are who they are. Thinking talents – the "how" of a person. How they think, how they rationalize decisions, their values. Relating talents – the "who" of a person. Who they trust, who they confront, who they ignore.

You Can't Learn Success From Failure

The authors say you cannot learn excellence by studying failure as if excellence was the opposite of failure.

Why not?
Because excellence and failure are often similar!

For example, both great salespeople and poor ones feel like they are selling themselves when they pitch their products.
It's that personal investment in the product that makes them so persuasive.
That same personal investment though, also makes them more scared of a no.

The difference thoug,h is those great salespeople are not paralyzed by those fears.

Play Favorites

A seemingly popular rule of political correctness these days seems to be that of treating people the same way.

Silly rule, imply the authors.
People are different and have different skills, abilities, and characters. And that's why you should treat them differently.

Don't Promote: Find the Right Fit

Career advancement promotes people to their level of incompetence.

Great managers instead understand that not every great employee must be promoted.
Some of them are good where they are, or can grow in areas that don't entail managerial duties, for which they might not be a good fit.

People Don't Change: Leverage Their Uniqueness

I loved this part.

In spite of all the self-help literature telling people on how they can change, managers accept that most people don't

change that much.

And we don't have unlimited potential.

Great managers don't complain about it though.
They capitalize on it.
They leverage people's uniqueness instead by seeking jobs that match their talents or moving them in positions that match their talent -or by accepting that someone must be let go-.

In the words of the authors:

> Don't waste time trying to put in what was left out. Try to draw out what was left in

Great Teams Have Great "Is"

It's not true that great teams don't have "Is". Great teams are built with great individuals.

Real-Life Applications

- **Leverage people, don't try to change them**

Yes, you can change, and you can change a lot. But that's not to say that most people will change.
Most people will not change indeed. And you should learn to read people, accept them as they are and try to leverage their unique strengths and contributions instead of wasting time in trying to change them.

- **Spend more time with the best**

When managers have problematic employees they end up spending a lot of time with those troublemakers rather than their top performer.
Paradoxically then, they are sending the message that troubles get the manager's attention.
Great managers instead spend more time with their best employees.

Review

The title of “breaking all the rules” feels like a marketing ploy because these supposedly good managers aren’t defying common sense or breaking any big rule, but generally applying common and sound principles.

In general, the book could have been briefer and focused on the 12 questions, but it’s an otherwise excellent resource for corporate learning centers and mid to higher level managers.

Best Entrepreneurship Books

Lucio Buffalmano · 11 March 2019 · Archived copy · Original

Are you looking for the best books for entrepreneurs?

Lucio is an entrepreneur, founder of this website, and he has been working in different startups for years.
And Ali is an expert on networking and has been consulting companies and startups.

And after going through many courses and countless books on business and entrepreneurship, this is TPM's reading list of the best entrepreneurship books to get you started:

Contents

- 10. Crossing The Chasm
- 9. Delivering Happiness
- 8. The E-Myth Revisited
- 7. Zero to One
- 6. The 4-Hour Workweek
- 5. Disrupt You
- 4. The Lean Startup
- 3. Start With WHY
- 2. Unscripted
- 1. $100 Million Offers
- Courses For Entrepreneurs

10. Crossing The Chasm

by Geoffrey Moore

Review (removed) | Kindle

Crossing the Chasm will teach you the intricacies and psychology of going from “cool product” to mass adoption.

That’s what differentiates small, “cult” and “cool” brands from unicorns. If you want your business to become a unicorn, this Crossing the Chasm must find its way into your bookshelf arsenal.

> Quote: *“The number-one objective is to secure a distribution channel into mainstream market with which the pragmatist customer will be comfortable.*
> *It comes before revenues, profits, press, even before customer satisfaction. All these other factors can be fixed later – but only if the channel is established*”

9. Delivering Happiness

by Tony Hsieh
Review (review removed) | Kindle | Print

Delivering Happiness stands unique among the best books for entrepreneurs.

Tony Hsieh doesn’t “just” share his touching, personal story of two successful startup exits.

But, much in line with the growing wave of positive psychology, it makes the case that success and happiness go hand in hand.

And making your employees and customers’ happiness a KPI might indeed increase your bottom line as well.

> Quote: *“Money alone isn’t enough to bring happiness . . . happiness is when you’re actually truly ok with losing everything you have*”

8. The E-Myth Revisited

by Michael Gerber
Review (removed) | Kindle

Most people who make the jump from employees to entrepreneurs fail, says Michael Gerbner.

One of the main reasons is that they don't think (yet) like an entrepreneur and they end up doing everything and making the business dependent on them.

The E-Myth teaches you how to change your thinking in a way that allows you to build a build that runs independently from you.

This is a must not just if you want to build to sell, but also if you want to build to live independently of work.

> Quote: *"If your business depends on you, you have a job. And it's the worst in the world because you're working for a lunatic"*

7. Zero to One

By Peter Thiel
Summary | Amazon

Zero to One is one of the most famous entrepreneurship books, from one of the most famous (and wealthy) men on this list.

Thiel is also quite power-aware and embraces one of the core tenets of this website: seek win-win alliances, and do not unnecessarily antagonize people -and especially not the high-power ones-.

In the tech-entrepreneurship world of the early 2000s, that means dropping the trite rhetoric of “disrupting”, which implies that you’re going to be an enemy of companies that are much bigger and wealthier than your small idea/startup.

Also, Thiel as his “PayPal mafia” is a stark reminder of the darker power of alliances and networking as well.

> Quote: Better to be called a cult—or even a mafia.

6. The 4-Hour Workweek

[image]by Tim Ferris
Summary | Kindle

Getting into the top 3 of our best entrepreneurship books list now :).

The 4 Hour Workweek is the book that more than anyone else epitomizes the digital revolution of independence.

And it's possibly the most quoted

Albeit it's mostly for solopreneurs and not for startup founders who want to build big businesses, I'd recommend anyone to read it.

Why?

Because it will make you think if what you want is a big business or simply the freedom and lifestyle that goes with it.
If the latter, it's possible that you don't need to build a big business (and wouldn't be happy with it, either).

> Quote: *"They have riches, but the riches actually have them*"

5. Disrupt You

by Jay Samit
Review (removed) | Kindle

One of the best books on both mindsets of entrepreneurship, and good real-world tips from actual (successful) entrepreneurs.

Less known than many other titles in this list, but no less good.

As a matter of fact, it's better than many of its more famous peers.

> Quote: Disruptors don't have to discover something new; they just have to discover a practical use for new discoveries.

4. The Lean Startup

by Eric Ries
Summary | Kindle

I remember my first job in a startup company.

The founder and CEO asked me if I had read "*The Lean Startup*" and when I said no, he gushed "Oh my God, you haven't read the startup Bible?".

Well, I have now… Together with many more.
And, with much more startup and life experience, I can also see why he called it "the Bible" :).

By now the principles of Eric Ries are so well spread and entrenched in the culture that when you read it you might think "but what he says is all obvious".

Sure, it's obvious *now*…
But you still might want to read the full book and learn it straight from the horse's mouth.

> Quote: *"The only way to win is to learn faster than anyone else."*

3. Start With WHY

by Simon Sinek
Review (removed) | Kindle

Why is "*Start With WHY*" the N.1 book in our "best books for entrepreneurs lists"?

It's not because "culture is everything".
It's because the reason why you do what you do is what attracts people to you, to your idea, to your project, and to your business.

And it's also what makes the difference between inspiring and visionary companies and all the others.

And, incidentally, it's what makes for a happy and fulfilling life as well.

Absolutely a must-read.

> Quote1: *"There are only two ways to influence human behavior: you can manipulate it or you can inspire it*"

And:

> Quote2: *"People don't buy what you do; they buy why you do it. And what you do simply proves what you believe*"

2. Unscripted

by MJ DeMarco
Summary | **Audiobook**

"*The Millionaire Fastlane*" used to be here.
"Unscripted" is from the same author, and we find it even more complete and applicable.

It's simply the best mix of mindsets, self-empowerment, mindsets, and strategies

It isn't even "just" about entrepreneurship, but about self-empowerment *through* entrepreneurship.

> Quote: *"There are only two ways to influence human behavior: you can manipulate it or you can inspire it"*

1. $100 Million Offers

by Alex Hormozi
Summary

Frankly…

… If we're talking about the best books for beginner entrepreneurs, we could give Alex Hormozi ALL the top spots.

One would go to Alex Hormozi himself as a "business guru", one for his book, one for his course, one for his podcast, etc., etc.

This was by far the most practical and impactful book OR course we've ever reviewed here.
And it's the one we've applied the most on TPM as a business.

Courses For Entrepreneurs

Some good and/or popular courses for entrepreneurs include:

- **Offer Creation Course** by Alex Hormozi **(10/10)**
  Largely similar and based on the above #1 book "100 Million Offers". But adds enough new wisdom and ideas that makes it better than most other paid courses just with that added wisdom. Oh, did we forget to add? It's free (!)
- **Marketing Step-by-Step** by Eben Pagan **(8/10)**:
  a good course that inspired TPM to claim ownership of "power dynamics" as the new discipline we created and championed (and, implied, for which we are the #1 resource in the world). In that sense, it may have been the most impactful entrepreneurship resource for TPM
- **Earnable** by Ramit Sethi (**6/10**)
  Doesn't actually "walk you through" the creation of your dream business. I *really* didn't appreciate being left dead in the water, especially after paying such a high price tag. If the course provided some form of active

mentorship, then it could start approaching ten stars

- **B-School** by Marie Forleo **(5/10)**
  One of the highest-priced courses on this list, more tailored to beginner entrepreneurs, but didn't do much for us

Good Entrepreneurship Books

Also, great reads on entrepreneurship and/or solopreneurship include:

- Web Copy That Sells: one of the best books I have read on copywriting
- Hooked: the habits loops applied to product design (ie.: how to make your product into an addictive habit)
- Made to Stick: how to make your message and ads go viral (or better: increase the likelihood it will go viral)
- Go Pro: only for those interested in network marketing, but unless you *start* a network marketing company I actively discourage you from getting into it (and from starting one as well: it does nothing good for the world)

Methods of Persuasion: Summary & Review (7 Steps)

Lucio Buffalmano · 11 March 2019 · Archived copy · Original

Methods of Persuasion (2013) covers the persuasion process from pre-delivery to post-delivery to (dramatically) increase the likelihood of compliance.

Please Note: I file this review into the "persuasion and manipulation" category as persuasion tactics can be used for manipulation as well. However, Nick Kolenda, the author, does not endorse manipulation.

Full Summary

Honestly, I was NOT looking forward to summarizing "*Methods of Persuasion*".

I like -and pride myself- on doing a great job with my summaries. But there is so much great stuff here that I couldn't do a proper summary of *Methods of Persuasion* without using too much of the author's material -and my summaries are NOT a replacement for the full product-.

But anyway, here is me trying to give you a taste.

Overview

Methods of Persuasion presents a series of 7 steps, which the author says "conveniently" adds to the acronym "METHODS".

1. Mold Their Perception
2. Elicit Congruent Attitudes
3. Trigger Social Pressure
4. Habituate Your Message
5. Optimize Your Message
6. Drive Their Momentum
7. Sustain Their Compliance

The first four steps are delivered before the request.
Steps 4 and 5 during the request.
And the last steps after the request.

Before The Request

Let's start with the request:

Prime Their Mindset

You can make people think about a certain topic by simply mentioning topics that remind them of a certain subject.

For example, if you remind women of their gender, you activate the stereotype of being bad at math and you can lower their math performance.

It also works outside of our awareness.

If you want your target to be more open-minded then a much better way than telling them to be open-minded - albeit that might work too if you know how to do it-, might talk about something related to open-mindedness.
For example, a story of someone doing something crazy and having a blast while learning and growing from it.

My Note:
There are some limitations to this technique. Since schemas are very personal and dependent on the background and personal life experiences, you can never be sure what will activate what.
In the example in the book, he wanted to prime the readers for a carrot. But since I am Italian, the first vegetable that sprung to my mind was tomato :).

Anchor Their Perception

Anchoring (Tversky & Kahneman, 1974) is so powerful that we fall for it even when know we are being anchored. And when we are in a new situation with no anchor, we try to come up with our own anchor ("self-generated anchor").

An anchor is powerful because we tend to move from the anchor to the outer reaches of our range for whatever phenomenon (or price) we are considering.
When dealing with semantic categories, depending on the situation, we can also adjust away from the anchor (for example if you ask me to assess the calories of a big mac after mentioning lettuce).

In negotiations, you should start with the highest number you can get away with.
When presenting options, you should use a decoy to make your favorite option seem better.

Elicit Congruent Attitudes

If you can make the person act, stand, or think in a way that is congruent with the action or message you want them to espouse, chances are they will follow through.

What happens is that they see themselves acting a certain way and they adjust their own beliefs and attitudes to match their actions.

To take advantage of our need to present congruent behavior, Kolenda describes the "foot in the door technique", the "lowball technique", the elicitation of an attitude (which can be as simple as asking "how are you").

Trigger Social Pressure

Remind people that your desired behavior is the norm, reveal similarities with your target, and make it seem like you belong to the same group (use words such as "we" and "us").

Once you can position yourself as "like the target", you can display the behavior you want the target to assume and chances are higher they will follow you.

Use social norms, group pressure, and rapport to influence your target.

Habituate Your Message

The more you can repeat your message and familiarize your target with it, the more he will naturally come to like it and accept it.

There are several reasons why this is the case. One of them is that as the message becomes more familiar to your target, he is able to recall it and understand it more easily and quickly.
And "ease" and "speed" become signs for "truth" and "liking".

To habituate your target you can mention the topic, or something similar to the topic, right before you make your request.

If you know is likely to perceive your message unfavorably, you can habituate them in small incremental steps.

During the Request

All of what we said before is about pre-suasion (also read *Pre-Suasion* by Cialdini).

Optimize Your Message

People judge messages based on cautious and rational analysis (systematic processing) or quickly and more haphazardly (heuristic processing).

This is what Kahneman refers to as "fast and slow".

Nick Kolenda then says that if you know that your target is likely to glance quickly at your message, you should prioritize "peripheral" cues such as the aesthetics, the marketing, the look, and the feel.

If you know they are going to analyze it deeply, put more thought into arguments, logic, and numbers.

To elicit heuristic processing three strategies are: increase the complexity of your message, enhance their mood, or spark their arousal.
The smaller font on good-looking products is also more likely to persuade as people are more likely to believe you without checking.
The difficulty in processing the information is also misattributed to the uniqueness of the product.
But if it's a run-of-the-mill product the font should be bigger because ease of processing generates familiarity.

- To optimize your message, use "you" and ask rhetorical questions (ie.: "don't you agree that… ", "isn't it true that.. ")
- Position your best arguments first and last
- Enhance your attractiveness

My Note: you don't know what they will use, and most smart people are more rational for important decisions
You may not know in advance what processing will take over, especiall in interpersonal settings.
So you may be better off focusing on both, or *how* you deliver the message, and *who* delivers the message (be a high quality man, and people will listen more)

Drive The Momentum

In these chapters, Kolenda describes how you should not give monetary or big incentives if you want to keep their goodwill because that will crowd out intrinsic motivation (also read *Drive*).

For one-off actions, though large incentives are fine -just pay attention it's not so large that they "choke" under pressure-.

- Don't make your target feel like you're trying to control them (avoid the word "should")
- Promote autonomy to let your target choose the reward

- Use scarcity (limit time and availability)
- Think twice before giving too many options (The Paradox of Choice)
- If you have many options it's good, but categorize them and chunk them up

Sustain Compliance

Features and feelings from one stimulus transfer to another.

So you should always strive to create a positive association with the action you want your target to perform (or belief you want them to adopt).

Nick Kolenda here goes over the famous Pavlov dog, Skinner, and operant conditioning.

I loved Kolenda's explanation here:

> Whenever we're presented with a new concept, we can't simply place that concept free-floating in our brain; in order to successfully integrate that new concept into our existing network of knowledge, we need to attach it to an already existing concept via some type of similarity or association.
> Classical conditioning is effective because it essentially forms a new connection in that network.

Other techniques:

- Metaphors (relate to the familiar and to basic survival like food)
- Leverage good / up positive associations
- Associate with naturally occurring primes (ie.: Apple brand with apple)
- Enhance your attractiveness

Emotion Misattribution

I quote Nick Kolenda:

> We think we possess a solid grasp of our own emotions and we believe that all types of emotions—sadness, excitement, fear, etc.—produce different sensations and feelings within us. What's surprising is that many of those emotions produce the same exact physiological response.

The emotions that "feel" are different because we look at the environment for cues to explain why we're feeling what we're feeling.

And we tend to make up stories about the "why" depending on what sees first or what makes the most sense.

this is why having arousing dates can work in making our dates believe they really like us: they misattribute their arousal (for something else) with attraction (for us).

Real-Life Applications

- **Convey high expectations**

Some people down-sell to beat expectations, but you're probably going to end up with a higher rating if you anchor expectations very high.

- **Use "you" pronouns in your message**

If you want to give a feeling of similarity, use "us" and "we". If you want to grab attention, research in advertisements shows that "you" can dramatically increase the persuasiveness of an advertisement.

- **Make your description difficult to read or understand**

If you want you or your services to be perceived as "advanced" or unique, make it complex to understand or even to read, with smaller fonts or fonts against a similarly-colored background.

CONS

If you know my reviews, you know what I am about to write.

If you don't know yet, my rule of thumb is that the better a book/resource is, the deeper I go with my nitpicking.

So here's my nitpicking for this wonderful resource:

- **Sometimes the "why" didn't convince me**

When cult members realized the world wasn't ending and there was no alien ship to take them on board, they developed stronger beliefs, says Colenda.

In my opinion, it's not that they developed stronger beliefs, but they *acted* more on their beliefs and tried to recruit new people because now they *needed* their BS to be true (some of them had even sold all their belongings).

- **Sometimes general rules are inferred from one single study**

Sometimes I felt some statements were a bit too bold in generalizing big psychological principles just because there was one mentioned study that confirmed it.

Countless studies have been proven wrong by successive research. That is why generalizing based on one single study takes us into dangerous territories.

- **Negative and graphic messages don't always work better**

The author says that graphic ads for driver safety work better. But that's not always true.

People are more likely to heed a highly emotional and painful message when they feel they can do something about it.
But if they feel too overwhelmed or like they can't change their behavior, they will suppress the message instead.

Also read: The Social Animal.

- **Adding negative information doesn't always make you more persuasive**

The author also says that you should introduce a small amount of negative information to make your case because it will look like you have done your research and considered all sides of the coin.

However, that's not always true: if you are presenting to an audience that is already full on your side, then it's better to state your case without acknowledging discordant information.
With a well-informed or critical audience instead, it's best not to use one-sided arguments.

PROS

- **Well-researched**

Nick Kolenda wades through scientific research and distills it in a digestible, easy-to-understand, and "ready-to-use" fashion so that every reader can use (or defend himself).

I have rarely seen a more referenced book that's not a handbook.
Part of it is because the author wants to portray authority -as he admits himself-.
And the other reason that he does not say himself, but which I will, is that he simply does a great job at being a thorough author.

Some of his most referenced works, which he mentions in the foreword, include Robert Cialdini -author of *Influence*-, Daniel Kahneman -author of *Thinking Fast and Slow*-, Dan Ariely -author of *Predictably Irrational*– and a few more.

Review

Methods of Persuasion is a deeply insightful book on persuasion and pesusaive communication.

Nick Kolenda says that his goal is to make *Methods of Persuasion* your highlight book.
Well, he did pretty well in my case as I did highlight a ton of it.

Methods of Persuasion is also one of the best books I have read on "Machiavellian psychology" and, potentially, dark pshcyhology.
I also took one of his courses and it was great.

Becoming Summary

You can't really summarize an autobiography, but I will give you here the bits and pieces that caught my attention the most and that are most relevant to a website like The Power Moves.

Don't Ask "*What Do You Wanna Be When You Grow Up*?"

Michelle Obama says that one of the most useless questions you can ask a child is "what do you wanna be when you grow up".

She says that it's not like at some point you become something and you're stuck with it.
And I loved this part and heavily nodded.

It's funny by the way how different languages also have that exact same expression.

Obama & Michelle Meet

- Obama seemed assured of his direction and made Michelle feel even more insecure at times

- Obama and Michelle met at work, and the unspoken bond between them was that “he was a brother” (almost everyone was white in the office)
- Michelle was disgusted when Obama lit a cigarette after lunch
- Michelle “swore off dating altogether” to dedicate herself to her career (typical lie people BTW)

Talking about smoking, Michelle Obama told Barack:

> Why someone as someone as smart as you does something as dumb as that

Which sounds a bit like a shit test eheh.
I would have replied:

> Who says I’m smart

Instead, Obama told her she was right.

- Obama told Michelle they should go out
- In the following days, Obama laid out the reasons why they should go out (ie.: compatibility, making each other’s laugh, etc.)
- Obama asked Michelle if he could kiss her (facepalm

Obama seems like he has a strong secure attachment style.

Obama & Michelle’s Relationship

Soon after that kiss, all her reservations started falling away and Michelle starts falling for Obama.

- Obama told her how beautiful she was
- Obama made Michelle feel good
- Michelle thought Obama was a unicorn to the point of being almost unreal
- Obama never talked about material things like buying a new house or shoes
- Obama loved books, reading even late at night while she slept
- During their relationship work felt like a distraction for Michelle (so much for the woman who wasn’t going to date to focus on her career
- Obama said marriage was an unnecessary and overhyped convention (Obviously he changes his mind :)
- For Michelle marriage was a given and she was sometimes worried about her different views (of course she was LOL)
- Obama wasn’t opposed to marriage, but for him, their love was great as it was (typical difference between men and women BTW)

Obama in Politics

- Michelle secretly hoped Obama’s political career would sputter so he would stay more at home with the family
- When at home, Obama was fully present though, listening, playing with the children, and reading them stories
- Obama would sometimes indulge Michelle by watching Sex & The City (damn! Is that a favor to do? Sex & The City is AWESOME!)
- Obama was a bit pie in sky kind of guy, believing that his book would solve all their financial problems (more typical of men having more faith in their dreams)
- Michelle was more pragmatic and realistic (typical of women, of course)

- Both were nervous the first time they were speaking in front of people
- When Oprah Winfrey interviewed Obama, Michelle wondered “what the hell is happening now”. Little later, he was elected to the Senate
- Obama told people that running for the presidency was a family decision and that Michelle would also decide
- Michelle Obama eventually decided that Obama was good for America and she couldn’t be so selfish to stop him (very wise and kind of her)

Presidency Campaign

- The media frames Michelle as angry and resentful. In defending herself she starts acting more angry and resentful, and she reflects on how many black women have been caught in that trap (makes sense, same as what happens with gaslighting in abusive relationships)
- The political games and power moves were taking a toll on Michelle. Sometimes she blamed Obama’s campaign for her woes
- Her instinct was to hit back and answer blow by blow on accusations but the campaign’s team told her to let it go (wise decision of course)

In The White House

Barbara and George Bush were very nice to the Obamas.
Michelle Obama could sense that George W. Bush was glad they had arrived to take over and he could finally retire from political life.

- George W. Bush was kind and had a genuine appreciation for the country that she always admired
- They had federal funds available to redecorate the house, but Barack insisted they’d do it on their own dime
- The security in the White House was crazy, encompassing all aspects of life and including the whole family
- But Michelle says the security for the family is in the end only to protect the president and his emotional and mental well being
- Michelle was uncomfortable with the change, and so was Obama. But Obama was happy he had to do nothing for the house’s upkeeping
- It’s costly to live in the White House: the president has to pay for all the items (not utilities, but yes for toilet paper, food, and guests)
- Obama asked for some food and they later found they were being flown from overseas and were super costly (LOL, couldn’t imagine the president’s family worrying about food prices)
- Michelle was a bit peeved by the media’s attention to her clothes and how they took precedence to what she said
- She met the queen of England and said:

> “there is a certain awkwardness that comes with every arranged meeting”

Interesting to see that even seasoned politicians can find it awkward to shoot the breeze.

- When they left the White House Michelle wondered if it must have been sad for Obama to finally be free when their daughters were just launching (which made me think these two weren’t always forthcoming with each other if she had to *guess*?)
- Michelle was horrified by Trump’s lewd comment about him assaulting women. She says Trump was a bully
- And this is where she came up with her famous sentence “when they go low, we go high”

Which actually Trump did rather well against Hillary:

- Michelle says that dominance, even the threat of it, is a form of dehumanization (which is not really true as a general rule, but it's true that it was really poor and low the way Trump talked about it)

Curiosities About Michelle Obama

- Among the luxuries, she allowed herself was a wine subscription (nice, you go girl! ⍰
- Michelle visited Kenya naively believing that she'd feel some kind of "back to the roots", motherland feeling of completeness, but she was -and felt- a foreigner there (naive thought indeed)
- Being a stranger African-American in Africa made her feel like she was a stranger everywhere, making her sad
- Michelle Obama visited Kibera, the biggest urban African slum (which yours truly also visited)
- Obama's relatives asked Michelle which one of her parents was white and she replied that she was "black through and through, basically as black as they come" (LOL)
- Michelle Obama did pushups with Bishop Desmond Tutu, author of "The Book of Joy"
- Michelle Obama won't run for office (damn the Republicans would have gone crazy with that ⍰

Becoming Quotes

> (…) To the cold morning this winter when I climbed into a limo with Melania Trump accompanying her husband's inauguration.

It feels like that "cold" is not just referring to the temperature :).

> I understood that I had choices (..) just go back to my toys at home, or I could just shut her up (…) the next time DeeDee made one of her remarks I just lunged for it. summoning everything my dad had taught me about how to throw a punch.
> The two of us fell to the ground fists flailing and legs thrashing.
> (…)
> "At least, I earned her respect"

It looks like when they go low Michelle Obama didn't always go high :).

> Even with a challenged sense of style, Barack was a catch

⍰

> Even white people were recognizing him now

Talking about increasing's fame :).

> Johm McCain had done himself no favor in choosing Alaska governor Sarah Palin as his running mate. Inexperienced and unprepared she had quickly become a national punchline

LOL indeed, Sarah Palin must have been the worst vice president's choice ever.

Becoming Criticism

This is what I liked less about *Becoming* by Michelle Obama:

Obsessed With Race & Colors

I didn't count how many times Michelle Obama said "black", "color", "white" and "black woman", but if anyone counted them.. I'm sure it would be a lot.

When she took the elevator of the White House she took care to notice that the man using who operated the elevator was a black man in a tuxedo.
It felt unnecessary.
Did she want to make a reference that the black man in a typical white house was the servant? With Michelle Obama's obsession with colors and races, it might not be far-fetched.

Partisan (Disguised as Bipartisan)

There is no shame in being on the left side of the political spectrum, a Democrat, a Republican, or however people want to define themselves.

But it's when you are a partisan pretending to be bi-partisan that it feels a bit sneaky.

Commenting on Trump she was disgusted seeing him "stalk" Hillary during the debate, diminishing her presence with his and getting away with it. As if he could do it.

That felt either like partisan commenting or a form of "white-male phobia" that transpired in other parts of the book.
Trump was simply playing the game as much as Hillary did. As far as I remember Hillary started the game of moving on Trump's side.

Sure, Trump might have played more games, and more ruthlessly, but it's not like it was Trump "stalking Hillary" and Hillary was a poor victim.

Superficial Comments on Policies

> Barack created bills that would create thousands of jobs for Americans.

LOL, yeah, sure, as if politicians could "create jobs". They hire people with government funds, but that's not to say

that you “create jobs”. You might as easily waste taxpayers’ money (which is what most often happens).

Avoid Low-Fat products

Michelle Obama spearheaded a very important agenda on nutrition. However, when she said that she promoted low-fat diaries, that’s when I thought she might not really know much about nutrition at all.

Most modern nutrition is rehabilitating fat. And cutting out fat is especially bad when you’re skimming milk and artificially trying to remove it.
Als read *Eat Fat to Get Thin* and *Own The Day, Own Your Life*.

Feels Like Victim Mentality at Times (Complaining)

Michelle Obama says the media tried to portray her as angry and negative and it was almost becoming a self-fulfilling prophecy for her.

Yet, in my opinion, she did come across as

> It takes energy to be the only black person in the lecture hall. Or one of a few non-white people trying out for a play or joining an intramural team. It requires effort, an extra level of confidence to speak in those settings and own your presence in a room.

She goes on to comment on the “looks” she got from students and some professors as if they wanted to say “I know why you’re here”, which planted seeds of doubt in her mind.

Or:

> I tried not to be intimidated when classroom conversation was dominated by male students, which often was. Hearing them, I realized they weren’t any smarter than the rest of us.
> They were simply emboldened, floating on an ancient tide of superiority, buoyed by the fact that history had never told them any different.

And:

> You gotta be twice as good to go half as far.

Cheap Feminism

Reminiscent of *Lean In*, Michelle Obama seems to think (and suggest) that women should stick together for the simple fact of being women.
She says:

> I still wonder why so many females rejected an acceptionally qualified female candidate and instead choose a mysoginist as their president

Forced Agenda of Multiculturalism

Michelle Obama explains that Trump’s administration is “white and male” like she was so tired of seeing growing up.

> The vibrant diversity of the two previous inauguration was gone, replaced by a dispiriting uniformity of, the kind of white male overwhelmeing… (bla bla bla)

Why should we assess an administration based on DIVERSITY?

Why not assess how good it does, and how competent it is?

Why should it be a value to FORCE multiculturalism?
Why should anyone "push" for more women or more color? As much as why should anyone "push" for more men if there are more women, or more whites if there are more blacks?

I don't think there is any inherent advantage in "forcing" more of this gender or of this color.

Hugging and Celebrating Bin Laden's Death

Michelle Obama talks at great length about mass shootings and how painful they were.
She makes violence and gun control a central theme in her book.

And then… Then she hugged her husband when Bin Laden was killed.
A man dies and a country celebrates. And their leaders compliment each other.

I somehow always found those scenes eerily pathetic. But I would have expected from the leadership.
Instead, it was worst. Michelle Obama tells the story of "jubilant people crowding the streets" as if it was one of the happiest moments of her life.
How sad.

Also, "killing Bin Laden" was a top priority for their administration? Really? Killing ONE man is a top priority??

Slightly Too Much Nationalism

I used to be more nationalist, but as I grow and get wiser I more and more see it as something we all need to overcome.

Michelle Obama touched by the wounded vet who, in pain, tried to stand up while spitting on the floor because he wanted to "salute the wife of his commander in chief" is pathetic to me.
Not for the man, of course, I wish him the best and speedy recovery, and in a way I also admire him.

But the feeling of pride for a boss or a flag is small-minded.

Similarly, her focus on "leaving a mark" on the White House felt misplaced and… Somewhat small-minded in the greater scheme of things.
But still… I understand it.

PROS

- Well written
- Well narrated
- Great insights into the life of a president (and first lady)
- Great insights into some of the political games
- Touching, on many occasions
- Funny and entertaining, on many occasions
- Some good, deep reflections

Review

I found *Becoming* overly obsessed with skin colors, slightly too feminist, and a bit too much on the complaining side.

On the plus side, it's entertaining, sometimes funny, almost always interesting, and, at times, also very touching. Especially the last chapter it's almost a tear-jerker while also being upliftingly beautiful.

Some passages increased my respect for Michelle Obama.
And even more so for Barack Obama.

I'm not Barack Obama's biggest fan as he often engages in social climbing and to me, that's one of the biggest sins of leaders (you can see examples here).
However, he is an overall high-quality man and he is the kind of man who makes a woman happy.

Overall, I respect both of them and I think they have had a positive impact and they were good for their country.

But I don't agree with some of the mindsets and philosophies that soak Michelle Obama's *Becoming*.

4 Ways to Beat Covert Disrespect & Aggression Like A Champion

Lucio Buffalmano · 15 March 2019 · Archived copy · Original

Some sneaky players aren't 'in your face aggressive'. They are *covertly* disrespectful, aggressive, and rude.

Their covert aggression may seem 'subtly rude', but it's often as bad as harmful for your status and reputation as any open attack.

While assertiveness may work in some cases, more advanced social techniques are usually superior to come out on top.

We are experts in social and power dynamics, and in this article, you will learn how to handle these covertly rude people and win every time.

Contents

- What's Covert Aggression
- Example of Covert Disrespect
  - #1. Use Humor to Crack a Joke At Their Expense
  - #2. Use Humor to Highlight Their Covert Aggression
  - #3. Encircle Them by Recruiting Bystanders on Your Side
  - #4. Dominate Them Socially
- Why Escalation is Difficult
- SUMMARY

What's Covert Aggression

Covert aggressors or "subtly rude people" make their attacks underhanded.

Maybe a dismissive gesture, a "funny" joke, or the good old eye-roll.

Sometimes you will see subtle rudeness from frenemies (see how to spot frenemies).
But while frenemies often don't even attack you at all and just stew, subtly rude people think they have enough power that they can effectively undermine you.

In the article on mean jokes and underhanded compliments, we explained that the best way of dealing with these people is to "draw them out" and show to them -and to everyone around- that their "jokes" are actually barely veiled meanness.

However, with subtly rude people, it's more obvious they are being rude. So there is less of a need to show everyone what their game is.

But you can't attack them head-on either.
Both because winning without escalation is most often socially superior, and because, since their move is small, it's easy for them to take a step back and make you look like you are overreacting.

Example of Covert Disrespect

To understand what's subtly rude, look at this scene for one minute and see if you spot it:

De Niro is being highly dominant through and through. And the subtly rude moment is when he shields his code from Stiller.

Stiller was already sleeping in the house and he is the official boyfriend of De Niro's daughter in a serious relationship that seems to be going towards a possible marriage.

Given the preconditions, De Niro is rude because his gesture communicates the following:

1. I don't trust you
2. You're not part of this family

Given the situation, it was fair for Stiller to hit back.
But how to do it?
Here are four ideas:

#1. Use Humor to Crack a Joke At Their Expense

Your humor shouldn't be innocent humor or, God forbid, self-

Your humor should even the scores, so this is one of those cases when derisive or "aggressive humor" is in the cards.

An example of derisive humor would be implying that De Niro is a paranoid wacko.

Alternatively, I like a type of humor that pokes fun at De Niro's *move* rather than directly attacking De Niro's personality (which is way more aggressive).

For example:

> **Stiller**: Damn! I was this close from stealing the alarm codes of the house I am already sleeping in

This type of humor makes fun of Jack and the gratuitousness of his move while at the same time showing a superior attitude.
Very powerful.

#2. Use Humor to Highlight Their Covert Aggression

In this case, you would simply shake your head in disapproval and mutter something like:

> **Stiller**: How welcoming

Or:

> **Stiller**: I love you too Jack!

This one is good to show that De Niro was showing strong negative sentiment towards him.

Or:

> **Stiller**: Typical Jack..

This last one is as if to say "typical Jack's dickhead move".

Minimalist humor is great for all situations in which you are not sure what to do and cannot come up with a smart, witty retort.

It's simple and effective:

1. Shake your head in disapproval or disgust

2. Mutter what they did was very low

That's it, very simple. It shows superiority and doesn't allow rudeness to unchecked.

#3. Encircle Them by Recruiting Bystanders on Your Side

If there are people around you can rally the troops on your side and isolate the rude bully.

This technique works best in two situations:

1. You have good standing within the group
2. The bully's move was unsavory

If one of the above is met, then it's relatively easy to get people on your side. And when you get people on your side, you win by default.

In this case, Still could have pulled off an encirclement move by looking at the bystander(s), pointing towards De Niro, and then making a joke or retort.
With just a small tweak, most of the above examples would work in this situation as well.

For example:

> **Stiller**: He really loves me

The moment the bystanders would have laughed, he had scored a social win.

If he wanted to go for a more serious tone, the social equivalent of filing a complaint with his girlfriend or mother-in-law, he could have looked at one of them, shaken his head, and used a minimalist retort.

Chances are that Stiller would have managed to get De Niro's wife or daughter to complain to De Niro about his behavior.
And that would have been a huge power move on Stiller's side.

#4. Dominate Them Socially

The final option for dealing with rude people is to go socially dominant on them.

In the example we are discussing, Stiller could have walked to De Niro and touched him. Either put a hand on his shoulder or pat his back.

Touching someone is very dominant and, in this case, it would have sent a strong message that Stiller does not take sh*i from anybody.

Since walking over and touching De Niro in his own house was going to be a very dominant move, it was paramount for Stiller to take the edge off.

He could have taken the edge off the dominant nonverbal with a friendlier verbal move.
For example:

> **Stiller**: Ahah it's OK Jack, I'm here in friendliness

This one would have rather openly communicated something like "I saw what you did and you don't need to do it because I'm a friendly, trustworthy person".
I personally like this approach a lot.

A more dominant version would have been to say something like this while patting De Niro on his back:

> **Stiller**: It's OK Jack..

This one would have communicated something like: "it's OK Jack, you don't need to be such an ass".

For the right tonality, you can watch this video:

Why Escalation is Difficult

Escalating against subtle rudeness is difficult and socially risky for one main reason: since their move is subtle, an escalation puts the burden on all of you.

You become the one who has to "prove him" wrong and you are the one who is expending more effort.

In Power University, I explain that the person who expends more effort is also the one who is more often socially weaker.
And it would be easier for the rude bully to step back and make it seem their move was nothing. If they decide to use that move, it's easy for them to deny or minimize and counterattack by making you look like you are overreacting and taking things "too personally".

Here is how it could have turned out in that event with a direct escalation:

> **Stiller**: Jack, stop that! Why are you treating me like a thief. I am the boyfriend of your daughter
> **De Niro**: ? What are you talking about
> **Stiller**: The way you're protecting your combination, you are acting as if I were a thief. Did you realize I am already sleeping in this house?
> **De Niro**: I am putting the alarm on as I always do
> **Stiller**: Yes, but you did this and turned your back on me to hide yourself. I'm not a thief Jack
> **De Niro**: You are making things up..

Etc. Etc.
Even if De Niro didn't want to deny his move, he could have easily said it was a natural reflex to hide his password, and Stiller would have indeed looked like he was making a big fuss out of small stuff.

SUMMARY

That's why, my friends, great social skills are not so much about pure dominance but about high social intelligence and social finessing.

As a matter of fact, the higher you go in the social hierarchy, the more the moves become subtle and the more power is conferred to the person who can display more tact and finesse.

Win Bigly: Says More About Character Than Persuasion (Book Review)

Lucio Buffalmano · 18 March 2019 · Archived copy · Original

In *Win Bigly* (2017) Scott Adams chronicles the 2016 US election and analyzes how Donald Trump, a master persuader in his own words, maneuvered and manipulated the media to win the election.

Contents

- About Scott Adams
- Notes
  - Donald Trump's Power Moves
- CONS
- PROS
- Review

About Scott Adams

Scott Adams is the creator of the Dilbert comic strip and turned into a political commentator and, apparently, persuasion expert.

Scott Adams claims to be apolitical, but it doesn't feel so in the slightest.

It feels instead like he's awestruck by Trump -which is not uncommon in the presence of grandiose narcissists and Machiavellians-.
And as time went on, by the 2020 election he shifted into being a Trump supporter / conservative. More than "conservative", some of his tweets sounded more like "conspiracist / MAGA".
Adams was Tweeting incessantly about election fraud, as well as re-tweeting Trump, and once being retweeted, by Trump:

For an analysis on Scott Adams the character, also check out "Decoding The Gurus" podcast:

Notes

Adams leverages several well-known influencing triggers and mentions several famous authors and *popular psychology texts*, including Cialdini's *Influence* and *Pre-suasion*, *Thinking Fast and Slow*, *Predictably Irrational*, *Made to Stick* and Trump's own *The Art of The Deal*.

Here are some of my favorite passages:

We Make Decisions Irrationally & Rationalize Afterwards

We think of ourselves are rational, but we make most of our decisions irrationally and only later back-rationalize to "make sense" of our choices -called indeed "*sense-making*" in psychology-.

High-ground maneuver

When you are under attack, don't answer to the attack, but move the fight to a universal issue that everyone can relate to and agree to.

For example, in response to Antennagate, this is what Steve Jobs said:

> We're not perfect. Phones aren't perfect. We want to make all our users happy.

Jobs acknowledges the mistake, but without apologizing or saying "I'm sorry".
He simply stated a universal truth and then moved to a positive response with which everyone can agree with.

> The Psychology of Political Manipulation

High Ground is Adult Ground

The example he used was particularly good:

> **Hypocrite Accusation Pundit 1**: *Your side didn't do enough to end street violence.*
>
> **Pundit 2**: Well, don't forget that your side failed at it too!

Result: Tie.

The high ground instead agrees and says that they learned a lot from their mistake, they are correcting it and they want to come up with even better solutions.

The high ground takes the adult and proactive role while framing the hypocrite pundit 1 as the child who can only offer complaints and accusations (also read *I'm OK You're OK* for more on child roles).

Tangible Examples Over Abstraction

Tangible, vivid examples are much more effective than complex abstractions and policies.

Trump's "wall" was an example of a strong, tangible policy that everyone could easily grasp and imagine.

Act The Part

Act Like you are already president and people will vote like you already are.

Scott Adams for example says that Trump's jet looked like the Air Force One.
Hillary's plane didn't.

Say Crazy Stuff to Dominate The Media

By using hyperbole and over-the-top, sensationalistic claims, Trump was all over the media.

As a matter of fact, the media came to depend on Trump to sell and make news.
And all his political opponents virtually disappeared.

Sometimes that hyperbole got Trump some bad publicity, but it was overall well worth it.

> Manipulation: Techniques, Strategies, & Ethics

How Scott Adams Leverages Crazy Claims

Scott Adams admits in *Win Bigly* of having used a similar manipulative technique when he said that Trump had a 98% chance of winning.
He didn't know the exact percentage, but he said a very high, highly specific number to get some press about it.

I'm With Her Was Dumb Slogan

I agree with the author that Hillary Clinton's "I'm with her" slogan was very poor.

It doesn't say anything about the people and it doesn't pack any emotional punch.
Most of all, it's very self-referential and all about Hillary.

Basket of Deplorables Loses Bigly

The author says that Trump profited handsomely from Hillary's gaffe of "basket of deplorables".

Trump framed it as an example of contempt. And that was the perfect move, as the author reminds us that contempt is one of the nastiest emotions and the biggest predictor of divorce.

Strategic Ambiguity

Strategic ambiguity intentionally leaves out parts of the message that could be objectable.
People fill in the gaps with whatever they feel and like, thus agreeing with you.

My Note:
This is a double-edged sword because people who don't like you will fill the gaps with negative ideas. And you fail the opportunity of possibly winning over some of them.

Donald Trump's Power Moves

I have written extensively on Trump's power moves.
You can read more here, including several videos on his tactics:

- Trump's debate tactics
- Trump's debate techniques
- Trump obliterates Macron

Donald Trump mostly defied Hillary through sheer dominance and by imposing his frame.

CONS

There is much that made me disagree with Win Bigly, including:

- **Continuous bragging about "calling the future"**

Win Bigly is a big parade of the author's ability to "predict the future". A couple of times he said that his predictions were so good that they ended up spooking people.

The author quotes *A Random Walk Down Wall Street* and Nassim Taleb's *The Black Swan*, but *Win Bigly* didn't seem to take any lesson learned from Taleb.
Especially from *Fooled by Randomness*. Win Bigly indeed seems to me to have been very much fooled by randomness.

And then, of course: anyone who brags about predicting the future tends to lose authority.

- **"My rational confidence on a Trump win"**

That's a quote straight from Win Bigly.Anyone who calls a prediction about the future, without any data, "rational" is *not* being rational.
Even if the author believed Trump was the best influencer ever, that does *not* assure a victory. And does not warrant the label "rational" on a prediction.

- **Reality Distortion Field & Investment**

Win Bigly goes into stock investment recommendations as well, saying the following:

> If the CEO of a mass public company is told to have a "reality distortion field", keep an eye on that company.

Keep an eye on that company" could be said of any oddball CEO. Or any CEO really.
Of course, the author-backed his claim with the usual correlational evidence of his own Apple's investment (a meaningless, non-evidence).

- **Lots of forced explanations**

Win Bigly seeks to find reasons for Trump's win through his persuasion strategies.
But as Tony Robbins says, you find what you look for.
And the author ends up finding a bit too many and a bit too improbable explanations.
One of them is that Trump is so addictive because he's unpredictable.

- **Sometimes feels overly braggart**

Win Bigly at times feels very self-promotional.

A parade of the author's purported superior knowledge, qualifications, huge Twitter following, big-ticket speaking gigs, and dating success (yes, even that one).

At a certain point, the author even suggests that Trump and Cialdini might have been swayed by his writing.
I don't know if that were the case… But I still don't think it's a good reason to brag.

See here: how to self-promote effectively, and how to brag effectively.

- **Trump wins at negotiation because people expect him to do well.**

Win Bigly says that Trump does well at negotiation because people expect him to do well.

And to me, this sounded like another example of a forced case of over-explanation.

The fact that Trump might as well tell people they need to be careful and raise their defensive wall.
And Trump didn't do so well negotiating with Democrats and North Korea after all…

- **New Yorker personality VS Californian personality**

Win Bigly says that Californians don't understand Trump because they have a different sense of humor.

> My claim, is that it's easier for a New Yorker to understand another New Yorker than it is for a Californian to understand a New Yorker

That might be true, but the influence of that on understanding someone's psychology is so minimal that it shouldn't be even mentioned.

The author then delves deeper into the different "New Yorker" and "Californian" personalities, which didn't add much value.

- **"Trained Persuaders" and "Master Persuaders"**

The author says that a "trained persuader" can easily recognize another persuader.
Obviously, he counts himself in the field of "trained persuaders", albeit all that we here are a lot of references to some hypnotist training and a lot of circular references to a few popular persuasion books.

- **The author detects lies and illnesses**

The author says that he uses hypnotist tells to detect lies with scary accuracy.

Most experts agree you can't detect lies with "scary accuracy", and tests show that "expert lie detectors" are barely any better than non-experts and are wrong almost as often as they are right (Also, read: *What EveryBODY is Saying* and *The Like Switch* by professional interrogators).

The author also says he could detect Clinton was ill.

That all sounded ludicrous to me.

- **Why we are a simulation**

The author says we are probably a simulation because our cognitive biases explain how the simulation can save computing resources.
That failed to convince me.

PROS

As you can read by the cons and the review, I cannot give thumbs up to Win Bigly.
However, there are plenty of good and even a few great ideas here.

I was particularly and positively impressed by the analysis of the high ground technique and the adult VS child role.

Review

There are parts I enjoyed from *Win Bigly*, but it lacks depth, and it's not the richest resource on persuasion.

The more I listened, the less I could take it seriously because the author's bias and cheerleading don't support a balanced analysis.

Adams also seems fooled by randomness at times, investing Trump's moves with pre-planned rationality.

And, cherry on the pie, Adams was also off the mark.
The author brags about his predictions. But he predicted a "win by a landslide". And in terms of total counts, Trump got fewer votes… By a good margin.

Yes! 50 Scientifically Proven... Summary & Review

Lucio Buffalmano · 19 March 2019 · Archived copy · Original

"*Yes!: 50 Scientifically Proven Ways to Be Persuasive*" introduces 50 ways that you can persuade and influence others, based on research and studies.

Contents

- Summary
- Real-Life Applications
- CONS
- Review

Summary

About the Author:
Noah Goldstein is an assistant professor at the University of Chicago Graduate School of Business. He earned a Ph.D. in psychology under Robert Cialdini at Arizona State University.

1. Give the Impression of High Demand

What can cause your sales to skyrocket?
Sometimes, it can be simply changing three simple words.

Going from:

> Call now. Operators are waiting

to:

> If operators are busy, please try again.

The first sentence gave the feeling that operators were waiting around fiddling their thumbs.
The second one gave the impression of a hot product that people wanted to buy.

2. Align Desired Behavior to Similarities

When you want to influence behavior, you should show how similar people act like you want them to act.

3. Show Positive Behavior, Not Negative One

Never show how people behave badly.
That doesn't lead people to want to be good and unique, but it leads them to think that many behave badly and, hence, so can they.

In short: don't point fingers at people behaving badly, but draw attention to the many who are behaving well.

4. Provide Fewer Choices

Too many options can easily lead to decision paralysis, which in turn leads to no sales (also read: The Paradox of Choice).
The exceptions are customers who already know what they want and those who enjoy the "picking experience".

5. State the Value of Free Products

If you are giving something for free or as an add-on bonus, you should always state its value.
If you don't, people will feel like it's worthless.

6. Place an Expensive Option for Contrast

Placing an expensive product in your product line will help increase the sales of your less expensive ones.

Try to place the product you want to sell the most as the "middle ground" option.

7. Fear ONLY Works With CTA

Fear only sells if people can do something about it and if there is a clear call to action to take.

Otherwise, people will block the negative message.

8. Make Them Feel Your Gift Is "Just For Them"

Waiters giving 1 or more mints at the end of customers' lunches see little difference in tips.

But if the waiter gives one mint and then turns around and adds one more, tips increase by 23%.
It's because it feels more special and "just for them".

9. Used "I"ve Already Done This" Reciprocation

If you say:

> I have already done this. Can you also do this?

You get much better results (45%) than if you said this:

> If you do this, I will match it and do it too

10. Favors Increase for Giver, Diminish for Receiver

Over time the weight of favors increases in the giver's mind and decreases in the receiver's mind.

If you want something in exchange for a favor then, it's best to ask for it right away.
Cialdini also takes a leaf out of his previous book Influence and says that it's best to preface your favor by saying:

> I know you will do the same in the future

If you need to ask for a favor back far away in the future you can -tactfully please!- help them relive the moment.
For example, you can ask them:

> Remember when you had that issue and I helped you out of it? It was quite helpful for your back then, right?

My Note:
I need to stress "tactfully" again. Do this wrong and people will resent you for making them feel indebted and trying to manipulate them.

11. Get a Small Commitment First

People are much more likely to comply with your request if they have agreed to a smaller previous request.

There are plenty of examples, including the famous "drive carefully billboard".

Here is another one for you.
A restaurant decreased their no-show reservations from 30% to 10% by changing “please call if you have to cancel” to:

> Will you please call if you have to cancel?

When people answered “yes”, that represented a micro-commitment.
Commitments work best if they are:

- **Voluntary** (you didn’t push them)
- **Active** (ie.: they say it and confirm it)
- **Public** (there are witnesses)
- **In Writing**

For example, you get more commitment if you make people fill their own forms as that makes them active participants and feels like a written confirmation.

12. Label People With The Behavior You Want

If you label people with a trait that you want them to show, they are more likely to live up to that trait.

This is something that Dale Carnegie also says in How to Win Friends and Influence People.

13. Make People Feel They’re Being Consistent

If you want people to change their behavior, show them how the change is consistent with who they are, what they already believe, and what they already do.

Keep in mind not to make people feel like they did a mistake in the past! That would likely push them on the defensive instead.
But tell them that with the information they had back then it was a smart choice. This way, you help them save face and you help them move out of their old habits.

14. People Like You More If They Do You a Favor

People will like you more if *they* do a favor to you, as compared to if you do a favor to them.

15. Add “Anything Will Help” To Your Requests

Adding “even a penny will help” increased donations both in terms of average donation size and in terms of the percentage of people who donated.

Some other applications:

> Can you just give me a little clarity

Or:

> Just a brief chat would make a huge difference

16. Set Your Sales PriceLow

The lower you start, the more people you get to start bidding. That will add competition fuel to the fire and increase social proof (ie.: “lots of people want the item, then it must be good”).

The exception is when the market is illiquid and there are a few people interested people.

17. Let Others Say Good Things About You

Credentials matter and are crucial.
But don't toot your own horn: have someone else say great things about you.

Also, don't forget to hang credentials on the wall and put them in your signature.

18. Make People Feel You Heard 'Em Before You Reject 'Em

"*Yes!: 50 Scientifically Proven Ways to Be Persuasive*" also gets into idea generation, saying that having many people contribute often leads to better results.

For better efficiency, there should be one final person to decide and if he must reject some contributions, he should make the rejected person know that his opinions and ideas were appreciated and considered.

19. Red Team Idea is Bad

Tim Ferris, an author of "*The 4-Hour Work Week*", touts the idea of a "red team", such as to designate a person or team with the sole scope of tearing ideas apart to show their weakness.

But Cialdini says that people usually don't take the red team seriously because "it's their job to find faults". And after they are done with the exercise, they feel like they have "considered everything there was to consider".

The best solution is a culture where dissension and criticism are welcome. Also read: *Principles* by Rai Dalio.

20. Teach (& Learn) The Correct Way

People learn by going through the correct way of doing things, not by looking at the wrong way of doing things.

21. Show Strategic Weakness to Gain Trust

People will trust you more when you show your credentials and your great work if you first showed weakness or vulnerability.

Of course, the flaw should be minor and non-essential (also read: Vulnerability is NOT Power).

22. Present Both Sides

This is similar to the above, but it's so deep that it deserves its own entry.

When you have a positive and a negative, you get the best results by presenting them both and highlighting the positive.

For example, this one, of course, ad terrible results:

> Our restaurant has little space

This one had better results:

> Our restaurant is very cozy

But this one has the best results of them all:

> There's little space, but that makes the atmosphere cozy

That means that saying something like:

> Our product is more expensive, but it's the most beautiful on the market

Works better than simply saying "our product is the most beautiful on the market".

23. Take the Blame to Gain Trust

When you take the blame, even when you had little responsibility, people trust you more going forward because you show more control over your environment.

24. We Like What Feels Similar To Us

We like things and people who are similar to us. From the date of birth to the zodiac sign, to names that sound similar to ours.

Mirroring and repeating people's use of words and expressions makes us feel more similar and increases trust and liking.

25. Make Your Product / Information Feel Exclusive

People respond much better when they feel like the information you share is not public and/or is only known by you.

That makes people feel more exclusive and like they can get an edge over everyone else.

26. People Respond Better to Loss Than Gain

Make people feel like they already have something and they will lose it -rather than what they don't have yet but might gain in the future-.

27. Use "Because" to Make People Feel You Have Good Reasons

People often answer to keywords rather than the full sentence.

When you use the word "because" you make people feel like you have good reasons for asking what you're asking (the famous experiment of cutting the line to make copies).

28. The Easier You Think of Something, The Better It Feels

If you ask people to think of 10 great traits of a Ferrari and they struggle to think of 10, they will feel like Ferrari is not that great.

If you tell them to think of 3 traits and they come up with them very quickly, they will rate the Ferrari higher.

For the same reason, simple names are better and more compelling than complicated or long ones.
Stocks with simpler names and tickers outperformed the ones with more complicated names.

Sentences that rhyme are also more convincing.

29. Use Comparison to Make Your Product Seem Better

Perceptions are relative.
If you anchor a huge price and then come down to a price that is still above the market value, it will seem much fairer and smaller.

That works even for unrelated items.

A hot-tub salesman increased sales by 500% when he said that customers report having a hot tub is like having an extra room. He then asked prospects to imagine how much a new room would cost.

Then, by comparison, the hot tub would seem like a huge bargain.

30. Give a Head Start

The completion rate is much higher when people feel like they had a head start.

That's why it's a good idea to start loyalty programs by pre-filling the first couple of slots and making it seem like the customers are getting a free head start.

31. Give "Aha Moments"

People feel much better about a product if they can feel better about themselves.

Before we said you should choose simple names.
But if you can choose a complicated name and customers will later realize how that name applies, it will give them an "aha moment" that makes them feel good about themselves and, by reflection, about the product.

32. Mirrors Are Drivers for Morality

When people can see themselves, they tend to act more morally and steal less.
Placing a mirror near a tiller would reduce customers' theft. A pair of painted eyes also help as it unconsciously reminds people they might be watched.

33. Target Your Message to The Culture

The US and some Western countries respond better to individualistic messages such as "this product will make you great", while more collectivist cultures respond better to messages such as "this product will make your family/friends happy".

Real-Life Applications

- **Don't Make People Feel Wrong**

What a huge concept to make us better influencers and higher-quality individuals: never make people feel like they made a mistake or they get defensive.
Instead, tell them that their decision, based on the information they had, was good and rational.

- **Don't Negotiate When You're Sad, Tired, or Distracted**

When you are sad you are worse at gauging the magnitude of numbers.
And when you're sleepy or distracted (such as when you're multitasking), you're more gullible and tend to believe more what you read and hear.

Thanks to Ali for this note.

- **Give Coffe When You Got Good Case**

If you have a good case to make, you can give people coffee. That makes them more attentive to what you've got to say and your good reasoning will stand out.

- **Build Relationships Before Negotiations**

Making friends and building good relationships before negotiations have been proven to make negotiations easier and smoother.

CONS

- **Manipulation doesn't work?**

The authors say that manipulation won't work because people will learn and the knowledge will spread.
And your long-term results will suffer.

I wish that were true, but there are plenty of times and situations where manipulation works well.

> Manipulation: Techniques, Strategies, & Ethics

- **No clustering of principles**

"*50 Scientifically Proven Ways to Be Persuasive*" is a wonderful list, but many of these 50 Proven Ways to Be Persuasive could have been clustered for ease of understanding (and ease of checking them later again).

Well, in this "Yes! Summary" I've done the clustering work for you :).

Review

Yes!: 50 Scientifically Proven Ways to Be Persuasive is a high-quality collection of persuasive and influencing techniques.

It's all based on research -albeit it doesn't discuss or delve deeper into the research- and provides plenty of examples of how that research can apply to your life and persuasion efforts.

Yes!: 50 Scientifically Proven Ways to Be Persuasive is one of the best books in its genre.
I highly recommend it to anyone who's interested in psychology and persuasion.

Also, read:

- The best books to persuade anyone
- The best books to manipulate (or defend against manipulation)

You Can Read Anyone: Summary & Review

Lucio Buffalmano · 19 March 2019 · Archived copy · Original

In *You Can Read Anyone* David Lieberman teaches how to read people and understand what they are thinking and when and if they are hiding anything.

Contents

- Summary
- CONS
- PROS
- Review

Summary

These are my main takeaways from "*You Can Read Anyone*":

Find Out if Someone's Lying

To find out if someone is lying you can't ask directly or they will go on the defensive and clam up.

Instead, you want to ask them if they can help you with something. For example, ask if they can help you find out who's been stealing from the office.
If they ask questions, offer advice, and help. it's a good sign.
If they become uneasy and change the subject, you can almost rest assured he's guilty.

My Note: This is an indicator, but it won't give you a final answer
This is an indicator *at best*.
The best liars will ask questions and pretend to help as well.

People Use "I" When Feeling Confident

When we are confident about something we tend to use the pronoun "I", "we" or "us".
When we want to distance ourselves, we don't take ownership.

If your boss says about your idea "I like it", it's a good sign. If they say "it's nice", you can guess they are less enthusiastic about it.

How to Find Out If Someone's A Good Friend

How do you find out if someone's a friend or a frenemy?

Tell them something important which has happened in your life.
If they don't ask about it later on, it's a bad sign. David Lieberman also says you can drop hints to help them remind and give them a chance to ask.

My Note: Great idea. Not just for friends actually, but to recognize socially intelligent and/or supportive people
I think this is a good idea: a good friend should care and ask. However, it's not necessarily a measure of friends but also a measure of emotional intelligence.

Also read: signs of frenemies.

Self-Esteem and Ego

The analysis of ego and self-esteem was one of my favorite parts of the book.

- Diminished ego & high self-esteem = humble person
- Large ego & low self-esteem = arrogant

The most dangerous to others are huge egos and low self-esteem (direct negativity towards others).
The most dangerous to him is dented ego and low self-esteem (more inclined to direct negativity inward).

The author says that one cannot have high self-esteem and a large ego.

CONS

- **Big, Unrealistic Claims**

I'm not a big fan of how Liberman picks his books' titles.
And the parameter of choice seems to be "the bigger the claim, the better the title" :).
His previous book for example was called "*How to Make Someone Fall In Love With You in 90 Minutes or Less*".

And in this book, he says:

> This technique virtually guarantees that you can find out within minutes if someone has something to hide

Wait a second… Guarantees?? BS!

PROS

- Good analysis of ego and self-esteem and how they intersect with each other
- Loved the tip on how to differentiate between good and supportive friends

Review

I'm not a big fan of the bombastic title, but there are a couple of good ideas here there.

Also, check out:

- The best books to understand people

- The best books to influence people

Persuasive Selling and Power Negotiation: Summary & Review

Lucio Buffalmano · 19 March 2019 · Archived copy · Original

Persuasive Selling and Power Negotiation is a mix of different authors and coaches sharing knowledge on wisdom on sales, negotiation, and interpersonal skills.

I found some parts to be great, some parts to be a repetition of what I had already heard, and some parts to be rather underwhelming.

Contents

- Summary
  - Quotes
- Real-Life Applications
- CONS
- PROS
- Review

Summary

There are several different takes and topics here, including some on dark psychology, “dark seduction” (what’s that?), and manipulation.

However, I haven’t found most parts to be very good, and some content I have already reviewed (Brian Tracy, and *Power Negotiating* for example).

So I will only list the good and new ideas here.

Questions to Sell

You never convince people: they convince themselves.

To know how to present your product, you need to know what they want. Questions are (car as an example)

- How would you know you have picked the right car
- What is it that tells you this is a good car (you, someone else, or data?)
- How do you this car has X (what sensory style he uses and what is he looking for)

Personality Styles

This section talks about introverts, extroverts, and ambiverts.
About pic pictures of people, visionaries, and detail-oriented ones. And planners and spontaneous ones.

Interesting, but no earth-shattering new information.

Frame Your Complaint in Positive Communication

Here is an interesting example of how to frame your complaint:

> You know, I have been coming here for the past 3 years. I have spent hundreds of dollars on your services and I’ve always been happy.
> What can you do, so that you can keep my business

The author says that the way you frame, it shows what a great client you've been.

My Note:
I really like the approach, but I think it might be a bit too aggressive to start it.
I would remove the "so you can keep my business part". At least in the beginning. Then, if you still don't get any compliance, add that part.

Don't Ask "*What Could You Pay*"

If somebody cannot repay in full or refuses your price, don't ask "what could you pay" but ask:

> What price did you have in mind

That way, you can still demand more afterward. With "what could you pay", they take a stronger stance and they look like they were lying if they move from there.

Be Willing to Walkaway

One of the female authors explains how she got married thanks to her willingness to walk away.

She told her boyfriend:

> I love and I think we'll make for such a great couple. But marry me, or I must walk.
> If you change your mind, come look me up, I will always love you.

Then she broke up and he came around a few weeks later.

Characters and Skills Form the Basis of Influence

God, I could not agree more.
Stamp this one onto your forehead: character and skills form the basis of influence.

It's not tricks, specific words, NLP, or anything.
It's how much people like you and respect you. And that's characters and skills.

People who buy from you are looking at your character and wondering:

> Is this a person I can trust?

When you want to influence, you want to ask yourself how you can improve your character and your basic skills.

The author also mentions:

- Communication skills (broad vocabulary, enunciation..)

Quotes

> In life you can earn a little or you can earn a lot. The choice is yours

> You never know the final price until you walk away

> The answer is always no when you don't ask

Real-Life Applications

- **Invest in great business cards**

People assume that your company is as solid as your business cards. Don't go cheap on business cards: print on good and thick papers.

- **Don't nod in negotiations**

Otherwise, it seems like you are agreeing and when you demand more or refuse the deal you will look like a fake, conniving person.

- **Ask the prospect what they think your house is worth**

I like this one.
I scared too many prospects away with starting high for my garage and they never came back. I should have used a different technique and asked them first.

CONS

- **Big mix**

Lots of different ideas, opinions, and topics.
Too different, in my opinion.

- **Varying Quality**

Some parts had me nodding thinking "this is genius". And some more were highly disappointing.

PROS

There are some great tracks.

Good negotiations tips, albeit many are summaries of other authors,

Review

I'm not a big fan of these mixed products. 40% of this information, I had already listened to.

And the variance is too big: you never know whether you should stop listening or whether the next author will be good. And that is a time sink that I don't appreciate.

Propaganda: Is This Old Classic Still Relevant Today?

Lucio Buffalmano · 20 March 2019 · Archived copy · Original

Propaganda (1928) is a classic book on persuasion and manipulation written by Edward Bernays in 1928. Bernays proposes a new take on the Machiavellian prince "constrained" by democratic rule. The prince, unable to resort to violence as easily as in the past, must today rely more on Machiavellian communication and propaganda. Luckily for him, it can be equally effective.

Takeaways

- Propaganda includes all the deliberate activities and communication efforts to influence people's minds and opinions
- Democracy and mass literacy requires the use of propaganda by the elites to channel the masses in the right direction
- Most people are already influenced and swayed by propaganda without even realizing it
- Businesses play the propaganda game the same way politicians do (ie.: don't trust their philanthropic gestures, which might be PR)

How Propaganda Works

About the Author:
Edward L. Bernays wrote *Propaganda* in 1928, mixing social science, the psychology of manipulation, and public relations.

What Is Propaganda?

Bernays defines propaganda as such:

> Modern propaganda is a consistent, enduring effort to create or shape events to influence the relations of the public to an enterprise, idea or group.

The Rich Men Use Propaganda Against The Poor

Universal suffrage and education are a threat to the aristocracy, the bourgeoisie, and the people with power.

The minority protected their interest with the use of mass media. With carefully planned and crafted communication, they get the common people to support their policies and ideas.

Bernays says:

> Propaganda is the executive arm of the invisible government.

This is something that modern communication experts also agreed upon. See for example:

- **Don't Think of An Elephant**: how the rich frame political issues to win the poor people's support

1. Universal Literacy Didn't Liberate People But Turned Them Into Consumers

I loved this paragraph:

> Universal literacy was supposed to educate the common man to control his environment. Once he could read and write he would have a mind fit to rule.
> So ran the democratic doctrine.
> But instead of a mind, universal literacy has given him rubber stamps inked with advertising slogans, (..) trivialities of the tabloids and the platitudes of history, but quite innocent of original thought.

This is something that some modern political analysts and commentators also agreed on.
See for example:

- **No Logo**: how the big brands manipulate consumers

2. People Are Irrational Creatures Who Think They're Rational

I was impressed to read what a good grasp the author had of psychology and the human mind.
This passage, for example, had me thinking that Bernays was way ahead of his time (modified for brevity):

> A man sits in his office deciding what stocks to buy, believing his purchases is rational.
> In actual fact his judgment is a mélange of impressions stamped on his mind by outside influences which unconsciously control his thought.
> He buys a certain railroad stock because it was in the headlines yesterday and hence it is the one which comes most prominently to his mind; because he a pleasant recollection of a good dinner on one of its fast trains; because it has a liberal labor policy, a reputation for honesty; because he has been told that J. P. Morgan owns some of its shares.

3. Authority Figures Make Propaganda Way More Effective

This paragraph made me think Edward Bernays was a genius:

> The salesmanship would reiterate innumerable times in full-page advertisements: “Eat more bacon. Eat bacon because it is cheap, because it is good, because it gives you reserve energy.”
> The newer salesmanship, understanding the group structure of society and principles of mass psychology, would first ask: “Who is it that influences the eating habits of the world?”
> The answer, obviously, is: “The physicians.”
> The new salesman will then suggest to physicians to say publicly that it is wholesome to eat bacon.

4. Politicians Use Propaganda to Sway Gullible Masses

The masses don’t have any great wisdom.
They follow their leaders and those who are better placed to influence and persuade them.

Writes Bernays:

> Given our present political conditions under which every office seeker must cater to the vote of the masses, the only means by which the born leader can lead is the expert use of propaganda.

Also, read:

- **How politicians manipulate people**

> Manipulation: Techniques, Strategies, & Ethics

5. ... And Big Business Started Doing The Same

Edward Bernays says that businesses have been employing propaganda tactics more and more.

And big businessmen are more and more performing on the public stage not out of genuine beliefs, but to drive sales.

He says (edited for brevity):

> The successful businessman today apes the politician.
> He has adopted the glitter and the ballyhoo of the campaign with sideshow, annual dinners that are a compendium of speeches, flags, stateliness, and pseudo-democracy slightly tinged with paternalism.

Also see:

- **The psychology of corporate manipulation**

6. Corporations Manipulate Public & Employees

Propaganda might as well be the very first great career advice text.

Edward Bernays was way ahead in his understanding of the Machiavellian games that HR and bosses play:

> On occasion he doles out honors to employees, much as the republic of classic times rewarded its worthy citizens.
> But these are merely the sideshows, the drums, of big business, by which it builds up an image of public service, and of honorary service. (..) Business stimulates loyal enthusiasms on the part of directors, the workers, the stockholders and the consumer public.
> It is one of the methods by which big business performs its function of making and selling products to the

> public.
> (But) The real work and campaign of business consists of intensive study of the public, the manufacture of products based on this study, and exhaustive use of every means of reaching the public.

Yep, couldn't agree more.

See again a modern analysis of these same principles:

- **How corporate leaders manipulate employees**

7. It's Not About *Pleasing* The Public But About *Swaying* It

There are some parts of Propaganda that feel so prescient and so befitting of Trump's administration that you might think it was written today:

> The important thing for the statesman of our age is not so much to know how to *please* the public, but to know how to *sway* the public.
> In theory, this education might be done by means of learned pamphlets explaining the intricacies of public questions. In actual fact, it can be done only by meeting the conditions of the public mind, by creating circumstances which set up trains of thought, by dramatizing personalities, by establishing contact with the group leaders who control the opinions of the publics.

8. How Politicians Use Propaganda

Imagine that a politician wants to lower tariffs.

A poor way of swaying the public would be to tell people to vote for him because he'll lower tariffs, and that decreases prices for everyone.

This is how a proper propagandist would approach the issue instead:

- Don't tell people low tariffs are good but create conditions that make his point dramatic and self-evident
- Stage a low-tariff exhibition simultaneously in twenty cities
- Have prominent men and women open the exhibitions
- Organize groups whose interests are especially affected by the high cost of living to spread the word
- Dramatize the issue (ie.: have prominent men boycott woolen clothes and go to important functions in cotton suits until the wool import fee was reduced)
- Let social workers speak on how the high cost of wool endangers the health of the poor in winter

Basically, by the time the propagandist is making his appeal, the public is already primed and willing to accept his message.

9. Technocratic Governments Systematically Manipulate People

Propaganda ends with what looks a lot like an endorsement for a technical, technocratic government that governs the masses with propaganda.

Basically, propaganda in Bernays's view becomes a way for the enlightened elite to channel the (not-so-enlightened) masses in the right direction.

I think there would be many benefits to such a government, indeed.
Our task would be to make sure that those elites are indeed enlightened.

And that's also one of the pillars of The Power Moves: we need fundamentally good people who know how to be bad to reach the elites of power.

Limitations

As much as I loved Propaganda, there are quite a few cons you should be aware of:

Simplistic View of "Invisible People of Power"

Propaganda talks about the "invisible people with power" as if they were a homogenous group with shared interests.

But they're not.
Sure: *some* interests might coincide, like keeping taxes for the rich low (or providing a way to escape them).

But there are *plenty* of issues where the rich and powerful stand on opposing grounds.

Unscientific, Random Claims Dressed as Obvious Truths

Talking about the few people who direct the propaganda, Edward Bernays writes:

> But it is well known that many of these leaders are themselves led, sometimes by persons whose names are known to few.

Have you noticed what any critical reviewer would object to there?
It's his statement of "it is well known".

This is the same format you find in Think and Grow Rich by the way.

Skips The Psychology of Persuasion

Propaganda makes big claims of how people exercise little will and instead obey orders of marketers and PR barons.

And it also goes into detail on how the propaganda is prepared.

Yet, it's rather light on the details of how this process occurs in the common people's mind.
Paradoxically, this might actually be an advantage. Coming up with some unscientific mental processes would have only undermined his work.

PROS

I loved Propaganda.
Among the pros:

- **Big Claims… But Also Awareness of The Limitations**

I highly appreciate how the author is fully aware, and clearly communicates, that propaganda is not an exact science.
He says:

> Scientific accuracy of results is not to be expected, because many of the elements of the situation must always be beyond his control.
> Propaganda, like economics and sociology, can never be an exact science for the reason that its subject-matter, like theirs, deals with human beings.

- **Intelligent Analysis**

I repeat myself, but Bernays was so ahead of his time that he is still ahead of many modern "communication experts".

- **Deep, Evergreen Propaganda Principles**

Some principles, like ditching facts for propaganda, are a timeless constant that worked 100 years ago as much as they will work in 100 and 1.000 years.

- **Technocratic Government: Propaganda For Good**

I agree that democracy is far from the best form of government, and it can potentially get even more dangerous.

Propaganda can be used for good or for evil.
And what we need is an enlightened leadership that uses propaganda for the best interest of humankind.

Review

Propaganda is a genius work for its time, and some of its principles remain valid. However, compared to more modern work, it lacks a century of progress in both scientific research and power dynamics insights.

One may say *Propaganda* is to persuasion and manipulation like *The Prince* is to power and power dynamics.

I am astonished at how much wisdom is scattered in this classic of persuasion and manipulation.
Part of the value is that Bernays is an intelligent and power-aware man, and he speaks about high-level truth, rather than specific persuasion techniques.

I place Propaganda at the same level as *The Prince* by Machiavelli: a classic on how to be bad, which can be used for good.

I also tend to agree with him that democracy presents some limitations and that enlightened leaders who can sway the masses with intelligent communication and propaganda can also best position themselves to serve the interests of those same masses.

This had long predated the birth of the more recent psychological movement called “Nudge Theory“, rebranded by Richard Thaler after his book “Nudge“.

The only question we must ask is: will leaders who adopt nudge theory and propaganda be enlightened leaders who will benefit the greater good, instead of themselves?

Finally though, you must be aware of the limitations: some claims are unscientific at best, and it’s not meant to be a how-to on how to influence, persuade, or sell.

See:

- Best books on **how manipulators influence others**
- Best books on **how to persuade people**

Propaganda Book Summary: 9 Rules of Mind Control

Huge classic with wisdom that doesn't age. The author drops knowledge like he's 200 years ahead of his time.

What Would Machiavelli Do? Summary & Review

Lucio Buffalmano · 20 March 2019 · Archived copy · Original

What Would Machiavelli Do is a satire on cut-throat business operations, selfish attitudes, and the pursuit of power with complete, total amorality.

Contents

- Summary
  - Machiavellian Mindsets
- Review

Summary

Stanley Bing says that *The Prince* is great, but it's aged and you wouldn't understand it anyway because many examples relate to Machiavelli's historical circumstances.

So, he takes the most famous political strategist in history and translates his teachings to today's world of business, power, and intrigue.

What Would Machiavelli Do, In Short

There are a lot of chapters, I will pick some of the best ones:

1. He would be unpredictable, and thus gain the advantage
2. He would be, for the most part, a paranoid freak
3. He would always be at war
4. He would cultivate a few well-loved enemies
5. He would have a couple of good friends, too
6. He would think BIG
7. He would move forward like a great shark, eating as he goes
8. He would fire his own mother, if necessary
9. He would make a virtue out of his obnoxiousness
10. He would be satisfied with nobody but himself
11. He would embrace his own madness
12. He would do what he feels like doing, you idiot
13. He would say what he felt like saying
14. He would delegate all the crummy tasks, except the ones he enjoys
15. He wouldn't exactly seek the company of ass-kissers and bimbos, but he wouldn't reject them out of hand, either
16. He would respond poorly to criticism
17. He would carry a grudge until the extinction of the cockroach
18. He would lie when it was necessary
19. He would be proud of his cruelty and see it as strength
20. He would kick ass and take names
21. He would torture people until they were only too happy to destroy themselves
22. He would feast on other people's discord
23. He would be loyal to the people who could put up with all this

24. He would screw with people's weekends, wedding plans, open-heart surgery . . . .
25. He would realize that loving yourself means never having to say you're sorry
26. He would scream at people a lot
27. He would establish and maintain a psychotic level of control
28. He would follow the money, honey
29. He wouldn't be afraid to sling that bullshit
30. He would never retire

What People Who Refuse Machiavellianism Do

Sure, there are plenty of people who will reject the Machiavellian way of life.
But here is what they do, according to the author:

> They try to be decent.
> They view other people as free individuals who have a right to live their own lives. They are embarrassed by power and greed and manipulation.
> In short, they find their own little cubbyhole and crawl into it.
> These are the men and women whom you see on the train or bus or subway every morning in their humdrum designer knockoffs, eating a dry little muffin from a brown paper bag and reading, confused and dejected, about the next Internet millionaire.

LOL, this might be satire, but it's also scathingly… Sad and true at the same time.

It reminded me of the beginning of Goodfellas:

The other people instead, those who travel business class, own jet or… Don't move at all when they want, the real movers and shakers, are different.
Because they ask themselves "*What Would Machiavelli Do*?".

On Paranoia

> **Why not assuming everyone is against you? It's more rational than believing they're on your side**

On Being At War

Make a list of your enemies.
Says Stanley:

> True Machiavellians who are serious about their hatreds as well as their loves, like Mr. Nixon, have a list.

You must keep your list relatively short though. Only 5 top enemies max or you're in trouble.

Nurture your rage but don't let it take over.
Business wars should be based on business, not just ego. And when business dictates it, it might be time to wage war against a friend, too.

> **To win the war, pick the terrain. Location, location, location**

Are You Thinking Like Machiavelli?

Here is a quick test to assess your Machiavellianism:

If I had a boat, it would be . . .

1. A perfect jewel
2. Very, very big— huge really
3. The biggest boat in the whole world
4. I have no idea, but it would be bigger than yours.

I believe other people . . .

1. Should do what I want them to do
2. Should fall down and kiss my feet
3. Should lie down in my path, so I can walk on them
4. There are other people?

Cut Expenses In This Order

1. Consultants: They expensively plug gaps that should be filled by cheap stuff
2. Very old people: They're slower, don't relate to the Internet very well, and can't drink as much as they should
3. Very young people: They're way too speedy and ambitious, won't shut up about the Internet, and don't drink as much as they should

Fire On Paper Whenever You Can

Especially if you're a beginner Machiavellian, you might still have way too much heart, ethics, and values getting in the way.
Fire on paper whenever you can or send someone else to deliver the bad news.

In the words of the author:

> But as long as you have other people to deliver the bad news to those who have to hear it in person, this part of being a first-class prince is no big whoop. Relax. You'll live longer.

Gender Inequalities

The author says that many women are still lagging behind men in business because they've had more trouble embracing the Machiavellian spirit.

He says:

> Too many are like Sherry Lansing of Paramount, who has the reputation of being "the nicest No in Hollywood."
> Who needs that kind of reputation? How many men would be proud of it? The Dalai Lama, maybe. But maybe not. I hear he can get really cranky when they screw up his reservation at Spago.

On Smart Women Using Sex

> She was lousy at her job, but her job wasn't her job. Her job was Larry.

The Traits of a True Machiavelli

- **Narcissism**: Until you learn to view other people solely as a function of your needs, you will be a short hitter
- **Business Narcissism**: So what if they have a vacation? You need them here. Unless you're determined to be a

second-rate wimp, you're going to need to insist your needs are met before theirs are. They won't like it. But who says they have to like it?

- **Greed**: A limited desire is a cap on your personal power. You don't have to want everything, but you have to want all
- **Lies**: You can separate the amateurs from the big boys when they get caught. Serious players who are busted for what other people might consider a lie feel no shame. They were just doing what Machiavelli would do
- **Self-Justification**: "Chain Saw" Dunlap still feels great about himself, even though he's probably the only one who does.
  Until you can muster this level of self-justification, you will remain the subservient stooge you are.

Pit People Against Each Other

There are two techniques to pit people against each other:

1. Drop projects and support by making it clear that someone else's priority has killed their chances
2. Praise people publicly in a way that hurts others

Find Your Selfish Inner Infant

Do you know all those self-help books telling you to find the curiosity and spirit of your infancy?
Well, that's the real infant that a Machiavellian needs to rediscover.

> The real Machiavellian, like the infant, believes there is nothing bigger or more important than him or herself. To succeed, you will need to achieve that view, to return to the liberating egocentrism of the selfish, amoral child.

Sling That BS

Trump almost got away with earning huge brownie points at the NY town hall and naming a new convention center after his father for free.

He did it by sending a letter and saying he would forego his millions in credit if the town hall was just so nice to name that convention center after Trump.

Luckily somebody went through the papers and realized that.. Trump wasn't owed anywhere near what he claimed.

What About Moderation?

Finally, in the last chapter, the author takes a different twist which partially underlines that much of the work was satire.

For example, most people thought Rudolph Giuliani was doing a great job, but all New Yorkers didn't want him anymore.

But it's not a full recant of the Machiavellian method. In the words of the author:

> Good may often be its own—and only—reward in this competitive, malevolent, and unfair world. This may be most true in business, where the unsympathetic aspects of the human character are compensated most lavishly. But evil does have its limitations, ones that even the biggest, baddest Machiavellis around should keep in mind. That may be the very best—and most useful— lesson of all.

Machiavellian Mindsets

On personal excesses:

> Personal excess: You have bad habits. Some are harmful to yourself, and should still be avoided. But the ones that are harmful to other people can now be celebrated!

On giving freely:

> Good expense accounts loosen the connections to non-business life most people enjoy. When they're spending your money, you own them. So be liberal.

Review

What Would Machiavelli Do received some low ratings on Amazon.

Maybe some readers could loosen up or lighten up a bit?
Or maybe some readers could wise up because this is how many businessmen operate.

Or, even better, let them stay the way they are so that you can reap the advantages of being one of the few who takes power dynamics seriously :).
Now that's some good Machiavelli mindset, my friends :).

Jokes aside though, I really enjoyed the book. It's funny and humorous. But it might also help some people to open their eyes to the reality of human nature.
And that, sometimes (or often?) putting your conscience aside will be handsomely rewarded in business (see: "when psychopathy beats empathy").

In short, "*What Would Machiavelli Do*" is a satire, yes, but it's a satire based on reality.
And you can also use this book as a tool to get rid of your rose-tinted glasses.

Also see:

- **The best dark triad books to become a real Machiavelli**
- **The best books on how to manipulate people**

Or **get the book on Amazon**

Power Moves Recommendations

Lucio Buffalmano · 21 March 2019 · Archived copy · Original

This page lists the resources that helped me in my business (or my life).

Some of them include affiliate links.

Contents

- #1 SiteGround

- #8. Airbnb
- #9. Asgaros Forum

#1 SiteGround

I use SiteGround for ThePowerMoves

If you want to launch your website or if you are planning to move hosting provider, I can highly recommend SiteGround.

Cons

- It's easy to exceed the amount of CPU / allocated on shared servers
- My upgrade to virtual servers wasn't super smooth

I had issues with CPU and RAM spikes, but that was my very own issue.
My TTFB (time to first byte) on virtual servers wasn't as fast as on shared plans, which I thought was very strange. But I didn't work on it long enough because I later downgraded back to GoGeek, the highest shared servers' plan (my move was too rushed).

Pros

- Fast

Speed is super important because it has a direct impact on SEO and users' experience -the two are correlated anyway-.

- Secure

Siteground has HTTPS on all plans, offers two-steps login, pushes patches and updates automatically and they take good care of their servers' environment security, which is even more important on shared plans.

- Reliable

100% uptime which is awesome.

- Lots of own plug-ins and services

SiteGround develops own caching solutions and plugins that will help you get rid of a lot of plugin bloats. All with the advantage of seamlessly integrating into the SiteGround ecosystem.

PRO Tip: if you are planning to grow or if you are already growing, it might be a great idea to start with a higher plan at a discount.
Because when you start with the smaller plan at a discount, you won't carry that discount when you'll have to upgrade to higher plans.
So pick the GoGeek and carry that discount for a few years until you'll move to dedicated server.

Start your website with SiteGround.

#2. Tax-Free Today

Guys, if you plan on starting a business you need the best information available on:

- Maximizing taxes
- Minimizing bureaucracy
- Legal and asset protection

And the best information available, bar none, is at Tax-Free.Today.

If you've already been around entrepreneurial-minded people you know that this is a world where everyone talks about legal entities and tax optimization.
But you will quickly realize that the truth is this: everyone *talks* about it but nobody *knows* anything about it.

It's against this backdrop of widespread ignorance that I was absolutely in awe of Christoph's work.
Christoph is a well of knowledge and on Tax-free.today, he delivers it in a simple, practical and actionable format.

I am very happy that today (May 2019) I have had my (first) consultation with Christoph and I couldn't be happier.
His team can also help you with the actual process of incorporation which is what I am doing right now.

I'll keep you updated on the actual results with a more in-depth review.

But in the meanwhile do yourself a favor and inform yourself on what, where, when and how you should incorporate:

- **Book a consultation with Christoph**

#3. LearnPress

For the online course Social Power, I use LearnPress (the website and company are called ThimPress as they also make WordPress themes).

The two major competitors of LearnPress are Learndash and LifterLMS.
Bot of them is relatively expensive while LearnPress is free to start with (you only pay add-ons, which still makes it cheaper and you don't need add-ons to start with).

I haven't tested the other two, but LearnPress was so simple and effective that I never had the need to.

I use LearnPress with the following add-ons:

- Stripe checkout

In the future I am planning to also get:

- Content Dripping
- Paid Membership Add-On

Basically, I am thinking to move from a one-off payment to a weekly payment system for Social Power and I will need those two add-ons to make it work the way I want.

LearnPress Support

Online reviews complain of a lack of support.
On the WordPress page of the plugin indeed there is little to no support, but you will get support on their forums on their website.

I can't compare with the support of other LMS, but I can tell you that Huyen not only got back to me, but actually logged in on this website more than once to fix some coding for me (thank you Huyen!).

LearnPress Themes

When I got LearnPress I was already running Genesis with a different theme and didn't want to undo all of that work.

If you are starting with the idea of selling a course, it might make sense to go for both LearnPress and Thimpress theme all at once.

Get LearnPress Themes here.

#4. Content Views Pro

To organize the blog page and, most of all, the Reading List that makes me so proud, I use Content Views PRO.

I absolutely love those guys.
There is nothing in the market that gets even close to them.

They also have a free version which I kept for a while.
But once I bought the pro version I had to wonder why I waited so long.

At $29 a year, it's so cheap anyway that I recommend you get the PRO right away.

Get Content Views Pro

#5. Genesis by StudioPress

I run Genesis by StudioPress on top of my WordPress installation and I also use a StudioPress theme.

Some people prefer Divi.
Divi is more customizable and makes it easier to change pages and homepage.
That's cool, but I chose Genesis because it's sturdier, safer and, some say, better for SEO.

That sealed the deal for me.

StudioPress Themes

First I had Magazine something, which was better for blogging purposes and showing off the latest posts on the

homepage.

Then I changed to Academy Pro, the current one, which is better to use the homepage as a sales page for the course.

My goal is to have something in between though. I love writing and sharing wisdom and I think some of my latest work should find its way on the homepage.
It's in my to-do list.

#6. Fiverr

My go-to service when I need to hire external help.

You can hire developers, CSS experts, data entry workers, translators, and even photoshop help.

My recommendation is that you find someone you like and then stick with him.
It will save you time and money.

Ask me for a specific recommendation on the right people.

Use this link and you get 20% off:

Get 20% Off Your First Order

GA Tracking Analytics

Learning what users are doing on your website is crucial to understand in which direction you need to develop and improve.

The default Google Analytics installation might not be enough for many. It wasn't enough for me for example.

Particularly, I wanted to know what users were doing before buying a membership.

To add customer goals and events, I was super happy with Tobias' work.
He was fast and thorough at the same time.
More thorough than anybody else I've seen on Fiverr, which I highly appreciated:

- **Customize your Google analytics with Tobias here**

#7. Freelancer.com

While Fiverr is better for smaller work, Freelances is better suited for bigger projects or for custom projects.

Write a description of what you need to get done and watch tens of people apply.
Then you can comfortably sort and choose depending on price, feedback, and expertise.

It's great.
Use this link and we both get a $20 bonus:

Get started with $20 bonus

#8. Airbnb

Airbnb will be your best help while you launch your company.

It provided a survival income stream to my business partners' while they bootstrapped.
If you have the opportunity, I can highly recommend you do the same.

Apply here and you get a $30 bonus right off the bat!

Travel with Airbnb

Or:

Begin hosting & bootstrap with a $30 bonus!

#9. Asgaros Forum

For the forum, I use Asgaros Forum.

There is no affiliate link here because it's free and I *highly* recommend above the more popular bbPress.

It looks beautiful and works wonders right off the bat while bbPress looks terrible and you'll waste weeks (and hours of developers' money) to make it acceptable.

How to Argue & Win Every Time: Strategies for Lawyers (Book Review)

Lucio Buffalmano · 24 March 2019 · Archived copy · Original

How to Argue & Win Every Time is a book in which author Gerry Spence shares his strategies and mindsets on winning court cases.

TPM Takeaway: Courtroom Persuasion, Upgraded with Power Awareness
Gerry Spence focuses on authenticity, storytelling, and emotional connection. At TPM, we build on that foundation by integrating power awareness, frame control, and strategic foresight because persuasion is not only about being understood, but about controlling the frame and guiding decisions in your favor.

Contents

- Takeaways
- Notes
  - 1. Ask For What You Want
  - 2. Pick Your Battles
  - 3. Use Simple But Emotional Words
  - 4. Put Yourself in Their Shoes: Empathy is Key
  - 5. Avoid Sarcasm: Don't Make Others Feel Inferior
  - 6. Inform, Don't Make Them Feel Stupid
  - 7. Take the Initiative
  - 8. Lead With Your Weaknesses: Rob Your Opponent of An Easy Win
  - 9. The 7 Basics of Winning Arguments
  - 10. Learn The Laws of Arguing
- Real-Life Applications
- CONS
- Review

Takeaways

- **Speak with power**: assertive, direct, and truthfully
- Allow others to reject and disagree (power protect)
- **Control the frame**

Notes

About the Author:
Gerry Spence was a trial lawyer indicted in the Trial Lawyers Hall of Fame. His own website not-so-humbly reads "the greatest trial lawyer in history".

1. Ask For What You Want

People don't want to say no, not to our face, and even less so when we ask what's just and reasonable.

Ask respectfully, yet assertively, directly, and high power.

> **The first trick of winning an argument is the trick of abandoning trickery**

2. Pick Your Battles

Pick your battles because you can't convince everyone, and neither should you try.

Gerry Spence says that you will likely not "win an argument" against a creationist who really believes that God literally created the Earth on the 7th day.
And that's OK, you shouldn't try to convince him otherwise.

3. Use Simple But Emotional Words

Use simple words that create emotions.
Any word that doesn't create emotion or visual content must be discarded. The author even says that "words that appeal to the sterile intellect should be abandoned".

4. Put Yourself in Their Shoes: Empathy is Key

Put yourself in the other person's shoes, and see the argument from their point of view.
To win the argument, you must see the argument from their point of view.

For example, when you ask for a raise, you must keep in mind that a corporation wants to see a return on its investments.
And you will always lose if you ask for a raise without having the corporation's profits in mind.

TPM Note: This is basic 'what's in it for them'. But in truth, the advanced level requires strategic intelligence. See 'how to be a good Machiavellian.'

5. Avoid Sarcasm: Don't Make Others Feel Inferior

Scorn, ridicule, and sarcasm are a no-no. But also use humor cautiously, since it can be misunderstood.

Humor is powerful when it reveals the truth. But the big risk is that of trying to be funny and failing.

When in doubt, if there is a chance that the other party might be offended, avoid it.
And remember: always give basic human respect to everyone.

Also read:

- **How to respect others**

> How to Show Respect, Maintain Rapport, & Influence People

6. Inform, Don't Make Them Feel Stupid

If you are an expert in a subject and your "opponent" doesn't know squat, your aim shouldn't be to win or crush them, but to inform them.

TPM Meaning: avoid 'teacher's frames' that always annoy others

> The Teacher-Pupil Frame: How Explaining Becomes a Power Move to Lower Your Status

7. Take the Initiative

Counterpounchers lose.
The winners take full control of the action instead. They don't defend when they can attack, and after they attacked, they attack again.

TPM Note: remember that people respect high power people. So some interpersonal dominance is crucial. You certainly must respect others and, as a lawyer, avoid being disliked. But you can't just be a too-nice guy who fails to get respect.

Also see:

- **10 Techniques to control frames and interactions**

8. Lead With Your Weaknesses: Rob Your Opponent of An Easy Win

You can tell your weaknesses much better than your opponent will.

So take charge of them and admit them at the very beginning. Admitting your weaknesses not only will increase your credibility, but it will also leave your opponent with little to say.

9. The 7 Basics of Winning Arguments

The basics are:

1. Prepare well
2. Envision your argument
3. Listen to the other
4. Find common ground
5. Be credible
6. Tell stories
7. Tell the truth

TPM Note: to combine truth with winning, see 'how to be honorable'.

> The Honorable Man's Guide: Power, Respect, and Success

10. Learn The Laws of Arguing

And these are the laws of arguing according to Gerry Spence:

1. Everyone is capable of making the winning argument.
2. Winning is getting what we want, which also means helping "others" get what they want.
3. Learn that words are a weapon, and can be used hostilely in combat.
4. Know that there is always a "biological advantage" of delivering the TRUTH.
5. Assault is not an argument.
6. Use fear as an ally in public speaking or in argument. Learn to convert its energy.
7. Let emotions show and don't discourage passion.
8. Don't be blinded by brilliance.
9. Learn to speak with the body. The body sometimes speaks more powerfully than words.
10. Know that the enemy is not the person with whom we are engaged in a failing argument, but the vision within

ourselves.

Real-Life Applications

- **Allow Others to Disagree**

For me, this was the biggest takeaway and something that took me a while to realize.
The best way to avoid arguments that go nowhere and end up in combative intimate relationships is to allow our partners to disagree and reject our arguments.

CONS

- **Terrible Audiobook**

The audiobook feels like one of those old, stodgy, grey old-school audiocassette recordings.

- **Some Generalizations**

The author says that “if you step into a kitchen where an argument is raging, all the noise is evidence of a desperate need of being heard”.
Fair enough.
But that still sounds like a generalization. He even mentions Van Gogh who cut his ear because nobody heard. But Van Gogh likely also had psychological issues, some say borderline personality disorder.

- **Few examples**

“How to Argue and Win Every Time” doesn’t have many examples.
It’s more discursive than based on techniques and case studies.

Review

"*How to Argue & Win Every Time*" shares some valid points but lacks a framework and advanced insights that one could expect from such a successful author.

It feels like diluted content, lacking practical examples, and even with some naive self-help advice.
That's the truth, despite I respect that Gerry Spence, the author, proudly represents "the little people".
On his website, he says:

> He fights against oppression and injustice in courts across US.

In a way, I think of him as a kindred soul for what we're doing at The Power Moves.

Note:
Power-intelligence is a force multiplier for lawyers. Beyond arguments and evidence, outcomes are shaped by a strategic mix of power-signaling, warmth to boost likability, and frame control.
Many lawyers use Power University to sharpen these edges and gain an advantage in court, negotiation, and client interactions.

 For a more complete, power-aware approach to persuasion, see Power University:

Check Power University

The Art of Deception: Social Engineering Tactics & Self-Defense (Book Review)

Lucio Buffalmano · 24 March 2019 · Archived copy · Original

The Art of Deception (2001) is a book on Machiavellian strategies to penetrate systems through people, a practice that is today called "social engineering".

Contents

- Key Takeaways
- Notes
  - Culture Makes Us Easy Targets of Social Engineering
  - Good Security is A Balance
  - Commercial Security Products Are Against Amateurs
  - Good Social Engineers Are Charmers
  - Social Engineering Techniques
  - The Art of Deception Stories
  - Quotes
- Real-Life Applications
- CONS
- Review

Key Takeaways

- Humans are security's weakest links (security is a process and a people's problem)
- Successful social engineering attacks often start with small, apparent inconsequential information
- Companies that want to protect their assets must focus on employees' training on security and security processes (and, I'd add, on learning basics of manipulation)

Notes

About the Author:
The author, Kevin Mitnick, is a well-known hacker who turned "white hat" to help governments, organizations, and users defend against hacker attacks.

Note on The Summary: In this summary of "*The Art of Deception*", we focus on the social side rather than on technologies to protect oneself against social engineering because technologies change, human nature doesn't.

Culture Makes Us Easy Targets of Social Engineering

The author says that it's the culture itself that makes us easy targets of social engineers.

We are taught to "trust our neighbors" and have trust and faith in each other.

All people are *not* kind and honest. Living as if they were, is the best way to get conned.

My Note:
Personally, I don't believe that most people believe in the lie of most people being kind and honest.
It's more a question of numbers: people are not deceived daily and are not the daily targets of fraud attempts. The

familiarity of not-being conned is what leads many people to lower their guard.

Good Security is A Balance

Too much security and the processes bog down the organization.
Too little security and a breach can bring an organization to its knees.

However, it might be wishful thinking to hope that security will not slow down processes at all or, in some cases, inconvenience someone (ie: regular employees who forgot their badges at home).

Commercial Security Products Are Against Amateurs

The commercial security products are mostly to protect against amateur intruders -also referred to as script kiddies-.

The real threats come from more professional, more experienced attackers who focus on one target at a time and carefully study their systems, processes, and organizational culture.

The amateurs go for quantity, searching for very weak prey, mostly for fun.
The professionals focus on one target and look for a financial return.

Good Social Engineers Are Charmers

In most cases, successful social engineers are good with people.
They know how to be charming, they are likable and they know people's psychology and they leverage it to bond and connect with people.

When necessary, they might as well leverage authority to pressure lower-level employees into compliance.

Social Engineering Techniques

The author says that social engineers use well-known influencing techniques and references Robert Cialdini's seminal work Influence.

Here are some more social engineering techniques:

1. Cushion the important question between inconsequential ones
2. Use personal questions (ie.: how long you've been with the company) to gauge his reaction (if he answers normally: great sign)
3. Use the lingo to sound like an insider
4. Ask something too big so they must refuse you and propose you the alternative you wanted all along: it will inspire trust (ie.: "can you go *fetch* my colleague's badge in the next building, it's in his drawer")
   Note: the word "fetch" is on purpose to make it more unlikely he'll want to comply
5. Take advantage of new people who are clueless and have less courage of pushing back
6. Use intimidation with the ruse of authority by mentioning a boss' boss or the CEO (works especially well with lower-level employees)
7. Piggyback and most employees won't challenge you. You can carry a few big boxes and pretend you can't access your badge or open the door by yourself if you need an excuse

The Art of Deception Stories

These are only some of the stories covered by Kevin Mitnick in "The Art of Deception":

- A person gets out of a speeding ticket by fooling the police into revealing a time when the arresting officer will

be out of town and then requesting a court date coinciding with that time.

- The social engineer gains access to the company's system, guarded by a password that changes daily, by waiting for a snowstorm and then calling the network center posing as a snowed-in employee who wants to work from home, tricking the operator into revealing today's password and access through duplicity.
- A con artist gains proprietary information about a start-up company by waiting until the CEO is out of town, and then showing up at the company headquarters pretending to be a close friend and business associate of the CEO.

Quotes

> There is a popular saying that a secure computer is one that is turned off. Clever, but false: the pretexter simply talks to someone into going back to the office and turn it back on.

Social engineer rule:

> First rule: never visit the premise unless you really have to. They have a hard time identifying you if you're just a voice on the telephone. And if they cannot identify you, they cannot arrest you.
> It's hard to put handcuffs around a voice.

On hiding the money:

> It was a typical case of "where is he hiding the money", or sometimes it's "where is she hiding the money". Sometimes it was a rich who wanted to know where her husband had hidden her money, though a woman with money ever marries a guy without was a riddle Keth wondered every know and then but never found a good answer for.

On a guy stealing an identity to fake a degree:

> He had just become Michael Parker, Bachelor of Science in computer science, graduate with honors in 1998. In this case the B.S. was uniquely appropriate.

On dumpster diving:

> It might be a tactic too low down for James Bond.
> Movie goers would much rather watch him outfoxing criminals and bedding beauties than standing knee dip in garbage.
> But real life spies are less squeamish when something of value can be hidden among banana peels and coffe grounds.

On passwords:

> "Password" worked.
> No surprise there.
> People just lose all creativity when it comes to choosing passwords.

On poor safety practices:

> He logged in to the network with password and user data which were conveniently written down on post-it notes attached to the display.

On keeping a low profile:

> A good social engineer never advertises his skills and knowledge.
> You always want people to underestimate you, not see you as a threat.

Real-Life Applications

- Don't give out any personal or identifiable information unless there is a need-to-know basis and you can identify the requester

CONS

- **Many Similar Stories**

The stories are the real added value of "*The Art of Deception*".
After a while, though they start to get similar and they lose some of their appeals.
It would have been better, in my opinion, to cherry-pick the best one and then maybe do a better analysis of them.

Review

The "*Art of Deception*" is a very good book on social engineering, and I rate it higher than the more popular "*Social Engineering*".

- Best books to manipulate others
- Best resources to influence and persuade people

The Culture Code: Summary & Review

Lucio Buffalmano · 24 March 2019 · Archived copy · Original

The Culture Code analyzes what differentiates the best teams from the average teams.
Daniel Coyle does a good job and the main message that belonging matters is one that all leaders should take notes on.

Contents

- Summary
- Skill #2: Share Vulnerability
- Skill #3: Establish Purpose
- Real Life Applications
- CONS
- PROS
- Review

Summary

Daniel Coyle analyzes eight successful groups based on the following criteria:

1. They performed in the top 1% of their domains for at least a decade
2. They succeeded with a range of different personnel and people
3. Their culture has been admired in their industry and beyond

Skill #1: Build Safety

Signals of connection generate a sense of belonging and identity.
The author says we all long for belonging and evolved to pick up on these subtle cues.

There are three basic qualities for belonging cues:

1. **Energy**: they invest in the relationship
2. **Individualization**: they treat the person as unique
3. **Future orientation**: they signal the relationship will continue

All these cues signal: you are safe here.

Alex Pentland from the MIT says that team performance can be measured along these 5 factors:

1. Group members talk in equal measure and keep contributions short
2. Members make eye contact and use lots of gestures
3. Team Members communicate with each other, not only with the team leader
4. Members carry side-conversations
5. Team members make personal experiences and bring back information to the team

The author says Google won the race to dominate the advertising market because of its safe environment.
It was safe for Larry Page to leave a note saying “these ads suck” because, I assume, employees wouldn’t feel threatened by the boss.

And it was safe and normal for an employee who wasn’t even working in the ads to find his own solution on his own

time.
He felt part of the team and didn't need any approval to step in.

> **It's not enough not to shoot the messenger: you have to hug the messenger**

The author goes on to share the examples of Tony Hsieh (read Delivering Happiness) and Ed Catmull (read Creativity Inc)

Skill #2: Share Vulnerability

Habits of mutual risk drive trust and cooperation.

When the leader can tell the words "I screwed up", he communicates that it's safe for everyone to share mistakes, correct each other and learn from each other.

Teams where people are afraid of challenging the leader stifle creativity and can even be dangerous in life and death situations.

The author also says there is a certain misunderstanding about vulnerability.
Some people tend to see vulnerability as touchy-feely (also read Daring Greatly and The Gifts of Imperfection).
But that's not what vulnerability is about. Vulnerability is about admitting we don't know all the answers and someone else can better help to reach our goal.

Also read:

- **Don't believe the hype: vulnerability is not power**

The author then discusses examples from SEALs teams (read: Extreme Ownership, The Dichotomy of Leadership, Make Your Bed and Can't Hurt Me).

The secret of SEALs teams was to carry post-operations briefings where there were no authority structures. Everyone was free and welcome to share experiences, suggestions, and recommendations with the only goal of learning and improving.

Skill #3: Establish Purpose

A common narrative and purpose create shared goals and values.

The successful teams make everyone feel important and everyone felt like they had an important role in the team's success.

Real Life Applications

- **Say: "*I am giving you these comments because I have very high expectations and I know you can reach them*"**

That feedback led to so much higher performance that the researchers of Stanford, Yale, and Colombia dubbed it "magical feedback".
And this piece of knowledge, to me, was worth the whole book.

- **Avoid sandwich feedback**

Everyone knows what's coming after the good stuff and people either focus solely on the negative (most often) or solely on the positive.
Also read: Thanks For The Feedback.

CONS

- **Lopsided Methodology**

Daniel Coyle follows the stereotypical way of drafting a book about leadership (and self-development in general): look at what the successful ones are doing, analyze (more or less) what makes them successful, and then generalize the principles.

Needless to say, there are plenty of pitfalls in this method, including the fact that the same methodologies might be at play in groups that haven't been successful (also read: Fooled by Randomness).
He does mention he looked into poor-performing groups as well, but then again, there is little information.
In short, albeit I actually agree with Coyle's principles, I'm not convinced about the methodology.

- **The 3 skills are random**

The 3 skills of The Culture Code feel random, and they don't work very well as categories for the chapters that follow.

- **Their culture has been admired by "knowledgeable people" and beyond**

This criterion of picking which group to study is the equivalent of saying "I picked this group because of the hype".
That can also lead to a bunch of errors and mistakes, as anyone who invested in the Elizabeth Holmes' hyped up Theranos can tell you.

- **Some examples felt forced**

A few of the examples in The Culture Code felt forced and twisted to fit the author's narrative.
For example, he says that the sentence "I'm so sorry about the rain, can I borrow your phone" worked better than "can I borrow your phone" because it created a safe environment to connect.

That felt like a totally random rationalization to me.
Cialdini in Influence also shows how a simple "because" can dramatically change the rate of compliance, and it has nothing to do with "safety".
I strongly doubt the author's explanation on "safe environment" and see no connection.

- **Some rose-glasses nonsense**

The author touts like a huge success the approach to hooligans of Portuguese police for the European cup held in Portugal (see Stott et al., 2007 or "The New Psychology of Leadership").

The approach was to go out without protective gear and to talk to hooligans instead of getting ready to fight.

For example, it was typical of hooligans to shoot up in the air the ball that would later crash around tables.
People would then start arguments that would snowball in fights and police heavy-handed intervention.

Well, basically the friendly approach towards hooligans was that of letting them shoot around the ball and only confiscate it when it would roll towards policemen.

Says the organizer of this "friendly approach":

> You can't go and take the ball, because that's precisely the kind of disproportionate use of force that creates the problem.

LOL, taking the ball from a bunch of thugs who are harassing law-abiding citizens is "disproportionate use of force?".

Basically, the approach was: feel free to harass everyone and we won't do a thing -unless the ball rolls around here-.

I don't argue that the approach might be effective, because it is.
But it required a much deeper psychological analysis than the one presented in "The Culture Code".
And it's not the magic bullet the author makes it sound to be.

PROS

I think every leader should read a book that stresses the importance of belonging in a group, and The Culture Code is one of the best books on belonging I have read so far.

Review

I had really enjoyed Daniel Coyle previous book "The Talent Code", so I was ready to receive "The Culture Code" with a positive halo from the author's good previous work.

And I wasn't disappointed.

Every leader should understand how safety and belonging impact groups' results.

Get the book on Amazon

Social Power: Start Here

Lucio Buffalmano · 25 March 2019 · Archived copy · Original

This article gives you a quick overview of power.

Contents

- #1: Avoid Power Dickhead-dom
- #2. Understand Power Is Not Dominance
- #3. Understand the Drawbacks of Aggression
- #4. Power Must Ensue
- #5. Develop The 3 Foundations of Power
- Questions?

#1: Avoid Power Dickhead-dom

The More You Chase It, The Less You Have It

Every now and then I receive comments and questions from people who want "learn how to be powerful", "learn how to dominate" and, of course, those who want to "walk into a room and be the most powerful person".

How can I put this mildly… These people are idiotic kids.
Even if they're grown up, psychologically speaking, they have a childlike mindset.

Most people with that mindset confuse power with dominance.
In life, they tend to be very low quality, isolated and socially awkward.

The few with that mindset who make it to the top -a there are quite a few- still are far from the most well-respected, high-quality people around.
And they have trouble holding onto that power (ie.: Donald Trump).

Power-hungry men are often not the leaders of their (poor) intimate relationships
Finally, people who approach life with a thirst for power not only cramp their own quality of life, but also inflict damage on others -and that's the opposite of what this website stands for-.

If you have that mindset, you need to fix it ASAP.
Both for your own sake, and for the world.

#2. Understand Power Is Not Dominance

You can exercise power in many ways which do not include dominance.
Soft power in social relationships, for example, entails little displays of overt dominance and yet is the most common form of power in our current world.

Dominance indeed is simply a subset of power, and it's often expressed through aggression.

I wanted to show you here an extreme example of how power and dominance are inherently different:

"Say what you want, but do as I say"
–*George Thompson*, author of Verbal Judo
In this scene from Scarface, the banker is, *apparently*, dominated.

Yet *he* is the one who gets what he wants while also preserving the relationship.

#3. Understand the Drawbacks of Aggression

Scarface is also a good example of how pure dominance and aggression help *reaching* power quickly.

But they often cause the downfall of those who don't learn how to "sterilize" the side effects.
Dominance and aggression help in getting power quick, but also help in *losing* power quick.

Why?

Well, one of the main reasons is that people resent domination.
And instead of wanting to help you, they'll want to stop you.
Instead of wanting to see you win, they crave for seeing you lose.

We can see it with Trump as well, who has lost plenty of power and control by escalating all kinds of battles that didn't need to be escalated.
Congress hates him, the press hates him, Mueller hates him, many members of his own party hate him… And I think that deep down his wife might hate him too.
He painted himself into a corner with the wall funding and he's become the most embattled president in recent history. Scratch that, he is *the* most embattled in history.
That's an effective way of retaining power.

#4. Power Must Ensue

Healthy, long lasting, high-quality forms of power that have people look up to you is different.

Viktor Frankl in his timeless "Trotzdem Ja zum Leben sagen" says that "happiness cannot be pursued. It must ensue".

That was a simple, yet genius.
Power is similar:

> Power cannot be pursued. It must ensue.
>
> *The Power Moves*

But… Ensue from what?

#5. Develop The 3 Foundations of Power

Power is surprisingly simple for many high-quality individuals.
Indeed, the simplest way to becoming powerful is becoming a high-quality person as the two strongly overlap.

Who you are, how much you care, how much responsibility you take and how well you understand people all form the basis of long-lasting power.

- **Your Personality**

Most people *crave* a leader and someone to look up to.
But here is the important caveat: they only want to follow and defer to those who are better than they are.

The potential for getting anything you want in life is only limited by your level of skills, and personality.
In short: your power is only as great as you are.

Thus, to increase your power, one of the best investment you can do is investing in developing yourself.

- **Emotional Intelligence: Reading Power Dynamics**

Like Simon Sinek explains in Leader Eat Last, the most successful and beloved leaders care about the people they lead.

He is not fully right, but he is not wrong either.
The reason why some great leaders are successful is not only because they care, but because the people care about them.
And yes, caring about the people is a great way of achieving that. But not the only one.

The most successful leaders are successful because people *want* them in power.
Or at least, a good chunk of the people. Or at the very least, a good chunk of the people who matter.
I explain the difference in Social Power, but hopefully you'll decide to go for a broader appeal.

This also applies for men in intimate relationships (see again the effects of power for power's sake in Trump's relationship).

- **Social Intelligence: Acting On Power Dynamics**

Reading power dynamics well is only half the battle.

The second one is knowing how to act on those power dynamics.

There would be much to say here, but for this quick overview let me just mention a key mindset.
And that mindset is ownership.

The best leaders take responsibility for the results and for the well being of the people around them.

Once you get into a mindset of taking responsibility for people and results
something funny will happen: you stop searching for power because you *become* powerful.
Mentally first of all.
And then, little by little, you realize that the tables have turned and *power* comes to you.

People ask you for directions in life, friends and colleagues look at to you. Then bosses give you the best assignments and you start getting promotions and responsibilities.

We're not done though.
There is one more element…

Questions?

If you got any question, head onto the forum.

Enchantment: Summary & Review

Lucio Buffalmano · 26 March 2019 · Archived copy · Original

Enchantment is a guide to developing a charming personality and improving one's social skills. In "Enchantment" Guy Kawasaki, the author provides a good overview of people's skills.

Contents

- Bullet Summary
- Enchantment Summary
- Real Life Applications
- CONS
- PROS
- Enchantment – Review

Bullet Summary

- Find your passion and live it
- When you meet people, look for commonalities
- Find your 1.000 screaming fans (enthusiasts)

Enchantment Summary

Enchanting is the art of charming people, and there two crucial components to enchanting:

- Being liked
- Being trusted

The author then also talks about enchanting to sell, so he adds how to launch, sell and manage social media.

Find Your Passion

Enchanting people are passionate people.
They know what they love, they pursue what they love and they share what they love.

Find Their Passion

Enchanting people also talk to other people about what *they* love.
As Dale Carnegie says in How to Win Friends and Influence People, the secrete to being interesting is being interested.

And if the people you talk to don't have a passion?
Always assume they do!
It's the best way to find it (or to help them find it).

And if they really don't, Kawasaki wonders if they are really worth enchanting :).

Find Common Passion

As Robert Cialdini says in Influence, people like people who are like them.

To stress how you are similar, always look for commonalities you have. Ideally, those commonalities will be common passions.

Create Win-Win

Similar to Covey in The 7 Habits of Effective People, Kawasaki says that likable people focus on adding value and finding solutions where both people profit.

Also read:

- **The 4 basics strategies for power**
- The laws of social exchange

Trust to Be Trusted

Guy Kawasaki mentions Tony Hsieh, author of Delivering Happiness. He says that Tony's company, Zappos, is based fully on trust.
And it works because Tony first trusted customers. And in return, customers don't take advantage of Zappos and its free returns.

My Note:
In reality, there is little to take advantage of free returns.
Returning products is so time-consuming that I'm pretty sure there is a huge number of people who keep products they're not too happy with to avoid having to go return them.
Plus: you are paying the returns of others on the shoes you're buying.

Enchantment also says you should assume people have good intentions and give them the benefit of the doubt. Someone might even do something bad but that doesn't necessarily mean they're bad people and there might be circumstances you're not aware of.

Always Reveal Your Conflict of Interest

Most people won't even care about your interests in promoting a product… As long as you state it very clearly.

Failing to disclose your interests and being found out will erode your trust faster than snow in an oven.

And there is also little to be embarrassed in most conflicts: if you behave honestly and only endorse products you like, then you have no conflicts to be ashamed of.

Build People Up Before Introducing Them

Guy Kawasaki mentions a simple and neat technique he learned from the author of "Yes: 50 Scientifically Proven Ways of Getting to Yes".

The technique, which significantly increased sales, was simply to tell customers something positive about the colleague you were about to pass them to.
For example:

> I'm going now to pass you to Miss. Pitt, she has over 20 years of experience in real estate.

Beat Resistance With Positioning

Sometimes people can resist an idea only because of preconceived notions.

Nintendo was having trouble penetrating the US market because Americans had turned hostile towards games and console.
Nintendo called its new game "robot" instead, and it was a smash hit.

Acquire Early Adopters

People resist change.
And a great way to overcome that resistance is by getting a few early adopters that will function as social proof.

Especially if the early adopters are the hip kids, then everyone else can look up to them and will be happy to follow.

That's why gaining early traction is so crucial.
Also read:

- Crossing The Chasm

An experiment divided students into three groups and gave three types of different feedback:

1. You know the material really well, you tried really hard, keep at it
2. You should do well, you should be doing better
3. I am proud of your work, you are doing excellent

The feedback that worked the most is the first one.

My Note: This is growth mindset
The first feedback worked best because students internalize the methodology of working hard and they tend to develop a growth mindset (also read "how to develop a growth mindset").

On Competition

I like what Kawasaki says about the competition:

> If you do something worthwhile you'll have competition. If you don't have any competition,, you should wonder if you're doing something worthwhile

Albeit Peter Thiel in Zero to One says that the really great companies operate as a monopoly with little to no competition.

On Marketing

Around 5% of your messages should be promotional.
And if nobody complains, you're not promoting enough.

The rule of thumb, says Guy Kawasaki, is that "the more value you give, the more you can promote".

On Career & Enchanting Your Boss

- Always prioritize your boss.

If your boss asks you something, drop whatever else you were doing and serve him first.

- Ask for feedback as you go

You give the impression of being proactive.

- Demonstrate progress
- Deliver bad news early (and add how to fix it whenever you can)

Bad bosses only want good news but you should avoid those bosses.

Real Life Applications

- **Swear… But Don't Swear Too Much**

People who swear from time to time come across as more passionate and more real.
A swear word can be used strategically to wake people up. But don't overdo it. On top of coming across as boorish, swearing loses its effect if it's continuous.

- **Little New & Original Ideas**

Enchantment is a good overview, but there is little new and original wisdom.

CONS

- **Correlation presented as evidence**

God, sometimes I wonder how many times I have repeated this one in my reviews :).
Guy Kawasaki says that if you don't believe that names impact the success of a product, "just look at Tata in India, which has been so successful because the name reminds people of the word grandfather.. ".

Of course, that doesn't say anything because it's a correlation, not causation.
Maybe Tata would have been even more successful had it been called "Caca".
Who knows… (also read read "Fooled by Randomness")

- **Do whatever your wife tells your first**

LOL, that might be a joke but some guys might take it seriously, so I'm raising a flag here (and read "how women control men and relationships").

PROS

Good information, interesting stories, and a very good narrating voice make Enchantment a real fast and worthwhile read.

- **Good advice on "working" your boss**

Read a full article on that: **how to manage your boss to get ahead**.

Enchantment – Review

Enchantment is not meant to break much new ground.

But it's a good book and provides a good overview of social skills and marketing as well.

Check the:

- **Best social skills books** to learn how to get good with people

or get the book on Amazon

In Sheep's Clothing: Summary & Review

Lucio Buffalmano · 26 March 2019 · Archived copy · Original

In Sheep's Clothing (1996) explains how manipulative and covert-aggressive personalities use the emotional vulnerabilities of others to win fights for power, status, or control.
George Simon, the author, also shares the signs to effectively spot and recognize these people, and the techniques to deal with them.

Contents

- Review

Bullet Summary

- Fighting in competition is normal and natural and as long as it's fair it's OK
- Aggression can be defined as fighting with little or no concern about others
- Manipulation is covert aggression
- Most aggressive personalities don't set out to hurt but to win (aggressive sadists, the exception, are a subset of aggressive personalities)

Full Summary

About The Author: George Simon holds a P.hD. in clinical psychology. He is also an active writer on his blog.

Fighting Fair VS Unfair Aggression

We fight because that's what we naturally developed to do when competing for limited resources or defending against enemy tribes (or enemies within).

However, there are many ways of fighting or defending our rights.

Assertively fighting for our rights is good and healthy.
Fighting fair while abiding by laws and regulations in business is also good for the whole, and can actually foster good interpersonal relationships.

It's when fighting happens without any concerns for others that it becomes pathological. That's what can be called "aggression" and, when it's hidden, it's covert aggression and manipulative by its very nature.

Two Types of Aggression: Overt & Covert

George Simon differentiates between overtly aggressive and covert aggressive.

- Overtly aggressive is obvious and easy to recognize
- Covertly aggressive may fly under one's radar so one can end up losing, without even being able to recognize the

covertly aggressive as a person to avoid

Of course, people can swing between the two and, often, manipulators present elements of both styles.

Learning to deal with covert aggression is all about learning social calibration.

Also see:

- **Dealing with micro-aggression and covert aggression**

> 10 Techniques Against Microaggression

A Definition of Covert Aggression

George Simon defines covert aggression as such:

> When you're out to win, dominate, get your way or control but are subtle, underhanded or deceptive to hide your true intentions

Why Covert Aggression is Very Popular

Covert aggression is very popular and widespread, for several reasons.
Here are some reasons why people often resort to covert aggression:

- Assertiveness and honesty take courage
- Honesty can be more costly (or better: seemingly more costly)
- Aggressors can fight without exposing themselves too much
- Manipulator can grab power while pretending he's acting for the common good

Take the example of firing an employee.
Going through HR can cost time and a lot of honest conversations where everyone must share difficult vulnerabilities.
Instead, the boss might simply use covert aggression to pressure the employee into quitting by himself.

If you want to see lots of covert aggression, I recommend the movie "Meet The Parents".

Covert Aggression VS Passive Aggression

Passive aggression is often mistaken for covert aggression, but the two are not the same.

Passive aggression, as the name suggests, is passive and includes stonewalling, silent treatment, and "pretending to forget".

Covert aggression is veiled and masked, but it's also active.
It includes guilt-tripping, minimizing, lying, or omitting.

See here an example of guilt-tripping a woman used on me:

And it *was* working.
I was feeling guilty, and also angry at the same time for the manipulation. People who are not aware of the game will only feel bad, without knowing why. And they might either comply or allow their whole day to be ruined because of the manipulation.

Manipulators' Personalities

Manipulators have an impaired conscience because they don't internalize social rules and are unable to see beyond their own self-interest.

Why not?

It's because, for them, internalizing social rules means obeying other people's rules. And that's the equivalent of a submission.

Manipulators indeed see social norms and rules as threats to their self-interest and, without any checks and balances from a well-functioning superego and conscience, they don't see beyond their own self-interest.

Manipulators are also power-hungry: they want to win and conquer and they cannot stand any act of submissiveness.

Narcissism and Manipulation

Not all narcissists are manipulators. Thinking highly of oneself doesn't necessarily entail aggression or manipulation.
However, most manipulators and covertly aggressive personalities present traits of narcissism.

Many Machiavellians are good manipulators though.

CEOs Might Have Character Disorder

Geroge Simons says that problematic aspects of personalities are egosyntonic, such as that people are happy with who they are (even if that causes trouble to others).

Speaking about CEOs, he says:

> CEOs like who they are and are comofrtable with their behavior patterns and how they act.
> Even though their behavior might bother others a lot.

And again:

> CEOs most often have inflated self-esteem, and it's not a compensation for underlying feeling of inadequacies.
> CEOs are undetered by adverse consequences or societal condemnation.

The author says that covert aggressors who get to the top are not different than most other manipulators: they're just more extreme and better at it (also read: Bad Blood).
And the better they are at it, the easier it is to climb.

This was very insightful.
Most CEOs have a strong need to win which, if left unchecked, is all too happy to trample on others.

And it suddenly clarified why CEOs score lower than average on emotional intelligence than most mid-level managers:

This is something that the authors of *Emotional Intelligence 2.0* (Bradberry) and *Emotional Intelligence* (journalist Daniel Goleman) never really understood.

Travis Bradberry, for example, says that "CEOs weren't doing a good enough job for not understanding emotional intelligence".
Nonsense.

Also, read:

- **The myth of emotional intelligence**

https://thepowermoves.com/psychopathy-empathy-and-success-at-work

Psychologist Must Stop Making Excuses for Manipulators

The author says many psychologists' approaches tend to make excuses for manipulators and actually make it easy for them to keep manipulating.

And that has found its way into our culture as well.

So what happens is that whenever we see someone aggressing or manipulating, we think that he must have some unresolved issues of his own and that he must be helped.

And instead of looking at the manipulation, we start making up theories about the psychological issues of the manipulator.

But while of course, a manipulator can have unresolved issues -we all can!-, that does not and should not excuse his behavior.
And neither it should sidetrack us from addressing the main concern, which is the manipulation and aggression, and not his unresolved issues.

Neurosis Are a Thing of The Past: Today It's Too Much Permissivism

George Simon says that we are all still too focused on neurosis, cultural baggage from Sigmund Freud's times.

But things have changed since then and society is not nearly as repressive and restrictive.
Today we have a few neurosis cases and many more cases of egocentrism and narcissism.

Psychologists today deal with more failures of *controlling* our urges and egocentrism than *repressing* our urges.

Today's big egos and too much self-esteem (the author say there is such a thing as too much self-esteem) are not necessarily the defensive mechanism of unconscious fears or insecurities.

Similarly, the covert aggression we see today is not the result of neurosis. Covert aggression is simply the means to a manipulator's ends.
George Simons refers to these different categories as exhibiting "character disorder personalities".

At the extremes of character disorder personalities, we are dealing with *sociopaths* and *psychopaths*.

They're Not Codependent: They're Dependent

After making a mockery of psychologists defending and trying to "fix" manipulators' Freudian issues, George Simon takes it on the popular definition of "co-dependent relationships" (also read: *Codependent No More*).

He says that albeit there obviously are plenty of dependent and codependent relationships, overzealous psychologists have expanded the definition to fit way too many cases.

In a relationship with a manipulator, the manipulator is often not really dependent but playing the part to keep the real dependant partner under their thumb.

In The Power Moves' opinion: big yes! Thank you, George Simon, for writing this book!

Recognizing Manipulators

Here are some signs of manipulations:

1. You are making too many excuses for someone
2. Dodging the issue
3. Distraction and misdirection
4. Covert intimidation
5. You find yourself defending and making excuses too often

6. He/she can often and easily make you feel guilty
7. Shaming (also read: beating the shame game, dealing with judgmental people)
8. Feigning innocence and confusion
9. Minimization, lying, denial, selective inattention
10. Rationalizing their bad behavior
11. Playing the victim
12. Playing you of their own faults

Also read: 30 Covert Emotional Manipulation Tactics and:

> Manipulation: Techniques, Strategies, & Ethics

Dealing With Covert Aggression

George Simon provides several tips for dealing with manipulators and covert aggressors:

1. Know yourself well first and foremost
2. Work on your self-esteem, ego emotional dependency
3. Focus on their act, not their intentions
4. Don't get sidetracked: stay with the issue
5. Demand and only accept direct responses
6. Demand immediate change and set timelines
7. Don't get upset or aggressive: they are looking for an excuse to escalate (and blame you for it)

As a website on dynamics of power, social psychology, and social skills, I deal a lot with covert aggression here.

You can see one example here:

Quotes

These are some of my favorite quotes, but please keep in mind they are not always verbatim:

On the nature of humans:

> When human beings aren't engaging in some kind of love, they're waging some kind of war

On the importance of policing our own basic instincts:

> Evil arises from the failure of owning and disciplining one's own basic instincts

On neurosis healthy in little doses:

> It's our capacity for neurosis that keeps us civilized. Neurosis is a very functional phenomenon, in moderation.

On power and power's ability to corrupt:

> Altough it is often said that power corrupts, power by itself doesn't have the ability to corrupt a person's character.
> It's the character flaws already present in people's character that lead people to pursue power and abuse it once they have it.

On power dynamics:

> The most fundamental rule of human engagement is that **the aggressor sets the rules**.
> It's impossible to deal with anybody once we start out in the one-down position.

On our future as a species:

> Our aggressive tendencies and behavior are not necessarily evil.
> (…)
> With the dawn of civilization, the need for aggression as a necessary instrument for human survival has lesseend considerabily. But as mankind's long history of warfare illustrates, this basic human instinct is very much still with us and is likely to be for some time to come.
>
> Therefore if we are to successfully advance in our social evolution, we will need to fashion cultural and environmental mechanisms that will help in harnessing and managing our effective instincts.

Exactly.
We need a new breed of enlightened leaders. Fundamentally good, but able to turn evil when having to face and rebuff evil.
This is The Power Moves' credo.

Real-Life Applications

- **Know Yourself to Stop Manipulation**

I can't stress this enough.
Power begins with self-knowledge.

- **Sometimes a Cigar Is Just a Cigar…**

And an ahole is just an ahole.
Don't make too many excuses for ass-holish behavior.

CONS

- **Finger-Pointing on Religion?**

The author says that some professions, like cops and priest, attracts aggressive individuals and manipulators who are freer to use aggression and covert aggression.

Fair enough. But when he doubles down with a few examples on priests it felt to me like it was unnecessarily pointing fingers towards a specific category.

- **Mixes sociopaths with psychopaths**

The author briefly talks about sociopaths and psychopaths, but as if the two were the same thing.
Of course, there is overlap between the two, yet they are two very distinct

However, the author had not the time and space to dig deeper. I think that digging deeper might have been too long of a detour. So take this as a mention rather than a pure "con".

PROS

This is a fundamental book to understand people, aggression, power dynamics, manipulation, and the psychology of power-hungry individuals.

There is no point in listing "pros" of must-read books, but here are some:

- **Great psychology**

The idea that manipulators don't internalize society's rules because for them that's an act of submission was pure genius.
A true "aha" moment for me that connected different neural islands in my brain from personal thoughts, information and life experiences.

- **Greater clarity on psychology**

The author makes the point that fear of social rejection is a sign of neurosis as they have extra capacity for guilt and shame as a consequence of their overactive conscience.
I had never thought of it that way, but it does make sense indeed.

- **You will understand Donald Trump**

The deeper you get into "In Sheep's Clothing", the more the psychology of Donald Trump and other power-obsessed individuals becomes clear.

Review

I absolutely loved *In Sheep's Clothing* and this is a seminal book both for this website and for anyone who wants to understand psychology.

As a matter of fact, it's with "*In Sheep's Clothing*" that I decided of making a new book series called "The Power Moves" recommended.

This will be a list of books that underpins the philosophy behind this website.
But whether you like or not this website, you will certainly like In Sheep's Clothing, which is a must-read for anyone who wants to understand people and psychology.

The Straight Girl's Guide to Sleeping with Chicks: Summary & Review

Lucio Buffalmano · 27 March 2019 · Archived copy · Original

The Straight Girl's Guide to Sleeping with Chicks is Jen Sincero's guide for straight women who want to "try" and learn more about sex with other women.

Contents

- Full Summary
- Criticism
- PROS
- Review

Full Summary

About the Author: Jen Sincero is the author of the bestseller You Are a Badass and, apparently, she is also an enthusiast of woman on woman action.

Introduction

Jen Sincero says she is a very sexual person, and started masturbating at 5 years old.
Yet, she's only had her first experience of lesbian sex past the 30 years mark and… She enjoyed it (apparently).

I listened to the audiobook, and frankly, there is little point in me recounting here of jokes and the sexual positions.

I don't summarize jokes, and I think that writing is a poor format to explain sexual positions (and so was the audiobook for that matter, I haven't fully understood a single position she described).

Criticism

What I can give you which is a bit more useful is my criticism of "The Straight Girl's Guide to Sleeping with Chicks".

It Felt Aggressive

The overall feel of “The Straight Girl’s Guide to Sleeping with Chicks” is on the aggressive, de-humanizing way of approaching sex, seduction, and lovemaking.

It’s as if the approach is all on “trying, experimenting and adding notches”.

As a website born to help people assert themselves and prevent abuse, I found the tone of the book to be slightly distasteful.

Sex Only, No Connection or Romance

“The Straight Girl’s Guide to Sleeping with Chicks” is mostly focused on the self-indulgent pursuit of maximizing personal pleasure.

And there is nothing wrong there.

However, people who are also looking for the emotional side of seduction will be left wondering, since there is little in terms of connecting and bonding, broaching sexual topics with other women, or sharing intimacy at different levels etc.

Immature View of Sex As a String of Experiments to “Defy Conventions”

“The Straight Guide to Sleeping With Chicks” seems to reduce sex and intimacy to racy games, experiments and “defying conventions”.

I’m not a big fan of that approach.
I find it a bit immature to approach sex as an opportunity to “rebel and defy conventions”.

Derisive & Judgmental Towards Women Who Don’t Reach Orgasm (or “Experiment”)

The approach towards women who’ve never had orgasms feels condescending and de-humanizing, as if they were inferior for being under the yoke of their stupid sexual hang-ups.

Note here that I don’t fully disagree with the author *in some cases*. There is a strong link between the ability to reach orgasm, Freudian neurosis, and the openness towards sex in general.
But that shouldn’t allow anyone to take a position of superiority over others.
If anything, it gives the more advanced practitioner a *responsibility* to help and educate those who are farther back, not to use them as a rung for some good ol’ posturing and social climbing.

Also, there is sometimes more behind the ability (or lack thereof) to reach orgasms.
For example, some people are simply asexual (around 1% of the population, it’s estimated). And some women don’t have vaginal sensitivity.

“Meh” Humor

The book is somewhat of a satire, or an attempt at making the readers laugh.

A few lines were actually funny.

Many weren’t.
Like trying to force humor with “funny” names and references to sex and vaginas felt like slightly childish attempts at humor (a bit like children laughing at cuss words).

And at times the humor also felt in poor taste.
Of course this is very personal though.

The “Women Are Better” Angle Is Debatable

The author seems to imply that sex with other women is much better.

One of the reasons, she says, is that women can go on and on without the pauses that men “need” between bouts.

But that makes no sense.

A man can do without his penis pretty much everything a woman can do.

And pauses are not a necessary given.
They mostly happen after he has come, which does not necessarily have to happen within a defined timeline (or at all). And plus, we’re in the age of Cialis and Viagra “pauses” are not a given, either.

If anything, it’s a question of knowledge and willingness more than ability. Such as many men not willing (or now knowing) how to do much else beyond trusting with their penis.
In that case, the author might actually be right.

How About Giving Up The Idea of “Men VS Women”

At the end of the day, I’m not a big fan of “this gender is better than the other”.

Some men can provide better sexual experiences to some women.
And some women can provide better sexual experiences to some other women.

PROS

Albeit this obviously isn’t my all-time favorite book, there also are a few good positives:

- **Good On Sex Education**

Albeit I didn’t get much on the positions from the audiobook (plus I had little personal interest in learning the details as a man), I think it’s quite good from a sexual education point of view.

And can be a very good guide for women who are indeed curious or want to try a few new things in their brand new F-on-F (sexual) relationship.

- **Positive Message of Getting to Know Yourself**

There is a positive message of getting to know yourself and your sexuality. Jen Sincero wants to demystify sex and remove from the dark corner of “sin-hood” that some people and cultures seem to hide it in.

- **Can Be A Positive Encouragement to Open-Mindedness**

I write as a guy in the west where “women on women action” is commonplace (and sometimes even a tool for what I call “attention whoring”: think of the girls kissing each other in bars and clubs).

However, there are some people and some areas of the world where sex is still a big taboo.
In those cases, this book might help.

Review

I wasn’t a big fan of Jen Sincero’s previous work with “You Are A Badass“.

So I might have been a bit negatively biased to begin with.

But I had high expectations for “The Straight Girl’s Guide to Sleeping with Chicks”.
I was hoping for some wisdom on social dynamics in picking up women from a female perspective.

I have met a few lesbians who shared some juicy details on how they prepare their move and it was *great* stuff.

Super interesting both for me and for the audience of this website, both from a seduction perspective and from a psychological one.

But that's not what I found here.

"The Straight Girl's Guide to Sleeping with Chicks" is a mix of humor, soft porn content, sexual education, and only lastly it's a guide to pick-up women.

Probably the best content is on sex education.
But if you want to learn more about how women and lesbians approach seduction, there is not much.
A couple of stories here and there and the old -and possibly abusive- "get her drunk" "tip" (slime-alert).

The Myth of Emotional Intelligence And Leadership

Lucio Buffalmano · 28 March 2019 · Archived copy · Original

Emotional Intelligence is a crucial component of both effective leadership and power.
Especially long-lasting power.

However, it's not the "Emotional Intelligence," as most people think of it.

By the end of this article, we will understand that it's more *power* intelligence that enables and supports leadership and power over the long run.

Contents

- How People Get Emotional Intelligence Wrong
- Power Requires the Ability to Switch Off Empathy
- Bad Leaders Without Conscience
- Ultimate Leader: High EQ, But Can Shut It Off
- Long-Term Power Rests on Good Leadership
- SUMMARY

How People Get Emotional Intelligence Wrong

First of all, most authors and writers have spread misinformation about emotional intelligence.

Let me give you an overview of how that happened.

Daniel Goleman, in his bestseller *Emotional Intelligence* popularized studies like this one with the often misquoted headline that "EI accounts for 80% of career success".

For the sake of clarity, Goleman clarified that he has been widely misquoted and misrepresented.

And of course, to anyone with a critical mind, the "80% thing" is absolute nonsense.
But that didn't stop the spreading of the misunderstanding.

The issue has been compounded by the misunderstanding of "vulnerability," as espoused by the research of Brene Brown and culminating in bestselling books such as *Daring Greatly*.

Since then, vulnerability has become a new way of showing power. And leaders should now "show their weakness", and "show their true selves.".
Of course, there are moments when a leader must be vulnerable, but not nearly as frequently as some people have been led to believe and not nearly as obvious as one might want (also read: vulnerability is not power).

So today, many people see emotional intelligence as a form of touchy-feely leadership.
Of course, that's not the case; emotional intelligence is simply the ability to better understand feelings and social dynamics.

But let's go in order.

CEOs Are Emotionally Stupid

So today, many people believe that emotional intelligence means tending to relationships and that emotional intelligence will help them become more powerful.

But is that true?
Does EI help in climbing dominance hierarchies?

Well, it turns out that Travis Bradberry, author of *Emotional Intelligence 2.0* measured the EI of many managers, executives, and CEOs.

What he found out was striking.

Managers had higher EI scores than average.
But CEOs?
CEOs showed *lower* EI scores than the average.

See the results here:

Bradberry's answer to that says a lot about human nature (and cognitive dissonance).
Bradberry, instead of calling into question the whole idea that EI helps you advance in your career, says that CEOs weren't doing a good enough job and they had some work to do.

This is a good example of "bending the data to fit the narrative".

But let's get back to the data now and develop a better theory with it.

And the data clearly showed that emotional intelligence is not a great predictor of career success. At least, not if you're aiming for the top spots.

The Truth of EI & Gaining Power

The truth, unluckily, is more complex. And somewhat darker.
And the truth is that ruthlessness and calculative Machiavellianism can be some of the best assets for climbing to the top of many hierarchical organizations.

To climb to the top, too much empathy and too much self-importance can actually become major obstacles.

Here is indeed what George Simon, Ph.D., says in his important book "*In Sheep's Clothing*":

> CEOs like who they are and are comfortable with their behavior patterns and how they act.
> Even though their behavior might bother others a lot.

The CEO might be emotionally intelligent enough to understand when his behavior might bother some people.
But he also ignores those other people's feelings and keeps on going anyway.

And says again, Simon:

> CEOs most often have inflated self-esteem, and it's not compensation for underlying feeling of inadequacies.
> CEOs are undeterred by adverse consequences or societal condemnation.

That's a different type of emotional intelligence.
It's not endless love and empathy. And it's not about accommodating others.
The emotional intelligence that is more likely to carry people to the top is also about knowing when to keep on going straight, no matter how others feel.

In the words of Dan Rust in his wonderful *Workplace Poker*, CEOs act more like Teflon rhinos.

Here is how Dan Rust defines rhinos (edited by me for brevity):

> Sometimes these individuals don't even perceive rejection that would seem blindingly obvious to others. We call these people "Teflon Rhinos" because nothing sticks and nothing penetrates their thick skin.

That thick skin is not what most people think of when they read about "emotional intelligence".

But in my book, it's one of its most important elements.

Rust says again:

> So is the key to success having a rhinoceros-thick skin, emotionally speaking?
> Well, there are a lot of benefits.
> You don't let rejection slow you down. It's easier for you to talk to influential, powerful people without being intimidated. You're more likely to ignore the lame criticisms of others. You persevere through obstacles. Accept no excuses. Drive yourself hard—and drive others even harder. You achieve your career goals, and in the end, that's all that really counts, right?

Dan Rust then goes on to describe the negatives of being an extreme rhino and proposes a slightly more balanced approach.

Power Requires the Ability to Switch Off Empathy

But a new theoretical paradigm seems to emerge when it comes to power and emotional intelligence.

And that's because the people who get to the top are able to dim, shut down, or ignore empathy and interpersonal emotions to enact plans and activities that might bother, hurt, or pain at least some of the people around them.

And looking at the business world today, we might make the case that **no Emotional Intelligence is better than too much Emotional Intelligence** IF that EI functions as a constraint on actions.

Here is the truth, then:

- In life and interpersonal relationships, EI is crucial
- To become a (mid-level) manager, EI is very important
- To get to the very top, a "barge my way through it and fuck what others think approach yields better results than one which is overly concerned about others

And that's why, sadly, the world we live in is prone to hostile takeovers by people who have no conscience and no moral checks and balances.

Bad Leaders Without Conscience

De Mesquita did some wonderful research.

And he came up with this tagline:

> *Bad* Behavior is Almost Always *Good* Politics

With his work and abundant evidence, de Mesquita shows that politicians who enact bad policies for the citizens increase their power and prolong their time in power.
To enact those bad policies, those dictators need no emotional intelligence—or, at least, not the "empathic" EI that some people think-.

Unfortunately, we're not just talking about dictators here.
Bad policies worked for several powerful men in democracies and Western countries as well.

For example:

- Elizabeth Holmes (Bad Blood)
- Albert "Chainsaw" Dunlap (Discussed in "Leaders Eat Last")
- Many unnamed others that might as well be in your company (see: psychopathy at the top)

Leaders with no conscience at all are very dangerous to everyone. And, in the long run, can also lead to very poor results for themselves too.

What's the solution, then?

Ultimate Leader: High EQ, But Can Shut It Off

Now we get to an important aspect of leadership.

Sometimes you might have to act *in spite* of your empathy and caring. That's part of being a leader with a mission.

Even though it seems like many CEOs have little EI, it would be very silly to discount Emotional Intelligence as a crucial aspect of leadership, power, and even the ability to quickly climb dominance hierarchies.

Countless studies, papers, and research studies show a positive correlation between EI and effective leadership (for example: Emotions and Leadership: The role of emotional intelligence).

The ultimate leader is indeed a compassionate leader who cares for and loves the people he leads.
But who can also look beyond the single instances and act forcefully when needed? A leader who feels the pain for himself and for others but, if he must act, will act anyway

As Ray Dalio says in *Principles*, the whole should take precedence over the single, and what's good for the whole is good.
And as Babin and Willink say in *The Dichotomy of Leadership*, a good leader must love his troops but, ultimately, carry the mission for which he is responsible.

And as Robert Greene says in *The Laws of Human Nature*:

> This empathy, however, must never mean becoming needlessly soft and pliant to the group's will.
> That will only signal weakness.
> When it comes to our primary task—that of providing a vision for the group and leading it toward the appropriate goals—we must be stern and immovable. Yes, we can listen to the ideas of others and incorporate the good ones. But we must keep in mind that we have a greater command of the overall details and global

> picture.

The best leaders can combine different types of leadership and pick and choose what is best suited for the occasion.

Long-Term Power Rests on Good Leadership

Robert Greene says that leadership rests on two opposing forces:

1. the people's need for a leader
2. the people's resentment of the leader's power and benefits.

Poor leaders let resentment grow and then must rely on coercion -and the military- to keep their control.
It's not always easy to stay on the good side of the majority of people, and that's one of the reasons why Machiavelli in "*The Prince*" said that it's best to be feared than loved.

But don't let that mindset infect you.
Great leaders *do* manage to enact strong leadership while being loved. And so can you.

As a matter of fact, **the more empowered the people around you, the more you need to also be loved and respected**.

That's because empowered followers have the power to oust a leader. Or, at least, have the power to walk away.
That is almost always the case in corporations, and in democracies where people have the power to vote you out.

These great leaders create enough goodwill to outweigh the resentment for having a leader in the first place.

They do it through showing empathy, caring, and delivering results.
And that's why empathy, caring, and love, all elements of emotional intelligence, are crucial for leadership.

When leaders fail to show they care about the people they lead, the follower disconnect. Passive aggression increases, and the chances of rebellion also increase.
A mutiny, either in the form of violence or voting the leader down, becomes more likely.

This is what Robert Greene says:

> When leaders fail to establish these twin pillars of authority—vision and empathy—what often happens is the following: Those in the group feel the disconnect and distance between them and leadership.
> They know that deep down they are viewed as replaceable pawns.
> And so, in subtle ways, they begin to feel resentful and to lose respect. They listen less attentively to what such leaders say.

... And On Tough HR Decisions

Needless to say, not everyone deserves your love and not everyone deserves to be in your team.

Emotional intelligence also allows you to “see” who are the people who are spreading rumors, discontent and generally poisoning the environment.

It allows you to see the power dynamics in your tribe and the power moves that can be used against you by conniving completists.

Emotional intelligence allows you to know when it’s time to use force and prune your beautiful trees off the bad apples that threaten to spoil the bunch.

Then once you know, act forcefully and swiftly.
As I often repeat on this website, there can be no love without the capacity of facing evil.

SUMMARY

Emotional intelligence is crucial for leadership because value-adding leadership and leadership of empowered individuals, ultimately, rests on the people to choose you and support you as their leader.

But you must not confuse “emotionally intelligent” with touchy-feely. Or with “paralyzed” by what others think and feel.

Emotionally intelligent leaders *do* care about the people around them.
But they also have a deep understanding of how to get the most from them and when it’s time for forceful actions.

And that’s what emotional intelligence is about: understanding people, caring, and leveraging that knowledge and love to doggedly pursue the best course of action.

The #1 Way to Stay in Power

Lucio Buffalmano · 28 March 2019 · Archived copy · Original

Disclaimer:
This post is scheduled for upgrade to conform to he quality we expect at TPM. Stay tuned for an updated version, or join **Power University**

Getting into a leadership position can be difficult.

But what's even more difficult, as history has proven over and over again, is *keeping* that power in the long run.

Power indeed often rests on shaky foundations: people want you there, but they also resent your power.
But by the end of this article, you will know how to keep power over the long haul.

Contents

- The Ambivalence of Power
- Entitlement to Power Is Leaders' Biggest Mistake
- You Keep Power When People Want You With Power
- How Great Leaders Hold to Power

- SUMMARY

The Ambivalence of Power

The main reason why power rests on shaky foundations is because of people's inherent ambivalence towards others.

People:

- Want a leader, but also want freedom
- Need a guide, but like to believe they don't need anyone
- Love looking up to someone better, but secretly resent them for making them feel inferior
- Say they want a friendly leader, but will lose all respect for a leader who can't lead
- Respect and fear strong leaders, but secretly want to kill a leader who makes them feel insignificant
- Like to dream of being as rich and powerful as the leader, but are deeply jealous of him

When things go badly, the same people who came to give you the crown will now come clamoring for your head.

In the past, heads have literally been rolling.
And executions were big public celebrations:

Note: Staying power with gullible subjects is easier
Notice how his charisma still gets through to the sheep**,** even when those sheep were there to see him die. If you're leading gullible people, staying in power is easier.
It's when you're leading more intelligent and/or people more at your level that it gets more difficult.

Heads roll more seldom these days but don't think it's any easier to stay in power.
We're exactly the same people as centuries ago indeed, and we can see the same pleasure of seeing our leaders crumble whenever a big-name politician loses a major election, or whenever a new big scandal hits the news.

The pleasure, of course, is double when the one who fell was a bad leader, like with Theranos' Elizabeth Holmes.
Then we can all bask together in the crowd's animal spirit, taking our sweet revenge on those who got all the leadership perks, but eventually betrayed us.

However, often you don't need terrible leadership to lose your power.
That ambivalence can be easily tipped towards the negative even with average or, sometimes, even with good leadership.

From a social dynamics point of view, the change from support to resentment can be swift and sudden. And it catches most leaders off guard.

Leaders Only See The (Positive) Tip of The Iceberg

Most leaders fail to see the ambivalence of leadership for three reasons:

1. They are not emotionally intelligent leaders and miss the signs
2. They haven't taken the time to study and understand social and power dynamics
3. People simply hide their negative feelings

Leaders mostly see the hand-clapping, the babies handed to them for kisses and pictures, the smiles…

And until the tipping point is about to reach many leaders fail to read the changing times, possibly unconsciously trying to cling to the status quote.
He dismisses the backhanded compliments of the frenemies, the slight disrespect, the passive aggression.
And he focuses on brown nosers, cronies, and the many sycophants who fail to see the end nearing.

But what is it that causes leaders to lose the goodwill of the people they lead?

Entitlement to Power Is Leaders' Biggest Mistake

Some people say that power corrupts, while others disagree.

I think we have ample evidence that power can corrupt. Or, at least, make easily-corruptible people worst.

History has shown it to us more times than we can count.
Leaders get power, maybe through fully legitimate elections.
And they soon forget they weren't bestowed power by birthright, that they are not there to enjoy fame, fortunes, and the trappings of power but that they are there to lead.
And to lead means to move people and the organization toward a better future.

Instead, they get used to the power, the attention, the spotlight, and to the trappings of leadership.

This is entitlement kicking in.
And albeit entitlement coupled with strong and forceful action can be helpful in quickly climbing dominance hierarchies, entitlement almost always loses you the people's goodwill which, in turn, makes it hard to keep your power -at least legitimately-.

An important caveat indeed is that the **people's goodwill might not matter much in dictatorships**.
Dictatorships follow different rules. But since most readers are thankfully living in more or less democratic countries, we are talking about non-dictatorial power here.

And in any democratic organization and in most groups, leaders and politicians can be voted out. **And leaders are often voted out, independently of their results, simply based on how much people like them** (or dislike them).

I have witnessed one politician after the other having fallen prey to entitlement and getting the boot because of hubris.

Some examples:

- **Matteo Renzi**: called a referendum to transform Italy into a presidential system, and got the boot because people resented he wanted "king's powers". And he was doing a *great* job with the economy.

- **Nicolas Sarkozy**: was seen a bit too chummy spending time on the yachts of the ultra-rich, people felt he had lost touch with, well… The people who vote. Got booted out.
- **Emmanuel Macron**: this guy made more power mistakes than I can count. See Macron VS Trump, Macron is Trump's bitch, and Macron makes people resentful

I list some famous people here so you can check them.
But you don't need to be a president to fall for the "power's entitlement trap". ***Any* position of power, even among your friends, carries the same risks**.
The general rule is this: t**he more you start acting like a king who's above everyone else, the more people will come to resent you**.
And if those resentful people can vote, join forces, or find the power to boot you, they will gladly do so.

Entitled Leaders Are Poor Leaders

Even if elections weren't a problem, the results almost always suffer when leaders become entitled and egotistic.

Entitled leaders close off to new ideas.
It's similar to the effect of a *fixed mindset,* and they see any bad news as a sign of dissent and an affront to their power and authority.

People sense when that happens and they start disliking their leaders.

This is what happened to French President Nicolas Sarkozy, Matteo Renzi in Italy, and, recently, Emanuel Macron who saw one of the biggest street protests rock the Western streets in modern times.

This was a very telling video of Macron's increasing entitlement and "power haze":

He was right in demanding more respect from the snotty kid, but the way he did, it deeply reeked of entitlement and a huge ego.

People feel their leaders' egos ballooning and they wonder whether they are in charge to feed their own ego or lead them.
When that happens, respect dwindles and goodwill disappears. The disconnect grows and resentment also grows.

In the worst cases, leaders who can manage to cling to power in the face of growing push-backs become paranoid. They spend all their time and energies fending off enemies, whether they are real or imagined.

This is what happened with Richard Nixon and this is what's happening with Donald Trump (also read: The Dangerous Case of Donald Trump).

When things get even worst, delusional leaders cling to power as they destroy organizations or whole countries, as it was the case with Muammar Gaddafi.

In *Eleven Rings*, Phil Jackson says he once told a power-hungry but not yet ready to lead Kobe Bryant:

> **You can't be captain when nobody wants to follow you**

How true.
Leaders can get a bit more mileage out of followers who don't fall anymore because they are already in power.
But **when your followers don't follow you anymore, then it's either you let the tanks roll, or your grip on power starts getting shaky**.

Also, read:

- How to overcome entitlement

Letting the Tanks Roll

I will eventually make an article for despots only.
But it bears repeating again: sadly for the population, the rules change for leaders that have access to the military.

Hated, selfish, and sociopathic leaders can remain in power if they pay the military well, and if they secure the generals' support (De Mesquita, 2011).

Great picture. But, ultimately, the tanks did score their win for the regime

But you don't necessarily need the military to remain in power as long as you got a way of harming your followers.
A bad boss who can fire his employee will still remain in power as long as he can keep his team divided (divide and stay in power).

Hopefully, though, you will at keeping power because the people want you there.
As we've already mentioned, it's usually better for all. And it's doable. If you put your effort into charming your followers and doing well for the team, everyone will win -and you will get to keep the power-.

You Keep Power When People Want You With Power

Great leaders know that, ultimately, their power rests with their followers.

And you must earn their trust by delivering, improving their lots, and staying true to your values and ideals.
And, ultimately, by showing how to be a high-quality person with your own personality.

Great leaders also know that as much as they will stay in power as long as people want them in power, they can also *increase* their power by increasing their goodwill with the people.

When leaders take their leadership position as a responsibility to carry their people forward, they build goodwill.
And when hardships strike, people will keep supporting the leaders they love.
They might even take up arms for the leaders they love.

Writes Robert Greene in The Laws of Human Nature:

> (us as leaders) must realize that we are actually in a weak position, and we must struggle to adopt the opposite attitude: We expect nothing from the people around us, from those whom we lead.
> We are not defensive or sitting back but completely active—everything we get from others, and most definitely their respect, must be earned. We have to continually prove ourselves. We have to show that our primary consideration is not ourselves and our sensitive egos but the welfare of the group.
> (…)
> With such an attitude, we will notice a very different effect. People will open themselves to our influence; as we move toward them, they move toward us. They want to win our approval and respect. With such an emotional connection, we are more easily forgiven for mistakes.

And says Simon Sinek in Leaders Eat Last:

> The true price of leadership is the willingness to place the needs of others above your own.
> Great leaders truly care about those they are privileged to lead and understand that the true cost of the leadership privilege comes at the expense of self-interest.

"Privileged to lead", that's the key mindset difference between entitled leaders and leaders who build goodwill, are loved by their people, and stay in leadership positions for the long haul.

> **Leaders depend on those whom they lead**

In this regard, a leader-group relationship is not that different from a person-to-person relationship.

If you show empathy, respect, care, and love for the group you lead, you will receive respect, care, and love back. And with that, also the guarantee that you will stay in power for the foreseeable future.

How Great Leaders Hold to Power

On top of the core pillars that we already saw in the overview of social power, this is what the most beloved leaders do:

- **Lead From The Front**

Leaders work harder than everyone else.
And marketing-savvy leaders show themselves working harder than everyone else, too.

July 1937 –. Image by © Bettmann/CORBIS
Benito Mussolini's genius propaganda was one of the first examples of the great use of mass media to influence the public.
By showing himself working hard people could look up to him without feeling jealous and resentful for his position: he was *earning* his stripes (or so it looked, at least).

- **Take Responsibility**

As Willink and Babin explain in Extreme Ownership, leaders take responsibility for whatever happens in their group and within their mission.

If things go south, leaders shoulder the blame.
Leaders who shoulder the blame hold up to the unwritten leadership contract: I get the trappings of power, but also shield you from blame and troubles (as much as possible).

And if things go well, they pass the credit.

- **Walk The Talk**

We live in a world -or perhaps we've always lived in a world- where facts randomly follow promises.
Duplicitous marketing slogans oversell mediocre products and politicians who promise change and better times often only deliver for their cronies.

But that's a great opportunity for enlightened leaders to distinguish themselves and cause major upsets even among better-funded competitors.

That's how Sanders was able to pull the offsets that he's pulled against the more established Hillary Clinton:

Hillary's Clinton coarse voice BTW is one of the reasons she has lots.

- **Know the psychology of leadership**

This post on leadership psychology is an overview of leadership psychology and group psychology.
Study it if you want to be a leader one day (or if you are already one).

SUMMARY

This article showed you that great leadership keeps power because people want great leaders in power.

There are different ways to maintain power, and this article focused on the positive aspect of keeping power: doing a great job as a leader.

This article also stated that power can corrupt.
And the more it corrupts you, the worst leader you become, and the harder it is to remain in power.

It's your duty as a leader to develop the mental checks and balances that make sure you stay grounded and never forget that good leadership is, ultimately, about responsibility.

Never grow entitled to power: that's the easiest way to make people resent you and force you out of office.

You must earn the trust and love of the people you lead and always remind yourself that you are there to serve. That's the mindset that will bring you love, fame, and long-lasting power (and, incidentally, also make for a better world).

The Social Skills Guidebook: Summary & Review

Lucio Buffalmano · 29 March 2019 · Archived copy · Original

The Social Skills Guidebook (2016) is a guide for teaching social skills and general social dynamics.
Chris MacLeod, the author, covers the basics of socialization while also delivering deep value and insights that everyone can learn from.

Contents

- Summary
- Real-Life Applications
- CONS
- PROS
- Review

Summary

About the Author: Chris MacLeod is a fellow writer on social dynamics and social skills.
He describes himself as a former shy, lonely, and awkward teenager and young adult. He worked on himself to change from shy and awkward to a socially effective human being, and he writes about the resources he wished he had when growing up. He holds a bachelor's in psychology and a Master's in Social Work, with a focus on counseling. Chris is also an active writer on his personal blog.

Introduction

I couldn't agree more with Chris MacLeod when he says that the most charismatic people are not using any special techniques, but they are executing the basics better than most.

The Social Skills Guidebook is more aimed at beginners who are very shy or somewhat socially awkward.
Yet it deals with the basics so well that most people can learn how to become more charismatic

Expect 1-3 Years to Get Good

The author says that everyone is different, so it's not actually possible to give an estimate on "how long it will take to get good socially".

However, he makes a very good point in saying that people should not trust or believe sources that promise instant change.

Expecting instant change can have adverse effects on people who don't see those overnight improvements. They might get frustrated, lose heart, and even give up.

Limiting Thought-Pattern

The author dedicates a whole chapter to the limiting thought patterns that people often end up in.
There are many of them, all good and very relevant from a psychological and social-dynamics point of view.
Here are some of them:

- **Jumping to conclusions**

Jumping to conclusions often means "jumping to negative conclusions", with bad self-talk such as "I had a bad conversation, it's because I am hopeless" or "the group didn't accept me, I am a real social reject".

On a smaller scale, jumping to conclusions also often leads to misunderstandings when we assign certain intentions

to actions for which we actually have no clue.

- **Filtering to support negative assumptions**

People who fall prey to jumping to conclusions and making negative assumptions will filter out all positive stimuli and focus on the ones that reinforce their negative narrative.

- **Interpreting reality based on negative emotional states**

Chris MacLeod says that people assign "rating difficulties" to social interactions based on how they're feeling.
So if they are feeling anxious or nervous for any reason, they think that social interactions are difficult and/or that they're not good enough for it.

But your emotional states have little to do with reality and/or the difficulty of social interactions.

This is very true, and generalizing our emotional states to our interpretation of reality is a well-known psychological principle with many interesting ramifications.

- **Catastrophizing**

Catastrophizing means focusing on the worst possible outcome.
As unlikely as that outcome might be, focusing on it only increases the chances of it happening… And it unnecessarily raises our stress levels and social tension.

- **"I'm responsible for all bad interactions"**

No, you're not, a conversation and a social interaction entail at least two people, and your speaking partner is as responsible as you are.

As a matter of fact, some interactions will always be bad, and you will eventually meet some people with whom it's impossible to have positive interactions.

My Note:
Taking Extreme Ownership of everything that happens to you can be a powerful tool for life.
But it needs strong self-esteem and an antifragile ego. For people who are not there yet, people with low esteem, or people who still see many more failures than victories, it's indeed best not to take full ownership.

Take Small Steps

Starting with big challenges you are not comfortable with is the best way to make it too hard on yourself and to increase the chances you won't see any improvement any time soon and that you will quit.

Instead, start small with something you are kind of comfortable with, not super comfortable.
Only move up to more difficult social challenges once you are 100% comfortable with the level you're at.

Dealing With Silences

First of all, silences happen all the time, and they are a sign that people are comfortable with each other and good friends.
You don't need to fill in all the conversational gaps.

However, there is no denying that silence can also happen with people you are not very familiar with, and it can get awkward.

If it's becoming awkward, avoid commenting on it and saying how awkward it is.
If you want to say something, you can say"

> "alright I guess there is not much more to say about that"

And the change of topic.
Or change the topic without saying anything.

Don't Force Uniqueness

The author says that the suggestion of being unique and avoiding all standard lines is overrated.

Instead, it's OK to have some commonplace statements, comments, or topics.
And it can be quite awkward when you try to force the super personal question or the "unexpected topic that grabs attention".

I couldn't agree more, and that's why I downrated social skills products such as *Charisma University*, *Charisma on Command*, *Captivate*, etc.

Don't Hog The Conversation...

Conversations are two-way streets.
People who hog the conversation and take most or all the speaking time bore people to tears and come across as extremely selfish, self-centered, and entitled.

It makes people feel like they don't matter, and they will react by excusing themselves (or resenting you if they can't move).

...Unless They're Not Contributing, In Which Case: Talk

This is a bit more advanced, but if the other person is not contributing much, they might need to be made more comfortable.

Albeit hogging the conversation is usually not good, this is an exception when doing most of the talking can help draw shyer and more reserved people out until they are comfortable contributing more.

Should You Share Personal Stories?

The recent work on vulnerability by Brene Brown (*Daring Greatly* etc.) has made some people believe that connecting is all about sharing and that courage is opening up.

Yes… When you know someone well and at the right time.

Otherwise, oversharing too soon is awkward and a big red flag.

But Do Share At The Right Time

But, says the author, the virtue is in the middle.
Not sharing anything leaves the conversation dry and makes people feel like you don't trust them.

This is especially true if you are getting to know each other better and if they share something personal first.

Asperger's Syndrome

In the last chapter, Chris MacLeod talks about Asperger's Syndrome and how it adversely impacts social skills.

It's very enlightening, and it made me reflect on whether or not Aspergers are best suited to teach social skills to non-Aspergers.
I already reviewed a *social skills book* from an author affected by Aspergers, and it was actually very good.
However, it's hard to learn all the nuances that you don't naturally get. And that might make Asperger's non-ideal teachers non-Aspergers.
At least when it comes to more advanced forms of emotional intelligence and leadership.

Real-Life Applications

- **Say Something: Filter Yourself Less**

Chris MacLeod says that a lot of conversational difficulties arise among beginners because they censor themselves too much and are always wondering “can I say this, or should I not say that?”.
But saying something, whatever it is, is often better than saying nothing.

- **Don’t Jump to Conclusions on People’s Shallowness**

It’s easy to think of others as shallow because you have access to your deeper thoughts and feelings, while you judge others based on what you see and the superficial conversation that’s going on.

That was very deep indeed :).

- **Self-Esteem Trails Accomplishments & Skills**

Keep in mind that our self-esteem usually trails our actual level. Don’t let impostor syndrome stunt your growth.

CONS

No cons concerning target readership of MacLeod’s book.

You might think that a book on the basics might bore a more advanced student. But instead, it was a good refresher. I found myself nodding most of the time, and I gleaned quite a few new insights as well.

Our only con is that **ambitious men who want more advanced results like status, respect, and attraction need something else after this book.**

PROS

- **Broad, Yet Exhaustive**

The Social Skills Guidebook talks about most of the relevant topics in basic social skills.
Yet it also manages to be exhaustive enough with each of them to cover most of what makes people effectively function as social animals.

- **Practical Examples**

The examples are scattered all over, and sometimes they are just simple, short sentences.
Yet, they work very well to make people understand the more abstract concepts that social and emotional intelligence are made of.

- **Good Mix of Basics & Advanced**

The author often starts with the basics, but then adds a few exceptions to the rules that will satisfy more advanced students.
That helps the readers bridge gaps of understanding between the general rules and the exceptions (for example, in group conversations).

- **Some Basic Power Moves As Well**

The author also has good suggestions on defending your speaking time from more aggressive social players who might want to cut you off (for example: raise your voice, raise a hand as if to say " wait," or add "*woh-woh, I'm not done, I'm not done*).

- **Great Narrating Voice**

The narrator is wonderful.
It makes a huge difference when he recites the dialogue examples and adds real value with his vocal variety.

Review

High rating for T*he Social Skills Guidebook*.
It covers the basics while also delivering lots of value for more advanced students of the social arts (and sciences).

Most importantly, it covers both the basics and more advanced topics with factual and very accurate information, which shows that Chris MacLeod knows what he's talking about and is very well-informed.

As a matter of fact, The Social Skills Guidebook is one of the best social skills books I have read and a rather underrated book.

If you're an ambitious man lacking social skills, **get this book first and then come back to TPM for status, respect, attraction, and top-1% results.**

Check the **best social skills books,** or **get the book on Amazon**

The Social Skills Guidebook: Summary & Review (Macleod)

One of the best books on social skills. Especially great for beginners.

Summary

About the Author:
Vanessa van Edwards is a social skills coach and author who describes herself as a recovering awkward person. She holds a Bachelor of Arts (B.A.) degree from Emory University, started out her entrepreneurial and writing journey with children's education, and later founded ScienceOfPeople.com to teach people skills.
Vanessa released several courses and books, including the best-selling book *Captivate* and *Body Language of Love*.

Intro

People School is divided into 12 different skills.

Some of them seemed more interesting than others to me.
Hence, I'm going to share only the ones that I found most useful while going through People School.

1. Charisma

We are always trying to assess people on two dimensions:

- warmth (friendly, likable, trustworthy)
- competence (capable, powerful, dependable)

I found it very interesting that for Vanessa high charisma is striking a balance between the two.

2. Be Engaging

There are three types of gaze:

- **Power gazing** (from eyes to forehead, effective work relationship, competence)
- **Social gazing** (from eyes to chin, friendliness and collaboration, warmth)
- **Intimate gazing** (from eyes to lower neck and upper torso)

Vanessa speculates that is why women wear necklaces: to attract more intimate gazing.

I also duly noted that taller people tend to naturally default to power gazing while shorter people to social gazing.
So shorter people might want to counteract that when they want to come across as more authoritative.

3. Asserting Yourself

I agreed with Vanessa that not everyone should be a driver at all times, and she says it's best to be a (good) follower when you:

- Don't know anyone
- Are new to the environment
- Are a guest
- Feel introverted
- There is already a driver

To learn more about communication styles and assertiveness, also see:

> Assertiveness: 6 Steps to Empowered Communication

4. Wield Influence

Vanessa says that we evaluate people by asking ourselves whether they are winners or losers.

She goes over some of the basics of what makes people high-power (winners) or low-power (losers), like body language, posture, and voice tonality.

And since her course is tailored to career folks, she goes over a study that found out how the most effective pitches to venture capitalists were high in comfort (signaling confidence) and enthusiasm.

PROS

- **Solid information**

We've already reviewed Captivate and Body Language of Love from Vanessa, and *People School* is our favorite course of hers.

- **High-quality production**

I have taken a lot of courses, and *People School* has some of the best-quality videos around.

- **Great personality**

Vanessa used "sparkling personality" as an adjective in a few of her products… And that description fits her very well.
She has a contagious, bubbly, sparkling personality that I'm sure would light up any room and draw lots of people to her (and here's hoping she doesn't have too jealous a husband :).

She can be a great role model for women as she manages to strike a difficult balance that is not easy for women to walk.

She is rocking her business while remaining warm and feminine. And she is very high energy without ever becoming too loud or overbearing.
She does the high energy instead with an angle of "it's so great to be with *you*".

In my opinion, that may make *People School* best suited for women (read below).

CONS

First, a more personal take: I'm not a big fan of *Science of People* marketing and approach to science.

Lab coat and lab references have been removed, which we approve of

The "behavioral researcher" title, coat imagery, and some other techniques felt like an attempt to enhance authority. While the marketing might work to sell better on some, more power-aware prospects can feel it undermines credibility.

So, that out of the way, let's see some cons:

Doesn't Teach Manipulation – Something You MUST Learn For Self-Defense

Says *People School's* own sales copy:

People School is NOT for you if:

- **You want to learn how to manipulate people:** We teach you to be the best, most authentic version of yourself when you communicate, not how to play mind games with others. If you're here to learn how to "trick" people, you will be sorely disappointed.

> "We teach you to be most authentic version of yourself not how to play mind games"

That may sound like an honorable approach, but from TPM's point of view, it's a naive take.
Scholarly work has long shown that manipulation is not the exception but the expected default in animal communication (Dawkins and Krebs, 1978).

Meaning: **learning how manipulation works is essential** to protect oneself and navigate complex social dynamics. *Especially* for those who seek to be 'the most authentic version of themselves'.

Any course that overlooks manipulation risks leaving its students unprepared for real-world challenges.

> **You don't want to go through life as a naive lamb, hoping there are no wolves.**
>
> *Lucio Buffalmano*

See our video on this topic:

> **Lucio**: Manipulation dynamics are a key competence domain for men who want to be successful and honorable

The Waiting List Trick: Authenticity VS Marketing

While *People School* emphasizes authenticity, formerly using a "waiting list" as a marketing tactic might feel inconsistent to some.

From TPM's point of view, it shows that the line between persuasion and manipulation blurs, and that effective men must learn both sides of the coin.

Edit:
People School used the "waiting list" approach at the time of our first review but ditched it later on.

Popular Studies, Debatable Rigor & Practicality

Vanessa van Edwards introduces several studies and explains how they apply to everyday interactions.

This approach makes psychology accessible and practical for daily life, which works for mass audiences. However, as someone who relies on science extensively, I noticed some areas where the research could have been more critically analyzed to derive truly effective strategies.

For example:

- **Priming**

It's debatable how valid the original study was as it failed to replicate.
You can read more in pop-psychology myths, however, as the *Routledge Handbook on Persuasion* concludes:

> As Brintazzoli and colleagues (2012) cautioned, **"the short-lived nature of the influence of subliminal information casts serious doubt on its effectiveness in everyday life** and advertising" (…) We are aware of no studies demonstrating any commercial success at using subliminal priming.

In short: it's not effective to even focus on priming to influence others.

- **Power poses**

As late as 2025 Vanessa stated that power poses' effects were 'still uncertain' and Amy Cuddy was working on replication. But the weight of the evidence for behavioral and hormonal changes- the biggest claim from the original 2010 study, is resoundingly against it.

Making psychology 'fun' is not the same as *effective*

Vanessa's approach leans towards edutainment.

It's a fair approach for most, but it can simplify complex topics and under-deliver for smart and ambitious men.

An old reading list from her made me think it's a tendency for both the author and Science of People:

Malcolm Gladwell is a great writer. But we see him more as an entertaining read, rather than a reliable resource

Is It Updated?

Vanessa mentions she used her customers' feedback to improve *People School*.

And in her book *Cues* from 2022 she mentions she filmed *People School* in 2018 with an expensive professional crew.

I'd have to wonder to what extent it can be updated if the original videos remain the same for so long?

Better For Women

Anyone can learn from *People School*.
But Vanessa's excellent bubbly personality may not resonate with men who prefer a more masculine, 'grounded' and powerful aura.

Social effectiveness can be divided into likability/social skills and power skills for status, respect, and attraction. Think of it this way:

People Skills (communion)	Power Skills (agency)
Harmony: be liked and accepted	**Impact:** influence, respect, status
Agreeable communication, validating, and supportive	**Assertive/Strategic communication**, display value, frame control
Date as friends first, see if you connect	**Date for attraction,** lead, and achieve your goal

In general, men benefit more from power-related skills rather than just social skills.

People School VS Power University

Are you still wondering whether *People School* is worth the investment?

This chart helps you decide by comparing its strengths against our approach:

Goal / Trait	Best Pick	Why
Be **respected**	Power University	Teaches positive dominance, frame control, and how to gain respect from men, women, and colleagues alike
Be **liked**	People School	Leans heavier on warmth, likability, emotional expressiveness
Women	People School	Vanessa's approach is more feminine. The team is mostly women, and People School's coach is a woman
Ambitious **men**	Power University	Trains **high agency in men for achieving goals**, including status, respect, and attraction
Beginners in social skills	People School	Accessible, supportive, and gentle introduction to soft skills and body language.
Intermediate or **Advanced** in social skills	Power University	Goes further into advanced dynamics of manipulation, Machiavellianism, etc.
Good relationships	People School	Focus on empathy, matching personalities for relationships, and good conversations.
Influence up / reach **executive** level	Power University	Includes science-backed strategies, boss ingratiation, and high-power behavior to make it to board level
Safe, inclusive, 'PG-14'	People School	Polished, inclusive, and psychologically safe
Hard truths, power-based psychology	Power University	No sugarcoating, straight talk on dominance, manipulation, and social realities.
Socialites, **employees**, & Public speaking	People School	Caters to professionals and presenters.
Entrepreneurs, **lone wolves**, strategists	Power University	Men forging their path, entering or creating new social circles, and men who want an edge

Or see comparison chart here.

People School REVIEW

Science of People is a good course on improving your interpersonal skills.
It's well structured, professionally filmed, easy to follow, and taught by a capable creator.

We deal with similar topics here at TPM, albeit from different angles.

We dig deeper into the less politically correct topics such as manipulation, dark psychology, Machiavellianism, conflicts of interest, dominance, etc.
We believe this approach better prepares men to succeed in life.

So, of course, we missed that "raw" side in *People School*.
On the other hand, we still liked it.

Although I'm always busy improving TPM, I was happy whenever I could find time in the evening to watch Vanessa's video lessons.
I'd watch while stretching to save time, but Vanessa made it hard for me! Her content had so many interesting tidbits that I often had to stop to take notes.
That's a sign of great content and I'd be happy to collaborate with her one day.

Is People School Worth It?

At nearly $2.500 *People School* is more expensive than many comparable courses, meaning that it's only worth it if it can justify the difference with the extra value it delivers.

Whether it will deliver that extra value also depends on you.
If Vanessa's approach resonates with you and *People Skills* delivers the results you want, it may be worth it.
As 'missionary' creators here at TPM we know that a premium course refined over the years is often better than a lower-priced but average course.

Vanessa seems to target her product primarily at professionals and corporate clients. If you have access to a training budget, *People School* could be a worthwhile investment.

Edit: Vanessa lowered the entry point at **$997**

People School Refund Policy

People School's refund policy was based on "proving" that you did the homework, but that has changed.

Currently, you have **7 days to request a refund**, but keep in mind that you must ship all course material back within 15 days to qualify.
As a busy person myself, I'd have preferred not to receive any material to avoid the time costs of re-shipping it back.

Also see:

- The best books and courses to develop people skills

If You're a Man Seeking Status & Respect...

People School offers valuable social skills lessons for everyone.

But if you're a man looking to gain status, respect, and attraction, Power University offers a tailored approach designed specifically for these goals:

Check Power University

The Best Social Skills Books For Adult Men

Lucio Buffalmano · 29 March 2019 · Archived copy · Original

Are you searching for the **best social skills books** to stop feeling awkward, learn what to say, and make friends?

Whether you're a beginner looking to boost confidence, a man aiming to sharpen your social prowess, or an adult seeking to refine your interactions, this guide has you covered.

We're **social skills experts**, having turned thousands of men into winners with our advanced social skills course Power University. And we read and reviewed *dozens* of social skills books, courses, and coaches.

We've curated a list of top-tier books on social skills, packed with practical advice to help you overcome social anxiety, improve conversations, and connect with others effortlessly.

Contents

- 12. How to Talk to Anyone
- 11. Cues
- 10. The Charisma Myth
- 9. Soulmate Sequence
- 8. Improve Your Social Skills
- 7. How to Win Friends and Influence People
- 6. The Power of a Positive No
- 5. Difficult Conversations
- 4. Charisma on Command
- 3. People Skills
- 2. The Social Skills Guidebook
- 1. The Social Strategist
- Advanced Learning
- FAQ: Your Top Questions About Social Skills Books
- Conclusion

12. How to Talk to Anyone

By Leil Lowndes
Summary | Amazon

Leil Lowndes' *How to Talk to Anyone* is a standout on every list of social skills books.

While I typically prefer deeper approaches over simple "tip lists," Lowndes makes this format work with her engaging and practical advice.

This book offers a collection of actionable tips to enhance your conversational skills, making it ideal for those wanting to navigate small talk and leave lasting impressions.

However, it's worth noting that it focuses more on techniques rather than foundational basics, so pair it with a beginner-friendly book if you're starting from scratch.

11. Cues

By Vanessa Van Edwards
Summary | Amazon

Vanessa Van Edwards is a leading voice in social skills, gaining massive popularity through podcasts and millions of views in 2025.

Having started out in children's education before transitioning to social skills, her book *Cues* is a solid body language guide on our power and warmth approach. It's also Vanessa's best book.

It tackles essential topics like decoding body language, signaling competence, and signaling warmth.
Her course, *People School*, also ranks on our best social skills courses list.

10. The Charisma Myth

By Olivia Fox Cabane
Summary | Amazon

Don't let the title fool you—*The Charisma Myth* is one of the best books on social skills, not just charisma.

Olivia Fox Cabane takes a broad approach, showing that charisma isn't reserved for the loud and outgoing. She explores various styles, including quiet and reserved ones, making this a top pick for introverts and extroverts alike.

Learn how to be charismatic with a style that suit your needs.

9. Soulmate Sequence

By Richard La Ruina
Summary | Amazon

Richard La Ruina, a former dating coach, brings more than just romance tips to *Soulmate Sequence*.

This book excels in general social skills and conversation techniques, featuring some of the best examples I've read for becoming a skilled conversationalist.

Its high-quality insights earn it a spot among the top social skills books for anyone looking to improve interactions.

8. Improve Your Social Skills

By Daniel Wendler
Summary | Amazon

Daniel Wendler, who overcame Asperger's to master social skills, shares his journey in *Improve Your Social Skills*.

This book is perfect for beginners and those with social anxiety, breaking down the basics of social interactions into clear, actionable steps.

For anyone starting from zero or on the Autism spectrum, this is arguably the best social skills book out there.

7. How to Win Friends and Influence People

By Dale Carnegie
Summary | Amazon

A timeless classic, *How to Win Friends and Influence People* is a staple on any social skills book list.

However, to truly benefit, you need power awareness.

As a community member noted:

> **Him**: I believed that being liked was the key (…) a belief that deepened after reading *How to Win Friends and*

> *Influence People.*

Focusing solely on pleasing others can backfire without understanding takers and power dynamics.
Check this section for more insights.

6. The Power of a Positive No

By William Ury
Summary | Amazon

Saying "no" tactfully is a key social skill many struggle with, even advanced learners.

William Ury's *The Power of a Positive No* offers brilliant strategies to decline requests confidently while preserving relationships.

It's a must-read for personal and professional growth.

5. Difficult Conversations

By Douglas Stone
Summary | Amazon

Difficult Conversations was one of my first social skills reads, and its depth still impresses me years later. It's a top resource for handling tough discussions with wisdom and clarity.

It's possibly the best book on navigating challenging social situations.

4. Charisma on Command

By Charlie Houpert
Summary | Amazon

Charlie Houpert's *Charisma on Command* (book and YouTube channel) focuses on high-energy charisma.

While it leans toward extroverted styles, it offers solid tips for group conversations and social dynamics.

Explore Charisma University, their main course, for more.

3. People Skills

By Robert Bolton
Summary | Amazon

Struggling with confrontation or boundaries?

People Skills teaches assertive communication, helping you strike the perfect balance between passivity and aggression.
We list this book in our list because learning to be assertive is a **foundational social skill for men**.

Pair it with *No More Mr. Nice Guy* for a powerful combo.

Power Nugget:

Both submission and aggression have their own payoffs, but both lead to poorer lives.

2. The Social Skills Guidebook

By Chris MacLeod
Summary | Amazon

The Social Skills Guidebook is **ideal for beginners** and the socially anxious, offering a step-by-step approach to mastering interactions.

Chris MacLeod's expertise shines, providing value for both novices and advanced learners despite the recency effect of my recent read.

1. The Social Strategist

By Ali Scarlett & Lucio Buffalmano
Summary | Amazon

Full disclosure: I'm biased toward *The Social Strategist* due to its ties to TPM's material.

However, it earns its top spot by **bridging foundational and advanced social skills**.

It introduces the social exchange concept, helping you avoid being a "value-taker" (a common pitfall).
From basics to frame control and power dynamics, it's ideal for those ready to elevate their game.

Beginners should start with *The Social Skills Guidebook* first.

Advanced Learning

- **Best Social Skills *Courses***: Video-based learning and exercises for social intelligence.
- **Advanced Social Skills Books**: Move beyond basics to gain status, respect, and achieve social goals.

FAQ: Your Top Questions About Social Skills Books

What are the best books for improving social skills?

Top picks include *How to Win Friends and Influence People*, *The Social Skills Guidebook*, and *The Social Strategist*, each offering unique strategies for better interactions.

How can I overcome social anxiety through reading?

Improve Your Social Skills and *The Social Skills Guidebook* are good books tying social skills with social anxiety. But real-life exercises and incremental exposure may be necessary for some, so therapy or a coach may be the most effective option for some men struggling with social anxiety.

Are there social skills books specifically for men?

Yes, *Soulmate Sequence*, *No More Mr. Nice Guy* and *The Social Strategist* address men's social challenges effectively.

What books help with making friends as an adult?

How to Talk to Anyone and *Captivate* offer excellent techniques for building adult friendships.

How do I choose the right social skills book for me?

Match your skill level: beginners start with *The Social Skills Guidebook*, while advanced learners opt for *The Social Strategist*. If you can afford, graduate to courses rather than book, which can provide more nuances adn advanced techniques

Conclusion

These **best social skills books** provide the tools to transform your interactions, whether you're overcoming awkwardness or mastering advanced dynamics.

Pick the one that fits your needs and start your journey to social confidence today!

Best Books on Influence and Persuasion

Lucio Buffalmano · 29 March 2019 · Archived copy · Original

If you are looking for the best books on influence and persuasion, you have come to the right place.

My credentials: I am a sociologist, a psychologist buff, member of the American Psychology Association, and I founded, lead, and focus on the “power dynamics” domain of influence and social skills.

I worked on sales, been very successful in life at influencing people, and I read many books on sales, influence, and persuasion.
And this is my current list of best persuasion books.

Contents

- 11. Pitch Anything
- 10. The Art of Closing The Sale
- 9. Propaganda
- 8. Creating Lasting Change
- 7. Getting Past No
- 6. Pre-Suasion
- 5. Blindsight
- 4. Influence
- 3. Yes! 50 Scientifically Proven Ways Ways to Be Persuasive
- 2. Methods of Persuasion
- 1. Persuasion, Social Influence, & Compliance Gaining
- Learn More
- Change Log

11. Pitch Anything

By O Klaff
Summary | Amazon

This is the equivalent of The Power Moves applied to VC pitching and persuasion.
Oren Klaff indeed focuses on persuading through understanding power dynamics and coming across as the most powerful man in the room.

At times I feel this attitude might be counterproductive unless you really know what you're doing and you can counterbalance it with warmth, but power dynamics are certainly something you should learn to improve your persuasion skills.

10. The Art of Closing The Sale

By B Tracy
Summary | Amazon

I wanted to put a good book on sale on this list as well.
And The Art of Closing The Sale provides a good overview both in terms of mindsets and in terms of sales techniques.

9. Propaganda

By E Bernays
Summary | Amazon

And now by friends, please roll out the red carpet and blow the trombones for… The Godfather of the influencing and persuasion books!

And, between us, the Godfather of media manipulation for the masses as well :).

Propaganda is the equivalent of *The Prince* for power moves and *The Art of War* for strategy.

And the most surprising thing?
Some passages are so crazy actually in the Donal Trump era that you will go check the publication date just to be sure you picked the right book!

8. Creating Lasting Change

By T Robbins
Review (removed)

When it comes to the best persuasion books we might want to lend an ear to a guy who's come from nothing and with no education and built an empire based on coaching and information.

That guy is Tony Robbins and he knows a thing or two about making people follow him.

7. Getting Past No

By W Ury
Summary | Amazon

Getting Past No is an underappreciated gem. Ury has written such "*Getting to Yes*" and "*The Power of a Positive No*", which are equally powerful.

But what's so special about *Getting Past No* is that it focuses on difficult negotiation, difficult people, and changing people's minds when things seem to be escalating and getting stuck.

And you want some of those "difficult people's skills" in life :).

6. Pre-Suasion

By R Cialdini
Summary | Amazon

This is the sequel of Influence, but it might have actually been its prequel. Pre-suasion focuses on the science of priming (which newer studies have called into question by the way).

However, "replication crisis" notwithstanding, priming is much more real, and Pre-Suasion will teach a thing or two about preparing the ground for your persuasions.

5. Blindsight

By Johnson and Guhman
Summary | Amazon

This is more large-scale persuasion in the sense of marketing.

But since there is most certainly an overlap between persuasion, influence, and marketing, then we need to reserve a spot for a book like Blindsight, which happens to be one of the very best books at the intersection between marketing and neuroscience.

Plus, there are also plenty of golden nuggets for interpersonal persuasion.

4. Influence

By R Cialdini
Summary | Amazon

Influence needs no introduction.
And if you need any, then I will presuppose that it's the first time you are researching information on influencing and persuasion :).

Influence is possibly the biggest seller of all the persuasion books and for good reasons.
A litany of persuasion books that came after it either reference or basically paraphrase Cialdini's main 6 principles.

3. Yes! 50 Scientifically Proven Ways Ways to Be Persuasive

By J Goldsetein et al
Summary | Amazon

This is a bit like *Influence* expanded version, providing more examples and more research to give supercharge your power of changing people's minds (and making more sales, as it adds quite a bit of marketing as well).

2. Methods of Persuasion

By N Kolenda
Summary | Amazon

You might wonder how a book you probably never heard before is on this list?

And even higher up than "*Influence*" and "*How to Win Friends*" -which isn't even on the list-?

Well, we don't rank books and courses on popularity.
We rank out of quality and value-added.

Plus, it's always a pleasure for us to bring to you a few lesser-known books that can be better than the more well-known ones.

What I appreciate most in books on influence like "*Methods of Persuasion*" is that it does not list a bunch of "triggers" or "techniques", but instead **lays out a more comprehensive approach to interpersonal persuasion**.

That makes it highly practical, especially for those looking to persuade and influene others in flesh and blood, rather than with marketing.

Kolenda walks you through a persuasion attempt from before making the request, to after making it with a daily, relatable example.

Methods of Persuasion will likely you make you a better persuader, and I hope more people will follow Kolenda's example of applying persuasion to everyday interactions.

1. Persuasion, Social Influence, & Compliance Gaining

By Robert H. Gass and John S. Seiter
Summary | Amazon

Persuasion, Social Influence, & Compliance Gaining is deepest, most researched, and most updated resource on persuasion and influence.

As a handbook it's denser and reference-heavier than most other books on this list. But the authors do a great job weave a cohesive, big-picture view of persuasion, including strategies, techniques, and practical takeaways on how to apply it in your life.

Learn More

- The best books on manipulation
- The best books to understand and acquire POWER

Also consider:

- Maximum Influence: Good overview of 12 well-researched influencing principles
- The Social Animal: Not your typical "book on persuasion". But it shares many golden nuggets on influence and changing people's minds. It's based on science and research, and that makes it one of the best resources available.

A Foundational Course For Persuasion

By Lucio Buffalmano
Overview | Reviews

Let's be real, guys:

No low-value man can easily influence high-value men -or women, for that matter-.

High-value men naturally look down on those who are "below them".
It's human nature.

So, in truth, **the foundational work to become a persuasive man is to become a high-value man**.

THEN, on top, you add this or that technique.

Power University is the ultimate course to become a high-power, high-quality man.
Once people start to look up to you, they will WANT to be influenced by you.

That's the biggest "secret" of influence and persuasion.

Change Log

- **Removed** ***Straight Line Persuasion*** (April 2025), Jordan Belfort's course on sales. It made this list thanks to a couple great tips on vocal tonality.
  However, the rest of the course was average and a couple of great tips aren't enough to feature on a list of the *top* influence and persuasion resources
- **Added** *Persuasion: Social Influence and Compliance Gaining* as the richest and most updated evidence-based overview on persuasion to date (April 2025)

Best Negotiation Books

Lucio Buffalmano · 30 March 2019 · Archived copy · Original

Are you looking for the best negotiation books?

You have come to the right place!
Whether you have just left money on the table, felt like someone took advantage of you or you simply don't want to overpay for stuff, these books will certainly help you save (and make) money.

Indeed, this list of best negotiation books might just have the best ROI on any book you'll ever buy!

Contents

- #11. Pitch Anything
- #10. The Art of The Deal
- #9. The 7 Habits of Highly Successful People
- #8. Never Split The Difference
- #7. Difficult Conversations
- #6. The Shadow Negotiation
- #5. Getting Past No
- #4. Game Theory Bargaining and Auction Strategies
- #3. Getting to Yes
- #2. Secrets of Power Negotiations
- #1. Negotiation Genius
- Bonus: The Course For Understanding & Using Power

#11. Pitch Anything

By O Klaff
Summary | Amazon

Oren Klaff focuses on negotiations to raise money.

Especially, focuses on pitching your entrepreneurial ideas to VCs.

I enjoyed it a lot because it focuses on the social power dynamics of negotiation.
Just make sure you don't overdo it because "powerful is good" but "overpowering" is more likely to be shown the door than given the money -and Klaff's advice sometimes can lean too much on the overpowering- side.

#10. The Art of The Deal

By D Trump
Summary | Amazon

Albeit the name, the success of the author, and the best-seller status of The Art of The Deal would have you believe this is all about negotiating, there is actually little when it comes to the technicalities of negotiations.

However, you will learn a lot about how sharks and power-hungry men think.
You need that knowledge for when you will be sitting at the negotiating table with someone like Trump.

#9. The 7 Habits of Highly Successful People

By S Covey
Summary | Amazon

Albeit not strictly about negotiation, Covey's best-seller deserves a place in any best negotiation book list for one of its seven habits.

And that habit is:

> Think win-win

Plenty of studies have shown that negotiating with a win-win mindset and being ready to make concessions lead to better outcomes and results.

#8. Never Split The Difference

By C Voss
Summary | Amazon

Now here's a guy who knows how to market and, can we say it? How to hype his brand.

So you can learn from him not just from what he writes, but from what he *does*.

Some might say that Voss' experience as an FBI hostage negotiator has actually little relevance to most life negotiations that his readers need.
But he spun and marketed his background as an advantage, the message being that "since I've been in challenging negotiations, then I know all about business negotiations as well".
Well, I'm personally not convinced that's the case.

BUT, that being said, Voss is a smart guy, and he is not just marketing, but also good content.
And at least part of what he learned in hostage negotiations can also be generalizable to both business negotiations and to our lives.

The main takeaway?
That the secret to negotiating with the most aggressive and dangerous negotiators is to listen and empathize, says Voss.

Needless to say, that doesn't mean to give in or be soft, but it does mean that lending an ear, sympathizing with their plight, and trying to offer a legally-acceptable compromise wins the day.

I find that approach to be most useful with emotional and, particularly, with angry negotiators.

#7. Difficult Conversations

By D Stone
Summary | Amazon

Another great book to negotiate when emotions run high.

Here again one of the biggest takeaways is to first listen and understand what our negotiating partner is so worked up about.
As the authors say, you can’t move the conversation in a positive direction until the aggravated party feels heard and understood.

#6. The Shadow Negotiation

By D Kolb
Summary | Amazon

Albeit it's marketed at women and for women, this is useful to anyone.

Deborah Kolb is a sharp mind that sees and understands frames, negotiation power moves, as well as deeper power dynamics.

Most of all, I liked that it contains *a lot* of examples, which also makes it a good text for beginners.

#5. Getting Past No

By W Ury
Summary | Amazon

Possibly the best book I have read to negotiate difficult situations.
Here are the two biggest takeaways:

1. Always (re)frame the negotiation as an attempt at finding a win-win
2. Help people save face and it will be easier for them to make concessions

If you noticed some parallels from How to Win Friends and Influence People, you are right.
After all, understanding people in one setting (friendships) helps you in all other domains as well because people are people (dating, intimate relationships, negotiations, etc., etc.)

Power University shows you a couple of examples where helping people save face helped me win the negotiation.

#4. Game Theory Bargaining and Auction Strategies

By G Berz
Summary

Warning:

This is very technical, as expected from a book on game theory.

Sure, auction theory is mostly based on the homo economicus and postulates that players are rational but we know that's not the case (Thaler, 2015).

Yet, I still learned a lot from these negotiation books.

No other book, for example, opened my eyes to the best technique to sell your house.
Now, thanks to Berz, I know that I will be using a Dutch auction style to sell my house one day.

#3. Getting to Yes

By Fisher & Ury
Summary | Amazon

Getting to Yes is a classic and one of the biggest negotiation best-seller books.
And for good reasons.

Two of its main negotiation takeaways are:

1. Developing alternatives (BATNA method)
2. Focus on interests and not positions

There is one more key concept, which I recommend that you make your new mantra for negotiations:

> Be hard on problems and soft on people

#2. Secrets of Power Negotiations

By R Dawson
Summary | Amazon

What's special about our N.1 best negotiation books?

It's that it's raw, crude, amoral… Just what you need to teach you what the *real* sharks and wolves do.

This isn't about "seek win-win", Dawson tells you how the as*holes and the power negotiators actually behave. And you need that tough love to protect yourself -and to attack back-.

You will learn techniques and power moves such as "good cop/bad cop", "higher authority", "the flinch" and all other power moves that the biggest sharks out there use.

I have listed some of these same techniques (and more) in this post here:

- **Manipulative negotiation techniques**

Personally, I can't believe what an under-appreciated and underrated book this pearl on negotiation power moves actually is.

#1. Negotiation Genius

By D Malhotra
Summary | Audiobook

Simply the best overview of negotiation I have read.

Deepak Malhotra well represents the philosophy of this website as well: seek win-win in a way that maximizes value and enlarges the pie for all, but don't be naive about it.
Such as learning about power dynamics, learning about manipulations, and being prepared for the obvious fact of life that not all negotiations or negotiators are good for win-win deals.

Bonus: The Course For Understanding & Using Power

By Lucio Buffalmano
Overview | Reviews

Negotiations are about power, leverage, and smart strategies.

Including *Machiavellian* strategies to display power, leverage, or empathy.

Power University teaches you how to behave high power, spot manipulation attempts, and negotiate your way to victory.

Also see:

- The best books on POWER
- Best persuasion books ever

Best Manipulation Books

Lucio Buffalmano · 30 March 2019 · Archived copy · Original

If you're looking for the best books on manipulation, you found them.

And if you're looking for more general information on psychological manipulation and Machiavellianism, you've found the right website :).

However, the information and psychology contained in these books can be turned into dark psychology and used for manipulation.
We do *not* endorse or condone exploitation, but we believe that learning these dynamics is crucial to an empowered and successful life.

Let's start.

♂Lucio's Take: **How this list was built**

Lucio:
Unlike AI-generated book lists, every recommendation here comes from books I personally studied cover to cover.

I've spent more than ten years researching manipulation, influence, social psychology, evolutionary psychology, status dynamics, Machiavellianism, and controlling relationships.

The best of these books influenced the frameworks later developed inside The Power Moves and Power University. Books I haven't personally studied don't make this list.

The ranking reflects three criteria:

- Scientific accuracy
- Authoritativeness, including realism and logic
- Practicality and usefulness in the real world

9. The Gervais Principle

By Venkatesh Rao

Summary

Technically, it's a series of posts turned into a book.

But if your goal is to understand manipulation, then wisdom should be your top priority and not the format.

And although the framework in The Gervais Principle may be simplistic and more theoretical than practical, it's

still one of the best books to understand corporate manipulation (<- and that one linked there is the best post to understand corporate manipulation, BTW).

> So why is promoting over-performing Losers logical?
> The simple reason is that if you over-perform at the Loser level (ed.: the low-level employee), it is clear that you are an idiot. You've already made a bad bargain, and now you're delivering more value than you need to, making your bargain even worse.

---

8. In Sheep's Clothing

By George Simon
Summary | Amazon

This is one of the foundational books on manipulation.

It covers the psychology of social manipulators, power-hungry men, and covert aggression.

Covert aggression is aggression in disguise, often used by social manipulators so that they can always deny their aggression, retreat, save face, and then probably blame you for your own overreaction.
To deal with it effectively, see "handling microaggressions".

"In Sheep's Clothing" was also one of the "The Power Moves recommended books".
I appreciated a lot that the author takes a stand against the tendency of some psychologists to make up excuses for manipulators' behavior.
With this book, you will learn manipulators' psychology, manipulators' strategies, and a few defensive techniques.

It's more on the theoretical side, though.
If you're looking for proper defense against manipulators, keep on reading.

> Evil arises from the failure of owning and disciplining one's own basic instincts.

7. Propaganda

By Edward Bernays
Summary | Amazon

This is where it all started when it comes to books on manipulation.

Propaganda is manipulation from the top to direct the masses.
And albeit it's probably not true that anyone can single-handedly instill thoughts, values, and beliefs in a nation's mind, it's certainly possible -and likely- that many people can be heavily influenced.

Bernays didn't have the means or the access to the research and studies we have today, yet his own observations are sometimes so prescient and accurate that it feels like this book has been written in the Trump era.

This is my own quote from a collage of this wonderful classic on manipulation:

> Universal literacy was supposed to educate the common man to control his environment.
> "Once he could read and write he would have a mind fit to rule". Or so ran the democratic doctrine.
> Instead, it gave them propaganda. And an easier way for the masters to control him.

6. The Art of Deception

By Kevin Mitnick
Summary | Amazon

This is the best book I have read about social engineering.

Anyone interested in manipulation, let alone anyone who's working in security and IT security should get it.

There are tons of examples of actual manipulations and albeit some of them are so simple and straightforward… A surprising amount of times that's all you need to trick most people.

> A good social engineer never advertises his skills and knowledge.
> You always want people to underestimate you, not see you as a threat.

5. 30 Covert Emotional Manipulation Tactics

By Adelyn Birch
Summary | Amazon

Brief and to the point, it's a solid overview of manipulation techniques in relationships.

Needless to say, we are talking about *abusive* relationships here so get this book to learn about the relationships that you must *avoid*.

I also highly recommend this article:

- **Gaslighting**, which also applies to all socialization
- **Psychopaths' sexual strategies**: including techniques and strategies to control women

> Psychopaths' Sexual Strategy: Marauders of Sex

> A loving relationship doesn't hurt you.
> Pretty obvious, but you'd be surprised how many people need to be reminded that.

4. The Art of Seduction

By Robert Greene
Summary | Amazon

The Art of Seduction mixes seduction with social charm as a tool for gaining leverage over others. And although it's not the best book for modern dating, it's one of the best books on seduction.

Also see:

- **How Women Mindfuck Guys**: a psychological analysis on potentially manipulative seductive techniques

> There is too little mystery in the world; too many people say exactly what they feel or want.

3. How to Lie with Statistics

By Darrell Huff
Summary |Amazon

Many readers believe that manipulation is some secret NLP tactic, hypnosis, or some covert techniques to control minds.

Then they go to lunch with fat-free food, gargle with mouthwash after brushing their teeth, and down two supplements. And without realizing, they've been successfully manipulated to spend their hard-earned money on overpriced items that add barely any benefit to their lives.

Keep this in mind:

> The biggest manipulator in this world is marketing.
> And the second is "scientific data" and researches.

Both data and research hide behind a firewall of trust and credibility lent by the high authority that our society grants to numbers and data.

And don't get me wrong: science *does* deserve that trust and respect.

And besides being nowhere near "the truth" as many believe, data and numbers are also pliable to manipulation.

"How to Lie With Statistics" makes this list of best books on manipulation because it exposes the most manipulators of them all: authority figures and authority hijackers.

> It ain't so much the things we don't know that get us in trouble. It's the things we know that ain't so

2. No Logo

By Naomi Klein
Summary | Amazon

No Logo is not a traditional dark psychology book. It is included because the highest-level manipulation in human society isn't interpersonal, but institutional and commercial/marketing.

At TPM, we must also note that *No Logo* lacks in scientific rigor, with lots of opinions and storytelling.

However, it's one of the best books on the irrational pull of brands, PR, and marketing.
Capitalism runs on consumerism.
And the best capitalists win on branding. **Branding is the true modern propaganda.**
And even though No Logo wasn't meant as a marketing book, it's one of the best books to highlight the powerfull effects of marketing on the psyche of people.

The high-level manipulation is the manipulation that makes you *crave* the latest shiny jewel, that makes you feel *proud* for owning it, talking it up to your friends, proudly showing its logo while you also market it for them -for free-.

Picture the thousands who waste a day of their lives queuing for the "privilege" of dropping a thousand dollars on a phone they don't need which is no better than the one they already have.

Or look at your shoes.
Are any of them Nike, Rebook, Adidas…?
Those companies are not shoe companies, they are marketing companies in the business of manipulation, offshoring production to the cheapest location they could find.

And people all around the world proudly wear them while letting those brands signal about their status and values.

> Scott Bedbury, Starbucks' vice president of marketing, openly recognized that "consumers don't truly believe there's a huge difference between products," which is why brands must "establish emotional ties" with their customers

Those “emotional ties” are manipulations.

---

1. Who’s Pulling Your Strings

By Harriet Braiker
Summary | Amazon

Probably the best overview of interpersonal manipulation, including:

1. The psychological profiles of manipulators
2. The personal weaknesses manipulators exploit
3. The technical steps to end manipulation
4. The self-development work to become more manipulation-resistant

If you’re interested in manipulation in close and intimate relationships, I also recommend:

- Emotional blackmail

> If you are not willing to lose the relationship—even when it means losing yourself in the process— then you are not ready to stop being a victim.

Courses: Turn Theory Into Practice

Many of the books above influenced the development of these courses. Rather than focusing on one domain (marketing, propaganda, abusive relationships, workplace politics, etc.), they integrate those insights into practical frameworks to succeed in life.

Power University

By Lucio Buffalmano
Overview | Reviews

Power University integrates the strongest ideas from the books above with years of additional research and own frameworks to focus on practical applications to boost men's success.

It's not just about defense; you'll learn to counter manipulators and reach your goals. And, when it's fair, you'll discover how to wield ethical manipulation to your advantage.

If you're serious about rising above, commanding respect, and gaining an edge, Power University is your answer.

Seduction University

By Lucio Buffalmano
Overview

Seduction University blends evolutionary psychology, power dynamics, and personal experience to teach how manipulation shapes seduction and relationship influence, both for self-defense and for ethical use.

Change Log

The following books are not strictly focused on manipulation.
But there are several gold nuggets here and there:

Removed

- ***The 48 Laws of Power*** (03.07.2026) because it's not strictly about manipulation
- **Don't Think of An Elephant** focused on political manipulation.
- ***A Gold Diggers Guide***: a valid resource on intersexual manipulation for resource extraction, but it veers more on the self-help angle

10 Best Body Language Books Ranked By An Expert

Lucio Buffalmano · 31 March 2019 · Archived copy · Original

Looking for the **best body language books** to master nonverbal communication and elevate your social skills?

At The Power Moves, we've reviewed dozens of courses and books on body language, social skills, and power dynamics, making us your trusted source for expert recommendations.

This curated list of the top 10 body language books and resources will help you decode nonverbal cues, boost confidence, and enhance your interactions, whether for dating, leadership, or everyday conversations.

We also include **body language courses**, as *seeing* nonverbal communication in action is key to learning it effectively.

Contents

- 10. Undercover Sex Signals
- 9. The Body Language Project
- 8. Body Language of Love & Dating
- 7. APA Handbook of Nonverbal Communication
- 6. What Every BODY Is Saying
- 5. Power Cues
- 4. Cues
- 3. The Definitive Book of Body Language
- 2. BBC Body Language Documentary
- 1. Power University
  - FAQ: Your Top Questions About Body Language Books
  - Change Log
  - Learn More

10. Undercover Sex Signals

By Leil Lowndes
Summary | Amazon

Some authors, including myself, question resources that claim to decode intent or feelings from specific movements or poses.

However, certain gestures *do* provide valuable insights when analyzed in context.
Studying individual poses isn't wasted time if you keep the bigger picture in mind.

Leil Lowndes excels in identifying body language cues often overlooked, especially in romantic contexts, making this one of the best body language books for attraction.

Also, read:

- Does He Like Me (male signs of attraction)
- Does She Like Me (female signs of attraction)

9. The Body Language Project

Summary

Ideal for beginners, *The Body Language Project* stands out as a **pictorial guide** with minimal text and abundant images.

This visual-first approach is exactly what you need to learn body language effectively.
It's a top pick among body language books for those starting their nonverbal communication journey.

8. Body Language of Love & Dating

By Vanessa Van Edwards

Summary

Body Language of Love and Dating is a Udemy course by Vanessa Van Edwards, focusing on nonverbal cues in dating and attraction.

Note: The image is from the cover of her book *Captivate*.

This course is a must for those seeking to master body language in romantic contexts, but it's especially suited **for women**.
Although men will also learn plenty, it is not tailored for confident and masculine body language.

Also, read:

- How to Be Feminine
- Attractive Female Body Language
- Alpha Male Body Language

7. APA Handbook of Nonverbal Communication

By various researchers
Summary | Amazon

For serious learners, science is essential, and this textbook delivers.

Though less practical, the *APA Handbook of Nonverbal Communication* is the most referenced body language book on this list.

Its **research-backed** insights make it a cornerstone for understanding nonverbal communication.

6. What Every BODY Is Saying

By Joe Navarro

Summary

Joe Navarro's *What Every BODY Is Saying* is a classic that consistently ranks among the best body language books.

It lacks the depth of visuals unfortunately and it's more about reading body language rather than adopting confident body language.
But as far as books go, it remains go-to resource for decoding body language in any setting.

5. Power Cues

By Nick Morgan
Summary | Amazon

Power Cues takes a **holistic approach** to body language and power, analyzing clusters of nonverbal cues.

Unlike many body language books, it dives deep into voice tonality, subconscious signals, and more.

With practical exercises, it's both a top body language book and a powerful self-help resource.

4. Cues

By Vanessa Van Edwards
Summary | Amazon

Cues aligns with TPM's warmth/power framework, diving deep into nonverbal cues that project warmth or authority.

It's a fantastic resource for improving both aspects of nonverbal communication.

3. The Definitive Book of Body Language

By Allan Pease
Summary | Amazon

Allan Pease's *The Definitive Book of Body Language* is the best-selling body language book for a reason.

In our review we called it the **"golden standard" of body language books** for its comprehensive and accessible approach.
It's a must-read for anyone serious about mastering nonverbal communication.

2. BBC Body Language Documentary

By BBC

Videos are superior for learning body language, and this free BBC documentary excels with real-life interaction analysis.

Unlike many courses relying on talking heads, it prioritizes practical examples.
It's a high-quality resource for mastering nonverbal communication.

1. Power University

By Lucio Buffalmano
Overview | Body Language of Power

Power University, The Power Moves' flagship course, is the **ultimate resource for men who want to master life**, including body language and social dynamics.

Distilling insights from top research and adding pictures, videos and exercises, it's built for men to become more confident and effective, gaining status, respect, and attraction.

Preview its approach with the linked articles above and elevate your skills today.

FAQ: Your Top Questions About Body Language Books

What are the best body language books for beginners?

The Body Language Project and *The Definitive Book of Body Language* are ideal for beginners, offering clear, visual guides to nonverbal communication.

Which body language books help with dating?

Undercover Sex Signals focuses on nonverbal cues for attraction and romance, while Power University ensures you internalize the mindsets, body language, and mindsets of high quality men.

Are there science-based body language books?

The *APA Handbook of Nonverbal Communication* is the most research-backed, perfect for those seeking a scientific approach.

How can I learn body language effectively?

Combine books like *The Definitive Book of Body Language* with visual resources like *Power University* or the BBC documentary for practical learning.

What's the best course for body language?

Power University is the top choice, integrating videos, images, and expert insights for comprehensive nonverbal mastery that starts from the mindsets down to the calibration needed for achieving ambitious goals.

Change Log

- *Winning Body Language* removed (03.03.2025): a valid resource, but removed to stay within the top 10.
- *Cues* added (03.03.2025).
- Re-assembled the list (03.03.2025) to better reflect added value and practical insights.

Learn More

- **Best books on frame control**
- **Best dating books for men**
- **Best dating books for women**

- **Best leadership books**

- **Best books on power**

Is Audible Worth It? A Brutally Honest Review

Lucio Buffalmano · 1 April 2019 · Archived copy · Original

Are you looking for an honest Amazon Audible review?

You have come to the right place.

By the end of this article, you will know whether you should invest in that Amazon Audible membership or not.

Contents

- About The Reviewer
- What Is Audible?
- How Does Audible Work?
- Audible Trial
- Audible Library
- Audible App: Poor
- Free Audible With Amazon Prime
- Where to Listen to Audible Books
- Audible CONS
- Audible Pros
- Audible Alternatives
- Is Audible Worth It?
- Audible Review – Summary

About The Reviewer

My name is Lucio, and I am one of the most voracious readers and knowledge-seekers you will ever meet.

With this website, I host the largest repository of editorial book summaries and review on the web.
Most of these books, I listened to rather than reading them.

And I like being efficient about it.
I love reading, but I am not your casual novel dabbler: I only read information that helps me make sense of the

world or which has practical utility.

And I like being ruthlessly efficient about it.

So my Audible review is the review of someone who's looking to increase knowledge in the most efficient way possible.

Let's start.

What Is Audible?

Amazon Audible is a monthly subscription service.

An Audible membership gives you access to a huge selection of audiobooks at a preferential and discounted rate.

To keep it simple:

- If you fit the bill, Audible can save you money on your knowledge acquisition

Amazon also tries to give you more perks and bonuses on top of "just" saving money.
For example:

- You can sync book listening and ebook reading to resume audio or ebook from where you left off the other (awesome)
- You can keep the audiobook forever
- You can listen to the audiobook on whichever medium you prefer

However, if Audible is worth it or not for you also depends on how much you read and how seriously you take knowledge.

Read on for more.

How Does Audible Work?

You start an Audible membership with a comfortable 30-day free trial which comes with 2 free audiobooks (or 1 free audiobook or even 3 free audiobooks depending on the promotion Amazon is running).

Albeit it's called "free trial", that's how actually all Audible memberships start.

When your 30-day trial ends, you will begin paying the subscription fee on a monthly basis and, at that point, you can call yourself a true, proud Amazon Audible subscriber :).

How much is the subscription depends on the plan you choose, where you are located, and when you sign up. However, consider an average of $15 per month.

With the monthly fee, you get one or two free credits per month depending on the subscription you choose.

You can use each credit to purchase one audiobook at a 1 credit: 1 audiobook exchange rate.
That means that an audiobook will cost you 1 credit no matter which audiobook you choose and no matter the tag price of the audiobook you pick.

Audible Trial

In my opinion, trying out the trial is a no-brainer.

You can cancel!
Let's be honest here, even if you don't want the membership, that's the equivalent of getting 2 audiobooks for free!

All you gotta do is remember to cancel the membership, which you can do right after you get the audiobooks.

Why wouldn't you want to get 2 audiobooks for free?
I highly recommend you give it a try because there is no downside.

Go to build your reading list, pick your two favorite books and get on with them.

- **Get 2 Free Audiobooks With The Trial Period**

Pro Tip:

- Start now because Audible will give you a chance for another free trial in the future even if you cancel (I know because I've had 2 free trials so far)

What If You Don't Like A Book? Audible Returns

As I mentioned earlier, Amazon built a whole membership service around audiobooks, which includes returns and exchanges.

If you don't like an audiobook you got, even if you listened to it until the end, you can exchange it for another book. It's an awesome service, but it comes with limitations of course to protect the system against abuse.

The limitations are not written in stone or, I suppose, some people would just abuse the system right before they hit the limit.
Instead, you will realize if you have gone past the limit because you won't be able to return your audiobook anymore.

You can still ask for a return at that point, but you must contact customer service.

They will likely go through a script designed to make you feel guilty about it but not so bad as to make you feel estranged (and leave a bad Audible review).
At that point, they will likely tell you, in a PR and PC way, that for this time they'll do it for you, but that you should take it a bit easier going forward (and you probably should: people work hard to write books).

In short:

- When you return an audiobook, you get your credit back
- There is no maximum amounts of audiobooks you can return
- You can't return books if you ended your trial membership (I tried)

What If You Want More Than 1 Book Per Month?

If you want more than 1 audiobook per month than you can buy the higher subscription plan for 2 audiobooks per month.

If even that is not enough, you can purchase whatever audiobook you like with a 30% discount.
The 30% discount does not apply to all audiobooks but to a large percentage of them. If your title is not on the discount list, you can still wait for the month to end and get it with your new credit (or just fork out the few extra bucks, you cheapo).

In short:

- Choose higher plans for more audiobooks
- You can save one month's credit for next month up to a certain limit (ie.: you can roll over credits up to a certain limit depending on the plan you choose)
- If you cancel, you lose your credits (so make sure you exchange all credits before canceling)
- If your monthly credits are over, you still get a 30% discount

Seamless Switch Between Audible & Kindle

If you also read ebooks on Kindle… This could be a huge game changer for you.

Whispersync for Voice allows you to seamlessly switch reading and listening to the same book as you move from Amazon App to Kindle.

The audiobook automatically resumes from where you left off with the ebook and vice versa.

This is what it could look like to you:

1. You wake on Sunday and start reading The 48 Laws of Power and stop at the 20th Law of Power
2. You get off of the bed, tell your Alexa-enabled speaker to start playing and the speaker starts from you left off in your ebook (the 20th Law of Power).
3. You listen until the 30th Law of Power and then enjoy some lighter music as you eat
4. You grab your cellphone and take your bike. You plug in your noise-canceling earphone and resume listening from the 30th Law of Power
5. You meet your girlfriend and you pause the audiobook that you're at the 36th Law of power
6. You go back home in the evening after the perfect day with your girlfriend. You go to bed and grab your Kindle, which automatically starts from the 36th Law of Power

Basically, if you enjoy both audiobooks and e-books, this will take your efficiency to the next level.

Of course, you do pay something more for efficiency as you will have to buy both versions of your book of choice (the audiobook version and the Kindle one).

Audible Library

Amazon has long been the largest bookstore in the world.

If you can't find a book here, you really are looking at some collectible item :).
The Audible Library is not as large as Amazon Books as not all books have a matching audiobook, but you can still count on more than 425.000 audiobooks.

It might sound impossible not to find your audiobook, yet if you are in a specific field or are looking for some old classics, it's not as unlikely that you will not find your audiobook.

For example, as a sociologist and researcher on power dynamics and "power moves", I want to soon read "Games Criminals Play". But there is no audiobook version for this old niche goldie.

What you can do at that point is to get your next favorite book in audio format while you get your ebook on Kindle (or Kobo).

In short:

- Audible has the largest audiobook library in the world
- Most new and popular books have an audiobook version
- Still, not all books have an audiobook file

Audible App: Poor

Now we get to the weakest link in the Amazon Audible plan.

If you read around, you will read raving reviews for the Audible app, but these are obviously people who don't treat books like studying material.

I do, and the Audible App doesn't help.

Look at the Audible App:

Looks sleek with its hip minimalist design, right?

Yeah, it does.
But… Is it also functional?

Let's look at what the bookmarks look like:

Still looks nice, but it doesn't work for sh*t.

When you click on "Play Clip", it only plays for 10 seconds or so. To listen longer, you need to click "Go to Bookmark".
But the functionality sucks: it doesn't take you back to the original track. It just starts playing the track from the bookmark tab, and there are no cursors to control the audio. Such as, from the bookmarks, you can't rewind, stop, or fast forward.

This might not be an issue for more casual listeners.
But it's an issue for me as a review. And it might be an issue for people who want to analyze and dissect their books.

Compare it to Audipo, my favorite audiobook app:

Audipo's bookmarks register straight on the audio track.
You keep the whole overview and quickly switch from one bookmark to the other to listen, rewind, slow down or fast-forward as you please.

This is the good stuff for those who listen to analyze.

Update: Still Crappy App
In the meanwhile, I have become a power user of Audible. But as of June 2020, it hasn't improved. For the use I make of it, with lots of notes I need to go back to, the app is disappointing.

Update 2: Terrible

The more I use it, the more I realize it's very poorly designed for those who are looking to take notes and learn, rather than just listen and move on.

Free Audible With Amazon Prime

Do you buy on Amazon a lot?

Then you should take into account Amazon Prime which will likely save you quite some money on shipping costs. And if you get Amazon Prime, an Aubile subscription is included in the price.

Consider also that you might use Amazon for groceries home delivery, which is a huge time saver and efficiency booster.

I was really interested in that.
Unluckily Amazon groceries is not yet very well developed in Europe, so I am still sticking with a local grocery chain (which is still an awesome time-saver).

Where to Listen to Audible Books

Anywhere you want, really.

The great advantage of audiobooks is that they allow you to maximize your time and multi-task, for example

listening to an audiobook as you do house chores (just make sure to pick easier books for multitasking or listen to them twice).

And one of the advantages of an Audible Subscription is that you can download the file, which allows you to move it as you prefer.

Here are some options:

- Smartphone
- Computer
- Tablet
- Amazon Kindle
- Alexa-enabled loudspeaker
- Amazon Fire TV
- MegaBoom via Bluetooth

For example, my favorite combo at home is to switch on my EU MegaBoom (linked is the latest version which is Alexa-enabled).
And then, bang!
Ready to maximize my time and listen to an audiobook as I exercise, clean, cook, or eat (as long as I'm not eating something crunchy or drinking wine, in which case I play music).

You can also listen to an audiobook while masturbating or making love, my friends.
Freedom… Ain't that beautiful :).

Turn Your Commute Into an MBA!

Dear readers, life is too short to waste valuable time waiting for late buses and staying stuck in traffic!

How to start turning time waste into learning opportunities?

The combo I recommend is audiobooks with noise-canceling headphones so that you can listen to audiobooks on the go, no matter the noise around you (and while preserving your hearing).

This way Audible Subscriptions helps you to transform your wasted waiting time into value-adding learning time. To me, that's tantamount to magic.

As Brian Tracy said:

> **You can now transform your commute into your university**

I personally use Bose noise-canceling headphones because when I researched it a few months ago they were the best on the market.

A great investment, if you ask me.

Audible CONS

Of course, not all is great about Audible:

- **UPDATE: you don't get to keep the books if you cancel!**

I just realized this when I went to cancel.

See here the message:

Before you go, we recommend you use any remaining credits you may have. After you cancel, you'll lose access to your member benefits and all credits at the end of your final billing period.

You'll no longer have access to the Plus Catalog

When your membership is canceled your membership will remain active until the end of your final billing period. After that, you will no longer be able to listen to the thousands of included Audible Originals, audiobooks, and podcasts. Even if they are already in your Library. You can continue to listen to free podcasts without membership.

Continue canceling

You don't get to keep your accumulated credits after your plan ends and, equally important, you don't get to keep the audiobooks!
Amazon Audible is not for purchasing books, it's for RENTING books.
And at the end of your tour, you must give everything back: S.

Unless… Unless you keep paying.
And that's where it feels a bit scammy.

- **Can Still Be Costly for Voracious Readers**

You are limited to the 2 credits/month of the upper membership tier. After that, you rely on the 30% discount to buy additional books.

And since audiobooks on Amazon are often not the cheapest, they can become costly for voracious readers.

- **Not for Binge-Readers**

If you are looking to get the top 10 books on a certain topic to cram the best information you can get, as quickly as possible, then Audible is not for you.

For example, a fellow reviewer notes that Never Split The Difference comes in at $19.0 with the membership discount. But you can get the Kindle version for $16.7
And you can get it even cheaper by shopping around for other audiobook providers.

So if you're looking to binge on the best negotiation books in the shortest possible time, the Audible membership is not for you.

- **Bad App For Serious Learners**

Most "normal" readers will be happy with the Audible app.

But not serious learners who are listening to dissect, analyze, store, and review information (read "Audible App" for more information).
However, as we have mentioned, you can download the audio file and use whichever app you prefer.

- **Reviews Based on Amazon Reviews**

The reviews you get on each title are, as you might guess, from Amazon's reviews.

Unluckily the Amazon reviews are far from optimal.

There literally are businesses that work to game the rating system and seem to be quite successful at it (read "Published").
And that's even without accounting for fake reviews from friends, customers who review the service instead of the product, and the usual "I like / I don't like the author" reviews (you can read more on best book reviews websites).

- **Gamification Approach to Learning**

I won a few badges in my Audible trial.

Even as a sociologist and a psychology buff who's read it all about businesses hooking people to products, I couldn't help but get a dopamine rush with it.

For a second, at least… The second after I immediately got back to my senses and thought "*how lame..* ".

Dear reader… Please don't let me ever catch you sharing your Audible badges on social media please :D.

Audible Pros

Of course, there are a lot of advantages to Audible:

- **Speed it up, save time!**

The feature I love the most about audiobooks is that they go quicker than ebooks and, thus, are more efficient.

I trained myself to listen to faster speeds, and if you're serious about learning I recommend you do the same.

The Audible app, contrary to some other audiobook apps on the market, also allows you to go beyond 2x.
Trust me, as you get better you will really want an app that lets you go faster than 2x.

P.S.: drop your excuses, I'm a non-native who started learning English in earnest at 20 years old.

If I can do it, so can you.

P.P.S.: It's not a race. Only listen as quickly as you can manage without losing comprehension.

- **You Can Buy Summaries!**

If you are into summaries, there are plenty of audiobook summaries for the biggest titles out there.

I'm not a huge fan of this option though as I need to trust the reviewer to trust a summary.

- **You Can Keep the Files**

Even if you can cancel your membership, including if you cancel your trial membership, you can still keep the audiobooks.
That's why I can highly recommend you claim your 2 free audiobooks.

- **You Can Place Your Membership on Hold**

This is a very nice feature.
If you're not using your Audible membership, you can pause it (and stop the membership payments as well of course).
At the time of writing, you can put it on hold once a year for up to 3 months.

Audible Alternatives

A proper Audible review should also look at the competition.

And of course, luckily, Audible isn't alone in the market of efficient learning.

So what about the alternatives?

- **Audiobook Bay, Pirated Torrents**

Let's be real here: there are plenty of pirated torrents out there for both ebooks and audiobooks.

How you feel about these options depends on your personal views.
I am ambivalent about it. I believe authors should receive fair pay for their hard work.
On the other hand, some poor people might use some initial help to get off the gutters.

The downside (or upside) is that the selection of audiobooks is very limited (there are more ebooks than audiobooks).

In this exampleCan't Hurt Me by David Goggins

- **Free Public Libraries**

There are plenty of public libraries in almost every country and you can rent books for free there.
Some of the most advanced countries also offer audiobooks.

- **Free online audiobook website**

There are also many websites that offer free audiobooks.
The issue here is that you won't find most of the books you want :).

- **YouTube**

You'd be surprised how many full (copyrighted) audiobooks are being uploaded on YouTube.

At the moment of writing for example both The Power of Now and Rich Dad Poor Dad are available (here is one example).

- **Blinkist**

Blinkist is an app and service for book summaries, and they also offer audiobook summaries.

It's becoming hugely popular as they epitomize the self-development mantra that you must read every day as much as possible (with which I disagree).

Personally, I'm not a big fan of Blinkist (you can read my Blinkist Review here).
But the trial period is free, so give it a shot and let me know what you think.

You can start a Blinkist free trial here.

- **MentorBox**

I don't like Tai Lopez and there are many questions about MentorBox values and business practices, but the product is good.

Take a look at the MentorBox review here.

- **The Power Moves**

ThePowerMoves.com has "only" hundreds of books, and they are not in audio format.

But the available reviews are the most critical reviews you will ever read (very few other sources, if any, will check the references and call BS without being afraid of pissing off authors and fans).

And the selection is also highly focused.
If you are into self-development, psychology, and people's skills, match those summaries with the highly targeted articles, and you have all the information you need to become the person you want to become (and the rest is in applying that information).

Is Audible Worth It?

It's actually easy answering this question.
As long as you have an idea of how many audiobooks you're going to consume and what's the average price.

- If you read less than 5-6 books a year, Audible is not worth it
- If you're buying Indie books at $3-$4, then Audible isn't worth it

Audible Review – Summary

Overall, Audible is a wonderful service.

and I can highly recommend it if:

- You read consistently (or want to read consistently)
- You prefer audiobooks (or want to start with audiobooks)
- You are already a Kindle customer
- You like the idea of seamless switching between Kindle and audiobooks

And frankly, between us, I recommend the Audible membership if:

- You don’t plan on paying a monthly fee but will gladly get 2 audiobooks for free

Personally, I am not a member yet as I am in “bootstrapping mode” and “binge reading mode”.
But I plan into easing into a calmer reading routine going forward and I look forward to joining the Audible Membership.

Power Cues: Summary & Review

Lucio Buffalmano · 2 April 2019 · Archived copy · Original

Power Cues (2014) takes a holistic view of communication.
Nick Morgan, the author, helps readers improve their social effectiveness by drawing from concepts of power dynamics, body language, and effective leadership studies.

Contents

- Bullet Summary
- Summary
  - 1. Become Self-Aware
  - 2. Master Nonverbal Communication
  - 3. Learn to Read Others' Unconscious Messages
  - 4. Master The Power of Your Voice
  - 5. Combine Voice & Body Language
  - 6. Learn to Effectively Use Your Intuition
  - 7. Get Minds In Sync: Use Stories
- Real-Life Applications
- CONS
- Review

Bullet Summary

- To be a great leader you need to align your unconscious power cues with your conscious content
- Improving yourself first requires self-awareness
- Isolate your subconscious fears, then repeat opposite mantras over and over for a few months
- Voice might be the most powerful tool for power

> **Machiavelli was wrong. Leadership is not manipulation. Not in the long run.**

I partially agree.
There is though plenty of manipulation among some leaders.

> Manipulation: Techniques, Strategies, & Ethics

Summary

Nick Morgan categorizes the power cues into 7 major categories:

1. Become Self-Aware

Before you can even think about fixing your current issues and upgrading yourself, you must know yourself.

These are some of the questions Nick Morgan proposes: how are you showing up in your conversations, your meetings, and your presentations?
Are you powerful and commanding?

Are you friendly and warm?
Do people fear you, trust you, like you, avoid you, or flock to you? What happens?
Do you take charge or take a backseat?

And here are the best takeaways from this chapter:

- Gestures and verbal communication are two separate communication channels
- Gestures precede words by splits of a second
- You must make the two go in sync or you look scatterbrained and uncharismatic
- Record yourself and get a full grasp on what you're communicating (or hire me and I'll help you)
- Don't talk while using slides in your presentation (reading slides and listening to you taxes two different parts of the brain and you'll lose the audience)
- Use gestures or your brain has to work much harder

2. Master Nonverbal Communication

It's difficult to fully control our body language, and that's why we should focus on emotions instead.
Then the body language comes out naturally.

The author says that most of us are not charismatic because we don't focus on our emotions.

We interact with people with a hundred different things going through our minds and we present a mixed bag of emotions.
We are like cluttered to-do lists.

And a cluttered mind results in muddled interactions, which are charisma-murderers.

When we can manage to muster a certain emotion, not only we are charismatic, but thanks to mirror neurons we will be able to make people feel the same (original research on mirror neurons here, but the research has been heavily criticized).

- You can work from emotions to gestures (inside-out approach)
- Or from gestures to emotions (inside in)
- The best approach is to work on both at the same time
- Pick a time when you felt like a winner, then use all five senses to put yourself back in that moment
  - It's easy for some, but not for others: practice until it becomes easier
- You just need to evoke the emotions, not the specific gestures
  - This is the sequence: emotions lead to gestures; body language leads to conscious thought

How to increase your charisma:

1. Increase your authenticity (words and body language in sync)
2. Increase your passion
3. Focus on the moment

> **Charisma is quite simple. It's focused emotion**

3. Learn to Read Others' Unconscious Messages

We make decisions at an emotional, unconscious level first, and only later we rationalize.
When you need to learn the subtle signs of others, you will be able to see where they are going before they are even

fully aware of it.

You are already able to read other people but only at an unconscious level.
To make the most out of it, you need to bring that awareness to your conscious mind first.

Once you become conscious about the messages you are sending and the messages others are sending, you will be able to act upon them earlier and you will be able to focus on what you want to pay attention to.

Once you become good at it, you don't need to constantly pay attention to it anymore.
They will become part of who you are and you can send them back to your unconscious once again.

- Gestures are fluid and ambiguous, analyzing them one by one is meaningless (the author mentions "Undercover Sex Signals")

The Four Constellations of Body Language

The author mentions Paul Ekman and his research in micro-expressions.
Learning to decode micro-expressions take a long time though, and he proposes an alternative by focusing on four basic tells of interpersonal interactions.

There are four core constellations of body language you should be paying attention to:

1. Power
2. Friendship
3. Alignment
4. Lying

The author discusses each and proposes you recruit your own unconscious mind for the answers.

The correct way to ask questions to your subconscious is through simple, polar questions.
For example: is this person friend or foe? Is this person telling the truth or lying? Is this person on my side or not? Is this person powerful or not?

After you ask those questions, empty your mind and let the answer come to you.
This, too, is a skill that takes practice.

4. Master The Power of Your Voice

This was one of the best and most eye-opening chapters of Power Cues for me.

Here is what the author says:

> people who put out the right kind of sounds—below the range of conscious human hearing—become the leaders of most groups.
>
> We defer unconsciously to leaders who have stronger low-frequency sounds.

And here is the good news:

> You can learn to increase the leadership potential of your voice through breathing and other vocal exercises, and practicing the authoritative arc.

And then goes on to mention the study:

> When Stanford and his colleague dug into the Larry King interviews, they found that lower-status people match the low-frequency sounds of the higher-status people in the room.

> We get together, we start talking, and in a couple of minutes, we've unconsciously picked a leader and lined up behind him or her.

A study also found out how voice pitches, and particularly deeper pitches, predicted election results every time in the past 100 years.

Does that mean that lower pitches always win?
No, not necessarily.
You need a mixture of both highs and lows to make your voice clear and resonant.

The author talks about finding your MRP, such as the point of your voice where you maximize both overtones and, most importantly, undertones.

> A bathroom with all its hard porcelain surfaces is a good place to practice working on your MRP.
> To find the right voice tone, practice moving up and down through your vocal range until you find that pitch that seems to echo throughout your head and the room.
> That's the pitch that maximizes the subsonic frequencies and will thus enhance your leadership power. To see how this works in practice, study—yes—President Ronald Reagan's voice. It's a perfect leader's voice; it oozes resonance and authority with every phrase.
> (what you need is) the resonance that will give your voice authority.

Then he says that Reagan here maximizes his MRP and whenever he changes pitch, he always goes back to his MRP.

Don't force yourself to go lower or higher as that will strain your vocal cords and can harm them for good.

Some people will find it easy to control their voice, while others must work harder at it.

5. Combine Voice & Body Language

Body language and voice must be in sync to influence.

There are four patterns of behavior that, when well managed, allow you to influence people:

1. Influence—how much one person dominates the conversation (increase positional power, emotion, or expertise, or control the give-and-take tempo of the conversation)
2. Mimicry—how much one person mirrors another (start by mirroring them, then have them follow you)
3. Activity—how energetic a person is.
4. Consistency—how even-keeled a person is (the higher the consistency and the more steadfast you remain to your ideas in spite of what people throw at you, the more powerful you appear)

> **The dominance that comes from authority, experience, and the unshakable conviction that you're right and the other fellow is a fool."**

However, as we also explain in Power University, you don't always want to be consistent and refuse other people's input when it's out of place.
Speaking to a client, a higher variation in your manners shows that you're open to them.

6. Learn to Effectively Use Your Intuition

This chapter gets you to work on your unconscious and resolve your fears.

1. Identify your fears as clearly as you can

2. Write them down (if it hurts and you feel it deep inside you're doing it right)
3. let them sit a few days and go back to them a few times during the day
4. Come up with counter-statements about the new you that you want (use only positive sentences, make it as precise and simple as possible with subject and verb)
5. Write it down, let it sit for at least twenty-four hours
6. Imagine this sentence were true: would your life improve? If so, you're doing it right
7. Now repeat this line as often as possible, especially before sleep, right after you wake up, and, most of all, any time the old doubts and fears creep up

It will take some time. From a few weeks to a few months. But keep at it with the same level of intensity.

7. Get Minds In Sync: Use Stories

Great leaders are storytellers.

And great leaders don't tell stories that make them sound great. They tell stories that make *others* feel like the most important heroes of the story.

The authors say that you should decide on the level to which you want to engage your audience and introduce Maslow's hierarchy (stay at the lower levels of safety if you want a visceral reaction).

And then you should pick one of the story's archetypes, which are: setting off on a quest, a stranger in a strange land, a love story, rags to riches, and revenge.

The author also explains how to set them up, particularly the "hero on a quest", which is so ingrained in our culture we don't even recognize it anymore as a story archetype.

Real-Life Applications

- **Don't talk while projecting slides**

Simple, yet such a game-changer.
Also, check out:

> Speaking Pro by Roger Love: Review & Notes

- **Practice managing your own states**

The typical "Tony Robbins exercise" of changing your states by recollecting a time when you felt great doesn't come easily to many but by practicing it will get easier

- **For presentation get an "off-stage beat"**

Nick says that businesspeople and presenters who find an objective and get into a positive emotion do much better. It might be something like:

While you're breathing before the meeting, get an objective and an emotion into your head.

> "I can't wait to tell these people about my special new idea and I'm thrilled to the max to see them."

You will also have less time to make yourself nervous.

- **Keep elbows away from the body**

Some people gesture with their lower arms only, and it looks defensive and unconfident.
Push the elbows out and gesture with your whole body.

- **Reading a person based on wrinkles**

The author looks for wrinkles on people's foreheads. If they have, that means they were open to new ideas and concepts.
A smooth forehead means they have been closed down most of their lives.

- **Prepare!!**

This is the biggest takeaway really.

When you don't rehearse your "first-timers" cue overlap with the cues of people who don't fully mean what they say.

To make sure that your verbal and nonverbal are congruent and aligned you need to know your material and what you're going to say.
Then you make it seem like you're going impromptu.

> **To deliver the perfect natural impromptu speech: prepare it well**

CONS

- **Some Induction Reasoning**

The author says that because Soviet athletes used some of the methods he presents, then they work.
But that, of course, proves nothing (also read: Fooled by Randomness).

- **Sometimes Studies Presented Without Critical Assessment**

The author mentions the famous Amy Cuddy experiment, but successive research failed to replicate it nearly as

strongly.
Edit: Cuddy later restated her claims are actually correct with further research here.

Also, read these articles:

- Pop psychology myths
- Self-help BS

> Pop Psychology Myths

Review

Power Cues is an excellent resource that looks a body language and nonverbal at a systemic and 'forest-level', rather than relying on single, 'tree-level' cues.

It's also very practical, with many tips to become a more influential, higher-quality man.

The Believing Brain: Summary & Review

Lucio Buffalmano · 4 April 2019 · Archived copy · Original

The Believing Brain reviews how, why, and what are the most pervasive irrational beliefs.
Shermer argues that the brain is a belief engine. Based on sensory data that flow in through the senses, the brain naturally begins to look for patterns, and then infuses those patterns with meaning, forming beliefs that are, sometimes, not really rational.

Contents

- Bullet Summary

- CONS
  - PROS
- The Believing Brain – Review

Bullet Summary

- We are somewhat wired to believe in external, sentient forces despite the lack of any evidence
- Skepticism means taking a scientific approach to claims
- Scientists must be skeptical because most claims turn out false

Summary

About the Author:
Michael Shermer is an American science writer, historian of science, and founder of The Skeptics Society.
In time, he seems to have become closer (and potentially biased?) to the libertarian and conspiracy theory community.
For a (rather critical) take on Shermer, see here:

Introduction

Michael Shermer identifies two major reasons why humans have a tendency to believe and act upon thoughts for which there is no empirical evidence and not much rational basis.

The two major factors are:

- **Patternicity** (seeing meaningful patterns where there is only randomness)
- **Agenticity** (injecting meaning into the patterns we see)

He then analyzes five major human areas of irrationality:

- Afterlife
- God
- Aliens
- Conspiracies
- Politics

Patternicity: How We Jump to Too Many Conclusions

There are good evolutionary reasons why we evolved patternicity.

And it's because, in spite, of it making it more likely for us to fall to erroneous conclusions, it also helped us to stay alive.

Indeed it's safer for us to over-detect patterns than not detecting any at all.
Our ancestors who reacted quickly to noises from the savannah by predicting it might have been a predator stayed alive much more consistently than those who saw no patterns between "mysterious noises" and danger.

On the other hand, there was no equally dire and life-threatening punishment for those who saw too many patterns or who jumped to the wrong conclusions.

High Patternicity Can Lead to Genius Discoveries

The author tells the story of his interview with Kary Mullis, a Nobel prize winner who believed in all kinds of weird things (that the HIV/AIDS connection is a conspiracy, that the climate is not changing, and that astrology is real).

He notices that albeit he did sound like a lunatic, his aware system of seeing patterns everywhere led him to analyze claims and pursue tracks that nobody else would have seen or noticed.

Agenticity: Why We Think There Must Be Someone Behind The Uknown

Humans do not sit well with the concept of randomness.
We don't like to believe that things just happen randomly and we look for causes -or "beings"- who direct and stand behind all the mysteries we can't readily solve.

The more science has progressed in its ability to explain causes, the more the agenticity of "mysterious forces" has disappeared.
We don't believe anymore for example that a storm is a punishment or that we can influence with a sacrifice or with random dances.

There are still countless events that people cannot readily explain though, and that's why we still look to other sources (or beings) instead of accepting randomness or the fact that "unknown" doesn't mean "some entity must be behind it".

Beliefs Come First, Explanations Follow

We first form a belief, and then look for confirmation.

This is obviously the antithesis of the scientific method, which goes the other way around: experiment first, theory second.

When we look for confirmation our psychology focuses on the evidence that confirms our beliefs while discounting evidence for the contrary.
Anecdotal evidence often trumps scientific proof in people's minds and, Michael Shermer says, this is why we are still debating evolution VS creation.

The Solution? Embrace The Scientific Method

The solution to our own mental shortcomings is to embrace the scientific method.

Not just what it says, but how it works.
Once we understand how it works, hopefully, we will have more faith in it.
And we need it.
The author says that 70% of American still don't understand the scientific process while 75% believes in heaven and 72% in angels (and only 45% believed in Darwin's theory of evolution).

> **Anecdotal evidence comes natural. Science requires training.**

Noteworthy Information

- **Skeptics have a higher locus of control**

People who believe in external forces and influences, in God or astrology or “faith” tend to have a lower locus of control.

- **The principle of positive evidence**

Having evidence that disproves a belief does not automatically make another belief right.

For a belief to be scientifically recognized as true, there must be scientific evidence against the opposing theory and scientific evidence for your own theory.

This is where, for example, creationists fall short: they lay a few claims against Darwinian selection and pretend that they prove creationism right.

- **It’s not true that the higher the education, the lower the belief**

Richard Dawkins in *The God Delusion* famously said that the higher the IQ and the education, the lower the belief in God.

Michael Shermer says that’s not the case instead. Intelligence is not a factor when we encounter claims we know little or nothing about.
Indeed, the opposite can be true: very intelligent people can better rationalize their own beliefs.
This means they are great at using smart logic to defend beliefs they acquired for non-smart reasons. And they can also sound more convincing in selling those ideas (also see Jordan Peterson, author of *12 Rules For Life*).

> Smart people believe in weird things because they are good at defending beliefs they acquired for non-smart reasons.

The Believing Brain Quotes

Here are some great quotes from "*The Believing Brain*":

> I'm a skeptic not because I do not want to believe, but because I want to know

If there is a God:

> If turns out I'm wrong, and there is a God, and it's the Judeo-Christian God more preoccupied with belief than beavior, then I'd rather not spend the eternity with him and joyfully go to other places where I suspect most of my family, friends and colleagues will be

On Einstein and paranormal:

> He's one of the greatest minds of our time, so what he says is worthy of consideration.
> But even the mind of a staggering genius cannot override the cognitive biases that favor anecdotal thinking.

On the situations in which our brains abandon rationality, the most Michael Shermer quotes Malinowski who notices that there is no superstition when outcomes are certain and under our control. But:

> We find magic wherever the elemnts of chance and accident and the emotional play between hope and fear have a wide and extensive range.

On how the inexplicable doesn't mean we have proof of anything:

> The fact that we can only explain 90% of UFOs seeings across the globe doesn't mean that the other 10% represent actual visitations.
> The fact that we can't explain how some tumors recides doesn't mean divine intervention sometimes chooses

> to act. It just means that science has yet to catch up with the wonders of the human body.

On God and who created whom:

> Humans created God, and not vice versa.

On the burden of proof:

> The burden of proof is on the believer, not on the skeptic to disprove the belief.

On proving a negative:

> Althought we can't prove a negative, we can just as easily argue that we can't prove the existence of irrational beliefs.

On advanced ETs:

> If we knew the underlying technologies, we'd call them "extra-terrestrial intelligence". If we didn't, we'd call them "God".

On how culture dictates and directs our irrational beliefs (and how true):

> Since they lived in a demonized world, they called those pressures "demons". Since we live in an alienized world, we call them "aliens".
> Our culture dictates the label and meaning we assign to these anomal experiences.

And finally, on starting your own critical thinking journey on yourself:

> **The first principle is that you must not fool yourself. And you are the easiest person to fool.**

CONS

- **Too Long on 9/11 Conspiracies**

I found the book delving too long and too deeply into conspiracies. Especially on the 9/11 terrorist attacks.
I can understand that's been such a huge tragedy and turning point in US life and culture, but in my opinion, the book is so good that it didn't have to tie itself so deeply to a specific single event.

- **The Moore Law, Singularity & Omniscient Computers**

The author talks about "singularity", or the point at which the computational ability of our computing systems will grow so large that it will become indistinguishable from omniscience.

Wow, mind-blowing, I had never thought about it that way.

Yet, I couldn't help but think that the idea that computational power will keep doubling and lead to omniscience is flawed.
To begin with, it's not written anywhere that computational power will keep doubling every year.
Second, computational power does not equate with the ability to act and draw inferences and conclusions on that data.

I do, however, agree with the principle.

- **It's So Ethnocentric to Believe We Can Communicate With An Alien Form of Life**

We cannot communicate with animals who developed with us on the same earth.
What makes us believe we'd be able to communicate with an alien civilization?

- **Psychology of Conservativism A Bit Out of Place**

I have found the part on the psychology of conservativism super interesting.
But it felt somewhat like an offshoot of "*The Believing Brain*". I prefer books that follow a more clear structure.

PROS

I'd call this the Bible of skepticism (and try to catch the irony in that sentence :).
Too much good stuff to only highlight a few "pros".

The Believing Brain – Review

I had high expectations for "*The Believing Brain*" and they were partially met.
There are some good points on how to think more rationally and critically -and how to become more BS-resistant-.

The chapter on intelligent creators and how we can't distinguish between an alien species able to potentially create planets and "God" was a good take.

I also found Shermer to be a sort of kindred soul as I found myself nodding and smiling across the whole book.

Make It Stick: Strategic Learning for High-Achievers (Book Review)

Lucio Buffalmano · 4 April 2019 · Archived copy · Original

Make It Stick (2014) is a book on how to read, learn, and retain information in the most effective way.

TPM Strategic Note: Learning boosts competence, a foundation of power
Competence, in turn, boosts self-esteem, confidence, and the odds of achieving success. Learning how to learn can maximize your ROI in any new field you seek increased expertise.
See: **TPM's competence guide**

Contents

- Key Takeaways
- Notes
  - Three Myths of Learning
  - Active Learning: Work Hard And Smart
  - How to Learn Effectively
  - How to Adopt a Learner Mindset
- Real-Life Applications
- CONS
- PROS
- Review

Key Takeaways

- It's more about how you learn and train than how much you do it
- Spacing out training and learning sessions is better than cramming out in a short time span
- Your own mindsets and approach to learning will make all the difference on whether you will learn or not

Notes

About the Authors:
Peter Brown is a writer and former management consultant; Henry Roediger is a professor of Psychology at Washington University; Mark McDaniel is a Professor of Psychology and Director of the Center for Integrative Research on Cognition, Learning, and Education (CIRCLE) at Washington University.

Three Myths of Learning

1. **Repetition helps memorize**: not necessarily: mindless repetition does little. The quality of the repetition might be more important than the quantity
2. **Fluency means understanding**: understanding something does not correlate with how fluent you are at repeating it
3. **Creativity trumps knowledge are not separate**: not really, don't listen to Einstein because knowledge *enables* creativity
4. **Learning styles help you learn**: no, there is no evidence that learning consistently with your learning styles will improve retention and understanding

Active Learning: Work Hard *And* Smart

Active learning is about learning hard and smart.
Both are required, together.

If you are thinking that learning is not easy, it's not. Learning, as with any worthwhile pursuit, requires effort.
Also, read:

- Deep Work by Cal Newport

How to Learn Effectively

This is a quick overview of the main principles of "*Make It Stick*":

1. **Retrieve & Do Lots of Tests**: when you force yourself to retrieve information, you are learning effectively. Tests help you because they force you to retrieve information. And don't make the mistake of thinking "yeah, I know this" and skipping the answer: force yourself to answer
2. **Vary Your Practice**: If you always train the same in the same way, you are limiting your capacity of adapting the learning to different aspects of your life. Change your practice conditions and change the type of tests
3. **Space Practice Over Time**: Practicing over time, especially if there is time to sleep between sessions, is far superior to cramming lots of practice in a short time. So space over time, but not so far away that you have to re-learn the material
4. **Work At Your Comfort Zone –** Mistakes are what allow you to learn, so you must work right at the edge of your comfort zone
5. **Connect The New Information**: The process of elaboration is to "make the new material your own" by connecting it to what you already know. This way you build a network of information that helps you retain and increase the value of that information
6. **Make The Information Yours**: By giving new meaning and/or connecting the information to your values and beliefs, you incorporate the new information in a way that it's easier for you to retain and access
7. **Practice More What You're Bad At**: practice more what you have learned less and what you are not as good at (example of reading new words more often), but don't stop practicing what you know well forever and you might lose it

How to Adopt a Learner Mindset

To learn the new material and to remember it more effectively Peter Brown stresses the importance of a learner mindset.

Among the key concepts of a learner mindset are:

- **Be Nice On Yourself**: Some people get discouraged when they start out because they're too clumsy. But everyone's clumsy when starting out.
- **Be optimistic**: Obstacles will always be there. Train yourself not to see obstacles as the ends of the road but as opportunities to improve and get better
- **Look At Life As Training**: Look both at tests, learning, and life in general as training and an opportunity to get better instead of a "make it or break it" opportunity, which only unnecessarily raises your nervousness
- **Stay At it**: Learning can take time. Stick with it

The author also recommends a growth mindset.
For mastering a growth mindset:

- Mindsets by researcher Carol Dweck

- How to develop a growth mindset

Real-Life Applications

- **Do The Practice Questions**

You know those practice questions you always skip at the end of each chapter?
Well, if you care about retaining and understanding the information, you must always do those from now on.

Even better, come up with your own questions. This is what I always do and then search for answers.

- **Don't Read The Answers and Nod**

You know when people skip to the answers and nod as if to say "right, of course… Know I know it".
That's very poor learning. You have to think about the answer yourself!

- **Strive to Surpass Your Current Level of Ability**

When you learn to strive to surpass your current level of ability and knowledge, that's when you learn the most effectively.

CONS

- **Could Have Been More Concentrated**

The information here is super powerful.
But I felt it could have been summarized in a blog post. Or at least, it could have been briefer.

- **Some Studies Provided Without Corresponding Criticism**

The author mentions *The Marshmallow Test*. Yet, there has been quite some criticism of that test which would have been good, in my opinion, to also mention.

Same for neuroplasticity and "*The Brain That Changes Itself*".

PROS

- **Science-Backed**

Henry L. Roediger III and Mark A. McDaniel are legit researchers and high authorities in this field.

- **Learning How to Learn Is A Metaskill**

Make It Stick deals with a topic that everyone should be well-versed in. But few are.

Review

Great book on a hugely important meta-skill: how to learn.

If you learn how to learn effectively, you will learn more quickly and more efficiently.

And the earlier you learn it, the more rewards you will reap in your life.

Money Can't Buy Respect: Elon Musk & Talulah Riley (Case Study)

Lucio Buffalmano · 8 April 2019 · Archived copy · Original

In this article, we analyze Elon Musk's social skills, interpersonal dominance, and what we call here 'power intelligence'.

Power intelligence is crucial to see and change interpersonal power dynamics that affect respect, status, and attraction.
In Elon Musk's early life, it seems apparent that he may have lost some respect and attraction by missing red flags and 'power moves'.

Let's dive in.

- Summary

Elon Musk's Relationship

For the sake of this article, I will analyze two videos of Elon Musk's relationship with his ex-wife and actress Talulah Riley.

Look at this first video:

Quite a brutal treatment, eh?
If you can spot the brutal treatment, you are already 10x smarter than Elon Musk when it comes to EQ :).

We might go as far as to say that she goes the extra mile in an effort to emasculate him.
However, what's equally disturbing, is how he both fails to do anything about it and how he seems not to even notice what's happening.

The moment in which he says "really" is especially telling about Elon Musk's emotional intelligence.

> **Talulah**: Alright, I'm getting on a plane to England and I'm n ever gonna see him again
> (she said it jokingly, albeit it's still an obvious power move)
> **Elon Musk**: Really?
> **Everyone with EQ above 0**: face palm

In this other video, she goes down even harder on him (is that even possible? Seems so):

Again, Elon Musk fails to do anything about it. We don't know for sure that he failed to understand how rude she is being, but social intelligence is also the capacity of *acting* on disrespect, and he obviously fails there.
And the fact that they stayed together for so long also leads me to believe that no, he didn't even see the power moves for what they really were: emotional abuse.

Since Elon Musk doesn't attack back this is not a combative relationship. Not because it's a good relationship, but

quite the opposite: this is a highly toxic relationship.
But because Elon Musk is non-reactive, he is simply a punching bag for her aggression.
Not an enviable position to be in is it :).

Talulah Riley Power Games

Clearly, she is engaging in relationship power moves and trying to position herself as the prize of the relationship.

If she is successful in keeping him down and lowering his self-esteem, she will always have him prove himself to her and try to "win her back".
That way, she can hold him like a puppet on a leash.

I have not met them in person and I have not seen all footage available and read all the resources on the two of them. But since they stayed together for so long, she might as well have been successful.

You can read a deeper analysis (and comment) on the forum:

- Talulah Riley's Manipulation of Elon Musk

> Manipulation: Techniques, Strategies, & Ethics

Power or Low Self-Esteem?

As I explain in the video, Talulah's abusive power games might also be the consequence of her low self-esteem and a consequence of her not feeling good enough for him.
Bringing him down is then her way of rebalancing the relationship and feeling more secure in it.

That might be one explanation.
If that's the case, it's also partly because Elon Musk never communicated with others -or made her feel- like she is with her for more than just a pretty face or a pair of perky books (something I talk about in "common communication mistakes men make in relationships").

But it might also be she's plainly a low-quality woman and/or hell-bent on overpowering him.
It's a minority, but there are a few women who take pleasure in shaming their partners (I once had a girl hug me and tell me she was getting wet… In front of her boyfriend. Talking about awkward).

I cannot say from here for sure why she does it.
But *for sure* she is engaging in nasty power moves, one-upping, and, even more often, put-downs.

And why she does it, in a way, is a moot point.
She does, and Elon Musk does not see it. And does not do a thing about it.

Elon Musk Relationship Leadership

Look at this scene:

She wants to stay while Musk clearly wants to move away.
Musk doesn't have the courage, strength, or leadership to influence her decision in any way.

And she obviously does not care enough to accommodate his husband. It might even be the case that she is doing it on purpose (making someone wait is, of course, another power move).

So what does he do, finally?
He walks away by himself.
Some people on that video commented that it was cool and showed strength.

Well, some people don't understand power dynamics any better than Elon Musk does :).
No, it doesn't show strength.
It's very un-leader-like instead and very puerile.

If a more socially powerful individual had been in Musk's position, he would have likely walked over to her and warmly but resolutely told her it was time to go.
Without being overbearing or aggressive, he would have made it clear that it was enough and he was done waiting.

Only after her possible (but unlikely) refusal, he would have walked away (and then again, if that scene had been repeated a few times, he might have walked away for good at that point).

She Is In Charge

The scene above also suggests that it's Talula Riley the one with more power in the relationship (or at least, she is the one with more power in that clip).

If Elon Musk had been in charge of the relationship, she would have most likely conformed to his will.
Maybe she would have *asked* to spend some more time taking pictures, but for sure she would not have ignored him, stepped away from him, and let him wait the way she did.

That was quite disrespectful.
And usually, followers, submissive women, and good relationship partners are not disrespectful to their men.
Or at least, not for long…

Elon Musk Social Intelligence

Elon Musk not only does not bond and connect with people -which few do anyway-, but fails to understand people and social dynamics at their very basic.

That becomes especially obvious when Musk tries to make some joke. He is not good at communicating that he is joking, which sometimes leads to his jokes falling flat.
And it becomes especially painful when people try to joke with him, as he fails to read nonverbal cues and cannot tell apart irony from serious conversation.

Here is an example:

"I'm trying to do useful things". Evidently, bantering with the host was not "useful" enough to engage in for Elon Musk, LOL :D

Elon Musk Leadership

We already saw Elon Musk's lack of relationship leadership. And, as we might expect, he does not shine when it comes to people's leadership in general.

Look at this scene here:

The speaker at the event is as socially challenged as Musk is.
But unlike Musk, he also seems to be quite irrational and might have some other issues going on.

To any leader with a bit of emotional intelligence, it would have become obvious within the first 20 seconds that his task was to curtail the crazy speaker and let him down as easily as possible.

But Elon Musk does the opposite of what a good and strong leader would do.
He:

1. Vacillates first
2. Then brutally drops him

Sure the man was being idiotic, but that doesn't mean Elon Musk could not have treated him with some heart and helped him save face (as Carnegie recommends in How to Win Friends and Influence People).
That would have taken some social finessing though, and by now it's obvious that you can't expect any social finesse from Elon Musk :).

Elon Musk Body Language

As you would expect, Elon Musk body language is rather poor.

First of all, he walks with a slight hunchback, which is far from ideal.

He also:

- Nods too often and too quickly
- Looks down for too long
- Constantly crosses his arms

You would at least expect that someone who has been called a genius more times than Einstein (Einstein also emotionally clueless BTW) probably would talk well and sound smart.

Instead, he uses a ton of filler words which make him sound insecure and far less intelligent than he actually is.
Also, read:

- Verbal signs of submissiveness

Is Elon Musk Autistic?

Watching a few of Elon Musks' video I had to wonder if he might have been autistic and if he might have Asperger syndrome.

I will not engage here in "digital diagnosis" (The Goldwater rule also discourages any psychologist from making a diagnosis from afar).

Therefore, I cannot be sure, cannot judge, and don't want to judge whether Elon Musk is AS or where he places on the autism spectrum.

Also, frankly, it would just be a label that would not add anything to this analysis.
It is pretty obvious that Elon Musk cannot relate well with people and has impaired social abilities.

Summary

For all his billions, vaunted intelligence, and "genius status", Elon Musk is emotionally challenged.

His former business partner Peter Tiel says in Zero to One that Elon Musk is a master salesman. Honestly, I struggle to see how that's possible.
Salesmanship requires emotional intelligence and social skills, and I fail to see how Musk could ace it with people (and I think you do as well, by now).

With Elon Musk it's not just about being "geeky", submissive, or lacking confidence.
He genuinely seems not to understand basic social cues.

Lemme finish with a quick note: this is not an attack on Elon Musk. He seems a good person and I am grateful we have people like Elon Musk in this world.

The Blank Slate: Summary, Review & Criticism

Lucio Buffalmano · 16 April 2019 · Archived copy · Original

The Blank Slate (2002) states that the social sciences have been the victim of an unscientific, biased ideology of "cultural determinism" whereby culture drives behavior and attitudes, and never genes.
The Blank Slate shows instead that nature and genes matter and, often, matter more than culture.

Bullet Summary

- When it comes to genes people suddenly lose the ability to differentiate between "50% from 100%, "some from all", "affect from determinism"
- In our current culture, people seem to lose all balance when it comes to nature VS nurture, and claims that nature matters are viciously attacked (ie.: "racist", "nazist", "white male patriarchist, etc.")

Blank Slate Theory

The blank slate theory, or tabula rasa, is the belief that human minds have no knowledge at birth and are shaped entirely by their experiences, environment, and education.
In the context of modern education, the Blank Slate theory also states that **the social sciences have been dominated by culture and nurture over biology and genes.**

Steven Pinker in this book discusses this second notion and seeks to change the scholarly narrative to also include the role of evolution and innate biological mechanisms.

Summary

About the Author:
Steven Pinker is a popular science author and experimental psychologist and is currently a psychology professor at Harvard.

Introduction

Pinker says that "*The Blank Slate*" does not say that it's *all* about genes.

Depending on the trait we examine culture or genes can matter more but, in most cases, it's a mixture of the two. Overall, both genes and the environment are equally important.

Even when the behavior is heritable, the behavior is still a product of development.

However, we still need a book to remind us of the obvious: that genes *do* matter.

Why We Need to Defend Genes, Nature & Biology's Role

The author makes the point that still these days it's incendiary to say that genes have a role in people's actions, temperament, and skills.

Some authors have been scolded for saying, for example, that:

- Blacks' lower IQ scores have genetic as well as environmental causes
- Similarities in children come from genes not just from parenting
- Rape is biological and not just cultural

The author says that even these days, an extremist position that says that culture is everything is still seen as moderate while the moderate position of 50/50 is seen as extreme.

The Blank Slate Fallacy

Steven Pinker refers to the blank slate as:

> The idea that the human mind has no inherent structrue and can be inscribed at will by society or by ourselves.

The blank slate, the author says, has become the secular religion of modern intellectual life.

My Note: I couldn't agree more with this.
I remember heated arguments with university colleagues where I was always alone against a bunch of "intellectuals" who embraced the blank slates.

The Mistaken Assumptions of The Blank Slate

The blank slate is based on two mistaken assumptions:

1. **The noble savage**: humans outside of civilization are good and peaceful
2. **Naturalistic fallacy**: what happens in nature is good

And one fallacious attitude:

- **The moralistic fallacy**: it would be so nice if the idea were true, that we shall believe it is true (a rehabilitated individual cannot bring himself to harm and hurt others.. Which is obviously not true)

Rousseau was wrong with the noble savage theory.
And so was Margaret Mead who confirmed the noble savage theory with her ideology-driven ethnographic analysis of the Samo (read Coming of Age in Samoa).
Mead described a culture of open-mindedness, pacifism, and free sex.

But she was wrong.

The truth is that most human societies have engaged in war and aggression and almost no society has approached sex as a simple act to be freely enjoyed at will.
And that is for a simple reason: aggression is part of the human makeup (together with opposing tendencies that can foster the common good).

The author also pokes some good-humored fun at the limitations of ethnographic observation, and he is spot-on:

> Imagine anthropologists studying the peaceful Europeans between 1918 and 1938

LOL, I love that quote :D.

Three Scientific Myths Against Human Nature

Steven Pinker dismantles the most extreme versions of three major scientific developments that have been (mis)used to deny the complex human nature:

1. **Human genome project** (the smaller than expected number of genes was used to refute the idea of innate talents or tendencies. The author calls it “the lean genome”)
2. **Computer models** (since AI can learn so much, the brain needs can wire or re-wire freely. The author calls it “connectionism”)
3. **Neuroplasticity** (“the blank slate” becomes “the plastic slate”, quips the author. The truth is that Ramachandran and other scientists took it too far saying that any part of the brain can decode any message: it’s not true, some brain areas did specialize for certain inputs and processes)

Says the author:

> Most gay men cannot be reversed by experience. Some parts of the mind just aren’t plastic.
> And no discovery about how the sensory cortex gets rewired will change that fact.

Parenting is Not A Role Anyone Can Take On

The most extremist blank slate theories see parenting as simply a role that anyone can take on, no matter if they are the actual parents or not.

However, statistics show that non-biological parents are far more likely to abuse, mistreat, and ignore their step-children.

This is because we have stronger inborn tendencies to care for and protect our biological children than random children.
Again, this is another example that we all have inborn tendencies and that not all are culturally acquired.

Heritability of Political Attitudes

Liberal and conservative attitudes are heritable not because attitudes are synthesized directly from DNA, but because they come naturally to people with different temperaments.

Conservatives for example tend to be more conscientious, authoritarian, and rule-bound.

Parity of Outcomes is Dangerous and Wrong

When we consider people and genders are the same -which we are not- dangerous policies that force equality of outcomes can become the norm (communism, gulag.. And the current policies that seek to force a 50/50 gender split).

More Wisdom

- **We have small variations**

Albeit we are 6 billion, the variations among single individuals are small among humans (it's bigger among chimpanzees even if we are many more).
This is likely because less than 100.000 years ago we went through a population bottleneck.
Since then we didn't have much time to accumulate lots of variations and our current differences in hair and skin colors are rather skin-level deep (pun intended).

- **Explaining behavior is not exonerating behavior**

We can, for example, discuss why it's "natural" for men to seek more sexual partners.
But that does not exonerate cheating and philandering.

- **Stereotypes are true**

In Blink, Malcolm Gladwell says that blink decisions are often correct (and in another book of his, he regrets the tendency we all have to make snap decisions based on stereotypes).

Steven Pinker takes a more scientific and moralistic-free view on stereotypes.
He simply says that, more often than not, stereotypes are not random and/or wrong as most people assume but they are often quite accurate and confirmed by statistics.

And psychology research backs that up.

He mentions: blacks are more likely to be on welfare; Jews have a higher average income; business students are more conservative than art students, women are more likely to want to lose weight; men are more likely to swat a fly with their hands.

- **There is evil, and it can be inborn**

The noble savage theory and some intellectuals wished to attribute all evil and wrongdoing to culture, society, lack of options, bad parenting, or poor education.

Unluckily, it's not like that.
There is plenty of evil, there are biological reasons for evil (a small number of parasites can thrive in an otherwise honest population) and some of it is inborn.

The author mentions sociopaths, psychopaths, and people who are in between and present Machiavellian traits without being full psychopaths.

- **Differences are greater at the far end of bell curves**

When you have any bell-curve distribution, the differences are small on average and will be far larger at the extremes.

Women and men present a bell curve distribution with men far more represented on the extremes (men are far more likely to win "Darwinian awards" and dying in the silliest ways possible).

- **Male VS female self-esteem** (and career success)

On average male self-esteem is more tied to status, salary, and wealth. They also highly correlate to their attractiveness as mates, and that's one of the reasons why men are more likely and more willing to work harder and longer hours.

- **Children follow the peer group more than the parents**

The peer group has a larger impact on how children turn out than the parents do.

My Note:
But then again, parents can heavily influence which peer group the children grow up with for example, by deciding where to live.

Quotes

On war and human nature:

> People all over the world have reflected over the futility of voilence.
> At least when they are evenly enough matched with their adversaries and noone can prevail.

On violence and human nature:

> With violence, as with so many other concerns, human nature is the problem.
> But human nature, is also the solution.

On feminism and salary disparities:

> Inequality of outcome cannot be proof of inequality of opportunity.

On feminist messages to women:

> We should not be sending gifted wmoen the message that they are less worhty and less valuabe, lazy or low in status if they choose to be teachers instead of mathematician, journalists in stead of physicits or laywers instead of engineers.

On truth, hope, and liberation.

> People hope to God that it isn't true. But the truth doesn't care about our hopes. And sometimes it forces us to revist those hopes in a liberating way.

CONS

- **Victim blaming**?

The author says that feminists shouldn't complain when people advise women not to go out alone at night in mini-skirts because that's simply sensible advice.

Pinker then says that if something bad happens, it's akin to leaving a car parked in the hood unlocked and with the keys inside.
He says that the police should investigate, but still, an external observer has the right to think "you stupid idiot, what the hell were you thinking".

In a way, he's right.
Yet, I'm not a big fan of that line of thinking.

There are plenty of places and societies where women can go out alone at night with mini-skirts.
If we want to have safer societies, we can't accept Pinker's stance of normalizing aggression and rape -and yes, rape is "natural", but that doesn't it make it right or acceptable-.

- **Soft-science**

Although I loved "*The Blank Slate*" and agree with everything, it's a crossover between personal philosophy, opinions, and science.
I must agree with Allen Orr that this is "soft science".

- **Strawman argument**

I agree with Steven Pinker that the current intellectual climate favors culture over nature.
I have experienced it myself as a student.

But I also must agree with the critical review of Louis Menand.
Menand says that to make his point, Pinker sometimes exaggerates "the other camp" and exaggerates their traits (ie.: a strawman attack).

- **Exaggerates nature over parenting?**

Sometimes I felt that the author exaggerates the weight of nature over parenting.
Albeit he states otherwise, at times it felt that with the studies and stories he was quoting he was implying that parenting mattered little.

- **Chagnon unreliable (?) data?**

Pinker relies heavily on Chagnon in some passages to draw conclusions about human nature, war, and violence.
And does so both in "*The Blank Slate*" and in "*How the Mind Works*".

However, Chagnon has been heavily criticized and may feel biased.
The criticism of his number seems potentially well-founded to me (Fry, 2012).

PROS

- **Wonderful analysis of the differences between men and women**, including on gender inequality, fairness, and policies.

- **Parity of outcome is dangerous!!** The best takeaway, in my opinion, is that the current drive to achieve “parity of outcome” is dangerous both for society and, even more so, for individuals.
- **Power dynamics in academia**: *The Blank Slate* also teaches human psychology and human nature from a “meta-level” point of view.
  The Blank Slate teaches us about ideological warfare, and how “intellectual doctrines” dominate and squash dissent, all to the detriment of good science -and truth-.

Review

The Blank Slate is a good book presents compelling arguments, but at times it risks overcorrecting—leaning too far in opposition to the very cultural bias it critiques.

In his rightful stance against what Tooby and Cosmides dubbed the “Standard Social Science Model”, **Pinker sometimes seems to go too much in the opposite direction**.

Pinker can’t stop harping on about “feminists”, “left-wing researchers” and “anthropologists of peace”, and at times it feels intellectually aggressive (see Sapolsky’s comments in “Behave“).

I think we could all do this with less competition and a more scientific search for truth. Learning something from the other side, and let science and factual work speak for themselves.

I agree with Pink that many scholars have not done science and refuse to accept strong empirical findings. Yet, they are also not 100% wrong on everything, including men’s interest in keeping women down.
And that’s what the Pinker-like evolutionary psychologists are missing.

Feminine AND Powerful: 9 Tips For Women Bosses

Lucio Buffalmano · 16 April 2019 · Archived copy · Original

Marrying femininity and leadership is not easy.

And being a strong, powerful woman while also remaining feminine, well-liked, and, why not, successful at dating and relationships, is even more difficult.

But alas, difficulties also present the biggest opportunities for those elected few who manage to crack the code.

This article teaches you the science and psychology of being a powerful woman while also remaining feminine, attractive, and well-liked.

- Is The Female Leadership Curse Cultural or Inborn?
- SUMMARY

Intro: Science of The “Female Leader Curse”

Research on leadership and persuasion shows:

Women pay a social price for their power and leadership positions.

By “social price” I refer to being disliked for carrying herself with power and confidence.
And, possibly, socially marginalized and excluded.

In the workplace, that might mean being passed up for promotions. In politics, that could mean not getting elected. And in dating, that could mean being passed up for the more submissive woman.

The female leader's curse applies without women having to do anything.
Indeed research shows that when students read the exact same description of a male and female leader, they ended up liking the male leader but disliking the female one… For the simple fact of being a woman.

Although there are also studies to the contrary, the body of research points to women facing a social backlash when they pursue power and/or when they display dominant traits (see for example Madeline Heilman and Susan Fiske).

Even many women and liberal men are not an exception.
See here Obama leveraging the "likability" issue against Clinton:

> **Obama**: You are likable "enough"

With that power move, Obama effectively makes Clinton's likability an issue, and calls it into question.

Female Leadership Curse & Politics

The 2016 US election also provides supporting evidence for the female leadership curse.

When did Hilary Clinton's ratings drop?
Hillary Clinton's rating dropped precipitously the moment she announced her candidacy for the presidency.

Correlation is *not* causation, but we can probably guess here that Hillary became "unlikable" the moment she decided to go for the top leadership position.

Female Leadership Curse & Dating

There is little research into female power, dominance, and dating success.

Luckily, we have enough experience there.
And we can also use evolutionary psychology here to provide us with answers.

Evolutionary psychology tells us that while men have a bias towards quantity, women prefer "better" partners (female hypergamy).
The consequence, of course, is that men *do* indeed fear -or "are intimidated"- of women who are "more than they are".
It's a rational choice: women who are better than they are are far less likely to accept them, like them, respect them, or stay with them.

In a nutshell: powerful, ambitious, and dominant women are less attractive for most men than less powerful, ambitious, and dominant ones.

The Power-Charm Trade-Off

Some women might say

> "to hell being liked, I don't care about a few bigots, I'll go for power and make them all jealous with my success".

Most of the times it doesn't work that way though.
To begin with, most of us suffer when we are harshly criticized and most people dislike us.

The second problem is in actual power.

Women who go for authoritarian and more typically male styles of power lose all or almost all of their charming power and seductive power.

While a more aggressive man *can* more easily move from social charm to authoritarian leadership, a woman who crosses into authoritarian leadership can hardly be charming.

As an example, look at this video:

> **Him**: (avoids the question)
> **Harris**: (grows irritated)
> **Moderator**: (reins in Harris)
> **Him**: (laughs, self-framing as cool and chill, and framing Harris as too emotional)

Kamala Harris chose went the authoritarian way, leaving much of her femininity behind.
However, this was admittedly off-character fo her. She generally does MUCH better, including in her presidential run.

The Solution

Luckily, there are plenty of solutions to the "female leadership curse".

These solutions require social intelligence, and some good understanding of psychology, power dynamics, and human nature.

This article is here to help.

Let's start with the techniques:

#1. Lead For An Ideal, For People Or A Bigger Goal

The women who pay the biggest social price of the female leadership curse are the ones who look like they are in it mainly for the power.

Power is mostly a male pursuit, and women who are after power look very "gender deviant".
Gender deviant is a very ugly expression, but it correctly identifies the problem here.

Research shows indeed that men who look like they are after power are not penalized.
But women are.

And that's why you should avoid looking like you're after power for power sake.
As a matter of fact, I warmly invite you NOT to go after power for power's take as that makes you a much worse leader, no matter whether you're a female leader or male leader.

Also read:

- Office politics

#2. Use "We" Frames To Avoid "Over-Ambition"

Similar as above: ambition is a trait that is OK or even appreciated in men.

But it's disliked in women.

Sheryl Sandberg in Lean In says that when you negotiate from an "I" perspective, both men and women will like you less.

You must approach negotiations, speeches, and campaigns from a "we" and "us" platform instead of "I".

If you are negotiating for a raise, always frame it as a win for both you, the company and your team.
Say “me and the team can do so great if we find a solution” and:

> Let’s just find an agreement and we will be so strong

Also read:

- **Best negotiation books**

#3. Make Use of Indirect Forms of Dominance

Studies show that direct expressions of power and dominance (for example: direct requests) adversely affected women’s likability.

But indirect expressions of power (ie.: eye contact) did not.

This means that for you as a woman it might be better to ask something in a friendly tone such as:

> **You**: Do you think you can do that?
> (hold eye contact)
> **Him**: Yeah, I think so

And then hold eye contact and have him (or her) acknowledge that yes he can, rather than telling him “do it”.
The effect is the same, but the indirect social pressure might be a more effective tool to wield power for women (and from an Influence point of view, it’s also much more effective!).

This goes at the core of what we call here “power protecting”.

So please read:

- **Power-protecting**: leading, without resentment

> Power Protecting: How to Keep Win-Win With High-Value People

#4. Use Democratic Style of Leadership

Research shows that when women lead with a democratic style of leadership, there is no social price and no adverse effect on her likeability.

Says Eagly (Eagly et al. (1992)):

> Female leaders showing autocratic (i.e. masculine) behaviour are evaluated more negatively than male leaders showing the same. However democratic male leaders and democratic female leaders are not evaluated differently.

Similarly, the Routledge handbook on persuasion says that ‘communal’ approaches to persuasion work better for women compared to more assertive or aggressive tactics.

People are much more comfortable with women in power positions who ask questions, include and, generally, act like benevolent leaders.

But what to do when a female leader needs to put her foot down?

#4.1 Consider A Maternal Style of Leadership

As much men can adopt a “father figure” style of leadership, women can adopt a “mother figure” style of leadership.

A mother figure style of leadership is a powerful role and a good solution to most of the resistances that women face in positions of power.

When needed, you bust out the spanking.
But it’s not a scathing dress down in front of everyone to display power. It’s more like a spanking for the bad boy because he deserved it, but which is delivered not to re-assert power but because it’s in everyone’s interest.

And then you can go back to a more communal and affiliative style of leadership.

Angela Merkel is referred to as “mutti” or “mommy” in Germany.
She is not “motherly” in a feminine way, but more like a detached, “father & mother” type of mother because the father is not around.

See some examples:

Angela Merkel’s secret is that of staying away from all excesses of both extreme male expressions of power and typically feminine expressions which would decrease a leader’s perceived authority.

#5. Offset Power With Stereotypically Feminine Qualities

I remember years ago in my first big corporate job, working as a Lean Methodology consultant alongside McKinsey and internal DHL consultants.

The head of the program was called “Tania”, and she was an icy German woman with an authoritative streak and a tall figure with blue eyes and light blonde hair.
Her appearance certainly didn’t help her to come across more relatable. But she didn’t even try that hard: everyone thought of “nazi” and “ice queen” in her presence when in the presence of Tania

When Peter, one of the line managers described her to me, he said:

> **Peter**: The new project head is *German*, *woman*, 43… *No kids*..

You should have seen his expression of contempt as he highlighted those words.
And by the time he had reached “no kids” I already knew where he was going.
What he wanted to say was this:

> She is not a real woman

Which, in turn, translated to this:

> She is not a normal human being, she doesn’t belong to our species and we can’t relate to her.

This is rather common.
When women come across as “gender deviant”, from a sociological perspective, people place them in the “out-group”, or “different from all of us”.
We don’t relate to people from the out-group and it’s much more likely that we will see them as enemies.

Here is the catch though: if a woman can show and “prove” her femininity, she can increase acceptance, and make herself more likable.

This research indeed shows that when people see that powerful women also present typically female characteristics,

hostility decreases and the strong female leaders become more liked and more accepted.

Here is what you might strategically choose to do:

- If you're a mother, make that information circulate
- Spread information on how you spend time home/parenting
- If no children, get a dog and do the same
- Tell stories of your cooking
- Put fresh flowers in your office
- Avoid masculine suits
- Use more colorful dresses
- Do your makeup

All these actions serve to communicate to the people around that "oh yes, she's a woman alright".

Remember:

> Since the backlash against women arises in good part for her violation of "expected gender roles", a woman can offset her power and dominance by showing feminine traits outsider her leadership position

Also read:

- **How to be feminine**
- 'Cat ladies' VS conservative men

> How to Be Feminine: Step-by-Step Guide (Videos & Pics)

#6. Offset Power With Hyper-Femininity

At the opposite of neutralizing yourself is the hyper-feminization of your power.

Imagine if your power is 10, then you want your feminine level to be an equal 10. Or even your feminine levels to outstrip your power, depending on the occasion -for example, when dealing with a superior-.

There is a special place in the Olympus of powerful women for the elected few who can correctly go for this style.

Why?

Because **combining super high power with super high femininity is what makes you "the queen".**

Joan Holloway from the show "Mad Men" is a good example of hyper-femininization of power.
Look at this scene:

(video in Power University)

Remember the direct/indirect language "how to look confident at work"?

#7. Consider More Typically-Female Careers

Paustian-Underdahl in her meta-analysis on female leadership and power found out that:

> (…) Male leaders were seen as more effective than female leaders in organizations that were male-dominated or masculine in other ways (i.e., numerically male-dominated organizations; military roles; Eagly et al., 1995). Additionally, **female leaders were seen as more effective than male leaders in less male-dominated or less masculine organizations** (i.e., educational, governmental, and social service organizations)

Basically: organizations and **businesses that fit the female gender stereotype boost the credibility of female leaders**.

This was a study on effectiveness rather than likeability, but I wouldn't be surprised if we can infer the same for likeability and acceptance.

Miranda Priestly in "The Devil Wears Prada" would have been less respected, would have had less authority and would have probably been even more disliked and has she worked in, say, an arm's producer rather than a fashion magazine.

#8. Combine Warmth With Power

This is more from a technical point of view, but whenever you can combine warmth and humor with a reprimand or with a request for compliance, you are better off than crude power.

This is an example of a woman who's done it very well:

> **Her**: (smiling and very friendly) it kills me to say it, but wrap it up, Mr. Pitt

This is one of our core life approaches, even for more.
Read more here:

- **Power and warmth**: how the two maximize your success

> Social Strategy 101: High-Power / High-Warmth

Is The Female Leadership Curse Cultural or Inborn?

Shall we really get into this?

Alright, let's do it quickly.

Researchers often speak about "culture", "qualities traditionally associated with…", "traits linked to behaviors that people associate to leadership and genders" and, of course "gender stereotypes".

Basically: most researchers refer to the culture and few mention nature, genes, or evolutionary psychology.
It's not surprising (see Steven Pinker's "The Blank Slate" for the "why").

However, chances are that it's both.

The Future of Female Power

Will things get better for women?

Since part of the backlash against powerful women is partially culture, we might see further improvement.
Researchers who have compiled meta-studies have indeed noted a tendency toward more acceptance of female leaders.

It's also possible that as more inclusive and less authoritarian styles of leadership become more the norm than the exceptions, women will do better and better.
As Koenig et all (2011) point out in another meta-analysis:

> Leadership now, more than in the past, appears to incorporate more feminine relational qualities, such as sensitivity, warmth, and understanding.

Basically, things have improved for women and are likely to further improve.

However, in my opinion, that's a tendency that cannot be extrapolated to infinity and to perfect equality.
And that means that **the social backlash against powerful women is not going away any time soon** because powerful women are threatening to most men (we won't get into the "why" here, but you can read more in out website).

It's also not obvious and not written anywhere that we will keep moving towards more equality.
Cultures always change and our culture might also swing again towards more conservative attitudes in the future.

Luckily, with guides like these, women can be powerful, and also well-liked :)

SUMMARY

There is no research that shows that people dislike successful women. Indeed, nobody has anything against' women's success.
It's when women have power, act dominant, or hold leadership positions that things can get a bit trickier.

Specifically, it's *how* women wield their power that makes a big difference. And when women behave like men, they lose.

Power, dominance, and femininity are not necessarily at the opposite end of the spectrum.
Yet they don't exactly overlap either.
And it's sometimes difficult to combine the two.

However, it's possible, and this article gave you a few ideas on how to be a successful female leader all around: from power to charm to social success to success in dating and relationships.

This is a sample from Power University (far more examples in the course).

How to Present With Confidence: 7 Winning Tips

Lucio Buffalmano · 19 April 2019 · Archived copy · Original

Do you have a presentation, a speech, or a pitch coming up and you want to convey confidence, authority, and power?

You have come to the right place.

My name is Lucio and my expertise lies in social skills, emotional intelligence, and, of course, power dynamics.

By the end of this article, you will learn how to deliver the most powerful presentation anybody has ever seen.

Contents

- Why You Must Present Confidently
- #1. Walk Confidently On Stage
- #2. Approach The Host With A Mix of Warmth & Power
- #3. Confident Handshake
- #4. Start With A Frontal Stance
- #5. Don't Lavish Compliments (If You're A Junior Presenter)
- #6. Stay Vocally Neutral
- #7. Avoid PowerPoint
- SUMMARY

Why You Must Present Confidently

Have you ever heard of Marshall McLuhan?

As a student of communication, I have read about Marshall McLuhan so often that Marshall felt like my next-door neighbor.
But if you haven't' heard about him, no worries.
Here all you need to know about McLuhan when it comes to present with confident:

> The medium is the message

"The medium is the message" means that who (or what) says something influences that message.
That's so simple, yet so deep.

It means that **if *you* present confidently, powerfully, authoritatively, and convincingly, then your *message* will come across as powerful, authoritative, and convincing**.

If you present meekly and unconvincingly, then your message will come across as weak and unconvincing.

And we don't want that.
Especially if you have something important to say and to present.

This article will show you how to present with power and confidence.

#1. Walk Confidently On Stage

First impressions are crucial.

Every single good book on social skills or body language says that.

And they're right.

To walk confidently on stage, **you must feel like you have something important to say**.
You must believe in your message and look forward to delivering your message.
Yet, you don't want to rush on stage, because that communicates too much passion, and too much passion is juvenile and childish.

Just look at this example:

Rushing to the stage says either that you're nervous, or that you're a bit too juvenile.
And junior employees and researchers rarely are the ones we listen to (and yes, the black hole picture is an exception: don't make the rules with the exceptions).

At the end of the day, in business as in life, what truly delivers the goods is staying power.
And yes you want to communicate passion, but **you want to show passion tempered by expertise, authority, and staying power**.

And you communicate that by walking slowly and confidently on stage.

#2. Approach The Host With A Mix of Warmth & Power

Conveying power that attracts rather than repels is about striking that good balance between warmth and (too much) power.

Too much power would mean treating the host like he's beneath you. And that would estrange the audience and make you come across like a smug, full-of-hot-air individual.
Avoid it.

On the other hand, you want to avoid behaving *too* warmly and friendly towards the host (or anyone else for that matter).
Because *too* friendly also communicates submissiveness.
One way that people end up behaving too warmly is by allowing the host to give them the upper hand.
Here is one (extreme) example:

It's important that you take care of not to look submissive towards the host or you (and by reflection your message) immediately look less noteworthy before you even open your mouth.

Three mistakes I often see from people who communicate submissiveness in their approach to the host:

1. Stick their hand out too early
2. Stick their hand out too far
3. Smile too much and too broadly

You can read more here:

- How submission look like
- How submission sounds

And of course:

- Mix warmth with power

#3. Confident Handshake

A confident and powerful handshake is what sets you off for the races in style.

On the other hand, a weak handshake will subconsciously communicate that you're not an authority.

Unluckily, you will have to contend for this with the host and/or the person who gives you the stage.

Allan Pease says that 88% of corporate executives shake hands taking the upper hand.
When someone takes the upper hand on you they push you in the submissive, subservient position. And you don't want to start a presentation from the subservient position.

Typical techniques for aggressive hosts who give you an upper-hand handshake include:

- Meet the host from his right side so your hand will look like it's on top
- Use your other hand to cup his hand
- Use your other hand to clasp his arm or upper arm

For more techniques on how to cope with handshakes read:

- Alpha male handshakes

#4. Start With A Frontal Stance

Most people are afraid of public speaking.

Even the experienced public speaker can start off with a certain "queasiness" about standing in front of a lot (or even a few) people.

A natural, unconscious reaction, is often to close our body language. And most people know this and they know they should avoid crossing their arms or locking their feet.

What fewer people are aware of though are what I call "sideways body language".
Such as, they walk around the stage or they look back at the host as an unconscious excuse to avoid standing fully frontal to the audience.

Sideways body language makes you look unconfident and shifty. Sometimes it's a split second, like in this example:

It's possible that he wasn't fearful. But because he adopted a sideways body language as soon as he walked in, people will unconsciously rate him as less confident, less authoritative and less trustworthy.

To be on the safe side: start your speeches with a friendly but full frontal stance towards the audience.

#5. Don't Lavish Compliments (If You're A Junior Presenter)

Giving compliments is great, and it can confer power (also read soft power).

Compliments also win you friends and make you come across as warmer and more relatable.

However, the same rule as for friendly signals applies: too many compliments aggrandize others while removing power and authority from yourself (also read: submissive signs).

The rule of thumb is this:

The more famous and established you are, the safer it is to give compliments.
The greener and less experienced you are, the more you need to avoid gushing about others.

Why so?
First of all, because you risk coming across as a sycophant. And sycophants usually add little value and rarely overtake their masters.

And second, because giving out too many compliments to the host or the previous speakers would send the message that *their* presentation is what people must pay attention to (and not yours).
And you don't want to send that message.

#6. Stay Vocally Neutral

You can't deliver a powerful presentation and go up at the end of each sentence.
You just can't. You either go up at the end of each sentence, or you deliver a powerful, confident presentation.

The two are mutually exclusive.
It is *that* important.

Just to be sure, by "going up at the end of each sentence" I am referring to that tendency of ending sentences as if there were a question mark.
Here is Stewie mimicking it in Family Guy:

Women sometimes use upward inflection as a seductive tool to send out "protect me" messages.
In those instances, it's fine.
But you must avoid it if you want to present with power and confidence.

#7. Avoid PowerPoint

PowerPoint only has "power" in its name, but it's otherwise a tool that will remove from conveying power and confidence from your presentation.

There are 3 ways in which PowerPoint kills your confidence:

1. **Triangle of death** (teetering from full-frontal stance to the audience and giving the audience your back to look at the slide)
2. **You lose the audience** (when you force people to either read or listen to you, they can do only one.. And often it's neither of them)
3. **You lose the audience while switching medium** (when you go from the text on the slides back to speaking people need some time to re-adjust and if you don't give it to them, you lose them)

"Triangle of death" is a term I got from Nick Morgan, the author of Power Cues.
When you stand in between the slides and the audience you murder your credibility, confidence, and power.

What's the solution then?
These are the solutions:

1. Don't use PowerPoint
2. Only use pictures
3. If you must use text, give people the time to read and don't talk as they read
4. If you must comment on the slides, either learn them and don't look at them or move outside the stage and use a pointer to adopt a "voice over" type of presentation

SUMMARY

This article is an extract from a seminar I have delivered at the Technical University of Berlin.

The central idea is that if you want people to listen and believe in your message, then *you* must make yourself a trustworthy and confident conduit for that message.

This article gave you a few advanced pointers on how to deliver a powerful presentation and how to come across as a confident speaker who speaks with authority.

How to Talk to Anyone, Anytime, Anywhere: Summary & Review

Lucio Buffalmano · 19 April 2019 · Archived copy · Original

In *How to Talk to Anyone, Anytime, Anywhere* Larry King teaches readers how to be a great conversationalist and interviewer.
The book is short and to the point and it contains all you need to know about the basics of enchanting conversations.

Contents

- Bullet Summary
- Summary
- The Secrets to Conversation
- Train Your Voice and Conversation
- Make Eye Contact (& Lean Slightly Forward)
- Ask Why
- Be Honest Talking With The Opposite Sex
- Acing Job Interviews
- Prepare, Prepare, Prepare
- Control The Interview
- Real-Life Applications
- CONS
- Review

Bullet Summary

- Be open: Don't be afraid of sharing your real self and your real feelings
- Be interested in others
- Listen and listen well
- Ask "why"

Summary

In "How to Talk to Anyone Anywhere" Larry King shares the now famous story of his first day on air.

He lowered the music ready to start speaking.. But no words could come out. He was too nervous.
So he raised the music again.

That went on for three times when the general manager kicked in the door and bellowed:

> This is a communication business

From then on Larry King was never scared again to speak in public.
What had he learned that day?

Read on…

The Secrets to Conversation

- Be as honest and open as possible: share how you feel
- Love talking to people (to be good at what you do, you must love what you do)
- Respect your speaking partners and treat them like you'd like them to treat you
- Be curious about your speaking partners
- Listen well: to be a good talker you *must* be a good listener

On being interested also read Dale Carnegie's "How to Win Friends".

Train Your Voice and Conversation

Larry King says that he was gifted with a good voice and a willingness to talk.
But just like anyone else, he had to work hard on those innate talents to turn them into skills.

You can train by:

- talking to people
- talking to yourself
- talking in front of a mirror
- grabbing all chances you can to deliver a speech (also read: how to present with power).

Larry King didn't train his voice much because he had a naturally good voice, he says.
But if he hadn't had one, he would have spent and invested in improving his voice.

Make Eye Contact (& Lean Slightly Forward)

Larry King says he didn't out of his way to study body language so he doesn't pretend to be an expert.

But he does say that eye contact is a crucial ingredient for a good conversationalist.
Larry King's rules:

- Don't stare continuously
- Look at them while you're talking and while you're asking questions
- Occasionally take your eyes off while you speak (but don't stare into empty space as if he wasn't there)
- Never look over your speaking partner's shoulder as if you were looking for someone more important to talk to

Larry King says his most basic advice is to worry about the basics of listening, caring and respecting and then letting your body language naturally do the rest.

Also read:

- Best body language books

Ask Why

Larry King's favorite question, and a reflection of his curiosity about people and people's life, is "why".

If someone has just moved: "why did you move".
If they changed job "why did they change".

Be Honest Talking With The Opposite Sex

Larry King's advice of honesty applies to approaching the opposite sex as well: be candid, he says.

If you don't know what to say, say that you are not sure what to say but you wanted to start a conversation with them.
The author then proposes you follow up with a topic you find interesting to test affinity and, also, their level of intelligence (also read: high-quality women and high-quality men)

For an actual science-backed guide on approaching a girl, look here:

- How to approach a girl
- **Cold approach as a strategy**

https://thepowermoves.com/cold-approach

Acing Job Interviews

Always approach job interviews thinking about what you can do for them.

To paraphrase JFK:

> Ask not what the employer can do for you, but what you can do for them

Also read:

- What's in it for them
- The law of social exchange

And of course:

- **How to ace interviews**

> How to Prepare For An Interview: 6 Tips To Get The Job

Prepare, Prepare, Prepare

Whenever you know who are you going to talk to or who you are going to interview about what you are going to talk about, always prepare.

If you don't prepare you end up digressing, using too many filler words and, generally, you will never be charismatic.

This is something Larry King didn't do with Seinfield, and it showed:

Control The Interview

As a sociologist and writer on power dynamics, I found it particularly interesting that Larry King says that in an interview the first secret to success is to make sure that you control the interview.

How do you gain control of the interview?

1. Know more about the subject
2. Remind yourself that you are the expert

And remember that you are never forced to reply to a question you don't want to reply to (or to give as many details as they want you to give).

Here are a few ways to divert giving an answer:

- “It would be premature of me to give an answer now”
- “I’m not able to answer that question because I haven’t seen the report yet… “

But don’t use “no comment” because it implies guilt (LOL, very good point).

Real-Life Applications

- To overcome shyness remind yourself everyone puts his pants on one leg at a time
- Talk to your employees on a regular basis, provide feedback and tell them what they’re doing well
- Don’t focus on the negatives
- Remind yourself that no matter what you answer, it’s not going to change the course of civilization, so take it easy

CONS

- Advice on staying updated

The author advises to “stay young” and stay updated on what’s popular and what’s driving the conversation.
I see where Larry King is coming from given the job that he does.
But I disagree here: for most people talking about the news is shallow conversation and the real productive people don’t waste too much time on the news.

Review

Sweet and to the point, “How to Talk to Anyone, Anytime, Anywhere” wastes no time on fluff or filler chapters.

The advice it shares is deep and simple, and yet it’s exactly what constitutes the basis of a great conversationalist.

I can recommend it.

Check the **best books** collection or **get the book on Amazon**

Persuasion: Summary & Review (Dave Lakhani)

Lucio Buffalmano · 19 April 2019 · Archived copy · Original

Persuasion teaches readers how to persuade and influence people.
Dave Lakhani, the author, does a good job of providing some of the main fundamentals of effective persuasion.

Contents

- Bullet Summary
- Persuasion Summary
- Persuasion VS Manipulation
- How to Manipulate
- The Foundation of Persuasion is Who You Are
- Become an Expert
- Tell People They Have Permission
- Leverage Social Matching
- Real Life Applications
- CONS
- Persuasion Review

Bullet Summary

- The difference between persuasion and manipulation is the intent of deceiving
- Persuasion is based on truth, honesty, inquisitiveness and the ability to tell a good story

Persuasion Summary

Dave Lakhani got interested in persuasion and manipulation because of his childhood with a mother who was the victim of a cult.

The cult mandated parents to beat hyperactive children to “stamp the devil out” and Lakhani left home as soon as he could.

Since then, he studied and researched persuasion and manipulation.

Persuasion VS Manipulation

Dave Lakhani dedicates part of “Persuasion” to explain the difference between persuasion and manipulation.

Lakhani mentions Robert Greene, author of The 48 Laws of Power, who said that all attempts to influence are manipulations.

But Dave Lakhani disagrees.
He says that in manipulation there is only the interest of the manipulator and the manipulated loses out.

In persuasion, the target of persuasion does not lose out and there can be a win-win.

I agree with Dave Lakhani here and it’s an important difference.

Also see:

> Manipulation: Techniques, Strategies, & Ethics

Why Manipulation is Short Term

Manipulation only works when there is a lack of information, experience, or critical thought from the manipulated.

When the manipulated thinks again over the course of the events or acquires the missing information, the manipulation becomes clear.
And that's why manipulation is short term: the manipulated eventually catches up.

How to Manipulate

Dave Lakhani shares how manipulation occurs and what the steps are so that people can understand and defend themselves against manipulation.

The steps are:

1. Look for people who are searching, looking for answers or salvation
2. Look for people who are unsure and unconfident
3. Test their knowledge and commitment
4. Present yourself as an expert and test if they push back or disagree with what you say
5. Use generalizations to get them to agree with you
6. Build rapport
7. Put them into a future situation where they benefited from following you (or your advice)
8. Subtly present your proposal, and make it a one time offer
9. Build more rapport and trust before you depart
10. Continuous the process until they're fully committed and then you can let them into your special insider circle

Also read:

- **Best books on manipulation**

> Best Manipulation Books

The Foundation of Persuasion is Who You Are

If you think of persuasion as building a house, then the persona, or who you are, is the foundation of that house.

Your persona must be well-developed and fully support the message, being fully congruent with what you espouse, say or sell.

The Three Elements of Your Persona

There are three elements of your persona that you must hone and develop to persuade at the highest levels:

1. Appearance
2. Voice and communication skills
3. Positioning (body language)

Dave Lakhani then goes on to describe each one of them.

Become an Expert

Becoming a formal expert in your area of influence is the single smartest thing you can do.

Similar to other books such as "The 4 Hour Work Week", Lakhani lays out a plan to become an expert in 30 days. But I'm not a big believer of 30 days expertise plans.

Tell People They Have Permission

Implying or outright telling people they have (your) permission to do something is a powerful reminder of their childhood days when they could only go ahead when a parent would allow them to.

It sets you as the one with power and can remove the last defenses and give the final nudge to complying to your request.

Also read:

- Soft Power

The author would sometimes ask the higher ranking officer in the room if he gives permission to the people around to take the decisions that best serve the interest of the company.
Later on, if any of them reaches an impasse, Lakhani reminds them they have permission from the big boss to go ahead.

Leverage Social Matching

The author mentions social proof from the classical Robert Cialdini's book Influence.

Dave Lakhani uses the word "matching" thought because you want to show that someone *just like* them has done what you want them to do. That takes away the risk that people will not want to follow a random crowd in case they have a rebellious streak.

Real Life Applications

- Get authoritative people to transfer persuasion power to you by endorsing you
- Know the person you are persuading better than they know you
- Let people talk so you can find and leverage the similarities between you two
- If you say sales end on a certain day, don't give it away to the latecomers who ask for the discounted price

- The yes ladder can be effective but people are likely to change their mind right after if you haven't properly persuaded them first
- Decide on a cut-off time: many salespeople don't maximize their time because they waste too much time on people who aren't going to buy

CONS

- **Blogging Advice is Dated** (and now wrong)

The author righteously suggests having a good website and a popular blog to enhance your online presence and perceived expertise.

His advice though is not current anymore and writing 200-400 words is actually harmful advice in today's environment.

This is not necessarily the author's fault since SEO has changed a lot in the years.

- **Some exaggerated initial claims**

So many influences and persuasion books start by making huge claims about what you will learn and be able to do.

I am not one of the people who enjoy that.

Persuasion Review

A good overview of persuasion, a great analysis of the difference between persuasion and manipulation.

What I loved the most about Persuasion by Dave Lakhani though is the focus on personality.
I believe that is the most important fundamental in any persuasion attempt and too often it goes unmentioned in many similar books.

Also check the:

- **Best persuasion books**

or **get the book on Amazon**

When: Summary & Review

Lucio Buffalmano · 19 April 2019 · Archived copy · Original

In *When* Daniel Pink analyzes the impact that time and the timing of your actions have on our lives.
Pink shows that *when* you decide to do what you strongly affects the effectiveness of your actions, and your chances of succeeding.

Contents

- Bullet Summary
- When – Summary
- Circadian Rhythms Archetypes: Are You Lark or Owl?
- Circadian Types' Traits
- The U-Shaped Daily Productivity
- There Is a Time for Art & A Time For Critical Thinking
- Tips to Maximize Your Day
- When to Go First, When to Go Last
- When to Get Married
- At Midpoint, We Relax Standards (& Assessments)
- By Midpoint It's Best to Lose (by a little)
- Real-Life Applications
- CONS
- When Review

Bullet Summary

- Our day has a U-shaped curve of efficiency and happiness
- Our life has a U-shaped curve when it comes to happiness
- If you want to maximize your efficiency: learn about your circadian rhythm and schedule your da-ys accordingly
- Take many breaks and take short naps

When – Summary

Daniel Pink is not a psychologist himself, but he does his research well -very well-.
I loved his previous book "Drive" and so I had high expectations for "When".

Circadian Rhythms Archetypes: Are You Lark or Owl?

When it comes to circadian rhythms Daniel Pink uses the terms "owl" for people staying late and night and "larks" for people waking up early in the morning.

Circadian Chronotypes (that's the correct word) are not fixed in stone but change depending on age, circumstances, and also gender.

Most of us are somewhat in the middle, which Pink calls "third birds".

It's important to know where you fall on the line circadian spectrum because it will affect how productive (or unproductive) you are during certain times of the day.

Circadian Types' Traits

Owls, or the people who stay up late and wake up late, tend to be:

- More creative
- Have a stronger working memory
- Score higher on intelligence tests
- Have a better sense of humor

But they are also more prone to addiction, drug use, eating disorder, sensation-seeking, and neurotic.

My Note: No real data here
This is one of those cases in which the author does not quantify those "more likely" and "more prone to".

To me, this is meaningless because a "1% more likely is insignificant" but a "50% more likely would be highly significant.

But the author doesn't provide those statistics.

The U-Shaped Daily Productivity

Every day, for most people, presents a U-shaped chart when it comes to productivity.

We start the day that we are very productive in the morning. Then we hit a trough in the afternoon and eventually we rebound in the early evening.

It's not just productivity though, the same U-shaped curve affects happiness, emotional balance, and warmth towards others.

This has been proven by several experiments, including:

- Daniel Kahneman, the author of Thinking Fast and Slow, who used the day reconstruction method
- The analysis of millions of Twitter messages by a Cornell University research

There Is a Time for Art & A Time For Critical Thinking

What I found most interesting from a psychological point of view is that times of the day which are poor for critical thinking tasks are actually great for artistic pursuits.

This is because our neocortex is less engaged and we can "let go" more easily.

Tips to Maximize Your Day

Here is some good advice to maximize your day:

- Drink water when you wake up (also read The Miracle Morning)
- Get some sun on your skin
- Coffee is OK, but best after 1-1.5h after waking up
- You can skip breakfast
- But do get lunch
  - Make the launch autonomous (you decide) and detached (no work-talk)
- Use micro-breaks (especially before important tasks)
  -

  - Moving and walking beats remaining seated
  - Taking a break with someone beats staying alone
  - Try to stay tech-free and let go of your phone
  - The company DeskTime calculated 17 mins of break for every 52 mins of work (but this is a meaningless average of course)
- Do nap (but not long naps: between 10 and 20 minutes is ideal)
  - You can get a coffee right before nap so that the effect will start right after you wake up
  - Around 7 hours after you first woke up is a good time for napping

For more bio-hacking also read "Own The Day, Own Your Life".

When to Go First, When to Go Last

I have read plenty of books that recommend people to go first or last (one of them: The Social Animal). And many of them got it wrong.
So I was really glad to read Daniel Pink's take on it since he says he bases his advice on research.

When you're in a serial competition (ie: job interviews or candidate seeking votes) go first when:

- In ballots and elections, the first name gets a boost
- You're not the default choice (it helps you get a fresh look from the decision-makers)
- There are relatively few competitors ("primacy effect")
- There are many strong candidates (if people see many strong early candidates they will start looking for flaws in the successive ones)

Go last (or not first) when:

- You are the default choice (people are less likely to challenge status quo and more likely to stick with the default when they're tired)
- There are many competitors of average level (the primacy effect doesn't hold and by going last you can showcase your uniqueness)
- You're operating in an uncertain environment (you can get a hedge by watching what the competition does)
- The competition is weak (at the beginning of the competition the judges hold an ideal standard of performance, and when it's not met, they discard the first competitors and the successive ones enjoy the more realistic expectations)

For a more complete guide check:

- When to go first, when to go last

When to Get Married

- Way until you're old enough, but not too old (above 32 the odds of divorce increase by 5% each year for the next decade)
- Wait until you completed your studies
- Wait until your relationship is mature enough (waiting at least 1 year before marriage were 20% less likely to divorce; waiting 3 years even better)
- Don't spend too much on engagement rings (somehow high spending was correlated with divorce, but this sounded dubious to me because no numbers were given)

At Midpoint, We Relax Standards (& Assessments)

We remember beginning and endings the most. If the ending of a colonoscopy is not painful, we remember it as less painful even if the total experience was longer and more painful (as compared to a colonoscopy that didn't end well).

What's also surprising is that most people relax their standards during the middle and that people even judge others less harshly for the middle.

If you're a president, you should focus on the last year because that's what matters the most.

By Midpoint It's Best to Lose (by a little)

Teams that at mid-game were behind by one point were more likely to win. This is because they went into the field with a mindset that they needed to make up and right after the match restarted they accumulated more points.

Psychologically indeed, researchers have shown that people invest the most effort when they were told they were trailing by a little (as compared to when they were told they were winning or they were losing by wide margins).

The effect didn't hold if they were much behind.
So as Robert Greene says in The 48 Laws of Power: crush your opponents totally.

Real-Life Applications

- Identify your circadian type, identify your peaks and troughs and schedule your most important work during your peak hours
- During your breaks, green and nature will help (even if just looking at it from a window)
- Exercise in the morning for:
  - losing weight more efficiently
  - building strength and boosting mood (evening and later afternoon are best for peak performance)
- End on a high note: people prefer endings on a high note even when the overall sum is lower than the option with a poorer ending but higher overall scores
- **For leaders**: when team morale is low it's best to emphasize the work that has been made; when team morale is high it's best to emphasize what needs to be done
- Think about the future: the author makes some fun of author who encourages of to "live in the present" (The Power of Now, wink wink) because cultures who have languages with strongly defined future tenses exercise

more, save more for retirement and, it seems, enjoy better lives
- Doctors and nurses make many more mistakes during the troughs of the day and are much more likely to be sloppy

CONS

- **At times the "better" was unquantifiable**

There were several instances in which Daniel Pink quantified his "better", "stronger" or "more likely".
But many other times where no number or data was given to quantify "better", "stronger" or "more likely".

To me, that felt as if the author was trying to make "When" more captivating or as if he describing small changes and avoided to quantify the actual impact or it would otherwise be obvious the change was minimal.

This makes "When", in my opinion, a wonderful book but more of a pop-psychology title than a heavily scientific one.

- **At time sensationalistic**

The author says that people who start working on a bad job market will earn less even decades into their careers.

The long term impact was 2.5% though, and the author says that "in some cases, up to 20%".
But that "in some cases" makes no sense, because obviously, we are going to have some cases which are larger. But we will also have some cases of people who ended up earning *more*.

The average 2.5% was all that we needed, really.

When Review

"When: The Scientific Secrets of Perfect Timing" is a wonderful book and I enjoyed it through and through.

It also reminded me of how hard it was for an owl like me to wake up early morning to go to high school and how unproductive I was simply because of my circadian rhythms (young men also tend to be more owls).
The author indeed recommends to start schools later, and I couldn't agree more.

"When" also gave me some new perspectives on psychology (for example when to go first or last and on people's tendency to relax standards of assessment in the middle).
And I learned loads on bio-hacking (albeit I'm not a fan of that word :).

And, in general, I simply deeply enjoyed reading "When", so I can once again highly recommend Daniel Pink.

Mind Games Women Play (& How to Beat Them)

Lucio Buffalmano · 20 April 2019 · Archived copy · Original

Women play all kinds of games on men:

- Manipulative games to control relationships
- Nasty power games to control dating

But stay with me her before clicking on those other posts.

This article gives you the quickest overview of games women play, plus, **you'll learn how to handle any game** and win, without being an as*hole.

"Mommy's so sick and tired of wearing panties"

Let's begin:

Contents

- 1. "Look At Me" (While I Don't Look At You)"
- 2. Feigning Disinterest (AKA: Chase Me Some More)
- 3. "Invest in Me" Games (Ie.: I'm Higher Value, Pay The Difference)
- 4. Delay Responses Games
- 5. Wait For Me Games
- 6. Cancel The Date Games
- 7. Prove Yourself to Me Games (AKA: Dance Monkey Dance)
- 8. Sex Withholding Games
- 9. Damsel in Distress Games
- 10. "I'm Not That Kind of Girl" Game
- Getting His Commitment Games
- Relationship Games
- Nasty Games Women Play
  - Bonus: These Are Not Games Women Play

1. “Look At Me” (While I Don’t Look At You)“

Games start early in seduction.

Before a single word has been exchanged, women are already making sure that he is chasing.

And the very first game to frame him into the chasing position is to get his attention while pretending she hasn’t even noticed him.

More often than not, **women don’t want men to realize they are looking at men** while at the same time trying to get men to look at them.

Some women keep playing this game long after the two have first met.
Have you ever noticed that some women bury their noses in their phones at your agreed meeting spot or always fail to see you first?

And maybe you’ve been wondering:

> **Clueless guy**: Gosh, I wonder how could she not see me

Well, if you have been wondering that, here’s the news: many women play games :).

This scene from Sex & The City is a good example (and the comments below the video confirm many women do the same):

> **Carrie**: (speaks and looks away)
> **Mr. Big**: (looking straight at her) Anywhere you want. Just you and me.
> **Carrie**: (look at him) Call me (breaks eye contact first, moves away)

⁉ Notice Carrie often looking away as they talk.
That serves to make him look at her more often than she looks at him. That frames her as the prize, and frames him as chasing.
Well played.

The “Look At Me Catwalk”

The crown for the “look at me game” goes to the lady whom I dated a couple of times a few years ago.

She was a real champ :).

She came out of the metro, dressed to the nines, and walked two meters beside me with a long stride and an erect spine.
Like a catwalk model who was overdoing her catwalk.

Then she stopped 3 meters in front of me, emphatically looked left and right as if she were looking for someone, and then stopped there.

I laughed, and immediately knocked a couple of points off of her for being such a game-player.

Beating “Look At Me” Games

You can let her play this game and let her “win” it.

As long as she likes you and she doesn’t exaggerate, a prey/predator dynamic is good for seduction (and if you do it well, it *helps* seduction).

Just make sure that you:

- Don't stare too much before approaching
- Are not staring at her when she turns to look at you during your approach

Also read more in: a scientific guide to approaching a girl.

2. Feigning Disinterest (AKA: Chase Me Some More)

The female dating literature sounds like a big choir whose refrain is: "make him chase you".

And making him chase starts by feigning disinterest or, at least, showing less interest than he does.

Beating the "Feign Disinterest" Games

This is one of those games that risk derailing the interaction if any of the two overdoes it.

How you handle it depends on the stage and the dynamics, but a high-power approach is to go direct and blow the game out of the water with high-power honesty.

For example:

> **Her**: Well, I don't know if I will have time to be honest
> **Him**: Look, it's fine either way. Nobody dies if you don't. But I like you. And maybe we can get along well. But to know for sure, we should find the time for a coffe.
> So I propose this: we exchange contact, I'll give you a call and we'll try to find some tie. Are you in?

That's high-power stuff.
If there was any interest, that would amplify it 10x.

3. "Invest in Me" Games (Ie.: I'm Higher Value, Pay The Difference)

Some women make it a point to make men pay for and invest in them.

Gold diggers are an extreme example, but normal women who seek a provider also play this game.

"Invest in me" games include trying to make the man:

- Pay for the dates
- Buy gifts
- Run to support her
- Emotionally support her (commiserate with her woes, rail against her enemies, etc.)

Making him invest in her increases her power because it shows that she has a higher sexual market value and the investment serves to "pay for the difference".

This is how it works:

The more you invest, the more you sub-communicate that she is more valuable than you are.

So, what does this game look like in real life?

You know the most stereotypical example:

> **Her**: will you buy me a drink?

Or here is a real-life texting example from an online dating match before even going out:

I was getting a terrible impression of her. I threw her a lifeline with that last message, but she was sinking in value in my eyes (P.S.: “two* people”)
Most men are happy to accept that frame and invest because, on average, women are more valuable than men in the dating marketplace.

Beating “Make Him Invest” Games

This depends a lot on your background and dating culture.

Investing in a woman before marrying is just how dating goes in some conservative cultures.

Even in libertine cultures, it can be OK to invest *as long as she’s being kind and/or gives back*.

It’s when investing becomes “over-investing” and when you’re getting little back that this game women play becomes really nasty.

A relationship where one gives and the other only takes is a sucker relationship.

I advise men to stay away from women who ask without giving and I advise women to stay away from “make him invest games“.

Most cool and well-adjusted guys don’t like it anyway.
Example from “How I Met Your Mother”:

> **Her**: Okay, well, what about me? Aside from the cats, how did I come across?
> **Ted**: That’s right– the check. The check came and, of course, I was going to pay, but you didn’t do the check dance

This is basically saying:

I didn’t like you because you didn’t even *pretend* you wanted to chip in and you acted like it was owed to you.

4. Delay Responses Games

The first time a girl messages a boy is the first time she will start thinking about delaying response games.

It’s that natural and it’s that common that we don’t need to discuss it further

Beating the Delaying Response Game

A common response is to let her wait as well.

It’s a solid response.

In this example, she was very warm and quiet chasing me in person.
But her message came with a delay and with a very snubbing tone:

So I let her wait and kept it short and snobbish as well.

But don't overdo it.
If all you do is wait longer and longer, you're doomed.
Either vary the response time or change the dynamics from a vicious cycle to a virtuous cycle.

I recommend the following:

1. The first time she does it, waits even longer
2. Don't invite her out if she avoided your invite of course
3. Keep your text shorter
4. As soon as she replies, reply within a day

The last point is the most important.

See it this way: one of you must eventually be an adult about dating and relationships.
And let it be you.

> **Great leaders always move first when it's time to stop the games.**
> -ThePowerMoves

5. Wait For Me Games

Similar to delaying responses, "making him wait" is the old power move in the world.

No self-respecting woman would show up early to a date and wait for him.
Many women will show up late and some will show up late *on purpose*.

The "make him wait game" sub-communicates that her time is more valuable, that she has more power, and that she can let you wait.
And when you wait, you confirm that frame.

Beating “Making Him Wait” Games

If the tardiness stays within 10 minutes it’s OK.

Longer than 10 minutes she must write to you.
If she is not apologizing, consider it a very bad sign and a strike against her character.
If she is also not responsive, consider the date off and move.

Often women will chase you when they realize you’re not waiting around for them:

10 minutes of delay, no writing, no apologizing… I took the date off and moved for better prospects. I met her later, after power dynamics were rebalanced

6. Cancel The Date Games

Here is another old trick.

The person who cancels sub-communicates cares less about the event, meeting, or date.

Robert Cialdini explains in *Influence* that we want what we can’t have.
So canceling a date can work in making men want her even more.

However, as with most games, it can also specularly backfire:

Of course, at this point, I could not be sure whether she had a real reason to cancel or not.
But since she canceled on the same day of our scheduled date, I reacted the only way possible (read below).

Beating “Date Cancelling” Games

How do you recognize a real need to cancel a date from a game women play?

Simple, you look for the following:

- Is she telling you well in advance?
- Is she apologetic about it?
- Does she propose alternatives?
- Does she show a willingness to make up for it?

If she does any of the above, great news, It’s probably true and you can reschedule (just a bit later, not right away).

If she just drops a shi**y text like the one above on the same day, without any apologies, she doesn’t deserve your time.
Let it die.

And if it was true, it’s up to her to re-initiate.
And if she reinitiates with a lame excuse, you know she liked you, you know she feels guilty and you know she knows she misbehaved (and, likely, you know that she was playing a mind game):

Then she chased for that date. But by then, I really lost most of my interest in her.

7. Prove Yourself to Me Games (AKA: Dance Monkey Dance)

This is what in the past we called "jump through the hoops" and it's a soft-power type of game.

Many smart women play it instinctively and most normal guys fall for it… Equally instinctively :).

The games women play that fall under the "make him prove to her" are varied and almost infinite. And sometimes they can be subtle.

Look at this example from a Tinder conversation:

It would seem natural here to follow up her joke with “I’m crazy smart” or “our babies would be smarter than Einstein”.
But, even if said jokingly, I’d still followed her in *her* frame, and, most of all, I’d have been proving myself to her.

My reply instead actually says:

> **Lucio**: Nono lady, *you* prove yourself to me

And in this case, it worked like a charm:

She got this :)
Many advanced dating games and power moves belong to this group.

And learning to deal with them is all about increasing your power intelligence, guys, There is no shortcut—actually, there is one: Power University.

Also, check this forum entry for the perfect execution of the "dance monkey dance":

- **She maneuvers seats to lock in and he plays the monkey dance**

8. Sex Withholding Games

AKA "Sex blackmailing".

The "withholding sex game" is encouraged and recommended by several dating coaches, including in the popular "The Power of The Pussy".

The author recommends women use sex as a bargaining chip to get whatever they want.

And that's what the game is all about: she refuses him sex until he gives her whatever she asks for. Or some women just play it for power, really (like Margot Robbie in the very first picture of this article).

> **If her biggest bargaining chip is spreading her legs you should play at another table (the stakes are low here)**
> -ThePowerMoves

Dealing With Sex Withholding Games

Never give in.

Men who give in to sex blackmailing communicate a host of bad traits, including:

- He can't get sex elsewhere

- He is easy to manipulate
- She doesn't really enjoy sex so much
- She is the (sexual prize) of the relationship

A good answer is to shame her.
Such as, you tell her you're disappointed she'd even stoop so low.

And then you can even invite her to leave (or leave yourself if you're at her place):

> **Her**: No, I don't feel like doing it… (if you don't do X)
> **Him**: You know what, I really don't have time for this.
> It feels to me like you're playing a bartering game or something.
> The relationships I seek are supportive and you don't seem to want the same.
> I should get to work now, and you should probably go

Then watch her chase you (as she should! She has to make her up for her manipulation).

> Manipulation: Techniques, Strategies, & Ethics

9. Damsel in Distress Games

It was far more popular in the old days of romanticism.

Today, with feminism and the pressure on women to be strong, we don't see it nearly as often.

But you'd be mistaken to think it's completely gone.
The smartest women indeed know better than to drink the manipulative Kool-Aid and still use it.

Of course, not all do it this obviously, but the psychology behind is actually this one:

> **Her**: Aaah! A spider (runs behind him)

Make him feel strong and powerful, and he'll move mountains to protect you.
This is actually a high-quality woman type of game.

10. "I'm Not That Kind of Girl" Game

AKA: "I'm relationship material".

This is part of the more general "Madonna games".

Such as women seek to position themselves as "serious" and "relationship material" by making him wait for sex.
So it can involve winning and dining before he can get to the cake (read "Madonna-whore dichotomy" because this is important in female and dating psychology).

Of course, sometimes women truly want to wait or need some more time.
But still, there are also a lot of games around it.

Indeed, some **women play this game even when they're being open and forward about sex (for a woman!)**.

Look at this example: this girl invited me to go to her place before going for lunch, and I wanted to make sure I was going to go there without "wasting a trip" if you know what I mean.
So I joked a bit about "coming", but that was too much, and pushed her into the Madonna game:

Typical Madonna game to avoid looking slutty. It's often up to the men to help her get rid of Madonna games.

Beating Madonna Games

See "Seduction University".

Also read:

- Lovers, providers & friends
- Lovers VS providers

Getting His Commitment Games

The games women play don't stop at seduction of course.

As a matter of fact, they switch to an even higher gear when things get sexual.

You can read more commitment games here, but some of the most popular include:

- **"You can't control me… Unless you become my boyfriend"**

Here is what this game looks like in real life:

> **Her**: I am going to party with my girlfriends
> **Him**: Aren't you partying a bit too much recently..
> **Her**: Well, you're not my boyfriend, so you can't say anything..

This one basically says: start to get serious or I am drifting away and might meet someone else.
In a way, she is giving you more control over her… As long as you give commitment.

It's not the nastiest game, as it's a form of barter and she is giving you something back.

- **Triangulation Games**

> **Her**: My new teammate Marco is sooo nice to me. Today he invited me for lunch and he taught me so much about..

This is a threat of triangulation, a seduction technique Robert Greene mentions in The Art of Seduction.
It's a veiled threat that if you don't hurry up, she might find someone else. While triangulation can be emotionally manipulative behavior, you must also ask yourself if you are not wasting her time.

Here is another example of a triangulation game:

- **Ultimatum Games**

Women usually play the ultimate game when they're looking for a relationship:

> **Her**: Either you get serious, or I'm outta here

All threats, including breakup threats, are, of course, nasty games.
I highly recommend men not to get into a relationship under any type of threat.

Not only it would give all the power to her, but it also says a lot about what she thinks of you (not so much) and provides a preview of how she might behave in the relationship.

- **The gentle ultimatum game**

This one looks like this:

> **Her**: I don't do sex without relationships

This is a good type of ultimatum game actually.
There's still a slight threat of possibly abandoning the relationship, but it does so in a very tactful way.

Relationship Games

Games diminish in relationships but do not disappear.

Relationships games start with her rewriting the history of how you two met and, somewhat magically, it always ends up looking like you chased her far more than you actually did :).

Relationships have very different games and power dynamics and men and women play different games because of their different needs.
See:

- **How women control men**
- Relationship power dynamics
- How to control relationships (the healthy way)

Nasty Games Women Play

Not all games are created equal.

Some can even be helpful.

But some others can be very nasty and lead to highly toxic relationships.

I've done a whole article on this, so read it here:

- **Nasty games women play**

Bonus: These Are Not Games Women Play

Sometimes people list these as games women play.

But most often, they're not:

- **Let's just be friends**

No, sorry, women who are attracted to men rarely use that as a game.
The only exceptions are with coworkers and when other people are around, in which case she might be trying to protect her reputation.

- **I like you more like a brother**

Similar to the above: this is rarely a game or a shit test, as it's often listed.
Women simply don't say this kind of stuff to men they are attracted to.

- **Make up / enhancing appearances**

The *APA Handbook* on relationships lists this as a common “lie” for women.

It’s not.

High-quality women DO take care of their appearances.

SUMMARY

The old pick-up artists used to ask as a conversation starter if men or women play more games.

Sure men do play games as well, but the games women play are, on average, far more numerous and far more advanced.

This article gave you an overview of the most common mind games women play and how you can confront them as a high-quality man.
Now you don’t need to fear women’s games anymore :).

To Sell Is Human: Summary & Review

Lucio Buffalmano · 21 April 2019 · Archived copy · Original

In *To Sell Is Human,* author Daniel Pink looks at sales and how it's changed in the era of the digital revolution, new scientific research.
Pink says that an ethical approach to sales is the most effective approach you can take in this day and era.

Bullet Summary

- Manipulation only works when there is an asymmetry of information, and that's not the case today
- Focus on service-selling: sell from a position that seeks to improve people's lives and the world
- When you get rejected make sure that you don't read it as a personal rejection and as an eternal rebuttal of your personal worth

To Sell Is Human – Summary

About the Author: Daniel Pink is an American author. He has a degree in law and worked in politics as the chief speechwriter of Al Gore.
He also wrote *Drive* and *When*.
I find Pink to have a knack for mixing good scientific research, psychology, and great storytelling.

In a way, Danie Pink's books are somewhat similar to Malcolm Gladwell but, in my opinion, more scientific and rigorous.

Manipulation Works in Sales With Information Asymmetry

Daniel Pink says that manipulation and unethical approaches to sales can work as long as sellers know more than buyers.

When sellers have more information than buyers can ever gather, buyers are at the mercy of the sellers and they must beware.

That's when Daniel Pink introduces Joe Girard, the poster child of the lying salesman who'd say anything to create a

fake bond and make a sale.

Also read:

- **Best manipulation books**

And:

> Manipulation: Techniques, Strategies, & Ethics

Manipulation Doesn't Work In The Digital Age

In the information age when a laptop can give potential buyers all the information they want and need, the low road of lying and manipulating doesn't work anymore.

People can also much more easily share information about lying salesmen and poor companies, making the costs for cheating potentially much higher.

Also read:

- Best influence and persuasion books

The Three Steps to Prospect Taking

Daniel Pink says that research shows there are three steps to effective prospect-taking:

1. **Reduce your power to sell better** (power selling rests on information asymmetry, today you need to attune to customers, and people who feel in high power are less able to attune)
2. **Use your head as much as your heart** (focus on what the prospect thinks, not just how they feel)
3. Mimic strategically

My note:
Step two was rather unclear to me and not very helpful from a practical point of view.

Extroverts Are Poor Sellers

Most people believe that extroverts excel in sales positions because they naturally like people and enjoy people's interactions.

However, the link between extroversion and income is tenuous or non-existent.

To be clear, extroverts do hold an advantage over introverts in sales positions, but they don't do nearly as well as ambiverts do.

Ambiverts are people who are in the middle of the extroversion spectrum and present traits of both introversion and extroversion.

Extroverts hold a slight advantage over introverts, but they often fail in sales because they tend to talk too much, ask too few questions, and, to use Daniel Pink's words "stumble over themselves".

Also, read here on how to become an ambivert:

- The ambivert advantage

Explanatory Styles Explain What Best Salesmen Do

Daniel Pink delves into Martin Seligman's studies here.

But the short of it is:

Martin Seligman found out that dogs -and later, people- give up trying when they (mistakenly) learn that they cannot do anything to change their circumstances.
When that happens, of course, there are no chances of succeeding because the organism simply fails to take action.

In human beings, learned helplessness is usually a consequence of negative explanatory styles.
Explanatory styles are different forms of self-talk that take place after the event has happened.

A negative explanatory style after a boss has yelled at you would look like this:

> My boss hates me because I am such a good for nothing and it's probably true I am worthless

People with a negative explanatory style explain events as:

- **Permanent** (negative conditions will endure)
- **Pervasive** (the causes are universal instead of specific to the circumstances)
- **Personal** (they are the ones to blame)

Research also shows that salesmen with an optimistic explanatory style oversell those with a negative style by 87% (top 10% VS bottom 10%).

Also read:

- Authentic Happiness by Martin Seligman

Three Sales Principles From Improv Theater

Researching for "*To Sell Is Human*" Daniel Pink visits a sales training that has its roots in improving theater.

The rules for good selling from improv theater are:

- **Hear Offers**

Don't focus on the "no" or the lack of "yes". Often behind a lack of yes there are ideas and paths that can lead to success and win-win.

Explore them by getting out of the mindset that you must "overcome objections".

- **Say "Yes And…"**

Don't say "yes, but…", which is a major rapport breaker.

Use "yes" and then redirect and go along with the prospect instead, which will help you listen and empathize instead of a combative mindset of "overcoming rejections".

- **Make Customers Look Good**

Daniel Pink mentions "Getting to Yes" and "7 Habits of Highly Effective People", two best-sellers that popularized the idea of looking for win-win negotiation.

On Saving Face also read: How to Win Friend and Influence People.

Leverage Pro-Social Behavior For Persuasion

Robert Greene, author of "*The 48 Laws of Power*" said that "self-interest is the currency that makes the world go around".

Yet research shows that appealing to the interest of our customers can yield much better results (for example: nurses reminded to wash their hands for the patients' benefit).

Real-Life Applications

- **Drop The "Overcome Objections Mindset"**

If you take one thing away from this summary of "*To Sell Is Human*" is to please drop the mentality that you must overcome objections.

That mindset makes you an annoying dic*head.

- **Use Mild Profanity**

Using some mild profanity such as "damn" in your speech will increase the persuasiveness of your speech.

- **Limit Choices**

Too many choices can lead to decision paralysis (also read "The Paradox of Choice").

- **Consider Adding A Blemish**

Adding a small drawback in an otherwise good list of positives increases sales as long as the blemish is last and the prospects are not in "full critical mode" but instead slightly distracted.
What happens psychologically is that the weak negative information increases the salience of the positive information (contrasting principle).

- **Ask Why They Didn't Pick a Lower Number**

If someone doesn't want to do something you can try to ask how much they want to do it from 0 to 10.
If they say 2, ask why it's 2 and not a 0. Now they are explaining why they want to do it.

- **Go First If You're The Incumbent, Last If You're The Challenger**

The challenger is better off presenting last. The market leader first.

Read an overview of how sequence and numbers affect pitches.

CONS

- **At Times It Felt Naive**

"*To Sell Is Human*" ends by inviting the readers to ask themselves if people's lives and the world will improve after they've done the sale.
That reminds me a bit of the spirit behind "*The Go-Giver*" and "*The Greatest Salesman In The World*".

I love the spirit and the idea of adding value to people and the world. But it's also somewhat naive to expect that success can only come with that mindset.

- **Old Message "We're All in Sales" Is Misleading**

The message that " we are all selling" is an old cliche often repeated in many sales books.
Somewhat, I don't fully agree: there is a big difference between "selling yourself and your ideas" and "selling products as a profession".

- **Misleading Research Attributions**

As "How to Lie With Statistics" shows research and statistics can be used to make any point, and in my opinion, they are even more dangerous because they can provide a semblance "of truth".

There were a few instances in which I felt that the words "research says" were used to give a semblance of certitude where there cannot be any certitude.

- **Misleading Generalizations From Research**

I felt that the author jumped to some misleading conclusions with some research.
For example, he says that granular numbers are more effective than coarse numbers, but then the comparison was not between similar products, and "effective" is a major generalization considering the research only measured a very specific product characteristic.

- **Somewhat Disjointed**

"*To Sell Is Human*" moves from self-promotion to sales ethics and morals to when to present for maximum effectiveness, as well, as what to improve theater teaches how to sell better.
It feels somewhat disjointed at times and more like a random collection of research and psychology papers.

- **Some Bad Advice For Self-Development**

In my opinion, some advice was poor.

For example, the author says to "count all the rejections you got" to understand that rejections don't kill.
But unless one already has an antifragile ego, focusing on rejection can be both painful and harmful.

- **Some Bad Selling Advice (The Customer is Doing You A Favor)**

The author presents Seth Godin, introduced as a "marketing guru", to advise selling from a position where the customer is always doing the salesman a favor.

This connects to the principle that "lowering your status" can help in attuning to the customer.
But I disagree here: it's a big generalization that doesn't hold true in many selling situations.

PROS

- **Wonderful Psychology**

Daniel Pink delivers some great pearls of wisdom when it comes to the psychology of selling and the psychology of happiness and self-development.

For example, he debunks the common misconception in sales that it's best to always tell oneself that "you can do it, you're the best", which is bandied by basically all sales books.

He explains that too positive self-talk has an upper limit and that some negative or critical self-analysis is helpful (also read: how to leverage failure).

- **Great Humor**

I absolutely loved the sarcasm of these two lines:

> Joe Girard is the world's greatest salesman.
> I know, because he told me.

LOL, priceless :D.

Then, a little later, says Pink:

> But there is one more thing you need to know about Joe Girard. He hasn't sold a car since 1977.
> He quit his business more than three decades to teach others how to sell.

- **Wonderful audiobook voice**

Daniel Pink actually reads his audiobook himself. I appreciate that, and the other listeners will too because he can make that writing come alive.

To Sell Is Human – Review

I don't fully agree with the idea that an ethical approach to sales -and success- is the best and most effective approach for your bottom line.

To me, it's very polly-annish.
I wish that an ethical approach to anything in life was the most effective.

The evidence that any critical observer can gather is clear: an ethical approach to life offers no inherent advantage when it comes to personal success.
Also read:

- **Psychopathy beats empathy and kindness**

Aside from that, I absolutely loved "To Sell Is Human".
It's a wonderful book and, for my personal taste as a sociologist, a psychology buff, and a lover of the scientific method, it's also the best book I have ever read on sales.

Game Theory Bargaining and Auction Strategies: Summary & Review

Lucio Buffalmano · 22 April 2019 · Archived copy · Original

"*Games Theory Bargaining and Auction Strategies*" explains auction theory to the layperson.
Gregor Berz, the author, strips away the equation and introduces real-life examples and psychology. This "simplified" format makes the book very useful and accessible to anyone who's interested in improving the outcomes of their negotiations.

Contents

- Bullet Summary
- Summary
- Transactions & Indifference Price
- How to Appropriately Name Your First Price

- Breaking The Prisoner's Dilemma: Collusion Through Repetition
- Don't Negotiate By Begging: Whoever Can't Afford to Lose, Loses
- Rational Bidding Strategies
- Negotiation Power Games

- CONS
  - PROS
  - Review

Bullet Summary

- On eBay, bid your indifferent price and that's it
- To sell your house, consider a Dutch auction to scour the market for the highest price
- Never let people know you really need the transaction

Summary

The author says that the name "game theory" is confusing and a better name for the field would have been "strategy theory".

But that's not what happened, so we got stuck with "game theory".
Just be aware that "game theory" is the study of the different strategies and outcomes of transactions and negotiations.

Transactions & Indifference Price

The indifference price is the lowest price that a seller is willing to accept and the highest price that a buyer is willing to pay.

Transactions hence only happen when the two indifference prices overlap.

My Note:
Or when the *stated* indifference prices overlap as plenty of transactions don't happen because one party fails to understand that an opening price was simply a gambit.

Negotiation is Sharing The Pie

Negotiations then are all about "sharing the pie" of the overlapping indifference prices.

How to Appropriately Name Your First Price

A price that is too close to your indifference price will result in you getting a smaller piece of the pie.

A price that is too far from your indifference price can result in the negotiation not even starting (there is no overlap of indifference prices) and you losing all your credibility).

My Note:
As other negotiation books have stated, a good rule of thumb is to pick a price that is the highest price that you would not be embarrassed in defending and backing with data.
Research also shows that **you are better off with a range** that has your target price at the bottom.
And **use precise numbers** such as "81k to 84k" instead of "80k to 85k" as research shows that's more effective in moving the other party towards your range.

How to Negotiating In Fairness & Without Arguing

Gregor Berz introduces and explains several forms of auctions that are better suited for reaching "fair" outcomes.

- **Sealed Exchange of Bids**

His example takes place between two friends in a beer garden (guess where Berz comes from? :).

In the "Sealed Exchange of Bids," both write down their idea of a fair price and give the bids to a third friend. The third-party only reveals the bids if the two prices intersect. Otherwise, there is no more talking about a deal.

If the prices intersect, they can meet halfway. This is done by sharing all available information.

- **I Cut You Choose**

This is especially suited for sharing or for settling a divorce.

One party divides the pie and the other party chooses. Nobody can complain because the person dividing has chosen two equally attractive packages and the party who chooses, well… He has chosen.

When it's difficult to make precise packages, the difference is made up with debit or credit notes to make up for the difference.

The English Auction

In an English auction, the bidders all compete against each other and the highest bidder wins the auction.

In an English auction, it's the second-highest bid that determines the final price because the winner only has to bid higher than the second-highest bidder.

The English auction can result in poor outcomes for the auctioneer (or seller) if the auction ends far lower than the indifference price of the winner (which can be a sizable difference in case there was little visibility for the auction and/or very few bidders can afford the item).

Vickrey Auction (Second Price Sealed Auction)

The Vickrey auction is similar to the English auction in the sense that the final price is determined by the second-highest bid.

But contrary to English auctions the bidders here don't see the other bidders' bids.

Dutch Auction (Great to Sell Your House)

The Dutch auction names a price advertises the item, and does not accept negotiations.

Technically, it's an "open first-price auction".

If no buyers are found at the first-named price, the price goes down over time, and each decremental step can even be shared in advance (for example: start price 350k; in one month 340k; in two months 330k).

As Gregor Berz says, The Dutch auction is a great way to scour the market for the right price (but you should avoid parallel Dutch auctions if you have several items on the market and there is little demand).

My Note:
The author also shares the story of a house sold with a Dutch auction, and I decided that if/when I will sell my house, it will be with a Dutch auction (and I also thought about how to leverage the Dutch auction dynamics to increase the evaluation).
It's also a great way if you don't want to waste time with lowballers and long rounds of negotiations and it's fantastic when the demand is strong.

Prisoner's Dilemma

The nature of the prisoner dilemma is that if everyone were to follow a "communal" course of action that is good for everyone, everyone would gain.

However, defecting from the communal course of action can provide outsized advantages for a single individual.

Environmental protection is an example of a prisoner's dilemma where if everyone contributed, it would be better for everyone. But individual defection can improve the individual's life to the detriment of the collectivity.

The author says that the Prisoner's Dilemma changed Adam's Smith mistaken assumption that if everyone maximizes his own position, everyone gains.

My Note:
I don't think Adam's Smith "Invisible Hand" has been nullified. That's still what capitalism is based on and capitalism worked great.
What has been corrected is the *extreme* interpretation of the Invisible Hand upon which neo-liberism sought to eliminate all possible regulations (but that was always resting on flimsy foundations and little understanding of human psychology, albeit unluckily that's exactly the politics Greenspan was embracing).
The Prisoner's Dilemma did add an important theoretical layer that better captures many real-life situations and includes human sociology into economics and transactions (also read Stiglitz on-point correction of the Invisible Hand fallacy).

Repeated games tend to eliminate the Prisoner's Dilemma (also called "iterated prisoner's dilemma").

Breaking The Prisoner's Dilemma: Collusion Through Repetition

When negotiations can be repeated in quick succession, the prisoner's dilemma can be overcome.

But it can also be overcome in a way that is only good for the players (and sellers) and not for the whole market.

That's what happens for example in the gas and fuel markets.

Collusion can take place without the parties even having to formally agree to collude.

The players know that by lowering prices they will elicit the exact same reaction from the other players and that they will only hurt each other.

So they all keep roughly equal prices that keep fat margins for all.

Don't Negotiate By Begging: Whoever Can't Afford to Lose, Loses

Whenever you plead with the other players to go through with the transaction at the price you "need", you signal the players that you need your portion of the pie (and you can plot it on a utility function).

But since the utility of each unit of the pie is higher for the person who "really needs it", then it actually seems fair that the transaction is concluded quickly and with a smaller pier for the one who needs it (he gets more value out of his small share anyway).

Writes the author:

> (…) has been confirmed in experiments with students time and again. If both negotiation parties are aware of the assessment of utility of the counterparty, then they divide it "fairly" based on the utility and not the pie itself

Dividing "fairly" based on utility means giving less to the one who needs it the most.
That's how the human mind works, which to me is a prime example that if we want a fair society we need to channel our selfish genes and darkest drives.

What does it all mean to us?
Read here:

- What auction theory says about human nature

Rational Bidding Strategies

A few applications of game theory:

- In a second-price-sealed-bidding auction (ie.: eBay) it's a no-brainer to simply bid your indifference price
- In a first-price-sealed-bidding auction (ie.: you pay what you bid), you must take into account your indifference price and mitigate it with your risk aversion and your estimate of the competition's risk aversion
- It makes sense to increase your bids in the smallest possible increments (but if you factor in psychology, then it can make sense to go for a big increment to showcase your firepower)
- To avoid the winner's curse the auctioneers should share the information of how many bidders dropped out (this is important when the estimate of one bidder is poorer than the cumulative estimates of all other bidders such as in oil rig bids)
- In most competition situations several auction types and several negotiation rounds deliver better results
- In TIOLI (take it or leave it) don't make others look like a fool (The critical limit for acceptance is usually between 5 and 20 percent of the pie, says the author)
- Dealing with dictators and psychopaths you can increase the credibility of your TIOLI by adopting a randomized strategy because the negotiation position of a rational individual is otherwise much worse

My Note:
Don't waste time on eBay by bidding in smaller increments. Just bid the price you'd be happy to pay and then focus on the rest of your life.

Negotiation Power Games

- **Feign a must have to sell it higher**

You can pretend that something is really important to you not because it is, but because you can exchange it for higher concessions from your opponent.

- **Serial TIOLIs**

When you have several different suppliers or interested buyers you can approach them one after the other, serially, with TIOLIs (ie.: “take it or leave it” or “ultimatum games”) to take full advantage of your power position.

It’s best to let everyone know that you have several options because that increases the power and credibility of your TIOLI.

Ultimatum games only work if you have built a reputation of not reneging on your word (Chris Voss in “Never Split The Difference” explains how negotiators seek to let ultimatums slip in a non-aggressive environment as a way of removing power from hostage-takers without angering them).

- **Collusion Games**

The author tells the story of a sales auction for a repossessed home.
At the auction, there were two real estate agents.

But instead of bidding against each other which would have driven the price close to the market valuation, they spoke to each other and then they declared themselves a “bidding partnership”.

There was only one offer at that auction and they got the house at a crazy low valuation. They were then likely going to split a very big pie between each other (and I wondered why the author didn’t bid himself).

- **Collusion Through Signaling Games**

Whenever bids are visible highly experienced negotiators can submit bids with numbers that suggest their intention

to collude (for example the last places of the non-rounded can correspond to the zip code of the bidding company and send the message that each company will only bid for the local license).

Press releases can also be used to hint about the intentions of a bidder to collude (for example the press release for a steel producer to close down a plant was a signal of reducing the offer and avoid a price war).

- **Avoiding collusion games**

The better the bidders can observe each other, the easier it is for them to manipulate the auction. Thus, makes it impossible for them to know where they each stand (also see: manipulative strategies for an overview of manipulations).

If you suspect cartels, avoid simultaneous negotiations like auctions as it's too easy for them to boycott it.
If you suspect a cartel, it's best to deal with them sequentially with a TIOLI.

And if you're dealing with an entrenched cartel, make a great offer to one of them to break the cartel (finesse power move).

Finally, avoid non-binding auctions because everyone will bid collusively far from their indifference price to keep their margins in the "real" negotiation taking place afterward.

- **Dirty negotiation tricks of non-binding auction**

In non-binding auctions, including online non-binding auctions, it's easier for the auctioneer to submit a fake bid to increase the perceived competition and drive prices up.

CONS

- **Games theory still seeks to do without sociology and psychology**

The author poignantly asks:

> The degree to which those involved in negotiations really behave rationally – a prerequisite for the application of game theory – is an especially interesting question.

When I read that "rational behavior" is a prerequisite for the application of game theory I can't help but feel that the whole concept of game theory is undermined.

Countless research has shown beyond any reasonable doubt that humans are *not* rational (just as three examples check: Kahneman, Ariely, and also "Fooled by Randomness").
To really understand negotiation, sales, and, well, people… You cannot do without psychology and pretend that people are perfectly rational.

PROS

- **Practical, deep, and helpful**

Wonderful book, I learned hugely how to better structure my negotiations and auctions.

- **Negotiation power moves**

You will learn a lot about the dirty tactics of negotiations here.

- **Great for Psychology of negotiations**

I would have never guessed that I'd learn psychology from a book on game theory negotiation, but I actually did learn about the (dark) psychology of negotiations.

And it goes straight into my list of best negotiation books.

Review

Albeit at times it wasn't the easiest book to read, I loved "Game Theory Bargaining and Auction Strategies".

Right from the start, you can see that Gregor Berz is not an ivory tower mathematician who embraces the homo economicus and snubs the real world of people and (irrational) psychology.

He recommends "*Getting to Yes*" and he peppers the book with real-life examples from his own experience, which makes "Game Theory Bargaining and Auction Strategies" a gem for negotiators and life-strategists alike.

13 Manipulative Negotiation Tactics & Self-Defense

Lucio Buffalmano · 22 April 2019 · Archived copy · Original

Negotiations might look win-win, but don't be fooled—how the pie gets split is a ruthless game of power.

Against shrewd, power-aware opponents armed with manipulative negotiation tactics, naive 'good guys' don't stand a chance.

At The Power Moves, we've spent years decoding these dark strategies so you don't have to lose.

This article exposes 13 sneaky tactics—from guilt trips to fake authorities—and equips you with bulletproof self-defense moves to outsmart them.

Let's dive in.

Contents

- 1. Feign Disappointment

- 13. Empathize & Fake Win-Win
  - ⍰ Example:
  - ⍰ Self-Defense
- Learn More…

1. Feign Disappointment

Principle:

⚖ **Positive emotions signal the deal favors you more than them**
Negative emotions suggest a poor offer and pressure them to improve it.

Studies show that disappointment works -probably based on the social exchange-.

Keep it muted

It’s a great technique, but don’t overdo it:

> **Power negotiator**: (jumping back) One million!?!?

This is often uncalibrated.
Be more subtle instead:

- **Mild display of disappointment**: pause for a second, look flustered and pensive, as if thinking “*Ouch, I really wanted to buy, but with this price…* “.
- **Build them up to invite concessions**

For example:

> **High EQ Negotiator**: Hmmm.. I can see why you can ask for that much. It’s a great service, I’m a big fan. I really want to find a way to work with you…

P.S.:
Learn social calibration.

⍰ Self-defense

1. Ignore it

2. Say it's a good offer
3. Keep talking about the product's benefits

2. Guilt-Tripping

Guilt tripping takes the crown for the most annoying manipulative technique.

It's sneaky, weak… And very effective at evoking an emotional response.
That response is often negative though, reeking of emotional manipulation, and pushing others away (Singh, Crisafulli, & Quamina, 2020).

However, the *Routledge Handbook of Persuasion* suggests it can be effective, IF it's moderate and stressing the positive of action-taking, rather than the negatives of inaction.

⍰ Example

> **Him**: (after pestering us with requests we already denied) Don't be so mean. <— Guilt trip
> I purchased this course by taking a loan which I'm still repaying <— 'Poor me' frame

⍰ Self-defense

- ⍰ **Think of them as sneaky turkeys**, it empowers you to negotiate tough
- **Stand your ground**
- **Attack back**, for example, go meta and explain why they're being sneaky manipulators

3. Set Up A (Fake) Higher Authority

For example, a board or boss sets the rules and must review concessions.

The higher authority allows you to:

1. **Blame shift and be tough without losing goodwill**
   Ie.: "*I'd love to, but they really wouldn't allow this*"
2. **Credit appropriation to look kinder** (good cop/bad cop)
   Ie.: "*I had to massage them hard, but I managed to…*"
3. **Social exchange manipulation**
   - Inflate concessions' value with deferment or games
   - Various power moves
     Ie.: "*Good news. I managed to secure their approval. But they request that you…* "
     "*We've never really done this, but…* "

Manipulative negotiators may use it to wrestle last-minute concessions.
For example, they 'only need the final approval', which gets rejected… Unless you do something for them.

⍰ Self-Defense:

1. **Set your own higher authority**
2. **Play their ego while undermining the authority**: "*Oh please, you're a top G, those guys would do anything you say"*
3. **Call it out**: *"Oh come on, you're not playing good cop/bad cop with me are you"*

And stand your ground against last minute concessions.
You can also blame-shift to 'preparations already started'. And to power-protect a more powerful party, you may even say that 'you're really sorry and would you love to. But you're happy to buy lunch'.

5. Hold Silence

Or speak with one-liners.

It's standard social power dynamics to disempower you with:

- **Higher dominance**, as you crack under pressure
- **Under-investment**, as you expend more effort to force rapport and fill silences

Social Roi Matrix, part of Social Investment Model (Buffalmano, 2026)

⍰ Self-defense

- Hold the silence as well
- Minimize your reply and stand your ground.

6. Nibbling: Last Drops, Before It Pops ⍰

Right before signing or even after signing, a power player may say:

> **Power Player**: Oh, by the way, you will repaint the walls right?

If you deny, they say it was ‘obvious’ or ‘standard procedure’.

Last-minute problems

Even more manipulative, before signing—when you have no options—they may ‘discover’ an issue to demand concessions.

This technique leverages the psychological bias of sunk costs.
After you invested time and effort, you’re more likely to concede.

⍰ Self-defense

1. **Reject it**
   - Stick to the contract: *“We do what we negotiated”*
   - ⍰ *“We negotiated openly for a good deal, let’s keep it that way please”*
2. **Use judge frames**
   - (Shake head) *“You’re disappointing me now”*

- (Look at him sternly) *"I expect better from you"*

3. **Attack back**
   - "*Sure, after you do X*"
4. **Call it out**: *"Quit the manipulative games"*

⍰Self-defense for last-minute problems

1. ⍰ Remember that walking is also their loss
2. **Hold your ground**, say the issue is priced in already
3. **Appease** and say that albeit you can't do much, you'll pay the first round

7. Bursts of Anger ⚠⍰

Studies show that bursts of anger can provide more concessions to the angry yeller.

This works best for more powerful negotiators.
Studies show that the less powerful party concedes *regardless of the appropriateness of anger*.

Don't fall for that!

⍰ Self-defense

- **Negotiate electronically**, studies show that electronic communication produces better outcomes when there is a power disparity.
- **Ignore**
- '(deadpan expression) *Are you done playing your little game?"*
- "(pause) *Make sure this is a first and last time*"

P.S.
This is also a manipulative control tactic of abusive partners.
So if you feel bold, you may even say 'I hope you don't do that at home'.

8. Reopening Negotiations ⚠

Agree on a price, and then re-start negotiating.

Some power players may frame the former deal as your demand -instead of the agreement-.

Negotiator's Swapping ⍰

Sometimes this power move includes 'negotiator's swapping.

Such as, you agree with one party, and then another party resumes negotiations from the previously agreed price.

⍰ Self-defense

1. **Call it out**, explain what they are doing and say it's not cool
2. **Resume from a higher price**
3. **Power move**: *"I'm glad we're renegotiating, because the previous price was too low"*

9. Say "*Don't Be So Defensive / Aggressive*" ⍰

This manipulative gambit leverages reverse psychology.

And it's a power move to drop your guard.

For example:

> **Negotiator**: Max! You're being so defensive! Relax, my friend. We're just discussing your new house, and it looks like a great deal for you.
> You'll bankrupt us like this <— Possible power move to make you laugh, stroke your ego, and soften you up

⍰ Self-defense

- **Frame it like they need to be more straight**
  Ie.: *"Thanks for saying that, let's negotiate in honesty for win-win, and there's no need for defensiveness on either side"* <— Blames them for your defensiveness/edginess

- **Humorous frame control**
  Ie.: "*If you can help me out to make this good, you'll always have a couch in the flat, any time"* <— Maintains a high-power win-win

Or you can deal with it in the dominant way that Putin used against Obama:

> **Obama**: (smiles and cracks a joke)
> **Putin**: (serious, pointing towards Obama without looking at him) He's trying to appease me <— ⍰⍰ I'm the most powerful man who must be won over

10. Let Them Come to You

Studies show that perceived power is crucial in negotiations.

Negotiators with more power *get* more concessions and weaker negotiators *give* more concessions.

And the power dynamics of hosts VS guests are clear:

⚖ **The greater the effort one makes to meet the other, the more neediness it signals**

Meeting on their turf also psychologically empowers the host and weakens the guest.

Host Power Moves ⚠

- Making you wait
- Sit you in the lowest chair
- Out-number you

Always watch out for parties whose interests align against yours

⍰ Self-Defense

- **Counter-propose your location or middle way**
  - Win-win counter: *"I'd love to see your office but I'm tied up. How about… "*
- **Lower perceived effort**
  Ie.: "*Cool, I'm nearby on X day, so… "*

11. Say: "*Let's Avoid Games, What's Your Bottom Line?*"

The manipulator may add he already has a good option, but wanted to hear one more before going ahead.

⍰ Self-Defense

1. Ignore it, negotiate as usual
2. Say your price is already attractive
3. Say you don't compete on price because you are… (unique feature of yours)

12. Rush to The End – Assume The Sale

Examples:

- *"When would you like to move in"*
- *"Can you start tomorrow"*

⍰ Self-Defense

- **Negotiate back maintaining win-win**
  - *"Yeah, that would be nice if we can agree, let's focus on the details to make it happen. We were talking about…"* <— As an interested buyer or employee
  - *"If we can find a good deal, we can talk about it"* <— As the buyer

- **Call it out**
  Ie.: *"Nice move, I was also in sales"*

⍰ Example

Here is an interesting example of the last job interview I took:

> **Him**: Would love to start with you (…) <— Disempowering. What if I don't want?
>
> We meet at 12pm (unfortunately can't earlier), <— Busy power move
>
> finalize compensation <— !We hadn't even started talking money !
>
> and get started straight away <— Contract… ?

I responded with my own power move:

> **Me**: Sorry the delay <— ⍰⍰ I'm not rushed. You need me more than I need you
>
> (…) To take time away from my other projects <— ⍰⍰ I'm busy, you need to win me over
>
> (…) a financial compensation that I'm not sure would make it worth it for you <— ⍰⍰ Open that wallet ⍰⍰

Look how that changed the tune:

Ale[redacted]yer <ale[redacted]app.com> Oct 24, 2018, 4:17 AM
to The, Tim
The walk-away gambit showcased my huge leverage, and my negotiation power 10X'ed
Hey Lucio,
that's sad to hear, we would have loved to work with you! Unfortunately I didn't reach you over the phone to hear at what point a financial compensation would become interesting for you. If you tell us at what point you could see us working together, we would love to hear about that. I think there's enough money to be made to find something we can agree upon ;) = "ask and we'll pay"

> **Him**: I think there's enough money to be made to find something we can agree upon ;) <— Nice frame for me ✌⍰

13. Empathize & Fake Win-Win

Research and real-world evidence suggest that an adversarial approach to negotiation can be counterproductive.

Enter Chris Voss, who popularized the rapport-developing approach with the high-power marketing of 'hostage negotiator'.

Unfortunately, research suggests that around half of cooperative negotiators are wolves in sheep's clothing.

And you're likely to fall exactly when you're at your worst and neediest.

⍰ Example:

Imagine you are negotiating your severance package after you have been fired.

Your boss now is gone, and it's just you and the HR representative (now playing a variation of good cop game).

They say:

> **HR**: I'm sorry, you are such an esteemed person around here.
> How do you feel

This is effective.
Research suggests that employees are happier at work based on how HR makes them feel, rather than negotiated salary (objective value of subjective value).

Maybe they will add:

> **HR**: We are aware that your manager has some issues.

Then you complain about your boss, and they will be all ears.

They say they couldn't touch your manager, but hopefully, things will change soon, they hint.
Now feel validated, and happy that your bad boss will pay.

And then they close the circle:

> **HR**: I have some a good network in town with other recruiters, let's do a lunch soon

Boom: they set up reciprocity and with the hint of future help you'll negotiate 'in friendliness' to avoid jeopardizing their help (which might never materialize, BTW).

⍰ Self-Defense

Understand that some negotiations are win-lose.

And the empathizer is NOT on your side. He's only trying to screw you over with a smile.

Here's how you handle it:

- **Pretend you're falling for it** to gain time or concessions
- **Empower yourself** with other options or deals
- **Crush them**

13 Self-Help BS & Myths: Updated List (Plus, Fixes)

Lucio Buffalmano · 23 April 2019 · Archived copy · Original

If you have a critical approach to life and knowledge, you probably cannot stand self-help myths, pop-psychology, and outright fabrications.

Sometimes they are hard to spot, though, because you cannot read hundreds of psychological studies and scientific studies "just to make sure".
So you end up "kind of" trusting the self-help guru.

But that's far from ideal because you will not fully trust and accept what's actually true and life-changing, and you might end up following advice that is actually unproductive.

Well, this article is here to help.
Bookmark it because I will be constantly updating it, and it can be your resource on the self-help lies you can avoid.

Bookmark it because I will be constantly updating it.

Self-Help Myth #1 – 10,000 rules

2 more minutes… And I'm a pro.
If you want to become a world-class athlete, all you need to do is put in 10.000 hours.

Culprits

- Outliers (Malcolm Gladwell)
- Countless self-help gurus after Gladwell

The Self-Help Lie

Gladwell—and countless self-help gurus since then—argued that becoming an expert at anything is mostly about how long you practice.

Gladwell picks several examples of great achievers who practiced for around 10.000 hours, ranging from Bill Gates to The Beatles (he was wrong).

So if you want to do the same, just put in the time, and you'll be world-class.

Critical Thinking Analysis

Just think about these variables:

- What field are we talking about? They can't be all the same can they
- What about your starting level?
- How do you practice?
- Natural abilities?
- Competitiveness of the field?
- …

After all, hey, I probably logged in 10.000 exercisings or cooking since I've born.
Yet I ain't no world-class at any.

But who wants to be the Grinch on the feel-good feast and get into those dull and tedious questions?

Just do 10.000 hours and you're fine.
Or are you…

Why It's Wrong

The questions above alone should make it clear why the 10.000-hour rule is a major self-help lie.

Anders Ericsson, the author of the original research explains in "Peak", his seminal book on peak performance:

1. "10.000" is an average in a specific field and, per se, it means nothing
2. It's more about *how* you train than how long
3. The research does not prove that logging a certain amount of hours will make anyone an expert

Basically: there is no 10.000 "rule" to speak of.

Why The Myth Spread

Gladwell takes advantage of two human psychological biases to spread this self-help lie:

1. We all want to believe we're no less talented than top performers
2. We all want to believe we can do anything we set our minds to

And of course, self-help gurus can make more money by selling the feel-good idea that "yes, just put in the time, and you're world-class".

What to Do Instead

It's more about *how* you practice than *how long* you practice.

Self-Help Myth #2 – Incantations

Repeat a mantra and you will eventually come to believe it and embody it.
Say it with enough conviction, and you become the mantra.

Culprits

- Tony Robbins
- Most self-help gurus

The Self-Help Lie

The idea, like almost all self-help myths, is captivating.
All you gotta do to change is to repeat the new mantra to yourself.

Brian Tracy invites his readers to repeat throughout the day "I'm the best, I'm the best, I'm the best".

Tony Robbins tells in its programs to repeat "all I have is within myself, all I have is within myself".

Try it, and you'll see how douchey you will feel :).
Jokes aside, I actually did try it, and it did provide me with a burst of confidence and good feelings.

But… Does it really work behind that burst?
Let's see the science behind it:

The Truth

Incantations are mostly marketed as a tool for people with low self-esteem and confidence.
The problem is, it's exactly to people with low self-esteem that incantations are the most useless.

Studies show that people with low self-esteem are not ready to accept positive feedback from themselves (Joseph et al., 2003).

It makes sense, no?

People with low self-esteem have a low opinion of themselves, so they are not ready and willing to accept positive feedback from someone whom they don't really respect (themselves).

And what about people with an already healthy level of confidence and self-esteem?
Even for them, incantations don't seem to be very useful.
Says psychologist Martin Seligman, one of the founders of positive psychology:

> We have found that merely repeating positive statements to yourself does not raise mood or achievement very much, if at all.

What To Do

Better options:

- Work to improve yourself to the point where you receive (real) positive feedback from others
- Challenge your negative thoughts, "talk back" to them with well-reasoned arguments
- Ask yourself questions and then force yourself to come up with positive answers (Senay Et Al., 2010)

For the sake of full disclosure, Tony Robbins also later caught up and switched to recommending questions instead of incantations.

Self-Help Myth #3 – Extreme Brain Plasticity

The brain can rewire and change itself, and that means that you can learn anything.

Perpetrators

- Tom Bylieu
- Books such as "You Can Heal Yourself"
- All types of quacks, including Joe Dispenza.

The Self-Help Lie

There is no talent, only effort.

Since the brain is plastic, you can learn anything and get good at anything.

Studies, books, and researchers are often quoted to give scientific backing to this self-help myth (Ramachandran with *Phantoms in the Brain* and Norman Doige with *The Brain That Changes Itself* are two common ones).

Critical Thinking Analysis

If the brain were infinitely plastic, then it would be able to always rewire and repair itself.

And we would have no neurosurgeons or psychiatrists.

Unluckily, we do.

And if talent mattered so little, then we would not see certain ethnicities or certain body types dominating certain fields.
But we do.

The Truth

The brain is plastic… Quite a bit.
But that doesn't mean it can rewire itself limitlessly.

For example, Brain plasticity is region-specific, meaning that some regions are more plastic and some are less plastic (Bindschaedler et al., 2011).
Contrary to self-help authors who (mis)quote Paul Bach-t-Rita, regions of the brain *do* specialize.

For more on the nature VS nurture debate, also check out "*The Blank Slate*" by Steven Pinker.

What To Do

Some of the exaggerations about brain plasticity have been borne out of the idealization of some researchers.

But we must be careful not to fall into the trap of the "lone, rebel genius who tells us what we want to hear".

Of course, you can improve… **You can improve on pretty much anything**.
That is so true and so empowering that we don't need lies around it.
Lies will only disempower you.
The truth will empower you.

And the truth says that albeit you can improve at anything, you are also better off choosing fields which you have a natural affinity for.

Self-Help Myth #4 – Only 7% of Communication is Verbal

Most meaning of human communication is nonverbal, so you can forget about the actual words.

Perpetrators

- Tony Robbins
- Almost all communication books

Critical Thinking Analysis

Just think about what you would say if you were to deliver a toast at your best friend's wedding and say:

> Sorry to say this at your wedding and in front of everyone mate.
> But I must take this off my chest.
> I have repeatedly had sex with your wife. Together with all our friends BTW.
> Your wife is a huge slut.

Would the message be any more positive or funny if he were to say it with a smile or with relaxed body language?

No, of course.
That message could only range from shocking to the most awkward "joke" ever.
And that's because, in many situations, words account for far more than 7%.

The Truth

Mehrabian's research was highly specific and only dealt with attitudes of likes and dislikes.

This is what, in a nutshell, the Mehrabian study tells us:

> When it comes to *feelings and atittudes*, we get most of our cues of the speaker's intent from non-verbal sources.
> When the two are in conflict, we give precedene to non-verbals.

That's the truth of the study, and it cannot be generalized outside of feelings and attitudes.

Furthermore, quantifying it in terms of percentage is meaningless, of course.
Extrapolating to all situations is equally meaningless.

Self-Help Myth #5 – EI Is 80% Of Success

IQ doesn't matter, it's all about how you understand and get along with people.

Perpetrators

- Emotional Intelligence (Daniel Goleman)
- Emotional Intelligence 2.0 (Travis Bradberry)
- Many communication and social skills "experts"

The Self-Help Lie

This self-help lie was popularized by Daniel Goleman's bestseller "Emotional Intelligence".

For the sake of clarity, Goleman stated that he has been misquoted and misrepresented, but of course, that didn't stop people from bashing IQ, which is hardly modifiable, in favor of emotional intelligence, which is far more malleable (and marketable).

Critical Thinking Check

Just think about:

- How do you measure and define "success" and "EI"?
- Based on what can you come up with a precise 80/20 split?
- In which field does the 80/20 apply?

We could go on at length, but albeit I am a HUGE supporter of increasing your EI, the claim that EI beats IQ 8 to 2 makes no sense.

The Truth

Countless studies show a positive correlation between EI and effective leadership (George, 2000).

But Travis Bradberry, author of Emotional Intelligence 2.0, also found out that EI rises until mid-level management but then *decreases* at the CEO level.

Hence, if we measure "success" as the "ability to climb hierarchical structures in business organizations", then the claim that EI is 80% of success is blatantly not true.

If you're interested in the topic, read more here:

- Leadership and emotional intelligence

- Are CEOs emotionally stupid?

Self-Help Myth #5 – Positive Thinking

If you focus on the positive, you will be happier and more successful. If you focus on the negative, you will be unhappy.

Perpetrators

- Tony Robbins
- Think and Grow Rich
- The Power of Positive Thinking
- 80% of self-help gurus

The Self-Help Lie

It seems so straightforward, right?

There is a connection between mind and body. Most people agree here, and research backs it (even the Latins knew it with "mens sana in corpore sano").

So the more you focus on the positives, the better off you are, right?

Well, not so fast…

The Truth

This one is not wrong… It's just correct up to a certain point.

Frederickson and Losada found out that too many positives become harmful above a certain threshold (11:1).

Furthermore, research shows that thinking about the worst-case scenario can help people manage their anxiety and lower their pressure. This phenomenon has a name in psychology, and it's "defensive pessimism" (Norem, 2001). Dale Carnegie recommended it long before there was any research on it ("*How to Stop Worrying and Start Living*").

Edit:
Losada has been heavily discredited in his math calculations to reach the threshold (especially in his 3:1 positive to negatives needed to "flourish").

Read more in pop-psychology myths, but it's fair to think that, beyond the exact numbers, the overall theory is good.

Self-Help Myth #6 – Release Anger

To feel better and live fully, you must let out all negative emotions.

Perpetrators

- Facing The Fire
- Red Pill authors
- Some poor “assertiveness” coaches

The Self-Help Lie

Bottling up anger and negative emotions is destructive. Hence, it’s much better to let them all go.

Yell, scream, hit a punching back.. And you will release all that poison and feel much better.

Or is it…

The Truth

There is plenty of evidence that venting your anger actually only makes you more angry and aggressive (Stack, 1999) and increases the negative consequences of anger (Lohr et al., 2007).

Self-Help Myth #7 – Mental Barriers (AKA: The Bannister Effect)

Barriers are all in your mind, and Bannister proved it.

Perpetrators

- Tony Robbins
- The Talent Code (Robert Doyle)
- The Effective Executive (Peter Drucker)
- And many more…

The Self-Help Lie

Before Roger Bannister people didn’t believe it was possible to run a mile under 4 minutes.

So people simply never did.

But the moment that Bannister did run the mile in less than 4 minutes, he showed it was possible.
Bannister broke a psychological barrier.

And what happened?

After him, plenty of others did break the 4 minutes barrier.

Why?

Because the limitation was in the mind.

Critical Thinking Approach

Just think about it: how could this even make any sense?

Do people run with a clock in their hands that they check before crossing the finish line?
And even if they did, would they slow down just to make sure they don't finish within 4 minutes?

And even if they did that, wouldn't that be a *motivation* to go under 4 minutes instead of a motivation to go slower?

This never made sense to me.
And indeed:

The Truth

Bannister broke a record that was standing for 9 years.

Not 90, not 900, and not 9.000.
Just 9 years.

Furthermore, the record Bannister broke was set in 1954, a period when running as a sport was hobbled by 5 years of raging war (running from bullets doesn't count as training).

As a matter of fact, runners in unofficial competitions from countries that didn't take part in the war had already gone sub-4 minutes.

But even if we were not to consider that and only remove 5 years from the 9-year gap in the record progressions, then we get 4 years, which is pretty much in line with the average gap between records (Wikipedia list of records).

The "Bannister effect" sounds like a good story, but doesn't hold to scrutiny.
Even Bannister himself said it's not true that experts believed that a sub-4 minute was impossible.

Fun fact: the last record is 3:43 and has been standing for 20 years.
Are we in need of breaking a "3:43" psychological barrier now? :)

Self-Help Myth #8 – Force Yourself Into Positive States

You become what you think of. Force yourself to think positively and you're good.

Perpetrators

- Tom Bylieu
- Countless self-help gurus

The Lie

If you force yourself to "control your states" and "think positive, then you never have to feel down, sad, or depressed.

And your states will naturally translate into more success.

It's an attractive thought because most people want to be happy and avoid pain.
But…

The Truth

Research shows that switching to a good mood when we're normal is easy.
But it's when we have little mental capacity left that becomes difficult (Wegner, 1994).

So what happens when we're anxious or stressed and we "force" ourselves to feel good is that we fail.
And when we're already down and we fail to switch to happy, we feel even worse and powerless.

The Solution

Accept the idea that it's OK not to be always happy.
Really.

Wegner also says that if you want to switch moods, getting other people to help and/or change the environment can be more effective than trying to force a state change by yourself.

Self-Help Myth #9 – Smile And You're Happy

To be happy, you just need to smile.

Perpetrators

- Tony Robbins

The Lie

This was actually backed by a famous study originally called in psychology the "facial feedback hypothesis" (Strack Et Al., 1988).
It was so popular that it was often even taught in beginners' psychology courses.

I still remember Tony Robbins yelling on the tapes "smile and look up in the sky and try to feel sad… It's impossible".
It was also impossible to be a normal and well-adjusted human being though :).

The Truth

A much larger successive study failed to replicate its results (Wagenmakers Et Al., 2016).

Self-Help Myth #10 – Visualize Winning

The more you visualize yourself winning, the closer you get to actually winning.

Perpetrators

- Think and Grow Rich
- Tony Robbins
- Pretty much any self-help gurus…

The Lie

Self-help gurus sell this one as the "secret" of all the winning athletes. They visualize winning and, guess what…? They win.

Easy, no?

Critical Thinking Analysis

Since this is not a secret at all, what's stopping the non-successful athletes from visualizing?

As a matter of fact, I bet many do.

So visualizing cannot be the main differentiator between winners and non-winners.

The Truth

One study shows that thinking about goals increases the number of times people *think* of those goals and *decreases* the amount of actual work (Fishback & Choi, 2012).

Another research shows that people who used visualization to envision themselves studying instead of getting an A not only performed better but also experienced less stress and anxiety (Pham et al., 1999),

What To Do

If too much visualizing is taking time away from work, remind yourself that work trumps visualization.

Don't visualize yourself too much with the gold medal but also focus on the process.

Self-Help Myth #11 – Law of Attraction

If you think often enough and with enough conviction about what you want you can attract it in your life.

Perpetrators

- 7 Spiritual Laws of Success (Deepak Chopra)
- The Science of Getting Rich
- The Secret
- Countless gurus and meaningless YB videos…

Critical Thinking

The law of attraction is not based on any empirical findings, nor on replicable real-life patterns.

Self-Help Myth #12 – Goal Setting in Yale

A survey of Yale's class of 1953 found out that people who wrote down their goals out-earned all the rest by several orders of magnitude.

Perpetrators

- Zig Ziglar
- Tony Robbins
- Countless gurus

Critical Thinking

This could have been just another case of correlation and said nothing about causation.
But, it turns out, it's even worse.

The Truth

Some people looked for the source of this study.
And there was none.

Finally, Yale University itself came out saying a survey on goal setting was never conducted.

Self-Help Myth #13 – High Self-Esteem

Psychology today has largely moved past what's been dubbed the "self-esteem movement".
Yet, it's still very popular in the self-help literature, which tends to embrace this stance:

> The more confident and the higher your self esteem, the better off you are.

That's not wholly wrong. High self-esteem *is* good.
But *only* if accompanied by a growth mindset and an antifragile ego.

Otherwise, high self-esteem only means more threats to that self-esteem.
You become more defensive and, potentially, also more aggressive.

Paradoxically, the higher your self-esteem, the more dangers you see in your external environment.

Writes social psychologist Roy Baumeister in his seminal work "*Evil*":

> Violence ensues when people feel that their favorable views of themselves are threatened or disputed by others.
> As a result, people whose self-esteem is high but lacks a firm basis in genuine accomplishment are especially prone to be violence because they are most likely to have their narcissistic bubble burst.

In psychology this is sometimes referred to as "status consistency", and it's an important cause of domestic violence (Hornung et al., 1981)

So yes, do seek high self-esteem, but only if you can back it up with an antifragile ego.

Bonus: The "Self-Help Nice-Sounding Stories"

Some self-help gurus love telling stories that sound nice and wow people, but that actually have little to do with reality.

Some of these self-help lies are:

- **Bucket-crab mentality**

The story goes that if you put crabs in a bucket they will not manage to escape because they all prevent each other's attempts to escape.

It seeks to describe the self-defeating mindset of jealous people who focus on keeping their friends low instead of focusing on going higher.

That makes sense for people.
But even though I don't any crustacean psychologists I believe this is another case of ethnocentrism at play: the belief that animals or things feel the same way that we do.

- **The boiling frog**

If you put a frog into boiling water it will jump out. But if you slowly heat the water, the frog will boil to death.

The self-help message then is that we should all react more quickly and we should all refuse to settle for less-than-ideal situations (or temperatures :).

Of course, it's not true.

Dr. Victor Hutchison, Professor Emeritus of Biology says "The legend is entirely incorrect!"
If you're interested in the experiments, you can read a bit more here.

As a matter of fact, the opposite might be true.
Douglas Melton, professor of biology at Harvard, says:

> If you put a frog in boiling water, it will not jump out. It will die.
> (and if you increase temperature slowly) it will jump before it gets hot.

- **The ostrich effect**

The ostrich effect is somewhat similar to the boiling frog.

The ostrich puts its head in the sand to "escape" from problems.

Of course, this makes little sense to anyone who's familiar with Darwin and evolution.

Sure, evolution is not perfect, but how could such an evidently self-defeating behavior take hold across a whole species?

Indeed, it's simply not true.
Ostriches do *not* escape reality by burying their hands in the sand.

Anti-Snake Oil Checklist

It can be difficult sometimes to recognize the self-help wheat from the self-help chaff, so here is a quick checklist:

- **Is the advice a sales pitch?**

If the advice is packaged in a sales pitch chances are that its goal is to grab attention and sell… Not necessarily to share what's useful and what's true.

- **Does it refer to researches, consensus?**

Notice the plural.
A single research is almost meaningless (also read "How to Lie With Statistics).

- **Does it make sense?**

You will notice that some self-help myth doesn't even make sense (ie.: verbal communication is only 7% of the meaning).

- **Does it provide actual measures?**

"Better", "more", and "quicker" mean nothing.
How better, how much more, how quicker?

Plenty of research shows a correlation between weather and stock performance.
Yet, would you invest based on the weather?

No, because the effect is minimal.

- **Does it use correlation?**

Remember: correlation is not causation.
The self-help gurus who don't get this are either dumb or in bad faith.
Read more in: Fooled by Randomness.

- **Does it sound too easy, simple, or generic?**

Life rarely is simple and easy and generalizations almost always fall into the category of "poor advice".

SUMMARY

This article lists some of the most pervasive and false self-help myths.

If you know of any that I missed, please do let me know in the forum or in the comments.

Please also note that this resource is not an attack against self-help and self-development.
Self-help can change your life if you let it.

Peak: The Science of Compentence (Book Review)

Lucio Buffalmano · 25 April 2019 · Archived copy · Original

In *Peak* (2016), Anders Ericsson explains how to train to achieve mastery and expertise, summarizing his research in a new field in psychology that has sometimes been dubbed “the science of expertise”.

Contents

- Key Takeaways
- Notes
- Naive Practice: The Wrong Way of Training
- Purposeful Practice: A Step Forward
- Deliberate Practice: The Gold Standard of Training
- Skills Are Based on Mental Representations
- The Mindset of Enhancing Performance
- The 10.000 Hour Rule Is Cr@p
- Training Beats Knowledge
- The Key to Mastery: Maintaining Motivation
- Blowing Past Plateaus
- Genetics DO Matter
- Purposeful Practice is Not A Must
- Peak Quotes
- Criticism
- Review

Key Takeaways

- Innate talent might be part of the performance equation, but most of the variance comes from training
- How willing people are to train might be, at least in part, governed by our genes
- The best training is focused, gets instant feedback, and works around plateaus

Notes

About the Author:
K. Anders Ericsson is a Swedish psychologist and researcher, and he is a professor of psychology at Florida State University. He is internationally recognized as one of the main experts in the psychological nature of expertise and human performance

Naive Practice: The Wrong Way of Training

Naive practice looks like this:

- “Just do it”
- Not knowing whether or not you’re doing it correctly
- Not having a specific goal

Many people believe that the more you do something, the more you learn.

And they train with simple repetition.

The truth is that simply repeating something won't make you better, and if you repeat the same actions and behaviors in "automation mode" (i.e., driving) without working on your weaknesses and without operating at the edge of your abilities, then chances are that you actually get worse over time.

So the person who's been driving for 20 years or baking the same pie for 5 years is not getting better at driving or baking pies unless they switch gears and challenge themselves.

Purposeful Practice: A Step Forward

Purposeful practice is a step forward and goes in the right direction.
Purposeful practice:

- **Has specific, well-defined goals** (or you have no way to get feedback and measure success)

For example: "Play the piece through, at the proper speed, without mistakes, 3 times in a row".

- **Get feedback to work on your weaknesses**
- **Leverages coaches and trainers for feedback**
- **Breaks tasks into smaller pieces**

Says the author: "Purposeful practice is all about putting a bunch of baby steps together to reach a long-term goal". Also, make sure to get enough sleep.

- **Pushes you outside of your comfort zone**

Getting out of your comfort zone means trying to do something that you couldn't do before. If it's easy, you keep going. If you can't, finding ways around it is one of the hallmarks of purposeful practice.

- **Attacks plateau by trying different approaches**
- **Gives full attention to the task at hand**
- **Monitors the progress**

To keep improving with purposeful practice, you need motivation. Purposeful practice is much harder than naive training or playing for fun, of course, and it can be the case that you will *not* enjoy it.

Indeed, as soon as we feel like "we're good enough" and slow down, we move out of purposeful practice, and we will likely not improve any further, no matter how often we keep playing or "training".

Deliberate Practice: The Gold Standard of Training

Deliberate practice is what makes champions and what we think are geniuses.

The elements of deliberate practice are:

1. **Find a good teacher**
    1. A good teacher is not necessarily someone who's good at the craft
    2. Find a teacher who's good for your level of skills
    3. He must help you develop your own mental representations so you can feedback on yourself
    4. He must give you exercises you can do at home
2. **Don't be afraid of changing teacher when you're too good** for him or when he's not helping anymore
3. **Operate at your outermost level of skills**
4. **Define specific goals**

5. **Be fully present and attentive during your training sessions**
6. **Train at home by yourself**: the best training is lone training
7. **Work on your weaknesses and mistakes with constant feedback**
8. **Choose a developed field**, otherwise, you must pave the way to peak performance

Fields With No Codified Training

If you are engaged in pursuits with no clear experts and no well-developed training methods, then do the following:

1. Find out the best performers
2. Reverse-engineers What makes them top performers
3. Most of all, find out what type of training they engage in
4. Copy what they do and train as they do. Then seek to improve upon it

If you can't find a teacher, you can always focus on the "3 Fs":

- Focus
- Feedback
- Fix it

Try to break your work down into smaller components that you can analyze and repeat. Then determine your weaknesses and train to eliminate them.

My Note:
Andersson seems to focus mostly on weaknesses.
However, many authors today suggest to focus more on your strengths than your weaknesses.
I think that whether you should focus more on weaknesses or on strengths depends heavily on your situation and that's something that should be determined on a case-by-case basis.

There Are Fields & Professions Without Deliberate Practice

There are many fields in which deliberate practice is not as easy.

Business consultants, for example, or artistic pursuits.
But also "folk dancing" or "playing music in a pop music group". There are many fields that lack codified and standard training approaches.

When all the steps of deliberate practice are not possible, you should strive to implement as many as you can (I also invite you to read "*Deep Work*" and "*Mastery*" which are probably more suited for intellectual and artistic types of work).

Skills Are Based on Mental Representations

Anders Ericsson spends a lot of time on the concept of "mental representations".

It's difficult to define them because they differ dramatically from field to field, but in essence, the author says:

> Pre-existing patterns of information, facts, images, rules, relationships and so on. They are held in long-term memory and can be used to answer quickly and effectively in certain types of situations.
> They make it possible to process large amount of information quickly (despite the limitations of short-term memory)

Mental representations allow for:

- Pattern recognition
- Effective information handling
- Quicker reaction times and problem-solving

Deliberate practice builds better and better mental representations by changing the neuro-circuitry in the brain. What sets experts apart is the quality and quantity of mental representations.

Mental representations are very domain-specific, and that's why deliberate is not for everyone. Some of the skills you build might not be very transferable to other domains of life.

Mental Representations for Reading

Mental representations apply to any domain, including reading and absorbing information.

That's why some people are better at understanding and retaining information.

The Mindset of Enhancing Performance

Ericsson talks about enhancing performance in the workplace as well, and it starts with dropping the following three mindsets:

1. Drop the belief that one's ability is limited by innate talents
2. If you do something for long enough, you'll get better
3. All it takes to improve is to "try harder."

Since the workplace is unstructured and not as well codified when it comes to training, you should first figure out what the "*habits of most successful people*" are and then find a way to train those skills in all the rest.

The 10.000 Hour Rule Is Cr@p

Eric Andersson talks about the "10.000 hour rule", popularized by Malcolm Gladwell in "*Outliers*" and since then has become a famous slogan in self-help (also read: debunking self-help myths).

Gladwell, Andersson explains, did not understand his study well (or chose to ignore reality to sell something).
In details:

1. There is nothing "magical" about 10k hours and there is no fixed time: some will need less to achieve the top of the field, some more
2. How much you need to train also depends on the competitiveness of the field
3. Time matters, but how you train is equally, if not more, important

Training Beats Knowledge

In "Peak" Anders Ericsson dedicates a good portion to discussing schools and training systems.

He dedicates some time to a very important aspect of people's lives: doctor's training. Doctors train as most other students train: in the classroom, absorbing knowledge.

However, Andersson shows that classroom knowledge translates very poorly into on-the-job skills.

Surgeons, for example, get better with surgeries, not with classroom time.
Unluckily, that also means that the first surgeries they perform will be far from optimal.

Ericsson says that we stick with a knowledge-based system though because it's easier.

The Key to Mastery: Maintaining Motivation

Since for Anders Ericsson, the main differentiator between peak performers and “good” performers is training, it ensures that different abilities to stick to the training regimes will make the biggest difference.

He does not like to talk about “willpower” though because people can easily fall into a circular thinking trap that if they don’t have willpower then they might as well not even try (read here the science of willpower).

He prefers talking about “motivation”.
And to stick to the training routine, you must have strong motivation.

To keep a high motivation:

- **Increase your reasons to continue**
  - Do what you enjoy
  - Use social motivation: create groups of people with the same goal
- **Decrease your reasons to quit**
  - If practicing is too hard, limit the time and increase the focus
  - Get enough sleep
  - Take breaks in between sessions
- **Measure your progress for encouragement**
- **Get (positive) feedback**

Feedback can be internal, such as the pleasure of seeing yourself improve, or external, such as getting recognition for your work.

- **Make your training and field part of your identity**
- **Take pride in your identity** (also read: antifragile ego)

Blowing Past Plateaus

The way past plateaus often is by looking for different approaches.

Since plateaus can be discouraging, it’s crucial that you don’t think you’ve peaked but that you understand that it’s only a question of technique, training, and time before you will break through.

If you wanna quit tell yourself you’ll do it after the plateau, and then you probably won’t quit at all.
If you are still junior in your field, ask for feedback from coaches who’ve done it and if you don’t have those mentors, look at how others do it.

Genetics DO Matter

I have read around the web some bad reviews about “Peak” which purports to say that talent does not matter.
These reviewers did not understand Anders Ericsson’s message.

I quote the author here:

> More generally, there is a complex interplay between genetic factors and practice activity that we are just beginning to understand.
> Some genetics factors may influence a person’s ability to engage in sustained deliberate practice. For example, by limiting the person’s capability to focus for long periods of time every time.

However, the author also makes the point that everyone can improve. And, in most cases, improve *a lot*.

Purposeful Practice is Not A Must

Remember that purposeful practice is not a must.
If “good enough” is good enough for you or if your “good enough” is enough to live well, then there is no point in engaging in deliberate practice.

And certainly, you can’t engage in deliberate practice in all fields of your life.

As the author says:

> And for the most part, that’s OK. “Good enough” is generally good enoguh. But it’s important to remember that the option exists.
> If you wish to become significantly better at something, *you can*.

Peak Quotes

> In short, the human body is incredibily adaptive.
> (…)
> There might be limits, but there is no indications we have reached them yet.

On whom the deliberate practice is for:

> Deliberate practice is for everyone who dreams.

And on people who stop at “average” and “good enough”:

> The reason that most people don’t possess these extraordinary physical capabilities isn’t because they don’t have the capacity for them, but because they’re satisfied to live in the comfortable rut of homeostasis and never do the work that is required to get out of it. They live in the world of “good enough.” The same thing is true for

> all the mental activities we engage in

Criticism

Extremist Position On Nature VS Nurture

The author seems to be pushing an agenda at times.
I quote him when he talks about a mentee of his he really liked:

> Dan gave an answer I really liked.
> He said he didn't appreciate the attitude that only certain people can succeed in certain areas. That only those people who are logical and good in math can go to mathematics. That only athletic people can go to sports (…)

I'm sure a scientist would agree that it's not about what you like and appreciate.
It's about how things are.

At least as long as one seeks to speak like a scientist.
A scientist should force himself to stick to facts.

For an overview of the role of nature, if only slightly too much on the nature side, see Steven Pinker's:

- **"The Blank Slate: The Denial of Human Nature"**

Mixes Correlation With Causation

The author looks at "prodigies" and then makes the case that there are no prodigies but only hard work.

I never liked the idea of "prodigies" either.
The author also says that no ballet dancer has reached the top without working hard.

He then uses that information to marginalize the role of talent.

But that says NOTHING about the role of talent. It might simply be the case -and probably it is the case- that making it to the top requires both talent and hard training.

This is interesting because the author is well aware of the issue when he delivers his criticism of Gladwell. He says:

> (..) To show a result like this, I would have to put a collection of random people through 10.000 hour of deliberarte practice on the violin and the see how they turned out.
> (…)
> The question of whether anyone can become an expert in any given field by taking part in any designed practice is still open.

Yet, why does he keep pushing the agenda that training is everything?

Unconvincing Marginalization of IQ

In his effort to make the point that there is no nature but it's all about training, the author engages in what in my opinion is a rather poor attempt at marginalizing the role of IQ in math, science, and scientific research.

So, how does Anders go about denying the role of IQ in the scientific disciplines?
He parades a list of successful scientists who have low IQs.

That by itself proves absolutely nothing.
But what sounded even more ludicrous is that the scientists he paraded did NOT have low IQs. They simply didn't

have “crazy high IQs”, but they were *all* above average.

Anders makes the point that the path to becoming a scientist might naturally screen for higher IQ.
This *might* be the case indeed (albeit I don’t think it’s the only cause for the correlation between IQ and the scientific profession).

In any case, the technique Anders uses of looking for exceptions to disprove a general rule should have no place in a scientific text. Especially one coming from such an esteemed author.

The Chess-IQ Fallacy

In his war against IQ Anders also recruits data and statistics from chess, a profession that in the minds of many is heavily interlinked with intelligence and IQ.

The author makes the case that IQ matters little in chess mastery.
But again, that proves nothing.

The fact that there is no major correlation between IQ and chess skills does NOT mean IQ doesn’t matter in general. It only means it doesn’t matter that when it comes to chess.
The fact that people believe that chess is correlated with IQ means nothing: people were simply wrong.

The “Lost Talent” Fallacy

Discussing the tendency of discouraging poor performers early on, Anders says:

> We lost a whole collection of children who might have become accomplished in this if only they had not been labeled as “no good in math” in the very beginning

I disagree with the “loss” thing.
We didn’t “lose” those children, they simply went down different paths!

And if there are any innate differences, and of course there are, then it’s probably good for many of them -but not necessarily all, that they went into something that might be better suited for them.

Sure, encouraging or discouraging people to pursue this or that field is far from perfect.
But an imperfect sorting system is better for the world than encouraging everyone into something for which they show no early signs of excellence.

Review

Peak is the best book on peak performance, effective training, and the best resource on how to improve yourself in almost any area.

In my opinion, unluckily, it’s polluted by an aura of feel-good self-help that removes from its otherwise incredible scientific findings.
“Peak” indeed seems to force a feel-good agenda that “yes, you can do anything” and that “no, innate talents and predispositions don’t count”.
And, in my opinion, we didn’t need that. We need more facts and less feel-good self-help.

Nature VS Nurture

Peak sits near the extreme end of the nature VS nurture debate.
In my opinion, to get the biggest bang for the buck, a more balanced approach is best for each one of us.

Such as, you’re better off also taking into account your natural tendencies and abilities when deciding which career and goals to pursue to the best of your abilities.

Peak: The Science of Compentence (Book Review)

Lucio Buffalmano · 25 April 2019 · Archived copy · Original

In *Peak* (2016), Anders Ericsson explains how to train to achieve mastery and expertise, summarizing his research in a new field in psychology that has sometimes been dubbed “the science of expertise”.

Contents

- Key Takeaways
- Notes
- Naive Practice: The Wrong Way of Training
- Purposeful Practice: A Step Forward
- Deliberate Practice: The Gold Standard of Training
- Skills Are Based on Mental Representations
- The Mindset of Enhancing Performance
- The 10.000 Hour Rule Is Cr@p
- Training Beats Knowledge
- The Key to Mastery: Maintaining Motivation
- Blowing Past Plateaus
- Genetics DO Matter
- Purposeful Practice is Not A Must
- Peak Quotes
- Criticism
- Review

Key Takeaways

- Innate talent might be part of the performance equation, but most of the variance comes from training
- How willing people are to train might be, at least in part, governed by our genes
- The best training is focused, gets instant feedback, and works around plateaus

Notes

About the Author:
K. Anders Ericsson is a Swedish psychologist and researcher, and he is a professor of psychology at Florida State University. He is internationally recognized as one of the main experts in the psychological nature of expertise and human performance

Naive Practice: The Wrong Way of Training

Naive practice looks like this:

- “Just do it”
- Not knowing whether or not you’re doing it correctly
- Not having a specific goal

Many people believe that the more you do something, the more you learn.

And they train with simple repetition.

The truth is that simply repeating something won't make you better, and if you repeat the same actions and behaviors in "automation mode" (i.e., driving) without working on your weaknesses and without operating at the edge of your abilities, then chances are that you actually get worse over time.

So the person who's been driving for 20 years or baking the same pie for 5 years is not getting better at driving or baking pies unless they switch gears and challenge themselves.

Purposeful Practice: A Step Forward

Purposeful practice is a step forward and goes in the right direction.
Purposeful practice:

- **Has specific, well-defined goals** (or you have no way to get feedback and measure success)

For example: "Play the piece through, at the proper speed, without mistakes, 3 times in a row".

- **Get feedback to work on your weaknesses**
- **Leverages coaches and trainers for feedback**
- **Breaks tasks into smaller pieces**

Says the author: "Purposeful practice is all about putting a bunch of baby steps together to reach a long-term goal". Also, make sure to get enough sleep.

- **Pushes you outside of your comfort zone**

Getting out of your comfort zone means trying to do something that you couldn't do before. If it's easy, you keep going. If you can't, finding ways around it is one of the hallmarks of purposeful practice.

- **Attacks plateau by trying different approaches**
- **Gives full attention to the task at hand**
- **Monitors the progress**

To keep improving with purposeful practice, you need motivation. Purposeful practice is much harder than naive training or playing for fun, of course, and it can be the case that you will *not* enjoy it.

Indeed, as soon as we feel like "we're good enough" and slow down, we move out of purposeful practice, and we will likely not improve any further, no matter how often we keep playing or "training".

Deliberate Practice: The Gold Standard of Training

Deliberate practice is what makes champions and what we think are geniuses.

The elements of deliberate practice are:

1. **Find a good teacher**
    1. A good teacher is not necessarily someone who's good at the craft
    2. Find a teacher who's good for your level of skills
    3. He must help you develop your own mental representations so you can feedback on yourself
    4. He must give you exercises you can do at home
2. **Don't be afraid of changing teacher when you're too good** for him or when he's not helping anymore
3. **Operate at your outermost level of skills**
4. **Define specific goals**

5. **Be fully present and attentive during your training sessions**
6. **Train at home by yourself**: the best training is lone training
7. **Work on your weaknesses and mistakes with constant feedback**
8. **Choose a developed field**, otherwise, you must pave the way to peak performance

Fields With No Codified Training

If you are engaged in pursuits with no clear experts and no well-developed training methods, then do the following:

1. Find out the best performers
2. Reverse-engineers What makes them top performers
3. Most of all, find out what type of training they engage in
4. Copy what they do and train as they do. Then seek to improve upon it

If you can't find a teacher, you can always focus on the "3 Fs":

- Focus
- Feedback
- Fix it

Try to break your work down into smaller components that you can analyze and repeat. Then determine your weaknesses and train to eliminate them.

My Note:
Andersson seems to focus mostly on weaknesses.
However, many authors today suggest to focus more on your strengths than your weaknesses.
I think that whether you should focus more on weaknesses or on strengths depends heavily on your situation and that's something that should be determined on a case-by-case basis.

There Are Fields & Professions Without Deliberate Practice

There are many fields in which deliberate practice is not as easy.

Business consultants, for example, or artistic pursuits.
But also "folk dancing" or "playing music in a pop music group". There are many fields that lack codified and standard training approaches.

When all the steps of deliberate practice are not possible, you should strive to implement as many as you can (I also invite you to read "*Deep Work*" and "*Mastery*" which are probably more suited for intellectual and artistic types of work).

Skills Are Based on Mental Representations

Anders Ericsson spends a lot of time on the concept of "mental representations".

It's difficult to define them because they differ dramatically from field to field, but in essence, the author says:

> Pre-existing patterns of information, facts, images, rules, relationships and so on. They are held in long-term memory and can be used to answer quickly and effectively in certain types of situations.
> They make it possible to process large amount of information quickly (despite the limitations of short-term memory)

Mental representations allow for:

- Pattern recognition
- Effective information handling
- Quicker reaction times and problem-solving

Deliberate practice builds better and better mental representations by changing the neuro-circuitry in the brain. What sets experts apart is the quality and quantity of mental representations.

Mental representations are very domain-specific, and that's why deliberate is not for everyone. Some of the skills you build might not be very transferable to other domains of life.

Mental Representations for Reading

Mental representations apply to any domain, including reading and absorbing information.

That's why some people are better at understanding and retaining information.

The Mindset of Enhancing Performance

Ericsson talks about enhancing performance in the workplace as well, and it starts with dropping the following three mindsets:

1. Drop the belief that one's ability is limited by innate talents
2. If you do something for long enough, you'll get better
3. All it takes to improve is to "try harder."

Since the workplace is unstructured and not as well codified when it comes to training, you should first figure out what the "*habits of most successful people*" are and then find a way to train those skills in all the rest.

The 10.000 Hour Rule Is Cr@p

Eric Andersson talks about the "10.000 hour rule", popularized by Malcolm Gladwell in "*Outliers*" and since then has become a famous slogan in self-help (also read: debunking self-help myths).

Gladwell, Andersson explains, did not understand his study well (or chose to ignore reality to sell something).
In details:

1. There is nothing "magical" about 10k hours and there is no fixed time: some will need less to achieve the top of the field, some more
2. How much you need to train also depends on the competitiveness of the field
3. Time matters, but how you train is equally, if not more, important

Training Beats Knowledge

In "Peak" Anders Ericsson dedicates a good portion to discussing schools and training systems.

He dedicates some time to a very important aspect of people's lives: doctor's training. Doctors train as most other students train: in the classroom, absorbing knowledge.

However, Andersson shows that classroom knowledge translates very poorly into on-the-job skills.

Surgeons, for example, get better with surgeries, not with classroom time.
Unluckily, that also means that the first surgeries they perform will be far from optimal.

Ericsson says that we stick with a knowledge-based system though because it's easier.

The Key to Mastery: Maintaining Motivation

Since for Anders Ericsson, the main differentiator between peak performers and “good” performers is training, it ensures that different abilities to stick to the training regimes will make the biggest difference.

He does not like to talk about “willpower” though because people can easily fall into a circular thinking trap that if they don’t have willpower then they might as well not even try (read here the science of willpower).

He prefers talking about “motivation”.
And to stick to the training routine, you must have strong motivation.

To keep a high motivation:

- **Increase your reasons to continue**
  - Do what you enjoy
  - Use social motivation: create groups of people with the same goal
- **Decrease your reasons to quit**
  - If practicing is too hard, limit the time and increase the focus
  - Get enough sleep
  - Take breaks in between sessions
- **Measure your progress for encouragement**
- **Get (positive) feedback**

Feedback can be internal, such as the pleasure of seeing yourself improve, or external, such as getting recognition for your work.

- **Make your training and field part of your identity**
- **Take pride in your identity** (also read: antifragile ego)

Blowing Past Plateaus

The way past plateaus often is by looking for different approaches.

Since plateaus can be discouraging, it’s crucial that you don’t think you’ve peaked but that you understand that it’s only a question of technique, training, and time before you will break through.

If you wanna quit tell yourself you’ll do it after the plateau, and then you probably won’t quit at all.
If you are still junior in your field, ask for feedback from coaches who’ve done it and if you don’t have those mentors, look at how others do it.

Genetics DO Matter

I have read around the web some bad reviews about “Peak” which purports to say that talent does not matter.
These reviewers did not understand Anders Ericsson’s message.

I quote the author here:

> More generally, there is a complex interplay between genetic factors and practice activity that we are just beginning to understand.
> Some genetics factors may influence a person’s ability to engage in sustained deliberate practice. For example, by limiting the person’s capability to focus for long periods of time every time.

However, the author also makes the point that everyone can improve. And, in most cases, improve *a lot*.

Purposeful Practice is Not A Must

Remember that purposeful practice is not a must.
If “good enough” is good enough for you or if your “good enough” is enough to live well, then there is no point in engaging in deliberate practice.

And certainly, you can’t engage in deliberate practice in all fields of your life.

As the author says:

> And for the most part, that’s OK. “Good enough” is generally good enoguh. But it’s important to remember that the option exists.
> If you wish to become significantly better at something, *you can*.

Peak Quotes

> In short, the human body is incredibily adaptive.
> (…)
> There might be limits, but there is no indications we have reached them yet.

On whom the deliberate practice is for:

> Deliberate practice is for everyone who dreams.

And on people who stop at “average” and “good enough”:

> The reason that most people don’t possess these extraordinary physical capabilities isn’t because they don’t have the capacity for them, but because they’re satisfied to live in the comfortable rut of homeostasis and never do the work that is required to get out of it. They live in the world of “good enough.” The same thing is true for

> all the mental activities we engage in

Criticism

Extremist Position On Nature VS Nurture

The author seems to be pushing an agenda at times.
I quote him when he talks about a mentee of his he really liked:

> Dan gave an answer I really liked.
> He said he didn't appreciate the attitude that only certain people can succeed in certain areas. That only those people who are logical and good in math can go to mathematics. That only athletic people can go to sports (…)

I'm sure a scientist would agree that it's not about what you like and appreciate.
It's about how things are.

At least as long as one seeks to speak like a scientist.
A scientist should force himself to stick to facts.

For an overview of the role of nature, if only slightly too much on the nature side, see Steven Pinker's:

- **"The Blank Slate: The Denial of Human Nature"**

Mixes Correlation With Causation

The author looks at "prodigies" and then makes the case that there are no prodigies but only hard work.

I never liked the idea of "prodigies" either.
The author also says that no ballet dancer has reached the top without working hard.

He then uses that information to marginalize the role of talent.

But that says NOTHING about the role of talent. It might simply be the case -and probably it is the case- that making it to the top requires both talent and hard training.

This is interesting because the author is well aware of the issue when he delivers his criticism of Gladwell. He says:

> (..) To show a result like this, I would have to put a collection of random people through 10.000 hour of deliberarte practice on the violin and the see how they turned out.

10 Bullying Debate Techniques From Ben Shapiro

Lucio Buffalmano · 27 April 2019 · Archived copy · Original

When it comes to debate techniques to win debates *no matter what*, Ben Shapiro is a great guy to learn from.

Shapiro is the most successful, Machiavellian, and ruthless political debater in the English-speaking world.

But as a good connoisseur of power dynamics, Shapiro sometimes deploys aggressive strategies and techniques that might be "unethical" or "manipulative".
This article will show you all the techniques Ben Shapiro uses to dominate his debates.

Contents

- #1. Get Under Your Opponent's Skin
- #2. Strike When They Overreact (i.e., Gaslighting)
- #3. Con With The Confidence Game: Talk Like You're Gospel
- #4. Ridicule Your Opponent
- #5. Use (Or bend) Science to Inflate Your Authority
- #6. Play The Victim to Hide Your Aggression
- #7. Hide Your True Power Source
- #8. Beat Them to The Punch: Accuse Them of Manipulativeness
- #9. Frame The Interaction (the way it serves you)
- #10. End With An Olive Branch After You've Taken Their Scalp (so you even look "nice")
- Ben Shapiro Personality Traits
- Ben Shapiro's Debating Fundamentals
- What I Think of Ben Shapiro
- SUMMARY

#1. Get Under Your Opponent's Skin

One of the major reasons why Ben Shapiro dominates all the debates is that he's the best I have ever seen at getting under his opponents' skin.

This is one of the things he's done, said, or heavily implied to get under people's skin:

- "you've been standing on the graves of dead children."
- "you're not a real woman" (to a trans)
- "I feel terrible for you" (to a trans)
- "why are you mainstreaming delusion?" (to a full panel of journalists)

Getting under his opponents' skin is a technique Ben Shapiro uses consciously.
And I know that because he bragged about it to a room full of his supporters.

> **Interviewer**: And you can smirk at me
> **Shapiro**: I'm not smirking (keeps smirking with a smart-alec attitude)

#2. Strike When They Overreact (i.e., Gaslighting)

This is how Shapiro deploys gaslighting:

1. Manipulate the victim into overreacting ("getting under their skin")
2. Remain calm as they overreact
3. Point out to the victim that they are overreacting and/or acting crazy and aggressive

The victim, looking at the calm and composed aggressor, often draws the conclusion that they are indeed acting too wild and over the top. And, often, they end up believing their aggressor and *feeling* crazy.

Gaslighting is a common technique that abusive men use in their highly toxic relationships.

When Ben Shapiro makes his victim act aggressively, he makes it a point to highlight it while he acts calm and rational.

That way, it looks like he is winning the debate thanks to his arguments, and not thanks to his emotional manipulation.

Ben Shapiro is an intelligent man and a highly skilled political debater.
Yet I'd go as far as to say that most of Ben Shapiro's claim to notoriety is due to him gaslighting his opponents (i.e., making them overreact and aggress him and then taking advantage of it).

> **Shapiro**: (makes them angry and emotional by refusing to use the "she" pronoun)
> **Moderator**: (gets emotional, voice cracks)
> **Shapiro**: OK, forget about disrespect, facts don't care about feelings <— the line that made him famous

Why Shapiro Does Not Say His Opponents Are Acting Crazy

When transgender Zoey Tur threatened to physically assault Shapiro, Shapiro could have claimed that threats of violence have no place in a debate.
And he could have made the case that everyone in the studio was supporting violence by not openly condemning Zoey Tur (and it would have been a good point, BTW).

However, he decided not to.
Why?
Because from a persuasion point of view, it's much better if people realize by themselves that people are being aggressive towards Shapiro while he simply makes his case calmly and rationally.

That way, people are actually siding with Shapiro of their own volition rather than because Ben complained or asked to do so.

And that's much more persuasive.

#3. Con With The Confidence Game: Talk Like You're Gospel

Ben Shapiro talks with an unwavering belief in his values and he talks like he's speaking unquestionable truths.

That attitude helps Shapiro browbeat his adversaries and it makes him wield outsized power and influence.

Talking with unwavering confidence like you're delivering scripture works very well both in destroying his debating opponents and in galvanizing his followers' base.
Most people indeed have an inborn tendency to follow the charismatic leader.

This is a terrible human bias because it actually helps dictators, psychopaths, and snake oil salesmen alike to build a huge following.
But alas, it's there and it's real so you better take it into account.

When People Quit Debating Shapiro

Ben Shapiro is so good at conveying power and authority that sometimes his least-skilled debating opponents simply give up.

They quit trying to debate him or start asking him questions instead of confronting him.

That's the hallmark of a powerful debater.
When people stop debating you they are recognizing your superiority. And when they ask you questions they are basically saying "you know more, you are the real leader, know let me learn from you"

#4. Ridicule Your Opponent

Ben Shapiro is a ruthless debater.

And one way he dominates debates is by intellectually destroying his opponent.

He does it in all the ways he can.
But one of his favorites and one of the nastiest power moves he deploys is by implying, or sometimes directly stating, that his opponent is an idiot.

He does it with smirks, witty remarks, voice tonality, eye-rolling, and other indicators of contempt.
Contempt also contributes to Shapiro's gaslighting effect.

Shapiro's "know it all" attitude is typical of the "smart alec" dominant archetype that we analyzed in "The 7 Archetypes of Dominance".

> **Shapiro**: (uses the podium and speaker power position to dominate and ridicule opponents)

This is an effective strategy, and can also be fair and value-adding.
Even Obama does it often.

Also see:

- **How to speak with power**

#5. Use (Or bend) Science to Inflate Your Authority

We live in a society that, righteously, celebrates science, data, and statistics.

People who drop quotes, names, data, statistics, and studies, sound well-informed, intelligent, and… "right".
After all, you can't argue with data, can you?

Ben Shapiro loves to drop a copious amount of statistics that make him sound like the ultimate authority on whatever he's discussing.

As per ThePowerMoves dictionary of power, this is a form of "power borrowing". Such as, you quote, cite, or align yourself with high-authority sources to borrow their power, and use it for your own -sometimes selfish- ends.

That's all cool and dandy, until… Until someone starts using science not to find the truth, but to impose *their version* of the truth.
Science, data, and statistics, albeit *technically* objective, can be manipulated to say almost anything you want to say (Darrell Huff, 1954).

And the most manipulative players can simply misquote a study, or make stuff up.
And I'm afraid Shapiro has done that, too.

And since few people even check whether what you're saying is based on good data or not, chances are you can

"win" your little battle, without your reputation ever being tarnished.

Example of Bending Researches

Shapiro doesn't want to call transexuals "she".

To defend a position that might seem just outright mean, he says that research showed that the suicide rate among transexuals is the same whether people recognize them for their preferred gender or not.
For anyone familiar with basic psychology and sociology, this seems very strange.
It certainly did seem so to me when I heard it.

After all, being recognized or ostracized by the people around has a *huge* impact on people.

So I looked up the research.
Turns out, it was pretty much as I expected it would turn up and pretty much saying the opposite of what Shapiro stated.

I quote:

> Respondents who experienced rejection by family and friends, discrimination, victimization, or violence had elevated prevalence of suicide attempts

Now, based on that, what do you think forcing a "he" does to a trans who wants to become a "she"? Might that qualify as a rejection for her?
I definitely think so.

And this is what another research says:

> Social support, reduced transphobia, and having any personal identification documents changed to an appropriate sex designation were associated with large relative and absolute reductions in suicide risk

And:

> Interventions to increase social inclusion and access to medical transition, and to reduce transphobia, have the potential to contribute to substantial reductions in the extremely high prevalences of suicide ideation

Basically: don't listen to what Shapiro says about transexuals.
Frankly, I found his position unneeded mean, and it only increases the level of pain and hurt in this world.

#6. Play The Victim to Hide Your Aggression

There is a strange tendency among human beings.

And that tendency is to think that if one has been victimized he can hardly be a victimizer himself.
Funny, because that's actually the opposite of how it goes (Glasser, 2001).

So what Shapiro conveniently says is that he is against abuse and bullying because he's been the victim of vicious bullying as a kid.

That helps him deflect a lot of bullying accusations and, when he's accused of bullying, it gives him an easier way out.

It's a bit like the abusing partner who says to his wife when she accuses him of being emotionally abusive:

> **Him**: How can you say that to me, you know what my father did me!!

Ben Shapiro's Next-Level Victim Power Move

Playing the victim is a dangerous technique though.

It's easy to overdo it and end up sounding like a complainer or like a powerless, submissive victim (check here body language of submission).

And you can't dominate debates as the weaker party of the interaction.

But of course, Ben Shapiro is too smart to fall into that trap, and he finds indeed a strong, powerful way of presenting himself as a victim.

Basically, it sounds a bit like this: "I'm ready to debate fair and square with anyone… But they prefer to shut me off, protest me, and aggress me instead of debating".

That way he sounds intellectually superior to his opponents while still painting himself as the victim of abuse.
It makes him look like a 21st-century Robin Hood.

> **Shapiro**: I'm very happy to talk about anyone, but they usually protest me <— meaning: "I'm being oppressed and canceled"

#7. Hide Your True Power Source

Hide your true sources of power, so others can't attack them.

As we have seen Ben Shapiro's debating techniques often resort to emotional manipulation, aggression, covert aggression, and bullying.
Yet he loves to paint himself as a "small Jewish guy who's been viciously bullied".

So on top of former bullying, Shapiro self-frames himself as "small and harmless".

With that frame, people are less likely to correctly identify one of Shapiro's biggest power tools: his aggression, his high-dominance, and his frequent "frame-imposing" strategies.

#8. Beat Them to The Punch: Accuse Them of Manipulativeness

This is another common technique of abusive men (Bancroft, 2002).

It consists of "beating your opponent to the punch" and accusing him of using your own manipulative technique.

So for example, let's imagine you are verbally bullying someone. What you would do then is to accuse your opponent of being a verbal bully.

When you do it:

1. **You get under his skin** and he will most likely overreact
2. **He loses his plot**, stumbles, potentially gets angry, and most likely defends. Often, he will counter-accuse you of being a bully, but now that you said it first, it looks like he's following your lead, reacting to your leadership, and generally losing the argument
3. **People side with you,** since people tend to believe the higher-power accuser more than the one who defends - they unconsciously think "why would he have to defend, if he's not guilty"?-

As a matter of fact, the more he overreacts and attacks back, the more he will look like a bully, and the more likely you are of winning the debate.

This is also a technique that Donald Trump used quite often.
Also read:

- Trump debating technique
- Win a debate like Donal Trump
- Win Bigly (analysis of Trump's persuasion techniques)

#9. Frame The Interaction (the way it serves you)

Whoever gets to frame the interaction holds a huge advantage in debates.

For example, someone might pose you a question and frame it in a way that presupposes you *did* say something or that you agree with something.
If you're not aware of the frame and you answer the question, you end up accepting that presupposition.

Or as you speak someone might reframe the conversation to better suit his political agenda.
For example, a frame to support capital punishment might be "what we're really talking about here is the proper punishment for the most heinous crimes like torture, pedophilia, and mass murders".

Ben Shapiro is very good at framing the conversation in a way that supports his own views.
For example:

> **Ben Shapiro**: A boy who thinks he's a girl, that's the use phraseology I use (…) which his technically what we're talking about here (frames the dynamics as a boy *thinking* he's a girl, rather than *feeling*, or *being*)
>
> As far as the actual psychological issues at play… (frames it as an *issue*)

Ben Shapiro frames the conversation around gender dysphoria in the way that serves him best:

- Thinking VS being: the boy *thinks* he's a girl. That frame implies the boy IS a boy, but mistakenly thinks he's a girl
- Psychological issue: frames the conversation any conservative wants it to be framed: you're the gender you're born with, you can't change it. And if you want otherwise, you have psychological issues that must be addressed mentally, not with an operation

This also makes Shapiro look smart, erudite, and powerful vis-a-vis the student he's debating.
His reply implies the student is rambling on and babbling, while he is the intelligent one who brings the conversation towards its central -and correct- proposition.

Also read:

- Basics of frame
- 10 Frame control technique

George Lakoff also addresses framing from a conservative VS liberal point of view in "*Don't Think of An Elephant*".

#10. End With An Olive Branch After You've Taken Their Scalp (so you even look "nice")

People remember mostly how things begin and how they end (Elliot Aronson, 2011).

This is much needed by an aggressive debater like Ben Shapiro, because if all he did was to aggress and deride, then people would leave with a rather bad impression of him.

Instead, I have noticed he often ends with a more conciliatory tone. That allows him to take rather extremist positions but still makes it seem like he's quite open.

But mostly, it allows him to act like a bully, tear his opponents to pieces, and then end with a more respectful, conciliatory, and high-warmth tone to look magnanimous.

His opponents, browbeaten during the whole argument, are sometimes more than happy to take that olive branch to save (some) face.
So he ends with another leadership move: he offers the olive branch, and others follow him -and if they don't follow him now, they look like butthurt losers-.

To people looking from the outside, it looks like Shapiro destroys his opponents with hard facts, data, and solid logic.
And then, he gets to seem nice and "superior" to personal squabbles to end in friendship.

It's the negotiation ideal of "be hard on problems and soft on people" (Fisher and Ury, 1981).

Except, he's not really that fair with the arguments, and neither that kind with the people.

But it's great for his public image: AFTER he did everything he could to shame and ridicule his opponents, he looks sensible and magnanimous to befriend them.

Ben Shapiro Personality Traits

Researching Ben Shapiro I have realized that is possibly the most ruthlessly effective debate I have seen so far.

He is better than Tucker Carlson and, in some ways, more effective than Jordan Peterson, author of *The 12 Rules For Life*.

Here are some of Ben Shapiro's superpowers:

- **Icey cold under stress** (the way he remained cool in front of the physical threat was nothing short of astonishing)
- **Does not take things personally** (also read: Ego Is The Enemy, The Antifragile Ego)
- **Quick-witted** (he owes his notoriety and skills to his quick-wit as well)

Ben Shapiro's Debating Fundamentals

Ben Shapiro uses plenty of power moves and unfair debating techniques, but don't get me wrong: he is also skilled with the basics.

For example:

- He embodies his values by living them, which gives him huge credibility
- Knows his topics really well
- Researches before going into a debate
- High degree of mastery of the English language
- Separates himself from his arguments (this allows him to take strong criticism without taking it personally)

What I Think of Ben Shapiro

This was a rather critical analysis of Ben Shapiro debating skills and personality.

It may come as a surprise then that it's not meant as an attack against Shapiro.

In these examples, I disagree with his stance on transexuals and his insistence on calling them by their biological pronoun.
That's really unhelpful and only adds to this world's misery. If there is one thing we should all strive for is to reduce misery and increase people's well-being.

And in general, I find him a bit too self-righteous, close-minded to different ideas and approaches, and derisive of others.
His approach to fame is obviously not to find bridges and solutions, but to create echo chambers, “us VS them” dynamics, and then throw some bones to the turkeys with his self-righteous outraged tirades.

But I do very much enjoy and, at times, even agree with *some* of his video commentaries.
Especially the ones that lay bare the hypocrisy of certain people, awards, ceremonies, and news cycles.
His criticism of Oprah Winfrey’s speech is spot on, for example.
And the column he’s got where he publicly airs his dirty laundry and past mistakes is pretty cool (and something I’m thinking of having as well).

SUMMARY

If you want to *win* debates, you must master the dark side of the debate techniques.

Ben Shapiro is one of the most successful political debaters around, and there is much to learn from him.

His debating dominance though does not only rely on facts and skills but also resorts to manipulation and bullying.

My personal invite to you is to build bridges, rather than “dominate” the opponent.
But with this article, you will know how to defend yourself against Shapiro-like debaters.

The Feminine Mystique: The Happy Housewife Lie (Book Review)

Lucio Buffalmano · 28 April 2019 · Archived copy · Original

The Feminine Mystique is a social analysis of the lives of women in the 1950s and 1960s in the US.
Betty Friedan, the author, starts by describing the general "malaise" and unhappiness of most American women and also expands on the general role of women, feminism, and the history of women's rights.

TPM Note: *The Feminine Mystique* documents the consequences of macro social power dynamics
The Housewife expectation was likely the downstream manifestation of a power and sexual strategy.

  - Politically biased on economics (left-leaning)
  - Proposes hard-to-believe conspiracy theories
  - Generalizes the malaise: what about happy housewives?
- Review

Main Takeaways

- The feminine mystique is a false narrative depicting women as happy housewives who find fulfillment in domestic chores, raising children, and supporting their husbands
- Women suffered in trying to live up to the idealized, fake image of the happy housewife
- The feminine mystique applied social pressure on women not to look too "smart" or "career-focused" in fear of appearing too masculine
- We will only overcome the feminine mystique when men and women work together

Notes

What I found fascinating is how Betty Friedan ended up writing "*The Feminine Mystique*".

Originally, she wanted to write an article. But she could not get it published because, she says, it ran against the zeitgeist and the narrative of the happy housewife.

The Problem That Has No Name

Women across the US show a widespread sense of unhappiness, emptiness, and unease.

But most of them don't want to talk about it and, even when they do, they cannot pinpoint the causes.
The fact that they have everything from a material point of view but are still unhappy without being able to find a cause makes them even more lost and ashamed of their own unhappiness.

Advertising also took advantage of the widespread unhappiness to sell products and help women reach the ideal of the happy woman represented by the feminine mystique.

The Culture That Creates The Feminine Mystique

Friedan makes the point that, in part, the feminine mystique narrative was a male creation, and it's no coincidence that it started when many journalists and editors returned after the war had ended.

But it wasn't just pop-journalism that perpetrated the feminine mystique.

The author has a beautiful analysis of Sigmund Freud, his personality, and his theories.
She says that some of Freud's theories, like penis envy, were reinterpreted and enlarged in scope.
Some other poor Freudian theories, such as female inferiority, were uncritically adopted as truth.

Sociologists also threw their weight behind the feminine mystique when they confused what "is", ie. the female housewife, with what "should be".

Finally, there is advertising, which loves to encourage women to become "experts of the house" and buy all the best products and machinery for house upkeep and house cleaning.

The Root Causes of The Female Malaise

The author says that the malaise arises because women are pressured into a role that they didn't choose.

When women comply with the feminine mystique, they are not developing their true identities, and they are not doing what they really want to do.

While men can fulfill all their needs with a life outside of the home as well, women can only fulfill their most basic physiological needs while remaining psychologically unfulfilled.

The Solutions Are Education and Positive Examples

The author says that the solution to the malaise is to encourage women to study and learn.

And to show them that there is no real dichotomy between motherhood, work, and outside-of-the-family fulfillment.
Women can work and lead happy family lives.

My Note:
I =agree with that. There must not be a dichotomy between happy motherhood, happy family life, fulfillment, and career.

Finally, Betty Friedan says that efforts to lift women out of *the feminine mystique* must be supported by men as well.
Men will also benefit from happier, more fulfilled women, and I couldn't agree more.

My Note:
I agree with the author.
It's only fearful men who are afraid of more emancipated women, and I want to write an article on this soon.

What The Feminine Mystique Means to You

In my opinion, part of the feminine mystique and the pressure it applies to women will never fully go away.

It will always stay there for two reasons:

1. Most men don't understand women and female psychology
2. Feminine women who adopt the "feminine mystique" do have a dating advantage

That's why there will always be some women who choose, consciously or unconsciously, to play that role.

And the women who decide to pursue their careers also sometimes end up not being completely fulfilled if their family and dating lives are not as good. Some career women end up resenting the women who play the "*feminine mystique*" role because they make them feel less feminine and make them less successful at dating.

- Feminine VS Career Women
- How to be powerful and feminine
- How to be Feminine
- Madonna/whore dichotomy

Power Dynamics Behind The Feminine Mystique

The feminine mystique points to underlying power dynamics about both patriarchi and feminism: it's about power dynamics.
This book points to a precise **power structure** redistributing:

- **Economic power** → men (breadwinners)
- **Domestic power** → women (but low-status, low leverage)

This power structure was maintained with culture and social reward or punishments:

- Reward for conformity: being and 'real man' for him and a 'good woman for her'
- Punishment for deviance: shame, avoidance, social isolation and loss of social status

This isn't just about 'specialization of work', it's also about power, control, and sexual strategies. See our in-depth analyses for more.

Real-Life Applications

- **Female emancipation follows "waves": women must be ready**

A great lesson learned for many women is that female emancipation (or repression) has so far moved in "waves" throughout history.

Periods of high emancipation have been followed by periods of higher repression or oppressive narratives, such as the feminine mystique.

Women should keep that in mind and be ready—or teach their daughters to be ready—at any cultural turn.

- **Housewives make for poor mothers: Follow your passions**

Women who stay at home and have no other interests or hobbies tend to raise more neurotic children.
They also tend to live vicariously through their children, whom they see as an extension of themselves.

CRITICISM

Much of the research is based on interviews

A lot of the stories that go into "*The Feminine Mystique*" are based on anecdotal evidence.
I still believe that anecdotal evidence, at least in this case, is valid and can be (somewhat) representative.
But we must still mention it as a potential limitation.

Analysis of infidelity is lacking

The author says there is a connection between emancipation and sexual satisfaction, which is true, but then loses the plot.

I found the analysis of infidelity through the feminine mystique to be somewhat lacking.

Politically biased on economics (left-leaning)

"*The Feminine Mystique*" sounds a bit like the leftist "No Logo" at times, and I think Friedan should have been more careful in her approach toward different disciplines.

She writes for example:

> Abstractions of "balance the budget" did no mask for women the danger of gutting government programs that protect the children and older people..

When she talks about "balancing the budget" as an "abstraction" that matters less than the people, the author betrays ignorance of basic economic principles.

A properly balanced budget does not stand against the people but it *allows* for good caring of the people.
Funding prosocial programs must be done, but *within* the budget, or at least with a plan for eventually paying it.
Or those same children she wants to support will be paying for them…

Proposes hard-to-believe conspiracy theories

Sometimes I had to wonder how such an intelligent woman who provided such a good social analysis could stumble on some basic idiocies.
The author, for example, implies that the tobacco industry is getting women hooked on smoking while men are quitting.

And she makes it sound as if that were a plan to keep women dependent.

Doesn't add up logically. If the tobacco industry wanted to make money, it would try to hook *both* men and women. Or should we say that the tobacco industry in China is trying to get men dependent, since men there smoke more?

Generalizes the malaise: what about happy housewives?

I wish Betty Friedan had also said that there are plenty of happy women who stay at home and it can be a healthy, fulfilling choice for some.

It's a small caveat, but it would have spared her lots of critics and it would have made her message more compelling and even more scientific (because blanket generalizations are almost always wrong when it comes to people and social sciences).

Review

The Feminine Mystique is a book of historical significance that drew attention to a real issue of 1950s culture, clipping the wings of many otherwise ambitious women and forcing them into a 'life of quiet desperation'.

Culture has partially changed, though not completely, but the social power dynamics of expectations, social pressures, and individual freedom and power against social trends still apply.
Plus, cultures always change and the 1950s culture may one day take over once again.

The book has its limitations, including that it generalizes and that it doesn't apply to the many women who may have been very happy to be housewives.
Many modern readers may also not realize that **today's issue is the opposite and that women who may want to be housewives instead feel shamed for not being 'independent enough'.**

Another important limitation of the book is that it documents surface-level consequences of deeper-seated power dynamics and sexual strategies, but never makes that connection.

On the positive side, Friedan rejects any "call to arms" and sends out a message of unity, something that we may need more of today.

Sway: Book Summary & Review

Lucio Buffalmano · 29 April 2019 · Archived copy · Original

Sway explains with anecdotes and experiments how the human mind is far less rational than we believe, and how we constantly fall victim to psychological pitfalls that we are not even aware of.
Ori and Rom Brafman, the authors, also give useful suggestions on how to improve our decision-making by taking our psychological biases into account.

Contents

- Sway Summary
- Real-Life Applications
- CONS
- Sway Review

Sway Summary

About the Authors: Ori Brafman is an American author and organizational consultant. He is a "Distinguished Teaching Fellow at UC Berkeley's Haas School of Business".
Rom seems to go for a lower-key public profile.

Loss Aversion Leads to Short-Term Bias

If you have been reading my summaries or if you are into psychology by now you probably know that humans are loss-averse.
That means that we fear losses more than we look forward to gains, and it can lead to a whole host of irrational decisions.

The Brafman brothers though add an interesting twist: our loss aversion makes us biased towards short-term actions that can be harmful to our long-term well-being.

Imagine for example that you are late and a driver in front of you is going too slow.
Chances are that you will get nervous and attempt a risky overtake that could end up costing really big.
Not only getting nervous is unhealthy, but the risk of a risky overtake far outweighs the limited advantage of a couple of minutes top.

Also relates to loss aversion;

- We stick with losers in the hope that things will turn around even though it's unlikely they'll turn around (ie.: Vietnam war and Iraq war)
- The more meaningful and emotional a loss is, the more we struggle to realize our losses and move on

Why Our Friends Know Better About Our Relationships (Commitment Bias)

We dismiss objective data when it doesn't fit what we want to see.

And this is most apparent when we really want to see something or when we're blinded by… Love (MacDonald, Ross, 1999).

MacDonald and Ross showed that roommates and parents were better able to assess the longevity of the relationship than the partners themselves were.

What's interesting though is that the partners knew and saw about their own problems.
They just ignored them when it came to making long-term predictions.

The authors say that it's similar to what happens when you see, say, a house that you like and you start fantasizing about how nice it would be to live there.
Then, you immediately become blind to the house issues and you focus on the positives.

Perceived Value Becomes Real Value (Value Attribution)

When we attribute a certain initial value to a product we will act accordingly to that value, even though the "real" value might be different.

How a product is presented heavily influences the initial value attribution, as the authors show for example a world-famous violinist playing in a subway station and nobody even noticing him.

When we discount products, people also tend to value them less, including after they buy them.

If people pay a high price for something, they're more likely to value it more, use it more attentively, and come back more often to it.

First Impressions Determine Our Destiny (Diagnosis Bias)

You have probably heard the saying that you get no second chance at first impressions and that first impressions are crucial.

Well, that's true.
As a matter of fact, it might be far truer than you imagine.

For example, NBA players who got drafted late were unconsciously labeled as poor by their coaches.
What happened was that, at parity of actual performance metrics, they still played less and got traded earlier.

The bias became so entrenched over time that it didn't go away at all. Even their careers were shorter than early picks.

And remember, this is at parity with actual performance metrics.

Don't Abuse Your Power (Fairness Bias)

People are irrational even when it comes to getting stuff for free.

Experiments indeed show that people will refuse to receive money if they know that the offerer is keeping the majority for themselves.

Why?
Because people expect and want fairness and would rather lose or get nothing than have to stand an unfair deal.

It's also important to notice though that what is "fair" varies by culture. The same experiment in an isolated culture, for example, showed that people were willing to accept any sum of money no matter how much the offerer kept for himself.

But in the West, you better look fair. And that's the reason why I recommend a different technique for lowballing in negotiations.

Also read:

- Best negotiation books
- A field-guide to manipulation
- Manipulative negotiation techniques

https://thepowermoves.com/dirty-negotiation-tactics/

The authors then expand on what "fair" means and show that respect and human connection are often more

important than actual results in court (for lawyers) or business negotiations (for car dealers).

This is also similar to the pattern we see in doctors and legal proceedings, with rude doctors getting sued more often than bad doctors (Cialdini, Influence).

We're Either Altruistic or Self-Interested (We Can't Be Both)

If you are familiar with the concept of intrinsic and extrinsic motivation that Daniel Pink discusses in his bestseller *Drive* then you know what I'm talking about here.

But the Brafman brothers add some good neuroscience to this phenomenon.
What happens is that we can only access one brain region at a time, and it's either self-interest (ie.: offer of money) or altruism (ie.: helping the community or being of service).

Thus, when you offer money, you remove altruism and higher ideals from the equation.
And unless people are desperate for money or you are really offering a huge sum, it's very possible that you might end up being much less persuasive with money than with appeals to higher ideals.

You Need Dissenters in Your Groups

The Brafman brothers also get into the social dynamics of groups and they say we can differentiate four different psychological types:

1. **Initiators** (the ones with all the ideas)
2. **Blockers** (the find the faults in the ideas of the initiators)
3. **Supports** (side with initiators or blockers)
4. **Observers** (they summarize the positions)

Of course, people will be naturally attracted to the initiators who are optimistic, bring new ideas and, often, are also charismatic individuals.

But blockers are extremely helpful.
With their initial dissent, they allow for discussion to start, they allow for different options to be considered and talked about.
And, ultimately, they often allow for a better final decision.

Real-Life Applications

- **Listen to people and make them feel heard**

Sometimes that's more important than actually helping change things.

- **Explain why you didn't choose them and they'll be happy**

Explaining why we are choosing a certain price, a certain argument position, or a certain decision can be all that a person needs to feel like he has been treated fairly.

- **If you must propose an unfair deal, remove yourself from it**

People were willing to accept "unfair deals" if they were randomly generated or chosen by a computer.
They just didn't want to accept it from another human being.

CONS

- **Overcritical of DSM**

I found the authors' position to be overly critical of the Diagnostic and Statistical Manual of Mental Disorders (DSM).

Of course, the DSM is not perfect, but that does not mean that it cannot be a useful text and a useful support for psychologists and students alike.

- **I'm not convinced about "diagnostic error"**

The authors say that men signed up in higher numbers for a loan when there was a picture of an attractive woman in the prospect. They say it's because of a diagnostic error, but to me, it sounds more like a halo effect.

And it's not always working BTW, using sexual lures on products that are not directly related to sex can have the opposite effect (Aronson, 1972).

Sway Review

Sway is a good book on human psychological biases.

It's somewhat similar to "*Predictably Irrational*" and "*Thinking Fast and Slow*".
A bit more on the "pop-psychology" side though, since it's more about stories and anecdotes.
However, in this case, I am not using the term "pop-psychology" in its pejorative form but in its more positive sense.

Because "*Sway"* is both interesting and entertaining, but also adds quite some new information to anyone who's interested in psychology and people's behavior.

Also, check out:

Intro

We define pop-psychology as:

> *Pop psychology consists of psychological claims and interpretations presented as scientific or evidence-based, despite being weakly supported, misinterpreted, or of limited effectiveness to achieve relevant goals.*

Pop psychology stands for "popular psychology", and it's probably far more widespread than more rigorous psychology. While not always and necessarily wrong or harmful, it is characterized by being unscientific and lacking nuance.

Who Are Pop Psychologists: A Profile

Here is a quick way to tell them apart:

- **The scientist seeks scientific rigor**; his claims are based on science and results. He often talks about "evidence", "more information needed", "exceptions", and "external factors."
- **The pop-psychologist seeks to *sound* deep and informed**, which leads many to believe that what he says makes sense. He speaks with certainties and generalizations

In some cases, the intent may be genuinely helpful, but the execution reflects limited familiarity with scientific methodology and critical thinking.
Here is a quick overview for you:

Sharing Science	[illegible]	[illegible]
Science VS Opinions	[illegible]	[illegible]

Pop-psychology and good science are on a continuum, and it's also possible to be high on both the scientific and pop-psychology scales. For example, Martin Seligman took positive psychology into more mainstream self-help, but while retaining good scientific rigor.

Let's now analyze some popular pop psychology myths that at one time or another have spread across the

mainstream.

We prefer refinement rather than dismissal
Debunking approaches increased in popularity after the replication crisis. They create black-and-white judgments that throw out the baby with the bathwater.
Scientific progress is rarely about completely discarding ideas, but about adding nuance and refinement. Even many flawed studies can still offer valuable insights when interpreted in context. The goal is continuous, critical evaluation of evidence, not sensational dismissal.

#1. Learning Styles

That's how you should best teach visual kids?
The narrative goes that some people learn more when the material is presented visually, while others learn more when the material is discussed verbally.

Over the years, different training methodologies and quizzes have sprung up, purporting to teach people how to learn more effectively.

Why It's Pop Psychology

A team of researchers in the field of learning psychology published a long and detailed review of the "learning styles literature", and you can find the whole research here.

In a nutshell, the researchers say that in all of the studies that allegedly did find evidence of different learning styles, very few used randomized research designs that would make their findings credible.

Of those that did use proper research designs, some provided evidence that not only failed to support the learning style theory but also found evidence that flatly contradicted the learning style hypothesis.

The researchers conclude:

> The contrast between the enormous popularity of the learning-styles approach within education and the lack of

> credible evidence for its utility is, in our opinion, striking and disturbing.
> If the classification of students' learning styles has practical utility, it remains to be demonstrated.

The Truth

The authors of the above study do not deny that some students might learn better when information is presented in a certain way.

They simply deny there is supporting evidence for the "learning style theory" in the current literature.
And they say that an optimal curriculum probably depends as much (or more) on the discipline than on the student's preference for learning (i.e., a geometry class could hardly be effective without lots of visual-spatial material).

#2. Mirror Neurons

If you're into self-development, you've probably read about 'mirror neurons'.

Rizzolatti accidentally discovered them in Parma, and it quickly became popular.
V. S. Ramachandra said that "mirror neurons will do for psychology what DNA did for biology".
And for years you could barely read a book on persuasion and self-development without stumbling upon mirror neurons.

Do you want to empathize with people? Mirror neurons will help.
Do you need to make people feel comfortable? Use your mirror neurons to let your body match theirs.
Need to subconsciously persuade someone? Match them first, then start leading… And their mirror neurons will have them follow you like you're the pied piper.

Why It's Pop Psychology

After reading so much pop-psychology on mirror neurons in humans you might be surprised to hear that there is no consensus as to whether mirror neurons even exist in humans.

Scientists such as Hickok, Pascolo, and Dinstein, for example, question the idea that mirror neurons form a distinct class of cells (Hickok even wrote a book about the "mirror neurons myth").

Where there seems to be more and more consensus instead is that mirror neurons are not the great revolution that early, over-enthusiastic scientists cracked it up to be.

The Truth

It's probably true that humans have mirror neurons as one study seems to have identified neural activity similar to Rizzolatti's monkeys.

But as this article from Harvard University points out the consensus seems to be moving towards the following:

1. It's unlikely that mirror neurons *alone* explain humans' ability for imitation
2. It's unlikely that the mental ability to simulate other people's actions is at the core of *understanding* other people's actions
3. It's possible that mirror neurons are part of our human's ability to empathize, but it's likely they're *only one element* in a larger, more complex system (Rizzolatti, 2010)

#3. The Marshmallow Test

The marshmallow test, first a study and later a book, is one of the earliest, most famous, and most cited experiments in willpower.

If you have been into self-development topics, then chances are very high that you have read about the "marshmallow test"… A few hundred times.

The basic narrative goes like this: children who can delay gratification become more successful in life, as it's been proven by the marshmallow test.

Some authors then go as far as to teach you -and your children- how to increase your "delaying gratification muscles".

Why It's Pop Psychology

1. The marshmallow test failed to replicate
2. There are simply too many variables that the "marshmallow test" did not account for

Some of the variables that the "marshmallow test" did not account for include:

- Different children are likely to have different levels of interest in consuming marshmallows (ie.: the "delaying power" is based not on self-control but on limited interest in marshmallows)
- The sample size was very small
- Children in the sample were from a similar socio-economic background (a subset of self-selection bias: all children of professors or students at Stanford)

Indeed, when Typer Watts replicated the study he found that:

- The correlation was 50% smaller than the original test
- The correlation almost vanished when taking into account intelligence and family background

Not The Researchers' Fault

The marshmallow test is actually an interesting and important study, and the authors are good scientists. Shoda, Mischel, and Peake cautioned readers about the limitations of their findings already in their original study.

They warned about the small sample size, the risk of over-generalizing their results, and the fact that *always* delaying gratification is also not an effective strategy.

The Truth

The ability to delay gratification, as one aspect of controlling impulses, is an important factor in success in *safe and stable environment* and when future returns outweigh the wait. But the best strategy can change depending on context and the individual.

In general, a complete lack of impulse control and short-term gratification instead undermines long-term success, and is associated with psychopathy.

#4. Ego Depletion / Finite Willpower

The theory behind ego depletion is that we all have a limited amount of willpower, and the more we use it on any given day, the less we have it.

Based on this theory, plenty of self-development resources claim that "scientifically", you should avoid "wasting" your willpower.

The theory was also expanded to include decision-making as a finite and limited resource connected to willpower. That's why some pundits recommended people do like Steve Jobs and wear the same clothes every day: you save up your mental resources.

Why It's Pop Psychology

Recent studies have thrown a spanner in the works for the ego depletion theory and challenged the whole theory.

A multi-lab replication experiment found the effects of ego depletion to be extremely small with "zero" included within its confidence interval.
A series of meta-analytic tests found little evidence that willpower is based on a limited physical or psychological resource.

Confirmation Bias

The ego-depletion theory has been a big thing in psychology.

On trial here was not just a single paper or study, but a whole overarching concept that seemed to have been repeatedly confirmed and was widely accepted.

It has led some scientists and some publications to call into question whether our current scientific system based on publications is not distorting scientific progress.

The Truth

Part of the issue is that, as Baumeister himself noticed in his original paper, there are no direct measures of willpower's limited resources, and the indirect experiments we must rely on are liable of being "polluted" by other intervening factors.

For example:

- Participants might arrive with the idea of "owing" the researchers some effort, and then "take it easy" after they feel they've given enough
- It's not always easy to isolate how people's changing *mood* impacts their tenacity (ie.: is giving up early a consequence of depression, sagging self-esteem, or is it because willpower is limited?)
- With some tasks giving up might actually be the most rational and smart thing to do

There can be ways to limit each of these factors, but not all studies have successfully done so.

A recent analysis of both sides of the argument finds no compelling evidence for either the ego depletion theory or the negation of willpower as a limited resource.

And of course, there is the good old placebo effect.
This study finds that ego depletion takes place, at least partly, based on whether people *believe* willpower is limited or not.

Identity may also play a role. Such as, the more willpower you display, the more you create a self-identity of someone who sticks with his commitments. And this "identity approach" could reinforce the "muscle" aspect of willpower.

That said, it's probably a smart approach to make your difficult but healthy habits as easy as possible (ie.: don't have colas in your fridge) and your easy but unhealthy habits as difficult as possible.

#5. The Stanford Experiment

The Stanford Experiment is a classic of social-psychology research.

Part of the reason it's so popular is that the "human darkness" that it purports to lay bare captures people's imagination like a magnet.
The idea that we're all a step away from becoming cruel, soulless victimizers makes us all scared and excited at the same time.

In a nutshell, it markets and sells well.
If you need any proof, the "Stanford Experiment" has its own website and it spawned movies, documentaries, and popular YouTube videos that purport to show the "untold truths" of what really happened.

The "Stanford Experiment" is also Zimbardo's most famous experiment and much of his later work has been inspired by its results, including a TED talk and a book with a catchy name (ie.: "*The Lucifer Effect*").

Why It's Pop Psychology

The Stanford Experiment is pop psychology because the word "experiment" doesn't even belong there.

It's not a real experiment and Zimbardo himself admitted so:

> From the beginning, I have always said it's a demonstration.
> The only thing that makes it an experiment is the random assignment to prisoners and guards, that's the independent variable.
> There is no control group. There's no comparison group. So it doesn't fit the standards of what it means to be "an experiment."

And then, later on, sounding as if he wanted to defend himself:

> Is it a study with flaws? I was the first to admit that many, many years ago.

There is countless valid and legit criticism against the Stanford Prison Experiment though which go well beyond what Zimbardo originally admitted, including:

- "Coaching" for guards' worst behavior
- Demand characteristics bias (ie.: participants are likely to behave like they believe the researchers want them to behave)
- Prisoners faking their hysterical crisis

Zimbardo has been very vocal in personally replying to most of the criticism.
His replies rarely constituted a full rebuttal of the criticism, but to me, he often managed to convincingly take some of the sting off of them.

However, in a nutshell: the "Stanford Experiment" is pop psychology because it's not a real experiment and its results cannot and should not be generalized.

The Truth

There are little doubts that different social settings can elicit wildly different behavior from the exact same persons.
And social roles do affect people's behavior.

The realization that people can act evil and we must learn to cope with that evil is, after all, one of the founding principles of this website.

And that's the issue with some of the criticism of the "Stanford Experiment": some criticism seemed motivated by morals and ethics, trying to redeem human nature.
But denying that people -or at least *some* people- can become abusive in certain contexts and when given enough power is a denial of human nature.

To say it in Zimbardo's own words:

> SPE serves as a cautionary tale of what might happen to any of us if we underestimate the extent to which the

> power of social roles and external pressures can influence our actions.

And with that, I agree.
To be the wonderful human beings that we can all be, we must all also learn about our darkest drives and channel them into something positive.

#6. The 10.000-Hour Rule

In his book "*Outliers*" Gladwell popularized the "10.000-hour rule".

The "rule" says that to reach the pinnacle of any discipline and to become a master of any craft you need to put in 10.000 hours.

Since Gladwell's best-seller hit the shelves, the "10.000 rule" spread like wildfire.
It was simple and catchy. It removes natural talent from the equation and puts outsized success in everyone's grasp.

Even reputable publications fell for it.
The picture below is taken from the National Geographic article:

There is only one little issue: it's not true.

Why It's Pop Psychology

There is no 10.000-hour rule.

Malcolm Gladwell is an incredible writer and an intelligent man.
But while his books make for entertaining reads, they're not always accurate and nuanced representations of reality (see "*most overrated books*" list).

With the 10.000-hour rule, I am not sure whether Gladwell actually misunderstood the research or gave it a simplified interpretation to make it more appealing to the masses.
And I don't know which one would be worse.

But Anders Ericsson, the author of *Peak* and the researcher whom Gladwell misquoted explains why Gladwell got it all wrong:

1. People variable: to achieve mastery some will require less time, some more

2. Field variable: the competitiveness of the field has a strong correlation to how hard you need to train to reach the top
3. Quality variable: time matters, but *how* you train is equally, if not more, important
4. And finally, there is no "magical" threshold that corresponds to 10.000 hours

The Truth

Albeit Ericsson leans into "nurture" and embraces the idea that training trumps everything, genes and personal predispositions likely play a major role as well.

Hence, to maximize your chances of success and get the biggest bang out of your training, choose a field you enjoy, a field in which you have all the cards to be successful, and then focus not only on how long you train but also on *how* you train.

#7. (Subliminal) Behavioral Priming

Priming says that exposure to one stimulus will later influence people's perception, response, or behavior.

It was an exciting discovery for psychology that semantic priming, such as simple words, could prime behavior *subliminally*.
That opened up a lot of doors to several different kinds of possible behavior manipulation and, of course, drew a lot of attention: the original paper by Bargh et al. has been cited thousands of times.

If you have ever heard about people who moved noticeably more slowly simply because they assembled words related to old age, then you have read about the original priming research.

Bargh's research has been widely accepted for good and made its way into the work of highly respected authors such as Daniel Kahneman (*Thinking Fast and Slow*) and Robert Cialdini (*Influence* and *Pre-Suasion*).
More psychology popularizers today still propose 'influence tips' based on priming and sound 'scientific' by quoting various papers.

BBC even made its own video research on priming:

And that's without even considering the hundreds of other authors who teach how to change people's minds and actions with "subliminal priming". All based on science :).

Again, there was just one minor detail: the whole premise was resting on shaky scientific ground.

Why It's Pop Psychology

There were previous failed confirmation attempts, but it all started in earnest in 2012 when Doyen and colleagues failed to replicate Bargh's original results.

Bargh pushed back on the initial criticism.
Another article he wrote, which was even fiercer, has now been taken down (but it's referenced by Ed Yong and Neurobonkers).
In my opinion, the simple fact that Bargh reacted as if the replication attempt was a personal attack, does not do him honor as a scientist.

But the scientific community was worried.
In that same year Daniel Kahneman, who dedicated an important part of his "*Thinking Fast and Slow*" to subliminal priming, issued an open letter about the issue calling for more clarity in the priming research.
In that letter, Kahneman was still overall optimistic about the existence of subliminal social priming effects and, he later admitted, he was hoping that the original researchers would bolster their case with stronger evidence.
But that didn't happen.

And as time went by, the pendulum started moving more and more toward the skeptics.

And in 2017 Schimmack et al. writes:

> Readers of "Thinking Fast and Slow" should not consider the presented studies as scientific evidence that subtle cues in their environment can have strong effects on their behavior outside their awareness.

In 2017 Kahneman replies and agrees.
He writes:

> I placed too much faith in underpowered studies

And he goes on:

> I knew, of course, that the results of priming studies were based on small samples, that the effect sizes were perhaps implausibly large, and that no single study was conclusive on its own.
> What impressed me was the unanimity and coherence of the results reported by many laboratories.

And then on the reasons why he fell for it:

> However, I now understand that my reasoning was flawed
> (…)
> Unanimity of underpowered studies provides compelling evidence for the existence of a severe file-drawer problem.

Basically, Kahneman is saying here that scientific journals have been guilty of confirmation bias and skewed the results towards a major over-representation of social priming.

The Truth

Priming as a general concept is valid.
But subliminal social priming that changes our behavior is much less powerful than originally estimated.

Says Kahneman:

> I still believe that actions can be primed, sometimes even by stimuli of which the person is unaware.
> There is adequate evidence for all the building blocks: semantic priming, significant processing of stimuli that are not consciously perceived, and ideo-motor activation.
> I see no reason to draw a sharp line between the priming of thoughts and the priming of actions.

But that does not change the fact that subliminal priming in the form that Bargh showed in his original study might not exist at all.

Another issue with lexical priming is that available studies seem to show that it's only very short-lived.
So it's unlikely you could subliminally prime someone and visibly change their behavior in either the medium or long term.

#8. Facial Feedback Hypothesis

You probably heard this one from Tony Robbins and similar self-help gurus.

The "facial feedback hypothesis" says that if you force yourself to smile, you will become happier.

The original experiment in 1988 had research subjects hold a pen in their mouth while watching funny cartoons. The subjects who held the pen rated the cartoons significantly funnier than the control groups.

From there, a whole host of implications mushroomed, including the idea that to be happy, you just need to force more smiles.

Why It's Pop Psychology

A much larger study in 2016, failed to replicate the original findings.

The Truth

The fact that the original study failed does not mean that body movement cannot change how we feel.

It's indeed not only possible but likely that movement (or lack thereof) affects our mood in a multitude of ways.

The indictment here is for the original "facial feedback experiment", not the whole idea of body movement.
So if you're down don't force yourself to smile, but do consider a walk in the green side of town.

Or, similar to the argument I make in "self-help myths", asking yourself questions and forcing yourself to come up with positive answers will also work well (Senay et al., 2010).

And of course, as a sociologist, I can highly recommend this simple solution: people. People and positive relationships are the best things you can do for a happy life (Harvard researchers proved with the longest study of humans' adult life).

#9. Growth Mindset

A growth mindset says that if you believe you can grow, you will seek and enjoy challenges and, as a consequence, you will grow and expand.

It's a bit like a self-fulfilling prophecy and the opposite is also true: if you believe your traits are unchangeable you will avoid challenges and you will never grow and improve.

Neither Dweck's TedX Talk nor her book "*Mindset*" were smash hits among the general public, but they led to major investments and training in schools all around the world.

Why It's Pop Psychology

Dweck suggests in her original paper that a growth mindset can be taught.
But Li and Bates' effort failed to replicate Dweck's initial results.

Carol Dweck replied that these experiments are difficult to run, but Nick Brown makes a good counterpoint saying that if experiments are so difficult to replicate, why does Dweck think pupils can easily learn a growth mindset from school teachers?

Carol Dweck's woes run even deeper though.
Nick Brown went over the data and found out that:

- 17 out of 50 GRIM check inconsistencies in the means
- Several numbers were entered incorrectly into the report
- One participant was dropped without any mention of it
- Ambiguous scores were considered 0.5 (ie.: a mark between a 4 and 5 was counted as 4.5)

Brown said Dweck was exemplary in sharing her data and owning up to her mistakes, but doubts remain and Brown himself says he remains skeptical.

An equally troubling issue for Carol Dweck as a scientist is a 2016 paper titled: "*What Predicts Children's Fixed and Growth Intelligence Mind-Sets? Not Their Parents' Views of Intelligence but Their Parents' Views of Failure*)".

But when Dweck was questioned about the mismatch between the title and the content, she replied:

> We can see how the paper's title could have been misleading. The paper itself never claims to compare the effect of parents' attitudes to intelligence with their attitudes to failure and, most important, none of the key findings rest on this.

Dweck said she's "seriously considering changing the title", but it raises some question marks. Why mistitling it in the first place?

The Truth

A strategic, well-applied growth mindset is an important building block of personal power.
However, it must be calibrated to the situation and, sometimes, you may also want to hide it when you must instead display authority.

Read more:

- Growth mindset strategies

#10. The 3:1 Happiness Ratio

Barbara Fredrickson and Marcial Losada are popular psychologists in the emerging -or shall we say "exploding"- field of positive psychology.

Martin Seligman, former APA president and best-selling author of "Flourish" went as far as to call her "the genius of the positive psychology movement".

Of course, that does not say much to me from the moment I noticed how much Seligman, Csikszentmihalyi, and Fredrickson enjoy cross-referencing each other.

Why It's Pop Psychology

The math behind it doesn't add up, as Brown's paper shows.

They write:

> The lack of relevance of these equations and their incorrect application lead us to conclude that Fredrickson and Losada's claim to have demonstrated the existence of a critical minimum positivity ratio of 2.9013 is entirely unfounded.

Losada declined to reply while Frederickson's reply felt like defending the concept while conceding the math might have been wrong.

The Truth

Tipping points beyond which "flourishing" happens are highly unlikely, as Frederickson himself states.

And if there is a tipping point, how could one even generalize to a simple ratio?
How can you generalize without accounting for the severity of thoughts, for example?
Sure the negativity of "I want to kill myself to stop the pain" can't be the same as "shoot, I didn't get 1st place this time", right?

However, the jury is still out on whether the positives need to far outweigh the negatives to be truly happy.
If Gottman's work is of any help, then that may be the case.

#11. Grit

This is Angela Duckworth's "achievement equation", as taken by her best-selling book "*Grit*":

> **Talent x Effort = Skill**
> **→**
> **Skill x Effort = Achievement**

An "achievement equation" where effort plays the lion's share was bound to draw attention in the self-help industry that loves a positive 'can-do' message (something we agree with).
Duckworth collected awards and delivered a popular TED talk:

> **Duckworth**: (17 million views explaining 'Grit')

Why It's Pop Psychology

Much of Angela Duckworth's material for her concept of "grit" is based on her research at West Point, where she found out that the "grittiest" cadets were the most likely to get through the course.

How much more likely?

98% of the grittiest cadets made it through the extremely physically and mentally demanding tests (Duckworth stressed how tough it is).
And the rest?
95% of *all* cadets made it through.

A modest difference.
But the bigger issue is this:

Grit is Rebranded Conscientiousness

The researchers of this meta-analysis of the grit literature pointed out that grit is, in essence, similar to other psychological traits that have already long been studied and researched.
Ph.D. psychologist Vitelli in Psychology Today expands on simple conscientiousness to also include industriousness, achievement need, and self-control.

With all these well-known psychological traits, was there a need to add a "new" one?

Jordan Peterson, before becoming famous himself and writing "*12 Rules For Life*", wrote on Quora:

> Duckworth failed to notice that they had re-invented a very well documented phenomena, that already had a name (and, when they did notice it, failed to produce the appropriate mea culpas. Not one of psychology's brighter moments).
> A physicists who "re-discovered" iron and named it melignite or something equivalent would be immediately revealed as ignorant or manipulative (or, more likely, as ignorant *and* manipulative), and then taunted out of the field.
> Duckworth? She received a MacArthur Genius grant for her trouble.
> (…)
> It's crooked psychology.

Crede commented that “grit” and “conscientiousness” are so closely interlinked that “grit” is a case of old wine in a new bottle.

Duckworth later stated that she likes to think of “grit” as a member of the conscientiousness family but with its own predictive power.
But even that has been called into question.

Two different studies (with 213 students and 498 students) found conscientiousness to be highly predictive of results but not grit.

But most of all, a meta-study from 88 different and independent samples shows that grit is “only moderately correlated with performance”.

Grit is Genetically Inherited

While much of the success behind the concept of “grit” stems from the idea that it defies “talent” and you can cultivate it, a recent study in the UK shows that grit might be a highly inheritable trait.

Analyze if Persisting Makes Sense

As Bazelais noticed in his own study, which failed to replicate grit (Bazelais et al., 2016), tenacity might even be counter-productive when results are not forthcoming.
At that point, you might be better off cutting your losses and moving on to something else.

Blindly following the ethos of “grit” might compound loss aversion bias to achieve even bigger… *Losses*.

Grit is important. It’s crucial. But should always be mixed with a critical analysis of your results.

The Truth

Grit succeeded because it was framed as empowerment for the ambitious underdogs, a message we support.
Duckworth is quoted in this New York Times interview saying that “grit beats the pants off I.Q.

> **Grit beats the pants off I.Q.**
> -Angela Duckwort

This is where we diverge.
Personal power shouldn’t be used to downplay the equally important role of other variables. That’s not empowerment, it’s twisting reality. And we find it babying towards the audience: an empowered and agentic audience needs truth first to succeed in the world.

Russell Brand Flirting Techniques: Seduction Analysis

Lucio Buffalmano · 4 May 2019 · Archived copy · Original

Russell Brand is one of the most famous public figures that people connect to flirting and seducing.

Of course, flirting is not sleeping, and we should not confuse reactions with results.

But Russell Brand also gets results, so it's well worth analyzing his flirting and seduction styles.

Contents

- #1. Push – Pull
- #2. Destroy Male Competition
- #3. Dominate Socially
- #4. Dominate Sexually
- #5. A Feminine Touch
- Downsides of Russell Brand Flirting Style
- Defeating Alpha Stereotypes
- Jester Dominance Style
- SUMMARY

#1. Push – Pull

Push and pull is a technique whereby you first make a compliment or a kind remark (the pull), and then you immediately push away -the pull-.

It's a great technique to build intrigue and build people up while, at the same time, not giving your game away too quickly.

It's best used when:

1. She's not yet attracted to you (and a compliment might seem like you're putting her on a pedestal)
2. You are not coming across as a high-value man she respects (and you risk being friend-zoned Mr. nice guy with the compliment)
3. The compliment is a big one and she's at a loss for words (and you want to avoid those moments of awkwardness)

And since Russell Brand often overdoes it with compliments and romance, it's indeed very good that he uses push-pull as much as he does.

Here are some examples:

#1.1. Inverted Push – Pull

Russell Brand also does the opposite, such as when he makes a big joke at the woman's expense and then reels her back in with kindness or touch.

That's very good, and I actually recommend men use it much more often than the standard push-pull because you end on a positive note and you end with the two of you closer.

This is an example of an inverted push-pull.

#2. Destroy Male Competition

Russell Brand always positions himself as the man of the revolution against the greedy ones who govern and control us.

His alternative is a more collectivistic society, a brotherhood of men. And that starts with more equality.

That's interesting because he doesn't seem so hell-bent on equality when he deals with other men.
Instead, **he hogs all the attention and never fails to marginalize other men to get the female attention all focused on him**.

Here are some examples:

Contrary to Ben Shapiro, I don't think that Russell Brand does it on purpose to unsettle all other men.
He does the same with women, after all.
But the result is the same: when Russell Brand walks onto a stage, other men tend to disappear.

#3. Dominate Socially

One of the main reasons why Russell Brand attracts all the women around him is because he dominates social interactions.
And with that, he looks like the alpha male leader that women so desperately want.

To be precise, Russell Brand has a clownish style of social dominance that does not work on all occasions, but whenever it works, it's social dominance nonetheless.

He especially leverages his "jester powers" to change topics as he pleases. It's difficult for hosts and other men to counteract because jesters reside outside of social norms, and they can do and say things that other men cannot do and say.

Plus, the public is often laughing at Russell Brand's antics, which would make it very difficult for anyone to confront him without looking like an antisocial brute.

That allows Russell Brand to do and say almost anything he pleases. And he uses it to his full advantage to control the interactions as he pleases.

#4. Dominate Sexually

In the old days of kings, jesters could not exaggerate with sexual jokes because, well, the king was the king and he had the first pick.

But today, few people have the balls to be sexually direct, which leaves Russell Brand in a class of his own, one of the exceedingly rare men who do flirt and who can do it well

Russell Brand plays the predator-prey dynamic in his interactions with women.
It works well because it's a game of course, it's flirting, she into him, and the dynamics amplify attraction as they amplify masculine-feminine polarity.

Off-Handed Remarks

Russell Brand likes to go overboard and catch women off guard. The more they're lost, the more power he wields.

And since women are attracted to men with power, his sexual dominance coupled with his social dominance makes Brand supremely seductive.

Also read:

- **How to flirt with texts**

#5. A Feminine Touch

Finally, I would like you to notice that Russell Brand presents a touch—or even more than a touch—of femininity in his behavior.

Starting from the way he dresses—catchy, provocative, and super stylish—he looks borderline gay.
His voice is slightly high-pitched, and his movements often resemble those of a gay man as well.

You never want to be too feminine.
But a touch of femininity goes a long way when it's offset by an otherwise masculine and attractive frame.

Russell Brand reminds me of dandyism and of glam rock superstars like Axl Rose.

Don't believe me?
Take a look at these images!

Note: unless you also have a similar alternative and dandy style, never go as feminine as Russell Brand does, as it would be too much for most men.

Downsides of Russell Brand Flirting Style

There are major downsides to Russell Brand's flirting style though.

As a matter of fact, I'm not a big fan of Russell Brand's style.
It's not the pinnacle of seduction and I think many guys misunderstand it because they look at the reactions of women and then think "oh wooow, he soooo good".

However, equating reactions with results is a typical beginner's mistake.

Of course, we can probably guess that Russell Brand also gets results, but let's not forget that it's not just flirting and seduction style that produces results.
There are other important variables including, for example:

- Fame
- Looks
- Money
- Intelligence

And Russell Brands excels in all of them.

We could probably compare Russell Brand level of attractiveness with Johnny Depp.

So which style is better, Depp or Brand?

The difference between Brand and Depp is that Russell Brand gets laid by chasing hard and that makes him lose quite some power.
A man with a style more like Jonny Depp can make his seduction work more like a dance where both the man and woman contribute. Or, since Depp is so attractive, he can also get the woman to do most of the chasing.

That's why, ultimately, a seduction style like Johnny Depp can get the woman to invest more, which in turn makes her more attracted, and which in turn gives more power to him.

When Russell Brand Loses Power

Another problem is that his style can isolate him from the people around him, who sometimes can form a coalition of "normal people" VS the oddball.

And they can end up not taking him seriously, which vastly reduces the social power of the jester.

See an example here:

https://youtu.be/ynUjo99Gzbk?t=440s

See?
Russell Brand took the joke very far out there and, at that point, they all socially coalesced against him.
They started speaking of him as "he" as if he was an animal that was there to entertain them.
That made Russell Brand look much less impressive than the dominant force he was just a few seconds prior.

And that's the risk that all jesters run when they take it too far: normal people coalesce and they end up looking like jesters that are being stupid for everyone's pleasure.

And that point, they lose social power and also seductive power.

Defeating Alpha Stereotypes

In a way, I like Russell Brand.

He shows everyone that you don't need to chase the worst aspects of toxic masculinity, that you can drop the alpha posturing, and that you can *still* clean it.

Because here is a guy who defies a lot of the hyper-masculine stereotypes of the red pill.
He behaves somewhat gay, laughs all the time, talks fast, and does not lift… And he slays it (attention: I'm not saying you should not seek power, lift, or be masculine: do all of those. I'm saying it's not necessarily needed for success).

Jester Dominance Style

In my guide on the dominance archetypes, I omitted a few styles that I left out for the customers of Power University.

One of the archetypes I left out is the jester.

And from a social point of view, that's exactly who Russel Brand is: a jester.

SUMMARY

From a seduction point of view, Russell Brand relies heavily on flirting, direct sexual talk, and heavy innuendos.

It works great for him both because he's good at it and because he's very attractive.
Albeit any feedback should be personalized, most men could improve by implementing more flirting and by better learning female psychology.

But because of its major downsides, I wouldn't recommend most men to imitate Russell Brand's style.

The Undoing Project Summary: Power, Envy, & Friendship (Book Review)

Lucio Buffalmano · 5 May 2019 · Archived copy · Original

The Undoing Project tells the story of the friendship between Daniel Kahneman and Amos Tversky, the duo who brought psychology (back) into economics and deepened our understanding of psychology, economics, and decision-making.

TPM Strategic Note: How envy and power dynamics can undermine relationships
This book is often read as the story of how Kahneman and Tversky only. But TPM's key takeaway is more uncomfortable. Even with a shared mission and two high-IQ brains, **power dynamics still determine relationship outcomes.**
This proves that "Rationality" (which they studied) cannot override power dynamics, 'power accounting', and social status consideration.

Notes

About the Protagonists:
Kahneman and Tversky are psychology researchers who have long worked together and who helped usher in a new era where economics overlaps with psychology.

About the Author:
Michael Lewis, the author, is an expert storyteller, and he seeks to mix science with the friendship and feelings that ran between Kahneman and Tversky.

Injecting Psychology Into Economics

The narrative often goes that before behavioral economics, people looked at humans as perfectly rational and all making rational decisions (the homo economicus theory).

That is not completely true: the early economists often tempered their economic models and theories with psychology and sociology.

It is true however that in the post-war Western world, most economics was based on the homo economicus paradigm, which saw men as perfectly rational.
And it's that mistaken assumption that Kahneman and Tversky proved wrong beyond any reasonable doubt.

No, humans are not rational.
They are quite irrational instead and, sometimes, they are predictably so (also read: Predictably Irrational by Dan Ariely).

One crucial reason why humans are irrational is that we don't use all the information available but instead use heuristics to jump to (often wrong) conclusions.

These are some of the most important heuristics:

Heuristics Of The Mind

Heuristics are cognitive shortcuts that we use to make decisions.
You can check out Daniel Kahneman's own book "*Thinking Fast and Slow*" for more, but here is what stood out in "*The Undoing Project*":

- **Availability**: we think that what's easier to remember is also more likely to happen (but that's seldom the case)
- **Endowment bias**: once you take ownership of something, you value it more and you tend to focus more on the positives
- **Hindsight bias**: we rationalize events after they happen and we assign them meaning and causalities where there is probably much more randomness
- **Regression to the mean**: trainer of Israeli fighter pilots believed that praise was ineffective because pilots performed more poorly right after praise, and they believed that criticism was effective because pilots would perform better after criticism. What was happening was a simple regression to the mean (ie.: it's unlikely one will perform exceptionally poorly or exceptionally well several times in a row)
- **Framing**: how you pose a question will influence the answer (for example if you say "10% chances of loss" VS "90% chances of victory")
- **Memory distortions**: we remember mostly how things begin and our memories are mostly dependent on how things end. What happens in the middle matters much less (for more details read "Pre-Suasion" and "Influence" by Cialdini)
- **Loss aversion**: we are more sensitive to losses and lacks than we are to gains and what we already have (but it inverts in the case of very long odds, which is why we buy insurance and lottery tickets).
  There are evolutionary reasons for that as Tversky said:

> **Happy species endowed with infinite appreciation of pleasures and low sensitivity to pain would probably not survive the evolutionary battle**
> Amos Tversky

Edit: Not true on loss aversion
And subsequent research showed that gain frames can work better, depending on context. See more in the *Rutgers Handbook of Persuasion*

For more on heuristics, also check the wonderful:

- Fooled by Randomness
- The Black Swan

We Maximize Mental Happiness, Not Utility

When people make decisions they don't seek to maximize chances of success (utility) but they seek to maximize emotional states (regret and happiness).

We owe that wisdom to Kahneman and Tversky who devised studies to measure our regret-maximizing tendencies.

These are a few tenets of regret-avoidance:

- We regret what we have done more than what we have not done (that can help explain decision paralysis)
- We regret more when we chose to do something different or "out of the ordinary"
- We regret our own actions more than the actions of others
- We regret losses far more when we know we were close to succeeding

Why so?
Because, Michael Lewis speculates, there is "less to undo" when we were close to achieving our goal and so it becomes easier to think of all the small details we could have changed to succeed.

How Regret Impacts our Lives

It was particularly interesting to notice that Kanheman resisted changing flight tickets in fear of something bad which could happen.
Basically, he was trying to avoid regret by anticipating regret.

Crazy stuff, and that's why **to live a better life we must learn our biases**, and then eradicate them or work around them.

What Looks Random Seems More Random

The birth order of children's gender (B for boy, G for girl) in the following two sequences is equally likely:

- G B G B B G
- B G B B B B

But people would say the first order is more likely because the second sequence, with five boys, does not look like the proportion in the general population.

And when it comes to birth order, these two sequences also have the same likelihood:

- B B B G G G
- G B B G B G

But again most people said the second was more likely.

Gambler's Fallacy

I still remember many years ago a friend of mine saying that flying was safer right after a plane crash.

Yeah, sure!

That's an example of a gambler's fallacy, such as believing that things "even themselves out by themselves".
For the same reason, people believe that after a coin lands on "head", then it's more likely to land on "tail" right after.

Obviously, that's not the case because the coin does not have its own initiative to willingly even things out.

Large Numbers VS Small Numbers

Most people believe that the law of large numbers applies to small numbers as well.
Even trained scientists often fail to understand that smaller populations are more likely to exhibit more variations and extremes and that the smaller the sample, the less likely it was that it would mirror the general population.

This is funny since generalizing the results of small populations is one of Kahneman's major mistakes when it came to priming (also read: pop psychology myths).

Don't Jump to Conclusions

This one always drives me crazy.

I can accept it from random people, but when my own parents jump to conclusions through (likely meaningless) correlations I struggle to hold back.

Seeing correlations where there might be none can give rise to whole processes of over-prescription.
For example, a doctor prescribes antibiotics, sees that the patient improves, and keeps prescribing antibiotics.

But the patients would have likely improved anyway.
And for all we know, they might have improved at the exact same rate.

As Darren Huff says in "How to Lie With Statistics":

> A cold properly treated will disappear in 7 days. Left on its own, it will fester for a whole week

We Need Evidence-Based Medicine

Because of the above reason and because of all our irrational shortcuts, we need more evidence-based medicine and more evidence-based decision-making.

It's been documented indeed that in the past doctors kept suppressing arrhythmia in the belief that it helped.
Turned out, research showed that it harmed patients.

Our Irrational Linking of Similarities

We have interesting and irrational ways of comparing and grouping things and it is not compared to the actual distance between things and concepts as it was previously believed.

New York VS Tel Aviv

For example, people think that 103 is similar to 100, but 100 is not similar to 103.
And people think that Tel Aviv is a bit like New York but New York is not like Tel Aviv.

What happened was that New York had more features in people's minds so Tel Aviv matched New York.
But people had few features of Tel Aviv in mind so New York didn't match Tel Aviv nearly as well.

We Compare by Comparing Features

When people link or choose, they compare features.
And features can become more or less prominent depending on how you present them.
The removal of features is also a feature, which is why a 3-legged dog is more similar to another 3-legged dog than to a 4-legged dog in spite of a 3-legged dog sharing the same feature with a 4-legged dog.

Because we only compare features that first come to our mind, it's possible that we choose coffee over tea and tea over chocolate but then prefer chocolate over coffee.

Groups Increase Alikeness

And we think that a banana is similar to an apple not because they're really similar, but because we grouped them into the "fruits" category.

There Are No Heroes: Only Struggling Human Beings

If you hear today the name of Daniel Kahneman you will probably think of an ambitious, super smart, best-in-class scientist.

Kahneman is a sacred cow in psychology.
And he probably deserves to be.

But what I liked most about "*The Undoing Project*" is that it puts scientific achievements back into perspective.
It's the history of two humans, just like everyone else.

And they had their own base feelings of resentment, jealousy, and envy, and, as well, were not very good at coping with the power dynamics between them.

Here is what Kahneman said, referring to their straining relationship:

> I am very much in his shadow in a way that is not representative of our interaction . . . There is envy! It's just disturbing. I *hate* the feeling of envy . . . I am maybe saying too much now

He didn't say too much, in my opinion; he just said the truth.
But sure as hell, when you say, "I am maybe saying too much now," then everyone thinks you are.

Wisdom Pills

- **Don't fantasize and envision what can really happen**

Daniel Kahneman has a rule of not fantasizing about achieving what he can actually achieve.
Because when he fantasizes about it, he loses his drive to make it happen.

You might want to consider doing the same.

Successful people are successful in all fields

Beginning his career Kahneman was tasked with looking for the different personalities that would be successful in the different fighting forces.

But there were no “pilots personalities” or “infantry personalities”.
What made one person successful in one branch also made him successful somewhere else, including in business.

Notice though that the results of the most successful personalities were only loosely correlated with education and intelligence

Quotes

On the games that people play in academia:

> And yet, the titles that he and Danny put on the papers were inscrutable.
> They had to play, at least in the beginning, by the rules of the academic game, and in that game, it wasn’t quite respectable to be easily understood.

The author then goes on to poke fun at the titles that researchers choose, and he’s actually on point with that.

On human irrationality and heuristic-driven thinking:

> Man is a deterministic device thrown into a probabilistic universe. In this match, surprises are expected.

On positive thinking (or at least, avoiding negative thinking):

> When you are a pessimist and the bad thing happens, you live it twice, Amos

On evolutionary psychology as a science (please note: I wholly disagree with that quote):

> Listen to evolutionary psychologists long enough, and you stop believing in evolutionary psychology

On hindsight bias and complexity:

> This ‘ability’ to explain that which we cannot predict represents an important flaw in our reasoning.
> It leads us to believe that there is a less uncertain world than there actually is.
> (…)
> The fact that we couldn’t (predict the future) is taken as an indication of our limited intelligence rather than of the uncertainty that is in the world

A new definition of nerd:

> He suggested a new definition of the nerd: a person who knows his own mind well enough to mistrust it

On risk aversion:

> **Risk aversion amounts to a fee that people pay, willingly, to avoid regret. A regret premium**

CONS

- **A bit disjointed: biography, psychology, or history of friendship?**

I found “*The Undoing Project*” to be a bit disjointed. If it wanted to sit in between a biography, a psychology text,

and the history of a friendship from its emotional point of view, then it did so a bit awkwardly.

And it's not Michael Lewis fault; it's simply very difficult to combine all three.

- **War stories slightly biased**

As I explained in my reviews of "Extreme Ownership" and "The Dichotomy of Leadership", I am not a big fan of people profiting from wars and/or telling war stories from a one-sided perspective.

"*The Undoing Project*" made me feel like it spoke of wars with a slight pro-Israel bias.

- **The story of a petty race towards the Nobel Prize?**

"The Undoing Project" feels like hyping the Nobel Prize. As if the Nobel prize was all that mattered, not the research or the deeper understanding of human nature.

I find it petty and distasteful.

- **The frog in boiling water myth**

It's a small detail, but I can't stand fake popular myths, and Michael Lewis perpetrates the lie of the frog in boiling water (read more in: self-help lies).

PROS

As a social psychologist who loves psychology, sociology, and understanding people, I thoroughly enjoyed "*The Undoing Project*".

Some of the highlights for me:

- Good psychology wisdom
- Great humor
- It reminded us all that we're all humans and we must work to overcome envy and jealousy
- It reminds us all that relationships can be difficult, but they can be easy if know how to work on them

Overall, there are far more "pros" than "cons".

Review

I have long been interested in the intersection of economics and psychology.

My master's thesis was a social-psychology-focused exploration of the 2007-2008 financial crisis (extract here and the Italian version of the behavioral economics research on Academia.edu).

So I was really looking forward to listening to "*The Undoing Project*". And I wasn't to be disappointed.

"*The Undoing Project*" reads a bit like a biography, somewhat like a novel and sprinkles well-researched concepts of behavioral finance all over.

Somebody might not like that "a bit of everything" also means "nothing in-depth".

But if you have the remotest interest in psychology and/or behavioral economics, then "The Undoing Project" is a must-read.

Practical Female Psychology: Summary & Review

Lucio Buffalmano · 6 May 2019 · Archived copy · Original

"*Practical Female Psychology for the Practical Man*" is a dating and relationship book for men in which the authors explain the psychology of women in dating and relationships from a "manosphere" point of view.

Contents

- Summary
  - #1. Women Are Manipulators
  - #2. Screen For Sex Drive & Self-Esteem
  - 3. Female Logic Is Schizophrenic
  - #4. Women Divide Men Into Providers & Lovers
  - #5. The 7 Female Archetypes
- Real-Life Applications
- Lucio's Insights & Criticism
  - #1. Made-Up Evolutionary Biology
  - #2. Misunderstands The Madonna-Whore Dichotomy
  - #3. Some Misunderstanding of Dating Economics
  - #4. Relationships and Seduction Are Not the Same
  - #5. Generalizations
  - #6. Some Weak Advice For Men
- PROS
- Review

Summary

About The Authors:
The three authors write with pen names or first names only.

Joseph has read heavily on seduction since his breakup, and, as he said, he took several David DeAngelo seminars
⍰⍰♂ **Lucio's note**: DeAngelo was a forerunner the PUA movement, although I found his products like "*Sexual Communication*" and "*Advanced Dating Techniques*" lackluster at best.

Franco seems to be working as a psychiatrist and dating and relationship coach.
⍰⍰♂ **Lucio's note**: His blogs are interesting, with several gold nuggets, although with some common limitations of similar authors, including room for improvement in science, accuracy, and logic. Some ethical red flags as well, with an only partially accurate post vaunting the psychopath's approach to dating

Joseph W. South has little reliable information online and he wrote for a PUA/dating website.
⍰⍰♂ **Lucio's note**: looking at his Facebook and Twitter (later suspended), he seems politically alt-right leaning, including some tweets of dubious scientific depth.

Guy breathes out smoke to 'prove' masks 'don't work'

#1. Women Are Manipulators

The authors say that women are manipulators by nature.

Manipulation is not always necessarily bad, though, and the authors say that manipulation can sometimes also support the relationship or the child's welfare.

But some other times it will undercut the man, and to avoid being taken advantage of (and to avoid having her attraction tank), he must stop all harmful manipulation attempts.

The authors quote Games People Play, but go much further than that to list and explain the following games women play:

- Double bind
- Bait and switch
- Ambush
- Jealousy
- Rich descriptions (this one made little sense to me)
- Pouting and whining

For practical examples, read:

- **Games women play**

And, most of all:

- **Manipulative games women play**

> 10 Nasty Games Women Play (Women, Stop These!)

Lucio's note: it's life that promotes manipulation, not 'womanhood'
They're probably right, but I'd contend that it's life that inherently develops manipulation as one of the many forms

of control.
Any form of life that better controls the environment beats those that don't. Men may use more direct and forceful approaches compared to women, but effective male manipulators still beat (and out-reproduced) those the poor ones.

#2. Screen For Sex Drive & Self-Esteem

The authors categorize women depending on their sexual drive (high or low) and self-esteem (high or low).

I very much enjoyed the difference, but the self-esteem part seemed like a huge misnomer.
The authors are not really describing self-esteem but end up describing much broader qualitative categories such as "low-quality women" and "high-quality women".

3. Female Logic Is Schizophrenic

The authors say that at its core, female logic is schizophrenic.

Women with high sex drive present more female logic than women with low sex drive, and men should not try to repress the female nonsense because they would end up thwarting their very feminine nature.

Example:

The authors describe an example of Franco's wife jumping from one topic to another, forgetting about their movie date, and accusing him of enjoying being away from home.

Franco does not contradict her like most men would have done. And he doesn't even remind her of the movie date they had planned.
Instead, he goes along with her, and, as he notes, he missed a lot of movies like that.

Lucio's Note: Not a good idea to adapt to craziness
I disagreed with the example.
Most men would indeed do much better in relationships if they understood female psychology, that's true. But going along with her nonsense means falling into her frame. You relinquish power.
Better: let *her* conform to you.
Relinquishing leadership and letting her back out of jointly taken decisions is weak.

Also, read:

- **How women psychologically manipulate men in relationships**

> Female Domestication: How Women Control Men & Relationships

#4. Women Divide Men Into Providers & Lovers

The authors revisit a very popular topic in the dating literature: the difference between providers and lovers.

They say:

> in their hearts chicks love to love bad boys, but in their heads they know that nice guys make much better husbands.
> This Female Basic Conflict is a schizophrenic duality between a woman's need for survival, on the one hand, and her need to express her own sexuality, on the other.
> This creates a psychological condition whereby a woman's sexuality is necessarily ambivalent and conflicted.

The authors say that most women will manipulate men to become providers, which I also found quite true.

Also, read:

- **Lovers VS Providers (and Friends)**
- **Should you be a lover or a provider?**

> Lover VS Provider: How to Pick Your Best Strategy

In spite of one of the authors writing on Girlschase, I agreed that it's nonsense to tell men it's best to never pay for the date.
Indeed, I often got laid after having paid for a couple of drinks and I never noticed a major difference in results between paying and not paying. So I never much believed in that.

However, the authors also say that it must be congruent with who you are and what you believe.
You must not change your rules and "buckle under pressure" to pay or you will look like a chump. And I also agree with that.

#5. The 7 Female Archetypes

The authors also list and describe 7 different female archetypes who, they say, are on top of the archetypes Robert Greene lists in "*The Art of Seduction*".

Their archetypes mix sex drive with self-esteem and add on top:

- Good girls (more concerned about society's approval)
- Materialistas (care more about material possessions)
- Adventuress (thrill seeker)

All women have some materialista in them, and all of them will try to extract something from men.
So don't get angry when she shit-tests you and asks you to buy a drink.

I also wholeheartedly agree with the authors when they say that it's a good sign to have some materialista in them because it means they care about getting the best deal they can get (so stop complaining about female hypergamy).

To learn more about materialistas also read:

- **A goal digger guide**
- **Ho Tactics**

Real-Life Applications

- **Switch from feminine to masculine**

"*Practical Female Psychology*" has some solid content.
This is one of them with which I wholeheartedly agree (minus the schizophrenic part because there is nothing schizophrenic about it):

> Therefore, to increase sexual and emotional arousal within a woman you will need to learn to shift between two identities in an almost schizophrenic manner.
> At times you will want to talk to women in a very masculine way: directly, succinctly and logically. At other times, you will want to you talk to women in the same manner that a female friend might do.

Lucio's Insights & Criticism

I enjoyed reading "*Practical Female Psychology*" and I can also recommend it (as long as you keep your critical thinking hat on).

But I also deeply disagreed with the following:

#1. Made-Up Evolutionary Biology

I'm a *huge fan of evolutionary psychology* and it explains much of human behavior.

But there is a lot of made-up evolutionary psychology in manosphere corners.

These authors remind me of psychologist Daniel Kahneman, author of *Thinking Fast and Slow*, who said:

> The more I listen to evolutionary psychologists, the less I believe in evolutionary psychology

I'm afraid that "*Practical Female Psychology*" is like that, at times.

#2. Misunderstands The Madonna-Whore Dichotomy

Despite the author talking a lot about evolutionary psychology, they still failed to properly understnad the evolutionary basis of the madonna-whore dichotomy.

First, they fail to consider that the Madonna-whore dichotomy might make sense from a male perspective because **it's a great strategy to impregnate the easier women and marry the more faithful ones**.

And no, if you think 'all women are the same', that's empirically wrong.

If the authors themselves admit that women differ in sex drive and the likelihood of cheating and sleeping around, then the Madonna-whore complex serves an important male need (a point that Robert Wright also makes in "*The Moral Animal*").

Also, read:

- **Madonna-Whore complex**

#3. Some Misunderstanding of Dating Economics

The authors write:

> Basically, when a female has agreed to be in an isolated venue with a man, she has decided (at least subconsciously) that the male in question is superior in terms of genetic fitness, in comparison to all the other males in her proximity.

That's not really true: men and women pick partners also based on what they feel is their own sexual market value and how closely they think they match.
If that weren't the case, average and lower sexual market value folks would never pair up with anyone.
Also, read:

- **The dynamics of the sexual marketplace**

> The Sexual Marketplace: Overview of Intersexual Dynamics

#4. Relationships and Seduction Are Not the Same

The authors write:

> In a relationship, you are picking up the same woman, over and over and over again.

I believe the dynamics of seduction and relationships are very different.
Also, read:

- **Basics of relationship power dynamics**
- **How to maintain relationship power**

#5. Generalizations

The authors write:

> men who become physically unfit in relationships learn very quickly that many women have no compunction against kicking a man while he is down.
> As David says, she needs to feel that he is the same strong bastard she was initially attracted to, even when he is sick-in-bed with the flu.

Albeit this might be true in quite a few cases, it's dangerous to generalize like that and it provides fertile ground for the rampant misogynism that is common in red pill communities.

That being said, "*Practical Female Psychology*" is not a misogynistic book and the authors espouse a much healthier mindset.
They say:

> Our belief is that it's never appropriate for a man to expect altruism from a woman, only to appreciate a woman's altruism when she provides it

#5.2. Sweeping Generalizations With Little Nuance (or Science)

"*Practical Female Psychology*" quotes several sources, but many are pop-psychology and it ultimately lacks scientific backing and, in my experience, also real-life nuance.

For example, they mention "*The Female Brain*" to say that:

> Though females may train themselves to act like men, in reality they have a very deep biological urge to be talkative

"Deep biological urge" to be talkative?
That, plus referencing sources like "*Men Are From Mars, Women Are From Venus*" didn't help the authors win score extra authority points.

Also, this idea that "women are natural manipulators" as if men weren't, is misleading.
Also, read:

> Manipulation: Techniques, Strategies, & Ethics

#6. Some Weak Advice For Men

And I found some typical "alpha male caricature" stuff that ends up being more harmful than helpful.

Here is one example:

> **Wife**: Let's go out to eat
> **Man**: I like the way you think. Grab your coat and keys, you're driving.
> **Wife**: Where are we going?
> **Man**: (Spins her around) We'll know when we get there!

The authors say that men should learn that statements such as "let's go out to eat" are tantamount to "I'm bored, entertain me".

Which, sometimes… could be true.

And it might even be true that women are on average more childish than men.
But generalizing to *all* or even most situations is the fruit of the toxic masculinity mindset which wants to see

women as “silly and cute” and who are not worthwhile partners for a more serious discussion.

Of course, there are times when women love being treated as silly and cute.
But likely not in a matter-of-fact conversation about where to go for dinner (especially if she’s driving, doh!).
That’s silly of *him*, not of *her*.

Furthermore, if she “wanted to be entertained” and he’s going out to eat just to “make her play”, that’s really low-quality of him.
In the example above he is fully buying into her frame and relinquishing all his needs. A busy man shouldn’t have too much time for playing around.

Learn more about what a real alpha male looks like:

https://thepowermoves.com/alpha-male/

PROS

- **Some good psychology wisdom**

Although I heavily criticized “*Practical Female Psychology*” for its pop psychology and made-up facts, I also have to praise it for the many pearls of wisdom it presents.

I even took something away from our products here which is the greatest compliment I can make to the authors.

For example:

> Many pathological male reactions that can be observed within couple relationships are in fact a desperate defense mechanism, employed by men who have no skills with women.

This stuff is true, but it’s not what you will find in research, studies, or more scientific books like the ones from John Gottman.

- **Some humorous lines**

There were a few lines that really got me laughing.
For example:

> Female Integrity To many men, the very notion of female integrity is an oxymoron of the highest caliber. Right up there with “military intelligence.”

Review

Practical Female Psychology is an interesting book with unique takes you won’t find in any other relationship books. Some of these takes are valid and deep, while others are more questionable.

It reminded me a bit of “*The Rational Male*” and of Red Pill philosophy.

And by that, I mean that it has some top-notch, very insightful content, mixed with some nonsense, generalization, and unfounded personal conjectures that scream “bro-science / pop psychology“.

To recognize which is which you need some good personal experience with women and a good understanding of psychology.

This review of “*Practical Female Psychology*” will help you separate the wheat from the chaff so that you can safely read the full book and get the most out of it.

Whoever Fights Monsters: Summary & Review

Lucio Buffalmano · 7 May 2019 · Archived copy · Original

Whoever Fights Monsters (1992) talks about the psychological profiling of serial killers from the point of view of Robert Ressler, the man who coined the word "serial killer".

Contents

- Summary
- Quotes
- Applications For Profilers
- CONS
- Review

Summary

For this *Whoever Fights Monsters* summary, I will skip the gory bits of Ressler's crime descriptions and focus on the information that is more relevant from a psychological and psychiatric point of view.

#1. Sexual Maladjustment At The Root of All Serial Murderers

Sexual homicides are sexual in nature, but it's important to notice that sexual homicide doesn't necessarily mean that the murderer has had sexual intercourse with the victim (some of the murderers weren't even able to have sex with the women they killed)

The author says that serial murderers are characterized as sexual homicides because sexual maladjustment is at the root of all of them.

Ressler says:

> Sexual maladjustment is at the heart of all fantasies, and the fantasies emotionally drive the murderers

#2. Sexual Murderers Profiling

The most common profile for sexual homicides is: white, male, intra-racial (white on white or black on black), and in their 20s or 30s.

Ressler says that sexual murderers have troubled relationships with women.
They are unable to have and maintain mature, consensual sexual relationships.

Nearly half of their interviewees reported, never having had a consensual sexual relationship.
They were aware it was not normal and resented it.

Serial Killers Are Driven by Their Fantasies

Serial killers, the author says, are obsessed with fantasies.

They have unfulfilled experiences that become part of their fantasy and push them on toward the next killing.

#3. It Takes Time to Develop Psychosis Which Leads to Serial Murdering

The author says that homicides do not start earlier because it takes some time to develop full-blown psychosis, which eventually tips the scales in the killers' minds.

Paranoia-schizophrenia usually manifests in the teenage years, and then it takes 8 to 10 years to reach that level of

psychosis.

The author says that telltale signs like setting fires, animal cruelty, and assaulting teachers start in adolescence, but the mindset starts earlier.

#4. The Problems Start Early

The author says that behaviors that are precursors to sexual homicide have been developing since childhood.

Most sexual murders come from troubled families, with poor relationships with their mothers and are devoid of love and affection.

As children, they were not socialized into proper and non-proper behavior.
Importantly, they are also not rescued in the next developmental phase of pre-adolescence, and at the age of 8 to 12, their environment either did not improve or got worse.

Fathers in this pre-adolescent period are missing.

#5. Body Types Can Help With Profiling

Ready for a shocker?

Here it comes.

Cesare Lombroso, the early sociologist who said that criminals were more likely to be short, was ridiculed by my colleagues during my studies as a sociologist.
Well, Lombroso wasn't right, but he wasn't 100% wrong either.

Indeed, one of the most controversial assertions in *Whoever Fights Monsters* for today's standards is the correlation between body types and the likelihood of committing crimes.

Robert Ressler says that it's simple logic: introverted schizophrenics don't eat well.
They don't think in terms of nourishment and they skip meals. They also don't care about their appearances.
And the natural consequence is that they are scrawny and disheveled.

This paper also shows a correlation between crime and height, albeit remember that it's not anything about "height genes", but probably more a question of having fewer labor market opportunities.

#6. Organized VS Disorganized Offenders

Whoever Fights Monsters differentiates between organized and disorganized offenders.

Disorganized offenders are usually devoid of normal logic and tend to be less calculative and less calm when they're in danger of getting caught.
They often don't drive, and if they do, their cars tend to be in very poor condition.
They don't think in terms of hiding pieces of evidence.

Organized murderers plan their crimes and even get better with time. They tend to fit better into societies and have better social skills.
They drive their own cars, and they can lure victims to their places with a false feeling of safety.
Organized murderers are sometimes successful with women and have a string of sexual relationships, but they can't hold relationships for the long run. And they have tremendous anger towards women (also read: toxic masculinity) and, often, towards society and people in general because they feel they have been mistreated.
Charles Manson, for example, believed it was society that held him down, or his songs would have been tremendously popular.

The disorganized murderer kills on the spur of the moment, while the organized one premeditates and seeks to increase his erotic satisfaction by keeping the victim alive.

The disorganized criminal was the kid that nobody remembered in school and was always quiet, with the neighbors thinking he was "*Mr nice guy*".
The organized one was the bully, the clown, or the ones who fight in bars. They escalate conflicts quickly and often lose jobs because they provoke their colleagues or superiors.

Disorganized criminals act out of their mental illnesses, and the pre-crime situational stress is often absent (more on it below).

#7. Criminals and Power Dynamics

Power and the search for power is a major motivators behind many sexual homicides.

Charles Manson, for example, played the Messiah for the people around him.
He was going to usher in a new era.
Manson renamed Charles Wattson "Tex" because there could be only one Charles in the Manson family.

And the rivalries between Manson and Wattson, another male member of Manson's family, were a major factor in the dynamics of the murders.

Manson said that his biggest mistake was to "let that SOB Wattson have too much power in the family", and Wattson was also murdered to elevate himself in the family's power structure.

"Me Or Nobody" Frame of Mind

I also found telling the story of a murderer who, in prison, was taking care of a sparrow.
He loved the sparrow.

But when the guards told him the sparrow had to go, he threw it into the blades of a fan.

He still loved the sparrow, but he said, "if I can't have it, nobody else can".

This is another typical mindset of abusive men.

Fear Games Psychopaths Play

Robert Ressler tells the story of an interview he was having with a dangerous serial killer.
When he buzzed for the guard to come, nobody showed up.

And the prisoner had a field day scaring Ressler about how easily he could kill him.

That reminded me of "*The Psychopath Whisperer*", which I also highly recommend and where the author also details similar power games the psychopaths enjoyed playing.

My Note:
The author used a very bad approach there from a persuasion point of view.
He started arguing with the prisoner, saying that it would not be good for him to attack him and that he could defend himself.

That's bad because it led the criminal to convince the author (and himself) that he actually could.

You don't want to start a race where a serial killer wants to prove to you that he can kill you.

#8. Manipulation and Stockholm Syndrome

Robert Ressler explains that some murderers' profiles are highly manipulative and very good at it.

One FBI agent started passing information to a serial killer and maneuvered to be the only one with full access to the murderer.
When the murderer was finally executed, the FBI agent was lost and disoriented, like he had lost a family member.

For more on manipulation techniques read:

> Manipulation: Techniques, Strategies, & Ethics

Charles Manson Manipulation

Ressler also devotes much attention to Charles Manson and how he manipulated his followers.

Charles Manson admitted to giving the hippies around him what they wanted to see.
He became what they wanted, he "held a mirror in front of them".

At the end of the interview, Manson asked Ressler to give him something to show the other inmates that he wasn't talking to an FBI agent just out of good-heart.
Because that would lower his status among the other inmates.
Ressler gave him a pair of sunglasses, and he felt sure Manson was going to fabricate a story around it to lead the other inmates on.

Charles Manson was a typical cult-leader schooled in dark psychology:

> Dark Psychology: 7 Ways to Manipulate People

#9. Other Important Traits of Serial Killers

- Intelligence is not a predictor; it can be either lower than average or above
- Mostly males (women serial killers kill on a spree and not sequentially)
- Early traumas contribute, but not all rapists and murderers have been assaulted
- The key differentiator is the development of perverse thought patterns
- Kinky fantasies that mix sex, death, violence, molestation, dominance, revenge, control
- The fantasies have strong visual components
- While with most people's fantasies, both partners have a good time, deviant fantasies correlate pleasure with the partner's danger
- Many serial killers keep objects (or body parts) that remind them of their victims
- Once the first murder takes place he crosses a line and usually, there is no coming back: fear mixes with excitement and when he's not caught right away he feels safer in killing again
- The fantasies often don't go away and it's not easy to safely re-instate serial murderers into society
- Not all schizophrenics are dangerous: most are not. But many serial killers are paranoid schizophrenics
- Lie detectors are not reliable with psychopaths
- Many like to use the colors, shapes, and trappings of authority to control their victims
- Overly cooperative behavior can be a warning sign as the murderer tries to pry information from the police to remain one step ahead
- There is usually a sudden event or loss that precipitates the attacks (loss of a friend, unemployment, etc.)

#10. Would Bundy Stayed "Normal" Without Precipitating Factors?

Intriguing question.

Some people said that Bundy would have never become a serial murderer if he hadn't had financial problems and if he was able to continue law school.
He would have become an aggressive lawyer spending money on hookers and entertaining more manageable forms

of kinkiness.

But Kessler says that killers like Bundy would have eventually stepped over the line even without any precipitating factor.

Bundy talks about “overcoming social inhibitions” of church and socialization here:

I wouldn’t personally trust Bundy too much on whatever he says.
He has often been described as highly manipulative and a sociopath (or psychopath, the diagnoses were not precise).
But he likely had a mix of several different pathologies and didn’t have strong feelings of guilt to begin with. He personally bragged of “not having to deal with guilt”.

I would agree with Kessler that he eventually might have overstepped the line whether or not there was a precipitating event.

Quotes

Ressler on his first interview with a serial murderer:

> But it was his eyes that really got me. I’ll never forget them. They were like those of the shark in the movie “Jaws”: no pupils, just black spots. These were evil eyes that stayed with me long after the interview.

And of course, the main quote:

> Whoever fights monsters shall see to it that in the process he does not become a monster. And when you look into the abyss the abyss also looks into you.

Applications For Profilers

- **Don't let "blank slate theories" pollute your ability to understand people and psychology**

Whoever Fights Monsters shatters the idea that people are all the same and that the environment is what makes all the difference.

No, certain genders, races, and age groups are more likely to commit crimes.
The author even says that certain body types are predictive.

- **Listen non-judgementally but don't overdo it**

The author explains how to win the trust of convicted murderers to let them speak freely.

He says you should be non-judgemental, but without overdoing it. When they talk about dismembering victims, don't go overboard to make a big show of how many times you've seen that.
Just stay normal without making a big show.

- **Ask good questions**

Ressler talks about journalists and agents going after the famous serial killers just for being able to say they spoke to Charles Manson or to make a scoop.

He says these journalists often don't get valuable information because of the silly questions they ask.
Ressler says he could see Manson losing all respect for a journalist when the journalist asked: "what does it feel to cut a man's ear".

Much better, Ressler says, would have been to ask what reasons Manson had to cut the victim's ear.

CONS

I think *Whoever Fights Monsters* is an important book to read for all psychologists and psychiatrists, but it's not very scientific:

- **Confirmation Bias on Profiling**

I have a certain feeling this book promotes a lot of confirmation bias and over-confidence in the profiling abilities of FBI detectives (starting with Robert Ressler himself).

Ressler does not shy away from bragging about how good his profiles were, yet he does not say talk nearly enough about all the times they were wrong.

I would have preferred a more scientific look into this: how reliable is profiling?
How often were they wrong VS right?

- **Profiling Data With Absolute Numbers is Misleading**

The profiling that the author espouses, for example saying that it's mostly white males, might lead people to the wrong conclusions.

For example, it does not take into account that the US overall population has more white males than, say, white Asians.

- **Big Mumble Jumble Lacking in Structure**

I didn't find the profiles to be very enlightening. The author should have used better categories in my opinion.

First, he says they all had trouble in childhood, then he says "not all rapists and murderers" suffered early traumas, then again he says it's all about the fantasies.
And later he goes back to revisit the paranoid schizophrenics that he mentions at the beginning of *Whoever Fights Monsters*.

They're all true, of course, and they often overlap.
But if he had used better categories and a better structure it would have been much clearer for the students who seek a better understanding of the mind of the serial killers.

- **Lacks Deeper Analysis of Psychopathy/Sexual Maladjustment Cross-Over**

I wish the author had gone deeper into an important question: the overlap between psychopathy and sexual maladjustments.
Because I suspect there are people with violent fantasies who don't act on them.
So it's only people who don't have internal inhibitors who act on the fantasies.

Kiehl for example says:

> Serial killers like Ted Bundy would meet criteria for psychopathy and they also have paraphilia, a sexual-based disorder like sadism.
> The drive to kill comes from the latter.
> The lack of emotions, empathy and guilt comes from psychopathy.

What I found lacking in *Whoever Fights Monsters* is the analysis of this overlap.

- **Bragging tone**

Finally, Robert Ressler writes *Whoever Fights Monsters* with quite a bragging style.

Review

Whoever Fights Monsters sits in between an informational text a psychiatrist could read and a lighter text that laymen simply interested in criminology could enjoy reading.

If you want to learn more about the psychology of criminals I also recommend "*The Psychopath Whisperer*" by Kiehl.
The difference is that Ressler operates as an FBI agent and the serial killers could not talk freely of their misdeeds. With Kiehl's interviews instead, the criminals were free to talk -and brag– about all the murderers they weren't being prosecuted for, which provides him with a vantage point over their minds.

In any case, *Whoever Fights Monsters* is a must-read for anyone interested in psychiatry, abnormal psychology, and criminology.

Also, I can highly recommend this read on "non-serial killer psychopaths" who also inflict much harm:

- **Psychopaths' sexual strategies and control techniques**

> Psychopaths' Sexual Strategy: Marauders of Sex

Replication Crisis: A Defense of Psychology

Lucio Buffalmano · 9 May 2019 · Archived copy · Original

The replication crisis has engulfed different branches of science, and the social sciences have been hit the hardest.

Psychology and social psychology, in particular, have been swept up in a spate of scandals and failures to replicate.

Whole theories that had been widely accepted as proven are being questioned and disputed (Priming, Ego Depletion).
Even classical studies that have been part of psychology curricula for decades are under heavy attack (Stanford Experiment, Milgram Experiment).

The blowback has been hard, and understandably so.
Trust in the social sciences has eroded.

Keep Calm & Stay Rational

But if behavioral economics taught us anything, it is that in most reactions and corrections, there is often a tendency for *over*-reaction and *over*-correction.

This article will make the point that some authors, commentators, and even scientists might be taking it too far.
I will make the point that the replication failure of some studies does not (necessarily) call into question general psychological theories and, often, does not even refute the principles behind the study that fails to replicate.

- SUMMARY

Replication Crisis: Knee-Jerk Reaction

The replication crisis is one of the hottest topics at scientists' tables. And understandably so.

Most good scientists avoid overgeneralizing. But as the news seeped from academia into the world of non-academics, the reactions have not been equally discerning.

ScienceOfPeople.com, a website on applied psychology claiming to run its own science lab (and which puts "science" in its own URL), writes that (bold font is mine):

> **Much** of what you know about psychology may be a lie.

Other popular bloggers, like Na Eliason, who dabble with science and psychology, jumped on the bandwagon (bold is mine):

> It wouldn't be crazy to assume that **any** new claim in psychology is more likely to be false than true

And even more reputable publications like The Independent didn't hold back.
If anything, they went even further when they dropped the term "psycho-babble" (bold is mine, and so is the triple question mark):

> Psychology has long been the butt of jokes **(???)** about its deep insight into the human mind (…) and now a study has revealed that ***much*** of its published research ***really*** is ***psycho-babble***.

Is "much of what you know about psychology" a lie, "much of psychological research "psycho-babble" and is research "more likely to be false than true"?

No, no, and no.

I make the case that the knee-jerk reaction, as is often the case with humans, has gone too far.

We are now witnessing an overreaction, where everyone is calling anything into question.
And as in any witch hunt, the bigger the prey, the more glory (and power) for the hunter.

That many articles that purport to "debunk pop-psychology myths" are going viral (mine included) is proof that we are in the middle of a "psychology sh*t storm" fueled not by actual scientists, but by amateurs.

The Darkest & Basest Human Drives Are Fanning The Crisis

Typical human biases and some of the darkest human drives are also stoking the flames.

"frenemy relationships", envy among researchers, and the search for glory in the current "hunt to debunk" have ushered in what Leonard Martin called a "McCarthy era for psychology".

Scientists whose life work has been called into question have sometimes reacted not like cool-minded scientists, but like the ego-driven creatures we often are (again, psychology at play).
And that hasn't helped either.

But as scientists, we all have a moral duty to rise above our lowest and darkest drives.
And we all have a moral duty to seek the truth.

And to seek the truth, we cannot limit ourselves to destroying and "debunking".
In this replication crisis, we must throw the bathwater, but we must keep the baby.

> **We must throw the bathwater. But we must keep the baby.**

This article will seek to bring some clarity on what's in the bathwater, and what's in the baby we must keep.
And it will call for a more balanced approach to this "house cleaning" that is the replication crisis.

How It All Happened

Replications have been failing since replications first started, so how we date the beginning of the current replication crisis is, at least partially, a subjective task.

Wikipedia says the term "replication crisis" was coined in the early 2010s as the world became more and more aware of the high rate of replication failures.

The newspaper Slate says the replication crisis started in 2011 when a paper by Bem "proved" that ESP is real (i.e., it proved people can predict the future).
Bem's paper used widely accepted research methods, so either ESP is real and people can predict the future or…
Our accepted minimum thresholds for proper research were not high enough.

And scientists, being the skeptical bunch they are, started opting more and more for the latter.

That was the beginning of the replication crisis, and acute observers could already see the dark clouds gathering over science and psychology.

Daniel Kahneman, author of "Thinking Fast and Slow" wrote in 2012 that "he could see a train wreck looming".
And he was right (ESP be damned).

Five years later, Kahneman would admit that he had made a major mistake by placing too much faith in low-powered studies (i.e., studies with too few participants).
And he was only one of many to have been fooled.

In 2015, the results of the Reproducibility Project were published, and they were unflattering, to say the least.
More than half of the 100 studies published in prominent psychology journals failed to replicate.

At the time of writing (May 2019), the reproducibility crisis is still underway.

An Insider's Look: Novum Crisi Replicati

Nullius In Verba is an insightful podcast on social science.

The host was in the perfect spot to provide a great insider's look, including the conflicts of interest.
He was still fresh out of his PhD when the replication started. So he didn't have much vested interest in preserving the status quo, and he took part in the Reproducibility Project.

He shares his perspective and insightful opinion on how psychology research was before the crisis, including people's mindsets, and how it changed.

Take a listen:

https://www.podbean.com/player-v2/?from=embed&i=nmuqd-148bd4a-pb&square=1&share=1&download=1&fonts=Arial&skin=1b1b1b&font-color=&rtl=0&logo_link=&btn-skin=1b1b1b&size=300

Replication Crisis in Psychology: The Causes

Many explanations have been put forward to explain why we are dealing with endemic levels of replication failures.

Some of them are specific to psychology, while others apply to all other sciences:

- Outright fraudulent research (i.e., doctored results, made-up numbers, etc.)
- Questionable research practices (these are grey practices that are not outright illegal)
  - Selective reporting or partial publication of data (reporting only some of the study conditions or data)
  - Optional stopping (choosing when to stop data collection, often based on the statistical significance of tests)
  - *p*-value rounding (rounding *p*-values down to 0.05 to suggest statistical significance)
  - Manipulation of outliers (either removing outliers or leaving outliers in a dataset to manufacture statistical significance)
- Publication biases
  - Publishing only studies with significant or interesting results
  - Confirmation bias (once a theory has been accepted as true, publications and researchers seek to confirm the theory to get published)
- Skewed incentives for researchers and publishers
  - Researchers *have* to publish
  - Researchers have more success and financial rewards with "new", "exciting" and "self-help friendly" research
  - Journals can have an incentive to publish "new" and "exciting" theories
  - Few replication studies mean little risk for scientists who cheat or "embellish"
- Researchers' agendas (ie.: researchers might really believe in their theory and then "find a way" to make it happen)
- Human errors and biases
  - "Priming" effects on researchers who expect certain results
  - Poor grasp of math and statistics by psychologists

They all contribute, and probably there are even more.
We can address some of these issues, and with some, we are already doing so.

But first, I want to review the studies and theories that we should defend from "over-zealous debunkers".

The VIP "Victims" (& Why They're Still Insightful)

In this section, I will analyze and fact-check significant studies that have come under undeservedly heavy attack.

By "undeservedly heavy attack," I mean that the studies, albeit flawed, don't deserve to be branded as "debunked"

and thrown away.
Many studies that failed to replicate do indeed still offer valid insights, and, in almost all of the cases, they don't cancel the validity of the general psychological concept.

#1. Power Posing

You know this one, don't you?

If you have been reading any self-help literature or if you are part of any self-help circle, you must know this one.

Amy Cuddy's TED talk amassed a massive 16 million views on YouTube alone.
And yet, I'm pretty sure that only a tiny fraction of those viewers are aware of the massive issues with "power posing".

Power Posing Replication Crisis

The power-posing original study only had 42 participants, and it failed replication *when it comes to hormonal changes*.

The arguments against power posing are so convincing that Dana Carney, co-author of the original paper, abandoned the idea publicly in 2016.
In her open letter, she declared very directly that "she does not believe that power's effects are real".
And I quote her:

> The evidence against the existence of power poses is undeniable

Amy Cuddy clung to her original idea (I suppose 16 million views can lead to a major dose of cognitive dissonance), and after more research, she published a new paper confirming the effects of power poses on people's *own feelings* (and not anymore on hormones).

Oh, P.S.:
"Power Posing" underwent a major rebranding under Cuddy's "fight on" strategy.
Now it's called "postural feedback", so make sure you follow the correct branding guidelines :).

Defense: Feelings of Confidence Are Real

First of all, this was a case of *scientist* mistakes, not *science*.

Maybe Cuddy was a bit too driven to seek spotlight and notoriety and jumped the gun.

Also see:

> Why Good Scientists Are Boring & Poor Ones Are Famous

Albeit it's not true that "power posing" induces any hormonal changes, it's true that people *do* feel more powerful and confident.

And it's also true that the way you stand will change people's perceptions of you, which will, in turn, most likely change your interactions and, again, the way you feel about yourself.

#2. Stanford Prison Experiment

The Stanford Prison Experiment (SPE) is a huge classic in social psychology.

And like many other classics, it's been under heavy attack recently.
Philip Zimbardo, the author of the original experiment and also the author of "*The Lucifer Effect*" has been a

staunch defender of his baby—and by baby, I mean SPE.
But the staunch defense only further galvanized the attackers.

Discussing SPE Brian Resnick from Vox asks Zimbardo:

> So does that not invalidate the conclusion?

From then on, the interview resembled a sparring session of attack and counter-attack rather than a discussion on human nature (or the scientific merits of the experiment).

This other article, titled "The Lifespan of A Lie," tells you all you need to know about the author's agenda, says:

> I hope there does come a point (…) where Zimbardo's narrative dies

Really?
Hoping for Zimbardo's narrative to die rather than the truth to come out?

This is what I'm talking about when I say that the replication crisis is fueled by power dynamics and personal agendas rather than simply a matter of proper science.

Stanford Experiment Replication Crisis

The "Stanford Experiment" is not an experiment in the way that scientists use the word "experiment".
It's not replicable, and Zimbardo himself has always said so, calling it instead "a demonstration".

But still, I recognize the value of the criticism.

There are good reasons to caution anyone reading, studying, or researching SPE.
Especially after it grew so big that the media and Hollywood made a mockery out of the psychology behind it:

Defense: Environments and Social Roles Do Shape Us

However, in spite of all the *very* valid criticism and limitations regarding its scientific nature, the "Stanford Experiment" still tells us lots of deep (and uncomfortable) truths about human nature.

The realization that normal people can act evil and that social roles and extreme environments can heavily affect our behaviors are socio-psychological truths.
There is a whole branch of psychology that studies how groups and social roles impact the individual, and it's called Social Identity Theory.

Refuting that society and social roles can impact our behavior for the worst, as many critics seem to do, is a failure to understand human nature.

As Zimbardo said:

> SPE serves as a cautionary tale of what might happen to any of us if we underestimate the extent to which the power of social roles and external pressures can influence our actions.

I agree with that.
And that's true no matter where you stand in relation to the "Stanford Experiment".

#3. Milgram Experiment

Riding on the iconoclastic high wave sweeping through all classical studies, "Milgram's Experiment" couldn't have possibly come out of it unscathed.

Milgram Experiment Replication Crisis

Gina Perry, an Australian psychologist, has written a whole book on the supposed "lies" behind the "Milgram Experiment".

I haven't read the book yet, but her interview here and her paper here are pretty clear.
In short, she says that only half of the subjects believed the experiment was real, and of those who believed it was real, 66% disobeyed the researcher.

Defense: Authority Does Exert Powerful Influence

At this point, I cannot judge how reliable and good the data behind Milgram's experiment really is.

But not only has a similar study in Poland recently yielded results similar to the original experiment, but this meta-analysis showed a high level of obedience pretty much anywhere.

Oh, and if we want to look beyond data and labs, we can just take a look at history and reality.
And they both show quite clearly that authority can lead people to do some pretty evil stuff (or did you really think it was just the evil Germans?).

#4. Grit

Angela Duckworth is the researcher behind the construct of "grit", which is a mixture of tenacity and passion.
She claimed that passion and perseverance are the mixes that more than anything else predicted success.

She also coined a simple "success" equation:

> Talent x Effort = Skill
> →
> Skill x Effort = Achievement

The concept was a smash hit in the self-help literature.
Possibly because it told people exactly what they wanted to hear: follow your passion and as long as you put in the effort you'll be successful.

Pop-psychology self-help gurus jumped on it and helped propel her book "*Grit*" into a best-seller and her TED talk to millions of views:

Note: Angela Duckworth said she was unhappy with the title that was given to her TED Talk, and yet… She did very little to make the *content* of the talk factually accurate.
As a matter of fact, she further oversold her (inflated) findings.

Grit Replication Crisis

Two studies (with 213 students and 498 students) did not find "grit" to correlate highly with results (but conscientiousness did).

And a meta-study from 88 samples shows only a modest correlation between grit and performance.

Duckworth also seems to have been overselling Grit both in her book and in her TED talk.
Even in her original research, the difference between everyone and the grittiest cadets was *very* small (98% of the grittiest cadets made it through and 95% of overall cadets made it through).

Check out my pop-psychology article if you want to read more, but the point I'm making here is that in spite of the obvious limitations not all about "grit" as in "passion and perseverance" must be thrown away.

Defense: Perseverance & Passion Are Crucial in Life

Angela Duckworth sought to measure both perseverance and passion.

And yes, she has embellished and oversold her findings. And yes, she probably made up this new construct that is a bit too similar to previous psychological traits.

But anyone arguing that perseverance -as in the ability to stick to your work when things get difficult- and passion -as in the amount of pleasure you derive from your work- are not important in life is lying.

Perseverance over the long run is what helps transforms big dreams into realities.
And working on what we care about is what makes our lives more meaningful and, well… Happier.

So *do* stick with your projects as long as it makes sense. Don't give up on the first difficulties and *do* pursue what you like and what stimulates you.

#5. The Marshmallow Test

The "Marshmallow Test" central message goes like this:

"children who were able to resist the temptations of eating a marshmallow now in exchange for two marshmallows later went on to become more successful in life".

That seemed to prove that control over urges and delay of gratification was key to success.
And that you could test that early on with a simple test.

The original authors of the study, of course, went on to write a popular book named, you'd never guess, "The Marshmallow Test".
And the video of the experiment amassed millions of views:

Marshmallow Test Replication Crisis

Typer Watts revisited the study and came out with a 50% smaller correlation between delayed gratification and "success" at 15 years old.

And what was the correlation when accounting for intelligence and family background?
Almost nothing.

He writes:

> Associations between delay time and measures of behavioral outcomes at age 15 were much smaller and rarely statistically significant.

There you go.

Defense: Delaying Gratification Is Crucial to Success

The "Marshmallow Test" is obviously a severely limited study. For example, who says that all kids liked marshmallows in equal measure?

And, between us nutrition nuts, who said that kids were better off with *double* the amount of poisonous lumps of sugar? :)

But jokes aside, would anyone deny that the ability to strategically delay gratification can be a crucial aspect of success?

Maybe you know the tale of "The Ant and The Grasshopper".
And if you don't, you can probably agree that what often makes the difference between turning dreams into reality

and never achieving anything lies in the ability to work hard.

And, often, **working hard includes and entails the delay of gratification**.
Which is exactly the point of the "Marshmallow Test".

#6. Fixed & Growth Mindset

Carol Dweck's research (and book) says that children who believe their abilities are liable to improve through efforts and failures learn more and improve much faster than children who believe that their traits are fixed and can't be changed.

Dweck's original paper suggested that a growth mindset can be taught with appropriate feedback and direction from teachers.

Growth Mindset Replication Crisis

More than a "replication crisis" Carol Dweck's assumption is simply difficult to replicate.
A proper growth mindset study entails teaching the mindset and then measuring the results over time, which is neither easy nor quick.

But Li and Bates' effort to replicate Dweck's initial results fell largely flat.
Carol Dweck replied that the experiments are difficult to replicate and must be done well.
To which Nick Brown quipped that "if the experiments are so difficult to replicate, why does Dweck think they can be easily replicated by school teachers"?

He has a point.

A meta-analysis measuring goal-setting, work towards the goals, and goals achievement was kinder towards Dweck's growth mindset research, albeit with some caveats.
It says:

> The present meta-analysis suggests that mindsets matter.
> One important conclusion from the present meta-analysis is that the associations of implicit theories with self-regulation are not straightforward and that perhaps the literature would be better served by asking when and how implicit theories are consequential for self-regulation rather than asking if incremental theories are generally beneficial.

However, most papers on growth mindset have been written or co-authored by Carol Dweck herself, so one must wonder about the validity of a meta-analysis where a good chunk of the papers is from the same author who's been criticized for embellishing her results.

Also, read our own article on growth mindset power dynamics:

> Why The "Growth Mindset" Is Disempowering You

Defense: Mindsets Are Important Psychological Traits With Major Implications

There are quite a few serious issues with Dweck's research and I am grateful to all the people who are pointing them out.
More research is also needed here.

Yet it's inconceivable to me that the difference between believing you can improve and believing you can't improve won't have a large impact on your life.

And that impact reflects not only in “success” or “school grades” (who cares about school grades anyway?) but also from a mental health point of view and the way you approach life.

I personally could see in myself how a fixed mindset held me back many times in life.
And I can see how nudging myself into a more growth mindset has helped me out in countless ways.

Sure, maybe you can’t easily teach a “growth mindset” and then see a huge jump in school grades.
That wouldn’t be realistic anyway, and I suspect that’s part of the issue: the impact is not so obvious and easy to measure.
But developing a growth mindset *will* improve your life. And significantly so.

#7. Priming

Priming, in a nutshell, is this:

if I subconsciously make you think about something, I will activate other related thoughts that will (subconsciously) change your behavior.

John Bargh is the Yale psychologist who first “proved” subconscious priming.
The original experiment has been cited thousands of times and spawned tens of similar studies which all seemed to prove that, indeed, priming works.

Priming Replication Crisis

Priming failed to replicate.
Bargh vehemently defended his research but, eventually, the tide seemed to heavily turn against priming.

Defense: Priming Might Not Be As Powerful, But It’s Real

Here is the funny thing:

as priming failed to replicate in the study’s subjects, it actually worked… *in the researchers*.

Indeed when Doyen told the researchers that the subjects were primed to walk more slowly, the researchers measured the subjects’ walk more slowly as compared to the automated measurement devices.

Doyen’s study is indeed called: “It’s All in the Mind, but Whose Mind?”

It’s ironic that the paper that started the “assault” on priming actually confirms that priming works.
Just in a different way.

Probably priming does not change behavior as powerfully and unconsciously as we thought, but it exists.
And it works.

And the psychological phenomenon of “elevating” related concepts that underpin priming is also true.
Says Colin Camerer:

> Priming has turned out to be the least replicable phenomenon.
> It’s a shame because the underlying concept—that thinking about one thing elevates associations to related things—is undoubtedly true.

Also, Bargh also ran experiments in which the researchers didn’t know what they were measuring, and priming still worked (Bargh et al. 1996 as also explained in the *Handbook of Research Methods In Social and Personality Psychology*).

The Replication Crisis is An Opportunity

The replication crisis in psychology -and in all other sciences as well- is a wonderful opportunity for science.

Says Howard Kurtzman, executive director for science at the American Psychology Association:

> The outcomes point to the need for reforms in research, review and publication practices.

Indeed.

I am happy we are going through this crisis.
It is showing to us all, beyond any reasonable doubt, that we have been operating below our potential and below science's potential.
And that's always a sign that we can advance towards better systems and processes.

This replication crisis does not sap faith in science but restores it.
It means that we were able to catch issues and mistakes, and we now have the opportunity to fix those mistakes.

This can be our chance to be reborn stronger and better than ever.
That we take this opportunity is up to each one of us.

Addressing The Incentives

Darren Huff showed it long ago in his "How to Lie With Statistics": lying with statistics is easy.

If we put incentives on researchers to find correlations, come up with new theories, deliver TED talks, and publish groundbreaking papers, then we are inviting them to embellish those statistics.
And researchers will find a way to do just that.

As our current research systems are structured, scientists are incentivized to bend statistics and embellish their results

Says Brian Nosek, executive director of the Center for Open Science:

> We can nudge the incentives driving our behavior so that researchers are rewarded for more transparent and reproducible research

Exactly.

Of course, there are other issues we need to address as well, but addressing researchers' and journals' incentives is where I would start.

Other Areas of Intervention

Here are a few more ideas to improve science:

- **Pre-registration**

Pre-registration means that the researcher describes his goals, methodology, and data analysis before he begins his research.

That way, he won't be able to "p-hack" or tweak" the numbers and run different analyses on the data to come up with "something more meaningful".

Pre-registration is working great.
To better understand how it works I found this podcast very insightful. Take a listen to the first: two psychologists discuss why a study has low authority and credibility because it failed to pre-register:

- **Institutionalize replications** (ie.: papers' auditing)

Replication is unsexy.
The biggest spoils in research always go to the ones that do something original and the biggest windfall of them all goes to those who champion a new theory, a new concept, or a new marketable technology.

Yet replication is exactly what can nip in the bud years of fake pop psychology claims and self-help myths from festering and spreading.

An institutionalized and independent replication center will also serve as an incentive *not* to mess with the data.
It's like an independent watchdog for proper science.

We're Already Improving

Some research sponsors are already improving their policies to stress the importance of reproducibility and more journals are now requiring pre-registration.

More scientists are doing mea-culpa, and psychologists know that's a precondition for positive change.

Transparency is now all the rage and data sharing for cross-checking is more expected than ever.

Replication research is getting more press, more attention, and, as well, more funds.
And that's good.

The legislation crisis is already improving science.
We must be grateful for it, and at the same time, we must keep on pushing.

SUMMARY

The replication crisis in psychology and social psychology has hit us hard.

But this is not a crisis of psychology -or science, for that matter-.
The main foundations of psychology and social psychology are still all there and always will be.

If you want to get along with people, persuade and influence people, and if you want to upgrade yourself, then you need to understand social psychology and individuals psychology.

This article made the point that even the studies that have been hit by the replication crisis the most, still remain hugely important milestones in our understanding of the human mind.

But this is not to say that there are no issues.
There are issues in the researchers' incentives and in the publication system.
And properly addressing those issues will make science and psychology better and stronger than it's ever been.

It's already happening, and that's great news.

Flourish: Summary & Review

Lucio Buffalmano · 11 May 2019 · Archived copy · Original

In *Flourish* author Martin Seligman takes stock of some of the most important results from decades of positive psychology research.
"*Flourish*" is also a practical book, since, alongside the theory, it also presents many exercises the readers can start applying right away.

Contents

- Flourish Summary
- Flourish Criticism
- Flourish Quotes
- Flourish Gold Nuggets
- CONS
- PROS
- Flourish Review

Flourish Summary

About the Author:
Martin Seligman is a professor of psychology and researcher and author.
Some say that positive psychology was finally recognized as its own domain in 1998 when Seligman chose it as the theme for his presidency at APA (American Psychological Association).
Seligman has also authored "*Authentic Happiness*" and "*Learned Optimism*" (my favorite).

#1. The Keys to Well-Being: PERMA

Based on positive psychology studies and research Martin Seligman comes up with 5 keys to a happy life:

- **Positive emotions**

Such as gratefulness, pleasure, joy, warmth, connection, etc.

Seligman makes the point that you can consciously increase your positive emotions and consciously decrease your negative ones.
When you reach a point of more positive emotions than negative ones, then you're a happy, flourishing individual ("Flourish" says it's 3:1 but that's been thoroughly debunked and suggests Seligman knows little of math).

- **Engagement**

Csikszentmihalyi calls it "flow": when we are so engaged in something we forget all the rest.
For more on flow and "peak" performance in sports or work also read: "Flow", "Deep Work", "Peak", and "The Talent Code".

- **Relationships**

"Happiness is real only if shared", and plenty of studies show that the single most important factor to happiness and mental well-being are positive human relationships from intimate relationships to social ones to family ties.

Relationships are so important that the majority of suicides for troops do not happen for war-related events but when home relationships got strained (for example breakups or threats to break up).

In this section, Seligman also introduces Gottman and many of his principles (if you're interested check this relationship overview).

- **Meaning**

Doing something you feel has an impact, meaning bigger than yourself.

For more information on meaning and the workplace, check out Drive, for more information on meaning in your life, check Start With WHY; and for more information on meaning from a more philosophical (but also practical) point of view, check "Man's Search for Meaning".

- **Accomplishment**

In the sense of moving forward, not necessarily winning in the competitive, "Jack Welch" kind of winning.

Seligman says there are four skills that determine accomplishment:

1. Speed of thinking.
2. Learning rate
3. Work planning and revision
4. Effort

IQ only measures the first one, which is why in Seligman's point of view it's not a reliable measure of success. Flourish also espouses Carol Dweck's theory that a growth mindset will help you succeed (read "how to develop a growth mindset").

#2. Can Money Buy You Love (or Happiness?)

Wealth contributes heavily to life satisfaction but not to a good mood.

As a matter of fact, the richest countries are far from being the happiest ones, and with progress and widespread well-being depression and suicides only increased.

Indeed, what reduces suicide rates are social hardships and, well… War also decreases suicides.

Money does matter though when people are below the poverty line and are struggling to feed themselves.

Money also does help if you spend it doing things that you like and enjoy.

#3. Optimism Makes You Healthier

Seligman presents several pieces of research to show how a positive attitude makes us all healthier and more immune to diseases.

The most interesting part for me though was the reasons why optimists get less ill and heal quicker.
Optimists:

- Believe they can change things with actions, so they act more (this is related to the "locus of control")
- Keep trying and don't fall into "passive helplessness"
- Have a better social network (they're better at making friends and attracting support)
- Use their social network more
- Respond better to stress

For more on "learned helplessness" and how to acquire optimism check out "To Sell Is Human", "Essentialism" or get my full guide "Ultimate Power".

#4. Flourish Exercises: Building Happiness

"*Flourish*" also contains plenty of exercises to make yourself happier.
Some of them:

1. Write down 3 things you're happy about during your day
2. Do something nice for people around you without expecting anything in return
3. Write down how your actions helped you get things done (will get you into a mindset that your actions do matter)

#5. The Florentine Moment of Western Civilization

Martin Seligman says that the rich Western countries are not at what he calls a "Florentine Moment".

They are rich and well-fed to the point where they face an important decision.
They can either decide to keep investing in "growth for growth's sake" or they can do what Florence did during the Renaissance: invest in beauty, arts, and happiness.

The author makes the point that wealth to produce more wealth is a hollow pursuit and we should include in our economic indicators better nuances to include psychological well-being and personal flourishing.

Flourish Criticism

Positive Psychology, Seligman, and "*Flourish*" are not without criticism from the scientific community.

Overall, I am still convinced of the high positive impact that this branch of philosophy can have on our lives, but we must also be aware of its limitations and dangers.

Some of the criticism:

High positivity correlates with illusion

Illusion means distortion of reality and living in one's own unreal world.

This is something that I have personally often criticized in some of the self-help literature and which has led to some exaggerations such as the "law of attraction" and "building one's own reality".

Many highly successful businessmen such as, for example, Ray Dalio, made it a point to look at reality as crudely as possible (for more on reality-based living also read "*Principles*" and "*The 50th Law*").

I believe though that one can easily achieve a happy medium of being positive without creating one's own reality. Furthermore, one can bend reality on certain topics, while remaining more reality-based on others, which is something Seligman also suggests in successive books.

One size fits all

Positive psychology, and "*Flourish*" as well speak a lot in general terms. And some principles are generalizable to a large swath of the population.
But "large" is not necessarily all.

And even then, there are important exceptions.

For example, I consider myself very driven and, as of now, I don't make happiness a high priority of mine.

I'd rather be happy one or two days a week only and the other days be neutral or even slightly negative while being highly efficient.

Positive psychology and the ideas present in "*Flourish*" can still help me -and everyone else in a similar situation- to "switch on" during those times when we want to go from "efficient" to "happy and flourishing".

Poor Judgment of Behavioral Economics

The author, in a long and drawn effort to dismantle all criticism of positive psychology, ends up discussing why optimism is good for stocks and does not create bubbles.

I was aghast at how simplistic -and wrong- that analysis was.
I have written my thesis on how psychological biases helped fueled the crisis and "irrational exuberance" as in "unwarranted, exaggerated optimism" *is* a major cause of financial bubbles.

For more on behavioral economics also check out "*The Undoing Project*".

Replication failures

One of the selling points of positive psychology is that it's like self-help but backed by science.

Well, it turns out that "science" is not always as thorough as it should be -or as its proponents would like to present it-.
As part of the current replication crisis in psychology, some important studies have come under fire, and that includes studies that were present in "*Flourish*".

The 3 to 1 positive ratio is one such example and the same can be said for "*Grit*" by Angela Duckworth.
You can read more here:

- **Pop-psychology myths**
- **Self-help myths**

Flourish Quotes

On socialization and positivity:

> Misery may love company, but company doesn't love misery

On the difficulties of measuring happiness:

> It turns out, however, that how much life satisfaction people report is itself determined by how good we feel at the very moment we are asked the question.

On how feeling secure allows us to receive criticism:

> This is related to the Losada ratio. To enable us to hear criticism nondefensively and to act creatively on it, we need to feel secure.

Note: But note that the Losada ratio has been debunked and is today a heavily discredited "theory".

Flourish Gold Nuggets

- **Don't use the word "happiness"**

It's so over-used and so general it has lost its meaning and it's not useful.

- **Life is too complex for monism**

The author says that past giants of philosophy all made the mistake of reducing the "meaning of life" to one simple variable.

Nietzche (power), Aristotle (happiness), and Freud (avoid anxiety) all ended up with too simplistic theories by basing their philosophies on just one main concept.

And I couldn't agree more.

- **Group selection better explains**

Seligman makes the point in "*Flourish*" that the group accounts for far more than evolutionary biology has so far been willing to grant.
He mentions "The Selfish Gene" as the book and theory that got us off-track with the idea that we're all about maximizing returns for ourselves.

He says that group theories of evolution better explain human social dynamics of altruism and mutual support.

I really liked this part and I think there is much truth in it. But I don't with Seligman when he proposes the group as the primary unit of selection.
No, it's not. The group is important but it's not the *primary* one.

- **Anti-depressants work little**

Anti-depressants do work *somehow*. But so does the placebo. Anti-depressant drugs such as Prozac do very little compared to placebo.

To be accurate, for severe depression drugs work well.
But for mild and moderate depression, the effects were non-existent.

- **Leader's positivity is crucial**

Positive coaches had measurable better results than negative ones (as measured in the MBAs).

But I wasn't convinced by Seligman's choice of expressions that were supposed to indicate "positivity" or "negativity".
For example "we lost because of the referee decisions" was included in "positive thinking", which to me made no sense

CONS

While the above "Flourish criticism" section refers to positive psychology in general, this is what I didn't like specifically about the book "*Flourish*":

- **Correlation used as proof**

In a few instances, I felt Sigman presents correlation as "proof" of something. But correlation is not causation.

For example, he introduces a coach who built "character strength exercises" to improve the team's performance. But that says little about the effectiveness of such exercises. And it says little about its effectiveness as compared to different exercises that could have been done.

Seligman also seems to show a poor understanding of correlation in his own life.
He talks about his efforts of hiring a Ph.D. candidate simply because she was a woman who borrowed money, walked into a poker tournament, and won it.
That really sounded ridiculous and I'd recommend Martin Seligman checks out Nassim Taleb's work, starting from "Fooled by Randomness".

- **Shallow analysis of Facebook and its social impacts**

Martin Seligman delivers highly positive praise of FB and its effects on happiness and flourishing.

I found it out of place and way overblown. Many other authors also agree that Facebook's net effect is probably more negative than positive on many users (Brene Brown, Mark Manson).

- **Very enthusiastic (but not always scientifically thorough)**

I found "*Flourish*" to be very enthusiastic but not always equally scientifically thorough.

When Seligman introduces Angela Duckworth, for example, he sounds like an awe-struck kid who can't stop blowing Duckworth's horn.

But Grit has failed to replicate, is no different than conscientiousness, and has come under heavy -and convincing- criticism from much of the scientific community.

PROS

- **Deeply insightful on the importance of positivity**

I found Flourish to be a treasure trove of information when it comes to the importance of positivity and psychological and emotional health.

- **Practical ideas and tools on how we can control our emotional states**

Flourish is also enlightening as to how much we can do to make ourselves happier, healthier, and flourishing human beings.

Flourish Review

Flourish is an important book on positive psychology.

Not because it added much to the literature of positive psychology -it's more like a summary of research-, but because it sparked further research and it helped spread the interest of positive psychology both among scientists and in the general public.

From my point of view, I can say it's always a pleasure to read a self-help book from an actual scientist and psychologist.

Some refer to positive psychology as a "new branch of psychology", but I found that term slightly misleading. Thinkers have been deliberating on happiness and on meaningful life for thousands of years. They weren't called "psychologists" back then, but if you read any stoicism the resemblances are striking, to say the least (check: "*The Little Book of Stoicism*" and "*The Obstacle Is The Way*").

But that's not to say that I'm not a big fan of positive psychology. Because, as a matter of fact, *I am* a big fan of positive psychology.

Positive psychology also started as a reaction to the outsized dominance and influence that psycho-analysis has held for decades. And also with that, I couldn't agree more.

Finally, I particularly liked and appreciated the point that Seligman makes on government policy.
Seligman says that policymakers should focus a bit less on economic growth for growth's sake and start looking more and more at how we can all become more flourishing individuals.
I totally agree. And I think that we don't need to wait for policymakers. We can do that change ourselves.

P.S.: I really had to stop, rewind and smile when Seligman talks about "Tiergarten" in Berlin since my flat is a short walk away and it's been a favorite destination of mine during summer.

In short:
Flourish is an OK resource for becoming happier and it provides a good overview of positive psychology.
But also presents some shallow analysis and some heavily discredited science as well. Disappointing for the founder of Positive Psychology.

MentorBox Review – Read Before Buying (AVOID IT!)

Lucio Buffalmano · 13 May 2019 · Archived copy · Original

MentorBox reviews are sprouting around the web.

Many of them seem to either be fake, good, or overly negative clickbait.

I used MentorBox to its fullest potential during the 3 days free trial, and this is my unbiased review of MentorBox.

Contents

- What is MentorBox?
- Who Founded MentorBox?
- MentorBox Book List
- Is MentorBox A Scam?
- MentorBox Reviews
- MentorBox Alternatives
- MentorBox Pros
- MentorBox Cons
- MentorBox Costs
- MentorBox Review

What is MentorBox?

MentorBox is a monthly subscription product to spread knowledge and information in a quicker, more efficient way than reading the whole book.

It helps you turbocharge your learning by giving you book summaries straight from the author.

The idea is appealing.
You hear from the authors and you go straight to the most important facts.

For each book it presents a “cheat sheet” with the main ideas, exercises to help you memorize the material, and then an interview with the authors themselves.

It’s a pretty cool format actually.

Who Founded MentorBox?

MentorBox is a partnership between Alex Mehr and Tai Lopez.

I don’t have a high opinion of Tai Lopez as you can see from my review of Tai Lopez manipulation techniques.

A quick search of Alex Mehr does not yield the most trust-inspiring results:

He does have a Ph.D. title though, which he appends to his name any time he can:

Just in case you didn’t notice, Alex Mehr has a PhD

MentorBox Book List

MentorBox does not have a huge list of books and there is no easy way to actually check names and numbers.

There are less than 249 videos you can watch, which is less than the book summaries you get on this very website for free.

But most of those videos are not actual summaries, they are random videos branded as “knowledge” from either Tai Lopez or Alex Mehr himself, which feel like space-fillers.

And they include some videos which I would warmly encourage everyone not to waste time on like a workshop on the law of attraction:

Some of the videos also feel like space fillers:

In case you can't read what's written there it's "Drink like a CEO – how to make the perfect Old Fashioned, Moscow Mule, and Mimosa".
And if you're wondering "WTF is that sh*t", you and I had the same reaction.

So my own estimation is that there are probably around 150 books, which is much fewer than this very website.

Is MentorBox A Scam?

MentorBox is not a full-on scam.
Not the product in itself, at least.

However, there are countless of complaints online about overcharges and refusing to make good on the refund policy.
Note: **I personally had no problems canceling, so my experience was positive** on that front.

And not all the courses that you get you can actually access which, to me, felt like MentorBox is not just a product you buy, but a teaser and conduit to sell you more and more (more on it later).

The whole MentorBox, the way it's packaged… It certainly *does* feel scammy.
MentorBox deploys the most aggressive, annoying and sneaky sales techniques I have ever seen anywhere.

"wait! Just one more thing… For the 10th time"

MentorBox Annoys The Hell Out of You With Upsells...

Signing up for MentorBox is an ordeal.
I have never seen any online course or product annoying people as much as MentorBox does.

But it's not over, because even after you click "no" one hundred times, the sale has just begun for MentorBox.

... And Spamming Emails

But you are not done.

Right after signup, you keep receiving Alex Mehr's hard-sell emails.
Within half an hour of signing up, I had already received two of them.

And that goes on top of the 3 to "confirm" I was part of MentorBox, which made me think their whole system was very disorganized:

Saying that I personally don't appreciate this kind of hard sell is an understatement.

I find it annoying and overbearing and I was tempted to mark it as "spam" just to get even.

MentorBox Reviews

Looking around the web most reviews are highly negative.

Glassdoor, which collects reviews from people working at different companies, has two reviews on MentorBox. And they're both very negative.

They describe toxic cultures, incompetent management, unfair practices toward the customers, and a focus on selling rather than delivering value.

Writes one of them:

> Website/customer service is bad and undeniably created to increase sales instead of serving the customer

Of course, there are also a lot of positive reviews. Especially in the testimonials section of the website.

But given the moral compass of the founders, I wouldn't put too much trust in the veracity of any of them :).

MentorBox Alternatives

If you want to learn quickly and efficiently, I applaud you.
You should focus both on learning and on doing so as effectively as possible.

MentorBox is not the only option though. As a matter of fact, there are plenty of alternatives to MentorBox.

Here are some of the most popular:

- **Amazon Audible**: Audible is Amazon's membership for audiobooks, where you can listen to the full audiobook instead of someone else's summary
- **Blinkist**: Blinkist is a popular Berlin-based subscription service for book summaries (check here my Blinkist Review)
- **Free online summaries**: there are plenty of free summaries online for MentorBox (check here the best book summaries websites and best book reviews websites)
- **The Power Moves**: this website shares the resources we study and analyze as part of our science-backed strategies
- **ReadinGraphics**: I always liked their idea of providing infographics and pictures together with the text summaries.

CREATOR OF SIDE HUSTLE SCHOOL PODCAST

TRAVELLED TO 193 COUNTRIES

There are also countless ways to get the full book for free, especially for the most popular ones.
But they are not all legal so I will skip them here.

MentorBox Pros

MentorBox presents many advantages, including:

- **author-delivered courses**

I have to say, some of these summaries were really captivating. Some of them end up being much more than simple summaries.
Some of the authors end up delivering what is a mix of a summary and a mini-course.

It was the case for example with Hooked for example. But Cialdini author of Influence and Pre-Suasion also delivered a wonderful speech.

On the other hand, these authors are also there to provide a teaser for their own services. In some cases, with actual affiliate links to book calls and private coachings.

- **You hear straight from the authors**

I think that the possibility of hearing straight from the authors, explaining and talking about their own books, is the biggest USP and the biggest advantage of MentorBox.

- **Well-designed workbooks**

I didn't try the physical version, but it looks like it's well printed and some people might get some value out of it.

https://youtu.be/5IhazdN7gP4?t=52

That being said, in my opinion, the physical box is just clutter that you don't need at your place.

- **Cool design**

MentorBox looks good from a design point of view, albeit the usability could be further improved.

- **Focus on entrepreneurship**

MentorBox has a strong focus on how to apply the book teaching in business, which can be very helpful to entrepreneurs or aspiring entrepreneurs.

And beyond the actual courses, you can learn some online marketing just by observing how they pitch and sell MentorBox (and hopefully you will also learn what not to do).

MentorBox Cons

On top of the bad online MentorBox reviews and the highly dubious business practices, this is what I didn't like of MentorBox:

- **Not all courses are free to access**

Some of them are only teasers or, worse, sales pages for the actual course that you must buy and pay for.

This is the case with Chris Guillebeau, the author of "The $100 StartUp":

- **No critical reviews**

MentorBox reviews all books and authors from the point of view that they are all correct and that we can all learn from them.

We do can all learn at least something from each book… Probably. But that doesn't mean they are all factually correct, or that they don't deserve some deeper investigation.

For example, MentorBox has Amy Cuddy as one of their authors.
But you will not hear from Amy Cuddy that her research failed to replicate and that her own research co-author called it "pseudo-science" (check out my pop-psychology article).

- **Designed for Sales**

Like the Glassdoor review mentioned, it really feels indeed like MentorBox is built more to sell than to teach.

At the end of each lesson, there are buttons to "share what you learned" because it helps you remember.
But of course, you share it wit ha nice link to MentorBox, which helps MentorBox get free advertising.

Whether "sharing to remember" helps more you remembering or MentorBox selling is a moot point.

- **Authors are doing quite some promotions**

The MentorBox authors are not just there to summarize their books, but they also do a lot of promotions about their other work and, of course, about their next books.

That might not bother you, but in a way that's exactly what they are doing on free channels as well.
They release a YouTube video, they give an interview and they share some knowledge while at the same time self-promoting.

- **Some incorrect information**

Some of the information present in the fact-sheets are false. Take this example:

The introduction says that Chris Guillebeau is a "wildly successful blogger", which is fine as that's relative.

But when I checked the claim of "1m Unique Monthly Hits", that was patently false.
As a matter of fact, Chris blog has far fewer visitors than this very website (and ThePowerMoves.com doesn't yet have 1 million unique monthly hits at the time of writing).

- **Not all books include authors' interviews**

MentorBox is sold like a service where you hear the summaries straight from the authors.

Yet, not all books actually get the summaries straight from the authors.
The 7 Habits of Highly Effective for example is Alex Mehr talking in front of a camera.

And that makes sense because Stephen Covey is dead unluckily, but

- **No good presenters to learn from**

I research social dynamics, so I take lots of care about how people come across.

And I don't find Tai Lopez or Alex Mehr to be particularly good speakers to learn from.
They use a lot of filler words, they go up with their inflection and they cross their arms and look tentative in their interviews and book reviews.

And the other guy who takes care of the content is even worse.

- **Useless "MentorBox Mastermind" Group**

The "MentorBox Mastermind" group you will be welcomed to join on FB is not only useless… But actually harmful.

If you're not the kind of person who would reply to such a post you know why such a group has nothing to teach you.
And if you're the kind of person who would reply to such a post:

1. get a grip
2. stick around here for a little longer before you get into MentorBox

MentorBox Costs

MentorBox "bare-metal" costs, without the physical delivery and without any of the add-ons is **7 USD per month**.

With that, you get access to most of the library of summaries and you probably don't need anything else.
But get ready to be bombarded by MentorBox upsells efforts and it might be worth mentioning that there have been complaints about over-charges.

If you have been the victim of over-charges let me know and I will include here your experience.

MentorBox Review

My MentorBox review is actually positive for the product itself. As a matter of fact, I was positively surprised.

I was expecting some crappy system with some bad "motivational quotes", but the summaries are well done and the interviews with the authors are interesting.

As a matter of fact, in my Pills of Wisdom I have been telling people that reading a lot, in and by itself, is not enough to become successful.
And that successful people apply the learning right away rather than simply consuming information.

That's why I love any product that helps to make your learning more efficient.

However, my overall MentorBox review is more on the negative side because the good product is tainted by the shady and manipulative business practices.

> **MentorBox is a great idea, a good product, but a less than stellar business**

> -The Power Moves Reviews

> Manipulation: Techniques, Strategies, & Ethics

Is MentorBox Worth It?

Whether MentorBox is worth it or not depends a lot on you.

If you have been around self-development for a while, you won't find anything earth-shattering here and you're better off *applying* information rather than focusing more and more on acquiring it.

If you are starting out, then it might be worth looking into as a way to cut your learning curve short.
But if you're on a budget, then you can get that same information, at the same speed, by looking for free information around the web.

Personally, I will not be using and I will stick to the full version of the book (plus my own research on what each author claims).

Misbehaving: Summary, Review, & Criticism (Thaler)

Lucio Buffalmano · 15 May 2019 · Archived copy · Original

Misbehaving (2015) tells the story of how behavioral economics became a recognized discipline in-between psychology and economics.
For the uninitiated, that means that the author, Richard Thales, tells the story of how psychology fought its way into economics.

TPM Takeaway: Behavioral economics imported psychology into economics
Thaler formalized well-known psychological and sociological insights from psychology, power dynamics, and social exchange theory (fairness, reciprocity, framing, status effects) into experimental economics. This made bounded rationality acceptable within economic models, but the underlying social exchange logic predates it and is more fully developed in sociology and power research.

Takeaways

- Old economic theories centered around fully rational individuals are deficient
- Even financial markets are not rational and efficient
- Economists have long rejected the idea of an irrational individual (and the meddling of psychologists in economics)
- Behavioral economics, such as economics with good psychology, is today widely accepted

Notes

Little by little, psychology supplanted the myth of the (inexistent and hyper-rational) “homo economicus” to give us all a better understanding of how people make financial and (ir)rational decisions.

Albeit psychology was only taking us closer to the truth, it wasn’t easy to change economists’ minds.

Beginnings 1970–78: Homo Economicus

Richard Thaler, with the first salvo of wit that will characterize all of “Misbehaving” says that economists replaced homo sapiens with a fictional creature called “homo economicus”.

For short, Thaler will refer to “homo economicus” as “econ” (pl.: “econs”).
Econs are rational and always make the best rational decisions, considering all the information and all the alternatives available.

Econs are not good representations of real humans, though, who make all sorts of mistakes and irrational decisions.

Economical models designed by economists, which the author also calls “optimization theories”, have long been built around “econs”. And that means that, since econs don’t really exist in real life, optimization theories make all sorts of bad predictions.
Just as an example, not only did no economist fail to predict the 2007-2008 financial crisis, but economic theories based on econs also postulate that financial bubbles are impossible.

Ironically, notes Thaler, the homo economicus theories based on math and rationality long gave economics the reputation of the most powerful of the social sciences.

Economic Theories Rest on Flawed Assumptions

There is a problem with economic theories, though: they rest on completely flawed premises.

1. Optimizations people face are too complex to be solved with perfect rationality (even going to the grocery store presents way too many options to be all resolved rationally, let alone the complexities of a career to choose)
2. We make choices based on biased beliefs (i.e., overconfidence)
3. There are too many factors that the optimization model leaves out and that economists simply shrug off as “Supposedly Irrelevant Factors” (i.e., econs would never buy more food for tomorrow because they’re hungry today and they would never finish an already bought meal even though they’re full middle-meal)

Thaler says we don’t need to throw the optimization theories away, but we have to stop basing our policies and predictions on them.

Enter: Behavioral Economics

Behavioral economics is still economics but with te an injection of good psychology and social science.

Thaler then dedicates a few chapters of “*Misbehaving*” to describe experiments that clearly show that optimization theories are wrong, that “SIFs” are not irrelevant at all and that econs don’t exist.
Or, if they do, they certainly don’t overlap with humans.

Prospect Theory

Thaler describes how he first stumbled upon Kahneman -author of *Thinking Fast and Slow*– and Tversky (check out “The Undoing Project” for the history of these two).

Kahneman and Tversky are the two main psychologists behind the emergence of prospect theory.
Prospect theory maintains that:

- Diminishing sensitivity of utility: the more we get of something, the less impact it will have (valid for both gains and losses)
- Changes matter more than levels (if I win a million dollars today and in a week I lose 700k I will be sad in spite that I am still at +300k)

No Need to Throw Out All Econ-Theories

Thaler doesn’t say we need to completely supplant all optimization theories. He says they remain good starting points for more realistic models.

And when the problems are very easy or the individual is highly skilled and approaching the problem with his full attention, then optimization theory may work fine (but these situations are the exception and not the rule)

PART II: Mental Accounting 1979–85

The author, parallelly but independently of Kahneman, wondered how people thought about money.
He first called it “psychological accounting”, but later followed suit with Kahneman and Tversky to call it “mental accounting”.

Opportunity Costs Theory (& Limitation)

An econ takes any decision by analyzing all possible alternatives. But real humans cannot compute infinite alternatives and, at most, they select a couple to choose from.

The people closest to an econ are actually poor people, who need to make ends meet and thus spend more time wondering about money allocation and opportunity costs.

My Note: Disagree with the generalization. Poor people are not always econs
I don’t fully agree with the author here or, at least, there are plenty of exceptions. Many people are actually poor because they do *not* think about money allocation and opportunity costs. Ever.
Think of psychopaths who live in the moment without worrying about the future.
Or those people who spend everything their whole monthly salary before the middle of the month (just visit the Philippines and you’ll meet those).

Transaction Utility

Humans don’t just think in terms of number and utility maximization, but also take into account the perceived *quality* of the deal.

If you buy a sandwich at a sporting event and pay it 3 times the price you would pay for it outside, the sandwich has negative transaction utility (ie: a rip-off).

And again, humans are willing to pay different prices depending on where an item is bought.
They are OK with higher prices in an expensive resort, for example, because they understand the expenses are higher there, the ambiance might be nicer and, well, they might even be happy with the splurge.

Transaction utility explains why people sometimes never buy something that would give them great memories for a lifetime.
Because, irrationally, they feel it’s not a good deal and don’t want to live with the feeling of having overpaid.
And on the other hand, we often buy stuff that we won’t even use because we feel it’s a great bargain.

And this is the reason why shops always fake sales: to give people the feeling they are getting a bargain.

Econs instead would never experience transaction utility.

Sunk Costs

People also wear dresses they don’t like anymore simply because they bought it and if they don’t use it, they feel like they wasted money.

This is an example of sunk costs.

People expense sunk costs because of mental accounting.
If you buy something and use it, the account is neutral. But if you spend money on something without using or enjoying it, it feels like you wasted money.

If instead, you use what you spent money on, it feels like you got a bargain and we feel good about it.

Indeed, the more we pay for something, the more we will try not to leave it unused and the more we will resist throwing it away.

Of course, econs would never deal with sunk costs.

Delayed Consumption & Mental Accounting

When we buy something for later consumption our mental accounting goes out of whack.

Buying expensive wine, which we will consume in the future, feels for many people like an *investment* rather than an expense.
And when we consume it in the future, it feels like we didn't even spend money on it (the paper research is called "Invest now, drink later, spend never").

Vacation timesharing properties leverage the same mental inconsistency to make people feel like they are investing in their future holidays.

The House Money Effect

The house money effect turns the normal risk-aversion of most people on its head.

The "house money effect" refers people to who have won money or somehow received unexpected money.
In that case, normal mental accounting goes out of whack and they feel free to throw money around and take risks and bets that they would normally never take with their own money.

That's why non-professional gamblers who start winning become much more aggressive and take many more risks with their new "house money".

Break Even Effect

Another SIF, not just for econ-based theories but also for the more psychologically-driven prospect theory, is the behavior that people present when they are losing but are given the chance of breaking even.

In that case, they are willing to take larger risks for the chance of erasing their losses.

PART III: Self-Control 1975-88

Economic theories have long presumed that self-control problems do not exist.
And that's another inconsistency between economic theories and actual humans.

In this part, Richard Thaler makes even more fun of economists and their models and theories growing more and more sophisticated as they implied that also people became more and more rational and sophisticated (check quotes below).
He discussed and explains Keynes, Milton Friedman, and Modigliani and also about "*The Marshmallow Test*" (albeit the Marshmallow Test is pop-psychology).

Of course, the reality of humans was much different.

PART IV: Working With Danny 1984-85

"Danny" is, of course, Daniel Kahneman, and in this part, the author keeps stacking more examples and proof that humans are not rational decision-makers.

Perception of Fairness

The author says that perceptions of fairness are related to the endowment effect.
Both buyers and sellers feel entitled to the terms of the deal to which they have become accustomed.

Perceptions of fairness also explain why it's difficult for employers to lower wages during recessions.
It's difficult because employees think it's unfair to take it away, which is something that would never happen in the world of econs where supply and demand are all that matter.

Humans are also willing to lose money to "punish" other humans whom they feel are behaving unfairly.

Some People Cooperate, Econs Shouldn't

Richard Thaler talks about prisoner dilemma and ultimatum games (also read "*Game Theory Bargaining*").

In the rationally cynic econs' world, players will defect because it's in their best interest to do so.
Yet the game played in laboratories shows that 40-50% of people cooperate.

In more relevant scenarios called "public goods games," many people still cooperate to enhance the public good albeit that it is not in their most selfish interest.

We see examples of this every day when people donate to charities and bring bags to clean their dogs' poop.
And that's not how econs would behave.

There is still an issue for many public goods that are no produced in enough quantity for everyone, but the problem is only half as bad as standard economic theory would predict.

Fun fact: the only people who act like econ and share nothing are economic graduates :).

Says Thaler:

> **A purely economic man is indeed close to being a social moron.**

However, there is a caveat.
If public good games are repeated consequently, public contributions tend to fall.

Economists argued that people learned over time that the best strategy is to be selfish.
But that's not the case.

Andreoni ran an experiment where the game was going to restart after 10 rounds.
And after 10 rounds, the contributions jumped back up. The author says it's because people learn that some people are jerks and nobody wants to be the fool who's taken advantage of (a sort of vicious circle).
But when the game restarts again, people contribute again.

Most people thus are "conditional cooperators": they are willing to cooperate as long as others are willing to cooperate.

Also, read:

- Smart collaborator
- Empowered individualist

> Empowered Individualism: Why the Individual Must Come First

PART V: Engaging The Economic Profession 1986-1994

The evidence was starting to accumulate for economists to have to pay attention to.

Thaler discusses the equity premium, such as the premium that the riskier equity asset class should grant above less risky assets such as bonds.

And the equity premium is much, much higher than economic models with rational players would warrant (should have been 0,4% VS the actual 6%).
Investors should have been implausibly risk-averse to explain such a huge gap.

Myopic Loss Aversion

Myopic loss aversion is the idea that refusing to risk once can be mitigated by playing the game several times and using the law of large numbers to take advantage of the favorable odds.

But Thaler says that doesn't make sense.
If you have good odds you should be willing to play one time as well.

PART VI: Finance 1983-2003

Richard Thaler says that the field where the "homo economicus" was strongest and most entrenched was in financial markets.

With all the big banks and all the money at stake, financial markets had to be efficient.
So if psychology and behavioral finance could prove also financial markets to be irrational, then the evidence could not be ignored anymore.

He spoofs Frank Sinatra to basically say that "if you can make it in New York (financial markets), you can make it anywhere".

The Efficient Market Hypothesis

The efficient market hypothesis rests on two assumptions:

1. You can't beat the market
2. There is no such thing as a free lunch

The author, again, says that the rational model hypothesis is not to be completely thrown away and it presents a great starting point.

But when it comes to a descriptive model of how things actually work, the model is not realistic.

The Irrationality of Financial Markets

Here is why financial markets are irrational:

- High trading volumes (in a world with efficient prices there would be no need for high trading)
- People overreact to news
- Sentiment and optimism have been proven to drive prices, at times, more than "fundamentals" do
- Stock prices move too much to justify forecasted dividends
- Mispricing of the same asset in different markets can last for a long time
- Stocks sometimes fall without reason (ie.: the 1987 crash)
- Split companies can end up being valued differently than the whole
- People make extreme forecasts based on flimsy data
- Most people shun underperforming companies out of stereotyping

Value investing, as espoused by Warren Buffet and Benjamin Graham and author of "*The Intelligent Investor*" does indeed work and can deliver superior results.

But no strategy should deliver superior results if markets were really efficient which, again, proves that financial markets are not efficient (the author then recommends buying funds trading at a discount, a strategy also endorsed, he notes, by the author of "A Random Walk Down Wall Street").

PART VII/VIII: 1994-PRESENT

In the last two parts, Thaler provides even more examples to prove that the standard economic models do not explain real-world behavior.

By the mid-2000s behavioral economics has become widely accepted and Thaler applies its concepts to real-world problems that the discipline can help tackle (ie.: nudging people to save for retirement, paying taxes on time, etc.).

TPM Takeaways

Market With "Transaction Utility": Never just give a discount. Frame it as a deal so the other person feels like they are "winning" or "getting away with something."

Don't Fight Sunk Costs; Use Them: If you want someone to stay committed to you or a project, ensure they "invest" early (time, effort, or money). Once they have a "Mental Account" open, their own internal bias will prevent them from quitting.

Conditional Cooperation: Understand that most people are not "good" or "bad," but **Conditional Cooperators.** They will help you as long as they don't feel like a "sucker." Your job is to signal fairness while ensuring you're also winning.

See:

- Smart cooperation
- Effective calculativeness

Quotes

I love a smart author who drops knowledge with wit, and Thaler does exactly that.
Here are some great quotes from "*Misbehaving*":

> In fact econs would be perplexed by the whole idea of gifts. An econ would know that cash is the best possible gift, which allows the recipient to buy whatever is optimal.
> But unless you are married to an economist, I don't advice you to give cash on the next anniversary.
> Come to think of it, even if your spouse is an economist, it's still not a great idea.

On psychologist bantering:

> Psychologists refer to a "just noticeable difference" as JND. If you want to impress an academic psychologist add that term to your cocktail party banter.

On economists resisting change:

> Economists have their way of doing things and will resist change. If for no other reason, that they invested years building their own corners of this edifice.

On people (econs) becoming smarter and smarter as the math formulas improved:

> As economists became more mathematically sophisticated and their models incorporated their new methods of sophistication, the people they described evolved as well.
> (…)
> Calculate the present value of social security benefits that will start 20 years from now? No problem!
> Stop by the tavern on payday and spend intended for food? Never!

On unrealistic models developed around omniscient, super-smart (and non-existing) individuals:

> Barro's insight is ingenious, but for it to be descriptively accurate we need econs who are smart as Barro.
> (..) the difference between our models is that he assumes the agents in his models are as smart as he is, while I assume they are as dumb as I am.

On status in psychology research and Cialdini, author of Influence:

> For some reasons the study of applied problems in psychology has traditionally been considered a low-status activity.
> Studying the reasons why people fall into debt or drop out of school has just not been the type of research leading to fame and glory -with the exception of Rober Cialdini-.

Talking about the confidence that economists had in the rationality of financial markets, Thaler says that the confidence came from the impossibility of proving the theory (either wrong or correct).
After all, who can "prove" what's the right price of a stock:

> There is no better way to build confidence in a theory than to believe that it's not testable.

On Chicago school economists:

> The old joke is that a Chicago economist would not bother to pick a 20 dollar bill on the sidewalk becuase if it were real, someone would have already snagged it.
> There is no such thing as a free lunch. And a free 20 dollar bill.

Review

Richard Thaler, Nobel Prize in economics, tells us the story of how psychology improved our understanding of

economics and decision-making

In a way, "*Misbehaving*" is a story of power and entrenched interests.
The power that economists were clinging to and the fiefdoms of influence they were defending against the impinging psychologists.

Misbehaving is a bit on the biographical side and it might also be categorized as a book on history (the history of economics and psychology).

But there is enough wisdom to make it a must-read for all people interested in psychology, economics, and, in general, for everyone interested in people.

Flow: Book Summary & Review

Lucio Buffalmano · 16 May 2019 · Archived copy · Original

In *Flow,* Mihaly Csikszentmihalyi, the author, dissects what "*flow*" is and how we can reach it.
Very briefly, flow can be defined as "the state of mind in which we lose ourselves in our work".

Contents

- Flow Summary
- Real-Life Applications
- Flow Criticism
- PROS
- Mihaly TED Talk
- Flow Review

Flow Summary

About the Author:
Mihaly Csikszentmihalyi, together with Martin Seligman, is often considered one of the founders of Positive Psychology, which is the branch of psychology studying happiness, satisfaction, and self-development.

How to Reach Flow

These are the steps you need to take to reach a flow state:

- **Clarity of goals**: your work must have a purpose and an end state. If your work is too big, you must identify smaller goals
- **Immediate feedback**: immediate feedback helps us stay fully focused by "gamifying" our experience
- **Engage at the edge of your ability**: when it's too difficult, we become frustrated, and when it's too easy, we're bored. Right in the middle is where flow happens
- **Do it because you want**: you can't reach a flow state when you are executing orders you are not happy to follow. Doing it without direct expectations for material rewards is even better

Learn more about how to handle disempowering orders:

> 10 Ways to Maintain Power When Executing Orders

And, finally:

- **Mental mastery**: ultimately, it's up to you to enter flow. It requires a certain control of your mind, which you can achieve with trial and error, meditation, and training

Csikszentmihalyi indeed invites people to look for opportunities in their lives in which they can create the elements of flow.

For example, instead of just folding clothes out of boredom, focus on doing it better, or quicker.
While shopping, focus on doing it in the most efficient way possible.

How Flow Feels Like

How do you know if you are reaching flow?
Here is what flow feels like:

- **Total immersion**: during flow, you don't even realize what's happening around you
- **Focus and concentration**: you are fully focused on your task
- **Time flies**: when you're in flow, you don't even realize time passing by, so it feels like time flies
- **Feels good**: flow is a rewarding state in itself. It gives you a sense of control over your work, which spills over into a sense of control over your life. And you don't care about problems, worries, or what others think of you

Flow Personalities

A few personality traits are more likely to get you into a state of flow.
These include:

- **Growth mindset**: people with a growth mindset are more likely to seek and enjoy challenges (check out "how to develop a growth mindset")
- **Clarity of purpose**: find a goal in what you're doing, and find a goal and a WHY for your life
- **Openness to criticism**: being ego-resilient and open to honest feedback allows you to take all feedback and opportunities for improvement
- **Locus of control**: feeling like you are the one who chooses what to do and you have the power to change your life's predicament
- **Focus**: being able to focus on one activity at a time without distractions is a crucial element for reaching flow

Flow Is Enjoyment, Not Pleasure

Pleasures are reactions to specific actions that are good for our survival or procreation.
Food and sex are typical pleasures.
But chasing pleasure can lead to addiction and never moving forward in life.

Enjoyment, instead, makes us better people while we are also feeling great.

My Note:
I only partially agree with this one. In the end, this is a major over-simplification. Read my "criticism of Flow" below.

Real-Life Applications

In my opinion, there is one crucial lesson to learn to improve your life:

- **Internalize that you always have a choice**

You cannot enter flow when you are following orders or doing things that you don't really want to do.
And it's not just about "flow", it's about efficiency, mood, life pleasure, and success as well.

This was a major issue for me: the moment the alarm rang, I hated it and felt like I was "forced" to get up and prepare for work.

The moment I forced myself to change my attitude, I became happier and more effective.

Always remind yourself that you have a choice. And if you are doing something, it's because *you* are choosing to do it.

Flow Criticism

I enjoyed the book, yet I also have some important criticisms of "Flow: The Psychology of Optimal Experience". Here are the main ones:

- **Flimsy connection between flow and happiness?**

Flow is considered one of the very first books on positive psychology.

Since then, it's been computed into several "happiness formulas" in many successive books. Mostly by non-psychologists, but, notably, Martin Seligman also included it in his happiness formula.

However, I still don't see such a strong connection between flow and a happy life.
While flow certainly wouldn't make anyone sadder, I also don't see how it can be a central part of a happy life.

The author says that the best moments in our lives occur during flow, but that's his own personal feeling, and he has no data or other way of backing it up.

- **Flow has limited utility when mastering a craft**

Today, it seems to me that everyone is obsessed with “flow”. Yet, by the author’s own description, a state of “flow” is only achievable when you’re doing a task you’re already good at.

There is no point in seeking “flow” when you’re learning, which is what you should probably be doing most of the time unless you’re already world-class (and let’s face it: we’re probably not there yet).

- **Flow is not easily applicable to all realms of life**

Some activities, like team activities, are more easily conducive to flow. And some activities, by presenting immediate and obvious feedback, are also more conducive to flow.

That also means that some other activities are *not* as easily conducive to flow.
And personally, I found some recommendations to reach flow anytime and anywhere borderline ridiculous.
Trying to grocery shop or fold T-shirts to achieve flow didn’t seem like it added anything to life.
I personally feel it’s much better to grocery shop while listening to some music and/or looking at and interacting with the people around.

- **Silly differentiation between “pleasure” and “enjoyment”**

The author seems to have an agenda to promote “enjoyment” over “base pleasures”.
And he says that pleasures don’t make us better.

To me, that’s hogwash. Sex, a pleasure, does make you better with physical activities, and, as any woman can tell you, there are ways to improve your technical skills, so it’s not true that pleasures don’t make you improve.

And even eating can be seen as a skill or, as well, as an art. Slowing down to enjoy it for longer, for example, or chewing better, which will help you digest better.

- **Why should you do anything without expecting something else?**

One of Csikszentmihalyi’s tenets for “flow” is doing it without any expectations of receiving anything back.

I don’t think it’s realistic—or even advisable—to simply “do things without expecting a return”.
What’s the point of doing anything if you don’t expect something as a result or as a consequence of your hard work?

I am writing this summary because I expect it will be helpful to people reading it.
If not, it will be helpful to make myself remember the crucial steps to reaching flow.
And if all goes well, it will help me do both while also contributing to making me financially independent.

And I think there is nothing wrong with that, -and I don’t think it stops me in any way from achieving “writing flow”.

PROS

I have listed a lot of criticism for “Flow”. Yet, I also believe that the ability to focus fully on one’s own work is crucial to success.
And also to a happier, flourishing life.

That’s what I am grateful to “Flow” for: giving me a few pointers to make it easier for me to fully focus on a specific task or activity.

Mihaly TED Talk

Mihaly Csikszentmihalyi also has a TED talk on flow:

If Csikszentmihalyi is in flow and experiencing ”enjoyment,” he is surely hiding it well there :)

Flow Review

Flow is a hugely popular concept these days, so I was very curious to review the original work.

I liked it, but also found that "*flow*" has a limited scope (or, better: it's been so overhyped that it expanded beyond its original scope).

For example, if you want to learn and improve, you shouldn't be focusing on reaching flow, which only happens when you're already good at something; you should focus on your weakness.

Working on your weaknesses is not necessarily enjoyable, but it's what will take you forward in life.

In my opinion, since flow is so dependent on so many variables that are not always under your control, it's not good to obsess over "*flow*".
Instead, it's better to focus on total immersion in your work (also read: *Deep Work*).
The two are similar, but total immersion does not necessarily need all the steps that Csikszentmihalyi lists in "Flow" while giving you all the same benefits.

How to Win A Toastmasters International Speech Contest (Proven)

Lucio Buffalmano · 17 May 2019 · Archived copy · Original

Are you interested in competing and winning a Toastmasters speech contest?

You have come to the right place.

TPM Note: This realpolitik guide helps, but never forget to focus on skills
This is a different guide that goes into more Machiavellian approaches and even some manipulation dynamics. Not because we recommend them, but because they're part of life. We never advise making these your focus, but to be aware of them to better navigate life, focusing on skills first, and always preferring an honorable approach to achieving goals.

In all evaluation contests I have competed at, I have only finished either 2nd, or 1st

Contents

- #8. Pick Low-Competition Markets
- #9. Take Friends: The Boost of a Supportive Audience
- Why World Championship is a Waste of Time
- My Toastmasters Background
- SUMMARY

#1. Train At Club Level To Get A Feel For Time

Evaluations are usually the role where people go the most often over time. In many clubs, mine included, people don't even try to stay within the time.

I personally never try to stay within the allotted time because I couldn't care less. My focus is giving value, not nailing the time or "staying within the rules".

However, that always puts me at a great disadvantage when it comes to competitions because I haven't developed a good feel for the time.
I never know how many of my observations I can safely deliver, and as I speak, I need to double-check the time every so often, which is distracting.

When it gets red I then rush to finish and my evaluations end abruptly.

That's why if you care about winning a speech evaluation contest, you should get used at a club level to staying within the time limit.

#2. Make Friends With The DTMs

Here is the biggest "secret" to coddling with the judges: it's always the same people who are judges.

And of course, the **DTMs are the people who most often end up being judges**.
Make friends with them, and you'll have friendly judges for as long as you want to compete.

DTM Profiling

DTMs are more often women than men.

Some are not very busy with work, or they wouldn't have time for TM.
Toastmasters may attract some because it provides a platform to feel significant, climb hierarchies and acquire status.

I've encountered several who could be defined as 'strong women', even domineering.
Some enjoy the "power" that comes from their experience and from judging others (so first hint: make them feel good about their TM accomplishments).

They tend to be very conscientious -otherwise, they wouldn't have stuck so long with Toastmasters-.
And with high doses of conscientiousness often come an eagerness to obey the rules.
So don't to be too rebellious or "too different": show that you respect the norms.

Finally, some of them want to be *seen* as strong and professional.
Learn to get to know the person behind the role, and you will be able to better bond and connect with them.

Befriending DTMs

So if you're not sure where to start from, always make good friends with the DTMs (they always have a pin and the older DTMs have a golden plaque).

Here is what you can do to be friendly:

- Talk to them face-to-face
- Always go to say hi first when they enter your club
- Make them feel important
- Add them on Facebook / Linkedin
- Like their status updates (yes, it matters)

No Friendly Judges, No Trophies

Performance always matters, of course.

But so does personal liking. Judges may not even willingly 'favor their favorite', but biases are often unconscious.

I know a couple of people who are *exceptional* speakers and top table topic performers with decades of experience. They are better with their speeches and tables topics than I am at evaluations.
And yet they never went past the district level and fail to go past the area level more times than not.

I don't think it's a coincidence that they are not friends with the DTMs who always happen to be contest judges.

#3. Flirt With The DTMs in Your Area

Some people take it to the next level with mild social seduction.

This is an art in and on itself and can't be explained via a short paragraph.
But just be aware that "flirting" is not necessarily sexual.
Machiavellian operators may broach racier subjects that most people wouldn't dare talk about, and that creates a 'level of connection' that's more unique to them.

Some techniques they may use include starting with more personal matters that make people feel bonded, to then lace in a personal, mildly flirtatious comment. For example:

> **Mach Player**: Whaaat, your children are in their 20's? You're so young yourself!

Or they may use small daily occasions to build them up and make them feel important:

> **Them**: Can I sit here?
> **Mach Player**: As if you had to ask, everyone here wants to sit next to you, you're a legend!

Or they may build them up via third parties, all done in jesting and good for extra smoothness. Plus, it's socially powerful and leader-like. For example:

> **Random Pawn:** DTM Marta here is my mentor
> **Mach Player**: Wow, congratulations, now tell me, what does one have to do get a legend like Marta as your mentor, are there some secret steps to follow?

#4. Make DTMs Your Mentors: Ask For Recommendations

Some social skills guides tell you to ask for recommendations because it makes people feel good.
That is true in several situations, but not in this one, because asking for feedback can frame you as a beginner.

The more you act like you are taking it all in, the more power you give them… and the more of a beginner you look.

And **judges don't elect beginners as the winners**.
So you must walk the line between asking for feedback, making others feel good, and *still* projecting competence and authority.

I recommend you ask questions, but more like an equal who respects their great knowledge and experience.
It's also great if you can ask something that they will see you follow up on.

Here is an example:

> **You**: do you think it's better to go on stage with the badge on or without?

Of course, it's better to go on stage *without* the badge, you know that already. But by asking you can make it look like you're later going to follow their suggestion.

And when they see you on stage they will think “My mentee is following my recommendation”.
They will feel like your win is also *their* win. And they’ll rate you higher.

#5. Visit Other Clubs: That’s Where Your Judges Come From

When you compete you can’t have judges from your own club.

Theoretically, you could be despised by your own club members but have very friendly judges.
And the opposite is true: everyone could love you in your club but that means nothing when you compete.

This why it’s crucial that you visit other clubs.
Especially the clubs that DTMs and judges frequent, and mingle mostly with the senior members there.

#6. Travel With The Judges

If the competition is outside of your town, don’t be the lone wolf going by himself.

Travel with as many Toastmasters as you can, but focus specifically on the ones who are most often contest judges.

And then work them up along the way, offer breakfast, drink with them, listen to their stories and make them feel good.

#7. On Contest Day: Network With Possible Judges You Don’t Yet Know

The higher you go, the more judges there will be.

Remember that by the time you got to the higher level contests, you already should know all the judges from your areas and most DTMs from your district.
But of course, you can’t know *everyone*.

So on contest day, you want to increase your odds of adding a few more friendly judges to your squad.
Focus on the DTMs and senior Toastmasters you don’t yet know and do this:

- Go early in the morning (don’t be the guy who gets there late as I did)
- Attend all contests (don’t be the guy who only attends his contest)
- Take supporting roles (judge of other contests, ballot counter)
- Talk to everyone, but prioritize with the DTMs you don’t yet know
- Congratulate every speaker (even the ones who sucked)

Be aware that the judges of one contest are also often judges of other contests, so **always take the opportunity to be a judge yourself and make friends with the other judges**.

Good speakers in a contest are also likely to be judges in another contest, so always make friends with the speakers as well.

#8. Pick Low-Competition Markets

There are two ways to win: get better yourself or lower the competition.

This applies to any area of life including, for example, dating, with new trends promoting moving to more congenial ‘sexual marketplaces‘.

Back to Toastmasters, look at my results for example.
I am good at evaluating (modesty aside: I never met a better observer, which is why I do what I do on ThePowermoves.com).
But I didn’t prepare myself for the contests. And I am *not* that good at public speaking (I haven’t even delivered 10

speeches so far!). And to win an evaluation speech contest you *do* need to be a good public speaker.

How come then I have been relatively so successful?
The main reason for my success is that I competed in easy markets.

What's an "easier market" in Toastmasters?
For example, it's competing in your mother tongue in areas where Toastmasters is not that popular (TM is most popular in English-speaking countries).
Or it's competing in English in regions where English is not the competitors' native language.
In my case, I competed in English in continental Europe, and that made it much easier for me.

On the other hand, I would expect the US to be a highly competitive market for Toastmasters.
India is also a highly competitive market as many people there grow up in a culture that glorifies academic achievements. And they carry that hard-working mentality to Toastmasters.

#9. Take Friends: The Boost of a Supportive Audience

Listen to this one:

In my last district contest where I placed second everyone told me I was superb, and the win was going to be between me, and another guy.

In the end, I didn't win.
But here is the funny thing: neither did the other guy that everyone tipped off!

It might be a coincidence of course, but do you know who won? **The guy who had the most friends in the audience won**.
He had the most friends from his club who all made a huge ruckus when he went on stage and who all laughed hard when he cracked a joke.
And who all applauded and cheered like they had won the lottery when he finished.

Having people support you from the audience is a massive help.
In the old days of theater, there was such a thing as "clappers". Today, TV shows have 'laugh tracks' for the same reason. Many actors hate them, but they're still there because they work.

If you crack a great joke people will laugh anyway.
But it's when your attempt at humor is average, poor or "too difficult for most" that having friends in the audience will make a difference.
Their laughter can make the difference in the judges' minds between a "what was that" and "that was good" (remember that judges also evaluate depending on the audience's reaction).

Why World Championship is a Waste of Time

In a nutshell, this is what I think about preparing yourself to become a Toastmaster world champion speaker:

> **Working hard to become a Toastmasters world champion is the equivalent of working hard to win a lottery**

And if that's not yet clear, it means that it's not an efficient use of your time and your resources (As Warren Buffett once said: gambling is a tax on ignorance).

Difference between evaluation and speech contests

I actually could recommend to prepare yourself well for winning an evaluation speech contest at the district level.

So why don't I recommend the same approach to the international speech contest?

Here is why:

Large Numbers = Random Results

The difference between the speech contest and the evaluation contest is in the word “world”.

The evaluation contest ends at the district level while the speech contest keeps going to the world stage.
But that also means that there are many more people competing for the world champion.
And when we are talking about very large numbers, **there is no reliable path that will significantly increase your chances of winning**.

The keyword is “significantly”.
Sure, you can “significantly” increase your skills. And you can increase your personal chances of winning going from, say, 0,1% chance of winning to a 0,2% chance of winning.
And that’s a “significant” increase in relative terms: you *double* your chances of winning.

But you are still competing against so many people that you still face a 99.8% chance of losing.

Is it worth it to work so hard in a field where no matter what you have 99% chances of losing?
I don’t think so.

> **No matter how good you are, a speech contest still leaves you with 99+% chances of losing.**

Compare it to entrepreneurship instead.
Working on your business -or in your job- you have a much more direct control over your chances of earning more.
Many people can get rich. And one person getting rich does not take away from your chances of getting rich but actually *increases* them.

You’re better off competing in a field that has *many* winners than in a field where one wins and hundreds lose.

> **It’s irrational to seek victory in a field where one wins and thousands lose**

Especially when you consider there are plenty of fields where thousands can win.
As a matter of fact, I would say that it’s irrational to invest days and days of your time to go after what is, in practice, a lottery ticket.

Working on Skills Matters Little

Working on your skills will not help much.
Most people competing are good, which means that high skills are a minimum requirement, but not a differentiator.

Sure, you can get better.
And you can get slightly better than the competition. Maybe even slightly better than *any* other competitor.

But that’s still not that helpful and certainly not a guarantee of winning.

Just think about it.
Even if you reach a level of a 10/10, there will be plenty of people that score between 9 and 10.

And skills are only *one* variable to influence victory.

Too many variables are outside your control

Here are a few variables that are partially or wholly outside of your control:

- How well you sleep the night before
- What the judges subjectively think of your speech

- How much the judges like the others
- The skill of all the other competitors
- Howe well all the other competitors prepare

Investing too much of your time in a field where the results are so out of your control might not be the best investment of your time and resources.

My Toastmasters Background

I have been a Toastmasters now for a little over two years.

I wasn't a good speaker when I started. I'm not that good today either to be honest, speaking is not my strong suit.

My specialty is evaluations, and my skills at evaluating derive from the same analytical skills that I use for this website.
I analyze speeches for structure, body language, confidence cues, persuasion techniques, etc. etc.

And it's the high quality of my analyses that make me a very good evaluator.
I can often come up with observations that lead people to think:

> Wow, that's true! I hadn't thought about that!

And when you can make people think that, you're on your way to deliver a "wowing" evaluation.

My Competitions Results

At my first competition ever as a greenhorn, I won the club contest, the area contest and I placed 2nd at Division level.

At my second competition ever I reached the international finals of district 95 in Gothenburg, where I placed 2nd (2nd sucks, lemme tell you that :).

In every single evaluation competition I competed, I either placed first, or second.
And, finally, I probably win the "best evaluator" award around 90% of the times at club level, and mine is quite a competitive club.

I say this not to brag, albeit that doesn't hurt :), but to provide you with the credentials that allow me to write a guide on how to win a Toastmaster speech contest (or evaluation contest).

See here how to brag, by the way:

> How To Brag Without Bragging: The Covert Brag Technique

SUMMARY

You have just read an advanced guide on how to win a Toastmasters competition.

This article focused on a speech evaluation contest, but most of the steps apply to any Toastmasters competition.

I don't think it makes sense to prepare too hard for a Toastmasters speaking contest because the numbers are skewed against you, no matter how good you are.

Speeches evaluation contests are better because they require less preparation and they have fewer knock-off rounds on the way to "ultimate champion".

In this article, I showed you the less-known "tricks" to win a Toastmaster speaking contest.

12 Ways Companies Manipulate Employees

Lucio Buffalmano · 20 May 2019 · Archived copy · Original

Corporations lie and manipulate to get the most out of their employees.
They're not necessarily being mean, they're simply doing what most aligns with their interests.

And for employees to do what best aligns with *their* interests, they must first *see* that manipulation. It requires power intelligence, and TPM was built exactly to boost your 'awareness'.

This article blows the whistle on corporate manipulation strategies, HR lies, and bosses' machinations.

#1. Employees Matter

This is the most pervasive corporate lie.

All HR departments in the world say that employees matter.
But that doesn't make it any truer.

Why It's A Lie

Says Dan Rust, author of Workplace Poker:

> It's not employees who matter, it's the *output* of the employees that matters.

Big difference.

Remove the output and the employee becomes a cost. And then you will see how much you really “matter”.

= make them feel good, and they’ll build your business (for a pittance)
In my experience, there seems to be a connection between how menial a job is and how much hot air HR spouts about “talent” and “employees’ satisfaction”.

As a student, I had a brief stint in Infosys BPO, and if there is such a thing as a “monkey job”, that’s BPO (BPO stands for “business process outsourcing”).
And I have never heard as much crap about employees’ talent and skills since my BPO monkey days.

The funniest thing though?
The number of people who actually believed those corporate lies.

Manipulation Explained

We all have in-built mechanisms for “social accounting” and for reciprocation (Cialdini, 1984; Blau, 1964).

If the company can make us feel like they care for us, then we must reciprocate to rebalance the account.

And just like that, with a few empty slogans and some discount vouchers, companies turn 9-to-5 captives into happy and loyal corporate flunkies.

Example: Ray Kroc & McDonald’s

Ray Krok famously said that your business is only as good as the people you hire.

Which, on average, makes sense.
Yet, coming from Kroc, it’s the perfect example of how manipulative corporations really are.

Says McDonald founder and minimum wage skirter Ray Kroc
One of McDonald's entries in the "mission and values" says:

> We provide opportunity, nurture talent, develop leaders and reward achievement.

Of course, facts tell a very different story.
McDonald lost countless lawsuits for wage theft and university research showed that fast-food workers earn so little that many of them depend on government welfare to survive (which is the equivalent of saying that taxpayers are subsidizing McDonald's profits).

There is one McDonald's initiative that deserves a special note though.
I think the guys at corporate McDonald's wanted to take the above Kroc's quote literally.
But instead of elevating their hires to the high-quality company they wanted, they lowered McDonald's communication to the low wages they offer.
And in a colossal brain fart, they offered the following tips to help their minimum wage employees make ends meet:

- Return unopened purchases
- Break food into pieces to feel fuller
- Quit complaining or you only raise your stress hormone levels

What a great employer: first gives you a job and then teaches you how to survive with it.

#2. "We're A Team"

This is so pervasive that most people even fail to see its manipulative side.

After all, teamwork is important for the success of corporations and individuals alike.
But there is a trade-off between the two.

And those who can see the dual nature of the teamwork best position themselves to win the career contest.

Why It's A Lie

There are good reasons to be team players.

But there is also much gain from selfishness (for more on "public good games" read Thaler, 2015).

And guess who gains the most from which?

Team orientation benefits the corporation, while selfishness benefits the individual.

Many individuals fail to realize this basic truth because nobody is *openly* selfish. That would be a very poor strategy. But the most Machiavellian players profess team-playing values, while maximizing for themselves.

This is the complete description of team-work for the more astute Machiavellian player:

> We're a team… Of selfish individuals who must hide their selfish drives with teamwork appearances

The most successful political operators indeed play *a bit* for the team, *pretend* to play a lot for the team… And they mostly maximize their own interest.

And look at this quote to see that's not even morally objectionable:

=directing individuals' accomplishments to my objectives
Here is the caveat: the "organizational objectives" are, of course, Andrew Carnegie's objective.
And the same is true for *every* business owner.
Being a team player benefits the owner far more than it benefits the individual.
And that's why corporates all over the world push the "team player" mantra (= be a good working bee for us).

When Team Culture Masks Abuse

There can be strong conflicts of interest between teams and individuals.

And when the "team culture" is taken to the extreme, it can be used as justification to abuse the individual.

- The miners complain about dangerous working conditions? It's not good for the whole Rio Tinto, fire them.
- The unionists complain of wages too low to live? Not good for Carnegie's steel company, hire the goons to break the strike.

Ray Dalio also takes an extreme "team first" position in his acclaimed "Principles", where he basically says that:

> **What's good for the whole is good**
> –*Ray Dalio*

Ray Dalio's team-first approach could easily become abusive towards the individual.

But of course Dalio prefers that approach: he *is* the owner.

Owners are inherently biased towards the whole because they *own* the whole.

And what's good for the whole is not necessarily good for you.
As a matter of fact, this "team first" value could easily justify cruelty and abuse towards the individuals.
We have seen it played out in history a number of times already. For example, the Jews were supposedly not good for the whole nation. So… Eliminate them.

Here is the same law re-written from a more cynical -but realistic- point of view:

> **What's good for the whole is good for the owner**
> *–The Power Moves*

Manipulation Explained

Allow me some quick theory.

Group selection is controversial in evolutionary psychology (Pinker, 2012).
But, from an organizational point of view, it's fair to assume that groups with selfless individuals outperform groups where individuals pursue more selfish strategies (Sloan, 2007).

And that's exactly what organizations angle for when they push team values.

The corporate incitement for teamwork seeks to discourage more individualistic pursuits which might be good for the individual but bad for the company.

Organizations with 100% selfless individuals promote the corporation's success -and increase its bottom line-.
The whole -and the owner- wins.
But it's all to be seen whether or not the individual also benefits from a selfless strategy.

The question then becomes whether the corporation returns the favor and shares the spoils.
In simple words: does a winning corporation fairly rewards its selfless employees?
Generally speaking, don't count on it.
People -and owners- often being selfish, it's often a very small trickle that seeps down the chain.

Instead, you're probably better off learning office politics and *actively* seeking as much of those spoils as possible. Which, incidentally, might be the best way to address economic inequality.

> **The best way to address large-scale social-economic inequality is at the individual level, with individual's empowerment**
>
> *The Power Moves*

Example: Howard Schulz & Starbucks

There are countless examples.

One of my favorite though is Howard Schultz, founder of Starbucks and author of "Onward".

In "Onward" Schulz makes a big show of loving his people.

Schulz was in so much pain for having to fire his beloved staffers. You know, for Howard they were family.

Yet, he did fire a whole bunch of them.
And then did it again.

There is nothing inherently wrong with having to fire people.
Businesses exist to turn a profit, and would disappear if forced to operate at a loss.
But when you talk about family and "standing together", and then you fire your own family members… Then you also realize that the family and standing together thing is a big con.

P.S.:
Schulz also thought that really good teams don't need unions (unions defend workers' interests).
And he always ferociously fought to keep unions away from Starbucks.
Basically, he said:

> Since I love you guys, I forbid you to join union and seek a better bargain.

Nice manipulative trick to keep all the bargaining power on his side.

#3. We're A *Dream* Team

The next step from "we're a team".

In the overzealous efforts of celebrating victories and hiding defeats management loves to gush how great the team is.

Easy manipulation, since people love it too. Everyone wants to be a dream player part of a dream team.

Why It's A Lie

The "we're so great" corporate BS is common.

Yet, it doesn't mathematically add up.
Dream teams are, by definition, a minority.

Simple math then tells us that most execs are lying with the "great team talk".

So here is a quick litmus test against condescending execs: how much are you being paid?

> **It's only a dream team if everyone's on a dream salary**

If your salary is not substantially above average, then you're not in a dream team.
No shame in that. It just means that you're being the victim of another corporate lie.

Manipulation Explained

How does this technique work?

In two ways:

1. Make people feel good for being part of a special team, and they will work harder to keep up that flattering reality

2. Set yourself up as a good judge, and people will work to avoid feeling like “not good enough for your expectations”

The latter is called “attribution”.
Research has proven that attribution is a highly effective technique to improve performance (Miller, 1975).

What does it mean, more practically?
That when you tell people they are good, you *incentivize* them to be good (ie.: work hard), so they can confirm the expectations and feel good about it.

In other words: people tend to rise to the level of expectations.
This is a technique Carnegie also recommends in his classic “How to Win Friends and Influence People“.

Finally, assessing people’s performance also leverages what I refer to as “judge frames”. Judge frames increase the soft power that managers have on employees.
Also read:

- **Judge frames and soft social power**

Example: Pixar & Ed Catmull

Ed Catmull, the former CEO of Pixar, wrote a book on “institutionalizing creativity”.
His job, he said, was to hire the best talent and remove the barriers to creativity.

I quote him:

> What is the point of hiring smart people if you don’t empower them to fix what’s broken?

Catmull believed in employees’ empowerment, but allegedly sought an agreement with other industry titans to ensure their wages stayed *below* market value.

Catmull insists he did it for the “long-term good of the company”.

> **Jesse**: This isn't a family! This is a prison! You're a liar and a bully!

#4. We're A Family

This is the advanced manipulation level of "we're a team".

You can see it more often in early-stage startups (and in mafia-like organizations).
Enter shared values, field trips, drinking together and, of course, "changing the world together".

Part of the "we're a family manipulation" include:

- **Using inclusive names for low-level employees** (ie.: "partners" for baristas in Starbucks and "associates" for Walmart)
- **Management's big show of openness** (ie.: open-door policies, dressing down, talking informally, etc.)
- **Easy-going, anti-hierarchical attitude** ("bring your whole self to work", you know, "just be yourself within the family")
- **"Hip" job titles** ("ninja", "hacker", "customer happiness")
- **Informal attire** (just come as you just left your sleeping room)

BTW, about the latter, if you want to test start-up open-mindedness, try to go to work with a suit and see what happens (hint: they're not gonna be very open-minded about that).

Why It's A Lie

It's not a family.

As simple as that.

You can change titles, clothes, or keep your door open, but the fundamentals dynamics of power don't change.
And the power dynamics in companies have nothing in common with families.

One above all: bosses fire employees. Families don't fire family members.

Ants die for their queen ant. Be my guest…

Manipulation Explained

The “family manipulation” arches back to evolutionary psychology.

We are all hardwired to break our backs for our families because we share a large chunk of our genetic coding with them (Hamilton, 1964).

And that’s what corporations are trying to do.
By framing workplaces like families corporations seek to encourage in their (disposable) employees the same level of affiliation and dedication that they have for their families.

Of course, the biggest beneficiaries of the family frame are owners, CEOs and company leaders.
As a rule of thumb, the higher the manager, the bigger his incentive to play the family card (and the more likely it is that it’s all a big lie).

Example: Peter Thiel Encourages Founders To Act Like Mafia

Corbis/The Telegraph
If you think I’m exaggerating, take a leaf from Peter Thiel’s book.

Peter Thiel is a famous entrepreneur and founder of PayPal, and he encourages founders to seek a culture that resembles a cult or mafia.
One of the chapter’s titles is, verbatim: “mechanics of mafia”.

Not by accident, the mafia calls itself “la famiglia”, or “the family”. That’s an effort to evoke a superior sense of belonging from its members.

See an example from The Godfather himself:

> **Godfather**: but don’t ever take sides against the family again (ie.: the family loves you… But only long as you do whatever it’s good for the family)

Remember this: **when an owner says the organization comes first, they are telling you that you are**

expendable.

So watch out for those “family” talk because family-first organizations require lots of sacrificial lambs on the altar of profit.

#5. Lofty Goals (Improving The World?)

We are in the era of “Start With WHY” and moonshots.

Nobody is out to win and succeed for themselves. And nobody wants the limelight because of their narcissistic tendencies.
And God forbid if any entrepreneur wants to make money.

No, today everyone wants to change the world for the better or, in millennia’s parlance, “want to make an impact”.

Why It’s A Lie

Guys, it’s simple:

It’s either we all turned into transcendental creatures who all outgrew their natural and inner selfish drives, or…
Someone is lying.

Even the worst narcissists and sociopaths these days use this front.
Tai Lopez, for example, wants to help people (and not finance his fetish for sportscars).
And even Elizabeth Holmes, the fraudster CEO of Theranos, said that it’s not about the money but the vision.

Manipulation Explained

Why do corporations want to frame their missions with lofty ideals?

Well, for one, because the owner looks better.
You know, kinder and prosocial, rather than selfish.

And second, psychology research suggests that intrinsic motivators like higher goals and ideals can drive people more powerfully than extrinsic motivators such as money and benefits (Daniel Pink, 2011).

That’s great news for employers, who are now all busy concocting grand visions to help the world.
With lofty missions, companies can pay less money, while getting more dedication.

This technique seems to work especially well with millennials, a generation packed with well-meaning simpletons who seek to “make a positive impact” (what does that even mean?).

When you have big dreams to impact the world… There are no limits to hypocrisy
What a win-win!
Stephen Covey would be proud.
The employers win. And the manipulated employees *feel* like they're winning.

Example: Bill Gates Helps The World... But Is Ruthless With The Competition

Bill Gates vision was that of a "PC in every desk and in every home" to make the world more productive.

And today Bill Gates cures diseases to make the world a better place with his Bill & Melinda Gates Foundation.

I am grateful for Gates' work, but it's rare that you will meet any dominant business leader who's not ruthless and cunning.
And Gates is no exception. Several memoirs of tech leaders who competed against Microsoft suggest he was ruthless.
It was either "accept my offer, or I'll lose money to drive you out of business". Talking about "offers you can't refuse".
And Gates also officially fell out of the law when he settled for Microsoft's abuse of monopoly power.

#6. "It's Not About Me, The Owner"

> **"It's about you, dear employees".**

Or:

> **It's about the mission, and you, dear employees, are making it happen**

You will see the self-effacing manipulation with very charismatic or very powerful founders who tend to hog all the attention.

What they do then is to play the self-effacing game to avoid being branded like the power-hungry and narcissist individuals they probably are.

There are two types of self-effacing manipulation:

1. “it’s not about me, it’s about the vision”
2. “it’s not about me, it’s about the people”

Why It’s A CEO Lie

People who become CEOs and work all the time are usually highly driven to succeed, win, and dominate.

Sure, some of them also have a vision that includes others, but it all starts with the self.

Elizabeth Holmes, our example of self-effacing business leader, wrote at 9 years old she wanted to discover “something that mankind didn’t think it was possible to do”.
That’s not the behavioral cue of modesty. That’s the cue of unbridled personal ambition.

Manipulation Explained

The self-effacing manipulator aims at becoming a transcendental type of leader.

Indeed the archetypes of the self-effacing leaders are often found in pro-social religions.
Jesus Christ was a self-effacing leader who not only sought no (apparent) credit but literally carried the cross for all his disciples.

How can we not love the leaders that do it all for *us*?
They almost seem too good to be true.

Well, turns out, some *are* too good to be true!

Similar self-effacing figures in popular folklore are Robin Hood, Don Quixote and Che Guevara who, on paper, fought for the people.

Example: Elizabeth Holmes

Listen to how Holmes self-effaces:

> **Elizabeth Holmes**: We have a belief system that it is not about us or about technology but about giving people a basic right

Little later people found out that Holmes defrauded not only investors and partners, but also the patients whom she so touchingly wanted to help.

If you have read “Bad Blood“, then you know that Holmes was possibly a sociopath or psychopath.
Yet the deeper question here is: is she an exception or is she just the most blatant example?

#7. We Care About Stakeholder, Not Just Shareholders

In this day and age, it’s not about the shareholders anymore.
It’s all about stakeholders and society at large.

Here are the stakeholders:

- Employees
- Customers
- Society
- Environment

The last one is particularly popular today.

Even fossil fuel companies joined the (green) party:

When Shell joins the Green planet movement, you know someone is taking you for a ride.

Manipulation Explained

Companies care about profits.
And since these days showing an environment-friendly facade helps to sell well, companies have adapted.

Needless to say, that facade is often more marketing than facts.

As this European Commission study shows, 60% of shoppers prefer to buy environment-friendly products, but corporate information is so misleading that, I quote:

> European consumers are not able to make an informed choice (of what's real or fake environment-friendly).

Where Is The Manipulation

Same as consumers, employees want to feel like they are good and caring human beings.
Cognitive dissonance (Festinger, 1957) then dictates that working for unethical companies would make them feel bad.

So companies feed employees just what they want to hear (ie.: the goody-good ethical hypocrisy).

Example: Phil Knight & Nike

In "Shoe Dog", Nike founder Phil Knight says that he rented sweatshops "just like any other business did".

And there is nothing inherently wrong with wanting to maximize profits.
It just feels self-manipulation when in that same book Knight prides himself on treating his sponsor athletes "like real people" and not as a "conduit to earn more".

Maybe the kids in the sweatshops wished he had just extended that kindness one little step further.

#8. We Win Together – Or Lose Together

Businesses love to talk up and celebrate "team victories".

And often you win and lose together, that's true.

But the *consequences* of both wins and losses couldn't look any more different for owners, CEOs, and employees.

Why It's A Lie

When the team loses the CEO gets a golden handshake and you get the sack.

When the "team" wins, the big shareholders get the cash and you get a pat on the back, a pittance and a useless corporate party that will steal even more of your personal time.

It's not about winning "together", it's about the split of the spoils

Manipulation Explained

Research shows that groups prefer leaders who seem similar and closer to the group they lead.

And the opposite is also true: the further removed and privileged the leader seems, the less the followers want to sacrifice themselves for the group (Haslam et. al., 2006).

This can create problems for modern corporate leaders.
Much social psychology research also shows that men become more risk-seeking and prone to rioting when they feel like they are not given an equal chance in life (Hopkins, 2013).

But people on top don't like unrest and risk-taking men and they'd rather have an obedient and submissive workforce.

When corporate leaders say or imply you all win together, they are trying to pre-emptively stave off all thoughts of unfairness to make you feel you're all on the same boat.

Finally, by talking about "togetherness", leaders try to position themselves as part of the in-group.
And leaders who are part of the ingroup enjoy a much stronger leadership and command a much more loyal followership (see Haslam, 2001) -at least among the most gullible majority-.

Example: Walmart & Sam Walton

Sam Walton was a ruthless money-grubber and faced much criticism for the way he treated his workforce.

Until, he says in his memoirs "Made in America", he had a revelation while traveling in England.

Walton decided Walmart would consider its employees as associates and would let them part of the company's success through stock-sharing options.

Wow!
How nice what Walton *says*.

Critics, who also have facts on their side, are not nearly as celebratory.
Walmart paid 352 million to settle 63 lawsuits over wages, including forcing employees to work off the clock.

And Walmart employees are so poorly compensated that the state of California alone pays them $86 million a year in financial subsidies and food stamps.

Maybe money can't buy you love, but Walmart employee's stock options can't even buy you food.

#9. We Work Hard, Play Hard

If you worked in startups, you probably heard this.

And you know what this picture means:

Startup Manipulation Explained

It works like this:

1. **Positioning to attract young grads**: Youngsters have a bigger "leisure drive" (Aarsen, 2007), and startups position themselves as "cooler" places for fun, which helps them attract young talent out of university
2. **Subtle frame of "giving your all"**: The slogan promotes a "hard & fast lifestyle" that is all about "giving it one's all", squeezing youngsters at the peak of their availability (biggest beneficiary being the company, of course, since you work far more than you party)
3. **Social scalping**: From a social exchange point of view, they promote your giving (hard-work), while not pledging anything(it's not "work hard, make a lot money", mind you, it's "work hard, play hard". The company pitches nothing)

The manipulation is still the same: squeezing the most output possible from employees, while giving back as little as possible.

To keep the charade, the founders might buy some games and beers for the office and once a year throw a company

party with the cheapest booze and food they can find.
Those parties were great learning experiences for me. The managers getting sleazy and sloppy with the pretty -or less unattractive- female employees was one of the reasons why I knew I had to forge my own way in business.

Worst part?
You might have to attend the sleaze-fest or you're not part of the "company family".

My advice is to attend that party, have fun, and pretend to buy into the manipulative "work hard, play harder" mantra.

But deep down, know the truth.

And the only hard partying is what the founders and shareholders engage in, including top booze, maybe cocaine, and probably top-shelf hookers, too.
What they throw for the company's rank and file is just a front -often, on the cheap-.

#10. We Are Driven By Values

My first company had it in its tagline:

> Driven by values

Every single company today lists values and beliefs.
And they always sound so good and inspiring, don't they?

Why It's A Lie

An organization is an inanimate construct, it has no values in and on itself.

The values you read are either:

- What the founder liked most -or, more commonly, what make him sound good-
- The values that better serve *the business*

So values are either there because the founder wishes he had them, or because they're good for the bottom line.

Manipulation Explained

Maslow's hierarchy of needs postulates that we strive for higher ideals once our most basic needs are met.

So once the organization takes care of the basic needs with a salary that is as small as it can get away with, the higher-ideal manipulations begin.

Company's values appeal to our higher selves and have three objectives:

1. Make employees work harder as they (falsely) believe they're contributing to some common "good"
2. Make employee more loyal
3. Make employee less selfish and more pro-social (good for the organization)
4. Increase the sense of homogeneity and like-mindedness among members

The last one is interesting.
If we believe we share similar values, it means we're alike. And since we like people who are like us (Cialdini, 1984), you become a better team player (again, good for the corporation).

Finally, **even money-driven companies without values are replacing your values**.
As Storr explains in his analysis of status and groups, even industries that value money such as banking and law

create a money-driven culture that assigns status to the hardest workers and to the biggest earners.
Since we are social animal, everyone working in those organizations naturally tend to take over the same values.
Result… They value and chase money, and *work accordingly*.
Yes, in those cases the employee may profit financially, but… At the cost of losing his own values, and toiling his life away for the organization.

And the ultimate winner is always the organization.

Case Study: Goldman Sachs & The Muppets

Goldman Sachs, the most (in)famous Wall Street investment bank lists among its core values:

- Integrity
- Honesty
- Putting the clients' interests first

How surprising to find out that Goldman's bankers internally referred to clients as "muppets".
How even more surprising that a few years prior Goldman Sachs settled a 550 million fine with SEC regulators for, in fact, swindling their clients with the cr@ppy subprime CDOs which fueled the financial crisis.

What Machiavellian Bankers Show Us

Funny thing:

Goldman Sachs runs employees' surveys.
And the results at the time of writing this article showed that *none* of the employees picked transparency and integrity as the highest value and they *all* picked "teamwork and winning".
LOL, What a nice move to put "teamwork" next to "winning" -"How to Lie With Statistics", anyone?-.

GS shows that in an environment of selfish Machiavellis people know the rule:

> Pay lip service to the higher ideals and focus on amassing resources.

#12. We Make An Impact (Build A Legacy With Us)

Maslow was a smart guy, but he missed a few important human drives.

One of them is the "legacy drive" (Aarsen & Altman, 2006).

Indeed, some of the most powerful values one can summon are transcendental.

Appeals to eternity leverage our unconscious wish of transcending the physical world, contributing to something eternal.
Few are frank enough to admit it because, unconsciously, they are afraid of how narcissistic that would sound -a mistake based on not accepting one's darker drives, by the way-.

The "making an impact" that we saw earlier is an example of an appeal to eternity.
When we "make an impact" and we "leave a dent in the universe", people feel like they're defying death.

Some appeals to eternity are:

- "Changing the world"
- Disrupting
- "Moonshots"
- Anything that's "never been done before"

- Working on the “biggest / most advanced” project etc.

Why It’s A Lie

I can tell you with almost complete certainty that no human being will ever be remembered forever.

And the idea of “changing the world” is ludicrous. The world changes anyway, and any changes are nothing but transitions.

In short, the goal of “being remembered forever” is not only aggressively narcissistic, but it’s also plain stupid.

And no, that’s not sad.
Quite the opposite: it’s empowering and liberating (and it helps you break free of manipulative leaders).

Manipulation Explained

We are the only animals on this planet who are aware of our own mortality.

That must impact our psychology and behavior somehow, and terror management theory is a branch of social psychology researching exactly that.

TMT has received its fair share of criticism, but it has passed laboratory scrutiny (Burke et al., 2010) and it’s solid science.

TMT postulates that the conflict between self-preservation and our cognition of death pushes us to unconsciously pursue values, ideals, and goals that make us transcend the physical realm.

Burkeman in “The Antidote” says that people primed with subtle reminders of death:

- Prefer charismatic leaders (Cohen et al., 2014)
- Supports group-affirming values (Cohen et al., 2005)
- Seek stronger punishments for “culturally amoral” (Rosenblatt, 1989)

There you have it: seek a charismatic leader, defend the group and punish outsiders.
The definition of a sect.

And that’s why conservative leaders also leverage the fear of physical harm and death: it rallies the troops behind the (supposedly) strong and charismatic politicians (Bush the Vietnam war’s skirter in military uniform, anyone?).

These are all behaviors that corporations would be happy with. Act like a sect, follow the leader and give your all… For eternity -and for the founders’ more physical income-.

TMT theory has been used to explain the birth and persistence of religions.
And that’s why, in many ways, No Logo author Naomi Klein was quite right and prescient when she said that the best brands are the new religions (brain scans confirmed it too, eventually).

Example: Steve Jobs & Elon Musk

Steve Jobs was the master of this corporate manipulation.

Everything about Jobs was about “changing the world”, “making an impact” and “putting a dent in the universe”.

By reflection, people who joined Apple as employees were also part of that "universe dent".
They also "changed the world" and they all put in their (futile) claim to eternity.

Elon Musk also leverages appeals to eternity.
The whole spiel on "making us an interplanetary species" is a big moonshot at "making history".
And people really get stupid trying to join Musk's team. That's the power of the charismatic, death-defying leader.

Do All Employers Manipulate?

Yes.

But so does pretty much everyone else.
The very human nature of maximizing one's own returns leads most humans to be natural manipulators (Wright, 1994).

Better questions would be:

- **Do corporations manipulate more than individuals?**

Still yes.

Corporations gain when individuals forego their interest for the corporation, which makes manipulation a survival need and a competitive advantage for corporations.

Plus, by their own very organized structure and by virtue of the people they attract in leadership roles, corporations can manipulate more effectively and at a larger scale than individuals can.

- **Do all corporations take advantage of employees?**

That depends on what one would consider a "fair" and "non-abusive exchange".

Your best bet is always to put negotiation leverage on your side though.
Because, given the chance, most corporations do try to keep as much as possible and give out as little as possible.

- **Should employees always be wary of their own employers?**

There is a natural, opposing duality in the relationship between organizations and employees.

Both *can* be better off cooperating and, often, both are better off.

Ideally, there would be a fair 50/50 split for the pie.

But, like in a public goods game, either one -but not both- can be *much* better off by taking more of the pie and short-changing the other.

The human tendency is to always take more and give less, but without exaggerating too much (see various experiments of ultimatum games).
But some bad apples, of course, will try to take *much* more and give much less.

Employees must be aware of this potentially adversarial relationship.

- **Do leaders roles go to the worst of human beings?**

No, not necessarily.

Driven, and even driven to get rich, is not synonymous with "bad".
Driven men are the men who move the world forward. Without them, we'd be still stuck in stone-age.
We need driven people.

But it's also true that ruthless and Machiavellian individuals can have an easier time climbing corporate ladders (see: Machivellis at the top).

"Chainsaw" Albert Dunlap
This all might point to an even deeper question: is it even moral to work for corporations?

The Morality of Corporations Over Individuals

This is what we gleaned so far:

1. Many CEOs are self-absorbed individuals who care little about others, yet
2. Corporate manipulation is all about getting employees to forego their self-interest for the group's allegiance (depersonalization, in psychology)

Let's be clear about something: getting people to care about the group can be a very good thing.
It is, after all, what holds our societies together and it's often a win-win.

But selfish leaders can also leverage group allegiances for darker purposes.

Whether it's used for good or for the founders' personal gains only depends on how the employer rewards the employees for foregoing the self in favor of the organization.
I don't know the specifics of your company and **it's your responsibility to judge your own company**.

And I underline "responsibility".

So take a hard look.
What's behind your company's slogans and values?

And don't forget to contribute

Finally, lemme clarify that **this article is not an encouragement to expect a salary without giving back**.

Expecting strangers to care for you without giving back is the definition of free-loading -and one of the worst examples of entitlement mentality-.

My recommendation is that you focus on giving while critically observing your work environment and assertively demanding a fair balance of give and take.

If you don't see a fair environment or if your fair demands are not met, then consider you might be doing something better with your time.

SUMMARY

There are many areas of potential conflicts of interest in work relationships.

Organizations tend to manipulate employees into dropping their individual interests in favor of the group's interests.

That's not always necessarily wrong.

But it's often the case that the company gains with the employee's pro-social behavior while the employee does not always gain in equal measure.

This article is high in cynicism.
It helps you uncover the reality of things beyond corporate lies and HR manipulations.
But don't go to the other extreme.
Instead, use it to critically assess your company and find a place where you can play win-win.

Ultimately, you want to be an "enlightened cynic" approach, you want to be an enlightened individualist, and move towards "enlightened collaboration" for win-win.

The Happiness Hypothesis: Summary & Review

Lucio Buffalmano · 20 May 2019 · Archived copy · Original

The Happiness Hypothesis mixes solid psychology research with philosophy and religious wisdom to provide a beautiful overview on what's the meaning of life, what is happiness and how to better achieve it.

- Review

Summary

About the Author: Jonathan Haidt is a social psychologist and professor at NYU.
He first started out studying philosophy but didn't find the answers he looked for because, he says, modern philosophy lacks a good understanding of psychology and human nature. After he moved into psychology

#1. Our Brain Is Not United and Coherent

Jonathan Haidt says that the mind is divided into several different compartments.

We often make decisions unconsciously and in a split of a second. Then only later we pick a rationally-sounding explanation for our unconscious decisions.

Patients with split-brain show that different parts of our brain can also go against each other as they try to and overpower each other (also read Incognito for more information).

#2. Our Brain Has Two Systems: Fast & Slow

The author divides the brain into two main parts:

1. The limbic system in charge of basic instincts
2. The neocortex for rational thinking

It's a bit reminiscent of Kahneman's two systems but the author calls the limbic brain "elephant" and the neocortex "driver".

#3. Nature Plays a Bigger Role Than Most People Realize

Jonathan Haidt seems to be more on the "nature" spectrum of the "nature VS nurture" continuum.

I'm more in the middle but like Steven Pinker brilliantly noted in "The Blank Slate" we do need to regain some terrain within our cultural glorification of nurture.

Haidt takes the example of two identical twins who had never met until they were 40.
They both had the same nervous tics and they were both afraid of blood and heights.

My Note:
Albeit of course I agree that genes play a huge role, the author seems to take it too far with this example, also listing the same year they met their husband and the miscarriage they both had.

When it comes to happiness, between 50% and 80% of happiness levels are genetic.

#4. Attachment Styles Determine Our Relationships

The author says that much of our happiness is determined by our social ties, our friendships and our relationships.

And our relationships in turns are heavily influenced by our attachment styles, which the author believes to be mostly hereditary (take here an attachment style quiz).

#5. How to Change Yourself

There are three ways to change yourself:

1. Meditation
2. Cognitive Therapy
3. Prozac (ie.: medication)

The author actually tried Prozac, and contrary to a few other authors who recommend being careful with it, he makes the point that it works very well.

The goal of meditation, he says is to control and tame the affective styles of your elephant.

#6. Reciprocity, Fairness & Greed

The author discusses ultimatum games, fairness, and reciprocity.

People seek fairness and reject offers they feel are unfair even when that means they will lose out themselves. Haidt also explains that these experiments proved to psychologists that economic theories of rational players were all wrong (read "Misbehaving" to learn more about behavioral economics).

Reciprocal Manipulation

The author takes a leaf out of Wright's "The Moral Animal" and says we evolved a huge brain to help us play the social game which includes manipulation, dirty negotiation tactics, and gossip.

Our reciprocal system also allows for manipulation though when people give us something to get something back. The author mentions Cialdini and recommends you see it for what it is: manipulation and drop any feelings of obligation.

Gossiping also allowed for cooperation because it helps spread the word about Machiavellian and selfish players who game the system.

However, Machiallive might still have a point and it might be the case that people favor the appearance of morality over actual morality.
Daniel Batson's experiment showed that behind closed doors even people who rated themselves as highly moral "found a way" to award themselves the best result even after the coin flip turned out negative for them.

The only intervention that enforced moral standards was reminding people of the importance of morals and then placing a big mirror in front of them.

Also read:

> Manipulation: Techniques, Strategies, & Ethics

We Believe Our Own Manipulation

On average, people really believe in their own mental manipulations. We really believe we're better, more ethical and "fair".

Indeed we are fairly accurate in our perceptions of others. It's the perception of our selves that is inaccurate.

The "Family Manipulation"

Haidt introduces the topic of reciprocity with The Godfather.

He says that mafia calls itself "the family" to strengthen the bond among the affiliates. And "the godfather" itself is an attempt at forging a kinship that doesn't really exist.
This is a technique also used in business by companies and CEOs, read more in "corporate manipulations".

Read more on dark psychology here:

> Dark Psychology: 7 Ways to Manipulate People

#7. The Adaptation Principle

The adaptation principle says that human adapt to almost anything which happens to them.
Both in the positive (hedonic treadmill) and in the negative.

An incredible study took people who won the lottery and people who became paralyzed. And as time went by (one year) they both returned around their baseline level of happiness.

But it's important to notice that no all activities and circumstances obey the adaptation principle and you might want to focus on them to maximize your happiness (more below).

#8. The Happiness Formula

This is the actual happiness formula:

> Happiness = S + C + V

- Set points (basically your biology)
- Conditions of your life
- Voluntary activities

Some conditions in your life do not obey the adaptation principle and tey will make you perennially sadder or happier.

Avoid the following:

- Chronic noise in your environment
- Long commute (you adapt to the bigger place out of town but not to the commute)
- Situations where you lack control (ie.: stuck in traffic)
- Shame: if you feel ashamed for something, fix it or find a way to get over it

Get more of the following:

- Good relationships
- Social circle (even introverts will be happier, os if you're one strive to become ambivert)
- Flow (read more here on how to reach flow)
- Become a satisficer (research products less and be more content with 1st option, also read "The Paradox of Choice")
- Constraints (social constraints can help provide structure and meaning)

- Work on your strengths, not weaknesses (also read "Strengthfinder 2.0")
- Do engage in volunteer work (even more helpful for socially isolated people)

Some traumas or hardships can also make us happier in the long run. Just make sure you talk about it.

Wisdom Nuggets

Here are more wisdom of nuggets:

- **We're all natural hypocrites**

We are programmed to see the slightest speck in our neighbor's eyes and not to see the log in our own.

- **Plastic surgery can improve happiness**

Albeit many scoff at plastic surgery as an uneeded and superficial remedy, the author says that people who go through with it often end up being happier in the long run.

He says it's because of shame and people who fix some major flaw they were ashamed of feel like a burden has been lifted (read "Daring Greatly" for more on shame).

- **Religious people are happier**

Before you run in the arms of Richard Dawkins after "The God Delusion" or into the skeptics Bible "The Believing Brain", do keep in mind that religious people tend to be happier.

- **People are more like plants than computers**

We often compare people to computers and we think of psychotherapy as a repair shop.
The author instead prefers a plant metaphor, also because most of the times people will get better by themselves.
Just like when you give water to a withering plant.

CONS

I loved "The Happiness Hypothesis", and these are some minor flaws I found:

- **Some debunked psychology**

Haidt wrote in 2015, so he must have known about the replication crisis in psychology.

Yet, he presents several studies which have been debunked or harshly criticized without giving a single mention of the criticism (ie.: The Marshmallow Test, priming).

You can read more in this article on pop-psychology myths.

- **Elephant and rider terminology**

maybe Haidt wanted to address "normal" laypeople who don't research or study their stuff, but even if that were the case… I still don't like the terminology.

It's condescending to think your readers are so stupid that they don't deserve more precise

- **Jumps to conclusions on psychopathy**

Haidt shares the story of a friend of his whose wife had run away with another man and brought her two children along.

He tells his friend he's a psychopath and he'll soon get tired of her.
But of course, any serious psychiatrist knows you can't make diagnoses from far away.

- **Lacks a coherent narrative?**

Albeit at all time interesting, it felt that at times it went too off a tangent and it seemed to lack a strong, coherent narrative.
For example, group selection and attachment styles felt too out of place for a book which is supposedly about happiness and positive psychology.

Review

I would give "The Happiness Hypothesis" 5 stars for much of the content.

It's just the incoherent nature of the whole book and some pop-psychology myths which took out some sparkle from an otherwise excellent book.

Nudge: Summary, Review & Criticism

Lucio Buffalmano · 23 May 2019 · Archived copy · Original

Nudge explains how policymakers can leverage psychology and social psychology to "*nudge*" people towards choices that are better for them and for society at large.

TPM Takeaway: Persuasion, Manipulation, Greater Good… & Individual's Power
Nudge sits at the intersection of behavioral economics, psychology, and public policy.
We generally support nudges for pro-social goals, though they may also be misused for poor policies. The key safeguard is **individual power awareness**, so empowered individuals understand the game of persuasion and can decide what's best for them and for society.

Notes

About the Authors:
"*Nudge*" is co-authored by Cass Sunstein and Richard Thaler.
Thaler is a Nobel Prize winner and I loved his book "*Misbehaving*", which explains how psychology improved our understanding of economics to give birth to "Behavioral Psychology".

1. What's A Nudge

The authors define a "*nudge*" as:

> Any aspect of the choice architecture that alters people's behavior in a predictable way without forbidding any option or significantly changing their economic incentives

A nudge should also be simple to avoid if an individual wants to choose differently.
In this sense, it's a form of soft power.

Choice Architecture

Choice architecture refers to the way and order in which you present the options and opportunities.

The way you present your options will naturally nudge you towards one or another direction.

2. The Rationale for "Nudging": Libertarian Paternalism

Sunstein and Thaler explain that we don't make rational choices that are best for ourselves and/or for our society. As a matter of fact, **we often make choices that are bad either for us, for society, or both**.

They make the case that we could use our knowledge of psychology to "*nudge*" people toward the best choice but ultimately let people decide if they want to do something different.

They call this stance "libertarian paternalism".

Libertarian paternalism is about nudging towards the best choice but allowing the individual to also reject that choice.

Libertarian paternalism promotes the best choice to increase its acceptance and to help the majority of people make the best choice.
The majority of people often operate in environments in which they might not know what's the best choice, and they are likely to want and accept the nudge (ie.: choosing the best mortgage, the best health care coverage, etc.).

Libertarian paternalism is not about overriding what people want and, if people want to willingly risk high or willingly hurt themselves, they can also be given that choice.

3. Why We Make the Wrong Choices

In the first quarter of "*Nudge,*" the authors review a few of the reasons why we make wrong choices.

They are:

- **We pick the default setting** (status quo bias)

We have a strong tendency to go along or stick with the default setting.
For example, few people choose "custom installation" on their software.

And few people opt out of organ donation if that's the default setting in their country.
Yet, very few people opt-in to donate their organs because that's not the default setting and because it goes against the path of least resistance (next item on the list).

- **We pick the path of least resistance**

We have a strong tendency to follow the path of least resistance. The path of least resistance it's often the default setting, but the two are not exactly the same.

For example, depending on how items are stocked in a supermarket or a cafeteria, people end up consuming different quantities of food because some of them will be more convenient to reach.

- **We use simplistic heuristics**

Heuristics are mental shortcuts that, often, lead us to the wrong conclusions.

Among the heuristics are anchoring, availability, representativeness, overconfidence, loss aversion, etc. (read more in "*Thinking Fast and Slow*").

The most important fact to remember about heuristics is that they prevent us from optimal decision-making.

Edit: loss aversion isn't always more persuasive
Contrary to what some had originally concluded, subsequent research showed that gain frames can persuade better, depending on context. See more in the *Rutgers Handbook of Persuasion*

- **We choose mindlessly**

For some activities, we end up choosing at random even though the consequences might be important (eating, for example, as an experiment proved we don't eat till we're full but based on the dish size).

- **We use poor mental accounting**

Mental accounting is a topic very dear to Richard Thaler as it's strictly related to behavioral economics.
In brief, it says that we are not rational with the way we spend, save, or invest our money.

- **We don't understand randomness**

We see more relations than actually exist (hot-hand fallacy) and end up jumping to conclusions that are often wrong.

We also have a poor understanding of randomness and we expect randomness to *look* random.
But randomness is "XXX" much as it is "YXY" (example of London bombing map).

Also read "*Fooled by Randomness*".

4. Temptation & Arousal Lead to Bad Long-Term Decisions

Temptation, coupled with mindlessness and arousal, is what leads most people down a path they don't really want.

We don't want to get fat and unhealthy, yet we keep staying on the couch when we know we should move.

And we smoke that pack of cigarettes even when we know we shouldn't.

In these situations, nudging can be very helpful to get us going in the right direction and to decrease the incidence of smoking and obesity in the population.

Arousal refers to the bad decisions we make in a state of arousal, which we always underestimate when we're not aroused (example of Ulysses tying himself to a mast).

5. How to Nudge

The authors provide many ideas from social-psychology research on how we can effectively nudge people.

For example:

- To decrease pollution, publish a list of the most polluting companies
- To increase saving rates, make contributions towards retirement plans the default option

If you are interested in more practical applications of persuasion, also check out Pre-Suasion, Influence, and "best books on persuasion".

Companies Already Use Nudging for Manipulation

Companies have an incentive to misuse nudging to make you spend more which, the authors suggest, is more akin to manipulation.

For example, they can pre-select options that are better for them but not necessarily for you.

Why don't these imperfections get corrected by the market?
The author says that markets are not perfect and there is no invisible hand to always fix mispricings (or punish abusive practices).

When the costs are hidden or difficult to find out, companies keep selling overpriced products and services.
Extended warranties are one such example

Also read "how corporations manipulate you".

More Applications of Libertarian Paternalism

The authors also go a bit further astray from nudging and expand on the concept of libertarian paternalism.

For example, they talk about:

- Reducing healthcare costs by foregoing the "right to sue"
- Automatically investing a higher portion of pay rises (which has a different mental accounting)
- Lock away money saved from cigarettes and only unlock it if smoke-free

The Morality of Nudging: It's OK As Long As It's Good For The Nudged

Libertarian paternalism is a policy choice and, as such, its acceptance varies heavily depending on political affiliations.

Says the authors:

> Our basic conclusions is that the evalution of nudges depends on their effects. Whether they hurt people or help them.

The authors say that it's not possible to avoid "choice architecture" and, hence, it's not possible to avoid nudging people.

Thus, "positive nudging" is the only possible way.

See:

- Persuasion vs. manipulation

Nudge Quotes

On climate change:

> **If the problem of climate change is to be seriously addressed, the ultimate strategy is based on**

> **incentives and not on demand and control**

I love books like "*Nudge*" which can sprinkle some great humor together with the bountiful wisdom they share. For example:

> The group average does exert a significant influence, but there are exceptions. A woman will eat less on dates and a man will eat more in the belief that women are impressed by maly eating.
> Not for men: they're not

On extended warranties and their general overprice:

> Please note that extended are plentiful in the extended world and many people buy them.
> Hint: don't

On the of "homo economicus", which the author calls "econ":

> If you are an econ, you can skip this section of the book. Unless you want to understand the behavior of your spouse, kids, and other humans.

On getting informed ahead of troubles:

> If you are married or plan to get married, do you know your state's laws on alimony and child support?
> Oh, never mind, there is no chance that ***you*** will divorce

Real-Life Applications

- **Nudging to spend without guilt**

Nudging in the US means enticing people to save more.

But for some people -like yours truly- the problem is not in saving, but in spending freely and without guilt.
You can nudge yourself to spend more freely and without worrying, for example, by designating an account as a "fun account" outside of your normal accounting.

- **Boomerang effect**: don't let people know their actions are better than the social norm

When you let people that their actions are better than the social norm, they feel like they can let themselves go and have "goodwill to spend".

But the exception is when you make them feel good for their choices, in which case they don't adjust.

- **Nudging in interaction designs**

Product designers should understand psychology to design good and functional products (and many don't).

On the remote, for example, the "on" button should be the biggest, together with volume.
But often, they're not.

CONS

- **Stocks are almost certain to go up (really???)**

I can't believe an author I respect as much as Thaler did come up with this BS.

How on earth can he say that “on a 20-year period stocks are almost certainly to go up”??
If a war started, are stocks likely to go up?

- **Some debunked psychology**

Some of the examples in “*Nudge*” have been relegated to debunked psychology in the recent replication crisis.

Review

Nudge is a great book on persuasion, social policy, and social science applied to politics for good governance.

I enjoyed the psychology part, albeit there is some valid criticism to what’s included as a “nudge” and the validity of some studies.
And I agree with several of the pro-social government policies it encourages.

Why Successful Women Struggle in Dating (and How to Win)

Lucio Buffalmano · 25 May 2019 · Archived copy · Original

High-achieving women often encounter a frustrating paradox: their success can feel like a roadblock to finding love.

And it's not just anecdotal.
Studies show that **high-status women are less likely to enjoy mating and reproductive success.**

At The Power Moves, we've dedicated years to decoding dating dynamics, blending research, evolutionary psychology, and real-world experience.

In this article, we'll explain this happens and share proven strategies to conquer the dating world without dimming your shine.

Why Successful Women Struggle

As it's often the case, there are multiple contributing causes to complex social phenomena.

Let's start with the major ones>

1. The Higher She Goes, The More Her Dating Pool Shrinks

Let's start with the first, most obvious reason.

Women, more so than men, show a more or less marked tendency towards hypergamy, meaning that they prefer men who are "better" than they are.

This creates an obvious problem because **the better she does in life, the fewer eligible men she will find** who are at her level or above**.**
Paradoxically, average women have it easier than successful women.

Here's a chart to clarify this concept:

Women want men who are ahead of them. So the farther she travels, the fewer the men
Women think that a big salary and a big-name college should increase their options, but sometimes the opposite is true.

Of course, we are talking here about *preferences*.
Women can physically reproduce with any functioning man, but dating less successful men feels like "settling" to most of them.

Where's The Problem?

Unless you are well-versed in evolutionary psychology, you might miss the issue here.

You might think, OK, but men also must want equally successful women, so they just find each other.

Well, it's not exactly like that:

2. Female Success Is Not As Attractive As Some Women Think

What? Men don't like successful women?

It's not that men don't like successful women, but:

1. Men have lower "success standards" than women
2. Some traits men value can be antithetical to success (i.e., age, submissiveness, and a nurturing disposition)
3. Men only value professional success up to a certain point (and almost never above their level)

Sure, men *say* they value intelligence and success, and nope, they would never be turned off or intimidated by it (a rational stance, BTW).
But what people *say* doesn't always square off with what they *do*.

Despite what they say, men indeed prefer women who are "less" than they are:

- **Some men prefer less intelligent women**

Studies show that above a certain threshold, men find female intelligence a turn-off.
And it's especially when he feels that she outsmarts him that he really loses attraction (Park et al., 2015).
Evolutionary psychologist and researcher David Buss says that men who rated intelligent women highly for long-term attractiveness still rated them as low in *sexual* attractiveness.

- **Many men prefer less dominant women**

Women prefer more dominant men, while men prefer more submissive women (Wu et al., 2016)

This is true also for some of the most successful men, which is why you see many tycoons with very low-key women (read: strong VS submissive women).

> Submissive Women VS Strong Women: Who Wins at Dating?

- **Men prefer women who earn less**

Time and culture have changed, but people haven't.

And deep down, most people don't feel it's OK for her to earn more (Bertrand, 2013).
That attitude translates into numbers, as statistics show that men tend to marry women who make less (or women marry men who make more if you prefer).

- **Men are wary of highly-ambitious women**

Women like ambitious men, but men don't award ambitious women any more points (Townsend, Wasserman, 1998).

As a matter of fact, ambition is often considered a masculine trait, and that's probably why women hide their ambition (Harvard Business Review, 2004).
Women who do not hide their ambition can be seen as gender deviants and lose points (and that's probably why Hillary Clinton lost the election).

- **Alpha men prefer kinder women**

Finally, some alpha males prefer not to date "alpha females," as that could mean more battles for relationship control and less mutual caring.

Successful men, work hard.
They might not want to admit it, but they prefer going home to a kind woman who helps them unwind rather than another (spent for the day) corporate fighter.

See Trump making this point:

> **Trump**: It's a bad idea to put your wife working for you (…) Ivana would get angry at someone working at the casino and she'd start shouting. And I'd say "I don't want my wife shouting at someone like that". There was a great softness to Ivana, and **that softness disappeared.** She became an executive and not a wife

That softness he's talking about is femininity.
When Ivana started working, she started acting more aggressively, more like a man. And Trump's attraction started vanishing.

Note:
Many dominant women turn submissive to more dominant men, but they still require more energy to "tame," and that's why men often prefer more submissive women to begin with.

3. High-Quality Men Have Options & Leverage

Here's another dating woe for career women: high-quality men and women have totally different markets.

Why?
Because, as men and women go up the success ladder, their dating markets move in the opposite direction.

While women would rather not date less accomplished men, men are OK—and sometimes even prefer—dating and marrying women who are less accomplished than they are.

And if that weren't enough, men have even laxer standards when it comes to short-term partners.

This creates huge imbalances in the upper echelons of social status.
Look at this chart:

Successful men have huge leverage, which leaves some career women frustrated when said men don't chase and invest at all.
"Doesn't he realize what a great catch I am", they wonder-.

Well, as we have already mentioned, men don't value their career achievements as much as they think.
And when men have options, their dating strategies often change.

Jon Berger in *Date-Onomics* explains that when women are abundant, many men go from monogamy to a "spread the semen far and wide" strategy.

4. There Is An Oversupply of High-Quality Women

> *There are no good men left*
> -the cliche'

But is it really a cliche?
Turns out… It isn't.
At least not for successful women.
It *is* harder for a successful woman to find a man.

"Successful", as much as 'high-quality," is partially subjective, of course.
But it's less subjective than some sources would want you to believe. And women are kicking men's asses in many of the areas that make a person high quality.

Including:

- **Women are more educated than men**

Women have long overtaken men in obtaining college degrees, and the difference has kept growing over the years.

And since women have historically been reluctant to marry less-educated men, that's a huge quality issue for successful women's dating opportunities.

In recent years, women have been adapting (or settling?), but the highest rates of unmarried (and childless) women are still to be found among the most highly educated (Pew Research 2010).

- **Women have higher emotional intelligence**

I remember a female friend complaining that she had met a great guy… On paper.
But she couldn't date him anymore after she opened up her heart about a recent painful event… And he immediately moved the conversation toward sports.

How to blame her?
Sure, that guy was exceptional, but women, on average, are markedly more emotionally (and socially) intelligent than men (Smieja et al., 2014).
And that's a very important trait to define a person's overall quality.

- **Women care more**

If we use conscientiousness as a measure of general "caring", some psychologists say that women score higher (i.e., Jordan Peterson, author of "*12 Rules for Life*")
But the findings are contentious, to say the least (Weisberg et al., 2011).

Where there is little arguing, though, is in personal care.
On average, women take better care of themselves.
From what to wear, to personal grooming and hygiene (Statista, 2016) women take more care of themselves.
And caring about oneself is one of the very basics of personal value.

Where does this all lead us?
Well, it's funny that when I say this, some women start cheering, as if they had won some competition (facepalm).

But this is a case of the "winner's curse," and it reminds me of an old saying: it's lonely at the top.

5. High-Quality Men Are Under-Supplied

As women have been improving their conditions, men have lagged behind.
And in some areas, there are just too few men in general:

- **More women in urban areas**

The gender split in cities varies widely, but a Columbia University paper shows women outnumber men in big cities (and the authors propose they're there looking for men).

When looking at statistics, we should take into account that gay men show up as male but are not looking for female mates. And there are twice as many gays as lesbians.

- **Whole world regions have more women than men**

Some regions of the world also see women outnumbering men.
One little-discussed reason is that transexuals, such as men who feel like women and thus are not available partners, skew the statistics.

In countries like Thailand and the Philippines, the gender ratio penalizes women in very significant ways (and that's why many Europeans enjoy Thailand).

- **There are far more low-quality men**

Finally, men are overrepresented in the (almost) "undatable" lowest rung of society.
Men use drugs at almost double the rate of women and are more likely to:

- Commit suicide
- End up in prison
- Socially shut down to the world
- Overdose and die (National Institute on Drug Abuse)
- Become alcoholic

In some regions of the former USSR, alcoholism has contributed to making those countries terrible markets for women to meet men.

Writes evolutionary psychology researcher David Buss:

> This trend is exacerbated by women's high standards for a mate: their choosiness dramatically shrinks the effective pool of eligible men. This leaves just a few survivors—men of reasonable social status, with adequate self-confidence and good resource potential, who are willing to commit—over whom women then compete.

6. For Many Men, Looks & Youth Trump Success

On average:

> **Men value most youth and attractiveness (genes) while women include social status, and resources.**

That's a generalization, of course, but research confirms it over and over (Regan et al., 2000 as an example).

And men who have the 'power' to go for these women, often do.

The average age difference between heterosexual couples tends to be above 5 years in developing countries and around 2-3 years in developed countries (Zhang, 2007).
But here's the catch: most men still prefer younger women (OKCupid study).

That wouldn't be a problem for average women. But since we are talking about successful women who want successful men, well… The rules change drastically for successful men.

They change because many **successful men *can* date younger women**. (remember the comparative advantage).
And many of them, do.

These findings are confirmed by data (Pollet et al., 2013).
The richest 400 men in the US married women who were on average 7 years younger. But when they remarried, they chose mates who were on average 22 years younger.

This must not necessarily be a case of "*gold-digging*" and I find it judgmental at best -most likely manipulative– to label "gold diggers" or "insecure old men" people who *choose* to date each other.

We could indeed also theorize that there is a strong relationship between resources, genes, and personal character.
The most successful men also showed a lot of *grit*, determination, and intelligence in amassing their fortunes.
And that makes them attractive fathers, no matter their age.

7. Many Career Women Lose In Femininity

And men prefer feminine women (Little et al., 2014).

This is also part of the general male preference for women who are less dominant, lower status, and less successful than they are.
Quoting from the latest *Oxford Handbook of Evolutionary Psychology and Romantic Relationships:*

> Physical dominance, size, muscularity, and wealth are traditional cues or instantiations of status.
> These features are unlikely to help women attract men and may even render women less attractive as prospective mates.
> For example, being too tall can harm women's mating prospects (…) a taller woman (e.g. , 6'4″) must compete with shorter women (6'4″ and below) for the few men taller than herself (6'4″ and up).
> Similarly, being too intelligent, educated, or high-earning—other markers of what we typically think of as status—might also be considered potentially harmful to women's success in mating competition (Bertrand & Kamenica, 2015; Folke & Rickne, 2016)

The downfall of femininity is two-pronged: cultural and professional.

The de-feminization of career women is not entirely women's fault. In large part, most industries and businesses reward traits that are more associated with masculinity than femininity.

It's not an accident, indeed, that Elizabeth Holmes decided to lower her voice to increase her authoritativeness and corporate clout:

> **Elizabeth Holmes**: (trying to adopt a lower, more masculine voice)

Of course, correlation is not causation, and many career women might be more masculine to begin with. But still, it's most likely a mixture, and I wouldn't discount the nurturing side of it.

8. Successful Women Lack Dating Skills

Many successful women date poorly for a variety of reasons:

- **Mistakenly believe their success makes them great catches**

And then get bitter when some men don't recognize them for the great catches *they* believe they are.

- **Some career women adopted combative "feminist" social roles**

Social roles are OK… Unless they come with baggage.

And self-identifying as "feminist" often comes with a very unattractive dose of bitterness and, in the worst cases, man-hating (yes, extreme feminism is the female version of toxic masculinity).

Just read *Lean In*, the most popular book for "feminist career women", and you will easily recognize a combative, bitter undertone.

- **Career women don't date assertively enough**

Most women don't date assertively enough.

And career women are not the exception.
The (false) belief that their accomplishments make them great catches leads successful women to date too passively.

Mark Gimenin even says that game theory factually predicts that successful women lose out in dating because, feeling like they have a strong hand, they don't bid aggressively enough.

Then the least successful ladies come in, and they're ready, available, and fun… And they pair up with the successful men.

- **Believed in the lie that men and women are the same**

That lie comes with many harmful consequences for career women's dating options.

They include the belief that her resources were going to give her dating leverage, that femininity was a thing of the past and that female open ambition came at no cost (and as we've seen, they're all wrong).

9. Smaller Issues Compound

We have already listed the main issues with career women's dating success.

But to compound the dating woes of successful women:

- Metrosexuals are on the rise (and male testosterone is on the decline)

- More libertine cultural trends favor high-quality men (but not women)
- Successful women are targets of exploitative men, including psychopaths (see "Hare, 1993")
- Lower value men may naturally resort to abusive tactics to keep successful women

See here:

> **Lucio**: Men dating higher-status women have less ability to add value, so they must resort to value-taking approaches to keep her

How to Combine Dating & Career Success

So far, this article might have seemed a bit depressing.

But first of all, exceptions always apply.
Plenty of men like successful women, and many successful women have perfect relationships.

Still, here are some tips to maximize your dating success:

#1. Plan Your Dating With Data

If you care about getting married and having children, do consider the gender split of:

- The city you're moving to
- The university you will attend
- The field you're working in

Or, at least, take into account the gender split of your:

- Hobbies, bars, and places you frequent

Sure, art galleries are nice, and wine tastings are sublime (I agree). And maybe you can meet some exotic and romantic Italian or French men. But if most attendees are women, what are the chances?

Be Aware of The Racial Divide

The gender split in education differs heavily among ethnicities.
Asian men are holding up, and there is little difference between men and women (no pun intended on Asians' lack of hair :).

White men have lost much ground, but worst of all, it's for Black women and Hispanic women.
Keep that in mind.

Black college guys, anyone?

#2. Expand Your Dating Pool to Non-Graduates

Of course, there is a correlation between the level of education and overall quality, but that correlation might not be as strong as you believe.

There are plenty of great men who didn't graduate

In my own household, my mom went to college, and my father didn't even finish high school.
But there are some doubts as to who's the intellectually dominant partner in the relationship (and yes, there is such a thing as intellectual dominance).

IQ and education are also only two aspects of quality. Men can be masculine or high quality in plenty of other ways (i.e., good with repairs, in great shape, good in bed, very caring, etc., etc.).

#3. Get Real(istic): Perfection Doesn't Exist

Some career women have super high standards, are perfectionists, and are never happy with themselves.

And they carry the same unrealistically high expectations in dating.

But perfection doesn't exist. People are flawed. We all are.
Consider turning "good but not perfect" into "good is good enough".

#4. Lock In Young

"Die young, stay pretty", sang the rebellious goddess Blondie.

But if you want to live and even catch a successful man, you might want to consider pairing up and getting serious earlier in life.

This is important information because, in this day and age, you will find countless resources telling you the opposite.

And guess what?

It's always women!

Elizabeth McClintock writes on Psychology Today:

> Age-old scare tactics (…) to frighten women into early marriage may do substantial harm and little (if any) good.

Don't fall for that.

Those narratives sound pro-women and supportive, but they are the exact opposite.

Most women advising other women to "wait" are indeed being rather manipulative as they're trying to:

- Handicap and mislead the competition with false information
- Make themselves feel better with the "misery loves company" effect
- Improve their own lives by lowering the social stigma of unmarried women

I call these forms of manipulation "pro-group feints", and their only benefit might be to make you *feel* better. But not to make your *date* better.

I have no vested interest in telling women to pair up young instead.
As a matter of fact, I really prefer all women to stay single.

But if you want to be in a relationship, then take heed of rational arguments and actual data.

It's Basic Negotiation

Basic negotiation principles dictate that you get the best outcome in your negotiations when you have the most options (Ury & Fisher, 1981) and the most bargaining power.

And since it's been proven over and over that female market values peak earlier, locking in earlier yields the best results.

It's Simple Math, Really

Simple math dictates that a bad dating market will only get worse with time.

Think of the analogy with a game of musical chairs: in the beginning, most people find a mate because the imbalances are spread over a large population.
But it gets more and more difficult as the faster players catch the best mates.
And in the end, when there are two people left and one chair, 50% of the population is left standing.

Again, this is not to say that women *must* pair up early.
And it's not to say that older women have no chances, because that wouldn't be true.

This is to provide you with good information so that you can make *informed* decisions.

#5. Stop Selling Your Career Success

Look at what this successful lady once wrote me:

… And notice my "far from impressed" reply

The lady in this example thought I was going to be impressed by her thunderous career start.
I appreciated that she was a professionally accomplished woman. *Until she turned it into a selling proposition*.

Then I thought it was cheap, and, to be 100% honest… A bit beneath me.
If you are successful, great. But know that it's not a *huge* advantage for many men (and that you shouldn't "sell it").

Also read:

- Dating mistakes women do before sex
- Games men play
- Nasty games women should better stop (at least if they want high-quality guys)

As long as you don't oversell your career achievements, there is no need to hide them either (funny skit from "Sex and the City):

> **Miranda**: I'm a lawyer. At a mid-sized firm. Actually, I was recently made partner. I went to Harvward law school

But instead of bragging, which is very male-like, be smart and more feminine with your self-promotion.

#6. Date More Assertively

Not overselling yourself doesn't mean you shouldn't date assertively.
Because… You should.

Here is an example for you of a sexually forward, assertive, yet attractive dating style:

And if you think that's unfeminine, she was the most exquisitely feminine woman I've ever dated.
Also read:

- Biggest dating mistakes women do before sex

#7. Mix Femininity With Power

It's not easy to be powerful and feminine at the same time.
But neither is it impossible.

A few examples of powerful and feminine:

Read the full article here:

> Feminine AND Powerful: 9 Tips For Women Bosses

Plus, of course, this classic here:

- **How to be feminine**

#8. Increase Dating Skills

Yes, there is such a thing as mating intelligence.

In simpler terms, it's "dating psychology".

Going too deep on effective dating is outside the scope of this article, but here are some resources for you:

- Attractive female body language
- 3 seduction styles analyzed
- How to drive him crazy
- How to date towards commitment

Hopefully, you have been too busy to read too much mainstream dating advice.
But if you have, mainstream advice is for average women, and it's sub-optimal.

#9. Pick A Sperm Donor

Turns out, you truly don't need a man, indeed.

Not one in your life, at least, and not even if you want family

Instead of looking for a needle in a haystack while wading through endless disappointments, pick a donor from a sperm bank.
Advantages:

- **Safe and clean**, since donors are screened for all major infectious diseases
  - Healthier children, since you can rule out several genetic mismatches
- **High quality,** since few men even qualify to become donors
- **Fast & easy**, with the time it takes for one date, you can browse hundreds of profiles

Of course, these are all on average.

Not all genetic and hereditary diseases can be tested, and IQ is not a screening requirement.
But it's still safer than any random real-life guy, and you assess the donor's IQ and life achievements from their profile and interview.

See a donor profile example.

Stealing Fire: Altered States of Mind As Power Tool (Book Review)

Lucio Buffalmano · 26 May 2019 · Archived copy · Original

Stealing Fire explores how altered states of consciousness can provide us not only with new transcendental meanings of life but also a very practical mental edge for our entrepreneurial endeavors.

Bullet Summary

- It's not just grit or working hours that separate the top 1% from the rest: it's also their access to altered states of mind
- Ecstatic states help you make connections between ideas you wouldn't otherwise make.
- You can also tap into that power with varying methods, learning curves, and risks

Summary

About the Authors:
Steven Kotler is a journalist and entrepreneur, while Jamie Wheal is an expert in leadership and *peak performance*.

You can gain more information on Jamie Wheal in his appearance in *Decoding the Gurus*:

> **Jamie Wheal**: But… have you experienced psychedelics from a first person phenomenological perspective (long incoherent rant follows)

Felt like a word salad to me.

Anyway, let's get into the book now:

#1. STER: The Traits of Ecstasy

A state of altered consciousness is defined by four characteristics listed by the acronym "STER":

- **Selflessness**: the paracortex of the brain connected to the self and our internal voices telling us who we are (and all the negative things we are) shut down and we can experience "collective awareness"

- **Timelessness**: total inability -or interest- to perceive time
- **Effortlessness**: things just feel right and click
- **Richness**: when we remove the ego, we allow the subconscious to take over, which is much faster at processing data, and we feel one with the world. We connect with the world in a new and different way, which is richer"

What I found most fascinating is that states of mind, including flow, are not about switching on some specific areas of the brain; they are about shutting down specific areas and functions.

#2. Immersing Yourself In The Present

A recurring theme of "*Stealing Fire*" is that ecstasy is reached when you are so present in the moment that you forget yourself and lose track of time.

He mentions, (of course) the spiritual guru Eckardt Tolle and the psychologist Mihaly Csikszentmihalyi.

Eckardt Tolle uses meditation to enter the altered states of consciousness and you can read more about his philosophy in "*The Power of Now*".

Mihaly Csikszentmihalyi instead focuses on achieving ecstasy through doing an activity you are so focused on that you lose track of everything else. This state is called "flow" and you can read more about it in his book "*Flow*".

#3. The Conduits to Reach Ecstasy

There are many well-known methods for reaching ecstasy, including:

- Sex
- Meditation
- Hallucinogenic drugs (psychedelics)
- Risky undertakings (extreme sports)
- Communal experiences (like Burning Man)

How Ecstasy Works

All the above activities activate the serotonin system and release serotonin, dopamine, endorphins, oxytocin, norepinephrine, and anandamide.

They make us feel in love, connected, trusting, and open.

#4. The Four Forces of Ecstasy

The author says that our recent human developments have made reaching ecstasy much easier for everyone.

In particular, they discuss:

- **Psychology**

With Martin Seligman's presidency of the APA (American Psychology Association), he steered psychology towards the study of human potential, giving birth to the field called "positive psychology" (see "*Learned Optimism*").

- **Neurobiology**

It increased our understanding of what's going on in the brain, making it possible to get more scientific about ecstasy -and how to reach it-.

- **Pharmacology**

We have developed an abundance of new substances that make ecstasy possible, from MDMA to LSD to Ketamine.

- **Technology**

New technology can allow us to prepare our own drugs, fly, immerse ourselves in virtual reality, or experience sensory loss in flotation tanks.

#5. Is It Worth It? The Ecstasy Value Equation

Since we can reach ecstasy with heavy drugs and risky sports, it's also natural that getting into an altered state of consciousness can be risky.

We can die from our brush-ups with death and we can also get hooked or never come back from psychedelic-induced mind trips.

So before going into altered states of consciousness, it might be worth it to make a very conscious analysis of the risk/rewards.

And this is what Kotler and Wheal identify as the equation:

> **Value = Time × Reward/Risk**

- Value is the overall score of a certain activity which will tell you whether or not it's worth getting into it.
- Time is how long it takes you to get into ecstasy or even to learn how to get into it (meditation requires time for example and learning to master extreme sports is a life goal on its own)
- Award is what you get out of the activity, either the pleasure or the entrepreneurial "eureka" moments
- Risk refers, of course, to the dangers to your mind and/or body

It's also possible to switch from a dangerous conduit of ecstasy to a safer one. The authors talk about an extreme skier who went from skydiving to communal festivals like Burning Man and interactive art.

#6. The Dangers of Ecstasy

The authors also talk about the dangers of altered states of consciousness both for the self and for possible uses by dark forces (ie.: government, brainwashing, etc.).

They say:

> Timeless devoid of reference points can feel a lot like paranoia and schizophrenia and it's been a linchpin of solitary confinement for centuries.

Going to the edge of consciousness can present risks for the body and the mind.

Don't Believe Everything You Think

Not everything you think and feel in altered states is realistic or helpful and the authors remind the readers "not everything you feel is real".

People with more dopamine in their systems are more likely to believe in conspiracies and abduction.
Such as they are more likely to be paranoid (for more on paranoia read "jealousy paranoia" and "*Emotional Vampires*").

#7. Don't Become A Junkie

Ecstatic states can be addictive.

The authors talk about free diving and how some free drivers get hooked on the feeling of being deep in the water.

And they keep going and going back… Until some of them never come back up.

And of course, drug use can be addictive and take people too far.

As the authors say:

> **The point is not to keep going until you find it all, but to come back before you lost it all**

The authors link vulnerability to ecstasy and say that the goal is to balance the lights of the ecstatic path with the darkness of the human condition.

Real-Life Applications

- **Watch out for brands**

Brain scans found out that the same brain regions light up for religious icons and powerful international brands like Ferrari and Apple.

That's something that big brands are working on to improve their advertising (and *manipulation*) and it's something we might want to be careful of.

- **Very good for creative endeavors**

Experimenting with meditation, psychedelics or flow could be a worthwhile pursuit for people working in
What happens is that the higher cognitions of the prefrontal cortex shut down and the brain makes connections that it wouldn't otherwise do.

Criticism

As much as I deeply enjoyed "*Stealing Fire*", there are also some parts that didn't I didn't enjoy as much or that didn't convince me much.
Including:

At times sensationalistic more than scientific

Stealing Fire sometimes seems to see sensationalism more than it seeks to divulge good information.

For example, it says (I paraphrase):

> SEALs are the most expensive warriors in history, and their training is largely designed to make ecstasy possible

But based on this, what do the authors say?
I didn't find an answer.
And reading the books from Navy SEALs such as Jocko Willink and David Goggins, it didn't feel that way.

Or about Google looking for their new CEO:

> Get it right and they own the search engine space for decades to come. Screw it up and it's game over. Back to grad school.

Google founders were going to be wealthy anyway and never going back to grad school anyway.
And I highly doubt the choices were so Manichean anyway.

And about Burning Man, the authors *really* forced the connection with Obama, who instead said that "he'd never go, maybe Bernie Sanders will".

At times shows a cheerleading approach

At times the authors seem to glorify the subjects they introduce instead of properly analyzing them.
For example, they say of SEAL:

> At their best they're always an anonymous team.
> "I do not seek recogniztion for my actions", reads the SEAL code, and this ethos is reinforced every time they flip that switch when egos disapper (…)

That must be why David Goggins met so much racism in the top SEAL team and why the SEAL themselves joke about former SEALs writing books of their own heroic war deeds.

Skin-dip on important topics

The author touches upon several important concepts but often does not go deep enough.
On ego disintegration, for example, he just says "ego is just a network and things like psychedelic, flow and meditation disintegrate that network". I wish he had gone more in-depth here because it's not really clear.

Sometimes some pop-psychology

There is quite a bit of pop-psychology in "*Stealing Fire*".

The authors say that power posing changes our hormonal levels, a claim which has been thoroughly debunked in the psychology replication crisis and labeled as "pseudo-science".

They also say:

> Grit is the term psychologists use to refer to that mental toughness

Not really true: it's mostly Angela Duckworth who talks about *grit* and she has been severely criticized for rebranding "conscientiousness" into a new term to get more media exposure.

Burning Man correlation failure

There is much talk about Burning Man and how it helped its attendees including Elon Musk, Tony Hsieh, and Google founder Larry Page

The author talks about how Google became incredibly successful as if to suggest it's because of Burning Man attendance and ecstasy.

But I don't see the causation.

Sociopath Elizabeth Holmes was also at the Burning Man, shall we then conclude that Burning Man leads people into committing massive frauds?

Evolutionary psychology unfounded conclusions

Stealing Fire describes how animals also take advantage of available psychedelics in nature to enjoy altered states of mind.

That's interesting.

But then it makes the case that altered states of mind must have been driven by evolution for a reason.
And that reason is to get stuck out of their rut of mindless habits and find new ways of doing things.

That makes no sense.
Not everything we or animals do must be because it helps move our species forward.
Read some *good scientific evolutionary psychology here*.

Altered state of mind accounting

The authors reach the conclusion that the industry for altered states of mind is to the tune of 4 trillion.

But they include cigarettes, social media, VR, coffee, alcohol, etc.

That seems to me like an altered state of mind type of accounting.
Sure coffee and social media have something in common with drugs, but they don't help us reach the STER that the authors themselves mention as the conditions for ecstasy.

No data to link billionaires' success to ecstasy

The authors make big claims by saying that the top world performers and entrepreneurs differentiate themselves also thanks to the use of ecstatic states.

But they have no way of corroborating it and they don't even attempt to.

They mention Tim Ferris (of course) saying that "most billionaires he knows" trip with altered states of consciousness, but that's no proof of anything.
Quoting Tim Ferris, author of *The 4 Hour Workweek* and a guy with a tendency to try all kinds of 'hacks' may also not be the most trust-inspiring, highest authority person to quote.

And attention: this is not to say that ecstasy cannot be helpful, because it probably is. Especially in creative endeavors.

But there is no proof whatsoever that most billionaires leverage it and/or that it will help you come up with a genius idea or invention and become more successful.

Review

"Stealing Fire" discusses altered states of consciousness, a new venue for exploring human potential and empowerment

I have to say that I am not a big fan of the ecstasy of “losing yourself in the crowd”.
I certainly see the appeal in it, and I’m not immune to it either, but I prefer individualism, instead.

I also wished for less cheerleading, deeper analysis, and more science, but all in all it’s not bad.

Everything Is Fucked: Summary & Review

Lucio Buffalmano · 27 May 2019 · Archived copy · Original

Everything Is Fucked is a social and philosophical analysis of the meaning of life.
Mark Manson, the author, says that hope must rest on cynicism and nihilism first, and we must first accept that our lives have no inherent meaning.

TPM Strategic Take: Hope built on nihilism is the ultimate floor of mental power
If you accept that "nothing matters" while still being able to care about things, work on yourself, and work on your goals, you're indestructible. You become depression and crisis-resistant because you already accept nihilism.
And you gain Maximum Walk-Away Power because the "cost" of failure is zero in a meaningless universe.
Nihilism alone can make you depressed. Power built on nihilism makes you a High-Stakes Operator.

Summary

About the Author:
Mark Manson is an American author who originally started out as a dating coach and then veered into more general self-help and long-term relationships.
He is also the author of "*Models*" and "*The Subtle Art of Not Giving a Fuck*"

1. There Is No Meaning In Life

Because we care about things, we believe they are important. But just because you care doesn't mean they do.
As a matter of fact, they're not.

We elevate the value and importance of events because we need that sense of importance, but in the grander scheme of things, they're meaningless and insignificant.

We are meaningless.

And that's OK.

2. Hope Is Built On Nihilism

Hope—real hope—can't be built on lies.

And telling yourself you are important is a lie.
Real hope must start by acknowledging and appreciating our insignificance.

From there, we can build a good case for hope and a meaningful life.

3. The World Is Not Good

Mark Manson doesn't like self-help.

He says that the typical "feel good" speech from positivists like Peter Diamandis or Steven Pinker is that today it's better than it's ever been before.
But that's a lie, he says.

Sure, we're richer, but we're also more anxious and depressed than we've ever been. Feelings of loneliness and isolation are at a record high, and social trust is at its lowest and keeps going down.

And that's without even mentioning extremism or the environment.

TPM Note: WE completely agree and we call this 'naive self-help'.
Learn more:

- **Naive self-help**: listing the categories of self-help you better ignore

> Naive Self-Help: Why Self Help Is Failing You

3. The 3 Pillars of Hope

To develop and keep hope alive, we need three things:

1. **Sense of control** (feeling like we're in control of our lives)
2. **Belief in the value of something** (something worth striving for)
3. **Community** (being part of a community that values what we also value)

At TPM, we prioritize the **Sense of Control (Autonomy)** as the most critical pillar, foundational for both mental power and real-world outcomes. Without it, you are a 'follower' in someone else's community. Also see 'agency over communion'.

4. Don't Try to Change Yourself

Mark Manson is very critical of the self-help industry, which, he says, he is "unfortunately" part of.

He says that when we try to force ourselves to change under the mantra that "yes, you can change and yes, you must", we often feel worse off.

The self-help industry fills people with inflated hopes and expectations, and when people fail to meet those unrealistic promises, they feel worse off.

TPM Note: Agree. Many gurus sell lottery tickets,
telling everyone 'they can make it', while mathematically only a minority will. Then, they use those few winners as 'evidence testimonials' to attract even more hopefuls.
Empty boosterism is also useless to the empowered man. It only boosts weak Narcissism without matching mental power. TPM advocates for Strategic Realism: focus on action, without the BS motivation.

Also see:

> **Lucio**: Self-help based on boosterism and motivation is weak. What's strong is focusing on repeated behavior over time that boosts your odds of winning, while you don't even strictly need the win

5. Don't Try to Get Rid of Pain

Pain is part of human existence, it's useless trying to get rid of it.

Human nature leads us to seek the negative in any case.
So if you remove the biggest stones from someone's path, we will still be focusing on the pebbles.

And it's unhealthy to believe that you can -or should always be happy. As a matter of fact, Manson says that pain can give significance to our lives.

Says Manson:

> **The quality of our lives is determined by the quality of our character, and teh quality of our character is determined by the our relationship to our pain**

6. Change Your Values To Become Better, Not Richer

Mark Manson says you can change your values in two ways:

1. Re-interpret your past events
2. Imagine the future the way you want to be (visualization)

He says that unfortunately, **poor self-help uses the narratives of future visualization for material stuff**, like "imagine how rich you are".

I couldn't agree more, and it's something that "*Think and Grow Rich*" also does, as do, of course, all the copycats.

He says that type of visualization does not improve yourself. If anything, you should visualize "what not having a yacht would feel like and how you're OK with it".

Golden Nuggets

Here are a few great insights from "*Everything is Fucked*":

- To start a new religion, sell hope to the hopeless (a dark psychology trick and what Machiavellian marketers do)
- Manipulators use in-group and out-group dynamics to gain followers (I agree, also read corporate manipulations)
- Sports are a form of religion that gullible individuals follow (mostly for extreme fans and ego-projections, exceptions apply!)

About that last one, see Lucio's reel ↗ (opens in new window)

Criticism

This is what I didn't particularly enjoy about "*Everything Is Fucked*":

1. Lacks A Coherent Structure

The author jumps from Nietzsche's biography to the risks of AI to self-development topics.
I don't see a connecting thread, and there is no coherent message. Maybe the author didn't want to have a message, which is OK.

But still, any book without well-defined messages are almost by definition, forgettable.

2. Somewhat Lacking in Social Analysis

I found the analysis on religions and ingroup-outgroup interesting and at times even insightful.

But also imprecise, at times, as Manson tried to analyze our whole society and human nature in light of the ingroup-outgroup dynamics.

The spin he gave on "how to start a religion" was quite hilarious though.

3. Bro-Talk Gets Old (& Undermines Your Authority)

Manson uses "The F-Word" and "Bro-talk" as a signaling device to appear "authentic" and "unfiltered."
However, for smart readers, this often reads as **Low-Status Try-Hardism**. A man with confidence doesn't need to cuss to prove he's "real".

Mark Manson found huge success with his catchy-titled book "*The Subtle Art of Not Giving A Fuck*".

And probably he felt like he had to deliver something similar. At least when it comes to language.
I didn't particularly enjoy the "bro philosophy" in "The Subtle Art", and I enjoyed it even less here, where it felt forced, unnatural, and also undermined the author's authority.

For example:

> This is basically what good therapy is. Self-acceptance, emotional intelligence and all that

"All that?" To come across as "cool", the author may also appear more uninformed and superficial.

Or:

> Thank you Francis Bacon, thank you Isaac Newton, you fucking titans

Feels like unneeded bro-attitude.
And since he was talking about the founders of the scientific method, Galileo and Copernicus might be worthier recipients of Manson's cussings.

Takeaway: **use Manson for the good insights, but drop the "edgy teenager" tone** if you want to be taken seriously in high-status circles.

PROS

There is much I liked about "*Everything Is Fucked*" because there is much I agree with Mark Manson.

This goes from high-level stuff like his criticism of the self-help industry (also check "self-help myths") to his (low) opinion of sports and fandom to his thoughts on pyramid scheme companies (read my review of "*Go Pro*").

- **Hope must rest on understanding and accepting nihilism**

Most of all though, I agree with Manson's view that a meaningful life must rest on first accepting the inherent nihilism and meaninglessness of our lives.

This is something that is also central to my view of life.

Review

Everything is Fucked, in Mark Manson's typical style, delivers good quality self-help for intelligent men who want something different than 'typical' self-help motivation and boosterism.

You can see that Manson is a smart guy and a rather independent thinker.

I appreciated "*The Subtle Art of Not Giving a Fuck*", the book that gave him notoriety.
And I even liked his first book "*Models*" when he was still a pick-up artist.

When it comes to his philosophy, I can say that I very much like -and agree- with Manson's approach to self-development, which partially rejects many of the empty self-development mantras.

However, while there are some golden nuggets that we extracted in this review, "*Everything Is Fucked*" fell flatter on me.
A disjointed book of interesting tidbits mixed with insightful ones and some less-than-stellar social analyses.

The Science of Likability: Summary & Review

Lucio Buffalmano · 28 May 2019 · Archived copy · Original

The Science of Likability lists 27 principles of likability taken from 27 social science studies.

TPM Power Note: Good for likability tips, but men also need power
Being likable, and knowing how to be likable, is important, but only if men also know how to get status, respect, and attraction. Otherwise, they become the too-nice guy: likable, but with little to show for it. See our 'social skills vs. power skills' guide.

- CONS
- PROS
- Review

Summary

In this summary of "*The Science of Likability*," I will focus on the most significant studies that will help you become a more likable person.

#1. Determine People's Mood

Determining people's mood can be a great way of assessing whether it's a good time to spend time with them, ask them for something, or whether or not it's a good idea to interact with them at all or-

You can simply ask "how was your day" and then get a good idea by reading their body language and tone of voice.

#2. Ask Them For a Favor

To turn an enemy into a friend, ask them a favor.

Cognitive dissonance dictates that they will justify the favor with the reason that they have done you a favor because they must like you.

But also, righteously notes Patrick King, don't just ask for favors but also do people favors.

Trying to keep a balance is important because **people keep track of favors** and of the "social balance".

Read more in:

- **The law of social exchange**

- **Benjamin Franklin effect VS reciprocation**

#3. Equalize Power & Social Exchanges Among Friends

I really liked this point and to me, it was one of the best insights of the whole book.

Patrick King says that if you are one down in the relationship, then you should make it clear that you want to give back because you care about keeping a balance.

For example: "I can't believe you helped me move and I forgot to take the bill the last time we saw each other. Of course, this is going to be on me".

And if they are one down, you can remind them.
For example: "last time I got it, do you mind now evening the score".

TPM Note: Exactly, this is also honorable behavior
And the same can be said about power exchanges, a more advanced level. See 'power protection'

#4. How to Instantly Become Good Friends

Simply acting as a close friend will make you close friends much more quickly.

Don't be afraid of discussing more personal stuff.

#5. Door in The Face & Foot in The Door

King discusses Cialdini with the now popular anchoring technique and foot in the door -which is similar to the "yes ladder".

The author also says the two are not necessarily mutually exclusive. You can first get your foot in the door and then start high in your requests to anchor a high price for your goods or services.

#6. Trust Is In The Number of Exposures

The author says that trust is often a consequence of how often we see and meet someone.

And that's why, the author says, salesmen keep pinging prospects: the sale didn't happen because of a lack of trust, and pinging them increases trust.

My Note:
I didn't fully agree here.
Pinging is not so much to build trust but to keep prodding your prospect toward action.

#7. Show Vulnerability

The author says that vulnerability is a sign of strength and people are attracted to vulnerable individuals.

Show more vulnerability, make some mistakes on purpose and people will like you more.

My note: disagree.
An out-of-place vulnerability might make you more likable, but that shouldn't be an ambitious man's goal.
Of course, there is power in vulnerability, but only under certain conditions. And you should make mistakes on purpose only if you're really out of everyone's league.

Also read:

- **Vulnerability is NOT power**

#8. Make Yourself A Constantly Pleasurable Companion

Just like Pavlov's dog, you can "train" people to feel good as soon as they see you by giving good vibes and emotions every time you meet.

Real-Life Applications

- **Don't use "I guess" too often**

Some people overuse the sentence "I guess". But there is an obvious big difference between "guessing" and knowing, and when you use "I guess" too often you come across as lacking confidence, knowledge, and authority.

- **Avoid being too polite**

If you are too polite -and especially brown-nosing- you come across as weak and unworthy of being listened to. Also, check out "*No More Mr. Nice Guy*".

- **You only need to win the leader over**

When you need to win a crowd over, focus on the leader. To understand who the leader -or influencer is-, you can simply look at how people look when a decision needs to be taken.

CONS

I think that a few studies were not put in good perspective. I felt that the author failed to place them in a bigger picture of how social dynamics work.

And that's how "vulnerability makes you attractive" became "be as vulnerable as you can" -wrong- and how "mistakes can make you endearing" became "make mistakes on purpose -wrong-.

When you don't already have a solid grasp of social dynamics it's easy to make these mistakes.

PROS

- Short and to the point
- Very good for beginners
- Some good insights even for more advanced students

I appreciated for example the idea of being upfront in wanting to "even the social score".

Review

I enjoyed "*The Science of Likability*", but I also found some drawbacks in the way it generalized some of the studies.

In my opinion "*The Science of Likability*" perfectly represents why science without a good grasp and understanding of human nature can be misleading.

Based on some otherwise good research, the author, for example, recommends "doing mistakes on purpose" or "oversharing" because that will make you more approachable and make people like you more.

In my opinion, those recommendations stem from a poor overall analysis of social dynamics and, most of all, *power* dynamics.

Only people who are so out of everyone's league to make them unrelatable should look into making mistakes on purpose.
And nobody should "overshare".

> Social Skills vs Power Skills: Why Likability Alone Won't Get You Ahead

The 9 Archetypes of Office Politics Players (W/ Real Examples)

Lucio Buffalmano · 30 May 2019 · Archived copy · Original

Office politics are everywhere.

From backstabbing colleagues to power-hungry climbers, knowing how to navigate them is key to protecting your status—and advancing your career.

This guide breaks down the main political players, their tactics, and how to handle them.
You'll learn:

✔ Their psychological profile
✔ Real-life examples
✔ Proven strategies to outmaneuver them

Let's dive in.

1. Power Hustlers

"*The world, chico. And everything in it*"

AKA 'overachievers' who:

- Always have something to add
- Seek responsibility and power
- Tirelessly self-promote

Psychological Profile

They're high in personal drive and low in empathy.

Nurtured overachievers grew up in families with high expectations, for example with narcissistic parents (McBride, 2008).

There are several types of overachievers:

- **Dr. Jekylls** = They can be nice on their own or when nothing is at stake, but 'switch on' with bosses, upper management, or opportunities to "shine"
- **24/7 overachievers** = It's "always on" with them, and they're often lonely
- **Machiavellian and socially skilled** = Put on a facade of teamwork and mission-orientation

Example

> **Teacher**: What are we missing?
> **Tracy**: (raises her hand as high as possible, jerks it to be even more noticeable)

Solutions

If they're socially unskilled everyone can see the ugly side of their ambitions so you must only surface and thread-expand it.

Here are some ideas that also work for the more Machiavellian ones:

1. Catch them in the act & speak up

Renee Evenson says that the best way to deal with overachievers claiming credit for teamwork is to speak up right away.

I agree.
If you let them frame themselves as leaders, that reality cements in people's minds. And your resentment grows

inside of you, which is unhealthy.

2. Take the issue to your boss

If the credit taker gets awarded with money, bonus, a promotion, or public praise for a shared achievement, let your boss know you're not happy.

The *Dale Carnegie Training* says not to complain lest you sound like a whiner. They say that at work, the person who sounds the most adult and mature wins.
That's often true, and they propose this approach:

> **You**: Dear boss, I understand you're happy with Tracy's work and I'm glad about it because she delivered some important parts.
> But there's one thing concerning me: this was a group effort and many of us did great work. When the time comes for my performance review, I want to make sure I get the same recognition

3. Rally the troops against him

Chances are you're not the only one to dislike them.

Leverage the discontent and slowly but surely isolate them.

The colleagues and people around you will fall into two categories: the apathetic ones who are too dummy to notice and care; and the smarter ones who care, notice and hate.

With the haters talk about the issue openly.
With the apathetic ones, go for an alliance based on friendship.

4. Keep your eyes on the prize: the boss

If they're 'working the boss', watch out you're not left behind.

If your boss doesn't like over-ambition, you've almost won: the more you can make their game obvious, the more they will be digging their graves.

If your boss is a dummy, you gotta keep on playing the game.
Also see:

- How to forget a strong boss relationship

> 10 Strategies to Master Your Boss Relationship & Win Promotions

5. Avoid 1-1 battles, avoid lecturing on morals

Overachievers are driven and resourceful, often going places.

Like it or not, that makes them high-value.

So avoid picking up a fight.

P.S.:
Don't guilt-trip them on "morals": they'll either hate you for shaming them, or they'll think you're weak.

> **Him**: (lectures overachievers on morals)
> **Overachiever:** (destroys him)

2. Social Climbers

"Can you please do that for me? Thanks!"

There are many ways to social climb, and we'll focus here on 'tasking'.

The general power dynamic of tasking VS execution is:

Those who assign tasks look like bosses, and those who execute look like subordinates.

By telling you what to do, they position themselves above you (and push you down in the process).

Psychological Profile

Taskers are power-conscious individuals.

Some of them resent being told what to do by their bosses, and, in a sort of "the oppressed becomes the oppressor dynamic", they seek revenge on their colleagues.

In some cases, taskers can also be insecure bosses who over-task just so they can "show who's boss" (the meme being a humorous example).

And finally, the last category of taskers are highly ambitious individuals who want to climb the corporate ladder and have a good career.

Usually, they pick people they think are easy to boss around. However, the most ambitious and dominant of them will try to task almost anybody.
The most knuckleheaded taskers will even try it with their own bosses.

Power Strategy

Very simple:

They task you, you execute, and they gain status to your detriment.

When promotion time comes, nobody promotes the low-status guy who executes other people's tasks.

Examples

- ⍰ ***"Can you please do X for me"*** <— The standard format
- ⍰ ***"Can you (please) take care of it by EOB it's very important"*** <— To sound leader-like and strategic
- ⍰ "***Can you come here please, I need your help on something"*** <— You go to them = you're the flunky supporting those doing real work.
- ⍰ ***"Thank you for taking care of that for me"*** <— A covert power move. Framed as if they were thanking you, a power move that makes them sound like magnanimous leaders who properly recognize their teams' work
- ⍰ "(Standing up to go to the meeting room) ***Come on, let's go"*** <— They lead, you follow

Little Dogs Task The Nastiest

Junior taskers don't have the actual authority to dispense tasks.

So they'll seek to task you when it's most difficult for you to refuse them.
For example:

1. Small, inconsequential things just to show they matter (i.e..: "pass me the pen, please")
2. TThings you were going to do anyway (i.e., "send me that report, please", when sending the report is exactly what you were supposed to do, and going to do)

Read more on how to execute tasks high-power:

> 10 Ways to Maintain Power When Executing Orders

3. Grumpy Players

"Bark bark"

The grumpy players operate on the assumption that the fewer people who can ask them, the more freedom and status they gain.

They play office politics defensively, fortifying their desk turf from encroachment and keeping as much of their time for themselves.

Psychology Profile

They're low agreeableness and socially awkward.

In everyday parlance, you may say 'loners and losers'.

Some are frustrated, and just hate people.

None of them know how to speak assertively though.
Instead, they're either:

1. Aggressive
2. Passive-aggressive

Defensive Mechanism

I dealt with lots of grumpy older players as a young consultant in IT, clueless about IT.

Grumpiness, in that case, was a defense mechanism.

They were rejecting being told what to do by someone they perceived below them, who knew nothing about their business.

Power Strategy

Their strategy is pure defense, and works like this:

The fewer people approach me, the less work I need to do -and the more powerful I look-.

Most of them don't have huge ambitions, or if they did, they have been thwarted by years of stagnating careers -of course, who would promote them?-.

Example

A passive-aggressive type:

> **Peter**: Milton? Hi, Uh, could you turn that down just a little bit?
> **Milton**: (turns around with a scared frown) but uh, I was told that I could listen to the radio at a reasonable volume, so I don't see why… <— Irritatingly insecure, but he frustrates his colleague and gets his way

At the far end, they have anger management issues, with Mad Max in "The Wolf of Wall Street" being an example.

Solutions

The standard advice of getting close to them sometimes works.

You may pierce their defense mechanism and become their best (and possibly only) friend.

But from a political and social status point of view, it's a double-edged sword.
Grumpy players are rarely high performers, and associating with them might drag you down.

As Robert Greene says in "The 48 Laws of Power": avoid the unhappy and unlucky.
And the grumpy players.

Here is the rule of thumb for you:

> **Befriending losers as a powerful man is an act magnanimity.**
> **Befriending losers as a powerless man is a case of "misery loves company".**
> -The Power Moves

4. Sticklers For The Rule

"*Please stick to the guidelines*"

Sticklers For The Rules stake their claim to power with laws, regulations, and SOPs.

Psychological Profile

They're often high conscientiousness and high neuroticism.

And can be very power-conscious.

Their Office Power Strategy

On paper, they're following procedures and ensuring everyone else does.

But in reality, they are piggybacking the rules for their personal power.

Plus, if they become "go-to guys" for regulations and procedures they become 'someone' in the small pond of the office world.

Their Power Is Capped – With A Low Cap

There is a (well-deserved) glass ceiling for them because movers and shakers make things happen.

Examples

> **You:** Hey hi man, my keyboard broke, they told me you guys can help
> **IT support**: Please go through the official channels and ask my boss for allocation I'm busy now

It may take one second to first plug that keyboard on their laptop and check the issue is the keyboard indeed, but… Nope.
They hide behind the rule to tell you to f*ck off.

5. Fawners

"*Just like you said, boss*"

Their God is their boss.

Psychological Profile

Contrary to what many believe, brown-nosers are rarely ambitious.

They might want to be bosses one day, but rarely can they even fathom themselves as CEOs or entrepreneurs.

Many are motivated by fear and security, rather than maximum advancement. And just infants seek mothers, fawners seek bosses.

Example

> **O'Neil**: (follows the boss, lights up a cigarette for him, looks at him for confirmation after he speaks)

Solution

Fawners dependent on poor leaders.

So if you have a great boss, you don't need to worry.

Otherwise, never complain about them to your boss!

Most bosses are average folks, and they love those who adulate them.
When you complain you sub-communicate your boss may not deserve the adulation. And they'll hate you for it. **People prefer the lie of adulation to the truth of reality**.

The best strategy is keeping a great relationship with your boss, while doing better work the fawner.
Better yet: let them believe that sucking up is the best way to advance (it's not), so you remove a competitor from learning and doing great work.

So never talk about learning, self-development, or doing great work.
Talk about people, talk about job security, make him feel the race is on sucking up better, rather than *becoming* better.

6. Power Aligners

"*That's not what we stand for. This company believes in…* "

Power aligners seek power by aligning themselves with those who already have power.

They take on the same values as the boss, of the company (or both) and champion them as if they were their own.

Psychological Profile

Some people confuse them for fawners.

But while fawners take a subordinate role, power aligners don't.
Instead, they're more strategic and astute.

Example

Imagine meeting with your boss, you complain about a bad customer:

> **Power Aligner**: But that's not what we stand for. It doesn't matter what the customer said to you. I know it can be hard, but we are here to offer the best service we can, no matter what

The boss is nodding at the power aligner's comment and you're now in a catch-22.
Tell them they're right and they win.
Keep defending your position and you dig yourself deeper.

Or imagine your boss is keen in getting discounts:

> **Power Aligner**: Did you ask if they could give a discount? Always ask for a discount, it can save us a lot of money

See what they're doing?
Acting like your future boss and presenting themselves as representing the company -"us"- (yeah, sure).

Even if you say you did ask for a discount, you are still proving yourself to them.

Power Strategy

Are shackles and the leader's condescension worth the 2nd in-command role?
Power aligners use a smart strategy well-founded in psychology.

To begin with, we all like people who are like us (Cialdini, 1994) and power aligners mimic their bosses' personalities and values.

Second, we are hardwired to seek in our ingroup people who support us, and, as legendary GE CEO Jack Welch explains in his book *Winning*, management wants to promote people who support their ideas.

... And It Works

As Haslam noticed in his "*The New Psychology of Leadership*", men who start off presenting themselves as dominant upstart leaders tend to fail.

Those who start off listening, watching, and learning about the group tend to win (see BBC Prison Study as an example).

Slipstream Overtakers

Their behavior mimics the overtaking technique used in motorsports.

Similar to slipstream overtaking, slipstream players align with the boss today, to overtake him tomorrow.
There is a business example in a great movie called "C'eravamo Tanto Amati ". This is the dramatic scene where the final overtake takes place.

Or if you prefer a historical reference, take Brutus. He first became one of Caesar's favorite and most loyal senators.
And then he championed the palace intrigue that killed Caesar.

So always be watchful of reports who are “a little bit too much like you” and “a little bit too supportive”.
Some of them might be preparing the ground for their own reign. And as their former bosses, your head may be the first to roll.

Also read:

- **How to coddle bosses**: boss interpersonal strategies for quick promotions

Solution

Never, ever attack a power aligner publicly.

When you attack them frontally it’s as if you’re attacking your whole company.

They’re on the side of the powers that be. The values they (pretend to) espouse are the company’s values, and, never forget, bosses love having watchdogs who help them control the herd.

And don’t even think of taking them on the sideline and having an “eye-to-eye conversation”.
It’s too easy for them to deny everything.

Here is a funny example from Family Guy on what’s most likely to happen:

> **Player**: I wasn’t attacking you, I was just making a point <— The point ‘just happened’ to support the boss, of course

Power aligners will play dumb. They can’t do anything else or their whole game crumbles.
They must keep the pretense that they’re 100% genuine and their buy-in into the corporate missions and values is unwavering.

The result when you challenge them is always the same: they’ll look like a great company fit, real management material.
And you’ll look like someone who should better find a new job.

You must play the same game back on them.
Agree with them, talk about “we”, “us” and “team above all” (or whatever your team espouses).

Here is an example:

> **Power Aligner**: But that’s not what we stand for. It doesn’t matter what the customer said to you. I know it can

> be hard, we are here to offer the best service we can, no matter what
> **You:** You d*mn right!
> Thank you for reminding me!
> I let my passion get the best of me. I'm gonna call that customer first thing out of this meeting and personally invite him to dinner to make up for it

7. Shunners

"*Oh, I didn't see you standing there for the last 2h…* "

The shunning game is the office politics equivalent of stonewalling and gaslighting of intimate relationships.

The shunners form a clique to socially exclude the victim.
When the target approaches one of them, the shunner is curt, detached, or even ignores them.

The gaslighting effect starts when you ask why they're cutting you off… And they'll tell you that it's not true at all (ie.: it's all in your head).

Psychological Profile

Shunners are most often, albeit not exclusively, women.

It's a form of silent social punishment, it communicates that "we're a group, and you are not part of us".

The shunners usually gang up on people whom they perceive are a threat, but who are (still) weak enough to be victimized.

Is the new colleague a bit too beautiful, bright, or ambitious? Then she's not one of us.
Is the new recruit too good and ambitious? You're not welcome because you upset our little world of entrenched interests.

Those are the psychological drivers behind the shunning game.

In a way, shunning is a reactionary game of fear. Fear of change, fear of losing status, and fear of having our egos upset by the results of the new incumbent.

Example

- Insiders jokes that you don't get
- If you open up they look at each other as if to say "what the hell was that"
- They laugh at each other's jokes but not yours
- Warm to each other, but very distant from you

All these behaviors communicate that you don't belong and they'll be much happier if you leave.

Shunning games can also happen in your absence.
For example, Sarkozi with Merkel against (absent) Berlusconi:

> **Sarkozy**: (looks at Merkel and smiles until she smiles back) <— Sub-communication ⍰ Berlusconi is laughable, Merkel and I agree on that, he doesn't belong with us"

Solution

Shunning games can be challenging.

Now imagine Berlusconi had been there in the video above.
He'd *know* that Sarkozy is an enemy and he's forming a collation with Merkel against him.

But if he were to escalate openly, he would look childish and argumentative.

As a covert type of aggression, the shunning game can easily be denied.

A better strategy then is the good old "divide and conquer".
Work up the members of the groups who are *least* sold on office politicking until you befriend them and break the game.

A shunner dynamic that might be on the way to breaking:

> **Unconvinced shunner**: You look good
> **Angry shunner**: (turns bitter at her friend being friendly)
> **Unconvinced shunner**: What (still wants to be friends with the angry shunner, but also feels like she's being unreasonable)

The moment a shunner looks too spiteful and too into the shunning game compared to the other players is a sign that you're on your way to winning

8. Sociopath Player

Sociopaths follow the Pareto rule.

They focus 80% on office politics and 20% on actual work. Given how successful some of them are, we might even wonder what's more important…

Psychology Profile

There is already much literature on this website on sociopaths and psychopaths, including:

- Why sociopaths win the corporate race
- Best resources on the dark triad
- Dark psychology

And I can also highly recommend "How Companies Manipulate Employees".

In a nutshell, though, sociopaths see the workplace as a big chessboard and they have little to no empathy for people.

They consider themselves superior to everyone else and deserving of top management positions.

Many sociopaths can't stick to long years of continuous work which might put them at a disadvantage.
However, many sociopaths have superficial charm, are smooth talkers, and are good manipulators.

Example

Younger female sociopaths are some of the most dangerous scorporate political players.

Male bosses are easier to bamboozle with charm and sexual innuendos.
And full-on sex is not even always needed, that's how dumb some men are.

Elizabeth Holmes built a whole empire bamboozling investors, media, and a who's who board of directors which included former US Secretary of State Henry Kissinger and Defense Secretary, star-general James Mattis.

General James Mattis is famous for his "macho quotes", including:

> **James Mattis**: When you men get home and face an anti-war protester (..) shake his hand. Then, wink at his girlfriend because she knows she's dating a pussy

Turns out macho-man James Mattis got so manipulated by the pus*y.
As chronicled by Carreyrou in *Bad Blood* indeed Theranos' board was powerless under Holme's guidance.

Solution

You must match their political savvy *while* delivering superior results *and* making sure people know who's delivering.

At parity of political dexterity, your superior results can win the day.

But just to be sure, create some internal enemies for the sociopaths.
It can be a boss who micromanages them, an exec who sees through them, or a higher-up who's afraid of the sociopath's ascension.

If you can combine all three, then you will win:

- Deliver superior results
  - & Make sure they're properly attributed to you
- Play the political game equally well
- Pitch them against someone powerful

In case you're in need of more, I have a case study up in Power University.

Can Office Politics Ever Be Stopped?

Corporations partially follow the rules of "public good games".

In public good games, if everyone contributes farily, everyone gains.

But if someone can cheat while others contribute, they gain far more.
So the incentive is always to play up and talk up the teamwork, but trip others and act more selfishly.

So I remain highly skeptical about any workplace being completely devoid of workplace politics.
Workplace politics are simply an extension of human nature.

We are designed, in good part, for the maximization of personal returns (Dawkins, 1976). Gossiping might be a direct offshoot of our nature of social animals (Wright, 1994).

It's a fascinating topic for a social scientist, but let's cut it to the chase here.

Where does this take us?
It means that to win the professional game, you must learn the rules of workplace politics.

We teach good men navigate work environments to advance and succeed in **Power University**

10 Office Power Moves (For Machiavellians Only!)

Lucio Buffalmano · 31 May 2019 · Archived copy · Original

Office power moves are actions and behaviors that assert your dominance and authority over colleagues and reports.

Why would you ever want to engage in power moves?

If you're really asking that question, get immediately off this page, please.
For the other Machiavellians who started salivating, this is your place.

Note: this article is a comedy piece!
It's inspired by a book called "*What Would Machiavelli Do*". Just like good comedy, it points out to some realistic power dynamics and principles, but in an exaggerated fashion that would not only be immoral if taken literally, but also ineffective and self-harming. **It's satire**. See the rest of the website for more effective strategies.

Just not as obvious and not as aggressively.
Maybe.
But the gist is the same.

This post will teach you how to assert power through the vast expanses of the office world.

This article is best suited for those who have some power already -why else would I waste my time with rookies and losers?-.

First lesson is a mindset: you da boss.

And whichever dark recesses those nine-to-fivers hail from, they must all know that you're the alpha male (or female) of the office tribe and that nobody fuxes with you.

Note: this is a humorous article (but it's still based on real power dynamics principles).

#1. Task Them For Stuff They Were Going to Do Anyway

Nothing makes you look as powerful and in control as telling others what to do.

Always be the first to tell others what to do.

Act quickly, before anyone else might score those precious points, or, God forbid, before they get a chance at doing it without being told to (brrr).

You never want to waste any chance at increasing your office's clout.

#2. Fix Their Mistakes Before They Get A Chance to Self-Correct

The more mistakes you fix, the more attentive you look—and the more you make others look sloppy.

The stark tension between "perfect you" and "sloppy everyone else" will soon loom so large that it will automatically propel you right to the CEO's spot.
And then you're finally free to make all the mistakes you want.

But again, be quick!
There is nothing worse in the world of office power moves than a colleague correcting his mistake before you can do it!

Don't allow that to happen!
It's always better to jump the gun and overcorrect than to miss an opportunity for power.

In case you're wrong, you still win.
Just say:

> **You**: Good, good. I want to make sure you're not as sloppy as you seem

Power moved!
You can never lose in this game of power by being too bold.

#3. The Melons Power Move

When life gives you melons, f*ck the melonade and make a career out of it.

There will come a day when CEOs won't pay stacked hookers anymore, but they'll plug their VR machines instead.
But until then, you're still on time to take advantage of the most easily manipulatable animal on planet Earth.

So strike while it's hot, sista.
Many men are still desperate to exchange a 'job' for another. So show the gals, and ask.

#4. Territorial Pissing Power Move

Does your company have separate areas for upper management and employees?
Flaunt the rules!

The rules are for the herd, and you're here to learn the office power moves of the movers and shakers.

Let your soul soar higher than the small confines of corporate borders.
Be a towering bastion for freedom, for equality.
Lead the herd towards a more just world.
Encroach upon the land of the wealthy and powerful as you carry the cross of the poor and oppressed.

Yours truly did just that in high school.

While professors had their own clean toilets marked as "reserved", the students were relegated to cattle-level stalls.
Do you think I was gonna have any of that?

I wasn't!

Until I got busted.

The principal, old fuck that he was, didn't get the pun. You should have seen his face when he was told:

> **Rebel power player**: yeah, but it didn't say reserved for whom

Power moved!

Good thing you can't fire rebel f*cks from high school.

#5. Master The Fine Art of Offers They Can't Refuse

Don't let money and rules constrain your creativity.
There is so much more you can exchange: think outside the box!

Tyson once said:

> **Everything is for sale. But the price is not always money**

Well, turns out that if you find out what they like, you might even *save* some money.

The Godfather, for example, found out that Senator Geary gladly paid for the license instead of being involved with her hooker's murder.

The big band leader who started Johnny Fontane preferred to put the signature on the contract instead of his brain. True story.

Yep, the Godfather is really good at thinking outside the box.

Papaya Power Move

But if that type of outside-the-box thinking doesn't work for you, don't worry.

All kinds of non-monetary offers don't entail violence.
And sometimes, some love is all you need.

And if the melons are lacking, try with papaya.

Sometimes thinking outside the box could also mean inviting people to peek inside the box.

Just be creative!

#6. Show Them For The Poor Idiots They Are

There is no point in making a lot of money if you can't rub it in the faces of poor people.

But in this world of PC, we are losing the art of a good rubbing it in.

That's why you must take it upon yourself to make those entry-level nobodies feel like the worthless pieces of cr@p they actually are.

A great office power move is to invite them out for a bash to make them feel like they are part of the group.
The secret to executing this power move well is to make them believe the company will pay. Those cheap f*cks love it when they can scrounge a meal on your dime.

But when the bill comes, big surprise!
Enjoy the look on their faces as you tell the waiter "we split the bill, thank you".

LOL.
They thought it was going to be fun ordering the most expensive booze in your company, eh?

Oh, what Mr. Nobody, you don't have that much money with you?
No worries, it will come off your salary on a monthly basis.

And you understand that by our internal regulations, we need to charge our interest fees.

#7. Haze The F*ck Out of Them

You know the famous Groucho Marx quote:

> I don't want to belong to any club that will accept me as a member

Indeed, you don't want lazy-asses, freeloaders commies like Groucho Marx in your club.
OK, that might have been a different Marx, so what, the point is the same.

You must set the bar high for your kingdom!

Plenty of sociological research shows that people don't value groups that are too easy to get into (Cialdini, 1984).

And that's why you must have them *earn* the entrance.
Cough up that entry fee until the last penny.
And then some more.

And this isn't f*cking high school.
It works the inverse here: the more senior they are, the harder you haze them.

Does the new CFO think he's above the rules?
Sure thing pal, pass me the paddle!

The CRO thinks it's not "safe" to record the hazing.
That's why he'll get a double dose!

That's how they earn their entry.
Everyone must earn their buttons. You don't want any young f*ck in the future to come in and tell your guys that they bought their buttons.

But most of all, you must make the point that only YOU are above the rules.
All the rest, they toe the line.
As long as you say so, at least.

#8. Misspell All The Nobodies' Names

I hope you didn't buy into that goody good shit from "*How to Win Friends*".

Here is the quote, so that you can more easily erase it from your brain:

> **Mr Softie**: Remember that a person's name is to that person, the sweetest and most important sound in any language.

And since Mr. Softie Carnegie hundreds of thousands of execs have been pissing all their power away by lowering themselves to the status of nobodies.

But not you!

Real power players showcase power with the weight of their disrespect. Starting with the very first names of the nobodies around them -which is pretty much everyone-.

Here is a rule of thumb: the more exotic the name sounds, the more power bosses misspell it.
They want to make them feel like barely accepted guests in their office. A distinct feeling that they're only there as long as they produce.

But at the minimum mistake, you sent them packing to… Oh, what's that? "Oh, you really need your VISA?"
OK, thank you for letting me know about your weak hand, as if this negotiation couldn't get any easier.

Fair deal!

The Art of Misspelling Names

And you might wonder, what if they are called "John", "Jim", or anything too easy to misspell?

I'm glad you asked!
Just because they're from your same place it doesn't mean they get treated any better!

And that's where you show why you're boss and you take it to the next level with your creativity.
You will call "John", "Jim".
And you will call "Jim", "John".

Another great option is to say that you're sorry, but they look so similar.
Bonus points if they don't look like each other in the slightest.

#9. Always Let Others Adapt to You, Your Culture, Your Tastes

You want to make sure people know this:

> You're not jumping on the inclusivity fad.

Let Justin Trudeau lead the way there:

> **Justin Trudeau**: (with nasal, high-pitched voice): we like to say peoplekind, not necessarily mankind, it's more inclusive

After Trudeau's snowflake move, this is what happened:

- 1/3 of the power Gods debated whether they should step back in and annihilate "people kind"
- 1/3 of the power Gods bet against humanity to survive much longer
- 1/3 of the power Gods can't stop laughing

Anyway, back to us.
How do you nail this down?
Just do the opposite of what Trudeau would do.

Trudeau would include other cultures?
You diss them.

Does Trudeau respect minorities?
You always side with the majority that governs the minority.

Trudeau would call the Christmas party the holiday party?
You know better.

A real office king has everyone else adapt to his culture.
Of course, it doesn't matter whether or not you're a practicing Christian; it's just to show that others have to adapt to you.

Oh, and it's meat in every dish. Just in case the vegetarians forgot that the majority rules.

Display Superiority With Disdain

Real power players don't buy the PC BS from their own HR.
They just made that stuff up to maximize the nobodies' output.

And for the petty middle-level managers. They're the conscientious ones who actually believe the corporate lies.

Power players are not really proud of their own cultures and countries. They know that top dogs are top dogs anywhere you go, and they have been the same any time throughout history.

But they still show disdain for anything they don't like, often including whatever they consider 'different'.
Just to show superiority and to decrease everyone else's status.

Here's how it's done, fellas:

That's a proper power player.
F*ck you and your culture, let's drink. When I say so.

#10. Let The Losers Wait

You must always show everyone that your time matters more than all their time combined.

That's why you call a big meeting and then you stroll with a 20 minutes delay saying:

> **You**: sorry the delay guys, I had some important stuff to do.

Say it with a superior tone.
Then, if they still don't get what a bunch of useless c*nts they are, you add:

> **You**: Alright, let's get through this quick so I can get back to do important stuff

If they still don't get it, you might have gone too far by following Michael Gerber's advice and making your business easy to execute.

You know, kings can get lonely too.
So hire some losers who can at least get your office power moves. There is no pleasure otherwise.

#11. BONUS: Burn The Whole Thing Down

What are you telling me?

You're not yet the top dog of the office world?

Cauterize that dishonor ASAP.

First, changed your mindset and start thinking with power in mind.

Take things personally.
That feedback with "room for improvement"?
F*ck him!

What about taking ownership of your mistakes?
No, f*ck that.

Growing from failures and feedback
What are you, a hippy now?

Use it all as dark motivation to handle your boss appropriately.
Much better use of your time.

Kevin Spacey doing that? Oh, the irony.

But a real Machiavelli quits the office with some proper flames in his wake.

The biggest office power move is always to bring the whole thing down and bury the idiots who failed to see you as king material.

Enter, the Mister Farage power move.

Look who's laughing now, f*ckers!

That rainy island is still in the EU, it might never leave and this whole charade just cost hundreds of millions?
Whatever.
Farage won.
He showed them.
Mic drop.

The Wisdom of Crowds: Summary & Review

Lucio Buffalmano · 1 June 2019 · Archived copy · Original

The Wisdom of Crowds is an analysis of group dynamics and decision-making. James Surowiecki, the author, makes the case that groups usually make better decisions than individuals, including individual experts.

Contents

- Bullet Summary
- Summary
- More Golden Nuggets
- The Wisdom of Crowds Quotes
- Criticism
- Review

Bullet Summary

- Collective wisdom is, in many instances, superior to the individual wisdom of even the biggest expert
- There are important limitations of crowd wisdom, most of a sociological nature, that we must be aware of
- We can leverage collective wisdom with decentralized systems designed to take advantage of crowd-sourced decision-making

Summary

James Surowiecki is a journalist, and former staff writer at The New Yorker, where he wrote the "Financial Page" column.
He was previously at Slate, a publication whose articles I often enjoyed.

Obviously, Surowiecki lacks a background in sociology or psychology, but that, in my opinion, means little if one takes care of his own education.

#1. Crowds Make Better Decisions Than Individuals

The central theme of "*The Wisdom of Crowds*" is stated somewhat before the start

James Surowiecki uses several examples to make his point, including:

- A crowd guessing the weight of an ox better than any individual in the crowd did (full story here)
- A group of people guessed the location of a lost submarine better than any single individual in the group
- The crowd of "Who Wants to Be Millionaire" provided better answers than any single expert

Surowiecki goes even further by saying that crowds make better decisions if they are composed of not-so-knowledgeable and not-so-smart agents.

He says:

> What Page found was that a group made of smart agents and not-so-smart agents almost always did better than groups made of only smart agents.

Page is Larry Page, and the author attributes the success of Google to Google tapping into *the wisdom of crowds*.

The problem with intelligence or knowledge is that intelligent or knowledgeable people tend to resemble each

other, and the difference in perspectives decreases.

That doesn't mean that intelligence or knowledge are irrelevant: they are *not* irrelevant, and they're both crucial traits.
But it does mean that diversity is, indeed, extremely valuable.

#2. The Proof That Crowds Are Smart

The author says that the fact that very few people can beat the market is proof that the crowd is very good at making decisions.

If so few people can beat the market, why do we cling to the idea that the right expert will save us?

My Note:
It's a good question, indeed. But I'm not convinced about this analysis: all the big funds in the market are led by experts.
Most money in the market is managed by experts.
So the stock market is not a good example of an "average crowd".

Quoting "*Fooled by Randomness,*" the author also says that those who eventually beat the market are rarely beating the market because of their expertise but are simply the product of randomness.

#3. You Need 5 Elements For A Wise Crowd

Not all crowds are wise, and, as we shall see, some of them are irrational and plainly do stupid stuff.

Here are the 5 elements that are necessary for a wise crowd:

1. **Diversity of Opinion**: individuals must draw different backgrounds and beliefs and base their opinions on private information
2. **Independence**: individuals opinion must be independent and not swayed by the group
3. **Decentralization**: decentralized systems allow an individual to draw on local knowledge and react faster

The top three are the conditions for a group to be "intelligent" and reach wise conclusions.

To make the group functional and to keep working, the system also needs:

1. **Aggregation**: there must be a system that aggregates the decentralized individuals' private judgment into collective wisdom
2. **Trust**: each individual must trust that the group is fair and that punishment is handed out for rule-breakers

#4. Limitations of Wisdom of Crowds

The author also goes into sociology and social psychology.

He talks about herd behavior and a few well-known sociological experiments.
And he says:

> If too many people adopt the same strategy, then the strategy stops being sensible and the crow stops being smart.

Herd Savior: Overconfident People

A cascade of information is what leads to herd behavior, even if we are not in the physical presence of a group.

A cascade of information is made possible by people who value public information more than private information.

That's where overconfident people come in handy: they value their own personal information and conclusions more than the group's conclusions. They make the public's information seem less certain, and they encourage others to question the group's conclusions.

#5. To make cooperation work you need conditional consenters

When it comes to cooperation, we can differentiate among different kinds of individuals.
The author quotes Fehr and Gaetcher (Fehr and Gächter, 2000) saying that:

- 25% of people are selfish, -or "rational" in economic terms-
- a small minority are altruists, who contribute no matter what
- the biggest groups are conditional consenters

The secret to getting a cooperative group going is to engage the conditional consenters.
And that's the problem of many public good games: by the end of it, most conditional consenters are no longer cooperating.

#6. Cooperation Problems in Tax System

James Surowiecki ends up discussing topics that have little to do with "wisdom of the crowds" but that are equally, if not more, interesting.

He talks about taxes as an example of a cooperation problem.
For a group to cooperate, he says, people must feel that:

1. **Trusting others**: people are happy to chip in as long as they know that others are doing the same (contingent consenters)
2. **Trusting the government**: to spend the taxes wisely and for the public good
3. **Certainty of punishment**: people feel like the system does not work if cheating does not get punished

My Note:
This is very good social psychology

#7. Vindicative Players Make The World Fairer

The author delves much into behavioral economics and talks about the willingness of people to punish bad behavior even when it will cost them to do so (a subset of "strong reciprocity").

He says that even if people don't do it for the common good, the result is the same: strong (and vindicative) reciprocators help make the world a fairer place.

Says the author:

> Individually irrational acts can produce a collectively rational outcome

I really loved this part, as I always thought the same.

#8. Hierarchies & Power Dynamics Thwart Group's Wisdom

Groups can also thwart collective wisdom by virtue of the power dynamics inherent in every group.

For example, you get the most dominant person to speak the most, albeit he might not necessarily be the most knowledgeable person.
And the more he speaks, the more people consider him credible and trustworthy, which, again, can only compound the original problem.

More Golden Nuggets

- Science is cumulative, every scientist builds on other people's work
- The healthiest markets are dominated by fear and greed at the same time: only with different and opposing attitudes can the market function well
- Less information is more: traders with too much information make wrong choices because we tend to give too much weight to the news
- Herd mentality in physical groups is what turns a crowd into a mob
- In any crowd, there are some people who'd never riot and some who'd always riot (instigators). The majority joins if the instigators reach the tipping point, and when a riot starts, the instigators shape the collective behavior

The Wisdom of Crowds Quotes

On the paradox of the wisdom of crowds:

> Paradoxically, the best way for a group to be smart is for each person in it to think and act as independently as possible.

Talking about the crowds of "Who Wants to Be A Millionaire":

> The experts did OK (65%). But they paled in comparison to the audiences. Those random crowds of people with nothing better to do on a weekday afternoon than sitting on a studio picked the right answer 91% of the time.

Talking about the wisdom of the crowd when the crowd has little knowledge to make a choice:

> At the height of the Cold War half of all Americans thought the Soviet Union was a member of NATO.
> Is it really plausible that Americans voters will really make sensible policy choices?

That says a lot about democracy :).

Criticism

There is some criticism in this otherwise good book. Some of it I found online and agreed with, and some of it I am moving myself:

1. Statistical sampling in disguise, not crowd wisdom

Once you add all the "exceptions" to the "wisdom of the crowd," it seems more like the author is talking about statistical sampling than real-life group interactions.

2. Little criticism of distributed intelligence systems

The author makes the case that the wisdom of the crows works best with distributed intelligence systems where different people chip in, like Wikipedia, for example.

However, he does not mention the problems of such systems. It's been the case, for example, that knowledgeable writers on Wikipedia have been corrected by less knowledgeable people and couldn't manage to get the truth across.

The idea that collective wisdom outweighs experts also presents counter-examples, like, for example, Kasparov beating "the rest of the world" in the chess match "Kasparov VS The Rest of The World".

The crowd might also be poor at coming up with totally new ideas as the outliers get pulled back into the average of known and more popular solutions.

3. Some unscientific "proof"

The author says that when the Challenger burned, the stock market "knew" which company was at fault, even though there was no official information as to which of the many contractors was to blame.

That's just silly.

So what now, we go from "crowd wisdom" to a crowd of fortune tellers?

4. Honesty developed because it's profitable?

The author discusses some history of capitalism as well.

He makes the point that capitalism is built on trust and that we trust each other much more than we think we do (ie.: trusting that a tech product you buy online or at a shop is a huge act of trust).

He is right, but I don't agree with his conclusion that trust develops because it's profitable.
That would entail everyone making a rational decision and sticking to it.

And people don't really work like that.

5. If scientific replication fails you should doubt yourself?

The author suggests that if a replication study fails, then you should righteously doubt your own experimentation skills and not the original study.

I find that concept misguided and at the root of the herd behavior that the author himself discusses.
The fact that an experiment has been successful doesn't mean it was "correct' or that it describes universal truth, as has been made abundantly clear by the current replication crisis.

6. Some misunderstanding of how markets work

The author says that the hedge fund Long Term Capital Management was operating on illiquid assets and making very little money on each trade "vacuuming up nickles".

But, he says, they made lots of money thanks to leverage.

But that doesn't make sense to me, because more leverage in small markets with small differences in prices will not make you earn lots of money.

When the trading volumes are too small, more leverage is not helpful.

7. The Crime Against Italy

LOL this party had me laughing as I could see myself in the author's description.

He is referring to Italy losing to South Korea in the 2002 World Cup.

It was one of the best Italian teams ever, with the defensive line being possibly the very best ever (Buffon, Nesta, Maldini, Cannavaro, anyone who knows football could hardly disagree on the quality of those guys).

The author says that the Italians made up the conjure.
But no proof of corruption does not mean there was no corruption.

I personally still remain open to the idea that the match *might* have been fixed, and time has proven that referee Moreno does not shy away from illegal activities.
The author also defends the referee's background, saying he's been a FIFA official referee for years.

But says little, also considering FIFA's CEO Blatter, is a notorious scumbag.

Review

The Wisdom of Crowds has relatively low reviews, and I don't see why.

In many ways, what the author describes is similar to the system Ray Dalio uses in Bridgewater that he describes in his highly acclaimed book "*Principles*".

I found "*The Wisdom of Crowds*" to be insightful in many ways. Its central tenet is controversial, but it's well explained and it makes sense.
It's not super strong when it comes to actual research because the beautiful anecdotal stories mean little in terms of proof.

Yet, the author is sometimes, -but not always- is also the first to criticize and expose the limitations of his own examples.

I can say that I really learned a lot from "*The Wisdom of Crowds*".

Particularly, it made me less of an extremist in my critical approach to crowds and groups. And I am thankful for that.

In a nutshell, I have reservations about some of the claims, but I can still highly recommend "*The Wisdom of Crowds*" to any social scientist and to anyone who's interested in learning about people.

Transformation Mastery by Julien Blanc: Review

Lucio Buffalmano · 1 June 2019 · Archived copy · Original

Transformation Mastery is a video course on overcoming trauma and subconscious mental blocks. In the course, former pick-up coach Julien Blanc shares his approach based on the "accepting and releasing" concept.

Contents

- Notes
- CONS
- PROS

- Transformation Mastery vs. Power University
  - Review
  - Transformation Mastery: Is It Worth It?
  - Why Power University Stands Out

Notes

About the Author:
Julien Blanc says he was shy, anxious, and terrible with people. He then swung in the opposite direction—which happens to most people who follow RSD– until he had another breakdown.
That was when he was in the middle of a scandal and went on TV to be abused by the CNN anchor.

After that defining moment of his life, Julien found his footing again, and he now teaches what he learned with "*Transformation Mastery*".

#1. The 3 Phases of Transformation

Julien introduces his program, divided into three segments:

- Awareness (being aware that you suck)
- proof (taste the proof of abundance for yourself)
- permanence (learn to stay in the 10/10 state)

I found the segments a bit confusing, to be honest, as the content didn't exactly match the segment.

These are some of the bits I liked, though:

#2. Inspired Actions VS Desperate Action

If you go talk to girls from a place of neediness, you will rarely move at all, and when you do, you will fail.

That's desperate action.

An inspired action is acting with effortlessness, "just because".

#3. Scarcity VS Abundance

Julien Blanc revisits here another popular theme of seduction and pick-up communities, the "scarcity and abundance mentality".

Scarcity is about running away from your fears.

Abundance is about enjoying the present moment, enjoying the journey, and enjoying life.

However, you can't reach abundance by trying. If you try to reach abundance, you're still coming from a place of scarcity, which means you're lacking something.

The only way to achieve abundance is by starting with abundance.

My Note: Catch 22?
This seemed like a circular argument.

#4. Don't Depend on External Sources for Happiness

In this section, he basically describes the hedonic treadmill and how we get used to anything we have.

You can't be happy chasing stuff.

The second issue with chasing your happiness through things and women is that, as much as that stuff can bring you fleeting pleasure, it also has the power to bring you pain.

#5. Let Go of Everything

You must let go of all emotions to get there. Even the positive ones—it's a state of being.

Achieving your transformation is a process of removing, not accumulating, and gathering.

Whatever you do, it's not about reaching for a better life. You can do it and work at it, but you don't need it.

#6. Meditation Process

The meditation process is about recalling, accepting, and letting go.

You accept whatever you fear, whatever scares you, and whatever worries you.
You don't fight it and you don't even force to let it go.
Let it fill your mind, and realize it's just a thought, it's just energy, it doesn't hurt you.

Then snap out of it.

The Idea Behind The Meditation

Your ego adds compensation for your subconscious. To reach abundance you must get rid of all the bad stuff in your unconscious mind.

And let go of any goal, there is no finish line.

Bonuses

In the bonuses, there is live footage from the seminars and a book review -Man's Search for Meaning-, which to be honest, felt a bit like unneeded space filler.

TPM's editorial review

CONS

These are some of the aspects I didn't like in "*Transformation Mastery*":

1. You must be a 10/10 (really?)

Julien often repeats this idea of going from "3/10" to "10/10", as if that were the state goal you should always be in.

I find this idea of "always being in a great state" baseless.
Who says that "total happiness" is a goal you should aim for?

I not only think that the idea of having to be 10/10 as often as possible is poor, but that it might work the opposite way (a theme that Mark Manson explores in "*The Subtle Art of Not Giving a Fuck*" and, partially, in "*Everything Is Fucked*")

I believe that there is much power and growth from not being 10/10 and from embracing your pain.

2. Assumes the students are in a terrible predicament

Julien seems to address "*Transformation Mastery*" to students who are in a "terrible spot" (the "three out of ten" thing).

That doesn't make it a good fit for people who are generally fine and just want better emotional adjustment.
Also, be careful with people who make you feel worse than you actually are. It's not what Julien probably intended, but it can be a dark-psychology power move to increase the follower's dependence on the leader.

3. Some woo-woo stuff

Julien says it's not "woo-woo", yet there is quite some woo-woo content.

4. Some pop-psychology

Transformation Mastery is a mix of some red pill content and some pop psychology.

It says that you are bombarded with stuff from socialization which you never question, and that goes into your subconscious and shapes you the way are.

You never even realize what shapes you until you learn to see it. But instead of the red pill, Julien proposes a pair of glasses to help you see the truth.

The subconscious part is not the most scientific explanation you will find and the socialization bit is a bit of a standard red-pill narrative (also not very accurate).

Some other popular self-help myths I didn't particularly agree with:

- You must kill your ego (no, you must leverage your ego)
- Stop making it a goal and you're more likely to reach it

5. What's the author's authority in dealing with trauma?

The course is based on the book "*Letting Go*", which is also unscientific and unsubstantiated.

If you need healing from trauma, please look into therapy.

⚠ 6. No refunds

So be aware.

PROS

A few very good insights and mindsets, like:

1. Get out of your head
2. Stop trying to filter yourself
3. Don't put a front, present yourself self to yourself first, and to others second
4. Radical acceptance: accept who you are with flaws and everything
5. Nihilism will help you, not hinder you: accept that you will die someday. Or soon (also read: how to leverage death for life)
6. Whatever you do, and whatever happens to you, it's not the end of the world. We are nothing on this earth (also read: how to leverage our insignificance)
7. Let go of all your needs. Focus on acceptance and contentment from within

The above might not be groundbreaking in the sense that it's new stuff.
And there is a reason why it's not new: it's been around for a while because it's true. And because it works.

The real question is: will you internalize it?

Transformation Mastery vs. Power University

These two courses are inherently different, but can co-exist for a better self-development progress.

If you've addressed emotional reactivity and you're already stable in your sense of self, then the next step is applying that grounded confidence in real-world relationships, dating, and social dynamics.
That's where **Power University** comes in.
Power University focuses on:

- Building social status
- Gaining respect
- Dating high-value women
- Leading in relationships and life

In short:
Transformation Mastery is inward stability.
Power University is outward power and effectiveness.

Review

The main concept behind "*Transformation Mastery*" is quite simple, and potentially effective.

And it's the revisitation of an ancient message in Eastern philosophies and religions.

And it's this: **the happiness that you crave is not to be found in the external world**.
No women or money will make you happy or content.

That's the core principle of "*Transformation Mastery*".
This is not a course on how to get things -or women- indeed. It's a course on learning contentment, acceptance, and completion.

And in healing trauma.

I partially agree with the first message but I found the "healing trauma part" more lacking.

Finally, I'd have to wonder if it's fair for a non-trained individual to address traumas.
How does someone without any proper psychology and psychiatric training deliver a program on healing oneself?
I personally found it a bit simplistic for people who need to heal from traumas and mental blocks.

And that's even though I liked both Julien's style of meditation and the overall message.

Transformation Mastery: Is It Worth It?

Well, the price tag is high but that depends on your pockets, too.

It wasn't exactly what I thought it was and this type of content doesn't resonate with me at this point in my life.

But that's just me.

Whether or not *Transformation Mastery* is worth it or not, will depend on what you need, how much cash you have lying around, and what other courses/books and resources are available to you.

Why Power University Stands Out

If you're looking for a science-backed approach that delivers practical results, Power University may be for you.

Unlike Transformation Mastery, it focuses on actionable strategies grounded in evidence-based frameworks to help you gain status, respect, and attraction.

Works for both social and professional settings:

The Antidote: Summary & Review

Lucio Buffalmano · 3 June 2019 · Archived copy · Original

The Antidote (2012) takes a critical look at self-help looking for common advice that is unscientific, wrong, or even plainly harmful.
Burkeman then proposes a different path of self-help and happiness through stoicism, proper psychology, and the acceptance of death.

TPM Strategic Note: Self-help is sub-optimal because it doesn't incude power dynamics and the 'darker' side of human nature
Most self-help fails because it ignores reality, trade-offs, and power dynamics. This book starts from a good idea and delivers several good insights, but falls short of delivering a full critique. See:
Why self-help fails smart men

- Extra Insights
- CONS
- Review

Overview

- The popular self-help advice of focusing on the positives does not help
- It's by accepting the very same things we want to avoid that we can transcend them

Notes

About the Author:
Oliver Burkeman is a journalist writing a psychology column for the newspaper The Guardian. He has been covering topics of self-help before.

#1. Best-Selling Self-Help Is Banal

I agree with Burkeman when he says that when you strip away the fluff and marketing from even the most famous self-help books, the messages are rather banal.

For example:

- The 7 Habits of Highly Successful People basically says to decide what matters for you in life and then do it
- How to Win Friends and Influence People tells you to be friendly and to use people's first names

This is part of what we call at TPM the ‘best-seller quality tradeoff’, such as that to sell big, books must be simple enough for most people to understand enjoy.
This is why I stopped reading best-sellers:

- Why I stopped reading best-sellers

G

And when the messages get more specific, says the author, another problem arises:

#2. Wrong Messages From Self-Help

When self-help gurus give more specific suggestions, their suggestions are often not supported by scientific research.

Two examples the author introduces right away:

- Venting your anger makes you angrier, not less
- Visualizing your goals doesn’t make it any more likely you will achieve them
- Focusing on how well things will go reduces people’s motivation to achieve them

The central theme of the book, also introduced early on, is this:

- Striving to make yourself happier is exactly what makes you miserable

This is a theme that has also been embraced by self-help skeptic author Mark Manson in *The Subtle Art of Not Giving A Fuck* and *Everything Is Fucked*.

The author reviews a few more mistaken self-help popular myths, and for a deeper overview I can recommend this article:

- **Self-Help Myths: The Full List**

And if you want more also check pop-psychology myths and the replication crisis.

Studies VS Theories	[illegible]	[illegible]
Sharing Science	[illegible]	[illegible]
Science VS Opinions	[illegible]	[illegible]

#3. A Negative Approach to Self-Help

The other central tenet of *The Antidote* is that the best way of reaching contentedness and developing ourselves is to embrace the exact same things we are trying to forget.

For example:

- Embrace uncertainty
- Accept insecurity
- Value death instead of pretending it'll never happen

People who don't accept insecurity are the ones who try to build big walls and protect themselves from any possible event.
But that's not possible, and only heightens the feeling of insecurity and increases stress and anxiety.

> **We build castle walls sto keep out the enemy. But it's the building of the walls that causes the enemies to spring into existence in the first place.**
> -Oliver Burkeman

#4. Self-Help Inflated the Need For Self-Esteem

Burkeman challenges the idea that high self-esteem is anything to strive for.

Assigning yourself a high rating also means that tomorrow you could assign yourself a negative one.

And, furthermore, should you even recognize yourself as a separate entity from the rest of the world?
Is that good for you?

It could be much better to rate your performance without referring that performance back to you.
Bad performance or good performance should have nothing to do with your self-esteem.

A Case For Not Having A Self At All

The author here introduces Eckardt Tolle, author of "*The Power of Now*".

The main idea here is that we all think of "I" as our thinking brain. But we are not out thoughts.
And when we can step back we can become one with the universe and, as Tolle says, *using* our brain (instead of being used and controlled by it).

Removing your ego from the equation eventually leads to the ability to not take things personally and, as Ray Dalio advises in *Principles,* the ability to look at yourself from above, as a machine.

#5. Immortality Projects Can Turn Antisocial

This section of The Antidote was the best and most instructive.

The author says that all religions, political projects, and wars are our attempts at immortality.

Whenever mortality was made salient, people would agree more with Bush's Iraq invasion and were more likely to vote for Bush (Ogilvie et al, 2005).

When reminded of death people become more supportive of immortality projects such as:

- Wars
- Acts of heroism
- Moralistic punishments
- Less sharing and trusting
- More hoarding
- Support for totalitarian charismatic leaders

#6. Don't Throw The Baby With The Bath Water

The author says that a path from negativity is not always the best and optimism is wonderful.

Goal-setting and visualization are also helpful. But we shouldn't overvalue the power of positivity and undervalue the power of acceptance.

Extra Insights

- Everyone loves to say that "there is a lot of insecurity in the world", except that everyone said that in every era
- **We exaggerate the threats to our lives**: staying home and sitting on the couch might be more dangerous than traveling for our long-term health
- When you have no options to achieve anything you're also not misled by the idea that only by achieving them you'll be happy
- Setting goals can be harmful if we become fixated on them

CONS

I really enjoyed *The Antidote*, and I think it could have been even better if it were not for:

- **Disjointed & off-topic stories**

Some of the topics felt like they didn't belong to the narrative of the book. The airport security checks, for example, felt like it didn't belong and, albeit interesting, didn't add value to the main argument.

- **Some of the evidence says little**

The author implies that self-help helps little because the countries where self-help sells the most are not the happiest countries.
But that says little and is no proof of anything.

- **Vulnerability & happiness, I missed the connection**

The author introduces Brene Brown, author of *Daring Greatly*, and her concept of vulnerability.
But I missed the connection between vulnerability and happiness, especially in the example of the inhabitants of poor slums (Kibera in the book).

The author seems to suggest that people in Kibera are happier because they are vulnerable.
But that didn't make sense to me.

Review

I like the main idea behind *The Antidote*, which is to put self-help under much-needed scientific scrutiny.

I like it so much indeed that I have done so myself and you can check my article self-help myths for the most updated wrong claims from self-help.

Ultimately, I can recommend "*The Antidote*" to anyone who's into self-help and to anyone who appreciates a more

scientific, well-researched approach to self-help (which should be anyone).

Check the:

- **Naive self-help**: why self-help fails

Letting Go: Summary, Review & Criticism

Lucio Buffalmano · 5 June 2019 · Archived copy · Original

Letting Go (2012) teaches readers to release all their negative and suppressed emotions to self-heal and reach enlightenment.

Contents

- Summary
- Criticism
- CONS
- PROS
- Review

Summary

About The Author:
David Hawkins (1927-2012) was a psychiatrist, author, and "spiritual teacher".
There is not so much information about him, and when I Googled his name, "SpiritualWiki" came up instead of Wikipedia. Needless to say, that's not necessarily a bad thing, so let's dissect this book.

#1. The Three (Bad) Ways We Handle Feelings

Most people handle unpleasant feelings in one of the following three ways:

1. **Suppression and repression**: they are two sides of the same coin, with suppression being conscious and repression being unconscious. Denial and projection of our bad feelings into others are both examples
2. **Expression**: venting and raging
3. **Escape**: getting ourselves too busy—or high—to think about it, It includes drugs, alcohol, risk-seeking, and workaholism

The author says that projection is the most common way of dealing with unpleasant feelings.

Projection is an internal psychological mechanism by which we try to maintain our self-esteem by "blaming others" for our internal troubles.

But since we project all our negativity onto others, it's responsible for aggression, hatred, and even wars.

#2. Why You Want to Let Go

Simply put, bottling up negativity poisons you.

It has negative consequences for your mental health, physical health, mood, and level of happiness.
Your decision-making abilities are also impaired because you base your decisions on negative feelings and distorted reality.

David Hawkins uses a computer phraseology to explain it:

> Garbage in, garbage out

The negative states are the garbage in, and the decisions that are based on them are the garbage out.

#3. Why Letting Go Works

The stress and anger caused by our unpleasant feelings cannot be coped with through escapism or suppression.

It's an internal feeling, and it must be dealt with by releasing it.

Once we are able to feel the emotion and then release it, we also release all the negative influence it has over us.

#4. How To Let Go

Letting Go never really goes through the exact steps of how to let go.
But here is the process I teased out for you:

1. **Allow yourself to feel the emotion**
   - Do not resist it, do not judge it, and do not try to change it. You will face resistance to letting go, sit with it without resisting the resistance
2. **Focus on the feeling**
   - Thoughts might come up but do not think, focus on the feeling and the sensations instead
3. **Let it go**
   - When you're ready, let the feeling go and snap out of it
4. **Rinse and repeat**
   - The feeling might come back, which means there is more of it to let go. Rinse and repeat the process until it's gone for good

How do you know when the process has been successful?
Successfully letting go means erasing the feeling from your consciousness.
So you will know because you have no more negative emotions within yourself about anything or anybody.

#5. How to Handle Past Traumas

The author suggests changing the way you see and interpret past events.

This is usually called "reframing".
In simple terms, it means you can give a different meaning to what happened, or change the narrative to see how it helped you improve, or how it made you stronger.

He quotes Viktor Frankl, author of "*Man's Search for Meaning*".
Frankl, a Holocaust survivor, says that the people who survived were those who found a deeper meaning in life to live on.

#6. Feelings You Must Let Go Of

The author then dedicates a portion of his book to all the negative feelings that we are bottling up and that we should instead let go of.
This includes:

- Blame
- Grief (too much grief drives people away and it's true, says the author, that when you laugh, the world laughs with you and when you cry, you cry alone.)
- Anger
- Resentment
- Fear
- Guilt

- Pride (we identify with things and feel like we need to defend and fight for them)
- Desire (it underlines that you are lacking something)

The most interesting thing for me was the need to let go of people's approval. Once you can let go of the need to be approved and liked, says the author, you become immune to the manipulation of marketing, advertising, and the media.

#7. FAQs

Toward the end of Letting Go, there was a list of questions and answers, which felt like a big marketing promo.

Basically, it says that letting go:

- Greatly helps alcoholics and supports the AA process
- Does not contradict any other religion
- Does not increase promiscuity, quite the contrary, because promiscuity is an attempt to overcome unconscious fears (really?)

Criticism

David Hawkins prominently features the titles "MD" and "Ph.D." (*authority principle of influence*, anyone?) next to his name.

But titles are no guarantee of science or thoroughness of information.
Not only does "Letting Go" fall short when put under more rigorous scrutiny, but the author's general approach is also extremely unscientific.

He overgeneralizes, confuses correlation with causation, and commits the ultimate sin for anyone who aspires to the title of a scientist: he accepts (and peddles) as "true" what has *not* been proven to be true.

Here are some parts that left me unconvinced:

1. The Woo-Woo Vibrational Energy

Vibrational energy is a constant theme throughout Letting Go.

For example, says the author:

> Thus our basic emotional states transmit themselves to the universe (…) the mind transmits its states through vibrational energy over unlimited distance.

I find this stuff offensive to the scientific profession and reminisce about the law of attraction as seen in even more dubious books such as "The Secret" and "*The Science of Getting Rich*".

2. Claims of "Tests" Where There Were None

The author writes:

> As various objects of thoughts and feelings are tested, it becomes obvious that everything in the universe has a vibration and that vibration has a strengthening or weakening effect.

Tested how, by whom, and when?
What was measured, and what were the results?

The author also describes the different vibrations of feelings, each one clocking at a different rate, with love, you would never guess, vibrating at a sky-high rate (how romantic).

The only thing that becomes obvious to me here is that the "obvious conclusions" are simply the author's very own thoughts.

3. Psychic, Lies & "Scientific Proof"

> Emotional patterns and their associated thought forms can be picked up and received consciously by psychics at a great distance.
> This can be demonstrated experimentally and the scientific basis…

Of course, no proof or references are then given.
What's next? Shamans and flying pigs can be demonstrated experimentally.

I find this highly offensive coming from someone who tries to portray himself as a scientist and who has actually gone through scientific training.

This is the belief of someone who could join the next People's Temple sect, not a scientist.

4. Right-Brained Nonsense

The author says:

> Most people have been trained to be logical and left brained.
> However some people, from birth are right-brained oriented. They are characterize by more intuition, creativity, telepathic communication and awareness of thought forms and energy vibrations

Telepathic communication…?

Yeah, right.

And if that weren't enough, he adds a little later that some of them can also see the bio-energy field around people called the "aura".
When you're in the presence of these people, you can also share in their capacity to see the aura.

The author makes it sound like he indeed saw the aura.

5. The Quantum Physics Manipulation

The author either believes or tricks the readers into believing that there is scientific evidence for his theories. He says:

> (…) for this has been a subject of great interest in the advanced quantum physics.
> Because emotions emit a vibrational energy field, they affect and determine the people who are in our lives

Sure, how we feel and how we behave determine the people in our lives. But it's not because of "vibrations". Probably more like mirror neurons (Rizzolatti, 1992).

This quantum physics scam has been repeated successively by other healers and scam artists such as Joe Dispenza (see my criticism of *Breaking The Habits*, *You Are The Placebo*).

6. Fake Clinical "Evidence"

This was one of the most troubling parts since the book was written by an actual doctor:

> The principles we discussed work in actual life (…)
> Lived experience and clinical observation confirm that the majority of human disorders are susceptible to being cured by following certain principles.

The majority?
Which ones exactly?
And what's a "majority"?

And "certain principles"? Like *your* principles?

And more:

> Many diseases can be reversed unless there is a strong karmic dominance to the contrary.

What's "karmic" dominance?

	Scientist	Pop-Psychologist

Sharing Science	[illegible]	[illegible]
Science VS Opinions	[illegible]	[illegible]

CONS

On top of the above criticism of the actual information, here are some more cons of Letting Go:

- Little concrete advice on how to execute "*letting go*"
- Very long, could have been briefer
- Poor understanding of human nature

The author seems to suggest that we all have a bigger drive to forgive and love but to reach there… We must let go first.
To me, this is rather typical of woo-woo literature's poor understanding of human nature.

- Some self-help myths

It's somewhat surprising that an author who talks about accepting negative emotions also says we should focus on positives, which is useful only up to a certain point and it's an otherwise pop-psychology myth.
And he also mentions the "crabs in the bucket" lie, which is also a self-help myth.

PROS

I listed a lot of criticism above.
But that's not to say that there is nothing good in "*Letting Go*". The Pathway of Surrender can be freeing and, indeed, help many people's mental health.

Review

It's a pity that a book containing such potentially great information had to be marred by so many unscientific, mistaken claims.

As it is, any person who approaches learning with a critical and skeptical attitude will find it hard to open up to the message of Letting Go.

There is simply too much BS thrown around.

However, it's also our responsibility as learners to force ourselves to let go of the bad and pick the good.

No matter what you think about the book or the author, letting go can be a great tool for improving your emotional and mental health.

Give it a try, and let me know how it goes for you.

Note on rating:
Albeit there are many good takeaways here, the 1-star vote is a moral obligation when a scientist claims scientific rigor where there is none.

Skin in the Game: Summary & Review

Lucio Buffalmano · 9 June 2019 · Archived copy · Original

Skin in the Game (2017) is Nassim Taleb's last book of his "Incerto" collection.
It investigates the adverse impact of having people act and make decisions without shouldering any downside if things go wrong (i.e., getting the rewards without the risks).

Contents

- Summary
- Quotes
- Gold Nuggets
- Your Takeaways
- Criticism
- PROS
- Review

Summary

About The Author: Nassim Nicholas Taleb is a statistician, former trader, philosopher, and, as he hates being called, an intellectual.
Skin in the Game is the latest of Taleb's series called "Incerto" and comprises *Fooled by Randomness* (2001), *The Black Swan* (2007–2010), The Bed of Procrustes (2010), *Antifragile* (2012), and Skin in the Game (2018).
At the time of writing, Taleb is possibly my favorite author.

The 4 Topics of Skin In The Game

Taleb says in the introduction that "*Skin in the Game*" is about four topics:

1. Uncertainty and the reliability of knowledge (or BS detection)
2. Symmetry in human affairs (fairness, responsibility, justice, values)
3. Information sharing in transactions
4. Rationality in complex systems and in the real world

In a nutshell, *skin in the game* means that if you get the rewards, you must also bear the risks.
Taleb makes the point that in many realms of our current society, whole classes of citizens are getting the reward while pushing the risks to the whole society.

To quote Taleb:

> **Skin in the game is mostly about justice, honor, and sacrifice. Things that are existential for humans.**

Complex Systems Don't Work With Simple Cause/Effect

Complex systems don't have obvious and simple cause-and-effect mechanisms.
And when in doubt, it's better not to mess with these systems.

Starting a war to implement democracies is an example of messing with a complex system.
Taleb says that clueless politicians compare a local dictator not with the local alternatives but with a Norwegian prime minister.

These people keep staying at their jobs even their reckless decisions because they don't have skin in the game.
Nobody paid anything for the Iraqi invasion or for supporting the "Arab Spring" failed uprisings.

> **Those who don't take risks should never be involved in making decisions**

Why Behavioral Economics is BS

You either love Taleb or hate him for his attitude towards the people he disagrees with.

In "*Skin in the Game*" he takes it on behavioral economics and authors such as Richard Thaler, the father of behavioral economics and the author of "*Misbehaving*" and "Nudge".

He says that Thaler's and other social psychologists' construct of "rational" makes no sense because you can't decide on a desk what's rational and what's not.

For Taleb, rational is what makes you survive (and thus passes the Lindy effect test).
This is what Taleb contests to behavioral economics:

- **Overestimating tail risks makes sense**

Taleb says that it's perfectly rational to overestimate some tail risks because you can't consider them in isolation.

Driving after 2 glasses of wine once will not be extremely dangerous, but doing so every day is.

When you measure tail risks in the laboratory you only consider one tail risk at a time, and that's why their conclusions are wrong.
Subjects are being rational in overestimating the risk because chances are, they are likely already running several tail risks in their lives.

- **Mental accounting is correct**

Taleb says that what "creepy interventionist" Thaler doesn't get is that what he refers to as "mental accounting" is exactly what allows traders to survive.

Betting harder with money you won and being more conservative with your own money makes sense because that's how you survive.

Thaler and other behavioral economists don't get it because they see the world as a one-shot game instead of a series of repeated trades.

My Note:
I really enjoyed Talebs' take on this one.
Yet, if he is trying to refute the idea that people are not rational, then I would have to vehemently disagree.

Minority Rule Is Destroying The West

In societies, minorities can come to dictate the rules to the majority.

This usually happens because of asymmetry or because the majority is either too flexible, too accommodating, or too indifferent.

A case of asymmetry is between smokers and non-smokers.
A smoker can sit in a smoke-free area but a non-smoker cannot sit in a smoker area, so the non-smokers will prevail even if they are the minority.

However, this can become an issue when the minority prevails because it's more aggressive or more intolerant.

> **It is the most intolerant person who imposes virtues on others precisely because of that intolerance**

Taleb says that we need to be intolerant of intolerance.

> **We need to be more than intolerant with some intolerant minorities. The West is currently in the process of committing suicide.**

Employees Are Broken, Submissive Fellas

LOL, I absolutely loved this part.

Taleb says that employees display submission by going through years of personal deprivation.
Giving up 9 hours of one's time for years, every day is the equivalent of domestication.
And showing up on time every day is the sign of an obedient, housebroken dog.

The question, asks Taleb is whether you want to be a housebroken dog or a free wolf.
However, being a wolf comes with risk. Wolves who seek their own paths have skin in the game.

Also read:

- **Example of a housebroken employee**
- **Female domestication in relationships**
- **Corporate manipulation**

The exceptions

There are a few employees who are not broken dogs though.

Taleb talks about traders who bring in lots of money, but the same is true for any employee who is a huge asset to the company and to his boss.

Being great gives you leverage against bad bosses.

Virtue Signaling & Limousine Liberals

I couldn't agree more with what Taleb says on virtue signaling from corporations and upper classes as tantamount to manipulations.

He says:

> The widespread enthusiasm for Piketty was representative of the behavior of that class of people who loves to theorize and engage in false solidarity with the oppressed… *While consolidating their privileges*

And Krugman was one of the economists who raved about that book.

Taleb also says that it is immoral to be against the modern market system and not live in a cave in Afghanistan.
And it is much more immoral to claim virtues without fully living with its consequences.

It's intellectuals Who Are Jealous of The Super Rich

Taleb says that it's not the poor who are actually envious of the rich and it's not the poor who first embrace communist movements.

It's usually the bourgeois the intellectuals and the clerical class who first embrace communism.
Deep down, Taleb says, it's because of jealousy.

Intellectuals like, say, Steglitz and Krugman, cannot stand that someone less smart than they are is also much richer.

Priceless.

The Idiocy of Naive Empiricism

You often hear people saying that you are more likely to die by X silly thing -i.e.: coconut falling- than by terrorist attacks or Ebola outbreaks.

Taleb says that makes no sense.

People dying because of falling coconuts or people who die by drowning in their bathtub will never double from one year to the other -they are examples of mediocre stand-.

But the effects of events in the extreme stand, say a huge virus outbreak or a series of terrorist attacks, *can* increase the death toll by several orders of magnitude.

Read more on naive empiricism:

> Naive Self-Help: 10 Most Dangerous BS to Avoid

Quotes

This quote summarizes The Power Moves:

> Don't give crap, don't take crap. But if someone starts to exercise power over you, exercise power over him

What is rational

> What is rational is what allows the collective to survive for a long time

On scholarly papers:

> Anyone who has submitted a scholarly paper knows that you raise the odds of acceptance by making it more complicated than necessary.

On skin in the game in the mafia:

> In the orders of the mafia, it's simple.
> A made man, that is ordained, can be wacked if the capo suspects a lack of allegiance. With the transitory stay in the trunk of the car and the guaranteed presence of the boss at the funeral.

On turning down honors and awards (I loved this one, totally my philosophy):

> People who collect honors are hierarchy conscious and I abide by Cato's injunctions: he preferred being asked why he didn't have a statue rather than why he had one.

On intellectuals yet idiot (IYI) and Steven Pinker:

> If he is a social scientist he uses statistics without knowing how they are derived, like Steven Pinker and psycholophasters in general.

And again on Pinker:

> The science journalist Steven Pinker played that trick with the book "The Better Angels of Our Nature" (…) we find out he either didn't understand his own numbers -actually he didn't- or he had a story in mind and kept

> adding charts, not realizing that statistic isn't about data but distillation, rigour and avoiding being fooled by randomness.
> But no matter, the general public, and his state-worshipping IYI found it impressive.
> For a while…

On groupthink and the circularity of the scientific system of references:

> If you say something crazy you will be deemed crazy.
> But if you create a collection of 20 people who set up an academy and say crazy things accepted by the collectivity now you have peer-reviewing.
> Academia has a tendency of going unchecked for lack of skin in the game.

About rich people's idiocy in overspending money on food:

> We ended up victims of some complex experiments by a chef judged by some Michelin bureaucrats.
> It would fail the Lindy effect: food does better through minute variations from Sicilian grandmother to Sicilian grandmother

Gold Nuggets

1. The higher you go, the higher the risk to your reputation and the more scared you are of losing an argument -especially with an upstart-
2. Putin has FU money and doesn't need to be elected, that's why he dominates all interactions
3. Don't take advice from those who give advice for a living -unless there is a penalty for their advice-
4. Rich people are easier to scam
5. Government intervention tends to remove the skin in the game
6. Skin in the game brings simplicity while bureaucrats who are far removed from the effects of their decisions prefer selling overly complex solutions
7. Selling is often a no skin in the game business
8. To discourage terrorists: carry the responsibility of their across family and generations. This way you remove some of the asymmetric advantages of people who don't care about dying
9. The current rise of populism is a rebellion against no skin in the game politicians, semi-intellectuals with ivy-league degrees who want to tell us what to think
10. People who don't look the part are more likely to be better at what they do because they had to overcome more (social) adversities
11. Don't listen to financial advisors talking about market returns: you can't get the same returns as the market as by the time you have to pull out your returns will diverge from the market (but I wish Taleb had flashed this one better)

Your Takeaways

- **Become financially independent**

People who are not financially independent also become morally dependent.
They have to fit the ethics of the organization they are (forced) to work for

- **Don't get an assistant**

Not having an assistant will force you to focus exclusively on the things you enjoy doing.

- **Read good books twice**

Don't get suckered into the BS of reading 4 books a day from Blinkist or 3x the speed on Audible.
Instead, Taleb says that because of the non-linear effects, learning is rooted in the repetition of complexity.
Provided that a text has good content you're better off reading it twice than reading a new one at the same time.

My Note:
This is an advice I'm already applying. I almost always listen to an audiobook twice now.

Criticism

I need to preface this section by saying that albeit there are many entries here, I still loved the book.
As a rule of thumb, the better the book, the higher the standard to which I hold it.

"Before it was better" fallacy

I love Taleb and I love his classical knowledge.

At times though it feels like he reverts to a "before it was better" and to simplistic solutions of "let's go back to how it was".

For example, Taleb tells the story of a corrupt Persian judge flailed alive by the local king.
However, not only that doesn't seem to be a good example of justice, but it's also not written anywhere that the king wasn't himself a corrupt, SOB king -or the only corrupt party in that interaction-.

No mention to downsides of skin in the game

Taleb admits that *skin in the game* comes with a conflict of interest.

I would have liked to see more on that.
And also a bit more on the exceptions to the rule as I can think of several situations where it's best to make decisions without skin in the game -or at least, with only a little skin in the game-.

Wide brush generalizations

Sometimes it feels like SITG, like some other previous Taleb's book, over-generalizes about professions.
Sure some good journalists in the profession might have the right of feeling unjustly attacked.

Sometimes presents unrealistic solutions

Taleb says the only solution to better research is forcing researchers to do research in their own spare time.

"That's how I did it", he says.

But thinking that because you did it in a certain way then others should do it the same way rarely leads to flexible systems.
And, in the case of Taleb, it means holding too high a bar for most people.

Society shouldn't work in a way that works for the top 1%.
Society should work in a way where average individuals and the bottom 50% can also contribute.

Survivorship bias (lindy effect)

Taleb makes the case that what survives is rational.

Yet I'm somewhat surprised that the man who introduced the idea of being "fooled by randomness" hasn't even thought that survival can happen by chance.

For example, he says:

> It is critical that is not just the books of ancient that are still around and have been filtered by Lindy, but that those populations who read them have survived too

Is he implying here that populations have survived because they heeded great books and wisdom?
That made no sense to me.
Furthermore, I'm not a big believer in this "*Wisdom of the crowds*" concept. Plenty of shitty books can hang around for a long time.

Are we largely collaborative?

Taleb mocks Dawkins, author of "*The Selfish Gene*", but I haven't seen a proper rebuttal of why the theory behind the selfish gene should be discarded.

He mentions something about Dawkins' poor understanding of probability, but sure that doesn't necessarily void Dawkins' arguments does it?

I also agree that we are largely collaborative and that we overestimated the impact of wars in history.

But that doesn't mean that we can't *also* be selfish.

Taleb also says we underestimate the impact of trade, which went on even during wars and between theoretically incompatible societies (Christian Spain and Muslims).
Yet, he is talking about human societies during periods of great civilizations. Cavemen probably didn't trade that much for millions of years.

Also read:

- **Enlightened collaboration**: yes to collaboration, but based on the natural selfishness of human nature

Miscellaneous criticism

- Germany works well because it's a federation: I'm not convinced. Plenty of federative countries don't work. It's

more about culture

- Making fun of social sciences and quoting philosophers for social dynamics doesn't meet my (highly biased) approval
- Reality is blind to looks: not really
- Peace in Europe because of the USA and USSR? Not really, the USSR has been gone for 20 years now. It's more because of the EU and, of course, "thanks" to nuclear devices

PROS

All the usual "pros" of Taleb's work are present here.
The deep wisdom, the biting humor, and the frank, realistic analysis of society.

In "*Skin in the Game*" the best social analysis was on "limousine liberals", albeit he doesn't use that name.

Review

Skin in the Game is typical of Nassim Taleb, and that's why I loved it.

The usual wisdom, biting humor, and irreverent yet realistic look into people and society.

I think that one of the reasons I like Taleb is because we are somewhat similar.
We both have a certain disdain for the status that so many people chase in this world.
And we both are intolerant to cultural artifacts, social rules, and… Of office hours.

How to Be A Great Toastmasters President

Lucio Buffalmano · 13 June 2019 · Archived copy · Original

Let me guess:

You are researching the “toastmaster president role”, right?

So I suppose you are interested in becoming a Toastmasters president.

Great.
I am happy you are thinking about being president, it’s an incredibly enriching experience.
And you have come to the right place to learn about how to be the best Toastmasters president.

After 2 years on the board and 1 year as president of the biggest and most awarded club in Berlin, I share here my experience to **help you become a great Toastmasters president**.

Contents

- #1. Build Members Up
- #2. Make The Club Great
- #3. Set The Example
- #4. Always Give Value
- #5. Look At Stage Time As A RESPONSIBILITY
- #6. Lead Like You Own It
- #7. Align To Group’s Culture
- #8. Make It A Group of Friends
- #9. More Decisions, Less Chit-Chat
- #10. Start Every Meeting With a Great Intro
- #11. Be Like A Sportsclub Manager: Hunt Top Players
- How to Influence Toastmasters Boards
- SUMMARY

#1. Build Members Up

Strong members make strong clubs.

Toastmasters' own slogan couldn't be truer.
And we could also add: strong members for strong clubs, with strong presidents.

Only when all 3 are in balance can you achieve great results.
And they go exactly in that order: people first, then the club's structure, then you can think of yourself as a president.

This is similar to how Viktor Frankl describes happiness. Viktor Frankl says that "happiness cannot be pursued; it must ensue".

It's the same for effective leadership:

> **Effective leadership cannot be pursued, it must ensue**
> -The Power Moves

And it ensures that by taking care of the people first and the club second.

John Maxwell, in his best-selling "*The 21 Irrefutable Laws of Leadership*" calls this principle "the law of empowerment".
And in a nutshell, it's this:

> The more you empower, the more powerful you become

Again, though, ideally, you have grown and matured enough that you are not doing it for the power. Here are a few ways in which great Toastmasters presidents focus on making the club members grow:

1. Encourage new members to deliver their icebreakers
2. Give accurate feedback
3. Gently push members to stretch themselves
4. Are the first to applaud their members' wins

#2. Make The Club Great

After people come to the club.

There are three ways in which you work on your club:

1. Reputation
2. Awards
3. Orderly and high-quality meeting

Focus on upholding a reputation for quality meetings, great speakers, and a club that develops and grows speakers and people.

Ideally, get some of your members to compete and win in Toastmaster's speech contests.
And get that distinguished president's award.

Then you can use it for your marketing material on Meetup, your website, and your Facebook group (and you can brag about it in your president's intros :).

Speaking of which, have your VP of PR publish and craft a strong online presence.
Ideally, **you want to have so many people wanting to join that you can allow yourself to choose the members who best fit your culture**.

When it comes to orderly meetings and taking care of the club, here is the beautiful thing: **if you take care of the people, the people will take care of the club**.

A Toastmasters president's job is the easiest if you have a strong board and active members.
I barely did anything as president, -and all the kudos and credit go to Mercury's board and the wonderful members.

#3. Set The Example

Now it's time to focus on yourself.

As we will see later, you set the example with your whole persona.
In the Toastmasters Club, it includes public speaking as well.

Can you imagine a Toastmasters president going on stage and forgetting his words, drowning in a sea of filler words while he stares into the void?

Don't worry, that can happen.
And it's OK if it happens.

However, albeit it's always OK to fail, **it's not OK to fail because you failed to prepare or because you failed to work on yourself.**
It must always be your goal, and you must always do your best to deliver great speeches, accurate and helpful evaluations, and outstanding functionary reports.

Let the others "wing it".
And maybe let them join other clubs.
They don't carry the cross of responsibility.
But you do.

Remember, you lead by example. And **your example must be that of an exemplary Toastmaster**.
And that includes being at least a good speaker.

Or, at least, it means that you work hard and show improvement on all the basics of proper stage performance:

- Breathing (with your nose, never with your mouth)
- No filler words
- Clear diction
- Voice tonality (no upward inflection)
- Good body language

Etc., etc.—you know the basics.

You must **be an example of what members can achieve by joining your club.**

Again, that doesn't mean you must be "perfect".

But it does mean that you *do* strive for perfection and that you *do* always give it your best.

#4. Always Give Value

Answer this question for me:

> Why should anyone join your club?

This should always be the answer:

> Because it delivers great value at a multitude of levels.

It cannot be just "to improve my public speaking", *because that's what every single Toastmasters club is there for*.

Improving public speaking is the bare minimum!
You must give something *more* to the people who join your club. For example:

- Superior feedback
- An example of leadership
- An environment of friends (more on it later)
- Great networking with lots of professionals

Finally, every time you go on stage, you must show an example of what "striving for excellence" really means.

When people see you on stage, they should think "nice, I'd like to become like that guy/gal".
How to do it?

Here is the mindset to do just that:

#5. Look At Stage Time As A RESPONSIBILITY

Responsibility, not opportunity.

What do I mean by this?

Do you know those speakers who go on stage and always fail to leave a mark on the crowd?

Most of the time, it's because they don't focus on giving.
They tell a bland story, they share why they quit their job but fail to relate it to the audience; or, worst of all, they tell us what great stuff they have done without teaching us how we can do the same.

As a president, you must focus on giving and enriching your audience.
But what does that mean, more precisely?

Here is how you can add value:

- Give high-quality and specific feedback on how to improve a speech
- Entertain and make people laugh
- Inspire and motivate others to take action
- Share a touching story
- Build people up, make them feel good

The key to doing it is to consider your time on stage as "irrupting into people's lives".
In a way, that is exactly the case: whether they are aware of it or not, **when you are on stage you are taking people's most precious commodity: their time**.
You can take their time to bring value and help them up, or you can waste their time.

Only Toastmasters presidents who look at their role as a responsibility to deliver value will truly excel.

> The only mindset of Toastmasters excellence is to look at your time on stage as a responsibility to give.

#6. Lead Like You Own It

As a child, I was THE biggest fan of Valentino Rossi.

Rossi is the most legendary motorbike racer ever.
And he said about riding a motorbike:

> Ride it like you stole it.

A bit extreme, but effective.
Similarly, as the president, **you want to feel like you own your club**.

Now this might be controversial, so let me explain it.

Ownership is one of the most misunderstood dichotomies of leadership.

We live in a world where people are wary of identifying themselves with their countries or organizations.
Politicians who feel like they "own" their countries are considered dangerous -and for good reasons!-.
And manosphere communities profess that "their girlfriends are not theirs, it's just their turn" -and they're not fully wrong!-.

And let me be clear again: none of the above is actually *wrong*.
Too strong an identification and too strong a sense of ownership are very unhealthy.
Controlling and abusive men have too strong a sense of ownership. Dictators take a sense of ownership to the extreme, feeling entitled to power and to the country's resources.

However, you must be cautious not to throw away the baby with the bathwater of ownership.

What do I mean?

I mean that a sense of ownership is also one of the bedrocks of strong leadership.
Yes, **you can't be a good Toastmasters president without feeling ownership and responsibility for your club**.

And ownership and responsibility go hand in hand.

So don't be shy and walk the dichotomy of ownership without any fears: you are only one member of the club and the club is bigger than any single member.
Part of you must know that.
And yet, **you must feel responsible for your club like you own it.**

So don't be shy of feeling like it's *your* club.
Because, as it's true for every other member, *it is your club*.

Not everybody agrees, but you must not listen to these people:

Don't listen to people telling you it is not "your" club: it *is* your club.
It's those who take responsibility who will save the world.

The Dichotomy of Ownership in Life

The dichotomy of ownership holds true of life in general.

It's not YOUR environment, but it also is.
And you are also responsible for it. We *all* must be.

Even in relationships, it's not your girlfriend or wife in the sense that you own her.
But as long as you are together, she is also your girlfriend.
And what kind of man would you be if you didn't feel any responsibility for her?

> **Don't be shy for a sense of ownerhip.A sense of ownership will save the world.**

#7. Align To Group's Culture

I will keep it short here.

The bottom line is this: **There cannot be any leadership without the leader's cultural fit.**

For the simple reason that no group will accept, support, or follow a leader whom they don't recognize as "one of us".

Rare exceptions apply, for example with the charismatic leader who invites his followers to change their ways to mold *him* instead.
But they are exceptions, and the rule is that you must be a good fit for your group's culture.

These are the corollaries of the "club culture rule":

1. Never seek to become president of a club where you don't feel like you belong
2. Don't ever try to change a club culture before the most senior members recognize you as "one of us"
3. Never vote or elect a president who is not a good representative of the club's culture

Notice that I say "align" and "fit", not "take over" or "mold it to your personality".
That would be manipulative leadership and the results are doubtful.
Says Haslam in his seminal work "*The New Psychology of Leadership*":

> In both the world and in the laboratory, leadership that is grounded in shared identity will always win out over that which is grounded in ego.

Power Moves Note:
in some clubs, the older members, sometimes the founding members, form a "clique" that controls the club's dynamics and decisions.
In these clubs, weaker leaders are muppets in the hands of the clique. To become president of these clubs you first need to align with the powers that be.
And then you can reform by recruiting new members and getting more people -and the power- on your side.
You can see an example of how prime minister Conte did exactly that here.

#8. Make It A Group of Friends

Guys, this is THE most important point!

If you get all wrong, but you get this right, you *still* have a great club.

A Toastmasters club where the members are friends will always, almost by default, be a great Toastmasters club.

And that was one of the key ingredients which made Mercury, my club, the best club I have ever visited.
In many of the other clubs I have been to, members congregate for the meeting, only talk about Toastmasters during breaks, and then all go away once the meeting ends.

In these clubs, nobody knew much about each other, and neither did it feel like they cared.
I can tell you this much: I would have never joined Toastmasters if the atmosphere had been the same in my current club.

So, how do you tell apart an average club from a club of friends?
Here are a few telltale signs of a club of friends:

- Members know each other's lives beyond Toastmasters
- After the meeting members go to grab food/drinks together
- Members are aware of each other's life successes and are happy for them
- Members support each other in ways that go beyond Toastmasters
- When it's election time, you don't need to coax or cajole members to take board roles: they are happy to
- Members collaborate for the well-being of the club even when they're not board members

As a Toastmasters president, **this human approach to club life must start with you**.

If you don't, people will feel like you are far removed from the club and that's how they are also expected to act among each other.

If friendships are born in a colder club environment, the friends will feel like it's "us friends VS all the other unknown Toastmasters people".
Instead, you want everyone to be part of the brotherhood.

Here are a few ideas on how to do it:

- **Organize out-of-club events**: our club became the connecting point between all the other clubs for everyone who wanted more than just improving speeches
  - **Bar nights**: these are meetings held at a bar or restaurant. If there are drinks and/or food, people are more likely to become friends. See a picture example here.
  - **Picnics**: I instituted 2 picnics a year where we'd go to a park in the city, and bring food and drinks. They were total blasts
- **Special surprise meetings for members leaving**: organize surprise parties for strong members who are moving. We had a song created for one of us who moved out of the city, with the whole club standing up and dancing. That made me memorable for him and for the club
- **Announce members' life milestones**: make them part of your intro, sharing good news about marriages, awards, etc. This deepens the feeling that it's a club of supportive friends
- **Show your love for the people**: meet people outside the club, talk about it, share pictures with members, share pictures of members hugging

When people show up to the meeting, greet them with a hug, be happy to see them, and cheer for their improvements and life successes.

Don't Learn Club Environment From TMI!

Finally, don't try to learn how to structure a club of friends from TMI.

The Toastmasters organization has been rebranding and it's more and more winking to corporate America these days.

Now it's all about "leadership skills" and career advancement.
Even public speaking has now morphed into "public speaking to a bunch of corporate flunkies" (see picture below).

That looks like fun (NOT)!

But, unluckily, **corporate culture is often antithetical to the values of genuine relationships and friendships**.

So take the good stuff from TMI, but avoid that stultifying suit and tie culture.
Don't run your Toastmasters club like a business meeting.
Go instead for passion and, for a place where personal growth overlaps with good humor, great fun, and true friendships.

> **When it comes to Toastmasters' clubs atmosphere, friendship trumps leadership**

#9. More Decisions, Less Chit-Chat

A great Toastmasters president also runs efficient meetings.

Efficient meetings are based on decisions that bring about positive results, and not on long debates and discussions. Leave long discussions for coffee and happy hours: board meetings are not surrogates for bonding.

When it's time for decision-making, keep it efficient and solution-oriented.

There are 3 general types of decisions you can have on the Toastmasters board:

- **Data-available decisions**: whenever you can use numbers, get people with the data, the knowledge, and the

actual experience. Seek to reach decisions based on facts

- **Creative decisions**: the more people chip in, the more creative material you will have. Discussions here are helpful. Use a democratic style to brainstorm and make everyone feel free to speak. The whole board should leave feeling they contributed and the *group* did a great job -not anyone in particular-
- **No-DEK decisions**: No Data, Experience, or Knowledge available. There is no point in discussing this here. Contrary to how most people act, more talk will not get you closer to the truth.
  Instead, narrow down on the options quickly, decide on something, and try it out.

From a mindset point of view, it's crucial for a Toastmasters president to internalize this belief: you are NOT your ideas.

You must focus on fostering an environment where the best idea wins, no matter where it comes from.
As a matter of fact, you should be the happiest when the best ideas come from members and board members, and not from you!

To reach this level, you must develop a growth mindset (also see Dweck, 2007).

Keep Meetings Short

As a final tip: keep board meetings short!

As short as possible.

Maybe you are aware of Parkinson's Law, which states that: "work expands so as to fill the time available for its completion".

There is a lot of truth in that, but the good thing is that the opposite is also true:

> Meetings shrink to fill the time available for their completion

So keep the meetings short.
Half an hour should be enough for all regular meetings.

#10. Start Every Meeting With a Great Intro

A great president provides the club with a great atmosphere.

It's your duty as a president to be a positive force for the club.

You should always be an example, and the best way to influence people to follow your positive example is by *starting* the meeting in the right mood.

Telling an uplifting story is a great way of getting people's attention and channeling the meeting in the right direction.

Also, notice that I tell stories that people can relate to: they were there. That helps the group bond and it shows to any guest that this is a club of friends who enjoy each other's company.

#11. Be Like A Sportsclub Manager: Hunt Top Players

Toastmasters is to help people improve their speaking skills and to increase their confidence.

And yet, there is little to learn and improve if you don't have in the club great speakers to learn from, great evaluators to provide superb feedbacks, and best-in-class members who encourage others to attend and grow.

That's why a great Toastmasters president also focuses on finding, "hiring" and retaining the best talent.

> **Your Toastmasters club is only as good as the people in it. So make sure the people are best in class.**

How to Influence Toastmasters Boards

Finally, we got here.

Come on… I know you were waiting for this!

But first of all, let me say this as loud as possible: you do NOT want to influence anybody.

As a Toastmasters president, you want smart board members and members who are happy to contribute that they come to you to influence *you* with their ideas and proposals.

And remember this: **the deepest influence is always character-based**.
You influence people by virtue of your character. Who you are and the example you give.

Steps for Group's influence

That being said, there might be a few occasions when you think it's important that your motion passes as quickly as possible.

And persuasion is a good skill to have in your toolset.

Here is how you influence Toastmasters boards -and groups in general-:

1. Pre-suasion: introduce your idea by linking to how it was done in the past, how someone else did it, and what good results it will likely get -also see *Presuasion* by Cialdini–
2. Look everyone in the eyes as you speak. When you stop to ask the board, never start with people who don't look sold on your idea: only ask people who are nodding
3. Ask questions that nudge towards a yes. For example "for simplicity and based on the positive past results, would you agree to do it as we did it the last time?"
4. Ask people in the circle, which seems more democratic. But go to the left or to the right of the first person you asked, depending on who seemed most sold on your proposal
5. After the second person, you jump in with your vote. Say "Cool, I'm glad we're agreeing on this, I also think it's the best solution".
6. Now it's 3 yesses already, and it's downhill. Even if you still have a naysayer, you can still pass your motion by majority

In this video, I describe a real-life example on a Toastmasters board:

Only use these influencing techniques as exceptions
Approaching life with the mindset you need to "influence people" is childish and slimy. Have people influence you instead with their great contributions.

SUMMARY

There you go guys, how to be a great Toastmasters president and how to make your Toastmasters club the best club ever :). In a nutshell, the biggest takeaways here are:

1. Love the members of your club
2. Love your club
3. Always do your best to deliver value
4. Make the people are friends and supportive to one another

As a last note, let me say that the title “how to be a great Toastmasters president” is only to help people find this post.

Since I am writing about my experience, it would be extremely childish of me to anoint myself as “a great Toastmasters president”.
So take this post instead as “Lucio’s experience as a Toastmasters president”.

The New Psychology of Leadership: Summary & Review

Lucio Buffalmano · 15 June 2019 · Archived copy · Original

The New Psychology of Leadership (2006) is an evidence-based investigation of the psychology and social dynamics of leadership.
It combines theory with laboratory-based evidence and real-world analysis to craft a holistic overview of how to be an effective leader.

Bullet Summary

- Our culture of leaders' idealization and idolization gets it (mostly) wrong about what leadership really is
- Leadership is a process of social dynamics between leaders and followers
- Effective leaders gain status and influence by representing the "we-ness" of the group
- The whole group is more effective when bound by a common "we"

- The “we-ness” of the group both empowers and constrains the leaders’ agency
- Great leaders can work on changing, expanding, or focusing on what that “we” means as they gain the group’s trust (entrepreneurs of identity)

Summary

About the Author:
Alexander Haslam is a professor of psychology at the University of Queensland.
He has also written several more books on social psychology and social identity theory.

#1. Leadership is Social, Not Individualistic

The authors mention John Maxwell as an example of literature—and a culture—that has long looked at leaders as separate entities from those whom they lead.

The issue of looking at leaders alone leaves out two important questions:

1. The followers have largely been left out of leadership’s literature
2. The interaction between leaders and followers

The authors make the point that the followers are part of leadership dynamics as much as the leaders.
For leaders to be effective, they must align their goals with the identity of “us,” which is the group.

#2. The Myth of “The Great Man”

Focusing on the inherent characteristics of leaders led researchers to look into what those “personality traits” of great leaders exactly were.

A lot of research has been done to find out what exactly these “great man” traits are.
But the results have been disappointing.

Even in the case of the best predictor of leadership’s strength, which was intelligence, it only predicted a mere 5% of the variance.

The long “psychological treasure hunt” for the secrets to leadership was highly unsuccessful, note the authors.
And it was time to stop focusing on the individual and start looking at the social dynamics instead.

Consequences of “The Great Man Myth”

The authors say that the myth of the great leader has some important consequences that, interestingly, benefit the leaders but not the followers.

If you believe in the great man theory, then:

- Most people are denied leadership positions because they haven’t shown “leadership traits.”
- Leaders must remain leaders because they possess the right mix of qualities

Personal qualities still matter, but they need to be put in context. Write the authors:

> It is not about asserting the superiority of “I” to “we,” but about demonstrating the superiority of “I” *as an embodiment of “we.”*

And to put the “great leader myth” in context, we need a new psychology of leadership.

#3. The Focus of The New Psychology of Leadership

The new psychology of leadership must be based on these criteria:

1. Move beyond the contemplation of the "great man" to a more holistic view which includes followers and other groups
2. Must be context-sensitive: there are no "all-season" leaders and the capacity to lead depends on people and context
3. Must be perspective-sensitive: if the group is large enough (i.e., a country leader), the leader will not appeal to everyone equally
4. The new psychology of leadership does not deny leaders' qualities: it simply puts them in perspective within a more holistic approach
5. It must have empirical validity. And it's exactly the empirical failure of past models that requires a new psychology of leadership

#4. The Current Academic Threads of Leadership Psychology

The "great man" theory of leadership is still popular to this day among the general public, but not among academic researchers.

The current threads of analysis are:

The Situational Approach

This approach stresses the importance of context, centered around theorists such as Philip Zimbardo and his popular Stanford Prison Experiment (read the STE's criticism here).

Empirically, we do know that personality traits do matter, no matter the situation.
So today, the most popular interpretation is that the environment moderates but does not obliterate character.

The Contingency Approach

This approach stresses the "perfect" match between leaders and followers. when there is a perfect match between the leader and the circumstances and needs of the group.

The authors fully endorse the general concept of contingency, but not the way it's been applied.

The issue with the contingency approach is that it focuses on the leader and the interaction as separate entities, and only the leader is the focus of psychological analysis.

The Followers' Centric Approach

There are multiple variations and sub-variations here:

1. One focuses on leaders' dependence on followers' perceptions of them
2. Another focuses on the transaction, with one strand borrowing from economics and exchange theories
3. And another focusing on power relations

The economic view centered on costs and benefits is endlessly elastic, and treating leaders and followers as equals does not seem to capture the reality of leadership.

The power approach is more interesting, tracing back to Machiavelli, whose main work "*The Prince*" focuses on the ability of leaders to reward and punish followers.

The authors say that power and power dynamics matter in leadership. Different leaders use different forms depending on who they are talking to. And the power approach to leadership is an important one.

I quote them:

> Clearly, then, power—so often ignored by psychologists—is another key ingredient that is necessary to understand leadership.

Yet, power must be put into a social perspective because it's not something you have or don't have.
You have power by virtue of other people.

Transactional theories also tend to be zero-sum games, while leadership can create new sources of value and new reserves of power.

The Measurement Approach

This approach uses questionnaires such as the Multifactor Leadership Questionnaire (MLQ) and, when well done, also submits questionnaires to the leaders' reports, managers, peers, and external parties (i.e., customers).

Popular "general public" books have gone for a measurement approach, such as "*First Break All The Rules*" and "*The Truth About Leadership*".

The Behavioral Approach

This is what has led to the "great man myth", but there is also good research.
Two behaviors that emerged as crucial to leadership are consideration for the followers and structuring the organization to organize the work.

Transformational Approach

Leadership is not just about existing social realities but also about the transformation of social realities.

Putting It All Together

All the different approaches do add value, and they show us that a comprehensive psychology of leadership must take the following into account:

- context
- followers
- power
- transformation.

#5. Leadership VS Management

The authors discuss a type of leadership that is not "only" about doing things.

What they focus on, though, is even more important.
It's the true ideal of leadership that they focus on:

> It is about **getting them to *want* to do things**. Leadership, then, is about shaping beliefs, desires, and priorities. **It is about achieving influence, not securing compliance**.

The leadership the authors discuss is different from simple management or authority.
And, the difference between them is that true leadership wins the hearts of people, mobilizing effort that is based on passion and intrinsic motivation (power through).

Leadership based on "brute force", external incentives, or "raw power" is a failure of leadership (power over).
People are likely to reject leadership that doesn't come from their own willingness to follow because they see it as

an external imposition.

> **Incentivization and brute force are the signs of leadership's failure.**

#6. The Core of Leadership

These are the four fundamental rules of leadership:

1. Be "one of us" (and distinguish the in-group from out-group)
2. Do it "for us"
3. Craft a "sense of us" (entrepreneurs of identity)
4. "Make us matter"

Failing to be one of us can end the careers of otherwise promising leaders. As happened to John Redwood when he was caught on camera trying to mime the Welsh national anthem without knowing it.

A clear demonstration that John Redwood was not "one of us", so he could not represent the group.

"The New Psychology of Leadership" then goes deep into what exactly each step means.

> **Leaders can be ahead of the group, but never so far ahead that they are out there on their own.**

#7. The 3 Core Dimensions of Collective Action

The authors propose a helpful question-and-answer format to summarize the core dimensions of group action:

- Who acts together? Those who feel part of a common social category

The corollary is that the wider the category of those who feel part of a group, the greater the mobilization you can achieve.
This is why politicians seek to use very broad categories: more votes.

- Within which framework will they act? Within the group's shared norms and values

The group's norms and values determine the boundaries of the actions one can take and which types of actions are deemed appropriate.
The more an action is congruent with the group's values, the more support it will get (and vice versa).

- Who guides them? Leaders who embody the group's distinctiveness

Leaders who want to leverage social power need to present themselves as the embodiment of the group's identity.

> **No leader can represent us when there is no "us" to represent**

#8. Rules of Leadership

As the authors analyze leadership by dissecting and presenting both literature and historical events, they present 4 major "rules of leadership".

To be effective, leaders must be:

1. **One of us**: must be seen as belonging to the group we lead
2. **In-group champions**: their actions must be seen as taken for the group's best interest

3. **Entrepreneurs of identity**: telling the group who we are us who we are and positioning their ideas as the embodiment of the group's identity and values. To leverage the group's support leaders must work hard to ensure their policies are aligned with the group's identities
4. **Engineers of identity**: also called "embedders of reality", it refers to transforming plans into reality. Vision only carries us so far and eventually, leaders must show the group they can matter, impact the world, and bring about the changes they seek

Notice that the dynamic between points 1 and 3 is dynamic.
To represent us, leaders must be similar to us. At the same time, the social identity enables and constrains leadership, as leaders can't act in opposition to the social identity.
But at the same time, leaders also structure and shape the meaning of who we are.
And they can act in a way to re-channel social identities.

Point 4 is also important: Leaders who rev the crowd up and mobilize them towards a certain vision must eventually deliver that vision.

An example of a leader who got the vision right but failed the "reality test" is George W. Bush.
Bush managed to transform the social identity of America into a country that defends itself -and the world- against evil forces.

Bush landed on the carrier wearing a flying suit, looking the part of a real warrior leader.
He declared "mission accomplished," and his ratings were sky-high.

But as the grim reality started catching up and undermined the lies of the war, he eventually lost much of his credibility as a leader and much of his power to rally the masses.

#9. Social Identities Enable Leadership

"*The New Psychology of Leadership*" is based on social identity theory.

The main social identity contributions to the author's new psychology of leadership are:

1. Our sense of self can be derived from the group we belong to and the meaning we associate with that belonging
2. The social identity will shape the norms and values of the group members
3. Intergroup behavior stems from the social norms and values connected to social identity
4. When social identities are switched on ("salient"), the group as a whole can count more than the individual's fate (depersonalization, see Turner)
5. The nature of groups and groups' dynamics are always interconnected with the social contexts
6. If social identity is based on a comparison with other groups or people, then our own social identities will shift depending on who we are comparing to

In short, **the effect of social identities is that they transform a collection of individuals into a coherent social force**.

Intra-group interaction leads people to agree on what's important and strive to achieve it, all pulling in the same direction.

Say to the authors:

> **Shared social identity is the basis of collective social power.**

Future Social Identities

Social identities don't have to be present-bound. They can arch back to our past, jolting us into missing our true

selves.
Or they can paint a picture of our future. spurring us to achieve it.

Often, they combine the two.
Martin Luther King's "I have a dream speech" challenges the listeners to embrace what it truly meant to be Americans—equals—and to make it a reality again.

In these cases, social identities are projects for future realities.
And also note that it's only thanks to a good cultural knowledge of the Gettysburg Address that King could align the Civil Rights Movement with the realization of American values.

#10. Fair to The Ingroup & Unfair to The Outgroup?

Plenty of research shows that judges and referees tend to favor and be more lenient to the ingroups, for example to teams or people who are from the same countries or regions.

Somewhat, ingroup favoritism comes to be expected.

People unconsciously know this and when leaders know they are "suspects" for not being very in-group, they become biased towards the outgroup, possibly in an effort to prove themselves (Van Kleef, Steinel, van Knippenberg, Hogg, & Svensson 2007). Ie.: **toughness is a strategy to secure in-group support**

Leaders who are not prototypical also "prove" their leadership by displaying in-group favoritism and by being unfair to the outgroup (Platow and van Knippenberg, 2001).

However, **it would be simplistic to say that leaders should be fair to the ingroup but unfair to the group**.

Fairness and unfairness are relative when it comes to leadership.
What matters is being the group's champion, and being the group champion depends on the group's identity and values.

So a group that values openness and stands against racism will not support a leader who is unfair to an outgroup of minorities.

Leaders' Behavior Shapes People's Behavior toward The Outgroup

What's even more crucial here is that leaders' actions and choices can shape the way people think and behave toward outgroups.
Say to the authors:

> The ways leaders treat people as similar or as different play a critical part in drawing category boundaries. **If we are fair in our treatment of people, the implication is that we are all "in it together."** If we are unfair, the implication is that we are in different camps.

All of us should take note here.

#11. Group Boundaries & Mobilization

The boundaries of our groups have huge consequences for the dynamics of leadership and social identities.

It's only when you can draw a boundary that you can institute a culture and a common mobilization.

As the authors write:

> Category boundaries contain and constrain those constituencies

When group boundaries mean life or death

In extreme cases, the boundaries will influence who fights who—or if any fight will happen at all-.

The example here is Bulgaria, which decided to consider Jews a "national minority" and "part of Bulgaria's citizens".

Compare it instead to the German group lines that stressed nationhood as "ethnic comrades as part of the nationhood.
And that definition painted Jews as outgroups.

When Bulgaria's' enlarged citizenship was accepted, it meant that Bulgaria didn't help the Nazis collect Jews on its territory.

My Note:
This is exactly the reason why, in my articles, I always caution people against becoming too entrenched in any group.
Also, read "dark-psychology" and "the social-psychology of the red pill" for more.

#12. Identities' Negotiations Between Leaders and Followers

The authors so far have negated the idea of the "great leader", but they also concede that leaders can shape the group's identity.

Whether the group has more power to define social identities or whether the leader has more power to tell the followers what the group stands for depends on contexts and situations.

Sometimes the group has precedence, and the leader tries to mold the group's identity.
Other times, a leader may have reached such iconic status that he comes to define the values of the group he leads.

The authors mention Roosevelt and his handicap.
As he strives valiantly to walk anyway, he represents himself and America as a nation that doesn't give in to hardships.

My Note:
The authors don't say it, but I think that it's crucial how long a group has existed and how strongly—or not strongly—they have codified their culture.
In the case of a long-standing group with strong cultures, groups will not yield to changing their values, no matter the "status" of the leader.

#13. A Prototypically Exceptional Leader

The group wants its leader to be representative of them and, in a way, like them.
Yet, they also want them to be exceptional.

What's important to understand here is that "prototypical" doesn't mean "typical".

Leaders must not be like individual group members, but like the identity that the group shares in common.

Prototypical means to be uniquely representative of the norms, values, and qualities that define our groups, and that differentiate them from other groups.
Being prototypical means being exceptional and fully representative.

#14. Leaders' Prototicapility Manipulation

The relationship between a leader and a group is not set in stone, and, as we know, there is no such thing as "reality".

Often, what appears is more important than what actually is.

We saw Bush earlier landing on a US carrier in a flying suit. Bush was actively constructing his image as a war leader, despite the fact that he never really deployed in any war zone and despite the allegations that he actively avoided Vietnam duty.

Leaders also rarely accept the groups' definitions as a given, and they seek to mold them to fit themselves and their goals.
Equally, they will seek to define their goals as concrete manifestations of the group's values and beliefs.

Finally, political leaders will often seek to define the boundaries of the group as broadly as possible, which will mean a larger appeal and more votes.

It's these leaders' machinations that lead the authors to call leaders "entrepreneurs of identity".
But here is the twist: leaders don't want to be seen as "identity" shapers. They prefer to be seen as a perfect, natural fit.

Say the authors:

> Entrepreneurs are what they are.
> Interpreters are how they wish to be seen—for if people accept their version of identity as self-evident, the battle for influence is all but won.

Prototypicality & Political Warfare for Leadership

Manipulations of prototypicality are also part of political warfare, with opponents trying to undermine each other's representativeness.

Sometimes these attacks can be misguided, though.
Political leaders attacking Bush for his "Bushisms" were actually helping him.
It helped him because Bush presented himself as an "All-American" leader closer to the people than to the scholarly elites.

#15. Embed Identity Into Everyday Life

Finally, the authors make the case that to secure the group's support, leaders need to show some (cultural) proof of identity.

Cultural artifacts such as parades, functions, and celebrations serve that need: to connect with the leadership.

Cultural artifacts also serve as the present proof that leaders can deliver the goods they promise in the future.
They are like a promissory note for what's about to come.

My Note:
In a book that blew my mind away, this part was the least convincing for me.
Read more in the "cons" section.

#16. Group Power Struggles

Now for the interesting twist.

Group members don't just vie against each other for status, power, and leadership.

But also do so in a greater social contest, sometimes using and leveraging outgroups or enemies.
This is social manipulation for power.

As a matter of fact, leaders who are insecure about their position within the group can end up picking fights against

outgroups to shore up internal support.
Say to the authors:

> Prejudice, discrimination, and even hatred, often actually derive from the struggle for intragroup authority and leadership.

Haslam cites his BBC prison experiment as an example of prisoners' leadership being highly dependent on the guards' outgroup.
And a political example of making enemies for power is the McCarthy witch-hunt.

More Wisdom

- Watch out for the "Charisma Myth" and any course on charisma: charisma is not so much an intrinsic quality that warrants leadership positions, but it's more a quality that followers bestow upon leaders for being prototypical and good representatives of the group (see Platow et. al., 2006).
- Attraction, trust, and similarity seem to be more the outcome of group formation than the causes (albeit attraction and liking can facilitate the formation of groups)
- Self-stereotyping is the act of defining oneself as belonging to a certain category. When people self-stereotype, they will find out what the category values and thinks and they will strive to conform
- Group's prototypicality changes depending on the context: an extremist as an outgroup will make the leader look more prototypical (i.e., similar) to the group
- Leaders must not make it about themselves but about policies, values, and ideals

Best Quotes

On why we must all care about leadership and leadership's dynamics:

> Third, just as politics is too important to leave only to politicians, so too leadership is far too important a

> matter to be left only to leaders.

On shared identity over ego:

> Leadership that is grounded in shared identity will always win out over that which is grounded in ego.

Practical Applications

This book is a treasure trove of information.
On top of the follow-up articles that I will write and that will draw heavily on it, here are more real-life applications of "A New Psychology of Leadership":

- There is little evidence that leadership programs translate into actual improvements and results
- Always be careful of leaders' manipulation
- Keep in mind that embattled leaders can pick enemies and fight just to shore up support

CRITICISM

Great book, so put these notes in context:

It's focused on a *theory* of leadership

And I think the author may have been clearer that he's championing that theory.

Also because the title may confuse readers.
Readers may believe this is an overview of the research literature, and that the literature has reached Haslam's conclusion on the predominance of social identities.

It may apply less to non-democratic contexts

Contexts where the dynamics change and dominance and coercion may work better, or incur less costs.

See for example '*The Logic of Political Survival*'.

That's my main criticism, and now a few cons:

CONS

- **Rarely confuses correlation for causation**

One of the examples of a shifting sense of identity was that of South Africa post-apartheid.
The supporters of a local sports team went from being feverishly racist to chanting their love for the black Nelson Mandela.

But that says little about shifting social identities.
It's very possible that people going to the stadium were simply already Mandela sympathizers and people who opposed him never really even thought about buying a ticket.

- **Organized social actions are anticipations of what's about to come**

I'm not convinced that parades, events, and other cultural artifacts are the present manifestations of future

Sometimes they are simply shows of power -think of military parades-, of what's happened in the past -think of "revolution" celebrations- or simply confirmation of "who we are" -think of countries that celebrate the birth of the republic or the end of fascist regimes-.

- **Are leaders not guilty when failure strikes?**

The authors say that leaders get the credit when things go well but that usually the blame is cast onto the followers when things go wrong.

I disagree with this one.

Leaders often shoulder a lot more blame than they are really responsible for when things go wrong.
As Robert Greene notices in "*The Laws of Human Nature*", followers have a dual drive of wanting a leader and also wanting the leader's head when things turn sour, -which has happened several times in the course of history-.

- **Too much faith in groups' rationality**

I feel the author puts too much faith in the "wisdom of crowds" and in their rationality.
They write:

> People in groups exercise reason and judgment just as much as they do when they are alone

I am surprised the authors don't recognize that groups can get much more irrational than individuals can.
Just listen to Hitler and Mussolini speak. No single individual would have cheered them so loudly. But gather a crowd of individuals, and you get very little reason and rationality.

The authors say that the "traditional psychology of leadership" says that strong leadership comes at the cost of followers' strength.
While the new psychology of leadership says that leaders' and followers' strengths feed into each other, it doesn't have to-.

So if they recognize that a leader can dictate identity and rob followers of their agency, why don't they also recognize that crowds of followers can be hollowed out of their power and act very irrationally?

- **In some sources, I couldn't find the relevant information to back the author's claims**

Being super interested in the topic, I have followed many of the resources the authors quote.

However, sometimes I struggled to find the evidence for what the authors claimed.

As an example, the authors say that Blake Ashforth and Vikas Anand (2003) found that a cult of personality paved the way for the emergence and justification of corruption.
But I didn't find the paper to fully back that claim, stating instead that charismatic leaders speak for loyalty to the person more than to the mission, but that they can use their charisma for good or negative purposes (note: you have to get the full paper, and the link is just the abstract).

PROS

At the time of first draft, it was the best book I have read on leadership.

Both from a theoretical and practical point of view-.

I also appreciate that, contrary to some more academic texts, they also dealt with real-life power dynamics and manipulations.
Such as, what actually happens in real life.

Review

The New Psychology of Leadership is one of the best books on leadership I have read.

Before it, I had mostly read "popular books on leadership".

Many of those were naive self-help books based on what a good leaders should be like -not what it actually is, and what works-.

I have since stopped reading popular best-selling books.
In part, it was thanks to this very book, which blew everything else away.

I read *The New Psychology of Leadership* on Kindle, and I highlighted 31620 words (by comparison, that's a wall of text 9 times longer than this review).
And that's while I was telling myself "stick to the main passages or you will end up highlighting the whole book".

Obviously, I recommend "*The New Psychology of Leadership*" to anyone who's interested in psychology, social psychology, leadership, and power.

Also read:

- **How to be a leader** (laws teased out in large part from this book)
- **Best books on psychology**
- **Best books on leadership**

Or **get the book on Amazon**

The New Psychology of Leadership: Summary & Review | TPM

Simply the best book on leadership I have ever read

The Psychology of Political Manipulation

Lucio Buffalmano · 16 June 2019 · Archived copy · Original

Political persuasion (and manipulation) is not only an art but also a science.

In this article we'll show you the influencing techniques that politicians use to persuade people to vote and support their policies, *–even when it's not in the voters' best interests-*.

Contents

- #1. Stoke Patriotic Pride
- #2. Mold Your Voters
- #3. Give 'Em A "Sense of Us"
- #4. Pretend You're Just Like Them
- #5. Divide Us (Good) VS Them (Bad)
- #6. Make Up Enemies
- #7. Seems unfair to The Outgroup
- #8. Embody The "Spirit of The Nation"
- #9. Play the "Great Leader"
- #10. Feign Disinterest in Power, Pretend You'Re On A Mission For Everyone's Benefit
- #11. Appeal to Higher Ideals

- Politics Naturally Promotes Manipulation
  - SUMMARY

#1. Stoke Patriotic Pride

Rational self-interest is a politician's biggest nightmare.

Politicians' jobs and power rest on the willingness of the people to accept their authority, the legitimacy of the government, and, of course, to pay taxes.

On the other hand, the more politicians can convince people to selflessly support the country and the government, the more powerful and legitimate they grow.

The problem is: **that selfless support for the group is not rational from a voter's point of view**.
And that's why politicians love to talk in terms of higher values—about "our great country" and *serving* that great country, of course.
The bigger and less homogenous the country, the more politicians need those abstract ideals.

Enter *us*, how great *we* are, how good *our* values are, and, my absolute favorite, "what we stand for".

Persuasion Explained

Sales manuals invite salespeople to pitch their products using the "what's in it for me" model.
And Robert Greene's 'law of power' states to 'always appeal to people's self-interest'.

And, in general, that's good practice.
But **the WIIFM model doesn't work for me in politics**.
WIIFM is a model of social exchange and in politics, appeals to identity trump social exchange (Tyler & Blader, 2001).

Why so?

Because **if people went deep in answering the question of "what's in it for me", the answer would be "not much"**.

Just think about it:

- Your vote counts for nothing (mathematically)
- Hiding part of your income is often more rational than declaring in full
- Serving in war means risking your life for a badge
- Your political activism has little, -if any- impact but takes a huge amount of time

What's the political solution?

The evidence suggests that the key to spurring people into supporting organizations beyond the legal minimum lies in *preventing* people from thinking in terms of rational exchanges.

And that's why leaders must appeal to higher ideals of honor, responsibility, and motherland.

There's nothing wrong with that.
But the question is: Are you helping your fellow citizens with your behavior, or are you helping mostly the persuasive politician?

Answering that question can help you avoid falling prey to political persuasion.

Example: Kennedy's "What Can You Do?"

Kennedy's line in his inauguration speech is the most famous example of what I call "selfless political manipulation".

You already know the line.

But I would like you to focus on what comes right before that.
And this is it:

> Each generation of Americans has been summoned **to give testimony to its national loyalty**.
> **The graves of young Americans** who answered the call to service surround the globe.

National loyalty, graves of young Americans scattered around the world… Did anyone stop to think about what that means?

A little later, Kennedy asks "will you join in that historic effort?".

The only rational answer here is "no thanks".
But of course, Kennedy's political persuasion worked, and people cheered.

And a little later, after the build-up, comes the famous line:

> **Kennedy**: Ask not what your countries can do for you, but what you can do for your country

And what should one do for his country, exactly?
Join in the graves of prematurely dead men?
Be my guest.

Again, this is not necessarily to say "be selfish".
As a matter of fact, be altruistic.
But do so intelligently.

Being selfless to "the country" means nothing.
"The country" is an abstraction that too often only means supporting the elites, the arms producers, and big business -or the stickers' producers if you're going the redneck way :)-.

> When they ask what you can do for the country, always ask yourself if, by any chance, they are *running* that country.
> That could uncover a few vested interests.

P.S.:
I'm glad I wasn't the only one to notice. And Steven Pinker recently listed Kennedy's speech as an example of anti-enlightenment ideals.
In my model of social manipulations, I call these "pro-group feints":

> Manipulation: Techniques, Strategies, & Ethics

#2. Mold Your Voters

We like people who are like us (Cialdini, 1994).

And, turns out, we want politicians who are like us, too.

And that's why a mainstay of political persuasion is making the politician seem the most representative of his citizens.

Persuasion Explained

We talked about "liking", but it's slightly more complex when it comes to politics and leadership.

"Prototypical" would be a better word.
Leadership psychology (Haslam, 2006) has shown that it's leaders who are prototypical of their voters who gain the

most support -and the most votes-.

Needless to say, *looking* prototypical in voters' minds is equivalent to *being* prototypical, thus lending itself to a lot of political posturing.

Example: George Bush

Bush was, in many ways -and unluckily-, a political genius.

A president everyone mocked for being a dumb idiot, he managed to position a war for big corporations as an all-American payback for freedom, democracy, and world peace.

Bush's personal positioning to the electorate was the "All-American president".
The good old Texan boy who loved beer and steaks and shunned the big-talking Washington bigwigs -just the kind of guy many of his compatriots would feel close to.

And his verbal mistakes helped persuade the electorate of the genuineness of that image:

"Awesome speech your Holiness" – the etiquette experts lambasted Bush. And the voters liked him even more.

Bushisms were a central part of making Bush seem more vulnerable, more relatable, and… More just like an average voter.

All the detractors who attacked him on his apparent lack of intelligence were doing him a big favor.

As Jacob Weiser acutely notes:

> Elitist condescension, however merited, helps cement Bush's bond to the masses

The Machiavellian Genius of Bushism

What's so Machiavellian about Bushism?

It's the genius of using a weakness as your representative quality.

Think about it.
When you choose a weakness as your representative quality you can't be attacked on it.

As a matter of fact, the more your opponents attack your manifest weakness, the stronger you become (Antifragile).

Something to think about for wannabe politicians.

#3. Give 'Em A "Sense of Us"

There is no "I" in a team, goes the platitude.

We have already seen that the centerpiece of corporate manipulation is to encourage employees to give up their self-interest for the company's self-interest.

Well, it's the same for political persuasion, and this is the other side of the "vilify self-interest" coin.
The main goal is to encourage voters to give up their self-interest and join in the "collective national community".

Persuasion Explained

From a social-psychological when the "we" mindset triumphs, depersonalization begins.
There are many gradients along the selfish/depersonalized continuum, and at the extreme, the group becomes more important than the self (Turner, 1986).

And when the group becomes more important than ourselves, we can do all crazy things for the group which might not be very good for us.

Again, nothing wrong with that.
That might even be a good thing.

But the real question: **is being so selfless for your country good for the country, or for those at the top**?

It's an important question because, usually, the politicians benefit by default from a "we" mindset.

Why?

Because the politicians lead that "we" entity of course, with all the benefits that follow.

Example: Michelle Obama

While not 100% a politician herself, Michelle Obama has had a tremendous influence on American politics.

And she is also a master persuader when it comes to identity politics.
See here an example (below the transcript of the most salient bits):

Have you noticed the persuasive techniques in there?

It's all about building Hillary to be "one of us, standing for people like us and for what we value".

She started with a slew of "we".
Then described Hillary as the perfect representative of us -there was something for everyone in there-, and then she's back to the "we" again.

Look at the transcript of the climax of that speech:

> ***We*** *as women*
> ***We*** *as American*
> ***We*** *as decent human beings*
> ***Can come together***
> *to say enough is enough*

Notice how she talks as a woman, thus indirectly painting an outgroup, possibly hostile enemy: men.
She says "decent human beings", thus indirectly painting "the others" as a non-decent -a basket of deplorables?-.

Of course, not all political manipulations lead to victory, and selling one of the biggest Inc. shills of all time was a tall order.
But Michelle shows you exactly how it's done -and if she had run, she would have most likely won-.

#4. Pretend You're Just Like Them

The best politicians know this secret:

The higher you go, the more you risk losing touch with your base.

But the opposite is also true: the higher you go, the more leverage you have when you get close to your electorate.

Why?

Because, the more powerful and gregarious you are, the more people will perceive your approachability as the true sign of unending magnanimity.

Persuasion Explained

As we've already seen, voters prefer leaders who seem similar and closer to the group they govern.

The opposite is also true: the more distant and king-like the leader seems, the less the followers want to sacrifice themselves for the politician's causes and goals (Haslam et. al., 2006).

History indeed shows us that most dictators and kings who lost their heads did so after they became too self-absorbed and too far removed from their population.

Solution?

Today's focus on **political persuasion is making the politicians look like they're in it for the people** and with the people.

By looking warm and chummy with the average Joes' politicians gain brownie points, look like "one of us" and stave off risks of looking too far removed.

Example: Barack Obama

Obama is a master of what I call the "manipulation of the politician next door".

From turning back to (awkwardly) say hi to a marine to fist-bumping cleaning staff (randomly caught on camera, sure) to "spontaneously" stopping by at a burger place.

Look how down-to-earth I am!
It always surprises me how most people fail to see the political game.
But fail they do.
Here are the two top comments below Obama's burger spree:

In truth, fist bumps to strangers are an unpalatable mix of condescension, manipulation, and patronization.

And to me, they are also somewhat demeaning to the receiver.
Just as the title suggests, the power differential is the equivalent of saying “here’s my bone to you. Happy now?”.

Failure to Respect The Law: Macron

Someone once said that you always recognize a powerless man by how hard he tries to look powerful.

Oh yeah, I said that.
But it still stands.

Politicians who fall victim to “power tripping” lose all their political goodwill, fail to influence voters and ratchet up anger and indignation.

Our beloved Immanuel Macron, self-appointed leader of the world (yeah sure), is a good example of this type of politician:

By asking a kid to call him “Mr. President” Macron looked stuffy, full of himself, and far removed from average people.
That’s the attitude that unleashed the yellow vest protests on him.

#5. Divide Us (Good) VS Them (Bad)

The old ingroup/outgroup from sociology.

It consists of depicting others (outgroup) as “bad”, “unfair” or “undeserving” and us (ingroup) as “good”, “just” and “deserving of victory”.

A world where evil is 100% evil and good is 100% good would be a much simpler world.
But unluckily, we don’t live in that world (Baumeister, 2010).

But manipulative politicians don’t let reality get in the way.

Persuasion Manipulation

The ingroup-outgroup is a well-known sociological principle (see Tajfel, 1970) and this is how politicians gain by creating this social dynamic:

1. With a hostile outgroup, people feel a bigger sense of belonging
2. With the competitive mindset derived from ingroup/outgroup, people will be more loyal
3. The worse you frame the competitors, the easier to justify unethical, immoral, and violent actions

Example: Jocko Willink & US Military

The “enemy mindset” is so obvious in the military.

Here is what Leif Babin, co-author of *Extreme Ownership*, says about the “Iraqi insurgents”:

> Our snipers killed a lot of bad guys and received many well-deserved accolades for it

“Bad guys”, says the officer from the invading army.

It might not be a coincidence that business-speak borrows so much military jargon. I recommend you reject that “bad enemies” frame at all times, it’s a cheap trick to get the best out of you, on the cheap.

A Note On The Danger of Social Identities

Ingroup – Outgroup leads to social identities, such as people defining themselves not as individuals but as groups.

Social identities are potentially toxic and dangerous as they are major drivers behind jingoism, hooliganism, wars, general aggression, and unneeded hatred.

I will cut it short here, but the potential toxicity of social identities is why I always invite in my reviews to reject:

- Tribalist ideologies ("Tribe", "The Way of Men");
- Misogynist ideologies pitching men against women (Toxic masculinity in "The Rational Male" and similar)
- Toxic feminist ideologies pitching women against men ("The Power of The Pussy", "Lean In" etc.)

> **Sometimes the most pro-social stance you can adopt is through a massive dose of individualism**.
> –*The Power Moves*

#6. Make Up Enemies

Machiavellian politicians don't make enemies.
They create them.

An enemy can be used as a pawn for internal power battles.
For example, an enemy of your political opponent can be your friend (Putin to Trump against Hillary).

Or getting into a special relationship with a stronger foe can allow for political oppression to go on unchecked for decades (North Korean dictators defended by China).

And of course, the oldest use of an enemy is to shore up internal support and marginalize your political opposition.
There is little which can embolden politicians as much as a righteous war against an evil enemy.
Bush after 9-11 is the perfect example. Every speech with the word "terror" in it suddenly became so supremely persuasive.

> Machiavellian politicians don't make enemies.
> They create them.

Persuasion Explained

From *evolutionary psychology*, we can derive that when an enemy shows on the horizon, the group tends to put all animosities aside and coalesce.
Coalesce around the growing power of the leader, that is.

And that's why leaders love enemies.

The real-life observation of enemies' power dynamics is also replicated in the laboratory, with Rabbie and Bekker finding out that insecure and embattled leaders are more inclined to pick fights with out-groups.

This is a sad and potentially dangerous reality of politics we should all be aware of.

I quote Haslam here from his seminal "*The New Psychology of Leadership*":

> We can see that intergroup phenomena like **prejudice, discrimination, and even hatred, often derive from the struggle for intragroup authority and leadership**.

In a nutshell: political games for power often have the nefarious consequence of harming innocent bystanders.

The effects of political enemies

In a more schematic form, this is how enemies help politicians influence their electorate:

1. Control over the political agenda (the enemy becomes the salient topic)
2. Claim of being the only representative of the group's interest (by championing the fight)
3. Discrediting rival leaders (others aren't vigilant and strong enough)
4. Centralizing power (beating the enemy takes priority over democratic processes)
5. Disciplining followers (the only patriotic action is to fall in line to focus our efforts on the enemy)

Example: McCarthy & Witch-Hunting

Witch-hunting is an interesting example of social and political power dynamics.

With the witch-hunt the enemy isn't just outside, it's *within*.

That increases voters' insecurities, who then look up to the only politician whom they feel they can trust: the leader of the witch-hunt.

The witch-hunt also obeys the strategy of "divide and conquer". A divided population is less able to mount a credible opposition.

It can be used as a political weapon for coercion and for dispatching political enemies (see Robespierre's Terror as an example).
In a cruel twist of fate phrases like "enemy of the revolution" and "enemy of the people" will be hurled around in a crescendo of madness and hypocrisy.

So back me up to do that job "for you"
Of course, it's implied that only McCarthy and his fringe Republicans were strong enough to stop the communist danger.

Notice also how he uses "Americans" in there.
That's McCarthy trying to position the witch-hunt as a moral duty for *Americans*, not just Republicans, thus enlarging his political appeal and increasing its legitimacy.

Enemies Are Self-Fulfilling

Made-up political enemies not only work very well but can become self-fulfilling prophecies.

The initial prosecutions indeed can provoke counter-reactions, which then confirm the politician's characterization of the world.

All to the benefit of the Machiavellian politician -and to the detriment of everyone else-.

#7. Seems unfair to The Outgroup

Great leaders are fair, say all leadership books.

Talking about platitudes -eye roll-.

And it's true that being fair *to the ingroup* increases leadership's authority. But it's also true that being *unfair* to the outgroup often strengthens the leadership.

Of course, you don't truly need to make enemies with someone. You can just pretend, and play up an act for the internal audience.
Then be back to your usual charming Machiavellian self when you meet the made-up enemy behind closed doors.

Persuasion Explained

Politicians know that their constituencies expect favoritism.

As a matter of fact, sociological research proves that *everyone* unconsciously knows that.

It's been long proven that referees, umpires, and judges favor their home teams or countries.
People act more unfairly and aggressively toward the outgroup *precisely* when they know that their constituencies are looking (Van Kleef et. al., 2007).

Indeed politicians who are insecure in their leadership can even strengthen their power by favoring their groups to the detriment of non-group members (Platow, 2001).
The unfairness is then re-interpreted as "standing up for us".

Unluckily the consequences for real-world politics are quite dire because it means toughness or **international aggression can be a strategy to secure voters' support.**

Politician's manipulations then can end up harming others just to "look good" to their voters.

Example: The Price of Disobeying The Rule

The mayor of Rome, an exponent of the most idiotic of the populistic movements, apparently wasn't aware of how realpolitik works.

So she showed up in person to give free housing to a family of gypsies -gypsies being a notorious outgroup almost anywhere in the world-.
The local police didn't have an easy day defending her from people's anger.

Sure thing, a few left-wingers might stand on her side.
But on net accounts, Raggi lost political goodwill there -and votes-.

Why?

Because the staunch left and right always vote for their party, no matter who's representing. And **those who matter most to political persuaders are the more pliable centrists**.

And of course, the well-meaning centrists would never say anything against gypsies for fear of being called "racists".
So they weren't protesting that day.
But they are going to vote soon…

Trump's Leverage of In-Group Politics

Compare it to Trump instead, who always played the "in-group politics" very well.

His criticism of politicians has always been that they are allowing others to rip the US off.

And he presented himself as the candidate who would finally defend America's interests.

And that appeal worked really well.

#8. Embody The "Spirit of The Nation"

The ultimate political persuasion is this:

Convincing the electorate that you embody the country and its values.

When a politician can come to embody the country and its values, he transcends the physical and becomes a mythic, selfless representation of the nation.

When you see people lighting up candles and decorating their houses with figures of the politician, that's the sign that the politician has become the embodiment of the values he claims to represent.

Persuasion Explained

By becoming a representative of the national values, the politician's personal power grows unmatched.

If it's a democratic system, a vote against him is not a vote against him, but a vote against the country and the values he represents.

In the old days, this political game also added a divine representation.
And kings all across history sought their blessings not through votes, but through the god themselves.

But don't think that we have improved with time: divine approval or not, the effect is still the same.

> A vote against the politician who embodies the country is a vote against ourselves

Example: Ronald Reagan

We could have used an example of a totalitarian dictator such as Hitler.

But that would have led people to think that this type of political persuasion is a thing of the past.
Of course, it's not. It can happen today or tomorrow as much as it happened yesterday.

A more recent and democratic example?

In recent history, and buoyed by a perfect propaganda machine, Ronald Reagan was the embodiment of American values.
This is what Richard G. Darman, Assistant White House Chief of Staff, wrote at the beginning of Ronald Reagan's campaign:

> Paint RR as the **personification of all that is right with or heroized by America**.
> Leave Mondale in a position where an attack on Reagan is tantamount to an attack on America's idealized image of itself—where a vote against Reagan is in some subliminal sense, a vote against mythic "AMERICA"

And as Ronald Reagan became the embodiment of freedom and capitalism, so America became the embodiment of freedom and capitalism in a mutually reinforcing cycle.

Reagan also had the historical advantage of having a natural big enemy with the communist USSR.
But Reagan taking on the former USSR wasn't just a president persuading another president, it was the embodiment of freedom and capitalistic power taking on the failed communist experiment.
It was the battle -and triumph- of America's ideology. Embodied in Reagan's persona.

Notice that when he says "we are called", he doesn't say that the Democrats say so or that other Americans say so. Reagan didn't want that, because that would have communicated internal dissent.

Instead, he wanted people to feel like some external foes were calling America "materialistic".
You see, Reagan didn't just want to be the embodiment of Republican values, **Reagan wanted Republican values to be the embodiment of all that is American**.
He did it very well.
And then, he embodied those same values himself -until today, with Reagan's portraits still adorning many conservatives' homes and circles-.

Sadly, the ultra-liberal view of the world won out, and it hasn't been good for the people or the world.
And that's why we must all learn how political persuasion really works, lest we all get the elites' shafts.

#9. Play the "Great Leader"

What's the best situation ever for a politician?

Having others to call on them, rather than having to sell themselves.

The pinnacle of any political persuasion is having people believe that you only can do the job.

And there is nothing like an enemy, a war, and an image of a tough and resolute leader to have voters flocking to the ballots.

Persuasion Explained

Gustaf Le Bon was a sociologist who, similar to yours truly, didn't hold crowds in very high opinion.
He believed that crowds seek charismatic leaders to submit to.

Le Bon has been criticized with time and for good reasons. But it remains true that, in times of uncertainty, crowds still crave strong leaders (Hakkar, 2017).

And that is why the more dominant types of leaders do two things:

1. Endorse highly individualistic models of leadership (ie.: we need strong leaders like myself)
2. Persuade the electorate about the "difficult and uncertain times" (so we need them to lead us)

Example: Bush in Flying Suit

After he created the external enemy, Bush painted himself as the only political leader who was hawkish enough to

lead the charge.

The next step was for him to pose like a true commander-in-chief, leading his people to victory.

George W. Bush could have flown in on a helicopter when he visited the USS Abraham Lincoln.
Instead, he chose a military plane.
And he talked the part of the warrior leader.
And he dressed the part.

It's easy to look at Bush after his presidency and think "he wasn't successful".
But he was.

Let's not forget that Bush reached some of the highest approval ratings of any president *ever*.
All while conducting a made-up war against an inexistent enemy.

Sure, eventually reality caught up with people.
But by then, the deed was done.

#10. Feign Disinterest in Power, Pretend You'Re On A Mission For Everyone's Benefit

Politicians know the basics of persuasion.

And one of the basics is that they can't look like they're in it for the power.
They must seem like they're in it for the people.

And that's what they always do: talk up their commitment to their constituencies and hide their real power ambitions.

Persuasion Explained

Leaders who forego the windfall of leadership are preferred to leaders who seem to be in it for themselves (Wit & Wilke, 1988).

This is a case of lab experiments backing up the obvious, of course.
What's more difficult is how to do it in real life.

And the best politicians do it by championing some big causes -reforms, "change", fighting this or that enemy, etc.-. Those never fail to gain the best grassroots support.

Example: Franklin Delano Roosevelt

Roosevelt is, still to this day, the only president who has run for a third -and later fourth- mandate.

But things weren't as certain towards the end of his second mandate. Had he made his intention obvious, he would have faced some major headwinds and accusations of having autocratic tendencies.

So Roosevelt never said he was interested in a third.
But neither did he flatly deny, which would have made it difficult for him to backtrack.

Instead, he maneuvered in the background to make sure that no major candidate would come out looking too strong (Robert Greene, 2006).

And then, while the Democratic leadership was struggling to choose a candidate, he made his self-effacing move sending his flunky to prepare the ground for him:

Notice that Roosevelt also used many of the techniques we discussed before:

- He managed to project an image of the great leader doing the impossible (the "great man dupe", unmatchable by any other candidate)
- With the war raging, he also leveraged external enemies
- And finally, he pretended he was there to serve out of a sense of obligation, and not because he (also) craved the power

A lesson on how to make a power-hungry pass for a savior.

Also read the "great leadership dupe":

> Great Leadership Is Great Manipulation: Jocko Willlink Case Study

#11. Appeal to Higher Ideals

This technique is not necessarily value-taking.

Great political leaders can appeal to higher ideals (extrinsic motivation).

But so do some of the manipulatively Machiavellian ones.

Appeals to higher ideals on more fragile minds can even lead to self-sacrifice and death.
You can see these more often in more extreme organizations such as the military, sects, hate groups, etc.

Higher ideals include:

- Unity & brotherhood
- Honor
- Loyalty
- Motherland

Persuasion Explained

Don't even make me start on this.

Your life in exchange for an ideal?
Your family -or mangled you- getting a badge in exchange for your blood?

What a great deal (sarcastic here).

But hey, you sacrifice yourself knowing that somewhere there is someone who handsomely profited from your sacrifice.

Political Manipulation Explained

There are two types of higher ideals manipulation:

1. Leveraging people's tendencies to believe in mystic or religious promises of after-death (Charles Manson, Bin Laden etc.)
2. Leveraging evolutionary tendencies to defend the group

It might not be a coincidence that countries and ships' names have female names.
So, you know, it's easier to inebriate young men into giving their lives to protect "their" women (yeah, sure…).

Solution:

- **Enlightened individualism**

Case Study: Best-Selling Navy SEALs

Examples of higher ideals can often be seen in all organizations that require big sacrifices from their team members.

https://youtu.be/hIvRkjOd1f8?t=66

William Wallace Braveheart's speech was only great insofar as it convinced a bunch of people to die anonymously for his own ideals of glory, fame, and power.

The bigger the sacrifice, the bigger the ideals (and the outgroup, see above).

Writes Jocko Willink in "*The Dichotomy of Leadership*":

> The wounded SEAL's grip on my hand tightened and he pulled me in (…).
> Not scared (..) that he might lose his leg. Only concerned he might have to leave our task unit.
>
> Task Unit Bruiser. Our task unit. Our Lives.

> This was a man.
> This was a true friend -a brother-. This was a hero.
> Young, brave, and more concerned for his friends than for his own life.

There you go.
That kid about to lose his leg doesn't even have a name. That's how much he mattered.
But hey, now his name is "hero".

But you only need to put a wider lens to see a much different story of this "hero" and the great team he got a bullet for.

How about the "hero" being part of an invading force that some professional propagandists span as a "war for freedom"?
And the team he got a bullet for as the fat cats getting rich on his behalf in the oil and arms industries?

Politics Naturally Promotes Manipulation

Unfortunately, intra-group competition naturally promotes the best manipulators into leadership positions.

And inter-group power dynamics tend to promote countries and religions that best cooperate internally.
Unluckily internal cooperation is often stoked by over-nationalism, out-group dynamics, or plain and simple 'external enemies' one must compete against, or destroy.

Says psychologist Joseph Henrich:

> intergroup competition will tend to favor the spread of any tricks for expanding what members of a group perceive as their tribe.
> Both religions and nations have culturally evolved to increasingly harness and exploit this piece of our psychology, as they create quasi-tribes.

This is why on this website we encourage individual-first self-development.
Good for you, and good for the world.

SUMMARY

Politicians, of course, are not bad per se.

However, since politics is ultimately a game of influencing and persuasion, politics is also replete with games and manipulations.

They are not necessarily bad per se but, as we have seen, some of them can be harmful not only to other politicians -which is to be expected- but also to citizens.

8 Toxic Employees That Destroy Teams (& How to Handle Them)

Lucio Buffalmano · 18 June 2019 · Archived copy · Original

Toxic employees can be a major threat—not just to your team, but to your career, success, and even health.

Most of them manipulate, undermine authority, and poison the work environment.
But some are worse than others.

This guide, based on realpolitik and psychology, exposes their tactics and shows you how to handle them effectively.

Let's dive in.

1. Narcissistic Rebels

These types of toxic employees **cannot stand having a boss**.

They reject any type of outside authority, are hypersensitive to power dynamics, and soon come to resent *any* boss who doesn't grant them enough freedom.

Psychology Profile

Some rebels had an overbearing parent or a highly demanding parent to whom they are *still* rebelling.

Accepting dominance hierarchies is a sign of maturity, but rebels are locked into a child role.

And now, even as adults, any outside authority triggers the same parental resistance as in their teenage years.
But today, instead of slaying the overbearing father, they want to slay *you*.

However, some are simply narcissists who cannot stand the lower status position in the social hierarchy.
They want to be the ones giving orders and calling the shots. They hate you for having authority over them and for having to execute your tasks.

Rebels Make Excuses to Hate You

Rebels hide behind causes and ideals.

They might pose as "social justice warriors", saying they hate power and bosses because "it's unfair", because "they oppress people" or because the boss is "abusive and mean".

That's only a front, of course: the truth is that they resent people who have power over them.
They don't want a good relationship with their bosses, they want *power* over their bosses.

Watch out for these people: the ones who are good at playing this game can easily sow discontent and potentially turn your whole team into an enemy.

Signs

- **Undermine team and work**: narcissists who feel 'constrained' in lower status role intentionally undermine organizational goals (Penney & Spector, 2002).
- **Insubordination and power struggles**: With the aggressive types, you will get into power struggles.
- **Passive aggression**: If they are more of the passive-aggressive types, then you'll see typical passive-aggressive signs (delayed replies, poor executions, undermining behind your back, etc.).
- **Low motivation, no extra mile**: narcissists in subordinate roles are less motivated, less willing to engage in extra-role behaviors, and more selfish (Benson, Jordan, & Christie, 2016)

Solutions

First, a reality check:

If too many resent your management, you might be the problem.

Manage not through authority and title, but by example.

That being said, some managers try to overpower rebels.
But that approach doesn't address the root causes.

Overpowering rebels is tantamount to curing a problem with more of what causes the problem.
They will resent you more, and they will want to destroy you to vindicate the infamy.

What to do then?

If they are poor at what they do, fire them.

If they are good, you must give them "freedom of operation".
Make them feel like they are special agents with a "license to act like self-employed people.".

Yep, that's the secret to keeping these guys performing problem-free: make them feel like they are self-employed.
Allow them to work from home, come and go on their own time, and, if they perform, remove any need for reporting.
Just let them come to you with the results and the money they earn for your company—that's what you want in the end, no?

Just Like Investment Bank's Traders

Investment banks use this approach with alpha-male, aggressive traders (Taleb, 2018).

Banks grant them lots of freedom, as long as they make money.

2. Cynics

Cynics masquerade their envious doom and gloom as realism.

They position themselves as rational, realist types that the rest of your team should better listen to.
And that makes them toxic employees per excellence.

Psychology Profile

There are 3 main types of cynics:

- Defensive cynicism (it's not that I'm unsuccessful, it's that everything sucks and I don't even try)
- Power mover (use cynicism to discredit others)
- Former idealists

Former idealists change tack when they hit life difficulties and realize that the company, the state, the people or whatever it is they were duped to believe in, weren't there to support them.

Hurt and disappointed, they swing in the opposite direction.

Cynics Misunderstand The Power Moves

Cynics love articles such as "corporate lies", Machiavellian principles, and "how politicians manipulate the masses".

But he fails to see that social exchanges *can* be win-win and that it's up to them to make sure they are (see "enlightened collaborator").

In short, he fails to go from “poisoned by cynicism” to “empowered by cynicism” and reach the “positive cynic” stage.
See more here:

> Positive Cynicism: Turning Poison, Into Gold

High-Achieving Cynics

Here’s the kicker:

Most executives and top performers are positively cynic.

The positive cynic is a different breed.
Not swayed by corporate BS, he focuses on giving because he obeys the cardinal rule of effective cynicism: the more I give, the more I can ask.

And, contrary to Pollyanna operators who apply misguided advice of “giving without asking“, they are very assertive in demanding their share of the pie.

And they are right!
It’s better to assertively ask for what’s fair, than waiting and hoping the man will be nice enough to give.

Solutions

Appeal to their practical side with bonuses, and appeal to *their own* goals.
For example, reputation, legacy, efficiency, record-low turnover, etc.

If they’re average of below-average performers and you need a motivated team, move them to more isolated posts, or fire them.

3. Homo Economicus

What you wrote on the contract, you get.

Don’t expect extra work, extra effort, or special allegiance.
With him, you get what you pay for -literally-.

Psychology Profile

Sometimes the homo economicus is driven by fear.

He is afraid that if he does more and doesn’t get more, then he is the ‘sucker’.

But more often the homo economicus is your average Joe.
He’s gotten his degree with average grades to live a simple life with a mortgage, a car, and an average lady on his side.

He pays his health insurance, his pension plan and he trusts the system to take care of him if things go south.

That’s it.
He’s not bad… He’s just an average fella.

Toxicity Impact

The homo economicus is toxic for top-performing teams.

Why?

Because they will form a clique with other homo economicus, slackers, and cynics.

That stand in stark contrast to the top performers and the extra-milers.

As the two groups grow apart, some of the extra-mile employees will start thinking “why work hard if these slackers will be reaping the same rewards”?
And, like in any public good game, the givers will stop giving.

That’s how average Joes harm team performance.

> **If you need excellence, you don’t the Homo Economicus**

4. Vulnerable Narcissists

The worst ones have the thinnest skin:

You need to tiptoe and power-protect to the extreme to avoid hurting them.

Psychology Profile

They’re narcissists and fixed mindset people.

They interpret negative feedback *on their work* as you telling them they *are* bad and unworthy.
Everything is personal with them.

And that’s why they can’t stomach reality: reality is often harsh.
And those you don’t want those labels in an HR formal complaint.

The Vindictive Paranoid

They might fake a stoic face, but in reality, they hurt and they never forget.
And they swear that they will make you pay.

They never communicate directly and honestly and they stew in their resentment for you.

The dumbest and most spiteful of them will sue you even if they have nothing on you -contrary to the Machiavellian players outlined below-.

Solutions

If you're in a big sprawling corporation, you can't avoid them.

If you are the more aggressive managerial type, learn some tactful communication.
These books on communication skills and "*Thanks for The Feedback*" will help you.

And you can turn them into allies.
Their fragile ego goes both ways: they get hurt easily, but also get *hooked* easily on emotional rewards.

5. Shirkers

They are busy with mysterious projects, take long to finish tasks, and generally try to do as little as possible to get by.

Oh, and they also take long lunches and often get sick.

Psychology Profile

There are several types of shirkers:

- **Entitled shirkers**: victims of entitlement mentality, such as the belief that they are due stuff without having to put in the work
- **Nurtured shirkers**: grew up with helicopter parents who gave everything (except good parenting)
- **Lazy shirkers**: apathetic to work and life, they just don't see the point and their biggest ambition is Netflix and

pizza

Finally, there are the socially clueless shirkers.
They overlap with entitled and nurtured and don't see or understand that healthy relationships entail an exchange.

How it Feels Managing Shirkers

Some shirkers are professionals in *looking* busy.

They like being in multiple projects to hide their real workload.
And they can always refer to "that other project they're working on".

But the most toxic shirkers use irascibility under this principle: if they make it difficult for people to approach and deal with them, nobody will ever give them work.

Milton in "Office Space" is an example:

Toxicity Impact

Free-riders aren't just toxic in companies and teams: free-riders are toxic to societies.

The issue is that free riders, as James Surowiecki notes, "poison" the whole system.
Employees who would go the extra mile in a fair contribution system stop giving when free riders show up.

And that's why free riders are devastatingly toxic: they trigger vicious circles of apathy, demotivation, and disinvestment.

Solution

The number of free riders varies widely depending on whether or not punishment is introduced in the exchanges (Fehr and Gächter, 2000).

So punish shirkers and free riders with lower salaries, lower bonuses, and no promotions.

6. Power Seekers

Power Seekers have huge ambitions.

That ambition includes taking your place or, even better, jumping straight above you.

They are dangerous for managers because if moving up means destroying you in the process, they will happily do so.

Psychology Profiles

The poor ones will make it obvious through dominance that they plan on replacing you.

And the good ones are Machiavellian and manipulative to the core.

They pretend to be all about "doing a great job" and "learning from you". And they'll even build you up in the process.

Solutions

If it's your company, you can use them.

Unless they're pure sociopaths, you align interests so that their selfish interest also adds value.
Just be *extremely* careful though: the most toxic types focus more on politics and rival elimination than on actual

results.

If it's not your company and you don't have great ambitions, don't cross them and let them free to walk their power path: that way you won't get hurt.

And if you want to compete with them, then make sure they learn nothing from you and get ready to rumble.

7. Suck-Up Players

Suck-up players flatter you and support you.

But it doesn't come for free: they do it because they want you to like them, protect them, and, crucially, to play favorites with them.

Psychology Profile

We talked about Suck-up players in office politics players as well.

Suck-up players can brown-nose for different reasons, ranging from admiration to love to power infatuation.

True suck-up players are not very ambitious.
Seeking power by reflection and brown-nosing indeed are defensive games, low-status behavior, and inherently submissive.

Just like children unconsciously seek their parents' goodwill, suck-up players seek political safety.

Toxicity Analysis

They are toxic for two reasons:

1. The team might think you two are in cahoots
2. It turns the team political and lowers morale and efficiency

Finally, if you're not attentive enough, they might even manage to get too close and win your favors.
You want to avoid that at all costs or you'll come across as weak and easy to manipulate.

Remember this golden rule of management:

> The closer you grow to one, the farthest you push the rest

8. The Predators

They look for ways to *take* as much as possible.

Often high in psychopathy, they rarely stop at moral and ethical considerations.
And they even rarely stop at lawful boundaries -unless they can leverage the law to screw you over, that is-

Psychology Analysis

They have no moral standards, are cynics, and sometimes are sociopaths and psychopaths.

If they do have internal morals, some of them will manipulate themselves first and foremost.
They will twist the story in their mind and paint you as the evil boss they must destroy -and yeah, they are the Robin Hood of that story of course-.

The lowest quality overlaps with the shirkers.
They're the kind of toxic employees who are mentally deranged enough to voluntarily hurt themselves just to get

insurance money.

The most Machiavellian of them instead connive and conspire to enact more elaborate frauds.
For example, they will read corporate laws and record your infractions just so that one day they can sue you and your company.

American Beauty has an example of a predatory toxic employee:

> **Manager**: Management wants you gone by the end of the day.
> **Employee**: Well, just what sort of severance package is management prepared to offer me? Considering the information I have about our Editorial Director buying pu**y with company money – which, I think, would interest the I.R.S., since it technically constitutes fraud (…) Not to mention.. (grins) Craig's wife!
> **Manager**: What do you want?
> **Employee**: One year's salary, with benefits.
> **Manager**: That's not going to happen.
> **Employee**: Well, what do you say I throw in a little sexual harassment charge, to boot?
> **Manager**: [chuckles in disbelief] Against who?
> **Employee**: [he chuckles right back] Against YOU. Can you prove that you didn't offer to save my job if I let you blow me?
> **Manager**: Man, you are one twisted f*ck

Begin with the end in mind: imagine that your worst employees will act like that. Record all conversations, and have the best lawyers… And be prepared for that type of (legal) showdown.

Solutions

- **Keep vulnerabilities and vices to yourself**, never allow coworkers to have 'dirt' on you
- **Fire strategically**
  - Have someone else do it
  - Pretend you're 'forced to' by circumstances
  - Pretend it was a board/collective decision
- **Power protect when firing**
  - It's about investors/business needs, not personal
  - It's about unlucky circumstances, not his character/performance
- **Make him feel he has a brighter future ahead** <— So he will not fight to stay
- **Trap him**
  - Give him freedom to spend company money, he'll misuse it
  - Hire an attractive double agent as his assistant

Reading people and prevention at an individual level also helps.

Look for signs of antisocial-disorder personalities, examine past employment history -often dotted by very brief stints- and check references.

Why You Must Ignore Popular Advice

Top results come from big publishers.

In the case of workplace topics, that's often Forbes, Business Insider, or Harvard Business Review.

While HBR often has great content, many of the rest… Not always.

This is the first result when typing “how to deal with difficult employees”:

9 Ways To Deal With Difficult Employees

1. Listen. Often, when an **employee** is **difficult** we stop paying attention to what's actually going on. ...
2. Give clear, behavioral feedback. ...
3. Document. ...
4. Be consistent. ...
5. Set consequences if things don't change. ...
6. Work through the company's processes. ...
7. Don't poison the well. ...
8. **Manage** your self-talk.

More items... • Nov 21, 2013

9 Ways To Deal With Difficult Employees - Forbes

https://www.forbes.com/sites/erikaandersen/.../9-ways-to-deal-with-difficult-employees/

This catch-all advice is rarely effective, often useless, and, sometimes, counterproductive.
Here are just a few reasons why it’s wrong:

1. **Listen**: listening to suck-up players sub-communicates that want to get closer. You need to send the opposite message
2. **Feedback**: giving feedback to rebels and vulnerable narcissists will only make them hate you more
3. **Walk through the company process**: vindictive and predatory employees will only take it to mean they must get ready for war. Much better to pretend all is good until you fire them out of the blue

Big publications are also forced to produce plain vanilla content that fits our zeitgeist of political correctness.
And that’s not going to cut it when you need effective, real-life advice.

We teach how to read people, spot red flags, and avoid toxic employees in **Power University**

Our Founder's Approach to TPM's Mission-Based Business

Lucio Buffalmano · 18 June 2019 · Archived copy · Original

My goal is to contribute to human progress by empowering men with the psychological tools, strategies, and mindsets to lead with strength and honor.

Some people advance humanity by building rockets or engineering biological breakthroughs.
Some others keep society running, also necessary.
My contribution is different: I focus on **the progress of human capital**.

If future generations are to build societies across planets and beyond, we need men of both skills and character—men who can lead, cooperate, and protect. I want to help shape those men.

And since we only get one life (likely), I choose to pursue this mission in a way that aligns with what I like doing, and who I am: independent, research-driven, and grounded in real-world practice.

TPM seeks to contribute to human civilization and progress by empowering the human capital itself

Contents

- Mission-Based Business
- Values-Based Business
  - Sales & Marketing

Mission-Based Business

My mission is to make Power University the ultimate tool to help good men evolve into **successful, capable, and honorable men**. When more good men rise, society benefits with:

- **More win-win leaders** enlarge the pie for all
- **Increased cooperation across individuals and societies**: crucial for when humanity will live on different

planets
- **Faster progress** through empowered human capital
- **Protect downside risks of dark triad leaders**, since empowered men are less likely to fall for dark triad leaders, populists, and ingroup/outgroup manipulations

Values-Based Business

While the mission is TPM's goal and the impact we want to have, our values are how we pursue that mission.

Since TPM's is largely centered around Lucio, the values are a mix of business values, and Lucio's own values and priorities.

#1. The Business Serves The Mission

TPM is based on both the overlap between what I love doing, what I'm good at, and what serves a great mission.

The **mission is the guiding star for business decisions**, above concerns for marketing and revenue maximization.

#2. We Want The *Right* Customers, Rather Than As Many Customers aS Possible

A values-based business wants individuals with similar values and who can help activate the mission.

In TPM case, that means we don't want overly selfish men, bullies, or freeloaders.

Protecting Against Freeloaders

TPM products are structured to make it harder for freeloaders to get the full value.

Power University drips over time, to prevent money-back guarantee abuses.
There are also links to forum sections that only logged-in alumni can access. And of course the most personalized advice is with coaching.

Customers Are Kindred Souls

When you speak from your values, many buyers share those same values.

Our customers also enable our mission, and keep us working on our mission.
I always felt a strong *obligation* to provide great value for them. My duty is to give them the best tools possible to win in life.

This is why, contrary to many businesses, I often default to prioritizing existing customers over getting as many new ones as possible.

#3. Achieve Your Dream Life, Then Deprioritize Money

My philosophy towards money is that any extra income above a "good life threshold" adds little value.

"Good life" is relative, so you must define yours.

For me personally, a good life is: the freedom to structure my day as I please, to do and say as I please, wake up whenever I wake up, travel whenever I want to travel, live wherever I want to live, get accommodation in good parts of town, and sit down at a restaurant without having to run budget calculations.

From a business perspective, it means **the ability to focus on product development instead of marketing**.

Keep Greed In Check

Greed is enslaving.

There is nothing wrong in wanting money -money is power and *enables* your intellectual freedom-.
But it must be balanced. If money becomes the #1 priority, then you lose intellectual freedom.

This is a given, because speaking the truth will eventually cost something.

Take this website and the red pill, for example.
This blog is one of just a handful of blogs to be officially archived in the "TheRedArchive.com":

Since the red pill was so popular among men, it would pay off well if I winked at it.
It does *not* pay off instead to criticize "*The Rational Male*", or of The Red Pill.
But I gladly pay that price.

#4. Prioritize Product Development Over Sales & Marketing

Once you reach the "living your way threshold", mission and time become more important than money.
So you optimize less on financial income and more on time-saving.

As of 2025, TPM has never run any ads, and never hired anyone to optimize our marketing and sales.

For years, the priority has been more research, better content, and better Power University.

#5. Freedom In Life, Work, & Relationships

My philosophy towards freedom allowed me to get into entrepreneurship without many fears. I'd rather die living my way than living restrained in a golden cage of safety and luxury.

#6. Intellectual Freedom Underpins TPM

Intellectual freedom is foundational to any truth-based organization.
It can't be otherwise.

Freedom includes the freedom to speak your truth, even if it may offend someone.
I strongly disagree with the saying 'if you don't have any nice things to say, don't say it'.

Instead, that's the better proverb for me:

> The only thing necessary for the triumph of nonsense, lies, and intellectual garbage, is for critical thinkers to say nothing

#7. Keep Costs Low: It Protects Your Freedom

I don't do risky investments, don't lend money, and keep expenses low.

Savings are a reservoir of power, and you don't give your power away.
Savings also protect my freedom, and TPM's intellectual freedom.

#8. Accept There Will Be Haters

Some of our values, coupled with speaking our truth, lead to someone disliking us.

For example, I believe that selling products that are not based on science or proven results is immoral.
So some of our reviews are highly critical.

That has cost us some friendships and several opportunities.
People don't like to link to, mention, or invite as guests people who can be highly critical.

Sales & Marketing

A values-based entrepreneur's time is sacred.

Customer care and sales must be done efficiently, or it takes time away from his focus.

Note: this section is from early-days TPM, it's different now

#1. Sell to Many, Avoid 1:1 Sales

Your time is the most important resource in the world.

So since early on I structured the business to avoid in-person and 1:1 sales.

I took this notion to an extreme.
Some early emails I got would be *so* easy to answer, and some of them are already set up to make the sale.
For example:

- I love your work. How long will access to Power University last?
- I'm thinking of buying; will the access to the private forum last forever?

These questions only ask for a little nudge before purchasing.
And I *still* didn't reply.

Non-replying saves time, of course.
But replying would also set a bad dynamic.

Replying to personal emails sets the expectation that you're available for private questions, and sets the expectation for *future* replies as well.

1:1 Sales Low Power

While I avoided 1:1 from early on, I did reply the very first few emails that felt like such a novelty.

From a power dynamics point of view, the more questions you reply, the more it cements the frame of them choosing, and you needing their purchase.

#2. Only Serve Capable Prospects

Luckily, TPM customers are smart people, so it's rare that people ask silly questions.

When it happens though, it's a signal that it may not be a good fit for us.

#3. Avoid the Trap of High-Effort Requests: They're Rarely Good Buyers

High initial effort = high effort to maintain.

In my value system, **approaching others while expecting them to do most of the work is immoral**.

Some cues of high effort buyers:

- Many questions
- Questions already answered in product descriptions
- Basic questions

Here is a very general rule of thumb:

> **The more questions they ask upfront, the more likely it is they will either complain later, or find a way to take up much more of your time**

Plus, it can also be a Machiavellian power move.
Some prospects asks questions just to make it easier for them to complain later.

The trick here is partially a manipulative negotiation technique against you, and partially, self-manipulation.

When they complain later, you feel guilty because you made them buy and now they're not happy (guilt-tripping).
And for them, it's easier to complain because, "hey, they had warned you that softness was important for them".

Even the ones that are not out to defraud you are usually "difficult customers".
If you can choose, it's better to get easy and good customers.

#4. No Asshole Rule

TPM helps men stand up to bullies and assholes.

We don't want to help the bullies, so we don't want them in our products.

7 Types of Freeloaders & How to Beat Them (For Entrepreneurs)

Lucio Buffalmano · 20 June 2019 · Archived copy · Original

If you are an entrepreneur, you know who freeloaders are.

They are the "potential customers" who expect discounts, exceptions to the rules, and, of course, who seek to get your services for free, without giving anything back.

This article will show you who the freeloaders are and how to deal with them.

Contents

- The Types of Freeloaders
- How to Deal With Freeloaders
- Why We Freeloader-Proof TPM
- SUMMARY

The Types of Freeloaders

Here are the types of freeloaders, categorized based partly on psychology and partly simply on humor:

#1. The Entitled Freeloader

If he has a question he immediately goes on the "contact" form because, of course, he is important, and if he has a question he needs a reply.

Once on the contact page, he immediately thinks that my request to avoid personal questions via emails does not apply to him -of course, he's entitled to priority treatment!-.

And to make sure I reply quickly, he uses smart copy to compel me to read:

Notice the highly descriptive subjects, just to show respect for my time
And of course, like every self-respecting freeloader, he keeps his issues for months rather than, God forbid, spend some money on a personal consultation.

Or who knows, maybe he's trying different subject lines copy on me to study which one works.
In that case, respect to you my freeloading friend :).

Advice for the entrepreneurs:
don't open those emails, they are freeloaders' clickbait.
If you do, skim through them and *never* reply.

#2. The "Go Get Another Job So I Can Get Your Stuff For Free" Freeloader

This freeloader is a thing of beauty.

He realizes that you might need to sell some stuff, but the rules should not apply to what he wants to consume -makes a lot of sense, no?-.

Advice for the freeloader:
Change mentality.
That "stop trying to monetize your work attitude" makes you come across as a selfish freeloader who'd rather see the content producer starve than provide even the smallest support through a "like".

Advice for the entrepreneur:
Don't reply, and God forbid get dragged into defending your right to ask for a fair exchange of value.

#3. Social Warrior Freeloader

You've got to love these ones.

Using social power moves on ThePowerMoves :).

Their angle is to take the moral high ground that it's about "learning and sharing", which is good, and "asking for money", which is bad.

For example, they complain to me about the 5 articles limit because "people need to learn".

That is, of course, a highly manipulative, self-righteous attitude that pretends to take the side "of the people" to make you look like a money-grabbing grinch -instead of someone who, just like anyone else, needs an income to live-.

It's also the same technique that manipulative politicians use to justify their profit-driven wars.
And the same technique that unfair debaters and moral police use when they deploy moral justice attacks.

Come to think of it, I might copy that strategy:

> **Me to the bank**: I need to live somewhere, stop with this mortgage sh*t every month!

Then you can get on a roll and knock down all your payment obligations:

> **Me to SiteGround**: I need to host my website somewhere, stop running your charge FCS!

When you start, it becomes a way of life, and you can get anything with it!
You can even expand to your personal relationships:

> **Fathers from now on**: It's your baby, it wasn't me who grew him for 9 months, take care of him. And of yourself. And since you're there, take care of me as well

The issue with this freeloader is that instead of facing and fixing his own issues -a lack or inability to produce an income- he pushes the blame onto others -i.e…: you, by not making it free, are the source of my problems-.

Advice for the freeloader:
1. quit using shame as a tool for power and compliance. It really makes you come across as super-unlikable.
2. Understand that capitalism, albeit far from perfect, is also a good system to enable our lives of freedom and choice.
3. Everyone needs an income, when you take that approach " making it free" it's the equivalent of saying: "I don't care if you cannot make a living".

Advice for the entrepreneurs:
Don't allow those messages to stay in public forums. They are nonsense, but people who still don't know much about the world can get easily swayed by these fake charismatic leaders (see Savonarola for a historical example).

#4. The "Rub It In" Freeloader

Freeloading is a way of *being*, not acting.

It becomes so normal for this type of freeloader, that you don't need to hide it anymore.

As a matter of fact, you can rub it into those idiots producing content and services:

Yeah, and "a lot" means that you've been evading the PayWall :)
LOL, I just had to smile at that one though, it was fun.

Basically, this guy flaunted all my requests in the contact form not to write with personal requests and then told me that he's been going around the PayWall.
He might have added in there he's been using an AdBlock as well, you know… Just to hit all the right buttons :).

But he did it all so naturally that I just had to smile at it.

Advice for freeloader:
to increase the chances of a reply, share a couple of articles or like the Facebook page and then tell me you did that. I'll immediately feel like you're a supporter.

Advice for the entrepreneur:
Don't get offended that people are trying to get your stuff without paying: that's how many people are.
Focus on the loopholes and weaknesses of your system instead. Or focus on getting more "proper customers".
Whichever you decide, don't waste time and mental cycles on people who give you nothing.

#4. The "Link To Me" Freeloader

I get a lot of these of course.

I might dig deeper later to find a couple of entertaining ones, but here's a typical bonehead request:

Advice for Freeloaders: What's In It For Me man, "What's In It For Me".
Especially if the person hasn't replied to you the first time around, don't go about stealing more of their time without fixing your delivery.
And if you don't have a WIIFM, then admit it.
It will make you come across as more sincere and less slimy.

Advice for Entrepreneurs:
They're doing that with hundreds of others, you don't want to link up with these people.
And asking without giving is immoral, never give to these people.

#5. The "Refund Me" Free Rider

Of course, the biggest example of freeloaders for digital entrepreneurs are people who abuse your refund guarantee.

Sometimes you can't be sure if someone is taking advantage of your refund system or if they sincerely couldn't take the full value out of your course.

But sometimes, you can be fairly sure they were trying to abuse the system.

Here is one example:

Basically: he asked for a refund as soon as he got into the course.
When I told him that the course hadn't yet fully unlocked, he "changed his mind".

Alright, right now it might still be an honest "not a good fit for me" customer.

But here is where it gets dodgy.
Right after the course was fully unlocked, he asked again for a refund.
Like all those weeks weren't enough to decide the course was good for you? You had to wait until everything was available for you to enjoy and download.

It looks like he was enjoying it if he waited until everything unlocked and he still tried his luck outside of the 30-day refund window.

A bit sad considering this also was a previous buyer of one of my ebooks.

How do you deal with these people?
If you want to run a value-based business where your time only goes to worthy individuals, then these people are not worth your reply.

I have to add here that, thank goodness, they are *very* rare.

Advice for the freeloader:
Buy if you can afford to buy or don't buy if you can't afford to buy. Quit being a bottom-feeding scammer.

Advice for the entrepreneur:
Don't refund people who are trying to scam you.
As a matter of fact, don't even reply.
But do record the events in case they try to harm you with negative feedback.

The Complaining Customer

Then, of course, there is the customer who "complains" to get something -a discount, a freebie, or, if they hit the jackpot of their lifetime, a full refund!-.

This was the second email he had sent, one to my business email and the other to the Paypal account -you gotta love people who double or triple message you-:

But I appreciate he stopped the game early and got around to proper behavior
Advice for the freeloader:
Most people know this game and it makes you look bad. Avoid.

Advice for the entrepreneur:

Same as above, giving in to scammers means contributing to a worse world. Don't be that type of entrepreneur.

#6. The "Ask Without Giving" Freeloader

This is another typical one.

It consists of asking without even considering to give back and, sometimes, without even being willing to give back.

Look at this example:

Still, I am happy to help someone out.

So I tell him "alright mate, how about this deal: you share on your FB (or whatever social media you use) a couple of the articles you like most, and I will give you access".

In my mind it was a no-brainer, the easiest way for him to say "yes" and even save face.
That way he wasn't scrounging around, but he was entering a fair exchange.

Win-win.

Instead:

Instead, here fuses the offer.

Fine, maybe he doesn't want to share his social media. I understand.

But at that point, it was up to him to either:

1. Come up with an alternative (i.e.: "I'll tell a friend of mine)
2. Show me he understands he's in debt and ask for a favor (i.e.: sorry I can't chip in right now, I'm asking just as a favor man)
3. Show me the understanding he's in debt Stop pretending this is a fair exchange and refer the decision to me (i.e.: "sorry I can't give anything back mate, you'd just do it for a favor and I'd be very grateful. Up to you")

And it wouldn't have hurt if he had added "I know it's not much, I'm just going through a rough spot".
That would have given him more credibility and "saved my face", just in case the receiver could feel he's overcharging.

Any of the above, I would have happily helped me.
And I would have thought

> Alright, I can't be sure he can't afford $9, but if he spent so much time asking for it, maybe it's true.
> Plus he gets it and he's being polite, and I appreciate that.

Instead, he refuses my proposal, keeps pretending this is a fair exchange and his reason for being a fair exchange is "because it interests me a lot".

Advice for the freeloader:
If you can't exchange, admit it and ask for a favor.
The reason is "because *your* content is so awesome and I'm going through a rough patch so if you feel like doing me a favor", and not "because it interests me".

How to Deal With Freeloaders

There are two ways you can deal with freeloaders:

1. Let them have it
2. Fight them

Most businesses today prefer letting the freeloaders win to lower the entry barriers to their business.
It's effective because that way you also get more legit customers on board and, after all, freeloaders are a minority.

However, that's not the path I decided for myself.
Since I run a values-based business, I choose to uphold my values to monetization as well.

My products are designed to be freeloaders-proof.
Here are a few ways to do it:

1. Drip feed your course with the last part dripping after the end of the refund period
2. Make sure that paying customers always get additional value and perks

Freeloaders & Free Riders: The Science

Freeloaders for online entrepreneurs is an instance of a bigger issue that in the social sciences is called “free-rider problem”.

In a nutshell, the free-rider problem refers to people who take out from a system without contributing anything to it.

It’s an interesting social phenomenon and it’s also highly relevant for this website.
However, this post only deals with the “free-riding problem” from a *practical* point of view.

As a matter of fact, from now on I will also use the more informal and pejorative form for the phenomenon, such as: “freeloaders”.

As we go through the example, you can also learn more about emotional intelligence and social skills.

Why We Freeloader-Proof TPM

Freeloaders are more likely to use this website for all the wrong reasons.

And they’re more likely to be takers, undermining our mission of contribution to humanity.

SUMMARY

- Free-riding can be necessary when you’re poor, can’t contribute, or building your way up
- When writing to busy people asking for something, don’t forget that you are asking. That puts you in debt and you need to put a WIIFM there
- Avoid approaching content producers with the attitude they need to answer you personally or they need to give you stuff for free: it makes you come across like a dic*head

Don’t Think of An Elephant: Summary & Review

Lucio Buffalmano · 27 June 2019 · Archived copy · Original

Don’t Think of An Elephant (2004) analyzes how political framing can be used to sway and manipulate public opinion, determine voting patterns, and even change people’s political orientation.
George Lakoff, the author, says that conservatives are winning the framing war in American politics.

About the Author

George Lakoff is a cognitive scientist and linguist, and former Professor of Cognitive Science and Linguistics at the University of California at Berkeley.
He is also active on his own blog, and does not hide that he is a fervent Democrat and political activist.

1. We See The World Through Frames

Lakoff says that frames are “mental structures that shape the way we see the world”.

Frames sit deep in our mind, but can be activated unconsciously by catch-phrases, references and simple words.

Frame Activation

When a frame is already in place, it can be activated through words. Such as, when you hear a certain word, a frame connected to that word in your brain is activated.

This is important because even when you negate a frame, that frame still gets activated.
That means that when you argue against an opponent using their language and words, you activate their frames.

Thus, **when you criticize your opponent with their words, you are reinforcing their messages**.

Moral of the story: you must develop your own frames and say what you want to say with your own words.

2. Frames Can Change Personalities

If a moderate person who is partly conservative hears conservative arguments and messages over and over again, he will grow more conservative-leaning synapses.

And, over time, he will also become more conservative.

3. Frames Need to Be In People's Minds Before You Can Activate Them

It is possible to activate frames by words, BUT a frame must pre-exist for you to be able to do that.

That means that framing isn't simply coming up with fancy names.

To activate a frame, there should be a frame first.

Sounds like a chicken and egg thing, right?
So the question becomes:

How do you create a frame that you can later active with a simple keyword?

Well, one way of creating a frame is by repeating a message over and over until it becomes ingrained in our brains.

As George Lakoff says:

> Reframing is more a matter of accessing what we already believe unconsciously, making it conscious, and repeating it till it enters normal public discourse.
> It doesn't happen overnight.

Why?

Because long-term concepts are instantiated in our brain and do not change overnight or by simply being told "facts".

4. Facts Only Matter if Morally Framed

Facts do matter, but only if framed in terms of their moral importance.

This is because if the facts don't fit the moral frames you have in your brain, then you will reject them (challenge them, ignore them or belittle them).

For facts to make sense, they need to fit with the synapses already connected in our brains.

Catchy Words Won't Go Far Without Frames

When there is no frame, you can't communicate effectively with a couple of catchy words.

So for example, the Republicans can activate frames with "tax-relief", because they worked for years on establishing the underlying frames that taxes are a burden, and cutting taxes is means freedom and personal empowerment.

But if you were to come up with a new catchy expression such as "altruistic-taxation" to express the positive aspects of taxation, you wouldn't go far because there are no frames linked to the altruistic aspects of redistributing wealth.

The lack of an underlying frame is called "hypocognition".

As Lakoff says:

> Slogans can't overcome hypocognition. Only sustained public discussion has a chance.

5. Liberals & Conservatives Have Two Different Moral Systems

Lakoff says there are two different moral systems in politics, each underpinning Democratic or Conservative parties.

Conservative moral system

The conservative moral system is based on the strict father who needs to impose discipline and order on the children -and on the world around

- See evil and good as separated
- The strict father who has to make sure that “good” wins
- Rich people obey the strict father rules and deserve to be rich
- Poor people don’t obey the rules, are amoral and deserve to be poor
- Never depending on others
- Taxes and redistribution are wrong because they give services to the amoral poor people

> Incidentally, charity for the “deserving” few costs a lot less than taxes to provide resources for the benefit of all.
>
> *George Lakoff*

Liberal moral system

The liberal moral system is based on a nurturing parent.

- Children are born good and can be made even better
- Both parents are seen as equal as sharing in the task of child-rearing
- Empathy for others
- People are also responsible for others and for the community

Systems’ Overlap

Most people are not 100% in a system but operate different systems in different areas of their lives (“biconceptualism”).

The two systems can operate in the same person thanks to two mechanisms;

1. Inhibition (when one system is running the other is switched off)
2. Different neural bindings (the systems simply apply to different political issues)

It’s with these people that framing and wedge issues work best: because they are the ones that can more easily switch between liberal and conservative.

6. People Don’t Vote With Self-Interest in Mind

George Lakoff draws a parallel between behavioral economics, with the work of authors such as Tversky and Kanehmann, and people’s voting pattern.

Same as people don’t always make the most rational economic decisions, they also don’t vote for the party that best represents their interest.
Lakoff says that **people vote their identity**.

Lakoff implies that it can be easily proven by the Republicans’ ability to cut tax for the ultra-wealthy, which only burdened the poorer class.

My Note: A bit lacking here
However, the author doesn’t take into account that some people might vote Republicans *in spite* of the tax cuts for the wealthy.
For example, some people might prefer better border control *even though* that means tax cuts for the wealthy.

However, I do agree with Lakoff.

7. Frames Examples: Tax Relief & Permission Slip

These are two examples of framing I loved from "Don't Think of An Elephant!":

- **Tax Relief framing**

George W. Bush introduced the expression "tax relief".

It was a genius move to make the middle class and poor people feel like they were getting something out of it. "Relief" felt like it was a political move to unburden the people, to help them fly higher and be freer.

- **Permission slip**

Bush said America wasn't going to need any "permission slip" to "defend itself".

He was leveraging the strict father worldview of the conservative framing and framing the interaction between nations as if between people.
It's children who need a permission slip, and America was no child. America was the adult (also read "I'm OK You're OK" for more on the parent-child role).

To see a real-life example of conservative framing, see:

- Ben Shapiro tactics

8. Orwellian Language Is Manipulative Language

Orwellian language is the framing of a negative policy with its opposite.

For example, the conservative "Healthy Forests Initiative" is an Orwellian frame because it's about cutting trees.

Promoting the name "climate change" instead of "global warming" is also an Orwellian frame, in Lakoff's point of view (but I disagree there).

9. This Is The Ultimate Republican Manipulation

George Lakoff says that:

- Republicans want policies for the wealthy

BUT, the top 1% are, well, just 1%. So to enact thoes policies:

- Republicans they need the vote of the non-wealthy

To do so, they managed a great trick: to paint Democrats as elitists out of touch with reality ("limousine liberals", "liberal elite", "tax-and-spend") and the Conservatives as rational and populists (Reagan's cowboy image, George Bush's Bushisms, and realistic budget accounting).

In short:

The greatest Republican manipulation was to frame Democrats as elitists, and Conservatives as down-to-earth realists who represent the average Joes.

I think Lakoff makes a great point indeed.

Real-Life Applications

- **Don't use the word you want to avoid people thinking**

Don't write "don't hesitate to contact me", because the word "hesitate" will make people hesitant.
George Lakoff says that when Nixon said "I'm not a crook", everyone immediately thought he was a crook.

"I am not a crook", and everyone started thinking he might have been a crook.

- **Avoid negative forms**

If you find yourself using too many negative forms, it might be the case that you haven't developed a strong form of discourse that you can reference.

- **Stay away from set-ups**

I have written extensively here on people who showed up into shows that were designed to ridicule, shame them or generally make them look like idiots (see Julien on CNN, Tucker Carlson and Neil Strauss on The View).

So I couldn't agree more when Lakoff says to stay away from set-ups or, at least, to prepare well and always reframe (instead of simply replying to pre-frame questions).

Criticism

Albeit I fully enjoyed "Don't Think of An Elephant!", there is also something I am skeptical about.
Including:

1. Correlation Is Not Causation

Sometimes I felt like the author seems to over-connect political victories to frames.

I felt reading "Don't Think of An Elephant" that the author falls for the all-too-human bias of seeing patterns where there might just be randomness (also read "Fooled by Randomness").

2. Not Convinced On Republican Superiority

A central theme of "Don't Think of An Elephant" is that Republicans are winning the framing war.

And, it's implied, that the framing advantage they have allows them to do politically better than Democrats.

Lakoff says that it all started in the 1950s, when Republicans "hated each other".

But then they got together and studied how to frame issues and how to win the framing battle.

Since then, they spent much money on think-thanks, and from the 1960s they gained the upper hand against fragmented and clueless Democrats.

The theory sounds interesting, but I feel it might be uncorroborated in the numbers.
I checked on Wikipedia and since 1960 to 2021 there have been 6 Democratic presidents to 6 Republicans (and 8 terms VS 8).
And that tally includes 2 Republican presidents who won by a whisker (Bush and Donald Trump, with Trump actually losing the popular vote).

3. Disagree On "Making Science More Persuasive"

Lakoff discusses a scientific paper on climate change.

And he criticizes it for using "scientific weasel words".
The "scientific weasel words" would be:

> High degree of confidence, anomalies, consequence, likelihood, absence, and exceedingly small.

Instead, Lakoff wanted the scientific paper to make bolder statements to confirm that yes, climate change is real.

But science isn't about convincing people, it's about presenting finding and data!
I can't lie: in that paragraph, I lost some of my faith in Lakoff as a super-partes analyst of reality.

Little later, Lakoff shows the type of language he prefers:

- "We cannot merely adapt to it"
- "The costs are incalculable"
- "What we are facing is huge"
- "Each day, the amount of extra energy accumulating via the heating of the earth is the equivalent of 400,000 Hiroshima atomic bombs.
  Each day! "

Lakoff also misses the power dynamics of the scientific establishment: any using any of the above sentences would quickly lose status and credibility within scientific circles -and righteously so-.

4. Mirror-Neurons Need Updates

The author says that mirror neurons are the reason why we can feel what others are feeling.

And says that psychopaths can sense what others are feeling, not be affected by it, and then use it to manipulate them -which is sometimes true-.

But mirror neurons in humans have been difficult to find and study, let alone link them to psychopathologies as Lakoff does (also read "Replication Crisis" and "Pop-Psychology Myths").

5. Partisan (But Honest About It)

George Lakoff is a Democratic political activist, so don't expect a neutral author.

He is honest and forthcoming about it, and I respect that.

Still, sometimes I disagreed with some fundamental ways of looking at the world.
For example, Lakoff repeats that "the private depends on the public", and I don't fully agree.
Both the private and the public enable each other.
Not seeing the codependence, in my opinion, can lead to a distorted view of political analysis.

6. Possible Misunderstanding of Piketty's Work

The author bases much of his tirade on resources distribution on Piketty's work.

Nassim Taleb in "Skin In The Game" says that Piketty got it all wrong.

I don't know enough here to judge, but considering Taleb's background in math and statistics, I'd go with Taleb here.

That being said, I do actually agree with Lakoff when it comes to the general principle.

7. Overestimates Religion's Influence on Actual Social Mores

The author says that "religion like Catholicism and Islam promote population growth".

Albeit that's not fully wrong if you read what those religions *say*, it also flies in the face of what we know about sociology -and, as well, actual data-.

Catholic and rich countries are not making more children when they become rich and wealthy, thus showing that religion and natality are not tightly interlinked.
And a Catholic country like Italy is facing a huge natality crisis again proves that religion's power to influence people on whether or not to make children is very limited at best.

8. Some Unsubstantiated Statements

There are some statements that the author presents as truths but that are not referenced and that left me scratching my head.

For example:

> When the very rich get exponentially richer and everyone else exponentially loses access to wealth, there is an inevitable pressure for short-term profits

"Exponentially" is a mathematical property that does cannot apply to wealth distribution, since one cannot go below zero.
And based on what there is an "inevitable pressure" for short term profits?

9. Some Arguments Didn't Convince Me

The author wants to make a point that Republican's focus on security and securing the borders -and the world- is misplaced.

So he writes:

> Most security experts say that there is no sure way to keep terrorists out or to deny them the use of some weapon or other; a determined, well-financed terrorist organization can penetrate any security system

What's that supposed to mean, then?
That one should not invest in security systems?

That is a poor argument because security is not binary, either working 100% or failing 100%. It's the "in-between" that security covers, and eliminating 98% of the threats is much better than doing nothing.
Furthermore, good security also *discourages* criminals, so you get fewer attempts to begin with.

PROS

- **TOP analysis on framing**

One of the best analysis of framing I have ever read.
Also read "techniques to outframe anyone" and "basics of framing".

> 10 Frame Control Techniques to Out-Frame Anyone

- **Great analysis of moral systems**

Very interesting analysis of the different moral systems of Democrats and Republicans.

It's uncanny how Lakoff seems to well describe some conservative thought leaders who emerged after -it made me think of Jordan Peterson and his obstinacy on good and evil-.

- **Genius analysis of how Bush frame the Iraq war after 09.11**

Some great analysis on how the Bush administration framed the war in Iraq and how it managed to get everyone's approval for it.

The war benefitted big corporations but thanks to the tax cuts, the war was all financed by the poor and by the middle class.

Review

"Don't Think of An Elephant!" is a classic.

It's one of the best books I read, making into bot the "best persuasion books" and "best manipulation books" lists.

Keep in mind that it's very partisan and it presents some partisan generalizations and unsubstantiated statements. Luckily, the author does not hide and is very open about his political views, which I appreciate and respect a lot.

And his analysis on framing is *really* good, so I can say that George Lakoff won me over with the depth of his analysis.

This is a must-read for anyone interested in psychology, influence & persuasion as well as political manipulation.

The Rational Male Preventive Medicine: Summary & Review

Lucio Buffalmano · 28 June 2019 · Archived copy · Original

In *Preventive Medicine* (2015) author Rollo Tomassi analyzes male and female sexual market value and the games women play to manipulate men and maximize their dating and sexual returns.

Contents

- SUMMARY
- Preventive Medicine Quotes
- Criticism
- Real Life Applications
- CONS
- PROS
- REVIEW

SUMMARY

About The Author:
Rollo Tomassi is a popular figure in the manosphere.

He is the author of one of the most popular red pill books called, just like his blog, "The Rational Male".

Tomassi defines himself in this book as "a student of life just as much as you are" and, he adds, "as such, I understand the value of knowing that I know nothing".

It's a nice virtue signal, but doesn't seem to us it corresponds to reality.
See:

> Rollo Tomassi: Red Pill Guru, Or Misogynistic Bias?

#1. This Is Hypergamy In A Nutshell

Hypergamy is one of the most defining concepts of Rollo's theorizing.

And we can summarize it as follows:

> Hypergamy is the female drive to secure the best genes she can and, ideally but not necessarily from the same man, attract the most resources she can.

Rollo Tomassi says that ideally, she will get both great genes and abundant resources from the same man.
But that's unlikely… Particularly in these days.

My Note: Are today's men really poorer than in the past?
This is a recurring theme in the manosphere that today's men are not as "good" or "mannish" as in the past.
And albeit that's *potentially* true, I'm far from convinced about it -and there is no data to back that up, as far as I'm aware-.

Also read:

- **Why you must stop whining about female hypergamy**

#2. The Science of Alpha Fucks Beta Bucks

Rollo Tomassi mentions the Kinsey Institute study.

The study shows how facial preferences in women change depending on their menstruation period.

And, Rollo says, women want mannish man when they're ovulating and most likely to be impregnated and prefer more feminine men when they're least like to get pregnant.

Rollo Tomassi claims that's the basis, and proof of the "alpha fucks beta bucks" theory.

My Note: The study was unclear, actually
Albeit what Rollo says makes sense, the study he cites actually disproves his own theory.
This is what the study says:

> However, there was no significant difference in masculinity preference between women in the low- and high-conception probability groups

Read more in the "criticism" section.

#3. This How Women Behave Depending on Which Phase They're In

Rollo Tomassi categorizes women -and their dating behaviors and expectations- into different categories depending on which life's phase they are in:

- **15 years old**: into hot boys with good bodies, facial symmetry, right eyes color, and proper haircut.
  Between 15 and 25, even a man with a beta mindset can be successful if he has a good physique.
  Women between 18 and 20 are incapable to commit to anything.
- **The Break Phase**: late teen years, moving to college she is inclined to end the relationship and enjoy her options during her peak years
- **party years** (20-25 YO): enjoy peak SMP and start developing and appreciation for inner alpha qualities. She longs for an ideal of alpha man with long-term provider capabilities
- **Late party years**: during the last third of party years she starts feeling more pressure for a long term commitment
- **Epiphany Phase** (28-30 YO): she realizes it's hard to compete with younger women, she switches from offers coming to her to feeling like it's her who needs to secure a good man.
  She still hopes she can "convert" the bad alpha boys
- **Transitory phase** (29-31 YO): competition anxiety increases, she's now getting more interested into beta providers
- **Security phase** (31-34 YO): affluence, status and resources become the major attractor for women. It's more difficult to game them because they require commitment
- **Development phase** (7-9 years after commitment & children): After a few years she has consolidated her position with a provider, a woman doesn't need a provider anymore.
  Her SMV decreases while his holds steadier, so she tries to become more dominant to preserve the power balance (my note: I'm not sure this is accurate: women initiate most divorces in long term marriages)

My Note:
A lot of good points in these phases.
But, as well, some mistakes some generalizations.
Ages and mores also change a lot depending on the culture, and this applies to liberal and libertine cultures (ie.: as of today it's very western-centric).

#4. These Are Female Manipulation's Tools

I really enjoyed these pearls of wisdom.

For example:

- "**Men are incapable to commit**": it's only women who find it hard to find a man who say that in an effort to mend their egos
- "**What happened to all the nice men**": women say this one to the beta chumps to signal they're ready for commitment… If he plays the nice guy role
- "**Men need to men up**": 30 YO or older trying to shame men into getting serious, but actually masking her realization that she's now losing all her power to attract men
- "**Men are threatened by powerful women**": shaming men into giving up younger women and appreciate her other (less important) qualities

And more generally:

- **Men shaming**: this is what she does when she can't find a man who "forgives her" of her wild past or when he refuses to provide

Also read:

- Commitment games women play
- Games women play (a long list)
- Are men threatened by powerful women or just being rational?

> Mind Games Women Play

#5. Providers Are Culturally-Manipulated Men

I only partially agree but I loved this part.

Rollo Tomassi says that the "feminine imperative" (sic) and the cultural expectations for men to provide can become straight-jackets for men.

Rollo recommends you watch this clip from "Breaking Bad" to understand the point:

To understand how women do it, read a classic article on this website:

- **How women domesticate men** (with examples)
- **Providers VS Lovers**: the quality of the man is what makes the biggest difference
- **Should you date as a lover or as a provider?** This article will help you decide which strategy suits you best

> Female Domestication: How Women Control Men & Relationships

#6. The More Powerful She Is, The More Honest She Is About Hypergamy

This was a very deep observation.

Rollo Tomassi says that **women who can provide for themselves are freer to talk openly about their dual dating strategy** (ie.: love the alpha bad boy but pretend you prefer the provider who sticks around).

The example is Sheryl Salzberg, author of Lean-In.

Salzberg openly recommends women to date around the bad boys but only marry and settle with a man who wants an equal partnership and "is happy or, even better, wants to do his fair share of chores in the house".

LOL, Rollo Tomassi totally nailed it there.

However, women who cannot provide for themselves as much as Salzberg can, still need to play the game and pretend they actually prefer the "egalitarian man".

This is because **most women have to settle for a tradeoff between alpha men and providing men**.
And when the time comes to settle down, they have to pretend they prefer the providing men.

Preventive Medicine Quotes

On what women want:

> Women want men who other men want to be and other women want to fuck

On women's position on a man's life:

> Women should be the supplement to a man's life, not its focus

On women's manipulation effort to make men into providers (I paraphrase):

> Men need to man up is the battle cry of every single woman older than 30

This is how Rollo Tomassi defines game:

> A series of behavioral modifications to life skills based on psychological and sociological principles to facilitate intersexual relations between genders

Criticism

I thoroughly enjoyed "The Rational Male Preventive Medicine".

And I agree with much of the content.

But, same as for its predecessor "The Rational Male", I also found *much* to object to.

If you're a red-pill Rollo fan, arm yourself with an open mind before delving in.

Did you?

Great.
Then, for an overview of the red pill, see this video analysis:

OK, then let's start:

#1. The Data Is Misrepresented (To Fit The Narrative)

Rollo misquotes studies to fit his narrative.

For example, he quotes The New York Post saying:

> According to a recent study by iVillage, less than half of wedded women married the person who was the best sex of their lives (52 percent say that was an ex)

Rollo titles the chapter "nobody marries their best sex ever", which is obviously a complete mischaracterization since almost half do.

But, most of all, he misrepresents -or misunderstands- the data to fit his narrative.

In a nutshell, he implies that the research proves that women fuck the alphas when young but marry the betas later on when looking for a beta provider.

However, Rollo doesn't realize **the research proves the opposite of what Rollo Tomassi says.**

You only need a modicum of logic and math to understand it.

Survey data shows that women's average sex partner count, just to stay on the safer lower end, is 5 partners.
If women were to marry the best sex of their lives just by pure chance, that would be a 20% chance.

Instead, it's more than double!

And that is the opposite of Rollo's theory.

#2. There Are Several Unsubstantiated Claims

Says Rollo Tomassi:

> The most secure, monogamous attachment women make are with men they perceive to be one to two points above what she perceives to be her own sexual market value.

I actually agree with the gist of the concept.

But… Based on what does he assign "points", and on what scale?
The famous old PUA "0 to 10 HB scale"?

And then again:

> Arguments about chores and sex life are most common in couples where the woman makes the decisions. Female decision-making status is an even bigger predictor of relationship dissatisfaction than female breadwinner status.
> (…)
> Women despise being the leaders

Based on what does he say that?
Because my personal observations don't substantiate that at all. Relationships with female leadership tend to be more stable and last longer.

So I really would have liked to check for resources. Or at least for a deeper analysis as to the "why that's the case".

But nothing… Just Rollo's own ideas presented as truths.

Overall, the whole "Preventive Medicine" is basically a book built around unsubstantiated claims.

That's not necessarily wrong.
I often repeat that a good observer of social dynamics can be better than a good researcher, but it's something to keep in mind.

Pop Psychology

It's funny.

Rollo Tomassi pokes fun at what he refers to as "the pop psychology of the love languages".

But love languages are not pop-psychology and several studies have confirmed their existence. Even psychologists who are critical of their usefulness confirm their relevance.

It's "The Rational Male Preventive Medicine" that sounds like pop-psychology at times.

#3. Evolutionary Psychology Doesn't Add Up

Evolutionary psychology is the best tool to understand sexual dynamics.

But *not* when you make up stories that *sound* credible but that have no scientific backing.
That's just storytelling.
And that's OK… IF one clearly stated that they are personal conjectures.

That wasn't always the case in "Preventive Medicine".

Sometimes, I found evolutionary psychology to contradict some of Rollo's theory.
For example, the popular theory that beta males are always left holding the bag for the "alpha fucks men".
But if beta males were consistently so stupid to provide and stick around older and less fertile women -and many surely are!-, shouldn't these men have disappeared from the lineage?

Or, at the very least, shouldn't there be so few of them that the "alpha fucks" strategy stops working so well?

That doesn't seem to be the case.
Instead, it seems like beta men are creating lots of other beta men. So, in the end, it might be more correct to say "alpha fucks more and provides less", betas fucks a bit less, and provides more".

Also read:

> The Science of "Alpha Fucks Beta Bucks" (Facts VS Myths)

#4. Young Girls Pair Up With Alphas, Old Girls Pair Up With Betas Doesn't Add Up Mathematically

This one also doesn't add up.

The idea of the "alpha fucks, beta bucks" is that the alphas are sexy and cool and they only give their dick.
And the betas are boring, pedestalize women, act like their emotional tampons and support them financially.

Younger women, says Rollo, want the alpha.
Older women want the betas because they stick around.

There is quite some truth in that and that *is* the case for some women. But reality is not so black and white.
For all women to fuck alphas as youngsters and marry betas as oldsters, there should be twice the numbers of men.
Obviously, that's not the case.

That's becuase reality is more complex and variegated.

Some betas also do bang (a bit).

And some alphas also *do* get married and stick around (just look at Trump, Berlusconi, and many other tycoons. Even if they had women on the side, they still got married).

There are indeed two more important categories of alphas:

- Alpha providers
- Alpha fathers

Or watch here:

Overly Simplistic Split of Betas/Alphas

Splitting men in two categories is bound to be overly simplistic.

Just like Marx was wrong dividing society in a Manichean "owners VS employees", so you can't be right simplifying a complex reality to "alphas" and "betas".

Read "lovers VS provers VS friends" for these dynamics.

Alpha Fucks: A Tool For Posturing & Ego-Massaging

That mantra is often used in the manosphere as a tool for ego massaging.

People who read alpha fucks think of themselves as alphas.
And then they go around repeating the mantra as an attempt to social climb on some imagined (or sometimes real) "blue-pilled betas".

This is called "alpha male posturing".
And as Rollo said in this same "Preventive Medicine": rich people don't need to say they're rich.
And alpha men don't need to say they're alphas.

#5. The Ovulatory Shift Is Not The Scientific Basis of The "Alpha Fucks Theory" It's Drummed Up To Be

Tomassi presents the ovulatory shift as if it the corroboration of the "alpha fucks, beta bucks" theory.

Logically, it makes sense.

However, the ovulatory shift in humans is a *hypothesis*, and the evidence backing it remains quite, well "shifty".

Albeit it *sounds* very appealing, the actual results when it comes to humans are not as obvious -or as strong- as Rollo makes it sound.

Meta-analysis shows both supporting evidence and contrasting evidence.

I quote a good recent study providing a nice overview:

> While some studies that measured women's hormones to characterize current fertility reported women's preferences for masculine characters were stronger when conception is more likely[47], several recent studies have found no change in mate preferences among women at the peri-ovulatory phase for muscularity[48,49], facial masculinity[23,49,50], beards[23,51], vocal masculinity[52,53] and facial symmetry[49]. Thus, **the extent to which ovulatory cycle shifts are associated with women's mate preferences may have been overestimated** in past research due to imprecise methodologies and small sample sizes[54].
>
> *Marcinkowska et al., 2019*

I personally think the ovulatory shift is *probably* real.
And yet, the ovulatory shift not nearly as strong as Rollo Tomassi makes it sound in his "Rational Male trilogy".

Personal female preferences seem to stronger than cycles.

Overall, I find some of the "science" behind Rollo's theories to be evolutionary psychology conveniently bent to fit the narrative.

#6. The "Feminine Imperative" Cultural Inculcation Is (Vastly) Overblown

Rollo Tomassi is almost as obsessed with this as feminists are with the patriarchy.

He seems to be convinced that there is a feminine propaganda that crooks all men's natural instincts.

For example:

> This is a major frustration for beta young men predisposed to effeminate conditioning that convinces them they will be rewarded for loyalty, support and building relationship equity

"Effeminate" conditioning?

I get what Rollo is talking about, but it's not effeminate conditioning.

Loyalty and support are valid qualities to be exchanged in the sexual marketplace.
Maybe they're not the ones Rollo favors -and neither are they the ones I favor-, but they're still valid traits which do can help men to find mates, under certain circumstances.

At parity of genetics, a loyal and supportive man will most often beat an unsupportive and disloyal one for long-term mating.

It makes sense, no?

And I'm also missing what would be Rollo's alternative here.
Disloyalty, selfishness and *not* building relationship equity?

It sounds like a great recipe for a great relationship… Not.

#7. The Rational Male Has Sect-Like Undertones

There are elements of sect-dynamics in this philosophy.

The group that should stick together, the "manipulative enemy" to study and defend from and other men to recruit and turn to the red-pill credo.

Labeling is also part of that game.

Sects make their members feel "special".
And what's the easiest way to do it if not denigrating anyone else who doesn't buy into the sect?

Enter the terms "beta" for those who don't buy into your theories.
The "blue-pilled betas" are the idiots and the suckers who get played.

And reflection "us", the red-pilled people within the sect, we are the cool alphas.

I find that both childish and off-putting.
And I wished more for a thought leader.

Also see:

- **Dark psychology in group dynamics**: how group leaders want to strengthen the group to increase their power

> Manipulation: Techniques, Strategies, & Ethics

And I advise you to read this article so central both to this website, and to personal empowerment:

- **The Individualist's Manifesto**

#8. Made Up Conspiracy of "Feminine" Propaganda Used As Straw-Man

Rollo sees society as a big feminine indoctrination.

For example:

> The feminine imperative has learned to recognize and exploit this natural deference by including as an inevitable part of future men's early conditioning
> (…)
> The feminine imperative IS the priority.

What?

Again, I actually agree with the general principle that different interest groups try to manipulate others.
But it's rarely an organized effort, and it's even more rarely an organized effort which manages to dominate all other groups' interests.

Instead, Rollo Tomassi speaks as if there were a secret sect of "master of puppets" women who successfully manipulate the media and the culture to keep men subjugated.

That is hogwash.

Let me state this clearly:

The idea that there is some sort of secret propaganda governed by the "feminine imperative" that effectively "effeminizes" men and manipulates men to serve women is nonsense.

But that's exactly what reading Tomassi feels like.

It's all about "feminine imperative", "conditioning", "feminine influence pervading men" etc. etc.

The keyword in my sentence is "effectively".
Because sure women tend to embrace and talk up values that benefit men.

But *so do men*.

The truth is that society is far too complex and far too fragmented to yield so passively to any indoctrination or propaganda from a population's minority.

Sure, everyone will be trying to pitch what best suits their interest, but rarely any voice can be so strong as to drown out all other groups' interests (with the only exception maybe being the conservative propaganda, but even there we're not talking about indoctrination).

Furthermore, Rollo then keeps using this made-up conspiracy as a straw-man technique to finger-point at women and "blue-pilled" society at large.

#9. Culture Encourages Male Providing Because It's Good For The World (Not Just for Women)

It's true:

There is indeed a strong cultural strand influencing men to behave subserviently to women.
And I have even personally spent all of my life rejecting the cultural diktat of the provider's role.

But this is what Rollo doesn't get:

It's not (just) the "feminine imperative" that seeks to influence men into providers' roles.

When men provide instead of, say, fuck and abandon pregnant women, it's good for society.

And **it's because male providing is good for everyone that society embraces it**, *not* because it's part of the "feminine imperative" to trick men.

That's what Rollo never seems to get.

Sure, women benefit when men provide, forgive their partying past and stay loyal.
But so do the children, the neighbors, the communities, society as a whole and, more often than not, those men themselves.

Furthermore, we could make the case that a man providing for his family is embracing certain values that should respected, and not laughed at (even if we personally haven't chosen that lifestyle).

#10. Rollo Tomassi Mistakes Cultural "Feminine Imperative" With Simple Effects of Supply & Demand

Tomassi gets this all wrong.

He says that men pedestalize women because of the "female imperative" and the "cultural conditioning".

I don't see it that way.

Sure, some men may fall for the cultural strand of the feminine worldview. And I even agree that, today, the feminine view is the most powerful.

But most powerful of all **it's the supply and demand of the dating marketplace that influences male behavior, *not* the "feminine imperative".**

Because most men are happy to impregnate most women and women are more selective, the rule of thumb is that **women are the demand and men are the offer**.

And *that* is what makes women, naturally (and on average), the object of desire.
Not the "propaganda", "female imperative", "conditioning" or any other made-up conspiracy.

Furthermore, we can argue that for most men, with the little options they have, it's rational to provide for women.

For more or and supply and demand read:

- **Sexual market place**: an analysis of dating power dynamics
- How to date
- Date-onomics by Jon Berger
- Why successful women lose at dating

#11. Lots of Sweeping Generalizations That Make For Bad Analyses

Rollo's theories are not wrong *per se*.

But they become mostly wrong when he pretends they generalize to almost everyone.

For example:

> The girlfriend you expect to build a Disneyland life with will break up with you as her options expand and your restrict

I can't believe how many pre-suppositions that sentence include. And most of them are unlikely to be true.
Especially to be *all* true at the same time.

For example:

- It presupposes he has a Disneyland fantasy in mind
- It presupposes she has no Disneyland fantasy
- It presupposes she goes to college, but he doesn't
- It presupposes she wants to "shop around"
- It presupposes he does not want to shop around (really?)
- It presupposes her options expand, but his don't

Notice that each of them are possible and, in some situations, even likely to be true.
But that they're all true at the same time is not the most likely scenario.

Basically, what Rollo says is true… For a few cases.
But the moment he writes as if he were describing a typical situation, then **Rollo's otherwise great micro-analysis becomes a nonsense macro-theory**.

The whole "Rational Male Volume 2" is fraught with sweeping generalizations.
Most of them are great analyses of specific situations, but most of them turn into very poor systemic theories when Rollo over-generalizes.

#12. Let's Be Frank: There Are Misogynistic Understone All Through It

Same as for "Rational Male Volume 1".

In Rollo Tomassi's worldview, women are "hypergamy-driven", while men are idealistic.
For example:

> Hypergamy doesn't care for male idealistic expectations of love

Of course, Rollo Tomassi portrays himself as neutral and open-minded.
But it just doesn't come out well.
He says yes, "women can love deeply", but take a look at the caveat:

> Women can love deeply, but from an entirely opportunistic perspective

What's that supposed to mean?
Does it mean that men "love deeply" from a purely *altruistic* perspective?

Nonsense.

The way I see it, you can't fool me with your "men and women are better together" and then break bread and laugh at Andrew Tate's blatant gaslighting:

Watch this video for more.

#13. If A Few Men Are Gullible, It's Not Necessarily Women's Fault, Is It?

The feeling of "Preventive Medicine" is that of manipulative men who dupe men.

Yet my feeling was that the men Rollo describes are not "typical" men, but a minority of gullible men.

Is it women's fault if some men have Disneyland fantasies well into their maturity?
I don't think so.

Furthermore, Rollo confuses manipulation with self-manipulation.
It's not only women who might want to hide a wild sexual past: it's men who don't want to see that past.

Also read the "Madonna-whore dichotomy".

The Rational Male Is Male Feminist Equivalent

Have you noticed the parallels with feminism?

"Feminine imperative" is the equivalent of "patriarchy" and "hypergamy" is the feminist equivalent of "toxic masculinity".

My appeal to you, my dear reader, is to move beyond petty group-identification and to look instead at humanity, as well as genders, as subsets of the whole.
As Robert Greene says (I paraphrase) "the only sense of belonging worthy of that name is the belonging to the human race".

Look For Win-Win Instead

Bottom line:

You can be better and stronger looking for win-win relationships within that whole, rather than looking at reasons why you should be at war.

#14. I Don't See A Society of Men Conditioned To Prioritize Relationships
