Again another case of bad generalization.

Rollo says that men are conditioned to stick to relationships to the detriment of their professional achievements. Women, instead, are conditioned to put themselves first.

I don't know in which world Rollo lives, but in *this* world, it's women who, *on average*, put relationships first and men who, *on average*, prioritize work, success, and achievements.

And in liberal societies, men are *less* conditioned to pursue long term relationships and do whatever they like, not more.
Men have never been free to stay single as they are today.

Rollo's advice that men should prioritize work and not get distracted by women is also wrong, in my opinion.
Just look at the most successful men: many of them have long-term relationships and I've never seen any study linking bachelor-hood to male success.

If anything, it might be the opposite.

Indeed as Amir Levine explains in Attached, studies show that strong intimate relationships help men to be more confident in life and achieve more.

#15. It's Great Analysis, But 100% Biased & One-Sided

It's called "The Rational Male".

But if one wanted to spoof it, they might dub it "the biased male".

Rollo says he connects the dots.
But he only connects the dots from the biased perspective of what he wants to see.

What Rollo says is not necessarily wrong but it presents, at (the very) best, only half of reality.

There is not even a single mention of male's own games, manipulations, and efforts to influence culture.

And sure you don't believe men are innocent creatures who don't partake in the sexual arms' race, do you?

If you do, take this as a wake-up call and read around here a bit more.

#16. It's Divisive: It Pits Men Against Women

This is what I like least about Tomassi's work:

It's extremely divisive.

And, in that, it's only better than feminism because of its more realistic analysis.
But not for its effects.

Most of Rational Male's theories are deeply, inherently divisive. And it couldn't be otherwise because it only looks at half of the game.

We have already seen an example: women have an "opportunistic approach to love" and men have "an idealistic approach to love".

And albeit, again, there is a backdrop of truth there… It's just plain wrong to make it into a generalized rule.

Rollo Tomassi says quoting one of his readers:

> I know how hunger feels and I assume women feel the same way.
> However I have no idea how hypergamy feels like, I have never felt its pull

What a load of bullshit!

Hypergamy is nothing but the tendency to maximize one's own returns and men equally seek to maximize their returns (the good ones, at least).

It's simply expressed differently, in men.

Read more in:

- **Stop whining about hypergamy**

#17. Rollo's Theory Leads to Toxic Relationships Because He Misapplies & Misunderstands Game Theory

This is "Rollo Tomassi cardinal rule of sexual strategy":

> For one gender's sexual strategy to succeed the other gender must compromise or abandon their own.

Which is basically a deeply flawed misunderstanding of game theory applied to relationships (also read "game theory bargaining").

It is true that one player from each gender *can* gain more by short-changing the other.
For example, *purely from a utilitarian point of view*, a woman *might* get more if she can trick more than one man to finance her lifestyle and invest in her offspring.
And, similarly, a man *can* gain more by getting a woman pregnant and abandoning her.

This is because social relations are somewhat social exchanges and, thus, can be described in game theory terms.
And tricking others (defections) *can* yield outsized wins.

And at the core, that's what this Rational Male philosophy is about: a long-winded description of how defection strategies apply to dating.
The problem is that Rollo stops there!

Rollo Tomassi never moves beyond a "me VS you" paradigm.

Why does Rollo Tomassi sees it as a struggle?

Because **Rollo's philosophy sees women as enemies of men**.
And that's why, I stated and confirm here, Rollo Tomassi's philosophy is inherently misogynistic.

The problem with it?

First of all, morality.
When you have an enemy, all amoral ways of dealing with them become moral (see Zimbardo, 2008)
Rape is also a type of "defection strategy" that you'd use with an enemy.

But let's stick to facts here without any morality.

Second, and most important of all, **both genders can also gain if they support each other**.
Which is, guess what, the standard view of relationships that society aspires to -exactly what it should do-.

Now, knowing the theory of manipulation ("defection" in game's theory terms), is extremely important to understand reality and to protect oneself.
But listening to "red-pilled authors" pitching a defection strategy as the "real reality" that men should follow, that's not only nonsense, that's toxic nonsense.

The Truth of Sexual Arms' Race

In evolutionary psychology, the defection strategy has also been referred to as "sexual arms' race".
It's been well explored and discussed by Robert Wright, which I invite you to read (a good substitute for resentment-fuelled manosphere evolutionary psychology).

The truth of the sexual arms' race is that it *coexists* with the many -and likely stronger- incentives for cooperation.
And you can minimize the incentives to defection while enjoying an awesome and supportive relationship.

TL,DR: **Rollo Tomassi "red pill" is a potentially highly toxic misinterpretation of relationships**.
I warmly welcome readers to seek more information -at least if they're interested in win-win and supportive relationships.

#18. Not Good For Seducers Who Love Women

I'm glad I can say this:

I am a man.
And I have been mostly single because I enjoy adventures. And I *really* dislike feminism because it pitches women against men.
And I even think that this society is on a warpath against (white) men, *especially* with divorce law.

This gives me some credibility to criticize Rollo Tomassi's philosophy.

And Rollo Tomassi's philosophy is toxic for men who love women, *including men who like to sleep with lots of women*.

Because seducers who like women, *like* women, and they don't consider them as enemies!

Also read:

- **Psychological breakdown of womanizers**: the different types of womanizers, including those who love women
- **Types of seducers**: different seducers' styles with pros and cons

> 10 Types of Male Seducers: Pick Your Niche!

Real Life Applications

- **Don't cave to ultimatums**: women give ultimatums when they feel their control is slipping and they need to hurry. But they will lose respect for men who cave in (also read "how to handle breakup threats")
- **Don't be vulnerable**: vulnerability has become all the rage with Brene Brown, but Rollo says it's a hoax. You will not be more attractive "opening up" and "showing your weak and tender side" (I agree, read: vulnerability is NOT power)
- **Don't settle because you're afraid of dying alone**: the image of passing away around your family is a fairytale dream. If you work on yourself, male value does not go down like female does (Rollo says men peak around 36-38).
  Instead of fearing to be alone, fear misery in a passionless marriage.
- **Don't buy PUA programs**: Rollo doesn't believe in PUAs selling programs and "cures". The information is freely available and your reality is too specific to find answers in a single course / program

CONS

On top of the criticism:

- **Not really as open-minded as professed**

Rollo says at the beginning of "Preventive Medicine" that "he knows that he doesn't know" and he invites readers to form their opinions.

That's all nice and good… *In intent.*

But he doesn't seem always very open to being wrong -or to warrant dissenters the freedom to disagree-.

I find indeed that "The Rational Male" is at times aggressive and bellicose towards anyone who disagrees:

- **Sometimes It's Unclear**

It was difficult to follow when Tomassi was talking about which phase was which.
For example, he has two different names, "transitory" and "epiphany" for what seems to be the same stage.
The fact he keeps changing names one minute after the other makes it confusing.

It's a pity because the content he talks about is good and some insights are genius.

- **Simplistic nomenclature**

I can't help but find this "beta/alpha" "blue pill/red pill" dichotomies too simplistic and, sometimes, used in child-like fashion (such as: "you don't agree, so you're a blue-pill dipshit").

- **Very bad mindsets for relationships**

Rollo is convinced his books are helping men (he says “saving lives”).
But I’m slightly worried that for each “saved life” there is an adversarial, toxic relationship looming.

PROS

I have a long list of criticism for “The Rational Male Volume 2” as you can see.
But that’s not to say there isn’t a lot of great wisdom in here. As a matter of fact, there is *a lot* of great wisdom and deep analysis:

- The analysis on “social conventions” is genius and spot on
- Rollo’s analysis of the dynamics of shaming as an ego-protection is superb stuff
- Top notch analysis of female and society’s social shaming of men (for example: to provide and accept her wild past)
- Eye-opening analysis of the diverging interests of women and men, together with the cultural struggle that ensues (but keep in mind Rollo only focuses on one side of the equation)
- Super funny -and deep- analysis of “Lean-In” by Salzberg (with which I wholeheartedly agree)

REVIEW

Let’s start with a personal take on the author:

?♂Lucio’s Take On Rollo Tomassi

Lucio: On the positive side, Rollo Tomassi has a good feel for intersexual power dynamics, good intuition, and some great insights that some men need to hear.
On the negative side, that comes with covert bitterns, some poor and biased takes, and some low-value mindsets coupled with ineffective advice.
Overall, we’d recommend caution, skepticism, and potentially more unbiased sources.

And now back on the book:

“Preventive Medicine” is powerful medicine.

But it cuts both ways.
Including the downsides of many drugs.

It reminds me of how the heroine was marketed as a “cure” for cough.
“Preventive Medicine” is somewhat similar: it (effectively) “cures” the patient of Pollyannish views of dating and relationships while potentially infecting him with misogyny.

In short:

“Preventive Medicine Book 2” can open your eyes if you’re a beginner.
And it can harm your relationships and views on women if you’re advanced enough to have good win-win relationships.

Luckily, this review is here to help.

Denationalize.Me Review (Tax-Optimization for Digital Nomads)

Lucio Buffalmano · 29 June 2019 · Archived copy · Original

Denationalize.me, or Staatenlos.ch in German countries, is a website catering to digital nomads and travelers who want to maximize their taxes and reduce their bureaucratic burden.

Summary

About The Author:
Christoph Heuermann, born in Germany in 1990, is a digital nomad German spending most of his time traveling (he tells about his travels in his cool blog here).
He started first writing for the German market, and later expanded to an international audience with Tax-Free.Today (edit: later renamed 'denationalize.me')

Good Information For Digital Nomads is RARE

Are you a digital entrepreneur?

Or a solo-preneurs, or someone who's running or thinking about running an online business?

Then you must have tried looking for good information on the following topics:

- Tax optimization
- Reporting duties (how to avoid filing long bureaucratic statements!)
- Legal entities (pros and cons, where to incorporate)
- Legal protection (against rogue legal firms, copyright vampires and, recently, EU crackdown on the Internet)

And **you must know how hard it is to find good and reliable information on these all-important topics**.

Of course, everyone has an opinion on this stuff… But they're all based on limited personal experiences, friends' or just simply parroting stuff.
Basically, they're all based on… Nothing.

Enter Denationalize.me: The Go-To Place For Tax Optimization

Then I finally stumbled on Denationalize.me.

And I got gold-rush excited.
The same excitement I get when I know I hit on a new golden source.

The depth of information was mind-blowing.
And the philosophy resembled the one here at the power moves.

Denationalize.me's Philosophy

Denationalize.me is much more than "tax optimization".
It's a philosophical statement, a way of life.

The website tagline says a lot:

> Stop complaining and free yourself from the burden of the State

I can imagine some people will disagree -or even shudder- at the idea of the state as a burden to free oneself from.

But if you resist that initial temptation, you will see that there is much truth in Christoph's point of view.

Even if you still end up disagreeing, we still can respect his philosophy.

Not Just Taxes: A One-Stop-Shop For Global Citizens

Although the name focuses on taxes, Denationalize.me is there to help people become **citizens of the world, unshackled from any obligations**.

Among the topics it deals with:

- Protecting your savings and future pension
- Legal entities all over the world, advantages and disadvantages
- Opening bank accounts abroad
- Deregistering from your country of origin (and whether you should do it)
- Where to get a new residence
- Where to travel and where to live
- Setting up a business with bitcoin payments

And of course, **optimizing and minimizing taxes and *filing***, potentially to zero (legally!).
Yep, like Tim Ferris first said in "The 4-Hour Workweek", that freedom is not the exclusive realm of the ultra-rich anymore.
Now you can have it, too.

Denationalize.me Is About Freedom & Personal Empowerment

Ultimately, Denationalize.me is about personal empowerment.

It's about choosing where to live, where to pay taxes, who to support and how to lead and live your life.

And that type of philosophy always strikes a chord with ThePowerMoves.

I focus on social power and freedom from bullies and small office despots.
Christoph focuses on geographical freedom, business freedom and freedom from "reporting duties".

My Personal Experience

I devoured several of Christoph's articles in one sitting and I had to get more of him.

So I booked a consultation some weeks ago and, a few days, I got the confirmation papers for my business.
I chose an LLC thanks to Christoph's advice.

> Life is too short to collect save, file and report pieces of paper!

Review

I stumbled upon Tax-Fre.Today and immediately thought "this is one of the most useful and interesting work I have seen in this whole year".

Little later, I booked a personal consultation with Christoph.

And, a little later, I incorporated The Power Moves following Christoph's recommendations.

If you're running a digital business, Denationalize.me is definitely something you want to look into.
Or you can simply save time and book a consultation straight away with Christoph. It's time well spent.

Book a consultation with Christoph

The Rational Male Positive Masculinity: Summary & Review

Lucio Buffalmano · 10 July 2019 · Archived copy · Original

Positive Masculinity (2017) is the third book in "*The Rational Male*" series and, building on the previous two volumes, expands Rollo Tomassi's red pill views to more relationship-oriented topics such as parenting, marriage, and child-rearing.

Contents

- SUMMARY
- Criticism
- CONS
- PROS
- REVIEW

SUMMARY

About the Author:
Rollo Tomassi is possibly the most popular "*Red Pill*" author at the time of writing.
The "*Red Pill*" is a mostly male community congregating around topics of masculinity, male rights, seduction, and general self-development.
This is the third installment of Rollo Tomassi "*The Rational Male*" trilogy, the previous two being "*The Rational Male*" and "*Preventive Medicine*".

Read TPM's take on Rollo Tomassi:

> Rollo Tomassi: Red Pill Guru, Or Misogynistic Bias?

#1. Don't Get Married

This is not one of Rollo Tomassi's iron rules, but for many men in the West, it should probably be.

He says:

> Under contemporary Western circumstances, there is no advantage for men in a state of marriage and 100% advantage for women

More than "advantages," I would probably talk about risks.
For an average man, getting divorced could mean being kicked out of his house and put in dire financial straits.

And if he's wealthy and the divorce is nasty, a man is often forced to pay huge alimony even though the wife might not have worked at all.

That is quite a sorry state of affairs for men who might want to get married.

#2. Assess Her Long-Term-Suitability (Without Being Afraid of Being Called Judgemental)

Not all women are the same.

And men should assess women based on their character, their traits, and their past.

The “feminine imperative” doesn’t like that, says Rollo Tomassi.
Our culture shames men who judge women as a defense mechanism to gain more power and control over them.

So a man who would judge her for her past will be labeled as “close-minded”, “conservative” or “judgemental”.

Also read:

- **Traits of low-quality women**
- **High-quality women traits**

My Note: I totally agree here.
These are games played at a social level, and I think they run deeper than “mem-women” interaction.
This is simply one example of the current craze for political correctness.

#3. Assess Her Prior Lovers

Rollo Tomassi says that the number of lovers a woman has is statistically proportional to her odds of cheating and getting divorced.

Women will cover up their sleeping around, saying it was a “journey of self-discovery” and that “she’s not that person anymore”.

Rollo Tomassi says:

> The single most important thing you can do is to vet her according to her sexual past

My Note: Prior lovers are important, but there is more
The number of previous lovers is important, but I’m not sure it is *the* most important indicator of the likelihood of cheating.
Also, the relationship is not as linear as Rollo Tomassi implies.
A woman with 0 lovers might be more tempted to “try out what it feels with someone else” than one who’s had, say 3.
Or a woman who’s never had an orgasm before is not safer with you but more likely to be “awakened” to sex and might want to try now with someone else again.

But, Rollo says, it’s not just about the quantity, but also the quality.

It’s important for a man to know if she’s been with alpha men before and how you stack up against men.
Women who’ve been with alpha men before will always long for an alpha (alpha widows).

Also read:

- **The science of finding a loyal partner**

#4. Masculinity Is Not a Mask You Wear

Rollo Tomassi says that our society is always ready to jump on a man who acts masculine.

One of the favorite ways is to accuse him of “wearing a mask”.

> Masculinity is a mask he wears, and not the real him. It’s something he puts on to hide his insecurities

I see what Rollo is talking about, and I have experienced it as well.
Same as Tomassi, I am not a big fan of accusations of “acting” when you’re just behaving like a man.

My Note: I agree, but masks are also real
Albeit I agree with Tomassi, I would also raise a flag here saying that many men *do* try too hard often and many also

do feel forced to act (I can see the sons of red-pill fathers feeling like they need to put this act just for being accepted by their fathers, for example).
Also, read "**Alpha male-posturing**" and "**The Mask of Masculinity**" for more on the topic.

#5. Seduction Keeps Going in Relationships

Rollo Tomassi says that it's a mistake men commit to end the seduction phase when the relationship starts.

The PUA skills, including for example the cocky funny, must keep on going in the relationship.

Tomassi discusses some techniques he himself used:

- Take-away (see one example in this article)
- Use the "right quantity" of alcohol for
- Breaking up is a demonstration of higher value (read how to deal with break-up threats)
- The dread game (ie.: stoke jealousy with triangulation)

My Note: Watch out for toxic relationships
I would only advise the dread game as a last-ditch effort for someone who's losing interest or for someone who's already in a toxic relationship and needs to defend himself/herself.
Otherwise, avoid it: why would you want to be a toxic partner in a toxic relationship?

And, finally, he recommends an old manosphere rule to control the relationship, such as:

- In any relationship, the person with the most power is the one who needs the other the least

I discuss the "need her less fallacy here".
It's not that it's not true: it certainly is.
But it presupposes a win-lose relationship and a combative attitude.
There are better and healthier ways of being the leader in a relationship.

Also read:

- **Relationship power dynamics**: the basics stages of power negotiation

#6. The Feminist Celebration of "First Woman To..." Are Ridiculous

Rollo talks about women celebrating another woman doing something for the first time as if it were a crushing blow to the "patriarchy' and as if they all won together.

He is right.

Unluckily if you're on social media it's hard to escape.

Men do it too.

A woman gets in a position of power of responsibility, and people find a reason to celebrate it.

And when there is no woman doing something for the first time, now we start getting the "second woman ever" or "third woman in 20 years" kind of "news".

I find it sectarian, divisive, and well… Purely idiotic.

Criticism

I'd like to preface this section of "Positive Masculinity" criticism saying that I focus more on the criticism in my reviews than on what I agree on.

There are already plenty of positive reviews for Rollo Tomassi's work, and many people who will visit this page already know how his work can help.

For my part, I believe I can provide more value by focusing on the criticism.

For a video overview of the red pill pitfalls, see here:

For this specific book, keep on reading:

#1. Children-Inculcation Can Be Harmful

"Positive Masculinity" discusses parenting and child-rearing.

It's good to instill good values in future generations, but what's "good" is debatable.

In my opinion, a good education should provide the framework and fundamentals and then let the children decide what to build -or if to build at all-.

Rollo Tomassi obviously doesn't it that way.

He says:

> A lot of guys with teenage sons want to hand them a copy of "The Rational Male" before they turn 18. Or maybe 15. Some even say 12.
> (…)
> I have to think that this is too late

I shuddered reading this.

This echoes my previous criticism in "*Preventive Medicine*" that the way Rollo interprets Red Pill is sectarian and cult-like.

I think that the sons and daughters of fathers who are going to grow up liberals will have a poor relationship with these types of red-pill fathers.

And I feel for the LGBT sons and daughters of red-pilled fathers.

Red-pilled fathers are going to emotionally impact their own LGBT sons and daughters of red-pilled fathers.

Can't you also see a huge emotional train-wreck looking with a gay son being inculcated into Rollo Tomassi's ilk of masculinity?

I do.

And I would instead advise men not to try to push anything on their children.

After all, you never teach preaching from an altar. **You always teach by example and by virtue of who you are**.

#2. Bad Masculinity Inculcation

I certainly don't consider myself a "feminized" person.

And some do consider me a red pill writer.

But the way Rollo recommends raising boys is not something I agree with and for sure it's something I would have hated growing up and strongly rebelled against.

This is his recipe for men:

- Include your sons in exclusive male spaces
- Only men are allowed in those spaces

- In a feminine world, it's important he feels valued in those "male-only spaces"
- He must learn to socialize like a man before he is feminized by society (ie.: meet with a purpose and communicate to reach that purpose instead of talking for talking's sake)
- Institute some kind of rite of passage for him from being a boy to being a man
- The right of passage must be uniquely male for which only boys are qualified for

This is typical "strict father morality" as seen in the manosphere.
It echoes Jack Donovan in "*The Way of Men*" and what Sebastian Junger writes in "Tribe".

And to me, they feel like kids in kindergarten. You know when boys say "we don't play with girls?".

Yeah, that's what it feels like to me.

I was that boy… In kindergarten.
But today… Today I prefer playing with girls :).

#3. Should We Complain Mothers Put Children First Instead of Their Husbands? I Don't Think So...

I felt Rollo Tomassi's complaining that mothers put children first felt like whining.

What should a man expect, that his wife keeps babying him instead?
Rollo Tomassi says that a man who complains is accused of acting like a child.

Well, yeah!
That does sound childish indeed.
As a matter of fact, Susan Forward, therapist and Ph.D., says that wanting to be put first is a salient trait of misogynists, some of whom haven't completely pulled away from their mother and now still seek to be mothered (Forward, 1986).

It's funny because Rollo does talk a lot about the "male burden of performance", but he does not seem to accept it in this area.

Sure, I can understand that it might be somewhat painful for a man to be "dethroned" when a baby enters the scene.
I totally can.
But at the same, I can't agree with a man who stays stuck in that mindset and complains about it.

A **man of the household who wants to be a leader needs to take the leader's burden**.

And it's a simple deal, really, **the leader's burden is to do what you must do without expecting a reward**.

If the reward comes, great.
If not, welcome to the leader's burden.

You know you're doing the right thing, and that should be all you need.

It's not true leadership if you expect someone to baby you, reward you, and take care of you.
The core of leadership is that *you* take care of others.

Sure, you might wish sometimes someone put *you* first.
But expecting that is truly the wrong mindset.

The Godfather said well:

https://youtu.be/0Oz6CN7Sjuo?t=50s

> Women and children can be careless, but not men

That could be translated into:

> Women and children can expect to be taken care of, but not men.
> Or at least, not men who aspire to be leaders' role models.

Also read:

- **To get women, you must lead**

#4. Confuses "Alphaness" With *Calculativeness*

Rollo Tomassi says:

> Top tier men don't raise other men's children, and she knows this

While it's true that men with fewer options may be more likely to accept women with previous children, I believe this has more to do with *calculativeness*.

For example, Brad Pitt, Tom Cruise, and Hugh Jackman all adopted.

#5. Weak Mindset on "Comparing" With Previous Lovers (and Losing!)

I do agree that the quantity and quality of her past lovers matter.

But worrying about 'past alphas' that may 'out-alpha you' is incredibly weak and defensive.
It's men with weaker egos and weaker self-esteem who need reassurance.
And, and at the extreme, it's the hallmark of abusive, controlling, and jealous-paranoid men.

Confident alpha men *are* alpha.
They don't run computational tables to feel 'safer'.

#6. The Orwellian Case of A Society Designed Against Men Is Overblown

"Positive Masculinity" paints a picture of an Orwellian society designed against men.

In my opinion, this is overblown and exaggerated and it permeates much of Tomassi's work.

For example in "Positive Masculinity' he writes:

> The Village will teach your boys to feel shame for being less perfect than girls (…) to the point that transitioning their gender to girls will be the norm (…) the village will…

The village?

Like in the previous books, Rollo Tomassi's analysis feels like a pre-planned brainwashing propaganda machine is running, designed to emasculate men.

Society is much more complex and fragmented, with countless forces moving in all kinds of directions.
Most societies, and especially modern societies, do not lend themselves well to the control of a single minority group.

I don't personally see around me that boys are shamed for "being less perfect than girls" and I don't think that any boy's bigger threat is "being transitioned to a girl".

Mostly though, **an empowered individual doesn't care about society because he is focused on himself, his life, his goal, and his individual relationships**.
Read "Empowered Individualism" for more:

> Empowered Individualism: Why the Individual Must Come First

#8. Misogynistic & "Women VS Men Frame"

We've already discussed the same in the previous two books "*The Rational Male*" and "*Preventive Medicine*".

And if anything, it might get worse here.

For example, he talks about his wife not being sympathetic to his pain:

> Due to species' beneficial hypergamy, women fundamentally lack the capacity to empathize with the male experience

And Rollo Tomassi really seems to believe that women are out to destroy male bonding, in some sort of pre-planned, concerted effort of a "divide and conquer" strategy.

Talking about women "inserting themselves in male spaces", including the locker room, he writes:

> (…) to restrict and control traditional male bonding while also fostering infighting amongst in-group and out-group men

Why would they do that, listening to Tomassi?

Because "men congregating together are a threat to the feminine imperative".

That's nonsense.

And criticizing the MGTOW movement, he says:

> This only serves to cede power to the feminine imperative

Obviously, **Rollo Tomassi sees the world as a power struggle between men and women**.

P.S.:
If it's true that you can judge people by their best friends, then Rollo here laughing at Tate's gaslighting tactics doesn't bode very well:

#9. Positive Masculinity is Conservative, Strict Father Morality to "Being a Man"

Rollo Tomassi says the red pill should remain apolitical. But it hardly is.
A good chunk of the manosphere/red pill movement is socially conservative.

You can see it quite clearly both in "Positive Masculinity" and in Tomassi's previous work.
Tomassi embraces what Lakoff defines as "strict father morality".

CONS

- **Grating Overly Emotional Narrating Voice**

I didn't like the narrating voice. It sounded too complain-ey and whiney.

- **Some studies not quoted**

Tomassi says that there are studies proving that women without a father or with a beta father grow up with daddy issues.
I would have liked to take a look at a study linking "betaness" to daddy issues, but none was provided.

PROS

This is what I also enjoyed about "Positive Masculinity":

- **The "TL;DR Phenomenon" Rant**

LOL, that was a good one.
Rollo says that whenever he makes a "TL, DR" note many readers attack his conclusions without even reading the actual text.

Welcome to the iPhone generation :).

- **The Sheryl Sandberg Spoofing**

That one was hilarious.

- **Some good examples of "beta husbands"**

Albeit somewhat extreme, and albeit I'm not a big fan of the expression "beta", there are great examples of, well… beta husbands.

For example, Rollo says:

> I have some friends who tell me how fortunate they are to be married to such understanding wives that she *allow* him to watch hockey on their guest bedroom TV

LOL, that was a good one.
And a great example of what to avoid (ie.: falling into a mindset that a partner should "allow" you to do what you like doing).

- **Rollo wearing black at a pink-sweater party**

Rollo Tomassi attended a "pink sweater" party showing up in a black T-shirt.
And, of course, the topic of his insecurity came up.

I remember similar reactions when I refused to take a picture with a huge pink bottle.

REVIEW

Of the whole "Rational Male trilogy", this was possibly the least relatable for more free-thinking readers.

There are still great ideas, but also somewhat more extremism, more "us VS them" mindset, and sectarian views of masculinity.

In my opinion, it's not benefiting Rollo Tomassi to stay stuck in the red pill only.
By having become one of the thought leaders of the movement, he might be tempted to "intellectually curl up" on his own theory and refuse to consider possible alternative views (groupthink).
And, under the pressure of his own followers, he might be nudged towards more and more extreme positions.

In sum: some good ideas and some great analysis of systemic (and unconscious) manipulation, including some acute observations on group dynamics.
But also very one-sided, misogynistic, and potentially toxic for male-female relationships, if taken literally.

Check:

The Origins of Virtue: Summary, Review, & Criticism

Lucio Buffalmano · 11 July 2019 · Archived copy · Original

The Origins of Virtue (1996) is a multi-disciplinary inquiry into why humans cooperate.
Why do we cooperate at a level that far exceeds that of any other animal, asks the author Ridley? His answer is that we do it because it's good for us.

Contents

- Overview
- Bullet Point Wisdom
- CONS
- Review

Overview

About the Author:
Matt Ridley is a science journalist who has been writing for The Economist, The Wall Street Journal, and The Times, always on scientific topics.
He is also the author of "*The Red Queen*", an evolutionary psychology text that I very much enjoyed.

The Selfish-Gene Is Altruistic

Matt Ridley discusses how the theory of the selfish gene, popularized by Dawkin's book "The Selfish Gene," might make some sad and depressed.

The selfish gene theory, in short, says that whatever we do, we are always selfishly motivated to replicate our own genes.

When we do something for others, we only do it because it benefits us.

But Ridley says, that's not depressing at all.

If something is altruistic, it's altruistic, whether or not it might have benefited or whether or not it was designed for mutual support.

Conflict Between Selfishness & Public Good: The Politicians

Ridley talks about the "darker" interpretation of Public choice theory.

Says Ridley

> They (the politicians) exploit induced altruism, they enforce cooperation and then defect.

They talk about the need for unity and togetherness and the importance of paying taxes… But then they actually take care of themselves and their interests first and foremost.

That might sound cynical, which Ridley admits himself, but he then adds:

> But then the opposing view, that bureaucrats are selfless servants of the public good is unduly naive

My point of view on this is that, of course, we don't need to go to the extreme of "all bad" or "all good".
But certainly, **we shouldn't underestimate the selfish drives of anyone invested in power and authority over**

others.

Also read:

- **Politicians' manipulation techniques**

Why Communism Doesn't Work

A society built on benevolence is riddled with nepotism because humans naturally favor their kins and friends.

Among strangers, the "invisible hand" of the market, which distributes selfish interests, is fair and works.

Then Ridley says that progress and harmony are possible without government, delivering the first salvo of anti-government political bias that characterizes "*The Origins of Virtue*".

Prisoners' Dilemmas Are All Around Us

Any situation where you are tempted to do something, but you know it would be a mistake if everyone did the same, is some sort of prisoner's dilemma.

We all pay the price for individualism and for what is, for the individual, a rational decision.

All fishermen would benefit if nobody fished at their maximum capacity. But every single fisherman would lose out if they didn't fish as much as possible because other fishermen would still deplete the common resource of available fish.

But Selfishness Is Not The Right Thing to Do...

For decades, scientists, and economists, first and foremost, derived the wrong lesson from the prisoner's dilemma. It turns out that selfishness is not the most rational thing to do… *As long as the game is repeated multiple times.*

Computer programs mimicking game theory situations and, more importantly, actual human interactions, showed that cooperation paid off (Axelrod, 1984).

Tit for that was the most successful program, and future programs will further refine it and shed more and more light on human behavior and cooperation as well.

This is the progression of the best computer simulation strategies as explained in "*The Origins of Virtue*":

- **Tit for tat**: cooperate first, then do whatever the other did the last time

For tit for that to win, there must be a stable and repetitive relationship. The more casual and opportunistic the encounter is, the more likely a defection (i.e.: cheating) strategy is to pay off.

There is a darker and more dangerous side to tit for that, which can be found in human relationships as well, sometimes: if a tit for tat meets another tit for tat, and by mistake one defects first, then a mutually assured war between the two starts.

This can happen in humans as well, as described in "combative relationships" and "vicious circle in relationships".

- **Generous tit for that**: forgives mistakes and, 1/3 of the time, overlooks a defection

This one breaks vicious cycles of defection while still remaining immune to exploitative strategies.

A strategy of "always collaborating" can thrive among a population of "tit for tat" and "generous tit for tat".

- **Pavlov strategy**: forgives like "generous" but does not automatically revert to cooperate and instead sticks to his last best strategy, whether it is defect or cooperate

The Pavlov strategy can exploit the simpleton strategy of "always cooperating.". It allows for a cooperating world

without allowing that world to descend into a too-trusting utopia where free-riders could easily invade and flourish.

As Sarah Constantin explains, Pavlov can beat Tit-For-Tat and generous Tit-for-Tat-with forgiveness in a wide variety of scenarios.

It's weaker against "always defect" strategies, though, because it keeps shifting back to cooperation and thus getting the sucker's payoff.

- **Firm-but-fair**: similar to Pavlov but continues to cooperate after having been a sucker in the previous round

Making the game asynchronous makes generosity even more rewarding. This makes a lot of sense in real life among humans: it pays to elicit cooperation by being nice (and that's why you don't usually greet people or negotiate partners with a scowl).

- **Discriminating altruism**: avoid playing with former defectors

It's immune to being invaded by selective defectors.
Contrary to tit-for-tat, it can re-invade an antisocial population.

Punishment Can Foster Cooperation

Any reciprocal strategy is inadequate in explaining cooperation in large groups because otherwise, free-riders would be rampant within it.

That's why Ridley makes the case that **a successful reciprocal strategy must also be highly intolerant of defectors** and defecting strategies.

The paradox, though, is that starting from a selfish environment, any strategy that is highly intolerant of rare defectors also makes it harder for cooperation to develop when cooperation is still rare.

That's when a strategy that punishes not only defectors but also those who fail to punish defectors can thrive (moralistic strategy).

Ostracism and Prevention of Defection

A more powerful solution for free riders in large groups is ostracism.

If people can recognize defectors in advance, they can simply avoid playing with them (discriminating altruism).

Discriminating altruists are immune to being invaded by selective defectors but can invade a population of defectors (if there is at least one more discriminating altruist).

This is likely what's happening with humans already.
An experiment by Robert Frank proved that people had better than random chances of guessing who would cooperate and who wouldn't with just half an hour of interactions.

> The prisoner's dilemma is only a dilemma if you have no idea whether you can trust each other.
> But most people have a fairly good idea

Reciprocity Requires Recognizing Players and Keeping Score

Reciprocity is uncommon among animals that are not kin.

Higher mammals, humans first and foremost, can be reciprocal because they are able to recognize players from past interactions and keep scores on who defected and who collaborated.

> Humans are uniquely good at reciprocal altruism

Why Do Humans Hunt Bigger Preys (Or Donate Money?)

Ridley asks why humans have been hunting bigger prey instead of smaller ones.

Why take the risk at all instead of going for smaller animals?

He says that it's because of the "social bonus" points that the big hunters garner. By having more meat to give away, he can give more meat to other females in the group in exchange for sex.

My Note:
Ridley here seems to commit a "correlation is not causation" mistake when he says the best hunters have more sex because they share more meat.
It might equally be the case that women are more attracted to the prowess of the hunters and not so much to the meat.
Or the best hunters might simply have higher status in the group. Or a mix of the three, of course (likely).

Big Game Hunting Introduced Humanity to Public Good

Ridley says that weapons allowed men to hunt bigger games together from afar.

That meant that nobody had to fear that others would hang back and let the most courageous (or stupid) take the risks.

Once the animal was killed, sharing also made a lot of sense because nobody could eat a whole big mammal by himself.

Weapons Allowed for Reciprocity, Too

Denying anyone who participated in the hunt was also impossible.

You don't want to deny a hungry man armed with a dart thrower.
Thus, weapons also allowed for reciprocity.

My Note:
This part also made me reflect, but I wasn't too convinced.
Denying a hungry man can also be dangerous if he's armed with his fists only.

However, I was convinced that weapons could make dominance a riskier business.

I paraphrase Ridley here:

> A leader of an armed population must lead more by persuasion than by coercion.

And this is a fundamental truth of ThePowerMoves: never count on power and authority to be kind to you.
Always make sure you can be independent of the authority and/or that you can strike back in case they get nasty.

> Checks and balances on power start with your own personal power.

Emotional Allow for Irrational Commitment & Cooperation

If everyone were rational, we would defect much more often than we do.

People would not start a joint venture company because they would be afraid the other would cheat them.

But we don't bring rationality to the table. We make irrational commitments driven by our emotions.

Love is also an emotion that underpins longer-lasting commitment. Sure, it might not last forever, but it lasts longer than just lust does.

Emotions prevent us from abandoning wounded mates and deserting spouses.
However, **negative emotions like revenge allow for group cooperation by making defections more costly**.

Indeed, people are much less generous when their identity is protected and when they know they can get away with whatever decision they make without any consequences.

Morality and what others think of us also keep our society in check.
We don't cut queues because we are worried about what others think of us. Other animals don't behave like that.

In short:

> Emotions are mental devices for guaranteeing commitment (and cooperation)

People who lose control over their emotions indeed lose their inhibitions and start displaying anti-social behavior.

A Case For Humans' Group Selection?

There is a raging debate among scientists split between those who believe that evolution might be shaped by group selection instead of gene selection.

Ridley repeatedly says that group selection does not overcome individualism in animals.

But then he says that humans might have become the exception *because of their increased ability to cooperate*.
I quote:

> **The virtuous are virtuous for no other reason that they can join forces with other who are virtuous**. And once cooperator segregate themselves from the rest of society, a new force of evolution can come into play: one that pits groups against each other rather than individuals.

This is a conclusion I am not too sold on, though.

Ridley says that, genetically, group selection doesn't work because losing groups are not annihilated and often join in the victorious group.
But the culture does prevail, leading to "cultural selection" (my note: "cultural selection" feels like a misnomer to me, I didn't agree with this part).

Strongest VS Smartest: Who Dominates?

In chimpanzees, it's not the strongest who dominates and becomes the alpha male, but usually, it's the one who's best at forging political alliances (and manipulating others).

> Power and sexual success can be achieved by coalitions of weaker individuals over stronger ones, a process taken to even stronger extremes in human beings

We Are Designed to Exploit The Group For Ourselves

Ridley says we are always and only in groups because it serves our interests.

We are not designed to sacrifice ourselves for the group but to exploit the group for ourselves.

My Note:
Yes, for some people.
And yet, many people have died for their country, or done very stupid things for a flag or for their "comrades". Or simply for a football team.
So I cannot agree fully here.

Plenty of humans do not use the group but are manipulated by it (or by its leaders, also read "corporate manipulations").

Bullet Point Wisdom

- Monogamous societies are often more cohesive and better at conquering rival territories
- The pursuit of self-interest is not mean, as Adam Smith is often misunderstood: the butcher is not motivated by benevolence, but it doesn't mean it's motivated by spite, either
- All societies divide labor between men and women and, even more so, between wives and husbands, including egalitarian societies. So it's not a question of "patriarchy"
- Always defect easily invades a population of "perennial collaborators"
- Sharing food lowers the variance availability, making every single member better off (risk reduction hypothesis)
- Pregnancy could be seen as a battle for resources between mother and infant (this is fascinating)
- After birth, kin relationships can be seen as a struggle for resources among kins
- Dolphins are as nasty as any other animal. They kidnap women and force themselves onto them in groups of two or three
- Similarly, the notion that underdeveloped tribes live in unison with nature while respecting nature is a myth: they do exploit nature and fall for our exact same "tragedy of commons"
- The interest of the individual always outweighs the interests of the group. When that's not the case, we are looking at kin and not strangers. If animals live in herds is because it's good for the individual

And I loved this quote the most, which has become a central theme of ThePowerMoves:

> Dawkins drew attention to the selfish-gene, not to justify it, but to alert us to it, so we can be aware of the need to overcome it.
> He urged us to the need of rebelling against the tyranny of the selfish Replicators

CONS

I loved "*The Origins of Virtue*" but on top of the political bias (more in the review section), I didn't agree with the following:

- **Evolutionary deterministic**

Ridley seems to consider all traits we possess as "good for ourselves".

But first of all, not all universals are necessary adaptations.

Second, there is much randomness and many adaptive traits can also become maladaptive as the environment has changed.

It's always possible to come up with some nice story to tell, but that's storytelling and not science (see the example below of people supposedly picking the best groups while that's obviously not always true)

- **Humans are very good at guessing which group their interests lie** (are they?)

Ridley says that as a "groupish" species, we congregate in groups that support our individual interests and that we are very good at picking the best groups to represent us.

I strongly disagree with that: we are not very good at picking the best groups.
We are very bad, actually.

Just look at idiotic football fans assaulting each other and going to prison for a game.
Or being depressed because the millionaires they support lost a match.

No, we're not that good at picking groups.

Also see:

https://thepowermoves.com/enlightened-individualism

- **Defection (and robbing banks) does not pay**

Ridley says that the real question is why don't more people defect, and by asking so he seems to imply that defections pay.

But I'm not so convinced.
Certainly not with the example he uses of "the occasional bank robber," supposedly proving defection pays.

The last statistics I read were from Baumeister, and he shows that nope, robbing banks doesn't pay because most bank robbers get caught.

Review

The Origins of Virtue is an excellent analysis of cooperation among animals and humans and how that cooperation intersects with the selfish gene theory of evolution.

Disappointed by Political Bias

I was a bit disappointed by the last couple of chapters, where a wonderful analysis devolved into politics and an anti-government tirade.

The negative reviews on Amazon are from people who disagreed with Ridley's political devolvement, not the rest of the books. And let me say these people are idiots for having missed the genius analysis in the rest of the book: I appreciated Ridley "ring-fenced" most of the politics to the last couple of chapters (except a couple of political zingers earlier).

I was also a bit disappointed to see that Ridley is a staunch supporter of Brexit.
Albeit, I prefer Britain to leave the EU ASAP with a very clear cut, I personally don't care that much.

But let's be frank: between us, I also secretly wished I would not like the author because of his anachronistic blue-blood royal title, his Ivy League education, and his banker background.
But he won me over simply by virtue of his work.

But It's Still A Gem

I loved "*The Origins of Virtue*" and I might make it one of the "Power Moves" recommended because some of its content goes at the core of this website's values.

So yes, I do recommend "*The Origins of Virtue*".

Power Moves: Summary & Review (Adam Grant)

Lucio Buffalmano · 12 July 2019 · Archived copy · Original

Power Moves (2019), recorded on the sidelines of the Davos World Economic Forum, is a reflection on power dynamics, the tactical-level power moves that signal status, and the larger implications of power in society.

Contents

- Summary
- Power Moves Criticism
- Review

Summary

About the Author:
Adam Grant is a psychologist and professor of organizational psychology at the Wharton School.
He is also the author of *Originals*, co-authored with Sheryl Sandberg, and *Give and Take*.

Power Moves is only available in audio format and is a mix of the author's own speculation and the opinions and ideas of the people he interviewed.

Power is Fragile

Adam Grant starts "*Power Moves*" making the case that "power has changed".

It used to be hierarchical, and it could last for a long time.

Today, it's much more fragile, much more distributed, and much harder to defend.

It's easier for start-ups to acquire power, but it's harder to hold onto it.

Today's power is the power of networks and ideas.
A Snapchat star and an Instagram celebrity have more reach than a corporate VP of communication.
And the startups keep disrupting old businesses.

My Note: Partially true
I don't fully agree here.
See the criticism.

Power Signals Itself

People always send out power cues about their power—or the power they believe they should have-.

Grant talks about how people stand and move in a room, who gives way to whom on the sidewalk, and who looks the most like the biggest alpha male.

If you are interested in learning and understanding the signs of power, definitely check out the course here or these articles:

- **How power talks**
- **How power looks**
- **Alpha male body language**

But also watch out for alpha-male posturing, which is a low-quality expression of dominance and social one-upping.

It's Not True That Power Corrupts...

Adam Grant says that it's not true that power corrupts.
It just gives you more latitude to influence more people. So it always depends on who is looking for that power.

> Power makes you more of what you already are

My Note: Only partially true
I don't fully agree here.
Power can corrupt, and we must be watchful that it doesn't corrupt those who are tasked with taking care of the public good -and we must be watchful that it doesn't corrupt *us*, too-.

... But Power Does Change People Around You

Power might not change you, but it does change how people act around you.

Generally, people become more manipulative around powerful people and seek to be liked more.

They hide their flaws and, consciously or unconsciously, try to mimic the powerful person's behavior and opinions.

This creates a problem for powerful individuals because they will have a harder time judging people's character.
This is important because **your power depends in large part on the people you surround yourself with**.

So you must find ways to reliably vet the people around you without counting only on your own analyses.

My Note: true, this is part of what being an "enlightened collaborator" is all about

For more on collaboration and manipulation, read:

> Manipulation: Techniques, Strategies, & Ethics

Givers VS Takers: Watch Out Who Gets The Power

Since different people seek power, we should be watchful of who gets it.

Some people tend to be takers: they are in it for themselves.
The givers tend to use their power to foster the common good instead.

And there are Machiavellian leaders who, Adam Grant says, perform more poorly than givers.
Machiavellian politicians, for example, were able to get fewer bills passed, and Machiavellian fund managers had lower returns.

How do you recognize if someone is a giver or a taker?

Ask them about their colleagues, and people will have a tendency to project their own personalities onto others.
So ask, for example, how common they think theft is within the company.

Also, read:

- **Machiavellianism: a guide**
- **10 Power moves of the Machiavellian politicians**

The Three Categories to Assess Powerful Men

You could assess how people relate to power along these lines:

- **Dominance / power**: they want to win and dominate others
- **Friendliness**: they seek to make people around them comfortable

- **Achievement**: getting things done is very effective in business but less so in government, as they tend to be hard drivers who walk all over people

Examples include Barack Obama and Donald Trump.
There is much analysis on this website on both, check them out if you want to know more.

Women in Power Face More Difficulties

Women have it harder when it comes to power.

Both men and women use a double standard when assessing dominance and drive, and both genders are much more critical of driven and powerful women.

Among the solutions, Adam Grant proposes:

- Negotiate by offering more options
- Ask leaders for advice to ingratiate them

Also, read:

- **Dating successfully as a successful career woman**
- **How to be a powerful woman: a scientific guide**
- **Strong VS submissive women in dating**

Employees Have More Power

Today's employees have more options and knowledge, which gives them more power against employers.

Grant interviews David Solomon from Goldman Sachs, who candidly admits that Goldman is hiring outside of the Ivy League because those people tend to stay longer in the company.

To me, the difference was all about entitlement.
Ivy League graduates thought they were entitled to Goldman Sachs and to any other top employer or opportunity.

Graduates from average colleges instead felt like they had made it in Goldman and were grateful for the opportunity (and unexpected financial windfall).

Emotional Intelligence is The Future

Artificial intelligence and robots will soon revolutionize the way we work and interact.

Many will become jobless in occupations such as construction, manual work, driving, and, later on, technical skills such as coding as well.

But a robot that can connect people, build relationships, negotiate agreements, or simply lead a meeting where emotions are running high is a long way off.

So the best bet for future employment is to increase your emotional intelligence.

Also, read:

- **How emotional intelligence makes you a better leader**
- **Emotional Intelligence by Daniel Goleman**
- **Emotional Intelligence 2.0**

> **The ultimate test of power is how you treat people who don't have power**

Power Moves Criticism

Since the book is so relevant to this website, I will go through some of the bits I disagree with:

The "be good to win" fallacy

Some passages reminded me of "naive self-help".

The "today is different" narrative is a poor analysis

One of the main concepts behind "*Power Moves*" is that today's power is different.

But that's such a typical narrative that I can't take it seriously anymore. It feels as if anyone who hasn't done a proper analysis just plops this old cliche that "today it's different than before".

As if "before" were a monolithic, homogenous construct that we can now compare to "today".

I think it was Taleb, who said that at any time in history, authors always said that "today is different".
And it was certainly more dangerous and "risky" to be a Roman emperor than a modern country president.

The example of power being more fragile, such as GM risking bankruptcy, was also quite meaningless: companies have been going bust since the dawn of business (before the Industrial Revolution).

Does technology make old powerless powerful? I think it can easily be made *more* powerful

In an effort to prove that "today things are different" and "power is more fragile," one of the interviewees mentions military technology.

The most disruptive military technologies, he says, have been:

- Suicide bombers
- Drones

- Cyber attacks

And then he says these technologies don't require many resources or a government.
Anyone can acquire the knowledge to acquire them.

Albeit there might be some truth, as a generalization, that's idiotic.

Where are the drones that people can easily acquire and build?
Drones are a hugely powerful tool for *technologically advanced governments*.

It's what allows technologically dominant countries to spy and wage war at smaller costs and without risking their own troop's lives.

And who carried out the most successful cyber-attacks?
It's mostly organized groups, often government-backed.

Furthermore, technology can be used by governments and powerful organizations to spy on people and keep track of them, which is already being done-.

Some superficial, very politically correct analysis

Ultimately, I found "*Power Moves*" to lack true depth.

Sure, it wasn't meant to be a long dissertation, but at least some mention of discordant voices wasn't going to hurt.

Talking about women in power, for example, suggests it's unfair that women are judged differently.

And that's a fair position to take.

But why do women get judged differently?
That's the question that a deeper analysis should answer.

While "*Power Moves*" embraces political policies obliging companies to hire a minimum number of women on corporate boards, there is no mention of the possible drawbacks of these policies or why one might disagree with them.

That makes for not only a more one-sided analysis but also a poorer analysis.

Review

Power Moves reviewed by The Power Moves :).

I first realized the existence of this book when analytics showed that people were ending up on my website after searching for "Power Moves summary", "Power Moves Adam Grant," and similar.

And then a friend of mine said, "hey, have you heard about that book called, like your website?":D

So finally, I could get around to reading Adam Grant's work.

And I liked "*Power Moves*".
Especially the interview format and the analysis of trends like robotics and artificial intelligence.

But it's not very deep on actual power and power dynamics, and I disagreed with a few conclusions.

Also, read:

Confessions of A Sociopath: Summary & Review

Lucio Buffalmano · 14 July 2019 · Archived copy · Original

Confessions of a Sociopath (2013) is the account of the author's life as a diagnosed non-criminal, high-functioning psychopath.
M.E. Thomas explains how her charisma and Machiavellianism allow her to influence and seduce others, offering insight into how sociopaths think and behave, while advising readers on how to manage a relationship with a sociopath.

Contents

- Notes
- Bullet Wisdom
- Quotes
  - Is Thomas A Real Sociopath?
- CONS
- PROS
- Review

Notes

About the Author:
M. E. Thomas is a pseudonym; it's not the real name of the author. But we do know that she founded the website Sociopathworld.com.
She seems proud of how many people populate her blog and forum, but there doesn't seem to be community activity these days.

Sociopaths Are Obsessed With Power…

The author says:

> Power is all I ever cared for in my life.
> Physical power, the power of being desired and admired, destructive power, knowledge and invisible influence…

Also, ruining people for Thomas is a display of power.
She says:

> (…) or ruin them however I like.
> Not because I want to witness the results necessarily, but because I want to exercise my power.
> The acquisition, retention and exploitation of power is what motivates a sociopath

Thomas says that one of her expressions of power is to feel like her ideas are shaping the world around her.
And that's why she writes.

Seduction is also a big game of power for sociopaths.
They see the thrill of catching the fish, getting the fish hooked… And enjoying having that fish hooked.

Until they tire of it…

Power Over Oneself

High-functioning sociopaths also seek to overcome their limitations and control their urges.
That might include forging long-term relationships.

> Sociopaths who truly seek to cultivate power realize that the greatest power is power over themselves

... Even As Kids

Since a young kid Thomas has been all about manipulation.

She wanted to ingratiate her parents and discussed with her siblings about who was the father's favorite or the mom's favorite, and plotted on how to win their favor.
Thomas was surprised when her sibling wasn't interested in playing the same game of parental manipulation.

My Note: Had the same experience
I dated a female sociopath who candidly admitted of her manipulation to become her father's favorite against her mother.
You can read it here.

The author was obsessed with the power structure of the adults and found all her peers unbearingly simple-minded.

Thomas sought to learn how the world worked at both the micro and macro level.
Not just for knowledge's sake, of course, but to use it for her own machinations.

Every time she'd hear something the adults seemed so interested about, especially so scared and mystery about, she wanted to know everything.
The "kids' explanations" for AIDS and nuclear bombs weren't enough for her, she wanted the adult versions.

The author also says that manipulating adults as a child was much easier than manipulating other children.
Adults forgot what it means to be a child and they expect "quirky" behavior from children.
But other children, they would know what was "off".

Also read:

> Manipulation: Techniques, Strategies, & Ethics

And They Love Scamming & Shortcuts

Thomas loved being first in class.

But most of all, she loved getting top grades and top jobs without putting in the work.

She says:

> My career trajectory was astonishing. Especially because it felt like a scam. And I loved to play that kind of game.

What motivated Thomas was not getting the top grade, but to study as little as possible and still pull out an "A".

Thomas had great university grades and extra-curricular activities, including performing at the closing ceremony of the Winter Olympics.

How did she get it?

"Through well-placed allegations of gender discrimination at her school".

She campaigned to be elected to the school's board, again campaigning against gender discrimination.

Basically, she leveraged feminism and affirmative action as tools to get what she wanted, without caring one bit about diversity (of course).

She loved the office politics and power games in the office and relished playing them herself.
Thomas would try to uncover personal secrets and insecurities from her colleagues and use them to gain leverage over them.

Of course, the actual performance was difficult for Thomas because she wasn't interested in doing the work.
She was all about the form, not the substance.

Also read:

- **Office politics players** (and power moves)
- **Machiavellian office power moves**

Sociopaths Enjoy Ruining People

The author says:

> Ruining people is delicious.

Even as a kid, she liked being in a group of at least three so that she could create drama

The author says that for some people, it's shocking to hear that there are people who are plotting against them.
And it's even more shocking when they know they might do it for no apparent reason other than the pleasure of flexing their power.

Ruining People in Seduction

The author describes how she tried to get back a female lover, not because she missed her, but because she missed having power over her.

So she crafted a well-thought-out email to change her mind and run back to her.
Which she did, breaking up with the new girlfriend, which made the author feel even better.

Also read:

- **Are you dating a sociopath?**
- **How sociopaths cheat the dating game**: a sobering, almost shocking read

> Psychopaths' Sexual Strategy: Marauders of Sex

Ruining Her Teacher

Sociopaths sometimes target people who stand in their way or whom they simply take a dislike to.

Thomas describes her manipulation strategy to oust a teacher she disliked.

Since the teacher had a bad reputation, the easiest way was to come up with a case of inappropriate behavior.
She started taking notes in class of all his dubious comments, made friends with all the other women, and started forming a clique to comment on the "disgusting" teacher.

She started a rumor that he put in the front row the girls who used to wear spandex and who had bigger cleavage.

Finally, one day the teacher commented on the dance class project and told Thomas that she was tacky, "letting it

all hang out, not like all other girls".
He was trying to get the class against her, but it was too late because she had gotten to them first. And he had just overstepped the boundaries in front of everyone.

She sympathized with all the other dancers, was all ears, and convinced one of them to come out with a formal complaint.

This is a technique we discuss in "how to handle a bad boss".

Sociopath At The Top of Corporate Ladders (?)

The author quotes Robert Hare when he says that sociopaths are four times more likely to be at the top of the corporate ladder, than in a janitor's closet.

My Note:
However, that statistic is no ultimate evidence.
Sociopaths, easily bored and interested in power, might simply never end up in a janitor's closet.
So 4 times almost zero would still be next to nothing.
Also read "*How to Lie With Statistics*".

Thomas also mentions Albert Dunlap, a former high-flyer in business who prided himself on being a sociopath. Dunlap said that:

> Manipulation can be translated into the ability to inspire and lead others, and overblown confidence is necessary (..) because you gotta like yourself if you're going to be a success

And the author says:

> If you combine the propensity for manipulation, dishonesty, callousness, arrogance, poor impulse control and the rest of the sociopathic traits, you could end up with a socially dangerous individual… Or the next big thing entrepreneur

As much as I still believe that sociopaths at the top are more the exception than the norm, it's still possible that some of them do end up leading companies or big startups.

The author says that what characterizes a sociopath is a predatory mindset, and that can be very helpful in business.

Or sometimes, I'd add, it might be both.
As it happened to Elizabeth Holmes, for example, the founder of Teranos (also read "*Bad Blood*").

Also read:

- **It's Machiavellis at the top**
- **Corporate manipulations**

> If we don't crash and burn, we have the potential to achieve dizzying amount of success

> The Myth of Emotional Intelligence: Machiavellis At The Top

Sociopaths Have Difficulties in Social Relations

It's not easy for sociopaths to fake emotions.

They feel fewer emotions than most, have little or no empathy, and have little or no sense of guilt.

They have difficulties contextualizing the emotions they feel. Sometimes Thomas cannot even recognize or understand some of her emotions, or why they originated at all.
For example, it's hard for her to say "I am sad because of X".

Since they have limited emotions and a different understanding of them, it's hard for socipaths to understand empaths (i.e., "normal" people).

Faking a Difficult Interaction

Thomas describes a few situations where she had no idea what to say or do to come across as "normal".

One of them was talking to a student whose grandmother had just died. She tried to fake a sad expression, then said a few things, then probed for a reaction, then said a few more things… And panicked that she was coming across as "not normal".

Then she abruptly interrupted the conversation.

Another one was dealing with the police after a break in. Thomas knew she "should" have looked scared, but she didn't feel anything.

She says she ended up maybe being too friendly and slightly flirty with the agents, but that was the most "normal" she could enact at that time.

Most People Can Tell There's Something Wrong With Sociopaths

The author says that it's not easy for sociopaths to fake "being normal".

She says that people don't exactly know what's wrong with them, but somehow they can see that something is not quite right.

Also see:

- Why Amanda Knox looks like a sociopath

Sociopaths' Manipulation For Good

Thomas respected her sister, Catherine.

Her sister's husband thought Catherine was more sociopathic than the author herself.
But, as the author says, Catherine manipulated for causes she considered good and right.

While the author only targets people who strike her fancy, Catherine only targets bad apples to ruin them and to see the good embodied by her, triumph.

While the author's self-image was that of a pagan god, Catherine's self-image was that of an avenging angel.

Catherine was always ready to fight for a righteous cause, defy authority whenever it was exercised unjustly.

Basically, the author's sister is the embodiment of The Power Moves.

Bullet Wisdom

- Sociopaths make terrible employees because they:
  - focus on power
  - cheat and look for ways to swindle their employer
  - look for shortcuts,
  - heavily engage in office politics
  - don't want to work hard
  - get bored quickly and can't stay with tasks
- Therapy only teaches high-functioning sociopaths what's expected of normal people.
- Thomas wasn't afraid to look like she was begging for a job if that helped get her: a few looks of disgust didn't matter to her
- Sociopaths have no fixed sexual sense of identity, and Thomas believes that's one of the most constant traits in sociopaths
  - To find out if someone is a sociopath, Thomas asks about their sexual past and makes fun of their homosexuality. If they take it personally, they're probably not sociopaths, because sociopaths wouldn't be offended
- Beating up a bully makes you a hero in people's eyes, says the author (and that's why Batman probably does, she adds)
- Talking about a bad teacher, the author says she couldn't stand that unfit people had authority over her (which is a feeling I can relate to)
- Some sociopaths have moral principles with which to approach to life, some of them based on religion (like the author)
- Thomas talks little because she's not interested in conversation. She prefers listening to gather information about others, which she can use -knowledge is power, she says-

- The author -and her sister- seem to see children as their replicas to control and own the future, and they want them to be as perfect as possible, almost robot-like

Quotes

On hurting people and "normal people":

> I intentionally hurt people sometimes, but don't we all?

On the normalcy of sociopaths:

> We can function, we just function differently (…), it is just that we think, live and make decisions in a way that some people find loathsome.

On being a lawyer:

> When I finished law school, I landed a prestige whore job. Every lawyer is a prestige whore

On parenting a non-sociopath child

> I have no idea how could I be a good parent to an empath child, how to love and respect it.
> I have one sister, a tearful hugging woman whom I regard with a great deal of disdain.
> What would I do with a child that needs constant emotional suckling?

Is Thomas A Real Sociopath?

Some commentators have called into question whether the author is a real sociopath.

Some of the doubts include:

1. She has strong emotional reactions to her parents, especially hatred for her father
2. The existential crisis seemed to come from an emotionally sad, depressed and needy place
3. She seems to use her blog as a way to self-actualize.
4. Thomas seems to seek community through her blog; she says she feels more connected to the sociopath community than to any gender or country
5. She says that the purpose of her existence is to be admired and always assumes people have crushes on her, which sounds very narcissistic

However, personally, I don't much doubt the author is a sociopath.

And I think it's idiotic of reviewers to read a book and shout, "she is NOT a sociopath".
What the hell do they know?

The author does acknowledge that sociopathy is partly nature and partly nurture, and she describes plenty of parental mistreatment to cover the "nurture" side.

But ultimately, we can't make final diagnoses from afar.

And from my non-final point of view, albeit there definitely were some bits that made you think of "narcissism", 80%+ of "*Confessions of a Sociopath*" is still far into the sociopathy spectrum.

CONS

- **Anonymity casts doubts**

It's understandable that Thomas uses a pseudonym.
But that also casts doubt on her story because nobody can check or corroborate her claims.

- **You must wonder how much is true and what's in her head**

The author says it herself:

> The stories I tell to explain my actions are self-aggrandizing. I spend a lot of time spinning stories in my head to make me seem more powerful and accomplished than I am in reality

- **Failed attempt at relativizing what's wrong with sociopaths**

The author attempts to "devictimize" sociopathy.

She criticizes Marta Stout since in "*The Sociopath Next Door*" she talks about "identifying" sociopaths instead of "diagnosing".

She might be right there.

In certain passages, she implies that violence is certainly not the prerogative of sociopaths and empaths, who go on all kinds of killing sprees because of their emotions and feelings.

She's not wrong there, either.

Yet, I don't buy this relativization.
Sociopaths, as a group, are potentially more dangerous than empaths, and, on balance, they probably take more from society than they give.

- **Confuses risk-seeking with stupidity and/or incapacity**

As an example of her risk-seeking behavior, the author talks about a summer in which she gambled her savings in stock options by holding them when she should have sold them and put all her eggs in one basket.

That's nonsense.

As if without a risk-seeking approach, she would have known the correct time to sell.
Nobody knows the "right" time to sell, and her experience trading is the experience of pretty much every single newbie starting out.

- **Pointless bragging**

In the same book, she confesses to having lost all her savings trading and also brags about her stock returns.

She started investing seriously in 2004 and averaged 200% more than the S&P 500.

The author brags that she manages it in spite of being "relatively unsophisticated". But she doesn't trade on knowledge, but on "special vision".

She seems to imply that the numbers back her up.
She talks about "every year" and "long term success".

The book was published in 2013, which is less than 10 years of data.

Again, I must add a "LOL" here.

- **Deep misunderstanding of evolutionary psychology**

The author brags of superior intelligence, but often gets it wrong.

She says the “most aggressive predators” are those who survive and thrive, which is a typical misunderstanding.

Aggression can provide an advantage, but not always.
Plenty of aggressive predators have gone extinct, and plenty of “wait to eat” life forms exist today (i.e., spider’s webs).

- **An overblown sense of one’s own accomplishments**

The author talks about the “ridiculous amount of money she was making” and her “astonishing career trajectory”.

But she couldn’t hold onto any of that to save her life.

- **Her effectiveness might be overblown**

You also must wonder about her stories of “ruining people”, which might prove a vastly overblown picture of her effectiveness.

For example, after she describes ruining her professor, she also says that after many complaints, she started losing credibility.
And that raises quite some doubt as to whether she was ruining the teacher’s reputation or her own in the process.

PROS

This is simply the best book I have read to understand sociopaths.

Before, the crown was held by Kiehl’s “*The Psychopath Whisperer*“, but he focused on violent people and convicts.

Confessions of a Sociopath not only deals with a different type of sociopath, but gives you the blow-by-blow description of the inner feelings and drives of a sociopath that no other “normal” researcher could.

Review

Confessions of a Sociopath is a wonderful first-hand book to better understand the inner psychology of psychopathy.

The 14 Best Books On Power

Lucio Buffalmano · 16 July 2019 · Archived copy · Original

Are you looking for the best books on power?

You've landed in the perfect spot.

At The Power Moves, we pioneered the power-centric approach to self-development.
We are the most visited website for mastering power, strategy, and practical empowerment.

This is the definitive reading list of the best books and resources to unlock power in all its forms, from boosting your "power intelligence" to commanding status and respect.

⍰♂Lucio's Take: **How I curate this list**

Lucio:
Unlike many rehashed or AI-generated lists, every recommendation here comes from **books I personally studied** in the last decade researching power, psychology, and men's success.
Books I haven't personally studied yet don't make this list.

The best of these books influenced the frameworks later developed inside The Power Moves and Power University.

I rank and update this list based on these three criteria:

- Scientific accuracy
- Realism
- Practicality

Contents

- 14. The Prince
- 13. Corruptible

- 12. The Psychology of Social Status
- 11. Social Dominance Theory
- 10. Underboss
- 9. Secrets of Power Negotiating
- 8. 48 Laws of Power
- 7. The Art of Worldly Wisdom
- 6. The Psychology of Leadership
- 5. The APA Handbook Vol. 3
- 4. The Handbook of Great Power Competition
- 3. The Selfish Gene
- 2. Power
- 1. Exchange and Power In Social Life

- Beyond Books: Acquiring Power

14. The Prince

By N. Machiavelli

Summary

The Godfather of all power books.

It's last in the order, but also commands the top position of this power-list.

Machiavelli was the first to write about realpolitik, and centuries later, it's still an eye-opener for generations of (previously) naive folks.

Also read:

- **The Dictator's Handbook**: for maintaining power as a despot, based on data and good analysis

Power Nugget: if you want to be good, learn how to be bad first

For many politicians and leaders, power is something to hold on to at any cost with a web of lies, manipulation, and if necessary, fear.

> Quote: A good person is ruined among the great numbers who are not good

---

13. Corruptible

by Brian Klaas
Summary | Amazon

Is it true that power corrupts?

And that "absolutely power corrupts absolutely"?

In part, yes.

But it's also that:

1. **Power-hungry and dark triad personalities go after power**
2. **Naive and power-blind people don't recognize bad leaders**. Many are *attracted* to them and want them as leader (sheep be damned)
3. **Systems matter to select applicants**. And systems can either encourage or discourage poor applicants
4. **Systems matter to encourage or discourage poor behaviors**. So we can design better systems to serve the collective

Klaas digs deeper into each one of them in this fascinating book.
It's an important read to understand power dynamics.

12. The Psychology of Social Status

by Joey T. Cheng and Jessica L. Tracy
Summary | Amazon

Ignore the fluff, and go for scientific evidence.

That's often good advice, and the perfect intro for *The Psychology of Power*, which is an overview of the research literature on status.

> Quote: human hierarchies are the product of our species' evolved tendency to submit to those who wield force and intimidation, and to follow and learn from those who garner respect and admiration.

11. Social Dominance Theory

by Sidanius and Pratto
Summary | Amazon

Social Dominance bridges the gap between individual psychology and group-based power structures, with a particular focus on social class.

At the individual level, it introduces **Social Dominance Orientation (SDO)**—a person's degree of support for group-based hierarchies and inequality.
At the societal level, it shows how dominant groups maintain control to monopolize resources and relegating other groups to subordinate positions.

If you want to better understand social power dynamics, including ethnic and gender-based competition, this is one of the best starting points.

Power Nugget: Men coalesce with other men to keep women dependent and outgroup men subordinate.

Men's sexual strategy is two-fold:

- **Intersexual competition**: keep women politically disempowered and economically dependent.
- **Intrasexual competition**: form male coalitions to monopolize access to high-value mates

These activities will result both in the oppression of women and in class stratification among men.

> Quote: Social dominance theory presumes that, beneath major and sometimes profound differences between different human societies, there is also a grammar of social power shared by all societies.

---

10. Underboss

By Peter Maas

Summary

Another unexpected book on this list.

Why here, why so high?

Because it's one thing it's to read about theories and strategies, and it's a very different thing to read *how* power strategies are applied in real-life, and what their results are.

And this book is all about power and strategies.

As Sammy Gravano said in his interview with Diane Sawyer:

> **We played chess. And he lost.**
>
> *Salvatore Gravano*

That "chess game" was a game for money, fame, power… And one's own life.

About the main protagonist, well… Some people say Gravano is a stone-cold killer and a psychopath.
I can't make a diagnosis, and he's not a guy to role model for.

But he's definitely a guy to learn from.
He's obviously power-driven, ruthless, and *also* smart and Machiavellian.

Now put a guy like that in an organization, the mafia, that is *all* about power and Machiavellianism, and you get a gem of a book to learn about power dynamics and strategies, -as well as fatal mistakes you better avoid-.

This is all rather extreme, of course.
Most people reading this aren't going to be joining the mafia. But what works and doesn't work in extreme environments is often the same as what works and doesn't work in more everyday situations, just more obvious, and with graver consequences.
Thus, extreme environments can provide great learning opportunities.

To learn from “Underboss,” you sometimes need to read between the lines to understand the dynamics, strategies, and mistakes. So it’s more for advanced folks. But the review on this website can help you in that direction.

Similar biographies of powerful men and organized groups include:

- **The Power Broker**, the history of Robert Moses, as power-hungry a man as it gets, successful and effective. The book itself is long, so stick to our review
- **Five Families**
- **Mafia Prince**

> Quote: “I’ll talk to Zuvito”, said my father.
> “Zuvito?” I think. “Old man Zuvito? What good’s he? He’s a frail little old guy.
> I’m a kid, I’m with a gang, my thing is to fight with fists. I don’t know Cosa Nostra. But that really opened my appetite to know more about Zuvito, what made him so feared. Boy, I thought, wasn’t it something to be that physically unimposing and still have that kind of power?

---

9. Secrets of Power Negotiating

[image]by R. Dawson
Summary | Kindle

The power dynamics at the negotiation table can make you rich.

Or poor.

And that’s why you better learn the power moves of the best negotiators.
Lest you are going to pay them to teach you in real time: with the money you leave on the table during the negotiation.

This is by far the best book on power negotiation techniques.
Also read:

- **20 Manipulative Negotiation Techniques**

Power Nugget: beware of any negotiator who appeals to ethics. He's most likely trying to manipulate you

Don't negotiate anything worthwhile before learning the tricks of the trade (and the power dynamics of negotiations).

> Quote: *"If we can do that for you, what can you do for us"*

---

8. 48 Laws of Power

by R. Greene
Summary | Amazon

Here's a book that doesn't need any intro.

This list of power principles requires some power-awareness.

Readers must be able to contextualize the laws within a deeper understanding of social dynamics and power dynamics.

Without a foundational understanding of social and power dynamics *The 48 Laws of Power* may even turn confusing and counterproductive.
I've seen that often with early coaching and forum users.

Here is an example of a question that I got asked more than once:

Some readers believe the “laws” are cast in stone, without context or exceptions
And here is an example of someone without basic social skills who’s probably behaving like an awkward weirdo (mis)applying the “laws” out of context:

One of the many nonsense questions asked on the subreddit “The 48 Laws of Power”
That being said, for those who have sufficiently developed social and emotional intelligence, “*The 48 Laws of Power*” is great.

Power Nugget: Appeal to self-interest

> Self-interest is the currency that makes the world go around

Appeal to self-interest is one of the most significant -and easily forgotten- laws (see freeloaders-approaches).

> Quote: Powerful people impress and intimidate by saying less.

7. The Art of Worldly Wisdom

By Baltasar Gracian
Summary

300 maxims to maximize status, perceptions, and reputation.

One spot before *The 48 Laws of Power* because Greene took heavy inspiration from this classic on power and social strategies.

---

6. The Psychology of Leadership

By A. Haslam
Summary | Amazon

Leadership is power.

And true power requires leadership and influence over others.

And "The Psychology of Leadership" is the *best book on leadership*, bar none.
All other leadership books look like children's books in comparison.

However, similar to "*I'm OK – You're OK*", this is a heavy read.
So to apply this information, see:

- **How to be a leader**: distilling the best lessons for practical use cases

Power Nugget: Great Leaders Know Psychology -& Manipulation-

Persuasive leaders are not different or special like most people think.
But they are more power-aware and power-skilled than most.

> Quote: Just as politics is too important to leave only to politicians, so too leadership is far too important a matter to be left only to leaders.

5. The APA Handbook Vol. 3

By Various Authors
Summary | Amazon

Crazy, I know, but:

There are no handbooks yet specifically on power.

The *APA Handbook and Social Psychology Vol 3 – Interpersonal Relationships* is the closest it gets.

Albeit technically about relationships, there are two whole chapters on power.
And they contain more research-based wisdom than any other book on this list :).

Quote: Handbooks don't sell for two main reasons: they don't pander to the fat middle of the IQ bell curve with watered-down pop psychology—and they don't hand out catchy quotes..

4. The Handbook of Great Power Competition

by Brian C. H. Fong and Ja Ian Chong
Summary | Amazon

Power is the core currency of international relations—and *The Routledge Handbook of Great Power Competition* offers both a scholarly overview and a timely, accessible account of today's geopolitical rivalries.

Drawing from leading experts in the field, it helps readers understand how the logic of power operates at an inter-state level.

> Quote: Power inequalities are always already stacking the game. That is also why liberals are naive in expecting rational interests to prevail, unless they are the interests of the powerful

3. The Selfish Gene

by R. Dawkins
Summary | Amazon

Unexpected entry, right?

Power permeates all facets of life, both on the outside and *within* us.
And runs much deeper than our conscious mind, too.

"*The Selfish Gene*", here as a representative of evolutionary psychology, explains how our genes can have us on a rail system.

But here is the potential issue with it: it's *their* rails.
Your genes have shaped our drives and urges not *for us,* but *for themselves*.

And until we learn what that programming is, the selfish genes have ultimate power over us.

Power Nugget: Your Genes Are Your #1 Master

You may or may not agree with the programming.

But you're following it anyway.

And guess what, it wasn't designed to make you happy or fulfilled. Heck, it wasn't even designed with your best interest in mind.

The only way to upset that program and gain a foothold of power over yourself (and the world around you) is to understand *what* that program is all about.

> Quote: Let us understand what our own selfish genes are up to, because we may then at least have the chance to upset their designs, something that no other species has ever aspired to do.

2. Power

by Jeffrey Pfeffer
Summary | Amazon

Power is a fantastic overview of power and power dynamics.

Pfeffer mostly deals with power in business and organizations and the strategies tailored to career advancement. But because there are so few great resources on power, and because Pfeffer did such a good job, Power also happens to be one of the best books on power, period.

Power Nugget: You Can't Stay Out Of It. Play The Game, Or Lose By Default

Power dynamics and politics are everywhere because they're inherent in any social animal.

People interacting with each other naturally form hierarchies, and since the people who want to climb those hierarchies outnumber the positions on top, we're bound to compete.

Albeit you may decide not to compete, **you cannot call yourself out of politics, competition, and power dynamics without paying a price**.
The price of lingering to the bottom—or of losing your position to a more aggressive or smarter competitor, comes out of ignorance.

> Quote: seek power as if your life depends on it. Because it does

1. Exchange and Power In Social Life

by P. Blau

Summary

Most books on power focus on surface tactics. *Social Exchange and Power* goes one level deeper.

Blau's central insight is that power emerges whenever one person controls resources, opportunities, or benefits that others value. In that sense, power is not primarily about force, charisma, or manipulation. Power is a byproduct of value, value-giving, and dependence on that value.

This simple principle became one of the foundational ideas behind modern social exchange theory and influenced decades of research on power, influence, reciprocity, cooperation, and social relationships.

For students of power dynamics, the book provides a scientific framework for understanding why some people gain leverage over others, how dependence creates power asymmetries, and why relationships are intrinsically based on exchanges of value.

Power Nugget: Power Flows From Dependence

The more people need something from you that they cannot easily obtain elsewhere, the more power you have.

Likewise, the more dependent you become on others, the more power you hand over to them.

Understanding dependence is one of the keys to understanding power itself.

> Quote: An apparent "altruism" pervades social life (…) But beneath this seeming selflessness an underlying "egoism" can be discovered; the tendency to help others is frequently motivated by the expectation that doing so will bring social rewards.

Beyond Books: Acquiring Power

by Lucio Buffalmano
Course Intro

Power University is the foundational execution system of this platform.

It integrates the latest available scientific research with The Power Moves' frameworks in applied social power dynamics.
The course synthesizes high-authority behavioral research and decades of scholarship on power, status, influence, leadership, and human behavior, translating complex social dynamics into practical strategies and real-world applications.

Power University combines the science with our own models and frameworks and integrates them into a unified system for understanding, applying social power, and reaping the *rewards*.

For men looking for a comprehensive roadmap to understanding, navigating, and mastering social power, it remains our most complete resource.

> Quote: Does power corrupt? Yes, it's really nasty on those who don't have it

---

Article's Change Log

Moved:

- (03.07.2026) Moved *Social Exchange* above *Power* because most everyday power is based on social exchanges, favoring Blau. Power aligns with TPM in its theoretical foundation, but it's more tailored to workplaces, and balance and calibration are required to get the most out of it

Removed:

- *Seduction University* (02.06.2026) for being more focused on delivering dating results, rather than explaining the theoretical dating power dynamics
- *No Logo* (02.06.2026) remains an underrated gem on the power of marketing and brands over the masses, but it's too specific on a single aspect of power
- *The Wisdom of Psychopaths* (02.06.2026) because psychopathy is too tangential to power
- "*Don't Think of An Elephant*" (12.03.2025), too tangential to power
- *"In Sheep's Clothing*" to make space for "Power" by Jeffrey Pfeffer

- *Influence* by Cialdini. Influence is a form of power and Influence was a trailblazer at his time, but there are now better resources for influence and persuasion
- *I'm OK, You're OK*, that helped us develop the concept of emotional power dynamics. But too theoretical
- *Workplace Power* by Lucio Buffalmano as it got integrated in Power University. This list still needs a top resource on workplace power dynamics. For the time being, you can check *Workplace Poker*, career strategies, *The Gervais Principle*, and our articles Business manipulation and Conflicts of interest at work
- The Art of Seduction (06.07.2025), since Seduction University provides a broader coverage of similar topics, including 'dark psychology tactics', while also being more practical
- *How to Lie With Statistics* (06.07.2025), a great book, but slightly too niche at the edges of communication and manipulation

Added:

- *Exchange and Power In Social Life* (02.06.2026)
- *The Art of Worldly Wisdom* (12.03.2025)
- *Social Dominance Theory* (30.05.2025)
- *The Routledge Handbook of Great Power Competition* (06.07.2025)

Note on notable books missing:

We left out titles such as "*How to Win Friends*" -basic social skills, not power-, "*Propaganda*" -great, but there are more scientifically sound resources today, and common entries such as "*Meditations*", and "*Mindset*". Not because mental empowerment doesn't matter, but because we went for a stricter definition of "power" here.

Without Conscience: Summary & Review (Robert Hare)

Lucio Buffalmano · 17 July 2019 · Archived copy · Original

Without Conscience (1993) takes the readers into the minds of some of the most dangerous individuals on earth: criminal psychopaths.
What makes them so dangerous, explains Robert Hare, is their complete lack of conscience, emotions, and inhibitors.

Contents

- Summary
  - #1. All Psychopaths Take More Than They Give

  - Potentially outdated view of psychopathy as inextricably linked to criminality
  - Some personal conjectures
  - ⍰⍰♂ Lucio's note: was he a psychopath, or was it relationship power dynamics?
- Review

Summary

About the Author:
Robert D. Hare is a researcher in the field of criminal psychology and is one of the most popular researchers on psychopathy.
He drafted the "Hare Psychopathy Checklist", and he is also the author of "*Snakes in Suit*" and the PCL-R chapter of *The Psychopathy Handbook* edited by Christopher J. Patrick.

#1. All Psychopaths Take More Than They Give

Not all psychopaths are in prison.

And many of them can manage not to ever have any troubles with the law -or at least, manage never to get caught-.

However, as Robert Hare says "all take far more than they give".

My Note:
I wouldn't know if *all* of them take far more than they give, but the more antisocial ones that Hare encountered in

prison likely do.

#2. Psychopaths Need Power And Control

Psychopaths have a strong need for psychological and physical control over others.

They must be in charge and will use any means to achieve it, from manipulation to charm to violence to intimidation.

That doesn't mean you shouldn't stand up for your rights, but you should do so, keeping in mind who you are dealing with.
Winning is their goal, and they are ready to do what you're not ready to do.

Power Moves Against Psychopaths

Here is a Machiavellian strategy to win against a psychopath:

Knowing that all the psychopath wanted was to win, the smart lawyer of the mother proposed to him joint custody of the children.
Once he got it, he didn't even want to see the children: all he wanted was to win.

That's an example of a risky, but smart power move that takes the opponent's psychology into account.

Also read:

- Machiavellian life strategies
- Power dynamics

#3. Examples of Infamous Criminal Psychopaths

Robert Hare opens "*Without Conscience*" with a quick overview of some of the most infamous psychopaths.

Including:

- Gary Tison: who manipulated the criminal justice system, escaped, and went on a murder spree
- Kenneth Bianchi: raped, tortured, and murdered a dozen women and fooled some experts into believing he had multiple personalities and the crimes were committed by one of his "bad" personalities
- Diane Downs: shot her own children because the man she liked didn't want them, drove them to the hospital, and calmly made up a carjacking lie

Those are only the violent tip of the iceberg, though.
As Robert Hare says:

> We are far more likely to lose our life savings to a swindler than our lives to a steely eyed killer

#4. Psychopaths Con & Manipulate: Examples

One psychopath pulled a knife on Hare. Then he said he didn't want to use it against him, but against an inmate who had made a move on his protege.

Why did he do it?

Because Hare was new and if he told the guards about the weapon, he would look like a snitch and lose his chances of working with the inmates.
But by not saying anything, he violated the law of "always report armed prisoners".

When Hare didn't report him, the psychopath had him and took full advantage of it.

When Hare finally refused his working request on his own father's business, he flew into a rage.
And later, while working to repair his car, he cut the brakes.

Hare found out, reported the incident, and the psychopath was confined to "the hole".
When he came out, he acted completely normal around Hare as if nothing had happened.

Another good book for prison games psychopaths play is:

- The Psychopath Whisperer

#5. Antisocial-Personality Disorder VS Psychopaths

ASPD refers to a cluster of antisocial and criminal behaviors.

The majority of criminals meet the diagnosis of SPD, but they are not all psychopaths.

Psychopathy is defined both by a cluster of personality traits and socially deviant behavior.
The difference, he says, has also been blurred because of the media's mischaracterization, including that of journalist Daniel Goleman.

#6. Criminal Behavior Decreases After 40 YO... But It Might Be a False Indicator

Psychopaths commit fewer crimes after forty.

But first of all, not all of them improve: some of them keep committing criminal acts until the day they die.

And second, it's not because they "improve" their traits or cure themselves, but because their personality stays the same.

Hare says it's because they might simply get better at evading the law and/or learn to get what they want through manipulation and cons, which are less likely to land them in jail.

> Manipulation: Techniques, Strategies, & Ethics

#7. White-Collar Psychopaths Get Off Easily

Robert Hare says that white-collar psychopaths might escape prison.
And when they get caught, they usually get much lighter punishment and even preferential treatment.

It's obvious Hare does not agree with that, as he says that they are equally as harmful to society.

Also read:

- **Psychopathy in business**
- **Corporate manipulations**

#8. Nurturing Women Are Victims of Psychopath Manipulation

Hare says the typical victims of psychopathic seductions are nurturing women.

They are the ones most likely to think "poor him, he had a terrible childhood".
They are often in the helping professions and tend to look at the good of others while minimizing their faults.

Of a psychopath, a woman said "I always had the urge to cuddle him" and "he needs mothering" (this is "parent seduction", read the full list of seduction techniques here).

Also read:

- **7 types of abusive men**
- **The Art of Seduction**
- **Women Who Love Psychopaths**

Some women married to a psychopath and who believe in traditional roles might as well keep suffering to "save the marriage", sometimes "doing it for the sake of the children" and in the meanwhile "hoping against hope it will improve".
Some women even end up blaming themselves (read: how low self-esteem is a vulnerability for abusive relationships), or tell themselves that if they try harder "he will finally realize what a wonderful gift he has".

#9. The "Fascinating Pull" of Criminals: Fawners' (Faulty) Psychology

Hare says that the criminals who attract the largest group are psychopathic serial killers whose crimes are sex-related.

The author says that the admirers are victims of their own psychological hang-ups, including:

- Unrequited love
- Vicarious dangerous experience
- Notoriety, excitement
- A cause worth fighting for (abolition of the death penalty, a soul to be saved, or a mistaken belief that the crimes were a result of abuse)

And, as well for some, the psychopath's behavior is an expression of manhood which the psychopath is happy to distort.

The girlfriend of a psychopath referred to him as "deeply sensitive, a mover and shaker, a man not afraid of anything".

"Deeply sensitive", LOL.

Career Women Are Psychopaths' Targets

With the world changing, career women have become psychopaths' targets for their resources.

Especially single women who are struggling in the dating market make for great targets.

Some psychopaths seek women in places where single career women would go, like single bars, cocktail after-hours or dancing lessons.

Also read:

- **Dating for career women**

#10. Traits of A Psychopath

"*Without Conscience*" has tons of examples for each one of these bullet points.

Here are some I took note of:

Egocentric and grandiose

They see themselves at the center of the universe and are justified in acting as they please.

One typical example is psychopaths who want to defend themselves even though they have no idea of the law.

If they get lucky, their grandiosity can pay off spectacularly (and maybe a little later fail spectacularly, see "*Bad*

Blood“).

Glib and superficial charm

They are often likable and charming, witty and articulate.
But they can come across as fake and insincere as if they are acting.

If you want to see an example, check :

- **“is Amanda Knox a psychopath?“**

They attempt to appear knowledgeable in specific fields, but it’s rarely deep knowledge and more the throwing around of keywords that make them *sound* like an expert.

Lack of remorse or guilt

Psychopaths don’t feel bad for their victims.
And the way they justify or minimize the pain of their victims would be comical if it weren’t tragic.

Some of them even say their victims enjoyed, or they did them a favor (ie: rape victims who enjoyed the rape or burglary victims who will be able to claim insurance).

Lack of empathy

They are totally indifferent to the people around them, which includes their relatives and partners.

One female psychopath allowed his partner to molest her five-year-old daughter because she wasn’t willing to have sex.

My Note: Might be too black and white here
Hare might be too black and white here. Some psychopaths have “theories on mind” or “cognitive empathy” with which they can predict what others are feeling (Fallon, 2017).

Deceitful and manipulative

Psychopaths lie.
A lot.

They see the world as made by predators and prey and it would be silly not to exploit others.

Shallow emotions

Some of them will deny having only shallow emotions (like Ted Bundy), but their behavior shows it.

Impulsivity & poor behavior controls

They live day to day, with little or no plans.

They have little or no inhibitory controls, which makes them highly reactive to the slightest provocation.

Psychopaths are the incarnation of a “short fuse”, but they refuse to acknowledge the problem and often see their reactions as well proportionate.

Need for excitement

Some psychopaths do crime for the adrenaline rush that comes with it.

Even non-criminal psychopaths cannot stand repetitive tasks and stick with things (which is why Marta Stout says they are rarely at the top of corporations, which requires sticking with the same tasks and company).

Lack of responsibility

They don't care about their own children, don't pay alimony, and don't care about putting others at risk.
Some of them consider their children an inconvenience.

Of course, many of them will tell you they do care.

A lack of responsibility is also what makes psychopaths unsuited even for high-danger occupations such as firefighters and soldiers, where they fail to stick to procedures.

Early behavioral problems

Setting fires, running away, school problems, theft, vandalism, promiscuity, cruelty to other children, and cruelty to animals.
They tell the stories of their animal cruelties either emotionless or with pleasure.

One psychopath shot a "mutt" in the anus with a pellet gun and then watched it shriek and crawl on the floor until it died.

Social deviance and adult antisocial behavior

And not part of the checklist:

Lack of allegiance

They have no loyalty except for "look up to N.1" (ie.: themselves).

Even though they're not afraid of the dangers and sometimes *seek* danger, they still don't make good soldiers.

When, in the rare case, they make the selection into high-risk fighting units, they are seen as "cowboys" and "loose cannons" and usually don't last long (also see: it's not true that good and evil are twigs of the same branch).

They also don't care about flags, countries, or who they are fighting for.

Living in the moment

Hare says that at the risk of angering some new age practitioner (a jab at "The Power of Now"), psychopaths' behavior makes sense only if you live in the now.

Psychopaths are incapable of thinking long-term.

Contradictory statements

Psychopaths have difficulties monitoring their own speech.

Within the same sentence, a psychopath might tell you he's not a criminal and then tell you about his burglaries or murders.

Incoherent flow of concepts

They can jump from one topic to another, without any apparent connection between the two.

Don't answer questions, or answer unrelated to the question

A behavior also seen in our analysis of gaslighting dynamics.

Bullet Wisdom

- Psychopaths constitute a significant proportion of persistent batterers (25% measured in a program of batterers, which they attend just to appease the courts)
- Predictions of criminal behavior can be vastly improved if we know whether a convict is a psychopath or not (psychopaths are twice more likely to commit crime again and 3 times more likely to commit violent crimes again)
- Sexual offenders who were psychopaths and got aroused at images of deviant sex were three times more likely to rape again (as measured by an electronic device strapped around the penis)
- The psychopath is like a color-blind person who has learned the position of the colors in traffic lights. He reacts to them but has no real understanding of the colors
- Psychopaths are in large part born, but parenting can have an impact on the expression of antisocial disorders towards more violent or more white-collar crimes (it's not attachment issues that raise psychopaths, but more like the other way around)
- You can sometimes recognize psychopaths by their stare. It's not the eyes of evil as some think, but the eyes of emotionless predators
- Therapy doesn't work: psychopaths don't see anything wrong with themselves and no therapy has ever been effective

Quotes

Asked about how many children he has, a psychopath replies:

> I don't really know, a few I guess, I have been accused of being a father, but I tell them "fuck you, how do I really know it's mine"

On the ridiculous grandiosity of a psychopath, clashing with his actual life and accomplishments as commented by

the interview:

> If I hadn't been so afraid of him, I would have laughed at his face for his blatant self-worship

At how some psychopathic victims are actually rather gullible and ready to take them at their words:

> He always told me how much he loved me, and I believe him. Even after I caught him fooling around with my sister.
> It took me a long time to realize he didn't care about me at all.
> Even after he beat me up, he used to use how much he loved me.

About Hare making the case psychopaths have lots of children as a reproductive strategy:

> Are promiscuous to have lots of children and reach some sort of "genetic immortality"
> He laughed and replied "I just like to fuck"
>
> ## Criticism

Outdated view of syndromal psychopathy

Hare views psychopathy as a classical syndrome, such as a cluster of co-occurring and co-varying traits.
However, that view has been challenged by more recent findings. Quoting Lilienfeld and colleagues from chapter 9 of '*The Handbook of Psychopathy*':

> Hare (1993) wrote that "psychopathy is a syndrome—a cluster of related symptoms" (…) the assertion that psychopathy is syndromal is challenged by findings that (1) the lower-order and higher-order dimensions of several well-validated self-report psychopathy measures (…) do not display (…) uniformly positive interrelations among subscales; and (2) two major factors of the and PPI and PCL-R show opposing associations with measures of internalizing psychopathology.

Potentially outdated view of psychopathy as inextricably linked to criminality

Robert Hare tends to see psychopathy as inherently linked with criminality. Hare's PCL-R also includes items referring to criminal behavior.
This view has been hotly debated in psychopathy research, and **many today believe that criminality is not a core trait of psychopathy**, but 'only' a possible consequence of psychopathy.

Some personal conjectures

Hare implies there are plenty of psychopaths at the top of corporations and psychopaths are responsible for many economic disasters (he mentions the savings and loan defaults).

But there is not much to back that up or to give us an idea of the phenomenon.

Update: I gathered much of the available data myself to compile this article on psychopathy and business organization

> The Emotional Intelligence Myth: Why Power and Machiavellianism Beat Empathy at the Top

Unfounded predictions?

Hare suggests that our society is getting worse, criminality is increasing, drug use is increasing and the "acceptance of psychopathic traits is increasing".

I didn't agree with that.

He also says that the generation that grew up in the '60s and '70s, with "higher levels of impairment in juvenile dysfunction" should worry us about their ability to bring up the next generation.

That made me think Robert Hare is a major conservative and I don't agree with his future projection.

Do psychopaths pursue a strategy of many offspring with little investment?

The author says that psychopaths are adopting a specific reproductive strategy: having as many children as possible without caring for them (as opposed to fewer children and caring for them).
This would be akin to an extreme 'lover strategy'.

But I doubt most of them do it consciously.
Hare's own example, Diane Downs, seems to prove the opposite. And a psychopath replied to Hare that he 'just enjoys to f***' (see the last quote in the "quotes" section, with Hare inquiring about his own hypothesis).

Update: I have run into a psychopath who adopts this strategy consciously, and I drafted an article. See "psychopaths' sexual strategy".

??♂ Lucio's note: was he a psychopath, or was it relationship power dynamics?

Hare describes this scene:

> One night she asked him *lightly* if he felt like stepping out the corner and bring her an ice cream.
> He didn't reply.
> When she looked up, he glared at her and said "always got everything you wanted, didn't you", he said in a strange, snide way

He then accused her of being pampered and having people do stuff for her. And she said, "what are you talking about, I'm not like that".

The power dynamics suggest she was making a big request to him. And what he replies might have actually made sense.

But the voices in the audiobook make him sound like a wolf and her like an innocent sheep.
In my opinion, that might easily be a distortion of the facts.

Also read: **how women control men**.

Review

Without Conscience is one of the most popular psychopathy books, and a helpful text for understanding psychopathy.

Robert Hare accumulated much experience over the years, and he shares many examples of how psychopaths think and behave. However, Hare's examples are almost all skewed towards *criminal* psychopathy. This is an important possible source of bias to keep in mind.

The Power Dynamics of Being Jacked (+ 3 Tips to Get Jacked Fast)

Lucio Buffalmano · 19 July 2019 · Archived copy · Original

Foreword:

When it comes to the power dynamics of being jacked, muscular, and "big", I cannot speak from first-hand experience.
I exercise daily and take some martial arts classes, but, on top of being small and naturally thin, "bulking up" has not been one of my goals (*yet*, you never know in the future).

But I *do* know there is power in being "big", and muscles can have a major impact on social power dynamics (as well as dating power dynamics).

And that's why to comply with our 3-pillars of knowledge approach and editorial guidelines, I'll pass the baton. The author is a passionate fitness model, and he experienced first hand what it means to go from thin, to jacked.

We've all seen it… some hulking fitness model walks into the club, and all of a sudden, it's "all eyes on him." The girls want him, the guys want to be him, and everyone wants to talk to him.

… But why is this?
What causes this primal, animalistic shift in human beings, when they see another human being who's bigger than they are? Well, to understand, let's take a look at evolutionary biology, and how it still impacts us to this very day.

Contents

- The Bigger Caveman
- Being Jacked: The Power Dynamics
- The Social Benefits of Being Jacked
- A Fitness Model's Perspective
- The Difference I Noticed
- 3 Tips to Get Jacked Faster

- Summary: Being Jacked Gets You Instant Social Status

The Bigger Caveman

In every single social species across the world, there are alpha males and beta males. We all know this, but let's do a quick recap.

Social animals require a social hierarchy – otherwise, they wouldn't know which direction to follow. In every social species, from wolves to walruses, there's an alpha male.

In the more animalistic species, size and strength are all that matter. Take elephant seals, for example. This species is known for its size and strength, with a typical elephant seal alpha male weighing up to four tons (yes, that's almost 8,000 pounds).

For these animals, strength reigns supreme. Whichever male in the group is the biggest sleeps with, quite literally, 85% of the females.

Compare this with a more advanced social animal, however, such as the chimpanzee. With chimpanzees, strength and size still matter, but what's more important is social status.

Thanks to Jane Goodall, we now have a very deep understanding of how their social dynamics operate… and there's one study in particular that illustrates this perfectly.

Upon observing a certain chimpanzee troupe, Jane noticed that one of the chimps was bigger and stronger than the rest. He treated them all like complete garbage, however, and always put himself first, even at the cost of the other chimps.

Then, however, there was another chimpanzee. He wasn't as strong as the previous one, but he did numerous social favors for the other chimps, – picking their hair clean of bugs, helping take care of the young, and offering food to the others.

When it came down to it, most of the chimps sided with the nicer chimpanzee, because he had amassed more "social status" by helping out his fellow chimps.

Now, don't get me wrong – in the animal world, size and strength are important. But do you know what's more important? Social status – and today we're going to talk about how to get it.

Being Jacked: The Power Dynamics

Every animal on the planet has one objective: to pass their genes to the next generation and give them the best

chance of surviving (see "*The Selfish Gene*").
It's that simple.

So, with that in mind, why does being jacked have such a huge impact on your social status? It's quite simple, really. Being jacked shows you're physically superior. That's it.

The benefits of being jacked go beyond simply attracting women, too. There's a theory in evolutionary biology that states that if another animal can *help you gain access* to other opportunities that would benefit your survival, you will befriend that animal.

Unconsciously, when people see a jacked man, they internalize two things:

1. He Probably Has Access to Lots of Women
2. He Could Help Me Gain Status if He's My Friend

It sounds shallow, and while human beings aren't all manipulative and fake, each and every one of us has a certain degree of these elements inside of us.

Being friends with the jacked guy means that women will come up and talk to him, and eventually, talk to you, too (through proxy).

Being friends with the jacked guy means that he will have your back in a social conflict… and everyone wants to be the jacked guy's friend when social conflict arises.

This is why being jacked changes the power dynamics. Fundamentally, life is, at its core, the struggle for SPACE. Land, resources, and territory are deeply ingrained in our minds.

That's why alpha male body language typically takes up more room.
And what better way to do that, than to ACTUALLY have your body take up more room, by being jacked?

When most men see a jacked fitness model, they typically have one of two responses:

- Get Needy/Jealous
- Want to Befriend Him

Here's a tip, gentlemen: those guys who get needy and jealous of the fitness model?
Those are beta males, who are insecure about their status.

Those guys who want to befriend him? They're other alpha males who recognize the power of connecting with another alpha male.

Keep that in mind.

The Social Benefits of Being Jacked

Imagine How Much Attention He Gets At The Pool
You've heard the PUA concept of peacocking, right?
It's an idea that stems from the peacock, an animal that prides itself on having the most colorful, gorgeous tail of feathers (see "*The Game*" and "*The Mystery Method*").

Now, why would an animal evolve such a tail, you might ask? It certainly draws more attention from predators, so wouldn't that be a bad thing?

Funny enough, it does draw more attention from predators, and that's exactly why it's a GOOD THING. If a peacock has a giant, colorful tail of feathers, what does that signal to the females?

"This peacock is so good at surviving, that even with a giant, colorful tail, the predators still can't get him. Mating with him would give me the best genes, period."

The same concept applies to human beings, and the same concept applies to being jacked.

So, with that in mind, here's some of the social benefits of being jacked:

- More Female Attraction (Obviously)
- More Male Attention (Good and Bad)
- Passive Shit Test to Men (A Chance to Catapult Your Status)
- The Halo Effect

The biggest benefit, in my opinion, of being jacked, is the halo effect.
It's a social dynamic that basically states you get all sorts of benefits for looking attractive.

Again, why is this?
It's because being friends with an attractive person means that by proxy, you will probably be introduced to other attractive people.

It's why hot girls always hang around other hot girls.

So, with that in mind, let me tell you a quick story… and then share some insider secrets on how you can get jacked

faster, to reap the social benefits.

A Fitness Model's Perspective

This article is a little bit difficult for me to write because I'd much rather say that being jacked is all that matters… but it isn't (and that's coming from a professional fitness model).

Being jacked does change the social dynamics, however – and if you can *develop strong social skills*, AND be jacked at the same time? Being the alpha male is like shooting fish in a barrel.

The funny thing is, too, being jacked is almost like a passive shit test towards the alpha males in the room. They sense the energy shift and immediately test your frame to see how strong it is.

You know what a shit test is, right? It's when you test someone's frame and status.

The pictures above were some recent pictures I took of myself. Not to toot my own horn, but I'm pretty jacked – hell, I get jacked for a living. In fact, let me tell you a story.

A while ago I walked into a bar with my girlfriend, and the second we walked in, the energy shifted in our direction. Now, from a social perspective, why was this?

- I'm Jacked (And It Shows)
- I Have Alpha Male Body Language
- I Have A Sexy Girlfriend
- We're Both Grounded in Our Own Energy

That's pretty much it.
We didn't even have to say a word, and the energy immediately shifted towards us. A big part of this, was me being jacked.

Shortly afterward, one of the guys in the bar (who knew some game) came up and tried to steal my girlfriend. It clearly wasn't working, so he tried to shit-test me.

> Damn dude, look at that chest!

he told me, trying to butter me up or get me self-qualifying.

> Your boyfriend's so sexy damn, how much do you lift dude? Stop it, I can't compete with this!

He kept on going, in an attempt to get me self-qualifying.

Of course, it failed miserably and only made me look better. You would not believe how insecure most guys get when they see a guy who's in a way better shape than they are.

So, by now, I'm sure you're thinking to yourself: "That sounds great… but how can I get jacked? Doesn't that take a lot of time?"

Well, fortunately not… if you follow these three tips.

The Difference I Noticed

My most recent 3-month transformation

I'm sure a lot of you are reading this, and thinking:

> "That's great, Jon! But is it really worth it to put in the extra effort?"

The answer is an unequivocal yes. When I was skinny, I still got female attention, but it was nothing compared to what it is now.

Before, I used to maybe get a few girls interested in me here and there… but now, it's literally like shooting fish in a barrel.

I was at the pool the other day, and two girls lying down, tanning, literally yelled out to me: "Hey, babe," while they were playing with their hair. I went over to them, chatted for 5 minutes, got their numbers, and left.

Now, to be fair, this doesn't usually happen – usually, girls just give you strong IOIs, but a lot of the time, they'll actually open YOU when you're jacked.

Why is this? Three big reasons:

1. You're More Attractive (Obviously)
2. It's Socially Acceptable
3. The Power of Pre-Selection

The first reason is obvious. Being jacked means you're more physically attractive. No shit.

The real magic lies in the other two, however.
First off, think about it from a girl's perspective – she runs the risk of being "slut shamed" if she opens guys too readily.

But, when she sees all of her friends checking you out? Now it becomes a fun game between the girls – "who can get the jacked guy to come talk to us first?" That's pre-selection for you.

She sees that her friends are checking you out, so it's suddenly "socially acceptable" for her to approach you. It feels normal and acceptable because her friends instantly approve.

It's similar to when a group of 3-4 guys sees a REALLY hot girl, and they egg each other on to go talk to her. Think of it like that, except it's girls egging each other on, to talk to YOU!

That's how incredible it is.
I remember another time I was at the pool (I go there a lot to show off the gains), and a girl literally came up and started flirting with us.

"You're cooking hamburgers? Oh wow, those look so good…" she said. "You can have one," I told her since we had a bunch. "Oh, really? No… I don't want it for free, can I do something for you instead?" she said.

I literally felt like I was in a porno or something.
One of the beta males in the group immediately cock blocked the situation because he never gets approached, but I wasn't even mad. How can you be, when you can just get another girl in minutes?

On top of this, getting girls on Tinder is literally like shooting fish in a barrel. I get open on Tinder all the time, and girls will literally throw their numbers and Snapchats at me.

I know all of this sounds hard to believe, but believe me when I tell you this… Getting jacked has changed my life more than almost anything else, and it can change yours too, if you give it a try.

3 Tips to Get Jacked Faster

Some Recent Snapchat Flexing, With Rapport Breaking Texts

Obviously, being physically superior is a huge attraction trigger. Girls are naturally attracted to men who are physically superior, which is why they go crazy over jocks in high school, and professional athletes in the real world.

This is female hypergamy at work.

We all want to be jacked – and we all can, too. What's important is that you stay consistent, and follow the fundamentals, however.

Find a good workout routine and stick to it. Count your calories, and get more than enough protein. We all know these things. It's nothing new.

But, I'm here to share a few of the secrets I've picked up along the way, that you can use to literally 3x or even 4x the speed of your recovery, fat loss, and muscle growth.

Tip #1 – Intermittent Fasting

Studies have shown that intermittent fasting is highly beneficial to your hormone profile.

… And you know what that means, right? It means more testosterone, which means you build muscle more easily, and in way less time.

Personally, I follow the 16-8 model, which means you restrict your eating to an 8-hour window.

So, if you wake up at 8 am, only eat from 2 pm to 10 pm. This is the most common form of intermittent fasting, and in my opinion, the most effective.

Tip #2 – Utilize High-Intensity Interval Training

High-intensity interval training, or HIIT for short, is a form of exercise that's extremely intense for a short period of time.

If you think about it, this naturally mimics our evolutionary conditions. Do you think cavemen were going on a 3-hour jog every other day? Of course not!

They were lightly walking around for most of the time, and then *immediately sprung into action* when they were hunting down an animal, or running from a predator.

To do HIIT, you simply sprint for 30 seconds, and then rest for a minute and a half. You repeat this 4-5 times, or to start, just 2-3 times.

So, for example, your HIIT session might look something like this:

- 3 Minute Warm Up
- 30 Seconds of Sprinting (or Going All Out on the Elliptical)
- 90 Seconds of Light Walking (to Recover)
- Repeat This Cycle 4-5x (30 seconds sprinting, 90 seconds walking, etc.)

The beauty of HIIT is you only have to do it once or twice a week to gain the benefits… and the benefits are abundant. Similar to intermittent fasting (IF), your testosterone will skyrocket.

Tip #3 – Use The Sauna

Studies have shown that using the sauna for just 15 minutes a few times a week can yield massive benefits for your hormones, recovery time, and heart health.

Once I started using the sauna for 15 minutes post-workout, I noticed the following benefits:

- Faster Recovery
- Relaxed Muscles (No More Knots & Tight Muscles)
- Better Sleep
- Overall Health/Wellness Improvement

Just adding in a quick sauna session post-workout can do wonders for your health, and best of all, it will help you get jacked way faster than you thought possible.

Summary: Being Jacked Gets You Instant Social Status

In conclusion, human beings are social animals, but we still value strength and size when choosing our alpha males. The world is a scary place sometimes, and we feel safer when we're led by a man who's physically outstanding.

…and while being jacked won't cure all of your social issues, when you get jacked in conjunction with learning some of the power moves we talk about here, your life will 10x in every way.

Getting jacked will take some time, and in fact, it will sometimes draw negative attention in your direction. Other men will test you, and talk shit about you… because deep down, they know that their girl would rather fuck you instead.

Just stay the course, and don't let it get to you. Life is a marathon, not a sprint… and I'm convinced that if you put in the work, you will completely transform your physique in just a few short months, and completely transform your social life in the process.

10 Science-Backed Laws to Become a Powerful Leader

Lucio Buffalmano · 21 July 2019 · Archived copy · Original

Most leadership guides are feel-good fluff with no substance.

Not this one.
Backed by social psychology and our deep expertise in power dynamics, these 10 laws will transform you from a good man into a respected, powerful leader.

Read on to discover how to command groups, win loyalty, and rise to the top.

Contents

- 1. Apprentice Yourself: Learn Culture & Power Structures
  - 1.2. Learn About The Group
  - ⍰ Example: Prison Study
- 2. Be Prototypical: Embody The Group's Values & Identity
  - ⍰ Reversal of The Law: Failure of Apprenticeship
- 3. Make The Group Look Up to You: Lead by Example

  - 6.2… But Also Control Rewards & Punishment
- 7. Reward Based On Contribution
  - 7.2.: The Ultimate Team: Competitive Altruists
- 8. Champion & Defend Your Group: It Shores Up Support
  - ⍰ Example: Ariel Sharon Pulling out of Gaza
- 9. Be Fair: Perceived Fairness Enables Group's Cooperation
  - 9.2. Be A Team Player
- 10. Remove Anti-Social Individuals (Or They'll Spoil The Bunch)
  - 10.2. Nip It In The Bud: Dispatch Snakes Before They Grow Teeth
- Bonus: Prepare Your Succession Plan

1. Apprentice Yourself: Learn Culture & Power Structures

Great and effective leaders started by being followers.

But not submissive, “hide in the corner” type of followers, of course.
They are *active* followers.

They contribute, partake in discussions, bond and connect with members, and of course, they take over responsibilities and add value to the group.

In short: **future leaders start by being great group members**.

1.2. Learn About The Group

Learn about:

- Group history
- Culture and identity
- Informal webs of power
- The most/least respected members
- Members’ personalities and histories
- Potential and aspiring future leaders (& threats)
- Current leaders:
  - What do people say about them?
  - How do current leaders act?
  - How can they use that info to position themselves?

The successful future leader embodies the group‘s norms, values, and aspirations.
He socially signals that embodiment, and positions himself as someone who can help the group and its members move forward.

Replacing VS Aligning

If the current leader falters, the aspiring leader with enough support may make a move to replace him.

But if the leader is effective, beloved, and has a strong power base, it's better to power align.

⍰ Example: Prison Study

The BBC Prison Study allowed for intensive observation while the group strived to form leadership.

The man who came to represent the prisoners started off by participating in group discussions without taking them over.
He observed, asked, and studied.

He probed the outgroup (the guards) and their power structures.
And he tested them, too.

And when it came time to decide who was going to speak for the group, it was he who led the group—not the most dominant man in the group-.

2. Be Prototypical: Embody The Group's Values & Identity

The most effective leaders embody the group.

Haslam, in "*The New Psychology of Leadership*" describes the leader's representativeness of the group as "prototypicality".

Being prototypical allows leaders to:

- Receive more support
- Drive change more easily
- Be excused more readily for mistakes (and even when behaving unfairly, Platow, 2001)
- Lead without pushback.

This last point is crucial.

The perception of power also changes with prototypicality (Fiske, 2011).
Power and influence from people outside of the group feel oppressive, while power and influence from an ingroup member is more positive.

The message for leaders is clear: trying to seem special as in "different" and "apart" from the group is a mistake.
Instead, **the most effective leaders *represent* the group as one of their best members**.

When the leader partakes of the group's culture and identity, we refer to "shared identity" (identity shared between leaders and followers).

⍰ Reversal of The Law: Failure of Apprenticeship

Think of leadership as a grassroots movement that takes you to the top.

The grassroots is your power base.
But to gain that power base, they must see you as a good representative.

In this fiasco, John Redwood lost the support because he displayed he was *not* a good representative:

> **Redwood**: (shows he doesn't know the Welsh national anthem) <— He sub-communicates he's not a representative of the group he craves to lead

John Redwood's political career went tumbling because he subtly communicated that he wasn't representative of the group. He wasn't "one of us".

⁉ PRO Tip: Only lead groups that match your personality
So prototypicality comes naturally to you -and you're genuine.

3. Make The Group Look Up to You: Lead by Example

“Prototypical” is NOT synonymous with “average”.

Quite the opposite.

You want to **represent the group as one of its very best members**.

Positively standing out makes your leadership all the more influential.
This is the essence of *prestigious* leadership.

You don’t need to be the best at everything.
And not even the best at your team’s core competence -especially not if you’re older-.

But you want to be experienced, and display great character.

Some crucial areas to excel at:

- **Work Ethics**
- **Experience**
  - Knowledge
- **Critical thinking** for superior decision-making
- **Preparation**, because sloppy leaders lead sloppy teams
- **Character**: own up to your mistakes, show you appreciate “learning” more than “being right” (see: how to develop a growth mindset)

And avoid:

- Any social climbing behavior (see example here)
- Abuses of power, including:
  - Personal vendettas
  - Sleeping with reports
  - Demanding and expecting exceptions

3.2. Lead With Empathy

Unfortunately, empathy is not a prerequisite to becoming a leader.

But John Mayer's work supports the idea that empathy is important to be a *good* leader.
Such as, a leader who adds value to the team.

Leaders who lack an emotional bond with their followers are dangerous leaders.
They are more likely to use their power position to further their own ends.
Often, at the detriment of everyone around.

This is the very reason why I started this website:

4. Display Personal Power When Starting Off

First impressions are crucial.

And they set the expectations *and the baseline* for future behavior.

If you start too democratic and affiliated, people will *expect* all decisions to be democratic and up to discussion.

Democratic leadership is great, especially with highly competent groups.
But it can become a problem if you must shift to a more forceful style because the group will feel like you "are becoming too overpowering."

It's better to do the opposite instead: start slightly more authoritarian.
Then, when you become more democratic, the frame is that they "won you over" with their good behavior.
And if you need to be more direct at times, it will feel natural.

> People always respect strong leaders who *choose* magnanimity and democracy.
> But they wonder if democratic and affiliative leaders are lacking in strength.
>
> ✒ *The Power Moves proverb*

Also read:

- Power Intelligence
- Social power dynamics

4.2. Don't Shy Away From Occasional Anger

Machiavelli once said:

> It's better to be feared than to be loved.

But here is the best part: *fear and love are not antithetical*.

And rare outbursts of anger or dominance in an otherwise calm and caring personality can combine the two.

The opposite is dangerous: a constantly calm and detached leader is suspicious.

Does he even have what it takes to raise his voice?
This is what the type-As, drivers, and more alpha-male personalities will be wondering.

And can he be passionate like a human being or is he some kind of emotionally impaired psychopath?
This is what the more empathetic team members will be wondering.

Put those questions to rest: **show you're *both* strong and caring**.

See Michael Corleone, mostly calm.
But also going wild every once in a while:

> **Michael**: (calm, then furious, then back to calm)

Do this if you don't want to raise your voice

You can achieve the same effect with:

- **Strong feedback**
- **Disappointment**, judge style
- **Telling them you expect better from them**

Break rapport with disappointment.
Then, once they fix their mistake, be even warmer than before as a reward. Sub-communication: "*Now* (that you complied) you can regain my respect and love".

5. Develop Groups Identities: Turning "I's" Into "WE's"

We define group identity as:

> The way in which a group defines and recognizes itself

The group's identity determines:

- Norms and behaviors
- Who it attracts and retains.

As a leader, you must **shape and control the identity that encourages the mindsets and behaviors that**

support your goals.

A *social identity* links the group identity with the individuals. It refers to how the members define themselves *in relation* to the group

When social identities are weak, people don't feel any sense of belonging to a group.
On the contrary, when social identities are strong people are *proud* to define themselves as group members.

John Turner, the developer of self-categorization theory, found out that **when people define themselves as group members, they also start *behaving* as a group**.

Including collaboration, going the extra mile, caring about the team, and supporting each other.

⍰ Example: Bush & The Iraq Invasion

Freedom and democracy are two major values of the American group identity.

Bush stressed, highlighted, expanded, and leveraged both to shore up support for his war.

> **Bush** (sub-communication): We as Americans value freedom and democracy. We'll protect our freedom and export democracy for a better America and better world

5.2. How To Strengthen Identities

Some ways to increase the group's identity include:

- Selection to enter the group
- High standards
- Rewarding high commitment
- Strong in-group bonds
- Foster a sense of pride

Unfortunately, external enemies and hazing have also been proven to increase the group's social identity and cohesion (for hazing, see Cialdini, 1984).

⍰⍰⍰♂ Lucio's Example: Excellence, With Fun

When I became a Toastmasters president, our culture wasn't well defined.

Why were we even meeting?
Just to get better at public speaking? If so, they could have joined *any* other club.

I wanted something more —a group who *loved* meeting and supporting each other.

I defined "we" as follows:

1. Highly supportive group of people
2. Who love each other's company
3. Serious about self-development,
4. But who don't take themselves too seriously

It's an apparent contradiction. "We" are fun and freedom lovers. But also are driven to move forward in life while helping each other with tough-love feedback.

The clarity and appeal of our identity propelled our club to record new joiners with a strong core of members who never missed a meeting.

Also see: how to be a great Toastmasters president.

6. Leverage Intrinsic Motivation

Poor leaders focus solely on sticks and carrots.

But carrots and sticks are sub-optimal.
Machiavelli said it a long time ago: mercenaries make for bad armies.
And classical research shows that **incentives might lead to compliance, but not to conversion**.

Relying on carrots and sticks is also costly.
One, you must monitor followers to ensure compliance. And two, you deplete resources giving away all those carrots.

The intrinsic motivators of social identity and personal motivation instead are self-replenishing.
See the diagram:

In short: always lead with intrinsic motivation first.
Make people *want* to contribute to the team and go the extra mile for the cause.

Move Beyond 'What's In It For Me'

'What's in it for me' is associated with more material exchange -the extrinsic approach-.

Research shows that in politics and in non-profits appeals to identity trump the social exchange model.
But that is also true for the very best *for*-profit businesses.
Organ and colleagues, for example, show that employees' willingness to "go the extra mile" hinges on them *not* asking "what's in it for me".

PRO Tip: Minimize transaction talk and separate it from motivation
Take care of material exchanges—but keep its discussion separated. And once done, focus on intrinsic motivation.
Better yet, have someone else handle the money negotiation.

6.2... But Also Control Rewards & Punishment

But let's not be naive.

Not everyone can be intrinsically motivated.
And some tasks can work well with rewards.

Plus, **it's always better to have the full power toolkit**, than just a part of it.

Finally, everyone respects a leader who *could* use punishments, but never does.
Here is a good maxim to keep in mind:

> **Your friendly handshake on the table is always most appreciated when there is a revolver in the drawer.**
>
> ✒ *The Power Moves proverb*

7. Reward Based On Contribution

The best contributors get to play more

Hierarchies are natural within any group.

Instead of pretending they don't exist, **base your hierarchies on contribution**.
Such as, how much value members add to the group, the mission, or the mindsets.

For example, an average performer who works the hardest adds value with his example, and should be rewarded for that.

> **Respecting merit-based hierarchies sends the message that meritocracy reigns supreme**.

7.2.: The Ultimate Team: Competitive Altruists

Barclay refers to competitive altruism when pro-sociality affords status.

That's the ultimate "culture of cooperation".

Even when pursuing self-interest, people contribute to the team and mission.

8. Champion & Defend Your Group: It Shores Up Support

Nobody loves and respects a leader who doesn't stand up for his group.

And the opposite is true.

Leaders who champion the ingroup can rely on some of the most loyal supporters.
And they are allowed more latitude because people see them as "the leader who has our back and whom we can count on".

Says Haslam:

> Leaders' capacity to exert influence—the very essence of leadership—rests on their behavior being seen to have "done it for us."

Unfortunately, studies show that leaders can lose support when they don't bend the rules to favor their ingroups.

Fortunately, highly prototypical leaders who show in deeds they are in it for the group -as opposed to themselves- can allow themselves to be fair even with the outgroup.
One more reason for leaders to be fair and prosocial!

⍰ Example: Ariel Sharon Pulling out of Gaza

Pulling out Gaza in Israel was seen a betrayal of the ingroup.

But Ariel Sharon could do it without much political blowback.

Why?

Because Sharon was seen as a conservative hawk, a war hero, and a staunch defender of the Israeli ingroup.

Thanks to his reputation and a history of championing the ingroup, he was allowed to do it.

Tip: Romance Your Spirit of Sacrifice

There are ways to do 'fairly' romanticize one's battles for the group.

Bosses may tell employees how hard they fought against budget cuts.

But the line between persuasion and manipulation can be thin.

So the more Machiavellian and manipulative politicians pick a fake enemy to play tough. Then, they ride that populist anger to gain more votes and support.

This is how Trump won the election: "America first" is nothing but a promise of ingroup favoritism.

Read more:

- Manipulation dynamics
- Trump's leadership style: dominance VS prestige

9. Be Fair: Perceived Fairness Enables Group's Cooperation

Unfair leaders break teams into individuals.

When people perceive leaders to be unfair or corrupt, they revert from prosocial to selfish and cynical. They focus less on contribution and more on playing politics and befriending the leader.

That's good for the leader, in some ways, but it's bad for the team and goals.

On the other hand, principled leaders set the example to turn selfish individuals into a collaborative team. That's one of the reasons why trustworthy, honest politicians run well-functioning, wealthy countries.

In social psychology, this is called the "group engagement model" (Tyler & Blader, 2003) and it's been shown in game theory experiments (Axelrod, 1984) as well as in animals and humans (Ridley, 1996).

After Tyler & Blader, Adapted from Haslam

> **Exemplary leaders show individuals that "we" is stronger than a collection of "Is"**

⍰ Example: People Saved Water Based on Leaders' Trust

Tyler and Degoey found that people limited water use based on trust in politicians, *not* the severity of the shortage.

Think about it: people's prosocial behavior didn't depend on the *severity* of the there but on the (perceived) *fairness of the leader*.

9.2. Be A Team Player

Axelrod suggests that one of the ways to foster cooperation is to signal the intention for reciprocation.

in simple words: if you want team players show that you're a team player.

Also see: enlightened reciprocation.

https://thepowermoves.com/enlightened-collaborator

10. Remove Anti-Social Individuals (Or They'll Spoil The Bunch)

Rotten apples spoil the bunch.

Anti-socials take from the team—but that's not even the biggest issues.
Anti-socials destroy teamwork, demotivate the top performers, and turn teams into selfish players.

Let's quickly review the science.

Experiments in public good environments show that most people are "conditional cooperators".

That means they cooperate as long as the majority cooperates.
But when selfish individuals (free-riders) take more than they give, conditional cooperators stop giving.

The 'rot' spreads, and it becomes a vicious circle.
Then you hit the 'tipping point', and your team devolves into a collection of (selfish) individuals.

This is crucial, so let's simplify: **selfish individuals spread selfishness like a virus**.

Solution:

Punish those free-riders.
Not only it's good for the team, it's great for your reputation as a leader:

Source: Evolutionary Psychology, David Buss, 2018
Luckily, experiments show that the opposite is also true.
Positive behavior of mutual support, altruism, and value-giving cascades into more of the same.

Also read:

- How to spot takers
- To be good, you need to be bad

10.2. Nip It In The Bud: Dispatch Snakes Before They Grow Teeth

Enemies inside aren't just bad for you, but for the team as well.

As legendary Chicago Bulls coach Phil Jackson said:

> The secret of managing is to keep the guys who hate you away from the guys who are undecided

When internal enemies are left free to operate, the team splits into two sub-teams: the loyalists, and the rebellious faction.
The first victim is the team spirit.

Solution?
Ruthlessly remove your enemies.

Also see:

- **Profiling toxic employees**

Bonus: Prepare Your Succession Plan

John Maxwell said:

> Time is the ultimate test of leadership

Even more, we add that 'the time *after you're gone*' is the ultimate test of leadership.

The worst infighting happens right after a great leader abdicates.
And the best empires faltered because of poor succession.

Don't make the same mistake. **Ensuring that your work survives your mortal life is your final crowning.**

With big corporations, there is no definitive answer on whether an external or internal CEO will perform better. But successors who are too different lead to cultural drifts and potential disagreement about the organization's identity (Balser, 2009).

Avoid that risk and choose successors who are honorable, effective, and prototypical.

How to Be a Great Manager: 12 Proven Leadership Strategies

Lucio Buffalmano · 24 July 2019 · Archived copy · Original

Great managers don't just manage—they lead, influence, and command respect.

Whether you're handling teams, navigating office politics, or driving results, understanding power is key —and we're experts in that.

This guide delivers 12 real strategies for high-impact leadership.

Let's dive in.

Contents

- 1. Develop Group Identity: Turn Individuals Into Teams
- 2. Wield Power Effectively
  - 2.2. Leverage The 6 Forms of Power
- 3. Appeal To Intrinsic Motivation
- 4. Use Emotional Rewards
- 5. Act High Power: Exec Material
- 6. Acknowledge & Foster Meritocratic Hierarchies
  - 6.2. Use Your Personal Power For Informal Hierarchies
- 7. Champion Your Team
- 8. Set The Standard With Your Example
  - 8.2. Be Honest: If Fosters Team Spirit
- 9. Keep A Healthy Emotional Distance
- 10. Power-Align With Executives
- 11. Don't Shy Away From Occasional Outbursts

- 12. Fire Anti-Social Individuals (Quickly!)
  - 12.2. Be Quick to Fire Your Enemies

1. Develop Group Identity: Turn Individuals Into Teams

Individuals become a team when they:

- Identify with the team
- Define themselves as team members

The self-categorization theory explains that **when people define themselves as group members, they also start *behaving* as group members**.

That leads to team spirit and pro-social behavior, including mutual support, personal initiative, and going the extra mile.

P.S.:
That also means higher output that you can then leverage for your promotion.

See here how to do it:

- **How to get the most from your team**

> How to Inspire People: 8 Leadership Strategies from Psychology

2. Wield Power Effectively

Good low-power managers remain managers.

Great high-power managers become executives and CEOs.

2.2. Leverage The 6 Forms of Power

Classical work by French and Raven identifies six different forms of power.

Let's introduce them through an example: a manager who wants his reports to attend a weekend seminar.
That manager can achieve his goal through one of his 6 powers (or a combination of them):

1. **Rewards**: pay the overtime, assign future high-visibility tasks, etc.
2. **Coercion**: passing the employee for promotions, "mobbing", assigning tasks that are humiliating or disempowering, etc.
3. **Expertise**: reports comply because they trust the manager
4. **Information**: the manager sells the idea well and makes the reports *want* to attend (this is persuasion)
5. **Legitimacy**: reports comply because they recognize the manager's authority over them
6. **Respect**: reports comply because they respect their manager and look up to him (this is a subset of soft power)

What type of power managers use depends on context (Bacharach, 1980), personality, company culture (Ashforth, 1994), and, of course, who they are dealing with.

How managers feel they can use power is largely correct and a good rule of thumb for calibration:

Power	Examples	Ability to Use On		
		Superiors	Peers	Reports
Reward	• Promote • Award pay rises • Assign desirable duties	Very low	Low	Moderate
Coercive	• Demote • Impose financial penalties • Assign undesirable duties	Very low	Very low	High
Expert	Specialized knowledge in a particular domain	High	High	High
Informational	Ability to present persuasive and logical arguments	High	High	High
Legitimate	Role-related (e.g., general, head of department, supervisor)	Very low	Low	High
Referent	Capacity to be admired and/or respected	Moderate	High	High

Taxonomies of power and the observed capacity to use them on others (based on Kahn's survey)
Note that **expertise and persuasion are the true "win-all" when it comes to power**.

Also read:

- Best persuasion books
- Best communication books

3. Appeal To Intrinsic Motivation

Reward, coercive, and legitimate powers are the easiest to use because they come prepackaged with the territory.

The moment you got promoted to a managerial position, you got the title (legitimate power) and the tools of the trade (rewards and punishments).

Him: It's your job! I give you money, you give me ideas <— Transactional approach to management

Her: But you never say "thank you" <— Asks for emotional rewards / intrinsic motivation

Him: That's what the money is for! <— Doesn't get it, and will soon lose her

Being a good manager means adapting to your employees' needs—even if they're not your own
While we understand and empathize with 'alpha male types' like Don Draper, this is simply less effective.

Classical research in social science shows that **incentives might lead to compliance, but not to conversion.**
Meaning: your reports might do it, but they will not believe in it and will not take ownership of your goal.

Relying on rewards and punishment (or "carrots and sticks") is also costlier.
They deplete your resources, and disenfranchised employees require more supervision.

See the first half of the diagram:

What's the alternative?

The alternative is intrinsic motivation.
Intrinsic motivation includes:

- **Shared group identity** with the team (i.e., reports proudly self-categorize as group members)
- **Shared identity with the manager** (i.e., "us and the manager both belong to this great group")
- **Alignment of individuals' aspirations with the team's goals**
- **Uplifting, supportive environment**
- **Pride** for being in the 'right' group

Extrinsic motivation matters even more in politics, volunteer-based organizations, and wherever money plays a smaller role (Tyler & Blader, 2001).

But it's a mistake to think that for-profit businesses rely only on money and "what's in it for me" types of exchanges.

Organ and colleagues, for example, show that employees' willingness to "go the extra mile" hinges on them *not* asking "what's in it for me".

Most dream employers are dream employers *because* of intrinsic motivation.

Simon Sinek, for example, says that many dream of working at Apple because Apple speaks to their identity and it helps them define "who they are".
That's intrinsic motivation.

P.S.: Don't make excuses, learn to be more inspirational
Working in a duller industry is a cop-out for managers who do not know how to leverage intrinsic motivation.
Any work, from cleaning toilets to washing cars gains with more intrinsic motivation.

4. Use Emotional Rewards

Every time you see something good, say it

As Blanchard and Johnson say, most managers give feedback only when something is wrong.

That demotivates employes and makes them feel underappreciated.

But dispensing emotional rewards isn't just about 'being nice'.
Dispensing emotional rewards is about emotional power dynamics and leading with soft power.

If you're a high-quality man, people will crave your rewards -and fear your criticism-.
That's the most effective way to manage.

Lucio's Take: **the emotionally challenged manager**

Lucio:
When I came back from my traveling sabbatical I attended the parent-holding company party.

One of the very first things the managing director told me with an accusatory tone was:

> **Bad Manager**: (I got you SOB expression) You know that your last customer isn't using the facility? But you got the bonus, eh?

Now consider that the bonus was peanuts, I had brought *all* their current customers, and I had never heard any praise from him.
Wonder why I didn't think too highly of him?

See this seminal article:

- Judge power dynamics

Pro-tip: share the compliments with the team

When you receive external compliments, confirm and then share with your team.

Example:

Sharing praise: a simple, cost-effective way of fostering team-spirit and motivation

5. Act High Power: Exec Material

There is one form of power that we haven't listed yet:

Personal power.

If you want to join the executive cadre, you need to be high power.

This website and Power University are here to support you.
But a few tips here:

1. Mind your social ROI: speak with purpose

The ROI Matrix, part of our Social Investment Model (Buffalmano, 2026)

The *APA Handbook* explains that high-status men talk more
However, that may be different at work, and certainly depends on *what* you talk about and *with whom*.

Managers who chit-chat too much are perceived as prioritizing relationships over results.
It's communion over agency, associated with femininity instead of masculinity, and not executive material.
Be more strategic. Be uplifting and helpful, but skip endless chats. Especially with lower-status people.

2. Direct meetings, rather than acting like a participant

Ensure the meeting stays on topic and productive.

Help reach decisions, assign tasks, and then summarize.

3. Apologize with a neutral tonality

Honorable men own up to their mistakes but they don't *over*-apologize.

Too profuse an apology feels like begging for forgiveness, which is emotionally needy and puts you in a subservient position.

Mentally strong managers move on quick from mistakes because they have antifragile egos. They're focused on getting things done, *not* on exculpating themselves.

Solution?
Learn to say "I'm sorry" in a more neutral tone:

> **Me**: Sorry I mixed it up (flat tonality) <— Sub-communication ⇒ "I've made a mistake there, so what, let's move on".

Also read:

- **How to look the part of a powerful executive**

- **How powerful men speak**
- **How powerful men move**
- **The archetypes of dominance**

6. Acknowledge & Foster Meritocratic Hierarchies

All groups have a hierarchy (Peterson, 2018).

And while 'flat hierarchies' have a place, don't pretend there is no hierarchy at all.
Instead, put those hierarchies to good use.

For example, **assign status based on tangible benefits people bring to the team to foster a culture of meritocracy.**
For example:

- **Results**
- **Effort** (ie.: show example of dedication and hard work)
- **Spirit** (ie.: can-do attitude, optimism, team loyalty, etc.)

6.2. Use Your Personal Power For Informal Hierarchies

Job titles sometimes aren't under your full control.

Instead, use your rewards and attention to create a parallel 'informal hierarchy'.

If it overlpas with the formal hierarchy, great.
If not, you can positively fix company issues and politics.

🤦♂️Lucio's Take: **Careful telling people who's 'lower down'**

Lucio:
One poor manager once told my same-rank colleague I was 'above her'.

While that was good for me, in way, it backfired on him.

Maybe he wanted to stoke competition for increased output.
Instead it lost him goodwill with my colleague, and gained nothing from me because he didn't tell *me*.

If anything, it got us closer and made us more suspicious of him.

Just *act* the informal hierarchy, no need to tell people who's 'lower'.

7. Champion Your Team

Theoretically, everyone should support the company as a whole.

But that's not how people's minds work.

People tend to break up bigger groups to form smaller units of allegiance.

None of your reports will say it out loud, but they secretly resent a manager who doesn't stand up for his team.
And everyone love a manager who champions and defends his team.

This isn't just me, of course.
Social research shows that **the more your reports see you as defending and championing them, the more they will love you and support you**.

Says leadership researcher Haslam:

> Leaders' capacity to exert influence—the very essence of leadership—rests on their behavior being seen to have "done it for us."

Of course, "championing" your team within a bigger company requires tact.
Here are some ideas:

- **In salary negotiations, be (slightly) on your report's side**

Help your reports with HR's negotiations.

- **Maintain goodwill negotiating as the founder**

If you are the early founder, mention your limitations from a higher authority to maintain goodwill -ie.: investors, board-.
See: manipulative negotiation techniques.

> 20 Manipulative Negotiation Tactics

- **Leverage enemies (tactfully!) to show you're on their side**

Enemies help a group bond.

Of course, be careful.
Exaggerating makes you come across as a bad fit for the organization.

But imagine your report complains about "that other department" slowing down his work.
The typical manager's response that you're all part of the same company will frustrate your employee.

Instead, if it's true, empathize with him to sub-communicate that you're on his side.

🤦♂️Lucio's Take: **I respected my manager most when he defended me**

Lucio:
I still remember my first manager fondly.

Anton, the program manager from another unit, would always grab me last minute for whatever he needed.
As a freshman, I wasn't sure whether refusing would harm my career, so I asked my manager.

He listened to me and then said: "*Whenever you feel it's too much, simply tell me, and I will take care of telling Anton to back off*".

It was a small gesture, but it significantly made me respect him more.

Also read:

- **Corporate manipulations**
- **Manipulation: a field guide**

> Manipulation: Techniques, Strategies, & Ethics

8. Set The Standard With Your Example

Here's how you do it:

1. **Set the values** you want
2. **Develop a social identity around those values**
3. **Represent those values** with your character and behavior

You want to be representative of the group.
But, as a manager, represent the group as one of its very best members.

While values may change, the fundamentals of honorable characters are always the same.
And **an honorable character is the foundation of prestigious leadership**.

And avoid:

- ⍰ Social climbing
- ⍰ Competing with your reports (remember: you are the manager, see yourself as a hunter and groomer of talent)
- ⍰ Getting too wasted at companies' parties (nothing screams "sloppy" as an overly drunk manager, only beat by a wasted manager who gets too emotional or sexually forward)
- ⍰ Abuses of power, including:
  - Demanding
  - Sleeping with reports

8.2. Be Honest: If Fosters Team Spirit

As the manager, you are the most important individual in the team.

You most influence the culture, and the level of contribution.

If they perceive you as unfair, individuals revert from pro-social behavior to more cynical, selfish, and 'covering my a*s'.
Contribution drops, and politics reigns.

This leads to a vicious circle where everyone focuses on taking and nobody gives anymore, It's referred to as tragedy of commons, and everyone loses.

Luckily, the opposite is also true.
And **principled leaders set the example to turn selfish individuals into a collaborative team**.

This is why, if you are wondering how to manage great teams, the simplest answer is: be a great team player.

In social psychology Tyler & Blader call this phenomenon the "Group Engagement Model", and it's been confirmed by experiments of game theory as well (Axelrod, 1984; Ridley, 1996).

See a diagram here:

9. Keep A Healthy Emotional Distance

Be friendly, but not too close friends.

Social power dynamics is clear here:

Close friendships are friendships of equals.
And a relationship of equals harms your ability to lead and command as as a superior.

So albeit the popular 'bring your whole self to work' and 'vulnerability' have their merit, take them with a grain of salt.
And don't overdo them.

See:

- **Vulnerability is not power**: how to do it right

10. Power-Align With Executives

Adapt the views, values, and opinions of those in power.

While you can fake it, it's far better to find a place that genuinely reflects your values.

The higher congruence of genuine alignment helps you be more charismatic, persuasive, and powerful (Morgan, 2014)

11. Don't Shy Away From Occasional Outbursts

Machiavelli said:

> It's better to be feared than to be loved.

And here is the best part: fear and love are *not* antithetical.

A strong manager who champions his team… But who seldom also gets angry achieve both at the same time.

A constantly calm manager, often described as the ideal in most "how to be a great manager" guides, is suspicious.

Your reports may wonder if you're some kind of emotionally impaired psychopath.
Or, even worse, they might wonder if you're not too weak.

Put those questions to rest with well-calibrated outbursts.

Alternatives to raising your voice

Strong feedback or intense expressions of disappointment work equally well -if not better-.

For example:

> **Strong manager**: (intense, disappointed) That would have been OK for someone else. But not from you. You have better potential than this. I expect better from you

Notice that this is uplifting and inclusive at the same time that it's strong feedback.

At first, this will break rapport.
But then, once they fix their performance, you win them back with even more warmth.

This ties back to emotional power dynamics and soft power.

The sub-communication if to say "When you do good work, you're back being a beloved team member".

12. Fire Anti-Social Individuals (Quickly!)

Rotten apples spoil the bunch.

That's not a maxim, it's (social) science.
Let's quickly review it.

Experiments show that the biggest group of people in any team are "conditional cooperators" (around 50% to be precise).

That means that **most people cooperate *only* as long as the majority cooperates**.
And when they see selfish individuals (free-riders) who take more than they give, they re-assess their pro-social strategy.

When free-riders go unpunished, conditional cooperators cooperate less.
Eventually, they stop giving completely.

And that is why **a good team manager recognizes selfish operators and gets rid of them as soon as possible**.

Luckily, the opposite is also true.

When cooperation and support increase, most people also start giving more.
The increased contribution is often related to how much more others contribute, which is why it's possible to start a virtuous cycle of cooperation.

12.2. Be Quick to Fire Your Enemies

This might sound Machiavellian, but it's not.

As a manager, you are the lighthouse of the team.
And if you are doing a great job, **your enemies are the team's enemies** (and vice versa).

Keeping enemies within the group is dangerous not only for yourself but for the team as well.
They will scheme and undermine you, forming coalitions within the team.

The solution, just as with the free riders, is to remove them.
If not possible, at least isolate them.

Also see:

- **List of toxic employees**

Political Strategy: Don't Antagonize Skilled Political Players

If you can't fire them, don't antagonize the people who are most likely to advance.

The last enemy you want is a rising star.

If it's a fellow manager, rise faster than them if you can, but without directly competing.

Also, if you're firing them, ensure it will go through smoothly.
Some of them may already have friends high up who may block the proceedings… And that may turn against you.

We teach good men the mindsets and skills to advance at work in Power University

How Use The 48 Laws of Power In 2026 (With Examples)

Lucio Buffalmano · 8 August 2019 · Archived copy · Original

Many readers learned the basics of Machiavellianism and manipulation from Robert Greene's popular "*48 Laws of Power*".

Unfortunately, some of these laws are based on ancient examples, and some principles don't apply as well to the modern age of the internet, AI, and influencer-based power.

In this article, we update *The 48 Laws of Power* with modern strategies and examples that work in today's world.

⍰⍰ For the complete book guide, see the main 48 Laws of Power guide.

Intro: Why Laws Need Updates

Modernity transformed the context. Here's an overview:

Greene's Context	Modern Changes	Law Updates
Kings & absolute power	**Freedom**, democracy, individual rights	**Sovereignty:** prioritize personal power over 'being a perfect courtier'
Low individual power	**High optionality** (dating, social & career)	**Leapfrogging:** networking and job-switching over 'never outshining the master'
Small & fixed social groups	**Anonymous metropolises**; digital reputation	**Self-expression:** self-focus & high-value branding over 'behaving like others'
Low costs for dishonor	**Empowered talent** 'vote with their feet & hearts'	**Honorable dominance:** Long-term, prestige trumps over-manipulation & 'stealing credit'

Download a high-resolution version of the modernized 48 Laws table here

Most examples from *The 48 Laws* are historical, and many are from *ancient* history.

While many power principles still apply, context also matters, and context has changed dramatically.

For example, the influence of bosses and social groups over individuals has waned. Today, everyone, and especially high-value men, enjoys more freedom and power than ever.
In this context, laws like “fit in” or “never outshine the master” carry fewer benefits and higher opportunity costs.

In a world with more freedom, information, and distributed power, *soft* power, prestige, and ‘pull’ approaches become increasingly effective compared value-taking strategies.

Let’s review some laws for more details:

Law #1: Leapfrog Your Boss

✕ Law 1: Never outshine the master.
✓ Law 1: Learn everything from your master, then move past him

⍰ Law of Power #1 is Dated Because it Slows Down Ambitious Men

In Greene’s contexts of kings, castes, and little social mobility ‘never outshining the master’ was a good rule of thumb.
Keep your head down, and… Stay safe. But **safety behind an average boss underperforms ambitious men in modern contexts.**

HBR research finds that ‘gatekeeping managers’ hold your career back.
And ADP finds that staying in the same role 3+ years slashes your chances of raises or promotion. Today, it doesn’t pay to play small.

⍰ Modern Application: Switch Jobs, Network For Power & Options, Be Your Own Boss

In today’s world of high mobility and optionality, it pays better to be bolder: network, switch jobs for higher pay, and leapfrog your boss with high-visibility projects.

⍰♂Lucio’s Experience: **Leapfrogging & sidestepping my masters**

Lucio:
I outshone my boss in sales and got to negotiate with the other higher-power MD for a higher position, salary, and equity package (see the story here).

Better yet, I'm living my best life after I quit having 'masters' and focused on my life passion and mission: TPM and Power University.

Law #4: Speak Up

✖ Law 4: Always say less than necessary
✅ Law 4: Speak up, be visible, and build your personal brand

⍰ Law of Power #4 is Dated Because Silence Makes You Disappear

We live in a fickle and narcissistic world where quiet men are outshone by the many who speak more and louder.

⍰ Modern Application: Speak Up, Gain Leadership & Visibility

Today's dominant leaders speak up to gain status and frame conversations to their liking.

Modern social media also offer new, unparalleled opportunities for fame.
Many influencers gained popularity with over-talk (ie: Ben Shapiro built an empire by commenting on every news).

Law #5: Get A Great Online Reputation & Live Free IRL

✖ Law 5: So much depends on reputation. Guard it with your life.
✅ Law 5: Curate your online reputation, and live freely in your real life

⍰ Law of Power #5 Is Dated Because High Mobility Makes Large Reputation Investment Low ROI

Most ambitious men will go through countless new social circles where reputation restarts from zero every time.

Plus, **modern men don't need a fixed social circle but can walk their own path**, 'sigma style' while meeting women and making friends *outside* of social circles.

⍰⍰♂ **Lucio's note**: this is how I like living

⍰ Modern Application: Focus on Online Reputation

Modern reputation doesn't run with word-of-mouth but with Internet searches, social media, and AI.
Digital reputation sticks beyond changing groups and people.

In real life, focus on gaining the respect of the people that matter, and forget all the rest.

Example: Keanu Reeves & The Heart of Gold

Few know Keanu Reeves in person, but many think he is great because of his online reputation.

Imagine if he wanted to make it public…

Law #7: Lead With Honor & Reap The Benefits of Higher Productivity

✗ Law 7: Let others do the work for you, but always take credit
✓ Law 7: Make people feel valued and give credit. They work harder, the pie grows, and you reap the rewards.

⍰ Law of Power #7 is Dated Because Team's Output Matters Today

Servants couldn't do much if their masters took credit, and feeding themselves and their families was the only priority.

But empowered employees expect better, and value respect and organizational fairness (Cohen-Charash and Spector, 2001).
This Mad Men TV series portrays this more modern dynamic:

> **Report**: (accuses bosses of stealing her idea)
> **Boss**: It's how it is, you should be thanking me
> **Report**: (quits some time later) <— The boss loses a valuable asset

Those who stay, less talented and demotivated, will have lower productivity, which long-term undermines the credit-taking boss.

⍰ Modern Application: Motivate Your Team, Reap the Benefits of Higher Productivity

Higher productivity means bigger pie for all—*including* for the leader.

This approach is particularly valid for masculine and agentic men who value achieving goals, not just 'looking good'.

Also read:

- The realpolitik guide to management

Law #11: Make Others Crave Your Presence & Attention

✗ Law 11: Learn to keep people dependent on you
✓ Law 11: Make people *want* to depend on you

⍰ Law of Power #11 is Dated Because Dependency is Costlier

It was easy for masters to make peasants dependent. In today's world, dependence is costlier, rarer, and not the peak of power many think it is.

⍰ Modern Application: Get High-Value Men & Women to Want You

The stronger currency of influence is not low-value dependence, but emotional investment from high-value people.

Top men earn it with high value and good social strategy.
Even if others may not strictly *depend* on them, they *want* them, crave them, and sometimes emotionally *need* them.

These are the types of high-value, power-savvy men we build inside Power University:

Check Power University

Law #13: Appeal to Higher Ideals With Prosocial Frames – Then Capture The Profits

✗ Law 13: When asking for help, appeal to people's self-interest, never to their mercy.
✓ Law 13: Appeal to higher ideals to signal honor, attract top talent, and sell to the wealthy

⍰ Law of Power #13 is Dated Because When Basic Intrinsic Needs Are Met, People Crave Higher Value

Self-interest in a world where basic needs are met underperforms.

Maslow's hierarchy suggests that people who meet basic needs crave self-actualization.
And research supports it: **engagement and teamwork grow when people do *not* think of what's in it for them** (see Haslam, 2011).

⍰ Modern Application: Provide For Material Self-Interest, But Focus on Higher Ideals & Values

Today's most influential men go beyond pure self-interest and attract with higher ideals.

People are willing to work for less and for longer if they feel good about it.
In marketing, **make people feel *less* self-interested**. The highest margins happen when people feel good and can virtue-signal ' their goodness.

Profits are largest when you help wealthy people feel better about themselves
More examples include Starbucks and fair trade, and Dolphins-safe tuna.
Read more:

- Corporate manipulation

Law #17: Lead With Warmth, While Holding Onto The Tools of Coercive Power

✕ Law 17: Keep others in suspended terror: cultivate an air of unpredictability.
✓ Law 17: Maintain the tools of control, but lead with honor to attract the best talent.

⍰ Law of Power #17 is Dated Because it Backfires in Modern Leadership Context

Erratic behavior for "air of unpredictability" requires absolute power. Even there, it's high risk: research shows that despots often meet premature death.
In modern contexts, 'suspended terror' would drive the best talent away.

⍰ Modern Application: Be a High-Power, Yet Honorable Leader

Be a strong and prestigious leader, make them crave your rewards.
Just like a Godfather, allies will remain closer if you keep the terror for your enemies.

How to be a leader

Law #18: Build A Fortress – Then Act As If You Don't Have One

✕ Law 18: Do not build fortresses to protect yourself – isolation is dangerous.
✓ Law 18: Fortress your life by covering your downsides. And then enjoy life carefree

⍰ Law of Power #18 is Dated Because Modern Fortresses Don't Require Isolation

Modern fortresses are not literal fortresses; They're strategic tools of high-value men, including multiple bank accounts, prenup agreements, doomsday bunkers, legal weapons, bodyguards, multiple passports, etc.

⍰ Modern Application: Protect Your Downsides For Greater & Safer Cooperation

Fotress your mind first, and then fortify pragmatically. Never depend so much on anyone that they could ruin you. Ensure that you'll always land on your feet, even if they betray.

Read more:

- Fortressing strategies for top-1% men

Law #24: Learn Office Politics, But Never To The Detriment of Skills & Results

✖ Law 24: Play the perfect courtier
✓ Law 24: Be a king

⍰ Law of Power #24 is Dated Because Modern High-Value Men Don't Need to Be 'Yielding' to Win

Greene states that the perfect courtier is 'yielding and indirect', associated with submissiveness, low power, and low honor.
It may have been helpful with egotistic kings, but modern high-value can skip it.

⍰ Modern Application: Live Like a King

Modern high-value men don't need to be literal kings to live like kings.
Smart and strategic men can have it all: attractive women, a life of freedom, and the fulfillment of pursuing meaningful goals.

Law #27: Create A Self-Help Movement of Easy Fixes

✖ Law 27: Play on people's need to believe to create a cult-like following
✓ Law 27: Market easy fixes

⍰ Law of Power #27 is Dated Because Cults Attract Low-Value People

With mass education and secularization, cults struggle to gain traction—attracting mostly the gullible and needier (the 'value-control tradeoff™' principle).

Beyond being dishonorable, modern high-value men can do better than leading a pack of bottom-1%.

⍰ Modern Application: Sell Hope & Fast Results

The most profitable modern cults are self-help movements of dogmatism and easy solutions.

There is an endless market for this naive self-help, ranging from the law of attraction to pop-psychology 'tricks'.

In many ways, that's *The 48 Laws of Power* 'secret': simple laws that are supposed to make you powerful (they may not).

The blurring line between self-help, quackery, and nonsense started with '*Think and Grow Rich*'

Law #30: Make Your Accomplishment Inspirational – They Can Do It Too!

✖ Law 30: Make your accomplishments seem effortless.
✓ Law 30: Make your accomplishment seem impossibly hard: they'll admire you, and nobody will try to match you

⍰ Law of Power #30 is Dated Because Today's Culture Respects Hard Work

Today, people admire and respect hard work.
Talent alone may even make you less authoritative (ie, 'it's easy for him, he's good looking').

Instead, everyone loves and respects hard-working underdogs. Most modern influencers use this new law:

Gary Vee, Tony Robbins, Alex Hormozi and almost every modern 'success influencer' play up hard work

⍰ Modern Application: Frame it as Both Talent & Hard Work

Deep down, innate talent always impresses because it's a timeless indicator of 'good genes'.
So, to combine the best of both worlds, play both.
This is the frame:

> It always came easy for me, and I also worked on it hard

Law #34: Dress With Sprezzatura to Display Power

✖ Law 34: Be royal in your own fashion: act like a king to be treated like one.
✓ Law 34: Dress down when others must dress up to display your power and independence

⍰ Law of Power #34 is Dated Because Brands & Suits Don't Signal Power Anymore

Dressing well signaled power when dressing well was hard. Not anymore: suits and knock-off brands are available to everyone.

If anything, overdoing 'royal fashion' with business attire can signal lower-class overcompensation.

⍰ Modern Application: Dress Casual to Display Superiority When Everyone Else Must Follow Dress Code

Dressing down when others must dress up signals you're above the rules.

A good power move is to mix real wealth indicators with dressing down. For example, nothing screams "I don't need your approval" like a disheveled man getting out of a Ferrari.

Modern disdain for appearances can also signal agentic goal-focus, an evolution apparent in Steve Jobs.

Powerless Steve Jobs on the left; powerful Steve Jobs on the right

⍰⍰♂ **Lucio's note: dress well for attraction**

Dressing to look good is important in dating and when working your way up. Dress well, without being a try-hard.

Law #38: Conform to the Leaders When Starting, But Soon Make *Others* Adapt to You

✖Law 38: Think as you like, but behave like others.
✓ Law 38: Think, be, and behave as you like, find others who do the same, and avoid sheep

⍰ Law of Power #38 is Dated Because Modern Empowered Men Don't Need to Toe Anyone's Line

Conforming is still helpful when starting out, but it holds you back as you grow.
Most of all, never adopt it as a mindset. Today, this law is **too disempowering for modern high-value men**.
Always think of yourself as a free man, and work to soon mold it into your reality.

⍰ Modern Application: Be a Leader, Not a Follower

Conform to the leaders and the role you want to have, not to random others ('power alining' in our lingo).

But most of all, focus on gaining status so you can lead. Or quit the hierarchy altogether, do your own thing, and be your own man.

Law #46: Appear Perfect

✖ Law 46: Never appear too perfect
✓ Law 46: Appear as perfect as possible

⍰ Law of Power #46 is Dated Because Modern Men Don't Depend On Lower-Value

People to Like Them

The original law made sense in a world of small and fixed tribes, but today it pays better to be bolder.

Also read:

- Frenemies and how to spot frenemies (frenemies are the envious par excellence)
- Vulnerability is not power: don't overdo it

⍰ Modern Application: Leave Behind Average Frenemies, Focus on Yourself & Associate With High-Quality People

> Focus on winning, instead of making losers feel better about themselves.

In the modern world of interconnected high mobility, you can leave average people behind and associate with other winners.
Do that.

How to Win in the Modern World

If Robert Greene's laws are the operating system of the past, you can improve on a 400-year-old code.

In the age of AI, digital reputation, and high mobility, following dated advice isn't just slow, but a liability.

We constantly upgrade Power University to be the ultimate update. It's the only strategy lab designed for high-value men who want to master the science of modern influence, power, and dominance.

In this context, laws like “fit in” or “never outshine the master” carry fewer benefits and higher opportunity costs.

In a world with more freedom, information, and distributed power, *soft* power, prestige, and ‘pull’ approaches become increasingly effective compared value-taking strategies.

Let’s review some laws for more details:

Law #1: Leapfrog Your Boss

✕ Law 1: Never outshine the master.
✓ Law 1: Learn everything from your master, then move past him

⍰ Law of Power #1 is Dated Because it Slows Down Ambitious Men

In Greene’s contexts of kings, castes, and little social mobility ‘never outshining the master’ was a good rule of thumb.
Keep your head down, and… Stay safe. But **safety behind an average boss underperforms ambitious men in modern contexts.**

HBR research finds that ‘gatekeeping managers’ hold your career back.
And ADP finds that staying in the same role 3+ years slashes your chances of raises or promotion. Today, it doesn’t pay to play small.

⍰ Modern Application: Switch Jobs, Network For Power & Options, Be Your Own Boss

In today’s world of high mobility and optionality, it pays better to be bolder: network, switch jobs for higher pay, and leapfrog your boss with high-visibility projects.

⍰♂Lucio’s Experience: **Leapfrogging & sidestepping my masters**

Lucio:
I outshone my boss in sales and got to negotiate with the other higher-power MD for a higher position, salary, and equity package (see the story here).

Better yet, I'm living my best life after I quit having 'masters' and focused on my life passion and mission: TPM and Power University.

Law #4: Speak Up

✖ Law 4: Always say less than necessary
✅ Law 4: Speak up, be visible, and build your personal brand

⍰ Law of Power #4 is Dated Because Silence Makes You Disappear

We live in a fickle and narcissistic world where quiet men are outshone by the many who speak more and louder.

⍰ Modern Application: Speak Up, Gain Leadership & Visibility

Today's dominant leaders speak up to gain status and frame conversations to their liking.

Modern social media also offer new, unparalleled opportunities for fame.
Many influencers gained popularity with over-talk (ie: Ben Shapiro built an empire by commenting on every news).

Law #5: Get A Great Online Reputation & Live Free IRL

✖ Law 5: So much depends on reputation. Guard it with your life.
✅ Law 5: Curate your online reputation, and live freely in your real life

⍰ Law of Power #5 Is Dated Because High Mobility Makes Large Reputation Investment Low ROI

Most ambitious men will go through countless new social circles where reputation restarts from zero every time.

Plus, **modern men don't need a fixed social circle but can walk their own path**, 'sigma style' while meeting women and making friends *outside* of social circles.

⍰⍰♂ **Lucio's note**: this is how I like living

⍰ Modern Application: Focus on Online Reputation

Modern reputation doesn't run with word-of-mouth but with Internet searches, social media, and AI.
Digital reputation sticks beyond changing groups and people.

In real life, focus on gaining the respect of the people that matter, and forget all the rest.

Example: Keanu Reeves & The Heart of Gold

Few know Keanu Reeves in person, but many think he is great because of his online reputation.

Imagine if he wanted to make it public…

Law #7: Lead With Honor & Reap The Benefits of Higher Productivity

✖ Law 7: Let others do the work for you, but always take credit
✓ Law 7: Make people feel valued and give credit. They work harder, the pie grows, and you reap the rewards.

⍰ Law of Power #7 is Dated Because Team's Output Matters Today

Servants couldn't do much if their masters took credit, and feeding themselves and their families was the only priority.

But empowered employees expect better, and value respect and organizational fairness (Cohen-Charash and Spector, 2001).
This Mad Men TV series portrays this more modern dynamic:

> **Report**: (accuses bosses of stealing her idea)
> **Boss**: It's how it is, you should be thanking me
> **Report**: (quits some time later) <— The boss loses a valuable asset

Those who stay, less talented and demotivated, will have lower productivity, which long-term undermines the credit-taking boss.

⍰ Modern Application: Motivate Your Team, Reap the Benefits of Higher Productivity

Higher productivity means bigger pie for all—*including* for the leader.

This approach is particularly valid for masculine and agentic men who value achieving goals, not just 'looking good'.

Also read:

- The realpolitik guide to management

Law #11: Make Others Crave Your Presence & Attention

✗ Law 11: Learn to keep people dependent on you
✓ Law 11: Make people *want* to depend on you

⍰ Law of Power #11 is Dated Because Dependency is Costlier

It was easy for masters to make peasants dependent. In today's world, dependence is costlier, rarer, and not the peak of power many think it is.

⍰ Modern Application: Get High-Value Men & Women to Want You

The stronger currency of influence is not low-value dependence, but emotional investment from high-value people.

Top men earn it with high value and good social strategy.
Even if others may not strictly *depend* on them, they *want* them, crave them, and sometimes emotionally *need* them.

These are the types of high-value, power-savvy men we build inside Power University:

Check Power University

Law #13: Appeal to Higher Ideals With Prosocial Frames – Then Capture The Profits

✗ Law 13: When asking for help, appeal to people's self-interest, never to their mercy.
✓ Law 13: Appeal to higher ideals to signal honor, attract top talent, and sell to the wealthy

⍰ Law of Power #13 is Dated Because When Basic Intrinsic Needs Are Met, People Crave Higher Value

Self-interest in a world where basic needs are met underperforms.

Maslow's hierarchy suggests that people who meet basic needs crave self-actualization.
And research supports it: **engagement and teamwork grow when people do *not* think of what's in it for them** (see Haslam, 2011).

⍰ Modern Application: Provide For Material Self-Interest, But Focus on Higher Ideals & Values

Today's most influential men go beyond pure self-interest and attract with higher ideals.

People are willing to work for less and for longer if they feel good about it.
In marketing, **make people feel *less* self-interested**. The highest margins happen when people feel good and can virtue-signal ' their goodness.

Profits are largest when you help wealthy people feel better about themselves
More examples include Starbucks and fair trade, and Dolphins-safe tuna.
Read more:

- Corporate manipulation

Law #17: Lead With Warmth, While Holding Onto The Tools of Coercive Power

✕ Law 17: Keep others in suspended terror: cultivate an air of unpredictability.
✓ Law 17: Maintain the tools of control, but lead with honor to attract the best talent.

⍰ Law of Power #17 is Dated Because it Backfires in Modern Leadership Context

Erratic behavior for "air of unpredictability" requires absolute power. Even there, it's high risk: research shows that despots often meet premature death.
In modern contexts, 'suspended terror' would drive the best talent away.

⍰ Modern Application: Be a High-Power, Yet Honorable Leader

Be a strong and prestigious leader, make them crave your rewards.
Just like a Godfather, allies will remain closer if you keep the terror for your enemies.

How to be a leader

Law #18: Build A Fortress – Then Act As If You Don't Have One

✕ Law 18: Do not build fortresses to protect yourself – isolation is dangerous.
✓ Law 18: Fortress your life by covering your downsides. And then enjoy life carefree

⍰ Law of Power #18 is Dated Because Modern Fortresses Don't Require Isolation

Modern fortresses are not literal fortresses; They're strategic tools of high-value men, including multiple bank accounts, prenup agreements, doomsday bunkers, legal weapons, bodyguards, multiple passports, etc.

⍰ Modern Application: Protect Your Downsides For Greater & Safer Cooperation

Fotress your mind first, and then fortify pragmatically. Never depend so much on anyone that they could ruin you. Ensure that you'll always land on your feet, even if they betray.

Read more:

- Fortressing strategies for top-1% men

Law #24: Learn Office Politics, But Never To The Detriment of Skills & Results

✖ Law 24: Play the perfect courtier
✓ Law 24: Be a king

⍰ Law of Power #24 is Dated Because Modern High-Value Men Don't Need to Be 'Yielding' to Win

Greene states that the perfect courtier is 'yielding and indirect', associated with submissiveness, low power, and low honor.
It may have been helpful with egotistic kings, but modern high-value can skip it.

⍰ Modern Application: Live Like a King

Modern high-value men don't need to be literal kings to live like kings.
Smart and strategic men can have it all: attractive women, a life of freedom, and the fulfillment of pursuing meaningful goals.

Law #27: Create A Self-Help Movement of Easy Fixes

✖ Law 27: Play on people's need to believe to create a cult-like following
✓ Law 27: Market easy fixes

⍰ Law of Power #27 is Dated Because Cults Attract Low-Value People

With mass education and secularization, cults struggle to gain traction—attracting mostly the gullible and needier (the 'value-control tradeoff™' principle).

Beyond being dishonorable, modern high-value men can do better than leading a pack of bottom-1%.

⍰ Modern Application: Sell Hope & Fast Results

The most profitable modern cults are self-help movements of dogmatism and easy solutions.

There is an endless market for this naive self-help, ranging from the law of attraction to pop-psychology 'tricks'.

In many ways, that's *The 48 Laws of Power* 'secret': simple laws that are supposed to make you powerful (they may not).

The blurring line between self-help, quackery, and nonsense started with '*Think and Grow Rich*'

Law #30: Make Your Accomplishment Inspirational – They Can Do It Too!

✖ Law 30: Make your accomplishments seem effortless.
✓ Law 30: Make your accomplishment seem impossibly hard: they'll admire you, and nobody will try to match you

⍰ Law of Power #30 is Dated Because Today's Culture Respects Hard Work

Today, people admire and respect hard work.
Talent alone may even make you less authoritative (ie, 'it's easy for him, he's good looking').

Instead, everyone loves and respects hard-working underdogs. Most modern influencers use this new law:

Gary Vee, Tony Robbins, Alex Hormozi and almost every modern 'success influencer' play up hard work

⍰ Modern Application: Frame it as Both Talent & Hard Work

Deep down, innate talent always impresses because it's a timeless indicator of 'good genes'.
So, to combine the best of both worlds, play both.
This is the frame:

> It always came easy for me, and I also worked on it hard

Law #34: Dress With Sprezzatura to Display Power

✖ Law 34: Be royal in your own fashion: act like a king to be treated like one.
✓ Law 34: Dress down when others must dress up to display your power and independence

⍰ Law of Power #34 is Dated Because Brands & Suits Don't Signal Power Anymore

Dressing well signaled power when dressing well was hard. Not anymore: suits and knock-off brands are available to everyone.

If anything, overdoing 'royal fashion' with business attire can signal lower-class overcompensation.

⍰ Modern Application: Dress Casual to Display Superiority When Everyone Else Must Follow Dress Code

Dressing down when others must dress up signals you're above the rules.

A good power move is to mix real wealth indicators with dressing down. For example, nothing screams "I don't need your approval" like a disheveled man getting out of a Ferrari.

Modern disdain for appearances can also signal agentic goal-focus, an evolution apparent in Steve Jobs.

Powerless Steve Jobs on the left; powerful Steve Jobs on the right

Lucio's note: dress well for attraction

Dressing to look good is important in dating and when working your way up. Dress well, without being a try-hard.

Law #38: Conform to the Leaders When Starting, But Soon Make *Others* Adapt to You

✖Law 38: Think as you like, but behave like others.
✓ Law 38: Think, be, and behave as you like, find others who do the same, and avoid sheep

Law of Power #38 is Dated Because Modern Empowered Men Don't Need to Toe Anyone's Line

Conforming is still helpful when starting out, but it holds you back as you grow.
Most of all, never adopt it as a mindset. Today, this law is **too disempowering for modern high-value men**.
Always think of yourself as a free man, and work to soon mold it into your reality.

Modern Application: Be a Leader, Not a Follower

Conform to the leaders and the role you want to have, not to random others ('power alining' in our lingo).

But most of all, focus on gaining status so you can lead. Or quit the hierarchy altogether, do your own thing, and be your own man.

Law #46: Appear Perfect

✖ Law 46: Never appear too perfect
✓ Law 46: Appear as perfect as possible

Law of Power #46 is Dated Because Modern Men Don't Depend On Lower-Value

People to Like Them

The original law made sense in a world of small and fixed tribes, but today it pays better to be bolder.

Also read:

- Frenemies and how to spot frenemies (frenemies are the envious par excellence)
- Vulnerability is not power: don't overdo it

⍰ Modern Application: Leave Behind Average Frenemies, Focus on Yourself & Associate With High-Quality People

> Focus on winning, instead of making losers feel better about themselves.

In the modern world of interconnected high mobility, you can leave average people behind and associate with other winners.
Do that.

How to Win in the Modern World

If Robert Greene's laws are the operating system of the past, you can improve on a 400-year-old code.

In the age of AI, digital reputation, and high mobility, following dated advice isn't just slow, but a liability.

We constantly upgrade Power University to be the ultimate update. It's the only strategy lab designed for high-value men who want to master the science of modern influence, power, and dominance.

- SUMMARY

Law #34: Dress With Sprezzatura to Display Power

✘ Law 34: Be royal in your own fashion: act like a king to be treated like one.
✓ **Law 34:** Dress royally. Unless you're already powerful and rich. In which case, dress how the hell you like

Law of Power #34 Explanation

This is another rule which applied better in the old days.

In the past dressing well was the prerogative of well-off people, so high quality dresses were a major indicator of wealth and power.

I am listening now to the biography of Casanova.
Casanova slept with a ton of women, and did so in what was a very sexually conservative society. One of the keys to his success was power: he was a wealthy nobleman, and one of the main ways he conveyed his status was with his clothes.

But today?

Today almost anyone can afford to dress well.

This is not to say that you shouldn't dress well.
I *love* dressing well and it's a huge tool of personal influence and persuasion.

But today things have changed, and the rules invert at the very top. At the very top, a disdain for appearances can become a power display.

Nothing screams “I don’t need your approval” like a disheveled man mounting on a Ferrari like he had not a care in the world.

Why?

Because not caring for what others think is either the sign of a low-quality individual or… The sign of power and superiority.

In today’s world dressing poorly and/or simply has also become a status symbol for entrepreneurs, so consumed by their visions that they can’t find the time for “appearances”.
Avoiding suits and fine clothes makes the entrepreneur look monk-like deep and consumed by his lofty goals.

Law of Power #34 Example: Steve Jobs’ Evolution of Style

Nassim Taleb makes the case that rich people cuss and dress down as a power display.

Why?

Because cussing means you don’t need to follow the PC etiquette and you’re not afraid of pissing off anyone (both major signs of “f*ck you money” and independence)

Dressing down is similar, sending the message that you don’t need to obey the rule styles that the herd must obey.

See how Steve Jobs changed style over time:

Powerless Steve Job on the left; powerful Steve Jobs on the right
Steve Jobs on the left didn’t have the power to dress as he wanted (the name tag is another indicator of low power).
Steve Jobs on the right instead was top dog, and he could dress as he pleased.

Law #38: Behave Like Others When Learning, Then Switch: Power Makes *Others* Adapt

✘ Law 38: Think as you like but behave like others.
✔ **Law 38:** Behave like others while you are still climbing the ladder. Once you’re on top make others adapt to you

Law of Power #38 Explained

The original law from "The 48 Laws of Power" is good to *climb* to power.

But it's not good for established power players.

From a mindset point of view, even while climbing the true Machiavelli knows that his "fitting in days" are numbered.
The true power power player wants to *shape* cultures, not adapt to them.

Because, if you think about it, what's the alternative?

If all you worry about is fitting in and dancing on someone else's tune… Guess what, your future is written.
And it's the future of a sheep.

Also read:

- Office power plays (it's a humorous article, but also based on how some power-obsessed Machiavellian think)

How to Fit In to Acquire Power

Let me repeat this:

You *do* want to fit in as a trainee, a junior employee, a manager and even maybe up to executive role.

This is something I describe in "How to Become A Leader", which I recommend you check out if you're serious about leadership.

But as you get closer and closer to the top, you want to focus less on fitting in and more on influencing the culture.

And same for what we said for personal style, a display of quirkiness going against the grain is also a display of power.
It says that you can allow yourself to be *you*.

Law of Power #38 Example: Gianni Agnelli & Sprezzatura

Gianni Agnelli was a cool man.

Born into money aristocracy, he was known as the "rake of the Riviera" even while he kept a steady and (seemingly) happy marriage.

He wasn't the type of rake who only slays because of his power and money though, and his conquests included equally powerful women.
Jackie Kennedy, JFK's wife, flew to the Amalfi Cost just to spend the holidays with him, and a defensive US president hat to plead her for "more first lady, less Agnelli".

But Gianni wasn't "just" a womanizer.

He enjoyed women, but wasn't the type of man to let women steer him off his path.
And with a mix of business acumen and charm, he led his family business to become Italy's biggest industrial complex.

Famous for his conquests, business success and style… Why would such a man wear his watches on the outside of his shirt?

There are a few rumors as to why he did it.
But ultimately, it's because he could.

Where you wear your watch is *purely* cultural.
Nobody says it must be inside the shirt, or your left. People wearing it "the proper way" are fitting in.

But Agnelli didn't need to fit in.
And he didn't want to.

The watch on the outside of his shirts was his way of saying "I got f*ck you money and f*ck you power, so f*ck your rules, you follow them".

The watch on Agnelli's wrist cuff says "I have the power to buck the social rules"

Law #39. Strategically Roil Your Opponents & Lead Them to Overreact

✘ Law 39: Stir up waters to catch fish.
✔ **Law 39:** Roil your opponent whenever a clear mind provides an edge, but be careful that an emotional opponent will not instead gain an edge

Law of Power #39 Explained

This rule actually works even better in modernity.

Why?

Because we condemn violence and overreactions even more so than we did in the past.

However, it's still a big mistake to generalize.
Greene says that "anger and emotions are counterproductive", but that's now always true.

We will see two examples for each to learn how to properly use the law of power #39.

Law #39. Example: Successfully Stirring Fish (Marco Materazzi)

Raise your hand if you know Materazzi.

Unless you're into football, like *really* into football, then you probably don't.
You see, Materazzi is not a great player.

Not with his feet, at least.

But when it comes to stirring up waters, he pulled the biggest feat ever in football.

Italy and France, two countries with a strong sports rivalry, were battling it out in the world cup final, the biggest sports event ever.

The two teams were tie 1-1 but France, led by its best player ever Zinedine Zidane, was going on the assault.
Zidane was an experienced player who had already won a world cup -the first ever for France-.
Winning two world cup would have consecrated him into the Olympus of the best players ever.
And this was his last match ever, making everything more legendary.

Zidane seemed on his way into legend-hood already.

He scored the first goal, and did so with a "panenka" penalty kick, a football power move hat had embarassed the Italian goalie.

It's hard to overstate the significance of that panenka.
Zidane scored it against keeper Gianluigi Buffon, who happened to be the captain of the Italian squad, the main alpha male of the team, one of the best players in that tournament, and widely considered to be the best keeper ever.
Buffon was representing the Italian team, and Zidane made a mockery out of him.

See the panenka here:

Embarassing the Italian captain with a panenka kick was a highly significant power display by Zidane. Captain VS captain, it was the equivalent of saying "I'm the true master here". And embarassing the best goalie ever was a statement as to "who" was the real best player.

Yours truly was on the edge of his seat for the whole night.
It all seemed set to be Zidane's crowning night. And a searing defeat for the Italians.

And it might have worked that way.

If it wasn't for Materazzi stirring up waters.

Nobody knows exactly what Materazzi said to Zidane.
But it changed the course of history.

Zidane overreacted, lost his head and sank it deep into Materazzi's chest.

Materazzi then played the game, pretending it hurt more than it actually did. And Zidane was thrown out of the game.

See the video here:

What a shameful way of ending what should have been a glorious career.

Some people defended Zidane and roasted Materazzi.
And, honestly, Materazzi has often been a very dirty player and I can't support him outside of this very specific game.

But Zidane shouldn't have let a few curse words to the women of his family get to him, which is a typical reaction of controlling men (and the most backward Islam).
He deserved to end in ignominy.

In that game, Marco Materazzi, a mediocre player against a legend, was a true hero for all the world's underdogs.

Law #39 Reverse Example: McGregor Loses Stirring Up Waters

Stirring up waters can lead to violence or war.

When that's the case, it might be that both sides lose.

And anger and rage in contact sports can be an advantage *for your opponent.*
For example, many have argued that Khabib destroyed McGregor also thanks to the rage that he brought into the

ring.
And that rage was there because of McGregor trying to stir up waters.

McGregor's "stirring water" technique likely made his opponent stronger (and sure made him look like a big mouth after the bout)

Even in non-contact sports, people who are good at channelling that anger can turn your stirring into motivation.

Legendary coach Phil Jackson shares in his biography the story of Derrick stirring up waters with Michael Jordan. The Grizzlies were winning against the Chicago Bulls, and Derrick thought well of stirring waters and taunting Michael Jordan.

Big mistake.
This is what Michale Jordan told him:

Stirring water with individuals like MJ is counterproductive
And then proceeded to unleash hell.
MJ led the Bulls to turn around the match and to inflict an historical beating on the water-stirrer.

What does it all mean to you?
What should you do, stirring or not stirring?

Stirring Up or Not Stirring Up?

As we've seen, stirring up water can be dangerous.

As a rule of thumb, do this:

- On pure mental games of concentration where rationality and coolness rule, stir your enemies
- With opponents who know how to channel their rage appropriately use the opposite strategy and induce them into a false state of tranquillity instead (play a sucker to catch a sucker)

Law #41. Learn From The Best Leaders, Leverage Them As Mentors

✘ Law 41: Avoid stepping into a great man's shoes.
✔ **Law 41:** Seek great leaders to learn from

Law of Power #41 Explained

It's partially true what Greene says.

It will always be a challenge being the leader after a great leader.

But what's the alternative?

Waiting it out?
Who knows when your next chance will come.

Moving somewhere else?
Even if nobody knows, deep down *you* will know that you're quitting out of fear.

Again, this is a terribly defensive mindset.
Even more, this is a defetist mindset.

I invite you to take the opposite view.
A great predecessor is a great man to learn from.

You might be able to recruit your great predecessor into your mentor as you take over, and you can use his great work and achievements to spur even bigger achievements.

Even if you aim at being "remembered" as the best -a really hollow mindset you should overcome-, remember this:

> **A dynasty always beats a single good ruler**

A good CEO manages a turnaround, or gives a company a good run. Dynasties create empires.

So don't be a scared bitch: take the challenge and run with it.

Law of Power #41 Example: Baresi and Maldini

Baresi was the captain of AC Milan, and he was one of the finest defenders to have ever played.

Maldini, a promising football rising star, was a born and bred Milan player, coming up from the junior teams of AC Milan.

Eventually, Maldini was old and talented enough to start playing with Serie A teams.
As the up and coming young gun, if he wanted to "avoid stepping into a great man's shoes", he should have left Milan.
He could have sought greener pastures somewhere else and, strong of his talent, become captain soon after and be the undisputed N.1 of a smaller team.

But that would have been a typical "big fish in a small pond" mentality.

And Maldini was better than that.

He stayed and built a great relationship with Baresi, learning all the tools of the trade from the best of the best.

Maldini grew to be one of the finest defenders to have ever played, winning everything there was to win, being part of one of the best teams ever -a title it contends with Messi's Barcellona– and eventually becoming captain after Baresi retired.
Strong of his model-like looks, Maldini also became the (pretty) face of the club and a true "flag" for Milan since

he never switched teams.

In terms of skills, it's hard to say whether or not Maldini surpassed Baresi.
But it doesn't matter: his name only shone bigger because of the partnership at the top.
The two of them are the best defending duo to have ever played together.

Maldini wasn't afraid of stepping into a great man's shoes and became an even bigger legend

Law #42: Purge The Troublemakers

✘ Law 42: Strike the shepherd and the sheep will scatter.
✓ **Law 42:** Bad influences spread. Make sure you spot and fire the troublemakers early

Law of Power #42 Explained

This law applies well to modernity as group dynamics stayed the same.

The caveat is that you must strike early, because rotten apples can spoil the bunch very quickly.

If you're looking for team performance, troublemakers take on a much wider meaning, including people who:

- Avoid work
- Don't buy into the vision
- Aren't unsupportive of the team

There are good resources on this website grounded on both psychology and power dynamics.
Check out:

- The realpolitik guide to being a good manager
- Toxic employees
- Archetypes of political players

Law #42 Example: Sometimes It's Either Them Or You (Kobe VS Jackson)

Phil Jackson, whom we already saw earlier shares a story all leaders should do well to heed.

Jackson was eventually ousted from the Lakers in good part because of his souring relationship with the team's star: Kobe Bryant.

Jackson implied that Kobe Bryant was too rebellious and uncoachable.
In this interview Bryant implies that Jackson was sneaky and talking too indirectly:

It's difficult getting to know the truth.

Having listened to both I tend to believe that Jackson's approach was too much on the "finessing" side and he might have been more forceful and more direct.

However, once he realized he couldn't fix the rift, he had one option only if he wanted to remain the leader of a healthy team; get rid of Kobe Bryant.

Law #43 Make People Want to Follow You

✘ Law 43: Work on the hearts and minds of others.
✓ **Law 43:** Make people *want* to follow you

Law of Power #43 Explained

Law #42 is the opposite of Greene's "air of terror" law.

And albeit they both might have a place, law #43 works better on most occasions and with most people.
And *especially* so in our modern world of democracy and personal freedoms.

Also read:

- How to be charming
- The Art of Seduction

Law #44. Use The Mirror Effects To Oust The Established Power

✘ Law 44: Disarm and infuriate with the mirror effect
✓ **Law 44:** Use the mirror effect when you are the upstart and you are trying to unsettle more powerful and more established players

Law of Power #44 Explained

The "mirror effect" can be very powerful, but it has a limited scope.

Why?

Because while it can infuriate, it also shows you are overly-invested into your opponent (rather than your own life and goals).
And over-investing into someone is the clear sign your opponent is holding sway over you.

There is however one use of the mirror effect.

And that's when you are dealing with legends and/or opponents who are obviously better than you are.

In those cases, it's OK for you to over-invest in them because it's already obvious to everyone they are better while you still need to prove yourself.

Law #43 Example: Unsettling The Established King (Valentino Rossi)

Valentino Rossi had been the dominant figure of motorbike racing for years.

Dominant here not just in wins, but in attitude as well: Rossi was (covertly) obsessed with power and dominance.

During my formative years, Rossi is one of the guys from whom I learned the most about dominance, power, and power dynamics.

But here is a truth of life: no lion reigns forever on sheer force.
And eventually the upcoming young guns started claiming the throne.

Jorge Lorenzo was the first aspirer to the throne.
And to unsettle his rival, he used the mirror effect.

Valentino Rossi, extroverted and exuberant, was famous for mocking his opponents and staging post-race theatrical celebration.
Jorge Lorenzo, reserved, introverted and somewhat socially awkward, wasn't the type.

But he forced himself and started copying Rossi's post-race celebrations. Here is one example where Lorenzo indirectly mocked Rossi for finishing the race much farther behind.

The most dramatic example of the "mirror effect" though was with a later upcoming young gun: Marc Marquez. Marquez never admitted it, but he was obsessed with being the new (and upgraded) Rossi.

He copied Rossi not with his celebration, but with what hurt the most: his wins, his riding style, and his on-track aggression.

The apex of the mirror effect came in the Laguna Seca race.

Years prior Rossi had pulled in Laguna Seca one of the most legendary overtakes ever in the history of motorbike racing by going on the off-track gravel with a bike on slick tires.
See it for yourself here.

Now what does Marquez do?

He overtakes Rossi himself in the *exact* same spot, going outside the tarmac *exactly* like Rossi had done.
See the overtake here.

Marquez would go on antagonizing Rossi in undercover ways and trying to prevent him from winning a 10th title.

But Marquez did it with a smile on his face, which infuriated Rossi and prompted the old lion to overreact in one of the most dramatic scenes any sport has ever seen.

Watch for yourself:

Law #46: Focus On Doing Your Best First – Learn Strategic Vulnerability Later

✘ Law 46: Never appear too perfect.
✔ **Law 46:** Show strategic vulnerability when appropriate. If you're not sure when, stick to always do your best no matter what the envious will think

Law of Power #46 Explained

This law works differently for the ancient world and modernity.

In the past, appearing perfect for kings and masters was advisable for kings and masters, but dangerous for underlings ("never outshine the master").

Today, it's different.

We live in democracies where (on paper) everyone is the same. But we also live in an iconoclastic culture that does not respect ranks and authority nearly as much as it did in the past.

Today everyone is invited to feel the same as their bosses and masters, which creates a ripe environment for envy and jealousy.

In this environment, "never appearing too perfect" can make sense. Even for an already powerful individual.

Perfection funnels envy and resentment, and does so especially in certain types of individuals.
For example:

- Men can be jealous of a successful woman when said men feel that women should be inferior
- As Taleb correctly points out, an ivy-league educated man will be resentful of a self-made man without education because some ivy-league individuals feel "superior" to uneducated men
- Rich-countries' citizens can be jealous of immigrants who become successful because they (secretly) feel like immigrants should do menial tasks

In these cases it might make sense to appear less than perfect IF you want to be accepted and welcomed by the group who feels envious of you.

But there are important psychological caveats for this rule.

It does not apply If the envious people have little power over you and if you could care less about them.

And it does not apply to people who admire you deeply, care for you and are not ambitious (or dickhead) enough to feel superior to you.

In all these cases, don't heed the advice of "making mistakes on purpose", which is one of the most stupid "social skills" tip I've ever read.

> **Focus less on making mistakes and more on producing mistake-free work**

This is the truth:

It takes a lot of emotional intelligence to understand when strategic weakness is called for.
People who haven't reached that level and/or haven't acquired enough power yet should not focus on this rule.

Also read:

- Frenemies and how to spot frenemies (frenemies are the envious par excellence)
- Vulnerability is not power: don't overdo it

Law #47: If You're Doing Better Than Expected, Double Down

✘ Law 47: Do not go past the mark you aimed for; in victory know when to stop.
✔ **Law 47:** If you were aiming for 90 and getting 95, try to go for 100, too

Law of Power #47 Explained

This is another law that applies more to the war fields that Greene loves so much than to modern social life.

In the old battlefields over-stretching your supply lines and entering too deep into enemy territory was dangerous (see Operation Barbarossa and Napoleon's invasion of Russia)

But in normal life, if you are doing better than you expected, you should likely double down your efforts instead of stopping earlier.

That's how power players act.

Real power players, especially the ones who climb fast, think in terms of “faster, bigger, greater”.

Law of Power #47 Example: Going For The Bigger Deal

Blow is a movie based on the real story of George Jung.

And sure, Jung he was in the drug business and that didn’t end up well.

But it’s the *mindset* here that is common to all power players, including the ones in legal businesses.

And this is the mindset of how some individuals acquire power *fast*.

In Jung’s career, when the business was going well with the weed the average guys in the team were happy with a good, but not life-changing sum of money.
They would have stopped there.

But Jung smelled the opportunity for *real* money and power.

Jung saw the business had potential, and he immediately thought about overshooting his goal and supplies and go directly to the sources.

And this is exactly how many fast-climbing power players think and act.

To stay within movies, it’s how Tony Montana in Scarface thinks and behaves.

But it’s also how Trump thinks and behaves.
In his movie “The Art of The Deal” Trump shows the typical “more, more, more” attitude of the fast-climbing power player.

It’s the attitude of going past his mark that allowed Trump to win the presidency while most people laughed at his campaign and called him unfit for the presidency.

Law #48: Remain Open to New Ideas – The Law of Teachability

✘ Law 48: Assume formlessness
✔ **Law 48:** Never assume you have “arrived”, but remain teachable and open to new ideas

Law of Power #48 Explained

Remaining “adaptable” is one of those suggestions that’s easy to give but difficult to apply.

What does it even mean, and where, when and how do you apply it?

The best interpretation in our modern world of fast change is to remain teachable and learnable.

Idiots repeat the same thing over 30 years and call it “experience”.
Fools end their training, get their diplomas and feel like they have arrived.
Real wise men keep searching for new answers and new wisdom until they die.

- Sometimes You Win, Sometimes You Lean
- Mindset
- How to develop a growth mindset

SUMMARY

The 48 Laws of Power is a wonderful book about power, but its laws are too specific and mostly suited for the ancient world.

This article puts the laws in perspective and adds modern examples and interpretations.

You can find the two previous installments here:

- The Updated 48 Laws of Power Book 1
- The Modern 48 Laws of Power Book 2

PS.:
To keep this series streamlined I skipped some laws because they overlap with previous laws (for example: “dazzle with spectacles” is “learn to leverage politics and appearances but never to the detriment of skills and results”).

Note:
As usual, The Power Moves does not encourage or condone amorality. Use responsibly.

The 48 Laws of Power for Honorable Leaders

Lucio Buffalmano · 16 August 2019 · Archived copy · Original

Are you ambivalent about "*The 48 Laws of Power*"?

If so, all honorable men are.
I also want to win, but I prefer winning with win-win approaches and achieving my goals while adding value to the world.
It's doable, because I've done it.

And the research literature shows that **immorality often harms a leader's ability to attract, retain, and get the most out of talented followers**. Instead, leaders who are seen as having integrity tend to attract, retain, and get the most out of competent men who can choose their leaders.

So in this article, we'll turn the 48 Laws of Power into the new "48 Laws of Leadership":

⁉ For the complete book guide, see the main 48 Laws of Power guide.

The 48 Laws of Leadership

✘ Law 1: Never outshine the master
✓ **Law 1: Honor Mentors Until Growth Stalls**
Respect your mentors and stick with them as long as you are learning. Once you're better, focus on moving past them: it's best for all.

✘ Law 2: Never put too much trust in friends, learn to use enemies.
✓ **Law 2: Pick Trustworthy People, and Prepare Contingency Plans Anyway**
Give enough trust to people that they feel empowered, but not enough that they could ruin you. Learn to tell trustworthy individuals from toxic ones and make sure you only have trustworthy ones around.

✘ Law 3: Conceal your intentions.
✓ **Law 3: Align Your Values to Your Goals for Authentic Honesty**
You can't 100% honest, 100% of the time. But be 'as honest as possible'. Be strategic in competitive environments, but be more honest in close and win-win personal relationships to get the best of both worlds.

✘ Law 4: Always say less than necessary.
✓ **Law 4: Speak Wisely to Earn True Respect**
Speak only when needed and when you can add real value. That way, people will come to see you as a true wise man and everyone will listen when you open your mouth.

✘ Law 5: So much depends on reputation. Guard it with your life.
✓ **Law 5: Ensure People Know You're a Honorable Man. Especially other Quality People**
Don't become a slave to what people think of you. And remember: only reputation with honorable and high-impact people matters. Forget the rest.

✘ Law 6: Court attention at all costs.
✓ **Law 6: Build Inner Strength Over External Validation**
Narcissists are weak and, dependent on external validation as they are, not in control of themselves. Make yourself into a man who does not depend on external validation instead (read "the antifragile ego" to start).

✘ Law 7: Let others do the work for you, but always take credit.
✓ **Law 7: Give Credit to People Who Earn It: They'll Work Even Harder**
Build your team around group identities and foster an environment where people want to work "for the team". You will automatically reap the benefits as a leader.

✘ Law 8: Make other people come to you. Use bait if necessary.
✓ **Law 8: Attract Through Your Quality & Copetence**
Pull is always better than push. Make people *want* to come to you based on your knowledge, skills, and personality.

✘ Law 9: Win through your actions, never through argument.
✓ **Law 9: Win with Actions and Arguments**
Actions and arguments are two faces of the same coin. Make sure you're good at both and that your actions and words support and reinforce each other.

✘ Law 10: Infection: Avoid the unhappy and the unlucky.
✓ **Law 10: Help Great People Up When They're Down. Avoid Takers**
Help momentarily unhappy and unlucky people: they will love you once back on their feet. Avoid toxic people, no matter how lucky or happy they are. Also: luck doesn't exist. you make your own luck.

✘ Law 11: Learn to keep people dependent on you.
✓ **Law 11: Excel to Make Everyone Want You**
Avoid the mindset of keeping others dependent. While it seems powerful, it's needy. Strong men don't even want dependent people because they're a burden to them.

✘ Law 12: Use selective honesty and generosity to disarm your victim.
✓ **Law 12: Build Goodwill With Honorable Character**
You will not be able to always be 100% honest, but strive to be as honest as you can, as often as you can. Every time you behave ethically and in line with your professed values, you build a reservoir of goodwill.

✘ Law 13: When asking for help, appeal to people's self-interest, never to their mercy.
✓ **Law 13: Pay Enough, and Inspire with Higher Ideals**
Avoid appeals to self-interest only, or you attract low-quality people who only think of "what's in it for me". Psychology shows that extrinsic motivation and appeals to higher ideals work better.

✘ Law 14: Pose as a friend, and work as a spy.
✓ **Law 14: Be a True Friend to Great People, Spot False Ones**
Be a good friend, but learn to judge people's true character. Learn to read the signs of frenemies and drop these people.

✘ Law 15: Crush your enemy totally.
✓ **Law 15: Avoid Wars, Display Teeth to Discourage Aggressors. But Win Whenever Attacked**
There will never be a war to end all wars, so always seek to avoid wars. But if you really must, attack covertly or make it impossible your enemy can retaliate (crushing him may be a valid option then).

✘ Law 16: Use absence to increase respect and honor.
✓ **Law 16: Deliver Value With Your Presence So Your Absence Hurts**
Focus on delivering as much value as possible with your presence. Then, once you're away, your presence will be sorely missed.

✘ Law 17: Keep others in suspended terror: cultivate an air of unpredictability.
✓ **Law 17: Make People Admire You, *Respect* You Too, and Always Punish & Banish Takers**
Make others admire you is your goal #1. But if someone disrespects you, put them back in their place. Admiration and respect, even respect out of fear, aren't opposite, they go together.

✘ Law 18: Do not build fortresses to protect yourself – isolation is dangerous.
✓ **Law 18: Fortify Wisely, Without Making it Look Like You Are**
A bastion of power to retreat to will make you more confident *outside* of it. Ensure you portray them as a power display, rather than defensiveness.

✘ Law 19: Know who you're dealing with- do not offend the wrong person.

✅ **Law 19: Discern Worthy Connections**
The original "law" is based on fear and defensiveness. Instead, know who you're dealing with because not everyone is worth your time, attention, and help.

❌ Law 20: Do not commit to anyone.
✅ **Law 20: Always Have Exit Strategies, and Only Commit to Honorable People**
Commitment limits your freedom, but can also bring benefits. Just make sure it's a win-win. And if they stop contributing, it's fair for you to move on.

❌ Law 21: Play a sucker to catch a sucker- seem dumber than your mark.
✅ **Law 21: Feign Weakness Strategically**
If you are not yet sure who you're dealing with, pretend to be dumber to truly assess people's character. And if you must go on a war path, pretend to be weaker and dumber to induce your opponent into mistakes.

❌ Law 22: Use the surrender tactic: transform weakness into power.
✅ **Law 22: Shun Unwinnable Battles**
Never fight unwinnable wars. Avoid most "winnable" wars, too: they rarely are as "winnable" as they look on paper (and as presented by power-craving generals).

❌ Law 23: Concentrate your forces.
✅ **Law 23: Focus Deeply on What Matters**
Don't waste your time on today's countless distractions. Find something meaningful and fulfilling and give your full attention to it.

❌ Law 24: Play the perfect courtier (royal advisor).
✅ **Law 24: Master Skills, *And* Politics**
Politics is important, but competence is harder currency. Skills are transferable while politics disappear the moment you leave an organization or a group (read "the futility of social status").

❌ Law 25: Re-create yourself.
✅ **Law 25: Craft Your Identity Intentionally**
Choose who you want to be, then work to become it. Choose your identity wisely, because it will determine how you think, how you act, and, ultimately, the direction of your life.

❌ Law 26: Keep your hands clean.
✅ **Law 26: Stay Honorable**
Build your life and character so that you never even have to stain your hands. Little by little, seek to think and behave more and more like the man you aspire to be.

❌ Law 27: Play on people's needs to create a cult-like following.
✅ **Law 27: Become Worthy of Admiration**
People want to look up to someone. Become someone who is worth looking up to.

❌ Law 28: Enter action with boldness.
✅ **Law 28: Boldly Pursue Your Goals From Beginning to End**
Don't just enter bold, *stay* bold. Pick worthy goals, and then commit to them.

❌ Law 29: Plan all the way to the end.
✅ **Law 29: Plan Flexibly Toward Goals**
Things never go according to initial plans, so focus on startig and reinventing along the way. It's all about getting there, not about following plans.

❌ Law 30: Make your accomplishments seem effortless.
✅ **Law 30: Showcase Effort and Grit** T
rain until getting things done will be effortless for you. But never be shy about telling people how hard you worked:

Everyone admires *grit* and staying power, and that's what you want to teach your best followers.

✘ Law 31: Control options: get others to play with the cards you deal with.
✓ **Law 31: Nudge to Make Others Fel Empowered; Command When Required**
Nudge towards a certain option. But if you're sure about the path, don't be afraid to tell the team what's gonna happen. People respect masculine but fair commands.

✘ Law 32: Play to people's fantasies.
✓ **Law 32: Tailor Pitches to Your Audience**
Pitch your ideas and opinions in a way that fits *your audience*, not yourself.

✘ Law 33: Discover each man's thumbscrew.
✓ **Law 33: Understand People Deeply**
Learn to read people, both bad and good side. But lead mostly with positive appeals, and never with cutting remarks. That's not leadership, that's toxic bullying.

✘ Law 34: Be royal in your own fashion: act like a king to be treated like one.
✓ **Law 34: Dress to Impress, Then Transcend It**
Dress well because everyone judges books by their covers. Once you have enough power, skills, and reputation, dress however you please.

✘ Law 35: Master the art of timing.
✓ **Law 35: Grasp the Zeitgeist, But Transcend It**
Study, learn, and understand the spirit and the zeitgeist. But never let it control you. And don't be afraid to lead towards new ways.

✘ Law 36: Disdain things you cannot have: ignoring them is the best revenge.
✓ **Law 36: Achieve Your Goals, Transcend Materialism**
Weak minds let what they don't yet have control them. Strong minds focus on the work needed to achieve. The enlightned minds learn not to need anything.

✘ Law 37: Create compelling spectacles.
✓ **Law 37: Develop Outstanding Products, Market Them Accordingly**
Marketing and product are two faces of the same coin: curate both.

✘ Law 38: Think as you like but behave like others.
✓ **Law 38: Adapt Then Shape Culture**
Learn how your social group thinks and behaves and, as a beginner, adapt to it. As you grow and start getting more and more responsibility, start shaping that culture for the better.

✘ Law 39: Stir up waters to catch fish.
✓ **Law 39: Zero In On The Issue, Strike With Precision**
Avoid collateral damage: it wastes effort, creates resentment, and it's the hallmark of poor work.

✘ Law 40: Despise the free lunch.
✓ **Law 40: Get What You Earned, & Give to Other Givers**
Despise the freeloader's mindset. Use generosity as a tool for influence and persuasion, and to repay the givers.

✘ Law 41: Avoid stepping into a great man's shoes.
✓ **Law 41: Follow Great Mentors and Outdo Them**
Timidity is for mediocre men. Seek great men to learn from, and be a worthy successor.

✘ Law 42: Strike the shepherd and the sheep will scatter.
✓ **Law 42: Address Problems at the Root**
If facing a mutiny, address the mutineer first. But fire everyone else too: they already showed their character.

✘ Law 43: Work on the hearts and minds of others.
✓ **Law 43: Appeal to Both Heart and Mind**
Appealing to *both* is often more persuasive (Aronson, 1972).

✘ Law 44: Disarm and infuriate with the mirror effect.
✓ **Law 44: Inspire Mirroring Through Excellence**
Mirroring is following. Don't waste time with low-level power games: become leader others want to mirror, instead.

✘ Law 45: Preach the need for change, but never reform too much at once.
✓ **Law 45: Lead Bold Change Effectively**
Effective change is the hallmark of leadership. Frame it the natural consequence your values, lead the way, praise people embracing change, cut the insubordinate… And soon you'll have a much-upgraded team.

✘ Law 46: Never appear too perfect: it creates envy and enemies
✓ **Law 46: Cultivate a Culture of Learning from Mistakes**
Foster an environment where people aren't afraid of mistakes. Reward those who own up to them and learn from them. But never commit mistakes on purpose to be more "relatable": it levels you *down*.

✘ Law 47: Do not go past the mark you aimed for; in victory know when to stop.
✓ **Law 47: Exceed Goals and Raise Standards**
If your overshoot your goal: keep going. It's the time to be bold and go from victory to triumph.

✘ Law 48: Assume formlessness
✓ **Law 48: Embrace Impermanence Without Attachment**
Enjoy everything, but don't get attached to anything because everything in life is transitory. You included.

Why Honorable Leadership

The 48 Laws of Power is a good text to learn more about power, but focusing on the dark side only isn't realistic, it's biased.

Leadership in democracies and free societies calls for leaders to make other want to follow.
And that's rarely with over-manipulation and games. Coercion and **manipulation become increasingly more obvious over time, harm your reputation, and drive the best people away**.

But let me be honest now:

No list of laws will make you effective. Not at gaining power, and not at leading.
To be really effective, **you must learn how to calibrate the principles.**

That's why in our flagship course we focus not on maxims, but on developing the skills that allow you to be effective any time, anywhere.

Why The 48 Laws Are Wrong: A Scientific Critique of The 'Laws'

Lucio Buffalmano · 18 August 2019 · Archived copy · Original

The 48 Laws of Power is a popular book on power, manipulation, and Machiavellian strategies.

But while many read it for a competitive edge, the truth is that **many of these laws can backfire** when applied rigidly or without calibration, leading to isolation and failure instead of lasting power.

Why are the laws wrong, and what works better?
This article critically examines the 48 laws using logic, power dynamics principles, and scientific research.

⍰⍰ For the overview, see the main 48 Laws of Power guide

Is "The 48 Laws of Power" True?

The 48 Laws of Power are not universally true or effective for most situations.

Its 'laws' are not universal power principles but maxims drawn from historical anecdotes, effective in specific contexts but often counterproductive elsewhere.
Several 'laws' also conflict with empirical research and established social and power dynamics principles.

The Dangers of Misapplying the Laws

Countless people take the laws of power as universal truths.

Part of it is due to Greene's persuasive writing and the successful marketing.
The book's messianic tone and popularity enhance credibility because **people assume competence from social proof and confidence** (Schnaubert et al., 2021; Leibenstein, 1950; Cialdini, 1984).

Result: **beginners use these laws in the wrong contexts and *lose* power and opportunities**, appearing sociopathic or inept.

An example from the “48 Laws of Power subreddit”:

Greene’s advice of distrusting friends and making enemies unsurprisingly backfired. Source: original here, recovered thread here

Despite this example being extreme, *most* laws backfire without heavy calibration.

Laws Debunked

Law of Power	Why It’s Wrong
#1 Never Outshine the Master	**Dead-End:** Sticking to this under average bosses leads to stagnation; fast careers require visibility.
#2 Never Trust Friends	**Inefficient:** Cooperation and proven friends outperform strangers and enemies in almost every scenario.
#4 Say Less Than Necessary	**Invisible:** Talkers gain more status, leadership roles, and perceived competence in group settings.
#5 Guard Reputation	**Costly:** Reputation is a resource to be traded for power; focusing on status makes you socially needy.
#7 Let Others Do the Work	**Brain-Drain:** Blatant credit-stealing destroys productivity and drives your top talent to your competitors.
#11 Keep People Dependent	**Low-Value:** Dependency creates “caretaker” costs; high-power individuals associate with self-sufficient, high-value peers.
#13 Appeal to Self-Interest	**Cynic-baiting:** self-interest matters, but higher values and intrinsic motivation build “missionary” engagement & loyalty.
#16 Use Absence to Value	**Forgotten:** Without established leverage, absence = “out of sight, out of mind.” Presence builds value first.

Let’s delve deeper:

1. Never Outshine The Master = Dead End Career

Sheep never outshine the master

While often valid, strict adherence to this law under average bosses leads to mediocrity.

❓ Law of Power #1 is Wrong Because It Slows Down Career Growth

Principle:

⚖️ **The more you appease a fearful boss, the more you remain stuck**

HBR research finds that managers who open doors boost promotions by 30%, while gatekeepers hold careers back. And ADP finds that staying in the same role 3+ years slashes your chances of raises or promotions—proof that 'playing small' under a defensive boss kills ambitious careers.

🤦♂️Lucio's Take: **I regret most the time spent under average bosses**

Lucio:
Ambitious men suffer appeasing average bosses, both psychologically and materially.

My top power moves were gaining the power to not depend on my boss, and when I *quit* having bosses.
⍰ **Why my boss couldn't outshine me** ↗ (video opens in YouTube)

Better Law

✅ Shine strategically, develop your own power base, and quit having a boss

2. Use Enemies Over Friends – But Long-Term Alliances Are Proven to Create Value

Friends can betray, and enemies can be useful, that's a valid point.
Yet, this law misses the true underlying principle of long-term cooperation and value creation-based trust.

⍰ Law of Power #2 is Wrong Because Proven Friends With a History of Cooperation Are More Trustworthy Than Strangers & Enemies

Principle:

⚖️ **Allies empower, enemies disempower**

In *The Evolution of Cooperation*, Robert Axelrod shows that simple cooperative win-win strategies like 'tit-for-tat' consistently outperformed in long-term competitive environments.
In the real world, even chimpanzee alphas rely on 'friends' over pure strength, and it's only truer for humans (Sapolsky, 2017; Kaburu et al., 2013, Ridley, 1996).

More friends and fewer enemies boost your odds of success

4. Say Less Than Necessary – But Research Says Talkers Gain Status

Silent archetypes can be powerful, and Greene seems to personally dislike flamboyant strategies, but this law only works with established power.

⍰ Law of Power #4 is Wrong Because Talkers Tend to Gain More Visibility and Power

Principle:

⚖ **The more you talk in the initial stages of socialization, the more status you gain**

The research literature points to the conclusion that talkers gain leadership during group formation (MacLaren et al., 2020).

The Psychology of Social Status states (quotes):

- Extroverts emerge as leaders more often (Bass 2008; Judge et al. 2002).
- Competence is judged by confidence, talkativeness, and nonverbal pride (Anderson and Kilduff 2009b).
- Dominance involves assertive behavior, including speaking more

And the *APA Handbook of Nonverbal Communication* notes that **low-power men talk less** (Brescoll, 2011).

Examples of talkative success:

- Ben Shapiro gained influence by talking extensively
- Carlos from our community gained ditching this law

Better Law

✅ Talk less when others must earn your approval, but talk more when you must climb and socialize

5. Guard Your Reputation With Your Life – Not For ‘Sigma Males’ & ‘Reputation Cash-Ins’

If reputation is everything, many manipulative laws warrant a big warning label, as they can easily damage it.

⍰ Law of Power #5 is Wrong Because Reputation is a Tradable Resource & Reputation-Management Must Justify the Costs

Principle:

⚖ **The more one gains by spending his reputation, the more rational it becomes to lose it**

During COVID, Bill Ackman emotionally unraveled about the impending market collapse while buying stocks — arguably trading reputation for generational wealth.
And Trump became the most powerful man in the world despite a highly polarized reputation (video reel ↗).

Also, reputation ties more to status than power.
And academic research suggests that reputation-focus increases dependence, while power makes you *in*dependent.
Quoting from the authoritative 'The Psychology of Social Status':

> **status relies on others** (…) As such, high-status parties (…) strive to fulfill others' expectations (Blader and Chen 2012; Ridgeway 1978, 1982)
> (…)
> In contrast, **power liberates people from social and normative pressures** (Galinsky et al. 2008; Guinote 2007; Keltner et al. 2003).

We encourage our smart and ambitious readers to prioritize power over status.

Better Law:

✅ Always acknowledge key individuals' opinions, but work on your power and independence.

7. Let Others Do The Work And Take The Credit = Undermines Team Effectiveness

The alienation from credit stealing may have been a smaller price for kings with absolute power, but it's costlier today (see 'modern laws of power').

⍰ Law of Power #7 is Wrong Because Credit-Taking Undermines Performance & Leads to Brain-Drain

Principle:

⚖**The more blatantly you steal credit, the more you undermine productivity and drive talent away**

Studies link credit-stealing to employees' anger, lower work outcomes, and increased turnover (Cohen-Charash and Spector, 2001). And based on power dynamics, we can speculate that it's probably the best talent that leaves.
The same applies in interpersonal relationships.

Better Law

✅ Credit the top performers: they'll stay, even more, achieve goals… And you will look like an effective and magnanimous boss

10. Avoid Unhappy & Unlucky – But Struggling Winners Are A Goldmine

Unhappiness and 'lack of luck' are two very different constructs.

⍰ Law of Power #10 is Wrong Because Helping Struggling But High-Value Men is An Opportunity

Principle:

⚖ **The bigger their need, the larger your credit**

Robert Wright hypothesizes that by evolutionary logic, helping those in need affords larger gratitude (larger debt for them, bigger credit for you).
More positively calculative men intuitively understand this social exchange, and see helping struggling winners as an opportunity.

⍰♂Lucio's Experience: **I'll always owe those who helped me in my time of need**

Lucio:
When I was jobless and desperate, Umar's support meant the world. I would drop anything if he called for help.

Better Law

✅ Help struggling but honorable and high-value men, and they'll owe you

11. Learn to Keep People Dependent On You = Costly Dependents

This law 'works', but mirros tactics that abusive partners deploy often out of fear of being left. It's far from the apex of power that some think it is.

⍰ Law of Power #11 is Wrong Because Dependence Creates Costs & Mostly Works With Lower-Value People

Principle:

⚖ **The higher their dependence, the lower their value, and the greater their demands**

Craving dependence signals neediness, creating potentially unhealthy *co*-dependence (Beatty, 1986).
Self-sufficiency is higher power, and academic research on narcissism lists it as adaptive and empowering (Cai and Luo, 2018).

Depedent people also tend to be lower value, as predicted by the social investment model, and supported by

research on mate value (Conroy-Beam et al., 2016).

Better Law

✅ Become self-sufficient, avoid dependents, and associate with high-value people

13. Appeal to People's Self-Interest = Attract Cynics

We embrace the 'what's in it for them' mindset, but advanced strategy means avoiding the calculative framing.

⍰ Law of Power #13 is Wrong Because Focus on Self-Interest Attracts Cynics While Higher Values Attract & Motivate Hard-Working 'Missionary Types'

Principle:

⚖ **Intrinsic motivation tends to motivate more, and costs less**

Beyond a minimum salary threshold, research on leadership dynamics suggests that intrinsic motivators outperform purely extrinsic ones based on self-interest.
We may as well say that the pinnacle of leadership is to make followers less self-interested (great leadership is great manipulation principle).

Costly appeals to material self-interest deplete resources, while intrinsic motivation boosts engagement and leaders' influence

Also see:

- How to be an effective leader

Better Law

✅ Meet their self-interest, but appeal to intrinsic motivation and higher ideals

16. Use Absence to Increase Value – But You Need Presence to Gain Leverage

The law applies to a few people with pre-existing social capital, while most others are better served with presence.

⍰ Law of Power #16 is Wrong Because Displaying Value & Gaining Leverage Come First, and Are Always Top Priority

Principle:

⚖ **Value and leverage are created with presence**

Research shows that positive preference is tied to familiarity, and workplace presence leads to promotions (Zajonc, 1968; Bloom et al., 2015).
'Out of sight, out of mind' applies to far more people. Absence is a missed opportunity to impress, gain status, and make valuable contacts.

Remember:

> Absence is only noticed after you've shown that your presence adds value.

Better Law

✅ Display value and gain leverage through presence, then consider strategically pulling back

46. Never Appear Too Perfect – But Perfection Awes

There is some evidence to show that mistakes boost likeability, but **'liked' ≠ 'powerful'** (also see: social vs. power skills).

⍰ Law of Power #46 is Wrong Because Perception of Perfection is Peak Social Power

Principle:

⚖ **The more unreachable and unbeatable you seem, the higher your power**

Keltner & Haidt (2003) propose that extreme talent affords unquestioned loyalty.
Awe leads to a diminished self and identification with the perfect-looking leader.

Charismatic leaders are different and 'superior', and especially so in more extreme circumstances. Research shows that cult followers must believe that the leader possesses exceptional powers (Dawson, 2006).

Better Law

✅ Never average yourself down to avoid average people's envy; shine so bright instead that they could never even imagine tripping you

All Laws Are Contextual (At Best)

And backfire when misapplied. Examples:

- **Court attention at all costs**: Valid for a 'fame strategy to power'. Otherwise, masculine men pursuing goals are better off operating under the radar, saving time and boosting maneuverability
- **Make your accomplishments seem effortless**: The 'law of least social effort' is valid. Yet, in other contexts, showcasing decades of hard work and dedication can display even more value
- **Despise the free lunch**: gifts can make up for exchange or personal value imbalances ('Compensatory Investment Principle™', Buffalmano, 2026). If you're giving more, take those free lunches

Contradictions Among Laws

Just some examples of laws contradicting each other:

Law	Contradiction
Act Like a King to Be Treated Like One → **Stand out**	*Behave Like Others* and *Play the Perfect Courtier* → **Conform**
Win Through Action, Never Through Argument → **Don't try to convince**	*Appeal to Self-Interest* → **Convince with smart framing**
Keep Others in Suspended Terror and Create a Cult-Like Following → **Invincibility & superiority**	*Never Appear Too Perfect* → **Vulnerability & relatability**
Enter Action with Boldness → **Bold action**	*Never Reform at Once* and *Do Not Go Past the Mark You Aimed For* → **Restraint**

Contrary to what some may think, the contradictions in *The 48 Laws of Power* are its smallest issue, as they only highlight that the laws are not universal, but contextual.

Conclusion: A Flawed Guide to Power

The 48 Laws of Power is a valid entry point into power intelligence, strategy, and Machiavellianism for those new and unaware of power dynamics.
It offers intriguing maxims that apply in certain contexts, but backfire in others.

Once you understand the *real* principles and how to use them for real-world outcomes, Robert Greene's books can be a valid addition.
We help men achieve that advanced level with Power University.

FAQs

Is The 48 Laws of Power Worth Reading?

The 48 Laws of Power offers historical insights into manipulation, making it a compelling read for understanding power dynamics. But it's not a reliable guide. Smart readers can pick useful tactics to apply in the right context, but misapplying these laws undermines social effectiveness. Pair it with The Power Moves' frameworks for best results.

Is The 48 Laws of Power Wrong?

Many of The 48 Laws of Power's strategies are only appropriate in limited contexts, and ineffective or counterproductive in many others. For example, using enemies instead of friends (Law #2) is bad advice in most circumstances, while absence to gain respect (Law #16) fails without established value. These laws also promote manipulation, which can backfire in good relationships. Sustainable power stems from high value and contextual applications, and good quality of life benefits from genuine relationships.

What Are the Contradictions in The 48 Laws of Power?

The 48 Laws of Power is riddled with contradictions that weaken its advice. Guarding your reputation (Law #5) clashes with selective honesty (Law #12), as lying destroys credibility. Using terror (Law #17) isolates you, despite warnings against isolation. Saying less (Law #4) contradicts research showing talkativeness builds status. These inconsistencies make the laws unreliable, demanding careful, selective application with emotional intelligence.

Why is 48 Laws of Power banned?

The idea that The 48 Laws of Power is banned is mostly a myth, inflated for marketing buzz. The book is widely available in bookstores, online platforms like Amazon, and libraries worldwide. However, it's restricted in some U.S. prisons. Beyond some selected prisons, no verified bans exist globally—claims about countries like China or Iran lack evidence. Publishers and fans exaggerate the "banned" narrative to boost its edgy appeal, driving sales.

Winning Beyond The 48 Laws

Was this analysis helpful?

If yes, you may find our full course on power even more helpful. We built it to decode, apply, and calibrate the truly foundational principles of power.
Power University delivers measured real-life outcomes in respect, status, attraction, and influence.

This is what one alumnus who found it after *The 48 Laws* said:

> **PU Alumnus**: 48 Laws didn't really help me in my day-to-day as much (…) PU has been unbeatable in its practicality

Evil: Book Summary & Review

Lucio Buffalmano · 20 August 2019 · Archived copy · Original

Evil (1997) is a multi-disciplinary analysis of some of humankind's oldest and most persistent problems: violence, aggression, and cruelty.

- Evil Review

Notes

About the Author:
Roy Baumeister is an American social psychologist, professor at Florida State University, and researcher.

Evil Doers Are Normal People

Baumeister says that to understand evil first of all we must all accept that, under certain circumstances, most people, you included, could commit many of the acts that could qualify as "*evil*".

Also read:

- The Lucifer Effect

The Collective Delusion of "Good"

Not only do most people believe they are good people who deserve good things happening to them, but they also have a rosy view of the world.

Social researchers found out that most people in the West hold the belief that the world is mostly a nice place, mostly fair.

Evil Is In The Eye of The Beholder

Evil is in the eye of the beholder and, most of all, in the eye of the victim.

Most people who commit evil don't see themselves as evil and would not define their actions as evil.

> If there were no victims there would be no evil

Do Violent Perpetrators Intend to Be Harmful? Difficult to Answer...

The author says that only a minority of violent crimes can be justified by "temporary insanity".

But to ask whether violent individuals intend to cause harm is not as easy as it might seem.
In many cases, evildoers (subconsciously) arrange for situations in which they feel they have little choice but to commit their crimes.

My Note:
However, the fact that they arrange for such situations would lead me to move the needle towards deliberateness.

Why Aren't More People Evildoers? Because of Self-Control

If evil is so easy to commit, why isn't there more evil in the world?

Baumeister says that it's because of self-control.

Many people have violent impulses and aggressive thoughts, but they are held back by internal "breaks".

This leads Baumeister to conclude that **the immediate cause of evil is a shortage of self-control**.

Such as evil can happen because of an increase in violent impulses or because of a decrease in self-control (or lack of self-control).
But in either case, the self-control was not enough to stem the aggressive drives.

Are Evil Doers Bred or Born? Both

Baumeister investigates whether evil is mostly the result of nature (genes) or nurture (culture).

Ultimately, the answer must negotiate a mix of both.

This is how Baumeister believes that culture can decrease evil and violence:

> Decreasing the emphasis on pride, self-esteem, and public respect, or providing multiple and clear criteria for proving oneself, may work against the tendency to use violence to maintain one's face.
> A strong cultural belief in the rights of individuals and in the inability of noble ends to justify violent means can help prevent idealism from fostering brutality.

The Steorytipes of Evil

Baumeister lists major stereotypes that most people (wrongly) believe about evil.

He calls it the "myth of pure evil," and it includes:

- **Evil intentionally inflicts harm:** random crimes are unusual and exceptional, yet they are the ones that most often color people's perceptions
- **The victim is good and innocent:** in the myth of pure evil the aggressor shoulders all the blame and the victim has no blame at all. This can happen, but it's the exception and not the rule
- **Evil comes from outside**: evil most often comes from the outside and is different from us
- **Deliberate malice of perpetrators**: this is mostly a victims' point of view. Some perpetrators are sadists who enjoy inflicting pain, but most of the time they are not

Baumeister says that the myth of pure evil survives because it makes victims feel better and because it provides a sort of "moral immunity" to justify violent and oppressive actions

The Magnitude Gap: No Big Deal For The Aggressor, Big Deal For The Victim

To understand evil, it's also important to understand what Baumeister calls the "magnitude gap".

The magnitude gap says that evil acts are almost always of greater importance for the victim than for the perpetrators.

The magnitude gap also includes the gain/loss accounting. The gain for the perpetrator is usually far smaller than the loss of the victim.
This includes burglaries -goods resell at a fraction of their values- or personal crimes such as rape -lasting little for the rapist while scarring the victim for a lifetime-.

Time-wise the evil act quickly fades into the past for the aggressor while it remains a vivid memory in the minds of

the victims.

Victims also tend to describe the evil act as an enormity, while evildoers tend to minimize and describe it in a detached fashion.

The True Cause of Violence Is Too Much Self-Esteem, Not Too Little

Baumeister uses the term “egotism” to describe both the good kind of self-esteem and the bad kind of self-esteem (conceit and arrogance).

There is a widespread belief that acts of violence are the consequence of low self-esteem, but that is not the case. Violence follows from high self-esteem, not low self-esteem.

To be more precise, and quoting the author:

> Violence ensues when people feel that their favorable views of themselves are threatened or disputed by others.
> As a result, people whose self-esteem is high but lacks a firm basis in genuine accomplishment are especially prone to be violence because they are most likely to have their narcissistic bubble burst.

And more:

> A common and important cause of evil is the quest to avenge blows to one’s pride.
> Dangerous people, from playground bullies to warmongering dictators, consist mainly of those who have highly favorable views about themselves. They strike out at others who question or dispute those favorable views.

So just to be clear, high self-esteem by itself does not cause violence and most people with high self-esteem are not violent.

However, violent individuals are an important subset of high self-esteem people.

It’s when that high self-esteem is threatened by an external party that violence can erupt against that external threat.

Zero Tolerance: Blaming Both Victims and Perpetrators

Baumeister takes an unpopular stance here, but I fully agree with him as that’s the only emotionally mature way of approaching the issue in my opinion.

He says that being victimized does not justify a violent response.

And sometimes victims need to be blamed as well, and that goes *without* exonerating the perpetrators.

Instead, he says, American culture seems to forgive the perpetrator if he was previously a victim.

Evil As Manipulation to Fight Wars

The author says that during wars propaganda tried to depict the enemies as pure evil to provide support for the war and an incentive to fight harder.

Because if wars were limited to people who benefit from the war, there would be too few combatants.
So leaders need to find a reason to shore up support for the war.

Unluckily, trying to depict the enemies as evils also serves to increase war atrocities.

Also read:

- **Dark psychology and its uses**

- Politicians' manipulation

The Four Roots of Evil

Baumeister lists four root causes of evil:

- **Means to an end (instrumental evil)**: the more rational side of evil, underpinned by lust, greed, or ambition. For example, the Mongol policy of brutality created terror, but also crime as a shortcut.
  The evidence suggests that violence is a poor means to acquire material wealth and sustain power, but it can create short-term power and dominance in interpersonal relationships (see abusive relationships)
- **Egotism and revenge**: people seek revenge mainly to answer to threats to their self-esteem, aggravated in case of public threats and "what others think".
  "When responding to a blow to one's self-esteem or public image, people will incur costs and losses to hurt the person who humiliated them"
  - **Conceit**: higher levels of egotism lead people to regard themselves as superior. That can lead to evil by not caring how others feel because, for the conceited, others don't matter.
- **Idealism & utopian goals**: it's men who honestly wanted to do something good who committed some of the world's biggest atrocities. Evil is not only acceptable, but it becomes an obligation for the sake of the greater good. The most fanatical and hateful members can become the leaders of the pack in idealistic evil (see Hitler).
- **Sadism / fun**: it accounts for a minority of evil, but it exists

> In the long run, the ends often fail to justify the means, and instead the means tend to contaminate the ends.

Most People Find It Upsetting to Harm Others

Some people have a strong gut reaction to harm others, even when it's appropriate or even when not harming could cause harm to themselves.

For example, one in four American soldiers in WWII could not aim and shoot at the enemy during battles.

German policemen recruited to kill Jews reported physical revulsion on their first day on the job.

And even serial killers sometimes report upsetting experiences on their first killings.

It's not that their moral and ethical principles have been violated, but it's more of a gut reaction.

But Many Also Enjoy Watching Others Suffer

Most people do not enjoy fighting and killing.

But albeit, many people have a revulsion for hurting others, not all do and many more find watching others suffer and die pleasurable.

As Baumeister writes:

> The spectacle of violence holds a fascination that seems to transcend time and culture.

However, this is not to say that everyone who watches or enjoys watching violence would be a perpetrator of violence.

Empathy As The Evil Antidote

Empathy is a powerful inhibitor of evil.

And that's why *psychopaths* who lack empathy commit more crimes and even more violent crimes.

Empathy also emerges later in life, and that's why children can be more sadistic

Empathy's Limitations: Intensity and Circumstances

People are different, and they also differ in their levels of empathy.

Furthermore, in some cases, empathy does not come into play at all.

Empathy is selective and can come into play in certain situations but not in others.
Some people can disconnect their empathic response independently of their overall empathy.

For example, Hitler was a vegetarian and stood firmly against any type of violence and harm against animals.

But Sadistic Pleasure Can Grow Over Time

This was one of the most instructive chapters.

Hans Toch, social psychologist and criminologist, concluded after a long research on violent offenders and violent policemen, that violence is habit-forming and can increase over time.

The author, relying on two different sources (Groth on rapes and Toch on violent offenders), says that around 5% to 6% of violent men are violent because they enjoy the pain they cause.

A few sadists need to overcome the first repulsion towards violence and inflicting pain before becoming sadists.
For example, says Baumeister, many serial killers got their start in the Vietnam War where they were forced to overcome their first resistance to violence.

Sadism is Like Addiction & High Adrenaline

Sadism resembles addiction.

The first puff of a cigarette, glass of beer, or drug experiences are often not the most pleasurable.
But as people keep using, they start getting into the groove, derive more pleasure, and become more addicted.

Baumeister links evil to high-adrenaline experiences such as bungee jumping.
The first time you do it you are super scared and the high you get afterward might not seem worth it.
But as you do it more often, the fear becomes less and less and the high stays the same, compelling you to do it even more often, and possibly from different locations and higher heights.

Similarly, with time it's possible that the sadists experience less and less upset at causing harm while he starts to derive more and more pleasure.

Why Not Everyone Who's Experienced Violence Becomes A Sadist?

Baumeister says that it's most likely guilt that stops many from becoming sadists after they become evildoers for the first time.

Says Baumeister:

> If this analysis is correct, then there is a potential sadist inside everyone, but our conscience and our capacity for guilt keeps it hidden.

Sadism and Need For Power

Baumeister says that one need for sadists might be that of eliciting sincere emotions.

Who would have such a need, he asks?

It's people who seek power.
People who seek power seek an impact on other people's lives and are miserable when they fail to have an

effect on others.

That power might be used for good or for bad, but the end game is similar and it's to produce an effect.

Says Baumeister:

> Rape, sexual harassment, and even children's teasing can also be understood in terms of power motivation.

Through the victim's pain, the sadist gains validation of his own power.

Baumeister says that the true sadist does not lack empathy, and empathy helps the sadist derive maximum pleasure.

Are Sadists Evil?

Baumeister says that sadists do not validate the idea that evil is real among humans.
He says that it's more correct to say that humans come with in-built mechanisms that can be adapted and recruited for evil means.

Criminals Are Short-Term Thinkers

Crime is often the product of short-term thinking, and it offers the emotional thrill that appeals to these types of people.

Criminals tend to show the same lack of control in all other areas of their lives.
For example, they are more likely to drink, use drugs become involved in unplanned pregnancies, get into fights, have car accidents, have unstable marriages, etc.
And if they happen to make some money, they spend it very quickly.

Evil Needs No Encouragement: Only Less Self-Control

Evil does not need to be promoted. It only needs less self-control to emerge.

Self-control can decrease for many different reasons, including:

- Inconsistent, conflicting, or ambiguous obligations
- Authority figures overriding personal judgment
- Focusing on low-level details to avoid dealing with ethics and morals
- Alcohol or drugs
- Culture (can dictate where, when, and how much it's acceptable to lose control)

The media can also help to bring out violent fantasies from people who are already prone to violence (the author quotes FBI expert Ressler, author of "Whoever Fights Monsters").

If Left Unchecked, Evil Escalate Towards Greater Evil Over Time

The first steps in the direction of evil are usually small.

And if they were to stop there, we would live in a much better world**.**

Unluckily though, both history and laboratory studies show that violence tends to escalate over time

Several factors come into play, which increase the intensity and gravity of the evil deeds.

Among the factors which flame the spread of evil:

- **Desensitization**; people get used to violence, stop protesting it and it becomes the new norm (there are exceptions where people move in the opposite direction though)
- **Mutual revenge**: revenge tends to be uncalibrated and much stronger than the initial offense, naturally leading

to escalation

- **Getting away with it**: when bystanders, police, the international community, or anyone who could have done anything fails to intervene, evildoers feel emboldened (example: Turkey with the Armenians)
- **Lack of reaction from the victim**: when the victim fails to react, for example, a spouse who does not leave the marriage, the abuser is likely to feel emboldened
- **Group dynamics**: several group dynamics contribute to individuals' morals being overridden

Guilt, Evil & Rationalization

Guilt is backward-looking, and people will try to avoid behavior they know will make them feel guilty.

If people want to engage in guilt-producing behavior, they will be looking to make excuses before they act.
For example:

- distancing themselves from the victim
- labeling the victims as sub-humans
- focusing on details and operations
- numbing with alcohol or drugs

When there is a strong will to believe, some perpetrators leverage small kernels of truth just to keep duping themselves.

> People will settle for any vaguely plausible argument when they want badly enough to believe that their hurtful actions are justified.

Guilty is unfairly under assault in our culture.
Guilty is a strongly prosocial behavior that underpins our communities.

Highly individualistic American society, says Baumeister, favors individual-favoring high self-esteem and scoffs at community-supporting guilt.

The Kafkaesque Twists to Save Appearances

To stave off guilt and to feel like nobody was doing anything wrong, German authorities at times prosecuted German camp officers who killed Jews without written consent.

Thus, in the camps where Jews were sent to be killed by the thousands, some were being prosecuted for killing Jews.

But those trials served to remind everyone that there was a method and -and morals- in what they were doing.

Bystanders' Support of Evil

Not taking sides often means taking the side of evil.

Evil doers will both feel emboldened to keep on going physically, and morally emboldened because if nobody protested then it must not have been too wrong.

Writes Baumeister:

> The victims of evil and violence depend on bystanders to bear witness to what is happening and take a stand against it. It is the only way.

More Wisdom Nuggets

- **Perpetrators feel justified**: Perpetrators often believe to be totally or almost totally justified in their violent response
  - Often perpetrators perceive themselves as under attack by their victims
- **Victims see things in black and white**: and clear right and wrong while perpetrators see a lot more gray areas
- **Victims' accounts often describe perpetrators as deliberately malicious**: while perpetrators' account very rarely describe their actions as mean
- **Some evildoers see themselves as victims**: Many perpetrators, including serial killers, see themselves as victims of the world
- **Blurred lines of guilt**: The lines between victims and perpetrators can often blur in the case of mutual escalation leading to the final act of violence
- **Serial killers are not "genetically different"**: serial killers are far from typical and represent a special case, yet some cultures and eras produce more of them, suggesting the environment can push more people into this exceptional behavior
- **Sexual sadism is rare**: most people in S&M are there for the masochism. In S&M clubs there are 3 or 4 times more masochists than sadists, and most sadists seem to have acquired it after having to be submissive first
- **We feel guiltier for unintended actions**: this is because people prepare their rationalization in advance for their intended wrongdoing
- **Groups of victims are rarely monolithic**: people tend to see "X VS Y" and group everyone in those two groups together. But in reality, both victim and aggressor groups are often heavily divided

CONS

- **Could be clearer in condemning abusive men?**

The concept that in violent relationships both spouses contribute to the violence is often true.

Yet there is no mention that the majority of *controlling people* and abusive individuals are men.

That's still not to say that, in many cases, female partners might not contribute to the violence, but still: most controlling and abusive partners are men.

- **Arthur Shawcross possible mistake?**

The author says that many serial killers were bred during the Vietnam War.
He uses Arthur Shawcross as an example, but when I researched him the Wikipedia page says that he never saw active combat.

- **I wasn't convinced about the "gangs depending on the neighborhood"**

The author says that the neighborhood supports the gangs with food and shelter and thus the gangs are dependent on the neighborhood, giving the latter more power.
I wasn't convinced by that.

- **Heat promotes violence?**

The author says that heat promotes violence.
That didn't sound credible to me, and upon checking, the link between heat and crime seems to be tenuous and no final proof is available.

- **Disagree that the world is getting worse**

Contrary to Mr. Pink in his "*The Better Angels of Our Nature*", Baumeister believes the world is getting worse and evil is increasing.

I disagree.

However, he might be right that future generations might think of the 20th and 21st generations as evil for their consumption and pollution.

Evil Review

Evil by Roy Baumeister is a monumental work.

It's one of those rare treasure troves of information that excites me for all the new wisdom it helps me acquire.

Because of its great work in connecting evil and group dynamics, I elect "*Evil*" as one of the foundational books for The Power Moves.

How to Be A Casanova: 17 Seduction Techniques (Autobiography Review)

Lucio Buffalmano · 27 August 2019 · Archived copy · Original

The Story of My Life (1822) is Casanova's autobiography, spanning his travels, adventures, arrests (& escapes), duels, kings' encounters, and, of course, his many seductions and conquests.
Albeit not intended as a seduction manual there is enough wisdom that our review *will* turn it into a seduction manual.

Who Is Casanova

About The Author:
Giacomo Casanova was an Italian philanderer, traveler, and author.
He is best remembered for his adventures throughout Europe, for his love of women, and for his many love conquests. His name has today become synonymous with “womanizer”.

How to Be a Casanova

In this summary, I will focus on Casanova’s techniques and mindsets:

1. Date High Power

Casanova was skilled at frame control, and had a deep grasp of female psychology.

But he was also a master at leveraging power.

Many of his lies happened because he leveraged the power of his position, social status, or money.
For example:

- He leveraged money as a tool to attract women -‘conspicuous consumption’-
- Seducing maids, he had them do work for him to highlight his power over them
- He presented himself as powerful and high-class

Example:

> **Lucio**: She was highly attractive. And talked little. Most men would have spoken more to try a force a connection. Instead, I let silence show my confidence

Also see:

- **How to gain status**

1.1. Leverage Cultural Dominance

Casanova came from a rich country and was a well-learned man.

He knew more and had experienced more than almost any girl he met.
And he always used that to his advantage.

For example, he tells a lower-class woman:

> **Casanova**: What my dear child, you wish to become the wife of a Venetian and you cannot write?

And guess what?
Soon after, the woman is proving herself to him, trying to show him that she is "good enough" for her (this is the "judge frame").

Some of his gambits are refined, advanced power moves.

They must be executed well, or you can come across as snotty and break rapport instead of creating attraction.

1.2. Leverage The Power of Money

What's the point of having money if you can't get what you want with it?

Sure, Casanova had plenty of skills and would have been successful even without money.

But his financial firepower, which he always threw around lavishly, did help in many seductions.
Casanova was also good at using and leveraging money to the best of its seductive value.

For example, once he threw a party where he hired chauffeured coaches to go pick up his guests.
That, of course, made him the biggest draw of the night and established his reputation as a man of vast resources, who knew how to enjoy life.
You can rest assured that, at that party, he was the big prize for all the women attending.

On another occasion, he says;

> I was successful with both of them because I was rich. If I had been a poor man, I should have neither of them.

And he was well aware that money could help seduction.
He says:

> Without counting my physical attraction, I had plenty of money and was not afraid of swinging it.

He also spent his money on pleasures such as food, good clothes, and good accommodation, and that's very attractive to women.

2. Learn Social Power Dynamics to Boost Status & Attraction

Casanova was keenly aware of the dynamics of power.

He knew that if he allowed a man to assert power over him, his attraction for women would tank.

And he was always guarded to come across as a powerful, dominant man.

One French man told him that as a Venetian he must have been a good friend of France because "Venice is under the protection of France".

That was a power move, and Casanova immediately rejected it in such a way that the whole table erupted in laughter on his side.

That's a good understanding of social dynamics.

2.1. Learn How to Influence & Manipulate

Casanova also had top social skills.

He crashed a party to speak with a girl she was pursuing.
And when the angry and conservative old general found out and scolded him publicly that he wasn't invited, Casanova replied:

> **General**: Sir, I did not ask you to come
>
> **Casanova**: that is true quite true general, but I thought no doubt correctly that the omission was due to forgettfulness, and I thought myself obliged all the same to come and pay homage to your excellency

What a damn genius.
The general was still angry, and Casanova worked him during the evening with some more social finessing.

By the end of it, the general loved Casanova and Casanova was on his way to getting the girl.

2.2. Introduce Yourself High-Power

When requesting help, to get out of prison, Casanova would leverage his means and connections:

> **Casanova**: My name is Giacomo Casanova, I am a subject of the Republic of Venice (…) I have sufficient means (…) I am known to the Venetian ambassador, the Count (…), the prince of (…)

That's some good leverage for his power network.

3. Use Onion-like Captivating Self Description

An onion-like description allows *her* to discover your value.

Take a look at this dialogue:

> **Her**: What sort of life do you lead in Venice?
>
> **Casanova**: I spend time at the theater, in the societies and in casinos, where I fight with fortune sometimes with good, sometimes with bad success
>
> **Her**: Do you visit the foreign ambassador?
>
> **Casanova**: No, because I'm too much acquainted with the nobility

Notice how he does not tout his own horn, yet he gives enough that prompts *her* to ask for more.
And eventually, it comes out that he is a well-connected, powerful man.

It's a superior technique to demonstrate higher value than bragging because it's *her* who teases out his attractive traits.

That's the onion technique: say a little, prompting her to ask for more, then show one more layer.
And she will be wondering what more great things you've got going on for you.

Also see:

- **How to signal high value**

4. Use Self-Effacing Irony With Lower-Status Targets

Casanova dressed stylishly.

Heck, he even had his hair professionally done at a time when almost nobody did that.

But when women complimented him for it, he used it as an opportunity to look humble, vulnerable, and relatable.

For example, when one of his targets complimented him for his clothes, he said:

> **Casanova**: (my clothes) they are my way of distracting attention from my face and figure

Bam!
Now he made her laugh while looking humble, and while still showing off his style and social intelligence.

This is important especially when you do come across as cool, attractive, and high power.
Also read:

- **Value & availability**: the key to getting shy and low self-esteem women

5. Be A Lover Who Makes Her Feel Special

Says Casanova:

> I invented on the spot 3 imaginary stories.
> Making a great display of tender sentiments and of ardent love, but without alluding to amorous enjoyment.
> Particularly when she expected me to do so.
> (..)

Here Casanova is playing with her romantic ideals.
He is showing himself as a man who can get women and make them fall in love with him… But who does not sleep around with random ones.

That way, she will feel special for having been the one.

This can be very helpful indeed, especially for men with the reputation of a rake.
I remember once a woman at my place who uttered “oh yeah, so great to be one of a hundred”.

6. Envelop Women With Unrestrained Passion

Casanova was a deeply emotional man.

He talks about crying, being so in love as to go mad, flying into rages, and wanting to kill himself.

The sentence “I was in love” litters the book.

For example:

> I spent three hours in conversation with the charming girl.
> And when I left I was deeply in love.

Emotional state transfer and the fact he himself was so deeply enveloped in passion undoubtedly increased the feelings of many of his women.
And it made him come across as more natural, more honest, and more relatable to women since women tend to be more feelings-oriented.

Casanova was also happy to be duped just to get closer to the object of his desire.

He says:

> I knew very well that I would be duped. But I loved his sister so much.

6.1. Yet, Also Use Calculated Romance

Casanova was a romancer at heart and always abandoned himself to feelings and emotions.

But he also knew when to play the game and how to position himself.

For example, he says:

> I composed the letter.
> Short, but **calculated to restore peace to her mind**.

He then goes on to describe his own letter as a "genius".

6.2. Casanova Was Sometimes Slightly Manipulative

Casanova also worked hard to further increase his influence on women.

He knew that the "cabalistic science" was baloney.
But he kept pretending it was true -and that it could even be taught- to increase his influence over more gullible women.

6.3. Casanova Was Passionate In Every Sense: Also Vengeful

Casanova was a passionate man all around.

The first story of his love as a 12-year-old kid is hilarious.
He went near his love's house but saw another man coming out. And he says:

> I pick up myself quickly with the intention of taking my revenge upon Bettina, whom nothing could have saved from the effects of my rage at that moment.

After he couldn't reach her and retreats to his room, he says:

> Deceived, humbled, ill-treated, an object of contempt to the happy and triumphant Cordiani, I spent 3 hours ruminating the darkest schemes of revenge.

Over the course of "History of My Life," he goes on to describe a litany of situations where he seeks revenge for his honor. Including a local prince.

7. The Mindset: A Great Lover Loves Giving Pleasure

Casanova loved giving women pleasure.

He says:

> The happiness I gave her increased mine twofold.
> For it's always been my weakness to compose 4/5 of my enjoyment from the sum total of the happiness which I gave the charming being from whom I delighted.

This is a trait that many successful womanizers share.

🤦♂Lucio's Take: **I always wanted to be an international Casanova**

Lucio:
Just like Casanova, I was driven to conquest.

Romancing women, while traveling and experiencing the world.

And guess what, that's exactly what I've done.

On one hand, it's much easier today.
On the other hand, I give myself credit for having done it while being short, bald, not-so-attractive.

If I can do it, you can.
I teach how on this website, and in our course.

8. Use Poetry to Romance At 360°

"Demonic Power of Words" is Robert Greene's expression from "*The Art of Seduction*".

And that might have been one of Casanova's best weapons.

Most of all, his alliteration to discuss sex is noteworthy.
For example:

> And during seven hours I gave her the most positive proof of my love and ardor.
> (…)
> I varied our pleasures in a thousand different ways.

Talking about not falling in love, he says he is not attracted to a woman without sounding mean and while saving her face:

> Yet, I did not surrender to her charms

On showing his D:

> (..) Playing the coquette, she gets angry because I did not conceal from her looks the very apparent proof that her charms had some effect on a particular part of my being.

And on having sex with a virgin:

> And after kissing her spheres of rose and alabaster I penetrated into the sanctuary of love which, much to my astonishment, I found to be a virgin citadel.

He used the same kind of language with his women.
That helped him come across as intelligent, witty, and high-quality.

9. Threesomes Technique: Go For The More Open-Minded Woman

If Casanova could pull threesomes in puritan Europe, you have no excuses :).

He says that timidity can be an obstacle.
But when there is another girl, timidity is more easily conquered than if you were alone.

He explains that fathers and mothers feel secure if their daughter meets a man with another woman.
But if he is a skilled seducer, it makes no difference with the more disinhibited one and it helps seduction with the shyer one.

You start with the more open alpha female of the two.
And the shyer girl will feel compelled to follow.

Also see:

> 10 Types of Male Seducers: Pick Your Niche!

10. Take Risks

Casanova took a lot of risks in his life, in many realms.

Gambling

Gambling was a popular pastime in the noble circles he frequented, and he won or lost vast sums of money at games.

Whenever he won, he loved spending money on luxuries and seductions.

Duels

He engaged in several duels to revenge his honor or simply settle arguments.

Casanova said of his first duel:

> I was fortunate enough to give him a gash across the shoulder. He could not move his arm. And he had to cry for mercy.

On another fair duel, he mortally wounds a well-connected Polish general and gets himself wounded.

Soon after the duel, he says:

> I was alone and without any weapons in a snow-covered country, my hand was wounded, and I had not the slightest idea which way was to Warsaw.

Not only did he have to risk the duel, but he also had to risk prosecution after fairly winning that duel.

Love

He was, of course, a risk-taker in love as well.
And he says about a fling of his:

> Her reasons were a mixture of prudence and love.
> Two feelings which seldom blend together.

At one point he couldn't resist anymore to see a Muslim woman's face that he lounged and sought to remove her veil.

11. Use Both Cold-Approaches & Social Circle Game

Casanova approached women in many different ways.

Many of the women he met through social circles of the upper class.
Quite a few of them were his servants or the daughters of his hosts.

He would go to church when he saw a beautiful lady so that he could talk to her.
He followed some women and knocked on the door of strangers to introduce himself after he saw where they'd lived.

And with a few more, he came up with crazy stratagems and plans.

Sometimes he just went with the spur of the moment.
One time he saw a beautiful woman on a gondola:

> I do not hesitated, but jumped into the gondola and paid double fare on the condition that no more passengers are taken.

Notice that his bold entrance showed not only confidence but also power and resources.

I believe that the best approach strategy indeed is mixed. **When you learn to come across as socially confident and powerful, then you get a huge boost within social circles**.
At that point, relying solely on cold approaches is limiting your options, because you'd be giving up on one of your main strengths.

12. Use Sex Talk to Get Women Thinking About Sex

Casanova used "sex talk" hundreds of years ago.

Talking to one of his targets he says:

> **Casanova**: in honor to the wonderful night they passed she has given him the nickname "count six times"
>
> **Her**: But what has six times got to do with sleeping with Madame Lamborghini?
>
> **Casanova**: My dear, the explanation is simple, the count has done in one evening what some husbands take a year to do

And there you are, now they are into sex talk and it wasn't even him who initiated it.
He just baited her into it.
Furthermore, he is using intelligent "social climbing in absentia" to position himself as better than "most husbands".

Or in another dialogue he purposefully confuses "height" to lead her to think about penises:

> **Her**: But you are taller than your friend
>
> **Casanova**: I'm not speaking about that kind of tallness, but another if you know what I'm talking about. And there my friend is really monstrous

And from there he transitioned to women who prefer bigger and women who prefer more average sizes.
Then he goes into his own penis and tells her "I will not leave you in doubt, tell me what you think" (LOL).

12.1. Sexual Move: Hand on D*ck

Casanova loved drawing attention to his penis.

But not only attention.
He also loved women to get a handful of his manhood (which is a great move, of course).

I quote him:

> As she left, she gave me such a kind embrace that I could bare it no longer. And guiding her hand, I showed her the power she exercised over me.

13. AMOG-Ing: Discredit Others to Look Better by Comparison

This is a technique I explained in one of my very first articles.

It consists of dropping comments about the competition that, albeit not overly critical, make you look better by comparison.

For example, Casanova says:

> **Her**: I cannot imagine a young man to ever fall in love with her
>
> **Casanova**: Oh that's nothing to a man of 25. One is always ready for an assault at that age. Not like me, who only feels a man in the presence of charm like yours

Casanova goes very direct and blatant here.
I wouldn't have done that and left it implied instead.
But different eras and different people, different styles.

14. Make Women Prove Themselves to You

Average men worry about 'passing her sh*t tests'.

Advanced players make women pass your tests.

Casanova was terrific at making women prove themselves to him.

Explaining to a woman why he could not find the perfect girl to get married, he lists how awesome they were… But the things they were lacking in.

> **Casanova**: She was extremely vain and would have ruined me with her expenditures for luxuries and

> fashionable clothes. Fancy this: she used to spend 50 sequel a month to the hairdresser
>
> **Her**: She was a giddy foolish girl. I only spend 1 sequel…

See?
With that first sentence, he is indirectly parading his standards and setting up hoops for her to jump.
Which she does right away. Now she is proving herself to him.

To another woman, he says he wants to have children if he gets married and her ex didn't.
So now she is even more excited about him (also see: atypical seduction techniques).

However, Casanova was not a power-seeker.
And he was also happy to prove himself to women, especially when blinded by love, passion, and lust.

15. Pace Future Reality & Establish Romance (AKA: "Fait-Accompli")

Pick-up artists used the term "pacing reality" to verbalize a favorable situation.

Casanova didn't know that expression, but he certainly was using it to his advantage.

> **Casanova**: Perhaps people will think that we love each other, and that we make such a great couple
>
> **Her**: Than you should inform your mistress that we are in love with each other
>
> **Casanova**: I have no mistress, and I shall have none because I cannot a find a girl prettier than you in whole Venice

Little later he asks her if she will love him, and when she confirms, the seduction has taken a huge leap forward towards consummation.

16. Adopt "Healthy Entitlement Mentality"

Positive entitlement is the narcissists' superpower.

While entitlement is toxic for average guys who lack confidence and mate value, **entitlement turbocharges a confident player's success.**

But the mindset that you deserve the best is a precondition to even go after attractive women.

Casanova often felt entitled to a great life -and to women-.
Commenting on the pretty wife of a 60-year-old man, he thinks that "the affair could be arranged amicably".

Thinking that the man would be "amiable" with him having an affair with his wife is an example of entitlement mentality.

Casanova also used a superb power move on her:

> **Casanova**: Please tell me, madam if the captain is your husband or your father.

LOL.

He says of himself and rating his chances high:

> I was young, enjoyed excellent health, I had money and plenty of daring.

16.1. Always Prioritize High-Quality Women

Casanova had sex with all kinds of women.

But he showed a preference for women of his caliber, well-learned and well-spoken.

He says of a woman:

> She received an excellent education, and it increased the pleasure of my conquest

17. Mindset: Losers Fight Men, Seducers Conquer Women

I always gotta laugh at men learning to fight to get women.

Then a small guy who has never fought in his life ignores other men, focuses on the women he wants, and seduces countless of them.
Also see:

- **Winners' mindsets** (in dating)

And this video:

Casanova also proves the same with this unrelenting focus on women, NOT on the competition.

He says:

> She resisted.
> (…)
> At last, by force.
> This was too much. The mere idea of using violence has always shocked me.
> I'm still of the opinion that the only pleasure in the amorous embrace springs from perfect union and agreement.

However, when in Russia, he adapted to what was the custom of the country.
And he says:

> And so violent she had been that was compelled to conform to the custom of the country and beat her.
> Strange to say that I could have not taken a better way to prove my love.

There is a perverse mix between love, lust, and violence.
But we will not dig deeper here.

18. Handle LMR With Both Physical Assaults & Words

Here is a good mindset for you:

Enjoy last-minute resistance.

Casanova enjoyed last-minute resistance.
He says:

> A little resistance sharpens the appetite.
> When favor is granted with too much ease it lose a great deal of its charm.

But keep your eyes on the goal.

Casanova could be quite “pushy”, too.
He says:

> I then began to caress her and make assaults in the style of an amorous man.
> But it was all in vain, though I managed to stretch her on a large sofa

From the dialogue above, you can understand that Casanova was not PC when it came to the last mile stretch.
Little later he says that he then chased her laughing, showing an extremely important trait for lovers: **making escalations fun and never too confrontational**.

Sometimes Casanova would use rationality to dismantle women’s verbal resistance.
For example:

> If your duty forces you to repulse me in spite of yourself, then your duty is a burden. And if it is a burden, it’s your enemy and you should get rid of it.

Then he invites her to close her eyes and “let go”.

19. Shed All Socialization Shackles: Underage Girls

It’s a different era.

And Casanova engaged with very young women.
Some of it might be considered in the vicinity of pedophilia.

He says, visiting his daughter:

> But one of my daughter schoolmates pleased me too much for my peace of mind

He would later get sexual with one of his daughter’s schoolmates.

20. Adopt Inner-Confidence Bolstering Beliefs

Casanova says that if a man truly wants to do something, he can do anything.

And of happiness, he says:

> Happiness is the fruit of imagination.
> If you wish to be happy, fancy that you are so.

Both are very helpful attitudes to be a successful player.

- Seduction University applies advanced strategies to turn men into world seducers

Casanova Best Quotes

My favorite of them all:

> **The man who professes his love to a woman in words must be sent to school again.**

On resistance:

> A little resistance sharpens the appetite.
> When favor is granted with too much ease it lose a great deal of its charm.

On the most typical Casanova:

> As usual, I fell in love with her

On the ease of seducing innocent girls:

> The more innocent a girl is, the less she knows of the methods of seduction.
> Before she has time to think pleasure attracts, curiosity draws her a little further and opportunity does the rest

On enjoying life on earth:

> I was happy.
> I love to say so in defiance of those moralists who say there is no true happiness on this earth.
> It's the expression of "on this earth" which makes me laugh. As if it were possible to go anywhere else in such happiness.
> Death is the end of all, as after death man has no sense.
> (…)
> No one should dogmatize on uncertainties, and after death everything is doubtful.

On knowledge.
Notice how he uses his maxim to gain intellectual power over the woman:

> On the contrary, Madame, I like questions.
> I have been teaching for the past six years to always ask questions.
> He who asks nothing, learns nothing.

On the sweetness of negative feelings:

> There are sorrows so sweet that they are almost joys.

On the nature of men and women:

> A grateful woman has only one way of showing her gratitude. And that is to surrender herself without reserve.
> (…)
> A man is made to give, and a woman to receive.

On the nature of princes and powerful men:

> For princes do not forget small injuries as they forget great services.

Casanova didn't hold average people in very high regard.
Talking of democracy, he says:

> Dear France,
> Where are thou now.
> Your sovereign is the people now, the most brutal and tyrannical sovereign in the world.

Casanova Personality

Casanova was a living paradox.

He is caustic against the church, highly skeptical of religion, and fiercely against repression and inquisition.
And yet, he goes to church and believes in the positive effect of prayers.

He laughs at the cabal and knows it's not real, and yet he goes on a mission to discover the secret of gold creation.

I don't think Casanova ever stooped low with his games, but he certainly engaged in trickery and manipulation. And he certainly left a few women pregnant without providing.
And yet, he always prided himself on his honor and of his positive treatment of women.

> Manipulation: Techniques, Strategies, & Ethics

Was Casanova a psychopath?

No, I don't think Casanova was a 'full blown' psychopath.

BUT he was higher than average in some psychopathic traits and he was a "dark triad man" since he was also high in Machiavellianism and narcissism.

Albeit turbulent and transitory, he developed deep feelings, and showed a strong conscience throughout several instances in his memoirs.

Also, see more dark psychology techniques in:

> Dark Psychology: 7 Ways to Manipulate People

A Rebel By Nature

Casanova was, in many ways, a man of honor.

But he also was an inveterate philanderer, a freedom lover, and a rebel.
He says of military career:

> The worst of professions for the constant self-abnegation, for the complete surrender of one's will, which passive obedience demands.
> It required a patience for which I cannot lay any claim.

And more about the politics within the ranks:

Loved Freedom, Starting With Financial Freedom

Speaking again of his refusal to pursue a military career, says Casanova:

> As any kind of injustice was revolting to me. And I could not bare myself to feel dependent.

Furthermore, says Casanova, his tastes were too expensive to be covered by a military career.

As any good high-quality man, Casanova wanted to be independent.
He says:

> I earned enough to keep myself without need anybody's assistance.
> And I always thought that a man who can support himself is happy.

Intelligent, And Street-Wise

Casanova was streetwise in many ways.

When asked to share his plan about the lottery he said "not before I am given a written statement that I will receive my share".

Talking of gambling, he says he wanted to bet heavier to break even, which is a "common error".
Indeed, today psychology recognizes it as a fallacy (see Thaler and Kahneman).

To send a message to a woman she wants to get in touch with, he first drops an empty letter as a decoy to her hated, protective auntie.
And as the auntie gets the first letter, he throws the real letter to his true target.
LOL, what a fu*king legendary move.

And he was obviously extremely high in mating intelligence.

Casanova Review

Casanova: History of Life is a treasure trove of foundational seduction mindsets, strategies, and techniques.

Autobiographies should always be taken with a pinch of salt, of course. But Casanova's vulnerability lends credibility. For example, he talks about being tricked, including by some women, and even of his experience with impotence.

Negotiation Genius: Summary, Review, & Top Tips

Lucio Buffalmano · 1 September 2019 · Archived copy · Original

Negotiation Genius (2007) teaches readers the psychology and strategies of negotiation. Drawing from psychology and persuasion to manipulation and trust-building. "Negotiation Genius" prepares the reader with all the basics they need to negotiate effectively.

Contents

Summary

About the Authors:
Deepak Malhotra is an American economist and professor of Business Administration at Harvard Business School. He focuses on negotiation strategies and dispute resolution.
Max Hal Bazerman is also a professor of Business Administration at Harvard Business School, and he specializes in business psychology.

Introduction

Too many negotiators rely on gut instinct or, worse, believe that negotiation is all about art and no science. These people, believing that negotiation is an art, also tend to believe in improvisation, and fail to prepare effectively.

Needless to say, that "cowboy approach" is a failed approach.

"Negotiation Genius" takes a different approach, combining experience with preparation, science, and a proven method.

> **Gut instinct is not a strategy.**

The Basics of Negotiation

These are the basic steps to prepare for a negotiation:

- **Assess your BATNA**

BATNA is an acronym first seen in "*Getting to YES*", and stands for "best alternatives to negotiated agreements".

In practical terms, it means that you know your other options and their value.

When you know the value of your other options, you will know what you can and cannot concede, and you will know when it's time to walk away.

Your question is: "what will I do if this negotiation ends with no deal".

PRO TIP: don't overly focus on your BATNA asking, "what will I do without them?" or you might get too defensive.

- **Calculate your reservation value (RV)**

This is your walkaway point—the lowest offer you can accept.
Once you're below your RV, you're better off with no deal.

- **Calculate the other party's reservation value**

This is not easy, but you want to have an idea of the reservation value of your negotiation partner.

- **Assess other party's BATNA**

This will tell you how far you can push and when your opponent is likely to walk away.

Here is a great tip: focus on the other party's BATNA, asking "what will they do without me".
People who focus on the value they bring to the table tend to get much better deals.

- **Evaluate the ZOPA**

ZOPA stands for "zone of possible agreement".

The ZOPA expands between the buyer and seller's reservation values, and within the ZOP, a deal benefits both parties.

This is the pie you are going to split, and knowing all this information will allow you to properly negotiate and to know when you're getting a bad deal, a good deal, or a great deal.

How to Evaluate Your Performance

There are several ways to evaluate your performance:

- Did you pass your RV? Good, but it doesn't say much
- At which point of the ZOPA did you meet? Above 50% is good for you

These are the measures all negotiators use, but they have an important drawback: they rely on the information you had before the negotiation.

Negotiation genius is about *adjusting* and *adding* more information.

When to Make The First Offer

The advantage of making the first offer is that you anchor the price, while receiving the first offer gives you more information about the other party.

The authors advise as follows:

- If you have sufficient information about the other party's RV, make a first-come, first-served offer
- If you don't have enough information, it might be best to let the other party speak first

If you have too little information, your first price might end up being either too low or too high.

What do you do if they make the first offer and it's too high?
Don't discuss it, and don't let them defend it, because you increase its power. Ignore it or make another anchoring counter-offer instead.

Ask Questions to Dig Out Information

Here is a gold nugget:

The worst thing you can do is to start negotiating with the belief that your assumptions are correct.

Imagine you are dealing with a piece of land and you are not sure whether the land might become available for commercial development.
So you would say:

> **You**: If the land is used for commercial development, that will make it quite valuable.
> With that in mind, let's discuss some specifics. What are your plans for this excellent piece of real estate.

See?
By mentioning commercial development, you show that you know its possible true value even though you are not sure.
And then you keep prodding on their plans. But now they will not be able to lie and deny they want to develop it.

The authors say that in the face of uncertainty, you want to interrogate (indirectly) and sound sufficiently informed.

If you are still unsure and if the other party refuses to share information, you can propose contingency clauses.
If they refuse to add contingency clauses, you know they are lying.

> Negotiation is an information game. Those who know how to obtain information perform better than those who stick with what they know

Trade Across Issues & Enlarge The Pie: Logrolling

Some negotiators think it's best to start with easy issues, while others prefer starting with the most important ones.

The authors recommend you deal with all of them together so you can find better synergies and trade-offs.

> If the other party values something more than you do, let them have it. But don't give it away, sell it.

As a matter of fact, says the author, the more negotiation points you can bring to the table, the more opportunities for value creation you have.

More issues equals more currency to exchange and make the pie bigger for everyone (another genius insight).

Remember:

> The goal is not simply to reach win-win. **The goal is to maximize value**.

Maximizing value entails adding more talking points, making the pie bigger, and truly understanding what you and the other party really want.

Here are some tips for effective pie maximization:

- Identify your multiple interests
- Think of the other party's multiple interests (and encourage them to do so)
- Leverage differences, priorities, and expectations (you can leverage contingency clauses so everyone can bet on his expectations)
- Create a scoring system (convert everything into dollar values)
- Calculate a "package reservation value" (so you can focus on the total value)
- If the other party is buttoned up, make two offers and then ask which one you should be focusing on more (that will tell you what they value)

> Poor negotiators assume there is a fixed pie to be fought over.

> Genius negotiators probe how to *enlarge* the pie.

This was a great insight.
It informed much of my approach to different techniques to "increase the scope of collaboration":

https://thepowermoves.com/enlightened-collaborator

Emotions and Cognitive Biases: Learn to See The Truth

"Negotiation Genius" adds more genius content when it tackles biases and blind spots.

The authors leverage work from Kahnemann, Thaler, and many more psychologists to help readers better negotiate with sound scientific principles.

The ones I liked best:

- **Egocentric interpretations**: People think they are more honest and good than they truly are
- **Avoid overconfidence**: Seligman recommends hiring salespeople who are overly optimistic, but good negotiators must be realists, not optimists
- Keep in mind: sellers truly can believe their product is superior to the competition (but it's not necessarily so)
- **Illusion of superiority**: not only do we view ourselves as better than we really are, we also see our groups as better than other groups.
  - "When we (ingroup) make concessions we do it because we're good, but they do it because it's in their interest" (avoid thinking like this or you won't be able to build trust)
- **Take an outsider's perspective**: imagine it was someone else in your position. Or ask (or hire) an external party to advise

I must quote the authors here because I like this part very much.
This to me represents the true positive transformative power of knowledge:

> Even well-intentioned people can act in seemingly unethical ways when they're motivated to claim more than they deserve.
> This does not make us evil, but simply humans.
> Understanding our own egocentric bias, we can move from "wanting to be fair" to actually being fair

Influence in Negotiations

The authors dig deep into the psychology of persuasion (Cialdini *Influence* & *Pre-suasion*) and how it can be used for *manipulation*.

Some good advice:

- Negative frame (what they stand to lose) is more persuasive than the positive frame (what they can gain), but you must use it carefully or it's annoying
- Aggregate the bad news and chunk up the good ones (i.e., break up your concessions)
- Make token unilateral concessions: a bit of a power move, this one is designed to build trust and invite them to do the same through actions instead of words
- **Door in the face** (aim for rejection, then moderate your demand): the yes ladder is only partially true, and having the other party say no, then lowering your offer, can be a powerful tool to induce acceptance of your second concession
- **Foot in the door** (aim for compliance, then increase demand): ask for a smaller favor they can say yes to, then

ask for a similar one but bigger (their tendency is to confirm their ongoing commitment to the cause)

> Manipulation: Techniques, Strategies, & Ethics

Door in the face VS foot in the door

"Door in the face" and "foot in the door" are not necessarily in contradiction.

DITF is appropriate to make your request seem reasonable by contrasting it to a bigger one (best done right away).
FITD is appropriate when you are building commitment to your key demand (best if there is some time between requests to help the internalization of the commitment).

Read more:

- **Unfair negotiation tactics** (& examples)

> 20 Manipulative Negotiation Tactics

How to Deal With Liars

Usually, you don't want to call your counterpart a liar as that would precipitate the whole negotiation.

What you do depends on the situation.
You want to deploy a strategy that allows you to let him know you know he has lied, while also allowing him to save face.

- Don't try to read people if they're lying: good professionals tell you it's not possible. Set traps instead.
- Ask clear questions because while most people don't want to lie, they are OK with misleading
- Change reality instead of lying about reality

And what about you, should you lie?

When the authors ask MBA students, far more people say it's OK to lie as compared to executives.
Executives know the real costs of lying.
And the authors say that it's always best not to lie.

Negotiating From A Position of Weakness

One of my favorite chapters in my favorite negotiation book (as of 09.2019).

Here are some great strategies to negotiate when you have little negotiation power:

- Don't advertise your weak position: few negotiators will truly know what your negotiating position really is
  - Avoid saying "time is of the essence" or "we can meet with you whenever you have the time: those give your weak position away
- Overcome your weakness by focusing on it (or valuing opportunities). When both have lots to lose or lots to gain, it's the one who makes the other's position more salient who negotiates better
- If you add any value and they want to destroy you, remind them of what they stand to lose
- Join together with other weak parties to form a stronger coalition (ie.: EU negotiating power greater than any single state)
- Avoid people acquiring too much power (ie.: salespeople in your company)
- Relinquish the little power you have: stop flexing the muscles you don't have and ask the other party to help you

out

The last one is not about “appealing to mercy”, albeit that might work too, no matter what Robert Greene says. This is how you could frame a salary negotiation when you have little power:

> **You**: I am very excited to work here and I accept the offer.
> Salary is not my primary concern, but it is a concern nonetheless, as it is for any person starting out.

Also, read more on frames here:

- **Frames and how to control the frame**

Dealing With Difficult Negotiators

- Don’t think of people as irrational: think of them as misinformed, and your options and efficacy will increase
- Ignore threats and ultimatums: respond to less threatening bits of their emails or words
  - If they only say “this is my final offer, take it or leave it”, you can say “it seems obvious you find it difficult to make any concessions here, I suggest we move to other issues and come back here later” or “I understand your frustration, we both know there is a deal to be made but we can’t seem to find it. Can you help me better understand your perspective? Why aren’t we there yet”
- Anticipate the threat and mention it first. Ideally, with your possible countermove.
  For example: “we understand this might cause delays, and if you also anticipate delays, we suggest we also involve other senior bank officials” (you use this in case he doesn’t want to involve his superiors)
- If you don’t think the threat is credible, you can tactfully let them know that
- Finally, consider that you might be in a position to negotiate, or that you’re negotiating out of context

> Negotiation experts tell you that you can negotiate anything.
> Perhaps you can. But that doesn’t mean you should

More Negotiation Tips

- Be comfortable with silence
- Highlight your concessions and make it clear they are costly to you. Otherwise, it's easy for them not to reciprocate
- Don't put too many contingencies on your concessions though or you make it difficult to build trust and cooperation
- Watch out for negotiation patterns: as time goes on, negotiations get smaller. But smart negotiators can fake that pattern
- Propose a PSS (post-settlement settlement) after you close the deal with the agreement, you will only change the contract IF -and only if- you can find mutually beneficial opportunities (the agreement becomes the new BATNA for both sides)
- Don't just ask "what", ask "why": it will help you better understand the other party's needs and find alternative solutions
- Don't dismiss anything as "their problem": they can quickly become your problems too
- Separate negotiation from influence: don't give in to pressure tactics
- If the value of your target acquisition depends on future events you know nothing about, you should not make an offer.
  Why Note?
  Because they will only accept if things go wrong
- Looking more prepared can pay off by lowering attempts at cheating you. For example, instead of only asking for a bit more discount, say that you will also talk to more vendors for future orders but you'd like to know from them if that's the last price they can quote
- Be careful of "intercultural communication seminars": the variance among individuals is more important than the differences
- It's not always the right time to negotiate: fighting over small dollars is also a waste of time.
- Negotiating too hard also sends the message you might not trust someone. Keep it in mind
- What looks good in Hollywood seldom works in real life

An example of what looks good in Hollywood but is BS negotiation:

Read the analysis:

- Why that's ineffective negotiation.

Review

As of September 2019, I rate "*Negotiation Genius*" as the best book on negotiation I have ever read.

I also consider it to be the best entry-level book because it's not focused on tactical and specific situations, like for example "*Never Split the Difference*" (conflict resolution) or "*Secrets of Power Negotiation*" (techniques), but provides a broad overview of negotiations.

The Dictator's Handbook: Summary, Review, & Criticism

Lucio Buffalmano · 9 September 2019 · Archived copy · Original

The Dictator's Handbook (2011) teaches the power dynamics, Machiavellian strategies, and mindsets of dictatorship.
It provides a different and revolutionary approach to political analysis by skirting fuzzy appeals to higher ideals and national interests and focusing on politicians' and leaders' self-interest.
The authors suggest that good or bad policies depend not on skills or goodwill, but only on who the leaders need to curry favor with to stay in power.

Key Insights

- Politics is a big tug of war for power and control of resources
- Democracies are best at guaranteeing prosperity because the leaders depend on the citizens' well-being to remain in power
- Autocracies lead to mass poverty and a few massively rich cronies because leaders depend on the cronies to stay in power, not on the average citizen.
- The best way to ensure good policies and increase a nation's well-being is to make the leaders dependent on the whole population.

Notes

About The Authors:
Bruce Bueno de Mesquita is a Professor of Politics at New York University. He is also a prolific author, with 16 books to his name.

Alastair Smith is also a professor of politics at New York University, author of three books, and the winner of the 2005 Karl Deutsch Award.
He is also the author of "*The Logic of Political Survival*".

Introduction: Are You Any Better Than Despots?

We all love the terrible stories of the worst politicians and business executives.

Why?

Because they make us feel as if we are superior and would do much better.

Instead, the authors urge us to ask why many, if not *most,* individuals, behave exactly the same way.

What are the forces that shape politicians to cling to power, bribe, and enslave their populations?

These are the answers that "*The Dictator's Handbook*" seeks to provide.

The Rules of Political Power

De Mesquita and Smith list the following rules of political power:

1. Politics is about getting and keeping political power (not about the welfare of the people)
2. Political power is best ensured and maintained when you depend on few essential cronies to attain and retain office (dictators are often in a better position to retain power than democrats)
3. Depending on a small coalition of cronies allows leaders to tax at higher rates
4. Dictators have the most power when their essential cronies are easily replaceable

Ideology and Nationalism Don't Matter to Leaders

In politics, ideologies, nationalities, and cultures don't really matter much.

Most political commentators and newspapers think in terms of what leaders want to do for their countries, but that's the wrong way to understand politics.

These sentences make little sense in the world of politics:

> - The American people want

> - The Chinese government ought to do

> - European leaders should do X for the good of Europe

Instead, if we want to understand politics, **we must learn to analyze and understand the actions and interests of *specifically* named leaders**, and we must avoid getting lost in fuzzy ideologies such as national interest and the common good.

It doesn't even make sense to talk about "international relations", because it's not about relations among states; it's about leaders and what they want and seek.

To understand politics, you must think about what's good for the leader to get to power and maintain power.
That's the true key to understanding politics—and to learning how to fix politics.

The 3 True Power Dimensions of Politics

Nobody rules alone.

What determines the balance of power and the politics that follow is how many backs the leader needs to scratch and how big the available supply of backs to scratch is.

From a leader's point of view, these are the categories that determine the extent of his power and the politics that he will likely enact:

- **Nominal selectors (interchangeables)**

Everyone who has at least a legal say in choosing the leader, In democracies, it includes everyone who has a vote. But in some non-democracies, voters are nominal selectors (i.e., The Soviet Union).

In practice, no individual voter has a big say in who runs the country, and the power of a single nominal selector in a true democracy is not much bigger than in countries with rigged elections.

- **Real selectors (influencers)**

This is the group that actually chooses the leader or the leader who will run for the elections.

In Saudi Arabia's monarchy, this is the senior royal member. In communist countries, it's the voting members of the communist party.

In the US, these are the electors of the Electoral College. But since they are bound to vote like the states vote, the nominal selectors and the real selectors are pretty closely aligned.

- **Winning coalition (essentials)**

It's a subset of the real selector, and these are the people whose support is essential for the leader to remain in power.
They are the ones with the power to overthrow their boss.

It includes the people responsible for actual policies, very senior civil servants, the highest army generals, and a handful of members of the court for kings.

In democracies such as the US the winning coalition is much larger than in dictatorships, and it consists of the minimum number of voters who give the edge to one candidate over another.

Based on the dimensions of political power, this is the definition of dictatorship:

> Dictatorship is a government based on a particularly small group of essentials, drawn from a very large group of interchangeables, and usually a small batch of influentials.

And this is the definition of democracy:

> Democracy is a government based on a very large number of essentials and a very large number of interchangeables, with the influential group being almost as big as the interchangeables

While, in monarchies or military juntas, the number of interchangeables, influentials, and essentials, is small.

Because dictatorships depend on a small number of essential supporters, they are a battle for private rewards.
And because democracies depend on large swaths of voters, they are a battleground for policy ideas.
My note: this was a generalization of course, see Trump's win with few good policy ideas and read "Win Bigly".

Dictator's Rules

1. Keep the winning coalition as small as possible: you will need fewer people to stay in power, have higher control over them, and you will save on graft (my note: however, a smaller number also means easier for them to organize a putsch)
2. Keep the nominal selectors as large as possible: so that you can easily replace troublemakers among the influentials and essentials, and send the essentials a message that they better behave
3. Control the flow of revenues
4. Pay your essentials just enough to keep them loyal: and keep them away from the source of money
5. Don't take money out of the essentials' pockets to make the people better: dictators depend on essentials, not on average citizens

Leaders Spend On Those They Need to Stay In Power

To understand politics, you need to understand this:

> Leaders spend on those whose support their hold on power.

This is why in democracies, where leaders need the support of all the voters, leaders spend a lot of resources for the good of the overall population.
Buying votes is not effective in democracies, so leaders seek to keep the loyalty of the voters with good and effective policies and with public spending that supports large infrastructure projects.

Democratic leaders also want a good and strong economy, because a poor economy means unhappy people and unhappy people mean no votes.

But in dictatorships, dictators need the support and loyalty of the essential cronies, not of the large population.
And so, they spend on the essentials first and foremost (even before spending on themselves).
Their political survival does not depend on the nominal selectors, who sometimes don't even vote, so the population always gets the short end of the stick, the leftovers -if there is anything left-.
And that's why the essential cronies often grow super-rich even while their countries fare poorly.

Where's The Money?

Leaders need to keep their backers happy.

And to do so, their main worry is where to find the money to keep the machine oiled.

Democracies, on average, keep taxes lower because they need to emphasize the public good.
Dictatorships instead tend to seek to extract as much as possible from those at the bottom (who don't really matter), to enrich those at the top (whose loyalty matters to the leader). The goal of dictators is to tax as much as possible without getting to the point of taxing so much that people stop working and revolt.

Getting to Power: Here's How You Do It

A dictator needs to do only three things to get into power:

- **Remove the incumbent**

The incumbent always has an advantage if he is doing his job well. The coalition of supporters knows they will be getting their beak wet, while they cannot be assured you will be doing the same.

There are three ways of removing the incumbent:

1. Wait for him to die
2. Strike at the right opportunity (old leader, a faux pas, a financial crisis)
3. Make an offer and/or convince the current supporters to switch sides
4. Overthrow the government through internal revolution or war with a foreign power.

Mortality is a great time to get into power.
Even slightly before death, leaders are usually at their weakest. Not because they're old or necessarily physically weak, but because the supporters know the leaders will not be long in a position to enrich and support them. And so they look at possible future alternatives.
For leaders, it's always a good idea to designate a successor to avoid these issues, and best of all if it's a family member.

Supporters are fearful of supporting a new entry though because they know what they're leaving, but they don't know what they're getting.
And it's common for supporters to be removed, discarded, or executed once the leader reaches power.
That's why allaying supporters' fears is a crucial step in getting into power.

Keep in mind internal revolution needs a lack of internal support from the military to succeed, so they are only

- **Seize the apparatus of government (treasury first and foremost)**

Most of all, you must get your hands on the treasury.

Ideally, you will also be able to capture the former dictator and retrieve some of his war chests.

- **Form a coalition of supporters to sustain him in power**

While a long-standing dictator is safer in place than a democratic leader, the first period as a dictator is risky.

Make sure you lock in a loyal coalition or someone else will be looking to overthrow you soon enough.

As a rule of thumb, keeping the same coalition of supporters as your predecessor is a risky move as it may contain true loyalists to your predecessor.

And keeping the same coalition that carried you to power is also risky. They all feel too powerful after having topped the previous leader. And they all feel their work should be rewarded with more than just an underlying position.

Many successful dictators get rid of the original coalition of supporters and replace them with new ones.

Dictators Are Held In Power by Military

The military is always a key to prop up the dictator.

Internal revolutions only succeed when the internal supporters defect the leader and leave the protesters free to overthrow the government.

Dictators who know the game and who still have the loyalty of their supporters will squash rebellions quickly and brutally to send a strong message that it's not worth it to demonstrate.

Say the authors:

> Consider a room of 100 people.
> Anyone could take complete control if he has 5 supporters with automatic weapons.
> And he will remain in control as long as the gunmen support him. There needs to be nothing special about the dictator except for the fact that he secure the guns first.

Companies Follow The Same Rules

The authors make the point that the same rules and dynamics apply to public companies.

The authors show that, albeit, the CEO should respond to the board, it's common for newly appointed CEOs to shake up the board after they come to power.

> Doing a good job is not enough to ensure political survival, and that is true for politics as much for business.

As long as bosses are beholden to a few boards of directors, they will keep them happy with fat bonuses in exchange for continued backing.

The solution is only to make CEOs more accountable to the millions of shareholders.
Reforming corporations is easier than reforming governments, the authors say: corporations don't have armies.

My Note: I'm not convinced by that.
In a way, not relying on hard power makes it easier for corporations to defend. There is no real enemy fight, just an invisible enemy who buys influence with money.

Also read:

- **How corporations manipulate employees**

Stop Foreign Aid: It Doesn't Help, & Might Actually Cause Harm

The easiest way to incentivize a dictator to liberalize its economy and provide more freedom is to force it to rely on tax revenues to generate funds.

If a dictator can rely on resources or on foreign aid and funds, then they will have no incentives to improve the lives of the average citizens.

Democracies should not send any aid to dictators, should not lend them any money, and should not forgive any debt.
Dictators who get a debt discount start re-borrowing recklessly right away.

Furthermore, the authors dedicate a whole chapter to foreign aid as a tool for policymaking, and not true help.

> Aid does a little bit of good in the world and vastly more harm

Democratization does not require benevolence. It requires economic needs by the dictator. And foreign aid helps alleviate the economic pain but only alleviates it for the leaders, not for the people.

Dictator's Dilemma: Liberty & Tax Revenues or Liberty & Risk Revolt?

Dictators can also gain-granting political freedom, allow technology, and provide good instruction.

How?

Freedoms help the population work more effectively, which in turn produces more tax revenues for the dictators.

However, freedoms also pose a threat as they make it easier for the population to organize revolts.
Galvanized by the increasing freedoms, the population might also feel like they can now demand more and more.

The authors say that successful dictators provide just enough freedom to keep the population producing enough for them to pay their supporters.

What About Wise, Well-Intentioned Leaders?

The author says that the world has produced wise and well-intentioned leaders and dictators.

But there haven't been many of them, so you better not bank on it.

They also make the point that "well-intentioned" often does not mean "good leaders".
Some of the worst leaders have been those who thought they were going to do great things for their population (see failed communist experiments as in Nikita Khrushchev, Mao Tsedong).

Among the exceptions of enlightened dictators are Dang Xiaoping (the man who liberalized China's communist economy while still keeping control) and Singapore's Lee Kuan Yew.

If Power Corrupts, Absolute Power Corrupts Absolutely

That maxim is generally true, but it doesn't capture the causality.

Power leads to corruption and corruption leads to power.
Small coalition governments *need* corruption because of the very nature with which they operate.

The authors say that the most corrupt regimes are always led by a small coalition.

Laws against corruption don't work in oppressive regimes and only provide the leader with more tools to prosecute his adversaries (think of the trumped-up charges of corruption in China or Russia).
Some leaders indeed allow corruption while still recording corruption in case they need to get rid of someone.

The best way to deal with corruption is to increase the coalition size.
So the authors say that to decrease corruption in FIFA and in the Olympic committee is necessary to increase the number of people with voting rights in those institutions.

Dictators Don't Care Much About Wars, Democrats Do

Dictators have two uses for the military:

1. Protecting the country against external threats
2. Protecting themselves against internal threats

And they usually care more about the second than the first.

As long as the war abroad does not threaten their position, dictators get into wars more easily than democrats do because they care nearly as much if the citizens at home are not happy with the war.

For democrats instead wars are costly.
Soldiers dying reflects terribly on democratic leaders, so Democrats only get into wars that they can win quickly, and they tend to spend much more on technology.

Why spend more on technology?

Because citizens' lives matter if the Democrats are to stay in power.
For despots instead, soldiers are expendable.

Despots Follow Sun-Tzu, Democrats Not: Here's Why

Sun-Tzu advice in "*The Art of War*" works for despots.

Sun-Tzu recommends stopping the campaign if it's costing too much and it's drawing out for too long.
Instead, democrats don't want to quit the war because that would make it seem like an unnecessary war that they lost. And that would cost them office because a war loss almost always costs them office. Unless they get beaten out of office by the opponent's army, despots don't have that problem.

Sun-Tzu emphasizes the importance of spoils to motivate soldiers, while democracies prefer fighting when it serves the citizens, or it would be impossible to sell the effort -and deaths- at home.

> **Bad behavior is more often than not, good politics**

More Realpolitik Wisdom

- Montesquieu didn't really understand politics and human nature. Machiavelli had a better grasp of human nature, but we can do better today by looking at more data
- **Do it, don't say it**: Never say you are going to make a purge of your essentials: do it without saying. If you announce, that you are inviting internal rebellions
- In democracies, austerity does not sell well. Especially after austerity has been going on for years (see Churchill after WWII)
- **Make friends**: CEO's longevity is tied to maintaining close personal ties with the members of the board
- Competent ministers or board members can be a risk for dictators as potential rivals (see "The 48 Laws of Power", law #1 of power: never outshine the master). The only trait that matters for dictators is loyalty
- Members of small coalitions live well, but in fear: make the coalition bigger and their benefits get diluted, make it smaller and they might lose their job
- **Rigged elections help dictators**: Strong leaders keep the supporters off-balance. This is why there are rigged elections in tyrannical states: leaders send the message that supporters can be replaced
- **Votes are sold in blocks in democracie**s: Many democracies have independent voters in theory but not in practice. Often votes are sold as "blocks" by their leaders (ie.: union bosses, religious leaders, or senators). And often these leaders sell the votes for a kickback
- **Tax loopholes serve the backers**: Dictators tax on average more heavily than democrats, but both make complicated rules and exceptions to favor their backers
- It's risky to be rich in autocracies (the richest Russian and Chinese individuals were both in prison)

- **Don't lend to dictators**: both democrats and, even more, dictators. The problem of repayment will be borne by the next leader… Or there is always the possibility of default and begging for debt relief. It's not a question of financial illiteracy
- Economic growth does not guarantee political improvement
- Small coalition regimes run their economies into the ground through inefficiencies designed to benefit the leader and the essentials
- **Ruthlessness is inherent to dictatorships**: The authors say that dictators must be ruthless. If people know he's unprepared to be ruthless when needed, he might not last long in power
- There is always a principled way to mask one's true intentions. The US promotes democracy when it backs the rebels and it supports stability when it supports governments

If you are interested in more, I recommend these articles with examples:

- **Political manipulations: techniques and examples**
- **Office politics: the archetypes of players**

And of course, in the face of selfish politicians, it might be a good idea to become a more individualistic player yourself.

Dictators' Handbook Quotes

On expedience VS doing what's good:

> Coming to power is never about doing the right thing. It's always about doing what's expedient.

On keeping the army loyal:

> Mugabe succeeds because he understands it does not matter what happens to the people as long as he pays the army

On the ultimate objective:

> In the end, ruling is the objective, not ruling well

On loyalty and competence:

> It is better to have loyal incompetents than competent rivals

On rigged elections:

> The is no better thing than a rigged election. As long as you are the one rigging it

On leaders and taxes:

> Leaders on the other hand are rather fond of taxes. As long as they don't have to pay them

And:

> Being a dictator is a terrific job, but it can also be terribly stressful. Especially if money is in short supply.

> Taxes are a great antidote to stress

On the dangers of wealth in autocracies:

> In autocracies it is unwise to be rich unless the government made you rich

On health care and infant mortality in autocracies:

> Even in autocracies with reported good health care system, infant mortality is high.
> Not because dictators don't like babies just like the next guy, but they recognize that helping babies doesn't help them

On helping the people instead of the coalition:

> Caesar made the mistake of trying to help the people by using a portion of the coalition's money.
> It is fine for leaders to enrich the people, but it has to come from the leader's pocket, not from his coalition of supporters.
> **Too much greed and too many good deeds are equally punishable.**

On idealism VS reality, the authors make a good case that everyone wants to help… But with government money, not their own.
And then they say:

> Despite the idealistic expressions of some, all too many of us prefer cheap oil to real change in West Africa or the Middle East

And, finally, one of my favorites underlining that appeals to ideological principles are often suspicious:

> **Men always have two reasons for doing things.**
> **The good reason, and the real reason.**

Criticism

Let me preface this section:

Not only do I love the book, but I also think that it is mostly right overall.
But a few notes still need to be added and potentially discussed:

#1. Does the US really act like a democracy for the citizens or are some democracies more masked autocracies?

The authors say that democracies tend to act for the citizens for the simple fact that they need the citizens' support.

Yet, Martin Gilen's study over 21 years shows that policy outcomes strongly reflect the will of high-income citizens.

This is not how democracies should work as for de Mesquita and Smith's model.
When it comes to actual policy, the US seems to act more like a small coalition government. This makes sense if you think that politicians heavily depend on donors to run their campaigns.

It would make sense then that the higher the wealth inequality (gini coefficient) and the more expensive the political campaigns, the less democracies act in favor of the average citizens and the more they act like small-coalition governments (ie.: autocracies).

This does not invalidate "*The Dictator's Handbook*" theories, but it increases a bit the complexity of the analysis, it adds some exceptions, and blurs the lines between "democracies on paper" and "true democracies".

True democracies then would require politicians to be less dependent on powerful and wealthy citizens and, possibly, present less income disparity just to make sure that a few cannot buy policies.

#2. Politics as self-interest only is a limited view and fails to truly understand and appreciate the hues of human nature

Since political analysis based on self-interest is sorely lacking, we need more books like "*The Dictator's Handbook*".

Yet, I believe that limiting ourselves to self-interest only leads to poor understanding and not to a "theory of everything" as the authors' students call it.

Not considering that people do have pro-social tendencies misses on an important aspect of human nature (see for example Ridley, 1996), even if cooperation was only self-interested (Axelrod, 1984).

It might as well be the case that dictators are self-selecting for selfish dictators' jobs while democrats attract a broader spectrum of individuals, including individuals who also want to do some good.

As an example, see the following:

#3. Leaders *do* have states' interests in mind (even if for selfish reasons)

The author says that it's never about countries but about individual leaders.

Leaders don't care about their countries, they care about themselves, they say.

Talking about Russians' ambitions to restore Russia as a great power makes no sense, they say, because it's not about "Russia", but all about the leader.

Yet, this statement in my opinion is wrong from a social-psychology point of view.

People *do* identify with their ingroup and with their countries. And leaders are people.
In social-psychology it's called the "Social Identity Theory", and in my guide on how to be a great leader I say that all leaders should encourage their group members to identify with their group for the simple reason that most people already have an inborn tendency to do so.

Putin, like many other autocrats, most likely *does* want his country to be a great power.
One because it gives him more power, second because it reflects greatly on him, third because that would make him well-liked and everyone wants to be revered and, finally, because he likely is at least a bit nationalistic and he identifies with Russia.

#4. Biased towards democracy: is democracy really *always* the best form of government? How about the democratic tragedy of commons?

The authors seem to reach this conclusion:

> Big coalition governments where nominal selectors are also the true selectors, such as democracies, are the best systems to ensure good policy and development

And, in many ways, that's absolutely true.
Especially if you compare it to your average dictatorship.

Yet, I can see many ways in which democracy, having difficulty with good but unpopular actions, cannot manage to avoid disasters.

The authors themselves admit that austerity does not win votes in democracies. Yet austerity is exactly what you

need sometimes.
I think of Greece or of Italy, a country with great potential, but which cannot manage to get out of recession and decrease its debt.
If Italy were a dictatorship, the dictators could introduce the forceful, unpopular in the short-term but good in the long-term policies that the country needs.

Democracies are also prone to tragedy of commons (also see: "*game theory bargaining*").

How does democracy cope, for example, with overpopulation if nobody wants a policy for one single child max?

How does democracy cope with environmental preservation if citizens all prefer to pollute?

Democracies can easily fall victim to the tragedy of commons whereas an "enlightened despot" can steer a country towards what's truly best for them in the long run.
That is exactly what Xiaoping did, and the authors themselves listed him as one of the "despotic heroes"
Xiaoping probably performed for China much better than any democracy could have ever done.

The authors say that good despots can exist, but they end up pursuing the wrong policies because they lack people's feedback.

However, that is not a convincing argument to me.
Modern despots can have access to plenty of data that average citizens don't even bother to check before voting.

- **What about hated democrats and beloved dictators?**

"*The Dictator's Handbook*" does not expressly say that dictators are disliked.

But the feeling is that dictators are disliked by the population, while democrats are more liked and popular.

Yet I think of Vladimir Putin, a rather liked and loved autocrat in Russia. Or even Pope Francis in the Vatican/Catholic Church.

And in most Western democracies the approval ratings of politicians are abysmally low.

This again seems, in my opinion, to fly against the face of the "terrible despots" concept and lend more credibility to the notion that "enlightened despots" are sometimes better than weak democracies.

#5. Unsure of some data, indexes, and evidence

There were a few instances where I wasn't sure about the underlying data or about the indicators used to corroborate the theory.

For example:

- **Is the "resource curse" true?**

The author says that "resource-rich" countries systematically underperform resource-poor countries.

The author says that "nations with readily extractable resources *systematically* underperform nations without such resources".

But it that true?

A few notable exceptions spring to mind, including the US, Canada, and Norway.
There has been considerable criticism of the "resource curse" theory, and I am personally not too convinced of how real that curse is.

I think it might be true with dictators, but it's not necessarily true with democracies.
The authors should have pointed that out a bit more clearly maybe.

- **Do democracies really tax less?**

The authors say that democracies, on average, tax at a lower rate.

They also say they have another book up with all the data and I am eventually going to read that, too.
Still, I would have liked them to at least mention they have data to back their assertions.

There are plenty of exceptions that make me at least doubt that assertion. Think of the Scandinavian countries and many more European countries. But also think of autocratic regimes with very low taxation or, in some cases, even true tax havens (ie.: Dubai).

- **"Straight road index"**

Measuring how straight the roads are to tease out how despotic a government is seemed a bit too convoluted to me.

Not necessarily untrue, but it might be a bit of a stretch. Especially if you don't take into account geography, population density, and wealth.

- **Earthquake index**

The authors use earthquake victims as a proxy for the level of government's care for its citizens.
That, in turn, would help identify dictatorships (don't care at all) VS democracies (care).

It makes sense on paper.

Yet, earthquakes are so rare that even democratic leaders should theoretically not care much about protecting their citizens from events that will happen who knows when.
But **if we only think in terms of self-interest, democrats also have a strong short-term bias**. The authors mention the earthquake in Italy for example, but I know well about it because it was exactly in my region, and the authors failed to realize that *the largest amount of victims came exactly from government buildings* that collapsed.

So albeit I agree with the overarching idea, I'm not too sure about this "earthquake index".

And since self-interest in my opinion does not explain big present investments for uncertain future rewards, I must wonder again: maybe self-interest is not the only way to understand politics?

Review

The Dictator's Handbook is a uniquely enlightening book on the power dynamics of politics and dictatorships, as well as realpolitik and human nature.

It helped us strengthen several of our articles as well as our flagship training Power University, and that's the greatest compliment we can ever pay to anyone.

Get the book on Amazon or check the:

- **Best books on power**

You Can Do Better Than The Red Pill. Here's Why

Lucio Buffalmano · 18 September 2019 · Archived copy · Original

The Red Pill is a loose network of men focused on sexual dynamics, male self-improvement, and protection against exploitation.

It's taught many guys useful lessons: dating strategies, status-building, and self-reliance.

But in practice, some threads of the movement drift into cynicism and adversarial thinking that limit growth. This article explains what the Red Pill gets right, where it goes wrong, and how to upgrade those lessons into strategies that build real power.

Note: we analyze the red pill seen from its raw and real grassroots dynamics
Not just the more politically appealing view of its public-facing authors. We would agree more with some of its more moderate participants. But we highlight the more relevant grassroots dynamics.

- SUMMARY

Intro: What's The Red Pill

This is a high-level definition of the Red Pill:

> The Red Pill is a community of men, who congregate to learn, share and discuss social and sexual dynamics with takes that may be too politically incorrect to be discussed by society at large.

The Red Pill is a subset of the larger "manosphere" constellation, dealing with varied topics such as life strategies, power dynamics, male rights, and general self-development.

The popular expression "taking the red pill", means opening up to the hidden truths of life that society hides from most people.

This website could be considered a red pill place.

Red Pill & TPM

The Power Moves was one of the first ones to be featured in The Red Pill Archive:

It makes sense that this website is there.
But at the same time, we differ in crucial aspects:

- We **teach individual empowerment**, and rather than group-based advancement (ie.: 'men's rights')
- We conceive the **possibility of smart win-win relationships** with male leadership
- We **believe in individual men's power to win**, no matter the context. So we care less about social trends, feminists, etc.

Let's start with the biggest elephant in the room:

Is The Red Pill Misogynist?

Yes, the rare important sub-currents within the red pill that espouse misogynistic takes that we do not like, support, or regard as truthful.

That being said, there are also plenty of valid red pill insights.
Men's and women's interests diverge sometimes, and those divergences can create friction and chances for cheating.
Some red pill can be 'positively Machiavellian'. But it also turns cynical, and sometimes potentially toxic for two reasons:

1. **Men VS Women focus**: It focuses *only* on areas of friction, disregarding opportunities for win-win
2. **Focus on women's faults**, rarely on the value women can add, and rarely on men's faults

The red pill often frames women as against men. And, not rarely, as manipulative and underhanded
Let's see some examples:

Men Are Good, Women Are Bad

The red pill sometimes portrays women as manipulative and underhanded.

Do women manipulate?

Sure.
Just like everyone else.

But the Red Pill wears distorted lenses. Aggressive or manipulative behavior in the "us" male ingroup is out of sight, while the faults of the "them" female outgroup are in full focus.

A quick sift among the most popular threads shows repeated confirmation of the "good men VS bad women" frame:

As if men can't manipulate, too (eye roll)
Red Pill author *alpha male strategies* also recommends men to "string women along" for as much as possible because, he says, that's what women do to men.

Men Are Smart, Women Are Stupid

Misogyny and anger might be more hidden among popular Red Pill authors, but they are endemic of Red Pill *communities*.

This post has been upvoted more than two thousand times, by 88% of the readers, and received the moderator's endorsement.

Here is what it says:

I'm not a woman hater due to inexperience like the feminists think so, in fact when I was inexperienced I treated women better than I ever do now. It's precisely because I deal with the prettiest and smartest girls on the daily that I've come to the conclusion that they're all fucking retarded. All of them. If they're pretty they're a whore. If they're smart they're also a whore. The "smartest" girls I know are the biggest sex addicts

Studies show no IQ differences between genders. But this revered TRP guy knows better...

He claims unsurpassed experience to conclude that "all" women are…

And most Red Pill redditors upvoted it.

AWALT: All Women Are All Like That (Bad)

The good old "they're all alike".

Again, no surprise for anyone schooled in group dynamics and psychology: this is a natural consequence of adversarial ingroup/outgroup dynamics.

These two group dynamics are particularly salient in communities like the Red Pill:

1. **Self-Stereotyping**: members strive to conform to the group (See Haslam, 2006)
2. **Outgroup stereotyping**: the outgroups is seen as "homogeneously bad" (see Baumeister, 1997)

Both of them can take some mental gymnastics, and the red pill groups help support the cognitive dissonance (Festinger, 1957).
Publish and upvote only information that supports our view until supporting information is all that's available to see.
And everyone can keep repeating "see? All women are bad".

A nuanced reality requires coping mechanisms to maintain a biased outlook
Free of any external interference, confirmation bias, groupthink, and group dynamics can maintain even the most unrealistic representations of reality.

Here are some distorted notions the red pill espouses about 'all women are like that':

- Women never really love a man
- Women dupe a beta provider to cheat with the alpha (alpha fucks, beta bucks)
- Women form no real attachment: hypergamy controls them

Again, there is a backdrop of truth in most of them.
Just not the way the Red Pill presents them, because the Red Pill naturally distorts them.

P.S.:
One must truly lack experience to believe that women can't love a man. See how to make women fall in love.

Women Control An Unfair System, Men Must Defend

The red pill sees women as controlling society and men as victims.

It's true that different individuals try to sway the judicial system and cultural system to favor their interests, of course.
And individual effort congregates at the group level. This is basic social power dynamics.

However, once again, the red pill never reflects that men do the same, and have been winning at it for centuries.
It also exaggerates how bad it is for men today, leading to some disempowering victimhood mentality and frames.

This one-sided narrative is similar to how hate groups operate, recruit, and proselytize (Lee, 2002).
The "unfair system" against "us" is exactly how this former nazi was recruited into the organization.

Selective Attention: Their Faults, Our Values

This might be the red pill's core issue: focusing on women's faults, without an equivalent appreciation of one's own.

When red pillers focus only on the "wrong" that women do and "what's to lose", they only see 1/4 of reality.
They miss:

1. **The positives of women**
2. **The negatives of men** (also see "games men play")
3. **The potential for win-win** (you find what you look for, as they say)

Read more on win-win:

- Fundamental strategies of power
- The enlightened collaborator

> Life Strategy: The Enlightened Collaborator

Social Psychology of Intergroup Conflict

Writes social psychologist Roy Baumeister:

> People do not generally need a great deal of urging to despise the groups that are arrayed against them (…)

Some Red Pill communities still provides plenty of urging, though.

In social psychology, the tendency to hate the outgroup is an offshoot of the "realistic conflict theory".
Conflicts become more extreme when:

- Members are authoritarian, craving power, and control

- Members engage in competition
- The competitions are zero-sum games

All three are true for the Red Pill.
The Red Pill attracts authoritarian men who crave more power and control, men high in Social Dominance Orientation, which in turn predicts sexism (Pratto et al., 2000), fueled by a view of gender relationships as social competitions.

These in-group vs out-group dynamics start benignly with a strong self-identification as men. Nothing wrong with thinking of yourself as a man, and it can be easily framed (and be) as healthy and good.
The problem is when it becomes the main or only source of self-identification, pride, and pitched within a competitive dynamic set *against* women.

These tendencies are either latent or openly embraced and encouraged:

Masculinity pride is Jack Donovan's main focus, for example.
Donovan, author of "*The Way of Men*" and a respected author in the RP community, theorizes that society, weakened by feminization (the enemy), is on the verge of breaking up

Rollo Tomassi, possibly the most notorious voice of The Red Pill community, also offers a frame of 'men against women'.
He writes:

> (…) women inserting themselves into male space in order to enforce the dictates of feminine social primacy

In male bonding, Rollo Tomassi sees a bulwark against the feminine assault.
Criticizing the MGTOW movement, he says:

> This only serves to cede power to the feminine imperative
> -Rollo Tomassi, "*Positive Masculinity*"

At a deeper level, this is ego fusion (Swann et al., 2012), which is the merging of group and self-identity such that the two cannot be disentangled.
From a social-psychological perspective, the bigger the personal self-identification with the "we", the higher the depersonalization.
At the extreme of depersonalization, the group becomes more important than the self (Turner, 1986) because, well… The group *is* the self.

This extreme sense of belonging, coupled with an adversarial attitude, leads to increasing anger and hatred towards

the outgroup (in this case, women).

Collective Narcissism

These dynamics overlap with **collective narcissism**.
Psychology researcher de Zavala explains that collective narcissism is a fragile and defensive form of group belonging, where **the group's alleged superiority is used to bolster a fragile personal sense of self-worth**.

We can clearly see this in some men in the manosphere.
For example:

NateSim latches his ego on the "men's cart", so he can feel good about himself when a man "beats" a woman. Low power behavior.

Collective narcissism is associated with vulnerable narcissism, the 'low power' form of narcissism, and defensiveness, thin-skin, and retaliatory aggression against perceived slights to the in-group (de Zavala, 2018).

The Power Dynamics of Hate Group Leadership

Hate groups need hate to stay alive.

Says Baumeister in his landmark work "*Evil*":

> The members with the firmest sense of hatred will end up being the ones that the others look to for support and guidance.

A moderate leader is dangerous.
He may build bridges, display cracks in the echochamber, or present an overly rosy view of the world. That puts the hate group at risk of dissolution, which the members who invested their ego in the group cannot tolerate.

Nobody speaks up against extreme leaders. The moderates will quit, raising the percentage of extremists in the group.

This is a general dynamic, and also applies to feminist dynamics.
For example, it's exactly what happened to this former feminist when she tried to understand manosphere activists:

> Former feminist: when you start to humanize your enemy, you in turn may be dehumanized by your community

Red Pill & Feminism: Two Sides Of The Same Coin

Read a few feminist and red pill books, and it's hard not to see the same issues and patterns.
For example:

Feminism	Red Pill
Patriarchy oppressing women	**Gynocentric society** oppressing men
Coercive Control = no loving relationships	**Hypergamy** / dual sexuality = no loving relationships
Toxic masculinity = danger to society	**Feminazi** = worsens society

The Red Pill's own bias may be a tad less bad than feminism, but I might be biased as a man myself.

Cynicism & "Zero-Sum Game"

At their core, some red-pillers look at relationships as zero-sum games.

Sometimes that zero-sum game thinking is obvious and easier to spot.
Some other times, it's more hidden.

For example, this is what an active social media red pill poster says:

> **Red Pill Guru**: They are using him for his money, and he is using them for their beauty

The keyword is calling 'using' what could be a win-win transaction, instead.
That's the mindset of focusing on the loss, rather than on the mutual benefit.

And Rollo Tomassi writes in "*Preventive Medicine*":

> For one gender's sexual strategy to succeed the other gender must compromise or abandon their own.
>
> – *Rollo Tomassi*

Rollo Tomassi is not *wholly* wrong.
But he is wrong in generalizing to the whole population, because plenty of men gain with a long-term relationship (Buss, 1994).

I'd have to wonder why Rollo got married, then.
Because if you see relationships as zero-sum games, then the red pill approach to refuse relationships makes sense.

> **The Red Pill is at odds with women and relationships because it presupposes zero sum games relationships, playing against a cheating opponent, who successfuly rigged the system.**

The only advice that can come out of that is to avoid relationships and play to win, but never cooperate.

In game theory, this is referred to as a "defector strategy".
Sometimes, it hides *fear*, though. That fear motivates one to avoid the game altogether or approach it with a

mindset of “I’ll cheat first”.

But this is not well-supported by evolution.
Humans developed pair-bonding and semi-monogamy because it was good for both (Luoto and Woodley of Menie, 2022).

This mindset can never allow for a healthy, collaborative, win-win relationship.

Again, the red pill does get something right.
A touch of cynicism is important; relationships do incur risks. And in committed relationships, **high-value men give more** (see our video here).

The virtue lies in looking at those dangers realistically and crafting effective strategies around them.
Read more here:

- **The positive cynic mindset**: growing past poisonous cynicism
- **Self-defense in business and love**, cooperating, while winning

> Self-Protection in Love and Business, Without Losing Trust

Risk of Toxicity & Abuse

Let me start with the obvious:

Not all Red Pill men are abusive.

Yet, it would be naive to not see that some dynamics increase that risk, including:

1. **Dehumanization process** (common in all hate groups)
2. **Dominance and control** (“be alpha & dominate, or be a loser”)
3. **Ultra-conservative social roles**
4. **Defensive, win-lose, & scarcity mindset** (attack first to avoid losing, Forward, 1998)

Let’s review some of them:

Dehumanization Process

Social psychologist Philip Zimbardo, notable researcher on violence and abuse, lists four social causes responsible for evil:

1. **Deindividuation** (“I” merges with “red-piled men”)
2. **Dehumanization** (women are bad, so morals don’t apply to them)
3. **Anonymity** (most red pill communities are anonymous)
4. **Diffusion of responsibility** (the more of us, the safer it is to be extremists, thus the effort of recruitment)

Dehumanization (Kelman, 1976) is encouraged in some Red Pill communities.
This is what Esther Vilar, author of one of the most popular *Red Pill books,* writes:

> Women live an animal existence. They like eating, drinking, sleeping – even sex, providing there is nothing to do and no real effort is required of them.
>
> *Esther Vilar*

Vilar describes women as mindless, animal-like creatures who leech on men for their survival.

And her book is recommended reading in The Red Pill subreddit, finding a prominent spot right on the sidebar:

Link to online PDF file BTW, just to support the author :)
Through dehumanization, even normally moral men stop feeling any bond and empathy with women.
See an example from a popular thread:

The toxic end game?

Once women are dehumanized, then it's fair game to treat them as sub-humans.

See an example:

- **Psychopath's sexual strategy**: active in the red pill subreddit

The Alpha Imperative: A Male Yoke

The Red Pill talks about the "feminine imperative", but the true diktat Red Pill men are all under is the Red Pill "alpha imperative".

Men who buy into the red pill build their self-esteem around semi-toxic and inherently fragile traits of 'alphaness'.

This guy, for example, ended up in a relationship after having "taken the red pill".
Here is what he writes:

So, I recently realized that my beliefs were really damaging. I realize these old Red Pill and Evo Psych beliefs that empowered me, also unequivocally **make me feel like a loser compared to everyone she's had uncommitted sex with.** So I wrote down the beliefs I hold and while I know some of them sound insane, I would really like your confirmation that they are false - I feel like it's the only hope I have. I did read the stickied evidence thread, which helped. So, the beliefs that are destroying the relationship:

- Women give sex and men have to earn it. If men are worthy for a short term fling, they are more "chosen" than a man chosen for a relationship. a man who gets sex without commitment is superior than one who needs to commit or show explicit signs that he wants to commit.
- The top 1-20% of men are the ones getting most of the sex, so it's likely that the men she slept with are better than me.
- Women present a loving, committed personality when they are in love with a long term mate, and a different, more sexual personality when they are with a highly attractive short term mate. So the short term sex partner sees more of her true nature, so he wins.
- Most men who date are just looking to get laid. Men who slept with my girlfriend just used her for sex, she allowed it. This makes them the winners over me.
- When a woman has sex with a new guy, it emotionally damages her somewhat. Sex in the future becomes a little less meaningful for her. Therefore, guys who got to her earlier won over the guy who has her now.
- Younger women are always more valuable, so if a guy slept with her when she was younger (even by a couple years), he got something better than me that I will never have.

See the pattern?

This man's fragile fear can be boiled down to the possibility of someone more alpha than he is.

The fear of other alphas "branding" women has a name: "alpha widows".
Alpha widows, or women who have been with an alpha, are supposedly "dangerous" to be with because they're harder to control (again, a low-value mindset of controlling).

But true development and **male power comes from not fearing anyone.**

Learn better:

- **How to lead relationships, with high-value**
- Antifragile mind
- Why the alpha male game is limiting you

Political Conservatism

> For a bunch of self-proclaimed alpha males, many of these guys spend a woeful amount of time demanding that a tough man rule them
>
> *Lucio Buffalmano – the authoritarian personality conundrum*

The Red Pill started apolitical.
But it has become largely a congregation of conservatives, complaining of libertine dating, women's sexuality, and general social dynamics.

See an example here, with Red Pill moderators officially endorsing Trump:

Nothing wrong with conservatism, of course.
But as a group that was also focused on dating success, chances are that conservatism and complaining may not help. And sure won't help to be a lover and successful dater.

The psychology of a player is inherently different than current red pill social and sexual conservatism.

Beyond Red Pill: Men's Empowerment

Here are some good steps:

- **Focus on the self**, less on social trends
- **Embrace nuances** and exceptions for a better understanding of reality
- **Adopt more empowering mindsets**: an empowered man can win, no matter the social trends
  - You can find plenty of feminine women to date
  - You can have win-win relationships

Please read more:

- **Making of the ubermensch**
- **Growing beyond the red pill**

And I will end with a quote from Robert Greene:

> We belong to the human race. Anything else is backward and far too dangerous.

SUMMARY

The Red Pill presents itself as the place to get the uncomfortable truths of life.
And some of those uncomfortable truths are spot-on, and beginners need to learn them.

The next step is to turn that inquisitive mind towards, well… The Red Pill itself.

Several red pill communities also contain some bitterness, cynicism, and some disempowering mindsets.
They should be a *phase* in men's empowerment, not the final step.

The next step is to embrace a more nuanced reality, more empowering mindsets and strategies, and the possibility for win-win relationships.

To transcend the group and win as a man, no matter where you are, check:

Red Pill Mindsets of High Value Men: Moving Past Anger

Lucio Buffalmano · 23 September 2019 · Archived copy · Original

This article's core notion is that "red pill communities" are best seen as phase in men's development.

While "red pill" is sometimes used for "seeing the truth", this article refers to some tendencies and subsets of red pill *communities* and *gurus* .

And to reach the best version of yourself, you must eventually move beyond the limitations of those communities and gurus.

So let's start:

Contents

- Attitudes Towards Women

Attitudes Towards Women

The views on women are the most significant differentiator between Red Pill men and post-Red Pill men.

TRP: Women Are Bad & Manipulative

At the heart of Red Pill toxicity is the view of intergender relationships as adversarial.

The Red Pill sees women as:

- Morally inferior to men
- Irrational and less intelligent
- Naturally manipulative and conniving
- Acting always and only on self-interest, which never intersects with male interest

This is an example:

Taken from one of the most upvoted threads on TRP Reddit
Some men joining the Red Pill were victims of Madonna-whore mindset.

Before they used to believe all women were Madonnas.
But then something unexpected happened in their lives, they join the Red Pill, and now they swing in the opposite direction, happy to justify their anger with the "all women are like that" mantra (ie.: "all women are whores").

They become highly mistrustful of women, and while sometimes mistrust is good, John Gottman's research showed that protracted mistrust and suspicion of other people's motives lead to loneliness and early death (mostly common in men).

Alpha Fucks, Beta Is Fucked: A Black-And-White World

Many Red Pill men find "the truth" depressing, yet providing opportunities for those who become "alpha males".

In black-and-white thinking, it's either you fuck women by being an alpha, or you get fucked by being a beta.
Of course, "alpha fucks beta bucks" is not wholly wrong.
But the concept, in its extremization, ends up being a distortion of reality.

Read more here:

> The Science of "Alpha Fucks Beta Bucks" (Facts VS Myths)

HIGHER VALUE: Women Pursue Their Self-Interest, Just Like Men Do

High-quality men are not naive.

They know that:

- **People manipulate**, both women and men
- **Interests can diverge**: some interests overlap, and others diverge -or may diverge over time-
  - Men and women share both common and diverging goals in dating and reproduction

So we can expect different strategies of intra-sexual and inter-sexual competition, as well as different adaptations

for manipulation.
Also say:

- Dating games women play
- Nasty and manipulative games women play
- Women control and “domesticate” men in relationships

> Female Domestication: How Women Control Men & Relationships

However, crucially, these men also believe that:

- Women’s nature doesn’t make them bad
- Many women are amazing and enriching to a man’s life

And, that, of course, the same applies to men -just differently-.

TRP: Women Are All The Same (AWALT)

This mantra suggests that men should stop thinking “their woman is different”.

And many men who believe their woman is special may need to hear that indeed.

Many core psychological traits and propensities are indeed shared among women -and across humans in general-.
However, as usual, some red pill communities take it *too* far.

And I’ve often seen that “AWALT” attached to some shameful behavior that does NOT extend to *all* women.

HIGHER VALUE: Most Women Share Many Foundational Traits, And Important Individual Differences

Post-Red Pill men know that there are general and fundamental tendencies in both men and women.

In that sense, **“AWALT” applies to any living organism** when it refers to all the many underlying similarities.

But they’ve experienced enough to know that **women also vary in their tendencies to cheat, take, and manipulate** -or to be faithful, giving, and straight-talking-.

They have experienced women who played dread games, who texted them to meet up to celebrate their new “single lives” after they had been hooking up for a month, and women who lied and deceived.
And they have experienced women who want simple lives, craving for 1:1 attachments and a man to take care of.

As a matter of fact, they worried for those women when they themselves weren’t willing to commit.
Here is one example:

Many women are truly 'very nice'

I worried she was too into me and too nice and submissive. Too "good".

Dropping gifts in my mailbox, preparing dinners, showing up at my door within 20 minutes when I told her I got fired (and while I was having another woman over…).

I wanted to expand her options, increase her negotiation power… Make her more like me. But it's not what she wanted. She wanted a man to give all her love to. I'm glad she found the right guy for that.

Attitudes Towards Seduction

Some men enter the Red Pill after a heartbreak.

Or following the momentous self-admission that they are not doing well with women.

The Red Pill promises solutions for both, so the sale is easily done.

Let's see how that turns out.

TRP: Women Love As*holes, Be An Asshole Or Lose

This is what the more toxic Red Pill seduction mindset looks like:

> Women chase unavailable assholes and despise betas.
> Become an asshole, or lose.

And while there is certainly some truth in that, it's also a limited view of what works in seduction.

Somewhat correlated is the objectification of women.

For example, red pill guru Rollo Tomassi', author of "The Rational Male" book/blog, refers to women one should be dating as "plates".

See an example here:

Since women are dehumanized, it's only natural that game in the Red Pill degrades into manipulation.
Enter mind games such as "triangulation" and "dread game".

Also read:

- **Asshole dating strategy**
- **How to be a "good asshole"**

> How to Be A Good Asshole

HIGHER VALUE: As*holes Do Better Than Losers, But I Do Better Than Both

Post-red pill men believe that cooperation and win-win are possible.

And that tends to work better in life.
Assholes mostly outperform submissive men and passive doormats. But high-power men who can mix in warmth tend to do best.

Whirlwind romance includes both physical ecstasy and romance, multiplying the effects and the enjoyment.
Example:

This is the type of seduction I've preferred, and it's what misogyny and "asshole game" will never provide.

Also read:

- **Smart cooperator**: cooperating as a red-pilled man

Masculinity Ideals

What does it mean to be a man?

That's a major topic of both the manosphere and the Red Pill, where the emphasis is on "being an alpha male".

Let's see what it means:

TRP: It's Either Alpha, Or Useless Beta

And yes, aspiring to "be alpha" in the sense of high status is great.

The issue with the toxic red pill drift is that the rule to being an alpha male is reduce to this:

1. Be a selfish asshole

Some men may indeed need to be more like good assholes -including becoming assertive and high power-.
But the worst Red Pill philosophy is overdoes traits of ass-holishness, and ditch the traits that can make for collaborative relationships (more on it later).

It's the exact same mistake feminists encourage women to do, by the way.
Women read equivalent books such as "The Power of The Pussy" and "Why Man Love Bitches" with the intention of becoming stronger.
But they often just become angrier, more argumentative, and bitter.

Alpha Males Against Feminazis

Some Red Pill men are misogynists because they feel threatened by women.

In a way, it's understandable. Empowered women ARE a threat to many (below-average) men. See video explanation here:

But it's a low-value reaction to complain and be angry about it.
This is what Rollo Tomassi, a popular Red Pill author, writes about women "invading" male spaces:

> (…) women are inserting themselves into male space in order to enforce the dictates of feminine social primacy
>
> *Rollo Tomassi, Positive Masculinity*

"Enforce the dictates of feminine social primacy"?
What does that even mean.

These gurus present an ideal of masculinity that should supposedly stop the "female advances".

Some red pill members support influencer ideals of 'masculinity to stop women's advancement.'
These men look at men and women as monolithic blocks, where a win for one is a win for all. And they invest their ego in the group, a phenomenon of ego-fusion (Swann et al., 2012).
You can see an example here:

Group dynamics encourage this competitive ingroup/outgroup dynamics. And men who don't conform attacking the "feminine advance" are shamed into compliance.

The group controls individuals with two powerful tools:

- **Belonging**: abide the rules and you're one of us, disobey and you're blue pill
- **Shame**: abide the rules and you're alpha male; disobey and you're beta male blue pill

And of course, the judge yoke of being "good enough" or "not good enough".
Which is funny because it's the same tool *women* use to control men.

It works like this:

You don't conform to *our* ideal of masculinity, which includes hating on empowered women? Then you're not a real (alpha) man.

HIGHER VALUE: I Don't Mind Labels, It's All About Achieving or Not Achieving Goals

High-quality men answer with a big "f*ck you" to anyone who tells them what a man *ought* to be.

They don't like external impositions because they're content with themselves.
They don't need a group to prop up their ego and self-image.

If they meet a successful woman making lots of money they're not threatened.
If she bench-presses more than they do, still not threatened, because they don't link their ego to "strength".

High-quality men are freer and more resilient because they use more flexible *guidelines* instead of steadfast rules.
They don't attach their ego to any specific trait.

See this video on high self-esteem:

And, finally, they don't even try to "fight social trends".
One, they know it's useless.

Two, they have better things to do.
Three, they'd rather make the most of those trends, than complain about it.

Attitudes Towards Others

How do the two relate to others?

In diametrically opposed ways:

TRP: Push "Blue Pill Men" Down to Feel Better

There are some social climbing dynamics at play.
"Alpha male" and "Red Pill" are social currencies that afford or remove status within the Red Pill community.

The community, like most other ideology-based groups, is set up to reinforce the beliefs of the community and to prop up the ego of its participants.

People who are not in the Red Pill are blue pill, and inferior.
That makes the members feel "better", as they can point to someone who is "worse".

There is also an internal struggle for status, of course.
Since the community's brownie points are delivered based on adherence to "red-pillness" and "alpha-maleness" values and traits, well… You guessed it, many **men are busy proving how alpha and red pill they are**.

This leads to social climbing, a common but rather low-status behavior that people adopt in groups.
I specifically addressed manosphere social climbing in "alpha male posturing".

HIGHER VALUE: I Aim High In Life, Could Use Some Company Up There

High-status men don't push people down.

Why should they?
They're at the top already.

It's only those in the middle and at the bottom who push others down to climb up.

Views On Romantic Relationships

Part of the manosphere encourages men to fulfill their "obligations" and care and provide for women and families.

Jordan Peterson for example encourages men to stick with one woman, and the "protector" is also a theme in the classic book "King, Warrior, Magician, Lover".

But the Red Pill is different.
They say commitment only works outside of Western society where "hypergamy" is still under control.

And, again… There is some truth to it.

But of course, the worst of the Red Pill takes it to an extreme, and don't see the possibility for a happy relationship.

TRP: Relationships Are Adversarial

This is something Rollo Tomassi often repeats.

And for the record, here is what the latest Hoxford Handbook of Evo Psych says:

> Despite the often too prevalent perception of a war between the sexes in the social sciences (see special issue of Sex Roles, e.g., Vandermassen, 2011), to a large degree interdependent reproduction promotes cooperation

> rather than confict (Buss, 2017; Mikulincer & Shaver, 2007)

That's largely correct, albeit higher value men need less relationship-based cooperation and have more power to negotiate on their terms. But let's keep things simple for now.

And listen to Richard Cooper talk about relationships in his YouTube welcome video:

> View this post on Instagram
> A post shared by The Power Moves (@the_power_moves)

> **Cooper**: They're just using him for his money. So? He's just using them for their beauty

Keyword is "using".

It makes sense if you remember that some corners of the Red Pill see:

- Intergender relationships as a tug war
- Women are inherently wicked and manipulative
- The playing field stacked against men

So relationships for the Red Pill are naturally hard.

It's no surprise that this leads to toxic relationships, possibly abusive relationships and, overall, to plainly terrible relationships.

See this example of a man who swallowed the pill and became completely paranoid:

Indeed, even if they want a relationship, it's difficult to develop one for men schooled in Red Pill communities. Current Red Pill philosophy stands in contrast to successful relationships.

Furthermore, keep this in mind:

Assholes, bad boys and dark triad manipulators can pick up women, but they can hardly form good relationships.
And, often, struggle with a high-quality woman who have more self-respect -and more options-.

But it's easier to keep hooked women with self-esteem issues.
This is why some men seek to decrease her self-esteem by lowering her value.
That makes the men feel more in control and decreases the chances she'll leave or cheat.

Red Pill Relationships and Ego-Threat

A woman leaving for another man is a big blow for anyone.

But it's particularly destructive for Red Pill men.
For Red Pill men, that would mean that they found "someone more alpha". Which, in turn, means "they are not alpha enough".

And since all their ego is built around “being alpha”, they fold like a castle of cards.

See an example here:

So, I recently realized that my beliefs were really damaging. I realize these old Red Pill and Evo Psych beliefs that empowered me, also unequivocally **make me feel like a loser compared to everyone she's had uncommitted sex with.** So I wrote down the beliefs I hold and while I know some of them sound insane, I would really like your confirmation that they are false - I feel like it's the only hope I have. I did read the stickied evidence thread, which helped. So, the beliefs that are destroying the relationship:

- Women give sex and men have to earn it. If men are worthy for a short term fling, they are more "chosen" than a man chosen for a relationship - a man who gets sex without commitment is superior than one who needs to commit or show explicit signs that he wants to commit.
- The top 1-20% of men are the ones getting most of the sex, so it's likely that the men she slept with are better than me.
- Women present a loving, committed personality when they are in love with a long term mate, and a different, more sexual personality when they are with a highly attractive short term mate. So the short term sex partner sees more of her true nature, so he wins.
- Most men who date are just looking to get laid. Men who slept with my girlfriend just used her for sex, she allowed it. This makes them the winners over me.
- When a woman has sex with a new guy, it emotionally damages her somewhat. Sex in the future becomes a little less meaningful for her. Therefore, guys who got to her earlier won over the guy who has her now.
- Younger women are always more valuable, so if a guy slept with her when she was younger (even by a couple years), he got something better than me that I will never have.

See the pattern?
These are all different manifestations of the same fear: that there is someone more alpha out there.

The Folding Alpha: One Example

BTW, I dated a girl once who left her former boyfriend for me.
He’d go old-school alpha male on her, saying “shut up woman” and “go to the kitchen woman”.

When she left him, he went into a tailspin. I actually felt bad for the guy.

HIGHER VALUE: Even If I May Not Want One, Good Relationships Are Possible

High-quality leaders know a few truths about relationships:

- Understanding women is crucial for relationships
- Picking the right woman is crucial for relationships
- A focus on oneself must find a corresponding focus on team-effort
- Relationships, like good negotiations, entail accepting influence as well

Not all high-quality men must want or settle in a relationship, of course.
But if they do, they screen their partner hard and aim for win-win.

From the get-go of dating, they like to see win-win mutual investment. They give, but with the expectation of receiving the same back.
And if they don’t see anything coming back, they are happy to cut ties.

They know people can slip and while they always leave the door open for possible cheating or future breakup, they don’t stress about it.
And they know that, if they picked a good partner, a good chunk of what happens is within their control.

They tend to be leaders of their relationships, of course.
And *good* leaders.
And it happens naturally and, most of all, it’s not confrontational leadership because **women are happy to elect high-quality men as their leaders**.

This is what my girlfriend sent me during our relationship:

Those are not the messages that assholes tend to receive.

And these are the messages that ex-girlfriends send to men who are value-adding leaders:

This was years after we ended. But positive leaders are rare, and women often miss them.

Of course, needless to say, the collaboration we endorse on this website is *smart* collaboration!
You must pick the right person to collaborate with (not everyone is), and you must make sure to keep that relationship collaborative.

Also read here:

- The enlightened collaborator

TRP: She's Not "Yours", It's Just Your "Turn" (She'll Leave You)

One simple video says it all about this:

> **Rollo Tomassi**: She's not yours, it's just your turn (implied, she'll leave you)

This mantra is often true and many men need to be reminded of it.

But only certain *types* of men need that reminder.

This is typical ceiling-type of advice because **only low-value men worry about being left**.
And only lower-value men need to be reminded to “not get too attached”.

HIGHER VALUE: I’m Not Hers, But She’s Lucky To Have Me In Her Life (For The Time Being)

That’s how confident great catches think.

Also, high-quality player types worry more about not hurting her in case she gets too attached.

TRP: Mate-Guard Her, Or You Get Cuckolded

It’s funny:

Many **red pill men glorify the player lifestyle but behave like committed boyfriends** because, deep down, long for traditional family life.

See an example here:

> **Rollo Tomassi**: If she asks you if she can go out partying, you say “yes” and then throw all the stuff out.

It’s fair to expect your woman not to go out partying.
But, again, the problem with that is that it’s ceiling advice for lower-value men because **mate guarding is defensive** and lower-value.

As evolutionary psychologist David Buss explains, **it’s the lower-value mate who mate guard the higher value mate.**
 See this video for more.

HIGHER VALUE: Where Can She Go? I’m A Catch. And If She Strays, She Goes

Most women who asked me if they could go out partying WANTED me to tell them to stay home.

And they’d be sad if I didn’t care.

For actual lovers, that question is just a game women play to get his commitment.

Sometimes, I gave her some limitations *just to make her happy* and show I cared.

But alas, some men will never understand that.

P.S.:
Check this more balanced video on marrying VS not marrying:

Attitudes Towards The PC-World

The Red Pill holds some views that society disapproves of, or frowns upon.

The same is true for high-quality leaders.

However, they have very different attitudes towards the gap between their beliefs and society’s beliefs.

TRP: The West Is Dying

Red Pill online circles commenting on societal trends are pessimistic.

They may even be correct in some analyses, but there are also at least as many reasons to be optimistic.

HIGHER VALUE: It Is What It Is, I Focus On What I Control

High-quality men are too busy with their lives to get lost in discussions of “how things ought to be”.

If there are a lot of feminists these days in the West, that’s how it is.
“I’ll find a feminine woman anyway”, they think.

Post-Red Pill men think that if you waste too much time talking and discussing the turkeys, you tend to become more like the turkeys.
And they prefer soaring with the eagles.

Also read this foundational article of TPM’s philosophy:

- **The Ubermensch**: how enlightened self-interest keeps you focused on what you can control only, and away from b*tchng and complaining

> Empowered Individualism: Why the Individual Must Come First

Politics

Political orientation will tell you a lot about people.

TRP: Long Live The Strongman

Many Red Pill members long for the strong man leader.

This may be due to the overlap with high social dominance orientation and the authoritarian subset of political conservatism, which focuses on hierarchy and obedience (Sapolsky, 2018).

The strong alpha male centralizes power, silences the competition, rewards other alpha males and punishes the weak. Its’the endgame of alpha-maleness
That seems fair to most red pillers because, as Miller and Kanazawa point out (Miller & Kanazawa, 2008) conservatives are more likely to fall for the naturalistic fallacy -ie.: what’s natural is good-.

So Putin, a known kleptocrat, is a true alpha male for many, while Obama was a weak feminized man.
That’s why the Red Pill on Reddit officially endorsed Trump:

There was disagreement here, but the post was still upvoted by 82% of Reddit users.

I can see these dynamics with our readership. For example:

As mentioned, beliefs of “alphaness”, “power” and “control” overlap with what Adorno referred to as “Authoritarian Personality” (Adorno, 1950) and what Lakoff calls “strict father morality” (Lakoff, 2008).

The red pill, albeit it presents itself as an apolitical movement, is naturally authoritarian, and leaning towards conservatism.

Read more:

- **Populism power dynamics**
- Conservatives, family, and children

HIGHER VALUE: Strong Men Are Always A Bigger Risk to Democracy

High-quality men can be liberal or conservative.

They might be against immigration, wanting to keep their guns, or prefer low taxation because they’re rich.
But they seldom fall for the allure of the strong man.

Deep down, they instinctively know that weak egos seek refuge in groups and charismatic leaders, while strong men seek to carve their own paths.

TRP: Group Above Individuals

Red pillers focus on *genders*.

Inherently, that puts a heavy focus on groups.

And when you focus on groups, “belonging” and “pride” come next.
Some of those guys tend to see the group of “men” as an extension of the self.

They recognize themselves as “men” first and foremost, and any win of men against women is also their win.
See the same example we saw earlier:

This guy -and the many upvoters- have this issue:

1. Project ego onto the group
2. Confrontational approach to gender relations
3. Fragile ego

Hence, it's "men VS women", and a win of any man, is also *his* win.
And any loss of any man against a woman it's *his* loss, *his* demasculinization.

A sense of belonging is important.
But in moderation.
Read more here.

Also read:

- **Drop the need for groups**

HIGHER VALUE: Individuals First

More enlightened men embrace self-empowerment.

It's the empowerment of the individual.
And with that comes the tendency -and ability- to look at individuals first, rather than groups.

And that opens the doors to exceptional men and women who rise above the average.
Funny enough, those high-quality men and women often share more similarities between them, than with the average people in their respective genders.

Finding The Right Balance

Post-Red Pill men get along better with everyone.

They may still get some flack for extremists.

But the truly extremists.

Since this website gets thousands of visitors a day, we sometimes get those from both sides. These are often good signs of balance.

On average though, you win over the smarter, higher-quality people.
And the moderates on both sides:

Random Female • 1 week ago (edited)

Woman here. I liked your video 'Dealing with Rude People', and it led me to this one.
Regarding this video: I like your approach. You outline categories, or personality types, but are clear that these are broad (no pun intended!) generalizations. Videos of this nature often have a subtle vibe of regarding women like animals to be hunted, (for physical gratification) or a misogynistic feel. Yours doesn't. You sound like you actually like women.
There is a large group of men, who though they pursue women and 'need' us, secretly hate/fear us. A scary type of man, to be avoided always. I know there are equally vile subsets of women - such as Users.
In short, as I woman, you have my 'stamp of approval'.
Cheers :)

The Stages of Moving Beyond TRP

1. **Denial –** What a bunch of cynics, this isn't real
2. **Anger –** Some of it makes sense… I've been taken for a ride!
3. **Deep Diving –** OK, let's see what else makes sense and how I can use it
4. **Depression –** Damn, the world truly runs on self-interest
5. **Self-identification –** I'm a Red Pill man (and can make fun of blue pills)
6. **First Post-TRP Awareness –** It's not like my life is that much better now. Is there somethingelse?
7. **Post Red Pill** Winning, as an honorable man, without bitterness, potentially with win-win

Do men "have to" go through the red pill?

No, not necessarily.
Not all men grew up blue pill or naive.

I always felt that what some red pill gurus called "harsh cold realities" were neither harsh nor cold, and much of it seemed common sense.

So when I first met the red pill saw less "truths" and more frustration, b*tching, and various degrees of misogyny.

In general, I believe **it's better to learn the basic dynamics of female and human nature from different sources than the pill**.
Frameworks that teach the same dynamics without resentment, such as TPM and Power University.

Guns, Germs, and Steel: Summary & Criticism

Lucio Buffalmano · 2 October 2019 · Archived copy · Original

One Sentence Summary: *In Guns, Germs and Steel*, anthropologist Jared Diamond explains that history followed different courses for different peoples because of differences among people's *environments*, and not because of biological differences among people themselves.

Contents

Bullet Summary

- What allowed certain societies to win over others was agriculture, which in turn led to:
  - Bigger populations
  - Centralized governments
  - Non-food workers such as scientists and soldiers
  - Germs
- Lands with large domesticable animals provided a huge advantage (especially the horse)

Summary

About The Author: Jared Diamond is an American anthropologist, historian, and author.
He is the author of popular science books such as "*The Third Chimpanzee*" (1991) and "*Guns, Germs, and Steel*".

The Maoris Prove It's Environment, Not Genes

Jared Diamond tells the story of two Maori tribes, the Moriori and the Maori.

The Moriori and Maori histories started diverging after separation, with the Maori picking up agriculture and the Moriori remaining hunter-gatherers.

Well, guess what happened?

The Maori eventually re-discovered the Moriori and exterminated them.

Diamond says that the Maori/Moriori is a small-scale replica of what happened with the Europeans and the rest of the world.
And that proves that it's all about the environment, not genes.

All Power Develops From Agriculture

In Diamond's view, it's agriculture that allows societies to grow in number and military prowess and, eventually, to take over neighboring land and people.

It's the ability to stockpile food and feed more mouths that allows for the existence of new social classes like kings, scribes, government officers, scientists, and of course, professional soldiers.

Political Fragmentation Is An Insurance Against Poor Decisions

Take a big country like China.

If the emperors stick to an initial bad mistake, like, for example, sea exploration, the whole population will not benefit from the possible colonization of new territories.

But if the same happens in a European country, an area where numerous kingdoms exist, it's likely that another European country will not make the same decision.

This is exactly what happened with sea exploration and the American "discovery".

Political Fragmentation Fosters Progress

Isolated societies can only count on themselves to invent and develop.

Fragmented societies can instead take advantage of random developments from other neighboring societies.
The same is true in the case of warring kingdoms, as inventions spread equally well through conquests.

As Diamond says:

> All else being equal, technology develops faster in large productive regions with large population with many potential investors and many competing societies.

This is exactly what happened in Europe.
Furthermore, having different societies all around also prevents nations from giving up technology, as could happen in isolated ones.
Japan, for example, gave up guns.
But no European nation could have done the same, or the gun-toting neighbors would have immediately invaded them.

More Wisdom

- Germs need larger populations
- Technology develops cumulatively rather than in isolated heroic acts
- East-West diffusion of innovation works best because of climate similarities
  - Thus, large continents like Asia and Europe held an advantage over long continents like America and Africa
- Geographical landscape can foster or suffocate diffusion of technology (think of Sahara's desert, for example)
- Geographical interconnectedness has positive effects, but it might become stifling if it's so interconnected as to be under one single ruler

Criticism

My main criticism is this:

I think that "Guns, Germs, and Steel" is driven by ideology more than a true search for wisdom.

Let me clarify.
This is what Jared Diamond writes:

> From my very beginning of working with New Guineans, they impressed me as being on the average **more intelligent, more alert, more expressive, and more interested** in things and people around them than the average European or American is.
> (….)
> That is, natural selection promoting **genes for intelligent has probably been far more ruthless in New Guineans** than in more densely populated societies.
> Besides this genetic reason, there is also a second reason why Guineans may have come to be smarter than Westerners

And then Jared Diamond proceeds to provide a cultural reason why Guineans might be smarter than Europeans. That reason is the proliferation of smartphones and TVs in the West. Jared Diamond provides no evidence there, just his own personal feelings.
I wish he had mentioned that which would have made him much more credible.
Yet, I can say that his hypothesis does make sense.

In any case, **Jared Diamond provides genetic and cultural reasons why Guineas are smarter than Europeans**.

That might be (might).

But why then Diamond's starting thesis is that it's impossible for Europeans to have conquered the world for every possible reason *except* anything based on genetics, personality, or disposition.
It must not be intelligence, of course. It could be drive, or ruthlessness. It could be anything. Or it could be nothing.
But the crux of the matter here is that it should not be excluded a priori.

And that's exactly what Diamond does.
But that's not how science works!

A little later indeed, Diamond says:

> Until we have some convincing, agreed upon explanation for a broad pattern of history, **most people would continue to suspect that the racist biological explanation is correct** after all.
> **That seems to me, the strongest argument for writing this book.**

So his reason for writing "*Guns, Germs, and Steel*" is to prove that Europeans are not smarter than other populations.
Which is probably true!
And yet, **science does not work the way Jared Diamond approaches his research!**
Science is not about proving your thesis right. Science is about *falsifying* your thesis and being ready to dump it at the drop of a hat.

To me, any book is built on the premise that you need to prove your theory or else is built on the wrong foundations.

And it might be a coincidence, but it's a convenient coincidence that Diamond's thesis vibes so well with the zeitgeist.

Plus, it's hard for me to reconcile how it "would not be OK" for Europeans to have conquered the world based on some genetic traits, but it's OK for Guineans to be smarter.
Unless one takes into account our zeitgeist, where it's not OK to say people can differ unless it's the minority / historically oppressed which differs in some positive ways.

And again, I must reiterate here that this is not a criticism of Diamond's results or ideas.
This is a criticism of the *premises*.
Jared Diamond's thesis indeed is truly compelling.
He is probably right and I learned hugely from this book. Yet, "*Guns, Germs and Steel*" is a wonderful theoretical building developed on bad foundations.

Quotes

Talking about researchers who believe that American big animals die because of humans:

> The American big animals had already survived the ends of 22 previous ice ages, why did they pick the 23rd to expire in concert and in the presence of those supposedly harmless humans.

LOL, I love a good and subtly ironic author :).

On the myth of "lone inventors" and progress developing organically, he says:

> The question is whether the broad pattern of world history would have been altered significantly if some genius had not been born at a particular place and time.
> The answer is clear: there is never been such person.

CONS

On top of the main criticism above:

- **Causational links feel forced or very random at times**

Diamond says that the Inca king Atahualpa fell for Pizarro's trap because of the Inca's illiteracy and their consequent inability to gather good intel about the Spaniards.

Frankly, I find that to be a huge stretch.

What if the Atahualpa was simply naive, stupid or maybe had in mind his own gambit which spectacularly failed? Diamond doesn't even stop to consider other possibilities, he immediately jumps to conclusions.

And he does it several times over the course of the book.

- **Jumping to conclusions without considering other options**

More than once I felt that Diamond jumps to conclusions without giving proper weight to other possible alternatives.

I prefer authors who more clearly state what's speculation and what's consensus, what's an opinion and what's a fact.

- **An author searching for a narrative**

Luigi Pirandello wrote a novel called "6 characters looking for an author".
It was an intelligent play that turned the table on the classical view of literary production: that the author searches for characters.

It feels like Diamond is doing the same. It's as if reality was so neat and simple that the dots just connect by themselves.
Diamond was just there to watch the dots connect.

He says that historians should be scientists.
And that if you took Australians and moved them to Europe and then took Europeans and moved them to Australia, you could still "predict" who'd end up conquering whom.

And that might certainly be the case.
But.. How can he be so sure?

Which is funny, because a little earlier, he says:

> We tend to see easy, simple factors of explanations

I think that sometimes life might just be a bit more random than Diamond seems to be willing to admit.

- **Overstates the importance of germs**

I don't think germs even deserved to be up there at the same level as "guns" or even "agriculture", which wasn't even in the title.

As Diamonds also say or imply, germs accelerated the process and helped -or delayed- the invaders.
But they didn't truly change the course of history. Just think of the new germs awaiting Europeans in Africa: it didn't stop them one bit.

- **Lacks political insight**

Diamond asks:

> Why do the commoners tolerate kleptocrats taking the fruits of their hard labor?

He then presents four ways kleptocrats stay in power. One of them is to redistribute wealth to make the masses happy.
Well, that's just not true, is it? Or, at least, it's just not how it usually goes.

To truly understand the power dynamics of repressive systems, check out "*The Dictator's Handbook*".

- **Geographically deterministic**

Jared Diamond managed to achieve his goal: he convinced me that geography is possibly the single most important factor leading to one society developing quicker than another.

And yet, I still feel Diamond is too deterministic.

- **Anna Karenina principle**

The author quotes the "Anna Karenina principle" from Tolstoj as originally applied to relationships.
The principle says that happy families are all alike and unhappy families are all different.

Well, Diamond is not required to have expertise in relationship research and literature, but John Gottman explains that the opposite is true.

Review

Guns, Germs, And Steal is a wonderful, eye-opening book.

I learned hugely thanks to Jared Diamond and I now better understand the history of human beings.
Most of all, I feel like I have a much better grasp of some of the most important drivers behind both civilizations' development and the relentless war for dominance and control.

And I also learned a bit more about human nature.
But at the same time, it's also biased.

Jared Diamonds correctly suggests that the environment is a major factor in the development of human societies.
Of course, it is. How could it not be?
But he dismisses all other factors, and he refuses to even consider anything related to genetics, characters, and personalities out of personal preferences and ideology.
Finally, he fails to entertain the possibility of being wrong, he fails to challenge his own theories and presents personal suppositions and opinions as scientific truths.
And that never fails to bother this critical reviewer.

This is no mystery.
The author clearly stated he was out to prove a point, and not to find out the truth.
Had he presented the book as "my take on history", "*Guns, Germs, And Steel*" would have been a masterpiece?
As it is, it's an offense to scientists.

Bullet Summary

- We will soon reach the biological limits of Earth's capacity to feed us and provide us with resources
- We have no predators' left to control our population; we risk destroying ourselves by destroying our resource base
- The solutions are easy, though:
  - Halting population growth
  - Reducing our impact on the environment
  - Preserving species and national habitats
  - Eliminating nuclear weapons
  - Developing better means to solve international disputes

Summary

About the Author: J
ared Diamond is an American anthropologist, historian, and author.
He is most famous for his Pulitzer-winning book "*Guns, Germs, and Steel*".

We Lived Dumb Far Longer After We Got Smart

It would seem natural to think that we developed as we got smart, right?

Well, that's not the case.

There is no parallel between brain size and the sophistication of human tools.
Our stone tools remained similar and unsophisticated for hundreds of thousands of years after we had already undergone most of our brain's size expansion.

As recently as 40.000 years ago the Neanderthals had brains even larger than ours yet they show no signs of innovativeness or art.
Even once our ancestors achieved modern skeletal anatomy, their tools remained the same as those of Neanderthals for a long time.

Why?

That remains one of the unsolved puzzles of human evolution.

Jared Diamond says that in that small DNA difference between us and the great apes, there must have been an even smaller percentage not responsible for physical attributes but responsible only for what makes humans: innovation and art.

My Note:
DNA evidence has now shown that our ancestors also interbred with Neanderthals.

When We Started Behaving Like Humans: The Great Leap Forward

In Europe, we started showing signs of innovation and growing tool complexity when the Cro-Magnons started replacing the Neanderthals around 40.000 years ago.

That's happened almost abruptly, says Diamond, and that's when we stopped being "just another species of mammals".

Of course, not all innovations appeared exactly at the same time, but this was the period when humans developed:

- Spears
- Harpoons
- Bows and arrows
- Beads, pendants and paintings
- Using animals for more than eating (clothes, bones for houses, etc..)

Cro-Magnons also had the important advantage of living longer.
Living longer before writing meant more time to grow skills and the capacity to hold and transmit more knowledge and wisdom for future generations.

My note:
Diamond, as he does a few times, presents his theory as if they were accepted consensus. However, there is no consensus on this "sudden" leap forward, and some other archeologists believe the change has been more gradual.

The Myth of Cavemen Hunters

It's only from around 100.000 years ago that we have good evidence of human hunting skills.

But even then, humans were very ineffective at big-game hunting.
The idea of "macho male hunters" is not rooted in reality, and male hunting likely had no major impact on our lives or on our evolution.

Even when we consider the evidence from modern hunter-gatherers, we see that it's more bravado, alpha male posturing, and made-up stories.
Most New Guineans, for example, eventually admitted that they had killed only a few kangaroos in their lives and that most of their hunting was of smaller animals.
Most of the food was gathered by the women.

It's only in the Arctic that big game hunting became the major source of food.
But we only reached the Arctic in the last few thousand millennia.

My Note: This is "machismo puncturing ethos"
Steven Pinker in "*How the Mind Works*" says that our ancestors have been characterized as "weak scavengers" because of the culture of "machismo-puncturing ethos".
I believe Pinker is right: our gut has evolved to process more meat than our cousins great apes, so albeit humans weren't "hunting machines", they did bring home some bacon (sometimes).
Furthermore, as Buss points out in "*Evolutionary Psychology*", a strong theory suggests that the hunting/gathering labor divide provided gender-specific psychological adaptations.

Intelligence Won Over Strength

The Neanderthals were much stronger than our ancestors, the Cro-Magnon.

But the Cro-Magnons were better equipped and probably smarter.
Muscles were no match against better weaponry, though, and the big-muscle Neanderthalians died out.

Also, consider that it's different than it is today.
Any gym rat can afford food today, but back then, feeding bigger muscles meant the necessity of finding more food while giving no advantage to people with better food.

The Tradeoffs of Growing Old (and Menopause)

Someone just approaching evolutionary psychology might wonder what's the point of having menopause in women or why we die.

Doesn't it make more evolutionary sense to live at least 200 years and never stop producing children?

Well, no, that's the wrong way of approaching it.
That question focuses on a few certain characteristics without considering the whole.

Evolution needs to optimize for the whole and use tradeoffs.

Since we can produce offspring, it doesn't make sense for nature to invest in costly self-repair mechanisms.

The perfect trade-off between length of life and offspring optimization depends on a number of variables, including reproductive biology, the risk of death, and the cost of various repairs.

Pursuit of Extramarital Sex: We're Not Fully Monogamous

Culture and upbringing greatly influence the pursuit of extramarital sex.

Yet, *both* the institution of marriage and the occurrence of extramarital sex have been reported in most human societies.

Human food gathering does require a social system where men and women "stick together".
It seems like neither full monogamy for life nor a total lack of attachment have been the norm in human evolution

Looking at today's humans, we realize that:

- Human parenting is monogamous in most political states (officially)
- Hunter-gatherer tribes are *mildly* polygynous

Looking at our body, we realize that:

- **Male testicles are smaller than chimps, but bigger than gorillas**

Testes size tells us whether a species is highly polygynous or not.
Bigger bodies mean that men fight for women and don't need to fight at a sperm level.
The biggest tests tell us that females mate with many men.
We are in between chimpanzees and gorillas, suggesting mild polygyny.

- **Male bodies are slightly bigger than female, but not much bigger**

In polygynous species, males are much bigger because they fight for women.
Human sexual dimorphism suggests that we are mildly polygynous.

We Are Serial Monogamers With Mild Incidences of Extramarital Affairs

It's difficult to get accurate information on adultery as there are obvious reasons to lie.

The author says that the first blood samples in the 1940s showed around 10% of children to be the fruit of adultery. The figure might be even higher as those old techniques might have downplayed the incidence, and of course, not all extramarital affairs led to children.

Subsequent research showed between 5% and 30% of children were born from adulterous affairs.

Still, overall, most fathers are raising their children, and as a species, we are not chimps just pretending to be otherwise.
But extramarital affairs are still part of our species, and the incidence might be higher than most people expect.

My Note:
As far as I read from other sources, the 30% is misleading as it was the figure of blood samples from fathers who requested the test because they were suspected of being cuckolded. So that skews the sample, of course.

Extramarital Sex Strategies

Researchers have applied game theory studies to extramarital sex (EMS).

There are two ways to measure the payoffs of EMS: number of children and confidence in parenthood.

Because of the biological differences, **a man stands to gain much more from extramarital sex or polygamy than a woman** if we measure the final result as the number of offspring**.**
And that's why, I would add, men complaining about "female hypergamy" and untrustworthiness" are really only seeing less than half of the truth or simply hiding their misogyny (also see "*The Red Pill*" and "*The Rational Male*").

Here are the different strategic theories one could adopt:

1. A man should always seek EMS because he has very little to lose and much to gain
2. Seek to maximize gains and minimize losses
3. Must take into account the female's own strategy

Number 1 says the author is obviously simplistic as it doesn't take into account the potential costs.
And number 2 still ignores the female's own strategies.

The author wonders why a woman should even seek an EMS since the genetic payoffs are much more limited for her.
One possibility is shopping for better genes, of course, see "female hypergamy" for more.
But Jared Diamond does not fully flesh out that possibility.

In short, humans cheat because the pursuit of a "mixed reproductive strategy", such as a stable relationship plus an affair on the side, can pay off.

Yet, it's not as simple as it sounds.
There are plenty of risks in engaging in EMS.

The Principle of Optimal Intermediate Similarity

People seek women who are similar to their parents, but not too similar.

As for most things humans, there is a tradeoff and an optimal balance. Interbreeding with similar people is good, but up to a certain point.

Intelligence Matters More Than Body Size

The author says:

> However, at some point in human evolution, male intelligence and personality came to matter more than size.

> Male basketball players and sumo fighters don't have more wives

The author talks about "size", but he seems to imply that physical traits matter less.

My Note:
However, I think Diamond is wrong here.
Basketball players don't have more wives maybe, but they probably have more partners.
Of course, that's not only because of size, but size and physical traits still matter.

See:

- The importance of being jacked in dating and social power

Concealed Ovulation & Female Sexual Strategies

Why are women the only species of apes to hide ovulation?

There are many competing theories, also reflecting the biases and preferences of each proponent.
Here are all of them:

1. Enhance Cooperation Among Males

Open ovulation would lead to more arguments and fights and who is going to have sex with whom and when.
Men would be distracted by available females and disrupt their normal activities of bonding and hunting.

This has been the theory of traditional male anthropologists.

2. It cements the bond between man and woman

The man doesn't know when she's fertile, so he has to copulate with her multiple times and over an extended period of time.

Not knowing herself when she is pregnant, she is also obligated to provide him with sex.

This has been the theory of a different group of male anthropologists.

3. Women can take advantage of men (command more resources & cheat)

Modern anthropologists realized that male apes share more with females when they are ovulating, so they hypothesized that women hid their ovulation to keep getting treats from men.

An offshoot of this approach is that hidden ovulation helps women to seduce and use other men besides their partners.

4. Demand relationship by exploiting his paranoia for parenthood

Women developed concealed ovulation to force men into a permanent marriage bond by exploiting male paranoia of fatherhood.

When he doesn't know about her fertility days, he must guard her and he must have sex with her repeatedly.

On the other hand, he also gains higher confidence in paternity and his woman will attract less competition.

This theory was from male and female biologists and it's more about sexual equality.

5. Prevent men from killing children and enlist their help

Men killing other men's offspring is a relatively common occurrence in nature.

Human females might have prevented that by confusing the issue of paternity.
That way, they can also enlist the help of more men to raise children.

This is the theory of a female biologist.

6. Trade sex for favors, with sex being less risky

Sex can be risky for women.
It can cost a child with a man she didn't want, or it can be risky as deliveries were quite dangerous during our evolution.

With concealed ovulation, having sex slightly delinks from reproduction, thus allowing her to lower the bar for sex.
She can use copulation to ingratiate male favor

Which one is true?
Difficult to say, probably all of them factored in, but that cannot be an excuse to accept any theory.

The author says that 1 and 2 seem valid.

Men Smoke & Drink As Indicator of Good Genes

Jared Diamond says that one of the reasons men smoke, drink, and do stupid things is indicators of skills and good genes.

Smoking and drinking function like some fitness indicators in animals, which are costly and dangerous on purpose, to function as truly honest indicators of value and fitness.

However, the author says that we smoke and drink based on the principle of proving ourselves strong by handicapping ourselves, and not because it really works.

My Note:
I found this part to be both interesting and far-fetched. I believe there is some bravado, "look at me how strong I am" kind of thing here.
But it's still far-fetched and simpler answers apply, such as "pleasure of the drug" and addiction.

More Wisdom

- Black skin is only loosely correlated with sun and the risk of cancer
- We already appropriated 40% of the earth's productivity (albeit: how can he say that accurately?)
- Nuclear weapons bypass our inhibition to kill other humans by acting from far away, at the push of a button
- Genocide is more common than we care to admit, and otherwise, good humans can contribute to it (also see "*Evil*" and "*The Lucifer's Effect*")
- Our species has escaped population control from any other predator, and now overpopulation has become an issue
- We are in the middle of an extinction crisis =, an event that's been accelerating in the last 50.000 years and which will reach completion by our children's lifetime

Criticism

I enjoyed "*The Third Chimpanzee*", yet, I think there are some notes worth making:

Misguided Blank Slate approach

Writes Jared Diamond:

> In contrast, every human population living today has interbred with every other human population with which it has had extensive contact.
> Ecological **differences among existing humans are entirely the product of childhood and education**

Wow, I almost can't believe he wrote that, with the accent on "entirely".
Also read: "*The Blank Slate*".

Ideologically-Driven

Same as with "*Guns, Germs, And Steel*", the book reeks of ideology.

Diamond says:

> Until we can come up with a convincing, credible alternative explanation, the suspicion that racist genetic theories might be true will linger.

Diamond doesn't have to "come up with convincing alternatives". He has to come up with evidence-based, scientific alternatives.

SJW Approach: Diamond searches what's convenient, not what's true

I quote from the author:

> At last, a theory grounded on sexual equality

Who cares what it's grounded on?
Give us what's grounded on data and empirical evidence!

And later on:

> Whether this theory is right or wrong, we must applaud her for overturning a conventional male sexism and transferring sexual power to women

No, we must applaud scientists who help us get to the truth, Diamond, not those who further your political agenda.

Jumping to (Unfounded) Conclusions

The author rarely stops pondering at the possibility that his own theories might be wrong.

And he never admits it when it's conjectured he is sharing, preferring instead to pretend he is presenting scientific truths.

For example, the author says that most life outside of Earth is extremely unlikely to evolve towards intelligence. Sure, he can draw on millions of multi-cellular species here on Earth, and yet… His theory is still resting on one planet only.
That alone should lead anyone to be wary of general conclusions. But instead, he is always so sure of himself.

He says:

> Other intelligent civilizations that arose elsewhere probably reversed their own progress overnight, just as we know risk doing

But based on what does he say that?

And again, talking about how *we* humans abused other species, he says:

> Any advanced extraterrestrial discovering us, would *surely* treat us the same way

Wait… "Surely"?
Based on what he says "surely?" One single species behaving like we did?

Sometimes Sounds Idealistically naive

The author says:

> We're only beginning to realize how sophisticated the conservation policies of so called primitive people actually are

I have never really trusted these idealized representations of "backward but wise societies" that love animals and respect the environment.

Especially when the author himself discussed many opposing examples.

> Naive Self-Help: 10 Most Dangerous BS to Avoid

Exaggerates our genocidal tendencies and the nuclear weapons' power to obliterate life

Diamond writes:

> Together with the destruction of our environmental resources, our **genocidal tendencies coupled with nuclear weapons** now constitute the two most likely by which **the human species may reverse all its progress** virtually overnight

A nuclear war would be disastrous.
Genocide would be horrendous.
And yet, from a macro perspective, neither would "reverse our progress overnight". Especially not genocide, which would only reduce the human population and not "revert our progress overnight".

Again, Diamond writes:

> The first species in the history of life on earth capable of destroying all life

This is silly and I'd expect a scientist writing about life to know a bit more about life.
How would humans destroy all life on Earth?
We haven't even destroyed forms of life that prey on us, from germs to annoying mosquitos.
How would we go about destroying *all* forms of life?

The truth is that if we start a nuclear war or another genocide, other forms of lives would continue living pretty much as if nothing happened.
As a matter of fact, many species would probably do much better with fewer humans around.

Nonsense Mediterranean example of collapsed civilization

The author says that the relative poverty of Mediterranean civilizations such as Greece and Persia is an example of societies that destroyed their own resource-base.

He talks about "deforestation, overgrazing and erosion" that turned a lush land into the barren places we see today.

What the hell is the author talking about?
Greece and Italy boast some of the best food and cuisine in the world. These are not "barren places".
And today's society doesn't fare well or poorly based on agriculture anymore. How is Greece poor because of fewer forests?

This made little sense to me.

The male penis is not for females, but to intimidate other males? Not really

Jared Diamond says that anthropologists claiming that a big penis is a display for women are engaging in wishful thinking.
Women never say they are attracted by bigger penis.

Yet, the author confuses what women are comfortable saying and what they actually prefer.
At parity of everything else, a woman probably still prefers a man with a slightly bigger than-average penis rather than a slightly smaller one.

Penises are hardly a tool of intimidation towards other men.

I think that aggression, muscles, and a willingness to fight are far more intimidating.
Even raising one's own voice is more intimidating and effective than a big penis.

The big penis is most likely the product of sexual selection by females (see "*The Mating Mind*").

Some unsubstantiated data

The author says that we "already appropriated 40% of earth's productivity".

But first of all, based on what?
And second, that makes no sense to me.
Nuclear energy is almost unlimited, and new technologies will improve the final energetical output of any input, thus making any estimate truly difficult to make.

Agriculture, idealism, and poor analysis

The analysis on agriculture felt like one was reading a Paleo diet booklet.

Plus the usual political agenda.

Says Diamond:

> With agriculture came not only an increase in food production, but also the gross social and sexual inequalities, the diseases and despotism that curse the modern human existence

Of course, almost any major change will present positive and negative aspects, but Diamond's criticism feels naively idealistic

He then goes on to describe how better the life of hunter-gatherers was. Yet one would wonder: if it were so much better, why were people so stupid to take up agriculture, more complex and labor-intensive?

Because, maybe, it wasn't such a poorer option…

The author's Chinese friends & anecdotal evidence

The author talks about the two Chinese female friends of his. One preferred white guys, the other Asian guys.
And that was because of where she grew up, he says.
That's also poor anecdotal evidence, though.

Anecdotal evidence for anecdotal evidence, as a kid, I also preferred white women and couldn't understand the appeal of blacks and Asians.
Now that I traveled, I am almost the reverse.

He ends up saying that "beauty is in the eyes of the beholder" which, again, is also a major generalization for a scientist.

Sexual selection must not necessarily produce two changes at once

The author says that sexual selection must produce two traits simultaneously: the change in taste and the change itself.

Yet, the changes do not need to be simultaneous. Anything eye-catching can be an advantage, and that develops with the sense itself.

Review

Like any book which helps to shed more light on human behavior and psychology, I loved "*The Third Chimpanzee*".

Yet, I couldn't help at times but think that Diamond might not have enough deep expertise in evolutionary psychology to write a book about it.

Furthermore, is unscientific, ideology-based approach to knowledge sits rather uncomfortably with me.

Why Psychopaths Get Laid More

Lucio Buffalmano · 6 October 2019 · Archived copy · Original

Many believe that women like psychopaths, and that psychopaths are attractive seducers.

And there is some truth when it comes to dark triads, as we've seen in these articles:

- **Casanova** was high in narcissism, Machiavellianism, and dominance
- **Seducers** have a touch of narcissism, in many cases

And of course, the main article:

- **Psychopaths' sexual strategies**: a sobering read

But why are psychopaths more sexually successful?
And is true for all psychopaths?
Is there also something that holds psychopaths back?

This post will answer these questions.

  - SUMMARY

The Attractive Traits of Psychopaths

Here are the traits that make psychopaths sexually successful:

1. **They *seek* more partners**: the single and most underappreciated advantage. It’s not so much that psychopaths are more attractive or better with women but, as several studies show, they simply want and seek more partners than the average guy
2. **Risk-taking: they go for it**. Psychopaths take more chances. While most men are worried about what the woman might think, or what people might think, psychopaths tend to go for what they want
3. **Confident approaches**: psychopaths tend to approach women with less fear, which makes them seem more confident
4. **Gib and charm** (at least superficially): not *all* psychopaths, but many dark triad men have learned to come across as smart and polished
5. **Good game:** some dark triad individuals are better at some types of courtship techniques and strategies, including:
   - **Power dynamics mastery**: psychopaths and dark triad men are more aware of general power dynamics and dating power dynamics, so they come across as more dominant, and more leader-like
   - **Love bombing**: Initial overload of whirlwind romance, followed by emotional unavailability that leaves the victim desperate and needy (only work with lower value targets, ⍰ see video explanation)
   - **Triangulation**: psychopaths are notorious for playing triangulation games, which makes them come across as pre-selected, and makes her invest more through jealousy
6. **Power and dominance over women**: psychopaths crave power, and we know that women like more powerful and dominant men. Later on, they will realize it’s toxic dominance, but it might be too late

Let’s examine a few of these:

#1. Fearlessness & Risk-Taking

A bold entrance can make the difference between a boring seduction, and a whirlwind romance that sweeps women off their feet.

Here is an example of a famous psychopath in movie history: Joe Pesci.

The psychopathic trait that worked for Joe Pesci here is fearlessness.

See it for yourself:

He meets her, greets her, walks her to his car, and pushes her head down for a blow job

You bet that risky approach will backfire a lot of times and lend you into some troubles over a lifetime.
But **psychopaths are driven by present rewards while being undeterred by risks and possible future**

troubles. That risk-seeking approach does help them increase their notch-count.

#2. The "Edgy" Appeal: When Risk Intersects With Excitement

The "edgy" and dangerous side of psychopaths appeals to women.

Especially to a certain subset of women high on extraversion and, themselves, high in excitement-seeking (Brown, 2009).
At the extreme of these women are the serial-killers groupies (but they're a minority).

The vacuously intense stare of the psychopaths, for example, can stoke fear and excitement, which heightens and/or is confused with "butterflies love" and sexual excitement.

The psychopath stare can evoke strong excitement

The "bad man" appeals to a certain subset of women, including some women with emotional issues that Norwood referred to as "Women Who Love Too Much".
Here's one of Norwood's interviews with a criminal as she analyzes the psychology of toxic relationships:

> When you've done time you learn that there are **some women who'll think you're a creep** and have nothing to do with you.
> **But there are others (women) who get turned on by the whole idea**. It fascinates them. They see you as big and bad and they get real seductive, trying to tame you. Or they think you've been hurt and they feel sorry for you and want to help you.

So you get two types of women when you go criminal:

- Those who like bad boys
- Those who like broken men and want to "fix" you

#3. The Power and Dominance Advantage

In many ways:

Psychopaths win because they're not "too nice guys", notes evolutionary psychologist David Buss (Buss, 2021).

Indeed, probably *the* most important trait that makes psychopaths effective in seduction is the power, dominance, and confidence they can convey.

Many psychopaths are high power, they want power and control… And women like powerful men.

Psychopaths are attractive because men who approach women from a position of power, dominance, confidence and leadership are *all* attractive, and it can sometimes become secondary whether it comes from a position of positive leadership or from a destructive one.

Indeed, women are also initially attracted to non-psychopathic power-hungry men for the same reason they attracted psychopaths. And, as well, they are also attracted to otherwise moral and ethical leaders: these men all show power and dominance over them.

We saw that with Obama, where his power-position as the president allowed him to make this woman go all giggly just with his presence:

The man who behaved more psychopath-like was Mike, the girl's boyfriend.
But Obama could have easily taken his girlfriend as an empath, because of the power, position and authority he had.

#4. Machiavellianism and The Willingness to Play Games

Machiavellians and sociopaths see life as a big chessboard.

That helped them learn dark psychology strategies and techniques to help them persuade and manipulate others.

Most normal guys don't learn persuasion that well, and they are wary to play any games that might hurt people.
Not psychopaths.
They are well versed in maneuvering others.

#5. No Conscience Might Mean Ruthless "Efficiency"

This is the dark side of psychopathy and seduction.

On top of being good at maneuvering others, **psychopaths have no qualms in harming others**.

That, of course, offers an "advantage" over men who do not want to harm women or, as the old pick mantra went, over men who to "leave women better than they found them" (Strauss, 2005).

As an old headhunter might say: it's always easier to bring home the reward if it's "dead or alive" instead of "alive only".

How About Violence? Extreme Traits Work Better in Times of Turmoil

Women are highly social creatures, and their attraction cues are far more plastic than men.

So what makes a man attractive is also context-dependent.

Women are highly attuned to what is most likely to provide men with status, success, power, and resources.

In times of violent turmoil, psychopaths probably fare a bit better because they might be perceived as "more adapt to the environment", and less likely to end up being a loser.

And in times of stable and opulent societies, "nicer" men fare comparatively better and the psychopath high-risk,

high-impulsivity approach is more likely to backfire and lead nowhere.
And that makes them less attractive to women in general (exceptions always apply, of course).

In today's developed societies, violence and extreme traits fare comparatively worse.

The Psychopaths' Disadvantages

Psychopathy also comes with important costs in dating and mating markets.
Let's review some of them:

#1. Psychopaths Struggle to Acquire Resources

Women prefer men with status and resources.

And although conscientious, high-IQ, factor-1 sub-clinical psychopaths may be highly effective in workplaces… That's a lot of qualifiers to turn a psychopath into a successful one. Instead, **pure psychopaths are bad at acquiring social status and resources**.
Exceptions apply, on average, antisocial and impulsive psychopaths tend to populate the bottom rung of society (or of prison).

That can work against them in acquiring mates.

Also see:

- **The traits that make up your sexual market value**

#2. Psychopaths Seldom Maximize Looks

Psychopaths chase quick rewards, and especially factor 2 psychopaths are heavy consumers of alcohol, drugs, and sometimes even food.
And **chasing rewards today comes at a cost for tomorrow.**

James Fallon is a neuroscientist who found out later in life to be a psychopath (Fallon, 2013).
Fallon says he loved seducing women for the power it gave him. But look at James Fallon:

Psychopaths come in all shapes and forms. Many are simply not attractive

My point is: **Psychopaths obey the laws of the sexual market place just like anyone else.**
And if they don't have attractive qualities, they struggle to get laid just like anyone else (especially with high SMV women).

Note: it's different for high-functioning psychopathic men
The above applies more to low-functioning psychopaths.
But it's not true for men with some psychopathic traits and who are also high in narcissism. Those guys do care about their looks.

Also see this article on male archetypes of seducers:

> 10 Types of Male Seducers: Pick Your Niche!

#3. Psychopaths Struggle With High-Quality Women Who Seek "Total Packages"

It's true:

When you meet a woman who is treated poorly but she is in love with him, she is often in a relationship with a man high in psychopathy.

Some of those psychopaths get drunk, sleep around, treat her poorly… And women still clean after them.
However, as you can imagine, women who stick with poorly behaving psychopaths and bankroll their debauchery are rarely the highest-quality women around.
Usually, they are lower SMV women, or women with low self-esteem and/or who come from abusive families.

It's simple math: **women with high sexual market value *can* get high-quality and hence often *demand* high-quality men** (David Buss, 2018).

Studies also show that dark triad men, especially psychopaths, have lower standards when selecting mates (Jonason

et al., 2011).
Even their strategies are often targeted at women with fewer options.
Love bombing is about chasing hard, and showering with attention. And that usually works best with women who have fewer options.

If you read the popular book "Women Who Love Psychopaths", you will realize that many of the targets don't seem to enjoy lots of dating options.

And if psychopaths are not great at dating high-quality women, they are even worse at keeping high-quality women -or simply just healthy women, for that matter-.

Clearing the "Psychopaths' Myths"

Let's now review some manosphere myths about psychopaths and their success with women.

1. Psychopaths Are Attractive

Psychopathy is a personality disorder.

By itself, psychopathy is not attractive.
Characters in vignettes who exhibit psychopathic attitudes are rated lower in attractiveness and desirability, either as short-term sexual partners or long-term mates (Rauthmann & Kolar, 2013).

At an even more visceral level, **psychopaths' facial morphs are UN-attractive to women** (Lyons and Simeonov, 2016).
Lyons states that there seems to be something about the cranial and facial features of psychopaths that makes them less attractive.

Instead, among the dark triads, research shows that narcissists are attractive (Rauthmann and Kolar, 2013)

But if the man affected by psychopathy is attractive, then that man can be attractive.

As a better rule of thumb, **women tend to be attracted to *attractive* psychopaths, not to *any* psychopath**. And, of course, not all psychopaths are attractive.

Many psychopaths have NO gib and charm, are ugly, or socially retarded.
As a matter of fact, the more violent they are, the less likely it is they are socially intelligent and successful with people.
The smart ones tend to do less violent crimes and more white-collar crimes (see "Snakes in Suits").

And, of course, there are also psychopaths who are total losers.
Dr. Hare, a leading expert on psychopathy, explains that **some psychopaths go on a killing spree because they had no success with people and women whatsoever and feel rejected and "wronged" by society** (ie.: the definition of a loser).

This is a bit like we've seen for the different roles of lover or provider that men take in seduction: the role does matter, but it's quality matters more than the role (see: lovers VS providers).
In this case, **it's more about *individual* psychopath and his level of game, skills, and attractiveness, than psychopathy *as a disorder*.**
Psychopaths who don't know what they're doing are rapists and only get laid through hookers.
So, even here, quality makes a bigger difference than "psychopath" or "non-psychopath".

2. Psychopaths Don't Better Defend Women

Says Rollo Tomassi, a popular red pill author:

> "(dark triad traits) were survival traits in the past.
> Those were the guys who got things done. Those were the guys who took care of their own. Those were the guys who were volatile enough to be fun in bed. Those were the guys who had the capacity to kill off a rival, **to defend the woman with his life**.
>
> *Tomassi, Preventive Medicine*

It's not completely wrong.

And it's probably true that harsher environments -differen than "past" environments- are more advantageous for dark triad men.

However, that romanticized view of "strong men who can defend women" runs into trouble when taking into account the fact that psychopaths develop no emotional attachment.

If anything, a factor-two psychopath or a "full-blown" psychopath in lay terms, might be more likely to *harm* women, rather than *defend*.

3. Psychopaths Make For Great Leaders

The myths here are similar:

1. Psychopaths can be heroes
2. Psychopaths make for strong leaders (to serve their community)

The idea that psychopaths can be heroes is a common one, but that doesn't make it correct (see Dutton, 2012).

It's a popular, romanticized view of the "bad guy who's actually good".
You know, the guy everyone thinks he's bad, but that he truly has a heart of gold and defends people with his life?

Yeah, that's good for a Hollywood script, but it's wrong 95 times out of 100.
I have addressed that fallacy in "do good and evil overlap" but, in short, here it is: psychopaths lack empathy and are extremely selfish.
They get the *small* stuff done, but rarely do they accomplish the big things: psychopaths can't stick to things.
And especially the more violent-prone ones, they rarely manage to make others want to follow them.

It's more like the opposite: psychopaths need a larger society to leach off to.
Psychopathy indeed is a frequency-dependent strategy (Mealey, 1995). That means that psychopaths *depend* on a larger society of collaborators, and cannot function effectively on their own.

4. Women Are Attracted to Serial Killers

This is pure sampling bias.

People see a famous serial killer and a few women who want to fuck them, and from "some women are attracted to *some* psychopaths", they generalize to the whole population with the wrong conclusion that "women are attracted to psychopaths".

Rollo Tomassi, author of the popular manosphere book "The Rational Male", falls for this bias in this interview:

> (..) **every time a new violent criminal** like Nikolas Cruz the guy who shot up the school in Florida, or Chris Watts the guy who killed his pregnant wife and their two daughters (…) **as soon as they get convicted almost immediately they get female fan clubs**.

And so does Ogi Ogas in his otherwise wonderful "A Billion Wicked Thoughts":

> It turns out that killing people is an effective way to elicit the attention of many women: virtually every serial killer, including Ted Bundy, Charles Manson, and David Berkowitz, have received love letters from large numbers of female fans.

It's *somewhat* true: a subset of women are attracted to serial killers.
Many hypotheses have been advanced, including the excitement that turns sexual with the fear (Saltzer, 2011), the (mistaken) belief that the serial killer makes them safer, or the attraction for the "alpha male traits" that the killer supposedly embodies.

Probably all of them -and more- contribute, also depending on the individual groupie.

However, **most people forget that many serial killers garner groupies through simple *fame***.
Fame leverages the simple, and super-effective, law of large numbers.
The *famous* serial killers who get enough airtime end up in front of many women's radars. And albeit it's very few of them who are into the killer type, the law of large numbers dictates that some will be attracted.

To make a comparison, Philippe Petit who rope-walked across the Twin Towers also got a fan club of women.
As a matter of fact, as soon as he ended his stunt and the media frenzied around him, he picked up an adoring admirer and went to her place to have sex.
But it's not "rope-walking" that's attractive per se.
It's the dare-devil mixed with fame, and fame being the *main* ingredient.

As evidence that fame is the main ingredient, consider there is a fan club for almost any non-ugly, famous man.
As a matter of fact, even famous pedophiles have prison groupies (Jared Fogle, for example).

But if you're "just" an unknown serial killer, you're not gonna have any fan club.
A serial killer who meets women at the bar or in the street is going to face rejections just like any other guy.

When it comes to psychopathy, (serial) killers, and attraction, there is also a general poor understanding of the phenomenon and how it overlaps with seduction and sexual success.

Let's clarify:

1. **It's *psychosis* more than psychopathy**: as psychopathy researcher Kent Kiehl explains, mass murderers are committed by men suffering from *psychosis*, not *psychopathy* (Kiehl, 2014)
2. **Few psychopaths are serial killers**: most psychopaths aren't serial killers. And not all psychopaths are serial killers
3. **Only a minority of women go wild over serial killers**: and only a fraction of the number of women who go crazy over your average pop singer talking about heartbreaks
4. **Quality of women is low**: women who chase serial killers are probably not the highest quality women around
5. **Many women see -or dupe themselves to see- the "nice" side of violent men**: says a woman who exchanged letters with Richard Ramirez "he was nice, told me to get an education and that I'm sweet and should sort my life out and not end up in prison lol. I really liked him. I told him I wanted to chop his wifes feet off and he was cool about it. he's a nice guy :-)"

More Like "Crazy Attracts Crazy"

When it comes to quality of women who are attracted to psychopaths, see what these studies show:

- Women high in personality disorder were more attracted to psychopaths (Watts et al., 2018)
- People who self-rated themselves as antisocial were more likely to accept anti-sociality in others (Lamkin et al., 2017)
- People high in maladaptive traits didn't find other maladaptive personalities attractive, they just found them less

unattractive, and thus were more "open to settle" (Sleep, 2017)

- Cluster-B women were more attracted not just to psychopaths, but to all personality disorder features (Grande, 2019)
- Women in their 30s and 40s are more attracted to serial killers, which is not the women in their top sexual prime (Ramsland, 2012)

So what we get here is that:

1. Psychopathy and personality disorders are not attractive per se
2. People who find personality disorders more attractive -or more tolerated-, also score higher in personality disorder

In more lay terms, this seems to be a case of "crazy attracting crazy".

Picture of the woman who sought to marry 80-years-old Charles Manson. She cut herself to look more like Manson

5. Psychopaths Have "Game"

Game is advanced social skills, but lacking crucial normative emotions, it's difficult to really become a peak performer.

Plus, anything advanced takes time and commitment.
And as we've seen, psychopaths don't exactly stick and endure short-term pain for long-term success.

Quoting from *The Oxford Handbook of Evo Psych*:

> although they attempt poaching frequently, antisocial people are also not the most successful poachers. That recognition goes to people who are self-described as open to new experiences, sexually attractive, and sexually unrestrained

Meaning, the best "poachers" and "ruthlessly effective players" are *attractive* players.
And for whathever psychopaths can poach, they also appear easier targets to poaching, leading to no net gain (Jonason, Li, & Buss, 2010).

Ted Bundy Example

What would you think if you saw a man trying to pick up women, pretending to need help?
More like a beta male, than a high-power winner.

And that Ted Bundy's approach.
Bundy, touted for his attractiveness to women, used pity plays to lure his victims and pretended to need help.

Plus, his girlfriend was an older woman with a child.
Not exactly a great seducer, was he?

6. Ruthlessness Is Attractive

Again, there is a speck of truth.

Some women can be perversely attracted to a total lack of ethics and morals.
And aggression can also be attractive, especially to some women.

But let's not exaggerate and overgeneralize.
Here is a rule of thumb, instead:

Cold-heartedness and aggression would backfire when first meeting a woman far more often than it would succeed.

Says Geoffrey Miller in "The Mating Mind":

> Very few psychopaths flaunt their lack of sympathy like Hannibal Lecter, because very few of them are glamorous, urbane geniuses.
> Mostly, they are just ordinary creeps who beat their girlfriends, stab guys in bars for no reason, get caught (…).

Most psychopaths instead feign kindness and, often, go to the extreme and into what's been referred to as the technique of "love bombing".

Love bombing consists of ardent pursuit, fast-pacing the relationship towards more and more commitment, professing unending love and writing, calling and texting more than any normal man would.

Miller says that females' appreciation for kindness might have evolved to avoid psychopaths and psychopath-like men:

> If sexual preferences evolved to avoid anything, they should have evolved to avoid psychopaths.
> During human evolution there may have been a three-way arms race: females developed better tests for male sympathy, male psychopaths developed better ways to fake sympathy, and male non-psychopaths developed sympathy-displays that were harder and harder to fake. Just as fitness indicators evolved to advertise freedom from harmful mutations, perhaps sympathy indicators evolved to advertise freedom from psychopathy.

Women who failed to recognize psychopaths faced bigger challenges in raising their children compared to more empathic parents.
Challenges not big enough to completely root out psychopathy from humans' gene pools, but enough to make psychopathy the exception and not the rule.

Psychopaths "Win" With...

Too Nice Guys As Competition

Psychopaths have an advantage over too-nice guys.

But they have a *dis*-advantage against high-value empaths.

Lower-Quality Women

Or, in more technical terms:

Psychopaths win at the lower and middle end of the quality bell curve.

As we've seen, many psychopathic traits make it harder for psychopaths to get and stick with the highest-quality women.
However, with women who are somewhat less desirable, a hard-charging, high-dominance psychopath often wins over the other average men she has access to.

Should You Aspire to Psychopathy?

Some men seek to develop dark triad traits as a sexual advantage.

That's what I realized during my research to write the "Analysis of The Red Pill".
On that Reddit community, some men discuss how dark triad traits allow men to sleep with a lot of women.

Well, they might be onto something.
Even actual psychologists have written books on the advantages of psychopathy and how to acquire some of those traits.
See for example:

- The Wisdom of Psychopaths
- The Good Psychopaths' Guide

This same website could be seen as a big guide to becoming a pro-social, high-quality dark-triad individual.
But that "high-quality" and "pro-social" are critical.

Overall, men who score very high in psychopathy are *not* high-quality people.
And albeit the predisposition for "fast and furious life" can help them do better than some average and below-average guys, they rarely achieve the highest success in life, be it in dating, self-development, business, or whichever common marker for "success" people use.

Finally, don't forget what we've discussed earlier.
The last reason why you don't want to go all the way into psychopathy is that **"crazy attracts crazy"**.
If you seek high-quality, attractive women, become a high-quality, attractive man.

SUMMARY

Psychopathy and psychopath-like traits can provide advantages in both mating and dominance hierarchies under some circumstances.

That is especially true in the short term, which is where the bulk of promiscuous men's partners comes from.

The "advantage" in lay count is in large part because psychopaths *seek* more mating opportunities.
On the other hand, many men low in psychopathic traits, including many relationship-minded men and men with more secure attachment styles, will be happy to stop with a single partner -and maybe some cheating on the side for some of them-.

That's why, because of his short-term predisposition, a good-looking, high-functioning psychopath will get laid

more than an equally good-looking, but “normal” man.

The psychopath’s advantages are most obvious when pitted against average or lower-quality, submissive men rather than with high-quality, strong, and empathic men.

A psychopath strategy fares relatively better in larger societies and urban environments and works better in the short term and more poorly in the long run.

Overall though, an equally attractive and high-power man is usually better positioned to land and, crucially, keep and increase attraction over time.

In relationships, psychopaths then use a host of different techniques to keep their partners under their thumb, but that’s a topic for a different article.

Sexual Conflict: How Men & Women Fight The Sex War

Lucio Buffalmano · 13 October 2019 · Archived copy · Original

Sexual conflict refers to tug-of-war dynamics where the reproductive or sexual interests of men and women diverge, leading to competing and win-lose strategies.

This article is not for the faint of heart, since we focus exclusively on the adaptations to cheat, control, and gain an advantage against others.

That's also evolution.
Those who were too nice lost, and failed to shape our modern brain.
Those who won, engaged in the never-ending escalation of the sexual arms race.

Women's Evolved Tactics

Women, just like men, wage the sexual war both against men and against female competitors.

We will review both.

Women Against Men

Women seek from men good genes, resources, and support.

All of them are important for women, and what she goes for depends on personality, environmental factors and life phase, leading to some complex and interesting sexual strategies.
Let's review them:

#1. Orgasms to Help The Affair Partner

Scholars haven't yet settled the evolutionary payoff of orgasms.

But since orgasms may help retain sperm, women may orgasm with the affair partner to increase the odds of retaining his sperm.
Indeed, women are more likely to reach orgasm with the affair partner.

#2. Escaping Men's Control & Mate Switching

Women usually prefer switching to the affair partner, *if he is available* (mate-switching hypothesis).

Otherwise, women may be happy to get the affair partner's superior genes, and let the boyfriend raise the child (dual sexual strategy hypothesis).

In my experience, mate switching is the preferred option if he is available.

And women may test and drop hints to the affair partner.
See an example here:

She deployed a mixed strategy & tested the ground for branch swinging
Her unstated message was “I’m single now (for you)”.
BTW, notice the dynamics. A controlling freak install apps on her phone to check her location. But smart “filles de joie” find ways around it and may find it even more exciting to cuckold them.
It’s a way to reassert their power and freedom, and to take their revenge.

Also see:

- Female hypergamy

#3. Concealed Ovulation: Keep ‘Em Guessing

Why do women hide their ovulation?

It’s atypical in the animal kingdom.
Most other animal females, including our brethren great apes, advertise fertility.

Why not women?

Well, there are several theories, and a good chunk of them involve the deceit of men.
Here are some of the most popular (names are mine):

- **Gold-Digger theory**: female primates get more male support when ovulating, so hiding ovulation allowed more astute women to keep the treats coming
- **Ho-theory**: women can trade sex for favors, but sex linked to conception was costly and risky to sell. Thus, delinking sex from conception empowered women by lowering the risks
- **“Dread fatherhood game”**: men are paranoid about fatherhood, and women developed concealed ovulation to force men into permanent marriage bond
- **“Love me” theory**: men, clueless about her fertile days, had to keep having sex with her for long stretches of time. Time and sex increase pair-bonding and keep him and his investment around

We don’t know for sure which one is correct, but it might be a mixture of them all.

A theory for hidden ovulation is resource-extraction from men

#4. Tell Men The Child Looks Like Him (to make him invest)

I'm sorry to spoil this one for fathers.

But in these most innocent words, there might lie the darkest manipulation:

> **Her**: Look at him, he looks just like you!

Well, that might be the case.
The child might indeed look exactly like the father.
But then, how come studies show women say this far more often than men do?
Even the mother's family says it more often than the dad's family!

One theory is that since fathers can never be certain of paternity, it's always good for the woman (and her family) to "remind" him.
Telling fathers that the baby looks just like them is a way of telling them "it's yours, baby, invest in him".

Of course, there is also a darker twist here.
Sure, most of the time the kid truly is *his* kid.
But the "this is your kid game" can also be used by cheating wives to support their dual strategy of "sexy son – unsexy provider".

Women remind men the child looks like them to keep their investment

#5. Mood Swings & Makeup Sex: The Female Emotional Slip Knot

Mood swings may serve several functions:

- **Test of commitment**: strong reactions signal strong interest
- **Multiplier of investment**, as men scurry to please her. And research suggests that the more one invests, the more he values the investment receiver
- **Arousal** of emotion and desire

About the latter, this is an interesting hypothesis from the '*Cambridge Handbook on Female Sexual Adaptations*':

> **when women face a mate retention problem, they may experience increases in sexual desire**; engaging in **sex in response to potential threats may facilitate partner retention.**

I believe the researchers may be onto something.
Makeup sex seems to be more common among volatile women like anxiously attached women, and borderline personality disorder women. And these relationships often involve volatile yet strong attachments.

Example: The First Woman Who Cried on me

I was still naive and vowed to myself that I'd make her stop crying (what a knight, eh?).
After I succeeded, she rewarded me saying I 'did great', an obvious power move.

Result?

She confirmed I was into her and I was going to be a good emotional provider.
And I got more invested into the relationship.

A female wet eye is the 2nd most powerful lubricated organ
Some men who fell the hardest for their women met them right when they were crying.

5.2. Nagging, Drama & Tasking: Controlling the Relationship

This is a bit more speculative, but consider this:

Women who were able to secure male investment over time won over women who got abandoned.
Evolutionary pressures may have favored women who got good at locking down men into committed relationships.

Refer to this article for the details:

- **How women control men in relationships**
- The power dynamics of assigning tasks

#6. Ridiculing Male Preference For Femininity

Imagine this sentence:

> **Her**: Only weak men need the reassurance of a submissive woman

Or its similar version:

> **Her**: Men who are afraid of successful women are weak

Those women might have a point, sometimes.
But their goal is to change the culture and the male mating strategy in a way that favors them.

They want to guilt-trip men in choosing less feminine women, and change the culture in a way that rewards and appreciate the go-getter women who, traditionally, have paid a heavy price for their more masculine traits.

But it's funny you never hear feminine women complaining, right?

It's non-feminine women who are scared of more feminine women because feminine women steal their mates.

And instead of competing on femininity, which requires work and a difficult change, some women lash out and try to change the culture.

Of course, it's not just culture, it's mostly nature.
But culture still matters a bit. And women have been winning this battle and have largely succeeded in changing at least the superficial cultural layer (the proof is the virtue-signaling men).

#7. Derogating Short-Term Strategies: Real Men Commit (?)

You know this game.

It's one of the most obvious (and cheap).
Basically: women looking for commitment denigrate sex and "fun" in favor of the supposedly "serious" relationships (as if the "serious" relationship didn't entail sex and fun anyway).

Here is an example from yours truly:

Example of derogation tactic against male short-term strategy
LOL at that, no more comments needed.
But do check what happened later on (link to follow).

Here is another example, this time using a cheap form of reverse psychology:

Female derogation of male short-term strategy
She was testing my availability and using inverse psychology to prod me to “prove her wrong”
But it was a cheap shot. It’s as if I had sent her an article about “emotional clinginess”.

Women Against Women

Women certainly have competing interests with men, but they probably compete even harder with other women.

Here are the weapons they use:

#1. Denigrating the Competition (Basic)

Basic denigration seeks to reduce competitors' mate value in the short or long term.
A popular one:

> **Her**: She's such a slut

That's designed to trigger the male inborn "Madonna-whore radar", leverage men's fear of cuckoldry, and lower the competitor's long-term value.

However, that may backfire for short-term as men may seek her out for a fling. And an astute woman may then turn episodic sex into a relationship.

In short-term contexts, women may sometimes denigrate for short-term, saying that a woman is a prude.
But that's rarer and can easily backfire.

1.2. Advanced Denigration

Let's analyze these tactics:

> **Her**: He uses his power and position on desperate women

That tactic discourages men from taking advantage of their power, and women from seeking out powerful men.

> **Her**: They only like him because they think he's rich / has white skin / has this or that "superficial" trait

That tactic discourages men from 'geo-hacking' and women from pursuing wealthy men.

These sentences do three things at once:

- **Denigrate men who 'hack' the sexual marketplace**, for example moving or using their power position
- **Denigrate women who offer easier sex to these men**
- **Virtue signal their supposed superiority**

In general, women dislike *lateral* male mobility far more.
With lateral mobility or 'geo-hacking', men move to dramatically improve their dating opportunities overnight.
This strategy is scarier because while top-1% men are statistically rare, 'normal' men moving has a stronger impact on her pool of options.

#2. Suppression of Competitor's Sexuality

This is the principle:

⚖ **The more easily women offer sex, the more difficult it is for women to get men's investment**

Meaning, women have an incentive to suppress other women's sexuality.
So you get the advice:

- *Make him wait 3 months*
- *Make him wait until you're married*

Women may also use covert aggression and acerbic gossip to enforce norms around sexual promiscuity, preventing rivals from 'dropping the price' of sexual access (Baumeister and Twenge, 2002).

#3. Competitors' Manipulation: Fake Help, Real Harm

This is by far the nastiest.

The manipulation game some women use is truly Machiavellian.
It's framed as help, while disempowering a competitor. For example:

- *Focus on yourself, not on men*
- *You don't need a man*

Both are valid, in some cases.
But in many other cases, **strength and independence lower a woman's attractiveness and sexual competitiveness.** She may drop dating altogether to focus on her career. And if not, strong and independent women are less attractive to many men.

Body positivity may also be another manipulation tactic.
Example here:

> **Her**: Men opposed my body positivity journey while women approved it <— It's because men lose when more women gain weight, while women gain

3.2.: Don't Settle: Advice or Manipulation?

Think of this common advice:

> **Her**: Never settle for less than the man you truly deserve
>
> **Her**: Never accept a man who doesn't show proof of his love

This type of advice places all the risk on the receiver while providing all the benefits to the advice giver.

A woman who refuses to settle risks remaining alone.
But her unyielding dating stance *always* favors women as a group, including the advice giver.

Why?

Think about it: if *all* women refused to settle and/or give sex without huge male investment, men would *always* have to invest big.
And the global bargaining power of women would increase.

Paraphrasing psychology researcher David Buss:

> The sexual strategy of the group affects the individual's mating success

However, **as a woman sets unyielding standards for others, she may compromise and land a 'good enough' but sure deal.**
Or she might decide to get quality genes, without that man's investment.

In the meanwhile, her girlfriend remains single, sex-less and, if she wanted a baby, childless.

This is the general feminist dating advice as well. Part of the feminist strategy is demanding individual compromise to favor the collective.

Male attention = female resentment
Malena is the story of female intra-gender sexual competition, with the protagonist physically “pushed off the market”. The film culminates with the mob lynching Malena -Monica Bellucci- and cutting her hair, the symbol of her beauty and femininity.

Men’s Evolved Weapons

Men certainly aren’t standing there and watching women play games on them.

We have already talked in the past of games men play at the micro-level.
This section will deal more with the systemic-level strategies that men deploy to win the sexual conflict.

#1. Circumcision: Lowering Her Sexual Appetite

Men love it when their women lust after them.
But fear when women lust after *other* men.

Of course, on average, high-quality men are more likely to enjoy the former and not worry about the latter. But since high-quality men are a minority, when in doubt, some men prefer to play defensively.

Men mutilate women’s clitoris to prevent them from having orgasms which, in turn, should reduce the risk of her straying and/or deploying dual sexual strategies.

I am not aware of any data, but I doubt that this is even effective. The woman still has the same urges, and she is still going to prefer better males.

#2. Restricting Her Sexuality: Infibulation / Chastity Belts

Infibulation and chastity belts seek to physically prevent sexual penetration from other men by blocking the vaginal opening.

#3. Feigning Long-Term Strategy & Support

What do men lie about?

It depends on the environment, circumstances, personal sexual market value and the type of sexual strategy (short term, long term or mixed).

Men pursuing a short-term strategy seek to come across as ladies' men, good lovers, pre-selected, etc.
This is a minority of men.

Most men instead feign to pursue long-term strategies by faking resources, kindness, feelings and professing non-existing love.

However, the short-term / long-term divide can get blurry sometimes.
Contrary to what some believe, a high-quality man faking long-term potential can also score quick sex if he's also sexy and moves fast.
As evolutionary psychology researcher David Buss says, women are more open to considering a short term mate if he also fits her long term ideal (also see providers VS lovers)

See Berlusconi:

Berlusconi needs not to show off wealth. But kindness helps his (social seduction)
Also see "atypical seduction techniques".

#4. Arranged Marriages: Abducting Female Choice

There are two reasons why arranged marriages benefit men than women:

1. On average, women choose, and arranged marriages limit female choice
2. In a free sexual marketplace, most women have more power than most men, and arranged marriages curtail that power

The fact that most arranged marriages take place in male-dominated societies gives us a clue as to who they benefit the most.

#5. Traditional Values & Slut Shaming

Traditional values intersect with "cultures of honor".

These cultures seek to repress women's sexuality to ensure male paternity.

One way they do it is by “slut-shaming”.

Most high-status (and liberal) men enjoy libertine sex because that means more sex for them.
But high status men are the minority, and **for most men it’s safer to keep women under a restrictive cultural leash to protect against infidelity.**

Of course, men may adopt a convenient double standard:

> Honor for me if I sleep around, shame on women for doing the same.

I’ve seen this culture often growing up in Italy.
The father of my sister in law professed, publicly and in front of all the extended family:

> If I hear any “stories” I take care of it personally. I don’t even let the husband stain his hands with it

The “honor” in this case was also about “guaranteeing a high quality woman” to my brother and my family.
Especially important when the man’s family is higher social status.

#6. Institutionalized Mate Guarding: Religion

Religion or defense against mate poaching?
Did you think the veil was for religion?

Maybe. Partially.
But hiding the female is such a time-tested technique in the animal kingdom that you might forgive us for seeing malice in male’s insistence on veils.

Writes Butovskaya in *The Cambridge Handbook of Sexual Psychology*:

> *The study by Pazhoohi and Kingstone in twenty-five countries demonstrates that veiling promotes sexual fidelity in women (Pazhoohi & Kingstone, 2020).*
> **Veiling is a male mateguarding strategy used to secure male reproductive success.**

See more here:

#6. Harassment & Coercion

Men have developed two biases that may increase the odds of sexual harassment:

1. **A bias for taking a shot** (men who tried more got laid more)
2. **A positive bias in reading female signals** (men who read more interest got laid more)

And sexual coercion may be an unfortunate adaptation for mating access.
Initially, the mate deprivation hypothesis suggested it was men without options who rape more. But David Buss more presented some evidence that it's dominant men instead who are more likely to rape.

#7. Men On Men Derogation

Intra-gender derogation tends to be more associated with women, but men do it as well.
See the forum entry for men VS men derogation.

The Contested Battlegrounds

Men and women's wars span many fields, from biology, culture, legal frameworks, and genes:

- **Legal system**: historically dominated by men, but recently may have swung the opposite side
- **Economic policies**: redistribution and socialism generally favors women (Ghodsee, 2018), while financial concentration benefits the few top men
- **Morality**, the ultimate tool of social influence
- **Genetic war**: men's genes code for maximizing an infant's resource allocation, while maternal genes 'defend' the mother (Brown, 2020)
- **Mating systems**, like monogamy or polygyny
- **Relationship social standards**, for example with 'men supposed to provide and protect' and 'women supposed to serve and support their men'

Also read:

- How women control relationships

> Female Domestication: How Women Control Men & Relationships

> **Morality is the pro-social mask of a selfish sexual strategy**

When Genders Band Together

Genders sometimes coalesce for common causes.

As we've already seen for example, the majority of men have an incentive to limit women's sexual freedom.
Conversely, women coalesce to demand and gain more sexual freedom, social, and economic power.

Sometimes these alliances are open and openly embraced and encouraged.
Writes for example Sheryl Sandberg in *Lean In*:

> We need to look out for one another, work together and act more like a coalition.

> As individuals we have little power. Working together we are 50% of the world population and therefore have real power.

Women also seek more power by trying to remove men from the sexual equation.
For example, I saw this on my Facebook timeline when I started this article:

Who needs a man when you can get 100s of themem with a good thirst trap
However, these alliances are often subconscious and emerging from individual drives.
For example, most men don't consciously shame career women in a conscious effort to shape a culture opposing women's career. Instead, it becomes an emerging social property of men's individual drives.

It would also be wrong to believe that all men or women gain from these alliances.
Instead, **the interests of top men and top women are often misaligned with their own gender majority.**

Just as an example, most men gain with monogamy.
But the top men gain with polygyny instead.

Collaboration (May Be) Bigger Than Competition

Dawkins and Krebs (1978) first mentioned that courtship is sometimes collaborative, other times exploitative.

But the exploitative side shouldn't overshadow the collaborative side.
Relationships exist because, for most peopl,e **collaboration between men and women maximizes fitness**.
Quoting the excellent *Oxford Handbook of Evo Psych and Relationships*:

> Despite the often too prevalent perception of a war between the sexes in the social sciences (see special issue of Sex Roles, e.g., Vandermassen, 2011), to a large degree interdependent reproduction promotes cooperation rather than confict (Buss, 2017; Mikulincer & Shaver, 2007)

This article put that in perspective, showing that relationships are *both* cooperation and defection, genuine support, and manipulative.

And believing that male and female interests perfectly intersect is naive at best.

In the meanwhile, don't get paranoid.
But don't be naive, either.

Women Who Love Psychopaths: Summary & Review

Lucio Buffalmano · 26 October 2019 · Archived copy · Original

Women Who Love Psychopaths (2008) looks into psychopaths' abusive sexual practices and the pathological relationship patterns between women and psychopaths.
Sandra Brown says that some psychopathic traits can be attractive and, in particular, they can be attractive to women who also have some specific character traits.

Notes

About The Author:
Sandra L. Brown holds a master's degree in counseling from the Liberty University and she is the CEO of " The Institute for Relational Harm Reduction & Public Pathology Education". I couldn't find much information about it except for its Facebook page.
In any case, the author has focused her studies and work on pathological relationships with dark triad men, especially psychopaths and sociopaths, and women.

1. Dangerous Men Have Low or No Empathy

The book focuses on 3 of the Cluster B Disorders:

- Antisocial

- Borderline
- Narcissistic Personality Disorders

Antisocial Personality Disorder (APD) includes both sociopaths and psychopaths.

My Note: BPD is different
In my personal view, it's a mistake to include here the Borderline Personality Disorder, both because they are quite different, and because the book mostly discusses predatory behavior.
Furthermore, narcissism should include "unprincipled narcissists" and not any other types.
That being said, I liked the author's idea of grouping and simplifying the dangerous men she describes in the "low/no empathy and conscience" category.

Brown says that one does not need to be a full-fledged psychopath or diagnosed as one.
A few traits can be enough for a harmful and toxic relationship.

2. Psychopaths Seek Power

Psychopaths seek power.
But, contrary to most other people, they are much more likely to find pleasure in using their power destructively (Rieber and Vetter, 1994).

Psychopaths enjoy power the most when it induces victimization, and that's what makes them highly dangerous.

However, how they get what they want must not always and necessarily be through violence.
It can be covert aggression, control through paranoid jealousy, passive aggression, guilt-tripping or, the author says, even pathetic neediness.

Here is a real-life example of guilt-tripping and pathetic neediness:

And it was working.
So you must be careful when people appeal to you as their only possible savior.
You must walk that line where you want to help people, but you don't want to help them to sucker you down.

3. Psychopaths Present A (Fake) Successful Image

Psychopaths lie.

A lot.
Sure, many men lie and play games, but the psychopath hides some true malignant personality.

Many psychopaths like to present themselves as truly successful. Some even *are* successful.
But many just fake it and, in some cases, also recruit the help of others for their lies and fabrications.

Some psychopaths can be found in professions that imply empathy, like medicine, theology, or psychology. So don't be swayed by the job title.

4. Traits of Women Who Love Psychopaths

These are the traits of the women who love psychopaths:

1. Extraversion and excitement-seeking
2. Relationship investment and positive sociability
3. Sentimentality
4. Attachment
5. Competitiveness
6. Concern for having others' high regard
7. Harm avoidance

The author goes into detail on why they matter and why they are at such high risk for pathological relationships.

I will quickly review them here:

- **High extraversion**: women who love psychopaths also chase fun, novelty and dislike boredom and "boring men". They often talk about how their initial exchanges hooked them up, while other women would would have felt like the psychopaths' dominance dangerous or overpowering
- **Attraction to dominance**: albeit this is not a listed trait, the author mentions that women who love psychopaths tend to be attracted to dominance and dominant men, and that's a risk factor because psychopaths tend to be dominant
- **Competitiveness**: she refuses to take the loss and is more likely to stay and "battle it out" and make the relationship work. Or to "battle him out" and avoid "losing"
- **High relationship investment**: this trait often gets confused with "codependence", but wanting to invest and give is a normal human tendency that is simply more accentuated in women who love psychopaths. Giving a lot is great with a man who is healthy and giving, but with psychopaths, it's a risk factor because they will take everything and give nothing.
  And that's why "princesses" and "divas" who *ask* for investment don't mix well with psychopaths
- **Social sensitivity**: the psychopath leverages her high empathy with (false) stories of his past pains
- **High attachment**: the author bundles "attachment" with "relationship investment and social sensitivity". While many women would tread more carefully, women who love psychopaths attach quickly and deeply.
- **Sentimentality**: she focuses more on the positives and remembers more of the positives. Psychopaths see affection as a way of making her addicted, and her high sentimentality helps the psychopath in his dark pursuit of power
- **Concern for having others' high regard**: they care too much about what others think about them, including the psychopath. After all the toxicity, some women still care about "staying friends"

The author also adds "tolerance", as in the ability to withstand pain, "trust", "loyalty" and "high morality".

Psychopaths like women with high morals because those women are unlikely to do to the psychopaths what the psychopaths do to them.
Plus, I'd add, they are more likely to fall for his games, and easier to control.

Brown says that women who love psychopaths tend to be high in:

- **Trust**: These women tended to trust too much, too soon. Even in the face of evidence to the contrary, women were more likely to trust the psychopath's *words* rather than his action.
  In the most glaring example, one woman ended up doubting she even saw the psychopath in bed with another woman when he denied there was anyone in the room.
- **Loyalty**: women feld bad about breaking promises and vows. Including promises of "never leaving him" which were done before he turned into Mr. Hyde.

5. Attractive Traits & Techniques of Psychopaths

Here is what makes psychopaths potentially seductive and attractive:

- **(Fake) success**: many of the psychopath's attractive traits, like business success, resourcefulness and directedness, are the fruit of lies and fabrications
- **Operant conditioning**: the psychopaths Dr Jekill / Mr Hyde double personality rewards positive behavior and punishes bad one (proper and good behavior are classified in accordance to his selfish convenience, of course)
- **Some psychopaths can make women feel safer**

Said one woman:

> "At some level, his false power feels like protection, even though in many ways it is the opposite. It feels like it is the strong protection that I had at home from my father. The fact that he can do actions disregarding rules in society, feels like a strong protective force when it does not work against me or others."

- **High sexual drive**: psychopaths are very high in sex drives, which can help make the beginning of the romance feel like a whirlwind of passion. Sex also releases oxytocin, which makes women feel bonded
- **Bold initial move**: psychopaths sometimes start the relationship with bold moves that captivate the woman. And sometimes it's strong chemistry with the psychopath's "rawness"
- **Replaying abusive past**: in some cases, the psychopaths simply "help" the women to repeat patterns of abuse from their fathers (traumatic replay)
- **(Fake) emotional bonding**: psychopaths don't feel much emotion, but they can make women emotional. They do so talking about the 3 Ps: past, pain and perceptions
- **Love bombing**: intense focus on her, constant chasing, making her feel like the only one in the world
  ??♂ **Lucio's note**: There is no evidence for narcissists using love bombing (Campbell, 2020) and, as far as I'm aware, neither for psychopaths. It's more pop psychology than proven psychology. It also doesn't seem logical that high-value men would use this tactic. I remain unconvinced.
  See here:

- **Emotional roller coaster and threatening the relationship**: once she's hooked, the psychopaths keeps her insecure and (unhealthy) attached by threatening the relationship (called "dread game" in Red Pill communities). The pathological relationship's keyword is "inconsistency"
- **Make-up sex**: make-up sex is part of the roller coaster of negative and positive emotions which is so addictive. When the psychopath has turned into Dr. Hyde, sex can become her only way to feel bonded to him
- **Isolation**: the psychopath seeks to isolate her from friends and support network
- **Highlight her resistance**: when women want to trust him, it's often enough for the psychopath to highlight

their resistance to make it disappear

- **Appeals to family desires**: when women want children, the psychopath implies or outright says he's looking to settle down and have children (also read: atypical seduction techniques)
- **Persistent pursuit**: psychopaths were fast to move from the first contact to closer and closer relationship under the guise of "so into you that I can't resist". Her high investment trait blinds her to the risk of men chasing and moving fast
- **(Fake) vulnerability**: the psychopath exposes his wounded side to make her feel sorry for him and trust him more.
  That makes her feel safer about moving fast (yes, that can work, but do read "vulnerability is not power").
  That's why some women refer to psychopaths as "incredibly macho" and yet "wimpy and needy"
- **(Fake) initial support**: in the beginning, he encourages to do more, be more and believe in herself. Later he will do the opposite and undermine her self-esteem
- **Dark psychology of Trance, Hypnosis, and Suggestibility**: female victims tend to be more suggestible than the average population, and the author says the psychopaths leverages it. She says psychopaths have "hypno-power"

For more on psychopaths' sexual strategies, please see:

- **The Machiavellian sexual strategy of pscyopaths**

> Psychopaths' Sexual Strategy: Marauders of Sex

Pick-up artists are high in psychopathy

The book is written in 2008, and the author also takes aim at the pick-up community of that era which focused on NLP and hypnosis.
Says Brown:

> Psychopathic traits are found in many people not just diagnosed psychopaths.
> **The web sites devoted to 'seduction techniques' are an example of varying levels of psychopathy** and are now being taught online to others. Anyone wanting to do this to another person, by definition is high in psychopathic traits.

I actually don't fully disagree with Brown. There is something true in what she says.
But it's also a major generalization with which I can't fully agree.
Finding a mate does not equate psychopathy, of course, and many people writing and learning seduction are simply looking for a mate and a healthy relationship.
Also, looking for many mates is not necessarily psychopathic, and can also be done as a value-adding individual.

And she goes on saying:

> The difference between students of seduction and the professional psychopath is that most psychopaths know these techniques instinctively.
> In fact, the worst psychopaths are probably the ones teaching others and making a fortune from the new hot seduction online communities.

If I think of the early pick-up artists, she might be right.
But, again, I don't agree with the generalization that learning seduction necessarily equates with high psychopathy traits.

How to Induce Trance

The author says the following techniques induce trance:

1. Sexual intensity
2. Breathing and heart rate becoming in sync through sex
3. Music
4. Dancing
5. Fasting
6. Sleep deprivation
7. Euphoria – feelings of connection and the effects of sex hormones
8. Flickering lights
9. Kinesthetic – through the sense of touch generating feelings or emotions
10. Intense playing or enjoyment
11. Prayer and meditation (cults use it)
12. Neuro-feedback—also referred to as Biofeedback—which changes brain waves and alters your state of consciousness
13. Peak experiences or flow states (heavy concentration produces a sense of interconnectedness)

6. Psychopaths' Arguing Tactics: How He Wins & Keeps Her Around

Relationships with psychopaths have lots of emotional turmoil.

And lots of fights.
Psychopaths fight in the following way:

- He rages
- When that doesn't work, he is tender
- When that doesn't work, he says she is just as sick as he is so they might as well stay together
- When that doesn't work he threatens to find another woman
- When that doesn't work he fakes insight that she was probably right all along about what's wrong with him and is the only one who understands him
- When that doesn't work, he threatens—he'll tell her family, work, children, etc. something negative about her
- When that doesn't work he carrot dangles with something she has wanted—to get married, have a child, buy a new house
- When that doesn't work, he says she must have another man which is why she is not making up with him
- When that doesn't work, he'll go to church
- When that doesn't work, he claims he has serious medical conditions like cancer to bring her back to him

What a nice piece of work, eh?

7. Breaking Up With A Psychopath

Since psychopaths are all about power and dominance, they want to end the relationship themselves.

Often, they will end the relationship in the most destructive way possible. With a power play or by leaving one last mark on her soul.

But even when he leaves, there is no "for ever" in the psychopath world. He will circle back in the future, sometimes years and years later, as if nothing had happened.

But what if it's her to end it?
Well, then the problems start.
Psychopaths cannot tolerate that she is now not under their spell anymore, they are vindictive and they will try to damage her as much as possible for the "affront" she is doing to him.

When She Can't Leave

Sometimes it's hard for her to leave.
Reasons include:

- Intensity of the attachment
- Impacted by depression or PTSD
- Anxiety and fear, which in turn increase the betrayal/trauma bonding dynamics
- Financial concerns
- Social or religious pressures
- Children

8. Psychopaths Do Attach, But Like Things, Not People

The author says that psychopaths don't bond, but they do attach.

Why would they become stalkers otherwise, which we know they do?

Normal people also attach, but we attach to things.
Psychopaths attach to women because they want to possess them and have power over them.

Says the author:

> Psychopaths seek others because it is through human contact that they get to experience dominance

9. Sex With A Psychopath Is Great... Or Terrible

Sex with psychopaths is not always a great experience for women.

Some consistencies included: bonding through women *thought* was occurring, intensity, frequency, deviancy.
And then, either the best or worst sex they had ever had.

Of course, psychopaths often added their lying twist to make women feel even more bonded.
Says one woman:

> "He was so completely captivated by how our sex drives were identical. He said he had never felt that about anybody and how we were completely different from anything he had experienced."

The sexual aftermath, either in the positive or in the negative, contributed to making women struggle in the aftermath.

Bad Sexual Experiences

Often sex helped the psychopath, but often the psychopaths' tactics and demeanor only pushed women away.
For example, said one woman:

> "He would speak to me disgustingly like, "Come here and suck my dick." He would put me down sexually. He couldn't see how his treatment of me led to my lack of desire for him. He told me he didn't have to put up with me—that other women wanted him."

Some other times, psychopaths forced women to tell him how good he was.
Said one woman:

> "I would have to measure his penis regularly with a tape measure and tell him how nice it was to know I was sleeping with a man so well equipped and that his penis was attractive."

Psychopaths are often deviant in a way that is not sexually attractive. Among the craziest stories, a psychopath spits on the woman while having sex, while another defecated on her because he came too soon (!!!).

Some other times, psychopaths' hyper-sexuality means it's also channeled in ways which are disgusting to most normal people, for example to children -including their own children-.
Said one woman:

> "I never felt totally comfortable with him sexually. I always felt like he was a pedophile."

And of course there was the woman who fought in court to keep her children away from him but couldn't manage to protect them through court.

Psychopaths Don't Like Active Women

Psychopaths often prefer sexually passive and submissive women.

Why?

Because psychopaths don't like it when women come to them: that doesn't give them the feeling of power that they crave.

10. Psychopaths' Shit Tests

"Shit tests" is a vernacular term for women testing men during seduction.

Well, the author says that psychopaths test women to gauge their likelihood of hooking.
For example, they will violate her boundary early on, or ask for help right after they have shown lots of affection to test her level of cooperativeness.

My Note:
The examples of the book weren't just "highly cooperative" but, it seemed to me, quite naive of women as well.
So, sometimes, "naiveness" is the true trait that allows psychopaths to extort money or goods from women.

11. Psychopaths Won't Change

The judicial system is:

> Sending them to batterer intervention, anger management or some other treatment is to waste resources and gives women the false impression that they have been 'treated' when what is wrong with them is actually highly untreatable or treatment-resistant.

Also see "Why Does He Do That" for the perspective of Ludy Bancroft, a man with decades of experience in running treatment seminars for abusive men.

12. Road to Recovery

Brown devotes a chapter on how to recover from pathological relationships.
Among the most important steps:

- **Understanding the pathology**

She must learn to tell the difference between healthy dominance and pathological dominance, excitement seeking behavior and “pathological” excitement seeking.

- **Deep introspection**

If a woman is picking similar partners and replaying similar relationships, she must find out why.
Luckily, it’s not love but it’s traumatic attraction.

- **Self-Care**: the psychopath took all her energy, now she must focus on herself
- **Symptom management**: the recovery should be treated as a potentially serious case of PTSD. The author discusses “intrusive thoughts” and “cognitive dissonance” particularly

Quotes

> Not all dominant men are psychopaths, but most psychopaths are dominant.

On courts that need to wake up to the incurability of psychopathy and stop allowing psychopaths around children:

> Wake up courts!
> Sociopathy is created from toxic early childhood environments. This toxicity is largely a child’s exposure to how the low/no conscienced think, feel, relate and behave during parenting.

I couldn’t agree more.

Criticism

Women Who Love Psychopaths is a strong resource to understand the dynamics and psychology of high psychopathy relationships and it’s been very useful for this website.

Yet, I also have quite some criticism.
Let's start:

1. Small-ish sample size to draw reliable conclusions

I quote from the book:

> Dr. Leedom was very helpful in assisting in developing the Women Who Love Psychopaths research survey. Over 75 women worldwide completed the survey.

In the beginning I thought that was a typo, but I doubt that the most important number in the whole book is a typo. And this is a *very* low number to generalize to the whole population of women.

On the other hand, it's a positive sign that most of the psychopaths in the study have not been incarcerated, since most other books on psychopaths refer to imprisoned psychopaths.

2. Ignores Proven Mate Value Dynamics

As I read the book, I had this nagging, lingering question:

What if the women who fall for psychopaths simply have fewer options and few suitors?

That would certainly make the psychopath's job easier: game a woman with fewer options and everything becomes easier.

I quote the author:

> The psychopaths they got involved with were far below their level of career status and education.

Why were they dating below their level?
Many of the women in the examples were not the youngest either. That should raise the question if psychopaths' biggest targets are not also facing a difficult dating market.

Unluckily, the author never addresses the question from that angle.
Sure, it's politically incorrect, but it could well be part of the picture.

3. Doesn't Add Up On Extraversion

Extraversion is a critical trait of women who fall for psychopaths?

That made little sense to me.

Introverts make for easier targets, usually.
The author of "Psychopath Free" was introverted. A negative review on Amazon for this book said she was introverted. Robert Greene in "The Art of Seduction" says that the best targets are isolated and introverted.
And I also think the same.

Extraverted people meet more people, have bigger social circles and, in general, are also more worldly and experienced.

Plus, the author seems to equate extraversion to power and dominance. She says:

> This type of extraverted, competent, and competitive woman could easily emotionally overpower a man who wasn't similar in his own extraversion.

I'm not convinced there is such a strong overlap between extraversion and dominance.

4. Could Be More Rigorous/Scientific

The author says that psychopaths have a “predatory 6th sense”.

I quote:

> Psychopaths have been endowed with what seems to be a 6th sense to hone in on women’s feelings of loneliness and grief

And later:

> Women are fascinated by the whole idea of a 6th sense in men who ‘know’ her so completely so early.

“The whole idea of a 6th sense”?
This is nonsense.

Or, talking about hypnosis, she says:

> There are hypnotic techniques that trained hypnotherapists regularly use. The psychopath no doubt uses these as well

“No doubt”?
Based on what?

4.2. Could Better Grasp Scientific Principles

Sometimes it feels like the author has a poor grasp of scientific principles, of what’s “proven” and what’s just an indicator.

For example, she says:

> Psychopaths instinctively know that women high in cooperativeness will stay in relationships with them longer. That has proven to be true.
> She indicated that when the psychopath had dated a far less cooperative woman, their dating period was far shorter!

That’s nonsense.
Sure, it makes sense, but it’s not been “proven” to be true.

Or, later on, she says:

> All of the women reported that they were harmed by the relationship with the psychopath.
> Stated another way, 0% reported 0 harm.
> That alone should alert courts (…) with decision making power over psychopaths and pathologicals that someone is always harmed by them.

Nobody argues that a relationship with a psychopath is likely to be destructive.
But… Does she realize that her sample is not representative because it’s self-selected?
In her sample there are *only* women who have been armed. It’s like going to a hospital and saying that cars kill. Sure they do… But not all the times, maybe.

5. Women Can Feel The Wounded Psychopath?

The author says that women in her sample talked about how they can feel others' emotions, especially the "wounded psychopaths".

And she writes:

> This is one indicator of why they feel so deeply attached to the psyches of the psychopaths—sensing at a deeper level the undiscovered disorder and its brokenness.

This made little sense to me.
Psychopaths feel little emotions and aren't very likely to be wounded and emotionally pained.
I think it's more like the women who wanted to see something deeper, catching at straws, believing -against evidence- that if they only keep holding onto it, they can make it right (see: "women who love too much").

Review

Women Who Love Psychopaths is a highly valuable resource for first-hand experiences of psychopaths' relationships, and the women who dated them.

Not only is it informative, but it's also helpful for a road to recovery.
I would give it 5 stars for the pro-social and potentially life-saving information it contains.

We need fewer women who fall for psychopaths and fewer children fathered and reared by psychopaths, and Brown's work helps with both.

But at the same time, I cannot gloss over some generalizations and the lack of a more rigorous approach.
Including the very small sample size, which is used for sweeping generalizations to the whole population.

Yet, I can still recommend "Women Who Love Psychopaths" to any woman who's either in a relationship with a psychopath, has been with one or, potentially even more life-saving, to any woman who is out dating.

9 Best Dark Triad Books for Power & Self-Defense

Lucio Buffalmano · 28 October 2019 · Archived copy · Original

If you're looking for the best dark triad books, you've come to the right page.

The dark triad includes Machiavellianism, narcissism, and psychopathy. They are foundational constructs for The Power Moves, and we studied them to tease out the most effective strategies to help men succeed, while also staying honorable.

Here are the current best resources on the dark triad.

Note**:** Unlike most lists, we only review books our founder and power dynamics expert Lucio Buffalmano has personally studied. His research empowers good men to understand and navigate the darker side of human nature.

Contents

- 9. Confessions of A Sociopath
- 8. The Art of The Deal
- 7. Machiavelli's Principles: Life & Work
- 6. The Dictator's Handbook
- 5. Who Is Michael Ovitz
- 4. Casanova's Memoirs
- 3. The Good Psychopath's Guide
- 2. The New Science of Narcissism
- 1. The Dark Triad of Personality
- Bonus to Learn the Skills: Power University
  - Change Log: New Entries & Exits
  - Further reading:

9. Confessions of A Sociopath

How do dark-triad folks think and act?

Well, there is no better way than to let an actual sociopath share that.
The author, a diagnosed sociopath, discusses how life looks like to a sociopath.

The results might shock someone.

M.E. Thomas openly discusses how she relishes ruining people.
That's common among psychopaths and sociopaths, since hurting others gives them a sense of power.
The author, a woman, discusses using fake allegations of gender discrimination for career advancement and instigating her classmates to file a made-up sexual harassment charge against her school teacher.

Don't get me wrong, many people enjoy seeing others lose. That's what frenemies are all about, after all.
And some even see the positives in other people's suffering. I remember an ex-girlfriend of mine being sad that her ex-boyfriend had a new beau.
Why?
Because he wouldn't pine over her anymore.

But sociopaths *do* take it one step further when it comes to relishing in other people's misfortune.
That's what Thomas makes clear here. And that's why you only want to *selectively* borrow from psychopaths and sociopaths.

A similar book is "*The Psychopath Inside*", but Fallon writes as a neuroscientist, with more scientific details that might bore some readers.

8. The Art of The Deal

Machiavellianism starts before you even open the book, at the "author" page level.
Schwartz indeed said that Donald Trump didn't write a single word of the book, and Trump, of course, replied that he wrote most of it.

To get to the real dark triad goodies in "*The Art of the Deal*," you have to be able to read through the lines, as the book was obviously going to be rather kind towards Trump.

Take for, example, when Trump wanted to help homeless people in New York by giving them shelter in an old building he had bought.
Unfortunately, the City of New York prohibited him from carrying out this generous act of kindness.

What gives?
That all sounded strange to me. So I researched it. And, it turns out, Trump wanted to let homeless people in to force the last holdout owners to sell low.

LOL, if that weren't so low, one couldn't stop laughing at Trump's Machiavellianism.

Also read:

- **Psychopaths at the top – empaths stop at the middle**
- ***Bad Blood***: how Elizabeth Holmes gained a 10-billion evaluation without any technology
- ***The Fund***, on how some potentially dark-triad founders operate (including the virtuous spins)

7. Machiavelli's Principles: Life & Work

A **ruthlessly cynical wake-up call for too nice guys**, this Machiavellian take on Ray Dalio's virtuous '*Principles*' will change the way you look at life.

It's a brief take that Lucio Buffalmano first wrote on a whim, but ended up being a hit among our readers. Many found it enlightening on the thinking patterns of dark triad personalities, especially for *Machiavellianism*.

It's a free article, give it a read and it may change the way you look at some authors' biographies.

6. The Dictator's Handbook

There you have it:

A playbook for narcissists and sociopaths to acquire president-level power and wealth.

This is the modern "*The Prince*", and no descriptions are needed, but two quotes:

> Quote: Rule 3: Control the flow of money.
> (…)
> Bravo to Pakistan's president Asif Ali Zardari, estimated to be worth up to $4 billion even as he governs a country near the world's bottom in per capita income.

And even worse:

> Quote: Rule 5: Don't take money out of your supporters' pockets to make people's lives better.
> (…)
> Bravo to Senior General Than Shwe of Myanmar, who made sure following the 2008 Nargis cyclone that food relief was controlled and sold on the black market by his military supporters rather than letting aid go to the people—at least 138,000 and maybe as many as 500,000 of whom died in the disaster

This is exactly what I refer to when I often say that good people need to know how to be bad.
Otherwise, it's only the "through and through pieces of sh*t" who get to power and hold power.

Also read:

- **Politician's manipulations**: techniques and examples

5. Who Is Michael Ovitz

This is our top pick for dark triad traits in the service of business success.

Ovitz's Machiavellian approach to business built the most powerful Hollywood agency in the world.
And made him an influential multimillionaire in the process.

On business structure, he says:

> The lack of hierarchy was a myth, of course, a management tool. We were democratic dictators.

And about his 'hidden power' and reputation, he says:

> Mystique is ten times better than publicity; it's much better to be thought of as the great and powerful Oz than to be revealed as merely another schemer behind a curtain.

And about his approach to business:

> My clients played characters on-screen; I played them offscreen.
> I was a chameleon, becoming whomever I needed to be to make everyone comfortable and close the deal.

A must-read and a tough wake-up call for anyone who has grown up on naive self-help and naive business books.

⚠ **Buyer beware!**
Ovitz had a life crisis and a tremendous fallout with his lifetime best friends and business partners, going from best pals, to worst enemies.
Read our review in full to avoid the same mistakes -we teach the 'best of both worlds' approach in Power University- ⍰

4. Casanova's Memoirs

Why are Casanova's memoirs even here?

Well, to begin with, because most people are interested in dark triad personalities to seduce and get laid more (no shame there).
Second, because I seek to provide an informational edge and few people are even aware of this book.
And third, because Casanova *did* slay thanks to dark triad traits.

Most of all, I believe, in narcissism, with power-aware narcissists being some of the most prolific types of seducers:

> 10 Types of Male Seducers: Pick Your Niche!

Casanova was a rake in an era when hookups weren't nearly as easy while traveling and often not knowing the language and customs (sigma male-style), and while overcoming a litany of roadblocks, from cockblocking parents to protective nuns while he tried to seduce women in convent.

When it comes to dark triad traits, I don't think Casanova was a psychopath.
What's peculiar about his womanizer style indeed is that he often fell in love with women as hard as they did -except he moved on anyway-.
But he did have plenty of antisocial (APD) and dark triad traits, including narcissism, a strong will to power, reckless and impulsive behavior, and endless Machiavellian plots to meet and get together with women.

In many ways, he also used many modern seduction techniques, including:

- Lavish money spending (conspicuous consumption)
- Entering elite circles and earning social status (social circle game)
- Staying in shape and attention to appearances (self-care)
- Wearing the most elaborate clothes (peacocking)
- Hustling to hire servants and stay at the best locations (lifestyle game)

And he leveraged his position of power for plenty of easy lays, too.
Bravo to Casanova, a true example of leveraging dark triad traits without (willingly) hurting anyone and in support of a life worth living.

3. The Good Psychopath's Guide

Some psychopathic traits can be used to enhance your odds of success in life.

That, you knew, I think. Or you suspected, at least. Otherwise, you wouldn't have ended up on this list of best dark triad books.

So after "*The Wisdom of Psychopaths*", Dutton moved to a "how-to book" on how to be more of a psychopath.

However, before you jump on that train: too much psychopathy becomes harmful and is not conducive to life success.
And violence, poor impulse control, and poor planning are a recipe for ending up in prison.

So, which traits should you borrow from psychopaths?

That's what Kevin Dutton does: he lists *what* traits you should borrow from psychopaths, and how you can go about developing them within yourself.

Also read:

- **Why psychopaths get laid more** (and why they fail more, too)
- **The psychopath's modus operandi to control women**

2. The New Science of Narcissism

By Keith Campbell

Summary

Dr. Campbell is one of the leading researchers in Narcissism, making this book a bridge between dry academia and captivating non-fiction.

If you want to go with more empirical work, go for *The Handbook of Trait Narcissism*. But for most readers, *The New Science of Narcissism* is a fantastic primer.

Crucially, Campbell also includes the *advantages* of narcissism, making it a standout among most books that focus on *victims* of narcissism.

1. The Dark Triad of Personality

As a website that values empirical evidence, we had to have this book.

It's not the only book written by a psychologist or scientist on this list. But it's one of the very few available scientific textbooks on the dark triad (and until 2026, it was the only).

So expect a "less entertaining read" on this one :).
But if you want what the research literature shows us about the dark triad, this is your book.

Bonus to Learn the Skills: Power University

By Lucio Buffalmano
Overview | Reviews

Technically, this is a course rather than a book.

But if your goal is not just to *understand* dark triad psychology, but to apply the research-backed insights ethically

and effectively, Power University is our most structured resource.

Unlike single-author books that focus on one trait (psychopathy, narcissism, or Machiavellianism), the course integrates findings from personality psychology, social strategy research, status dynamics, and behavioral science into a coherent framework.

The goal is not to turn you into a dark triad personality.
It is to help you:

- Recognize dark-triad strategies in others
- Borrow the effective traits
- Avoid the self-sabotaging traits

Because the format includes video examples, case breakdowns, quizzes, and applied exercises, many readers find it easier to internalize than standalone books.

The guiding philosophy is simple:
Learn the full playbook. Use it ethically. Win without becoming destructive.

Read alumni's reviews here.

Change Log: New Entries & Exits

We continuously update our foundational lists of best books to provide our readers with the latest and best resources.
Here's what we added and removed, and why:

Added

- *Who is Michael Ovitz* (23.02.2024) as one of the best accounts on how some potentially dark triad traits can lead to business success
- *Machiavelli's Principles* (2025), because of our positive readers' feedback: a much-needed counterweight to naive self-help

Removed

- *Psychopath Free* (03.03.2025), a great book for understanding how potentially sadistic 'predatories of love' win over affection and discard, but it focuses on a single, second-hand case. We favored books with more empirical evidence and broader applicability
- *The 48 Laws of Power* (03.03.2025), a valid primer on power and manipulation dynamics, but many laws are too low-power to properly reflect dark triad psychology
- *The Art of Seduction* (03.03.2025), a great book, but its seducer types do not represent how most dark triads actually operate. Especially not in the modern world
- *Trust Me, I'm Lying* (03.03.2025) perfect valid book on Machiavellian strategies, only removed to keep the list streamlined and balanced across all three dark-triad subtypes

Further reading:

- **Best books on narcissism**
- **Best Red Pill Books**
- **Best books about power**

- **Best psychology books to understand human behavior**

The Mating Mind: Summary & Review

Lucio Buffalmano · 30 October 2019 · Archived copy · Original

The Mating Mind (2000) is an evolutionary psychology text in which Geoffrey Miller, the author, lays out a novel theory for human mind evolution.
Miller, with intelligent analysis and convincing argumentation, makes the case that the human mind is a fitness indicator that evolved through sexual selection.

Overview

- Our minds didn't develop as survival machines—or only as survival machines—but as courtship machines
- The mind's most expressive qualities are like a peacock's tail: evolved to entertain and attract mates while parading high fitness
- Our minds evolved through sexual selection.

Notes

About The Author:
Geoffrey Miller is an American evolutionary psychologist and psychology professor at the University of New Mexico.
Miller is one of my favorite authors and can be seen as a bit of a maverick in the world of academia, but one should take into account the "stuffiness" of the academic world. There have been some controversies, but when I dug deeper, he had not really said anything controversial. The way I see it, some people get roiled too easily when they seek what's true rather than what's convenient.

Why Our Brains Evolved With Sexual Selection

The author states that our brains are simply too complex and costly to have evolved randomly or for survival.

There are only two ways a trait can develop: sexual selection or survival selection.
Survival selection is not very apt at explaining our brains.

Direct sexual selection for mental faculties offers a superior explanation for the emergence and maintenance of our large brains.

Once we started developing language, humans had a direct way of assessing mental abilities, and thought itself became subject to sexual selection.

Miller even says:

> During human evolution, sexual selection seems to have shifted its primary target from body to mind.

Our Brains Didn't Originally Offer Great Survival Advantages

A hundred thousand years ago, our ancestors were already anatomically just like us.

Yet they didn't invent agriculture, civilization, or any advanced weaponry.
Obviously, our mind was not such a huge instant game changer when it came to survival.

And what our mind is uniquely good at just doesn't help us survive.
What use is humor, art, storytelling, or flowery language?

Furthermore, many traits that offer a clear survival advantage repeat over and over across species -eyes, claws, sharp teeth, etc.-. This is called "convergent evolution", and yet we don't see any sign of convergence towards a human brain.

Our human mind is unique, and sexual selection, fickle and unpredictable, perfectly explains its emergence.

Language Is Our Dancing Rituals

Many species' courtship is based on singing or choreographical dances.

Humans also dance or sing, but far more common is speaking.
Language is humans' ritual courtship dance.

Instead of selecting mates based on the display of dance moves, tails, or songs, we started selecting each other based on ideas, stories, humor, and conversational skills.
Which, in turn, were just another indicator of mental faculties and overall fitness.

If you think about it, what do men and women mostly do when they first meet?
They talk.
And they assess each largely based on what each says and how they say it.

Sexual Selection: Female Pick Or Male Fighting?

Darwin saw two different processes for sexual selection:

1. Male competition for female "possession"
2. Selection by choosy females

In either case, sexual competition sometimes does not benefit the species as a whole.
Says Miller:

> Nature shaped animals for exhausting sexual competition that may be of little benefit to the species as a whole.

Runaway Sexual Selection: An Imperfect Explanation For Our Brain

Runaway sexual selection happens when females start selecting for a specific trait and the male population quickly undergoes significant changes to adapt to female sexual choice.

With runaway selection, traits that become maladaptive from a survival point of view can occur (think of antlers' horns or peacock's tails).

Sexual selection can start randomly, and it's the fuel that drives the species to change and diverge.

Says Miller:

> Suppose you take a dozen species of ape that lived in social groups in Africa about ten million years ago and apply runaway sexual selection.
> One species might develop a runaway preference for large muscles, and turn into gorillas.

> Another species might develop a runaway preference for constant sex, and turn into bonobos. A third species might develop a runaway preference for creative intelligence, and turn into us.

When we accept the theory of runaway selection questions like “why are we the only intelligent species” make no sense anymore.
It’s like asking the lottery winner why he won.

Problems With Runaway Selection

We do not have enough fossil evidence to support the runaway process VS a slower process like ordinary survival selection, and Miller goes on to raise a few questions that the runaway process still leaves open.

For example, runaway sexual selection usually produces differences between males and females, and IQ is the same for men and women.

However, one might argue that propensities differ, with men far more likely to produce and amass works of art, literature, music, or status symbols.
Says Miller:

> A strong version of this theory might suggest that human culture has been dominated by males because human culture is mostly courtship effort, and all male mammals invest more energy in courtship. Male humans paint more pictures, record more jazz albums, write more books (…)

Miller also takes into account that culture has also contributed to inhibiting females’ expressions of art.

Overall, Miller says, the current evidence does not support a strong version of the runaway brain theory.
But, at the same time, it also does not support any theory of male sexual competition through toolmaking, or group warfare as the driving force behind the mind’s evolution.

Why Sexual Selection Explains Our Mind Despite Lack of Dimorphism

When female sexual selection starts selecting for a certain trait, there usually begins a divergence between males and females.

Think of the lion’s mane, the peacock’s tail, or the singing of some birds and frogs.

But there are three possible explanations for the mind having stayed similar in both men and women:

1. **Genetic correlation**: in the long run sex differences would evolve, but in the short run both sexes can see an increase in ornamentation
2. **Sexual choosiness for high intelligence requires high intelligence**: there is probably lots of genetic overlap between the ability to produce attractive sexual displays and the ability to appreciate them. This overlap can explain why the intellectual differences between men and women are much smaller than, say, long tails in birds (more research is needed here, for example, to shame that the same genes are involved for cultural production and assessment)
3. **Mutual choice**: most of human evolution happens in long-term relationships because short-term ones do not often lead to pregnancies. And when it comes to the long term, men are equally choosy. Thus, the selection for intelligence might have been a mutual one

However, if it was a question of mutual choice, then the runaway brain theory is not the right one to explain human intelligence.

The Human Mind As Fitness Indicator

Fitness is the propensity to survive and reproduce successfully and it’s determined in large part by an individual’s

genetic quality.

High genetic quality usually means low mutations, because mutations are shots in the dark and most shots in the dark miss.

How can a female -or a male, for that matter-, assess the genetic fitness of an individual?
Well, some traits reveal more genetic information than others, and often these traits are the sexual ornaments that evolve as fitness indicators.

The human mind, with its incredibly high complexity, makes for a wonderful fitness indicator.
It's a simple idea: the more complex it is, the easier it is to mess it up. And if functions well, that's a big vote of trust for the brain's owner fitness.

And once sexual selection puts the brain in its crosshairs, the brain is helpless to resist: it has to play the game, take risks, and invest in more and more complexity (i.e., smarter and smarter). Those who weren't able to prove mental fitness died out, together with their small, efficient, risk-averse, and mutation-proof brains (mutation-proof because the smaller and simpler it is, the less likely it is to develop dangerous mutations).

It's just like the chimp's testes or human female boobs: bigger testes and boobs are not good for natural selection. But they are the tools of the mating game, and those who want to play must play along with the game's rules.

The Handicap Principle

The handicap principle states that for a fitness indicator to be reliable, it must tax the organism.

If it's not costly and resource-demanding for the organism, then it can easily be faked, and it wouldn't be a reliable indicator.

The human mind is very costly to maintain.
Writes Miller:

> The brain's costs are what make it a good fitness indicator. Sexual selection made our brains wasteful, if not wasted: it transformed a small, efficient ape-style brain into a huge, energy- hungry handicap spewing out luxury behaviors like conversation, music, and art.

The Ornament Theory of The Human Mind

Miller goes on to describe how sexual ornaments help win mates by leveraging sensory bias.

The human mind can also touch pleasure centers in other humans.
In an era when television and movies had not yet been invented, more entertaining men were more attractive to women.
Women wanted to spend more time with men who could tell elaborate stories or make them laugh.

Men who created better art and paintings, weaved, and wore better clothes and body paintings were more successful than women.
We can still see it today.

However, by itself, the ornament theory is not enough to explain the evolution of our brains.

Miller says we must put all three theories together to come up with a solid theory and understanding of the human mind's evolution.

Towards An Integrated Theory for Human Mind's Evolution

Here are the three theories Miller introduced:

- Runaway selection (women started selecting for high intelligence)

- Indicator of overall health (fitness indicator)
- Sensory bias (brain-related functions such as speech and art also happen to be entertaining and/or exciting)

The three of them are not separated anyway.

Fitness indicators also tend to become more ornamental because the sensory bias of the female shapes the ornaments to a certain aesthetic, while traits that started off as runaway ornaments tend to acquire value as fitness indicators because beautiful ornaments tend to be costly to produce.

Sexual Selection: The VC of Evolution

One of the big questions of evolutionary psychology is how complex organs can come to exist.

For example, how can you develop an eye when an eye is composed of so many interdependent pieces?
What use is a retina without a cornea or a pupil?

Why would individuals start developing a retina without all the other components already in place?

Miller says that sexual innovation might favor early development simply because it looks sexy and works like a good fitness indicator.

So, for example, the first prototype wings were useless, but they looked cool. And so sexual selection pushed towards longer and longer wings.
Until they finally also served for survival purposes.

Sure, most of those evolutions will bring no benefit, and some of them will revert back and disappear.
But some will turn out to be useful and will push evolution forward.

The human mind might have evolved the same way.
Started out with sexual selection and then proved to be a huge boon for survival as well, bringing us to the apex species on earth.

How We Evolved: Female Choice, Natural Pair-Bonds, & Little Male Help

To estimate what dating and mating were like in our Pleistocene past, we need to gather data from three different sources:

- Sexual behavior of other primates
- Sexual behavior of modern humans still living as hunter-gatherers
- Sexual selection evidence in modern humans, both in body shape and human psychology

Since to conceive it takes more or less 3 months of regular sex, very short-term partnerships have been less significant in our evolution.
Longer-term partnerships have been more important from an evolutionary point of view.

Lifelong monogamy was probably very rare; polygyny was probably the exception, and serial monogamy dotted with more or less rare flings and affairs was probably the norm.

Powerful Female Mate Choice

Females exercised strong power in mate choice.
Harassment was probably relatively common, but females could curb it and retaliate through family, friends (including female friends), male partners, and relatives.

There was no jail time for killing an abusive partner, a stalker, or a psychopath.

Hidden ovulation also increased female power and power of choice (see: the sexual arms race and the tools of warfare).

And once language evolved, it also served as a tool for policing against harassment, rape, or illicit affairs.

But men also chose their partners; the fact that both men and women evolved distinctive sexual ornaments proves that both genders exercise choice.

Fathers' Help Was Spotty, But Helpful

Male hominids probably did little fathering.

However, that fathering might have increased as human children started taking longer and longer to fully develop. With children's long-lasting vulnerability, it made more sense for men to assist their offspring rather than seek new mates.

Women likely had boyfriends, but the boyfriends might not have been the fathers of any of her children, or only of her last child.

But that might have also helped increase male parental investment.
Paternal effort may have evolved through sexual choice as a courtship effort, such as: when men attracted women by pleasing their kids.
Because if a woman's child didn't like the pursuer, chances are she would have stayed with the children.

However, Miller ends up saying that the role of men as fathers and household contributors is still spotty.
There are some signs that men have also been selected for being good fathers, but more research is needed.

The Myth of Male Protection

Women likely didn't need that much protection from men.

Against predators, men have virtually no advantage over women. A mere 10% more physical size and 20% more weight make little difference.
They may be more accurate at throwing things, but the odds are still heavily stacked against any human individual when facing a saber-toothed tiger or a charging rhino.

When it comes to defending against other humans, a woman would have been safer among dozens of other women than in mixed groups or married to a man without any social support group.

Men might have actually been a burden at times.
Says Miller:

> Interviews with contemporary hunter-gatherer women by anthropologists such as Marjorie Shostak reveal that these women view many men as more trouble than they're worth.

However, exceptions are made for high-fit men:

> If they have very high fitness, then their good genes, good sex, and good conversation might compensate for their messiness and lethargy. But if they are only average, their potential for sexual jealousy and violent irritability may render them a net cost

However, I found one source describing Shostak as a feminist, which makes her opinion here possibly biased.

Youth Matters Less When There Is No Socially Sanctioned Monogamy

Miller says that age matters less when there is no strict monogamy, like in our evolutionary past.

If the relationship was likely to end within a few years, it mattered little whether she was 30 or 10 years away from menopause.
Sure, age still correlated with fertility, but the simple fact that she was still alive, and possibly with children, boded

well for her fitness level and parenting skills.

Sexual & Social Discrimination Systems Are Sensitive to Stimulation Yet Resistant: Orgasms and Humor

Whenever we see a human perceptual or cognitive ability that is sensitive to the stimulation but not to *all* stimulation, we can infer that it's a tool for sexual or social discrimination.

Orgasms, for example, are not always easy for women, which might make them a tool for selecting certain types of men who have enough energy and are kind enough to take their time.

Humor is the same: a good sense of humor discriminates and is designed to find partners of a similar or higher level of intelligence.

Human morality has been sexually selected

Both men and women love kind partners.

Many authors explained human morality as either a side effect of nepotism (W. D. Hamilton, 1964) or as reciprocity (see "*The Origins of Virtue*").

Both are very valid theories and probably both nepotism and reciprocity shaped our morals and ethics.
But they still leave out plenty of unexplained behavior. Charity donations, for example, moral leadership, sexual fidelity, or sportsmanship.
Miller goes more in-depth on charity donations and why they don't fit the kinship and nepotistic models, and I couldn't agree more with him.

For too long these tendencies have been swept under the carpet, and now the evidence has become too strong to deny.
As Miller says:

> Human kindness is becoming accepted as an adaptation to be explained rather than a myth to be ridiculed.

So, how to explain it?

Miller instead says that morality, kindness, and altruism possibly evolved thanks to sexual selection.

Natural selection might at times favor selfishness, but natural selection is impotent if sexual selection starts selecting for kindness and altruism.
Miller says that courtship behaviors that displayed kindness and altruism -hunting- won out over courtship behavior that was neutral -showing off- or aggressive -fighting and hurting other contenders- because the altruistic courtship tribes won against the selfish ones.

It sounds like group selection, but it's not: every single individual is still acting selfishly. But the selfish act just happens to benefit others instead of either adding no value or hurting them.

My Note:
I was surprised that Miller didn't mention that kindness also signaled the potential for higher male parental investment.

The fact that kindness is a trait used for sexual positioning is also the reason why it's difficult to go against political correctness.
If a researcher were to say for example that intelligence is important, different among people, and heritable, that could be misconstrued as the researcher being unkind and asocial.

Moral Leadership

Frans de Waal's research among chimpanzees showed that the alpha male ape Yeroen remained in power thanks to his social intelligence and *his ability to foster peace and harmony*.

That means that we have common ancestors for whom status based on leadership became a viable alternative.

Again, this makes sense when we look at evolution from a wider angle and not because women preferred good leadership "because it's good".
Females might have developed a preference for psychopathic leaders who rule out pure violence.
But they would have likely lost against groups where virtuous and cooperative leadership increased group effectiveness.

Humans took it one step further.
Says Miller:

> Where chimpanzees evolved moral leadership, humans evolved the more advanced capacity of moral vision, including the passionate articulation of social ideals concerning justice, freedom, and equality. **Moral vision is sexually attractive, and may have been generated by sexual selection.**

Also read:

> Why Psychopaths Get Laid More

Morals: Another Tool to Fight The Sexual Conflict?

I particularly loved Miller's take on morals.

Miller notes first that any overt display of fitness indicators breaks all of our moral values.

He says:

> Loudly advertising one's fitness violates our values of humility, decorum, and tact.

Why is it so?

Well, Miller says that it's because morals were purposefully invented to discourage the too-obvious parading of fitness indicators.

He says:

> Human norms and values developed as reactions to patterns of natural human behavior that we decided should be discouraged.
> If a great deal of human behavior consists of advertising one's fitness, and if many ways of doing that impose social costs on others, and if moral norms develop to minimize social costs, then a lot of moral norms should be aimed directly against the irresponsible use of fitness indicators.
> (…)
> They emerged as moral instincts and cultural inventions to combat the excesses of sexual self-advertisement and sexual competition.

Personally, I think that morals can function as a civilizing force.
Check out this forum entry for the discussion.

Art & The New Sexual Game That is Modern Art

An artistic vein likely helped our artistic ancestors mate more than plain men with no artistic taste.

However, looking at art today would be misleading because modern art has changed the game.

The art that made our ancestors successful was folk aesthetics, not modern art.
Modern art has been usurped by the elites to play their own social and sexual mating games.
Write Miller:

> With folk aesthetics, the focus is on the art-object as a display of the creator's craft.
> **With elite aesthetics, the focus is on the viewer's response as a social display.**
> (…) as a verbal display in its own right. Elite aesthetics follow the same signaling principles as sexual selection, but follow them in cultural direction specifically designed to contrast against folk aesthetics.
> Elites, free to enjoy all manner of costly and wasteful display, often try to distinguish themselves from the common run of humanity by replacing natural human tastes with artfully contrived preferences.
> But to an evolutionary psychologist, the beauty that ordinary people find in ordinary ornamental and representational art says far more about art's origins.

When an average visitor to a modern art museum says "even a child could do that", he is actually saying that he cannot discern the ability of the artist from the painting he is seeing.
Modern art does not work nearly as well as a fitness indicator.

Yes, modern art is all a big game, and Trump said the same in "*The Art of The Deal*").

More Wisdom

- **Evolutionary psychology must look at differences, not just similarities**

Some authors, like Steven Pinker and John Tooby, said that evolutionary psychology should focus on human universals.
It's a good rule of thumb for survival adaptations, but it overlooks sexually selected adaptations that evolved specifically to advertise individual differences in fitness, health, and intelligence.

- **Sexual VS Natural selection: survival of the fittest is misleading**

Surviving is evolutionary useless without reproduction.
Heritable differences in reproductive ability are as important in evolution as heritable differences in survival ability.

And that's why sexual selection is stronger -if not stronger- than natural selection.
Of course, though, the two are often not opposite to each other but overlap. Sexually selected traits are most frequently also fitness indicators ((Fisher's intuition) and often, but not always, also provide a survival advantage.

- **Sexual selection in between natural and artificial selection**

Some biology students are taught sexual selection as a subset of natural selection.
But that's wrong, and that's not even how Darwin thought of sexual selection. Darwin saw sexual selection as an autonomous process that was midway between natural and artificial selection.

- **Sexual selection happens in Long Term Relationships**

Much of the focus of dating is on shorter-term sexual relationships.
Yet, true evolution is more likely to happen in longer-term bonding because short-term sex rarely leads to pregnancies.

- **Psychology missed the train on sexual selection**

Not only have 20th-century social sciences missed the boat on human nature and psychology, but evolutionary psychology is still missing the boat of sexual selection in humans.

Major evolutionary psychology works such as Pinker's "*How The Mind Works*" and David Buss's textbook "*Evolutionary Psychology*" both explain most of the mind's adaptation through natural selection.

- **Physical strength is not synonymous with fitness**

Physical strength is not synonymous with fitness, because the energy and investment of muscles can easily produce fewer offspring than an investment in the brain, larger testicles, or even fat reserves.

- **Our ancestors' life was boring more than dangerous**

Contrary to the popular belief that our ancestors lived a highly dangerous, busy life, Miller says that our ancestors probably had more leisure time than we had.
Men went out hunting, often unsuccessfully, while women successfully gathered food.

Sure, predators were around, but they weren't a constant and endless danger and our ancestors got used to it like we are used to the traffic and city life.
Our ancestors lived some of the longest lives in the animal kingdom, suggesting that the daily risk of death was minuscule.

Like most other apes, our ancestors didn't worry about daily survival, but about social and sexual problems.

- **Sexual selection does not require polygyny**

Females do all the choosing and a few males monopolizing reproduction makes sexual selection move faster.
But polygyny is not a necessity because even in perfect monogamy higher fitness individuals pick each other, and their offspring survive at a higher rate.

- **Female want heritable fitness, and resources are an indicator**

Miller says that Buss has amassed plenty of evidence that women prefer high status, high income, and high resources men.

But while Buss interpreted his data as women evolving to prefer good providers to support their families, Miller believes that, albeit those traits correlated with male material benefits, they also correlate with heritable fitness.
And women more likely evolved looking for heritable fitness more than material benefits.
If the same traits can then work both as fitness indicators and wealth indicators, all the better.

- **Freud got it wrong: it's not children wanting sex with parents, it's about fitness indicators**

Miller notes that social relationships are similar to dating: we still put our best foot forward and seek the best friends we can get.

The same happens between children and parents: children want to advertise fitness so that the parents keep investing in them.
That's what Freud got wrong: he noticed flirtatious behavior between children and parents and thought it was and inferred it was because of the child's secret desire to have sex with relatives.
But that would make no evolutionary sense: it's most likely because children are seeking parental investment.

- **Winner takes all and male risks**

Men developed according to a higher-risk strategy than females.

Men all have higher birth defects, higher infant death, higher mortality and any age, earlier senescence, and greater variation in health, strength, size, and intelligence.

The risky strategy suggests that male competition is a higher-risk, higher-reward game.
Men at the top of the hierarchy reproduced a lot more than average men, while men at the bottom reproduced very little or not at all.

- **Runaway sexual selection produces differences among humans**

Even within the same species, runaway sexual selection can produce differences between groups, ethnicities, or races.

This should be obvious to anyone who has traveled and can recognize different faces among different ethnicities.

- **The evolution of the penis**

Male genitals evolved equally for effectively carrying sperm and under female sexual selection pressure.

Penises likely did not evolve for carrying sperm though, because sperm competition correlates much more strongly with testicles' sizes.

Length or thickness is not crucial in sperm's war. A thick penis might "trap" a competitor's sperm during copulation while a long one might overshoot the cervical opening rather than meet it accurately (Also see: *Sperm Wars review*).

Some authors espoused the belief that penis size was a tool for males against male competition, but I agree with Miller when he says that makes little sense.

Quotes

On sexual selection trumping survival selection:

> Those proto-humans that did not attract sexual interest did not become our ancestors, no matter how good they were at surviving.

On evolution making us hungry, not happy:

> Evolution's job is to motivate us, not to satisfy us.

On entertainment, often provided by our mind, being more important than war and competition in the history of our evolution:

> I am making a different pitch, for romantic comedy as the genre least likely to mislead us, if we think of h u m a n evolution as a narrative. My rationale is that in action, war, and intrigue, people mostly just die. But in romantic comedy, people sometimes get pregnant.

Fitness like a secret Swiss bank account:

> Fitness is like money in a secret Swiss bank account. You may know how much you have, but nobody else can find out directly. If they ask the bank, the bank will not tell them. If they ask you, you might lie. If they are willing to mate with you if your capital exceeds a certain figure, you may be especially tempted to lie.

On the idiocy of thinking about the brain as a "computational machine" for survivability:

> As long as you ignore most of human life, the computer metaphor is terrific.

I was surprised to see Miller using the term "patriarchy", but he makes a great point on the myth of male protection:

> Female hominids seem unlikely to have displayed the exaggerated physical vulnerability expected of women under patriarchy.
> When you picture ancestral females facing predators, do not imagine Marilyn Monroe whimpering and cowering. Imagine Steffi Graf brandishing a torch in place of a tennis racket.

Some authors speculated that sexual differences work as a "species recognition marker", such as tools to help animals recognize they belong to the same species.
Miller obviously doesn't believe that's the case, and he ironizes:

> This viewpoint implies that the hours of mutual conversation during human courtship are likewise nothing more than a way for us to tell that the other individual is a human rather than a chimpanzee.

On the same techniques of sexual selection used for socialization and family relationships:

> We should not expect to see fitness indicators used exclusively after puberty and before menopause, only that they are then directed at different targets.

On sperm competition not being a very important aspect in the penis' evolution:

> If sperm competition were the driving force behind penis evolution, males might have evolved scary-looking flagellated genitals. Men would copulate by inserting their equipment, instantly flooding the cervix with half a pint of semen, and then lying on top of the woman for the next three days to make sure no rivals have the chance to introduce competing sperm. I understand that such behavior is quite rare.

On orgasm as a tool for sexual selection:

> Surely, sexual selection theory offers insight into this ancient h u m a n mystery. Female orgasm seems poorly designed as a pair-bonding mechanism, but it is perfectly designed as a discriminatory system that separates

> the men from the boys.

On art as just another tool for sexual selection. This part was hilarious, I hope Geoffrey Miller allows me to quote it (and shorten it a bit) because it truly deserves some more publicity:

> If you could interview a male Satin Bowerbird for Artforum magazine, he might say something like this:
>
> *"I cannot remember when I first developed this raging thirst to present richly saturated color fields within a monumental yet minimalist stage-set, but I feel connected to something beyond myself when I indulge these passions. When I see a beautiful orchid high in a tree, I simply must have it for my own. When I see a single shell out of place in my creation, I must put it right.*
> *Birds-of-paradise may grow lovely feathers, but there is no aesthetic mind at work there, just a body's brute instinct.*
> *It is a happy coincidence that females sometimes come to my gallery openings and appreciate my work, but it would be an insult to suggest that I create in order to procreate. We live in a post-Freudian, post-modernist era in which crude sexual meta-narratives are no longer credible as explanations of our artistic impulses."*
>
> Fortunately, bowebirds cannot talk, so we are free to use sexual selection to explain their work, without them begging to differ.

On morality:

> Any good evolutionary theory of h u m a n morality must convert the apparent costs of helping others into a realistic benefit to one's genes.
> Saints are literally one in a million. They may be instructive as moral ideals, but they are statistically irrelevant.

On the phenomenon of "anonymous donors":

> I suspect that few male millionaires keep their charitable donations secret from their wives and mistresses.

On altruism:

> Human altruism is not an evolutionary paradox. It is a sexual ornament.

CONS

The Mating Mind is a top evolutionary psychology books.
There are no real cons, just a few notes:

- **Runaway sexual selection can go both ways with our brains?**

Miller says that if our brain evolved with runaway selection, then it was too slow.
It's possible we had "bursts" of runaway selection, but that would beg the question of why they all went towards increased brain size since runaway sexual selection is not biased in any direction.

However, I don't see why once a species is moving towards more intelligent not "randomly" women would start selecting for stupidity.
It doesn't add up.
I don't think "up" or "down", "increase" or "decrease" is as random as Miller presents them to be.

- **Randomness doesn't have to *look* random**

When discussing the runaway selection of the human mind, the author seems to expect randomness to "look" random.
But randomness can equally look neatly organized, especially when we're talking about a few bursts only (on "random bias" see more with Taleb, Kahnemann, and Thaler).

- **Men not helping each other?**

The author seems to see no reason for the "patriarchy" to exist because that would mean helping out other male competitors, and that makes no evolutionary sense.
He says:

> Men often bully women into silence, but this is usually to make room for their own verbal display. If men were dominating public language just to maintain patriarchy, that would qualify as a puzzling example of evolutionary altruism

I disagree here.
Keeping women away from power helps average men because independent women are -or, at least, feel- like a threat to average men since those said women wouldn't need those men.
And since most people cluster around the average, a concerted effort to keep women down is -or, at least, feels- like a win for most men.

The patriarchy is not a concerted, conscious effort, but it can be the net result of countless individuals acting on their own accord, for their own interest (see Ghodsee, 2018)

- **Reminder: it's a speculative theory**

Miller is the first to say so, and kudos to him.

Workman and Reader in their *intro to evolutionary psychology* also list Miller's theory, and they say:

Miller's hypothesis is controversial, not least since there are many pressures that might lead to women being artistically less productive than men (time spent childrearing, being economically disadvantaged, having different societal expectations)
However, as with the other two hypotheses, it is not clear whether the use of language as a way of attracting a potential mate was an original causal factor in the development of language, or whether it was something that appeared after language evolved. The peacock's tail, for example, would originally have evolved for functional reasons (functional that is in terms of natural selection) before sexual selection distorted it beyond recognition. Likewise, language might have originally appeared for reasons other than to impress potential mates, with sexual selection only acting upon it later.

Review

The Mating Mind presents a thought-provoking theory for the evolution of human intelligence and, at least some elements of it, appear to be plausible and logical in lieu of dating and seduction dynamics.

I also loved Miller's approach: he invites the readers to think with their own minds, clearly preface what's data-driven and what's speculation, and he is the first one to challenge his own hypothesis instead of trying to "sell them" to the readers.

This is what we need more of.

Highly recommended!

Attraction Explained: Summary & Review

Lucio Buffalmano · 31 October 2019 · Archived copy · Original

Attraction Explained (2015) is an evidence-based dating book. It digs deeply into science and research to debunk dating cliches and provide readers with what really works in love and dating.
It focuses particularly on factors such as appearance, personality, geography, and similarity.

- The best predictor of a relationship is physical proximity
- Repeated exposures increase liking
- Appearances matter, but both male shallowness and “female depth” have been overblown
- There is a whole host of traits that are attractive in the sexual marketplace, including kindness and warmth
- Kindness and warmth make others feel like we are also more physically attractive
- Liking is mutual, and that’s why “feigning disinterest” often backfires
- Similarity is one of the strongest predictors of relationship formation

Full Summary

About The Author:
Viren Swami is a Professor of Social Psychology at Anglia Ruskin University in the UK. He focused his studies and research on attraction and body image.

Dating Books Harm More Than Help

Arlie Hochschild conducted an analysis of the best-selling dating books for women published between 1970 and 1990.

She concluded that not only do they don’t help, but they actually harm readers. Under the guise of fake egalitarianism and gender equality, they harm the reader by encouraging:

- Emotional distance
- Denial of emotional needs
- Encouraging distrust of others
- Being self-reliant at all times instead of investing in social relationships

Writes the author:

> Rather than expecting to give or receive love from other human beings, the postmodern cowgirl devotes herself to emotional control, forever distrustful of others with whom she might have relationships.

Hochschild talks about the "abduction of feminism" and taking the movement down the wrong path.

And she is not the only (female) researcher to look into dating books for women.
Rebecca Hazleden's analysis of the fourteen bestselling relationship manuals published between 1981 and 2000 reached the same conclusion. By encouraging self-sufficiency and self-love at the detriment of social bonds, the books, she concluded, prepare readers to be "utterly isolated, cast adrift in a loveless world".

My Note:
This is something I have often said in my article and analysis as well, thus I wholeheartedly agree.
It's the same that's happening in some fringes of male dating self-help, by the way, and not just the females. See "*The Rational Male*", "*The Red Pill*" and "growing beyond the red pill".

David Machin and Joanna Thornborrow analyzed the Cosmopolitan dating section and came to the same conclusion.
Cosmopolitan presents the guise of a "fun fearless female", but those women are still alone.
If dating is about finding someone, then these resources hardly help.

Pick-Up Artistry For Men

Viren Swami reviews the birth and development of the dating industry for men, from Ross Jeffries "NLP seductions" to Neil Strauss' "*The Game*" to "*The Mystery Method*".

He asks if there is any truth in the "science" and psychology of the early pick-up artists, and his answer is "no".

And some of the tips, like "negging" seem to fly in the face of actual science.

OK, no science, but do they work at least?
Swani says there is no real evidence. Plenty of personal stories and anecdotal evidence, but no real data.
And anecdotes of failures are easy to find as the successful ones.

The author says that the high incidence of misogyny and *manipulation*, both rampant in the pick-up industry, does not bode well for relationships.

Complexity Reigns Supreme

First of all, says the author, humans are complex.

There are no "laws of seduction" as much as there are no "*laws of power*" or "*laws of human nature*".

Moods, situations, and personalities all render socialization and dating very hard to predict and, as for anything human, very difficult to generalize.

Playing Hard to Get Doesn't Work Because People Prefer Partners Who Like Them

Why does playing hard to get doesn't work?

Because liking begets liking.

One person's liking for another usually predicts the other person's liking in return.

And the opposite is true.
Psychologists have shown that criticism is damaging to relationships, and spurning is similar.

That's why playing hard to get often backfires: plenty of research shows that vagueness and stand-offishness won't get you very far.

Of course, simply telling someone you like them does not magically make them like you.
We don't live in that type of world.
The reciprocity effect is influenced by suspicion of second motives, how "exclusive" that liking is, the costs and risks of our compliment, and how much they already like us.

I will quote the author here because I just couldn't agree more:

> (…) expressing liking for someone is a symbolic act of investment in the relationship.
> (…)
> In turn, these expressions of attraction lead to trust, which generates even more attraction.
> When we believe someone is trustworthy, we're much more likely to want to interact with that person in the future, simply because we believe those interactions are going to be beneficial.
> **In short, expressing liking leads to attraction and feelings of trust, which in turn leads to greater attraction.**

In both my experience and opinion, that's spot and exactly the case.
But there are some benefits if women play the "hard to get" strategy smartly.
Read:

- **How to properly play "hard to get"**

Also read:

- **The myth of men enjoying the chase**
- **How to delay sex without rejecting him**
- **Common female dating mistakes**

Similarity Works

People are much more likely to form relationships when they share common attitudes, values, beliefs, and demographics.

People also tend to form relationships with partners whose overall attractiveness matches their own, which is called "assortative mating" in psychology.
Couples are also much more likely to form when there is a similarity in sociodemographic characteristics.

Watch out for dissimilarity though, because the opposite is also true: dissimilarity breeds dislike.
We tend to assume that people share similar attitudes, and when we find out they don't, we come to dislike them.

Appearances Matter. And They Matter to Both Genders

The standard view is that men are all about appearances and women more about their status, resources, and power.

But the author challenges the stereotype and, with an obvious dig at "*Men Are From Mars, Women Are From Venus*", says that men and women are not from different planets and are more similar than most would expect.

Viren Swami says that for hypothetical situations, there is plenty of data showing that men value physical attractiveness more than women do and that women focus more on status and earning prospects.

But hypothetical situations don't always transfer to real life, and in face-to-face, the differences between men and women disappear.

My Note:

The author mentions the "computer dance study" and "speed dating" scenarios.
However, I would make the case that those are very peculiar situations. The computer dance study was based on brief interactions *dancing*, a physical-based activity with brief interactions and little talking and, hence, little information about status (if not the physical attractiveness itself as an indicator of status). All participants were university students, too.
Speed dating, by their very nature, is quick and fleeting as well. And they are self-selected too, because people going to speed dating events, usually, are not the highest caliber mates and it's possible they're willing to compromise.
Telling people that their choice of partner was a very low-status individual might have led to very different outcomes in both men and, even more, women. But that wasn't attempted.

What makes a big difference, says Swami, is whether individuals are looking for casual dating or long-term and committed dating.
Women looking for the short term were more likely to be swayed by attractive looks and placed looks above ambition.

When assessing for long-term ambition became relevant again.

Female's own socio-economic status changes preferences.
The author says that one study found that more financially independent women showed a stronger preference for physical attractiveness over financial prospects.

My Note:
However, I had a different feeling from that study.
I have copied from the abstract of the study:

> Ambition and attractiveness synergistically influenced targets' long-term desirability, and these preferences were not moderated by women's sociosexual orientation.

To me, it sounds like women value ambition quite a bit.
And plenty more studies showed that women in the upper social brackets and women with higher future earning potential both cared *more* about their long-term partner's social status and earning potential (see David Buss' work).

Women who endorse feminist attitudes also placed less importance on their financial firepower and gave more importance to traits such as kindness, understanding, and creativity.

When it comes to short-term flings, both men and women are willing to compromise on intelligence and status, but not on physical attractiveness.

However, keep this in mind:

> Physical attractiveness isn't a static quality and that it can evolve and change depending on the characteristics of the individual as well as the situation they find themselves in.

Attitudes Towards Random Sex: Men & Women Are Not That Different

Men and women have different approaches to free sex.

Clark and Hatfield's study (1989) is the most famous example.
When college men and women went around propositioning for random sex, most men accepted, and all women refused

But Swami says that the study has been overblown.
The differences decrease when the person asking is familiar and attractive, and they disappear when the person is

famous.

My Note:
The author seems to be confused about the issue.
He says that men and women are equally likely to accept sex if the asker is Angelina Jolie or Brad Pitt.
In those cases, both genders are equally likely to say "yes". But here we're back again into the status and power category: Brad Pitt is sky-high in attractiveness, fame, power, status, and income.
That's not a good study to prove that women are similar to men when it comes to casual sex.

To sum it up, says the author:

> Sex differences in responses to casual sex may appear to be larger than they actually are.
> If the right person comes along, the risk is low, and there is the potential for a good night of sex, women and men are equally likely to accept the offer of casual sex.
> And for both women and men, physical attractiveness matters.

Stated Preferences: Not Very Reliable, But Still Matter

Do you know those people with a clear idea about the partner they want?

There are a few of those.
But do they end up with the partners they look for?

Well, they might, but their wish list has little predictive abilities of who they actually end up with.
The match between "ideal mate" and "actual mate" is still associated with better relationship quality and a higher likelihood of staying together.

Why do stated preferences are poor predictors of who we end up with?
Well, part of the reason might be because once we meet someone, we care a bit less about looks and we start digging a personality that we didn't know we could enjoy:

Once The Interaction Started, Appearances Matter Less

Once social interaction is underway the importance of social appearances slightly declines.

OKCupid for example registered that randomly matched people who went out on a date mostly had a good time.
And that was independent of how attractive their partner was.

The same study showed that the best predictor of a follow-up date was not physical attractiveness, but how well the daters got to know their partners.

Nice Guy Stereotype: They Don't (Always) Finish Last

The stereotype is that women *say* they want a nice, but deep down they actually lust after the bad boys.

Is it true?

Well, Urbaniak and Killman actually set out to put that stereotype to the test.

Participants were given a script in which a woman ("Susan") was participating in a game show that resembled aspects of the popular TV game show "The Dating Game."
Susan is presented with the opportunity to date one of two male contestants ("Todd" or "Michael") and must choose between them based on their responses to her questions.

Todd gave answers ranging from typical "nice guy" answers to "tough guy answers", while Michael remained constant and "middle of the road".

For example, to the question about “what it means to be a real man”, “nice Todd” said:

> A real man is someone who is in touch with his feelings and those of his partner. Someone who is kind and attentive and doesn’t go for all that macho stuff. He’s also great in the bedroom and puts his partner’s pleasure first. I’d definitely say I’m a real man.

Middle of the road Todd said:

> A real man knows what he wants and he knows how to get it. Someone who works hard and plays hard, and who is good to the woman he loves. He’s also great in the bedroom. I’d definitely say I’m a real man.

And jerk Todd:

> A real man knows what he wants and he knows how to get it.
> Someone who knows who he is, but keeps other people guessing and on their toes – he doesn’t go in for all that touchy-feely stuff.
> He’s also great in the bedroom and can tell his partner what he likes. I’d definitely say I’m a real man.

Participants were then asked which date Susan should pick and which date they would pick.

Contrary to the stereotype that nice guys are always passed over, it was nice Todd that women chose most frequently both for Susan and for themselves.

In a similar study with dating ads, it was kind men who were picked the most.
Or, more precisely, men who exhibited altruism as a courtship display, using keywords such as “I volunteer at a food bank” or “I enjoy helping people”.

My Note:
This study lends credibility to Miller’s theory of sexual selection of morals, BTW).

In summary, it’s not really that complicated: **When rating hypothetical partners, women seem to prefer men who are easy-going, warm, sensitive – read ‘nice’ – but also confident**.

Needless to say, not all women are the same. Some recommended Todd to Susan and picked the jerk for themselves. But it was a minority.

More Dating Wisdom

- Uncertainty might be used in certain situations to pique interest
- Turn-taking during self-disclosure builds intimacy
- Self-disclosure is mostly effective when partners feel understood and cared for
- Self-disclosure works because it shows a willingness to risk opening up and have an honest and authentic relationship
- For women, “selectively hard to get” works best, ie.: be hard to get for everyone but not for the man you like
- Similarity fosters attraction, and *perceived* similarity seems to be stronger than actual similarity

Quotes

> In fact, the need to know that one’s affections for another will be reciprocated is a common experience among people who have fallen passionately in love.
> Knowing that you have been selected out of all possible suitors and that your liking is reciprocated can be life-

> changing.

Real-Life Applications

Plays fewer games.
Sometimes, less is more.

CONS

- **Some generalizations**

The author writes:

> This isn't to suggest that all pick-up artists are nefarious and perverse. But as a community, pick-up artists are morally, ethically, and – importantly – scientifically bankrupt.

I think that's a rather broad brush with which to paint such a large, disparate, and diversified industry.

- **Sometimes more about debunking than truth?**

Sometimes I get the feeling the author is more about "debunking" this or that than actually getting to the truth.
That might lead to cherry-picking certain studies and ending up with a tainted version of reality.

I felt that way about the "offer for casual sex".
The differences between men and women are extremely stark there and well-grounded in many studies and, well, also in "real life" as we all experience it.
The efforts to show that there was no difference felt out of place.

- **Some out-of-place value-signaling white-knighting**

> Demands for sex, abusive responses to rejection, and dick pics – unsolicited photos of genitals – are all common forms of woman-hating in contemporary dating.

How is a dick pic woman-hating?
It might be stupid, it might be out of place, and in some cases, it might be idiotic and inappropriate.
But woman-hating?

Or this other passage:

> (…) men open a conversation with a woman with inept sexual advances, like 'I need an opinion on my penis size' or 'Mmmmmmm baby what are you wearing baby?' The misogyny that drips from texts like these make any sort of further interaction unlikely.

Again, I see a lot of ineptitude indeed, but ineptitude is not misogyny.

- **Cultural determinism bias**

Sometimes the author seems to adopt the typical "blank slate" and "standard social science model".
For example, he says:

> Nevertheless, ideas of "paternalistic chivalry" – the notion that men should initiate and take control of approach behaviors and dating decisions – continue to dominate how heterosexual couples interact.
> The most obvious reason for this is that we live in societies where women have less power than men.

Not really, “the most obvious reason” is that we have been shaped that way. Doesn’t mean it’s good or that we should keep it that way, but it’s *not* because women have less power.

PROS

- **Great science and research**

What a wonderful job in finding, analyzing, and summarizing so many wonderful pieces of research.

I truly learned a lot thanks to Viren Swami.

- **Open-minded approach to science, difficult probing questions**

I like that the author is not afraid of asking difficult questions.
For example, he notes that we tend to consider beautiful people as also more “good”.
I immediately thought there that he should ask whether or not beautiful people might also be more “good”. He did ask and address it indeed, even mentioning some (limited) supportive evidence for “beauty” to reflect on health, social skills, and intelligence.
That gave Swami a lot of credibility in my eyes.

Review

Attraction Explained is a wonderful book.

The author does something that we need more of deploying science and common sense in an area, women’s dating, where bad advice and generalizations are worsening women’s dating lives.

The Evolution of Desire: Summary & Review

Lucio Buffalmano · 2 November 2019 · Archived copy · Original

The Evolution of Desire (2016) reviews human relationships, dating, and sexuality from the vantage point of evolutionary psychology.
David Buss, the author, explains why we find certain traits and mates attractive, how and why we cheat, and provides a comprehensive overview of male and female sexual strategies.

Bullet Summary

- Conflict in mating is the norm, not the exception
- Strategic interference is the area where the sexual strategies of men and women diverge
- Human mating strategies are large and highly sensitive to context

About The Author:
David Buss is an evolutionary psychologist and researcher, currently teaching at the University of Texas. He is a well-known and respected voice in evolutionary psychology and has written several books, including what's possibly the most popular university textbook called "*Evolutionary Psychology*".

Summary

What Women Want

Let's start with what women want:

Women Want Men With Resources

Women want men with resources.

As a rule of thumb, whenever women can demand resources and men can provide them, then women demand resources.
This is true across the whole animal kingdom, and it's true for women too.

Says Buss:

> The evolution of the female preference for men who offer resources may be the most ancient and pervasive basis for female choice in the animal kingdom

But when are resources important from an evolutionary point of view?
Buss says there must be three preconditions (but I break them up into four as I feel it makes more sense):

1. Resources must be accruable, defensible, and controllable by men
2. Men must differ in their holding or skills at resource acquisition
3. Men must be willing to invest those resources in women
4. The advantages of committing to one man must outweigh the advantages of being with several men

In humans, these conditions are most often met.

Says Buss:

> The marriage patterns in America confirm the fact that men with the most resources are the best equipped to actualize their preferences.
> (…)
> Indeed, the male occupational status seems to be the best predictor of the attractiveness of the woman he marries.

Sexual Differences in Appreciation For Resources

Countless studies show that women appreciate resources much more than men do.

Women consider resources not "absolutely indispensable", but important (a "necessity", not a luxury). Men consider resources in a spouse "desirable", but not very important (a luxury, not a necessity).
Even with the sexual revolution, women still value financial prospects twice as highly as men do. An analysis of personal ads showed women asking for financial resources 11 times more often than men did.

A study asked men and women what would be the minimum percentile of earning capacity they'd be willing to accept in a mate.
Men wanted wives at least in the 40 percentile. The women's minimum was 78. As such, they wanted a man who earned at least more than 78% of all other men.

The preference of women for men with resources is universal.
In all cultures, religions, and political systems, women placed higher importance than men on resources (roughly 100% more).

There were a few differences.
In the Netherlands, women cared for resources only 36% more than men do; in Japan, it was 150%.

Women Want Resources Even When They Have Resources

Buss theorizes that women might seek resources because they have less than men.

Yet, a tribe in Africa where women have more resources than men casts strong doubts on that theory.
Wealthy tribeswomen still want men with resources, and a lack of provisioning from the man is one of the most common causes of divorce.

Buss also studied Western women in the high-income bracket, and **high-income women placed an even greater value on mates with a high degree, professional status, and high income**.

Even women right after college, who could be expected to earn more than the average, placed higher priority than the overall female population on male earning prospects.

In short, women with lots of resources prefer men with resources more than poorer women do.

Women Want Men of High Social Status

Women desire men who command a high position in society.

High social status or a high-status job are viewed by US women as only slightly less important than financial prospects. But the two things often go hand in hand, anyway.

Buss indeed says that social status provides a strong clue as to a male's access to resources:

> Social status is a woman's strong indicator of the man's ability to invest in her and in her children

David Buss says that women worldwide prefer marrying up, a phenomenon also referred to as "hypergamy".

To learn more about the science of female hypergamy:

> Stop Whining About Hypergamy (& Do This Instead)

Why Women Want Social Status

Why would you even want higher-status men?
Just like money, because it's better for them, of course. But from an evolutionary point of view, **women want high-status men because it's good for their children** (and the propagation of their genes).

Children in high-status families worldwide typically have better access to health care, education, jobs, etc. And that translated, worldwide, to access to more mates and better-quality mates.

Women also place high importance on indicators linked to high social status, including:

- Education
- Professional degrees
- Command respect of the group (social power)

The opposite is also true, with women rating a lack of education as "highly undesirable".

Short-Term VS Long-Term Preferences

Women care more about social status in long-term partners and slightly less about short-term dating.

They still value status more than men do in both short-term and long-term mating, and this is true across all world cultures.

Women Don't Even See Lower-Status Men

Buss tells the fun story of a group of women at a restaurant complaining that there were no eligible men around to settle down.
Which was funny, considering they weren't shy of saying so in front of the whole staff of waiters, all males.
What the women actually meant was not that there were no men, but that there were no men of acceptable social status.

Indeed, women don't care much about what men think of them when they don't even consider those men as eligible for either short-term or long-term mating.
See this example from SATC:

(video unfortunately removed)

Age: Women Want Older Men

Buss says that age also provides an important cue as to his resources.

Young men rarely command the respect, power, and social status to acquire resources.

In all the 37 cultures the author analyzed, women always preferred men who were older than they were.
The global median age difference is 3 years worldwide.

But Buss also says that women might prefer older men for reasons other than resources.
Older men tend to be more mature, emotionally stable, and even more reliable in their provisioning.

Buss says that young women tend to go for a few years older, promising men rather than much older men because the age discrepancy may increase relationship strife.
Furthermore, sperm quality tends to decrease with age, and much older men might not be around in the case of children.

My Note:
Matt Ridley says that the "not being around" for children issue can be overcome in case the man possesses so many resources that she doesn't him personally.

Exceptions of women going for younger men exist, but they are usually circumscribed.
In China, with very young couples it happened because the younger men were from very high society and had assured social status and wealth. In other cases, it was the woman who had fewer options.

Sometimes it can be for pleasure too, with the proverbial "pool boy". Nut when settling down, women usually prefer older men and, if they are rich, men with at least an equal amount of resources as they have.

Young Men Are Evaluated On Personality

In cultures where couples marry young, women sometimes cannot reliably assess social status and resources.

So seek personality traits that are likely to lead to future success, social status, and income.
Traits such as:

- Ambition
- Industriousness
- Intelligence
- Dependability (assures the continuity of investment)
- Emotional stability (emotionally unstable men are very costly to women)

In Buss' study ambition and industriousness were rated as important or indispensable.
Again, there is a major gender difference here: women regarded a lack of ambition as extremely undesirable, while men didn't care about women's ambition.

Women are also likely to break up with a man if he loses his job, lacks career goals, or shows a "lazy streak".

How Men Elevate Their Status in Status Hierarchies

Buss' research lab found 26 distinct tactics that people -mostly men- use to elevate their social status.

They included:

- Industriousness
- Deception
- Social networking
- Sexual favor

- Education

Industriousness, such as working hard, prioritizing goals, putting in extra time, etc., was by far the biggest predictor of income and promotions.

What Women Want For Short Term

For short-term mating, women value traits such as:

- Physical attractiveness
- Desirability
- High levels of masculinity

These are traits that signal "good genes".
Women with high mate value are, on average, more drawn to highly masculine men.
Buss speculates that, since more masculine men are less faithful, that might be the case because high mate value women have the power to remind those men what they'd be losing by straying.

Women Want Kindness (& Men Too!)

Both men and women the world over value kindness.

Buss says it's because people depend on other people's kindness, not from strangers' kindness, but from their mates.
Kindness also increases the chance that a man will commit and provide, and make for a better father.
But I believe people seek kindness also because it makes for a much better relationship and because, on average, one expects a kind person to also be more reliable and trustworthy.

Interestingly, in Japan and Taiwan, men valued kindness more than women did.

What Women Want? Everything!

The reason why men have been baffled for so long by the question "what women want" is simple:

> Women's mate's preferences are inherently complex, multi-faceted and context-dependent.

And, I would add, sometimes women even seek traits that are rarely found within the same man.

What Women Don't Want

First of all is incest.

Incest is more likely to produce defective offspring, and women are more repulsed by incest than men are.
Why?
Because an unhealthy child is more costly to a woman than to a man since women spend far more resources on each child than men do.

Other traits women don't want simply end up looking the reserve of what they want.
No resources, no drive, no status, emotional dependency and immaturity, small size and stature, feminine appearance, meanness, cruelty, etc.

What Men Want

Men Want Young(er) Women

Men solved the problem of finding fertile women, in part, by looking for young women.

Men universally prefer younger women to themselves, although how younger also depends on culture.

However, as men get older and older, the age difference in they seek a wife increases.

The only exception is for young adolescent males who prefer older women. But older women don't want these younger men (on average).

Men Want Women With Good Physical Appearance

Men rate physical appearances much higher than women do.

This does not mean that the search for physical attractiveness has been fixed during the ages.
Indeed, the premium both men and women -but men more- place on physical attractiveness has increased steadily during the 20th century, most likely the product of TV and fashion magazines.

Physical appearances include:

- Full lips
- Smooth skin
- Clear skin
- Clear eyes
- Lustrous hair
- Good muscle tone
- Symmetrical faces and bodies
- Waist-to-hip ratio

Some parts of considered beautiful do change with culture, but many others are common.
Men of different cultures and ethnicities all agreed as to which faces were the most and least attractive of each other's "races".

Culturally Determined Standards of Beauty

Among the culturally determined standards of beauty:

- Plumb VS dark body built
- White or dark skin (but white is usually superior)
- Eyes, ears, buttocks, and genitals
- Most men prefer large firm breasts, but some cultures like long pendulous breasts (!)

The slim VS plumb body built is the most culturally variable standard of beauty.
Men don't seem to have an inbuilt preference for a rigid amount of fat and go for what is considered "higher status" in their culture, which in turn seems to be connected with the amount of food available.

Averages Look Good

Facial features that are considered attractive often look like the average of the population.
Composite faces were rated as more attractive than individual faces because they tend to eliminate irregularities.

Men Like Youthful Behavior

Buss says that our ancestors had access to two types of observable evidence of a woman's health and youth: features of physical appearance and features of behavior.

Feature of behavior includes:

- Bouncy youthful gate

- Animated facial expressions
- High energy levels

My note:
This part seemed to be a generalization. I struggle to see a 70-year-old rich man going for the "bouncy gate" of a 19 YO and he might rather seek a slightly more mature woman in her 30s. At least for a relationship…

Beautiful Wife = Status Boost

Men value a woman's attractiveness also for the status boost it grants them.

Men do place a lot of importance on "rank", and a beautiful wife helps them rank higher in social hierarchies.
So, yes, the "trophy wife" is a thing.

The trophy wife is especially important for unattractive men because people infer that if he is with an attractive wife, he must have a high social status.

Why Do Men Commit?

Why would want even want to commit at all?

It's a fair question, so let's find the answer:

- **Women demand it** (at least they might deny sex)

Some women might require investment and proof of love and commitment before even consenting to sex.
Men who refused to give might have not found a mate at all or struggled to mate with the best ones who also have more power to demand resources.

Basically, women's demands made it costly for men to pursue a short-term dating strategy only.

- **Increasing the odds of paternity**

Focusing on short-term dating only is not very likely to produce children because it takes many sexual intercourses to conceive.

Men who committed and got constant sexual access to a woman increased their odds of paternity.

- **Increasing the odds of children's survival**

Children are more likely to survive with a father.

- **Increasing the odds of children's mating success**

Children are more likely to be successful in the dating market if there is a father who helps them develop (and accrue resources)

- **Increased social status and social network**

If you're single you might have missed the "social status" boost that married men get.
Just think of this: how many single presidents have been running your country recently?
Chances are that most of them were married.

A married man can also leverage a larger network of people and the extended family, both of which can be helpful.

Men Want Chastity & Loyalty (to Secure Paternity)

Faithfulness and sexual loyalty are the most highly valued traits.

Why?

Because paternity is uncertain for men, male dating strategies also evolved to ensure paternity.
The right strategy starts by picking the right partner, and that's why men place a premium on:

- Virginity / low partner count
- Partner's loyalty (see Madonna/whore)

The value of virginity and partners' count is highly cultural though.

Men did adapt with the times and as premarital sex has become more common, the premium on virginity, once very high, has decreased precipitously.

Things do change both with culture and with the cyclical swings of gender dating power, though.
Women compete more on chastity and loyalty signs when they are more dependent on men and men do seek those signs more when they have more dating power.
That's not the case in many Western countries, where governments provide women with much social support.

As a rule of thumb: men value chastity if they can get it and if it's common in their dating environment.

Even more important than chastity though is loyalty.
Says Buss:

> The actual amount of prior sexual activity in a potential mate rather than virginity per se would have provided an excellent guide for ancestral men who sought to solve the problem of paternity.
> **Indeed the single best predictor of extramarital sex is premarital sexual promiscuity.**
> People who have many sex partners before marriage tend to be more unfaithful than those who have few sex partners before marriage.

Casual Sex

The simple fact that men seek casual sex means that, at least sometimes, women were willing to engage in casual sex.

Says Buss:

> One of the keys to ancestral women's sexual opportunity was a lapse in mate guarding.
> Hunting provided a window of opportunity because men went off for hours, days or weeks.

There are many cues as to our history of "monogamy with exceptions", including:

- **Sexual dimorphism**

Sexual dimorphism usually is a sign of female choice and non-monogamy. Humans don't have huge dimorphism, but some physical differences are obvious between genders.

- **Males' testes size**

We are in between polyamorous chimpanzees and gorillas, but slightly closer to gorillas (gorilla females only sleep with the alpha male).

- **Increased male ejaculation after not seeing the partner for a while**

Suggesting that ancestral men who "flooded" their mates were protecting against possible infidelities.

- **Men enjoy variety**

The Coolidge effect shows that men are turned on by new women more than by older ones.

🤔♂ **Lucio's note**: the coolidge effect may be stronger among men with unrestricted sociosexuality

- **Standard relaxation for "acceptable partner" in short-term mating**

In the short term, women seek slightly different traits, while men relax their standards and sometimes invert the traits they seek.
In the short term, men dislike women seeking commitment and prudish women. They are not bothered by her relationship status and prefer high sex drive, sexually experienced women.

Basically, the traits men seek to increase the chances of casual sex and limit the chances of women extracting resources from them.

Men also often relax standards of beauty, allowing them to have sex with more women.

- **Female orgasm: the tool of mixed strategy**

Says Buss:

Orgasms *may* facilitate a mating strategy of getting the best of both worlds: investment from one man and good genes from another man.

And about men, in general:

> Men have evolved a powerful desire for sexual access to a variety of women

Read more in "*Sex at Dawn*" and:

- **The tools of sexual conflict**

> Sexual Conflict: How Men & Women Fight The Sex War

Men Whores & Whores: Socio Sexual Orientations

Both men and women have a whole repertoire of mating strategies which are also context-dependent.

However, there do exist somewhat stable individual differences sometimes called “socio-sexual orientations”.
In simple terms: some men and some women are more likely to engage in easy sex and cheat more.

For more read:

- **How to find a loyal partner**

Men Want More Casual Sex Than Women

There is plenty of evidence that men seek casual sex more than women do.

Including:

- Sexual fantasies: women rarely change sexual partners, and men most often do
- Men sometimes devalue the partner after sex (more common in men seeking short-term strategy)
- Prostitution catering to men
- Pornography mostly caters to men
- Women’s fantasies focus more on feelings (57%) than men (19%)
- Men seek extramarital affairs more often (and commit more extramarital affairs)
- Men rarely have hookup sexual regrets, women do so more often
- Following hookups women are more likely to want a relationship, men are more likely to want more hookups

These are general trends, of course, and men and women can sometimes act opposite of their gender average.
But, on average, that’s how it goes among humans.

Says Buss:

> The human female is much less interested in a variety of partner.

Biologically and from a “selfish gene” perspective, that makes a lot of sense since women have much less to gain from a variety of sexual partners than men do.

Women advantages in casual sex

What are the benefits for women in casual sex?

They include:

- **Access to resources**

This is true even today, when women value four characteristics in short-term mates: spending lots of money in the beginning, giving gifts from the beginning, extravagant lifestyle, and being generous with resources.
Also, read “*Ho Tactics*” and “*A Gold Digger’s Guide*“.

- **Evaluate potential husbands**

Short-term for women must not remain short-term.
What can start as a quick fling, some women can turn into a long one. If that’s the case, women seek the same qualities in short-term mates for long-term ones and devalue a man for focusing too strongly on a short-term strategy.

- **Enlarging the support network**

Short-term mates can provide support and protection.

- **“Back-ups” and potential replacement**

A lover can provide a potential replacement in case the official husband dies, deserts, or loses social status.
In these cases, women might even be OK going for lower-quality men than their husbands.

- **Mixed strategy: superior genes**

A woman might get better genes from casual sex on the side and have another man provide for the children.
In this case, she would go for a higher quality man than her husband. Women indeed are more exacting for physical attractiveness when it comes to short-term dating.

Buss surprisingly doesn’t add, so I add it my own:

- **The pleasure of sex / relationship**

I don’t see why the pleasure of sex shouldn’t be an important criterion for women to engage in casual sex or extramarital sex.
The same goes for a committed relationship going stale, with the new one possibly being more emotionally satisfying and having better chemistry.

Costs of Short-Term Mating

All sexual strategies have possible advantages and possible costs.
For casual sex and extramarital sex the possible costs:

- Sexually transmitted diseases
- Developing a reputation as an “easy woman”
- Developing a reputation for a man who never invests
- Payback / revenge from an official mate
- Withdrawal of resources from official mate
- Carrying unneeded risks with sperm that will not lead to a child
- Break current bond with heavy costs for existing children

As Geoffrey Miller said:

> One healthy child is worth 10 sexy liasons in the bushes

Finally, the overall wealth of a nation and its social safety nets can also increase cheating because they lower the costs of breaking up, which is especially true for women.
And some other legal systems can increase the benefits of breaking up; think, for example, of a husband getting rich and the wife being able to demand half of it.

Tactics for casual sex: display of wealth works

Surprisingly, immediate displays of wealth are more effective in attracting short-term mates than long-term ones.

- **Bravado / display of confidence**

Confidence works both long and short term, but anything looking macho or bravado can become a drawback in the long term and is high risk (including any super overt approach like half-naked bodies, dick pics, very direct openers, etc.)

- **Generosity of resources**

Generosity of resources, days Buss, is critical in both short-term and long-term dating.

- **Good/expensive clothes**

Good and/or expensive clothes also work in both the long and short term.

- **Satellite strategy**

The satellite strategy is simple: you don't need to be the richest, most handsome, highest social status man in the club.
You only need to be right next to him.

- **Manipulation**

Finally, displaying fake long-term traits and feigning openness to a relationship can also help to rack up many short-term lovers.

Also read:

- **Lovers VS Providers**

For an overview of manipulation:

> Manipulation: Techniques, Strategies, & Ethics

Tactics for long-term dating

Among the effective tactics for the long term:

- Persistence
- Kindness

Leaving large tips, for example, shows both kindness and availability of resources.
Showing a liking for children and animals also works.

- Investment
- Displaying commitment
- Loyalty and fidelity
- Openness and honesty
- Demonstrations of love

My Note:
Some of these techniques work if the two are of around the same value or if she perceives him as being an overall "not-so-bad option". Otherwise, they only look desperate and/or stalke-y and further decrease his appeal.

Mate Poaching

Attractive mates are always in short supply, making mate poaching a real strategy to acquire mates.

People who acquire highly sought-after mates tend to guard them attentively, and whenever they are single they tend to be quickly removed from the dating pool.

For each age bracket in monogamous societies, shortages get more and more severe as time passes by, while in polygynous societies female mates are scooped up right after puberty.

In such a dire dating environment, mate poaching is often the only real solution.

All the techniques and traits discussed so far are equally effective in mate poaching, with the addition of:

- **Temporal invasion**: changing the schedule to be more often around the target, especially when the current partner is not there
- **Driving a wedge**: boosting the target's self-esteem, indirectly derogating the official partner

On average, men's jealousy is mostly sexual and mostly targeted at men who have status and resources.
Female jealousy is mostly about feelings and the risk of losing his investment, and it's targeted at sexually attractive females.

Men tend to guard their mates more closely, while women tend to be more focused on the competition.

Techniques to keep one's partner

Some techniques to keep one's partner include:

- Jealousy and triangulation
- Aggression towards potential suitors
- Making them feel guilty
- Condescension: it lowers a partner's self-esteem and sexual value self-assessment (men do it twice as often)
- Submission and self-abasement as emotional manipulation (men do it 25% more than women do)
- Concealing the mate
- Public signals of possession (rings, holding hands, kissing, etc.)
- Threats / violence / punishment / abuse

Crazy as it may sound, Yamamano women regard their husband's abuse as a sign of their love.
This is something Casanova also noticed in Russian women -and he obliged to the custom-.

Also read:

- **How women control men and relationships**

> Female Domestication: How Women Control Men & Relationships

The High-Quality Way to Keep One's Partner

A greatly effective defense against mate poaching is remaining a high-quality mate, meeting the partner's needs, and developing a strong bond and happy relationship (especially for men).

Enhancing and keeping their beauty is also an obviously effective technique for women since men value beauty both in their partners and for social status reasons.

Also read:

- **How to keep power in relationships**

> 5 Ways to Maintain Power & Control in Relationships

Gender Differences in Keeping One's Mate

Men tend to guard women harder when they are at their peaks of reproductive abilities.

Since men retain their reproductive abilities for longer, women over time need to invest more in the relationship.

If the man also moves along in life and earns more, then the divide might grow even bigger.

Is Rape Truly About Power?

Rapists target young and fertile women, so for sure it's *not* all about power.

However, what's interesting is that men with a high partner count and men who rate their future earning potential as high were also more likely to use force.
That invalidates the "mate deprivation theory", such as the theory that mostly men of lower socio-economical conditions resort to rape for lack of options.

Men most likely to rape are:

- Hostile towards women
- Endorse the view that men secretly want to be raped
- Impulsive, low empathy, low agreeableness, hyper-masculinity, general hostility

Mate Switching

Three events made mate-switching worthwhile:

1. Current mate becomes less desirable
2. Increase in one's own value
3. New compelling alternatives become available

Buss says that since these three scenarios were likely common during our evolution, it is reasonable to expect that humans developed psychological mechanisms to evaluate the costs and benefits of the current relationship in comparison to alternatives.

Indeed, happiness in a relationship is partly measured by one's partner's mate value and the value of alternative mates in the local environment. The decision to stay or leave the current relationship depends on these unconscious measures.

Strategies to End Relationships

People are rarely honest about ending relationships.
And they never say their "market value" has increased or that "there are too many new valuable options".
Instead, they:

- Violate their mate's expectations
- Infidelity (either one's own or spread rumors about the partner)
- Stop sharing resources
- Cruelty, unkindness, escalating arguments
- Stop offering sex (mostly for women)
- Telling the partner they should start seeing other people

Ending relationships can carry costs and possible revenge, which is why people try to soften the blow. They might say, for example, "it's not you, it's me".
Escalating fights also provide an obvious excuse. "It doesn't work, honey, we always fight".
It works well, especially when they get angry, as that proves again that it's not working.
See an example:

Instigating fights and blaming the breakup on the constant fighting is very effective

Why People Divorce

The most common reasons for divorce are, the order:

1. Infidelity
2. Infertility

Most societies have stricter norms and stronger consequences for female adultery than male adultery.

Very common as well:

- The man fails to contribute or keep up

The divorce rate in the US is 50% higher when the woman earns more than the man.

Coping With Breakups

Breakups are some of the most emotionally distressful experiences.

It can carry costs via revenge, loss of social network, loss of respect for losing the relationship, or for ending.

Some try to remain friends to decrease the chances the partner might seek revenge or to maintain access to the mate's social network.

Women are more likely to go shopping and do other activities that increase their physical attractiveness.
Some ruminate and stalk, which usually only prolongs the pain.
Both genders sometimes seek sex with other, as one woman interviewed said: "the best way to get over a man is to get under another one".

On average, it's much easier for men to remarry after a breakup at an advanced age.

Women Cheat Most Towards The End of Their Reproductive Years

Some author's assumption is that women, deploying a mixed sexual strategy, should cheat when they're most fertile.

But in fact, women cheat the least when they're most and last reproductive valuable.
Most affairs are clustered towards the end of their reproductive years.
The same is true for extramarital orgasms, clustering towards the end of the reproductive years.

There are several explanations fielded as to why that's the case.
One is that the costs of straying are lower as men are less jealous of aging wives. Another one is that women might seek to get one last child or switch mates before it's too late.

Around Half of the Male Population Seeks Cheating Opportunities

Around half of the male population seeks some extramarital opportunities.

For those who keep moving up the social ladder, cheating opportunities often arise.
It's often attributed to a weak ego, immaturity, or "midlife crisis", but it's actually a pretty normal adaptation -but that's not to say that it's right or fair game-.

More Wisdom

- Sexual orientation is more flexible and fluid in women and more fixed in men, rarely changing over time. Men tend to be either strongly hetero or gay, while it's more blurred for women
- The ability to assess thousands of mates online sometimes paralyzes our ability to decide on "the one"
- Humor works: men prefer women who laugh at their humor, and women prefer men who make them laugh
- Sexual harassment depends a lot on the status of the harasser: low-status men are more likely to be labeled as

harassers

- Short-term invites are more likely to be labeled as harassment than pursuits for long-term relationships

Quotes

> A scientist cannot wish away unpleasant findings

On female choice shaping men:

> Men are one long breeding experiment, run by women

On beauty being in the eye of the beholder:

> Beauty might be in the eye of the beholder, but those eyes have been shaped by millions of years of evolution

On mate switching:

> Those who stick through thick and thin with an undesirable mate might receive our admiration, but their kind didn't reproduce as successfully and are not well represented among us today.

On desirable people:

> Desirable people are always outnumbered by those who desire them.

CONS

- **Too resource-centered?**

Somewhat I feel that David Buss' analysis of the sexual marketplace ends up being too resource-centered.

And by this, I don't mean that resources are not important, they obviously are.

But gene quality is equally important and, most of all, the two are not mutually exclusive.
As a matter of fact, the two things are also heavily interlinked: the ability to acquire resources correlates well with genes' quality.
Buss mentions it, but I felt it was too small a note on such an important aspect of the sexual marketplace.

- **I don't buy the "protection hypothesis"**

Buss says that women sought tall, fit, and resource-rich men because of the protection they could afford, and because of the protection of the household resources.

Again, we go back to the "resource-centered" view.

I'm not convinced by the protection argument.
Sure, it might be part of it, but I don't think it's the main reason.
Strong men are also better batterers and there is no amount of strength that will keep wild animals or organized incursions from another tribe. Or even from even a fraction of one's own tribe, for that matter.

- **Women want similar men so that they keep providing**

Buss says that women sought men who were similar because that guaranteed a longer-lasting bond and a longer period of male provisioning.

This is quite a jump in the dark to make and, again, it's very resource-centric.

- **Sometimes paints women as too conservative?**

The author says that "for most women, sex after just one hour is a virtual impossibility".
Well, I wouldn't necessarily agree with that. Especially for lower-quality women.

- **Highly reliant on questionnaire**

Some of the data on what works to attract mates was based on questionnaires on what people reported would be effective on them and/or what they would use themselves.
There are obviously some major drawbacks to questionnaires.

- **Sometimes seems slightly stuck in "monogamy mode"**

The author says that "it would pay for both men and women not to wait until their mate's death to start evaluating other alternatives".

That sentence seems to suggest our evolution was mostly monogamous. Other sources suggest relationships tended to be much shorter, and somehow I am also skeptical about these "super long term" relationships.

- **Denial of male "united front" to keep power against women**

The author says that the leftist and feminist accusations of men trying to hold onto the reins of power cannot be true because men are also stacked against other men.
This is a common stance among many evolutionary psychologists, and I wholly disagree here.
Of course, men -or a majority of men to be precise, not all have much to gain by keeping women away from power and resources.

Of course, men are also pitched against other men. And so are women. But that doesn't deny the fact that genders can band together to offer a bigger win to most of their members.
Just like unions do.

- **Sometimes I wished it presented discordant evidence for some of the proposed theories**

Unluckily, some of the biggest names in modern evolutionary psychology, including Steven Pinker, seem to have gone too far with the denial of cultural importance.

But culture does matter.
For example, how would Buss explain that most German men consider emotional betrayal more painful than sexual one?
Could it be that attitudes towards sex, such as open and liberal attitudes do impact how men and women view sex, including cheating?

It sure seems it does…

That does not constitute a rebuttal of Buss's own findings. And, in my opinion, it remains possible, and maybe even likely, that overall men still fear sexual betrayal more than women.
But it's not all nature, and culture plays a role (and, as well, sexual experience plays a role, in my opinion).

Review

The Evolution of Desire is a monumental work on intergender dynamics and sexual power dynamics.

It helped us improve several of our articles, strategies, and even products.

Summary

About The Authors:
Satoshi Kanazawa is an American-born British evolutionary psychologist and writer. He focuses on evolutionary psychology to analyze trends and issues pertaining to society, people, and mating choices.
Miller was a social psychology professor. He died before the publication of the book, so most of the writing belongs to Kanazawa.

Introduction: Avoiding Naturalistic and Moralistic Fallacies

The authors begin by saying that human behavior is a mixture of human nature, culture, and unique experiences.

The recent trend has been to discount human nature, though, so the authors often stress how the "standard social science model" gets it wrong when it doesn't account for human nature as shaped by evolution (also see: "*The Blank Slate*").

However, when analyzing human behavior from an evolutionary point of view, we must avoid falling for these two fallacies:

- **Naturalistic fallacy**: the belief that what is natural is good and that what it is ought to be -and stay that way-
- **Moralistic fallacy**: the belief that what's "fair" or "moral" is how things really are. What *ought* to be is how nature actually is

Conservatives are more likely to commit the naturalistic fallacy, while liberals are more likely to commit the moralistic fallacy.

And since academics and social scientists are much more frequently liberals, the moralistic fallacy has been a much greater issue for the social sciences.

A Note on Stereotypes

The authors say it would be easy to dismiss their claims as stereotypes.

But "stereotype" doesn't mean that there is no truth in the generalization. They say:

> Many stereotypes are empirical generalizations with a statistical basis and thus on average tend to be true. The only problem with stereotypes and empirical generalizations is that they are not always true for all individual cases.

The authors then take another swipe at the social sciences:

Cultural Diversity Is A Myth

And when it comes to culture, the authors say, deep down, all human cultures are essentially the same (also read: why cross-cultural communication is a waste of time).

The recent history of the social sciences is shameful, say the authors.
The social sciences went on a quest to find "different cultures" just so they could "prove" that all human behavior is culturally determined.

And every time a new culture that seemed different than the Western culture could be found, it was a big celebration, so we could blame all our deviances on capitalism or on greed.

But every time, the "different" culture turned out to be a hoax or really quite similar to any other human culture. Three such examples:

- **Samoa and Margaret Mead** (Mead had been taken for a ride)
- **The Gentle Tasaday** (a response to Chagnon's "Yanomamö: The Fierce People") turned out to be a hoax or, at least, not what they were rumored to be
- **Native American Environmentalism**: some authors, including Jared Diamond, bought into the idea Native Americans protected the environment, but it's not true

The Savannah Principle: How We Grew Maladapted

The Savannah Principle states that the human mind has difficulties comprehending the modern environment.

We have evolved in a much different environment, and progress has been so fast that we haven't truly adapted to it.

In some cases, our old Savannah brain can lead to maladaptive behavior in our modern environment.
Some examples:

- **Sugar, fats, food**: we have too much today and we tend to over-consume
- **Pornography**: our mind can't tell that the images are not real women
- **Paradox of choice in mating:** images and dating apps make us believe there are more options and higher quality than there really are
- **TV series "friends"**: watching the same show over and over again, we feel like we know the characters and think we have a larger social circle and more friends

Now let's get down to the Q&As:

Why Are Men And Women So Different?

Two simple biological facts make men and women different:

- **Anisogamy**: the female sex cell is larger, more costly, and more "precious."
- **Internal gestation**: women can produce far fewer offspring than men

Anisogamy and internal gestation lead to very large sexual differences in fitness variance.
Fitness variance is the difference between the "winners" and "losers" in the reproductive game. In simple terms, that means that men can either be big losers and not reproduce or be big winners and leave a large number of offspring. Women instead tend to be "safer bets": most women will reproduce, and the difference between the winners and the losers is much smaller.

This has very important consequences:

Men Are More Aggressive Because They Must: Win Big Or Lose It All

The greater fitness variance is the reason why men are more aggressive, competitive, and violent than women. Men must compete, or they are left out of the mating game. Women's ability to compete is much smaller, and the dangers are higher.

Women Invest More On Offspring Because Each Offspring Is More Valuable to Women Than to Men

Remember that women invest more in sex cell production and in internal gestation (i.e., pregnancy).
They also invest far more than men once the baby is born.

And remember that men have the potential for far greater reproductive success, even while the woman is still "busy" with that one baby.

That means that each child represents a much greater portion of a woman's lifetime reproductive potential.
And that's why women ultimately "care" more about children and willingly invest more.

Why Men Prefer Blonde Bombshells (& Women Want to Be One)

Men prefer blonde women because:

- Hair tends to become darker with age, so pale color signals youth and fertility

The authors say:

> There is nothing arbitrary about the image of ideal female beauty.
> These are youth, long hair, small waist, large breasts, blonde hair, and blue eyes. There is evolutionary logic behind each one.

However, I failed to see any more reasons why blonde and blue eyes are "better" than a brunette.

He Said, She Said: Why Do Men and Women Perceive the Same Situation Differently?

Men have more to lose from a false negative -thinking she's not interested when she actually was-, than from a false positive -thinking she's interested when she actually wasn't-.

This only applies to other women, and men tend to assess the interest of their sisters in other men more accurately.

In contrast, women tend to underestimate a man's romantic commitment to them because the cost of a false positive -thinking that a man is more committed than he really is- is far greater than the cost of a false negative -thinking that he is not romantically committed when he actually is-.

Interestingly enough, the same logic applies in groups.
People tend to be more cautious about free-riding in a group when they are very dependent on that group.

Why Does Having Sons Reduce the Likelihood of Divorce?

A son's value is largely determined by his wealth.

So by staying within the household, the father can help the child accruing more wealth through fathering, education, direct transfer, and inheritance.

Daughters don't benefit nearly as much from wealth (or from a father figure), so the father has much less to gain by sticking around (and the mother has much less to gain to keep him around, as well).

Why Are Diamonds a Girl's Best Friend?

Diamonds help women screen for men who present attractive qualities to start a family:

- Resources
- The willingness to spend those resources

Ironically, the more useless the gift is, the more it shows that he is willing to spend and invest.
Diamonds don't do anything, they are useless. But they show strong financial firepower, and the willingness to dote.

Why Might Handsome Men Make Bad Husbands?

Men can maximize their reproductive success with two different strategies:

- Dad strategy: stick with one mate and invest
- Cad strategy: seek many partners without sticking and without investing (much)

Non-handsome men don't have the card option (albeit I don't fully agree here).
Very handsome men do have that option, but that doesn't necessarily mean they will date as cads.
They might instead still prefer being fathers and "settling down". But since they have both options, you never know.

More attractive men do indeed have more sexual partners and more extra-pair sex.
And one study shows that handsome men invest less, are less attentive to their partners, and lie more (my note: I wouldn't trust the "lie" part too much, though).
Instead, more attractive women have more long-term mates than short-term ones.

Also read:

- **Lovers and providers**, which are the same as cads and dads

> Lover VS Provider: How to Pick Your Best Strategy

Why Rich Men Have More Sons

By now you should know why.

Wealthy and high-status men are more likely to find plenty of mates, so it would make sense for rich and high-status men to have more sons than daughters.
And albeit it might seem like theoretically one cannot choose the sex of their children, there is much evidence to support the Trivers-Willard hypothesis that parents do indeed skew their children's sex ratio in ways consistent with evolutionary psychology.

Tall and big parents as much as violent people are also more likely to produce boys, while small parents are more likely to produce females.

It's also been shown that engineers have more sons (140 boys for 100 girls) while nurses have more daughters (140 daughters for 100 sons).
This might be because of the different "brain types" that work well in mathematical professions VS people and "empathy-based" professions.

Why Beautiful People Have More Daughters

Beauty serves both men and women well.

However, it's more useful for women since women are mostly judged by age and beauty while men are also heavily judged by income, status, and personality as well.

When it comes to long-term relationships, where most children are produced, women do well for short-term and long-term mating, while beauty for men is more useful in short-term mating.

That's why beautiful people tend to have more daughters.
And the numbers check: young Americans rated as "very attractive" have a 56% chance of having daughters as their firstborn.

Why Are There So Many Deadbeat Dads but So Few Deadbeat Moms?

There are two biological reasons that make fathers worse parents than mothers:

1. Paternity uncertainty
2. Higher fitness ceiling (ie.: every single child is more valuable to moms than to dads)

And, ironically, it's the mother's higher commitment that allows men to neglect children even more.

Why Old and Young Women Are Most Likely to Kill Children

Young mothers kill their children because they have plenty of time to make more and focus on higher-fitness children.

Older mothers kill their children because they possibly have more children and want to focus their attention and resources on the higher-fitness ones.

Why Do Girls of Divorced Parents Experience Puberty Earlier?

There are two competing theories:

1. They're genetically more like their fathers and his "short-term" strategy
2. They interpret the father's desertion as a sign that men are not to be trusted and prefer a short-term strategy

Both matter.
Women in polygynous societies hit puberty earlier to get into the high-competition market.
As a sign that the West is moving away from monogamy, the average age of puberty has dropped precipitously in the United States.

Why Are Men More Violent Than Women?

Anne Campbell's "staying alive theory" suggests that women are more important for the survival of the children.

Thus, it makes sense for women to be less risk-oriented than men.
When women must compete with males, they usually do it in more indirect ways, which also happen to be lower risk.

On the other hand, since men have often played in a "winner takes it all" sexual marketplace, it made sense for them to take more risks.

Why Do Some Men Beat Up Their Wives and Girlfriends?

It's a maladaptive by-product of "mate guarding".

And that's why men guard and beat their wives more when they're younger and fertile.
Indeed, it's the age of the wife that predicts male beating, and not the age of the man.

It's not a Midlife Crisis, It's Her Menopause

The male midlife crisis is a myth.

In truth, men go on a shopping spree for cool and expensive cars because their wives are approaching menopause, and they prepare themselves to attract younger women.

My Note:
It was very interesting; however, it lacked some strong data to back it up.

Why Men Earn More Than Women

Men earn more because they have to.

Men need those resources to trade them in the sexual marketplace and attract a mate.
And that's why men are much more stubbornly devoted to making money and achieving higher status.

And, as the authors say:

> Women make less money because they have better things to do than make money.

Why Are Most Suicide Bombers Muslims?

Because Islam is openly polygynous.

Polygyny leaves a lot of men without a mate, which in turn makes men more desperate to scramble and risk their lives.

Across all societies, polygyny increases violent crimes.
Then, entered Islam, promising 72 virgins for martyrs.
And the bomber is served.

> The prospect of exclusive access to seventy-two virgins in heaven may not be so appealing to anyone who has even one mate on earth, which strict monogamy guarantees.
> However, the prospect is quite appealing to anyone who faces a bleak reality on earth

Male Brain VS Female Brain

The "type S" brain is better at systems, and it's more common in males.

The "Type E" brain is better at empathizing and is more common in females.

Civilization Only Exists Because of Female Choosiness

Imagine a world where women weren't sexually selective.

A world where women would have sex with any guy who asked for it.
What would happen in that society?
This is what Miller and Kanazawa say would happen:

> Absolutely nothing, because people would never stop having sex!
> There would be no civilization in such a society, because people would not do anything besides have sex.

That was a big eureka moment for me.

The open questions of evolutionary psychology

The authors end the book reviewing the open questions from "*The Moral Animal*", the book that got them into evolutionary psychology (and the same book that got me into it, BTW).

The questions were:

- **How can evolutionary psychology explain homosexuality?**

No good answer is yet available.

- **Why are siblings so different from one another?**

Siblings occupy different “niches”.
The firstborn tends to identify with the parents. The latter ones cannot easily take that role and tend to rebel.

- **Why do soldiers die for their country?**

Many soldiers are from lower socio-economical classes.
If they have children already, having the government take care of them in case of death is not too bad.

- **Why some people decide to have few or no kids**
- **Why some people commit suicide**

Still no answer.
But I’ll provide an answer here.
The mistake, in my opinion, is in the approach that evolutionary psychology must explain everything with a neat theory.
And that’s the consequence of a deterministic view of evolution like everything must happen for a reason and fit neatly like a game of Tetris.

But the world is complex, and evolution is far from perfect.
Evolutionary psychology is big-picture thinking, it should *not* be able, nor try, to explain the exceptions to the rule.

More Wisdom

- “Cultures” are different at a superficial level, but deep down they’re the same. And “culture” is just another universal
- Humans are naturally polygynous, so almost all societies present a certain degree of polygyny
- Contrary to what most people would think, most women benefit from polygyny, while most men benefit from monogamy
- Polyandrous societies are very rare, and almost all of those few practice “fraternal polyandry”, such as brothers married to the same woman
- The most successful type of polygyny is sororal polygyny, with sisters married to the same man
- Girls in polygynous societies are shorter than girls in monogamous societies because there is a race to mature early and become the junior wife of a local high-status man (and girls who mature earlier tend to be smaller)
- Societies with a high degree of resource inequality lead to polygyny, while well-spread resources can support monogamy
- Religion is a product of our false-positive bias, and women are more religious because they are more risk-averse (risk aversion correlates with religious beliefs)

Criticism

Why Beautiful People Have More Daughters has a lot of genius content.
But also some bits and pieces that left me scratching my head, including:

- **Exaggerates the instances of cuckoldry**

The authors often repeat estimates of 13–20% rates of cuckoldry in the US (i.e., the husband has no idea he is raising someone else’s child).
I have read very different estimates, and most were lower.

Indeed, the authors themselves later say “although a comprehensive recent review suggests that the actual incidence among Western populations may be much lower, at around 4%”.

But they still seem to relish repeating the much higher statistics, for example:

> Mommy’s baby, Daddy’s maybe. And for 10–30 percent of daddies, it is not.

- **Probably wrong analysis of rape** (“mate deprivation hypothesis” is incorrect)

The author says that rapists are predominantly from the lower class.
That might be the case for convicted rapists.
However, David Buss, summarizing the latest findings, says that the “mate deprivation hypothesis” is most likely wrong.
Instead, studies also show that men with a high partner count, men of high status, and men who expected to earn a high income were more likely to use force.

- **Sometimes unscientific**

The author says that a child represents 1/20 of a woman’s lifetime reproductive potential and 1/1000 of a man’s.
But if we evolved from tribes of less than 150 people, that’s vastly overestimating the man’s *realistic* lifetime reproductive possibilities.

Also, the authors sometimes confuse correlation with causation, when for example they say that married men produce less because they are enjoying the fruit of their labor (i.e..: a mate).

- **Sometimes on an unscientific political crusade**

Sometimes you get the feeling the authors are more focused on a war against politicized sciences than on actually doing science.
However, they sometimes don’t realize they are themselves becoming political just by opposing and questioning the “other side” so strongly.

- **Sometimes it just makes no sense**

The authors write:

> Men’s status and mate value, unlike women’s, are socially and culturally specific, and they cannot successfully attract women outside of their own society and culture.

This is just plain and untrue.
As a matter of fact, the opposite might be true, and “foreigners” and “outsiders” might get a boost.
Also see:

> Sexual Market Value Hacks: Boosting Your SMV

- **The human penis as a “semen displacement device”**

This is most likely not true.
The semen war is mostly fought with testes, not penises.

- **Sometimes sounds conservative and climate-change denialist**

The authors write:

> Environmental protection is a luxury that became possible to Western societies only in the last several decades. Before industrialization and the current age of material abundance, all human groups had to exploit the environment to the maximum just to survive.
> No one could afford to be environmentally conscious, and Native Americans were no exception.

That's true, but also rather misleading.
Even if older tribes were environmentally unconscious, which they were, their footprint was still incredibly smaller than our current civilizations.

- **Sometimes lacks a "first-hand" understanding of women**

The authors say:

> So it makes perfect sense for women to avoid casual sex with anonymous strangers

And:

> Women avoid pornography for the same reason that men consume it; in both cases, their brains cannot really distinguish between real sex partners and the imaginary ones.

Alright, for sure, men want more sex with strangers and consume more pornography.
But saying that women "avoid" pornography is, sorry to say, dumb. I have dated more than one woman who watched porn.

- **Random application of evolutionary principles: authors fooled by randomness**

The authors commit typical, beginner-level mistakes in their approach to science.
They see a correlation and jump to a conclusion.

Sometimes it doesn't even make sense.
For example, they write:

> The same logic is probably behind the stereotype that women with large breasts are dumb. In the ancestral environment, without plastic surgery or even bras, only very young women had large, firm breasts.

To begin with, that's so incredibly random of an explanation.
Second, the breasts often grow with age, and very young women rarely have the biggest breasts.

- **We're monogamous because resources are better spread out? NO!**

The authors write:

> The reason most Western industrial societies are monogamous, despite the fact that humans are naturally polygynous, is that men in such societies tend to be more or less equal in their resources, compared to their ancestors in medieval times.

That's not true.
As other evolutionary biologists have noted the difference between the richest men in Western societies and those at the bottom is much larger than in hunter-gatherer societies.
Maybe what the authors wanted to say is that even men around the bottom of society can (often) feed children.

- **Deterministic: it misses the randomness of evolution**

The authors say that “there is nothing arbitrary about the ideal of beauty because it’s been shaped by millions of years”.

That’s not true, and that’s also a major failure to understand evolutionary psychology and the concept of “runaway sexual selection” (Miller, 2000).
At the center of runaway sexual selection is that it can start on quite arbitrary traits and, sometimes, even go against natural selection.

Evolution is much more random than the authors think, and that’s what they fail to understand.

- **Sometimes cultural-denialist**

The authors pay lip service to the idea that “culture” matters, but end up sounding very culture-denialists.

They write:

> That all human cultures, however exotic and seemingly different on the surface, are essentially the same. There are no human cultures that are radically and completely different from any other, just like there are no human bodies that are radically and completely different from any other.

The truth is that human nature and culture are not in opposition to each other.
Given a certain culture and environments, different mating strategies and different genes are expressed, leading to very different “human natures”.

Quotes

> However, the true polygynous nature of humans is never too far beneath the surface, even in nominally monogamous societies such as ours.

On childcare after divorce:

> Divorced parents with children are playing a game of chicken, and it is usually the mother who swerves

On men working to impress women:

> Men have built (and destroyed) civilizations in order to impress women so that they might say yes.

On female power:

> For a man to walk into a bar and have his choice of any woman he wants, he would have to be the ruler of the world.
> For a woman to have the same power over men, she’d have to do her hair.”

On racism and education:

> Contrary to what social scientists and hippies alike proclaim, we don’t learn to be a racist through parental socialization; we learn not to be one.

Review

I love evolutionary psychology.

And I loved "*Why Beautiful People Have More Daughters*". So much so, that I was tempted to give it 5 stars.

It's a good introductory evolutionary psychology text for the layperson: it gives you a quick overview, in an entertaining format

In the end, I settled for 4 stars for a simple reason: it's too politically motivated and too "extremist" in its denial of cultural relevance.

Furthermore, I missed a truly scientific approach.
Correlation was sometimes confused with causation.
And I wished the authors had been more forthcoming in labeling what's speculation, what's a theory, and what's thoroughly backed by data and research.

When an author fails to do so with the most controversial theories, he naturally raises readers' suspicions.
That's my second biggest gripe with this book: it should have been more careful and more forthcoming in highlighting the divide between science, speculation, and personal conjectures.

So, overall judgment?
I loved it and learned a lot, so do read it.
Just make sure you take into account the criticism I listed above.

The System by Todd Valentine: Review & Summary

Lucio Buffalmano · 4 November 2019 · Archived copy · Original

The System is a dating course for men by Todd Valentine teaching men how to approach, seduce, and sleep with women.
In "*The System*", Todd proposes a 5 step process going from open to close and includes many breakdowns of his own interactions.

Todd Valentine

About the Author:
Todd Valentine is a dating coach with many years of experience, both when it comes to dating for himself and teaching. He first started with Real Social Dynamics and then broke off to do his own thing.
He is also the author of "Day Game" and, he said in one of his courses, a proponent of applying Jordan Belford's "straight line persuasion" to seduction (i.e.: "straight line seduction").

Summary

Introduction

- There is no such thing as a "natural game": if someone is learning a game, then it's not natural
- There is a lot of good information today: in the past, in the days of "*The Game*" and "*The Mystery Method*" there was a lot of bad information, but now you can find lots of great information almost anywhere
- Avoid "models of seduction": your base of seduction must be being a high-quality man, then you can add seduction models to that core
- "High frequency" is BS: the "high frequency" is woo-woo BS, it's unscientific and means nothing

I agree with everything.

The System: 5 Steps

The system is based on the following 5 steps:

1. **Open**: Only goal is to get the conversation going
2. **Man assessing woman frame** (Todd calls it "Premise"): showing there is a chance for you two to be together, it's you auditioning her for a role in your life.
   Establish the premise early on so you operate under it for the whole duration. If you do it too late, it's too late.
   Compliments that communicate "I'm evaluating you" are a good way of setting the premise without giving too much power away
   1. **Direct opener** (Todd calls it "intent") is a subset of premise and it's best for beginners. Otherwise, you give too much power away
3. **Evaluate**: you must evaluate her to give yourself (and her) a reason to see her again or to keep interacting with her. You evaluating her sets yourself as above her (judge frame) and prompts her to chase you
4. **Narrative**: the story of you two meeting
   1. Ideally, you two together
   2. Alternatively, you being a high-value guy, and then try to move to you "the two of you together"
5. **Close**
   1. Seed: For example, you can say "are you adventurous? " "yes" "well, then we should get a coffee sometime". Or "do you live in the area?"
   2. Frame it as a win: frame it as a win for her (see: **frame control techniques**)
   3. Qualify: communicate she passed your standards, even if she didn't just say "you seem cool anyway"
   4. Lead: "what's your number", assume the close

Also see:

- **The Judge Role**: here I explain the social and power dynamics of assessing and qualifying others, both in seduction and in social settings. I feel that "the judge", both as a name and as a concept, makes power dynamics for easier to understand. In short, the judge" is the person with power in social interactions because he judges others (qualify / disqualify / shit test / emotional reward / emotionally punish are all tools of the judge).

Types of Openers

- Super direct (sexual)
- Direct
- Direct-friendly (push-pull, observation)
- Situational (tease, using environment)

- Opinion
- Impersonal

I very much like and agree with Todd general advice on which open to use, which he tailors to skill levels.

Beginners should open up more directly, or they risk coming across like friends.

Intermediate students should be more in the middle, in between direct and indirect.

Advanced practitioners should use more indirect openers and try to communicate their intentions with nonverbal undertones.

The rationale is that directly stating you like her gives your game away and gives your power away.
You place her above you and make her the prize.
Indirect allows you to withhold more power in the interaction and gives her more space to chase.

Overall, I don't fully agree that an advanced man shouldn't go direct.
I think that there are situations where you can go very direct sexual, move very quickly, and you will not lose points but instead kick off a sexual "whirlwind romance" effect.
For example, some of my best interactions came after I told a girl, straight up, "I thought you had very sexy legs".

But all the rest is spot-on and high-quality information.

Mindsets:

- Talk to her like you know her
- Assume she will stop
- Know that you are giving her value

Tech:

- Chatty and friendly first and only later sexual or you raise the bar too high

You don't want to be too sexual too soon or the question in her mind will be "will I have sex with this guy".
And that's a bar too high for the very beginning and you will lose a lot of girls, who will naturally answer "no" even though many of them would have later turned into "yes".

Pulling Dynamics

1. **Seed**: You seed, get feedback on what she likes, and see if she hooks
    1. "you don't seem like the worst person to hang out with"
    2. "it would be funny to take you on an adventure, but I don't trust you yet"
    3. "I'm getting tired of this club, I might have to leave soon, maybe a drink or two but I might not stay all night"
    4. "there is this great place, I would totally take you there, but let's hang out here a little longer"
2. **Frame**: frame it as a win for her.
    1. "I don't take a lot of people there, maybe one day, probably not tonight";
    2. if you're taking her home, say you gotta get up early and you can't stay with her the whole night
3. **Qualify**: have her work for it. Ask if you can trust them, tell them you're not sure you can't take them tonight (have them convince you it's a good idea)
4. **Lead**: lead with confidence, have a gameplan

9s and 10s: Don't put them on a pedestal

If you treat them like they're different, you've already lost.

The first step for 9s and 10s is to realize that if all they do is coast on their looks, then they are quite empty.

Many girls who make money off their looks make very little money.
Strippers make more, but they face diminishing returns and are often very insecure.

And many girls who make lots of money on their looks… Well, they are selling themselves.

Dealing with the "blase'" response

Some girls will play the "high-value woman" when you approach them and pretend they didn't see or hear you.
There are three ways to handle it, says Todd:

- **Say right after "hey, nono, it's OK, I'm** (your name)

The idea here is to communicate that you know what's going on and that they need to play their game to avoid low-value men hitting on them.
With this one, it's like you were saying "hey don't worry, I know what's up and I'm as high value as you are"

- **Keep talking from a high-value frame**

The exercise "the wall" will be helpful here.

- **Challenge her and make her participate**

Tease her and find a way to make her react somehow.

Exercises

The last part of "*The System*" is for the exercises.

One of the exercises is called "the wall", and it goes like this:

Talk for a minute to a wall to get used to girls giving you nothing. It will get you used to coming up with things to say.

Level 2: talk to the wall and establish the premise. ie.: "I like you, but you're so flat", "I like you but hey, white wall, so bland", "I like a little spunk in my wall"

Level 3: talk to the wall from a high-value frame, from a perspective that you're wanted, that the wall likes you, and that you are used to great social feedback.

Infields

A good chunk of the program is about Todd infields plus another one of his students/teachers (JP).

I think that's where a lot of the value is as people can get to watch a few successful dates and pulls with the conversation and Todd's commentary.

JP's first infield, the one in the teaser, was true class.
The second one I didn't like it much, it felt like he was coasting on his good looks and got a bit too aggressive with the sexual intent. It would not have worked as well with a guy who was not as good looking and, most important, she felt more in charge than he was:

You can see her hand on his face, usually, girls only do that if they feel in charge.

Whenever a girl touches my face I know that she is feeling in charge and I always wonder "where did I fuck it up that she now thinks she's in control?" (and that's why Joe Rogan gets so angry when someone touches him, especially on his face).
But then again, the guy was younger than her and that's more likely to happen when she's got a few years on him.
Plus he had sex with her in the end.
I also like the guy: he comes across as very down-to-earth and his interactions tend to be very natural.

Student Infields

Plus Todd analyzes a few infields of his students, analyzing their mistakes and what they could do better.

Those guys were a bit beginner-level, so beginners will get the most "uplift".
Yet, because of Todd's commentary as a very advanced guy, even more advanced people can gain new insights.

Avoid "Alpha Male Strategies"

Todd has been vocal about the dangers of "alpha male strategies".

In "*The System*" he comments on one of his student's videos that it was a dick move to dump a girl right away after she said she had a boyfriend because "she's a human being".
And he reiterates the old pick-up mantra of "leaving her better than you found her".

Well, I like that approach.
And I think it's more effective, too.

For example, if a girl is talking on the phone the AMS approach would be to tell her to hang up.
But that's silly, Todd says because on the other hand of the phone, there could be a parent, a boyfriend, or a dear friend. And you're still a stranger.
Instead, he recommends a more subtle approach.

More Wisdom

- **Violating social norms is bad advice**

Withstanding social pressure is good, but breaking social norms just so to do it is not attractive (garish clothes,

straws in her nose, laying down on the floor, talking overly loud, etc.)
The *ability* to violate social norms is good, actually doing it is bad.

- **Approach interaction with a mindset of "self-amusing"**

If you go in to have fun, you will naturally have a non-needy mindset.
I'm personally not the biggest fan of this "self-amusing" approach, which if you take it too far leads to more clownish behavior and the girl will take you less seriously.
But in smaller doses, it can be good.

- **When she says "I admire your confidence"…**

She is actually pushing you low down.
She is saying "I admire that a guy lower in value like you is not afraid of approaching me".
Also read "covert power moves".

- **Social circle game is about your status in the group**

Just being around cool people won't get you results by itself.
It's not just about being *in* the group but about your role in the group.
Social media and social circle games should be on top of your core seduction skills, but not seek to replace them.

That's true, but if you are very close to a very high-status person, then you can reap almost equal benefits because he will attract more women than he can take.
In *evolutionary psychology*, this is called the "satellite strategy", and can work wonders (see Buss, 2013).

CONS

Todd Valentine is one of the best pick-up coaches around.

The main con is that the pick-up artist schooling he trained can be over-gaming and lower-power.

Let's see:

1. Cold approach only, which is not highest ROI

Todd espouses cold approaches as the best way to meet women.

And I LOVE the cold approaching.
Even beyond meeting women, I love it for the challenge and self-development.

However, it would be stupid of me to confuse what I like or do, with what's most effective.

Compared to higher-power strategies, walking up to random girls is a high-effort, low-ish returns strategy.

A few things will help increase efficiency:

1. Great looks
2. High confidence / power
3. Great game
4. A place with LOTS of women walking around

But even if you score high on those, you still need to trawl the streets to find a girl whom you like -and you won't find *that* many if you're picky-, who is in the right mental space to date/bang new guys and, of course, who likes you back enough to come with you on a date.

That's all doable -done it plenty of times, too-.

But whether or not it's a strategy that suits you best, is not a given.

The rewards of cold approaches are also smaller compared to more "winners take all" strategies such as fame, jet-set lifestyle, or high-status social circle game with lots of attractive women in and out -basically, all strategies where women come to you, or naturally gravitate around you-.

You don't need to take my word for it. That day game takes effort you can see it from dating coaches as well.
Take some videos from James Tusk: he is handsome like a model, and still spends hours and hours in packed streets to get a few numbers.

Or you can watch it from Todd himself when he shows his not-so-good interactions:

If you want to be efficient, you need to date with power dynamics in mind. Pick-up artists running up and down the street are not the highest-value guys around.

And for those shooting for more, than there are more effective dating strategies.

Also see:

- Cold approach VS social circle

https://thepowermoves.com/cold-approach/

2. Sometimes over-gaming

Todd comes from RSD, which was based on routines, push-pulls, and a lot of "game".

A bit of your old-school stereotypical PUA-style kind of thing.
You can see that a lot in Todd's method.

He was the best of the RSD pack, in my opinion.
But just sometimes I feel Todd overdoes the teasing and laughing *at* the girl, which can lead to a combative dynamic. And combative dynamics are OK if you can win and manage them, but they're inherently more mercurial and less stable.

This isn't just my opinion by the way.
I talked about it with Kether. Kether is one of the best, if not the best player in South Korea. He gets real results and he's a man whose skills and mindsets I personally respect and can vouch for.
I hold Kether's opinion in high regard, and he felt the same way about Todd "over-gaming" sometimes.

- **Over-gamers get lots of shit tests**

I feel one reason PUAs talk a lot about shit tests is because they *attract* lots of shit-tests.

And they get them because they come across as too gamey. Women don't know if they're for real, so they feel the need to throw stumbling blocks.

The bad news is that it's not true that the better the woman, the more games you need.
As a rule of thumb, **the better the woman, the more over-gaming will doom you**.
Higher-quality women and alpha females are more likely to want direct alpha males who go for what they want, without too much verbal smoke.

Which is exactly what this smart woman tells Todd:

> **Todd**: I'm very shy, I rarely travel, I get really nervous around girls in particular, I never had an interest in life experiences..
>
> **Her**: You know what your problem is (already a bad frame…) you're overconfident (= you try too hard…) you do have this things where it looks like girls are your enemies (= you overgame)

Todd was going for the old PUA technique of “DHV” (demonstrate higher value).
But, like with the early PUAs, it’s a bit too obvious. It feels like cheap social climbing.
And as a rule of thumb, the higher you go in life, the more your demonstrations of high value need to be subtle or indirect.

- **Over-teasing**

Sometimes Todd also pushes women who like him a little bit too on the edge, and when you do that you might not be able to bring them back.

You can turn women off with over-gaming and too much push-pull. Especially when they already liked you.

Over-gaming also leads to “self-rejection“, and you can read more here:

- **Low-availability and over-gaming are killing your seductions**

Once a girl likes you, it’s best to set an “us together” frame (collaborative frame) VS continuing to tease.
Here is an example:

Over-teasing and over-gaming past the mark leads to self-rejection. That’s why she left. There is something as “too much power”. Once you have enough power, focus on getting to know her and moving forward, not on acquiring more and more power.

Because he focused so much on teasing and showing value without bonding, she self-rejected.

In chart terms, this is how over-gaming conversations go:

Since Todd knows game and has a good feel for power dynamics, he later rebuilds her up with more genuine appreciation.
And that’s what changed the game.

Be careful not to overdo the power though, because many women will self-reject forever.

3. Sometimes could be a higher power

One of the consequences of gaming a lot is that it comes across as a lower power.

And this is a criticism I also often make of myself by the way.

Alpha-male types tend to be more direct and grounded.
They talk slower, tease and laugh a bit less and, especially, they don't laugh to *release* tension.

See an example of releasing tension with laughter here:

The girl was being confrontational. From a frame control point of view, she was one-upping him. Laughing as an attempt to look superior by not taking her seriously was good. But still, it was too much laughing resulting in a loss of power, dominance, and leadership.

Higher power is especially recommended when you *already* have attraction, when you are high SMV, or when you simply want to be bold and efficient.
If she reciprocates, higher power leads to quicker sex, zero LMR, and no shit tests, as well, also makes her lust for you far more.

You can see a story/example here:

- **Example of a high-power cold approach**

4. Avoid risky jokes that push good girls away

Todd jokes often about the girl taking advantage of him.

However, I'd be careful with these as they open bad frames.
For example, I'd never joke about the girl "stealing one of your kidneys".

Avoid those, especially with more risky-averse women.

5. Complex system to internalize & strange names don't help

Todd is very smart.

And probably also because of that, "*The System*" can be complex.

However, it doesn't HAVE TO be that way.
For example, the names could have been simpler.

The old concept of "showing interest" becomes "showing *intent*", which is not as intuitive.

And then "intent" becomes a subset of "premise".
But "premise" sounds a lot like "frame", and it's not as intuitive.
Todd also talks about frames, so now we have two similar concepts, but with different names.

And then there are "premises within the premise" and some terms, like qualifying and validation, that are used somewhat differently.

After a few weeks you've gone through "*The System*", you may not remember "*the system*", because the names and steps are not very intuitive.

6. Filler words = less confidence

Todd is a great teacher.

And when gaming, he knows which words to use because he focuses a lot on them.
I think he could step it up even more if he addressed *how* to speak. For example:

- Fewer filler words
- Better diction
- Remove upspeaks

You can hear an example of upspeak.

Filler words are useless utterances like “uhm”, “ah”, and “so” that people use to fill the silences. Filler words are known to make you come across as less confident and more nervous.
Also, see the “verbal expressions of submissiveness“.

> How to Stop Being Unconfident In Conversations

Todd Valentine Review

Todd is a great pickup teacher.

He’s a smart, logical, rational, and incredibly verbally talented man.
He’d have been successful at anything he’d done, and he decided to put his genius in the service of pick-up.

And I think Todd Valentine is one of the best dating coaches around.
I like his approach: rational and level-headed, based *both* on experience and logic.

And I like how he relates to people and women.
Demands respect, and enforces his boundaries, without going all macho, “alpha male posturing” style.

He’s above black-and-white thinking of red-pill style dating advice, and is free of bitterness and anger that taints some fringes of the manosphere. And yet, he is no idealist. He just calls it for what it is.

Being a pick-up artist, even if a top one, may be the main drawback of learning seduction from Todd.
Having grown professionally within RSD, his style can sometimes come across as a bit “gamey”, potentially losing in power or genuineness.

In his videos talking to the camera, he is very grounded and rather high power.
But in his in-fields sometimes some laughing feels forced, and he can be less powerful and authoritative.

That can work sometimes to put women at ease -it increases warmth and that offsets some of his games-.
But sometimes I feel he could laugh a bit less, and be less ‘game-y’.

Still, all in all, he is one of the best dating coaches around.

The System Review

Todd is logical, methodical, and capable, and *The System* is a solid product to learn ‘game’.

You can also check the best dating products for guys, or compare these two effective courses:

The System vs. Seduction University

Category	Seduction University (TPM)	Todd V – The System
Philosophy	Seduction built on *personal power*, becoming a more attractive man.	Dating built on verbal ‘game’: openers, ‘intent’, ‘premise’, etc.
Outcome	Become a high-value, respected man women *want to be and stay with.* Short + long-term attractiveness.	Get dates through repeatable conversation frameworks. Focus is mostly on approach → date acquisition.
Method	More strategic and psychological, includes seduction & making women fall in love	More tactical, heavy use of techniques like push-pull, qualification, and teasing
Best For	Men wanting high-quality women	Men wanting to approach and date around

Category	Seduction University (TPM)	Todd V – The System
Weaknesses	May feel “deeper” and less step-by-step at first if someone wants scripts.	Robotic if over-applied. Some guys become try-hard or low power
Strengths	Builds a man women *respect*, desire, and stay loyal to. Works online, in-person, social circles, life.	Very good beginner approach structure if someone lacks conversational grounding.
Retention	High. Men learn leadership and bonding, and women stay, invest, and pursue.	Lower. Works to *get* women, less effective to *keep* women long-term.

If you want to become the **kind of man women *naturally choose and invest in*** → Seduction University.
If you want to **get better at approaches & first impressions quickly** → Todd’s System.

Best Evolutionary Psychology Books

Lucio Buffalmano · 5 November 2019 · Archived copy · Original

We boast the largest collection of evolutionary psychology book reviews in the world on this website.

And after studying and reviewing dozens of them, we came up with this list of the best evolutionary books.

Let's dive in.

Contents

- 10. Why Women Have Better Sex Under Socialism
- 9. How The Mind Works
- 7. The Red Queen
- 6. The Evolution of Desire
- 5. The Selfish Gene
- 4. The Mating Mind
- 3. The Oxford Handbook of Evo Psych & Relationships
- 2. The Secret Of Our Success
- 1. Evolutionary Psychology: An Intro
- ⍰ Evolutionary Psychology Books to Avoid
- Change Log

10. Why Women Have Better Sex Under Socialism

By K. Ghodsee
Summary | Audiobook

Despite feminist and left-leaning ideologies that permeate this book, Ghodsee deserves a place for addressing gender power dynamics.

Many (male) evolutionary psychologists on this list overlook or minimize the idea that men may gain when women as a collective are kept disempowered.

For example, in this interview, David Buss downplays the concept of patriarchy with a joke:

> **Buss**: (…) Two very elegant women with designer handbags are walking by a guy who's fixing the tar in the street and as he's groveling on the ground they say "stop oppressing me"

It's a funny joke, but it missed the broader point.

Societal patterns emerge from aggregated behaviors of individual preferences and behaviors.
It's a phenomenon called 'emergent behavior' and what social dominance theory refers to as '*aggregated* individual discrimination'.

Most men cluster around the average and, as Buss knows, they all share the same needs of mating and ensuring paternity.
Average men struggle when women become more successful than the average man. So **it's *evolutionarily expected* for men to be incentivized to limit women's power**.

Men may not be aggressive and open about it. But they may look down on the career woman while encouraging their partners to stay home.

Feminist scholars overreach at times, but dismissing their critiques risks missing important truths.
Ghodsee's argument isn't flawless, but it raises valid points that deserve consideration.

Read more here:

- **Social dominance theory**, which perfectly explains class-level dynamics, of which gender is only one expression
- **What Buss and Peterson underestimate about the patriarchy**

---

9. How The Mind Works

By S. Pinker
Summary | Audiobook

"*How the Mind Works*" is a 'meta book' on evolutionary psychology.

Such as, Pinker discusses evolutionary psychology *as a science*.
Including its credibility, the most common criticisms, and its current standing in the social sciences.

I find Pinker sometimes veers off into philosophy and is heavier in his personal views than on empirical evidence.
Finally, I find *How the Mind Works* too deterministic with two fallacies:

1. **The "perfect machine fallacy"**: the idea that organisms are perfect adaptations, working like clockwork machines
2. **The "perfect designer fallacy"**: the idea that evolution will always shape organisms to be the best possible adaptations for the environment

Although Pinker probably knows better, the reader should keep those two fallacies in mind.

See Lucio's take on these common fallacies

7. The Red Queen

By M. Ridley
Summary | Audiobook

"*The Red Queen*" focuses on sex sexual selection and mating, and wt would be even higher if it weren't for "*The Evolution of Desire*" which covers similar themes.
"*The Red Queen*" is superior in terms of theoretical framework and in the overview it provides.

But "*The Evolution of Desire*" is more practical, and it ranks higher because The Power Moves is focused on the practical applications of knowledge.

6. The Evolution of Desire

By D. Buss
Summary | Amazon

If you are looking for how evolutionary psychology wisdom more practically applies to dating and mating, but still has "scientific rigor", look no further.

This book can be an eye-opener and it will increase your mating intelligence 3 fold.

And from the same author, but slightly more focused on "sexual conflict", also see "*When Men Behave Badly*".
If I had to put these two head-to-head, I wouldn't know which one is better -they're both just great.

Also read:

- **The Sexual Marketplace 101**
- **Sexual Market Value 101**
- Sexual conflict: the weapons of genders' war

5. The Selfish Gene

By R. Dawkins
Summary | Amazon

The Selfish Gene, popularizing Hamilton's work, is probably the most culturally significant book on this list due to its popularity.

The title may be a bit misleading though.
Today, most social sciences accept that selfish interests may be best achieved by cooperation.

Dawkins, like a good scientist, took stock of the evidence, acknowledged the issue, and made amends.
In more recent versions of "*The Selfish Gene*", Dawkins writes:

> Cooperation and mutual assistance can flourish even in a basically selfish world (…) we can see how even nice guys can finish first.

Dawkins went as far as to say that he could have called his book "*The Cooperative Gene*".

That is not to say that the "*Selfish Gene*" was wrong, though. The concept that evolution -and most of what we do- is in service of the selfish gene's reproductive goals still stands.

4. The Mating Mind

By G. Miller
Summary | Kindle

If you want to understand deeper nuances of evolutionary processes and sexual choices, then this is a top choice to go along with a broader textbook.

Besides its thought-provoking main thesis, Miller addresses two common misunderstandings of evolutionary psychology:

1. **Evolution ≠ "constant progress"**, or the myth that 'evolution always improves'
2. **Survival ≯ reproduction**, or the tendency to focus more on survival and male-to-male competition, rather than reproduction and male-to-female courtship

But evolution is complex.
It's both survival *and* reproduction, *at the same time*.
Sometimes the two don't go hand in hand, but can also (partially) move against each other.

Miller drives that point home.
And he does a great job of explaining the messier and more complex nature of evolution, including the more interesting cases of runaway sexual selection.

- See our video on 6 common understandings of evolutionary psychology..

The Mating Mind also introduces a thought-provoking new theory: that intelligence, together with kindness and altruism, evolved thanks to sexual selection, via courtship. The brain, he says, is a wonderful proxy for fitness, and courtship displays that mental fitness.

3. The Oxford Handbook of Evo Psych & Relationships

By Various Authors
Summary | Kindle

This handbook is a well of wisdom at the crossroad of evolution and relationships, and this entry also functions as a stand-in for quality handbooks.

It provides a narrower focus on mating and relationships, but it doesn't detract from a general understanding of evolution since mating and relationships are foundational to evolution.

It could gain with some streamlining and synthesis because different authors sometimes revisit similar and/or foundational concepts with slightly different angles and studies.

But overall, it was one of the most TPM-enriching books we've ever reviewed.
I took copious notes, and improved many articles thanks to this handbook.

Other recommended handbooks include:

- ***The Cambridge Handbook of Evolutionary Perspectives on Human Behavior***, same high quality, but potentially provides a broader overview
- ***The Oxford Handbook of Infidelity***, focusing on a crucial evolutionary area of reproduction, relationships, and cooperation/defection. High-quality work

I found the *Cambridge Handbook on Sexual Psychology* series (*Female Sexual Adaptations* and male sexual adaptations) to contain some overlapping information but still informative, though in certain chapters I noted room for improvement in scientific rigor.

2. The Secret Of Our Success

by Joseph Henrich
Summary | Amazon

This is the only book on cultural evolution featured on our list—but it's a game changer.

Henrich presents a compelling argument that turns the dominant gene-centered narrative in evolutionary psychology on its head:

> In the longer run, genes are evolving to adapt to these culturally constructed worlds, and this has been, and is now, the primary driver of human genetic evolution.
> (…)
> This is quite different from the usual story.

I believe a possible counterpoint is that today's culturally constructed world may move too fast for genes to even be able to catch up.
But Henrich shares compelling evidence and logic to make his argument credible and convincing.

Henrich also takes some playful jabs at the gene-centered perspective, pointing out how it mistakenly downplays culture:

> In twenty-first-century textbooks on evolutionary psychology, for example, culture is often politely acknowledged and then waved off as being mostly relevant for explaining phenomena like the "hula-hoop craze, changes in clothing styles or fashion, beliefs about alien beings, and jokes."
> (…)
> these now outdated evolutionary views fail to recognize that the *central force* driving human genetic evolution for hundreds of thousands of years, or longer, has been cultural evolution.

The gauntlet has been thrown.

If Henrich and his peers are right, cultural evolution may revolutionize our understanding of human psychology.
I venture that we're possibly on the cusp of a significant shift in how we understand evolution, human nature, and,

most importantly, our future as a species.

Let's hope Planck's Principle—that science advances one funeral at a time—doesn't apply here because I'm eager to see it panning out.

So, why not give it the title of best evolutionary psychology book?

First off, genetic evolution remains foundational to understanding human nature.

Second, cultural evolution is still developing and lacks comprehensive handbooks or widely accepted theoretical frameworks.
While biological evolution is supported by extensive empirical evidence and decades of collaborative effort, cultural evolution relies on pioneering individual work.

But this book is still essential for understanding how biological and cultural evolution complement each other—sometimes aligning, sometimes clashing, and with culture frequently overriding genetic influences.

Finally, this book and its companion '*The Weirdest People In The World*' revisit group-level selection, a concept sidelined by gene-centric theories.
It illustrates how cultural shifts enable more cooperative groups to outcompete and expand—ie.: Western individualistic and impersonal pro-sociality led to the West's global dominance—.

> The *central force* driving human genetic evolution for hundreds of thousands of years, or longer, has been cultural evolution.

1. Evolutionary Psychology: An Intro

By Workman and Reader
Summary | Amazon

Choosing the best evolutionary psychology book came down to a close contest between *Evolutionary Psychology: An Introduction* by Workman and Reader, and David Buss's *Evolutionary Psychology*.

Both are excellent.

We ultimately picked *An Introduction* as our top choice because it offers a broader overview of the field. Workman and Reader trace the field from its Darwinian roots and evolutionary mechanisms across species to the captivating debates and competing theories that continue to shape the science today.

It's also accessible and written with learners in mind.
Chapter summaries, discussion boxes, and practical exercises make it ideal for students, beginners, or anyone looking to develop a foundational understanding.

P.S.:
Workman and Reader don't shy away from uncomfortable truths.
Among the many worthy quotes, take this one for example:

> In a sense, all sexual beings participate in a form of eugenics, albeit unconsciously.
> (…) when an animal (including a human animal) selects a sexual partner it does so, among other things, on the basis of (…) good genes

⍰ Evolutionary Psychology Books to Avoid

These books are, in many ways, *good*.

However, they had important biases that ultimately led to poorer conclusions.
Here they are:

---

3. The Third Chimpanzee

Jared Diamond seems to align with the zeitgeist of the Standard Social Science Model, and this quote of his illustrates it clearly:

> "Ecological differences among existing humans are entirely the product of childhood and education".

The use of the word 'entirely' raises concerns.
Good scientists don't jump to conclusions, are open to being wrong, and tend to use words like "seems", "tends", "mostly", etc.

Diamond's approach seems motivated by the wish to counter genetic or racial explanations for human differences, as he himself writes:

> Until we can come up with a convincing, credible alternative explanation, the suspicion that racist genetic theories might be true will linger.

That stance is understandable in its moral intent.
But still, that's not a scientific approach, which should be unbiased.

Diamond's take would only gain authority if he admitted his biases and preferences.
When he doesn't, he earns a spot on this list.

---

2. Sex At Dawn

Sex at Dawn feels like two swingers wanting to justify their preferences.

There are two main theses in "*Sex at Dawn*" and a third implied theme:

1. Humans are not (fully) monogamous
2. Humans enjoyed no-strings-attached sex like the bonobos
3. Monogamy sucks, let's go back to the free-sex thing like good hippies

With the "not *fully*" monogamous, there is nothing to opine
And it may be so well-accepted that it feels like making a case against a strawman.

The issues start with the second point, more dubious, and the third one, a moralistic claim.
To begin with, bonobos can be nasty to each other just like any other great ape (Sapolsky, 2017).

Second, the claim that "fathers didn't care about paternity" raises questions.
There are evolutionary reasons why fathers who didn't care about paternity are not well represented today.
Fathers who didn't care about paternity were out-reproduced by those who did, and they left fewer and fewer copies of their genes.

And finally, even if they are right, our past has no normative power as to how we *should* be, or even could be.

Ultimately, I enjoyed "*Sex At Dawn*".
But I didn't like that it presented as science what to me felt more like personal preferences.

---

1. Sperm Wars

This would be another great book… If the author didn't present theories as facts.

More than two decades after the book released, there is still no evidence for the "killer sperm" the author lucidly describes as if it were a fact.

Also read:

- **Best psychology books**
- **Best books on manipulation**
- **Best books on power**
- **Best red pill books**

Change Log

Removed:

- ***The Blank Slate*** (28.12.2014). An interesting discussion about "tabula rasa hypothesis", behaviorism, and the "standard social science model" and how they affected academia during Pink's tenure.
  However, it veers deeply into politics and 'culture wars' and we prefer a list based on wisdom
- ***Why Beautiful People Have More Daughters*** (29.12.2024) as it's more intuition-based with some 'just-so stories' and lighter in evidence.
  The title itself betrays an emphasis on what's catchy, rather than what's meaningful. It refers to the Trivers-Willard hypothesis, which was weak even at the time the book was published, and struggles to replicate.
- ***The WEIRDest People In The World*** (13.01.2025), added in 12.2024 was replaced by the same author's *The Secret Of Our Success*, more focused on cultural evolutionary principles
- ***Behave*** (09.04.2025), great resource, and Sapolsky's background puts evolution into a biological context. But we removed it to keep the list more laser-focused on evolution
- ***The Origins of Virtue*** (05.05.2025), because it focuses more on cooperation than evolution in general. Furthermore, Ridley's analysis is solely based on rational costs and benefits, while other entries here also include extra insights to shed light on this fundamental human behavior
- ***The Moral Animal*** (29.06.2025), a book that's heavily featured in most other 'best evolutionary psychology books' lists' online and with which I have a special personal connection. It's the very first evolutionary psychology book I read, I underlined almost all of it, and I felt like I was unlocking the secrets to understand the world.
  But decades after its publication, there are more updated books to provide you with an overview.
- ***Evolutionary Psychology*** by David Buss: still a top choice and it remains our top pick under the best general psychology books for its human-focused depth.

Added:

The Secret Of Our Success (13.01.2025) as a brilliant representative of cultural evolution.
The entry may change if a handbook on cultural evolution comes out.

Ranking change:

- ***The Mating Mind*** dropped from #4 due to its more speculative nature and heavy focus on the evolution of intelligence. The new #2 also provides an equally speculative but convincing alternative to the evolution of intelligence.

What Is Sexual Market Value, and How to Increase It

Lucio Buffalmano · 16 November 2019 · Archived copy · Original

The sexual market value (SMV) is an individual's measure of sexual attractiveness.

Sometimes referred to as "mate value" by academics, high SMV men are the sexual marketplace equivalent of high-value men in *social* exchanges.

High-SMV individuals have an easy time dating, have many partners to choose from, and generally date other high-value women or men.

This article explains how sexual market value functions, helps you assess your sexual market value, and helps you *boost* your sexual market value.

People subconsciously assess others' SMV while showcasing their best selves to elevate their own

So let's start:

- SMV Strategies
  - Pick A Niche
- Summary

Sexual Market Value Theory

We define sexual market value as:

> Sexual Market Value (SMV) refers to an individual’s overall desirability as a mate, determined by a combination of factors determines their perceived value in the mating market.

In simpler terms, the sexual market value is an individual’s level of attractiveness.

Sexual Market Value Dynamics

The concept of sexual market value is rooted in the negotiative dynamics of human relationships.
While some find this framework unpalatable, it is nonetheless supported by substantial academic evidence.

For example, the latest *APA Handbook* of relationships says:

> Both sexes would be most happy with a partner who is high on all desirable dimensions (…). However, most people (…) must compromise and make trade-offs.

Meaning: everyone prefers a mate with a higher SMV, and nobody wants a lower SMV mate.
Since nobody wants to settle for less, people usually end up with someone who’s on their level (assortative mating).

Indeed, **an individual’s SMV is the best predictor of the quality of his mates**. And that’s *especially* true for long-term dating.
Thus, the higher mate value, the more and better dating options one has.

Sexual Market Value Is Power

Your sexual market value largely influences your “dating power”.

In simple terms:

High SMV = high dating power.

The reason is simple: everyone wants a high SMV mate.
Quoting from the *Oxford Handbook of Evolutionary Psychology:*

> **humans** have evolved not to mate indiscriminately but have evolved psychological mechanisms to **evaluate and prefer mates who possess greater, as opposed to lesser, reproductive value**

However, that doesn't mean that everyone is out for the best of the best.
Instead, because everyone assesses others, people's success in the sexual marketplace is linked to their *own* sexual market value.

So, are you doomed at birth by your SMV?

No.

Luckily, **your SMV is malleable,** often *highly* malleable.
And you can almost always increase it with well-directed effort, smart marketing, and good old personal self-development.

You can even increase your SMV by simply changing how you *think* of your SMV.
We call that 'confidence'.

How SMV Impacts Mating Efforts & Partner's Choice

Most people have an inherent understanding of their own SMV.

That means that, largely, it's a myth that everyone -or women- seeks the "best of the best".
Instead, people usually target potential mates who are close to their own sexual market value.

Many men drop their standards and "date down" for short term, but maintain higher standards for long term

Usually, men are willing to "fish down" for short-term and uncommitted dating.
But also men tend to prefer similar or higher value partners for the longer-term.

Sexual Market Value Assessments

Please be aware of this:

Attraction is highly contextual and subjective, and **any SVM calculator or chart is inherently simplistic**.
Just as an example, read my note under the SMV calculator below.

Sexual Market Value Calculator

⚠ Warning again: it's a reliable calculator, but the final number is not destiny!

⍰⍰♂ **Lucio's note**: SMV isn't destiny. Even as a short, low-status, low-income trainee at my old company's party, I

was with the most attractive woman. Smart men can always find a way!

For the charts, we'll use a few simplified ones, while addressing the biggest flaw of most: ignoring the distinction between short-term and long-term dynamics.

Male Sexual Market Value (Short Term)

Looks and "game" reign supreme in short-term.

If looks are the equivalent of standing naked, game is the marketing (or manipulation) of that package.

Everyone engages in some form of "game".
Conversation, personal style, nonverbal language, bonding and vibing with others—they're all game.

Games work best in short-term dating, just as marketing and sales work best in selling the product.
Once the sale has been done, the intrinsic qualities of the product come to the fore.
This is why honest self-development is one of the best forms of "game". Self-development improves your SMV for both the short-term and long-term.

One might ask:

Why are resources even featured in short-term mating?

First of all, it's simple logic.
And since logic simplifies at the extremes, imagine: at parity of everything else, would she rather accompany him at his mansion in a chauffeured car, or walk to his shared room in Shanty Side of Town?
Obvious answer.

Second, the two temporal dimensions are linked, and some women go for short while hoping for long-term.

Third, several studies showed that resources can also help in short-term dating.
For example, "conspicuous consumption" (Kenrick et. al., 2011), or throwing money around, is a powerful attractor in club environments.

Male Sexual Market Value (Long-Term)

Now imagine you want to settle down.

And you would ask yourself the ancestral male question:

What do women want?

The simple answer is: everything.

For simplicity, we keep the same traits for each chart.
But a more realistic chart would add more traits, including the ones that facilitate long-term pair bonding such as kindness, maturity, secure attachment style, emotional availability, etc.

Game in the long term enlarges its scope to include relationship management and maintaining attraction in the long-term.

And of course, **all traits are at least somewhat connected** and overlapping.
For example, high-status men are perceived as more attractive, and even taller. And vice versa.
And high-status men tend to have more resources. And vice versa.

Female Sexual Market Value (Short-Term)

This one was *not* difficult:

The game for women is the ability to make them horny.
Good game can complement looks, or can help make up for looks.

Female Long Sexual Market Value (Long-Term)

Here is one misunderstood, yet simple reality of SMV:

In long-term mating, men are nearly as selective as women.
And the inverse is also true: in “short-term mode”, women become more like men.

For example, when a colleague told me he wanted a woman with a master’s degree, I knew he was *not* a player.
Instead, he was looking for a wife.

Swapped “game” for “faithfulness” because men value it highly
Age is interesting.
A previously popular SMV chart assessed market value *only* based on age.

And it does matter a lot, indeed.
But there are still contextual elements.
First, it’s about the age one *looks*.
Second, it matters comparatively less in non-monogamous societies because men are not “stuck” for a lifetime.

Faithfulness, the most sought-after trait in several surveys, also matters less to very high-status men in polygynous cultures.
These men have many women, so they can allow themselves to care less about fidelity -unless they’re jealous and paranoid, exceptions always apply-.

Traits of SMV

These traits tend to boost, correlate, or signal high mate value:

#1. Male Resources

Says Buss:

> *The male occupational status seems to be the best predictor of the attractiveness of the woman he marries.*

Many studies show women’s preference for men with resources is universal across cultures, religions, and political systems.

Women prefer men with resources even when *they* themselves have resources.
Research among women in the upper-income bracket in the US showed that high-income women placed an even greater value on mates with high degrees, professional status, and high income.

High status and income men are aware of their ability to attract more desirable women.

As men's income goes up, they seek younger partners while also expressing a stronger preference for facially feminine women.

While resources are most helpful for committed long-term, they can also empower very wealthy men for uncommitted sexual access.
For example, Berlusconi placed several "entertainers" in his many condos around Milan and ready "on call".

#2. Male Social Status

Women desire men who command a high position in society.

For US women, high social status or a high-status job are almost as important as financial prospects.

Evolutionary psychologists say that women want high social status because it's linked to access to resources. I believe that's part of it, but power also plays a role.

Women also place high importance on indicators linked to high social status, including:

- Education
- Professional degrees
- Commanding the respect of the group (social power)

2.2. Women Wear Blinders to Low-Status Men

The *Handbook of Relationship Initiation* makes this point with a TV-show example:

> In an episode of Sex in the City, the four main protagonists bemoaon the lack of available men in New York. In fact, the establishment is stacked with young, reasonably attractive men—busboys, doormen, barmen, water waiters, and so forth.
> These men, however, are not mateworthy (and are almost invisible) because they fall well below the minimum criteria of status and resources

These attractive low status men can make good short-term flings -think of the proverbial "pool boy"-.
But women enter these relationships from a position of power and only "settle" for lower-status men.

See more in successful women dating.

#3. Male Ambition & Industriousness

Connected traits are:

- Ambition
- Industriousness
- Intelligence

In Buss' large-sample study ambition and industriousness were rated as important or indispensable.

In turn, both industriousness and ambitions facilitate men's growing income and social status.
And that may explain why men are over-represented among CEO and board members. Men are sexually incentivized to work harder.

As a popular Italian singer Adriano Celentano sang:

> He who doesn't work, doesn't make love
>
> *Pop Italian song lyrics*

And men took note.

Again, there is a major gender difference between the sexes here: women regarded a lack of ambition as extremely undesirable, while men didn't care about women's ambition.

#4. Kindness

In Buss' large survey data both men and women across the globe value kindness.

Buss says it's because support is important in life.
And a kind mate offers an unstated promise of support when we will all, eventually, hit a rough patch.

Kindness also increases the chance that a man will commit and provide, and make for a better father.

4.2. But... How About Assholes?

The stereotype goes that women *say* they want nice guys, but prefer assholes.

The stereotype is partially true, but what matters most here is power.
Women are attracted to behavioral cues of male social dominance and social confidence (Gangestad et al. , 2004; Li, Yong, Tsai, et al. , 2020).

Women's preference for dominance is particularly strong for short-term (Brown et al, 2022).

Bad boys beat "kind guys" whenever the "kind guy" is weak and unconfident. And especially for the short-term.
Viram Swami reached this same conclusion when reviewing the evidence for the nice guy / bad guy dichotomy: to be successful, the "nice" guy does need to be confident.

Also see:

- How to be a good asshole
- The asshole strategy
- **Power University** is designed to help these good men *also* become high-power, attractive, *effective* men

#5. Intelligence

Evolutionary psychology professor Geoffrey Miller says:

> *During human evolution, sexual selection seems to have shifted its primary target from body to mind.*

Think about men and boys meeting.
What do they do?
99% of the time, they talk.

Talking allows us to showcase and assess the health and intelligence of a person's mind.

Intelligence is also the meta-trait that allows us to play the dating game itself.

5.2. Humor, "Game", Conversations, Frames

Conversations and humor showcase intellectual brainpower.
And "frame control" is an indicator of social dominance and intelligence.

Also see:

- The role of dominance in seduction
- 10 frame controlling techniques

> 10 Frame Control Techniques to Out-Frame Anyone

Humor may also be a well-adapted tool of sexual choice and sexual discrimination.
When a brain's pleasure center can be stimulated, but not stimulated by *everyone*, chances are that it's an evolved tool of sexual discrimination.

This is why "making her laugh" does indeed help.
And that's why women prefer men who make them laugh, whereas men prefer women who laugh at their jokes.

5.3. Vocabulary & Conversations

Vocabulary is at least 60% heritable and 80% correlated with general intelligence (and 20% with body symmetry).

A theory of the existence of so many synonyms when one single word would suffice is that words serve not to better explain things, but to display superior intelligence.

Why Men Stop Talking During Relationships?

A common complaint of women is that men stop talking during relationships.

That supports the theory that vocabulary, language, and intelligence courtship tools to *gain* sexual access.

But once sexual access has been granted, men don't need to put up with that effort anymore.
As someone said:

> Why should he regale you with poetry when 20 words a day suffice to have sex with you?

#6. Male Physical Traits

The female preferences for attractive physical traits include:

- Height
- Symmetrical body and faces
- Athleticism
- Toned muscles
- Masculine features (more personality-based than the previous ones)
  - Large jaw
  - Jutting chin
  - Beard
  - Low voice (up to a certain point)
  - V-shaped torso

Some physical traits, like height, are intercultural and present fewer exceptions (though still not zero).
Other traits are more cultural and contextual, including the preference for masculine facial features (Perrett et al., 1998).

The Virtue Is... Above The Middle, But Not Too Extreme

Many of these features have an upper limit.

For example, deep voice is attractive, but only up until a certain frequency.

Men struggle to understand this because **men keep being intimidated by more mannish men long past women are attracted by them**.

This suggests that for seducing women the “lover” strategy beats the “fighter” strategy (Tamsin, 2015).

We call this phenomenon “law of optimum balance“.
See here:

- Law of dating optimum balance

> Why Peak Attraction Is Really In The “Seductive Balance”

Male attractiveness

Men’s attractiveness may be the most underestimated trait in the literature.

That’s because much recent research and evolutionary discourse have been dominated by surveys (ie.: David Buss and David Schmitt SST theory).

Surveys are valid in certain contexts, but less in others.
And they tend to underestimate looks.

However, looks matter.
And especially so in the short-term.

In general, women look more at male faces than the body.
Men tend to look more at bodies than faces -younger men in locker-room mode may refer to “intercourse while covering her face”-.

#7. Female Youth

Men solved the problem of finding fertile women, in part, by looking for younger women.

The proof that men seek youth as a sign of fertility is in adolescent males, who instead prefer older women (an unrequited attraction).

7.2. The Appeal of MILFs

The MILF-apeal is real and widespread.

How do we explain this?

Well, think about what an older woman with children has proven.
She has:

- **Proven health**: she’s been around for longer
- **Proven fertility**: her kids are the proof
- **Proven mothering skills**: her kids being alive is proof
- **Experience being a mother**

From an evolutionary perspective, *the MILF is a safer bet.*

Many men prefer an attractive older mother to younger women

7.3. Youthful Behavior

Buss says that our ancestors had two types of evidence for a woman's health and youth:

1. Features of physical appearance
2. Features of behaviors

Feature of behavior includes:

- Bouncy youthful gait
- Animated facial expressions
- High energy levels

7.4. Age Matters More For Women

Quoting from the *Oxford Handbook of Evolutionary Psychology:*

> Women's preference for a young, fertile-looking partner has been theorized and found to be weaker than that of men (Antfolk, 2017; Buss, 1989; Conroy-Beam & Buss, 2019; Kenrick & Keefe, 1992)

Why?

1. **Reproduction**: Age is more correlated to her reproductive value than men's
2. **Evolved preference**: Age is more correlated to beauty in women than in men
3. **Math**: Women's sexual value is based on fewer traits than men's, and age and beauty carry comparatively more weight

The peak of desirability depends on many factors but, on average, it's in the early and mid-20s for women and late 20s and mid-30s for men.

Here is a chart from OK Cupid, based on the number of messages men and women received:

Extra reminder: aggregate numbers are poor predictors of an individual's sexual market value because individual variances are large.

Some influences and mitigating factors to age include:

- **Availability of resources**

Destitute women might place a premium on resources and care less about age.

- **Quality & quantity of other traits**

Different traits can compensate for age.

Real-world data provides evidence. The richest 400 men in the US married women who were, on average, 7 years younger.
But when they re-married, billionaires chose mates who were on average 22 years younger.

#8. Female Physical Appearance

Men rate physical appearances much higher than women do.

Traits of high-appeal physical appearance include:

- Smooth, clear, and homogenous skin color distribution (signals absence of parasites)
- Facial femininity (signals your and more estrogen, ie.: higher fertility)
  - Full lips
  - Large eyes
  - Thinner jaw
  - Small chin
  - Chromatic contrast
  - High cheekbones

  - Relatively short distance between mouth and jaw
- Clear eyes
- Lustrous hair (hair quality and length correlate with age and health)
- Good muscle tone
- Leg length (long legs relative to torso length, 5% longer than the average receive maximum attractiveness)
- Symmetrical faces and bodies

Waist-to-hip ratio plays a role but has a smaller impact than overall body fat and shape (Tovee et al., 1998, 1999). Interestingly, men prefer the gait of women wearing heels because it makes for shorter steps and increased tilt and rotation of the hips.

8.2. Women's Physical Appearance Matters More

Physical appearances matter more to women's SMV.

While handsome men gain more in short-term dating, women gain both in short-term dating and long-term dating. And attractive women tend to have less casual sex and more relationships.

This is also why beautiful people tend to have more daughters than sons.

8.3. Status Boost: The Trophy Wife

Men value a woman's attractiveness also for the status boost it grants them.

The trophy wife is especially important for unattractive men because people infer that if he is with an attractive wife, he must have a very high social status.

#9. Faithfulness

Survey after survey shows that men care *a lot* about fidelity (Buss & Schmitt, 2019).

Even in relatively open-minded and modern societies, faithfulness still matters.
In a survey by David Buss, U.S. Men evaluated faithfulness and sexual loyalty as *the* most valued trait out of 67 possible characteristics.

Women took evolutionary note and strategically present cues to sexual fidelity when seeking long-term mates.
Also see the "Madonna-whore" dichotomy.

> The Madonna-Whore Complex: What it Means to You

#10. Misc.: Art, "Fun", Good Sex

Sex…

Why wouldn't anyone count *sex* in the sexual market value?

And there is much more, too.
Fitness can be displayed in countless ways.

Enter the appeal of poets, artists, and singers.
Some of these "alternative" signals of high fitness include:

- Art (albeit today it overlaps with status)
  - Body ornamentation

- Dance
- Irreverent humor
- Ideological ardor
  - Snake oil salesmen
  - Shamans
  - Honest idealists
  - Rebels
- Memorable storytelling
- Spiritualism, sometimes mixed with allusions to sex (see tantra)
  - Shared consciousness
  - Altered states of consciousness
- Pro-social behavior & charity
- Good sex

Both men and women enjoy good sex, and people who can provide -and market- their lovemaking skills are also providing a valued SMV currency.
The female orgasm is elusive because it's a sexual discrimination tool.

Pro-social behavior is also attractive in the right contexts.
Geoffrey Miller argues that both intelligence and cooperation evolved from sexual selection (Miller, 2000).
That's why men increase their charitable contributions and tips when women are around (it's virtue-signaling, as a sexual strategy).

Ranking SMV Traits

Precise measures are sexy.

Plug in your details, and get out a final number.
A "certitude" -ain't that nice-.

However, because of the high individual variance, any quantification and ranking is bound to be misleading.

But that hasn't stopped researchers from trying.
Here is how Buss' survey ranks the characteristics most commonly sought in a mate:

Rank	preferred by males	preferred by females
1	kindness and understanding	kindness and understanding
2	intelligence	intelligence
3	*physical attractiveness*[a]	exciting personality
4	exciting personality	good health
5	good health	adaptability
6	adaptability	*physical attractiveness*
7	creativity	creativity
8	desire for children	*good earning capacity*
9	college graduate	college graduate
10	good heredity	desire for children
11	*good earning capacity*	good heredity
12	good housekeeper	good housekeeper
13	religious orientation	religious orientation

And here's how they changed over time.

Let's improve this approach by differentiating short VS long term:

Short-Term VS Long-Term

People's SVM change depending on whether the assessment is for short, or long term.

For example, see how women's rating changed between the two:

Trait	Short-Term	Long-Term
Ambitious and career-oriented	1.04	2.45
College graduate	**1.05**	**2.38**
Creative	1.20	1.9
Devoted to you	**0.90**	**2.8**
Fond of children	1.21	2.93
Kind	**2.50**	**2.88**
Understanding	2.10	2.93
Responsible	**1.75**	**2.75**
Cooperative	1.47	2.41

ranging from –3 (extremely undesirable) to +3 (extremely desirable):

Ambition presents the biggest difference between short-term and long-term.

It explains why an attractive hippie with a guitar is a great short-term fling, but not a great long-term, "official" mate.
Same for the pool boy :).

Sexuality and skills are not on the table.
But men who are successful at short-term dating tend to have a higher sexual vibe and also to be more comfortable around sex.
The promise is better sex, partially, but also "guilt-free sex", where she doesn't have to play the Madonna and hide

her true self.

Of course, these are based on what people *say*.
I never trusted too much what people say :).

So I find a different approach more helpful.
Just like a good investor looks at what problem a new venture solves, the good SMV analyst looks at what a specific woman needs:

What Does She Need? Female Adaptive Problems

This is a high-level summary of why women want what they want:

ADAPTIVE PROBLEM	EVOLVED PREFERENCE
SELECTING A MATE WHO IS *ABLE* TO INVEST	Good financial resources or prospects
	Social status
	Slightly older age
	Ambition/industriousness
	Size, strength, athletic ability
	Intelligence
SELECTING A MATE WHO IS *WILLING* TO INVEST	Dependability and (emotional) stability
	Love and commitment cues
	Positive interactions with children
SELECTING A MATE WHO IS ABLE TO PHYSICALLY PROTECT HER AND CHILDREN	Size (height)
	Bravery
	Athletic ability
	Masculine body type
SELECTING A MATE WITH GOOD PARENTING SKILLS	Dependability
	Emotional stability
	Kindness
	Positive interactions with children

Adapted from the *Evolutionary Psychology* handbook

Of course, smart men can find different ways to help women meet their needs.

For now, let's move past the tables, though.

And now let's get more quantitative with this better approach:

Microenocomis Explain Mate Value

One way to measure what men and women tend to value ore is with budget allocation studies borrowed from microeconomics.

The principle is that people allocate their budgets according to how much they have, and what they need most.
In evolutionary terms, fertility is a "basic need", and the rest cascades from there.
Since women's fertility decreases faster, this model explains why men prioritize beauty -even in long-term dating-.

Quoting from the *Oxford Handbook of Evolutionary Psychology:*

> Li and colleagues confirmed the priority model using a budget allocation paradigm (…) For long-term mates, **men tend to allocate a signifcant portion of their low budgets on physical attractiveness, whereas**

> **women allocate a signifcant portion to social status** traits.
> As budgets increase, however, signifcantly less is spent on these necessities, and more is spent on other traits—so-called luxuries (Li et al. , 2002)

Women considering short-term mates also prioritize physical attractiveness about as strongly as men do for long-term mates, but spend increasingly more on other traits as budgets increase.
And men, of course, prioritize attractiveness even more for the short term (just like our charts above show).

Similar experiments where budget was used to reveal more information showed that women inquired first about physical attractiveness for short-term mates but social level for long-term mates.

Regression analyses on these studies showed that **being below average hurt more than being above average**.
A curvilinear pattern indicating a necessity's diminishing marginal returns, and indirectly also confirming the validity of the micro-economics approach.

Compensate what you don't have: it works

Quoting from the same handbook:

> researchers demonstrated that a compensatory decision-making strategy (where traits that are high in value can ofset those that are low in value) using weighted-sum calculations outperformed the Euclidean distance model and noncompensatory models such as take-the-best, threshold, and aspiration

For more, check our article "Exceptional Dating" based on this principle:

- **Exceptional dating**

> ExceptionAL Dating: How to Succeed Despite Shortcomings

Mate Values Are Universal Calculations

Everyone assesses other people's value.

Most of these calculations are unconscious, but no less real.
And the consequences are endless and far-reaching.

Just three examples:

- **People forgive high-value cheaters** more than lower-value ones (Sidelinger and Booth-Butterfeld, 2007)

The unspoken calculation is that higher-value maters give more. So they're more *afforded* to stray.

- **Higher mate value partner = higher relationship satisfaction** (Conroy-Beam et al., 2016)

Worth noting though this is only true up to a certain point. If the discrepancy grows *too* large, partners may get uncomfortable (the optimum balance again).

- **High-mate value partners = more jealousy** and mate guarding (Buss and Shackelford, 1997)

The subconscious calculation is that higher value partners are more likely to stray because of more options. They're also a bigger loss if lost, and harder to replace.

- **Men are more romantic when women are scarce**

When men outnumber women, women and relationships become more valuable.

The shift is so powerful that whole cultures change, shifting towards more courtship and romance.
For example, studies suggest that when men outnumber women, men invest more, marry more, value their partners more, and become more romantic.

The longer, more effortful, and more expensive the courtships, the higher the woman's value is compared to the man

SMV Strategies

So many traits… And such a great opportunity!

Especially for men.
It allows for specialization and for choosing along the lines of personal preferences.

Sure, the indicators of overall fitness do correlate with each other, but it's not always a *high* correlation.
Says Geoffrey Miller:

> (..) such correlations might be quite modest.
> (…) Because each indicator is costly (so it works according to the handicap principle), there are trade-offs between indicators. This allows scope for individuals to differ in their allocation of resources to different indicators

An example of such specialization is a relationship-type of man VS "player".
The former displays kindness and commitment, the latter focuses on looks and personality/"game".

> Lover VS Provider: How to Pick Your Best Strategy

Pick A Niche

Now that you know it's a market, think about how to market yourself best.

Here are some ideas of successful male archetypes for you.
All different, but all can be attractive:

> 10 Types of Seducers Exlained: Pick Your Niche!

Summary

Mate value refers to an individual attractiveness in dating and mating contexts.

Albeit still somewhat controversial, the concept of mate value should be as natural as life itself to any unbiased mind.

Animals assessing other animals' mate value is a natural consequence of *any* animal's drive to maximize their reproductive fitness.
Humans included.

Our goal was to provide a simple and "real world" analysis that everyone can understand but that is as scientifically rigorous as a textbook.

Reminder: we embrace honor and human respect here

We respect respect-worthy human beings of all stripes and shapes based on *character*, rather than 'beauty'.

And we take a can-do attitude on this website.

We firmly believe that a realistic look at dating dynamics empowers both men and women to live richer and more fulfilling lives.

Including, if that is their goal, finding a loving and supportive partner (love is also part of humans' psychological makeup, BTW).

Our Power University alumni told us they became 7 times more attractive. Check it out **here**.

The Sexual Marketplace: Overview of Intersexual Dynamics

Lucio Buffalmano · 17 November 2019 · Archived copy · Original

To understand dating and sexual dynamics, you need to understand the sexual marketplace.

Let's start with a quick definition.
The dictionary of power definitions defines the sexual marketplace as:

> The sexual marketplace (SMP) encompasses everyone looking for sex or relationship and who can realistically meet or interact with each other.
> In the SMP people offer their sexual value (offer), compete with other members of the same gender, and seek and assess the sexual market value of potential mates from the opposite gender (demand).

While sexual marketplace dynamics are more the theory of dating, this is the type of theory that provides the foundation to better understand and internalize the tactics and strategies.
When you understand the forces, needs, and drives that govern the sexual marketplace, you also increase your mating IQ.
And a higher mating IQ helps you to:

1. Be a better and more strategic dater
2. Assess your partners better
3. Be a better leader of relationships

People enter the SMP to date, and dating is a way to assess each other's SMV
So let's start:

- SUMMARY

It's A Negotiation

Some still consider the sexual market place concept "fringe" or "pseudo-science".

In part, it's because people *wished* it wasn't true.

For some, an approach based on self-interest, power, and calculative negotiations offers a bleak portrait of human nature.

But there is little to open that market forces ARE at play even in dating and relationships.

The latest *Oxford Handbook of Evolutionary Psychology and Romantic Relationships* says:

> Whenever people have the ability to choose partners and partner quality varies, we should expect competition for more desirable partners. This competition for the "best" partners occurs in a biological market (e.g. , Barclay, 2013, 2016; Noë & Hammerstein, 1994, 1995).
> In any market, supply and demand afect the value of a good (e.g. , a romantic partner), and anything afecting supply and demand can also infuence the mating market

And the latest *APA Handbook* of relationships clearly describes dating as a negotiation:

> Both sexes would be most happy with a partner who is high on all desirable dimensions—physically attractive, wealthy, charming, agreeable, and so on (Fletcher, Simpson, Thomas, & Giles, 1999). However, most people are not in a position to attract a partner who is perfect in every way, so they must compromise and make trade-offs. When forced to compromise in choosing a long-term partner, men and women make very different choices. Women prioritize social status and give up good looks
>
> *The APA Handbook of Personality and Social Psychology, Volume 3: Interpersonal Relations*

So now that you know that this is a valid model, let's learn it better.

Sexual Marketplace 101

The basis of most dating power dynamics and gender differences comes down to three evolutionary facts:

1. **Women produce fewer eggs, while sperm is abundant** (**anisogamy**): the female sex cell is larger, more costly, and "rarer". Male sex cells -sperm- are easier to produce and more abundant.
   Meaning: Women are worth "more" than men when it comes to reproducing
2. **Women invest more time and resources in reproduction, at higher risks** (**female internal gestation**): women are also more vulnerable and have higher nutritional needs during pregnancy.
   Meaning: Women learned to want, seek, and secure supportive men
3. **Women invest more time and resources in child-reading** (**breast-feeding**): on average, babies *need* mothers for survival but can survive without fathers. That has eventually and likely led to women also developing more feelings and connections with the children
   Meaning: women are worth more when it comes to both reproducing and nurturing future generations

Evolution rewarded those who had the most surviving and reproducing children.
Evolution, working on the above biological differences, led to the following gender differences:

1. **Women are more careful and risk-averse**: a reproductive mistake or an unsuccessful child is costlier to a woman than to a woman. That makes women generally more cautious around dating and sex -for example, waiting longer for sex–
2. **Women are pickier**: since women stand more to lose from mating with the wrong man, they tend to be choosier in their partner selection
3. **Women invest more in children**: each child means more to a woman than to a man, so women tend to be more protective and nurturing towards their children

Because of these biological differences, on average: **men are always ready and willing to have sex, while women are more careful and pickier**.

This is one of the most fundamental laws that govern the sexual marketplace.

1. Men Are the Offer, Women Choose

On average:

- **Men are the offer**: because men are generally more willing to add a sex partner, men are the offer
- **Women are the demand**: because women are generally more risk averse and stand more to lose, they are pickier and scout and test the offer before choosing

Sexual marketplaces vary in time and place. But because of the biological underpinnings, sexual marketplaces tend to be buyers' markets, favoring women (with many important exceptions, of course).

So over the whole population, on average, **women have more power in dating** (heads up for the empowered men reading here: you don't have to care about the whole population! You're an individual and you can always buck the trend).

The comedian Bill Maher put it nicely in one of his stand-up jokes:

> For a man to walk into a bar and have his choice of any woman he wants, he would have to be the ruler of the world. A woman who wants the same power, does her hair and puts makeup

In other words: when it comes to short-term dating, any reasonably attractive woman has more or less the same power as the (male) ruler of the world.

2. Female Beauty Confers Huge Power -& Determines Her Sexual Mores-

Women are better served pairing up with a high-quality man than by sleeping around with lots of guys.

So more beautiful women are more able to secure high-quality men and, generally speaking, prefer securing a relationship with them.
Hence, more beautiful women are more often in relationships than less beautiful ones.

Beautiful women command lots of power and are better served to find a high-quality provider

Higher SMV Women Have More Relationships

Women's overall value impacts their dating choices and behavior.

Less attractive women have fewer chances of securing high-quality men. So they may lower their standards and be more willing to engage in short-term sex.

Obviously, they'd also prefer sleeping with high-quality men.
And since men are more willing to go for quantity, they may be able to get a short-term fling with a man who is generally higher quality than they are.

For the same reason, less attractive women might also pursue a quantitative strategy, such as giving birth to more children with comparatively less providing.
It's rare indeed to see a very beautiful single mother and single mothers seem to cluster in the lower rungs of society.

3. But There Are Limits to Beautiful Women's Dating Power

So, women have power, and men just parade and hope to get picked?

Well, no.
Here is another rule of the sexual marketplace: general rules are poor at explaining the dynamics of the sexual marketplace. The general rules most often apply to the middle of the bell curve for average men within normal distribution environments.

But where selection really gets interesting -and where there are most rewards to be reaped- is at the extremes.
Taking sexual market value as an example, and to simplify:

More exceptions and contingencies to the general rule of female power in the SMP:

1. Dating is not only short-term, and men also get pickier for long-term
2. Women don't want any man but truly crave higher-quality men
3. Female dating power is highly dependent on age and looks

Finally, the most powerful players in the sexual marketplace are the very top men.

4. ... And Top Men Have Top Power

At the very top, men have so much power, status, and resources that they can attract and take care of many women -together with their children—more than any other average man could.

The women know it, and they all queue up.
When those guys are also attractive or have overall high fitness, they are the complete package. And women queue up even more.

At the top of the pyramid, power, status, and resources matter more than looks in terms of his power to sleep with lots of new women, especially in the ancestral environment in which we developed.
But if you think about it, it's also true today.
If it were a race for more casual sex, few male models could beat an average-looking tycoon.
And that's even more true with fame and celebrity status.

Remember the difference in reproductive effort that, on average, gave more power to women in dating?

Well, at the very top, since men don't have to wait more than a year to reproduce again, the power dynamics invert, and anisogamy also gives power to men from a genetic point of view.

The evolutionary proof that top men have more power than top women is in the babies.
Very powerful men tend to have more sons than daughters.

5. Women Want Money & Commitment (MPI Theory)

Male parental investment is crucial to understanding human dating.

In simple terms:

Parental investment, first theorized by Robert Trivers, defines how much parents invest in their offspring. Male parental investment (MPI) defines how much the males of a particular species invest in their offspring.

Human males are relatively high in parental investment compared to many other species in the animal kingdom. But they are not nearly as high as human females. Such as: men don't invest in their children nearly as much as women do, but they do invest quite a bit.

For clarity, when we talk about "investment" in humans we refer to generally sticking around and helping each other, both emotionally, financially, and with daily actions.

So, how does male parental investment affect sexual dynamics?

In nature, the females of species who cannot expect any help from their male counterparts (ie.: no male parental investment) *only* mate based on male genetic qualities (fitness) as displayed by certain fitness indicators (ie.: looks, plumage color, physique, dancing prowess, and any other symbol that the particular species developed as fitness indicator).

Meaning: **that when females cannot get any help to raise offspring, men bring only themselves to the table** (no future help or resources), **and females mate based on attraction**.

Conversely, when women *can* get resources they will *also* look and screen for resources (and their availability to them).

In humans, most women can secure support for child-rearing -or, at least, the promise of it-. So, **when women are choosing long-term relationships and, even more, starting a family, they will also want men who will help and support them** (with child-rearing and household finances). And they will tend to discard those who are not able or willing to invest anything (that is not necessarily to say that the man who helps and supports them is the biological father of her children, though).

This is especially true for high-quality women. High-quality women can more easily pick and choose among several men who are willing to help with child-rearing (men get in exchange a high-quality partner, good genes, and a social status boost).

Flowers and gifts are a sign of his willingness to commit and provide

6. Women Want Commitment & Devotion (Future Signaling Theory)

Sure, the man having resources is good and nice.

But it's not enough.

Women also seek signs that he will make those resources available *to her*.

How does she do it? Commitment is one way.

In part, **commitment is the measure to which a man promises to make his resources available to her**.

And of course, she wants to see "proof" that the commitment is true and not just verbal. Enter gifts, dinners, wining, and dining, picking her up, investing time in her, etc., etc.

Some evolutionary psychologists say that feelings developed as a way to make men stick to a woman to help raise the children. And that's why many women also want to see "proof of love" to make sure that he will stick around and help.

We can also speculate that women evolved a set of tools and behaviors apt at controlling their relationships so that they could more easily control men, together with their support and resources.
Check out this article for that:

- **How women control men and relationships**

> Female Domestication: How Women Control Men & Relationships

Sexual Market Place Power Dynamics

Alright, let's get into some proper sexual power-dynamics now.

We will quickly review a typical date progression and analyze where the power lies:

1. Before Sex, She Has More Power

Sex is a huge milestone in any budding relationship.

Be it short-term or long-term, before sex, women have power.
If he is spending time with her outside of obvious friendships and professional partnerships, it's almost a given he would like sex with her.

This holds true, on average, even in the case of high-quality couples.
Sure the woman is excited around him and might really want him, including sexually. But she still has the power of denying and is still holding the most important card: sex.
This is why **men must always be careful, and smooth, in the lead-up to sex, no matter their SMV**. Indeed, a botched-up escalation is often taken as evidence of a much lower SMV.

How the man acts to being rebuffed is also important
See here an example of smooth handling of a rejection:

"No problem", perfect tonality to handle rejections like a boss

2. After Sex, He Has More Power (& She Needs to Chase Commitment)

As we have seen, human males are often happy and willing to "nest up" and stick around.

But still, not *all* men commit and stick around.
And when they don't, it could be disastrous for her.

That's why while men seek sex, it's usually women who care more about commitment.
Especially after sex.
Why?
Because when sex begins, the woman is more and more at risk of getting pregnant. And if she hasn't secured his commitment by then, that could be a costly mistake for her.

Of course, some men do chase for commitment.
But that's not ideal from a power dynamics point of view.
When men enter a relationship after chasing commitment, they lose all their power and enter the relationship as the needier party.
They cannot maintain the initial attraction, she loses respect, and it's bad for all.

3. After Commitment, She Has More Power

After commitment, it should hopefully be more about teamwork than power.

But still, we are analyzing power dynamics here, and the question of "how has more power after commitment" has a definite answer: she sees a power resurgence.

Why?

Think about it: who gains more with commitment?
The woman.
Sure, he also gains much with commitment, including exclusive access to her reproductive system. But while a man maximizes his potential with lots of casual sex, a woman is better served to raise children with the help of a committed partner.

And that's why **commitment is more of a win for women**.
The woman has no higher upside potential than a commitment to a high-quality man. But a man has a much higher

potential for outside commitment.
That's why, with commitment, the man is giving more and the woman is taking more.
In some cases, **men sub-communicate with a commitment that she is worth more than him, and commitment serves to make up the difference**.

Purely from a mathematical point of view, as we saw, she *is* worth more than him because his reproductive contribution is cheap, while hers is high-maintenance.

Still, a man might still be better served by letting her go after the commitment.

He proposes and professes endless love… And gives away all his power

4. After Children, He Has More Power

After the children are born, the man has more power.

Why?
Because the woman is more invested in the child.
Because since women invest more in children and can have fewer children in their lifespan, a child is worth more to the mother. Furthermore, a child needs the mother to survive but doesn't need the father.

That means that the father could walk away and the mother would still have to take care of the child… On her own. So right after the child is born, women need male help and provide more than the man needs the woman.

Ironically, it's the mother's greater commitment that allows the father to potentially neglect the children even more. **Breaking up with young children is the ultimate game of chicken**, and it's usually the woman who swerves first because, if she didn't, the child would die.

A completely amoral man could abandon a woman when she needs him the most and seek another woman to impregnate, having his cake and eating it too -from a genetical point of view-.

Most modern nations have instituted laws and regulations to force men to at least provide financial support to children.

For more, see:

- The stages of power in dating and relationships

> Relationship Power Dynamics 101

Bargaining in the Sexual Marketplace

Remember the social exchange?

Well, it's the same here.
Imagine dating as a big exchange.

And as we have seen in the sexual market value overview, there is a plethora of traits that people seek and exchange.
Especially for men, those traits are many and varied, often with only a tiny limited overlap among each other.

This means **men need to master more areas of their lives to reach their full potential**.
But that also gives men more freedom and more potential for power because they can make up for one trait's lack with another trait's abundance.

1. Value Exchanges In The Sexual MarketPlace

The rule of thumb:

> People tend to pair up around the same overall value.

That's why **self-development is crucial to sexual success.**

The self-assessment of one's own sexual market value is a mix of self-esteem, confidence, sexual marketplace feedback, past sexual success (or lack thereof), and of course, temporal and environmental variables (ie.: the competition and normal mood swings).

Of course, the assessment varies somewhat but, overall, people tend to have a relatively good grasp of their value and an unconscious idea of what they can realistically "get".
Porper value targeting and matching helps reduce rejection and wasting time on unobtainable mates. But it's also important to the health of the relationships, and since the health of the relationship is also important to make and grow healthy children, it does make sense to target people who are going to be happy with us.

However, partnering up with the same overall value is not the same as "being similar".
Most couples do end up looking similar, that's true, but **most couples look similar only because most people are not excellent in any single trait.**

Enter what the "disassortative bartering" is.

2. Couples Match Total Value (Disassortative Bartering)

Because the sexual marketplace matches different intra-gender needs and wants, it's very possible to end up with very different couples.

How?

With disassortative bartering.

The general rule is that the more value you have, the more you can ask back.

But since there are different traits that are being exchanged, a subset rule is that **the more of a *certain type* of value you have, the less you can give in a different type of value.**

Biologists for example report that in some species of birds more attractive males work less and care less about the children.

Why?

It's because a huge amount of value in one trait (physical appearance) allows those birds to give less -or nothing- in another trait (caring and support).
But the couple still forms because she is still getting enough total value.

3. Sexual Bartering in Humans

The same is true in humans.

Since the currencies that both sexes appreciate are different, you can get couples who *look* much different.

For example:

- The young woman who's trading her looks and reproductive years for his resources
- An unattractive but powerful smart man pairing up with an attractive woman
- Handsome black man pairing up with an overweight white woman

These exchanges are perfectly valid because, albeit uneven on a specific currency, they still match up on the total value.
Or so at least think people who enter those relationships.

The only ones who complain, of course, are more average people who are not very valuable in any specific currency.
So instead of looking at themselves –or, mind you, to the obvious fact that the couple was happy enough to enter into a relationship-, they prefer finger-pointing and acting "offended" and "scandalized".

For anyone who wants to see, disassortative bartering is everywhere.
Women demand higher income to date races they don't like, billionaires marry young women (Pollet et. al., 2013) and psychopaths court older women to monopolize their finances (Brown, 2009).

Power allows for the bargaining sex in exchange for opportunities

Mating Systems & Power Dynamics

Culture, environment and marriage systems heavily impact dating dynamics.

In general:

- **Monogamy empowers lower status men**
- **Polygyny empowers high-status men**
- **Women may be better off with polygyny's larger choice**
- **Society may benefit from monogamy**

Why women may benefit from polygyny?

It's largely a question of larger pool to choose from.

For example, in environments with scarce resources, a woman may be better off being the 10th wife of a king than the only wife of a struggling peasant.
However, attractive women may gain with monogamy because they can monopolize a high-status man.

And what about society?

It doesn't take much for polygyny to create a pool of disenfranchised men with little hope for relationships or sex. And they have nothing to lose:

From Joseph Henrich, 2020

Many Western societies have been moving away from monogamy. Some authors defined Western society as “serial monogamy”, or “soft polygyny”.
There is also plenty of room for men living in big cities to be fully polygynous (whether that’s polyamorous, such as with the consent of all, or hidden).

SUMMARY

The sexual marketplace follows many of the economic rules of supply and demand, with operators trying to get the best deal for themselves.

This post gave you a quick overview of some of the most fundamental rules that govern the sexual marketplace.

10 Sexual Market Value Hacks to Boost Your Attractiveness

Lucio Buffalmano · 17 November 2019 · Archived copy · Original

Sexual market value (SMV) is crucial to dating and attraction.

At The Power Moves, we specialize in actionable strategies to gain status, respect, and attraction.
And in this guide you'll learn the top hacks to improve your attractiveness and thrive in the dating market.

Contents

- 1. Go Where Women Outnumber Men
  - Rationale
- 2. Go Where You're Most Prized
  - 2. Race Impact on SMV
  - Higher Status
  - Physically
  - ⍰⍰ Nice Guys Move To Safe Places
- 3. Strategize For Your Goals
  - Short-term & Quantity
  - Long-term & Commitment
  - Making First Experiences
- 4. Strategize For Your Strengths
  - Target Women Who Value You
- 5. Use Your Money (Wisely)
  - ⚠ Money Making Up For Looks
  - Money For Effective Dating
  - Money For Family-Formation
  - Careful With 'Build It & Women Will Come'
- 6. Find Your Niche
  - Fit Your Favorite Underrepresented Niche
- 7. Time Your Dating
- 8. Boost Your Preselection
  - Rationale
- 9. Date The Right Women
  - First-Mover Advantage
  - Go For Hidden Gems
- 10. Keep Going: It's a Numbers Game
- Bonus: The Ultimate Hack

1. Go Where Women Outnumber Men

The gender ratio applies to all levels: work, clubs, and cities you move to.

For example:

- **Work**
- Fashion industry <— Gay population bonus
- Graphic designer
- **Cities**
  - New York <— Gay population bonus
  - Berlin <— Gay population bonus
  - Philadelphia
- **Countries**
  - SE Asia <— Trans population bonus
  - Eastern Europe
- **Shocks** that reduced the man's population (e.g., wars, migrations).

And de-prioritize tech-heavy cities, large military bases, etc.

⍰ Consider gay & transexual excluded from official statistics
Gay cities underestimate the gender gap and are often libertine and hookup-friendly—perfect for party lovers. Places with a large transgender population further skew the local dynamics because they resemble women.

Rationale

The gender ratio boost is underappreciated, powerful, and *fast* (Birger, 2015).

Self-development is upward mobility and takes time.
Moving is lateral mobility, and easier.

When women outnumber men dating gets easier for both short term and long-term:

- **Hookups increase** as women have less power to demand resources and commitment
- **Men short-term dating strategies** (lover strategy) rather than ones based on monogamous continued investment

- **Cheating increases** in monogamous relationships increases

2. Go Where You're Most Prized

Or where you're *less* disadvantaged.

2. Race Impact on SMV

- **White men: Africa & SE Asia** where they prize white skin
- **Asian men: where your culture is popular**
- **Black men in Northern Europe** may fare comparatively better

2014

OkCupid QuickMatch Scores

		ASIAN women	BLACK women	LATINA women	WHITE women
men rating women	ASIAN men rating...	15%	-20%	2%	3%
	BLACK men rating...	2%	1%	2%	-6%
	LATINO men rating...	4%	-18%	10%	4%
	WHITE men rating...	9%	-17%	3%	6%

		ASIAN men	BLACK men	LATINO men	WHITE men
women rating men	ASIAN women rating...	24%	-27%	-15%	18%
	BLACK women rating...	-13%	23%	-3%	-6%
	LATINA women rating...	-14%	-16%	18%	12%
	WHITE women rating...	-12%	-8%	1%	19%

White men and Asian women often have advantages in certain regions
The chart suggests that:

- Men's white skin still provides an advantage
- Asian women date better, potentially because of the association with submissiveness
- People still prefer the same ethnical background

In general, race is a 'superficial layer' that in any social exchange matters most *before* getting to know people.
After that, personal qualities come to the fore.
That being said, unfortunately, it still matters.

I suspect that race matters more for women than for men because men are judged on more traits, and race gets "diluted" more.

Black skin can polarize opinions, but that can work in your favor.
Meanwhile, Asian men may have seen rising appeal thanks to the global popularity of K-pop and Japanese manga culture.

⍰⍰ Go Where You're Positively *Unique*

Principle:

Your advantage grows as the number of similar alternatives decreases.

For example, being white in SE Asia cities is advantageous —but in a smaller town, you're a VIP.

⍰♂Lucio's Take: **VIP-ing around the globe**

Lucio:
Indonesian town women asked me for pictures. Groups of young girls also walked to me.
When I left a Meetup group a girl -virgin- offered to join me.
In Africa women that my friend rated as attractive *complained* when I didn't meet them.
And a cute girl on a Vietnam bus offered my friend her phone number.

Leveraging the preselection ⍰⍰
Psychology research shows that women look at what other women like to discern what's attractive.
I used that with even more attractive women:

Minority Advantage

Just being in the *minority* sometimes is an advantage.

Women are curious, and minorities can be polarizing, which is also good.

Women who dislike local men also seek foreigners <— ⚠ Includes women with negative experiences, or with low local value, so shields up

Higher Status

Different cultures are 'dominant' in different niches.

For example, an Italian background would boost me in international clothing, luxury, arts, or wine industries.

Most Western men moving to poorer countries automatically get a boost (partially because of a higher status frame).

🤔Lucio's Take: **Status power moves for power & bonding**

Lucio:
Light-hearted power moves can increase both status and attractiveness, and bond.

For example, visiting an art and history museum with a local Korean, I joked at how recent their 'oldest' manuscripts were and how simple the artwork was.
The comparison was that 'my' background/civilization was much older and advanced -and hence 'better'-.

Avoid The 'Lower-Status Immigrant' Stigma

Immigrants are preframed as lower-status 'financial migrants'.

Plus, there may be stigmas.

Act opposite to the stereotypes:

- Dress better
- Remove thick accents
- Align with the host-country culture
  - Be more 'open-minded' if from conservative countries
- Date within the foreign community

Physically

Gym types may fare better on beaches and open-air parties.

Metrosexuals stick to large cities.

⍰⍰ Nice Guys Move To Safe Places

Albeit evidence is mixed, some research shows that women's preference for masculinity and strength increases with environmental hazards.

Nobody gains with unsafe places, but thin, feminine-looking men and ‘nice guys’ may be especially penalized.

Move to places where male competition and female selection rely less on dominance and aggression and more on smarts and good jobs.

⍰⍰ I bet he wouldn’t be as popular in a place ravaged by gang warfare

3. Strategize For Your Goals

Humans have a vast array of sexual behaviors they can select from (Buss, 2016).

And both personality, background, and culture influence their behavior and preferences.

Short-term & Quantity

- Libertine countries
- Big cities
- Bars & clubs

Long-term & Commitment

- Conservatives environments
  - Church
  - Religious countries
- Towns

Making First Experiences

- Countries where dating is easier for you.

4. Strategize For Your Strengths

For example:

- Good skills but no looks ⍰ social circle / cold approach
- Good looks ⍰ upscale venues
- Introverted ⍰ cold approach / targeted socialization
- Extroverted ⍰ house parties / bars

Clubs are terrible for introverts and below-average-looking men

Target Women Who Value You

Some traits may make you higher value to specific women.

⍰ Examples:

- An Italian player met women by Italian language schools (he got their schedules)
- Middle Eastern guy attends pro-Palestinian rallies to meet sympathetic women
- ⍰⍰♂ Well-dressed guy (me) meets women in fashion streets

5. Use Your Money (Wisely)

Money matters more for long-term and committed relationships.

⚠ Money Making Up For Looks

.! ⍰ Using money well requires strategy & power skills!

Look for:

- Conservative women
  - Family-oriented
- Security-looking women
- Long-term oriented women

- ⚠ Low-status women <— ♟ Ensure you're more than just a social climbing tool
- ⚠ Luxury lovers <— ♟ Ensure you lead & control your spending

Except for luxury lovers, they're often in conservative, poorer, and smaller towns.

Money & Geography

As *The Oxford Handbook* suggests, poorer countries' culture places a premium on wealth.
And as Sacco summarizes in *The Cambridge Handbook on Sexual Psychology*, there may be a tradeoff. Such as, higher status women prefer indicators of genetic quality, while poorer women prefer high status men.

In brief: a Westerner's average income takes him much farther in poorer countries.

⍰♂Lucio's Take: **provide for a partner, not extended families**

Lucio:
I saw families in developing countries bringing their attractive daughters to upscale malls looking for wealthy-looking foreigners.
It was interesting, and a bit sad.

⚠ Ensure you remain in charge.
Meet her 1:1, ber careful if her family is involved, or negotiate a convenient arrangement. Lead the exchange, and ensure it's you and her first. Don't let the family dictate.

Money For Effective Dating

- **Create *experiences* with your dating**, lead her into a world of possibilities to mix the best of both worlds
- **Get a VIP table and send others to invite girls** for you

Money For Family-Formation

One can:

- Have family in a poorer country with a family-oriented woman
- Co-parent in a poorer country
- Pay a surrogate mother to have children

Careful With 'Build It & Women Will Come'

Money *complements* skills.
Avoid using it to make up for personal qualities and personal development or you will only attract superficial women.

In general, chasing money to 'date well once rich' is a poor strategy for many Westerners, trading the certitude of their present best years for future uncertain results.

Avoid the 'hustle approach' in well-off countries

As Godhsee argues, socialist policies empower women financially and decrease the need for both wealth, and a male provider.

Principle:

The more distributed wealth, the less money matters
 De-prioritize money to date in wealthy countries

Northern Europe, wealthy and redistributive, is the worst for the 'hustle strategy'.

6. Find Your Niche

Observe what most men pursue -and *whether they're successful*-.

Chances are that popular niches are overcrowded.

For example, most men still go for the provider role. So the 'dinner at an OK restaurant and sell your dependability'

may be over-supplied.

Fit Your Favorite Underrepresented Niche

Best mix:

- You like the niche
- The niche is under-supplied
- You like the girls who like your niche of choice

🤔Lucio's Take: **Here's the 'beta' who out-slept the alphas**

Lucio:
Most ambitious men went for 'alpha' group status, muscles, flashy cars, dominance, and embracing conservative ideologies.

Meanwhile, the guy they'd call a 'beta'—short, scrawny, carless, and warm to women on first approach—was out-dating them all.

My stylish player niche, vibing and understanding women with a solid base of power skills was a 'blue ocean' of opportunity.

Remember: strategy beats dominance.

For some inspiration see:

- Seducer types: find your niche

> 10 Types of Male Seducers: Pick Your Niche!

7. Time Your Dating

Some authors shared a sexual market value chart plotting age and gender:

Although the char above gained early popularity, it's now getting clear that it lacks nuances and can be misleading.

For example, it may be true for some men to 'peak' at around 36. But that 'peak' doesn't directly translate to 'peak dating options' for women at *their* (supposed) peak.

Instead, proximity (e.g., college, work, or social circles), similarity of interest, and Western modern culture generally mean that sub-25 women date men in their 20's.

Luckily, you don't exactly need a sub-25.
But to maximize your dating, it's best not to wait around hoping you'll become an Adonis in your mid-30's :).

Hence, to maximize age for most men:

- **Teens**: whatever happened happened :)
- **College**: party & hookups -be safe! Always use protection-
- **20's**: date around, learn through quantity
- **Early 30's**: increase standards
- **Mid 30's**: look for a quality woman (if you wish to settle down)

We share specific examples and techniques in our dating program.

8. Boost Your Preselection

Attraction is socially influenced.

Some tips:

- **Curate online profiles**, including attractive women
- **Befriend attractive women** and go out with them
- **Show pictures with attractive women** that are relevant to a story/experience
- **Share stories** involving:
  - Exes
  - Suitors

- Gay men making a move

Rationale

Attraction is not simply what *she* likes but, in large part, also what *other* women seem to like.

Why?

First of all, it's a shortcut and the brain loves shortcuts.

Second, from a genetic point of view, she prefers offspring that can easily find a mate to procreate.
And what many other women like trumps what one woman prefers -even if that one woman is her-.

This means that attraction is not highly objective but, in part, it's also a social construct. And that's why **female attraction is social and influenced by what other people (especially women) like**.

But since she can only judge what she sees, the same guy could a catch one night if he's flirting with two attractive woman, or a nobody if he's sitting alone.

9. Date The Right Women

For short-term, you're free to go after 'unrestricted women'.

But for long term:

First-Mover Advantage

Some women never dated around and they can make for perfect girlfriend materials.
For example:

- **First visiting the big city**, you'll find them sightseeing and shopping, looking lost and wonderous
- **Dating apps in travel mode**, swiping in small towns
- **Day game**, demure and conservatively dressed
- **Working behind the counter**, in low-visibility jobs

Go For Hidden Gems

Most men go for the showiest women.

Examples:

Dressed in miniskirts, went out alone, and sought followers with ‘thirst traps’.
She was often approached.

But:

Author's life example for alumni's

Dressed well but conservatively, only partied with boyfriends, kept a low profile in life and social media -panorama pictures, private profiles, and no 'sexy poses'.
She had never been approached.

Wish I could show you the picture, but to my taste, the second was also far more attractive.

Ignore the flash, and focus on attractive women with understated styles.

10. Keep Going: It's a Numbers Game

You heard them:

Women want 6 feet, women want money, women want status, women want confidence, and bla bla bla.

And they're all true.
But still, the only hard rule in dating is that **every rule has exceptions and exceptional men break them.**

Take height, one of the most universal women's preferences.
I had taller women approaching me -or calling me in tears to get back-.

And the best way to break rules is to work on yourself, and put the law of the large number working for you.
And getting Power University will also likely help you :).

For more on exceptions, see:

> ExceptionAL Dating: How to Succeed Despite Shortcomings

Bonus: The Ultimate Hack

The ultimate hack TRANSCENDS dating for good.

It gives you ULTIMATE UNNEEDINESS.

No, it's not a fake BS tool.
It's for real.

I'm just shocked at how few guys realized it.

Which is also why it's so good :).

We're just not yet ready to share it publicly.

⍰ This is a preview from Power University. Our alumni stated that they became 7 times more attractive to women⍰

Power University: Evolution & Version History

Lucio Buffalmano · 30 November 2019 · Archived copy · Original

Power University is a long-term, research-driven program.
It is not static, and it is not a one-time release.

Since launch, the course has been repeatedly upgraded to improve:

- Conceptual clarity
- Real-world effectiveness
- Scientific precision
- Learning structure and sequencing
- Practical examples

Each version reflects new insights gathered from:

- Student results, coaching, and feedback
- Ongoing academic research and primary literature reviews
- Real-world experience

Power University remains a living system — continuously refined to remain the **most complete and effective curriculum for understanding and applying power dynamics in real life.**

This page documents the evolution of Power University over time, including the rationale behind the updates.

- **Current version**: 9.2
  - Upgrade 10 underway

Contents

- 9.0. Update: 20% more wisdom, 3x faster
  - 9.1. Update
  - 9.2. Update
- 8.0 Core Update (Structure & Organization)
  - Structural & Organizational Update
  - Content Updates & Upgrades
  - 8.1. New Lessons & Improvements
- 7.0 Core Update
  - 7.2. Various Smaller Updates
- 6.0 Core Update
  - 6.2. Strategies of Power
- 5.0 Core Update (Career Strategies)
- 4.0. Core Update (Basics of Power)
  - 4.1. Workplace Self-assessment
- 3.0. Core Update (Dating)

- 3.1 Update (Quizzes)

9.0. Update: 20% more wisdom, 3x faster

Date: March 2024 – March 2025

9.1. Update

Date: March 2025 – October 2025

- **Exercises** to all key lessons
- **Upgrading** of all lessons, following the lessons learned from the later stage of 9.0 upgrade
  - Leveraging AI for better structure and delivery
- **Curriculum restructure** focused on the core competencies

9.2. Update

Date: April 2026 – May 2026

This upgrade sharpens PU's focus on **practical skills, strategy, and self-defense** around Dark Triad traits and manipulation.
We added a **research-based synthesis** and removed less actionable content—making PU faster and higher ROI for agentic men.

⍰ Dark Triad Edge
A research-backed synthesis of narcissism, Machiavellianism, and psychopathy—translated into **practical strategies and skill-building exercises**.

⍰ Dating Strategies
A high-level approach to achieving dating goals with the highest possible ROI, sometimes without even dating at all.

➖ Machiavellianism
Removed as a standalone lesson: valuable, but more introductory and less actionable.

➖ Gaslighting
Removed from the core curriculum; kept as an **optional (recommended) resource** for self-defense and red-flag detection.

✨ Strategic Thinking (Skill)
Upgraded for clearer application and real-world execution.

8.0 Core Update (Structure & Organization)

Date: 11 June 2022 – 10 July 2022

Structural & Organizational Update

We addressed first and foremost the structure and organization to take full advantage of the new course learning management system.

While the older system only had modules -> lessons, the new learning management system had modules -> lessons -> topics.

Because we wanted to avoid a proliferation of lessons with the older system, lessons we much longer. And because we have too much great and groundbreaking content, some techniques and examples had to be fitted into the "closest matching lesson". The downside is that this led to very long lessons, and a poorer match between lesson titles, and content.

In the new system, the topics are nested under the lessons in a drop-down menu, keeping the front end sleek, compact, and easy to navigate.
So taking advantage of the better technology we re-organized the content with the following benefits:

- **Shorter lessons for faster and easier consumption**: no more intimidating lessons of 8.000 words requiring 2-3 hours to go through. Now whenever you have half an hour free, you can do one more lesson.

- **One lesson, one topic** (higher semantic relevancy between titles and content): you can read a lesson's title and know exactly what's inside. It's not just a cosmetic change, since when you prepare your mind for a certain topic, you're also better able to internalize that content.
  Furthermore, it makes it easier to go back to PU and find exactly what you were looking for

- **"Prioritization Tags" for maximum efficiency** ("optional", "advanced", "theory", "foundational", etc.): with higher granularity, we could mark what's "foundational", "advanced", or "nice to have" but not necessary.
  This way, if you are in a hurry and fully internalized, you can skip the "OPTIONAL" lessons.
  More beginner students may also keep the advanced lessons for after they've finished PU -or go faster through them to get an idea, without getting discouraged if it sounds too complex-.
  Either way, more options and empowerment, and a more efficient learning experience.

- Ordered lessons: PU was already ordered from most basic to more advanced, but with the option of higher granularity, not each module is also better ordered, going from:
  - "Most foundational" to "optional": mindsets -> high-level strategies -> techniques -> examples
  - "Simplest" to "most advanced": foundational -> basic -> advanced

- **Dedicated lessons for examples & case studies**: we could also separate the mindsets, strategies, and techniques, from some of the examples and case studies that show and *apply* those concepts.
  We believe that examples and case studies are incredibly helpful, but if you want to focus on the "main meat", now you have the option to skip the case studies.

- **Lessons for positive behavior to emulate, and negative behavior to learn and defend from, but not to emulate**: to gain more immediate clarity, in some cases we broke up lessons for examples of dominant behavior that is too dominant, disempowering, and hence often ineffective, and "high-power" but effective.
  For example, the lesson on dominant archetypes now differentiates between "positive archetypes" and "not-so-good ones that you want to learn from and defend from, but not necessarily to mold and emulate"

Content Updates & Upgrades

Albeit the main goal was a structural re-organization, we also had plenty more great content that we picked up from various studies, life experiences, video examples, and of course, our forum and community.

Some of the content upgrade includes:

High-Value Socialization

Formerly called "social exchange":

- **Advanced rules**: separated it from the previous, longer main lesson on social exchanges, and added several examples and case studies

- **How to recognize the takers**: how to exactly spot the “takers” that you want to avoid

Power 101

- **Covert Frames**

Several new examples of covert power moves, including solutions and best techniques.

- **Power tests**: an important new concept in the “introductions” lesson on how some people test others early on for what they can get away with, including how to ace those tests

Frames

Broken up into more lessons, starting from mindsets and highest-level strategies to the techniques.
Now each major technique is a separate topic.
And we added a sub-section specifically for self-defense, which is what most people are interested in.

Plenty more examples and case studies, including:

- **Keep your grenade technique**: the approach was already in PU, but too hidden. It needed its own technique name and definition, which we now have

Dating & Seduction

We slimmed down this module and maintained, but also importantly improved the foundations.

The reasons are two-fold: we want to keep Power Univeristy compact and streamlined, and we now have Seduction University focusing on dating and seduction.

- **Foundational Power Principles of Dating**
- **Power Levers of Effective Dating** (and how to use them)

Leveling Up

New module for better granularity.
It includes:

- **4 case studies for socially challenging situations**: a new interesting case study on how to handle a group that is laughing *at you*

Power Tech

This is where a lot of the new golden nuggets entered PU, including:

- **Stock responses for unexpected requests**:
- **Stock responses and techniques for tasking and orders**:
- **Easy responses for EVERY SITUATION**:
- **How to apologize and maintain power**:
- **Power protecting**: an all-important concept that was scattered all over PU but that finally finds its own lesson with its own approaches and techniques

Machiavellianism

Turned into its own module as I come to think that this is the pinnacle of strategic thinking and living.

Many of the previous lessons, especially the social exchange, provide the foundations upon which Machiavellianism is built.

Broken up the lessons to make them briefer and easier to consume, and added many concepts, examples, and case studies all across the lessons.

8.1. New Lessons & Improvements

Upgrade to Foundational Strategies of Social Success

With a new infographic, better and more descriptive titles.

New Lessons

- **"Be straight"** a new foundational social approach, also similar to the "eagle concept" and long overdue
  - "Be straight examples"
- **Growth mindset power dynamics & strategies**
- **"Negotiating authority"**, is a new example of optimizing your behavior and power to better influence others
- **How to make friends** and acquire and maintain high status
- **How to power protect**
- **Gaslighting**, a fundamental lesson to better understand manipulation and manipulators, and how to handle them

New Concepts

- **Sliding scale of power** as a new foundational concept of social power dynamics

New Examples & Case Studies

And improved examples and case studies –including a real-life audio example from Lucio on how to assertively draw boundaries, how to handle socially difficult situations as in "people laughing at you", covert power moves 4 new examples, and new uses of passive-aggression-.

Plus, new and/or better links for "those who want more" and infographics

7.0 Core Update

Date: July 2021 – October 2021

New Course Infrastructure (Learning Management System)

The new course improves the user experience and adds new features such as:

- Better structure
- **Assignments**: at the end of each important module or lesson there are now assignments to help students follow through

New Lessons Structured Started

The new concept is to break up lessons into smaller chunks, rather than having very long lessons.

Power 101:

- **7 Charts to learn & strategize for social exchanges**: a new lesson to better understand social exchanges and

value

Social Skills – Advanced:

- **Basics of Social Power Dynamics**: this is a new, foundational overview, of social power dynamics. It introduces many basic and foundational concepts that will help you understand -and retain & acquire- power

Frame Control Strategies:

Expanded and more comprehensive module.
And a new structure and layout that will help you learn and improve your frame control:

Leadership

- **Leadership power dynamics**: new groundbreaking lesson on the basics of leadership power dynamics

Dating Module

Re-upgraded it all as Seduction University launched, so every single lesson improved with more real-life examples and practical strategies/techniques.

- **Foundations of dating dynamics**: with the new concept of "straight-line dating"

Bonuses

- **Machiavellianism**: new groundbreaking lesson on how to become more Machiavellian, how to think like a Machiavellian and real-life examples of Machiavellianism to internalize the approach

Removed:

- Practical steps to increase your confidence and power: take the best wisdom and examples from it and combine them with the lesson "basic laws of power".
- "From Hello to Babies: Overview of Games & Manipulation": It was too long (6.000 + words) and needed an upgrade. Broken it up into several lessons and put it into "Seduction University"
- 3 quizzes to increase your emotional intelligence: Matthew is working on a specific product on emotional and social intelligence, both of which are supposed to be the more basic precursors to power dynamics. I'd rather have PU focused on power and strategies

7.2. Various Smaller Updates

Date: October 2021 – January 2022

- **Dating module upgrades**: as we launched Seduction University we upgraded and improved the lessons that are shared between the two courses
- **Countless typos, grammar, and sentence improvements**: largely thanks to **Bel** (many thanks man!), who flagged hundreds of typos, grammar, syntax issues, and more
- **Several smaller updates and improvements**: part of which in conjunction with the release of the book "The Social Strategist". As Ali and I went through the editing process, it was also an opportunity to address the parts that are shared between PU and the book
- **Traffic Light System**: to understand and assess social power dynamics

6.0 Core Update

Date: September 2020–December 2020

New Design

The new theme improved the design of the website, and it was especially aimed at improving the design and usability of the course.

This is feedback from an early customer who could compare the two systems:

> My belief turned into reality 2 days ago.
> I came across your latest updates to the Power University. The user interface is so amazing now! It is so much more pleasing to the Eye! now It feels so amazing to navigate through the lessons! I have sat through and completed more lessons in the last two days, than the last 1 year combined!
> I love It!

It's a public post, so you can also read or comment on it here.

New Structure:

The most foundational lessons are now in the intro.

I've noticed too many enter the course thinking "I must be high-power/dominant" without fully appreciating the importance of alliances and the drawbacks of overpowering people.

So now they get those crucial lessons first thing.

The social skills module now comes before social power dynamics.
That makes more sense from a learning progression point of view.

Basics:

- **Social exchanges**: new lesson added. This is a foundational lesson for understanding social dynamics and for some of the most important strategies for social success

Power Dynamics:

- **2 new dominance styles**: in the lesson "Archetypes of Dominance", added the "status inflater" and the "easy life man"
- **Body language of dominance**: added a "mindset" for a high-power walk
- **Assertiveness quiz**: 3 questions to give people a feel of how to strike an assertive balance between submission, assertion, and aggression

Social Skills: Advanced

- **Social exchange quiz**: 9 questions drawing from very different social scenarios. Includes analysis and strategic thinking. The goal is to help people internalize the basic rules of effective and successful socialization
- **Assertiveness**: a much-needed field guide to assertiveness Including, of course, how to be assertive AND high-power (the two overlap but are not always the same)
- **Introduction power dynamics**: 2 new cases studies—one turned into a quiz—together with strategic thinking on how to handle the aggressive openers
- **Microaggressions & calibration**: new lesson on calibration and handling all the smaller daily power moves. It replaced the former lesson "dealing with mean jokes", and it's both more advanced as well as better at tackling

and explaining the basics

- **Covert power moves – quiz**: new quiz to help you level up your skills in reading covert power moves and more subtle power dynamics, including strategies for dealing with them. The example is from dating, but principles apply to all socialization.
- **Manipulation**: a brand new lesson on this very important aspect of social dynamics. How manipulation works, the strategies, how to defend oneself, and how to integrate manipulation into your social strategies.

Frame Control Strategies: New Module

Since frame control is so important, as well as so misunderstood, I dedicated a whole module to it.

- **Frames 101**: two new paragraphs on:
  - Mindsets and belief of frame control
  - "Frame cementing" technique, a super powerful tool of persuasion ju-jitsu
- **Quiz – frame analysis**: a new quiz on how to properly analyze frames, including power dynamics and strategies
- **Frame control techniques**: broke it into two lessons, added 2 more techniques ("frame shocking" and "frame stealing"), added more examples, plus general upgrade and improvement.

Relationships Power Dynamics

- **How to maintain power & attraction**: Added one more crucial technique, as well as mindset, together with real-life examples.

Leadership: New Module

- **Leadership 101**: new lesson on basic dynamics, strategies, and mindsets of leadership

Removed:

To keep Power University as optimized as possible, I have removed some lessons or quizzes.
Worry not, the overall quality has gone up, and you can still find the best from these lessons:

- Dealing with mean jokes: there is a similar free post, and the lesson on microaggressions and calibration better covers this topic, too
- Case study – Johnny Depp: an interesting breakdown, but there is far better now on PU to help you internalize high-power behaviors
- Dealing with cold-blooded dominant men: it's now an add-on in the private forums
- Workplace warfare: there is a similar post now. Warfare is rare, and you better avoid it than engage, so this wasn't a core lesson
- Handling rejections with power: there is a similar public post now
- World's lies & manipulations – the systemic games people play: I will later turn this one into a public post. In PU, it will soon be replaced by a far better overview of manipulation.
- Genders & culture – different approaches to power: people are more similar than they are different, and focusing on commonalities is a better strategy for both learning and success. There is enough about gender differences in the course, and more practical. PU is ultimately about practical strategies, and this lesson was too theoretical.
- Verbal judo – handling slights and personal attacks: an interesting lesson, I'm considering upgrading it and putting it back. But as of now, the frame control module better covers this topic, and engaging in verbal slights is something that high-power, high-quality folks rarely do
- Dominant verbal bullying – Jamie Dimon quiz: too specific, not enough added value. To get into PU, it's either

something is a 9 or 10 in added value, or it's out

6.2. Strategies of Power

Date: January 2021

- **Fundamental strategies of power:** New example with the mafia; going a bit deeper into the dangers of collaborations; added a new approach/mindset called "high-collaboration, high-paranoia".

5.0 Core Update (Career Strategies)

Date: December 2019 – May 2020

Across these months, I have focused on learning and researching as much as possible on workplace power dynamics and career strategies.

The result has been a complete overhaul of the career section. Not anymore just about power dynamics, but about career strategies. Hence the new name.

Part of the update:

- **Women winning in business**: 2 lessons for women to learn how to adapt and thrive in what's still a male world
- **Career success strategies**: proven strategies to help you advance in your career
- **Boss management**: how to establish a boss relationship that helps you advance in your career
- **Effective self-promotion**: including Machiavellian strategies
- **Enlightened business culture**: for founders and bosses who want to establish cultures that nourish great relationships and effective action
- **Political landmines**: common mistakes you need to be aware of
- **Exec soft-skills & how to convey power**: this is the equivalent of the "how to convey power" lessons in the first module, but tailored to the workplace
- **Bonuses**: excel tools to keep track of your network and self-assessment quizzes

Social Skills

- **Frame control expansion**: I realized that frames and frame control are hugely important topics to help students master social interactions.
  So now there are 3 lessons on frame: a basic one, a lesson on techniques with lots of examples, and a lesson on mindset.
  Soon, a quiz on frames will follow

(Removed) ~~Women Sections~~ (Removed)

The section for women addressed feedback of PU being too male-centric:

The Power Moves Feb 9, 2020, 11:32 AM

Hello K, I have already issued your refund. If you have a feedback for me, I will be happy to h

K .com> Feb 9, 2020, 12:19 PM

to The

Hi Luke

Thank you for your reply, wish there were more female examples of power 90% of the examples were men so as a female felt alienated

Know that there is one section that goes over woman in business that happens week 3 or 4 , however it is

This is what she went on to say:

> Was hoping to see more examples of strong woman in power for the videos and how woman wield power in general as it is a resource severely lacking in the market.
>
> Read a lot of resources such as: Secrets of Six figure woman, and break your own rules - address many psychological traps that a female has to address before even beginning to thinking about body language,

Kristina had a great point.
There **is no such resource to teach women how to strategically handle power and success while still remaining likable and feminine**.

We researched for months about women and power.
I got the books she suggested, plus more, an delved into the research literature for women and power, and women in the workplace.
I recalled all instances of powerful women I've met, and I scoured movies and YouTube for real-life examples.

And I condensed all that knowledge into a few lessons tailored for women only.

Edit: From PU 9.0 we decided to focus on men only, and the 'lessons for women' have been dropped from the latest curriculum.

4.0. Core Update (Basics of Power)

Date: January 2020

Based on the questions I received, I realized that people would benefit from the basics a bit more.
And this is what this update did: it added two lessons about the basic strategies of power.

Basics of Power

- **The Fundamental Life Strategies of Power**: New lesson on basic strategies and mindsets to help people be the most

Social Skills

- **Warmth & Power**: New lesson on warmth and power, the two dimensions people first assess when judging others
- **Frame Control**: New lesson on how to control frames

Relationships

- **What games is she playing**: added one quiz on manipulative techniques

4.1. Workplace Self-assessment

Date: February 2020

- **Quiz for women's self-assessment**: I added one quiz based on Lois Frankel's work
- **Dating as provider examples**: I added a couple of screenshots to provide more examples of how to date effectively as a provider

3.0. Core Update (Dating)

Date: November 20–30, 2019

Overview: The 3.0 update focused mainly on the dating and seduction section but provided an upgrade throughout the whole course.

Basics of Power

- **Social inflaters**: a new lesson tackling the phenomenon of those who pretend to be of higher status than you are, Teaches how to recognize them and how to deal with them
- **"Belly first dominant walk"**: added the "belly first" style of dominant walk, together with a video reference

Workplace Power

- **Female power**: add a new video example on how to express power with femininity
- Added more examples

Dating & Seduction

Overall, a major general update following a focused study on the best evolutionary psychology resources

- **Sexual market value**: new lesson
- **What influences your SMV**: new lesson with practical suggestions
- **Mating strategies**: new lesson, spin-off from the first lesson, and more in-depth
- **Mathematical way of finding your partner**: new bonus lesson for those who want to settle down

Relationship Power Dynamics

- **Games of chicken**: added threats of violence

Sticky Social Situations

- **De-escalation techniques**: new lesson, spun off from the general overview and added more examples and techniques
- **Handling mistakes**: new lesson, spun off from "the list lesson", improved and added more video examples

Bonuses

Social finessing, previously one big lesson consisting of quick "power pills" to help people improve their EI, is now 3 different lessons:

- **Power**: new lesson with more examples

- **Persuasion**: new lesson with more examples
- **Social Intelligence**: new lesson with more examples

3.1 Update (Quizzes)

Version 3.1. saw a few aesthetics updates and two new quizzes for male self-assessment:

- Provider/lover strategy: this quiz helps men to self-assess if they might be more suited for a provider or a lover strategy
- Short-term or long-term: this quiz helps men self-assess what they actually prefer and decide when it's time to settle down (based on Geoffrey Miller's work)

Power University: Research-Based Foundations for Social Power

Lucio Buffalmano · 4 December 2019 · Archived copy · Original

Power University is built on one of the most extensive research bases in the self-development field. Lucio Buffalmano has studied and synthesized hundreds of books and thousands of peer-reviewed papers across psychology, sociology, and behavioral science—and tested their insights in the real world.

The result is a practical, research-backed system that shows what truly works to build power and success across life's most important domains: **social dynamics, dating, relationships, and career**.

Rather than publishing an endless list of resources—which would be incomplete and quickly outdated—Power University distills the core principles and techniques that consistently deliver results. Many of these books and scientific handbooks are also **critically reviewed on The Power Moves website**, so readers can explore the foundations themselves. This ensures the focus stays on what matters: proven strategies that give students a measurable edge in real life.

Contents

- The Research Foundation
- Three-Pillar Approach
- Resources

The Research Foundation

Representative influences include:

- **Scientific handbooks** on psychology, social behavior, and communication.
- **Seminal works** on power, persuasion, and human nature.
- **Evolutionary psychology** research on dating and relationships.
- **Case studies** of real-world leaders, negotiators, and entrepreneurs.

Three-Pillar Approach

Our unique blend of **science, field observation, and critical analysis** ensures that every module is grounded in evidence and proven in practice.

Resources

While Power University is built upon an unparalleled foundation of **hundreds of books and thousands of research papers** across psychology, sociology, and behavioral science, we believe that both our focus and our students' focus should remain on implementation, not compilation.

Therefore, we do not provide an exhaustive, manually updated bibliography. All foundational research, specific studies, and key resources that underpin the curriculum are **critically analyzed and seamlessly integrated** into the lessons. This ensures the student receives only the distilled, proven techniques that have been tested and synthesized by power expert Lucio Buffalmano. The result is a system of knowledge that is **always current, highly effective, and entirely focused on real-world results.**

> **Lucio**: We stopped publishing the full list of Power University resources. The knowledge base is simply too

> vast to keep a running catalog, and maintaining one would drain time better spent improving the program itself. Our focus is on delivering the most value—distilling the research into practical strategies that work in real life.

How to Stop Cockblockers (For Good)

Lucio Buffalmano · 6 December 2019 · Archived copy · Original

If you are out meeting women, you will eventually stumble into cockblockers.

What is a cockblocker?
The power dynamics dictionary defines it as:

> Cockblocking is the action, behavior or intent, from a woman or from another man, to prevent a man from interacting, seducing, or sleeping with a woman.

After reading this article, you will fix the cockblock problem for good, no matter what type of cockblocker you are facing.

That great friend who doesn't know when it's time to leave
These are nine steps to handle cockblocking for good:

Contents

- #1. Focus on Becoming a High-Value Man
- #2. Move The Girl to More Private Settings
- #3. Learn Power Dynamics & Make Cockblockers Fear You
- #4. Only Focus On Your Best 20% of Interactions
- #5. Turn Potential Cockblockers Into Friends & Allies
- #6. Ignore The Cockblocker and Empower Your Girl to Choose You
- #7. Tell Her to Handle the Cockblock For You
- #8. Go "Under The Radar"
- #9. Leave Her to The Cockblock: Let Her Realize How Much Better You Are
- Why Sometimes It's Not Your Fault

- When to Ignore & When to Engage the Cockblocker
- How to Engage The Cockblocker

- Cockblocker Power Moves
  - The Power Dynamics of Cockblockers
  - Summary

#1. Focus on Becoming a High-Value Man

Cockblockers are less likely to meddle when you look like a high-value man.

Women *want* to interact with high-value men, and **people don't usually cockblock high-quality men that women are happily engaging with**.

The movie Hitch has one good example.
It's his low status and his poor handling of the situation that invite the cockblocker:

Cockblocking an inept man can be an opportunity to start an interaction, BTW

When you're a high-value man, only extremely jealous cockblockers will meddle, and that's because they don't mind losing social points as long as you also lose.
Basically, these cockblockers are the equivalent of a social suicide mission: they look like jealous idiots, but they will foil your plans, and you won't get the girl, either.

Also, read more on seducers' styles and attitudes:

> 10 Types of Male Seducers: Pick Your Niche!

#2. Move The Girl to More Private Settings

If you two like each other, move her somewhere more secluded.

Cockblockers have an easier time if you remain in networking environments or in high-traffic zones.

But if you sit down or move somewhere secluded, then cockblockers cannot come and butt in.
This is truly the simplest and most effective technique.
And that's what good seduction is about: moving the interaction towards higher intimacy.

Even just moving outside of a bar or club is enough.
Or in the smoking areas, too.

#3. Learn Power Dynamics & Make Cockblockers Fear You

Who is easy to cockblock?

The man who doesn't know how to defend against cockblocking.
It's when you look socially uncalibrated that other jealous men will think they can interrupt you with no repercussions.

Preventing cockblocking is not much unlike avoiding street mugging in a way: don't look like easy prey, and people won't assault you.

But if they can see you're a socially-skilled individual, they know you can make them look for the annoying cockblockers they are.
Even suicide-mission cockblocking from White Knight orbiters will decrease when they fear you.

Of course, fear is not just social, it can also be physical.
Size also helps here.
Hitting the gym will help to make you a more menacing figure that people will not want to cross.

Imposing and aggressive-looking men are cockblocked less (by other men, at least)
Equally helpful is a reputation, an image, or a network of friends who suggest that you can retaliate at will.
However, I don't recommend you focus on physical threats to avoid cockblocking: it's not an effective way of getting results in seduction.

#4. Only Focus On Your Best 20% of Interactions

Yes, the good Pareto Law works on cockblockers as well.

If you focus on the best 20% of interactions, it means you only stay in interactions with great chemistry.
In those interactions, the girl also likes you.

People will see that she's having a good time and that there is no reason for cockblocking.
And if someone still tries to, she will be there to help you fend them off.

#5. Turn Potential Cockblockers Into Friends & Allies

This strategy is pre-emptive.

And it's based on the idea that if her friends like you, they are less likely to cockblock you.

It's not always true, but it's true more often than not, and since life is about increasing the odds of success, she is warm and social toward her friends.

Don't go overboard here and remember that you are there for the girl you like.
But if you meet her with her friends around or if one of them happens to come and say hi, do show some warmth.
Say hi, smile, and as you say "nice meeting you," flash your eyebrows upwards, which is a nonverbal indicator of friendliness.

When the girl you like is putting her contact information on your phone, that's also a perfect time to crack a couple

of jokes with her friend.
That way, she won't say anything bad after you're gone.

#6. Ignore The Cockblocker and Empower Your Girl to Choose You

This is the gold standard of anti-cockblocking strategies:

Having *her* handle the cockblock for you.
Women will not always do it because it requires social power and leadership, but you can prod them in that direction.

See here how you can do just that (I use the worst-case scenario of a friend physically grabbing her):

> **You:** Wow, congratulations! And what…
> **Friend:** (grabs her arm) Let's go Kristi
> **You:** (pull her back on your side, raise your voice) Wait! (lowers voice again) It looks like your friend is trying to pull you away. (optional: turn towards friend, give a smirk, raise your eyebrows and say "hi by the way") I was having a good time with you, stay for a few more minutes **Girl:** Yes, (to friend) Angela, we're good.
> **Friend:** You good?
> **Girl:** Yeah, yeah, we're good

You want to make the grab more physical and less about raising your voice with "wait", which looks more dominant.

Act quickly, but try to be smooth: knee-jerk motions make you seem like you're panicking and out of control.

If you decide to turn towards her friend, that's your small olive branch that will make it more unlikely that an escalation will follow.
Why is that important?
Because **when you escalate against her friends, her friends almost always win,** so always try to avoid escalations.
If the cockblock is not physically pulling her, but only telling her to go away, which is the more likely scenario, it's the same but without the grabbing.

The beauty of this approach is that she deals with the cockblock herself, and **when she deals with the cockblock to stay with you, it's the equivalent of admitting that she likes you and that she wants you to take the interaction to the next level.**
Basically, you turn the cockblock to your advantage.

High-Risk Move: Threaten to end the interaction

A higher risk, higher return response would be to tell her: "shall we say goodbye".
That puts more pressure on her to decide right there and then if she wants to commit to you.
If she stays, it's a stronger indicator that she likes you.

#7. Tell Her to Handle the Cockblock For You

In this version, you ask your girl to handle the cockblocker for you

> **You:** Wow, congratulations! And what…
> **Friend:** (grabs her arm) Let's go Kristi
> **You:** (grab her on your side, raise you voice) Wait! It looks like your friend is trying to pull you away. Could you please tell her you'd like to stay a couple more minutes and you'll join her later

It's important here that you offer her the opportunity to stay a bit longer with you and *still* rejoin her friends later.
You want to avoid making it a question of "me or her".

This is a mistake many men make because *they* would choose a new girl over old friends.
But it's not how most girls think and behave.
We saw it in "sexual marketplace 101": women tend to be conservative. So, unless things are going incredibly well, chances are that if she is forced to choose, she will choose an old friend rather than a new, almost unknown guy.

#8. Go "Under The Radar"

Who's more likely to get cockblocked?

Those who make it the most obvious are trying to pick up a woman.
Double loss if you the woman look like she is resisting you. That makes the cockblock 10 times more likely to intervene—and for good reasons!

See an example from "Menace II Society":

Instead, smooth operators who seem social and flirt more under the radar will be able to peel off with her later on or to surreptitiously exchange numbers nonchalantly.

I've done this several times.
In groups, I exchanged contacts as friends, kept talking while we typed our details, and maybe even exchanged contacts with some of the guys in the groups.
And then I'd go out on dates with the girl.

#9. Leave Her to The Cockblock: Let Her Realize How Much Better You Are

Ready for a risky move?

Leave her right after the cockblock joins.

This is a move I like when:

1. You are in great shape
2. There are different targets around
3. You want to parade your power over her and/or make her chase you

What's the rationale here?

It's that if you two were having a great time, now **you give her space to miss you when you leave her**.
If you two had great chemistry, chances are that she would be shocked and saddened by your departure.
Often, you will even be able to see the effects on her face.

Like in the Hitch scene we mentioned earlier:

Leaving is a high risk, but it can boost your value

If you two were going really well, chances are she wouldn't be able to focus on the cockblocker.
In psychology, there is a name for this phenomenon: the recency effect (Elliot Aronson, 1972), and it happens when the previous attention-grabbing item on the list—you—keeps lingering on in her brain.

Of course, this doesn't work when it's unlikely you will see her again soon (and that's why that Hitch scene, in those circumstances, is a poor strategy).
But it's great stuff for social circles.
And it can work well for parties and events where leaving and joining new groups is a common behavior.
If she approaches you again, it's on. If not, do approach her again later.

Why Sometimes It's Not Your Fault

Prevention is not a 100% guarantee against cockblocking.

Plenty of circumstances can be outside of your control.
For example:

1. She has some bitter friends
2. The alpha female leader of her group is jealous she's talking to you
3. Lots of people bothered her and now her group is protective
4. She had some personal issues recently and her friends are overprotective
5. One of her male orbiters is madly in love with her and will do all kinds of crazy stuff to keep men away

So don't take it too personally if cockblocking sometimes happens: it's part of life.

When to Ignore & When to Engage the Cockblocker

Should you always ignore a cockblocker?

The author of "*How to Make Girls Chase*", recommends you never look away from the woman to engage the cockblocker.

And, generally speaking, ignoring is a good frame control technique for damage control limitation.

That works great if your girl also ignores the cockblocker. When that's the case, you are forming an unspoken alliance, and you are throwing the cockblocker down the bus *together*.
Powerful stuff.

Ignoring the cockblocker does not work as well as if the woman engages the cockblocker, though.
Why not?
Because she broke contact with you and took the lead in the interaction. And she openly spurned your leadership: you ignored, she included.
Now *she* is deciding who to give priority to.
And she decided to put *you* on pause while giving the cockblocker the precedence.

If she quickly dispatches the cockblocker and comes back to you, you're still good, and it's a strong sign she's interested in you.
But if she keeps engaging the cockblocker, then it's terrible news for your seduction: she becomes the leader while at the same time putting you on the back burner.

In that case, you would have been better off if you had taken the lead to deal with the cockblocker.

In sum, this is how you decide:

Do not engage the cockblocker if:

1. You two are already very bonded
2. She's very into you

Basically: you don't engage the cockblocker if you think she won't engage him or if you think she will dispatch him quickly.

Engage the cockblocker if:

1. You're at work networking events where people are there to meet new people (not engaging would look overly aggressive and out of place)
2. You don't have good chemistry yet and she's not engrossed in the convo

3. Your girl seems very happy to meet new people
4. The cockblocker is very close to her

In sum, you engage him if you think she will engage him or if welcoming people is what's expected in the environment you're in (for example, a networking event).

How to Engage The Cockblocker

If ignoring the cockblocker is not possible and you must engage, then you must take ownership of that interaction.

Do it like this:

- **Let him in and lead the dance**

If you decide to let him in, do so from a position of leadership.

That means that you decide how to let him in.
Best of all, don't say anything but open your body language to include him without even saying hi (i.e.: slightly turn towards him, as if to say "I can see you're there").

Don't overdo it: you are just being socially polite because anything else would backfire, and you are *not* shifting priority from the girl you like to the cockblocker.

- **Keep your priority on the girl**

Let the cockblocker in with your body language only and finish what you were saying with your girl before verbally engaging the cockblocker.
If it was her who was speaking, look interested and then somewhat reluctantly turn to the cockblocker when she's finished.

- **Engage the cockblocker at low priority**

You don't want to show more interest and joy in talking to the cockblocker.

Slightly (slightly!) turn towards him to make him part of the group, but DON'T change the subject you were talking about.
If you start asking him "so what about you" you are offering him the stage, and you don't want to do that.

Instead, turn to the cockblocker, quickly look at him to acknowledge him (shake hands if appropriate and possibly introduce your girl), slightly rotate your body towards the new person, and then go back to the girl.

Boom, you just communicated "you're in because we have to, but the sooner you're gone, the better".

- **Keep engaging the girl**

Keep going as if it were a 1:1 conversation between you and your girl.
If the girl likes you, she will follow your lead and show little engagement with the cockblocker. If the cockblocker has any social skills, he will understand and leave.

If your goal was to exchange contacts and you already did so, you can be warmer towards the cockblocker

How do you calibrate your level of warmth?

It depends on these two variables:

1. your goal in the interaction
2. if you have already exchanged contacts.

If you want to keep the interaction going and potentially try to bring her home on that same day, then you should be less social and more aggressive in your interaction.
For example, you choose to ignore the cockblocker.

If your goal was to exchange contacts with the girls and if you've already made plans, you can allow yourself to be warmer toward the cockblocker.
Your job is done there, and you can even use the occasion to leave her on a high and move on.

Cockblocker Power Moves

The worst cockblocking for you is this:

1. He joins the two of you
2. You turn to him
3. He then turns to the girl right away, ignoring you

Why?

Think about what that communicates from a power dynamics perspective.

It communicates that he can get your attention and sidetrack you from your interaction with the woman, which suggests that you either don't like the woman or that you don't have the strength to go for what you want.

Then he cuts you off by moving to the woman, which is the behavior of a higher-status individual compared to you. Ouch…

Example of Poor Cockblocker Control

Here is an example from La Haine.

The black guy was going great… Until he lets in his idiotic, cockblocking friend and lets him take over the interaction:

What a great way of letting down a woman! :(

As a rule of thumb, you are always the leader when you make the first move and introduce your friends.
But you show yourself to be a crappy leader when you let them actively disrespect you and the girls.

If you want to become more socially effective and you have clueless friends, I'm afraid that you must get used to going out without them.

The Power Dynamics of Cockblockers

On average, cockblockers of any kind are good news for her and bad news for him.

They are great news for her because it show she has options, friends, and/or male orbiters.
And it's bad news for him because it shows he must fight the competition.

If a competition ensues, even if he wins it, he will still lose out in terms of the balance of power.
On average, **a cockblocker always tips the balance of power in her favor**.

That's why men who are highly socially skilled will handle cockblockers without looking like they are fighting over her.

Summary

Your best way of avoiding cockblocking is to work on yourself and find a girl you like and who also likes you back.

Focus more on the process of getting you two together than on “fighting” against cockblockers to get her.
The mindset of “having to fight cockblockers” is most often the mindset of men lower in sexual market value, trying to get higher SMV women.

And you don’t want to date in that frame of mind.

Cockblocker Types: Identify & Deal With 9 Cock Blocking Scenarios

Lucio Buffalmano · 6 December 2019 · Archived copy · Original

You already know the basics of how to handle cockblockers, but not all interruptions are created equal. The strategy that works for a clueless friend will fail against an aggressive one-upper—and could sabotage your entire interaction.

This is the definitive guide on the **taxonomy of cockblockers**. We start explaining what exactly is a cockblock, and then break down **9 distinct types.**
Cockblocker range from the Jester to the Power-Aware, and we provide you with the **exact, scenario-specific strategy** needed to identify the threat and secure your interaction without losing status.

What Is A Cockblocker

A **cockblocker** (or **cockblock**) is a person who intentionally or unintentionally interrupts a sexual or romantic pursuit, making it difficult or impossible for the initiator to succeed. This interruption, often called **cock blocking**, can range from a clueless friend delaying a conversation to an aggressive rival actively sabotaging an interaction.

1. The Clueless Friend

First of all, is the clueless friend.

You know the guy.
You are getting along with a girl, you flirt with her; she responds; everything says it’s all about the two of you… But the third wheel just stays there.

How to Deal With This Cockblocker

The clueless friend is easy to handle: you just gotta take the lead and let him know, as directly as it's needed, that "you two", such as "you and the girl", are going somewhere and that you two—you and him—will catch up later (more like another day).

The day after, call him and apologize that you had to do it.
If he's a good buddy, he will understand.

2. The Jester

The jester cockblocker will come in with high energy, crack jokes, ask opinions, and potentially engage in lots of touching with both you and the girl.

These are the sometimes pick-up artists who are following "high energy" models as espoused by early pick-up theory (*Mystery Method*, *The Game*) or RSD-style schools.

How to Deal With This Cockblocker

To handle these cockblockers effectively, you have to form a non-written bond with the girl that says "it's the two of us, enjoying this clown".

When the guy cracks a joke, look at the girl, not at him.
Don't get too drawn in by his stories and jokes. Keep your body pointed towards the girl, and if she does the same, you've got this.

Then keep talking to the girl only, and if she replies looking mostly at you, she's telling you she wants to be alone with you.

If the jester doesn't get it, move her away with an excuse.
You can simply tell her or ask her if she wants to move somewhere else. For example "hey, do you want to go refill a drink" or "hey, shall we go check the dance floor".

If she nods, put a hand on the joker's shoulder and say "alright man, that was fun, pleasure meeting you".

It's also possible to do it the other way around and first tell the jester that it was nice meeting him, then invite the girl to move.
It's very dominant, but it's also more risky, and it gives more of your game away.

You also come across as more defensive while sending a very strong "I like you" signal before she commits to anything.

3. The Teasing One-Upper

This is a specific type of joke that can put most men in a bind.

There is a video on YouTube where a guy named Barron describes this exact situation:

His technique is to go over the top in a joking way.
I disagree with it.

It gives the cockblocker way too much importance and power, and he is following the cockblocker's lead.
When you try to "outdo" the cockblocker, you also end up looking like a social climber, and by now you should know that's far from optimal social behavior.

Where most people trip here is that they feel like they need to answer verbally—or, worse, physically—to the tooling man.
But that's not the case.

Here are two big takeaways for you:

1. You don't need to reply to everyone
2. Not everyone is worth your time and effort

How to Deal With This Cockblocker

Don't engage him.

You don't need to be confrontational about your refusal to engage.
You can even give the cockblocker a slight nod as if to say "I heard you, and I'm acknowledging you (but not going to give you full attention with an actual reply)".

And then you can actually use him to strengthen the bond with the girl.
Like this:

> **Tooler**: Hey man, you trying to pick up this chick, go ahead, ask her out, how's your schedule Jane, this guy's interested
> **You**: (look at him and nod slightly, possibly even smile and say "hey man" then turn to the girl while pointing your finger towards the guy) funny guy here

Why is this move more powerful?

Because it obeys the law of least social effort.
The cockblocker bent out of shape to trip you.

He's trying to get your attention and manipulate you, which is a high-effort behavior (and possibly motivated by fear).
When you try to outdo him, you put in even higher levels of effort.
Not good.

And you forget about the girl.
Terrible.

When you don't engage him instead, you communicate that he's not worthy of your time. *Much* more powerful.

4. The "Are You Two Together" Cockblocker

Have you ever had someone ask a girl you've recently met if you're together?

Handling that question is not easy when you're not (yet) together, but you're interested, and things seem to be going well.

It puts you in a bind: saying yes is possible only if she's dying to be with you. Otherwise, it communicates that you want her so badly while she hasn't decided yet.
And that will sink your chances.

Saying no is slightly demeaning towards her, and it communicates that he's free to intrude.
And if you don't reply, you let the awkward silence linger, which reduces both yours and the girl's social status—but mostly the man's status as he should be the leader—and makes it painfully obvious you are not together.

Which is exactly what happens in this scene from The Breakfast Club:

Sporto is losing the most value because he is the man and he is not taking charge. He is also allowing a bad situation to fester, and women usually blame the man in these cases.
Bender, the "bad boy," is not winning either, but he's managing to destroy the romance between the two.
A better answer by Sporto here would have been to deal with Bender's attack by dealing with his *behavior* or his *motives*, not with his words, which answer within his frame of reference and leave you stuck in a double bind.

How to Deal With This Cockblocker

If a cockblocker barges in and asks the two of you if you are together, you want to answer with something noncommittal, but without saying "you've just met" or anything that sounds demeaning to her.

A good option is to exit that frame and say that the two of you are talking and getting to know each other.
Then move back to the girl and cut him off.

If you two are already close, you can use this occasion to move her away with you.
If you are not yet close, watch how she reacts to your handling of the intrusion, as that will be a great test of how much she likes you.

5. The Fake-Friendly Cockblocker

The friendly cockblocker is insidious.

He leverages our inborn tendency to be friendly to people who are friendly to us (Cialdini, 1984).

However, don't fall for it: he's trying to trick you and ruin your interaction. Sometimes it happens to me with people who use Italian stereotypes in a seemingly friendly way to interrupt my conversation.
Like raising their voice with "ciao bello" and doing some Italian hand gestures.

This *might* seem friendly because they recognize your culture and are giving you lots of attention.
But don't fall for it, it's the opposite of friendly, and they're acting way too dominant if they're interrupting your previous conversation.

How to Deal With This Cockblocker:

A great way to handle this is by acknowledging them with a slight smile, but no more.
Don't follow their high-energy lead, and you will come out of it much stronger.
Then stay focused on the girl.

6. The Socially Aggressive Cockblocker

There are many ways to be aggressive.

For example:

1. Barges in and starts talking without being invited
2. Tells you she is not free
3. Come in and hug her as if to mark territory (even though he's just a friend)

The correct mindset here is that if your girl is still there talking and engaging with you, other men don't have the right to cut you off.

How to Deal With This Cockblocker

Whenever possible, don't engage the cockblocker at all.

Either raise your hand as if to say one minute, or slightly turn your head and say "hey, wait for a minute, man".

Example: the white-knighting cockblocker

Some years ago, I was at a club.

I was talking to a black girl, and she was happy to talk to me.

Suddenly, a big "jealous friend" (or maybe a friend of the guy she was supposedly seeing) butted in in a confrontational way.

I can't recall exactly what he said; it wasn't a quiet environment.
But I turned my head halfway between the girl and him and said loudly and sternly "I'm not talking to you, man".
That stopped him in his tracks, which also suggests that attitude often overthrows size.

Pyrrhic victory, though: that also stopped my interaction with the girl.
The problem with using aggression against aggression is that it will likely sour the interaction.
And it mostly only works with cockblockers who don't know the girl.

If the cockblocker and the girl are friends, it will force her to pick the friend over an unknown guy because sticking with you would ruin their friendship.

And, again, women are conservative and are more likely to pick a guy from their social circle over a stranger.
Social mastery is about using the *least amount of* force possible to get your desired outcome.

Better Strategy: Recruit Her Help

With an aggressive cockblocker who happens to be her friend, I recommend you recruit her help to handle him.

In the example above, you can ask her "do you know him"? If she says yes, then prod her to handle him by saying "All alright, cool, can you tell him it's all good here?".

Move Her Away From The Confrontation

If the cockblcoker doesn't know the girl and you successfully used aggression against aggression, seek to move her right away.

You want to look like you're "protecting her" and want to move away from an unpleasant interaction.
If you stay stuck there, she will likely excuse herself and abandon what looks like a nasty and dangerous environment.

7. The Physically Aggressive Cockblocker

Look at this scene from Scarface:

A mistake many men make here is to think they need to fight for the girl.

That's a typical male mindset applied straight to women.
But since men and women are different, that does not always work well.

There has likely been some physical competition among men for women in our past as a species, but *evolutionary psychology*, together with real-life observation, shows that violence is rarely conducive to seduction or sleeping with girls.

You shouldn't have to fight for a girl who likes you.
And if she didn't like you to begin with, then you're fighting for nothing, and you're better off moving on to a girl who actually likes you.

How to Deal With This Cockblocker:

A better course of action here?

Tell the girl to follow you somewhere quieter.
If she follows you, she wants you.
If not, she might prefer the guy, or she might enjoy seeing men battling for her.

I'm not telling you necessarily to back down, but I am telling you that you are going to lose power vis-à-vis *her*, even if you win against *him*.

Even if you were to win, you'd end up being the powerless one because she just played the "contest game" on you, and that makes her the prize of the relationship.

- What do do when a man hits on your girlfriend?

> How To Deal With Guys Hitting on Your Girlfriend

8. The Power-Aware Cockblocker

This is the rarest breed, and they're potentially the most dangerous.

They come in and ignore you.

Most guys would naturally try to get his attention, and right there and then, they lose.

If a guy ignores you and just talks to the girl, it's paramount that you ignore him as well.

If you try to get a man's attention when he's given you none, you basically acknowledge him as a higher value.
And 99 times out of 100, you're toast.
Avoid laughing at his jokes, too, or you risk looking lower value:

Don't laugh at his jokes, or you risk looking lower-class. Just arch your lips up if it's good, and that's it

How to Deal With This Cockblocker:

What you must do when a man butts in and ignores you is to do the same as he does and only engage the girl.

She will then be the one to choose.

You must be wise about it, though.
Avoid looking like you're vying for her attention, which puts you in the chasing and power-down positions.
If he is trying to get her attention, let him while you avoid over-investing: he is actively devaluing himself.

Talk normally, and if she engages you more and looks at you more often, then get into some slightly more personal topic that will make it obvious this is about you and her.

For example: "*oh I see, I had a similar experience actually, how did it feel for you when…* ".
Alternatively, you can flirt with her.
Touch her arm while saying with a smile "*And I bet you're always flirting with that handsome boss of yours, aren't you*".

If she plays along with you, you are effectively cutting each other out, which is perfect for your seduction.

7 Dating Strategies for Men (Research-Based)

Lucio Buffalmano · 8 December 2019 · Archived copy · Original

There are countless books and courses, not to mention articles all over the net, teaching men how to get women.

A few of those articles and products are based on solid science, though, which can create some confusion.

This article is based on **proven male dating strategies** that have been studied and measured.

We divide each strategy into 4 components:

- **Overview**
- **Manipulative Version**: how it can be used to manipulate women
- **Competition-Busting Version**: how you can use the strategy against the competition ("derogate")
- **Effectiveness**: how effective the mating strategy actually is

So let's start:

Contents

- 1. Acquire & Display Resources
  - Competition-Busting Use
  - Effectiveness
  - Conspicuous Consumption: Throw Money Around to Sleep Around
- 2. Acquire & Display Status & Power
  - Effectiveness

  - Effectiveness

- Maximizing Your Dating Success

1. Acquire & Display Resources

One of the most widespread ones.

Driving expensive cars, buying expensive watches, and wearing a suit are only some of the countless ways men seek to communicate their status and resources.

Competition-Busting Use

Business is built around competition for resources.

Every time you go to work, you go to acquire resources.
And every time you seek to make more money, you are competing for resources.

Men also try to derogate other men's resources by implying they "got lucky" or "cheated".
When men say other men cheated or got lucky, they try to undermine the link between their results (the resources they acquired) and their genes.

If they cheated or got lucky, it means they couldn't replicate the results, don't have the traits necessary to acquire resources, and thus are not going to make good children.

Derogating other men for their availability of resources can be effective in long-term dating, but it's relatively ineffective in short-term dating.

Effectiveness

Yes, resources afford lots of dating power to men.

Steven Pinker says that one of the best predictors of a wife's attractiveness is her husband's income.

Countless studies now show the importance of resources for mating.
Resources are more effective for long-term mating, but they can also help for short-term mating.

Townsend and Levy for example found out that women preferred entering into *both* short-term and long-term relationships with men who were wearing expensive clothes.

And you can also see it in Buss' research.
Women do value resources more for the long term, but also show a strong appreciation for resources in short-term mating:

Table 5
Long-Term Resource Potential: Women's Mate Preferences

Characteristic	Short term *M*	Short term *SD*	Long term *M*	Long term *SD*	*t* tests	γ^a
Has a promising career	1.20	1.20	2.30	0.80	−3.49*	0.78
Has good financial prospects	1.20	1.11	2.60	0.50	−5.09**	1.14
Likely to succeed in profession	1.10	0.97	2.60	0.50	−6.38**	1.42
Likely to earn a lot of money	0.90	0.97	2.10	0.85	−4.86**	1.09
Has a reliable future career	0.40	0.50	2.70	0.47	−15.66**	3.50
Unable to support you financially	−0.70	0.92	−1.30	1.38	3.27*	0.78
Financially poor	−0.64	0.87	−1.36	1.14	4.63**	0.70
Lacks ambition	−0.86	1.05	−2.36	0.81	9.14**	1.38
Uneducated	−1.25	1.06	−2.39	0.81	7.05**	1.06

[a] The effect sizes (γ) are gammas (Howell, 1987). They signify the difference between means in standard deviation units. Cohen (1977) defines effect sizes as *small* if they are 0.20, *medium* if they are 0.50, and *large* if they are 0.80 or greater.
* $p < .01$. ** $p < .001$.

Source: Sexual Strategies Theory, Buss & Schmitt, https://doi.org/10.1037/0033-295X.100.2.204

How men *use* resources can also influence dating, both in the long and short-term.

You can see from Buss & Schmitt research that "stingy" is a bigger turnoff for women in short-term dating than longer-term dating:

Table 4
Immediate Extraction of Resources: Women's Preferences

Characteristic	Short term *M*	Short term *SD*	Long term *M*	Long term *SD*	*t* tests	γ^a
Spends a lot of money on me early on	1.80	1.28	1.20	1.20	2.85*	0.64
Gives me gifts early on	1.80	1.28	1.20	1.11	3.94**	0.88
Has an extravagant lifestyle	1.10	1.33	0.30	1.46	3.56**	0.64
Stingy early on	−1.90	0.72	−1.60	0.68	−2.85*	0.80

[a] The effect sizes (γ) are gammas (Howell, 1987). They signify the difference between means in standard deviation units. Cohen (1977) defines effect sizes as *small* if they are 0.20, *medium* if they are 0.50, and *large* if they are 0.80 or greater.
* $p < .01$. ** $p < .001$.

Source: Sexual Strategies Theory, Buss & Schmitt, https://doi.org/10.1037/0033-295X.100.2.204

Why would women even care about resources for short-term mating?

Well, think about how a taste for resources could have evolved for short-term dating only: even if only a few

women managed to “lockdown” a man with lots of resources, it could have made sense for women to develop a preference for casual sex with wealthy men instead of poor ones.

Conspicuous Consumption: Throw Money Around to Sleep Around

We mentioned that resources can help with short-term mating as well.

Resources are particularly effective in short-term mating when they are so abundant that the man spends like he couldn’t care less…
That’s called “conspicuous consumption” (Thorsten Veblen, 1899), and refers to the flashy display of a vast amount of resources.

Research shows that conspicuous consumption works for the short, but not long-term.
Possibly women know that conspicuous consumers are mostly interested in casual sex and are not easy to tie down.

Most Men Use Resources Together With Commitment And Support

Most men, though, don’t have a vast amount of resources.

And that’s why most men use resources for long-term mating, promising to make those resources available to a single woman, along with their devotion and support.
Enter, commitment (third item on this list).

2. Acquire & Display Status & Power

Power and status overlap with resources, but are not exactly the same.

Robert Wright suggests that since our ancestors could not hoard resources, women might be more viscerally attracted to power than to resources.
Buss suggests the opposite, with power being an indicator of resources.

But for our purposes, it doesn’t matter which came first. Plenty of research shows that women prefer high-status men, both in questionnaire research and in real-world experiments (Gueguen, 2012).

Effectiveness

Very effective.

It can be effective in darker ways, too.
Ask Weinstein:

The “low-power”, turkey-level use of power
Weinstein is an example of using power as an exchange for “opportunities for sex”.

But, of course, it doesn’t have to be abusive.
And most of the time, it’s not.

We hear about the cases of “abuses of power”, but we don’t hear about the countless cases where women are more than happy to sleep with a powerful man.
In my working career, I’ve witnessed more than one example of willing, attractive women sleeping with corporate high-flyers.

3. Display (or Feign) Commitment

Men demonstrate their willingness to commit in a litany of ways:

- Displaying empathy and understanding (ranked #1 for long-term dating)
- Displaying fidelity (ranked #2 for long-term dating)
- Honesty & openness
  - Acting truthful
  - Communicating feelings to her directly and openly
  - “Being oneself”
- Displays of kindness
- Displays of love towards children (La Cerra, 1995) or pets (Tiefferet et. al., 2013)
- Signals that he’s willing to help around the house (Bleske-Rechek, 2006)
- Professing love
- Discussing future plans
- Showing concern for her problems
- Helping her out

- Spending lots of time with her
- Persistence in courtship
- Any signal that says “I am willing to channel resources, time, and effort over the long run”

Men offer commitment in exchange for exclusive sexual access to their reproductive system.
The unwritten exchange is: “I will provide for you and the children, and you only sleep with me”.

Manipulative Version

Women are naturally attuned to paying attention to their level of investment and commitment.

And they’re very attuned to spotting changes over time because the longer the positive signals last, the more difficult it is to fake them.

However, that doesn’t mean that some men aren’t willing to *fake* over a period of time.
Indeed, many men make fake commitments to gain sexual access to a woman, only to “ghost” her after sex.
Or, even worse for her, after she has given birth.

Feigning commitment for sexual access is most widespread in cultures where casual sex is rarer and long-term dating is the norm.

Why so?

Because in more conservative cultures and environments, women deny casual sex to most men, men are “forced” into either committing… Or faking commitment.
That’s why in my experience I’ve seen the “feign commitment” more often from Asian men than European men: European women are more open to casual sex, and men have less of a need to feign commitment.

Fake Honesty & Vulnerability To Display High Value

Some of the most advanced players can use “fake vulnerability and honesty” strategically.

For example, he can talk about a *past* of gallivanting and womanizing.
That sounds like honest disclosure and “coming clean,” while it actually positions him as a high sexual market value player (low SMV guys don’t get lots of sex).
As they share the story, they leave the door open to the possibility of commitment now that they’re finally maturing.

And that’s the woman’s dream: a high-SMV man, a bit of a rascal, who now *might* stop just for her.

If they do it well, the woman will want to rush towards that possibility.

Competition-Busting Use

Denigrating a man’s willingness to invest over the long-term is an effective way to attack a rival for long-term dating (Buss & Schmitt, 1996).

In Buss’ research, disclosing that a man has a serious girlfriend was ranked as the most effective tactic to make a rival less attractive to women (Buss, 2016).

I doubt it’s very effective to denigrate men pursuing casual sex, though.
In my experience, the allure of the “player” can be very attractive for short-term sex.

Effectiveness

NOT if it comes before sex and in libertine cultures.

In very conservative ones, it can work even early on.

But in libertine cultures, only go for it if you want long-term dating, after you've been intimate, and ideally, after she's already shown plenty that she likes and wants you.

The commitment makes a long-term relationship both more likely and more solid.

For most men, commitment is a basic requirement that women demand to enter a relationship.
Few men, either very attractive (high in fitness) or very wealthy (high in resources), can do without commitment and still get sex.

This is what women rank highest as indicators of commitment:

He told her that he really loved her.	5.48	*1.42*
He implied that he was really committed to her.	5.36	*1.15*
He took her to a private or secluded area.	5.36	*1.15*
He told her that he really cared about her deeply.	5.36	*1.29*
He offered to give her a massage.	5.28	*1.06*
He treated her with respect.	5.24	*1.54*
He made her a gourmet meal with wine and candlelight.	5.20	*1.32*
He invited her to go to a hot tub.	5.08	*1.53*
He invited her to his house/room/apartment.	5.04	*1.10*
He invited her over for a romantic dinner.	5.04	*1.14*
He talked her into having sex with him.	5.04	*2.31*
He got her to drink a lot of alcohol.	5.00	*1.29*
He told her he didn't do "one-night stands" because he liked relationships that lasted.	4.96	*1.27*
He lavished attention on her.	4.96	*1.34*
He acted genuinely caring and kind.	4.96	*1.43*
He started to undress her.	4.96	*1.57*

Note: For all means, 1 means the act is very likely to be ineffective, 4 means the act is likely to be moderately effective, and 7 means the act is very likely to be effective.

Source: David Buss, https://doi.org/10.1080/00224499409551752
From the chart above, notice the potential bombshell that is "he told her he didn't like one-night stands because he liked relationships that lasted".
There is a lot of potential there for getting her to fantasize about a relationship with him.

Honest communication Effectiveness

Honest communication and displays of vulnerability can be attractive to women, as they suggest the man is "being himself" and "honestly opening up" to her.

That's why I recommend men listen more than they talk but also open up (strategically) during conversations. Mutual "opening up" contributes to a whirlwind romance that truly sweeps her off her feet (and that leads to physical "opening up" later).

Love & Devotion for LMR

Finally, professing love and devotion can also be used by more unscrupulous men to overcome last-minute resistance to sex when she's still on the fence.

"Conspicuous" Commitment Displays

There is no "conspicuous commitment" in the research literature, so this is my own theory.

Exaggerated displays of courtship can work similarly to very direct openers: they can accelerate the courtship process.
If he's a high-value man and/or if she likes him, it can make women swoon.

See the "perfect lover" Rudolph Valentino, as described by Robert Greene in "*The Art of Seduction*".
And that's why high-effort displays of love can also work on first approaches, for example, "The Notebook":

> **Him**: (Jumps on a moving Ferris wheel to meet her. Then risks his life to get a "yes")

Note: High-in-romance conspicuous commitment strategies work better in cultures with a long-term bias and with romantic women. It fares more poorly in cultures with a strong short-term bias (also see "SMV variables") where it's too high an investment and makes you look too try-hard.
Generally speaking, we wouldn't recommend this as your go-to approach.

4. Display Physical Prowess With Sport Success

Women want healthy and physically strong men—or, at least, stronger than they are-.

Men show their physical strength with:

- Playing competitive sports
- Seeking rewards and victories in their sports
- Seeking prestige roles in team sports (i.e., quarterback or team captain)
- Lifting weights

Physical prowess in almost any physical endeavor is an indicator of both health and higher-than-average fitness.

Competition-Busting Use

There are many layers of competition when it comes to physical prowess.

Winning in sports is one way of showing physical superiority in a controlled and safe environment.
Men also derogate other men's success related to sports, for example by insinuating they are "all brawn and no brain", or that they are using drugs (see an example here).

Physical prowess also feeds into social dominance, with men trying to use size and physical threats to assert dominance over others.
In early pick-up artist parlance, it was referred to as "AMOG-ing" (i.e., "alpha male of the group").

Also see:

- **What's an alpha male** (and how to become one)
- **Alpha male handshake**
- **Alpha male body language**

Effectiveness

On average, athletic men, especially successful ones, have more sexual partners than average.

But doing sports is very effective IF you also gain status and money with your sports activities.

Otherwise, it has little effect if you play at an amateur level, with few real-life downfalls.

When it comes to muscle, there is much variability in women's preferences, so it's not a straight line where "more is always better".

Very thin body types are usually a turn-off, and some studies show that a *moderate* amount of muscle mass is preferred (Frederick, 2007).

4.2. Display Sexual Prowess

Overlapping but independent indicators of physical prowess are displays of *sexual* prowess.

Every man good on the dance floor also alludes to sex, while good music coordination suggests good rhythmicity, which is important to help women achieve orgasms.

Sexual prowess signals don't actually require masculinity.
As a matter of fact, it requires a level of comfort with one's body and a "free-flowing" movement that is rarely found in the most masculine men.

Enter the elegant tango dancers, or the slightly feminized glam rock stars (see more pictures of young Axl Rose).
Look at how Russel Brand, a successful seducer, moves:

Some modern urban seducers specialize in picking-up women by making them horny and sexually attracted and making them feel free to fully express themselves with them.
They can do it with direct sexual communications, hints of sex, or, even better, indirectly with body language.

Look at this guy, for example, who drips sexuality with his moves and attitude.

Effectiveness

This one requires skills.

It can backfire badly and make him look like a pervert if done wrong, -as most men do-.

But it's effective if done well.
More effective for short-term mating than for long-term mating, albeit as we've seen, there is often an overlap between the two.
And it's always easy for high-value men to switch from casual sex to long-term dating if they so wish.

5. Display Self-Confidence & Bravado

Self-confidence is an indicator of status (Barkow, 1989) and past successes.

David Buss says that men with high confidence earn more money and more easily find sex partners, and many men try to appear more assertive and dominant when they are around women they like.

Assertiveness is crucial, so also see:

- **How to be more assertive**

Competition-Busting Use

Men compete for social status.

Self-confidence is extremely useful because it is strongly correlated with social status and power.
And social status and power then lead to mating opportunities.

Bravado has more limited use and is more turkey behavior.
It includes bragging, alpha male posturing, and social climbing.

Effectiveness

Confidence is effective at all times.

Bravado, as in risk-taking, can also be effective in the short term, with research showing that women prefer men who engage in risky behavior (Petraitis, 2014) and even men who have head scars (Burris, 2009).

Table 2 Rotated Factor Loadings Greater than .450 for the First and Second Factors

		Factor 1	
Low-risk option	High-risk option	When done by males	When done by females
Biking along paved bicycle paths	Back-country mountain biking	.686	.692
Training cats and dogs for movies	Training bears and horses for movies	.590	.694
Rock climbing at a health club	Rock climbing in the backcountry	.626	.626
Shallow-water snorkeling at an ocean beach	Deep-sea scuba diving one mile offshore	.688	.543
Being a scientist who studies birds out in the wild	Being a scientist who studies alligators out in the wild	.581	.643
Rollerblading for exercise	Extreme rollerblading (e.g., doing tricks)	.599	.620
Playing "touch" football	Playing "tackle" football	.668	.530
Going to the ocean and swimming 20 feet offshore	Going to the ocean and swimming 200 feet offshore	.523	.658
Delivering packages for the post office	Delivering supplies to soldiers in combat	.533	.636
Washing windows outside strip malls	Washing windows outside high-rise (e.g., 60 story) buildings	.522	.643
Cross-country skiing at a Rocky Mountain resort	Skiing the steepest slopes at a Rocky Mountain resort (e.g., Double Black Diamond slopes)	.511	.646
Swimming across a 150-foot wide pool	Swimming across a 150-foot wide river	.583	.570
Playing slow-pitch softball	Playing fast-pitch baseball	.477	.652
Rowing a boat around a lake	White-water kayaking	.537	.562

Source: https://onlinelibrary.wiley.com/doi/abs/10.1111/jasp.12237

Men must be careful not to overdo the bravado thing, though.
Do it too much, and it's the equivalent of over-investing. It looks like he is strutting around *for her*, and that gives her all the power of choice.

It would be the equivalent of birds dancing around to show off. They might dance well, but the power is still all hers to pick and choose.

Furthermore, in my opinion, bravado is not the most effective strategy because it's indirect.
It aims more at impressing *other men* than actually focusing on the process of advancing a romance *with a woman*.

5.2. Asshole Dating Strategy

You know the "asshole game".

Some men are naturally assholes, while others purposefully seek to be more antisocial and unpleasant in the belief that it will get them more women.

But is it true?

Effectiveness

Well, under certain, limited conditions, it works.

So we need to dig a bit deeper here.

Urbaniak and Killman's study shows that women would pick "nice guys" both for other women and for themselves,

albeit a few women did pick a nice guy for other women and a bad boy for themselves—but still a minority of women.

In a similar study with dating ads, thus mimicking a more realistic long-term dating scenario, it was still kind men who were picked the most.
Or, more precisely, men who exhibited altruism as a courtship display, using keywords such as "I volunteer at a food bank" or "I enjoy helping people".

Age is another factor that comes into play.
Younger women tend to be more infatuated with the image of the rascal bad boy, while older women tend to go more for the stable and mature type.

Viren Swami reaches the conclusion that if the "kind guy" is unconfident and looks like he lets everyone trample him, then the bad boy might be the preferred option.

But if we are talking about a confident man, then the bad boy appeals to a smaller fraction of the population while being unappealing to a much larger one.

The Kind Asshole Strategy

Please note that kindness and "asshole" are not necessarily opposites.

As a matter of fact, I like the mixed "kind asshole" style (for example Seduction University).

Women love it when an otherwise kind and refined guy shows an edge of aggression and anti-sociality directed towards the "real" antisocial (in a way, that's exactly what ThePowerMoves is all about).

6. Display Indicators of Intelligence (Game)

Among the numerous possible displays of intelligence:

- Humor
- Poetry
- Arts
- Good conversations
- Any verbal aspect of "game"

Evolutionary psychologist Geoffrey Miller (Miller, 2000) says that many of the "higher" forms of human intelligence are nothing but indicators of fitness.
Since there is much overlap between success in the arts and status, and between seduction and good conversations, I think that Miller is right.

Effectiveness

Yes, with some caveats.

You might have read on Tinder about women self-defining themselves as "sapiosexuals".

Well, as it turns out, it could be true.
Albeit only a minority of people are sexually attracted to intelligence (1% to 8%), sapiosexuality exists (Gignac et. al., 2017).
It's not a linear correlation, though, and there is a ceiling: when someone is *too* smart, like genius level, then attraction decreases.

In my opinion, this is due to the fact that women are generally attracted to men they feel are better than they are.
But when the difference is too big, then the disconnect is also too big.

It's the same for masculine traits: studies show that a masculine voice is attractive, but below a certain threshold, it's not attractive anymore.

What works best with intelligence are its *expressions*.
IQ by itself does nothing to attract; it's all about how you *convey* it that works (i.e., sounding intelligent, smart, and refined).

Take the old cliche of women liking men who make them laugh, for example. Well, it's true, women like men who make them laugh (Bressler, 2005).
And that's because humor is an easily recognizable expression of intelligence, together with good quips and comebacks, or good conversation, and making her feel good.
"Game", in many ways, is also an expression of intelligence.

Also read:

- **Mating intelligence**

> Mating Intelligence: Effective Dating for Smart People

7. Become Famous (Social Proof 100x)

Social proof includes:

- A group of cool friends
- High status in that group
- Women warm and friendly towards you (mate-copying)

All of the above work effectively.

All of the above work effectively.
And they will provide *outsized* mating success when they are amplified by fame.

Fame is the new mating superpower.

The power of fame was limited during much of our evolution.
After all, everyone was "well-known" in small tribes, and being "famous" had some benefits, but it was capped by the tribe's size.

Today, technology has changed the game.
Access to millions of potential mates who self-select to follow you *because* they like you is a true game-changer.

It started with mass media and reached new heights with social media.

Example of Fame's Effects: Connor Murphy

> **Murphy (social media personality)**: I've had too many encounters (…) this has happened a lot actually, where girls see my social media and they come over and literally tell me "oh my gosh, this is gonna be such a cool story when I tell my friends"
> (…) they didn't care about how good the sex would feel, they're just looking for validation

If you don't know who this guy is, it's because he isn't even THAT famous.
But he had a large enough following on Instagram to get girls to proposition him for sex.

Of course, he's also a handsome guy, but you can bet that if he weren't famous nobody would proposition him for

sex.

Effectiveness

Extremely effectively.

But allow me an important caveat.
It's effective *once you have it*.
Not in the sense that you should *pursue* fame as a dating strategy. For most guys, that's like seeking to get rich by winning the lottery.

For most people: focus on having a good social circle of friends, including female friends.

However, if you got a shot at fame, this is as close as it gets to a silver bullet.

Fame provides men with power and resources all at once, *plus* a mass market to advertise them.
Followers also self-select, meaning that many of those who choose to follow you already like you.

Fame can also help transcend looks.
Studies show that average-looking famous people have a bigger emotional impact than non-famous but attractive ones (Gakhal, 2008).
We also grow familiar with famous people, and there are plenty of studies now showing that familiarity breeds liking and attraction (Peskin, 2004).

Plus, there is the law of large numbers.
Put yourself in front of enough people, and you're bound to find someone who likes you.

In sum: become famous enough, and even an otherwise unattractive man still could rake in large numbers of willing female sexual partners.

Maximizing Your Dating Success

As you can see, men have many different tools at their disposal.

In our current society, there are enough paths to success that men can "specialize" in one or a few of them depending on their taste or propensity.

See here how different types of men can all be attractive and successful at dating, albeit they all have different personalities and styles:

> 10 Types of Male Seducers: Pick Your Niche!

Men can also make up for what they're lacking in one area by exceeding in another.

With these many options, all that's required is to get off one's ass and work :).

9 Proven Female Dating Strategies (Science-Based)

Lucio Buffalmano · 9 December 2019 · Archived copy · Original

There are countless dating books and courses for women, not to even mention the newly minted “female dating strategies” on Reddit.

They all teach women how to date, how to find a boyfriend, and how to drive make men crazy.

But few are truly scientific.
This article combines science with what works in the real world, as personally experienced by the author.

  - Effectiveness
  - How to Effectively Use This Strategy:

1. Enhance Your Appearances

Obviously.

All women instinctively know that men place a premium on appearance.

And as a natural consequence, one of the most ubiquitous female dating strategies revolve around enhancing physical appearance.

Effectiveness

It's the foundation of any good dating strategy.

And please note, **it's not just about "looking better", but also an indicator of taking care of oneself**.

Every time I see a woman I like who does not take care of herself, I lose some interest in her.

To make a comparison:

A woman who doesn't care at all about her appearance is like a man who is happy to remain at his entry-level job.

How to Effectively Use This Strategy:

You probably know the basics already.

It starts with personal hygiene and basics such as shaving legs and upper lip.

Science supports all following items as important dating assets:

- White teeth
- Facial skin contrast (yes to makeup)
- Cheek redness
- Smooth and clear skin
- Lustrous hair
- Red lips (lipstick works)
- Firm breasts (push-up bra works)
- Hourglass figure

- Leg length (high heels work)

You don't have to be great at all or at any of those.
Just taking care of them –*especially* in the phase when you're looking for a partner-.

2. Display Youthfulness

Men are attracted to younger women.

How young depends on a number of factors, including how old he is, what he can realistically get, and whether or not he wants children and a serious relationship.

It's not true that "younger is always better", but on average younger women do command more negotiating power in the sexual marketplace.

Effectiveness

Being strategic as to when to best settle down is very effective.

As a matter of fact, in the West where everyone largely leaves this important part of their lives to chance, it might be the best-kept open secret in the world.

How to Effectively Use This Strategy:

Youthful behavior is *wholly* up to you.

"Acting" young is an effective technique to be more attractive.

Evolutionary psychologist researcher David Buss lists the following traits for "youthful behavior":

- Bouncy youthful gait
- High energy levels
- Animated facial expressions

I'd personally also add a "sense of wonder" and "excitement" to be used whenever you're doing something you like.
I'll never forget the woman who jumped and shrieked full of excitement when our "romantic boat ride" was ready.

If you want an example of "animated facial expression", look at this clip:

Highly feminine, attractive flirtation, BTW
And for a grander dating strategy:

- **Settle down earlier rather than later**

It's a question of negotiating power.

Sure, you can do well in negotiations no matter what, but if you want to put the odds on your side, you're better off playing when you got a strong hand.

And for women, that's in the 20s.
If you're past it, it's all good.
In many countries, including in the West, marrying after her 20's is not a huge drawback because many women do it.

But still remember the mantra: earlier is better than later.

- **Be strategic about settling down**

Being strategic means that you know what you want and plan how to get it.

By when would you like to have a serious relationship?
Always start preparing two years before your "deadline date".

What type of man, where are you going to meet him, how and when are you going to ask for commitment… ?

For more on age and exceptions see:

- ExceptionAL Dating

> ExceptionAL Dating: How to Succeed Despite Shortcomings

3. Signal Your Faithfulness

Men tend to divide women into Madonna and whores.

And they don't want to invest in the whores.

So… Give him that "Madonna".
And don't worry, it's not about being religious or SUPER restricted. It's about making him feel you're not going to sleep around and he won't have to guard you like a prison guard.

Fidelity cues in the scientific literature include:

- Virginity
- Low number of former partners
- Faithfulness

And from personal experience living I add:

- Little partying
- Little "secretive meeting with the girlfriends only"
- No frat-type stories to share of drunken hookups

And:

- Delaying sex (reasonably, see lesson)
- "Playing hard to get" (reasonably, see later)

Effectiveness

For long-term dating, yes, absolutely.

In David Buss' research **men seeking a long-term partner rank faithfulness as their #1 priority**.

For obvious reasons, faithfulness is not as important in short-term dating.

How to Effectively Use This Strategy:

Well, if you want to be honest… Then you'd start by keeping your sexual partners' count low.

But that's up to you.

What I can tell you from an amoral and Machiavellian perspective of what works best:

- If you have been with more than 10 men, don't say it
- If you have been with more men than he has, don't share it
- If you have crazy sex stories and he hasn't, don't share them (but don't share even if he has. Men love being more sexually experienced and loath being less sexually experienced)

If you're in a libertine culture, he asks how many men you've been with, and you fear your number is too high, say:

> **You**: I have gotten close with a few I felt good about. The way you act, I think less than you. How about you, by the way?

Then, confirm it was less.
It pains me that this advice might put someone in the position to lie. But if I have to tell you what works, then this is what works best.
You can still be honest and only end up with men who accept you for who you are -ideal-.

You can also modify that line if things are getting serious:

See "Seduction University".

4. Time Sex to Your Target

Women delay sex for two reasons:

1. To make him invest more while she retains the biggest bargaining chip
2. To avoid looking easy

In the Madonna-whore dichotomy, delaying sex helps women to position themselves as Madonnas.

Effectiveness

Most often, yes.

Men cannot know her previous history, so they rely on how she behaves with them.

If she is hard to get for him, then many men generalize that she must be hard to get for most men, and thus she's a woman worth investing in.

However, when it's a lie, it does not work so well for men who "know the game".
Also, many women play this game very badly, making it obvious they want to withhold as a negotiation chip, or that they're withholding it *with him* only (and nobody wants to be the sucker who's waited when others didn't).

By the way, here are the types of games you want to avoid:

- Nasty games that destroy relationships

> 10 Nasty Games Women Play (Women, Stop These!)

How to Effectively Use This Strategy:

Here are six rules of thumb to help you strategize:

1. Wait if he's conservative
2. Wait if you're in a conservative culture
3. Wait if you have some deeply ingrained beliefs on waiting

4. Go for it if you're in a whirlwind romance
5. Go for it if you have great chemistry and passion is running high
6. Go for it if you have been on a long nice date and it just feels like the "icing on the cake"
7. Open-minded men who have been around: go with the flow of how you feel

Finally, if there is a strong chemistry, don't douse the flames as that will scream of "game-playing" and "frigid", and it might derail an otherwise wonderful romance.

If you go for it quick, ideally you want to make him feel special and that you did it "just with him".

If you must delay sex, many men have a fragile ego and they take a sexual rejection personally.
The key is to "delay without hurting his ego".

Read:

- **How to postpone sex effectively**

> How To Slow Down Sex & Get A Relationship

5. Play *Selective* Hard to Get

Women play hard to get for two reasons:

1. To signal desirability ("she must have lots of options to choose from")
2. To look more faithful ("Madonna")

We go back to the Madonna-whore yet again.
It's not that we are repeating ourselves, it's because the Madonna-whore is deeply ingrained into men's brains and it is central to his levels of commitment and investment to a woman.

Effectiveness

The selective strategy, on paper, makes sense.

And in some circumstances, it can work great.

But there are a few issues when it's badly done, or done with the wrong type of guy.
Including:

- Some men will interpret her behavior as disinterest and move on (see "top dating mistakes")
- Some men will see the game and refuse to play (see the "make him chase danger")
- Men with options might end up with easier women (or more astute women playing the "bait and switch" game)
- People like people who like them, and stand-offishness communicates "I don't like you" (Viren Swami, 2016)
- Some driven men might *want* her more, but end up liking her less

However, there is a way to make it work.

How to Effectively Use This Strategy:

The idea is simple:

Women should be hard to get for everyone but welcoming of the man she chose.
This is what I call "selectively hard to get strategy".

With this strategy, she retains all the positive aspects of the general “hard to get” strategy, such as desirability and loyalty, but without the drawbacks.
As a matter of fact, this “selective hard to get strategy” has a strong advantage: it makes him feel great.

Research supports the efficacy of this strategy (Walster et. al., 1973), and so does my personal experience.
I can tell you that the women who had few sexual partners but had sex with me quickly and pleasurably were my real favorites -and the ones I think of most fondly-.

This is truly powerful.

5.2. Selectively Smitten: Encourage His Pursuit

This is the “enhanced version” of “selectively hard to get”.

Part of the selectively smitten dating strategy is that, while you are generally selective, you are so glad to have found him, that you are not afraid to show it -a display of confident vulnerability as well-.

I have used many examples across this website, this is just one of many:

The moment she said “I look forward to meeting you”, I perked up.

And suddenly was looking forward to meeting her much more than I was just moments before getting her text. And I also liked her more.

And here is one more example where *I* was playing guys’ games. But her honesty made me like her far more, and drew us closer together:

See “Seduction University”.

When to communicate your liking and appreciation?

Before most women do (in the West).

Jokes aside, you want to avoid doing it before he has done anything to show his interest.

But once he is showing interest, which includes texting, asking you out, complimenting you, or anything which moves the interaction towards romance, then showing liking and appreciation will only help.

6. Signal Exploitability (& Flip The Scripts Later)

Sounds strange?

Well, beyond the veil of political correctness, that's how people -in this case, men- really are.
Men are attracted to signs which communicate "I am easy to exploit".

Exploit for what?
Sex, of course.

Signals of exploitability, on top of the ones in the figure below, include:

- Silliness
- Giggling
- Cluelessness
- Scatterbrained conversation
- Irrational beliefs (very religious or superstitious)
- Child-like behavior (we saw a few examples)

As Mae West once said:

> Brains are an asset, if you hide them.

Effectiveness

Absolutely.

This is one of the main ingredients in the secret sauces of the best world seductresses.
Marylin Monroe looked exploitable, and the coquette style also leverages "child-like playfulness" (see: "how to seduce a man" for case studies).

And this is why "lollipop girls" are sexy to many men. Some of the men who find it attractive have pedophile tendencies of course, but many non-pedophiles find it attractive because it sends signals of exploitability (exploitable like naive children are).

Risks of This Dating Strategy

To begin with, it works best with men pursuing a short-term strategy (Lewis et. al., 2012).

And while men like silly and exploitable girls for the short term, they don't usually like them as long-term partners.

See the research ranking "exploitability signals" on both short and long-term dating:

Positively correlated cues	Short term mate	Long term mate
"Sassy"	.65***	−.60***
Immature	.62***	−.62***
Intoxicated	.49***	−.40***
Reckless	.58***	−.69***
Promiscuous	.68***	−.64***
Partying	.51***	−.46***
Flirty	.54***	−.37***
Promiscuous friends	.54***	−.49***
Attention seeking	.49***	−.56***
Young	.25**	−.12
Sleepy	.24*	−.17
Come hither look	.29**	−.26**
Revealing clothing	.47***	−.48***
Touching breast	.00	.06
Open body posture	.39***	−.29**
Alone	.09	−.07
Ring (wedding/engagement)	.10	.01
Tight clothing	.36***	−.33**
Friendly	.08	.30**
Punk	.19*	−.45***
Materialistic	.24*	−.30**

Source: Goetz et. al, 2011 https://doi.org/10.1016/j.evolhumbehav.2011.12.004

Short-term and long-term are almost specular: as good as they are to get attention for casual sex, they make men run for the hills after sex.

How to Effectively Use This Strategy:

It's possible though to get the uplifts, without the drawbacks.

Let's see a few ways of doing that:

1. Add the "protect me" layer

You can add "in need of protection" signals to the "exploitable" ones.

The "protect me" side is what makes men want to guard and defend, and it's very effective for the long-term as well.

This scene is an exaggerated example, of course, but just to give you an idea:

This strategy frames him as the father-figure of the relationship. Just don't stay stuck in it 24/7: men also like a grown-up sometimes
And this is a real-life texting example leveraging the same principle:

- See the forum

Vulnerability is also the secret sauce of Marylin Monroe: sky-high signals of exploitability/submissiveness, mixed with an air of woman in need of "protection" (plus a sprinkling of orgasmic facial expressions).

Asking men for help is also a time-tested strategy that works to initially position her as "exploitable" while also awaking his protective instincts.

2. Ask him if he's a good man

If you're a socially intelligent woman, this may sound ridiculous.

Ridiculous in a naive way.

But it's exactly because it's ridiculous in a naive way that it works great.

Asking men if they are "good", or if they have "good intention" signals exploitability in two ways:

1. The fear of "non-good men"
2. The misplaced trust that you can recognize good men based on their own answer

Of course, most male game players will answer "yes".
But all good men will also like you more just because you ask.
It signals that you want long-term relationships and, indirectly, it's also an indicator of faithfulness, since women who are interested in flings and short-term sex wouldn't care nearly as much about who is "good" and who is not.

It's also a positive way of making him prove to you and frame the relationship as "a relationship with a good man", which might help bring the best out of him.

See an example here:

Her saying “I want to believe you are a good person” is a genius move.
Since I didn’t exactly jump through her hoops, she *helps* me pass her screen, which she needed to do if she wanted to maintain both interest and power -keeping interest without me passing her screen would devalue of her own standards-.
And it also indirectly says “I just screened you in, be glad, and be on your best behavior”.

Bait (with exploitability signals) and switch to long-term

Another technique is to bait men with exploitative cues and then seek to switch to a longer-term strategy.

For example, you seem all exploitable and silly at first, like you wouldn’t even put up much resistance to sex.
But then… Then you use the technique in “how to make him wait for sex” to increase the odds of long-term relationship.

Most baited men would be OK to wait for sex when they know she likes him and it will eventually get there.

Signal submissiveness to the right man

Once you meet a man you truly like, small displays of submissiveness will go a long way.

Here is one example:

See Seduction University.

Can’t Women Just Be Smart?

Men say they like intelligent women.

And they do… Up to a certain point.

They even *say* they like women who are smarter than they really are but, when it comes to real-life interaction, they don’t (Park et. al., 2015).

That means smarter women need to play the game a bit… Or look harder for a smarter man (or an open-minded one, at least).

Plenty of those exist, so don't stress too much about it.

Also read:

- Submissive VS independent women

7. Signal Your Approachability

For women to date at all, they need to attract suitors first.

Some men will make the move anyway, but those are often either players or men who can't even read social signals.

Women who want more control over their dating lives -and you should be one of them- take it upon themselves to signal that they want to be approached.

Effectiveness

For the short term, absolutely.

In the literature, it's called "sexual signaling", and the more forward she is, the more effective men rate her strategy to "get" casual sex:

Acts Rated Most Effective for Promoting Sexual Encounters

Female acts	Male raters (N = 25) M	SD
She asked him if he wanted to sleep with her.	6.56	*1.04*
She guided his hands to her genital area.	6.44	*1.19*
She talked him into having sex with her.	6.42	*0.97*
She told him directly that she wanted to have sex with him.	6.40	*1.08*
She undressed in front of him.	6.36	*1.00*
She started to undress him.	6.12	*1.39*
She invited him to her bedroom.	6.12	*0.97*
She asked if he had a condom.	6.00	*1.16*
She told him she had birth control.	5.88	*1.24*
She put her hand on his thigh.	5.80	*0.96*
She invited him to her house/room/apartment.	5.80	*1.08*
She told him that she was sexually attracted to him.	5.80	*1.47*
She invited him to go to a hot tub.	5.76	*0.97*
She took him to a private or secluded area.	5.64	*1.11*
She offered to give him a massage.	5.60	*1.08*

Source: Greer & Buss, https://doi.org/10.1080/00224499409551752
Of course, this research states the obvious to the point that it's almost comical.

I suppose women won't be surprised to know that "guiding his hand to her genital area" could promote a sexual encounter :).

Problem is, research also confirms what both men and women instinctively knew: that a sexually forward woman is extremely effective at getting casual sex, but not so good at getting a long-term partner.
Cari Goetz (Goetz et. al., 2011) for example measured how attractive "easy" women are to men. Turns out, men *love* easy women for short-term sex (+0.65) but actively dislike them as long-term partners (-0.60).

Again, we see the inherent sexual conflict of male strategies here: what they seek in a short-term partner is the opposite of what they want for a long-term partner.

How to Effectively Use This Strategy:

Still, there are ways of using this strategy to get also long-term relationships.

Here's how:

Signal more often, and more obviously

Most women are too coy and signal too little.

Or not at all.

Or they think they signaled their interest, while men have no idea.
Men miss the signs *all the time*, including when most women think they were "clear enough". So better to err on the side of over-signaling than under-signaling.

If it's a mixer event, just start talking to him.
Plenty of women did that to me and I always appreciated it. Some women even asked me during our conversation "so do you have Instagram". That's a great way to prod him to exchange contact and ask you out.

Stick to the basics: men are simple-minded

Most men miss out on basic women's signals.

For that reason, avoid anything too fancy and stick to the good old "hold eye contact with him" and potentially add a smile, both of them backed by research (Abbey, 1982).

Meet more men, give more men a chance

A huge mistake women commit is to relinquish control of their dating lives.

They go out and think "if it happens, it happens".
Much better is to put the odds in your favor. Make it easy for chance to happen.

- Go out by yourself sometimes (but say your friend stood you up)
- Go to the bathroom by yourself
- Send those attraction signals
- Give some boring men the chance for a date

8. Show Kindness / Caring

People want to partner up with good people.

And men also gain if the mother of their children has good character, so it only makes sense if men also developed to appreciate cues of good character.

And indeed, it's been now shown by several studies that personality traits can enhance a woman's attractiveness (Albada et al., 2002).

The field of research even has its own name, and it is the "interaction appearance theory".
Swami's research, for example, found that providing positive personality information leads men to consider a wider array of body types as more attractive.

The character's traits men appreciate are:

- Femininity
- Kindness
- Coyness

- Agreeableness
- Honesty (Paunonen, 2004)

How to Effectively Use This Strategy:

Provide a good time, and people will want to spend more time with you.
Both romantically, and not.

Here are a few crucial bits:

- Ditch feminism -especially the extremist one- (has an anti-male side to it and men are getting tired)
- Swap the "resting bitch face" for a welcoming one
- Curl your lips up, not down
- Make it less about me, more about you
- Listening more than talking often pays off
- Do a favor to him / preening

This one is particularly interesting.
A woman once reached out to my jacket and as I wondered "what the hell is she doing", she picked something and said "there was a hair".
That was *such* a great move.
At the same time that she signaled interest, she also signaled caring and kindness. And my attraction skyrocketed: I *so* wanted her.

I can highly recommend you do something similar if you want to signal your interest in a man. It's as effective to signal interest as any other move you can do, but it makes you look less sexually thirsty, less desperate, and much more long-term quality woman.

9. Derogate Your Competitors (Without Sounding Jealous)

Women, just like men and probably more than men, derogate their competitors.

Effectiveness

David Buss says that effective competitor derogations works.

And that it should affect a woman's sexual market value *both* for the short and long term.

However, it's risky because it's very easy to come off as jealous or bitter.

Take the good old "she's such a slut".
I still remember the woman who used that tactic against the girl I liked and who later started dating. I took a huge dislike on her that will probably last a lifetime.

How to Effectively Use This Strategy:

Notes

About The Author:
David Buss is an evolutionary psychologist and researcher, currently teaching at the University of Texas. He is a well-known and respected voice in *evolutionary psychology*, authored and performed an incredible amount of field research, and has written several books, including '*The Evolution of Desire*', and '*When Men Behave Badly*'.

Milestones of Human Evolution

- 15 billion years ago (bya) The Big Bang
- 4.7 bya Earth forms
- 3.7 bya First life emerges
- 1.2 bya Sexual reproduction evolves
- 500–450 million years ago (mya) First vertebrates
- 365 mya Fish evolve lungs and walk on land
- 248–208 mya First small mammals and dinosaurs evolve
- 208–65 mya Large dinosaurs flourish
- 114 mya Placental mammals evolve
- 85 mya First primates evolve
- 65 mya Dinosaurs go extinct
- mammals then increase in size and diversity
- 35 mya First apes evolve
- 6–8 mya Common ancestor of humans and African apes evolves
- 4.4 mya First primate with bipedal locomotion (Ardipithecus ramidus)
- 3.0 mya The australopithecines evolve in savannas of Africa
- 2.5 mya Earliest stone tools develop—Oldowan (found in Ethiopia and Kenya, Africa); linked with Homo habilis
- 1.8 mya Hominids (Homo erectus) spread beyond Africa to Asia—first major migration
- 1.6 mya Fire evidence; likely hearths; linked with African Homo erectus
- 1.5 mya Invention of Acheulean hand ax; linked with Homo ergaster
- 1.2 mya Brain expansion in Homo line begins
- 1.0 mya Hominids spread to Europe
- 800 thousand years ago (kya) Crude stone tool kit used—found in Spain, linked with Homo antecessor
- 600–400 kya Long, crafted wooden spears; linked with Homo heidelbergensis found in Germany
- 500–100 kya Period of most rapid brain expansion
- 200–30 kya Neanderthals flourish in Europe and western Asia
- 150–120 kya Common ancestor for all modern humans (Africa) evolves
- 100–50 kya Exodus from Africa—second major migration ["Out of Africa"]
- 50–35 kya "Creative Explosion", an explosion of diverse stone tools, bone tools, blade tools, well-designed fireplaces, and elaborate art; increased population density. Mainly among Homo sapiens, rarely among Neanderthals
- 40–35 kya Homo sapiens (Cro-Magnons) arrive in Europe

- 30 kya Neanderthals go extinct
- 27 kya–present Homo sapiens colonize entire planet; all other hominid species are now extinct

What happened to other hominids?

Up until 100.000 years ago, there were still three hominids on earth: Homo sapiens in Africa, Homo neanderthalensis in Europe, and Homo erectus in Asia.

What happened to the Neanderthals and Erectus is still up for debate, with two main theories:

- Multiregional continuity theory (MRC):
- Out of Africa theory (OOA): modern humans evolved in Africa, then migrated all over the world and replaced the other hominids

The archaeological and genetic evidence supports the OOA theory.

What caused us to become smart?

There are many theories as to what caused our major feature: brain size.
Some of the theories link our brain expansion to toolmaking and use, social challenges and social competition, cooperative large-game hunting, and complex communication.
Buss says that all of them might have played a role.

My Note: How About Sexual Selection?
I was surprised David Buss doesn't list sexual selection and sexual competition as possible causes of brain expansion.
Geoffrey Miller in "*The Mating Mind*" makes a compelling case for sexual selection and brain development.

Behaviorism Debunked: Enter Evolutionary Psychology

Behaviorists believed that the human mind had little or no innate properties.
The only innate property of the brain was general intelligence and the ability to learn anything via "reinforcement and punishment".

This has sometimes been referred to as the "tabula rasa" or "*blank slate*" theory, and in the past decades, Western culture loved the idea.
Anthropologists hunted different cultures, and the more different they were, the more supposedly they proved there were no inborn adaptations, and the more they were celebrated.

See Margareth Mead and the Samoa debacle as an example.
Even to this day, the Wikipedia top summary entry still mentions no bias, ideology, or doubt over the quality of Mead's accounts. It talks about the "controversy" over Mead VS Friedeman without mentioning controversies on Mead's work.

David Buss suggests that the tabula rasa theory was based more on ideology than on data, and he says:

> If tropical paradises existed in other cultures, then perhaps our own problems of jealousy, conflict, and competition were due to U.S. culture, Western values, or capitalism.

However, as time went by, psychology research and science left little wiggling room for behaviorism and "tabula rasa" theories.
Evidence has started mounting that the external environment is not the sole determinant of behavior and that humans all share some commonalities and predispositions.
Starting with Martin Seligman, for example, it became clear that humans can easily learn to develop certain types

of fear, like snakes, but it's difficult to make them develop other types of fear, like cars or electrical outlets.

David Buss says that three forces combined to usher in what's been called the "cognitive revolution" that eventually supplanted behaviorism as the dominant trend in psychology:

- Violation of the "fundamental" laws of learning
- The study of language, with Chomsky arguing for universal invariants across languages
- The rise of the computer and the "information processing metaphor"

Do Domain-General Mechanisms Even Exist?

Some evolutionary psychologists believe that, on top of our evolved specific mechanisms to deal with our evolutionary problems, we also have domain-general mechanisms such as general intelligence, analogical reasoning, concept formation, and working memory.

For sure domain-specific mechanisms communicate with each other and are not walled off, so to speak.

But while we can be fairly certain about the presence of domain-specific mechanisms, we cannot yet be sure of domain-general ones.

Evolution and The 3 Products of Evolution

Among the 3 theories of life on earth—seeding, creationism, and natural selection—natural selection is the most widespread among scientists.

There are three products of the evolutionary process:

- **Adaptations**: inherited and common to the whole population because they proved better at ensuring survival and/or reproduction (example: umbilical cord)
- **By-products**: they have no functional designs and don't (directly) solve any evolutionary problem (for example: belly button)
- **Noise**: random effects produced by mutations and chance (for example: the shape of a person's belly button)

The "noise" is the engine of evolution.
Most of the noise will be unhelpful. But eventually, someone will stumble upon a mutation that helps the organism survive and reproduce. And it will spread out until it becomes an adaptation.

Evolutionary Psychology Misunderstanding

David Buss lists the following as the most frequent misunderstandings people have about evolutionary psychology:

- **Human behavior is genetically determined**: genes interact with the environment
- **If it's evolutionary, we cannot change it**: we can change it, and we might argue one of the goals of studying *evolutionary psychology* is to gain more personal power over ourselves
- **Current mechanisms are optimally designed**: no, they're not. Evolution can be chaotic as it *reacts* to the environment. A good design builds from scratch, but evolution has to "add" new things on top of what's already there

How to Test Evolutionary Hypotheses

A common criticism of *evolutionary psychology* is that it's not a science because it's not falsifiable.

Well, that is not the case.
Buss says there are several ways in which a hypothesis can be empirically tested:

- Comparisons: measure if groups that are supposed to differ do indeed differ (comparing species, groups of people, genders' reactions to stimuli, etc.)
- Archeological records
- Contemporary hunter-gatherer societies: supposedly living closer to the circumstances of our evolution
- Laboratory experiments
- Public data and records
- Products and artifacts
- Behavior: self-reported or observed

The Inclusive Fitness Revolution

Classical Darwinian fitness is focused solely on parent-children, and Hamilton expanded it to include kin as well.

The simple yet revolutionary idea of Hamilton was, as I quote Buss:

> An organism can also increase the reproduction of its genes by helping brothers, sisters, nieces, or nephews to survive and reproduce.

One implication of the inclusive fitness hypothesis is that people will be more altruistic and helpful towards their kins, and that's been proven by several studies.

This is how Buss explains Hamilton's rule:

> Hamilton's rule, stated more formally, is that natural selection favors mechanisms for altruism when c < rb In this formula, c is the cost to the actor, r is the degree of genetic relatedness between the actor and the recipient

What's crucial to remember here, and what many people get wrong, is that Hamilton's rule is not an adaptation per se.
The Hamilton rule simply predicts that altruism among kin can arise, and if it does, it will be favored by evolutionary forces.
Altruism that goes against Hamilton's rule instead will have to buck the evolutionary forces and is more likely to be rooted out (evolvability constraint).

David Buss goes on to describe all the types of relationships directly linked to Hamilton's rule, including parent-child. sibships, half-sibships, aunt-niece, uncle-nephew, grandparent-grandchild, and others.

We recognize kins in the following ways:

1. Through association (having grown together)
2. Through odor
3. Through kin classification (all cultures have special names for kins)
4. Through facial similarity

People are also good at spotting clusters of kins from strangers, which could have been helpful in recognizing who is allied with whom.

Why Families Evolved

Families are uncommon in the animal kingdom.

Only 3% of mammals and birds form families.
It makes sense because remaining in the parental nest incurs high costs, including delayed reproduction and a

concentration of resource competition.

Two models have been proposed:

- Ecological constraint: families emerge when there is a lack of mating opportunities
- Familial benefits: families emerge when they can provide benefits to their offspring
  - Enhanced survival from family's protection
  - Enhanced ability to better compete later in life
  - Inheriting or sharing the family resources
  - Inclusive fitness gains by helping genetic relatives

Non-Kin Altruism

David Buss also goes into the evolution of non-kin altruism.
The theories developed to explain the puzzle of altruism are:

1. **reciprocal altruism**
2. **indirect reciprocity:** people benefit when others see them being altruists, and they gain a reputation as reciprocators
3. **need-based transfer systems:** risk pooling, a form of social insurance
4. **costly signaling:** increases reputation and status through the handicap system (similar to "conspicuous consumption" in mating)

I liked his summary of Axelrod's techniques to increase cooperation:

1. **Enlarge the shadow of the future**: if people think you'll be dealing with each other again, they'll be more likely to cooperate
2. **Teach reciprocity**
3. **Insist on no more than equity**: greed is the downfall of the many, when people know fairness is the goal, they'll be more likely to trust and cooperate
4. **Respond quickly to provocation**: sends a signal you don't tolerate exploitation, which will not work with you or within your team (also see: "how to be a great leader")
5. **Cultivate a personal reputation as a reciprocator**

There are several psychological adaptations showing that we evolved to compute social exchange barters:

- We are bad at abstract logical reasoning, but when problems are presented as costs and benefits in social exchanges, we are good at solving them
- People naturally pay close attention to potential cheaters
- People are reasonably accurate at predicting who will cheat and who is a genuine altruist and cooperator
- People are more generous when others are watching (the benefit of "indirect reciprocity" and building a reputation as a collaborator)
- Altruists seem good at spotting each other and preferentially hanging out with each other
- Emotions evolved to support the social exchange system, including gratitude, anger towards non-reciprocators, guilt,

More research is needed in this area, and you can also read "*The Origins of Virtue*" for more information.

Coalitions

Buss also gets into coalitions and the free-rider problem, and says there is mounting evidence that we evolved

psychological adaptations to punish free-riders.

The studies are still in their infancy, but some possible adaptations include:

- gossip as a means of social bonding and controlling free-riders (Dunbar, 2004; Kniffin & Wilson, 2005),
- in-group favoritism bias (Schiller, Baumgartner, & Knoch, 2014),
- prejudice against and punishment of out-group members (Schiller et al., 2014)
- xenophobia
- adaptations to enforce group norms
- ostracizing those who violate social norms (van Vugt & van Lange, 2006)
- enforcing rules and norms of fairness
- status and reputational benefits to those who contribute heavily to group goals
- providing rewards to those who contribute (Kiyonari & Barclay, 2008).

The Four Classes of Evolutionary Problems

David Buss says that humans have to tackle four major classes of problems, and he structures his work around them:

1. **Survival and growth**: reaching the stage at which the organism is capable of reproduction
2. **Mating**: selecting, attracting, and reproducing
3. **Parenting**: support the offspring until they can also reach the reproduction stage
4. **Aiding genetic relatives**: supporting those around us who carry our genes

My Note: Why "Problems"?
This might feel like nitpicking, but I have an immediate gut reaction to the use of the word "problems".
Buss quotes Darwin, who in turn talks about the "hostile forces of nature", but that nature is what allowed life in the first place, and it's what allows all life forms to *thrive*.
Nature empowers life but does not do its very best to thwart it.

Problems of Survival

- **Folk biology**: all humans have an innate grasp of nature because we all needed to learn what was edible and what was poisonous
- We dislike bitter and sour food because it's likely to contain toxins
- **Neophobia**: we have an innate dislike for new food because new food is potentially dangerous
- **Disgust is an evolved defense against disease**: that's why we find more disgusting what's also more likely to carry diseases. Women, at higher risk of catching STDs, have a heightened sense of disgust
  - Mothers rate their children's feces as less disgusting, signaling an adaptation to tend to their offspring
  - In dire necessity, humans can override disgust (see cannibalism)
- **Adapted fears of life threats**: snakes, spiders, heights, strangers, public rejection of courtship attempts, etc.
- **Auditory bias**: approaching sounds are perceived as louder than receding ones because of the greater danger of approaching threats
- **Threat-saliency:** people, as well as children, are faster at spotting dangerous animals such as snakes and lions among random objects
- **Darwinian medicine**: fever, cough, sneezes, they probably shouldn't be treated because they evolved to help us tackle diseases

The Hunting Hypothesis (& Gathering Hypothesis)

The hunting hypothesis suggests that hunting has been instrumental in developing many of our adapted mechanisms, including:

- Reciprocal altruism and social exchange
- Division of labor

The gathering hypothesis suggests instead that women provided the impetus for human evolution via gathering, but it falls short in many areas.

In any case, the specialization of gender-specific division of labor has resulted in measurable differences between men and women.
Men have better navigational abilities, map reading, and mental rotation of objects -for hurling spears maybe?-.
Women have better spatial location memory.

Challenges of Sex & Mating

For more on this section, please read:

- **Sexual market place 101**
- **Sexual Market Value**
- **Sexual conflict**

David Buss also wrote a book fully focused on sex and mating, called "*The Evolution of Desire*".

> Sexual Conflict: How Men & Women Fight The Sex War

Patterns of Inheritance & Spousal Diverging Interests

The data on inheritances analyzed from an evolutionary point of view provided some incredible insights.

Here is the data from the analysis of 1.000 probated wills (Smith, Kish, and Crawford, 1987):

- **Women distributed their estates to a larger number of people (2.8 VS 2.0)**

This might be because women have a stronger tendency towards building and maintaining networks of support.

- **A majority of men left their entire estates to their wives, often with expressed confidence that the wife would pass along the resources to their children**

Men tend to trust women more.
This is because women have higher parental investment than men, so it is indeed more likely that women will take care of their own children.

And, of course, it's because older women are more unlikely to remarry and even more unlikely to have additional children, so the husband can be more confident that his widow will allocate the resources toward their mutual children.

- **Women never expressed trust that the man would take care of her children**

Interesting.
Women tended to trust men less.
And they might not be wrong: older men are far more likely than older women to remarry, and they might use their previous wife's resources to attract a new mate and perhaps even start a new family.

That's risky for her: resources will be diverted from the original wife's children to unrelated individuals.

- **But if their wives were young, men were more likely to leave their estate directly to their children**

This makes sense since younger women are more likely to remarry and, possibly, have more children fathered by another man.
And they might use their late husband's money to dote on children that are not his.

The evidence of psychological adaptations for short-term mating in men

The psychological evidence for an inborn bias toward male short-term mating are:

- **Desire for sexual variety**
  - Porn consumption trends
  - Number of desired partners (men mention far higher numbers than women)
- **Nature and frequency fantasies**: women are more likely to emphasize feelings, but there are large individual differences and some women also fantasize about sex with strangers
- **The amount of time elapsing before a person seeks sex**
- **Lowering of standards in short-term mating**
  - De-prioritization of face in favor of body (women don't show the same)
  - **Closing time phenomenon**: men find women more attractive as the venue-time approaches
- **Search for "exploitability cues"**: men like women who look simple-minded and exploitable, while women don't like men who look exploitable
- **Attraction reduction shift**: men tend to be less attracted to women right after sex (especially true for men with a short-term bias)
- **Tactics to avoid short-term mating from becoming committed**
  - Keeping the conversation sexual in nature
  - Maintain multiple sex partners
  - Having sex with someone else
- **Extramarital affairs**: men in most cultures pursue extramarital affairs more than women do

Women also sometimes use tactics to prevent casual sex from becoming more, but it's usually more about "giving the wrong phone number".

Overall, male more and more deeply rooted psychological adaptations for short-term mating show that casual sex is a strategy more significant for men, than for women.

The evidence for female short-term mating strategy

Here is an overview of the current evidence for an evolved female strategy for short-term sex:

- **Desire for sexual variety**
  - Porn consumption trends
  - Number of desired partners (men mention far higher numbers than women)
- **Nature and frequency fantasies**: women are more likely to emphasize feelings, but there are large individual differences and some women also fantasize about sex with strangers
- **The amount of time elapsing before a person seeks sex again**
- **Lowering of standards in short-term mating**
- **De-prioritization of face in favor of body** (women don't show the same)

- **Closing time phenomenon**: men find women more attractive as the venue-time approaches
- **Search for "exploitability cues":** men like women who look simple-minded and exploitable, while women don't like men who look exploitable
- **Attraction reduction shift**: men tend to be less attracted to women right after sex (especially true for men with a short-term bias)
- The existence of common tactics to avoid short-term mating from becoming committed
  - Keeping the conversation sexual in nature
  - Maintain multiple sex partners
  - Having sex with someone else
  - Preference for loose women
  - Not minding too much if a woman is in a committed relationship

Overall, male more and more deeply rooted psychological adaptations for short-term mating show that casual sex is a strategy more significant for men, than for women.

Benefits of Short-Term Mating for Women

Several theories have been put forward to account for female evolved short-term sexual strategy:

- **Resources**
  - **Investment via paternity confusion**
  - **Immediate economic resources**: short-term biased women prefer men with an extravagant lifestyle (conspicuous consumption), and who spend money on them early on.
  - **Protection through "special friendships"**
  - **Status elevation**
- **Genes**
  - **Sexy son hypothesis**: women who engage in short-term mating place a premium on the man's physical attractiveness, but replication failure suggests caution
  - **Genetic diversity**:
- Mate switching
  - Mate expulsion
  - **Mate replacement**: women who have affairs are significantly less happy with their partners, and they find "promiscuity" and existing relationships mildly undesirable in an affair partner, supporting this hypothesis)
  - **Mate insurance**:
- **Short-term for long-term mating goals**: women themselves rated the possibility of switching casual sex for a relationship as the second most important reason for casual sex
  - **Sex to evaluate long–term mate potential**: young women might go through a period of casual sex as a way to assess their own SMV
  - **Clarifying mate preferences**:
  - **Honing skills of mate attraction**:
- **Mate manipulation**
  - **Increasing commitment of long–term mate**:
  - **Revenge as deterrence**

Parenting and Kinship

Parenting dispositions and behavior can be predicted, at the most general level, through the following three contexts:

- **Paternity uncertainty (ie.: are children really mine?)**
  - This is one of the reasons why men generally invest less in children
  - Step-parents are more likely to beat, abuse, and ignore children who are not theirs
  - Women "remind" men that children look like them
  - Paternal grandparents invest less than maternal ones
  - Men who perceive their wives as faithful and trustworthy also invest more in their children
- **Alternative uses of the resources**: where can I get the biggest bang for the buck? My children's or my sister's? Nurturing or looking for another mate?
  - Young women are more likely to kill their infants because they can produce more later on, under better conditions
  - Young women without a providing man kill their infants more often, except when they're old because they won't have another chance at procreation
  - Men high in status offer less parental care and ramp up their mating efforts
- **Children's ability to survive and reproduce**: parents invest more in children most able to convert their effort into fitness (does not mean they always invest more in the healthiest child, sometimes curing a sick one can make more sense, but they tend to allocate investment strategically)
  - Ill and deformed children receive less help and are killed more often

Interestingly, resources can change the pattern of parental investment. Mothers with little resources followed the predictable pattern of investing less in prematurely born babies (high risk), while mothers with lots of resources invested more in high-risk infants than low-risk ones.
Who said that money is the root of all evil?

Women, as the primary caregivers, have evolved more psychological adaptations for nurturing, including:

- Better at decoding facial expressions, particularly negative ones
- General reduction in risk-taking
- Reduction in risk-taking when paired with babies

Parent-Child Conflicts

Parents and children share 50% of their genes.
But that also means they are 50% different, and that leads to potential conflict.

A child always gains in seeking more investment, while a parent might gain more by sharing their support among several children -or looking outside of the relationship-.

The theory of parent-offspring and, more in general, genetical self-interest and different interests within families predicts that:

- Children will want more of their parent's resources
  - The mother-child conflict starts in the uterus, with children trying to get as much as possible even if gets unhealthy for the mother
  - Children want to be breastfed for longer than mothers want
  - Children seek to get more resources than their siblings

- Parents will want to give less than the child requests
  - Parents want to wean children sooner
  - Parents punish conflict between siblings
  - Parents encourage more cooperation among siblings than they really want

Parent/offspring conflict also increases in the presence of new offspring as that means more competition, and in the presence of half-siblings, since that means competing with someone who has even less genetic relatedness.

Parents/Child Conflict Over Mates

Parents and offspring's interests also diverge when it comes to the choice of mates.

Children will gain more from selecting a genetically superior partner because their offspring will inherit 50% of their genes. But parents only have 25% of their genes in common with their grandchildren, so they will gain more if their children select a partner that promotes their interest independently of genetic quality. Say, for example, a mate that will further their status and economic well-being.

This is especially true for fathers, since they retain fertility for long, and they have more interest in securing new possible future mates.

The evidence indeed proves that:

- Offspring prioritize physical attractiveness more than their parents
- Parents prioritize family background
- Parents and offspring are in conflict over the pursuit of a short-term mating strategy (it's hypothesized that a short-term mating strategy can compromise the status and reputation of the family)

Parents indeed find a short-term mating strategy far more acceptable for themselves than for their sons and, especially, daughters.

My Note: This Was Deeply Insightful
This conflict on mate selection was truly a novel and genius revelation for me.
Even after tens of books on evolutionary psychology, I had never thought about it.
I am still not 100% bought into it as offspring might simply want an attractive partner because they will have sex with them. Parents don't care since they don't have to live and have sex with them, but it's still an interesting new point of view.

Conflict Changes Over Time

Manipulation of course goes both ways, with both parents and children trying to manipulate each other in what's in their own best interests.

Since parents and children share 50% of their genes, sometimes there is overlap in their common interests.
But as time goes by, so do the interests overlap.
As both parents and children age, parents become less useful to children, both in terms of producing new offspring with a 50% relatedness and in terms of direct help to themselves.

To learn more about both manipulation and sexual manipulation, read:

> Manipulation: Techniques, Strategies, & Ethics

Conflict, Organized Conflict & Recalibration Theory

David Buss discusses conflict among humans, the only species together with chimps, which is on record for organizing squads of alliances to attack other individuals of the same species.

How could war even become widespread?
Tooby and Cosmides list four conditions that must be met for war to become part of the human repertoire:

- The average long-term gain in reproductive resources must outweigh the reproductive costs of engaging in warfare over evolutionary time
  - An increase in sexual access to females is the most likely candidate since it's the resource that imposes the greatest limit on male reproduction
- Men must believe that their group will emerge victorious
- The risk and the importance of each member's contribution must translate into a corresponding share of the benefits
- Men who go into battle must be cloaked in a "veil of ignorance" about who will live or die.

Recalibration Theory

The recalibration theory proposes that anger serves to increase -recalibrate- the value that the target of your anger places on your well-being.

Individuals with a superior ability to inflict costs and confer benefits should be more prone to anger because they can be more effective with it.
Indeed, a man's upper body strength and a woman's physical attractiveness both predict the propensity towards anger and show a history of fighting, more success in prior social conflicts, a greater perceived utility of aggression, and a greater sense of entitlement.

Status, Prestige, and Social Dominance

Human mechanisms to be effective social animals are inherently complex.

Contrary to many other animals, our social hierarchies transcend mere physical brawn to include social skills, leadership, and the ability to enlist powerful friends and form coalitions.

Since the payoff for men is higher, men also tend to seek status and prestige more than women do.

There are many traits that correlate with dominance, including some that you might not always expect:

- domain expertise
- size / athleticism
- testosterone and serotonin levels
- intelligence
- physical attractiveness
- humorousness
- good grooming

Service-for-prestige theory

Leaders provide key survival resources to followers by leading the group in more effective ways than anyone else could.
In exchange, he receives social status and more mating opportunities.

Elevated status and dominance improved male mating success in three ways:

1. Women prefer high-status men
2. It proves men with more resources to support women and their children
3. More powerful men might simply take the mate of subordinate men

Social Dominance Orientation

Men are higher than women in social dominance orientation (SDO).

Individuals high in SDO endorse the legitimacy of one group's domination over another, the deservingness of discrimination and subordination of one group by another, and the allocation of more perks to one group than another.

Gender Differences in Dominance

Dominant men have more egoistic dominance acts, while dominant women have a higher incidence of prosocial dominance acts.
Female dominance is more group-oriented.

Dominance Theory

Deontic reasoning, such as thinking in terms of which actions one may or must not perform with respect to a social rule, emerges early in life.

People have a tendency to spontaneously check for other people's social violations, especially when those violators are lower in status.

Also read:

- **How to be dominant**

https://thepowermoves.com/signs-of-dominance/

Social Attention-Holding Theory

Paul Gilbert emphasizes the emotional components of dominance (also see "social rank theory").

Animals naturally assess each other's "resource-holding potential" (RHP), and based on that information, they might attack if they are superior, or flee or submit if they believe they are inferior.

Gilbert says that humans also use RHP, but make it part of a "higher-level socialization" in what he calls "attention-holding potential".
Humans compete with each other to be attended to and valued by their social group. High-status members command lots of attention, and when they bestow their attention on another peer, that individual rises in status. Ignored individuals instead lose status.

Going up the ranks results in elation, more helpful and prosocial behavior, and a happier mood.
Loss of status results in anxiety, shame, envy, depression, and anger.

Presumably, social anxiety should help the anxious individual avoid any risk that would likely result in a loss of social status.
Shame is similar, kicking in when the individual's will be devalued by others.
Envy, instead, might function to make us pursue the same path as those who have the resources we want. Hero worship and the idealization of others are nothing but a positive form of envy.

Again stressing the differences between men and women, men tend to be envious of men who have more sexual experience and have more mates, while women are envious of more physically attractive women.

Friends' Benefits & Frenemies Dangers

Men tend to prefer a larger number of less intimate friends and tend to spend less time nurturing their friendships.

Says Buss:

> In contrast to the psychological closeness and intimacy of women's friendships, men tend to use friendships to achieve some common goal, such as cooperative hunting, cooperative defense, or coalitional warfare.

Friends can bring lots of benefits, but they're also competitors and rivals, and that's often always in the air.
Men tend to perceive more sexual competition from their friends than women do, but women also compete with their female friends.
For example, the less female-attractive member of the friendship pair perceived more mating rivalry than the more attractive member (see: "frenemies" and "how to spot a frenemy").

Towards a Unified (Evolutionary) Psychology

In the last chapter of "*Evolutionary Psychology*," David Buss talks about the many overlapping fields of psychology and the lack of a unifying force.

He says that *evolutionary psychology* should be the discipline that ties all the different branches of psychology together.

And I couldn't agree more.

He also partially -and tactfully- criticizes the effort of cognitive psychology to hunt for "cognitive biases", saying that they are not really biases but simply evolved shortcuts that work well for most of our evolution and most of our problems (for cognitive biases, see "*Thinking Fast and Slow*" by Daniel Kahnemann).

Finally, Buss introduces a few more interesting theories, including attachment theory.
For more on attachment theory, see:

- **An overview of attachment theory**

Buss, of course, puts attachment theory within the wider lens of evolutionary psychology.
He says, for example, that variations from a secure attachment represent children's adaptation to non-optimal familial environments.
Avoidant attachment adapts to parents unwilling to invest, while anxious attachment adapts to a parent who is unable to invest, which leads to more short-term mating strategies.

More Wisdom

- **Dark triad predicts deception**: dark triad traits predict deception and sexual harassment (see: best dark triad books)
- **Psychopathy as a strategy**: psychopaths pursue a "cheating" strategy that can be rewarding, as long as there are enough cooperators in the system. Psychopaths pursue a cheating strategy mostly with interaction partners who are less attractive and those whom they don't expect to interact with in the future (also see: why psychopaths get laid more)
- **Sexual selection has two modes**: Sexual selection operates on two levels: intrasexual competition for access to mates, and intersexual selection or mate choice (which can also be conflictual at times, see: intersexual conflict
- **Evolution hasn't stopped**: there has been an acceleration of human evolution in the last 40.000 and 10.000 years, and not a slow-down as some had thought
- **Offspring's niches**: first-borns tend to be more conservative and close to their parents. Later brons enter into an

already existing child/parent bond and, mathematically, might receive less support even if the parents seek to be equal, so they seek their own way in life and reject the status quo. Last-borns, who receive all the family's support, tend again to be closer to their parents

- **Female beauty allows for upward mobility**: Buss says that beautiful women "marry up", also referred to as "female hypergamy".
  To learn more about the science of female hypergamy see:

> Stop Whining About Hypergamy (& Do This Instead)

Best Quotes

The quote, in this case, is not necessarily "inspirational", but it's a good wake-up call:

> These homicide data are preliminary, of course, but they suggest that there are risks of being the less valued party in the parent–child relationship.

??♂ Lucio's Analysis

Evolutionary Psychology is a monumental work.
These are the small notes I took on the side that left me wondering sometimes:

Does Not Always Disclose The Speculativeness of Some Theories & Hypotheses

Some theories are presented as if they were overwhelmingly proven and accepted.

But I more than once felt this wasn't the case, like in 'sperm competition'.
Or when alternative explanations may undermine the theory, like with the dual mating system for short and long-

term mating.

Should Disclose Sample Sizes & Effect Sizes More Often

For example, when it comes to the differences between male and female jealousy, the overlap between men and women is as telling as the difference.

And David Buller correctly points out that most German men report emotional infidelity to be more worrying than sexual infidelity.

Why's that so?
Could it be that culture, especially when it comes to openness towards sex, is more important than Buss acknowledges (at least on this one issue)?

Sometimes research was based on small samples

Writes Buss, talking about the link between attractiveness and number of offspring:

> A smaller study of 47 modern Polish women failed to find a link between female attractiveness and reproductive output.
> It is possible that modern birth control technology may sever the historical link between female beauty and offspring production.

Yes, it's certainly possible.
But I would *not* generalize from such a small sample and I would avoid drawing any conclusion based on it.

Determinism: over-explanations of what might just be randomness?

Evolutionary psychology has been criticized for being an "after the events" exercise of nice-sounding narratives with little science.

I think people who say that don't really understand *evolutionary psychology* or human nature, but that doesn't mean that, at times, evolutionary psychologists don't tend to over-explain things.

For example, I found the explanation of humans drinking alcohol as a by-product of our taste for ripe fruits to be quite an unsubstantiated stretch.

At least, I would have liked a note saying that some of these correlations were more speculative.

Too little room left for personal variations?

Buss says that "there is nothing arbitrary nor culture-bound about the standard of beauty".

But that's not true.
First of all, some standards of beauty are quite arbitrary in the way they develop, arising from random mutations in tastes that might or might not correlate too well with fitness.

Second, there is quite a bit of cultural variance in at least a few traits, as Buss himself found out.
For example, the amount of fat on a woman.

Also see:

- **Exception AL dating**
- **The cultural and external influences of your sexual market value**

> Sexual Market Value Hacks: Boosting Your SMV

An overly competitive view of nature?

I've already mentioned Buss talking about "hostile forces of nature".

And I believe that is only one side of the coin.
If nature was so "hostile", there would be no life. Instead, the earth is covered with life, so nature can't be that hostile, after all.

The same approach extends to competition.
It seems to me that the author focuses too much on competition to the detriment of cooperation.
For example, he writes:

> Natural selection is intrinsically competitive, a feedback process in which one organism's design features out-reproduce those of others in an existing population.

Of course, nature is "intrinsically competitive".
But it's also "intrinsically cooperative". Sometimes you could call it "competitive cooperation", or "codependency", like in humans' gut microbe, but it's still a form of cooperation.

Naive view on men not joining forces against women?

Buss is no naive author.

However, in this one instance, I felt it was a "too rosy view" of mankind.

The author says it's not true, and not possible, that men might unite to exclude women from resources and power.

He writes:

> Feminist writers sometimes portray all men as united for the common goal of oppressing all women (Dworkin, 1987; Faludi, 1991).
> Evolutionary psychological analyses suggest that this cannot be true because men and women compete mainly against members of their own gender. Men strive to control resources at the expense of and to the exclusion of other men.

I think the author is missing out here on the power dynamics involved.

Men compete against themselves the same way that most organisms compete but, as we've mentioned already, many organisms also collaborate *while* they compete.

Very high-quality men would not mind if women got more power, resources, and freedom to have sex as they, please.
They'd still win and find mates. As a matter of fact, they would win even more (albeit disempowered women also make it easier for high-quality men to keep attraction and power in their relationships).

But the majority of men are not very high in SMV.
So the vast majority of men *do* have an interest in keeping women away from sources of income and sexual freedoms.
The poorer women are, and the more forced they are to pair with *a* man, any man, the better off most average men are.
This is a case where a win for the group can be a win for the majority of individuals in that group.

Indeed, Buss says it right a little later:

> *Evolutionary psychology* points to a different conclusion: each individual is united in interests with some members of each sex and is in conflict with some members of each sex.

Exactly.
And when each individual is united with a large number of members of his own sex, then an effective, silent coalition to restrict the power and freedom for women can naturally form -and it probably *did* form-.
There is *some* truth in the patriarchy.

Also read:

- **Why the patriarchy is real**
- **Why Women Have Better Sex Under Socialism**

> Why Women Have Better Sex Under Socialism: Summary & Review

Also, read "how men keep women down at work".

Sometimes does not account for possible confounding factors in the research

Sometimes I felt that confounding factors were not properly accounted for and the authors might have been too quick in jumping to conclusions.

For example:

- **Men ejaculate more when the partner isn't there, but masturbation can't be the same as sex.**

The author mentions an experiment whereby 35 couples agreed to provide ejaculates resulting from sexual intercourse from condoms.

He says that the longer the couple was apart, the more the man ejaculated. Since the research took into account masturbation as well, that's proof that the quantity of ejaculation depended on time apart only.

However, that means that the researchers put masturbation and sex on the same level.
Who says that masturbation is equivalent to having with a partner? Maybe those men always ejaculated less when masturbating as compared to having sex. That should have been taken into account.

- **Teenagers killed more often, but teenagers also annoy people more**

The author says that teenagers are not killed by parents because they are the best age to secure future offspring. The proof that it's not about the ability of the child to defend himself lies in non-relatives, who kill teenagers more often than any other age category.

I thought that was a smart way of looking for trends.
Yet, teenagers are also more likely to rebel and annoy people, which is why non-relatives might get into violent altercations more often.

- **People leave more heredity to children than siblings *only* because they're younger and thus more valuable.**

The author says that people leave more inheritance to children than to siblings because they're younger and thus have more future mating potential.

That didn't make sense to me.

People leave more inheritance to children because they are responsible for their children, but they're not equally responsible for their siblings, who in turn are responsible for their own children.

This is a case of overthinking through genetic payoffs without considering other factors, such as "unwritten human contracts". In this case: "I care about my children, you care about yours".

Contradictory information on altruism & value

The author says that parents kill infants more than teenagers because they invest more in teenagers, and in teenagers are getting close to reproductive age.

Yet, he also says that helping in the life-or-death situation declines *steadily* as the recipient's age increases.
That might be the case because younger people need more help, yet it's a potential discord one should investigate further.

Mother / child uterus conflict: is it a case of arms race?

The author says that mothers want to abort unhealthy fetuses while fetuses, having only one shot at life, produce chemicals to prevent spontaneous abortions.

The author says it's an arms race and seems to imply that unhealthy children produce hCG to "trick" the mother's system into keeping the fetus implanted.
The mother's body appears to interpret high levels of hCG as a sign that a fetus is healthy and viable and so does not spontaneously abort

But there is no proof whatsoever that unhealthy children produce more hCG, so I didn't see it as an arms race as the author implies.

Sometimes implies causation where I saw only correlation

There were a few instances where I felt causation was implied without there being a basis for it.

For example:

- The author says that homicide statistics are proof that poor and unmarried people kill more as a "strategy of last resort". However, that does not necessarily imply causation and it could be that killers are also more likely to be poor and unmarried.
- The author says that males victimized by aggression during middle and high school lose status and have significantly fewer sex partners by the time they reach college, but who says it wasn't the low status they had to begin with that caused victimization?
- The author says that being in a gang results in more mating success because a study showed that gang members had more sexual partners than non-gang members. Again, this is just a correlation. And then he says that gang leaders had the most, but that says nothing because leaders are *always* more attractive and he should have compared it with non-gang members who were leaders of something -say, a fraternity-

Does not give enough weight to sexual selection?

I am biased here because I'm a big fan of Miller's "sexual-selection-centered" view of evolution and, especially, the development of intelligence.

So I naturally found that this wonderful manual under-represents the role of sexual selection in general and, specifically, of sexual selection in the development of the human intellectual faculties.

The Deadly Innovation Silliness

That was all the more striking when the author spent a lot of time discussing the theory of the "deadly innovations hypothesis".

The theory says that as our weapons and tools became more formidable, their mishandling also caused more deaths and, thus, more selection pressure against dumb people.
Frankly, that made no sense to me.

The number of deaths should have been so high to make an impact that I just can't believe there are enough people who accidentally shoot themselves or, in our ancestral time, who accidentally fell on their spears.
Plus, that can happen to anyone, and I can't see it being highly correlated with IQ.

Some weaker references: Baker & sperm wars? Chagnon?

The author mentions a couple of times Baker and his research, both sperm warms and the likelihood of women experiencing orgasms more often outside of their relationships.

Baker is controversial for his unscientific claims that have either not yet been proven, or that have been proven wrong -see his book "*Sperm Wars*"-.

The author also mentions Chagnon.
Chagnon's data on increasing mating success among murderers has been criticized -and, it seems to me, for good reasons, see Sapolsky for an overview and Fry for the original paper-.

I wish Buss had added a note on the side. Or at least quickly mentioned the debate raging on and why he still believed the source was valid.

Needs an update to integrate cultural evolution

Says Henrich:

> Famous evolutionary psychologists, from Steve Pinker to David Buss, are fond of claiming that natural selection is the only process capable of creating complex adaptations
> (…)
> I largely (…) (but) I part ways with them on the word "only." At least since the rise of cumulative cultural evolution, natural selection has lost its status as the only "dumb" process capable of creating complex adaptations well fit to local circumstances.

Also read the seminal:

- *The WEIRDest People in the World*

Review

Evolutionary Psychology is a fantastic introductory book fo the field of evolutionry psychology and one of the best overviews available.

The fact that it's written by David Buss, one of the leading researchers and experts in the field, only lends more authority to it.

I am grateful and indebted to David Buss' work and to his massive contribution to the discipline.

Edit:
The 7th edition is now available.

Behave: Summary, Review, & Criticism (Sapolsky)

Lucio Buffalmano · 16 December 2019 · Archived copy · Original

Behave (2017) is Robert Sapolsky's Magnus opera. It's a multi-disciplinary approach mixing *evolutionary psychology*, biology, and anthropology to explain what makes us humans and what causes and influences our thoughts and behavior.

Contents

- Summary
  - You Need to Think in an Interdisciplinary Way
  - The Underappreciated Temporal Elements of What Influence Behavior
  - Testosterone Is A Status-Seeking Hormone, Not An Aggression Hormone
  - Oxytocin Is Not What You Think It Is (In-Group Against Everyone Else)

Summary

About The Author:
Robert Sapolsky is an American neuroendocrinologist and author.
He is currently a professor of biology and professor of neurology and neurological sciences at Stanford University

Note: Excluded in This Summary
In this summary of "*Behave,*" I will not go into the description of the brain—not needed for our purposes—and Sapolsky's long dissertation on "free" will"—philosophically interesting but a practical time waste.

You Need to Think in an Interdisciplinary Way

Sapolsky's message and his goal with "*Behave*" are to provide an interdisciplinary approach to people and psychology.

He says that you cannot look at the trees without losing sight of the forest.
You need an interdisciplinary approach.

The Underappreciated Temporal Elements of What Influence Behavior

Many disciplines study what influences our behavior.

And depending on when we act, different causes tend to be the most immediate triggers:

- A second before we act: neurological
- From seconds to minutes before we act: environment and sensory stimuli
- Hours to days before we act: hormones
- Thousands of years before we act: genetics

Testosterone Is A Status-Seeking Hormone, Not An Aggression Hormone

Testosterone makes men more aggressive, goes the cliche.

But it's not really true:

- Within the normal range, individual differences in T don't predict who will be aggressive
- The more an organism has been aggressive, the less testosterone is needed for future aggression
- When testosterone plays a role, it's facilitatory, T doesn't *create* aggression, it just makes people more sensitive to triggers for aggression, particularly in those predisposed to aggression
- T fosters aggression only during challenges to status
- T increases whatever behavior is needed to maintain status, which, depending on context, might also lead to more generosity

Studies that link aggression to testosterone also cannot pinpoint causality because aggression also increases testosterone.

When the differences in testosterone concentration in an individual are within the normal distribution, there are no differences in behavior.
When they are huge, then individuals become more aggressive.

However, individuals who decide to increase their testosterone might already be predisposed toward more aggression.

In the end, different levels of testosterone are not good at explaining why some individuals are more aggressive than others.

And the actual effect depends on context.

An increase in risk-taking, for example, which is linked to testosterone, might lead to taking a risk and making a peace offer.
It also makes people feel good, potentially leading to more prosocial behavior.
And when status is awarded through prosocial behavior, higher doses of testosterone make people behave more generously.

In sum, testosterone makes people seek status.
But what awards status is context-dependent, so the effects of testosterone are context-dependent.

So the problem is not that testosterone causes aggression; the problem is the frequency with which our society rewards aggression.

Oxytocin Is Not What You Think It Is (In-Group Against Everyone Else)

If testosterone has too bad a reputation, oxytocin is coasting on a falsely good reputation.

Oxytocin:

- Increases mother/child bond
- Encourages monogamous pair-bonding
- Enhances trust and social affiliation
- Makes people more cooperative and generous
- When dealing with “them” it makes us more ethnocentric and xenophobic

There is a huge caveat for oxytocin, the “love hormone”: it only increases trust and generosity towards the “us”, or the ingroup.
It is nice to “us” and worse to everyone else.

Just like testosterone, the effects of oxytocin are dramatically dependent on context, who you are, your environment, and who that person is.

Why Adolescents Care So Much About What Others Think

It seems like adolescents are particularly sensitive to what others think of them.

In brain scans, the same brain area lights up when answering the questions “what do you think of yourself” and “what do others think of you”, as if the two were the same.
In adults, there is some overlap, but the two are not the same.

Adolescents also feel a stronger need to belong.
In a game of passing the ball to each other, adults who were excluded felt bad, but then the part of the brain that rationalizes and trivializes kicks in. So they might tell themselves “who cares? it’s just a stupid ball game”.
In adolescence, there is no brain region that activates to mitigate the pain.

You Need To Be Able To Detach Yourself Emotionally To Help Others

The person who is more likely to help and act is not the one who feels the most empathy.

Too much empathy can “crush” the person emotionally, and he does nothing -or moves away-.
Instead, the more people can regulate their empathic emotions, the more likely they are to act prosocially.

Thus, the ability to gain some detachment is one predictor of who actually does take action.
That’s why adolescents tend to be more empathic but can get overwhelmed and take no action.

This theory, taken to an extreme, has led some psychologists to suggest that psychopaths with zero empathy can make for more effective human beings (but I don't fully agree).
See:

- **The Wisdom of Psychopaths**
- **The Good Psychopath's Guide**

> The Wisdom of Psychopaths: Summary & Review

The Marshmallow Test Is A Good Test of Character & Odds Of Future Success

The Marshmallow test has received a lot of criticism -see "pop psychology myths" and "psychology replication crisis"-.

But Sapolsky defends it, saying that "a gazillion-dollar brain scanner doesn't hold more predictive power than one marshmallow".

- Kids with poor impulse control, who wanted to hold on but suddenly ate the marshmallow—that profile is a statistical predictor of adult violent crime
- Kids with "steep time discount curves", who think it makes no sense to wait—that's a predictor of adult property crime
- 40 years post-marshmallow excelled at frontal functions, had more PFC activation, and had lower BMIs

Bowlby and Attachment Theory: Dads May Be As Good As Moms

There is no evidence that a woman damages his child if she doesn't breastfeed.

And nothing in the science says that the same good attachment can't be provided by a man, two mommies, or two daddies.

My Note: Father equivalent to mother should not be implied
I'm skeptical about the "man, same as woman statement".
The fact that science doesn't categorically exclude that a man can provide the same attachment as a mother should *not* lead anyone to suggest that a father is equivalent to a mother.

Also read:

- **Attachment styles overview**

> Secure Attachment Style: Overview & Examples

Abortion Lowers Crime

Liberals said it was the economy that lowered crime.
Conservatives said it was more budget for policing.

A study instead showed too strong a correlation between abortion laws and crime drop twenty years later not to imply causation.
Of course, the findings were controversial, but they don't seem controversial to Sapolsky, who says:

> What majorly predicts a life of crime?
> Being born to a mother who, if she could, would have chosen that you had not be.

> What's the most basic thing provided by a mother? Knowing that she is happy that you exist

Bullies Pick Socially Awkward Kids As Targets

Bullying targets aren't selected at random but tend to be those types of kids with a "kick me" sign behind their backs.

Bullied kids' traits:

- Personal or family psychiatrical issues
- Poor social and emotional intelligence

Bullies' traits:

- Disproportionately from single-mom families
- Young parents with poor education and/or employment prospects

Two profiles of bullies:

- Anxious, isolated kid with poor social skills bullying out of frustration to receive acceptance (the most typical, and they mature out of bullying)
- Confident, unempathetic, socially intelligent kid with an imperturbable sympathetic nervous system, the future sociopath

If you want to find a kid who is really likely to be a mess as an adult, it's the kid who bullies at school, then goes home and is bullied by his parents.
These were the most likely to say "bullying is OK, and the weak deserve to be bullied".

Social Learning is Crucial For Character Development

A few examples:

- **Gender math differences**

The differences between math scores between men and women grow smaller as the countries become more egalitarian.

And they all but disappear, even slightly inverting, in Iceland, where the genders are the most equal.

But some differences, like better reading performance by girls, get bigger in more gender-equal societies.

- **Alcohol and aggression**

Alcohol makes those who believe that alcohol makes you more aggressive, more aggressive.

- **Status-related behavior**

Social behaviors of submission and aggression are hardwired, but parents and socialization teach when each one is appropriate.

A monkey raised in isolation displayed all the "correct" aggressive and submissive behavior, but at the wrong times and the wrong people, challenging the alpha when it did not have the power and strength to do so.

Individualist VS Collectivist Cultures: The Differences Are Real

The differences are strong and real.

But they're not always positive for collectivist societies and negative for individualistic ones as they're often presented.
Both individualists and collectivists denigrate outgroups, but only collectivists inflate assessment of their own groups (and that might be why the Japanese feel they're so good).

Individualist and collectivist cultures also produce different moral systems.
For example:

- In collectivist societies, conformity and morality are synonymous, and law enforcement is more about shame

There is a genetic reason why the US is more individualistic, and that's in the prevalence of the R7 allele.
People who emigrated to America, starting from the very first migration, were more restless, more driven, and more yearning for freedom and mobility.

The R7 allele is almost non-existent in Asian populations, especially in Japan and Taiwan.
The author says it's because of rice, which requires a large social effort to support.

My Note: I don't believe this "ad-hoc" evolutionary explanation
The author says that when Asian societies started growing rice, they also started selecting against R7 genes.
That sounded nonsense to me.
It sounds a lot like one of those "after the facts" made-up evolutionary psychology.
Edit: Indeed, *The WEIRDest People In The World* provides a better explanation for the psychological diversity.

Inequality Makes People Unkind

Cultures with more income inequality have less social capital.

The author says that trust requires reciprocity, and reciprocity requires equality.
Instead, cultures with big gaps are the opposite, because hierarchy is about domination and asymmetry.

This shows in research in many different ways, including:

- The higher the income inequality, the fewer people vote
- The more income inequality, the less likely people are to help someone (in experimental settings)
- The more income inequality, the less generous and cooperative people are in economic games

The author talks about "antisocial punishment", whereby people punish those who cooperate too much.
High levels of inequality and/or low levels of social capital predict a high rate of bullying and antisocial punishment.

Antisocial Punishment: Why People Attack The Cooperators

People tend to punish non-cooperators and free-riders.

But, in some cases, people also punish cooperators, going by the name of "antisocial punishment".

Why does that happen?

The author says it's because it puts pressure on "being nice", and some people don't want that. It happens in cultures where people don't trust one another -ie.: Greece and Oman-.

My Note: This is more speculative, and later work suggests it's also due to tribal VS impersonally pro-social culture and psychology

How We Pick Our Leaders

We mostly pick unconsciously and then rationalize.

One study indeed showed that kids, ages five to thirteen, could pick the election winners 71 percent of the time.

As rules of thumb:

- People vote competent and experience more than policies (competent-looking faces won 68% of the time)
- People often vote to depend on single issues they care much about
- People tend to vote for better-looking candidates
- People tend to vote for candidates who use more “we” and “us” pronouns

This fits into the larger phenomenon of people rating attractive individuals as having better personalities people typically being rated as having better personalities and higher moral standards.

But even here, contexts matter:

- When electing politicians, people prefer older and more masculine faces if it’s during times of war and unrest
- But they prefer younger and more feminine faces if it’s during peacetime (of course, that doesn’t mean that picking more aggressive and masculine leaders during war must be a good idea)
- In scenarios fostering cooperation between groups, intelligent-looking faces are preferred.

> How to Be A Leader: 13 Laws From Social-Psychology

Feeling Poor Predicts Illness

Poor people are less healthy than rich ones.

Yet, it’s not just about *being* poor and not having access to health care. *Feelings* directly correlate with a lack of health.

Violence Doesn’t Correlate With Sexual Success (Like Pinker and Evo Psych Suggest)

The author, with his usual wit and humor, criticizes the link between sexual success and killing.

Sapolsky begins by masterfully painting Chagnon as a bit of a bully himself, -but without ever saying so-.
Chagnon, says Sapolsky, “successfully establishes the Yanomano’s street cred”.
Unluckily, his data was not as strong as that of the Yanomamo warriors. For example, Chagnon did not account for age when comparing Yanomano, who had killed, with those who hadn’t.
And, most of all, he didn’t account for the most violent Yanomano who did *not* survive.

Sapolsky says that comparing the *surviving* killers with the non-killers is like running an analysis on veterans and concluding that wars are safe.
Indeed, the analysis should have taken into account the killers who got killed.
He has a point, and this is a criticism I also added to the otherwise wonderful Buss’ “*Evolutionary Psychology*“.
Sapolsky’s criticism extends to Steven Pinker himself, who indeed sometimes can go overboard with his continuous, never-ending attacks on “leftists”, “feminists” and “anthropologists of peace”.

Political Affiliation is A Psychological Profile

Consider Jonathan Haidt's six foundations of morality:

- care VS harm;
- fairness VS cheating;
- liberty VS oppression;
- loyalty VS betrayal;
- authority VS subversion;
- sanctity VS degradation

Liberals tend to value the first three, namely care, fairness, and liberty while undervaluing loyalty, authority, and sanctity.
Conservatives instead heavily value loyalty, authority, and sanctity, which often become stepping stones to right-wing authoritarianism and social dominance orientation (for example, see the dynamics of "the red pill community").

Obviously, that's a big difference.
Says Sapolsky:

> Is it okay to criticize your group to outsiders? Rightists: no, that's disloyal. Leftists: yes, if justified. Should you ever disobey a law? Rightists: no, that undermines authority. Leftists: of course, if it's a bad law. Is it okay to burn the flag? Rightists: never, it's sacred. Leftists: come on, it's a piece of cloth.

The differences in psychology are:

- Conservatives:
  - dislike ambiguity
  - have a stronger need for closure
  - dislike novelty
  - perceive more threats (in all realms of life)
  - empathize more with the ingroup
  - are comforted by structure and hierarchy (obedience, loyalty, law and order)

That's why, says Sapolsky, republicans managed to get poor whites to vote against their own interests: it's the confirmation of the status quo, and the devil you know feels safer than social transformation.

For liberals, the government should provide for the people, but for rightists, it's more important that the government provides protection with law and order -and go get your guns, too, just to be double safe-.

Disgust Underpins the Difference

From a biological point of view, it seems like the differences stem from the approach to the feeling of disgust.

Conservatives have a lower threshold for disgust.
Conservative Leon Kass used disgust as a formal policy, arguing that if you feel inherent disgust, then you don't need to reason about it, you got your answer.
Sapolsky quips:

> If it makes you puke, then you must rebuke

Of course, the author disagrees with it because different things disgust different people, especially when it comes to

social policy (ie.: the idea of slaves being free was “disgusting” to some people only a few centuries ago).

Conservatives Are More Stupid (Some Sub-Groups, At Least)

With Theodor Adorno in the 1950s, the link between conservative affiliation and lower IQ started.
Some, but not all studies since then, have supported the conclusion.

More consistent, though is the link between lower intelligence and a specific type of conservatism, such as right-wing authoritarianism -the guys who love hierarchy.

There are two explanations as to why lower intelligence might be connected with conservative affiliation:

1. Rightists are uncomfortable with ambiguity
2. Leftists “think harder” and make more connections (“integrative complexity”)

For example, one study shows that both liberals and conservatives tended towards personal attribution when explaining the causes of poverty -ie.: “they’re poor because they’re lazy”-.
But given them more time to think, the liberals shifted towards situational explanations -ie.: “things are stacked against the poor”-.

Liberals and conservatives seem equally capable of thinking past gut personal attributions because, when asked to do so, both, are equally adept at presenting the viewpoints of the opposite camp.
But liberals seem to be more intrinsically motivated to push toward situational explanations.

This is why it’s easier to make a liberal more of a conservative: you just need to increase the cognitive load, add time pressure, and alcohol, or make them too tired to think.
But it’s difficult to make a conservative think like a liberal.

This differing attributional style extends beyond politics.
If given more time, a liberal is more likely to think that a guy tripped over a dance because the dance was difficult.
But ask them to make snap judgments, and they are more likely to think like conservatives: the guy is clumsy.

The Impact of Environment on Parenting Teaching and Values

The role of a parent is to prepare the child for future success.

And it seems that parents adapt their parenting style to the environment in which they live:

- **In poor environments parents must prepare kids to fight**: parents’ speech was full of metaphors about not losing what was achieved, such as standing your ground, keeping up your pride, and not letting others get under your skin. Parenting was authoritarian, toughening the goal. Parents teased kids far more than in the other neighborhoods.
- **Working-class parents educate for “hard offensive individualism”**: families had some socio-economic momentum, and kids were meant to maintain that precarious trajectory. Parents’ speeches about their hopes for their kids contained images of movement, progress, and athletics—getting ahead, testing the waters, and going for the gold. With hard work and the impetus of generations of expectations, your child might pioneer landfall in the middle-class
- **Upper class was about psychological well-being**: Children’s eventual success was a given, as were expectations of physical health. Far more vulnerable was a child’s psychological health; parents’ responsibility was to facilitate their epic journey toward an individuated “fulfillment.”

Cultures of Honor: Between Courtesy, Hospitality, & Honor Killing Vendettas

Cultures of honor emphasize rules of civility, courtesy, and hospitality.

But also retribution, which one should always undertake for affronts to the honor of one's self, family, or clan; failing to do so is shameful.
That's why cultures of honor are filled with vendettas, revenge, and honor killings.

Some cultures of honor include Sicily, the mafia, the American South, and part of Latin America.

The author says that cultures of honor developed because people need to defend their status to survive and thrive. They take place among pastors because while nobody can steal your crops, someone can steal a herd overnight.

The Stanford Prison Experiment Made Good Points About Authority's Dark Side

Zimbardo and his famous Stanford Prison Experiment received plenty of criticism.

Haslam, an author of "*The New Psychology of Leadership*", ran the BBC Prison Experiment with results very different from what Zimbardo got.

And Zimbardo, also the author of "*The Lucifer Effect*", has always pushed back hard against critics (too hard for a neutral scientist, probably).

Beyond the personal anger, the author says that a few findings can be generalized:

1. When pressured to conform and obey, a higher percentage of normal people than most would predict succumb and do awful things.
2. Still, there are always those who resist (some apples, even in the worst of barrels, do not go bad)

The elements that contribute to resisting authority and not committing terrible acts include:

- Becoming aware of implicit, automatic biases;
- Becoming aware of our sensitivity to disgust, resentment, and envy;
- Recognizing the multiplicity of Us/Them dichotomies that we harbor and emphasizing ones in which a Them becomes an Us;
- Contact with a Them under the right circumstances;
- Resisting essentialism;
- Perspective taking;
- Rndividuating Thems.

The "nature" of the authority also plays an important role:

- Does the authority(s) evoke veneration, identification, pants-wetting terror?
- Is the authority in close proximity? (when the authority was in a different room, compliance decreased)
- Does the authority come cloaked in prestige? (experiments in a warehouse had lower compliance than on Yale campus)
- Is the authority perceived as legitimate and stable?

The type of social pressures:

- Groups of "Us-es" evoke more conformity than groups of Thems (Konrad Lorenz became a nazi because everyone in the social circle did, including his dad who was a kind man)
- How many are urging us to action? (three individuals doing the same is more powerful than one person doing the same three times)
- How many more "rebels" are there? 10 against 2 starts an "oppositional social identity", and it is a huge difference from 11 against 1
- Collectivist cultures tend to obey authority more

What is being required and in what context:

- Persuasive power of incremental action: we rarely have the sense that we are "crossing the line" when we're moving forward on a continuum ("you were OK shocking the guy at 225, but not 230? That makes no sense, come on, it's the same")
- Removing personal responsibility: telling people they won't be held responsible, or reminding them their responsibility is to the experiment, not the people being experimented (ie.: "you signed up a form", "you're ruining things")
- Diffused responsibility: compliance increases when guilt is diffused and you can tell yourself that you're just "one cog in a big machine"
- Anonymity and deindividuation: diffusion of responsibility happens naturally with big enough groups, that the victims can't recognize you, and if you wear special uniforms, you can't recognize yourself afterward
- Possible alternatives: if we see alternatives, we are more likely to seek them, if we think there is no other option but to obey, rebellion becomes difficult

The nature of the victim:

- The victim is an abstraction: "future generations" is an abstraction; being close to the victim or shaking hands with the victim decreased compliance in Milgram's experiments
- The psychological distance is increased or decreased: "how would you feel in his shoes"?
- The victim was friendly or unfriendly towards us
- The victim is individuated: but don't let the authorities do it for you, they will always paint the victims as nasty

Personality of the individual that predicts compliance resistance:

- Not valuing being conscientious or agreeable;
- Being low in neuroticism;
- Scoring low on right-wing authoritarianism (any authority is more likely to be questioned if you question the very concept of authority);
- Social intelligence, which may be mediated by an enhanced ability to understand things like scapegoating or ulterior motives
- Stress, with people being more likely to obey under stress

Women voice more verbal resistance but ultimately comply more. Gender is not much of a predictor, though.

Being a hero sometimes is as banal as the banality of evil.
Heroes are normal people, too.

Rationalizing Evil Deeds

Finally, there are rationalizations that people use to do what's good for them, but poor for others.

Says Sapolsky:

> It's not great if someone believes it's okay for people to do some horrible, damaging act.
> But more of the world's misery arises from people who, of course, oppose that horrible act…. But cite some particular circumstances that should make them exceptions.
> **The road to hell is paved with rationalization.**

Cheating or Not Cheating Is Not About Struggle, It's About Values

In a study of coin tosses and self-reporting, about a third of the subjects cheated frequently and easily.

In people *capable* of cheating, but who ended up resisting, there was an internal struggle and delayed response.

People who never cheated had no internal struggle.
For them it was easy, there was no internal conflict, no different parts of the brain activating: you simply never cheat, no need to think about it.

This is not to say that honesty cannot be the result of an internal struggle, but if *continuous* choices are required, then it's difficult to come out with spotless honesty without cheating a few times.

Rich People Are Greedier

Says Sapolsky:

> Across the socioeconomic spectrum, on the average, the wealthier people are, the less empathy they report for people in distress and the less compassionately they act.

Why?
Because wealthier people are more likely to think of greed in positive terms, to view the class system as fair and meritocratic, and to view their success as an act of independence.
And they all mean that not acting the way they do means being "somewhat inferior", which is a great way to decide that someone else's distress is beneath your notice or concern.

The Invention of Religion As Moralizing Force

There are a few patterns among people and religions:

- Desert cultures tend toward monotheistic religions
- Rainforest cultures tend toward polytheistic religions
- Nomadic pastoralists' deities tend to value valor in battle as an entrée to a good afterlife (probably needed to defend cattle)

Gods and religious orthodoxy are more important in cultures with frequent threats (war, natural disasters), inequality, and high infant mortality rates.
Probably because people turn more frequently to God for help.

And once cultures get large enough that anonymous acts become possible, they start inventing moralizing gods.
Probably to help society stay more prosocial and less threatening.

Three important points Sapolsky makes about religion:

1. Religion reflects the values of the culture that invented or adopted it, and very effectively transmits those values;
2. Religion fosters the best and worst of our behaviors;
3. It's complicated.

Power Is Manipulating You To Keep You Down

Those on top seek justification for the inequality.

Fiske found out that when those in power can frame the underclass as high in warmth, but low in competence, it can help stabilize the status quo (Fiske and Cuddy, 2002).
The powerful feel good about their presumed benevolence, while the subordinates are placated by the (condescending) sops of respect.

Enter the "poor but happy" cultural trope, and the "rich and unhappy, stressed out, or overburdened".

There are cultural myths that support the status quo.

Finally, I loved this quote from Sapolsky (edited for brevity):

> Imagine texts bouncing along and across the trenches saying "This is bullshit. None of us here want to fight anymore"
> They could have ended it, tossed down their guns, ignored or ridiculed or killed any objecting officer spouting obscenities about God and country, could have gone home to kiss their loved ones and then face the real enemy, the bloated aristocracy who would sacrifice them for their own power.

I'm not a leftist, but I love that attitude.
I think it's important to learn more about manipulation, so check out:

- **Politicians' manipulations**
- **Corporate manipulation**
- **Manipulation strategies**

> Manipulation: Techniques, Strategies, & Ethics

More Wisdom

- The Bonobos are not friendly and "peace and love", as some authors imply. Instead, they are nasty to one another just like any other species
- **The bystander effect**, such as people not helping when there are lots of people around, holds for non-emergency situations, but in dangerous situations, the more people there are around, the more likely they are to step forward
- **Men are more aggressive or prosocial depending on what confers status**: when there are women around men tend to be more risk-taking and more aggressive. But when status is achieved through pro-social actions, men are more pro-social
- **High-density living doesn't increase aggression**: high-density living is a bit like alcohol and testosterone: it makes more aggressive individuals more aggressive. But more submissive individuals also become more submissive in conditions of high-density living
- **Humans are not polygynous nor monogamous**: we're in between, a confused species that can go either way
- **Alpha chimps are not the highest in testosterone**: the highest in testosterone were the younger males who started lots of fights they couldn't finish. The only period when T predicted rank was during group formation when fights were more common. Otherwise, the link between power and T is not high
- **Brawn gets you to power, brain keeps you there**: getting power is about aggression and strength, but staying in power is about social skills
- **Mirror Neurons are overblown**: the author takes aim at Ramachandran a "mirror neurons enthusiast". Sapolsky says he got "a bit too giddy about mirror neurons", and he adds: "*I'm not trying to harp on Ramachandran, but how can you resist someone brilliant handing out sound bites like calling mirror neurons "Gandhi neurons*"? (also see "self-help myths")
- The Better Angels of Our Nature is wrong: Sapolsky joins statistician and philosopher Nicholas Nassim Taleb in criticizing Steven Pinker's work and "naive optimism",
- **Religiosity doesn't predict support for terrorism, it's the attitudes of those around**: It's not how much one prays that predicts intergroup hostility, it's being surrounded by coreligionists who affirm parochial identity, commitment, and shared loves and hatreds

- **Religious people act nicer(?)** Some studies report more charitable acts towards in-group, but others show no correlation. The discrepancy partially arises when the data is self-reported, as religious people want to be seen - and see themselves- as more charitable. But it does seem that religious cues boost prosociality
- **The bystander effect**: The bystander effect happens when there is no real threat. But in dangerous situations the more people, the more likely they are to act
- **Action requires detachment**: too much empathy can overwhelm people and cause them to do nothing or to withdraw. Action requires empathy, but also the ability to detach oneself and think clearly. Adolescents sometimes can be too empathic
- **People are poor fighters**: people are generally poor fighters. Fists break during fights, and most people just scuffle with little damage to each other. Most people are also afraid of fights. Footage of football hooliganism shows most are on the sidelines
- **We mature late because of our complex societies**: human children mature very slowly, and this is in part because it takes time to evolve, adapt and learn to the point that we can be effective in our complex societies
- **Epigenetics: it's both genes and environments**: most complex personal traits are not caused by genes, but influenced by genes, which in turn are influenced by our environments in how and when they express themselves

CONS

I loved "*Behave*".

Yet, there are important notes:

Too Much on The Plate

Few academics have the courage to say it.
But here it is: there is such a thing as "too long".

The ability to sum up evidence to provide an overview and make a point is an important skill.
I understand authors want to write "defining operas" of their life's work, or show how deeply they researched.

But that doesn't serve the readers well.

Behave ends up being too long, especially the chapters describing how the brain works.

Lots of Personal Opinions (& A Bit Politically Motivated)

Sometimes the author seems to look into science to reach leftist political conclusions.

For example, he says that "nothing says that a man can't provide the same attachment as a mother", and that seemed a bit of a stretch.

Or that "other countries would be baffled by Americans voting for the most likable person" when Bush, a conservative, won out against Kerry, the liberal.
But he should know people are pretty much the same all over.

The book is also full of barbs towards the rich and politically conservative. The rich, for example, seem to invent the cultural trope of "poor but happy". But who says that it's not the poor who come up with it to feel better about themselves?

Bashing of Agriculture: The Clear Sign of Ideological Bias

Here we are again.

This is a popular view among left-wing authors, for example, Jared Diamond -"*Guns, Germs, and Steel*"; *The Third Chimpanzee*"-, and Yuval Noah –*Sapiens*-.

Allow me some sarcasm now.
You gotta love the "agricultural myth" of the left wing. You ascribe to it, and you get in exchange a set of magical rose-tinted glasses. You put them on, and they take you to a wonderful and pristine past of equality, freedom, and bliss.

Let's imagine for a second that agriculture really was "bad", somehow.
It still remains to be explained how millions of people were stupid enough to keep planting and harvesting, never looking back to their past of hunting and gathering.
Or how come agriculture conquered the world, together with the populations that used it?

But hey, maybe modern authors know better what was good for them.

And "*Behave*" reminds us what are the agricultural ills that those dumb ancestors of us didn't realize when they switched to it.
Agriculture made us all sedentary, "overly dependent" on a few crops and animals only, "vulnerable to droughts", and even led us to "do something that no other primates do: live near our feces".
But finally, eventually, we get to the crux: agriculture instituted inequality.

That's what Sapolsky says.
And there we are, finally: agriculture sucks because it brought inequality.
Now at least we know where the author's heart lies.

Such a pity that such an enlightened author, of such a wonderful book, had to fall for the politicization of history.

Sometimes Random Studies Generalized

Sapolsky says that "when it comes to Eternity, sticks apparently work better than carrots".
He says that based on a study "showing" that the greater the skew towards belief in hell as opposed to heaven, the lower the crime rates.

But the study was based on 67 countries, and I just can't see how one can isolate tens of other variables, which, in my opinion, all account far more than "a bias towards heaven or hell" -ie.: poverty, inequality, education, etc., etc.-.

PROS

I listed lots of cons, but "*Behave*" is a masterpiece.

I especially loved Sapolsky's scientific approach.
His willingness to go beyond the immediate correlations, to look for discordant information, and to truly dig for the deeper causes.

Sapolsky's last message is what a true scientist and searcher of truth should always remember:

> It's complicated.
> And it depends.

And that's why, my friends, you always need to be watchful of those who proselytize on a few simple, over-generalized concepts.
Yes, they might seem charismatic.
But they probably don't have either truth, or your best interest in mind.

Review

Behave is a majestic book that goes deep into human nature, enlightens on many important topics, and dispels many myths and generalizations.

It provided much information for my own work, including a couple of future articles and my own course "Power University".

Its only limitation, in my opinion, is its own strength: by providing such a vast, interdisciplinary overview, the reader might end up overwhelmed, and walk away with little practical information.

What may have made it even better is a coherent thread that pulls everything together.
Sapolsky speaks of the need for a general, interdisciplinary approach, but "*Behave*" still feels like a hotpot mixture, albeit a tasty one.

I leave with one great quote from Sapolsky:

> Anyone who says that our worst behaviors are inevitable knows too little about primates.
> Including us.

How the Mind Works: Summary, Review & Criticism

Lucio Buffalmano · 21 December 2019 · Archived copy · Original

How the Mind Works (1997) explains how the human mind processes information by drawing upon *evolutionary psychology* and the computational theory of mind (i.e., comparing the mind to a machine).

Contents

- Summary
- Quotes
- More Wisdom
- Criticism
- Review

Summary

About the Author:
Steven Pinker is an author, experimental psychologist, and psychology professor at Harvard.
He is also the author of "*The Blank Slate*", "*The Better Angels of Our Nature*" and, my favorite "*Enlightenment Now*".

Evolutionary Psychology Is Not "After the Facts Storytelling", But There's Plenty of Bad Evo Psych

Steven Pinker says that one of the common criticisms of evolutionary psychology is that it's an exercise in after-the-facts storytelling (see Nassim Taleb).

He says that it's not the case, but one of the reasons it might seem like this is because there are plenty of people who make up nice-sounding, but ultimately meaningless "evolutionary psychology explanations".

For example: "men avoid asking for directions because approaching a stranger might get one killed, or "happiness evolved because happy people are pleasant to be around, and so they made more friends and allies".

The reason why these are lame is not because they seek to explain behavior and psychology in light of our evolution, but because they do a poor job at it.

Common Mistakes in Evolutionary Psychology

Some of the common mistakes that people who first approach evolutionary psychology are:

- **We don't need to explain everything because there is no evolutionary explanation for everything**: our mind is adapted to the savannah, not the computer age. We didn't have institutions such as birth control and adoption agencies. Had we had "birth control trees", we could have developed to fear them like we fear spiders.
- **Natural selection does not shape behavior directly, but only acts to shape the generator of behavior that is our mind**: did not evolve, what evolved is the mind. There is no gene for "adultery", maybe there could be a "desire" to have sex with someone who is not our spouse could have evolved, but the desire might also be overridden but other desires which are also indirect products of our genes
- **Natural selection cares only about the long-term fate of that replicate**: to understand and reverse-engineer a machine, we need to understand what it was created for. And the goal of the mind is to maximize the number of copies of the genes that created it
- **People don't strive to selfishly spread their genes, genes selfish spread *themselves***: they do it by the way they build and shape our brains, making us enjoy sex, avoid harm, love our children, etc. Our goals are not our

genes. The reviewer complained that human adultery cannot be a strategy to spread genes because humans take precautions not to get pregnant. But he misses the point: sexual desire is not people's strategy to propagate genes, it's people's strategy to obtain the pleasure of sex, and the pleasure of sex is genes' strategy to propagate themselves. If the genes don't get propagated, it's because we are smarter than they are.
Genes are a play within a play, not the interior monologue of the player.

Why People Oppose Evolutionary Psychology

Steven Pinker goes here into a theme that he cares deeply about: the leftist and feminist ideology that tries to deny human nature.

You can read "*The Blank Slate*" for more as he dedicates the whole book to the "denial of human nature".

But in short, the opposition comes because of three *wrong* implications about human nature:

1. If the mind comes with a structure, different people might have different structures, and that would justify discrimination and oppression
2. If antisocial behavior like aggression and the pursuit of status and resources are natural, that would make them natural, and hence good (naturalistic fallacy)
    1. If "bad behavior" is in the genes, then trying to change is futile, and that makes any attempt at improving our society, useless (not true)
3. If behavior is caused by the genes, then people cannot be held accountable for their bad and harmful behavior

In short, some (leftist) scholars see it like this: innate = right wrong = bad.

Instead, says Pinker, understanding behavior means to understand and mediate between:

1. genes
2. the anatomy of the brain
3. the brain's biochemical state
4. the person's family upbringing
5. the way society has treated him or her
6. the stimuli that impinge upon him or her

Species Evolve at One Another's Expense

We fantasize about the land of milk and honey and peaceful nature, but except for fruits, virtually every food is the body part of some other organisms.

Organisms evolved defenses against being eaten, while wannabe-eaters evolved weapons to overcome those defenses.

The cycle of life is an arms race to better eat others.

Most evolved weapons and defenses are genetically programmed and fixed within a lifetime.
That gives humans an unfair advantage. They can attack species that can develop defenses only in subsequent ones.
Many species cannot evolve defenses rapidly enough.

My Note: It's also partly about learning, though
Some species are particularly bad at surviving humans because they don't fear humans.
But a few bad encounters can "teach" them to stay away. So, albeit Pinker's line of reasoning is correct, defenses are also partially learned and not fully inborn.

Stereotypes Are Often Based on Accurate

Talking about "categorizations" and their utility, Pinker also discusses stereotypes.

He says that:

> Some stereotypes may be based on good statistics about real people.
> In the US, there are large and real differences among ethnic and racial groups in their average performance in school and in their rates of committing violent crimes.
> The statistics of course say nothing about heredity or any other putative cause.
> Ordinary people' estimates about these differences are fairly accurate, and in some cases, people with more contacts with the minority group, such as social workers, have more pessimistic and more accurate estimates of the frequency of negative traits such as illegitimacy and welfare dependency.

What's racist, Pinker says, is not being realistic in the general trends and numbers, but using the general trends and numbers to make decisions about individual cases.

I applaud Pinker for broaching this politically sensitive topic with some good sense.
And it also happens that there is plenty of research to show that stereotypes often have more than a kernel of truth.

We're Not As Irrational As Psychologists Say

Steven Pinker, like a few other evolutionary psychologists, doesn't buy into the much-vaunted irrationality of the human mind.

Contrary to what popular books such as "*Thinking Fast and Slow*" and "*Predictably Irrational*" would lead us to believe, people's thinking is not as stupid as one might believe.

Even when people's judgment of probability departs from the truth, their reasoning is not necessarily illogical.
Take the gambler's fallacy, such as the belief that if something random happens many times in a row, it's less likely to happen in the near future. The gambler's fallacy does apply to dice, but we didn't evolve playing dice and slot machines, and many days of cloud might predict the sun.

Says Pinker:

> In any world *but* a casino, the gambler's fallacy is rarely a fallacy.

So when a smoker rationalizes that his 90-year-old parents have been smoking for decades, so the national statistics don't apply to him, he might as well be right.

The Good of The Group Can Lead to Evil Results

Steven Pinker dedicates one chapter to altruism and the evolution of altruism.

We have touched already on this topic in many summaries already so I will not write at length about it.
But Pinker does add one great contribution.

He says that perhaps we should rejoice that we didn't evolve to put the interests of the group ahead of the individual.
Because he says:

> Often, the best way to benefit one's group is to displace, subjugate, or annihilate the group next door.
> (…)
> When human leaders have manipulated or coerced people into submerging their interests into the group's, the outcomes are some of history's worst atrocities.

I couldn't agree more, and there is a foundational article here on the good of individualistic self-centeredness.
See:

> Enlightened Self-Interest: Making of The Ubermensch

Dating Is A Marketplace

At a certain point, it makes sense for people to stop dating, choose someone, and pair up.

But choosing someone because he or she was "the best we found" leaves our partner vulnerable.
Out of 6 billion people there will surely be someone who likes you even more than your partner does, and whom you will like much more than you like your partner.

So if you always go for the best you can get, rationally you would leave your partner.
That's why people want to see their partners' feelings, and signs that they chose them because they really like them, and not because of a rational calculation.

> The Sexual Marketplace: Overview of Intersexual Dynamics

We Lie to Ourselves to Lie Better, But The Truth Is Still Hidden in Our Brain

To better lie and deceive others, people often believe their own lies.

However, the truth is still useful, and it should be registered somewhere in the brain.
People fool themselves to maintain a good image of self, so for example, they derogate others when they assault others.
This is cognitive dissonance, first postulated by Leon Festinger. But, says Pinker, it was Elliott Aronson, author of "*The Social Animal*" who truly got it right.
Cognitive dissonance only arises when people need to eliminate the dissonance between what they do and the proposition of themselves being as benevolent and effective as they'd like to think they are.

Sometimes we have a glimpse of our own self-deception when some remark really hurts.
It's because part of us knows it's true, but we'd prefer to keep it hidden.

For more on self-deception and self-manipulation, also read:

> Manipulation: Techniques, Strategies, & Ethics

Scholars Fight A War for Status, Not For Science

Theoretically, scholars and researchers should have truth in mind.

But in practice, scholars are also known by colleagues as "the types who can be pushed around" and "the types who won't take any shit".
A switchblade at a scholarly conference would strike the wrong tone, but scholars fight the battle with different means, including:

- Intimidation: “clearly”
- Threat: “it would be unscientific to… “
- Authority: “as Popper showed.. “
- Insult: “this work lacks the necessary rigor for (this is actually soft power and judge role”)
- Belittling: “few people today seriously believe that… “

Achieving Status With Dominant or Social Intelligence

Even in violent tribal groups such as Yanomano, strength is not everything some leaders earned power and authority with shrewdness.

Chagnon reports that some leaders are flamboyant bullies, but some others use shrewdness and discretion.
One man, for example, dominated thanks to a web of alliances and conserved his authority by giving orders only when he was sure everyone would follow them.

Status Rule #1: Follow Those Above You if You’re Below, Be Different Than Those Below if You’re Above

And that’s why fashions change so quickly.
The people above always seek to differentiate themselves from those below them, while those below always try to copy them to get the same status.

And that’s the rationale behind the current trends of hipsters, dressing on purpose more like low-class individuals.
Pinker says the upper classes and the most advanced fashion trendsetters dress provocatively down to avoid being confused for the boring middle class.

Aggressive Nonconformity

Aggressive nonconformity is an advertisement that one is so powerful and confident, that he can break all the rules and jeopardize the goodwill of others.

Quotes

On futurology:

> The one prediction coming out of futurology that is undoubtetly correct is that in the future, today’s futurologists, will look silly

On the irreconcilable differences between creationists and scientists:

> As I marveled at the Swiss-watch precision of the joints, the sewing-machine motions by which it drew silk from its spinnerets, the beauty and cunning of the web, I thought to myself: “How could anyone see this and not believe in natural selection!?”
> At that moment a woman standing next to me exclaimed “How could anyone see this and not believe in God!?”

On the randomness of stock markets:

> A large industry of self-anointed sears allucinate trends in the random walk of Wall Street

About creativity and self-interest (I’m gonna quote Pinker on this one, it’s too good):

> Unfortunately, creative people are at their most creative when writing their autobiographies

On moralistic science:

> I think moralistic science is bad for morals, and bad for science

On genders' differences towards adultery:

> A woman has an affair because she feels that a man is in some way superior or complimentar to her husband. And a man has an affair because the woman is not his wife.

More Wisdom

- Caste societies have legends and myths instead of history and science so that they can justify their power position over others
- We categorize to better infer information from reality
- Disgust is partially learned, but we are also all predisposed to disgust and adults often find the same things disgusting. Disgust is intuitive microbiology
- Children try to get in between parents to hog attention and avoid competition with a new child. This is what Freud misunderstood: it's not sexual competition, it's competition for resources
- Children grow up influenced by their peer group far more than their parents because their peers provide far more reliable information as to which behaviors will be effective. The child's future success and sexual access do not depend on the home environment but on the social environment
- Sex is not a bonding force in human nature, but a divisive one (also see: tools of sexual conflict)
- The Madonna/whore dichotomy is the optimal mating strategy for males of any species who invest in their offspring
- Our taste for music and the arts are non-adaptive byproducts (this is one theory, while I tend to agree with Miller and believe they were sexually selected as fitness indicators, as it also happens in other animals)
- Humor is a tool of social power dynamics, it can be a tool of aggression, or a tool of submissiveness to defuse tension (see Power University for the power dynamics of humor)
- Religion is a technique for success

Criticism

How the Mind Works was a wonderful read, but there are important points I need to raise:

1. Too Deterministic, Sometimes "Fooled by Randomness"

Sometimes I feel Pinker seeks to over-explain things.

The author says that evolutionary psychology shouldn't seek to explain everything, and yet sometimes it feels that's exactly what he does.
For example, he asks:

> If consciousness is useless, if a creature without it could negotiate the world as well as a creature with it, why would natural selection have favored the conscious one

Natural selection has not favored the conscious one.
There are countless ways of supporting life and making it thrive, consciousness simply happens not to make such a huge difference on whether one has it, or not.
Possibly, consciousness actually helps to spread genes, but natural selection has not really favored anything. It happened rather randomly.

2. The "Perfect Machine" Fallacy: The Computer Analogy & Organisms as Perfect Adaptations

Says the author:

> Organisms are not just cohesive blobs of pretty spirals, they are machines.
> And their complexity is functional adaptive design

In the epilogue to later editions, the author says he was misunderstood with the "machine" analogy.

Yet, the main issue with the machine analogy is that Pinker makes it sound as if organisms work like perfect clockwork.

The analogy repeats over and over, giving exactly that feeling of "perfect machinery".
For example (italic is mine):

> Animals' brains are just as specialize and *well engineered* as their bodies
> A brain is a *precision instrument* that allows a creature to use information to *solve the problems* presented by its lifestyle

And again:

> Each animal has evolved *information-processing machinery* to solve its problems, and we evolved machinery to solve ours.
> The *sophisticated algorithm* found in even the smallest found in even the tiniest dabs of nervous tissue serve as yet another eye-opener…

And more:

> The real action is in the pattern of connections among neurons, just as the differences in content among different computer programs, microchips or video cassettes

And even more:

> The difficulties of building organisms to cooperate and be generous have not prevented natural selection from *installing* cooperation and generosity in humans.
> (…)
> *The onboard computers* of social organisms, especially humans, should *run sophisticated programs* that assess the opportunities and risks at hand, and act accordingly

How the Mind Works could have as well been called "how this engineering feat works" or "how this computer" works.

Together with the mind seen as a "perfectly engineered machine", evolution also comes to be seen as the "perfect engineer designer":

3. "The Perfect Engineer Fallacy": Evolution As Infallible Designer

Says the author:

> Natural selection does not have the foresight of engineers. But that cuts both ways. It does not have their mental blocks, impoverished imagination, or conformity to bourgeois sensibility and ruling class interests either.
> Guided only by what works, selection can hone in on brilliant creative solutions.

And then:

> Ingenious contrivances of the living world, the bio-mechanical perfection of cheetahs, the infrared pinhole cameras of snakes, the sonar of bats, the superglue of barnacles (…) after all, more malevolent forces like predators and parasites are constantly gnawing at an organism's right to life and do not forgive slapdash engineering

Again, we go with the "machine" analogy.

Reading "*How the Mind Works*", I felt like it was like a hymn to evolution's perfection.

The author even downplays the *mistakes* of evolution:

> And many of the examples of bad design in the animal kingdom turn out to be old spouse's tales.

It sounds like the author is saying that evolution makes no mistakes.
But it's not really like that.
Evolution is messy, sometimes also going off maladaptive tangents.

The selfish gene, after all, doesn't care about "perfect".
The selfish gene is happy with "good enough to replicate".

Learn more here:

4. Too Natural Selection-Centric, It Forgets Sexual Selection

I find Steven Pinker, like a few more contemporary evolutionary psychology authors, to focus too much on natural selection and too little on sexual selection.

See here an example:

5. Unconvincing Explanation of Complex Adaptation Through Natural Selection

The author says that natural selection can well explain "complex adaptations".

And I believe that's the case.
It must be the case, what other explanations are there, anyway?

Yet, his "rational" arguments are not very rational at all.
For example, he says:

> Halfway wing will not make you soar like an eagle, but it will allow you to parachute.

Yeah, halfway… But how about 1/5 of a wing?
Or 1/10th of a wing?
That's just useless.

I don't believe that natural selection is the answer here.
Probably sexual selection also played a role. I like Miller's theory of "sexual selection as the VC of evolution" (check out "The Mating Mind").

6. Too Much Vitriol Spent Against "Feminists" & "Leftists"

Pinker has a point when he talks about some ideology-driven academics.

But sometimes he overdoes it.
And, as well, sometimes he fails to understand that those authors too, can add a few important contributions to the discourse.

7. The Concept of "Humans As Weak" Is Wrong (& Ethnocentric)

It's funny that, of all the people, Pinker falls for this.

He pokes fun at the countless authors who say we're just another chimp, and he makes fun of those who say

humans are weak because today “this weak animal” controls the fate of the supposedly “stronger” animals.

And then, he falls for it himself.
He implies we are weak and that our victory is the “ultimate revenge of the geeks”.

I don’t see how anyone could see humans as weak, even without our recent surge of high-tech.

That’s very ethnocentric to say. And it’s because, as Pinker also knows, we tend to focus on threats. So we focus on *bigger* animals, or on smaller *dangerous* animals.
And we forget the countless ones who are neither bigger nor dangerous to us.

But the truth is that we are some of the biggest animals on earth.
We live long and have long childhoods because we were powerful and didn’t die frequently, including during our evolution.
And we are left free to build our own weapons, even without any high technology, we will still come out victorious against 99% of any other animals.

So this idea that “humans are weak” is really just misplaced and ultimately ethnocentric nonsense.

8. Sometimes It’s “After the Fact Storytelling”

I have the feeling the author sometimes jumps to conclusions.
For example, talking about hunting:

> And men are bigger and more adept to killing because of their evolutionary history of killing each other

Based on what the author says men are bigger because of “killing each other”, and not simply “fighting each other”, or because they were selected by women to be bigger.

No data is provided, but it’s presented as a fact.

9. Does It Misunderstand the Hamilton Rule?

I’m surprised that an intelligent man such as Pinker could misunderstand Hamilton, but it seems that’s just what happened.

Says Pinker:

> Biologist William Hamilton noted, that if a benefit to the relative, multiplied by the probability that the genes is shared, exceeds the cost to the animal, that gene will spread in the population

But Hamilton’s rule doesn’t say the gene *will* spread.
The gene *can* spread.

Genes that obey Hamilton’s rule will not be rooted out by evolution, while those that do disobey Hamilton’s rule will have to against the forces of evolution.

But nothing in Hamilton’s theory says that the genes will necessarily spread like Pinker makes it sound.
Again, this to me suggests that Pinker has a rather deterministic view of evolution and that if something *can* happen because it’s good for the gene, then it *will* happen for sure.

10. Chagnon and War: The Controversy

There has been much debate about Chagnon, and I’m not taking any side against Chagnon here, or against Pinker’s general conclusions.

As a matter of fact, since war is so widespread, I do believe humans do have a tendency for war and, possibly,

psychological adaptations for it (albeit not a gene for war, of course).
As Pinker says:

> Some people think that evolutionary psychology claims to have discovered that human nature is selfish and wicked. But they are flattering the researchers(…)
> No one needs a scientist to measure whether humans are prone to knavery. The question has been answered in the history books, the newspapers, the ethnographic record, and the letters to Ann Landers.
> But people treat it like an open question, as if someday science might discover that it's all a bad dream and we will wake up to find that it is human nature to love one another.

Yep, I couldn't agree more.

However, Pinker could have done himself a favor and not relied heavily on Chagnon and the Yanomamo.

After all, there are good arguments that seriously cast some doubts on the link between killers and sexual success (see Sapolsky, 2018 for an overview and Fry for the critical paper).

Review

Steven Pinker wanted "*How the Mind Works*" to be his Magnus opera.

And it is indeed a monumental work.
But that's also his limitation, in my opinion.
Similar to "*Behave*" by Sapolsky, it crams in too much information from too many disparate fields.
It's difficult to find a central theme, a thesis, or a clear message that the reader can remember.

What will one associate "*How the Mind Works*" with, when the topics it touches upon range from extraterrestrial life, to the evolution of art, to the utility of humor?

My Own Bias in Reviewing "How the Mind Works"

I was a bit biased toward "*How the Mind Works*".
And not in a positive way.

To begin with, I wasn't holding the author to the same high self-esteem I used to.
I find him to be too derisive towards the people and colleagues he disagrees with, including in the epilogue of this very book. He ends up sounding smug, and I don't like that attitude.
Maybe he's trying to follow his own theory of "scholars who won't take any shit" a bit too hard, and he should focus a bit more on what's true instead of who's right.

Second, I had read and loved "*The Mating Mind*" first, where Geoffrey Miller tears down the idea of the mind as a computer, and I knew that Pinker was accused of embracing that metaphor -albeit he says that's not the case in the epilogue of the new version-.

Third, I had already read "The Blank Slate", focused on demolishing the leftist and feminist "Social Science Standard Model", and I was tired of that raging battle.
How the Mind Works dedicates a whole chapter, plus lots of barbs spread throughout the book, against feminist and leftist academics. You know, it gets tiring after a while.

Overall, it's still a high-quality book.
And I am twice grateful because "*How the Mind Works*" also helped me improve my products, for example with Steven Pinker's intelligent analysis of humor and the use of quips to win debates.

Why Women Have Better Sex Under Socialism: Summary & Review

Lucio Buffalmano · 22 December 2019 · Archived copy · Original

Why Women Have Better Sex Under Socialism (2018) is a book about the intersection of politics, power dynamics, and sexual dynamics.
In it, the author Kristen Ghodsee states that capitalism disempowers women and women's sexual choices, while socialism, state-funded childcare, and affirmative actions empower women and their sexual choices.

Contents

- Overview
- Quotes
- Criticism
- Review

Overview

About the Author:
Kristen R. Ghodsee is an American ethnographer and Professor of Russian and East European Studies at the University of Pennsylvania.
She specializes in the study of ordinary citizens' lives under socialism and post-socialism in the Eastern Bloc.

Socialist Ideas Are Enjoying A Renaissance

The author says that socialist ideals are enjoying a Renaissance in the West because "citizens desire an alternative political path that will lead to a more egalitarian and sustainable future".

My Note: Obviously, this trend-spotting didn't stand the test of a mere few months
The author mentions Corbyn, the Greek former prime minister, Bernie Sanders, and a few more.
She wasn't wrong, but these "short-term trends" are so fickle that they change in the span of an en election.
Most of the people she mentions are gone from the mainstream political landscape, and one could equally make the case that right-wing extremism is on the rise.

Millennials are also far more open to socialism than the previous generation.

Socialism Empowers Women

This was one of the best ideas from Ghodsee.
She says:

> When women enjoy their own sources of income, and the state guarantees social security in old age, illness, and disability, women have no economic reason to stay in abusive, unfulfilling, or otherwise unhealthy relationships.

I partially agree with her.

Women Working at Home Subsidize Employers'

The author says that when women stay in traditional roles, such as caring for the children and the elderly, they are subsidizing the costs to employers and to society.

They are performing social-work, but without being recognized for it and without receiving pay.
Instead, they become enslaved to their husband, especially in countries where they can only access health care

through their husbands.

My Note: She has a good point
She has a very good point and I hadn't thought about it.

Writes the author:

> As capitalism made a slave of the man, and then by paying her through him, made her his slave, she became the slave of a slave.

Don't Conflate Gender With Discrimination

The author says that one should not forget that gender is not the primary category of analysis when it comes to discrimination.

Black and Hispanic women are far worse off than white women.
And if we don't see that, the author warns, then we fall for the same mistake of Sheryl Sandberg's ilk of feminism.

Says the Ghodsee:

> The old concept of sisterhood ignores the structural aspect of capitalism that benefit white middle class women while disadvantaging working class women of color

She says that appeals to gender can break up the front of social reform because it cut through disadvantaged classes that have more in common that their different gender would otherwise suggest.

And again:

> When examining structures of oppression, we must be mindful of the hierarchies of subjugation

In The Power Struggle Between Men and Women, Conservatives Support Men, While Democrats Support Women

Giving women the right to vote has likely played some role in the increase in government spending and in pushing governments to better serve the needs of the many, instead of the few.

The author says that Red Pill communities and male rights blogs are conservative because they seek to repress women.
Ghodsee says that all male rights activists convene that women vote for liberals because it's in their economic interest to do so.

In one of her best moments of lucid, impartial analysis, Ghodsee drops a true gem:

> Ultimately, this thing we call government, is not inherently good or bad, it is a vessel that is steered by those who happen to control it at any one moment in time.

Capitalism Thrives on Individualism Because "The People" Are Its Biggest Enemy

Says the author:

> The largest enemy of plutocracy is large numbers of citizens working together for a common cause.
> It's no coincidence that capitalism thrives on an ideology of self-interest and individualism, and its defendants will try to discredit collectivist ideals based on altruism and cooperation.

Well, that was another smart insight and the best way to end this summary of "*Why Women Have Better Sex Under Socialism*".

Quotes

People, this book is not recommended to (which indirectly says a lot about the author's bias, TBH):

> If you don't give a whit about women's lives because you're a gynophobic right-wing internet troll, save your money and get back to your parents' basement right now: this isn't the book for you

On men complaining that a good job didn't provide them with any dating power:

> Money was useless, they complained.
> "*The few Eastern Marks that a doctor could make in contrast to someone who, say, would in a theater, did absolutely no good*", they explained, "*in luring or retaining women the way that a doctor's salary could, and did, in the West. You had to be interesting*".
> What pressure!

On everything changing, including the costumes and more:

> Everything was forever.
> Until it wasn't no more.

On the good things about socialism that we are all forgetting:

> There was a baby in all that bathwater, it's time we get around to save it.

Criticism

Despite some significant insights, there are some important issues I need to raise:

1. Sometimes Interviews, Rather Than Data

This is a common issue in anthropology and ethnography.

The author relies heavily on interviews, and small samples affected by self-selection bias -ie.: women who answered to her work-.

2. Sometimes Opinions, Rather Than Data

The author says that "the majority of women rejected the traditional breadwinner model. They wanted to work".

To begin with, what's the "majority"?
And second, it's not clear whether women rejected it out of willingness, or out of need.
Based on what does she say "they wanted to work?".
If it's based on her interviews, what was the sample?

It feels like a sentence thrown in there, without any true data backing.
This is not to say that it's meaningless, maybe she's right… But I, as the reader, cannot be sure.

3. Some Shallowness When It Comes to Actual Seduction

The author says that Roosh's book "don't bang Denmark" stands as a testament that female empowerment shields women from the "alpha male game".

That doesn't make much sense to me, and I'll skip expanding on it.

But just as a quick note, the author should realize the contradiction with what she says just a bit later, such as that reduced gender inequality and economic opportunity for women result in freer sex and more casual partners.

4. Conflates What She Prefers With What *All* Women *Should* Prefer

The author's analysis stops at a very superficial level.

She seems to lay out a pipe-dream of what *she* thinks things *ought* to be and then goes out looking for confirming evidence.

And she never asks the real deeper questions that would open Pandora's box of a wholly different reality.
For example:

- Why do women exchange sex for resources?
- What else is exchanged in the sexual marketplace? Maybe it's not *only* money VS feelings, but also status, looks, opportunities…?
- Do some women prefer exchanging youth and beauty for luxury, or are they *all* "forced", as the author suggests?
- Why do women, on average, have fewer resources in capitalist societies? Is it really *only* because of the glass ceiling?
- Why do women tend to care more for infants, is it really *only* because of socialization? Why do some men invest less in relationships and childcare, is it *only* because some of them have money?

These are the questions that would go at the roots of the topics the author wants to tackle. But she decides to either skirt them or to only provide the answer that best fits her narrative.

This is why "*Why Women Have Better Sex Under Socialism*" fails to provide a realistic picture of sexuality and male/female dynamics.

5. The Concept That Money Is A Tool of Female Oppression Makes Little Sense to Me

Writes the author:

> Directly or indirectly, sex and money are always linked in women's lives. A remnant of our long history of oppression

She goes on to explain how only by limiting the power of money women will gain true sexual freedom.

The author does not understand that money is only a proxy for resources, and women look for resources the most when resources are scarce, no matter what political system they live in.

A poor-ass communist country will still have (at least some) women seeking resources far more than a rich capitalist country where most women can find a job.
You don't need to take my word for it: just ask any man who's traveled to Cuba (or the Western men who traveled in the Eastern bloc right after the fall of communism).

6. Superficial Analysis of Sexual Economics, Believing It's All About Money (It's Not)

The author says that sexual economics is true, but "only within the confines of the free market system".

The book seems to suggest that:

1. Money corrupts dating
2. Money gives more power to men
3. Without money, sex and love become more important

And well… She's right. *Partially*.
But not nearly to the extent she describes.

The issue is that the author seems to believe and suggest that money is the *only* currency of exchange that is unrelated to sex and feelings.
Obviously, that's not the case.

To begin with, money and resources are the same.
And **resources don't disappear with communism, it's just that fewer men have them**: few political cronies instead of many successful professionals and entrepreneurs.
I bet that if the author had investigated communist leaders' wives and mistresses, she would have found they had more sex, with more women, and more attractive ones than the average population.

The only difference is that in communism resources are far more limited and only men high up in the party have them.
Basically, her solution to making dating "better" seems to me like it's a form of "make it worse for everyone".

Second, **power and status don't disappear under communism, and they are exchanged the same way as money is**.
Even purely from an economic "barter" point of view, a man who has access to anything that a woman might want still has the ability to "exchange" that something for sexual access -ie.: there might be a communist Weinstein who controls who gets to be an actress in the state-sponsored movies-.

And finally, **the exchange nature of dating does not disappear, no matter how successful you are at artificially removing resources**.
Attractive men, intelligent men, artistic men, dominant men… They will still all command more power in the dating market, and still potentially demand more while giving back less.
Studies, for example, show that attractive men do invest less in their relationships (on average).

Also see:

- **Sexual Economics 101**
- **Sexual Market Value**

> The Sexual Marketplace: Overview of Intersexual Dynamics

7. At Times, It Sounds A Bit Like Straw-Manning

The author presents a few scenarios in which being a woman is a handicap.

But they felt somewhat forced, like when she says that a girl getting a pink letter when she's born is branded as "guilty for not being a boy".
That made no sense (and especially not to me: my parents wanted a daughter).

A few men do the same, complaining "if a man had done what this girl did, hell would have broken loose".
This sounds to me like a really childish "who's worse off" type of game.

8. One-Sided Representations of Economic Theories

The author shouldn't have gone into economics.

She says that cutting public jobs during economic downturns prolongs the downturn.
That's true, but not cutting public spending also increases debt.

Ghodsee's position on public spending is also the position of Paul Krugman, and I actually agree with it -at least during crises-.
But I think she shouldn't have gone into economic theory without at least mentioning both sides of the argument.

The same goes for Piketty and his data on inequality.
The author would have gained credibility if she had mentioned the criticism Piketty has received for his methodology (see Nassim Taleb, 2018).

9. Some Out of Place "Red-Revolution" Moments

Writes the author:

> Redistribution is going to come, in one form or another. Current levels of inequality are unsustainable in the long term.

This is nonsense and should have no place in any book that wants to be taken seriously.

Based on what does she say?
I find symptomatic of what truly drives the author.
And it's not science or truth.

And again:

> If two billions people spontaneously decided to stop using Amazon or Facebook, two of the most powerful corporations in the world, would cease to exist

As a bit of a no-global myself, I wouldn't mind seeing some sprawling, tax-evading corporations fall, but this is still symptomatic of the author's own political bias.

10. Conflates “Social Expectation” With Real Innate Propensities

Like most other left-leaning authors, Ghodsee prefers to stress the socialization influence on gender roles instead of the nature side.

Here is what the author writes (I paraphrase for brevity, but without changing the meaning):

> Men and women are not the same, but our beliefs about how men and women behave a figment of our collective imagination -a powerful figment, yes, but a figment nonetheless-.

Of course, the author also blames socialization for fewer women in positions of authority and in tech and engineering fields (also see: how to be powerful and feminine).

Oh well, what can I say, it’s a pity that a book with so much potential had to fall for the same old nonsense that plagues left-leaning literature.

11. Society Should Bear The Cost of Raising Children Because Children Benefit Society?

The author says that children benefit society, so society should bear the cost of raising them.

She even says that children might be more of a benefit to society than to their parents (!!).

I feel very strongly about this, so I’m not going to mince words: this communist nonsense at best, and truly harmful thinking at worst.

So if one decides not to have children, he should pay for my children?

And has the author realized that we live in an overcrowded world?
Or maybe when she complains about global warming she really believes it’s evil corporations and not that we are too many in this world?

12. “Our Goal Should Be”: The Communist Way of Telling People How to Live

When I hear stuff like this I want to throw the audiobook away:

> Our goal should be that an equal number of men and women choose to act as stay at home parents

Here we are, a typical communist, telling people how they should think and act.
So a perfect society should “force” people into equilibrium, no matter what they freely decide?
Thank you, but keep your “goals” within your own home.

13. Nonsense Evolutionary Psychology

As is common among many leftist authors, the author bashes agriculture (also see: Jared Diamond, Yuval Noah, and Robert Sapolsky).

Supposedly, agriculture instituted inequality, slavery, the patriarchy, and even monogamous marriage, with the enforced fidelity of the wife -anything else couldn’t be thrown in there, I suppose-.

Please don’t listen to that part, it just isn’t true.

14. A Bit Naive When it Comes to Human Nature?

The author seems a bit naive at times.

The idea of removing inequalities to make people’s lives better and relationships better is somewhat naive, in my opinion.

And then she says this:

> One of the biggest problems with 20th century socialism in Eastern Europe was that some leaders were too eager to sacrifice the lives of their own citizens for the sake of building a more just and egalitarian future

I don't think that one of the biggest problems was that leaders were too good and too future-oriented.

Review

This book on Amazon has either 0-star reviews or 5-star reviews.
No in-between.

That says two things:

1. People review based on ideology, rather than content
2. This book lends itself to be seen as an ideology-driven book

That doesn't make it necessarily wrong, and there is some true original insight here.
Indeed, I would also give it 5 stars for its positive insights:

5 Stars for the insight on male/female competition as groups

The most important insight in "*Why Women Have Better Sex Under Socialism*" is the "power struggle" or "gender conflict" between men and women *as groups*, not as individuals.

Ghodsee is the only author who actually understands and appreciates how men and women, as groups, battle to influence the political and cultural discourse in a way that benefits them.

In that regard, Ghodsee stands unique among everyone else, including the most famous, experienced, and esteemed evolutionary psychologists.
Indeed, most other evolutionary psychologists either deny, misunderstand, or choose to ignore that men, even while pursuing individual goals, can end up acting like a homogenous group that seeks to restrict women's access to power and resources.
One would wonder if that might have to do with the fact that almost all evolutionary psychologists are men…

So I applaud Ghodsee and I am thankful to her for saying it.
Thanks to her, now I have one author to quote and mention, instead of just me saying it on this website.

One Star for Political Bias

Unluckily, the author's personal biases also lead to many important handicaps and limitations in "*Why Women Have Better Sex Under Socialism*".

To begin with, this is a book about how "things *ought* to be", rather than how things are.
And finally, partially because of the political biases, "*Why Women Have Better Sex Under Socialism*" is not a book to understand sexual dynamics or true human nature.

In summary: I do recommend you read it.
You must follow it with a more rigorous and neutral text of evolutionary psychology based on data.

The Social Climber's Bible: Summary & Review

Lucio Buffalmano · 1 January 2020 · Archived copy · Original

The Social Climber's Bible teaches readers, in a fun and entertaining satire, how to engage in social climbing. In other words, how to shamelessly advance one's life by making the right connections with the rich and famous

Contents

- Summary
- Quotes
- CONS
- Review

Summary

About the Authors: Dirk Wittenborn and Jazz Johnson collaborated to write "*The Social Climber's Bible*". They are careful not to share too much information about their own lives and experiences, but they sound like they know a thing or two about jet-setting.

Social Climbing is Good

The authors say that as long as you keep thinking that social climbing is something "bad", you're never going to improve your life.

You need to reprogram yourself.
Social climbing means "pursuing friendships with those of higher social status".
But the concept that others are somewhat "superior" to you is offensive. Instead, the authors say, you are at least the same. Or even better.

Plus, everyone does.
"Networking" is nothing but a more civil and polite way of defining what, in practice, is social climbing.

- **Empowering thought**: you're a special person who could be more special if you just had more special friends

The Famous Ones Are All Social Climbers

Say to the authors:

> Who are those boldfaced names chiseled on the walls of art museums, opera houses, hospitals, and Ivy League universities?
> They're social climbers.

They imply that philanthropy is social climbing, and it's how the best social climbers "cleaned" their reputation:

> If you pay for the new wing to a cultural institution, you are no longer a crass, pushy vampire squid who beat the rap on insider trading, you are the new best friend to the cultural elite of the world.

But, at the end of the day, they were social climbers.

How to Start Climbing From Scratch

Here are a few tips to start making your first good connections:

- Attend Alcoholics Anonymous, Al-Anon, and Narcotics Anonymous in the richest and trendiest part of town: the best American families have at least one heir with a substance abuse problem
- Take notice of those with really expensive items or those mentioning their backsliding at some exclusive golf club
- Attend open public memorial services
- Attend upscale gallery openings
- Go to art auctions and raise your paddle a few times
- Go to churches and cathedrals in upscale neighborhoods

Make People Feel Good: You Only Got Your Personality to Offer

When you're starting out, you only have yourself to sell, no money, and no connections.
So you must be affable, make people feel good, and also be service-oriented.

Never try to be the star of the show: let your host be that. You're there to support him (and be invited back).
Help cover up other people's faux pas, smooth out the interactions, and entertain the "wild boars", such as the powerful but terrible individuals.

When you're invited a few times, be the first to volunteer, serving food, drinks, or cleaning up stuff—especially if there's a maid, so you won't have to actually do it-.

Even reading a bedtime story to their children is fair game.
Remember: it's easier to take full advantage of the Big Fish if you make the Big Fish believe they are using you and in debt with you.

And never forget to always bring a present (the authors have a technique to bring great-looking presents while actually spending little on them).

Turtles and Swans: Your Best Social Climbing Friends

Turtles and swans are not Big Fishes or whales; they have all the right connections that can help you.

- Turtles have all the social resources but are too shy, insecure, demure, or awkward to take advantage of them (ie.: they're not climbers like you)

Your relationship with the turtle is a sort of fair exchange: they take you to a good party, and you show them how to have a good time there.
They help you get inside, and you help them improve their social skills and make them feel special.

P.S.: never have sex with your turtle(s). They might want it, but you must avoid it.

- Swans are very beautiful and attractive men and women. Often, but not always, they're actors or models

They are invited everywhere simply because they're beautiful.
Big Fish want to have sex with them, but sometimes invite them just so they can tell people they had sex with them.

Sometimes you can become friends with a swan, and they'll be happy to bring along average people like yourself.
Sometimes they're insecure that they have nothing beyond their beauty, and other times they'll appreciate pretending they got a date as an excuse to deny people's sexual advances without offending them.

Never fall for a swan.
They might grind with you, tell you that they love you, etc., but **swans know they know you're a social climber and not a real date**.

Swans are attractive, and you might want to have sex with them.
They are mercurial, and when depressed or high might even suggest the possibility of sex.

But you must resist and deny.
If you do, they will think that you want to use them just like everyone else. And they'll not take you anymore with them.

Unicorns

Unicorns' special traits come in multiples.

They are either super famous and super-rich, or super-rich and super attractive, or all three of them combined.

Examples of certified unicorns are the Clintons, George Clooney, Angelina Jolie, Jay Z, Beyoncé, Prince William, Anna Wintour, etc.
All ex-presidents are unicorns (except Jimmy Carter).

You're not a unicorn for life, though.
Madonna still thinks she's a unicorn, but she's not.

You should never approach a unicorn directly, because they get approached all the time.
And directly flattering won't work because they get that all the time from fawning fans. And you don't want to be a fan.

The way into a unicorn's inner circle if you're still a nobody is exactly that: help them feel like normal people.
And say no to their freebies from time to time, because they get paranoid about being used by social climbers.

How to Spot A Big Fish

These are the signs of a potential Big Fish

- People clustered around them
- People hang on every word they say
- People laugh at their not-so-funny jokes
- All the above signs x10 if the target is not attractive

My Note: Those are also all signs of attraction
The author makes a great point that those signs are especially valuable if the person is not attractive since social power and attraction sometimes have the same signs -and overlap-.

If you want to know who the person is, **ask the silly question to someone who is totally uncool, so you will not look clueless to important people**.
Then go Google them.

How to Gather Intel From Potential Target

You never want to be too direct.
Questions like "where do you live" and "what's your job" translate into "how much do you make".

Instead, make a statement.
For example: "don't you live in Tribeca?" or "aren't you in finance?".

How to Gain Big Fish Appreciation

Find a moment when Big Fish is relaxed, happy, and surrounded by friends.
Then say something like this:

> **You**: You know, Frank, the last time we talked you said the most brilliant thing about (whatever the topic is)

Then say something smart, no matter whether they truly said it or not.
And they will want to invite you back again to remind them how smart they are and to show it to the people around them.

Making Up Stories is OK, If You Don't Get Caught

The only question the social climber will ask is: will I get caught?

Social climbers all makeup stories.
Hillary Clinton said she landed in Bosnia in danger of enemy fire when, in fact, she was just strolling around in total safety.

Lies that work well include a past that shows a good upbringing: a privileged past is invaluable to social climbing.
An example? Like that time your grandmother took you on a safari. If prodded for details, say you were only seven when you took the trip and can't remember.

Other easy lies include people who are now dead and cannot deny your allegations.
To make your lie more believable, get a big glossy canvas of the dead person, hang it in your home, and write a personal inscription to yourself.

Avoid Sex for Social Climbing

The authors advise against having sex with the big fish and whales you'll be social climbing with.

If the sex is bad, they'll be disappointed.
If it's good, they'll want more, and they will get possessive and want to limit your freedom to climb higher and better.

However, there are a few exceptions.
See Porfirio "Rubi" Rubirosa and Pamela Harriman, aka the "whale hunter".

But don't worry too much if you're not into sex: some of the best social climbers are asexuals, who plan their moves without being slaves of their hormones.

Marriages and Prenups

If you're the one who wants to sign a prenup, you shouldn't ask yourself whether your spouse is a gold digger, but you should be asking why you are marrying someone with so little to offer.

And if you are sub-handsome and rich and the penniless spouse says it's unromantic to sign a prenup, then know that you are not only dealing with a gold digger but a gold digger who thinks you are sub-handsome and stupid.

If, on the other hand, you got the money and they got the connections and the "class", know that their family will be asking you for money -and never paying it back-.

Say to the authors:

> Stop being so superficial and look in the mirror. Find yourself a life partner who's as less than gorgeous as yourself but has more of the important things in life than you do, i.e., someone who's in a position to ask you to sign a prenup.

If they ask you to sign a prenup, tell them that you will do "anything that makes them happy".
When they produce the prenup, say you promised your mom that you would always have your lawyer check all contracts.
If the prenup is bad, don't get angry. Let your lawyer get angry with you.

If you can't afford a good lawyer, sign a promissory note with a good firm based on a percentage of the future

divorce settlement.

If you can't change the prenup, sign it anyway to avoid looking as greedy as you actually are.
It can be renegotiated later on anyway if you make the marriage bad enough.

Entering Whale Families

If a social climber like you has met someone from a whale family, chances are that they are the "rebellious kid".

So be prepared not to be the most liked guest when you get invited into the family, and be ready to do your best work with them.
You must ingratiate all of them.

And if you are pursuing a "sleep to the top" strategy, never sleep with the first member of a whale family you meet.
Wait until you get to know the family, and then have your pick: Not all trust funds are created equal.

If something bad happens to some of the whale sons, never ever take the blame for them.
They will drop you and deny all your allegations.
But you can make an agreement for your cover-ups.

Social Climbing Wisdom & Techniques

- A great social climber never looks line one
- Dress in a way that you stand out, but don't stand out too much or you'll look hard
- No matter how hard you're trying to be someone you're not, you must look natural
- Always look and act like you belong
- When you arrive at a party, don't knock or ring: it makes you look unwanted
- To get out of the unwanted small talk, point to someone and say, "that's my friend and he doesn't know anyone; you don't mind if I look after him, do you?"
- If you only know the host, wait until they're talking to at least two good targets before saying hello (and always start by saying how wonderful they look)
- Give people the illusion that you know them by saying "so good to see you again" instead of "nice to meet you" (great habits for when you'll have so many friends that you can't remember)
- The ignored wives of big shots can be a great, often overlooked opportunity for social advancement and party invitations (but watch out not to make the husband jealous if you're a straight man)
- Learn to master your emotions and facial expressions: so you can look happy when you're trapped talking to your host's parents

Quotes

The book is hilarious, and there is an abundance of great and funny quotes.
Here are just a few of them.

The social climber knows that the truth is sometimes hurtful and cruel. And, most importantly, it doesn't make you popular:

> Telling people they look gorgeous when in fact they're an eyesore or praising them for being wise when they have the intelligence of a cocker spaniel doesn't make you a phony, it makes you a kind person.

On very attractive swans and borderline personality disorder:

> Though Swans are not listed in the DSM, many psychiatrists categorize them as borderline personality types. Whether that is fact or vengeful thinking on the part of the members of the medical profession who do not get to ride Swans is open to debate.

On buttering people up:

> Never underestimate the value of kissing your hosts on all four of their cheeks.

On networking at funerals:

> Funerals and Wakes Funerals other than your own are a great place to social climb.
> Wakes are basically cocktail parties with tears.

On making people feel good:

> Play it safe and get off on a good foot by deliberately mistaking the bride's or groom's mother for her or his

> older sister.

CONS

Some advice was solid, but others I really didn't agree with.
It could come across as tacky.

For example, adding to a letter "your secret is totally safe with me", is too direct.
It feels like you're forcing a connection and overselling your trustworthiness.
And there were a few more examples I didn't agree with.

Review

The Social Climbers is at the crossroads of a book on tips and pieces of advice to social climb, and an exercise in comedy and humor.

In that regard, it's somewhat similar to "*What Would Machiavelli Do*".

Sometimes you're not sure whether the authors were joking or serious, but if you can read through the lines, you will get some good tips.
And you will learn the true mindsets of the most Machiavellian, calculative social climbers.

10 Frame Control Techniques to Out-Frame Anyone

Lucio Buffalmano · 4 January 2020 · Archived copy · Original

Frame control refers to the body of skills and attitudes that create shared meaning among people.

Frames shape the narrative and the meaning people assign to words and events.
Good frame control allows you to influence what people think, feel, and do.

We have been the foremost authority on frame control for years now.
And with this article, we teach you 10 frame control techniques to gain status, influence people, and achieve your goals.

Contents

- 1. Speak From Your Frame
- 2. Frame Ignoring
- 3. Reframe It
  - Frame Flipping™
  - 3.2. Refuse Their Reframes, Set Your Own
- 4. Bridge Leading™ (Control The Transition)
- 5. Frame Matching
  - ⍰ Example: Fight Fire With Fire
- 7. Engagement Frame Control™
- 8. Philosopher's Frame™ (Go Broader)
- 9. Frame Shaming™ (Take Moral High Ground)
  - Frame Surfacing™
- 10. Frame Imposing™
  - Frame Negotiation

- ⚠High Power Amplification™
- Learn More With Power University

1. Speak From Your Frame

Emotionally weak men defend and react. Leaders speak from their frames.

For example:

> **Journalist**: Critics say your immigration policy is **racist**<— Incendiary question with loaded keywords. Easy to get defensive, over-react, and lose authority and influence
>
> **Strategic Politician**: We believe that **smart and selective immigration** can be a source of strength. <— Doesn't react, starts a new frame basead on his values
>
> But we do not support unchecked immigration that turns into a cost for our country. <— Frames the criticism as costly for everyone
>
> Skilled workers who respect our values are welcome <— Ends on a positive

It takes emotional strength because we naturally react to what's either flashiest, or offensive.
But once you can remain unaffected, your become more authoritative and influential.

2. Frame Ignoring

> Ignore the speaker, the message, or both

Ignoring makes you look superior and works in a multitude of situations.
When you're not sure what to do or say, ignore and you will often limit damage.
Imagine someone wants to tool you by a pool:

> **Tooler**: Hey dude, did you borrow your swimsuit from your grandma or what
> **You**: (glances in his general direction) hey man, what's up (turn away and ignores)

Ignoring is on a range, and doesn't necessarily mean you pretend nothing happened. It ranges from pretending they don't existing, to acknowledging and replying, but selectively ignoring part of their frame.

3. Reframe It

Reframe everything towards what best moves you towards your goal.

For example, one can reframe a supposed negative, into a positive.

Frame Flipping™

> Frame Flipping™ is TPM's term for reframing that **flip a narrative on its head** from an obvious negative, to a positive

Ronald Reagan won the election with this single frame flip:

View this post on Instagram
A post shared by The Power Moves (@the_power_moves)

> **Interviewer**: (calls into question Reagan's age and mental faculties)
> **Reagan**: I am not going to exploit, for political purposes, my opponent's youth and inexperience <— Flips younger age from asset, to liability. And framed his older age as advantageous experience

Similarly, a man may reply:

> **Negative friend**: If I go say 'hi' I will bother her
> **Empowered friend**: If you don't go say 'hi' she will lose a chance of meeting a great guy

3.2. Refuse Their Reframes, Set Your Own

A manipulative negotiator may say:

> **Him**: Look, this is not about legal issues, this is about trust. And we've known each other for a while now, haven't we? <— Potentially manipulative to make you drop your guard and frame you as being too difficult

While you could choose to own it and say you don't trust, it's often best to power-protect to maintain rapport. Negotiator expert William Ury suggests to address the underlying frame of trust, for example:

> **You**: It's not about trust, it's about doing business the right way.
> And doing business the right means that we put everything in writing

4. Bridge Leading™ (Control The Transition)

> To manage the bridging from two different frame with the goal of maintaining the lead

Imagine this example:

> **You**: Of course you will love him, all mothers love their children
> **Her**: My mom didn't love me <— She corrects you, a small power loss, and introduces a new heavy topic you can't ignore
>
> ✕ **You**: I'm sorry to hear that <— You followed her thread, the next move is on her, and you the lead control

However, if you immediately move to her new frame list most men would, you lose some power and lose control of the interaction:

- **✕ Lead → Yield → Follow**

Even worse would be to try to deny it: you escalate a frame battle you can't win, and you break rapport.
Instead, here is how the smart power-aware man proceeds:

> **You**: OK, all mothers *except yours* (smiles warmly) <— Power move / joke to control the transition

> **Her**: Ahaha
> **You**: Jokes aside, I'm sorry to hear that, what happened with your mother <— Stays in the lead

✅ **Lead → Power Move → Lead Again**

This man first manages to get a laugh, and then moves on to bond and connect with people.

5. Frame Matching

> To match the delivery style of the speaker to avoid being overwhelmed

Matching and mirroring are often used referring to *empathizing*. That's a valid and effective approach, but sometimes you must match the *power delivery* of the message-be it the conviction, aggression, or emotionality.

Many people automatically go on the defensive against yelling, crying, blaming, or emotional outbursts. That's a mistake because **in patterns of attack and defend, the attacker looks dominant and *right*, and the defender looks weak and wrong.**

There are three options here:

1. **Stick to logic** when there is an audience and level-headedness wins (ie.: Jordan Peterson vs Cathy Newman)
2. **Demand level-headedness as a precondition** to talk with you, and walk if they don't
3. **Match their emotional level**

Frame mirroring, or matching their exact accusation can work, but…
It can feel childish. And it's a nasty manipulation tactic that gaslighters use. So only go for it if genuine, and it can help end on a draw.

⍰ Example: Fight Fire With Fire

> **Matching high-intensity** deliveries based on conviction, emotions, and intensity, rather than merit, fairness, or logic

Example of emotions controlling the frame and forcing compliance:

> **Her**: Hoooneeey, gooo! Do something! Harry! Hurry!

Her 'covert frame™' is 'this is terrible' and 'it's on you to act'. His frame is 'this is amusing' and 'no action is needed'.
Her frame is not necessarily 'right', but since she injects so much emotion, he buckles and feels compelled to comply.

Also see:

- **How women control relationships** (and what to do about it)

7. Engagement Frame Control™

> Engagement Frame Control™ is TPM's frame control term and application of the strategy of **choosing the terms of engagement** and the contest arena that best suit your strengths or preferences

This technique allows you to stay assertive even while you refuse to escalate. **Use it to address possible fears of physical escalation.**
For example:

> **Attacker**: What are you gonna do about it, let's step outside <— Covert frame ⍰ you solve this dispute with a physical altercation
>
> **You**: (not afraid) What are you talking about, <— Rejects terms of engagement
> this is a silent coach, and respecting others means not being loud <— Makes it general rules of respect
> for phone calls people can step outside. If you'd be so kind to do that, I'm sure everyone here would appreciate <— Maintains his assertive expectation

Steps:

1. Reject their rules of confrontation <— You can do it with ignoring and speaking from your frame
2. Set your own
3. Fight on your terms, or disengage

⍰ A funny example from a TV show

8. Philosopher's Frame™ (Go Broader)

> Philosopher's Frame™ is TPM's term for applying the rhetorical move of **going broader** to disagree or undermine an argument or speaker, while remaining **unassailable** by **linking to general principles and truths**.

You can use it for many purposes. For example, remain noncommittal without conceding, disagreeing without engaging, withholding personal information, or to keep speaking from your frame.

For example:

> **Conservative**: This country belongs to us, we must have more rights and secure our borders
>
> **You**: I get you. <— Empathic bridge to maintain rapport
> People have been defending their borders since time immemorial. <— Concession for 'frame negotiation'
> But people have also been moving for millions of years before ever-shifting artificial borders ever existed.
> Go back far enough, and humans belong to Earth <— Take a more liberal stance, but it's with high-order general principles that it can hardly be disproven

Or on the opposite side of the political spectrum:

> **Liberal**: If people complain that immigrants are stealing their jobs it means they're really sh*t at their jobs
>
> **You**: Well, on one hand you're right. If you're a highly skilled maverick, yes.
> Employers also gain from more labor competition.
> But not everyone can be a genius <— Slight power move implying he's covertly bragging
> And local laborers suffer when competition drives wages down. <— General principles of supply and demand, it's hard to refute.

In this second example, you make them look unsympathetic and out of touch with the working class. That effectively undermines both argument and speaker. But your frame based on general principles is unassailable.

9. Frame Shaming™ (Take Moral High Ground)

> Frame Shaming is TPM's term for the known tactic of 'taking moral high ground'. It's **using superior or superior-looking moral framing** to gain power through ethical legitimacy and shame the other party as 'morally inferior'.

A moral or honorable frame can sub-communicate that others who disagree or behave differently are lower-quality, without even having to say it.

In this example, he uses 'high power vulnerability' to shame her for 'playing the field':

> **Her**: You know, they have sex and after they feel nothing
>
> **Him**: (corrugates his eyebrow in disapproval) But you're not like that <— Implies it's trashy, gives her a chance
>
> **Her**: Aren't you?
>
> **Him**: Not a drop. Not even half a drop <— Holds his frame with full conviction, and shames her
>
> **Her**: Wow. <— Impressed and ashamed, but not giving up just yet
> What's wrong with you <— Tries to shame him back
>
> **Him**: I get it… You've never been in love <— Holds his frame with high power vulnerability

He wins because a) society supports his frame, and b) he traps her into a masculine/player role that's often negative for women.

In Power University dig deeper on how you can use it for dating and LMR, for example when she says:

> **Her**: you only want sex

Frame Surfacing™

> To 'surface' a covert power move™ to fully display the nastiness of an attack

After you surface a covert attack, the attacker automatically looks nasty and vile. You can then thread-expand on it to inflict maximum social loss, or you can assertively demand to be more respectful.

Example:

> **Attacker**: Oh good to see Max tonight. We should make those free drinks more often <— Covert power move. Uses a joke to indirectly imply you're a scrounger only coming out when things are free
>
> **You**: What do you mean by that <— Forces him explain and 'come out from his joke-cover'

Keep asking until you surface the power move. You can prod to 'be upfront' and 'show their hand'.

If they deny, they look weak. After several denials, you can address the power move openly and you will look both more dominant and more honorable.

10. Frame Imposing™

> Frame Imposing™ is TPM's term for a deliberate choice to **hold your frame as the only possible option** and refuse to yield , even at the cost of friction.

For example:

And little later she agreed to meet, and sent flying kisses

Frame imposing is crucial, and in Power University we share how to do it appropriately.

Frame Negotiation

> Frame Negotiation is TPM's term for **collaboratively negotiating frames** to maintain rapport, bond and connect, and increase influence and follow-through

It's crucial to talk about negotiation right after imposing because **negotiation is often the most effective approach** to influence and achieve goals.
And negotiations are often the default in real-life, and the most skilled men use frame negotiation as their default mode for frame control.

It includes techniques such as finding commonalities, agreeing and redirecting, empathizing, and validating.

Importatnly, begotiation doesn't necessarily mean being 'nice'.
For example, in this case study Steve Harvey is dominant, yet eventually open to power-negotiate:

> **Ariana**: You keep making mistakes <— Uncalibrated, awkward attack

> it's not Arihana, it's Ariana (laughs)
>
> **Steve**: (doesn't laugh, doesn't defend) See, once again, let me show you something now. <—- doesn't defend or attack back, speaks from his frame with a high power teacher frame
> Listen to me…
>
> (…)
>
> **Ariana**: OK, I apologize <— She backtracks
>
> **Steve**: Nono, I'm the one who got to apologize <— After he re-empowered himself and she apologizes, he is magnanimous and does the same

If Harvey laughed he'd submit, validate the attack, and relinquish host leadership.
He does explain the mispronunciation, but on his terms and in full control of the exchange. True "alpha male" style.

⚠High Power Amplification™

> To agree and amplify frames that empower you

This is an important upgrade of "Agree and Amplify", one of the most popular frame control technique in the PUA literature.
Agree and amplify is a legit tecnique and can work great, but **agree and amplify can backfire if you amplify negative frames**. Even in jest, negative frames can disempower you.
See an example:

Careful With 'Agreeing & Amplifying' Negative Frames

> **Attacker**: You should invite her out
> **Him**: Oh yeah man (…) I'm gonna get a limousine, I'm gonna get a dozen roses… <— Agrees & exaggerates to unrealistic levels (amplify)

⬆ It's reactive, high investment, and it thread-expands a low-value, *simp* self-frame

Learn More With Power University

This is barely the tip of the iceberg.

Says a student:

> **PU Alumnus**: if you write a book about frame control, you might become rich

We've done something even better: a course.
And it works:

> **PU Alumnus**: The lesson on frame control opened my mind (…) I can come up with frame control techniques on the fly

Join PU, and you can do the same.

Mating Intelligence: Effective Dating for Smart People

Lucio Buffalmano · 12 January 2020 · Archived copy · Original

Maybe you're smart… But when it comes to dating, are you smart where it really matters?

Because not all intelligences are created equal.
It's mating intelligence that is the most relevant mental ability to help you find a great partner and enjoy a great relationship.

This article will explain what mating intelligence is, what it's not, why it matters, and how you can develop mating intelligence.

Contents

- What's Mating Intelligence
- The Types of Intelligence
- How to Increase Your Mating IQ
- Advice Lacking Mating Intelligence
- Displaying Your Intelligence (The Right Way)
- SUMMARY

What's Mating Intelligence

The dictionary of power dynamics defines:

> The set of cognitive and intellectual abilities, as well as the knowledge and proficiency of power dynamics and sexual strategies that support effective mate selection, courtship, reproduction, and relationship management.

Mating intelligence also includes the psychological abilities that deal with competition, as well as understanding the

motives of rivals and mates alike.

Mating intelligence is most likely not the latest fad in coming up with new types of intelligence, but it's been measured to "account for a significant portion of the variance in mating success" (Geher, Kaufman, 2016).

The Types of Intelligence

The literature on the types of intelligence is large and contradictory.

Some people even deny the existence of different types of intelligence.
And that alone, to me, raises questions about the intelligence of those people :) (read here for a better take on this topic)

Just take a look at Elon Musk social intelligence, or Albert Einstein's letter to his wife, and it will become obvious how some super-high-IQ men understand little about psychology, mating, and the opposite sex.

Here is how psychologist Geoffrey Miller groups the various types of intelligence:

From Geoffrey Miller, except he calls "domain intelligence" academic intelligence
In truth, intelligence and its various sub-modalities are quite complex.
So don't take the above chart not as a deeply scientific representation, but more as a tool to give you a quick idea.

All types of intelligence actually overlap with each other more than this diagram shows. And "mating intelligence" is at the center, not because it's necessarily more important, but because it's the focus of this article.

Let's review the types of intelligence:

1. General intelligence

General intelligence is at the top because it predicts all the others, and it's what women are indirectly trying to evaluate when they meet you.

However, just being intelligent does nothing to your attractiveness or to your sexual market value.
In simple words: **IQ by itself does nothing to increase attraction**.

Yes, there are a few sapiosexuals, and yes, it's not just a thing in Tinder's descriptions; it exists (Gignac et. al.,

2017).
But even then, sapiosexuals have no idea how to assess intelligence unless the intelligent person knows how to convey that intelligence.
Yes, at the right time, pure displays of “smarts” can work -and bonus points if it’s accompanied by passion-. More than once I was passionately explaining something to some women who stopped listening to what I was saying, but instead looked at me languidly, and sometimes muttered: “I love you”. She didn’t care *what* I was saying -which I wished she did-, but she cared that it *sounded* smart.

But it has to be at the right time.

Intelligence that is presented in the wrong way, by being smug or belittling others, can even be negative.

So when does intelligence become relevant?
Intelligence only becomes a sought-after trait when you convey it appropriately and through mating-relevant signals.
For example: humor, emotional connection, intellectual dominance, and *sounding* intelligent. Or, as well, through seduction techniques sometimes referred to as “game” (ie.: push-pull, screening, tasking, etc.).

2. Social intelligence (SI)

Definition:

> Social intelligence is the ability to understand other people’s interests and drive, and to operate effectively within social groups to achieve both personal and shared goals.

Social intelligence is attractive both directly in dating and indirectly for what it allows men to achieve.
Socially intelligent men are better at working with others, acquiring status within groups, climbing social hierarchies, and acquiring leadership roles. All of these traits are also highly attractive in the sexual marketplace.

Because some very bright guys are not good socially, some people think that there is no connection between social intelligence and general intelligence, but that’s not true: the two *are* linked.

3. Emotional intelligence (EI)

Definition of emotional intelligence:

> The ability to understand and leverage your emotions to guide effective thinking and behavior, coupled with the ability to read other people's emotions.

As for social intelligence, general intelligence, and emotional intelligence are positively correlated.
Bright people are better both at managing their emotions and at creating better emotional connections with others.

Needless to say, don't confuse emotional intelligence with being "touchy-feely" or "gushing".
Emotionally intelligent men make for better daters and seducers because they know when to push, when to step back, when to talk a bit more, and when it's time for a bold move.

And they make for better life partners, too.
Men high in EI are also less dangerous to both women themselves and to children, which makes these men ideal candidates for long-term relationships.

And since men high in EI are less moody and better control their feelings, it also helps men become relationship leaders.

Finally, there is a special place in women's hearts for those few men *really* high in EI.
Women love men who can get inside their heads and know what they're thinking. And if he can explain it to them as well, that's intellectual dominance as well.

4. Verbal intelligence (VI)

Definition:

> Verbal intelligence is the ability to understand both spoken and written language, as well as the ability to speak and write well.

In a practical sense, verbal intelligence, sometimes referred to as "linguistic intelligence", is **the extent to which an individual can use language to achieve goals**.

And since people heavily rely on language for communication, being high in verbal intelligence means that you are good at getting what you want -which is also the definition of power-.

And of course, verbal intelligence has a special place in courtship and dating.

After all, just think about it.
What do the girl and boy do upon meeting?
99% of the time, they talk.

VI also predicts more highly relevant courtship skills, such as:

- Your ability to tell good stories
- Your humor
- Exciting conversation
- Good conversational flow
- Active listening

And, of course, pillow talk as well (never underestimate the power of good pillow talk :).

5. Practical intelligence (PI)

Practical intelligence is the most relevant intelligence in the real world.

It includes both manual dexterity, fixing things around the house, and “street smarts” as well.
It also includes the ability to construct makeshift devices to achieve goals, which you will often see in movies (McGiver was built around practical intelligence).

Here is one example:

Behind that flier, there is a light spot.
It was on my balcony, without a switch to turn it off. Since I prefer sleeping in fully dark rooms, I had to find a way to cover it.
I found a flier in the room, went to the garbage room looking for packages, removed some Scotch tape, then put it on top of a dustpan facing upward, and pushed the dustpan against the ceiling.

Women always like men to show practical intelligence because **men with practical intelligence seek ways to control the environment and win.**
Practical intelligence is how we moved out of the stone age, and it’s the true original impetus behind high-tech engineering.

Women instinctively value high PI because many challenges that potential partners and dads will face are at this level of practical problem-solving.

Today, PI includes knowledge and dexterity in:

- Circuit breakers
- Car engines
- Maps
- Tax forms
- Food recipes
- Guns functioning

Yes, basically all things that bookworms tend to ignore. Again, it's why people tend to think that general intelligence and practical intelligence are not linked.
But, again, they are.

6. Academic intelligence (AI)

This is what is most often measured with IQ tests.

And it's also the type of intelligence people associate the most with general intelligence.
And yet, it's not very highly correlated with dating and sexual success.

Some academics, though, like to cling to the idea that "real" intelligence is only shown in the halls of universities and in debates with big words thrown around.
But it's all a game of status, of course. Academics who place academic intelligence "higher" than other intelligence are indirectly implying they are somewhat "better" than a good plumber or an effective seducer.

Instead, **the sexually unsuccessful academic would be better advised to admit he's not as smart as he thinks he is in *all* types of intelligence** and get to work to improve at them.
Because he *can* improve at them.
If he can put his ego aside, that is.

However, since our society has become what Miller refers to as a "cognitive meritocracy" (Miller, 2016), academic intelligence still helps in dating.
Book smarts predict how well people do on the SATs, which college they get into, which grade they will receive, and how well they will do at work and at building wealth.

Eventually, unless the academically intelligent fella is *very* poor at everything else, those qualities will also help him lend a woman.

7. Mating intelligence (MI)

It's funny, isn't it?

There are official and well-recognized ways of increasing and working on *all* of the above forms of intelligence.
Yet nobody teaches how to effectively find and keep a partner, which is what most people care *the most* about.

Well, this article is here to fix that.

The “Intelligence Handicap Myth”

Some people think that intelligence doesn’t matter in dating.

Funny enough, this myth is perpetuated by smart men even more than non-smart ones.
Look at this example:

That’s a psychological self-defense mechanism, not a realistic analysis

When those who think of themselves as smart do poorly in dating, they will be the first to say that “intelligence doesn’t matter in dating”.

Most of the time, these guys are being victims of psychological self-defense mechanisms.
Such as they seek to defend their own self-esteem by accusing others of stupidity and by keeping their own self-image of “smart”.

The mistake here is two-fold:

1. Conflating “book smarts”, which is only one type of intelligence, with “intelligence,”
2. Assuming the successful athlete is dumb, which he might not be

The chances of the athlete being dumb are lower than for any other given random man.
A successful athlete learns to master his sport and its rules through practical intelligence. If he’s in a team sport, and even more if he’s the captain of that team, that’s all social intelligence.
And if he can tease, joke, and talk, he’s also verbally intelligent, which makes him the complete package.

By the way, you can see these “false myths” propagated by everyone who is not having success and wants to preserve his self-esteem.
The poor guy says that women only want rich men, thus excusing himself for all the other traits he lacks.
And the “nice guy” says women only want assholes, thus excusing the fact that he’s possibly a pushover.

Why Women Select for Intelligence

From an evolutionary point of view, it makes a lot of sense for women to prefer more intelligent men.
Intelligence is not only a strong indicator of an individual's success but also overlaps with body symmetry, physical health, and longevity. And it has a very high heritability.

Intelligence also works as an indicator of the *absence* of negative traits.
The human brain is a very complex organ, and it's easy to mess it up. And that makes the brain a very good indicator of genetic qualities.

Intelligent people and people with healthy brain functions have fewer mutations that mess up their brains. So by choosing a man who's smart, a woman gets a huge range of genetic benefits.

Traits Correlated to Intelligence

A BBC study of 120,000 people across fifty-three countries showed that the most attractive traits in a long-term mate were, in the order:

1. Intelligence
2. Humor (which is a form of intelligence)
3. Honesty
4. Kindness
5. Physical attractiveness
6. Moral values
7. Communication skills (another form of intelligence)
8. Dependability

In some way or another, most of these traits at least partially depend on intelligence.
Humor and communication skills depend on verbal intelligence. Kindness and moral values depend on emotional intelligence. Honesty and dependability partially depend on social intelligence.

There are many important traits that help increase one's own sexual market value which are also linked to intelligence.
Intelligent people:

- Achieve more power and status in life
- Accrue resources
- Remember more things (including physical-related tasks, like her favorite sexual positions)
- Are more mature at any given age
- Lower rates of drug addiction and unemployment
- More likely to live longer and avoid accidental death
- Make for better mentors and teachers to the children

Why Mating Intelligence Matters The Most

Mating intelligence is not "superior' to any other type of intelligence in any way.

It matters more to dating simply because it's *dedicated* to mating and dating.

To fix a pipe or a car, practical intelligence matters most.
To understand complex equations and do well in research, academic intelligence matters most.
And to bang more women, but also to snag the highest quality men and enjoy better relationships, mating intelligence matters most.

Mating intelligence helps men get laid in two ways:

1. It makes courtship run smoother (direct way)
2. It signals general intelligence and good genes (indirect way)

Focusing on the indirect boost, says Miller:

> A guy's clever courtship reveals his general intelligence, which reveals his general brain function, which reveals his general genetic quality, which predicts how well his kids will survive and reproduce in turn.

So, how can one go about increasing his mating IQ?

How to Increase Your Mating IQ

To increase your mating intelligence:

1. Learn general psychology

You can check out my list of the best psychology books to learn about human nature and psychology.

2. Learn about mating psychology

From an evolutionary point of view, our psychology is based on only two things: survival and reproduction (and the tradeoff between the two).

So to learn about human mating psychology, evolutionary psychology is best.
See here for the best evolutionary psychology books, or go straight for Dating Power Dynamics, which summarizes all the most mating-relevant information.

3. Learn about dating power dynamics

Cooperation is stronger than competition.

But competition is also real and possibly dangerous. So you should learn about sexual conflict and dating power dynamics.
Best resource is Seduction University:

4. Learn good seduction strategies

See here:

- **Best dating resources for guys**
- **Proven dating strategies**
- **Types of successful seducers**

5. Make lots of experience...

Theoretical knowledge and personal experience are two sides of the same coin.

But if you had to choose just one, it's simple: practical experience gives you a real chance of getting your girlfriends (or boyfriends).
Just reading doesn't.

... And take notes

Go out and meet people of the opposite sex… And take notes. Reflect on what happened, and you will increase your effectiveness twofold.

6. Make female friends

Yes, you shouldn't be in the friend zone.
But that doesn't mean you shouldn't have female friends.

As a matter of fact, the more female friends you have, the more you can learn about female psychology.
The trick, of course, is to make them feel free to talk about anything without being judged.

Overall, avoid locking yourself up in all-male "lairs", or hanging out with men only.

7. Develop critical thinking

Critical thinking is truly the meta-skill of learning.

Critical thinking is the superpower that shields you from snake oil, self-serving gurus, and clueless advice-givers.
Once you have critical thinking, you can truly read and learn from anything and anyone.

8. Learn from mentors mixing *both* science and experience

Dating is a huge industry, which of course means that there are also a lot of quacks.

Ideally, you want a mix of both scientific theory and experience.

Having only one is limiting, especially if the guy's experience is not very broad.
The guy who's been with more than 1,000 women doesn't always and necessarily know a lot about women. He might just happen to be famous or super attractive. Or he might be using the same strategy, which might or might not work well for you, and that's why sometimes I force myself to go to clubs and bars, even though I don't like it-.

And the guy who studies attraction lacks the experience to discern "paper attraction", or what people say and report, from what can actually work in real life.
I can see this a lot from scientists who write books on attraction, including science-based dating books to which I have given 5 stars (i.e., "Attraction Explained").

9. Stay away from your friends' advice

If I had a dollar every time a clueless guy gave advice about dating and seduction…

As a rule of thumb, avoid what your friends are telling you.
Especially if those friends are not getting laid.

Most guys are not really giving advice, which is helpful; they are just "pretending to know" so that they can gain

social status.
And that's especially true when it comes to women and seduction.

Even some of the people teaching dating and seduction are not always real experts (see below).

Advice Lacking Mating Intelligence

There is plenty of advice when it comes to dating.

Some of it is good, while others spread dating idiocy.

Example of bad dating advice:

1. Sweeping generalizations

You've heard these.

At the very basic level, they start with "all men are…" and "all women are..".

Some examples are:

- Men like to chase
- Women want money

But there are also less obvious generalizations, such as "moving quicker is (always) better", or "making him wait is (always) better".
Even otherwise, very good sources are not immune to generalizations.

2. Made-Up Evolutionary Psychology

Evolutionary psychology is the new dismal science.

Not because it's not good, but because every idiot makes up evolutionary theories.
As a rule of thumb, stay away from anyone who uses evolution to sell something or to support a strong ideology he strongly adheres to (ie.: extremists among feminists and manosphere authors).

3. One-Issue Focus

Some authors or sources focus only on one side of the coin.

These sources give the appearance of being intelligent because they go beyond the mainstream.
But they're still skewed.

For example:

- **Mainstream advice focuses on feelings**: it's PC, and it forgets about power dynamics, diverging sexual interests, and often, what really works
- **Red Pill focuses on sexual conflict**: and misses out on the opportunities for cooperation and relationship-management
- **Pick-up advice focuses on active effort**: it's about approaching lots of women, forgetting about deeper power dynamics, and leaving out potentially more efficient strategies
- **Self-development focuses on passive values**: work on yourself, go monk-mode, etc., and forgets that experience matters

All of them are right.
Even in mainstream media, Dr. Phil and Steve Harvey have some good things to say.
But by focusing on one single element of the equation, many authors in those niches miss out on the complete

forest.

4. One-Issue Solutions

You know, things like:

- Get rich
- Get ripped
- Get game

Again, they *all* work.

The problem with one-issue solutions is that they often appeal to guys who are not yet well-rounded enough.
So, the (very) few who do indeed get good with one-issue solutions end up very unbalanced.

A few men do get good at one of those.
While getting good in just one aspect *will* increase their SMV, it will not increase it nearly enough compared to those who have taken a wider angle at self-development.

Being rich while still low in mating intelligence only increases the risk you will be used by some gold-diggers.
Do you want to see an example?
Just check out Elon Musk's relationship with Talulah Riley:

Focusing on "game" only will make you into a barfly, and it will get sadder and sadder the older you get.

And that's why, at the end of the day, to be successful at both dating and life, you truly need a holistic approach.

5. Advice Based on What One Prefers (Not What Works)

People often don't give advice based on what works.
Or even on what they believe.

They give advice based on what *they* choose and what makes them feel good.
People defend their niche of choice because they need confirmation and reassurance that they are doing it right.

So you get this:

- **The gym guy says muscles get you laid** (i.e., "I'm doing it right; follow me").
- **The PUA says it's all about the game** (i.e., "I'm doing it right; follow me")
  - **The poor guy says it's all about sexual escalation** (i.e., "I'm not at a disadvantage because I don't get money)
- **The famous guy says it's all about vibe** (i.e., "I'm not getting easy lays because I'm famous; it's because of my personality")
- **And those who seek the "lifestyle game" point to the harems of stars and millionaires** (i.e., "It's not that I'm afraid of approaching women; it's that I'm working the long game").

And actually, all of the above are helpful.
But what's worked for those people won't necessarily be the best strategy for you.
And it's certainly not the only strategy for dating success.

Furthermore, in many cases, the most ardent proponents of a certain strategy aren't even having success with it.
But:

1. They are trying to convince themselves by convincing others
2. They are misleading the competition to gain a competitive advantage (a manipulation technique)

Instead, different male types can all be successful, as long as they're good in their niche.

> 10 Types of Male Seducers: Pick Your Niche!

6. The Truth: Embrace Complexity & Find Your Own Way

Human social behavior is complex.

Human mating behavior is also complex, with different and sometimes opposing strategies that work or not work depending on the individual, the circumstances, and the culture and environment.

That's great news.
It means that, if you understand the game, you can find something that works for your personality and the type of friends you like.

Displaying Your Intelligence (The Right Way)

Alright.

So we get it.
Intelligence matters.

But how do you display it?

This is how, in descending order of importance:

1. Convey Your Sense of Humor

Yes, it's true that women like men who make them laugh (Bressler et. al., 2005), and good humor predicts mating success (Greengross and Miller, 2011).

And it makes sense for women to like men who make them laugh because a good sense of humor reveals an intelligence of multiple varieties.

Don't go overboard with the humor, of course.
The backbone of your conversation should be about getting to know a person, and humor should be sprinkled over it to also make it fun and engaging.

You talk about important stuff, then make a little joke or tease to lighten up the mood. Talk more about important stuff than another joke. And then repeat on a loop.

2. Learn Conversation Skills and Storytelling

What you did and who you are, are the products.

How you present it is the marketing.
And, as we all know, marketing is important.

When you talk about yourself, are you presenting yourself in the best possible way?

When she asks about the most typical things, such as "what's your job", "what do you like doing", or "what about your exes", do you have a clear, engaging, and funny response?

If not, that's your exercise: prepare the answers to these most common questions.

3. Keep Some Myster: Leave Dots to Be Filled

When you tell your story, it's always more intriguing to leave some blanks to be filled.

And it's always more powerful if she asks you for more information, instead of you saying everything.

For example, instead of saying "I moved to the city because I wanted to get a great job", which is quite plain, you would say:

> **You**: And then I moved here because I'm a guy who demands more from life

More of what?
What else do you demand more of? Maybe you're also more demanding when it comes to women.
That gets her thinking, and in a very positive way—plus, she invests more mental cycles in you.

4. Focus On The Conversation (& On Her)

There is nothing worse than a conversation partner whose eyes keep darting around, who is distracted, and who cannot keep his focus.

It's not just bad for the conversation; it also communicates many negative traits.
So when you do something, learn to give it your full focus. Including your conversations.

5. Do Talk Feelings and Emotions

Many guys think that talking about feelings and emotions is effeminate.

Well, many guys don't get laid much.

This doesn't mean you have to cry or *only* talk about feelings and emotions.
But when talking about something touching and important, do ask her "how did that make you feel".
And when you talk about your story, add what it means to you. How you felt when you did whatever you did

Being able to talk and convey feelings communicates emotional intelligence and makes women feel more understood and at ease.

Also, as a nice power move, you can mix emotions with sexual hints. See an example here:

6. Use More Nonverbal Expressions

In a politically incorrect forum post, I describe why Slavic men are not stereotypes of lovers and why Latin men are.

One of the reasons is that Eastern men use almost zero facial expressions, a flat voice tonality, and little hand gestures.

That communicates emotional distance, and women feel like there is a gulf between you two.
Instead, learn to use your face as a communication tool.

You can even take acting classes to improve your facial expressions.

And since you're there, do use more hand gestures as well, and active listening is highlighted by interjections such as "ah-ah", "hm-hm" and "I see".
All of these have been proven effective in increasing attraction.

7. Showcase Creativity and Creative Skills

Creativity starts with the way you dress and groom.

Are you bland, plain, and boring?
Or do you communicate your personality and taste with the way you dress and groom?

And of course, it goes all the way up to everything artistic you do and appreciate.

There is a good reason why women love creative men: creativity and intelligence are tightly linked.
So if you can play an instrument, talk about it and put one in your room. Then play it when she comes over—it's not corny, it's effective.

A friend of mine used to play guitar and sing for the ladies. Then, to take some of the edge off, he'd say: "I used to be very romantic…".
That hints at some darker story in his life. What happened to him? And maybe she could be able to make him love again?

And of course, the way your house looks and the ambiance and vibe it communicates says so much about you that you can't really leave it up to chance.

8. Teach Her and Explain Things

Don't be afraid of the 1% of angry women who coined the term "mansplaining".

You don't need me to tell you that many women love their teachers and professors, right?

Women love it when a man can explain things to them.
As long as he can do it well, of course.

Doing it well means you can explain things in an entertaining way, relating them back to her life and to you two.

Teaching well is also attractive to women because men will also be good at teaching children.

9. Be Intelligently Humble

One mistake some people make is that they feel they need to show off.

Huge mistakes: braggarts come across as social retards.

And they do it when they don't know sh*t, too.
That has the opposite effect and makes them come across as total douchebags.

Humble means knowing your limits and not being afraid of admitting them.
Remember: the greatest strength is knowing your weaknesses.

10. Be Curious About Her and Her Story

One of the most underrated traits of intelligent people is curiosity.

When someone talks about something you don't know about, ask more, ask for more, and ask for examples.
The attitude must be "I don't know about it; tell me more".

I always ask so much when I don't know about something because I'm genuinely curious.
And I always ask for examples. Or even pictures.
When a girl tells me she draws or cooks, I always ask to see some pictures.
It gives her a chance to show off (soft power) and makes her invest more in the relationship.

11. Use "Philosophers' Frames"

Philosophers' frames make you sound smart, erudite, and powerful.

For frames, please check "frame control" or, more in-depth, Power University.

12. Listen More (AKA: Know When to Shut Up)

No matter how well you are talking, it's often better to let your speaking partner talk more.

However, that doesn't mean that you just let the conversation develop randomly.
Indeed, it's best to combine listening and power with this last advice:

13. Act Like a Host

Direct the conversation as if you were the host of that conversation.

Your goal is to make that conversation entertaining and fun while you also get to know her more in an atmosphere of emotional safety where you are not going to judge her.

Being a good host who directs the conversation for mutual gain combines power and kindness at the same time.

And it's what will truly make you stand out.

SUMMARY

Intelligence matters in dating.

Intelligence is also not just a trait that we select for, but the meta-trait that allows us to play the dating game itself. Mating intelligence is the most relevant type of intelligence when it comes to dating and relationships, and it can be increased with conscious effort.

Best Books on Frame Control

Lucio Buffalmano · 12 January 2020 · Archived copy · Original

Frames and frame control is a foundational principle of social and power dynamics, but there are surprisingly few books and resources on this topic.

Frames as a concept originated from multiple disciplines and authors, including Gregory Bateson and Kenneth Burke.
However, Erving Goffman was the first to systematically develop frame analysis in sociology.

The concept gained popularity in 'pick-up' circles, borrowing it not from academia, but from the formerly popular NLP approach to influence and persuasion.
Some mentions of frames can also be found on books on sales and negotiations.

But even when frame control is discussed, it's most often a paragraph or a mention.
I haven't seen any great resources fully dedicated to frames.

Now, that being said, scattered around, we can find some good stuff on frames and frame control.
This list only contains top-notch information on frames and frames' control:

Contents

- 12. Primal Leadership
- 11. The Shadow Negotiation
- 10. Negotiation Genius
- 9. Pitch Anything
- 8. Pre-Suasion
- 7. How to Make Girls Chase
- 6. Talking From 9 to 5
- 5. The Secret Handshake
- 4. Don't Think of An Elephant
- 3. Getting Past No
- 2. The Social Strategist
- 1. Power University
- Bonus: Mental Frames

12. Primal Leadership

Goleman says that when two people with different emotional states meet there is a tug of war at the amygdala level.

And the ones that “stick to their (emotional) guns”, end up winning the other individual over to their own emotional state of choice (for example: when an unflappable person meets a confrontational one, the confrontational one will eventually calm down).

Goleman never calls them “frames”, but he *is* talking about frames.

11. The Shadow Negotiation

Another book proving my original point:

Many authors talk about “frames”.
They just rarely call them frames and rarely apply the framing nomenclature.
For example, Deborah Kolb talks about reframing your opponents’ frames, but instead of calling her techniques reframing, she calls them “strategic turns”.

Still, this is a great book to understand how frames affect negotiations and how you can use them to your advantage.
And her example of “interrupting the move” (i.e., “breaking the pattern”) was genius.

And talking about “genius” and “negotiations”:

---

10. Negotiation Genius

This is simply the best book I have read on negotiation.

It's not laser-focused on frames, but since frames are often about negotiation and the negotiation of meaning, this book will help you with both.

9. Pitch Anything

When I started reading "*Pitch Anything*," I was flabbergasted.

"God", I thought, "this book is ThePowerMoves applied to negotiation! This guy is the real deal!"

But by the time I had finished, I felt that Oren Klaff remained stuck on one type of frame control only: frame dominance.
His techniques zero in on wresting control of the interaction. And that's all cool and dandy: you need those skills as well.

But frame domination sometimes leads to an escalation of conflicts, and it can ruin relationships.
In life as much as in sales, you also need frame control skills that help you *negotiate* the frame, or persuade others without making enemies.

That's why I recommend the reader get a wider overview of frames, which includes collaborative frames and frame negotiations.

Alright, the warning being sounded, this is still an awesome read on frames and (frames conflicts).

8. Pre-Suasion

Pre-suasion is all about "pre-framing".
And pre-framing is all about influencing people by exposing or manipulating their frame of mind and frame of reference before they are exposed to a certain stimulus.

In psychology, this is called "priming", and depending on how you "prime" people, you might as well call it "pre-framing".

Priming as a psychological construct has been under heavy fire during the recent psychological replication crisis, and it's even been branded as a "pop-psychology myth".
But, of course, the war against psychology went too far. Priming is real, and so is the effectiveness of pre-framing.

7. How to Make Girls Chase

Frames were popular in ‘pick-up artist’ circles and male dating advice.

Chase refers to frames when he talks about the ‘hard push’, a name that may ruffle feathers in today’s cultural climate. Those dynamics relate to what we call here “power showdowns”, or escalations that make or break an exchange and decide who is of higher status.

6. Talking From 9 to 5

So much genius insight here.

Not just frames but also power dynamics concerning gender and sexual conflict.

The only con for most people reading is that Deborah Tannen, the author, is a linguist and researcher, so her books can come across as long and tedious to those who are used to a more engaging "Malcolm Gladwell" style of psychology.

5. The Secret Handshake

The Secret Handshake is the perfect example of how there is great wisdom around, but it's very scattered.

In particular, Kathleen Kelley Reardon opened my eyes to the best ways to teach frames and frame control.
She uses very simple yet effective ways of describing frame-power dynamics. She puts an arrow up for "one-up" actions, an arrow down for "one down" and more submissive actions, and "one across" for neutral actions.

You can use "one-up" and "one down" to attack, counter-attack, or defend. And you can use "one across" to buy yourself time.

So simple, yet so effective.
I couldn't help but use a similar framework for my lesson on frames.

4. Don't Think of An Elephant

The only book on this list to discuss framing at a political and mass-communication level.

George Lakoff, the author, is obviously a Democrat. But he doesn't hide it, so it doesn't bother me one bit.
And what he says simply makes sense, regardless of where you stand on the political spectrum.

This whole book is an exercise in frame wars and frame control, applied to politics and public discourse.
Lakoff discusses how the Republicans framed the political debate around key issues such as taxation (tax-relief) and climate change (climate change instead of global warming) in a way that benefited them.
By winning the frame war against the unsuspecting Democrats, Republicans convinced millions of people to vote against their own economic interests.

So, in a way, this is also a book on how to use frames to manipulate and persuade people.

You might not agree with it, but his analysis of frames is spot on.

Genius book.

3. Getting Past No

There is a genius insight in "*Getting Past No*".

And it's one of the foundational concepts of this website and of our general life strategies for power and success.

And that insight is that you will gain every time you can turn a competitive frame into a win-win frame.

Says William Ury:

> Whenever the other party goes into positional and confrontational bargaining, you must reframe it to a more helpful win-win approach.

That's become one of the main tenets of ThePowerMoves.com

As a general rule, there is always more power in turning as many relationships into win-win, rather than fighting (frame) wars.

2. The Social Strategist

Review – Amazon

No surprise *The Social Strategist* is the highest-ranking book on frames and frame control.

After all, it's this website's first and current main book.
And TPM was the first website to properly address frames outside of very niche social research or less rigorous self-help.

It's also one of the very few books to properly call "frame control", and there is a whole chapter dedicated to it, not just snippets here and there as it's the case for many other books in this list.

1. Power University

Question: What's the best book on frame control?

Answer: The best book on frame control is not a book but a course, and it's the Power University course.

Here is what one Power University alumnus has to say:

Power University doesn't just describe frames as a book does; it also *shows* you clear video examples from real life, mock dialogues, and quizzes.

The quizzes test your intuition, help you develop your social radar to "see" frames, and teach you how to influence them.

I started this website and the course because there was little available on power dynamics.
There was nothing much on frames, either, so I put a lot of information on frames, frame control techniques, and how to use frames to increase your personal power and life success.

We talk about frames a lot in Power University.
And there are three dedicated lessons.

You can get 30% of those lessons' content in this free article:

- **Frame control techniques**
- **Basics of frame control**

Bonus: Mental Frames

So far, we have discussed mostly social frames.

But frames are also used to control *oneself*, and one's mind.

Meditations

Meditations is the first, most iconic text discussing frames as a way to control oneself and one's mind.

Marcus Aurelius:

> Whatever happens in your life, you decide what that means to you and how you feel about.

And that's the essence of frames applied to any external event—to control one's own feelings about it.
Aurelius also recommends only focusing on what you can control and letting everything else drop out of focus.
In a way, that means embracing a smaller frame of the world, only looking at a small portion of reality. The only part that matters: is what you can control.

Frames for self-help are also popular in male self-help and pick-up literature.
Frames discussed in pick-up are often framed as "imposing one's frame" or "constructing one's own reality". Both *can* be helpful if one does them strategically. But it can also make people come across as social retards when applied indiscriminately or as mentally unhealthy when that "reality distortion" goes too far.

For more on self-help-related frames, see:

- **Learned Optimism**: Changing Your Internal Dialogue to Be Happier and More Optimistic, by an actual psychologist researcher
- **Personal Power II**: Tony Robbins discusses reframing to change the meaning of what life events mean to you

Enlightenment Now: Summary & Review

Lucio Buffalmano · 16 January 2020 · Archived copy · Original

Enlightenment Now (2018) describes how the values of the Enlightenment, such as science, reason, and humanism, have led to constant progress since their inception. The world has never been better, implies Steven Pinker, and it will keep getting better if we defend and promote Enlightenment values.

TPM Power Takeway: Empowered individualists win in this new world
Pinker provides a historical, philosophical, and cultural foundation for the Empowered Individualism framework, or the sovereign individuals about collectives. This foundation can help shed collective psychology, "group-first" manipulations, and moral shaming sometimes used by leaders to exploit subordinates.

Key Takeaways

- There is a negative bias in the news, which makes people more scared and depressed than they should be
- But the truth is that thanks to the Enlightenment, the world has improved for the better
- The Enlightenment ideals are reason, science, and humanism, which naturally lead to progress
- If we stick to those, we'll solve all our problems

Notes

About the Author: Steven Pinker is one of the most popular and influential intellectuals today. He also wrote "*The Better Angels of Our Nature*", "*How the Mind Works*", "*The Blank Slate*", and "*Rationality*".

We Need to be More Convinced of Enlightenment Ideals

The West is shy of its values.
Contrast that with the Islamic State, which knows exactly what it stands for.
Why does it matter?
Because that certainty is very seductive.
People gravitate towards certainties.

So, as Steven Pinker seems to suggest, the West should more openly and more strongly embrace the ideals of the Enlightenment.

I agree with Pinker.
In the absence of an ideal, people will pick their own. Or they will take whatever ideal comes from the latest charismatic leader. And those ideals are often not for their own good.

News is inherently biased

People tend to believe that the world is far worse than it really is.

Partially, it's because of human's normal cognition, which focuses more on the negatives than on the positives.
In part, it's because negative news sells more.
And in part, it's because news is inherently skewed towards the negative.

You will never hear a reporter tune in and say: "I'm reporting live now in a country where no war has yet broken out".

The news also only reports upticks and not general trends.
You will never hear that "violence is on a general trend of decline", but you will hear of all the episodes of violence.
And of all the times that violence has been increasing in this or that city,
And that despite the fact that violence, says Pinker, is on a general decline.

Pinker also introduces research showing how the news has gotten gloomier over the years.

The Reasons Why Poverty Has Declined

Steven Pinker says that poverty declined because of three factors:

- The global retreat of communism
- The spread of capitalism
- The spread of democracy
- The increasing number of level-headed humanistic leaders
- The end of the Cold War

- Globalization

Defending globalization, Pinker quotes:

> Some argue that globalization is a neo-liberal conspiracy designed to enrich a very few at the expense of the many. If so, that conspiracy was a disastrous failure.
> Or at least, it helped more than a billion people as an unintended consequence.
> If only unintended consequences always worked so favorably..

Where We Improved (The Effects of Progress)

These are the areas in which Pinker describes measurable and quantitative improvement:

- **Life:** We all live longer and better lives.
- **Health:** We have conquered many threats of infectious diseases that killed people by the millions. Our general health has improved, and we get less sick
- **Sustenance:** Hunger and famine are becoming less frequent. People are better fed today than they have ever been. Weight problems today are being too fat, which, Pinker says, is a much better problem. Much of that improvement is because of technology applied to agriculture, and genetic engineering will keep making things better
- **Wealth:** Since the beginning of the Enlightenment, wealth has increased almost two hundredfold. This happened everywhere in the world, not just in the West. Thanks to science and technology, a poor man today lives better than a king a few hundred years ago.
- **Safety:** Deaths from accidents have decreased as technology makes our lives safer, even though we keep moving more and doing more of what we did in the past.
- **Quality of life:** We work less and accomplish more
- **War & Peace:** Violence, both in wars and violent crimes, has been reduced. Today we have international institutions, led by better-educatedpeople, which help avoid conflict
- **Democracy:** Democracy is expanding, and that's a good thing
- **Equal rights:** Racism, sexism, homophobia—they are all on long-term declines
- **Knowledge:** People are better educated than ever, and they are learning more and more

Individuals Must Come Before Groups

This is possibly the concept I like most in "*Enlightenment Now*".

And, incidentally, the one I also agree with the most with.

Pinker says that one of the counter-enlightenment ideas is that individuals are the expendable cells of a superorganism.
A clan, a tribe, a religion, or a nation. And that the supreme good is the glory of this collectivity instead of the well-being of the people who make it up.

This is also the same mistake that some extremist manosphere authors and feminist writers fall into.
They focus on the well-being of their gender, which often ends up looking like "my gender against your gender".

Steven Pinker even goes as far as quoting and indirectly criticizing the famous Kennedy's words, "ask what you can do for your country, not what your country can do for you".

I applaud Pinker for saying that, but I wish he had been even clearer against nationalism.

Also read:

- **Political manipulation**
- **Manipulation and group manipulations**: check out the group feints and the leaders' manipulations for more on "groups above individuals."

And, most of all:

- **Enlightened individualism**

> Empowered Individualism: Why the Individual Must Come First

Threats to Enlightenment

Counter-Enlightenment ideas we need to be wary of:

- **Religion**
- **The "group above individual" ideals,** where people become expendable cells of a bigger organism
- **Declinism**, or the idea that we are getting worse and worse
- **Anti-scientific speech**, is based on the idea that science should not encroach on religion, ethics, or values. And based on the idea that science is the foundation of this or that social ill
- **Romantic green movement**, such as the subordination of people to the ecosystem (in contrast to "humanistic environmentalism")

Clean Environment is A Tradeoff

Steven Pinker says that the environment might not be as pristine as it was a million years ago, but we should not be fundamentalists about it.

A clean environment is a tradeoff.
If people have to choose between some smog and electricity, they will tolerate some smog.

And as countries get richer, they naturally start caring more about the environment.

There Is No Population Bomb

Pinker denies the risks of overpopulation.

He says that as countries get richer, they also slow down population growth.
First, they go through a "demographic transition". As they get richer, the population swells. But it's not because they breed like rabbits, but because they stop dying like flies.

Then, eventually, birth rates adjust, and the population stabilizes.

World population growth has already peaked and slowed down.
And it will hover around 0 in 2070.

Personal Ideologies and Convictions Blind People to Truth

This one was one of my favorite parts and the most relevant to people's psychology and to this website's credo.

Steven Pinker says that big ideologies blind people to the truth.

And people who are the best at understanding trends and reality are those who do not belong to any ideology.
And they are better at forecasting future events.
Says Pinker:

> (the best forecasters) Are anti-impulsive, distrusting their first gut feeling.
> **They are neither left-wing nor right-wing**. They aren't necessarily humble about their abilities, but **they are humble about particular beliefs, treating them as "hypotheses to be tested, not treasures to be guarded."**

A strong ideology always biases people.
The "experts" were the wrongest exactly when the predictions happened to be within their realm of expertise—probably because they held the strongest beliefs there.

Political Affiliation Makes People Biased

It's not true that conservatives are more prejudiced. Sure, they might be more prejudiced against minorities, but liberals are more prejudiced against religious Christians.

Both conservatives and liberals fared poorly at basic tests on economics that were designed to trigger typical liberal or conservative causes.
As such, people didn't answer with what was true but with what their political doctrine dictated.

People with strong beliefs are usually sealed off to new information. When a new piece of information doesn't fit with their worldview, they look for anything that would discredit the source.
And they end up being even more entrenched in their own beliefs.

To Convince Conservatives of Climate Change We Need More Conservatives, Not More Scientists

People pick their beliefs based on their belongings.

That's why more scientists aren't going to help people who are conservative change their minds on global warming.
Instead, we need more conservatives to embrace the cause of global warming, showing people that it's OK to do something about global warming and still be conservative.

More Wisdom

- The digitalization of technology is helping us decrease waste
- Global warming is real
- We won't solve climate change with individual acts of virtue signaling
- The climate is a public goods game, presenting the typical threat of the tragedy of commons
- There is no evidence that Trump's election increased hate crimes. Beware of NGOs that have a hidden agenda
- The best predictor of Trump support was pessimism
- The discovery of cognitive and emotional biases doesn't mean we are irrational (a zinger to Dan Ariely with "*Predictably Irrational*" and Daniel Kahneman with "*Thinking Fast and Slow*")
- We need more science and less literature in school
- Nietzsche's philosophy is the philosophy of sociopathy

Quotes

On Enlightenment Principles:

> The the Enlightenment principles, that we can apply reason and sympathy to enhance human flourishing may seem obvious, trite, old fashioned. I wrote this book because I have come to realize that it is not.

On the individual above groups:

> A second counter-Enlightenment idea is that people are the expendable cells of a super-organism—a clan, tribe, ethnic group, religion, race, class, or nation—and that the supreme good is the glory of this collectivity rather than the well-being of the people who make it up.

And again, on the individual freedom trumping his group or leader:

> It's quite another thing when a person is forced to make the supreme sacrifice for the benefit of a charismatic leader, a square of cloth, or colors on a map.

On who writes history:

> History is not so much written by the victors, as by the affluent.
> The sliver of humanity with the leisure and dedication to write about it.

Pinker lists capitalism and globalization as the major causes of the rise in well-being.
But also to Mao:

> Mao single-handedly and dramatically changed the direction of global poverty with one simple act. He died.

On the extremization of conservative politics:

> Intellectual and political polarization feed each other.
> It's hard to be a conservative intellectual when American conservative politics has become steadily know-nothing, from Ronald Reagan to Dane Quale, to Jeorge Bush, to Sarah Palin, to Donald Trump

On political correctness contributing to extremization:

> The capture of the left by identity politicians, political correctness police, and social justice warriors creates an opening for loud mouths to brag for telling it how it is

On reason VS tribalism:

> The challenge of our era is how to foster an intellectual and political culture that is driven by reason, rather than by tribalism.

Amen to that.

Criticism

I loved this book, but there is much to criticize:

1. Pinker forgets the past doesn't equal the future

More than once, Pinker resorts to the argument that because something went well in the past, that's proof that it will go well in the future as well.

For example, his argument against the threat of resource depletion includes the countless previous calls for "peak oil," which have always been proven wrong.

His argument for infinite growth is that "the world has always moved past a certain resource before that resource ever became scarce".
Does it then mean that human growth will keep going unabated just because it has done so far?
Again, another trend is extrapolation to infinity, which makes no sense.

His argument against the danger of AI includes the Year 2000 fears that proved all exaggerated.

And of course, Pinker's case against nuclear weapons dangers rests, in good part, on the failed forecasts of apocalyptic Armageddon.

I think it's idiotic to take what happened in the past as proof that things will go well in the future.
Like Nassim Taleb says, there were many pundits in Rome and Athens who became famous and popular, saying that "Rome / Athens always come back". Until they didn't, of course.

2. Resources will never deplete? It makes no sense

Steven Pinker is quick to make fun of old predictions of resource depletion that never materialized.

He contrasts those failed predictions with today's prices of some raw materials, which have never been lower.
He seems to imply that raw materials will never run out.

But that makes little sense.
A finite resource *will* eventually run out, no matter how wrong the calls for *when* they would run out were in the past.

3. Strawman arguments to win easily: debating against made-up foes

Pinker seems to see a lot of enemies of the Enlightenment.

Sometimes, he seems to exaggerate them to make his point stronger and to increase the need for his book and opinion.

In "*The Blank Slate*" his enemies were feminists and left-wing colleagues. These enemies have not disappeared, but

Pinker has also found new ones.

The new enemies are the simpletons and backward forces against progress, which are to be found even among scientists and academics.

Says Pinker:

> "Intellectual magazines regularly denounce "scientism," the intrusion of science into the territory of the humanities such as politics and the arts. In many colleges and universities, science is presented not as the pursuit of true explanations but as just another narrative or myth. Science is commonly blamed for racism, imperialism, world wars, and the Holocaust. And it is accused of robbing life of its enchantment and stripping humans of freedom and dignity."

"Regularly"?
Like, how regularly?

And I'd really like to see a few examples of universities where science is presented as a myth.
Who presents science as a myth, exactly?

And what's the percentage of people doing it?
Because I think it would be incredibly small.

And again, he says:

> "It's time to retire the morality play in which modern humans are a vile race of despoilers and plunderers who will hasten the apocalypse unless they undo the Industrial Revolution, renounce technology, and return to an ascetic harmony with nature."

I actually fully agree with him.
But… Who is actually so extremist as to call for the undoing of *all* technology?

It's tempting to enlarge our enemies and make them bigger villains… So that we can look like bigger heroes by contrast.
But I expect better from an enlightened scientist.

4. Never backtracks, but attacks his critics

Pinker seems more intent on defending his previous work than on correcting and making it better.

This is something I have noticed in his previous books, updates, and answers to critics as well.

It's the same here.
He pokes fun at "people who can't seem to accept that things are getting better".

And of course, he conveniently picks easy targets to make his arguments sound more compelling.
For example, here is how he presents the criticism of his thesis that violence has gone down (with which I agree, by the way):

> So violence has declined *linearly* since the beginning of history. Awesome.

Or:

> How can you predict that violence will keep going down, a war could break out tomorrow

Pinker addresses the most boneheaded criticism of his work.

But he does not mention the *valid* criticism of his data as pointed out, for example, by Nassim Taleb and, even better, by Robert Sapolsky.

5. Arguments based on ego, or ideas?

Pinker sometimes seems busier discussing who's right or wrong—he is right, of course than on providing neutral analyses and theories.

The time he spends defending himself and his previous work feels like a lot of wasted time and unneeded space.

Here is an example:

> As for the accusations of romanticism I can reply with some confidence.
> I am also the author of the staunchly unromantic, anti-utopian book "*The Blank Slate*", in which I argue that..

It's fair to discuss criticism. But it should be quick and based on ideas and data.
A scientist shouldn't discuss based on personality and personal beliefs, but based on data and ideas.
I don't say this lightly, but Pinker sometimes comes across as a guy with a huge ego.

6. Unconvincing on economic inequality "not mattering" for happiness

Steven Pinker says that "people are content with economic inequality, as long as they feel the country is meritocratic".

Hmm, interesting.
I agree.

But I disagree with the idea that people are not unhappy when they see they are much poorer.
There is much psychological evidence that crime rises when inequality rises.
Social psychology also shows that people are social animals. And that people's happiness hinges, in large part, on their comparison with others.

7. Irrationally optimistic (AKA: Biased)

It feels like the author is not looking for truth but for evidence that confirms his own theory.

It's funny because this is what Pinker says in this same book about the forecasters who made the poorest predictions:

> The forecasters who did the worst were the ones with **Big Ideas**—left-wing or right-wing, **optimistic** or pessimistic—which they held with an inspiring (but misguided) confidence.
> (…)
> They kept pushing their analyses to the limit (and then some), using terms like "furthermore" and "moreover" **while piling up reasons why they were right and others wrong**.

Oh, the irony.

8. The "nature is a war" fallacy

Pinker cites part of his previous work in "*How the Mind Works*" and reminds us that "nature is a war".

This is a topic relatively common in modern *evolutionary psychology*, and David Buss also says the same.

Yet, that's looking only at one aspect of nature and life.
Nature and life are at war, OK? But it's also cooperation. Take our gut bacteria, for example: they're not at war with

us, but they survive while they help us survive.

There are countless examples of cooperation in nature.

9. Did philanthropism and international help really improve the third world?

Steven Pinker says that part of the reason the poorer areas of the world are improving is because of rich men's philanthropy and Western government support.

He mentions Bill Gates, of course, which was mandatory since Bill Gates is always so kind towards Pinker (and helps him spread his books).

However, I am a bit more doubtful as to how much philanthropy can actually help.
Especially when the recipients of international help are governed by a dictator.
See "*The Dictator's Handbook*" for the rationale.

10. Wrong on 'Terrorism is Ineffective'

This is a common mistake many people commit.

They look at how many deaths terrorism has caused, and then they say, "see? It's ineffective; we are all getting too scared for nothing".
Nassim Taleb correctly calls this "naive empiricism".

But that fails to look at the costs of preventing terrorism.
Has Pinker gone through any airports recently?
The costs of 9/11 and terrorism, in general, are immense. The costs of security, inconvenience, and of course, the most limited resource we possess: time.
And everyone is paying for it.

Read more here:

> Naive Self-Help: 10 Most Dangerous BS to Avoid

PROS

I list a lot of criticism.
Yet, this is a fundamental book for everyone to understand progress, together with what drives that progress.

- **A manifesto to science, reason, humanism: I couldn't agree more**

I agree with everything Steven Pinker says about the true blessing of Enlightenment ideals.
Science, reason, and humanism all lead to progress and better lives.

Let that be your religion.

- **The group must serve the individuals that form it, not the other way around. The individual can't be sacrificed for the group**

Amen to that.
I see way too many people today appealing to group belonging. Including feminism, men's rights movements, nationalists, religions, etc.
That's fascist and backward.

CONS

On top of the criticism above:

- **Great manifesto, but poorer analysis**

"*Enlightenment Now*" is a great manifesto of scientific and enlightenment ideals.

- **Biased towards optimism**

Pinker seeks to force optimism into every single topic he analyzes, though, and that makes his analyses come across as biased.

I actually agree with most of what Pinker says.
Yet, I also find it preposterous to take every single issue and threat, present and future, and somewhat turn it into "it's all good, we'll solve it".

- **Too much space wasted on Donald Trump**

"*Enlightenment Now*" could be a manifesto for reason, science, and humanism.
Pinker shouldn't have wasted too much on Trump.
Two decades from now, Trump will be gone, and this will feel "old".

Instead, the values it espouses are immortal.
That's why he should have avoided wasting time with the most recent events.

Review

Enlightenment Now provides a good analysis of how values intersect with civilizational progress and individual empowerment, although Pinker veers into over-optimism and narrative fallacies.

Triumphalism rarely makes for good analyses based on reason, and ego prevents one from improving his work.
I might be wrong here, and I might revise my opinion in the future. But today, from what I saw, I find the author to be a bit too antagonistic and defensive. He is smart, so he knows how to be *covertly* aggressive, potentially making one's attacks seem based on ideas, rather than power, status, and ego.

Still, it's a good idea to embrace the Enlightenment values, both as individuals and as a society.

What Women Want (Mate) by Tucker Max & Miller: Summary

Lucio Buffalmano · 19 January 2020 · Archived copy · Original

What Women Want (2015), formerly known as *Mate*, is one of the best dating books for men with mindsets, exercises, and strategies to achieve dating and sexual success.

Contents

- Bullet Summary
- Mate Summary
- More Bullet Wisdom
- Quotes
- CONS
- PROS
- What Women Want Review

Bullet Summary

- Work on yourself based on what women scientifically want
- To find the type of women you like, where they are most abundant
- Win-win is possible, and that's what you should aim for

Mate Summary

About the Authors: Geoffrey Miller is a professor of evolutionary psychology and also the author of "*The Mating Mind*".
Tucker Max achieved fame by writing about his drunken sexual adventures and misadventures, then collecting lots of sexual notches as he became famous.

Intro: Much Dating Advice is Twisted

The authors say that much of the available dating advice either has some twisted ideological agenda or lacks any scientific rigor.

They specifically mention feminism and manosphere misogynists, and I agree with it.
They even mention religious zealots, but that was so far off the wall for me that it never even registered.

Say the authors:

> In sexual politics, feminism's gain is patriarchy's loss. This zero-sum way of thinking assumes a perpetual "battle of the sexes," and sadly, it is common in both gender feminism and the manosphere.

The Five Principles of Dating Success

1. **Make a decision with science**
2. **Account for the woman's perspective**
3. **Own your attractiveness**
4. **Be honest** (with yourself and with others): if you lie to yourself, you'll never get what you want. And honesty in a world of liars makes you stand out
5. **Play to win-win** a staple of this website, to which I'd add: learn to spot nasty women and the games they play,

and ruthlessly cut them out

And when I read these principles, I knew that “Mate” had the potential to be a great book.

Play for Win-Win

The authors remind us that if relationships exist at all, it’s because partnerships can work.
Otherwise, they wouldn’t exist at all:

> If human mating wasn’t mostly a positive-sum game that yielded “win-win” experiences and relationships, then neither sex would agree to play the game in the first place.

I couldn’t agree more.
And on the mistaken view of the “battle of the sexes”:

> This “battle of the sexes” view is totally, completely wrong. It is counterproductive, counterintuitive, and counter to thousands of generations of evolution. That is why we endorse the opposite principle: Your mating goal is to find and create “win-win” relationships, where both you and the woman are better off because of your interaction.

To be precise, there is an element of conflict between the sexes.
But the forces for unity are stronger, or cooperation and relationships wouldn’t have evolved at all—but they did.
And since, as Tony Robbins says, you find what you look for, you should absolutely avoid looking at intimate relationships as battlegrounds.

So the PowerMoves stance is simple: know the areas of conflict and use them to play win-win.

And when I read this part, I knew this book had the potential to make the “*best dating books*“ list:

> Don’t think of mating as fighting women for victory. They are not your enemy. **Think of mating as finding women who want the same things you want**—so you can both win.

The 5 Steps Process

The 5-steps process is:

1. **Get your head straight**: get the right mindsets, replace old models with the correct ones
2. **Develop attractive traits**: based on science and what women truly seek
3. **Display attractive proof**: learn how to showcase your attractive traits
4. **Go where women are**: move where you are most likely to meet the women you like and where your traits are most appreciated
5. **Take action**

Build Self-Confidence

To build self-confidence, you need to first acquire the skills.

You need to learn to do the things you want to show confidence in, then prove to others and to yourself that you can do it.

The best way to be confident before you can make it is not to “fake it till you make it”, but to develop trust in the process.
trust that you can learn and get good at it. This is a growth mindset.

Also see:

- **How to develop a growth mindset**

If you are feeling down because you haven't gotten the results yet, you shouldn't force yourself to "suck it up" and "get over it".
First, acknowledge and accept your feelings. Name them.
And then develop that growth mindset, which will tell you that you can acquire all the skills you want and grow out of your frustrations.

Understand what it's like to be a woman: they have very different perspectives

When men interact with a woman, they are worried about being rejected.
Women are afraid of being assaulted or physically harmed.

My Note: Women feel vulnerable because of rape danger, not just size
The book proposes that women feel vulnerable because of the size difference.
And to prove the point, it says that an average guy would feel very vulnerable to a big NFL player. But I don't feel vulnerable to bigger guys, albeit I'm very small. I think female vulnerability is not only in size but because they are the sex that can be impregnated by someone whom they didn't choose.

Miller says that women who send mixed messages aren't (necessarily) trying to manipulate men.
But they are sending mixed signals because from one side they might be interested, but from another side, they might still be fearful.

This is a good observation.
Many women who were attracted to me were also too afraid to come over. And that's why building comfort and rapport is indeed an important part of courtship -especially with more fearful women-.

Also, keep in mind this: women experience weirdos in a far higher number than men do. So, women often get an unnaturally distorted, negative view of men.

Other differences include:

- Women are more skittish about sex because they're afraid of pregnancies
- Women are more afraid of STDs because they're more likely to one, and they are more likely to be serious
- Women care far more about how you smell than men care about how she smells

To actually learn about manipulation techniques read manipulative games women play, and drop those women:

> 10 Nasty Games Women Play (Women, Stop These!)

The different Threshold for Sexual Disgust

The average guy wants to do with women things that the average woman might find unappealing because women have a lower threshold for sexual disgust.

Women are not sure what to do when men push them to do things they don't exactly feel too aroused for.
Will men leave them for some kinkier woman?

And if she does it and does it poorly, will he like her less?
And if she learns to do that stuff, will that make her too slutty?

She might also feel bad knowing that her father would want to disavow her if he ever knew what she was doing.

My Note:

In my experience, most women who like a guy and submit to him will mostly just go along with his leadership and with whatever boundary he's pushing.
But it's true that they will worry whether his attraction for her will change after whatever act they've been doing.

Short-term, medium-term, long-term: what's your strategy?

There are plenty of women looking for short-term and casual sex, so you don't need to lie or pretend that you're only doing long-term.

Conversely, it's not true that men are all looking for short-term and plenty of men are more inclined towards long-term relationships.

First of all, you should know which one you want and prefer, so that you can adjust your strategy.
And you will avoid mistakes, like hurting yourself and others.

Miller drafted a quiz to help readers find out what's their main disposition.
I modified that quiz and added a few questions based on my own experience.

You can find it here:

- **Find out your mating disposition** (it's on the advanced forum for subscribers only)

Short-term requires much more work to get sex before you always need to find a new partner.
The "costs of acquisition" for sex are very high in short-term. You need to go out, approach, take rejections, find a girl who likes you, and then lead the interactions till the bed.
Something that will only happen for a small fraction of your approaches.

Tucker and Miller say that a healthy long-term relationship is one of the best things you will ever experience.

Empirical evidence shows that younger guys tend to be happiest with medium-term relationships involving lots of sex but not so much commitment.
Older guys tend to be happiest in committed relationships, as in marriages. Tucker and Miller say that marriage is the biggest predictor of happiness for me. And they're not saying that because they want you to get married, but because that's what the evidence says.

My Note: *Happy* marriages make you happier
It's true that married people tend to be happier than unmarried ones. Yet, I think that one should not generalize too much because a marriage can cut both ways. Choosing a bad partner can be disastrous. That's why I place so much emphasis on this website on recognizing the traits that make for a good spouse (same for partners and friends).

The Moral Code

Tucker and Miller propose a set of questions that will help men build their own moral code, and decide what's ethical and what's unethical.

Some of the questions include:

- The "everyone knows" heuristic: If people you cared about knew what you're about to do, would you still do it?
- The hero/villain heuristic: If you watched a movie where a guy does what you're about to do to a woman, would the audience support you or boo you?
- The YouTube heuristic: If she recorded the whole scene with a hidden camera and posted it to YouTube, would you be ashamed or proud?

When you know where you stand morally and ethically will make you more confident and will increase your own self-respect.

What Women Want

Across the animal kingdom, there are only four high-level strategies that males have found to work:

1. Force
2. Trickery
3. Bribery
4. Honest mating effort

The most reliable and the one that is most likely to give you a good relationship is the last one.
Your goal is to make you as attractive as possible, given the proven criteria of choice that women have.

Women's criteria of choice depend on evolution, cultural traditions, individual personalities, and context.

The most romantic words a man can say are not "I love you" or "I am sorry". But it's these:

> Don't worry honey, I got this.

Women want men who are effective in life.
And for long-term, they want men who are willing to use their effectiveness to deliver benefits (ie.: defend, support, and provide).

To be attractive to women, men need to be effective in all the domains of life: health, family, friends, work, play, and knowledge.

The questions that women ask themselves when it comes to assessing effectiveness are:

1. Do you carry good genes?
2. Would you be a good partner (even a woman cruising for sex will feel less slut-shamed for sleeping with a guy she can fantasize as being a great boyfriend)
3. Would you be a good dad?

Ideally, a guy has all three, but women will settle for one above the other depending on their own mating goals.

How do you improve your effectiveness?
The first step to improving your sexual market value is to work on your ineffectiveness. Such as: since women are risk-averse, the downsides will get you out of the race immediately, and they matter more than upsides. Instead of focusing on reaching the top 1% in all fields, focus on not being on the bottom 10% of each one of them.

Also read:

- **Sexual market value hacks**

> Sexual Market Value Hacks: Boosting Your SMV

The keys to attracting women

1. **Get physically fit**: sleep, nutrition, exercise are the three keys to physical fitness
   1. Avoid sugar and grains, eat unprocessed foods
   2. No need for big muscles, women are attracted to physical effectiveness, not physical narcissism. To workout properly go heavy and fast. Intensity is key
2. **Get mentally fit**: the key indicators are happiness and contentment, sense of humor, playfulness, openness, mental resilience and adaptability

    1. Enjoy small pleasures, do gratitude exercises, meditate
    2. Make better friends, do more of what you enjoy and less of what you dislike
    3. If you need it, go for psychotherapy (both the authors did it)
    4. And most of all: stop complaining!
3. **Get smart**: intelligence is attractive, but it must be conveyed intelligently
    1. Sense of humor, conversation and storytelling, creativity and creative skills, teaching and explaining, let them talk more
    2. See: mating intelligence (article inspired in large part by this book)
4. **Get your life together**: willpower and conscientiousness, turning dreams into goals and working them to make them real
    1. Reframe your willpower: from having to do hard things and give up good things, to "taking care of the future you" (this was genius and I will add it to my "Ultimate Power" ebook)
    2. Work hard, but don't become a workaholic (no monk mode)
    3. Don't work hard to the point where it's damaging you, learning to switch off is a skill: your long-term success depends more on your mental health than on doing 10% more today
    4. Show willpower and conscientiousness with sexual restraint: if the girl is delaying sex, remain emotionally grounded
5. **Become a Tender-Defender**: the good mix of agreeableness and assertiveness
    1. Extreme agreeableness (pushover) and assertiveness (dark-triad / violent dominance) are both repelling
    2. Just like men want a "lady in the street, a whore in the sheets", women want a strong man who is kind to them
    3. Be stronger and more assertive than the "*nice guys*" and better, more caring than the assholes
    4. Women are attracted to displays of real altruism—empathy, thoughtfulness, generosity, and sacrifice—that deliver concrete benefits to people in need. That's why they like doctors
    5. Agreeableness is important because conflict is costly, and it should be avoided whenever possible
    6. Women want and benefit from a kind man who can also be strong and decisive in protecting her: that's the sweet spot of the "tender defender"
6. **Social Proof**: social proof provides women with important signals based on how others treat you
    1. Practice being warm and outgoing
    2. Do make friends with both sexes
    3. Making friends is all about adding value. Indeed, social proof just answers this question: does this guy add value to people's lives?
    4. "Mate copying" leverages social proof from other women, which is why you shouldn't be afraid of being friends with other women
7. **Get some money**: it's a shortcut to self-improvement and lifestyle improvement
8. **Aesthetic proof**: aesthetic proof is a signal of intelligence, status, and conscientiousness. It can also serve as a signal of resources and fitness (fitting clothes)
    1. Fix the most common mistakes in grooming like nose hair, bad breath, bad hygiene, dirty house, and car
9. **Romantic proof**: this is most important for long-term dating
    1. Narrowcast by showing you like *her*, not a thousand women
    2. Pay attention to her
    3. Escalate your commitment gradually and slowly

Aesthetic proof power move

You can also use aesthetic proof to sexualize the conversation.
See here an example:

Read the forum entry on using aesthetics for sexualization.

Don't ignore mental health!
Many guys focus on physical health and money, but few guys focus on mental health. But mental imbalances are a biological turn-off, and mental health and fitness are very attractive.

The book also focuses on how to display those traits. While I don't agree with all of those ways, like, for example, the "fun and physical" date types, I found them very useful.

Also see:

- **Proven dating strategies that work**

> 7 Dating Strategies for Men (Research-Based)

Pick Your Best Mating Markets

Few pick-up and dating resources focus on this aspect.
And that's one of the reasons why I don't rate many dating resources very highly: they are simply missing out on the bigger strategy.

Luckily, "What Women Want" does deal with mating markets. And it does so very well.

A mating market is defined as:

> A geographically defined local dating zone that operates on the supply-and-demand dynamics of free markets in order to yield win-win outcomes

The ideal mating market for you has these features:

1. A large number of women of the age and ethnicity you prefer
2. A low operational sex ratio (fewer men than women seeking mates)
3. A subculture open to your mating goals (short-term or long-term)
4. A market in which your mate-value is competitive compared to the other guys there
5. A market in which your age is especially attractive
6. A market in which your distinctive traits and proofs are especially attractive, given the women's preferences there
7. An environment in which it's easy to meet people

For more, read:

- Sexual market value hacks

And:

- **Choose your seductive niche**

> 10 Types of Male Seducers: Pick Your Niche!

To Meet Women Easy, Make Your Mating Life an Extension of Your Social Life

Miller says that bars and clubs are not good places to meet women for most men.
And since rejection can be hard, he proposes an approach where you simply do a lot of social activities and meet women as you go about your busy social schedule.

Speed dating skews towards an older and professional crowd, but if you fit the bill, it can be extremely effective.

Online dating is also one of the most powerful tools, and he teaches how to filter dating markets in OKCupid.

Strong Men Are Sincere

If you're looking for short-term, you can say it.
Just do it in a socially intelligent way. You might say that one day you might want a girlfriend, but for now, you're only interested in meeting new people without anything getting too serious.

In a world of liars, that will be refreshingly new for her, and she will respect it.
This type of honesty changes the frame of the interaction. From the typical games, men play to a new conspiracy of daring truth-tellers.

And if you're looking for a relationship, do say on a second date that you're open for a girlfriend, if the right woman comes along.
And on the tenth, you can say that your mating goal is getting married.

More Bullet Wisdom

- Avoid pick-up lines
- With attractive women, focus on their personalities
- Even attractive women are often self-conscious
- Do make a positive impression on her friend and she will be happier to see you because you will provide her with a status boost in her group
- Women fantasize about being sexually dominated and controlled by handsome, caring, and strong men. But men misunderstand this part, and treating her curtly outside the bed is *not* the way to go
- Don't put pressure on her to orgasm: she will feel like she has to fake just to make you happy. So stop making her orgasm a sign of your virility and instead focus on enjoying yourself
- Don't specialize in useless skills: culture-specific intellectual proofs like chess or games rarely provide much benefits in dating
- **Conversation in mating contexts is about indirectly signaling your underlying traits**
- To approach conversations well, think of yourself as a host: gently guiding the conversation towards mutual satisfaction
- Change your approach from "getting sex" to "just having fun": it will take the pressure off, make you more charming, and lead to more success
- To women, a great guy who won't commit is an extra-dangerous source of potential heartbreak and disappointment
- People can enjoy sex and relationships no matter their mating value
- Penis size matters, but all the other traits as a whole matter more
- Pay for the first dates: research shows that the majority of women want men to pay for the first dates. Paying shows signs of kindness, generosity, and material proof

Quotes

On getting rid of your goal of “making her come” and on stopping putting that pressure on women:

> If she just wanted to come, she’d have stayed home with a bottle of white wine, Fifty Shades of Grey, and her vibrator. If she’s with you, it’s because she wants more than just an orgasm. She wants a sexual connection. She wants to feel sexually desired.

On the importance of physical fitness:

> Physical health matters at a deep biological level (..). When she meets you for the first time, this is what she is evaluating when she sizes you up, whether her gender studies professor likes it or not.

On the importance of enjoying life:

> Women don’t adopt boyfriends out of pity (they do that with puppies); they want a guy whose happiness cup overflows into theirs. Enjoying life is hugely attractive to women and a signal of good mental health.

On dominance without kindness:

> Offering a woman nothing more than dominance is like challenging her to eat a spoonful of pure cinnamon—she might give it a shot, but she’ll gag and cry in the end.

On money as a signal of quality traits and money as in “just money”:

> One is worth $75 million because he happened to win the Powerball jackpot when he was an unemployed school bus driver. The other is worth $7.5 million because he built his own company from the ground up and now has ten employees and thousands of customers.
> Who would you rather go home, out, to the altar with? Multiple studies show that women choose the entrepreneur

On the importance of a good sense of style for men:

> Awesome male style isn’t just a new gay thing; it’s a very ancient straight thing.

On the importance of getting along mentally, and not just physically:

> This is where Kim’s vocal fry, and Angelina’s compulsion to turn her family into a UNICEF ad, might start to grate a little.

On the importance of penis size:

> If we lived in a species where females chose males just for penis size, we would have evolved tiny brains, no humor, no civilization, no love, and no courtship beyond standing up straight and naked, pointing to our huge members

On learning to accept one’s lust and sexuality:

> The harshest truth of all you need to wrestle with is that if you’re ashamed of your lust, you’re ashamed of yourself. And you’re ashamed of masculinity in general. It’s not enough to respect yourself as a human being.

> You also have to respect yourself as a man.
> Respect for women does not need to, nor should it, compete with respect for yourself or your sexuality.
> When relationships work well, it is precisely because the man respects the sexual nature of his female partner and the woman respects his male sexual energy as well.

CONS

Sometimes disempowering when it frames a player's lifestyle as unreachable

The author says or seems to imply that it's best to have realistic expectations and that having many sexual partners is unlikely.
And maybe that is the case for some, but… It's not *that* unlikely for many guys who are very driven to achieve it.

For example, he says that you shouldn't take Tucker Max as an example of what's likely to happen in clubs because "Tucker Max is very fit".
I find Tucker to be normal/average at best, and most certainly a "fitness level" that most anyone can reach or even easily surpass.

More for relationships than hooking up

Albeit the book presents itself as both for committed relationships and casual sex, I find it to be far better suited for the former than for the latter.

If you seek casual sex, you should complement this book with more resources.

More geared to "typical provider dating"

The book is slightly more geared towards the typical dating style of a provider than of a lover.
But, for dating with a provider frame, it's *very* good.
To decide what's best for you, check out "lovers, providers, and friends" and "should you date as a lover or as a provider".

> Lover VS Provider: How to Pick Your Best Strategy

Discouraging at times: more on the "can't" than "can do" side

Of course, sometimes it might be true you can't do this or that.
But I don't think it's necessarily a helpful mindset to have.

And, as well, I found "Mate" at times a bit too "innatist disempowering". And doing so, sometimes, with an annoying, top-dow tone of "I know better, you can't".
The frame sometimes seems to be that: you either got this or screw you. A bit Spencer-like on that (Spencer was the philosopher of "social Darwinism", later usurped by the nazis).

For example, when it reminds people that you can't do much about your physical limitations.
Or when it says that if you got dumb parents then you're going to be dumb.

Yeah, maybe.
But dumb and overweight people can still be successful. I think putting a note on the possibility of achieving success no matter what would have made "Mate" even better.

Sometimes more about what would be nice than about what's true

Say, Miller and Tucker:

> Don't worry about the unattainable, irrelevant, or repulsive forms of social proof like fame, wealth, or class. They are not the most efficient ways to attract women.

Sure, they might not be the most efficient way of attracting women because they are hard to achieve.
But once you have them, they are some of the most efficient and reliable ways of attracting women.

Seeks to entertain with cursing language

I've never been a big fan of using curse words to be funny.

It feels like Bart Simpson level of humor, ie.: childish.
And you can find that type of humor in "What Women Want".

Maybe Tucker Max wanted to insist on the old habits that gave him success.
Or maybe the duo wanted to be on the cruder side to look more "authentic". But sometimes, they overdid it.

For example:

> You're likely to end up about as smart as the average of your two parents. But if your parents are idiots, chances are that you will be too.

I don't like that attitude.
It also seems elitist.
Or talking about masturbation, the title of the chapter is "go fuck yourself". I didn't find that particularly funny either.

But this is just a small note, partially irrelevant to the content, and it might be just me.

Sometimes it's unnededly caustic towards pick-up community

The authors say that pick-up artist "kino escalation" is predatory, psychopathic bullshit.

And then they say that the only way to continue is through a natural, mutual progression of sexual tension.

Which is pretty much the same as good "kino escalation" done well.
I agree that the mindset behind some pick-up advice is either psychopathic, stupid or even counterproductive.
But that doesn't mean that all pick-up advice is bad. Kino escalation in the sense of getting her used to your touch is important, especially for beginners who never touch their dates at all.

Jason Statham VS Johnny Depp: who gets the hottest girl?

The authors say that dominance and assertiveness can be more important than attractiveness. Especially when she's at her peak fertility.

Agreed.

The example is that Jason Statham, whom I had to Google, and Johnny Depp walk into a club where nobody knows them, Statham is the one who is going to get out with the hottest girl.

About this one, I wouldn't be so sure.
Johnny Depp is not just a cute face. Depp is also extremely edgy, in his own way.

PROS

- One of the best books on the fundamental traits that lead to attraction
- One of the most scientifically sound books on dating and attraction

- Deep and useful wisdom for self-development that also goes well beyond dating (especially on willpower)

"Mate" is one of the best dating books when it comes to the fundamentals.

Both when it comes to the fundamentals of what women want, and how you can work on them.
And that's why I rank it so highly. It's one of the best entry books for newbies, but even more experienced guys will learn from it (I did).

What Women Want Review

I feel that "Mate", later called "What Women Want" is a heavily underrated book.

Part of the reason is the marketing mismatch.
With Tucker Max on the cover, it was somewhat marketed to the wrong audience, and the content felt like a "bait and switch" for some readers.

Indeed, most of the negative reviews of "Mate" come from red-pill men (I know that by the content of their reviews and their review history, which includes testosterone supplements and raving reviews for "*The Rational Male*").
Red pill men tend to be overly cynic and don't see the possibility of a win-win with a woman.
So they somewhat resent the more enlightened collaborative approach of the book that recognizes the possibility for a win-win.

But they also complained about Tucker Max U-turn.
And for that one, well, I see their point, actually.

This book with the Tucker Max name on, it feels very incongruent. It feels like an exercise in "do as I say, not as I do (or did)".
You know, like the drunk guy who had a lot of fun drinking and now teaches kids to never touch alcohol? Yeah, that's how it might feel.

And while Miller, rightfully, exhorts readers to avoid manipulative advice from sociopaths and dark-triad men, I need to wonder… Was he fully aware of who his co-author is?
Because, while I don't know him personally, Tucker Max definitely sounded like a man high in dark triad traits and high in power-craving (even if his stories are made up, as some critics say, that would only prove that he is willing to do anything to be successful).

I think that the book would have been better received if they had at least made an intro paragraph to address this issue. For example, Tucker could have talked about his past and then added the trite cliche that now he's matured to a new stage.
Then the bridge between his past and "What Women Want" would have least met somewhat sense.
But with the current marketing and content, it can feel incongruent.

However, those contradictions should not stop us from seeing the good in this book.
And there is a lot of it.
When it comes to dating from a more conventional, provider point of view, this is one of the best books on the market.
Most guys aren't necessarily making it their top priority to have as many notches as possible. And that's why "What Women Want" might be my #1 recommendation to any guy looking for a committed relationship.

Alpha Male Strategies: Summary & Review

Lucio Buffalmano · 24 January 2020 · Archived copy · Original

Alpha Male Strategies (AMS) is a dating book for men. It offers a red-pill perspective on dating and relationships, equipping men with mindsets and techniques to improve their dating lives.
From a seduction and relationship point of view, AMS focuses mostly on polyamory, keeping women on rotation and adding just enough new ones to keep the small harem going.

- PROS
- Alpha Male Strategies Review

Alpha Male Strategies Author

Alpha Male Strategies, abbreviated as AMS, is an Afro-American man who provides dating and relationship advice to men.

If you are looking for *Alpha Male Strategies'* bio and his real name, you're out of luck. AMS writes and introduces himself as "*Alpha Male Strategies*, a dating coach".
There is no public name available.

His dating advice could be classified as "lifestyle".
Instead of focusing on "game" and techniques such as push-pull, routines, or cold approach openers, he focuses on increasing men's sexual market value and building a life that attracts women -instead of *chasing* women-.

AMS started off as a YouTuber and then wrote three books on dating and relationships.
The book reviewed here is his first book and, so far, his best-seller.

Bullet Summary

- Stay on your purpose: that's your N.1 priority and it should always be more important than any woman
- Don't give her too much validation, or she will get bored with you
- Learn to be happy and content on your own

AMS Book Summary

About the Author: AMS is a self-help author and dating coach for men.

The Different Types of Pills

Here is how AMS describes the different types of stages a man reaches in his understanding of women:

- **Red Pill men**: see the world, including female nature, for what it is. A red-pill man cannot be in a relationship

because they know about female hypergamy, and they know that women can't really love a man.

- **Purple pill men**: know the truth, but, unlike red pill men, have decided to accept it. Most alpha males will periodically enter this stage as they tire of sleeping around and want a relationship
- **Blue pill men**: are unaware of female true nature

AMS says that red-pill men have a tendency to come off as bitter, and I fully agree. Also see:

- **The truth about the red pill**
- **Growing past the red pill anger**

AMS says red pill men come across as bitter because they truly wish to have something meaningful with a woman, but they know they can't.
However, I disagree with the "they can't". I've been around the world and dated many women, and I have had countless meaningful relationships.

A High-Value Man is Dead Set on His Purpose

Says AMS:

> A high-value male is simply a man who is primarily focused on his passion and purpose in life.

A high-value man does not have much free time to chase women.
He might pursue and court her in the beginning, but if it's not reciprocated or if it's going nowhere, he will drop her because he has no time to waste.

The difference between an alpha male and a beta male is all in the mindset. An alpha male has an abundance mindset, and he's not afraid of being alone.

Also read:

- **How to stop being a beta male**

https://thepowermoves.com/how-to-stop-being-a-beta-male/

Master The Ability to Be Alone

One of AMS' foundational concepts is that of learning to be content with your own company.

The ability to be alone, says AMS, is what gives you true relationship control.
If you are afraid of being alone, you will never be able to demand respect because you are afraid that she will leave you.

Mastering the ability to be alone is not something you do for women. You do it for yourself.
And it will also help you with any other friend or family member who is being negative or unsupportive.

Get Your Finances in Order

AMS says that money is important.

You can have all the games you want, but women still care about financial stability.

Money is freedom, and it's great to have.
However, to make sure that your money-making gig is also your purpose, AMS recommends you find something you truly like that can *also* be monetized.

However, you must be careful with money and resources.
If you're not

Also read:

- **How women control men** (and relationships)

> Female Domestication: How Women Control Men & Relationships

The Three Dates Rules: How to Avoid Being Used

If you have money, you want to be careful that you are not going to be used for that money.

One way to protect yourself is to live by the "3 dates rule".
The three-date rule means that if you have not slept with a woman by the third date, you are not going to see her again.

AMS recommends doing third dates only if she comes back to your place on the second.
The only exception is if she offered to pay for the date.

My Note: I Like This Approach
I like this approach. I would add a few more exceptions though, like if she's a virgin, very inexperienced, or if you're dating in a more conservative culture and environment.

Before You Make Money: Convince Her You Got a Plan

Since women like financial stability, if you are still hustling, you may find it difficult to date well.
AMS recommends that you communicate you have a plan and a vision to make it happen.

Get in Shape

Women love men with good physiques.

Says AMS:

> Women settle for the dad bod if the man displays beta male provider qualities, but all things equal, she would definitely prefer the nicer physique.

Keep Her Chasing Your Validation

AMS recommends avoiding validating women.

But since "validation" for AMS means any non-sexual attention, then it means **you must be very distant at all times**.

AMS' goal with emotional distance is to avoid validating women so that they will crave your validation.
This is somewhat of a dark-psychology seduction technique and what on this website I call a "judge frame" whereby chase your validation to get emotional rewards from you.

It can work, but not always, and works best with a certain subset of women.

Also read:

- **Soft power**

My Note: I disagree with the extent to which you should withhold your attention
While it's certainly possible to give too much validation and attention, I disagree with AMS' extreme.
For example, AMS says even when you're in a relationship you should not initiate physical contact.
And he says you never want to communicate "I care about you", which I think is counterproductive both in

relationships and in dating.

Charisma Beats Looks

Charisma and personality are more important than looks, muscle, or money.

In the words of AMS himself:

> **AMS**: So you stay on your fucking purpose.
> And you go hit the fucking gym.
> And some fat, broke mothafucker that got game and some personality will *still* take your fucking bitch, nigga

LOL, what a character AMS is :).

But Status is The Most Important Trait

AMS says that good looks and money will get your foot in the door but, by themselves, they're not enough.

Personality and charisma are more important than looks and money.

But nothing beats status.

I agree.
Also read:

- **Scientifically proven dating strategies**

> 7 Dating Strategies for Men (Research-Based)

The 4 Types of Women

AMS says there are four types of women:

- **Materialistic women**: actually easy to sleep with because they're not concerned with personality
- **Relationship women**: two sub-groups, the ones that want a relationship before sex, stay away from them, and after sex
- **Attention whores**: they just want attention, not real dates. Avoid wasting time on them
- **Alpha seekers**: they shit test a lot to avoid betas

> Shit Tests Power Dynamics: 8 Ways To Win the Game

Women's Strategies to Get Men

Women will seek to get men in two ways:

- Quick sex, hoping that will keep him around (for men with options)
- Claiming celibacy, and making him wait (for men without options)

If you are socially skilled, then women will more likely try the good sex route.
And if you lack social skills, then they will more likely try to get you into a relationship before you even have sex.

You can't fake social skills, says AMS.
And that's why he encourages readers to socialize during the weekend -so, no to monk mode-.

The Male Strategies

- **The nice guy**: he seeks to be a friend first
- **Beta male provider**: shows off what a great provider he could be
- **High-value male strategy**: the alpha male lifestyle means he lives by his own rules
- **Direct Approach**: walking up to a stranger and insinuating a sexual relationship

Also read:

- **Choose your best dating strategy** (provider VS lover)
- **Alpha male providers VS beta male providers** (scroll down)

https://thepowermoves.com/lover-provider-friend-dating-strategies

Avoid Direct Approaches & Openers

AMS is against too direct approaches, especially sexual ones.

He says that's not a good approach because it can scare women off and you preclude yourself from the ability to raise her interest levels with a date or two.

It's a good point.
However, I do believe there are plenty of ways to sexualize a conversation early, without scaring women off.
See a texting example here:

And read the forum entry on using art for sexualization.

Don't Do Cold Approaches: Alpha Males Don't Spam-Approach

A true alpha male does not do cold approaches because that puts him in the chasing position.

An alpha male instead waits for signals of interest before approaching, so he knows he's good to go and he can retain his power.

And, says AMS, never leave the house with the mindset you are looking for women.
Just go out and enjoy your life, instead.

I disagree with this because it goes against the simple law of large numbers.
Also, read our own analysis of the limitations of the alpha male game:

- **The alpha male game: PROS & CONS**

> Why "Dating Like An Alpha Male" Is Costing You

The Two Steps to Sleeping With Women

AMS says there are two steps to sleeping with women.

The first one is getting your foot in the door, with either your looks (alpha males), or your financial stability (beta males).

The second step is charisma and game.
So:

- Get your foot in the door with looks or financial stability
- Use game and charisma to sleep with her

Men who start making a lot of money start relying too heavily on their money to get laid.
And while sex is sex and it's always good, you ideally don't want to get laid just because of your money.
Plus, money isn't going to be enough with all those ladies who are not primarily focused on money and financial stability.

Keep Your Dates Cheap...

Don't try to impress her by throwing money around on dates.

Yes, expensive dates can work, but they will put you in the beta male provider category because you are trying to impress her, which in turn communicates she has a higher sexual market value.

Plus, if you don't end up together, you will have wasted that money and you will feel even worse.

... But Pay for The Date

He who pays has power.

The one who pays decides where and when.
And if you let a woman do that, you are putting them in their masculine energy.

Alpha Males Don't Kiss

I was surprised to hear this one.

AMS is the only dating coach I have read who recommends this behavior -and I have read many-.
And the funny thing is, it's exactly what I've been doing for a while now.

Of the last 20 women I have been with, I probably only kissed 2 or 3 before having sex (update: that changes depending on location and on how much dating power I have).

AMS says that some women are just looking for sex, and kissing is more intimate. Don't assume she wants intimacy, maybe she wants sex.
To me, it's also a question of efficiency and risk-management: if a kiss is not needed, why go for it?

You might even find out she doesn't kiss well, or she doesn't like the way you kiss… Or one of you two just ate onions. So since it's not needed, just don't.

More Wisdom

- **Entitlement mentality**: To maintain a masculine frame with the woman of your dreams, believe you are entitled to her
- **Drop "we'll see" women**: When a woman says "we'll see" or "I'll let you know", simply tell her to get back to you when she knows. Then stop talking to her (see "what I'm spontaneous really means")
- **Never discuss the other women you're dating** (but actually I think there is a good way to do this and it will shoot up attraction via preselection)
- **Maintain calm frame**: If a woman gets quiet during a date, don't panic, stay calm, and hold your frame (see "frame control techniques")
- **Don't argue with women**: a masculine frame remains calm, assertive, and non-emotional
- **Stay cool if someone hits on your GF**: If a man is hitting on your girlfriend, you must remain calm, without showing signs of jealousy (also see: what to do when a man is hitting on your girlfriend)
- **Don't cheat**: If you're in a relationship, don't cheat. Not because of ethics and morals, but for peace of mind
- **Cycle different sex positions**: If you want to last longer AMS switched between being on top, letting her ride, and from behind (same as I do)

The Beef With PUA

Alpha Male Strategies is not entertaining any beef.

But there was a critical video from Todd Valentine, a popular PUA, which seemed to criticize AMS' style and the "alpha male approach to dating".

Todd is a smart guy and he made some good points we also largely agree on in our article on "the limitations of the alpha male game".
But I feel he missed a bit on the power of dating as a high-value man, since many pick-up artists date with rather low power.

Read more here on the types of male seducers:

> 10 Types of Male Seducers: Pick Your Niche!

Quotes

On success and seduction:

> Guys, let's face it, women are attracted to successful men.

On submission in and out of the bedroom, which I totally agree with, and which intersects with male leadership and male dominance:

> If you want your woman to submit to you in the bedroom, then you better damn well make sure she's submitting to you outside of the bedroom, it's that simple.

On putting women on a pedestal:

> If you treat her like a celebrity she's going to treat you like a fan.

On women withholding sex to get a relationship (also see "games women play" as well as "manipulative games women play"):

> Unfortunately, there's always a beta male willing to play these women's waiting game, just make sure it's not you.

> 10 Nasty Games Women Play (Women, Stop These!)

AMS recommends never to give oral sex to a woman (LOL, this just screamed "black guy advice" :D):

> Under no circumstances are you to perform oral sex. It's too submissive and validating. You'll lower her attraction if you do.

CONS

I thoroughly enjoyed "*Alpha Male Strategies*".
But, from my point of view, there were a few important red flags:

Promotes Manipulation

Just read the titles of these two chapters:

- How to keep sleeping with women *who are feeling used*
- How to keep sleeping with a woman who wants a relationship

AMS even says "lead her on for as long as you can".

If that's what an "alpha male" does, then that type of alpha male sounds manipulative and needy to me.

Beyond ethics and morals, there is also an element of fear and scarcity mindset when you focus so heavily on keeping a woman in your life that you must pour so much effort into stringing her along.
It's the fear of not being able to find another woman or a woman who wants the type of relationship you want.

AMS says you shouldn't feel guilty for leading women on because that's what women do.
They string men along without ever giving sex, so you can string them along with sex without ever giving a relationship.
Clinical psychologist and Ph.D. Harriet Braiker says that it's typical of a manipulative mindset to see the world as a place where you either play or get played (Braiker, 2003).

And I disagree with that advice for another reason as well: it's a race to the bottom.
Why should you race against some bitch who strings men along? If you really have to use others as yardsticks, pick better people.
You shouldn't be interested in a race towards the bottom.

As they say:

> You can't soar with the eagles if you're worried about how the turkeys behave.

Learn more about manipulation here:

> Manipulation: Techniques, Strategies, & Ethics

Relationship Control Based on Keeping Her Uncertain

To keep women attracted, AMS recommends keeping women uncertain.
He says:

> Once you give a woman certainty the mystery and challenge are over and she starts to look for her next prey.

It sounds like overthinking it. If you're a high-value man and generally provide her with a good time whenever you meet, both sexually and in conversations, women will naturally find you attractive.

Furthermore, this strategy can definitely become counterproductive.
A woman I liked walked out of my life because she said: "she needed to protect herself".
I never told her I liked her, and she drew her own conclusions.

On dates, AMS advises:

> When you're on a date just simply withhold your interest level.

But why would you go out with a woman if you're not interested in her and in getting to know her?
Indeed, when AMS advice to wait a week to contact her again after a date, he says that insecure women will not reply.
Instead, I think he is losing women by playing too disinterestedly.

Also read:

- **How to keep control and power in the relationship**: the healthier way

> 5 Ways to Maintain Power & Control in Relationships

The "women can't love a man" mantra

Says AMS:

> Men who digested the red pill see the world for the way it truly is (…) They understand that **women are incapable of truly loving a man**.

Sentences like these leave me baffled.

Sometimes I have to wonder: can guys who write about seduction never have experienced a woman being in love with him?

And then there is the pot calling the kettle black thing.
As AMS writes about leading women on and never wanting a relationship, doesn't he think that maybe it's him who can't truly love a woman?

I still remain open-minded to this supposed difference of love between a man and a woman, but my experience simply differed.
I've been in love, and some women have been in love with me -sometimes, a *lot* in love, and even when I was a rather average dude-.

So I wished some red pill authors provided some better arguments, examples, or scientific evidence for the mantra

of “women can’t love a man”. But, so far, it just differs from my studies, experience, and observation.

Sometimes confuses culture with nature

Writes AMS:

> Feminism has taught women to let men do all the pursuing.
> Women are taught that since they have the vagina a man should do 100% of the pursuing.

This is just not true.
It’s not feminism that taught women they have lots of power in the sexual marketplace. It’s biology.
If anything, feminism tells women they’re more like men, so it allows women to be more active in dating.

Also, AMS writes:

> Blue pill men tend not to be jealous because they’re completely unaware of female nature.

I strongly doubt it.
Jealousy is inborn.
The author himself teaches to keep jealousy at bay, so he probably also feels it.

Editing could be better

This is not the end of the world, but it does detract a bit from the author’s perceived authority.

Some typos were funny though. Like the “plutonic friend”, for example :)

PROS

I loved many of the concepts in “*Alpha Male Strategies*“.
And he offers a truly unique perspective on dating that few other authors have.

For example:

- Stressing the importance of being comfortable on your own
- The ability to be alone used to weed out uncooperative women

I couldn’t agree more with this:

> This means if a woman is not giving you one hundred percent cooperation you have the ability to walk away.
> This means you’ve mastered the ability to be alone.

- The poor relationship nature between high-value men and demanding women

Says AMS:

> (…) due to your high value mindset maybe you don’t want to put up with their demanding attitudes

That is something I have noticed in myself many times indeed.
I never get together with women who are too demanding. That’s also why on this website, I recommend women not to play too many unavailable games: busy men will not keep chasing.

- AMS is not afraid of being vulnerable

I was expecting someone with that name to engage in some alpha male posturing.

Instead, AMS comes across as a down-to-earth, even vulnerable man.

For example, he says:

> Few men are born alpha. Me myself I was a certified beta male up until I was 27 years old.

Alpha Male Strategies Review

I got to make a mea culpa.

I didn't approach "*Alpha Male Strategies*" with the highest expectations.
I had seen a video from Todd Valentine where he criticized some red pill concepts, and the comments in there seemed to say Todd was actually criticizing AMS (and yes, I think he was).

So, somehow, I had built the wrong impression this was going to be some alpha male posturing caricature, mixed with red pill misogyny.
And while there is *some* stuff I disagree with, there is also a lot of great content here.
Some of the content goes to the core of what's a high-value man, and some of it is also unique in the dating and seduction industry.

The author is also no show-off, he is actually very vulnerable and open in sharing himself and his past failures.

AMS says that he got much inspiration from Corey Wayne, author of "How to Be a 3% Man", but I liked "*Alpha Male Strategies*" even more, and I find his seduction advice to be more effective.

If it weren't for some win-lose and manipulative approaches I disagree with, such as the justification of male manipulation on females' own manipulative nature, plus the red pill mantra that "women can't love", then this could be one of the best dating books for men.

AMS' focus is also an interesting niche that is relatively under-served by seduction advice: picking up not scads of new women with endless spam cold approaches, but just enough new ones to keep a small harem and a healthy rotation.

RSD Blueprint Decoded: Review & Notes

Lucio Buffalmano · 28 January 2020 · Archived copy · Original

Blueprint Decoded is a mix of self-help and dating courses for men, and the flagship product from Real Social Dynamics.
The course is a set of talks delivered by Owen Cook, the main author.
"*The Blueprint Decoded*" takes a holistic approach to dating. It helps men improve their lives first and foremost and, as a reflection, their dating lives as well.

Contents

- Overview
- Owen Cook / RSD Tyler Review
- Blueprint Decoded SUMMARY
- CONS
- RSD Review
- Blueprint Decoded Review

Overview

- **You're behaving low-value because you don't have true core confidence**: Your brain stops you from feeling and acting low-value in two ways:
  - It scans for environmental cues, and if they don't all say "you're high value", then you behave low value
  - Your own internal rules for what it means to be successful often tell you that "you're not successful yet", and thus you don't allow yourself to be high-value
- **To develop true core confidence, you must control your state and change your own self-assessment**: Changing that means acting with high-value at all times. And changing your internal rules and your self-talk in a

way that is more

- **That will take time. In the meanwhile, focus on not being indifferent to what others think of you**: you can learn not to care about what people think of you. That way, people cannot make you feel low-value. If you can go out and have a good time no matter what, you're doing great already

Owen Cook / RSD Tyler Review

The author of "*Blueprint Decoded*" is Owen Cook, who is also known as "Tyler", from Tyler Durden's character in the movie "*The Fight Club*".

That was his nickname at the beginning of the Pick-Up Artist movement, of which he was one of the earliest and most prominent figures.
Those who have read "*The Game*" by Neil Strauss will not come out with the best image of Owen Cook.

The early PUA movement was about finding out what worked with women. It had somewhat of a geeky, "cracking the code" approach to it.
It was a lot about memorizing what to say ("routines", using different techniques that would allegedly enthrall women (from NLP to hypnosis), and codifying systems of steps that would supposedly lead from meeting a woman to bedding that woman -see "*The Mystery Method*"-.

Owen Cook embodied that movement very well. Affected by Asperger, Tyler had to learn social skills without any natural ability to understand them.
Whether that makes him suited to teach social skills and social dynamics, I will leave it up to you to answer.

I can see how memorizing routines and steps attracted Owen Cook in those early days: they provided a way to interact with people and women without having to actually *understand* people, women, and social interactions. It was a bit like programming applied to social interaction: start by saying X; if they say Y, reply, Z. And so on (today things have changed, and you can find many dating coaches who either have natural skills or who truly learned psychology and made plenty of personal experience).

Whatever you think of Owen Cook, and however badly he might have come across in "*The Game*", he can still smile at how things eventually turned out.
As the pick-up community gathered steam and attracted more and more men, he founded with 2 other guys "Real Social Dynamics", a company aimed at providing courses and training on how to better socialize and meet women.
Once "*The Game*" hit the bookshelves -and Neil Strass toured the States to promote it-, Owen and Real Social Dynamics were in the best position to ride that wave -and cash it in-.
Albeit rarely in mainstream TVs and publications, Owen Cook has been for many years the public face of pick-up, and the most famous teacher in that space. And for many years, RSD has been the main name and brand when it came to seduction.

Things changed though.
As seduction grew, new and more socially skilled coaches started entering the field.
As the community evolved and moved away from routines, RSD image suffered a bit. Owen Cook also evolved his style and game, but probably not enough to remain a leading figure in the new, evolving environment ("*Blueprint Decoded*" we review here was aimed at moving past the routines).

But thanks to smart business choices, RSD still remained at the forefront of the industry.
RSD grew new coaches from within and allowed them enough freedom to keep building their name and brand *within* the RSD ecosystem.
See for example RSDJulian, author of *Transformation Mastery*, and former RSDTodd, author of *Day Game* and *The System* (Todd later acrimoniously divorced from RSD).

Albeit not the dominant force it was, RSD is still one of the biggest names in the male dating and self-development industry.

Talking about self-development, RSD today is slightly moving away from pure pick-up and focusing a bit more on general socialization, self-development, and, as he calls it, “personal transformation”.

We will see how that goes.
Surely Owen Cook’s story is a fascinating one.

And he shows no signs of slowing down.

Blueprint Decoded SUMMARY

Tyler wrote the Blueprint material over a span of four years.
These are my notes from *Blueprint Decoded*:

1. Men & Women are Valued on Different Criteria, And That Empowers Men

Women’s value is mostly based on looks.
Within a few seconds, a man can say whether or not he is attracted to a woman, simply based on her physical attributes.

Men instead provide value to a woman in different ways besides their looks and physics.

For more read:

- **Sexual market place: a primer**

> The Sexual Marketplace: Overview of Intersexual Dynamics

2. Core Confidence Trump Situational Confidence

This is one of the “core” concepts of “*The Blueprint Decoded* and one of my favorites.

Situational confidence is based on the environment, the situation, or the relevance of specific traits.
If you are in the office, for example, and you are an MD, then you will probably be confident, because you have a lot of power in that environment.

Now imagine a guy who looks bad and is overall insecure.
But he is a manager at McDonald’s.

If you looked at this guy, you would think he doesn’t get laid and doesn’t have any social status.

Instead, he probably has a lot of social status when he’s working at McDonald’s. And he could probably hook up with the waitresses working for him.

That’s how situational confidence can turn a below-average Joe into a successful guy.

But if that guy doesn’t also have core confidence, the moment he steps outside of work, he’s a nobody.

Core confidence comes from within.
When you are generally confident about yourself, you are confident no matter where you are, and no matter what you have.

3. Your Brain Scans for Social Cues & Stops You from Having Core Confidence & High-Value States

Most likely, you know how to act like a high-value man.

But your brain is stopping you.
How is it stopping you?

Your brain naturally picks on the social signals and social dynamics around you. And if it perceives that you are not a high-value guy, then it makes you act like a low-value guy.
Such as, **environmental cues block your mental access to high-value states**. And you *feel* low-value.
This is psychological self-cockblocking.

If someone treats you like a chump, then your brain tells you to act more like a chump.
We can speculate with some *evolutionary psychology* that men developed those behaviors to keep safe within the group and avoid challenging more powerful men.

However, that has today become maladaptive.
There is nobody who is going to attack you for hitting on a hot girl at a club or at the mall. And nobody is going to attack you for acting high-value no matter what situation you're in.

Today, acting high-value no matter what will always pay off.

4. Your Self-Evaluation Controls Your Access to High-Value States & Core Confidence

There are two elements that determine your access to high-value states

1. Social cues (we just discussed)
2. Your internal rules and standards

Your own self-evaluations sometimes stop you from feeling -and acting- like a high-value man.

For example, your rule might say: "When I launch my company and it starts making 5 figures a month, *then* I will be a high-value guy and *then* I can feel great about myself".

But until you get there, you are precluding yourself from enjoying that high-value state and behavior. And those are exactly what makes it more likely for you to get there in the first place.

My Note: This one took a leaf from Tony Robbins
Owen Cook here took a leaf from Tony Robbins' work. Tony Robbins was the first one I heard to teach internal rules. Also see: *Personal Power II.*

What type of self-talk do you have?
Does your self-talk tell you that you're a good-for-nothing guy who will only deserve some scraps of respect once he achieves X, Y, or Z?

If that's the case, maybe you should change that.

And maybe you should change your own judging criteria and rules to something that allows you to feel good no matter what.

5. Once You Manage Your Internal Rules to Always Feel High-Value, Offer Value Without Asking Anything Back

Once you manage to feel high value and content with your life, two things happen:

1. You always feel good, perennially in a high-value state.
2. You can start *giving* value

Being properly "in state" for Tyler means that you talk to people, women, and groups, from a place of enjoying life and want to have a good time.

When you are generally happy and content with your life, you communicate a lot of great things about yourself. People think you must have a great life, and that you are probably also getting laid (pre-selection).

My Note: That's true… With a caveat

I agree with Tyler, too many people fail to recognize the importance of being content with one's life (also see "What Women Want" by Tucker Max and Geoffrey Miller).
However, there can be such a thing as acting "too happy", which feels off. And sometimes I feel that Tyler's infields are too much on the entertainer side.

When you are in the state, you offer value and make people feel good without asking for anything in return.

When you give instead of taking, people want more of you, and that makes you high value not just to yourself, but to everyone around you as well.

6. To Begin With, Focus on Not Letting Other People's Opinion Get to You

The road to core confidence is a long one.

Before you get there, you want to focus on insulating yourself from the social cues that tell you that "you're not good enough".

How do you do it?
By developing indifference.

You want to become indifferent to all reactions you get from people. Especially the negative ones. If you can go out and enjoy yourself even when all women reject you, then you're well on your road to mastery.

> What To Do When A Girl Rejects You: Definitive Guide

CONS

- **Too Long**

The marketing for "*The Blueprint Decoded*" says: "over 20 hours of life-changing knowledge".

20 hours… You gotta wonder if that is a bonus point or a drawback. In my opinion, it's a failure to present and package information.

However, it would still be OK if the material was still on point. The problem is that there is too much fluff:

- **Fluffy**

Owen Cook loves to talk.

And that's all good and dandy. Especially if you're with friends and shooting the breeze.
But when you're talking to train and deliver information, you should probably be less verbose and more informative.

Instead, I find "*The Blueprint Decoded*" to be an endless string of words, sometimes without a clear direction or goal.

- **Sometimes superficial analysis**

Owen analyzes the roles of lovers and providers.

I suppose for a beginner, that might be helpful.
But otherwise, it's a rather superficial analysis based on stereotypes. It paints a positive stereotype for the lover, who gets the girl without investment and uses a negative stereotype for the provider, who pays and gets cuckolded.

Sometimes it is like that, of course.

But the reality is more complex.
Sometimes the lover is an idiot, and some other times a provider can be a high-quality provider.

To learn more, read:

- **Lovers VS provider (VS friends)**: analyzing the dating roles in relation to their quality
- **Lover or provider**: picking your best strategy

https://thepowermoves.com/lover-provider-friend-dating-strategies/

- **Some feel-good crap**

Owen calls the idea that men need to look good to pick-up girls "social conditioning".

I suppose that helps the men who are more likely to buy his products to feel good about themselves -and about Tyler-.

And in a way, it's true.
You don't need to look good.
But it helps.

What Tyler is not providing, is a good, evidence-based analysis, together with practical steps that people can take.
For example: how to maximize their looks, or what other traits to develop -just telling them to develop "charisma" does not qualify-.

The same goes for "don't put women on a pedestal, in truth men and women are on the same level".
Again, not true.
On average, average women have more value than average men.
But at the very top, the relation inverts (also see: (add links here).

- **High energy risks "jester" vibes**

Tyler leans heavily into the "high-energy" side.

And he advises people to be more like him.
For example, he recommends listeners "get in state" by reproducing animals' sounds, gathering in circles, and jumping and shouting.
Then, go cold-approaching girls in that state.

I disagree with that type of advice.
Or at least, I disagree if it's aimed at making you act like you're an ADHD bouncing off the walls.

Tyler's own teachings seem to stem from this "high-energy" ideal.
Even when he says that looks and money don't matter, he asks: "is the most popular guy at the party always the best looking"?
Tyler seems to equate "popular" with "the guy who's getting the most attention, by being the loudest".

RSD Review

Both RSD and RSD Tyler tend to be on the "high-energy" end of the spectrum.
And hyper-social.
He comes across as a bit ADHD, to be honest.

He laughs a lot and loudly, shouts, moves quickly, and darts around.

There are many ways of seducing.
One can seduce one-on-one, or attract everyone's attention with over-the-top behavior and hope some girl will be attracted and bite. Obviously, Tyler's style is more suited for the latter.

For a while, the "high-energy" style was very popular in seduction communities. As a matter of fact, it was the only one being taught.
Even today, some coaches are still teaching this method.
Charlie from "*Charisma University*", for example, teaches this method.

I don't think "high-energy" and "hyper-social" is the best to build a deeper connection -or to seduce, for that matter-.

I remember there was an "infield video" of Tyler on YouTube gaming a so-called "alpha female girl". Unluckily it's gone, but to me, it felt like all smoke and no meat.

However, that is not to say that high-energy does not work.
It can also work very well, depending on the situation. One can attract lots of attention and then go home with the star-struck girl -or the equally high-energy girl-.

But if you are not high-energy yourself, I don't recommend you copy this style.
It will come across as weird, and there is no point in trying to be someone you're not -or someone you don't enjoy becoming-.

RSD Pivot Into Self-Help

Recently, RSD has been moving away from pure pick-up and seduction and embracing more general self-help.

However, to me, it feels a lot like woo-woo self-help, and it's rather undifferentiated from all the self-help based on the law of attraction.
I don't personally consume that type of content and neither would I advise my audience to.

Blueprint Decoded Review

There are some great ideas in "*The Blueprint Decoded*".

The main messages that I teased above can be life-changing indeed.

Unluckily, they are to be found and rescued in a sea of verbosity.
People who don't have the patience, or who get distracted, might even miss them.

I think that's a big con: the course should have been structured around those key, core ideas, and then provided examples and exercises around those key ideas.
Then it would have been a great course.

As it is presented and packaged now, I can't give it a very high rating.

Finally, when it comes to mating intelligence and a few core concepts of mating intelligence, it's lacking.
The analysis of the lover-provider is just skin-deep, and the analysis of which traits confer power and leverage in the mating marketplace is more about feel-good than about what actually works.

Overall: 5/5 for the wisdom on situational and core confidence.
But 2/5 as a 20-DVDs product to share that wisdom.

Check out the **best dating books for guys**.

Conversation Casanova: Summary & Review

Lucio Buffalmano · 29 January 2020 · Archived copy · Original

Conversation Casanova is a good dating book for men teaching readers how to talk to women in order to bond with them and seduce them.
The *Conversation Casanova* system is based on sexualizing the conversation and moving beyond small talk to truly get to know your conversation partner.

NOTES

About the Author:
Dave Perrotta wasn't a natural at socializing, making friends, or talking to women.
But he craved more, and he actively sought improvement until he got so good that he decided it was time to teach what he had learned (based on the book itself).

The Casanova Mindsets

These are the core mindsets you need to get better at conversations and seduction:

1. **I am responsible for my life and my circumstances**
2. **I am enough. I don't need the approval of someone else to feel complete:** when you focus on approval, you live by other people's standards, and you relinquish control (see next paragraph)
3. **I have a mission and purpose in life, and women are not my #1 priority**
4. **All women are attracted to me until proven otherwise**

Some women will be into you. But they will not come out and tell you. And sometimes, it's difficult to read the signs, whether she's into you or not.
To fix that problem, simply assume that all women are attracted to you. That will also lead to more attractive behavior from your side, and some women who were on the fence will actually like you more.

Why You Must Overcome the Need for Validation

This part was by far my favorite in the whole book.

As a matter of fact, it was one of my favorite passages in all the books on seduction I have read.
The need for validation is one of the most important and yet least discussed aspects of seduction.

Perrotta says that most men subconsciously feel like they are not enough and that they need something external to complete or "make them better".

In seduction, the external validation often ends up being women.
But there are never enough women to plug that hole.

Writes Perrotta:

> Once you score a date with the girl, you'll want to bring her back to your place. Once you bring her to your place, you'll want to have sex with her. Then, you'll want to tell your friends about it and "show her off."
> That will be nice and feel good, but the good feeling will wear off. Soon, you'll want more.
> You'll want to experience this feeling of approval again, and you'll need other women to fill the need. You'll need to keep trying harder to impress your friends and your parents.
> The cycle will never end.

When you focus on other people's approval of you, you are living by their standards, not yours. You are relinquishing control of your life and your well-being to outside sources.

I also loved Perrotta's question about finding out whether you still have a need for validation or not:

> Think of dating/picking up your dream girl. What excites you more? Experiencing her beauty, personality, and passion? Or bragging to your friends about getting such a 'hottie'?

To that question, I would also add: are you excited about the thought of "having it pulled off"?
Then you are probably chasing your own validation.

And the game is the same: there will rarely ever be "enough" for you to feel "good enough".

Overcoming Approach Anxiety

1. **Focus on overcoming your fears**: make it more about winning your own battle against fear than approaching the girl. It feels better to conquer your fear than to actually talk to girls. And that will make you more result-independent, too.
2. **Shift your perspective**: most guys think it's risky to talk to women because rejection hurts. But in truth, it's far riskier not to talk to them. That's the perspective shift you need to undertake.
3. **Tap into your manhood**: feel the attraction, and let that lead you

I would also add here: since most guys focus on what they don't like to find an excuse, focus on what you like instead.

How to Make a Great First Impression

1. **Slow down your speech rate**: most guys talk too fast, and slower is more attractive
2. **Avoid jerking, speedy, or anxious movements**: or anything that looks like fidgeting
3. **Use the "sexy smile"**: with one corner of your lips higher than the other (and avoid the big, toothy smiles)
4. **Strike a good balance between being too goofy (wrong) or overly serious (wrong)**: crack some jokes sometimes, but overall have a conversation aimed at getting to know her
5. **Adopt good posture**: and strong body language
6. **Give strong eye contact**: and avoid darting your eyes around
7. **Talk at your natural voice pitch**: high-pitched voices are unattractive, and to speak deeper, make sure you breathe from your belly

How to Have a Good Early Conversation

1. Early on, make an "assumption statement" instead of asking questions: for example, instead of "what do you do", you can say: "you look like an artistic type, are you a designer or something" (something that Mark Manson in "Models" also recommends)
2. Ask a close-ended question first: for example: "where do you come from?"

3. Then ask an open-ended one to build on the previous question, “oh cool, how is it like there?”
4. Then build up on what she said by sharing a comment, your own experience, or how you feel about it

How to Bond and Relate

Perrotta says that to bond and relate you need to help people see you as “the same”, as opposed to as “the other”.

He then goes on to describe the most common conversational mistakes people commit and how to fix them.
He recommends avoiding making too-contentious opinions early on and letting the girl talk more (I agree).

Also read:

- How to bond and relate (with plenty of examples)

> How to Build Deep Emotional Connection

You Must Genuinely Love Women

Dave Perrotta says:

> In order to be truly successful with women you need to become a man who loves women.

I think that in this era of bitterness and the red pill, we need that type of reminder.

Also see:

- How to grow beyond the anger

More Wisdom

- Ask for her number or to see her again at a high point of the interaction; this is always a good reminder
- To flirt, don’t ask “what kind of guys do you like”, but “what kind of guys do you find sexy”: this is my own note on Perrotta’s suggestion, and I loved it. I used to ask “what kind of guys do you like”, but from now on, I will switch “like” with “sexy.”
- Imply that she is hitting on you: this is something I used to do a lot but that over time I drastically reduced. It works though, and it was a good reminder that I can also restart doing it a bit more often
- Touch during the conversation: even in the beginning, and possibly before asking for her contact information because I found out that a touch before the request increased compliance. The elbow or the side of her arm are good places for initial touches
- If you’re walking through a crowded place, take her hand
- When talking about yourself, realize that it’s about communicating your sexy qualities
- The two most important qualities to convey are dominance and prosocial traits
- Among your qualities, do include “appreciation of beauty” and vulnerability

CONS

- **“I know this is really random” opener**

Perrotta presents four different types of openers.

“I know this is really random…” is how he sets up his direct opener.

It was a rather common one in seduction communication, and it almost went mainstream (also referenced by Tim

Ferris in "*The 4-Hour Workweek*").

However, I never liked that type of opener.
Perrotta advises readers to slow down on that "reeeaaallly", which further draws attention to how random your interaction is.
But that also makes it far less natural, and whenever possible, I prefer to make my interactions seem natural and effortless.

This isn't based just on opinions: I used it a lot, and for me, it didn't work nearly as well as other types of openers.

- **Grabbing her contact info with the "I know this random…"**

Same as above.
When the girl is in a rush, Perrotta recommends you grab her contact information with the following sentence:

> I know this is random and we literally just met, but you have a really fun/interesting vibe. We should grab a drink this week or next."

Again, I wouldn't draw attention to the "randomness" bit.
The rationale for doing that is that you "pace her reality", as the early PUA called it, and that you show emotional and social intelligence.

But it also somewhat shows low standards: you "literally just met someone" and you already want to hang out?
Ideally, you want to exchange contact when there is some interest or when she qualifies a bit.

The "you have a really fun vibe" is a form of qualification, but it could be better, in my opinion (for example, it's better to ask a question to make her qualify and then use her answer to qualify her).

Alternatively, I prefer to be more honest and say "you seem the kind of girl I like".
The "fun vibe" just doesn't feel genuine to me.

- **The "agree and amplify" technique is good advice, but doesn't always work well**

Perrotta mentions women's shit tests and recommends the "agree and amplify" technique to pass those tests.

He calls it "agree and exaggerate," but it's the same.

For example:

> **Her**: "I'm too old for you…"
> **You**: "Oh, I know. I'm just a boy trying to find his place in this big world. I'm no match for a sexy, mature girl like yourself."

I think the "agree and amplify" technique can work in some situations. But often, it doesn't. It's because you remain within their frame, which gives them control.
Plus, you are following their lead.
Also read: frame control and how to properly use frames.

> 10 Frame Control Techniques to Out-Frame Anyone

PROS

- **Highlights the importance of prosocial qualities**

Dave Perrotta is one of the few, if not the *only,* authors I remember to highlight the importance of prosocial traits. Most authors focus on being more of an asshole, or on being more dominant. There is a place for both of them, but prosociality is what makes the difference between a non-pro social dominant man that high-quality women reject, and a dominant man women want more and more in their lives.

Props to Perrotta for delving into such an important yet underrated aspect of seduction (and socialization in general).

- **Very good on many of the basics**

Conversation Casanova puts together many of the main basics of good conversation, and it's equally good in highlighting

Review

Conversation Casanova is a great book for beginners because it covers many of the basics.

Because it focuses on the basics, more advanced students of the social arts might find "*Conversation Casanova*" to be OK, but not to break lots of new ground.

A few times, I disagreed with the advice -see the "cons" section above-.
But overall, I agree with most of what Perrotta says. We also have had a somewhat similar trajectory, so I can understand Dave's own drives and motivations.

Finally, even as a non-beginner, there were also a couple of important reminders, plus a good new nugget of wisdom I took away and which I will be implementing.

The 5 Laws of Social Success: Smart Power, For Smart Cooperation

Lucio Buffalmano · 30 January 2020 · Archived copy · Original

Most self-help advice gets social life wrong.
Some is naive "just be nice" advice. Others push ruthless tactics. Both fail to deliver the most better (and the best life) in the real world

The truth? Real social success comes from *smart power* — the ability to build allies, earn respect, and win with win-win, without exposing yourself to unneeded risks.

This guide reveals the **five laws of social success** — the foundation of every powerful, respected, and fulfilled man's life.

Let's dive in.

Contents

- Intro
  - Smart Cooperation
- 1. Make Friends, Not Enemies
  - 1.2. Keep Your Enemies Few, and Weak

  - 5.2. Plan With The End In Mind
- 5. Bonus: Be Honorable
- Learn More

Intro

Much of the self-help literature is naive.

And the more realistic literature, including popular literature on power, rests on cynicism.

They’re both partially right.

Self-development, giving, and genuine relationships are foundational to a good and successful life.
And power, manipulation, or dark psychology are necessary for self-protection—and equally foundational for success.
A foundation of “healthy cynicism” is good.

However, they’re both also lacking—but also lacking.

Self-development without a healthy dose of reality, including its ‘darker’ aspects, sets you up for failure.

Total cynicism on the other hand can *sound* more ‘real’ and effective—especially to those who spot the flaws in standard self-help.

But total cynicism is no more effective than naive self-help is.
And it’s *especially* harmful for close relationships and, generally, for a happy life.

What is effective, then?

Smart Cooperation

Smart cooperation is the most effective.

Cooperation is the backbone of progress, civilization, and power projection.

The most influential evolutionary psychology theories posit that collaboration evolved because it was good for the selfish individual, their kin, and their groups (Axelrod and Hamilton, 1984; Ridley, 1996).

Just look around, and cooperation has produced everything worthwhile. And cooperating groups overpower individuals.

Collaboration is simple: it means that the value you each contribute leads to more value for both of you.

To us, it means that **anyone who learns to better cooperate wins**.
Hence, the basics of successful socialization leverage cooperation, while reducing its downsides.

Here's how:

1. Make Friends, Not Enemies

Make friends and allies who can further your goals. Friends are a power multiplier and a safety net.

Match dominant men's strength to befriend men
They're often competitive and dominant, so if you're too similar, you might clash over the alpha spot.
Instead of antagonizing, consider mutual respect. Show strength, with respect.

1.2. Keep Your Enemies Few, and Weak

And pick them wisely.

The safest enemies are:

- **Physically distant**, avoid neighbors who would pollute your life
- **Low power**, easily dispatched and unable to retaliate
- **Cool-headed**, fighting for a goal, not for sport
- **Individuals**, rather than groups or movements
  ⍰⍰ If you start a war with groups, only declare war on the leader, NOT the full group.

Fewer enemies mean you can focus your firepower if needed.

⍰♂Lucio's Take: **Keep litigious people at arms' length**

Lucio:
I steer clear of petty squabbles.

I set up a “cordially distant” relationship with my cantankerous and litigious neighbor:

- **Friendly** when we meet
  - I give what’s easy to give ⍰
- **But always busy** and “gotta go” to limit contact
- **Superficially supportive** and “yeah yeah” her problems to prevent getting dragged down

I act warm but too busy and above it all to be bothered. Worked like a charm.

1.3. Avoid Wars, Keep The Unavoidable Ones Limited

Avoid any conflict that doesn’t further your goals.

When you must fight, fight:

✅ **Stealth**, never attack yourself. Remain invisible, and you’re unassailable
✅ **Expedient**, fought for a specific reason
✅ **Fast**, avoid gridlocks that waste time and resources
✅ **Clean**, to avoid all-consuming hatred, keep enemies as friendly as possible. ⍰ See ‘Gentleman’s Warrior approach‘
✅ **Siloed**: one issue/front only

⍰ Examples: Trump & Johnny Depp

> **Ivana**: Donald during the divorce was brutal. He took the divorce as a business deal
>
> **Trump**: (Publicly) you will never hear me disparage Ivana because she’s the mother of my kids (…) she’s a

> good mother (…) We're good friends (…) I wish both of them to be happy

♟ **Fight to win, but maintain good relationship**
Trump let his lawyers bitterly fight his exes, while publicly commending them.
Trump maintained good relationships, access to the children, and avoided bad press.
That was crucial in his future presidential runs.

See:

- **How Johnny Depp Beat Amber Heard** by making friends

And here is what one of the Power University alumni said when he discovered how this law applies to frenemies:

> I recovered, thankfully, but a valuable lesson was learned that day: fight only as a last resort. And seek out friendlier options if possible. If I applied your knowledge to that situation today, I am sure things would have turned out differently.

2. Pick & Stick With High-Quality People

They make your life better and help you up.

At the most general level, high quality people to you are:

1. **Non-value-takers**, obviously, but it's important to start with the basic
2. **Value-givers**, or at least willing to

I personally also include traits such as:

1. **Honorable character**, able to own up to mistakes and apologize when wrong
2. **Ethics and morals**. It's not about being a saint or "nice", but having basic standards of morals and ethics. Including preferring to do win-win, rather than taking advantage of others
3. **Open to talk, listen and change**, including antifragile ego and growth mindset. Since nobody is perfect and nobody is perfect for us, they must be willing to listen and consider changes

2.2. Avoid Cheats & Turkeys

They make your life worse and drag you down.

Of course, nobody is perfect.
But evidence shows people differ. Including their moral fiber, their giving/taking attitude, and their mental dispositions.

Avoid people inveterate manipulators, takers, and overly pessimistic people.

Also read:

- How to spot takers

Gravity Principle: the more impactful they are, the better they must be

Because of repeated exposure, proximity is crucial. Principle:

⚖ **The closer the relationship, the more important quality and win-win become**.

- ⍰ **Proximity Rule** with real-life example
- ⍰⍰ Giving to neighbors instead of strangers

3. Build & Sustain Strategic Win-Win

Game theory models, evolutionary theories and real-life observation show that cooperation benefits the individual (Axelrod, 1984). Win-win cooperation is a power multiplier.

Some approaches are:

1. **Prefer win-win** to naturally show it with vibe and action
2. **Strategically display leverage**, such as your power for retribution, escalation, and 'other options' <— ⚠ Must be done tactfully to avoid souring the relationship!
3. **Call out any non-cooperative move** to ensure you don't pass for naive and exploitable. Even things out of necessary with a non-cooperative move of your own ('provocability' in game theory)
4. **Keep giving** within win-win (and getting)
5. **Remind of the benefits/costs** of cooperation VS fallouts (strategically)

Potentially:

1. **Police and control**, and let people know about the costs of cheating

3.2. Use Win-Win Frames

Some ways to do it:

1. **Use cooperation-evoking keywords** and expressions as evidence shows it works
   Ie.: *"We"; "Together"; "Teamwork"; "We're a great team"; "Great job, partner!"*

2. **Say it** or sub-communicate it
   Ie.:
   - *"I believe in win-win"*
   - *"I support my partner and expect the same—otherwise, why bother?"*
   - *"I help my friends out whenever I can. They do the same to me, and that's why I love them"*
3. **Show it**, and come through for your friends, allies, team, and leaders
   Ie.: If your best friend is sick, show up to his door with groceries

3.2.2. Reframe as Win-Win

Remind and re-set the win-win frame, especially during hiccups or disagreements.

⍰ "How to" and examples in our premium material.

Note: win-win ≠ being "nice"
You can be assertive, get angry, or momentarily even go for win-lose. If overall you prefer win-win, you're still a "win-win guy".
Win-win also doesn't mean 'perfect 50/50 split'. If in negotiations you capture 90% of the added value, that may not be fair, but it's still win-win.

For good examples:

- **Handling shit test with collaboration**: a real-life example from John
- **Removing the seed of antagonism**: see an example from my own life

Also read:

- **Frame control**

> 10 Frame Control Techniques to Out-Frame Anyone

⍰ When You Can Go Alone

Everyone benefits from smart cooperation.

And cooperation is most crucial for underdogs, challenging environments, or large missions.

But you can go alone when you:

- **Can achieve your goals solo**
- **Love walking and working solo**
- **Enjoy total dominance**, and competitors can't beat you, not even when teaming up

⍰♂Lucio's Take: **I love my life as a lone wolf**

Lucio:
Much of my life I walked alone.

It's how I liked it and worked great for me.

I'm even proud because it's tougher—finding dates, friends, and new circles while restarting fresh and managing business solo.

However, I still embrace win-win approaches and techniques.
They worked great, even with more transient relationships.

P.S.: Why not win-lose?
 The case for limiting win-lose (more theoretical)

Also read:

"Enlightened collaborator".

> The 'Smart Collaborator': Giving For Win-Win, Without Being Exploited

4. Be High-Power High-Warmth

Power gives you respect, status, and attraction.

Warmth gives you prestige, friends, and the social charm everyone loves.

Also read:

- Value and availability, a geekier explanation of how the two intersect
- **High power & high warmth**

> Social Strategy 101: High-Power / High-Warmth

4.2. Be "Politely Direct"

Direct communication feels assertive, powerful, and honest.

Too much indirectness feels fearful, submissive, and 'sneaky'.

The best combination is direct AND polite.

Low Power Indirect	High Power Direct
Date is late: *Do you think maybe next time you could warn me on time?*	*Hey listen, I don't know if we'll meet again, but if we do, I expect more punctuality, OK?* (then be warm)
Rejecting an invite: *I'm not sure if I can make it, maybe another time?*	*Thanks for the invite! Unfortunately, I got something on that day*
Negotiation: *I guess that may not work for me*	*Appreciate the offer, but doesn't work for me. Here's what does though…*

Calibrate directness

Adapt to your:

- **Culture & context**: err on the side of directness *within your culture*
- **Boss**: indirect boss, be more indirect. Direct boss, be more direct
- **Power**:
  - Indirect with superiors
  - Direct with subordinates

Also read:

- How to socially calibrate

5. Plan For Failure (CYA)

To collaborate only is naive.

This is because **collaboration and cheating are two sides of the same coin**.
You can't do one, without the other.

The conundrum of cooperation:

The closer your cooperation becomes, the higher the costs of betrayal.

However, you can't quit all collaborations and hope to maximize your potential, or enjoy your best life.

The answer is not to avoid collaborations, win-wins, and relationships.
But to be *smart* about them.

This is the overarching theme of our work and mission.

An effective high-level approach:

5.2. Plan With The End In Mind

Most relationships end.

And that's OK.
Plan to:

- **Reduce your fallout costs**
- **Increase their fallout costs** to incentivize continued cooperation
- **Have backup options** to ensure you 'land on your feet'

More in our premium material ⍰.

5. Bonus: Be Honorable

Albeit not strictly necessary to gain power and achieve goals, it adds important benefits such as:

- **Leadership benefits** such as gaining prestige, admiration, and grassroots support for your leadership
- **Inner psychology benefits** such as higher self-esteem and confidence
- **Better relationships**, especially with higher-quality men and women.

Honorable means to uphold and live according to shared ethical standards and values.
For men, it also includes displaying courage and 'leading from the front'.

48 Laws Cheat Sheet

A cheat sheet in infographic

⍰ **Download it here** at highest resolution

Cheat Sheet List

Law 1: Never Outshine the Master

- Make those above you feel superior. Do not brag or showcase your superior talents, or it will make them dislike you (see here how to brag effectively)
- Rationale: if you prove to be superior, you make them feel insecure, you become a dangerous enemy, and they will want to crush you

Law 2: Never Put Too Much Trust in Friends. Use Your Enemies

- Friends will take you for granted, come to envy and resent you, and turn into frenemies plotting against you. Turn your enemies into allies instead
- Rationale: people want to feel like they earned what they got. If you provide handouts out of friendship, they will resent you. The enemies you helped and turned into friends instead will always appreciate you and want to prove their worth

Law 3: Conceal Your Intentions

- Never say what you're really up to
- Rationale: when you keep people in the dark, they won't be able to prepare or thwart your plans

Law 4: Always Say Less than Necessary

- Powerful people impress by talking less
- Rationale: The more you say, the more you look banal and try-hard. An air of mystery will make you more impressive

Law 5: Protect Your Reputation at All Costs

- Reputation is the cornerstone of power. To resolutely handle an enemy, attack his reputation
- Rationale: People act not based on who you really are, but based on who they *think* you are.

Law 6: Court Attention at All Costs

- Stand out from the crowd
- Rationale: Unknown people have little power. People at the center of attention have lots of power

Law 7: Get Others to Do the Work For You, But Take the Credit

- Make what most bosses do: use their team, but always present the result as if it happened because of them
- Rationale: You will enjoy the windfall while doing nothing

Law 8: Make People Come to You

- Avoid chasing people, but make others approach you and ask you for favors
- Rationale: the person who chases has no power. When people chase you, you have the power

Law 9: Win Through Actions, Never Through Argument

- Talk is cheap, actions always speak louder
- Rationale: talking and explaining make you look like a powerless big-mouth

Law 10: Don't Get Infected by Misery and Misfortune

- Avoid the losers and complainers, associate with the happy and the winners
- Rationale: emotional states are contagious, losers will bring back luck to you

Law 11: Learn to Keep People Dependent on You

- Make yourself indispensable
- Rationale: when people don't need you, you have no leverage. When people need you, then you have the power

Law 12: Use Selective Honesty & Generosity to Disarm Your Victim

- One act of honesty will cover a dozen dishonest ones
- First, make them trust you, and then you deceive them big

- Rationale: if you're always overly Machiavellian, people will catch on, and it will ruin your reputation. Cover your machinations with some fake generosity instead

Law 13: Get Help by Appealing to Self-Interest, Never to Their Mercy

- If you need help, don't remind people of the past good you've done for them. Instead, find something that will benefit them *today*
- Rationale: nobody wants to be reminded of how they have been helped in the past. And nobody wants to help the desperate one. Appeal to what's in it for them, instead

Law 14: Pose As a Friend Work As a Spy

- Gather intelligence and learn people's secrets by getting close to them
- Rationale: You can't learn by watching from afar. Only when you get physically and emotionally close will you be able to pry on all their secrets

Law 15: Crush Your Enemy Totally

- Don't wound. Kill
- Rationale: wounding and inflicting damage will make people seek revenge. If you must hit, hit in a way that your enemies won't be able to retaliate

Law 16: Raise Your Value Through Absence and Scarcity

- Don't be too present. Create value through scarcity and absence
- Rationale: What's common is worthless, and what's rare is valuable. Learn to make people crave your presence, and let them talk and wonder about you when you're strategically not there

Law 17: Keep Others in Suspended Terror: Cultivate an Air of Unpredictability

- Predictability makes you an easy target. Make your moves more random and unpredictable
- Rationale: It's easy to plot against you when people know what you will do. Instead, especially when you have lots of power, being unpredictable will make people fear your next move. And they will be busier protecting themselves than plotting against you

Law 18: Don't Isolate Yourself Behind a Fortress

- Isolation is dangerous: mingle with the people instead
- Rationale: isolation will cut you off from all sources of information. Being in a crowd also means being in the know

Law 19: Know Who You're Dealing with

- Pick good targets, and don't cross the wrong people
- Rationale: different people must be treated differently. When you know who you're dealing with, you can adapt your strategy

Law 20: Do Not Commit to Anyone

- Maintain your Independence as long as possible
- Rationale: Remaining neutral will allow you to better study and understand the situation. And the warring factions will be coming to you asking for support, giving you more power

Law 21: Play A Sucker to Catch a Sucker: Seem Dumber Than Your Mark

- Seem dumber than you really are
- Rationale: when you look dumber and weaker, your opponents will lower their guard

Law 22: Use the Surrender Tactic

- Don't fight until the bitter end, but surrender and regroup
- Rationale: being destroyed yields no benefit. Instead, don't give them the satisfaction of winning on the field. Surrender to infuriate them and to gain time to work on your next move

Law 23: Concentrate Your Forces

- Focus on one thing: intensity beats extensivity
- Rationale: fighting on too many fronts will spread you dangerously thin. It is better to work sequentially on your projects and targets
-

Law 24: Be a Masterful Courtier

- Learn to play the social game, also called "politics". Make people feel good, learn flattery, and use influence and persuasion over brute force
- Rationale: Unless you're already on top, politics matter as much as results do. You must learn to deal with other people in the court: those at your same level, those below you, and most of all, those above you

Law 25: Re-Create Yourself

- Don't leave your image and reputation up to chance or, worse, up to others to shape. Be the master of your own image that you want to project
- Rationale: what's effective is not fixed in time but changes depending on the time, the culture, and the environment. Recreate yourself to remain in power through the changing times

Law 26: Keep Your Hands Clean

- Don't stain your reputation with illegal or immoral acts. Let others do the risky business for you
- Rationale: since reputation is so crucial, you want to avoid getting mired in any scandal

Law 27: Play on People's Need to Believe to Create a Cultlike Following

- Drop rationality and appeal to some large emotional ideal
- Rationale: some people crave to believe in something, and some seek a charismatic leader to follow. Be that charismatic leader who also gives them something to believe in. Don't worry about rationality with these people: emphasize emotions. And they will give you all the power you want (see Donald Trump)

Law 28: Enter Action With Boldness

- Timidity is weak. Do it confidently, or don't do it all
- Rationale: tentative action and body language make you look weak. Look confident and like you know what you're doing instead, and people will naturally respect you

Law 29: Plan All The Way to The End

- Don't start moving towards a goal without knowing how you will reach it.
- Rationale: the end goal is what matters. Too many people start without knowing what they want. Don't be one of them: start planning from the end goal backward

Law 30: Make Your Accomplishments Seem Effortless

- Always look like what you did was easy for you, and you will look far more impressive
- Rationale: people naturally respect effortlessness over hard work. Everyone can achieve it with hard work, but with natural talent? That makes you look vastly superior. And higher SMV, too

Law 31: Control the Options

- Provide people with a few options that all benefit you, and they will do your best interest while feeling strong and empowered
- Rationale: people like to feel in control. Give them a semblance of options, as if they had the power of choice, and they will happily do your best interest

Law 32: Play to People's Fantasies

- Give people what they want to hear
- Rationale: people say they want the truth, but they actually want what makes them feel good. Play to their best fantasies, and they will love you

Law 33: Discover Each Man's Thumbscrew

- Find your opponent's weaknesses, insecurities, and hot buttons
- Rationale: some of the most driven folks are all hiding insecurities (see David Goggins' "Can't Hurt Me", for example). Find out which ones they are, and you will know what forces are controlling them

Law 34: Be Royal in Your Own Fashion—Act Like a King to Be Treated Like One

- Act the way you want to be treated, and pretend you already are who you want to be. And people will treat you like you already are.
- Rationale: how do people know who you really are? For the majority of people who don't know your background, it's based on how you behave and how you dress. Behave like you're royalty, and people will treat you like royalty

Law 35: Master the Art of Timing

- Never seem in a hurry, but look calm and collected, like you always have things under control
- Spot the early trends, and position to take advantage of them
- Only strike when you're ready
- Rationale: Greene bundles up different things under this law. When you look unhurried, you look like you're in control of your life. And when planning your moves, keep in mind the timing and seek to strike at the best time

Law 36: Disdain things you cannot have: ignoring them is the best revenge

- Ignore what you cannot have, and you will look superior
- Rationale: a few things, you can't have them. And for a few issues, you can't solve them. If you make a big deal out of it, people will know that you can't get them. You look powerless. And if you complain about them, you will look butthurt. Instead, don't let them bother you, and it will seem like you're above them.

Law 37: Create Compelling Spectacles

- Curate the appearances, make big shows, dazzle people with spectacles
- Rationale: What people can't see doesn't exist. If they can't see the dirt, it doesn't exist. What is real is limited by what they can see. And if all they can see is a beautiful facade, that's the only reality for them

Law 38: Think As You Like, But Behave Like Others

- When you make a show of being different, people will dislike you. Pretend to be like them instead
- Rationale: when you go against the grain, you communicate that you are different and superior. People will resent you. Blend in instead. At least, blend in until you have enough power to do what you want

Law 39: Stir Up Waters to Catch the Fish

- Unhinge your enemies by getting them emotional
- Rationale: an angry and emotional enemy is an enemy more prone to mistakes. Make them emotional, and you might be able to profit from some poor decisions

Law 40: Despise the Free Lunch

- Avoid freebies, they are rarely truly free. What's worth having is worth paying for, and you will keep your independence
- Rationale: people who give you something usually want something back. When you accept freebies, you allow others to control you through guilt, reciprocation (see Cialdini, 1984), and the Law of Social Exchange, by which you are now indebted to them

Law 41: Avoid Stepping Into a Great Man's Shoes

- Don't follow great people, or their names and reputations might eclipse you. If you truly master, seek a novel path that will make you stand out
- Rationale: What happens first always appears better and more original than what's next. Especially if your predecessor was great, you will look like an average guy who is just keeping up the good work

Law 42: Strike the Shepherd to Scatter the Sheep

- If you are having trouble, always seek to go to the source. If it's about people, attack the leader, not the followers
- Rationale: there is often a major source of your troubles in life. If it's about people, attack the head of the revolt, not the sheep who are following him. Attacking the sheep will only galvanize the other sheep. Attacking the shepherd will end the revolt

Law 43: Work on the hearts and minds of others

- Avoid coercion. Seek to make people want to follow you instead. Win their hearts with emotions. Play their fears. And seek to provide just enough rationale to win their minds, too
- Rationale: unless you are a despot, it's difficult to get what you want with pure strength and dominance. People resent being forced into something, and over the long run, they will rebel and plot against you. It is better to persuade and influence them instead (also read: power over VS power through)

Law 44: Disarm and Infuriate with the Mirror Effect

- Copy exactly what they are doing and saying, and it's sure that you will be able to get under their skin
- Rationale: Greene provides two different uses for the mirror effect. One is to get under people's skin, and another is to mirror exactly what they like so that you can charm them

Law 45: Preach the Need for Change, But Never Reform Too Much at Once

- "Change" is a big keyword people love to throw around. So embrace. But don't change too quickly or it will result in pushback
- Rationale: People love change with words but hate it in practice. So give them what they want: big words of change, but little change in practice

Law 46: Never Appear Too Perfect

- It's dangerous to appear better than others or like you have it all. Pretend instead that you're also human; pretend that you are like them. And most of all, pretend like the power you have requires so much sacrifice that they will not want to take it away from you
- Rationale: People are jealous and envious of those who look too perfect and powerful. Look vulnerable sometimes, and play up your sacrifices

Law 47: Don't Push Too Far: In Victory, Learn When to Stop

- Once you reach your goal, stop: your job is done
- Rationale: when it looks like we are winning easily, the temptation might be to keep on going. But it might be a trap. Or you might lose what you've already won. Stop instead at the healthy target you initially set

Law 48: Assume Formlessness

- Rigidity is lost in a world that is always changing and on the move. Stay flexible and be ready to change yourself as well as your plans
- Rationale: everything changes. What worked today won't necessarily work tomorrow. And you must adapt to thrive

Email Cheet Sheet

Our email newsletter provides a 'cheat sheet' crash course on power for men.
It will teach you the steps to becoming a high-value man, a man of confidence and power.

Advanced Guides on Power

For those who want more than just a cheat sheet and are ready to do the work to become truly effective men who advance in life and achieve goals:

- **What "The 48 Laws of Power" got all wrong**: why the 'laws' alone won't make you powerful, and what will
- **Modern 48 Laws of Power** for contemporary power players
- **Laws for Top-0.1% men**, men who don't want to protect bosses' ego but want to conquer

And:

- **Manipulation Techniques**: an overview of manipulation
- **Dark Psychology**: an overview of psychology used for darker objectives
- **Power University**: the leading course dedicated to mastering power dynamics and achieving status, respect, and attraction

48 Laws of Power List + Notes & Infographic

Lucio Buffalmano · 3 February 2020 · Archived copy · Original

This is a list of *The 48 Laws of Power*, and the bullet points provide a quick explanation.

⍰⍰ For the complete book guide, see the main 48 Laws of Power guide.

48 Laws List

Law 1: Never Outshine the Master

- Do not showcase your superior talents, or it will make those above you dislike you

Law 2: Never Put Too Much Trust in Friends. Use Your Enemies

- Friends will envy and resent you, turn into frenemies, and plot against you. Turn your enemies into allies instead

Law 3: Conceal Your Intentions

- Never say what you're really up to

Law 4: Always Say Less than Necessary

- Powerful people impress by talking less

Law 5: Protect Your Reputation at All Costs

- Reputation is the cornerstone of power. If you want to destroy someone, attack their reputation

Law 6: Court Attention at All Costs

- Stand out from the crowd

Law 7: Get Others to Do the Work For You, But Take the Credit

- Do what most bosses do: use your team, but present the results as your achievements

Law 8: Make People Come to You

- Avoid chasing people, but make others approach you and ask you for favors

Law 9: Win Through Actions, Never Through Argument

- Talk is cheap, actions always speak louder

Law 10: Don't Get Infected by Misery and Misfortune

- Avoid the losers and complainers, associate with the happy and the winners

Law 11: Learn to Keep People Dependent on You

- Make yourself indispensable

Law 12: Use Selective Honesty & Generosity to Disarm Your Victim

- One act of honesty will cover a dozen dishonest ones
- First, make them trust you, and then you deceive them big

Law 13: Get Help by Appealing to Self-Interest, Never to Their Mercy

- If you need help, don't remind people of the past good you've done for them. Instead, find what's in it for them *today*

Law 14: Pose As a Friend Work As a Spy

- Gather intelligence and learn people's secrets by getting close to them

Law 15: Crush Your Enemy Totally

- Don't wound. Kill

Law 16: Raise your Value Through Absence and Scarcity

- Don't be too present. Create value through scarcity and absence

Law 17: Keep Others in Suspended Terror: Cultivate an Air of Unpredictability

- Predictability makes you an easy target. Make your moves more random become more unpredictable

Law 18: Don't Isolate Yourself Behind a Fortress

- Isolation is dangerous and cuts you off from information: mingle with the people, instead

Law 19: Know Who You're Dealing with

- Pick good targets, and don't cross the wrong people

Law 20: Do Not Commit to Anyone

- Maintain your Independence as long as possible

Law 21: Play A Sucker to Catch a Sucker: Seem Dumber Than Your Mark

- Seem dumber than you really are and your opponent will lower his guard

Law 22: Use the Surrender Tactic

- Don't fight until the bitter end, but surrender and regroup

Law 23: Concentrate Your Forces

- Intensity and deep work yield better results

Law 24: Play the Perfect Courtier

- Learn to play politics

Law 25: Re-Create Yourself

- Be the master of your own identity, don't let others define you

Law 26: Keep Your Hands Clean

- Use others to do illegal and immoral deeds while you look above reproach

Law 27: Play on People's Need to Believe to Create a Cultlike Following

- Create a cult-like following where you are the cult-master

Law 28: Enter Action With Boldness

- Timidity is weak. Do it boldly and convinced, or don't do it at all

Law 29: Plan All The Way to The End

- Make your luck by drafting proper and accurate plans that begin from the most important part: the end goal

Law 30: Make Your Accomplishments Seem Effortless

- You look immensely competent and powerful when you achieve your goals without breaking a sweat

Law 31: Control the Options

- Make people feel like they had a choice, but truly only give choices that see you as the winner

Law 32: Play to People's Fantasies

- Give people what they want to hear, not the truth

Law 33: Discover Each Man's Thumbscrew

- Find your opponent's weaknesses, insecurities, and hot buttons

Law 34: Be Royal in Your Own Fashion – Act Like a King to Be Treated Like One

- Act like the person you want to become

Law 35: Master the Art of Timing

- Never seem in a hurry, but look calm and collected, like you always have things under control

Law 36: Disdain Things You Cannot Have: Ignoring Them is the Best Revenge

- If you can't have something, pretend it doesn't even register in your brain. Pretend it doesn't exist

Law 37: Create Compelling Spectacles

- Dazzle people with big shows that cover the harsher reality that you don't want them to see

Law 38: Think As You Like, But Behave Like Others

- When you go against the grain in your communication, you feel superior. People will resent you. Blend in instead

Law 39: Stir Up Waters to Catch Fish

- Make your enemies angry and emotional

Law 40: Despise the Free Lunch

- Freebies come with strings attached. Instead of taking freebies, offer them: generosity is a sign and magnet for power

Law 41: Avoid Stepping Into a Great Man's Shoes

- Don't follow great leaders in their footsteps, or you look like a smaller hanger-on. Carve your own path instead

Law 42: Strike the Shepherd to Scatter the Sheep

- Deal with the problem at its source. Strike the source of the trouble, the leader, or the main instigator

Law 43: Work on The Hearts and Minds of Others

- Influence beats dominance. Direct people gracefully, master the art of gentle influence
- Appeal to hearts (emotions) first and foremost. Then deal with the mind (rationality)

Law 44: Disarm and Infuriate with the Mirror Effect

- Copy what they do: it's a great technique to stir water and make them angry and emotionally unhinged

Law 45: Preach the Need for Change, But Never Reform Too Much at Once

- Change is traumatic, and people will resist it: make your changes slow and gentle

Law 46: Never Appear Too Perfect

- Make the average mass feel closer to you with strategic vulnerability

Law 47: Do Not Go Past The Mark You Aimed For. In Victory, Know When to Stop

- Don't push too far, stop when you achieve your goal

Law 48: Assume Formlessness

- Everything changes. What worked today won't necessarily work tomorrow. And you must adapt to thrive

How to Apply The Laws

This is list of 48 Laws of Power is helpful for a quick overview and remider.
But to apply them in real, life, see:

- **Applying the 48 Laws in modern life**: and with modern examples
- **48 Laws for Top-0.1%**: the truly advanced rules

But if the laws don't work for you, see:

- **Why The 48 Laws Don't Give You Power**, and how to fix them

As well as:

- **Manipulation**: a primer on manipulation techniques and games people play
- **Dark Psychology**: a primer on the dark side of influence and psychology
- **Machiavellianism**: to become positively Machiavellian

And to go from list to becoming a high-power man, we turn these laws into a full system to deliver men status, respect, and attraction from women:

Minimal Game: Summary & Review (Aaron Sleazy)

Lucio Buffalmano · 5 February 2020 · Archived copy · Original

Minimal Game is a dating book for men. Aaron Sleazy, the author, teaches pick-up and seduction for level-headed guys who *don't* want to become pick-up artists or weird spam-approachers. Sleazy's method to date and seduce is based on efficiency with little gimmicks.

Contents

- Summary
- More Wisdom
- Quotes
- CONS
- PROS
- Minimal Game Review

Summary

About the Author:
Aaron Sleazy Elias is a dating coach, blogger, and writer.
Aaron made a name for himself because of his skills and advice and, partly, because of his criticism of the pick-up industry.

Seduction is Simple: Don't Overcomplicate It

Finding a mate is something primal and natural.

Seduction advice and books like "*The Game*" or "*The Mystery Method*" overcomplicate things.
And they do so because it helps them sell overpriced products and seminars.

Maximize Female's Potential Interest

The first step is to maximize your appeal to women (your sexual market value).

In this section, Sleazy says that looks are not the end-all, be-all. But they do matter, so you should focus on maximizing your looks.
And while money and status take years to achieve, improving your looks can be done in a matter of days.

Weed Out Uninterested & Asexual Girls

Aaron Sleazy does not like asexual and overly shy girls, and he recommends going after the sexual ones.

He says:

> Some girls are horny literally all the time, or at least rather frequently, and those are the ones you should go after.

If you're looking for quick sex, he's right.

Sleazy also doesn't like girls who don't enjoy sex and girls who are not interested in you.

If she doesn't like you within the first five minutes, chances are low that she will like you after 5 hours.
So cut the interaction short and look for more receptive women, instead.

Force an Early Reaction To Efficiently Get to The Girls Who Like You

How do you quickly screen the girls who like you from those who don't?

Well, Sleazy proposes that you seek out a reaction early on.
For example:

- Get just a little bit closer as you speak
- In the daytime, just ask a question: if she is kind and adds more information than needed, she likes you
- Hold her hand and caress it: if she does the same or if she keeps it there, she's interested
- At night, you can be bolder and let your hand rest on her thigh, or escort her as you walk with your hand on her lower back, really close to her ass

If you perceive negative reactions, just stop the interaction.

Aaron Sleazy recommends the same approach for "pulling", or inviting home.
Once the attraction has been established, a simple question such as "where do you live" should suffice. And if she doesn't bite, you could outright say "I feel like leaving, do you want to come with me?".
That works especially well with confident women, says Aaron, and I agree.

Know What Girls You Like – And What Girls Like You!

Chasing every single pretty girl is a time waste.
And it has little chance of success.

Instead, you are better off selecting your market and making yourself a good fit for that market.
And, says Aaron:

> If you don't get anywhere with a particular kind of girl, you have two options: 1. Focus on different women; 2. Change yourself.

Focus on different women, says Aaron, does not mean "less attractive", but it means "women with whom you have more in common".

When you take on a certain style and personal definition, you will be more attractive to girls who are similar to you.
But you can still attract girls from different sub-cultures.
What's sure instead is that if you look nondescriptive, you will also be non-attractive across the board.

Also, check out:

> 10 Types of Male Seducers: Pick Your Niche!

Don't Set "X Girls to Approach" Goals, Go Out to Be Social

When you set yourself bizarre goals of going out and talking to x amount of girls, you will come across as scripted and insincere.

You will sub-communicate that you are not talking to them because you like them, but because you racking up numbers.

Even when you reach a place, don't tell yourself "I must talk to some girls now", but be open to whatever happens.
And if you see a girl you like, then walk over and say hi.

Also read:

- **9 steps to effectively approach women**
- **Cold approach VS warm approach** (social circle)

https://thepowermoves.com/cold-approach/

Don't Lose Spirit: Even The Best Ones Get Rejected Most of The Times

Just to give you an idea, you shouldn't expect more than 10% of the women you approach to be interested in you.

And if you have sex with 5 girls a year, you are doing fine by general standards.
And if you get 10, you are outstanding.

Says Sleazy:

> **Success is, statistically speaking, rather the exception than the norm**

And he's right.

To Meet Girls, Just Drop a Random Comment and See How They React

This was a totally novel approach to meeting a girl, and I liked it.

Aaron Sleazy recommends just dropping a simple comment and then letting the girl tell you, with her reaction, whether she likes you or not and whether she wants to take it further or not.

For example, at a clothes store, you could drop the comment:

> That's a really nice color

Or you could ask for directions.
Based on how she replies, you will know whether she likes you or not.

To Get Into the Lover's Vibe, Talk to Her As If You're Lovers

Treat the girl as if you two already had sex.

A girl will follow your lead and treat you the same way; you will bond and connect more quickly, and sex is much more likely to happen.

- **How to get women with leadership**

https://thepowermoves.com/how-to-seduce-women-with-leadership/

More Wisdom

- Most women are insecure. If you are secure in yourself, chances are they will naturally look up to you
- If you're successful in just one area of your life, then getting married should not be an issue
- It's only after sex that you will truly know a woman: sex breaks important barriers to honesty
- What you can't fix, you must accept: accepting your body is a necessary step to being comfortable with your sexuality
- One key to seduction is to talk to strangers as if you knew them already
- Lead an interesting life
- Run away if you meet a girl who seeks to "make you chase" and "make you wait"

- Be honest: if you are only interested in sex, don't pretend you want a relationship
- If there is chemistry, sex happens and should happen quickly. And you should prefer women with good chemistry
- You don't need to overcome your fear of approaching if you're OK with a girlfriend or for "normal" dating. Leave that for the aspiring Casanovas
- If you meet a girl early in the day, feel free to call in the evening; otherwise, call her next day
- When making plans for the date, be precise when it comes to the day, time, and place
- Meet her as early as possible, so she has time to come back to your place. (I agree)

Quotes

A good definition of seduction:

> Seduction isn't making someone do what they don't want to do. Seduction is enticing someone into doing what they secretly want to do already.

On the simplicity of seduction (and female choice):

> There are no obstacles to getting girls, and there is no secret behind it either.
> The mechanics behind seduction are in fact surprisingly simple, and the key insight is that mate selection is the domain of the woman.

On early sex, better than long, drawn-out dating:

> Really getting to know a woman is a long process that always starts with sex.

On the help that money provides in dating:

> Money might not necessarily buy you love, but it surely makes it easier to get laid.

On stacking up negative features (i.e.: if you're short, don't be fat :) :

> Height is a very attractive feature, and women generally prefer a man who is taller than them. So, if you are short you better not be overweight.

On the importance of structuring your life to meet the type of women you like:

> For the very most part you will meet women whose life has some connection to yours. Everything else is a pipe dream.

This one, I just found funny, on dumbing yourself down to vibe with "regular girls":

> When a cute girl stepped up to the canvas, I said something devoid of any meaning such as that the colors were "strangely fascinating." This was in line with my belief that it's better to dumb yourself down to avoid repelling regular girls (…) she nodded approvingly, being the little pseudo-intellectual she was.

Another funny quote, highlighting that sometimes "just an OK guy" is all that's needed:

> In big cities there is an abundance of lonely office girls that spend their evenings alone (…). They are only

> waiting to meet a great guy like you — or any guy at all, which could of course also be you.

On “one-night stand manners”:

> Some girls have excellent one-night stand manners and know when to get up and leave.

And lastly, on avoiding relationships with women you are incompatible with:

> You will not get back the time you have invested in a relationship that was doomed to fail from the beginning.

CONS

- **Light on technical details**

Aaron Sleazy says that seduction is simple, and he’s right.
Yet, a few more details for guys who are not yet socially well-developed enough could have helped.

- **Somewhat demeaning towards online dating**

Aaron Sleazy doesn’t like online dating, and he doesn’t seem to have a high opinion of people who use it.
I disagree.
It’s efficient, and everyone looking for a mate should do it.

- **Somewhat demeaning towards a provider’s role**

Aaron Sleazy calls the husband the “dumb fuck and his money”.
Deploring the provider role is very common in the seduction industry, but something I never agreed much on (and one of the reasons why I had to write my own book on seduction).

- **The “anti-PUA” angle**

I’m not a big fan of many pick-up artists, as they come across as too gamey. Even the good ones, like Todd Valentine, sometimes overplay.
And yet, in a way, any book on seduction is somewhat picky.
So, albeit I partially agree with Sleazy, I am somewhat more at ease with the pick-up community.

- **The idea that women want sex more than men want**

Sleazy suggests that women want sex more than men, but since society tells us that’s not the case, we believe it.
Well, that’s not true, and it’s not just society. The Madonna-whore dichotomy is biological.

- **Conversational competence minor role in seduction?**

Aaron Sleazy explicitly says he doesn’t like to talk much and hates chit-chat. He prefers clubs and physical escalation.
Fair enough.
Still, one should not generalize. And conversational competence *is* very important in mating (also see: mating intelligence).

- **Dumbing yourself down? Maybe more like “calibrating”**

Says Sleazy:

> Speaking as an over-educated intellectual myself, I can assure you that you are a lot better off if you dumb

> yourself down a little bit.

Well, he's not wrong if "being intellectual" means talking about stuff she doesn't care about, doesn't know about, or anything that makes you sound pretentious.
Yet, I wouldn't necessarily say "it's better to dumb yourself down", but I would call it more "adapt to the situation". If she's dumb, dumb yourself down. If she's a smart cookie, be your smart self.

PROS

- **It's a number game where everyone has a chance**

Aaron Sleazy correctly points out that dating never stops being a number game.
And he is the only one to correctly point out that with all the fetishes that exist, there is a fetish for almost any unattractive feature one might have.

- **Good call on prioritizing external and visible features**

This one made me laugh, but it's a great point indeed:

> I wouldn't bother too much about hair on your back or shoulder as long as you don't plan to meet women on the beach, because once you have gotten that far, it won't matter anymore.

LOL, that's true indeed :)

- **One of the few to highlight the importance of your environment**

Sleazy says that the environment you are in might be the most important factor in determining your level of success.
While that might seem exaggerated, it's actually true.
Also see: sexual market value hacks.

- **Focusing on women with whom you have more in common**

This is another little, underappreciated pearl from Sleazy.
So simple yet so often forgotten: focus on women with whom you have the most in common. Everything will come easier.

Minimal Game Review

I like Aaron Sleazy.

He champions some of the ideas I also embrace, like, for example, "mutual seduction".

He pokes fun at the made-up *evolutionary psychology* of many pick-up resources, something I also often wrote about.
He writes well, mixing biting humor with rationality and critical thinking -similar to Nassim Taleb-.

I just don't understand why the adjective "sleazy" lodged between his name and surname. He's not sleazy at all!

Overall, I very much enjoyed "*Minimal Game*".
Truly simple, it reminds guys that getting the basics of seduction right starts first and foremost by accepting your sexuality, then looking for girls with mutual liking.

In a way, this is a dating book for men who don't want to become weird, high-energy pick-up artists.

Check the **best dating books** for guys or **get the book on Amazon**

Attract the Right Girl: Summary & Review

Lucio Buffalmano · 6 February 2020 · Archived copy · Original

Attract the Right Girl teaches men how to recognize and pick a relationship-quality woman, together with tips and advice on how to become the kind of guy that a high-quality woman wants to be with.

Contents

- Takeaways
- Notes
- Quotes
- CONS
- PROS
- Review

Takeaways

- Know what you want
- Seek a woman whom:
  1. Likes you
  2. Supports you (and your goals)
  3. She invests in you and in the relationship
- To get this type of woman, always work on your self-development
- If the woman is not a good fit, always walk away

Notes

About the Author: Bruce Bryan is a pseudonym, and he has written many books on dating and relationships.

Find Out What YOU Like

To find a girl you like, you must first know what you like.

Stressing the "you" in "girl you like" does not just serve to remind you that your power of choice is as important as the girl, but also to remind you that you must choose based on what works for you.
Not what your friends or society like. Don't choose based on ego. Choose based on what will make *you* happy.

Don't Change for A Woman, But Find a Woman Who Complements Who You Are

Says Bryan:

> So think about your life goals, your passions, and your interests, and focus on dating quality women that "fit" with you in those areas.

Make A List of What You Like In A Woman

Again, I couldn't put it any better than Bryan puts it:

> It may seem harsh to be so specific in making a list about what it is you want in a woman, but it's even harsher to try and make someone else fit your ideal of a "perfect" woman.

Once you know what you really want and you have written it down, stop looking for “the one”, and simply look for who fits the bill.

The Traits of A High-Quality Woman

Bruce Bryan says a high-quality woman:

- **Can influence her man without being forceful**

Bryan says that men enjoy being in charge, and the top women understand that, and instead of challenging him, they use “feminine grace” to influence their men.

The graceful woman wants freedom from masculine responsibilities and expectations.

Bryan says there is a difference between “influencing” and “changing”:

> Every woman in some form or fashion wants to either change a man to suit her needs, which is bad, or she wants to influence him to become the best version of himself, which is good.

I couldn’t agree more with Bryan.

- **She wants to be appreciated for the fact that she is a woman, and desires to express her true femininity**

She also wants her man to be masculine, and she appreciates him for that.

- **She treats his man like a king**

The world can be a challenging place, and a great woman helps the man by providing a great environment in his intimate relationship, which includes both support and loyalty.

Says Bryan:

> **A good woman will make you feel as if your presence matters to her.**

Since if she truly likes you early on she might be on her best behavior, notice how she treats the man in her life.

- **She is a thoughtful and proactive lover**

And thoughtful and proactive will know her man and what he likes her.
And she will try to provide him with the environment that he appreciates. That can be shown for example by preparing his favorite dish, or by letting him enjoy football night.

- **She appreciates his man’s strengths**

A great woman will make you feel like you are having a positive impact on the world.

My Note: So true
I can’t agree more. One of the best women I’ve been with first asked me about writing a book one day long before that thought had even crossed my mind.
My answer was “who is even gonna read that”.

She will respect your strength and encourage you if you have given your best, even if you fail.

- **She’s a fountain of youth**

Says Bryan:

> She’ll still possess a childlike zest for life and be an absolute joy to be around.

- **She will hold his man up to his word**

All the “make you feel good” traits are nice.
But they’re not enough.
You also want a woman who will hold you to the best man you can be. And that includes keeping your word.

Says Bruce Bryan:

> Maintaining your integrity as a man should become one of her top priorities in your relationship.
> Yes, she might “nag” you, but ONLY if you’re not being the man that she knows you can be.

Finally, among the top qualities, Bruce Bryan lists confidence, competence (being good at what she does), femininity, and taking care of her appearance as well.

Also read:

- **High-quality women**
- **Low-quality women**
- **Nasty game players, you need to avoid**

> 12 Traits of High-Value Women (With Examples)

How do You Know She’s a Top Woman?

Bruce Bryan says that top women make men want to do things for them.

He says:

> It’s a strange feeling in which you’ll WANT to take care of her and treat her like a queen.
> You’d fight for her if the situation called for it, and you’d gladly make the sacrifices necessary to ensure her happiness.

To Demand High Standards From Women, Have High Standards for Yourself

Half of the book is about recognizing great women, while the other half is about becoming the man who can attract them.

Says Bryan:

> You MUST have high standards for yourself and your woman and low tolerance for dishonesty or lack of integrity from you, her, or anyone else for that matter.

He says that to get this type of high-quality woman you must get into the mindset that you are assessing her and the quality of her character.

The rest of the book contains some advice on dating, like not being a wuss, or having boundaries that you demand to be respected.

In short, Bryan says that to be attractive to a high-value woman, you must be a high-value man (and a high sexual value man).
He says:

> She wants someone that she has to go out of her way for, not because she has to, but because she wants to.

Chase Each Other: It's Give & Take

Bruce Bryan says that relationships are a give and take.

He also applies that give and take to chasing, which is the first time I read about it.
Bruce Bryan talks about "giving her the gift of chasing you while also chasing her".
This is also something I talk about in "mutual investment".

> How to Make Him Chase You: Definitive Guide

Be Willing to Walk Away

If a woman is not the right fit, if she is not treating you well, and if she doesn't like you…

Walk away.

It's not just a behavior, it's a mindset.
And it's a mindset that will make you all the more attractive to the high-quality women who are a good fit for you.

The Caged Bird Paradox: Don't Give Up Your Freedom Too Easily

When a great woman meets a great man, she'll want him only for her and put him in her little cage.

But she doesn't want him to fly too easily into that cage.
She wants a bird who loves his life, and a bird who loves his fly and does not fly into the commitment cage too easily.
So it's best if you make her work for it.

Quotes

> Dating an average woman that isn't a good match for you or who isn't highly attracted to you or interested in adding value to your life is actually WORSE than being single.

On seeking women who want the same thing:

> Trying to force an uninterested woman into a deep, harmonious relationship is like trying to force a round peg into a square hole.

On fears leading to poor partner choice:

> Many guys fail to attract the right girl because of fear. They fear being alone the rest of their lives or they fear commitment.

On her unwavering support:

> You want to be with a woman that will remain consistent in her support of you regardless of your weaknesses and burdens. In fact, a good woman is one who will help to heal the emotional scars of your past just as you would with her.

On the value of men with high standards:

> If a woman can land a guy with high standards, she'll feel as if she's won the lottery.

And finally:

> You can't turn a whore into a housewife. There, I said it.

CONS

I loved "*Attract the Right Girl*".
These were the bits I agreed less with:

- **The "believe you deserve it" mantra**

There is a lot of self-help that is based on telling readers that they are great and that they "deserve" whatever they want.

I never liked that.
It feels like an entitled mentality, it does not lead to long-term success, and it makes people inherently low quality.

- **The "patience, she will come" advice**

Same as above. Very common, never believed in it, never liked it.

- **Geared towards providers and men seeking a "queen / caretaker of the castle"**

This book is mostly for men who enjoy a "good woman", and a woman who will be the queen of the castle.

It's less for men who want a go-getter or an equal.

That being said, most men fit the former category, and a woman can be both.

PROS

Top book.
Almost all of the information in this summary is not only high-quality but also rare in the dating literature.
Finally, I also personally used Bryan's list of traits and qualities to help me fill up my own list of traits I seek in a woman.

Review

Attract the Right Girl is one of those little hidden gems.

It's a simple and short book, yet it packs a huge punch.
Contrary to most dating books for guys, its main focus is not on how to meet and seduce women, but on how to *filter* women.

This is the mindset of men with options, who prefer collaboration and focus on finding a collaborative partner.
Also see:

https://thepowermoves.com/enlightened-collaborator
Just for that, it deserves a recommendation.

I find that picking the right partner is the most underappreciated aspect of seduction. And, as well, it might be one of the most under-appreciated skills for life.
Part of this is because of our PC culture whereby "picking" means "judging", and these days you don't wanna judge.
But whatever the reason, don't miss out on these life-critical skills.
And do focus on picking the right partner.

In many ways, Bruce Bryan here is encouraging readers to pick a partner that will hold her side in what I call "collaborative relationships" in my "fundamental strategies of power".

Daygame Nitro: Summary & Review (Nick Krauser)

Lucio Buffalmano · 7 February 2020 · Archived copy · Original

Daygame Nitro is a dating book for men that teaches guys how to meet women during the daytime. Nick Krauser, the author, lays out a model that he dubbed "daygame for alphas".

Contents

- Daygame Nitro Summary
- More Wisdom
- Quotes
- CONS
- PROS
- Daygame Nitro Review

Daygame Nitro Summary

About the Author:
Nick Krauser is a dating coach based in the UK. He started getting pick-up and daygame after his failed marriage and divorce. He read the Mystery Method, signed up to a boot camp, and never looked back. As he gained more success and experience, he eventually developed his own system and started teaching.
Today Nick Krauser considers himself past and over his "game" phase in life.

Daygame for Alphas VS Daygame for Beta

Nick Krauser says that his system is "daygame for alphas".

These are the differences between daygame for betas and alphas:

- She is the prize for betas / he is the prize
- She's great and must have so much going on / you are the adventure in her life
- You must be warm and make her comfortable / you must project dominance and charisma
- Stay safe and don't crazy stuff / be crazy

Also read:

- **How not to be a beta male**

> How to Stop Being A Beta Male

The Krauser Daygame Model

The Krauser Daygame Model has the following steps:

- **Kill Momentum**: stop her and make her engage you. You do this by showing high value right from the start
  - Pre-approach
  - Target acquisition
  - Spontaneous opener
- **Vibing**: match her energy and draw her into a 1:1 conversation
- **Investment**: when hse starts chasing you and putting in work

- **Commit Her**: she decides to have a date with you, either now or in the future
- **Deep Rapport**: you usually get into this stage once you sit down in a more private location (not in the street)
- **Verbal Escalation**: sexualize the conversation to make her horny

The idea of the KDM is to start high energy and give a lot in the beginning. Then, little by little, you start to cool down, rein in your body gestures, and draw her in.
That's when she should start investing more and more

Daygame Nitro is built around defining and explaining each of those steps.

Also read:

- How to approach girls: 9 steps to a successful approach
- Cold approach VS other approach strategies

> Cold Approach VS Social Circle (VS Tinder): Strategies

In Daygame You Must Be Fun

Albeit Krauser talks a lot about being alpha and one of his FAQ is "aren't alpha males serious", he says that seriousness is the kryptonite of day game.

He says that the primary way of getting an overload of initial attraction is by being fun.

My Note: I don't 100% agree
I agree that being too serious makes for a poor initial interaction most of the times -but not always-.
However, I felt like Krauser overdid the fun part.
Furthermore, if you can get a strong initial (sexual) chemistry, you can do without the fun part.

Krauser says that the most help a wingman can give you is to keep you social and upbeat while you walk around.

Use Your Wing to Show High Value

When you want to approach a woman, you should get even more animated in your talk, speaking louder, laughing harder and gesticulating more than usual.

That communicates high value.
This is what Krauser says the girls will think:

> Wow, high value guys. Having fun in their own world, at ease with what is around them.

I agree that sometimes being deeply into a conversation with a friend of yours will deeply attract attention.
I remember once locking eyes with a girl while talking animatedly with a couple of friends of mine. This girl was with two other guys, and she *still* stopped in her tracks.

Another time at a bar, me and my pal were absorbed in conversation. With the tail of my eye, I could see a truly beautiful blonde woman -who was out with a guy- looking at us.
When my pal was in the bathroom, she stopped by to talk to me.
I told her to join me and she sat down, ditching that other guy she was with.

That being said, I wouldn't exaggerate the laughter or the gestures. Those can make you look too juvenile and less powerful.

Only Approach Girls You Find Attractive

Going only for the girls you truly like and appreciate from your masculine core is one of the central tenets in Krauser's philosophy.

He lists all the advantages to only go for the women you truly feel attracted to, and I agree with them all:

- You developed a trigger: when you see your type of girl, you know you're going to approach
- Approach anxiety decreases
- Your inner game improves when
- You are not distracted and overwhelmed by all other girls walking around
- You feel like the selector, because you have standards
- It helps you deal with her shit tests because you can communicate from a place of honesty
- The girl feels like you picked her for a reason
- You specialize and get better with the girls you like

The only reasons you might want to approach girls who are your type is to get some experience, to get socially lubricated, or to bottle up that feeling of not really caring so that you can do the same if you're feeling nervous.

> Shit Tests Power Dynamics: 8 Ways To Win the Game

Deploy Push-Pull Right From the Beginning

Krauser says that if you compliment a girl from the first moment you talk to her, you give away too much of your power.

That's not how alpha males act, so you want to use push-pull right from the beginning.

For example:

> **Krauser**: Hi. I just have to say something. I just noticed you from over there. You are dressed fucking ridiculous. I love it. It's very sexy

In that example the push-pull is inverted.

I find this technique interesting, but I don't think I will be making it my mainstay.
I feel that if you are confident in your value, then you don't need the "push" or "the neg" right from the start.

More Wisdom

- **Sexualize the convo with random sexual appreciation**: Nick Krauser recommends you drop a random sexual hint while talking about random stuff. For example, talk about your day, say "great tits by the way, I like them", and then keep going
- **During the investment stage, disagree on something small**: this will give you an idea on where you stand, and it will highlight you're not kissing up to her
- **Right after she commits to follow you, do more of the talking**: if she follows you, especially if you had to push a little bit, do more of the talking afterward to help her smoothen the transition. In those moments she is thinking "have I done the right thing committing to follow this guy?".
  This was a very good point indeed.

Quotes

On low-value guys following others for what they should also like:

> Beta males, chodes, losers (or whatever term you prefer) live their lives according to other peoples' values (…) They read GQ to be told what's cool. And they want the girls that society tells them they want. They read the FHM list of 100 sexiest women and don't laugh out loud when Terri Hatcher and Jennifer Lopez make the list.

On the danger of going after a girl who is not really your type (I was smiling and nodding badly here):

> (…) And it will help you avoid the most soul-destroying of situations: getting stuck in a set with a girl you realise you don't like, while a super-hot girl you do like walks by.

On the clunkiness of pre-canned material:

> It's still possible to open girls with canned material, but then again, it's possible to eat soup with a fork.

CONS

- **The Alpha/Beta dichotomy and the red pill**

The red pill has some great content.
But also some poor information and mindsets which don't make me the biggest red pill fan.
Nick Krauser is.
And together with red pill terminology and start contrast between "alpha" -everyone who uses those dichotomies includes himself in the "alpha" category of course- and "betas".

And I wasn't a big fan of how Krauser defines alpha.
To make the point that the reader had grown up in a "pussified society", he says:

> You've grown up in a pussified society where all of the savagery of nature, red in tooth and claw, has been sanitized out of life.
> **There's a good chance you've never had a fight in your life (if no-one ended up dead or in hospital then it wasn't a fight)**.

I wouldn't necessarily consider the amount (or lack) of serious fights one has been in as an indicator of "alphaness". Being in too many of those might be an indicator of criminal behavior, making it more likely one stays stuck at the bottom of society.

- **The examples of fun-conversation seemed too random and silly at times**

Overall, I liked Daygame Nitro and Krauser is an overall good guy to learn from.

Some of the examples that were supposed to be fun seemed too forced, too random, and too "entertainer" style to me.

For example:

> **Her**: I got it in a little market. I like the wool it's lovely
> **Krauser**: Wool is for sheep. I like sheep actually. I never quite understood why people are supposed to count sheep when they go to sleep. Do you sleep?
> **Her**: Duh! Yeah.
> **Krauser**: Hahaha. Only Homer Simpson says duh. (…) No, I mean properly sleep like in a deep trance (…)

> **Her**: I don't really know. Actually, yes! There was one time I got drunk at a party and they hoovered up around me.
> **Me**: Hoover is a proper noun. You should say cleaned, or vacuumed. That's what my gran says. I love my gran. I sleep like a barbarian. I'll wake up immediately if danger strikes. Are you dangerous?

Krauser points to his lack of logical reasoning and free associations as a good thing.
I also enjoy thread-cutting and some free associations sometimes, but his examples felt too much jumping around.
That it sounds silly doesn't bother Krauser, who later on says that you should "embrace the retard".

I disagree with it.
In my opinion, making a girl feel at ease also means letting her know that you can be normal and rational (see: mating intelligence).
Crazy, like true crazy, is scary, and not sexually attractive.

PROS

- **The use of Facebook for long-term game**

Chase Amante in "How to Make Girls Chase" says that you should never take any social media from a girl. And I always disagreed.
Nick Krauser is the only one who gets it right. He says:

> Numbers are a logistics-solving device when you expect to meet each other soon.
> Facebook is a logistics-solving device when you expect to stay on each other's radars until something changes.

I couldn't agree more.
Also see one of my earliest articles on how Facebook helped me get laid with a girl I really liked by staying on each other's radar.

- **Only approach girls you truly find attractive from your core**

I loved that simple, yet transformative concept.

- **Avoid girls who play too many games**

Krauser says that girls who tease too much, shit-test too much, or play too many games are girls you need to avoid.
He says:

> I know the temptation – "I might as well keep playing to try to fuck her." No. That will kill your abundance mentality, demolish your inner game, and poison your next ten dates. Just screen the bitch out.

Most of all, I advise screening out the *nasty* game players:

> 10 Nasty Games Women Play (Women, Stop These!)

Daygame Nitro Review

Overall, I liked Daygame Nitro.

I disagreed a bit on the level of "fun" one needs, and how to express high value early on.
But I loved the concept -and the necessity- of learning what type of woman you like and then only going for that type of woman. Nick Krauser was the only one to truly lay out the deep reasons why you should adopt that attitude.

Day Bang: Summary & Review (Roosh V)

Lucio Buffalmano · 7 February 2020 · Archived copy · Original

Day Bang is a dating and seduction book for men that focuses on meeting women during the daytime.
"Day Bang" is mostly based on the idea that you have to avoid scaring women away. And to avoid scaring women, Roosh V embraces indirect game, which he rebranded as "elderly opener".

Contents

- Day Bang Summary
- Quotes
- CONS
- PROS
- Roosh V Review

Day Bang Summary

About the Author: For good or for bad, Roosh V is a big name in the manosphere world. His blogs, mixing politics with seduction, have been some of the most popular
Roosh V didn't seem to do much to avoid drama, and at times he seemed to relish "stirring the pot" with the media. He claimed to be the father of the Red Pill community, and to have coined the community's popular terms "beta male" and "alpha male", a claim that has been debunked.
But that's all in the past. Today, Roosh converted to Christianity, says he's ashamed of his previous work, and condemns pre-marital sex.

Don't Worry Too Much About the People Around

Roosh V says that most people fear day game because they fear being rejected and being made a fool for the people around to see.

But he says that if you think your rejection will even matter to anyone, you are delusional as to how much you truly matter.

He says:

> In a random stranger's world, your mistake may get a chuckle, but five minutes later you will essentially be erased from their memory.

To get over your fear of approaching and your fear of being a fool to nearby people, Roosh V has a very different solution.
He encourages readers to think about the truly worst that can happen.

People will laugh at you, then update their social media with the story of your foolishness, and then laugh at you even more.

Once you are OK with that outcome, you can come back to present. And know that the worse will never materialize.
Now you can re-imagine the story while you are still looking like a fool, but instead of crowing and whimpering, you look at the people around and smile confidently.

Once you own the worst-case scenario, you can also start considering that it's so unlikely it will never truly happen.

Approach Indirectly: The Elderly Opener

Roosh V says that any direct approach will scare women.
Instead, you must approach them like you would approach a cat. By showing you're harmless.

How to do it?

If she has a big suitcase, you will ask not about her trip -too personal!- but about the quality of the suitcase.
If she is writing something, you will not ask what she's writing about, but about the pen.

And he adds:

> To show that you're sincere in learning about the pen, you'll share short anecdotes about your own good or bad experiences with pens.

If you don't remember, you will make up some experiences.
Says Roosh:

> Telling little lies while seeking information we don't really need is necessary to start a conversation in a way that keeps a girl relaxed.

Necessary?

My Note: I disagree
Frankly, I was almost hoping he'd come out at a certain point and say "I was joking".
Roosh recommends talking 2 or 3 minutes about mundane stuff you couldn't care less about. And since most likely the woman also doesn't care about it… Why on earth would you talk about it?

Here is an example from Roosh V:

> Let's say you opened a girl in a bookstore café about the quality of her laptop (…) You even played a little dumb, asking if her laptop had "the Internet access" and USB ports, questions I've actually asked before.

I think the girl would be sitting there thinking "what a terrible approach". Roosh also shows little emotional intelligence here, asking a woman about tech stuff about USB ports?
Most women have no idea.

Also read:

- How to approach women

> How to Approach a Girl: 9 Science-Based Steps

Don't Smile on The Approach

Roosh V recommends not to smile on your initial approach.

He says:

> Smiling will kill your approach before it even gets started because it reliably scares the cat.

And this is another piece of advice I disagree with.

If you come across as unpolished, that's OK because it shows that you are being natural and didn't rehearse

anything.
Says Roosh:

> Now I'm not saying you should purposely pause and throw out "um's," but you get no bonus points for being smooth and polished.

Again, I disagree.
Being smooth and polished can powerfully increase attraction. It's an indicator of confidence, social power, past successes and, as well, intelligence.

Roosh doesn't see it that way though, as he says:

> In my sock example, I played up that I was a style retard, incapable of buying a five-dollar pair of socks, when in reality I'm totally capable of making that decision.

How could purposefully look like a childish retard help one score?
Sure, it can work… Sometimes, with some girls.
Anything might work, if you do it just enough times. But then again, like Krauser says, you can also eat soup with a fork.

And playing up your retardation while you chat about boring topics you care nothing about does not strike me as the most effective and efficient style of game.

Also read:

- **Cold approach VS warm approach**

> Cold Approach VS Social Circle (VS Tinder): Strategies

Bait, Don't Tell

Roosh stresses the importance of baiting, such as removing enough details from your answers that women will naturally you ask about them.

Having women ask instead of you telling them is far more powerful.

Quotes

On being cool with women's rejections:

> It's true that a rejection means a girl doesn't want you in her life. You're so worthless to her that she doesn't even want to get to know you. My response to that is… so what?

On the importance of being a high quality man and a high sexual market value guy:

> Unfortunately, game isn't a miracle drug. It doesn't create value where there is none—it merely brings out the value that you already have. You'll still need to offer something in exchange for vaginal entry.

CONS

Overall, I disagree with an approach model based on being "as indirect as possible".

Especially if it's presented as the *only* possible way.

Indirect game promoted as the only way of meeting women

It would be OK if Roosh V had said “there are many ways of starting a conversation and meeting women, and I will introduce here the indirect game”.

Instead, he talks it up as if it were the *only* effective method.

That’s patently not true.
Not just from a theoretical method, but I say that from plenty of experience.

Kether, a successful day gamer, also goes mostly indirect.
As a matter of fact, I learned from him how to make indirect work best.
And it’s not about asking random questions about the laptop she is using and how much RAM it has.
It’s indirect in the sense that you don’t start with “how hot she is”. But it still starts with something about *her* -or what’s in common between you and her, or what you’re both doing-.
Plus, it progresses talking about *you* and the *woman*, not about random stuff that neither of you cares about.

Complex system for something that should be natural

I agree with Aaron Sleazy here, author of “Minimal Game“.

Meeting the opposite sex is something natural, not something unnatural like Roosh V says.
Yes, even in the day, you can make it seem very natural.

Instead, Roosh V introduces this extra complex system made of stages and acronyms.
It’s reminiscent of “The Mystery Method“, of which I was never a fan of.

Number-centric, discourages going for more

Writes Roosh V:

> Related to the previous point, at night you can sleep with her after only a couple of hours. During the day you won’t get much more than a number.

Most of the times you will get a number.
But starting with the mindset that “you won’t get much more than a number” is a poor mindset.
And you can sleep with her after only a couple of hours in the daytime, too.

No real connections, just game

“Day Bang” seems to be heavily centered around “getting the number”.

It almost feels like Barnie Stinson from “How I Met Your Mother”, a character that seemed to conflate “getting her number” with “having seduced”.

Hints of mysoginy

Roosh says he only sees women as lubricated holes for his own pleasure.

As shocking as that might sound, that’s OK.
I have a different view, but I don’t see anything wrong with seeing women as sexual objects.

Seeing women as sexual objects is *not* the same as hating women. And it’s not the same as being bitter. It only means that you see a woman you like, and you want to have sex with her, and not become friends or talk.

That’s OK.

What’s not OK, is when you resent women and wish them harm.

And sometimes I got that feeling from Roosh.

Limiting beliefs

Says Roosh:

> At night you can sleep with her after only a couple of hours. During the day you won't get much more than a number.

I don't know what he's talking about.
And I'm *far* from attractive.

Trick-based, weak-ass approach -"*Getting*" a kiss?

Says Roosh V:

> Your main goal during the day is to get a girl into a night venue, preferably one that serves alcohol (…) Western dating norms dictate that the easiest way to get a kiss starts in a nighttime environment like a bar or lounge.

So here is this guy, talking up "alpha game", trashing out Western women as undeserving… And then he talks about the "easiest way to *get* a kiss?".
I hope you see what's wrong with that…

PROS

- **Provides realistic numbers and expectations**

Roosh says that even if you get truly good, you will still be rejected most of the times.
So don't worry if you'll end up playing the numbers game.

- **Novel advice on overcoming approach anxiety**

Roosh was the first one I've read to recommend beginners to visualize not just negative outcomes, but the worst possible ones.

I think that might be a better approach for some to overcome approach anxiety.

- **Good advice on baiting**

The section on baiting was good.
And I even modified my Tinder description to put a bait in there.

- **Great wake up call on working from coffee shops**

I always thought it was ridiculous to rent a desk or to gulp down sugary latte just so you could work outside of home.

But Roosh V opened my eyes:

> I see no reason why you should read or work from home where the chance of meeting a girl is 0%. Haul ass to a coffee shop instead.

Thank you Roosh!
I wasn't a fan of your book, but this little gem might be a game-changer.

Roosh V Review

I have only reached half of Roosh's book when I started writing this review.

Frankly, I didn't see much good up until then, and I disagree with the whole approach Roosh takes to seduction.
He talks up indirect game –*very* indirect- as if it was not just the most efficient way of picking up women, but as if it were the *only* possible one.

That's patently not true, and I can say so not only from theory, but from first-hand experience.

Frankly, I wasn't sure whether to give it 1 or 2 stars.
Roosh seems to be a bit like RSD Tyler, learning techniques without a solid base of social and emotional intelligence.

There is a place for indirect game.
And somehow "Day Bang" could be useful to a few guys. Some people go in way too overpowering and don't realize they are scaring girls.
I once saw a guy with a gym bag and gym attire stand in front of a woman, chin up, with the attitude of "wanna fight about it?".

And I had a black friend who once approached a girl at night, with his hoodie on.

These guys could gain from reading "Day Bang" because it might make them realize that "not scaring the cat" is also important.

But apart from that, I don't like Roosh's day game approach in "Day Bang".
I don't think it's very effective and efficient, and sometimes it can come across as outright weird.

Competence and Warmth: The Science of Winning People Over

Lucio Buffalmano · 9 February 2020 · Archived copy · Original

Every social interaction runs on two signals: power and warmth.
Get them both right, and people respect you, follow you, and are drawn to you. Get them wrong, and you're dismissed as either weak or arrogant.

At *The Power Moves*, we're experts on power dynamics, and we pioneered the real-world use of the **Competence & Warmth Matrix**—a science-based framework that explains why some men gain admiration and influence while others stay invisible.

This guide shows how to use it to project strength *and* connection—the foundation of respect, status, and attraction.

High-Power / High-Warmth™: A TPM Framework Built on Established Research
While the underlying psychology of warmth and power is well established in social science, TPM's **high-power / high-warmth™** model is a practical framework that distills this research into a clear baseline for everyday social exchanges, influence, and status building.

Competence and warmth matrix

Contents

- Intro: The Science
  - TPM's Approach
- Power & Warmth Quadrant
  - 1. Low Power – Low Warmth (lose-lose)
  - 2. Low Power – High Warmth (lose-win)
  - 3. Low Warmth – High Power (win-lose)
  - 4. High warmth – High Power (win-win)
- Strategic Uses

- Power & Warmth For Baseline Behavior
  - ⍰ Quick Examples of High-Power, High-Warmth
- How to Become High-Power
- How to Become High-Warmth
  - Moral Traits
  - Behavioral & Nonverbal
- Note: Why 'Power' Beats 'Competence'
- In Summary

Intro: The Science

Two different but similar models underpin this approach:

- The stereotype content model (SCM) postulates that groups and individuals assess each other along two dimensions of **competence** and **warmth**.
- The Interpersonal Circumplex Model (IPC) plots traits and interpersonal behaviors, or how people interact one-on-one, along the **agency** and **communion** dimensions.

The interpersonal circumplex, based on Gurtman, 2009

While the two overlap and reinforce each other, there are also some noteworthy differences:

Difference	IPC	Fiske SCM
Target	Personality traits and behaviors (individual-focused)	Social perception and stereotypes (group-focused)
Dominance	Directly measured (dominant ↔ submissive)	Implicit in "competence"
Warmth	A behavioral/interpersonal trait	A perceived intention/moral judgment

Difference	IPC	Fiske SCM
Framework origin	Interpersonal theory (Leary, Wiggins)	Social cognition and stereotype research

In his seminal *Exchange and Power in Social Life*, Peter Blau also lends credibility to this framework. He suggests that people who seek status prioritize displaying value on salient traits, a competence signal. People who 'give up' on status and prefer acceptance/communion instead tend to self-efface (a display of warmth).

TPM's Approach

> *High-power / high-warmth* refers to a **baseline approach to social exchanges** in which an individual combines **assertive, status-conveying behavior (high power)** with **prosocial, trust-building behavior (high warmth)**.

For our purposes, we sublimate both into this simplified approach:

- **Power**: how powerful is he?
  - High-power ⇒ high-value, respect-worthy, high-status, and leader
  - Low-power ⇒ low-value, 'too nice guy', naive
- **Warmth**: is he friend or foe?
  - High-warmth ⇒ potential ally, uplifting
  - Low-warmth ⇒ competitive, antagonizing, enemy

High-power in our model includes assertiveness, postive interpersonal dominance, social confidence, and an agentic predosposition.
High warmth includes respect, power-protecting, signals of friendliness, and a generally uplifting approach to others.

One of our foundational social strategies is to **adopt a baseline behavior that is high power and high warmth**. The smart social strategist calibrates each to context and goals. For example, he can display power on salient and foundational attributes, and 'taking the edge off' with warmth in less crucial traits.

Power & Warmth Quadrant

The two axes of power and warmth form 4 quadrants.

See it here with an example in each for politics, work, and relationships:

	Low Power	High Power
High Warmth	**Mr. Nice Guy** • King's servant • Clueless intern • Nice beta provider • Nobody cares of you	**High-Quality Man** • Beloved king • Founder & leader • Women's dream man • Everyone wants you
Low Warmth	**Frustrated Chump** • Deposed despot • Bitter civil servant • Jealous cuckold • Everyone hates you	**High-Value Taker** • Hated king • "Short-fuse" CEO • Abusive narcissist • Everyone fears you

1. Low Power – Low Warmth (lose-lose)

> The resentful loser

Examples:

- **Jealousy frenemy**
- **Bitter man** who failed at dating
- **Grumpy Karen** yelling at service workers

From a stereotype model perspective, people in this category are homeless people and welfare recipients. These groups are seen as leeching off society, taking (low warmth), but taking *little* (low power).

Emotion: Contempt | Behavior: Active harm

This quadrant says:

> "I'm unhappy with my life and take my frustration on the people around".

2. Low Power – High Warmth (lose-win)

> The too nice guy

Examples:

- **Homeless** you take pity on
- **Manipulated provider** for men
- **Submissive housewife** who always says yes, no matter how she feels

Emotion: Pity | Behavior: Passive facilitation (and sometimes passive harm)

This quadrant says:

> "I'm friendly and naive, easy to manipulate and take advantage of".

3. Low Warmth – High Power (win-lose)

> The ruthless prince

Examples:

- **Unapproachable VIP**
- **Cruel dictator**
- **Despotic boss**

In politics, Republicans are seen as low-warmth. And that may partly explain why security and defense appeal to Republicans.

Emotion: Envy | Behavior: Passive harm

This quadrant says:

> "I'm powerful because I'm better than you".

4. High warmth – High Power (win-win)

> The prestigious leader

Examples:

- **Gregarious VIP** shaking hands and signing autographs (think of Keanu Reeves)
- **Successful mentor**, like a founder mentoring his team
- **Uplifting leader**, welcoming newcomers, encouraging team members

In politics, liberal leaders tend to be seen as high warmth and high power (TPM note: but they must be high power to win elections).
Socially, high power and high warmth men enjoy large appeal and people want to be around them.

Emotion: Admiration | Behavior: Active facilitation

This quadrant says:

> "I'm powerful, and I'm happy, and I radiate positive energy".

Strategic Uses

While power and warmth is a great default approach, there is a time and place for everything.

For example, low warmth and high power works for:

- **Despots**

- **Gangs** and for quick climbs
- **Prisons** to discourage aggression

Says psychology researcher Baumeister:

> A reputation for dangerous, unpredictable aggressiveness, causes others to leave one alone.
> (…)
> This is the irony of the fighter who never fights because he is known to be such a dangerous fighter that no one is willing to challenge him.

But phases or bursts of low warmth are also helpful for faster results.
For example:

- **Reset wrong impressions** of a 'sucker' with dominance and no warmth
- **Learn assertiveness faster** with over-correction if you were a people pleaser—like a 'good asshole phase'

However, don't stay stuck at the low-warmth stage:

Beware the 'As*hole Trap' (low warmth, high power)

The 'as*hole approach' can deliver some respect and attraction with a display of value-taking power (Pinker, 1997).

But it's a dead end that caps your potential.

Just like women's 'entitled b*tch approach', **the asshole approach is mostly effective *below***, to lower status and unaware men and women.
And it appeals mostly to younger men who dream of being 'alpha' but must still develop their baseline self-esteem - see 'alpha male posturing'-.

Higher-quality men and women won't be impressed.
Instead, this approach breeds enemies, caps your potential, and harms relationships—especially with high-quality people.

		Competence	
		Low	High
Warmth	High	**Paternalistic stereotype** low status, not competitive (e.g., housewives, elderly people, disabled people)	**Admiration** high status, not competitive (e.g., ingroup, close allies)
	Low	**Contemptuous stereotype** low status, competitive (e.g., welfare recipients, poor people)	**Envious stereotype** high status, competitive (e.g., Asians, Jews, rich people, feminists)

The a*shole approach increases enemies

P.S.:
Men stay away from women playing the equivalent 'entitled game':

Low-warmth and high-power women seek to signal status, high demand, and exclusivity. It's a manipulative strategy, don't fall for it

Power & Warmth For Baseline Behavior

Power and warmth work best for most people and situations and align with our foundational social strategies.

The advantages include:

- **More friends** and fewer enemies
- **Better leadership** in free groups and societies, including attracting and retaining talent
- **Better close relationships**
- **Deeper influence** as it better aligns with prestige (Henrich, 2015)

Finally, chances are it's also better for you and your health, both mental and physical.

You spend less time and resources 'instilling fear', displaying anger, or policing others (Haslam, 2006). Instead, you get positive feedback from the world. People think and treat you as an upstanding, value-giving and honorable man. And that reinforces your confidence and self-esteem.

⍰ Quick Examples of High-Power, High-Warmth

Just for a taste of what high power and high warmth can look like in real life:

- **Work**: Set deadlines with authority, but ask, "*How can I support you?*" Team loves it.
- **Social Settings**: Lead the convo confidently, but spotlight others—"*Tell us about your trip!*"
- **Relationships**: Be the leader, but be a 'leader for both'. Ie.: "*I've got this, and I've got you.*"

- **Across-the-board**: Look people in the eyes when greeting, parting, or thanking
  ♂ I always thank service workers with direct gaze and a smile

How to Become High-Power

This website is dedicated to making you high-power.

Just as an overview:

1. **Self-development** for status, strategic thinking, money, etc.
2. **Remove submissiveness**, in behavior and words
3. **Increase social power**, in behavior and words

Or for a one-stop program for the highest speed and effectiveness, check out Power University.

How to Become High-Warmth

There are two dimensions of warmth:

1. **Behavior & nonverbal**: friendly attitude, smiles, nods, etc.
2. **Moral** with a *reputation* for being a fair and honorable person

Research shows that **morality is more important**.

Great news.
Warmth can be misread as submissive and it wastes time.
So if you want to be more 'masculine', decrease smiles and nods and **cover warmth with our honorable approach** that includes ethics.

Moral Traits

The traits and attitudes include:

- **Honesty**, fairness, and ethics
- **Adding value** and win-win
- **Prosocial** attitude and behavior
- …

Actions signaling moral warmth

Besides what we list in our honorable man approach, daily signals include:

- **Give back** after you've been given ⍰⍰ Win-win approach
- **Tips** and charity contributions ⍰⍰ Prosociality
- **Differentiate trash** ⍰⍰ Shared resources preservation
- **Clean after yourself at canteens** and restaurants ⍰⍰ Consideration towards lower-status strangers
- **Contribute to team goals** and objectives ⍰⍰ Team player
- **Speak about high-quality people you respect** ⍰⍰ Honorable
  - Distance yourself from as*holes

⍰ Strategic morality: be effective, without being a jerk

The Machiavellian approach to morality is:

- **Reputation only**, focusing on visibility, not utility
- **Cheap**, give when it costs you nothing
- **Expedient**, Give when you'll see or need them again

And avoid any time you can get away with it.

We recommend 'morality maxxing' for fair rewards. For example, if you donate blood, get the sticker: you earned it.
If you donate money, drop it in conversation.

But as usual, be honorable, keep it balanced, and add real value to the world.

Behavioral & Nonverbal

First of all:

1. Avoid low-warmth expressions

- Downward lips ⍰⍰ "I'm unhappy with life"
- Smugness ⍰⍰ "I am so much better than you all"
- Overly dominant poses ⍰⍰ "I'm the domineering force (you watch out)"

For example:

Downward lips, overly dominant, angry, meme-like haughty, and “better than you” smart alec

2. Add warmth signals

Starter pack:

1. **Nod or slight head bow** upon meeting someone the first time
2. **Flash your eyebrows upward** when you first meet someone
3. **Higher-pitched voice,** when saying “bye”
   Audio example:

Next from most basic to advanced:

- **Build them up**, if you admire something, say it
- **Fully engage them**, be interested, ask questions, and relate
  And:
  - Self-disclose. Make it a give-and-take, also share about yourself to avoid being an information-taker
  - Be (appropriately!) vulnerable, especially if they’re anxious or share a vulnerability, you can relate back
- **If you both start talking, invite them to go first** (lower power but higher warmth)
  - If you cut them off but keep speaking, acknowledge it and give back the floor
    Example: “*Sorry if I jump in*” and then: “*You were saying… ?*“. Then, listen

More cues here

But to keep it simple, remember that for most traits it’s about calibration and balance:

 Try warmth to turn enemies into frenemies
Some people act distant because they think that *you* think are too good for them.
Try warmth to show you respect them. If it doesn't work, go back to low warmth.

And an important reminder for people pleasers:

 Warm ≠ 'nice'

Warmth *includes* friendly or 'nice'.
But it doesn't mean being *overly* friends, or 'inconvenience yourself friendly'.

The most important foundation of warmth is respect for others.

You don't need to put yourself, your goals, or your closest people last just to be friendly.

 Examples:

'Being courteous', including to waiters, is warm and recommended, but:

- **Ignore waiters if it's an important conversation**, or give quick 'thank you' without eye contact
  Forum entry here

'Smiling' is warm and recommended, but:

- **Don't force a smile if someone walks to you**. It's warm enough to give them your time

Note: Why 'Power' Beats 'Competence'

Fiske's original research refers to "competence", while Leary's original insights refer to 'dominance'

Dominance and the IPC model are in general closer to our interpersonal-focused approach.
But we prefer 'power' for three reasons.

- **Definition: power better fits the description**

"Competence" is defined as "the capacity to enact one's intentions" (Fiske et al., 2007).

While competence can fit that description, we believe it aligns even more closely with power at its highest level of abstraction.

Dominance comes closer in meaning to power but is narrower in scope.
It often refers to overt interpersonal behavior, whereas power encompasses both explicit and implicit forms of control, both interpersonal and non-interpersonal. That broader coverage aligns more closely with our model.

- **Power is free of positive (and potentially naive) connotations**

Second, the name 'competence' has positive connotations while 'dominance' carries negative ones.

In our TPM's philosophy, **the positive framing of 'competence' can make it naive** by excluding the 'darker' and more domineering, value-taking expressions of power.

Power is more neutral, encompassing both value-giving and value-taking approaches.

- **Power better describes reality**

Finally, we believe that power is a better descriptor of reality. A reality that includes social power dynamics.

Competence, with its positive frame, runs into some issues.

For example, would you define Trump's yank and pull signature handshake as 'competent'?
Here they are for you to review:

> **Trump**: (yanks people towards him to sub-communicate he's the most dominant)

When asked whether Trump's handshake was competent or warm, a fellow social skills teacher replied, 'neither'.

It's understandable that with 'competence' she runs into such an issue.
She expects 'competence' to be 'nice'—or at least neutral and *not* aggressive and domineering.

To us instead, and with our approach, these approaches make perfect sense.
And we can easily fit Trump -and any other domineering and aggressive approach- into the extreme version of power. Extreme power without warmth = *over*-dominance = bullying. But still neatly fits into the stereotype content model.

In Summary

People assess others first for their power and friendliness.

Power gives you respect, and friendliness gives you friends.

In most free-forming relationships and free societies **warmth complements and increases your social effectiveness and well-being**.

To be high power and high-warmth, move confidently, and treat others respectfully.
For practical applications, we turn this framework into strategies in our flagship program:

Lover VS Provider In Relationship and Dating

Lucio Buffalmano · 13 February 2020 · Archived copy · Original

Lovers and providers represent different male roles and strategies for dating and relationships.

In simple terms, lovers pertain to short-term dating and uncommitted intimacy, while providers focus on long-term, committed relationships.

In this post, we will explore what are lovers and providers, what's a provider mindset, and how you can pick your best strategy.

INTRO: The Science

While terms like “lovers vs providers” have been popularized by online dating communities, those concepts are rooted firmly in evolutionary psychology.

A first milestone for this concept can be set at the Sexual Strategies Theory (Buss and Schmitt, 1993), claiming that men and women evolved different adaptations for short and long-term mating.

Shortly afterward, Gangestad & Simpson‘s strategic pluralism theorized that women evaluate men in two different ways: genetic qualities for short-term flings, and parental investment for long-term relationships.

Lovers and providers are the male archetypes that ‘specialize’ in these two categories, each appealing to very different female preferences.
Sexy lovers seduce for fast and uncommitted sex, while dependable providers court for long-term provisioning.

Several subsequent studies confirmed the validity of this theory.
For example, Gorelik writes in the latest *Cambridge Handbook of Evolutionary Perspectives*:

> the picture that is emerging is that **women employ a dual mating strategy** marked by a preference **for (a) dominant and physically attractive men on the one hand and (b) committed providers and carers who are invested in them and their offspring** on the other hand

And later:

> **Men may likewise employ a dual mating strategy** (…) by shifting between competition for access to mating opportunities and direct paternal care within the context of a pair-bond.

Cashdan’s reseach also found that both men and women approach dating according to these two main strategies.

But please note that:

- **These strategies aren’t mutually exclusive**, and one man may be a provider in a relationship, while trying to be a lover outside of it
- **Mate value influences but doesn’t determine the strategy**, since a high value man may prefer a committed relationship, while a lower value man may still avoid relationships

However, mate value influences the strategy because **only higher value men can be successful lovers**.

Finally, lovers and providers’ strategies have also been linked to early childhood experience (life history strategies), and they come with very different psychological profiles.
Read here for more:

Psychological profile of lovers

From Science to Pickup Advice

As a broad generalization:

- Mainstream dating advice targets providers
- PUA and red pill communities target lovers (and sometimes scoff at the provider)

Lovers are sometimes referred to as alpha males, while providers are scorned as beta males, also encapsulated in the maxim alpha fucks, beta bucks.

However, the truth is more nuanced than that, and each approach also comes down to life phases, personal

preferences, and… Contextual effectiveness.

Lover vs Provider Mindsets

Although lovers tend to pursue short-term strategies and providers lean toward long-term ones, both approaches can sometimes be applied across both modalities.

See a matrix here:

	Lover Strategy	Provider Strategy
Short-Term Strategy	• Screen for sexual interest • Avoid non-sexual investment • Get to sex ASAP • Move on or keep it strictly sexual	• Feign interest in her • Display or feign resources • Feign willingness to commit • Display or feign long-term qualities • Ghost her after sex
Long-Term Strategy	• Ramp up sexual tension • Avoid non-sexual investment • Get to sex ASAP • Slowly increase non-sexual investment • Go from FWB to official relationship	• Show interest in her • Display willingness to commit • Display personal & long-term qualities • Get to sex when she's ready • Develop a relationship

Short-term dating with a provider role, in red, is the most exploitative strategy.

Let's learn more now, bridging science, experience, and advice that works:

Lover Strategy

Definition:

> A lover seeks sexual intercourse with a woman without committment, and little investment

Low investment includes little or no financial support, emotional support, or time together outside of intimacy.

These are the characteristics of a lover strategy:

- **Focus on the physical and sexual** aspects of seduction
- Search for the **quickest path to sex**
- **Rejection of long courtships**
  - Avoidance of investments of time and resources (unless we're talking about a highly manipulative approach)
- Potentially **active disqualification as a long-term provider** (ie.: presenting himself as a traveler, a player, or saying he doesn't do relationships)
  - Potentially playing down any indicators of commitment
- **Avoiding commitment** and keeping the relationship "sex only"

The lover strategy is superior for short-term dating and casual sex, including speed to sex from first meeting.

It efficiently screens for sexually available women, it requires less investment, and women are more likely to move fast with a good lover type.

The major caveat, of course, is that for the man to successfully use a lover strategy, he must be at least somewhat attractive to the woman she wants.

Lover First, Provider Later

The lover can also eventually "pivot" from casual to a "real" relationship.

There are some advantages to starting out as a lover, including:

Quicker Sex

Why so?

Because women are not screening lovers for resources and commitment, and may not seek to look like good girls (Madonnas in the Madonna-whore dichotomy).

So since women are not auditioning lovers for a long-term role in their lives, they only need "attractive enough" or "fun enough" to enjoy the sex or the adventure.

Potentially More Attractive and Higher Power

Women don't take just about anyone as lovers.

To be a lover, one needs to reach a minimum level of skills and/or attractiveness.

So **entering relationships as a lover gains stronger attraction and leverage for a possible future relationship**.

Why?

First, because she will compare him with other men she's been with.
And subconsciously, she will rationalize that if the lover was faster, then he must be more successful with other women (and women like sexually successful men).

And second, because entering a relationship as a non-providing lover adds a "double-bind" attraction. First, she picked him for his sexiness. And now she even gets the resources?

Wow, what a win!

Little caveat first: the "lover advantage" is mostly vis-a-vis average providers.
Higher-quality men who date more as providers also enter relationships with high power.

Now back to our lover style.
Of course, there is no "all-season perfect strategy", and the lover role comes with its risks and shortcomings.

The Risks of Being a Lover

Some of the risks include:

- **It might not be her type of sexy**: If he doesn't pull off "sexy enough" or if he's not her type, then he has no value to her.
- **If sex doesn't happen quickly, he's out**: Lovers are supposed to be skilled and make it happen. If he doesn't, he's no lover, so he's out.
- **Flawless seduction or nothing**: A small blunder and he's out because he's not much of a lover if he mucks it up.

- **She may turn cold and disappear** if you make her feel ashamed for having been 'too easy' or 'slutty' ('anti-slut defense). She will blame it on you, and avoid you

Here is a good texting example:

The lover frame was set, she was digging it, we moved to discuss logistics and we agreed on the date… And then she suddenly unmatched me.
She likely felt she was being too easy, too slutty… And she cut the interaction.

- **Works less well with low-sex drive women**: You have less sexual drive to leverage. Same goes for women with more hang-ups about sex.
- **Buyer's remorse risk (post-sex anti-slut defenses)**

Sometimes anti-slut defenses kick in after *sex* has happened, and even then… It's over.

No biggies if you only cared about sex, but if you wanted to see her again, then it's on you to manage her slut-feelings (more on it later).

The risk is especially high with conservative women, or she wasn't 100% sure and convinced.
She may even resent sex if it feels like 'your win' but not hers (and for good reasons. That's why we highly recommend win-win and collaborative frames here, especially during escalations and LMRs).

As Miller says in "What Women Want":

> Even a woman who is really just cruising for some hot sex will enjoy you more and feel less vulnerable to slut-shaming if she can fantasize about you being a great boyfriend.

This happened several times to me.
Here is one example:

How do you go from all over and “miss you” to ghosting? With a lover’s frame that makes her feel like a slut on the day after

- **Risk of being branded as “not relationship material”**

Some women slot lovers as the “guy for fun only”.

The risk is present even if she likes you a lot, and sometimes *especially* if she likes you a lot.

One of my biggest heartbreaks was the woman who disappeared on me saying she “needed to protect herself”. That was the equivalent of saying “you’re not the kind of guy I can trust, you will not form any pair bonding”.

And that’s one of the reasons why I disagree with the advice of never telling women you like them (see AMS). That’s low-level, fearful game.

- **You misdiagnose her personality (and fall for the bait and switch)**

As a general rule, the more she likes you, the more power you have.

The problem with dating high-power is that… You only get to know the people you’re dealing with when *they* are high power.

Up until the power is on your side, her focus is to lock you down and present the best version of herself.

But things will change as the relationship develops and she accrues more power. For example, after marriage, or after kids.
Then the lovers really get to see the “real” her, and it can be a big surprise.

- **You might not get the type of girl you like**

Some women you will rarely get with a lover’s strategy.
It might be a minority, but women who never wanted sex outside of a relationship do exist.
Women looking for a relationship might also be more closed off to men dating with a lover strategy.

Overall, the lover strategy tends to work less well with certain types of women, and better with girls who are

libertine, unrestricted, high-sex drive, closeted high sex drive, sexually curious, etc.

You date below your full potential

This is possibly the biggest drawback of the lover dating strategy.

When you date purely as a lover, you are taking important assets off the negotiation table: resources, committment, emotional support, and a future together.

No matter how sexy you are, a sexy man who *also* adds those traits is inherently higher value.

Keep this in mind: **at parity of sexual market value, the boyfriend candidate is superior to the lover candidate**, because the boyfriend candidate, who is most often a provider, is the full package.

That means that **dating with the lover role you may harm your chances with higher quality women**.
After all, as research found out 'attractive women want it all': *both* lover qualities, and investment (Buss and Shackelford's, 2008).
Women who might have otherwise dated you, had you chosen the provider route.

Look at this chart:

A lover who is a 4 and removes all of the "provider stuff" can hardly date a 9.

But a provider who is a skilled dater and who adds all the provider stuff can more easily get a woman who is above his sexual market value.

Provider Strategy

Let's define the provider strategy:

> A provider seeks sexual access with a 'package' that includes mutual commitment, emotional support, and financial support.

Some men are providers at heart, and most men date as providers most of the time.

Most “serious relationships” often see the man in a provider role.

Presenting oneself as a provider with less sexual edge is slower but, on average and for most people, safer.
As PUA Richard La Ruina says in “Soulmate Sequence“:

> To proceed at a slow burning pace is just playing easier.
> Going immediately from strangers to lover is a pretty hard challenge.

Wining and dining might be in the cards, but he is allowed more room for mistakes.
Part of the reason might not be very encouraging, and in part it’s because most providers are held to a lower sexual standard than lovers.

However, most is *not* all, and if you’re reading here, chances are that you’re not “most” guys.
And a sexy man can also date as a provider.

Indeed, there are different layers of being a provider.
The low-quality way is to pitch one’s resources and commitment in exchange for sexual access.

A step above that is to use this frame:

> Here is me, here are my qualities, here are my resources, and if we get along I might join forces with you and commit them or a part of them to you

Some ways in which men show their willingness to provide include:

- Picking her up
- Taking her to dinner
- Paying for her
- Showing up well dressed and clean for her
- Caring about her
- Defending her and taking her side

The Advantages of Adding Provider Traits

Advantages of provider-type of dating include:

- **Works best for most men** (by definition most men are not super sexy)
- **Higher batting average for most men** (at parity of SMV, at least)
- **Easier**, doesn’t require the lover’s smoothness

Take the example of nutritionist Layne Norton.
Layne admitted in an interview he’s only been with two women in his life, both of whom became his wives.
Certainly not a player, and not much experience. Yet, as a high-quality provider, the lack of some experience was no issue in marrying a very high-quality, attractive, and popular woman:

- **Some women avoid pure lovers** (especially the ones looking for a relationship)
- **Relationships with a provider tend to be stronger**
- **Some men are more fulfilled as providers**: Bruce Bryan says that the right woman will make you *want* to be a provider.
- **It allows men to get higher quality women** who wouldn't otherwise sleep with him right away

The last one is the most crucial, as we've seen.
That's the main reason why I would not advise most men to date as lovers unless I knew their goals and preferences beforehand. For men looking for a relationship, I would definitely advise a high-quality provider.

The Risks of Being a Provider

The risks of being a provider include:

- If they get into a relationship, he might start the relationship with less power
- He needs to share his resources
- He might end up moving too slow and attraction might dissipate
- If he's boring and showing off too much wealth, it might seem more like a transaction
- If he's not good at truly making people open up, she might present him with the mask of what he *wishes* to see

As you can see, there are risks associated with being a provider as well.

How to Effectively Date As Provider

See "Seduction University".

Provider Mindset

In dating contexts, the provider mindset is a psychological orientation where a man prioritizes the well-being, security, and support of her woman—financially, emotionally, or physically—as a core identity trait.

It emphasizes:

- **Responsibility**, including financially
- **Pair bonding**, securely attached when healthy, anxious when less healthy
- **Future-oriented planning**, potentially for a family
- **Cooperativeness**, with a win-win midnset and the belief that cooperation makes the pie bigger for all

Men with a provider mindset tend to be high in agreeableness and conscientiousness, and low in dark triad traits.

Blending Roles: The Lovider

The 'dream man' blends the roles.

A rich provider can be sex and move fast, while a poorer but sexy man can still add provider's traits.

Everything is in the execution.
Look at this example from "The Saint":

> **Lover**: (orders and pays for two wine bottles of $500 each)

Van Kilmer plays the stereotypical artist-type lover.
Yet, her attraction spikes higher when he shows he *also* has high-flyer type of money and he's inviting her for the drinks.

This is a peculiar example, but the general rule is exactly that:

Top-quality men combine qualities from both providers and lovers.

And that's why, I invite you to look less at the roles, and focus more on overall quality.

Should You Date as Lover or Provider?

For effectiveness, proper calibration to the context and woman is paramount.

And for quality of life, your preference reigns supreme.

Here are a few questions to help you decide what's best suited for you:

Q.: Are you around average or handsome?

– If you're average or below, provider might be more suited
– If you're handsome, lover will come more easily to you

Q.: Are you in a conservative or libertine culture?

– If you live in a conservative culture, provider might be more suited
– If you live in a libertine culture, lovers have an easier time

Q.: Do you live in a big city or countryside?

– If you're in the countryside, the lover is much more challenging
– If you're in a big city, the environment better supports a lover strategy

Q.: What priority do you assign to women?

– If you have many competing interests, learning to be a lover might suck up lots of your time
– If women are important to you you crave experience, then you should develop the lover's skills

Q.: What type of places do you like?

– The lover style tends to work better in bars and clubs
– The provider strategy fares comparatively better when you meet women outside of bars and clubs

Q.: What age bracket are you dealing with?

– The lover style tends to work better with both younger and older women
– The provider strategy fares better with women in "settling down age"

Q.: What type of relationships do *you* prefer?

– If you're more into relationships, then you don't lose anything going for provider
– If you're into casual sex, then you the lover is more effective

Many men (and women) are not sure.
If you are not sure, that can create issues within yourself, so think it through.
If you are not sure and want to find out, here is a quiz for you to take (subscribers only).

Q.: What type of girls do you prefer?

– Low sex drive, more conservative women respond better to a provider
– High sex drive and more libertine respond better to a lover, especially when they're not yet in "settle down mode"

If I had to pick one way to choose, I would recommend you to pick based on your preferences and the types of girls you like.
For all the rest, you can find ways around it.

Be Like Water, My Friend

Finally, it's always best not to constrain yourself into a role.

Slow down if one day you meet a conservative woman who doesn't trust you yet.

Or strike the iron while it's hot if you see signs of strong attraction.

Think fluidly, and you will always be more successful.
Fluid minds always beat inflexible ones.

Seduction University provides actionable advice, "hacks" and examples we can't share publicly

Soulmate Sequence by Richard la Ruina: Summary & Review

Lucio Buffalmano · 17 February 2020 · Archived copy · Original

Soulmate Sequence is a dating book for men. Richard la Ruina, the author, teaches readers how to socialize more effectively, including how to expand one's network of friends, develop stronger relationships, persuade people, and meet "the one".

Summary

About the Author: Richard La Ruina started teaching seduction right after it went mainstream in the US following Neil Strauss' book "The Game". La Ruina's company, "PUA Training", went on to dominate the UK market.
The man who wrote "Soulmate Sequence", though, is in a new stage of life, says Richard himself. Not anymore going out every night meeting new women and honing techniques, but more focused on his relationship as a married man.

Empathy and Unwavering Integrity Are The Foundations

Says La Ruina:

> Most magnetic people draw their power to influence others by genuinely operating from a place of empathy and unwavering integrity

Think of Who You Like, Then Go to The Places Where They Hang Out

Think of the kind of girls you like.
Then, go to the places where they are most likely to hang out.

Don't just talk to women though, meet anyone. That's how you build a social circle that will also naturally introduce to more potential partners.

Don't Be Afraid of the Friend-Zone

Richard La Ruina says that not only you shouldn't be afraid of the friend zone, but you should actively put more people -and women- in the friend zone.

The wider your network expands, the more options you will have to meet someone who eventually is going to be more of your friend.

The advantages of making friend with a beautiful woman who's not open to dating:

1. You can meet their friends and enlarge your circle (slow game)
2. The more you spend time together, the more likely it is that some feelings will start developing
3. Maybe they're taken now, or closed off to new relationships, but that might change later -and you will only know if you stay in touch-

4. Going slow sometimes is safer than going from stranger to lover (I agree, also read "lovers VS providers")

This is advice I agree with.
Being afraid of the friend zone is defensive and it's what scared men with a thin skin do.
Also read:

- **Lovers, providers, and friends**

> Lover, Provider & Friend: The Truth of Men's Sexual Roles

To Influence People, Avoid Competitive Frames

"Soulmate Sequence" goes much wider than dating and relationships, also including being a better persuader and influencer.

Here are some of the bits I liked most:

- Tell people how to act, not how not to act
- Instead of saying "you're so unlucky", say "you're not the luckiest person on earth"
- Instead of saying "when are you going back to work", ask "how many more days of holiday do you have"
- Instead of "you've lost the match because", say "you haven't succeeded this time, but here what we can do better"

And make sure that you don't use those negative forms in your own life and in your own self-talk.

Learn more in:

- **The basics strategies of power**

> The 4 Fundamental Strategies of Power

And read here how I turned a competitive frame into a collaborative relationship.

To Converse Properly, Ask A Question, Then Add Your Comment

The best way of killing a conversation is by asking lots of questions in a row.

Instead, you want to use this format:

1. **Ask a question** (listen, step into their shoes, imagine what it feels like)
2. **Comment on what they said** (use a statement first, based on what they said made you feel or think of)
3. **Then ask one more question to probe deeper** (keep the focus on them)
4. **Add one more comment** (and reward them, if they invested a lot)
5. Let them keep going on the subject they love

For example:

> **You**: what do you do
> **Her**: fashion designer
> **You**: cool, I can imagine it must be interesting creating new clothes and helping shape the new trends. Do you like it?
> **Her**: yeah, I love it
> **You**: awesome, it's great when you do something you love. What do you love most about it

You also want to avoid the most common conversational mistakes:

1. Not listening
2. Preparing your next question in advance
3. Don't go off a tangent about how what they said only relates to you and never ask a question back

To Never Run Out of Things to Say, Be In The Moment

Awkward silences can derail your conversations.

This is what happens when you run out of things to say:

1. Dive too deeply into the details (when you ask where do they work, and for long, you get too specific and have less in common about those details)
2. Ask lots of questions that only elicit short responses (and it feels like an interview without connection)

Richard La Ruina recommends you use more statements, and then end your statements with an open-ended question.
For example:

> **You**: what do you in your free time
> **Her**: I do yoga
> **You**: cool, I think it's great when people make physical activities that are not just about moving, but also involve your mind. Why do you do it, to stay in shape?
> **Her**: actually, no, it helps you stay in shape, but I just love how it makes me feel
> **You**: oh really, it sounds like something that is really adding a lot in your life. It makes me want to try. Tell me more

Says La Ruina:

> Connecting with another human means you go deeper, and know more about their life than the bare facts you can check on their online profile. Bare facts don't build any basis for true connection.
> When, how much, and "how long" only litter the talk with extra, unimportant details.
> Instead, think emotions. That's the basis for true connection.

Think of yourself as an explorer, exploring the uncharted territory of this person's character.

Also read:

- **How to develop a deep emotional connection**

> How to Build Deep Emotional Connection

How to Help People Self-Express

Do you know the feeling you get when someone lets you talk about your deepest passions and feelings?

That's what you want to have people experience with you.
This is what La Ruina recommends to reach that hook point:

1. The best way of getting into a good subject is to:
    1. Stick around popular topics such as work, passions, hobbies, travels, etc. until you see the other person's eyes light up

   2. Answer their question and ask them back about the same topic, since people ask about what they like and want to talk about
2. Now it's time to delve deeper: use statements and add more questions to accelerate their self-expression
3. They will likely ask you questions, but make sure you stay on the topic they want to express about

How to Approach Women

1. Always leave women feeling better than you found them: that gives you a huge advantage in decreasing your anxiety, because you know that if worse comes to worst, you made her feel good
2. Do not have big goals about the interaction: you're just having a conversation
3. Remind yourself of the pain of a missed opportunity
4. Always have something great to say: this will be your fallback plan so that you know that you can just walk towards her and, at worst, use that one

Sexualize the Conversation

If you're interested in dating and relationships, then it's a good idea to sexualize the conversation.

Some tips La Ruina shares:

- Say someone in the room is truly gorgeous
- Talk about attractive celebrities
- You can preface sexual topics by saying "a friend of mine says…"

Also read here an example:

- **How to sexualize the conversation with art**

Women: Strategically Drop Games & Use Disarming Honesty

I often talked about the dangers of over-gaming for women.
And I'm glad Richard La Ruina is one of the few to confirm why strategically dropping games can embolden men to chase more.

He says:

> She apologized and said she couldn't get the message until then, and she was so happy to hear from me.
> I was amazed: a beautiful girl, who wasn't playing games.
> She was happy to hear from me, and she said so: refreshing and very positive.

Most of all:

- **Avoid nasty games**: these games drive good men away

> 10 Nasty Games Women Play (Women, Stop These!)

Start Relationships With Relationship-Worthy Tests, Not With A Bang

Most people try to frontload their value, present their best selves, and have the best possible in the beginning of the relationship.

Much better instead is to experiment with the typical environments you will be sharing during relationships: long

trips together, and spending time in less stimulating environments with less distractions.

How to Network: Give First

To expand your social circle:

- Present yourself as a giver, not a taker
  - Offer to buy them a drink, even if their drink is full
- If you're asking for something or want to talk to them, invite them out for lunch, or tell them you can pick them up at the airport

You can't connect with everyone, but by giving first, you can connect with people who are "one level up" above you. I couldn't agree more.

To Change Someone's Mind: Never Set Up "Me VS You" Frames

If you want to change someone's mind, avoid making a "my point VS your point" battle, or you will encounter resistance and push backs.

Instead:

1. Ask them to elaborate their point
2. Ask questions (but not "why", as if to say "are you crazy")
3. Keep your tone neutral
4. Validate their position and reflect it back to them (ie: I also thought that way for a long time)
5. Then say "I've read a lot on the subject and… " or "today my position is that.. ". Make your point in a friendly way
6. If they disagree, give them space to talk
7. Say that "yeah, sure, I understand that… " and then re-link to your opinion

What's Richard La Ruina is recommending here is what I call "frame negotiation".

Also read:

- **Frame control examples and techniques**
- **The basic strategies for power** (for collaborative frames)
- **Smart collaboration strategy**: on why collaboration trumps defection

Another great technique to change people's minds is to make them curious about your point of view. Talking about how an action, a product, or an opinion is working great for you, which will lead them to ask questions. As Greene says in "The 48 Laws of Power": make people come to you.

More Wisdom

- Find an actor or role model you like, and mimic him
- You want to ask important questions early, like if they want kids, but without sounding like you're coming on too strong. You can do it by mentioning a quick story about kids, then asking if they like kids
  - If they ask you, respond directly. Say you'll be ready soon for kids, but not with anyone, it has to be the right person
- When you share something impressive, say it with a flat neutral tonality, without looking for positive reactions. That way, you communicate that it's just one of the many cool things about you and that there is much more like that
- If you're not exclusive, don't be afraid of saying you're going on dates. Say that you're single and want to maximize your chances of meeting that special one
- If someone shares something cool about them that you don't have, don't diminish or defend yourself for not having the same. Just compliment them
- The rule of thumb is that the higher your status, the less you should smile
- High quality men do lots of activities, so never live a life where you answer the question "what did you do" with "nothing much"
- In dating, don't compliment on physical appearances, but wait until you get to know them more deeply so you can deliver a more personalized compliment
- If you're an introvert, you have some advantages and disadvantages. Add one or two extrovert qualities to deliver in bursts, then you can settle down with the people who better vibe with you
- Don't sit in front of each other, but sit side by side

Quotes

On the key to social success:

> The key to all success in all social interactions, as I'm sure you've noticed, come back to making other human beings feel good.
> (…)
> In a selfish world, the person who lives by this credo will stand out and, perhaps ironically, will prosper greatly.

On bragging:

> Bragging is essentially a way of boasting "I am inadequate"

CONS

I loved the book.
These are just a few blemishes:

- **Kissing on the first date: I don't agree**

Richard La Ruina says by all means kiss on the first date, or invite her to go watch a movie.
I don't agree with the kissing part -I'm more in line with Alpha Male Strategies here-.
Some of his tips for the first kiss were good, but I didn't like some others.

- **Sometimes a bit "fake"?**

I understand Richard La Ruina studied and perfected his persona and movements to appear as he wanted to appear.

I believe that, up to a certain point, that's all good.
However, I gotta wonder: if all you do is working on looking how you want to be, where is the genuine you?
Because that can come across, too -something Kezia Noble commented on, as well-.

So when he advises you to sit down and think through what the relatives of your partner would like to see in you, I didn't agree much.
It felt too fake, and convoluted.
I'd instead walk in to meet them while being myself, and if they like me, great. If not, well…

Richard La Ruina Review

I think Richard La Ruina has a very good understanding of people, psychology, and social dynamics.

He is a bit more on the "softer kind", more about frame negotiations than about Red Pill style of "alpha male frame imposing".
And I tend to agree with that for the simple reason that it's more effective. With the caveat that you CAN be stronger when needed, being like water works better than being only dominant.

Maybe Richard La Ruina's style might come across as a bit unnatural (fake?) if you overdo it.
The social chameleon style is powerful.
But with the emphasis on making others feel good, emulating those whom you wish to become, and doing what's effective instead of what you feel like, you might end up behaving far off from what you feel like and from who you are.
That's the only red flag I'd raise. Sometimes, you are better off served by acting more as you please, and finding those who better vibe with your attitude.

Otherwise, La Ruina is a very good guy to learn from.
And "Soulmate Sequence" contains top-notch information, and I learned a few more things from it.

He ends the book by saying that, happy to be in a long-term relationship, he'll make it work.

And we wish him all the best with that.

Relationship Power Dynamics: Strategies for All 9 Stages

Lucio Buffalmano · 20 February 2020 · Archived copy · Original

Relationships follow predictable patterns of shifting power between men and women.

Understanding these dynamics is crucial for dating well, choosing good partners, and building better relationships for both.

So let's get started.

Relationship Power Dynamics (TPM) is TPM's applied model for understanding, influencing, and maintaining attraction, pair-bonding, and cooperation by managing power, warmth, and investment in romantic relationships. Part of TPM's Interpersonal Power Dynamics (see the TPM Power Dynamics Framework).

Contents

- 1. Dating Before Sex: she has more power ♀
- 2. After Sex: power starts shifting on his side ♂
- 3. After Several Sex Encounters: he has more power ♂
  - ⍰ Highest power: high value, frequent casual sex, feelings ♂♂
  - ⍰How to get intimacy without a relationship
- 4. After Commitment: she has more power ♀
  - ♟ Strategy: what do you really want?
- 5. Early Relationship: power re-negotiation ♀♂
  - ⍰ Be A Good Leader For Both
  - Women Have Walk Away Power ♀
- 6. Long-Term Relationship: both seek control, she gets it more often ♀
  - Change in Personal Value: Renegotiations VS Team Victory
  - ⚠ Careful With Status-Boosting Giving

- 7. After Children: biology favors him ♂, the law favors her ♀
  - Law, custody, & Alimony
- 8. Growing Old: paper power for him, real power for her ♂♀
- 9. After the Breakup: depends on value & quality ♀♂
  - If they get back together, she has more power ♀
- Changing Power Rules: “Game”

1. Dating Before Sex: she has more power ♀

In dating, men offer and women pick.

As the choosers, women have power.
They screen and assess men, and men prove themselves.

For more, see:

- **The sexual market place: a primer**

> The Sexual Marketplace: Overview of Intersexual Dynamics

2. After Sex: power *starts* shifting on his side ♂

Scholars refer to milestones that open new phases as ‘turning points’.

Ans after sex she chose him for a meaningful milestone.

However, the very first instance of sex might or might not complete that shift.

The power shift varies based on personality, culture, and dating experience.
Intimacy matters less for:

- **Libertine women & cultures**
- **Younger age going through a 'party phase'**
  Ie.: it matters less if she's during a party phase in college
- **Goals are rebound or experience** while it matters more if she's looking for a relationship
- **Short-term dating contexts**
  Ie.: met her in a club
- **Pleasure-focused intimacy**, which contraception first allowed
- **Bad experience** may make her regret the choice

A good mindset: treat it as one milestone, but know more are ahead.

In brief, it means that **in some cases it takes more than one sexual intercourse to complete the power shift.**

Also read:

- **Providers and Lovers**: understanding the two dating strategies

> Lover VS Provider: How to Pick Your Best Strategy

3. After Several Sex Encounters: he has more power ♂

By now, she has chosen him.

But without commitment, he hasn't yet chosen her for a significant role—"girlfriend material."

So it's on her to *win* the commitment.

That's the phase when the woman "nags" about going steady, making it official, and the good old "what are we".

Biology and psychology conspire to increase men's power
Intimacy has a more potent attachment effect on women.
Sex, possible orgasms, skin contact and good intimate conversations increase the attachment.

Tip for women: pick the top choice without intimacy, or with intimacy with all
Because if you have sex with one but not the others, the decision will often become automatic -and not necessarily rational-..

⍰ Highest power: high value, frequent casual sex, feelings ♂♂

A funny example:

> **Her**: (pretends to sleep, plays games, pretends to be OK "hanging out")
> **Him***:* This is awkward, I really want you to leave, but I don't know how to say it without sounding like a dick

⬆⍰⍰ He'd be more honorable & attractive saying he has work to do
Power protect, and maintain a better relationship for both.

⍰ ⍰⍰The honorable move is to speak straight, and let her go.
If she wants more and you don't, say you like her and would like keep seeing her, but that you also care about her well-being.
This makes you even *more* attractive. But if she can't stop seeing you, it's on you to encourage her to stop.

⍰⍰ Only high-status men get the ‘sex power boost’

High status and power aware men get to intimacy before commitment and don’t strictly *need* a relationship.

But women dictate the pace and rules to lower-status men, who are happy to conform.

⍰How to get intimacy without a relationship

⍰ **Answering an alumnus question** <— We’re not fans of this approach, but it’s a fair question. For PU alumni only

4. After Commitment: she has more power ♀

For biological reasons, high-status men ‘give more’ with commitment.

This is why:

While *both* give up the opportunity for casual sexual encounters, **exclusivity is costlier for a high-status man than for a woman** because men stand to ‘gain’ more from casual encounters.

Men also experience a testosterone drop in relationships.
Researchers hypothesized that men switch from “hunting for a mate” to “nurturing for the family”.

This is not to say ‘avoid relationshps’ because most men also gain from commitment -or relationships wouldn’t have evolved-.
As *The Oxford Handbook* says:

> (…) high degree of overlap in interest between the sexes (…) interdependent reproduction promotes cooperation rather than confict (Buss, 2017; Mikulincer & Shaver, 2007)

Plus, the types of men we train here now how to make her feel lucky to be with him :).

For more, see:

Commitment dynamics & strategies

Lucio: Men give more with commitment and, even more, marriage. This can create an imbalance risk—a ‘sucker’s trade.’
It doesn’t mean ‘don’t commit’ or ‘don’t marry.’ In a strong relationship, both partners gain.
However, be mindful of potential imbalances and ensure she values and deserves your commitment.

♟ Strategy: what do you really want?

We dig deeper in Power University for the practical takeaways, but see an example of how awareness helped me pick the best high-level approach:

⍰♂**Lucio’s Take**: Why I chose uncommitted freedom

Independent, freedom-lover and always prioritizing my goals, long-term commitment isn't for me.

Staying commitment-free made life both easier, and more ethically honorable.
Not wanting to be the man who 'goes get milk', I avoided situations I'd need to escape from, and enjoyed life more.

5. Early Relationship: power re-negotiation ♀♂

Commitment and 'officialization' change the dynamics, and new expectations come into plays, including:

- Partner's time and availability
- Loyalty
- Unwritten rules

If the couple moves in or grows closer, also:

- Spheres of influence
  Ie.: He handles car-related tasks and payments, she handles house decor and cooks, etc.

⍰ Be A Good Leader For Both

Lead for mutual benefit, respecting her interests.
Inspire her to follow your lead naturally, without imposing or verbalizing it.

⍰ Tips:

- **Define the responsibilities**
  - **Tell her what she's responsible for**, and that you trust her with it
- **Let her decide what matters most to her**, but little to you
- **Consider her preferences** for common decisions
- **Mind her well-being when taking important decisions**
  - Influence, instead of dictating
  - Explain *why* if she disagrees
  - Make it up to her if you overrule her opinion

Women Have Walk Away Power ♀

Women operate with a shorter fertility window, and invest more in children.

For women in reproductive age, time is an investment for which they seek a return.

That means that nature may make women more practical and 'ruthless' in pursuing their needs.

Albeit the difference is small-ish, studies indeed show that, on average, men are more romantic than women, fall in love quicker, more often, and stay in love for longer after a breakup.

For us, this means that **women are readier to end a relationship that won't fulfil her needs**.
On average, that makes women more assertive and most men either react, lie, or begrudgingly concede -none of which is high value or honorable, and we don't recommend it-.

6. Long-Term Relationship: both seek control, she gets it more often ♀

Men mate guard against infidelity, and women guard for continued provisioning.

But with power-unaware men, women carry their higher dating value into relationships and are often 'the prize' -especially with attractive women and sex-less relationships before commitment-.

In this website's framework, women tend to take the judge role in the relationship (see: soft power).
It's possible women unconsciously seek control to keep the man's support over the long term. And there is indeed evidence that relationships where she is in charge last longer.

Also read:

- **How women control relationships**

> Female Domestication: How Women Control Men & Relationships

Change in Personal Value: Renegotiations VS Team Victory

Personal value changes over time reflect in the relationship dynamics.

As per social exchange dynamics the partner who improves the most can "demand back" to compensate for the value imbalance.

While that would be 'fair' in many ways, it can also create issues.

For example, your increasing value provides better lifestyle, expands your options, and gives you the right for favorable re-negotiation.
But most women resist and many feel like the relationship moved from 'love' to 'calculative'.

Strong win-win relationships insulate against this risk because one partner's gain becomes a 'team victory'.
That's the advantage of win-win dating and collaborative relationships.
But it requires the growing partner to give up selfish interests for the team.

⚠ Careful With Status-Boosting Giving

Some long term-oriented 'good men' may:

- Support her studies / career
- Provide total access to their wealth
- Take her from poor background to 'first world'

Giving is wonderful.
But **before lifting her up ensure she's a worthy recipient, a team player, and in love with you**.

Otherwise, it's a transactional relationship and she may leave with her new opportunities.

Prioritizing her studies or career over yours is especially dangerous because you remain lower class while she mingles with higher class.

Also read:

- **How to keep power in LTRs**
- Sexual market value: an overview

> 5 Ways to Maintain Power & Control in Relationships

7. After Children: biology favors him ♂, the law favors her ♀

This is darker.

But men gain 'walk away power' after children.

Women are more tied to children, more dependent on men's support, and each child is 'worth more' to women.

Kanazawa and Miller say that breaking up after birth is the ultimate game of chicken. And it's usually the woman who swerves first (Kanazawa & Miller, 2008).
Ironically, it's the mother's greater commitment that allows the father to potentially neglect children.

But generally avoid threats, and instead learn how to handle them:

- **How to handle breakup threats**

> Here's What To Do When She Threatens to Break Up

Law, custody, & Alimony

Most civil countries overturned biology.

Custody laws tend to favor mothers and enforce paternal support.
So women hold the trump card, potentially even weaponizing children and custody arrangements against him.

8. Growing Old: paper power for him, real power for her ♂♀

Men's longer fertility and lesser age penalty should empower them.

In practice, however, men's longer fertility window is only valuable if accompanied by high status.
And even then, many men simply wish to stay in the relationship.

But looking at divorce data, women seem to value relationships less as they initiate most divorces, and more than 65% of divorces after the age of 50.

We can speculate women's shorter fertility window and higher investment per child makes women more pragmatic.
So once the man is not useful anymore, women may also devalue the relationship.
But this is pure speculation on our part.

Here is practical advice instead:

⍰ If you want to stay together, grow compassionate love

To strengthen your relationship over time, do this:

- **Grow compassionate love** with support and mutual caring
- **Develop common interests**
- **Develop common friends**
- **Make your conversation stimulating**, remain curious about life, others, and each other

 For example, a woman in Gottman's studies shared that she 'could never cheat because she'd have to run and tell her husband about it'.
Implied: she tells her husband *everything*.
Do you think she'd ever want a divorce from that?

Plus:

CYA approach: maintain a life outside your relationship
Want to be with her, but never *need* to.
Have friends and interests.
And if a breakup happens, welcome the new challenge of dating.

9. After the Breakup: depends on value & quality ♀♂

Studies point to men bearing a heavier emotional burden post-breakup.

But the evidence is mixed and all over the map.
Instead, it seems to me that the main differentiator comes down:

- Who initiated the breakup
- Self-esteem & confidence
- Value
- Availability of alternative options

If he was high-value, she loved him, and the relationship was fulfilling, she may yearn to reconcile.
And vice-versa.

Common patterns for most

- Women hope he will get back in touch and provide what they wanted, but are ready to move on

Women have a stronger resolve to go through the pain and move on

- Men are initially elated with the regained freedom, but soon realize being single is tough

Few men have the right psychology to be single or 'players for life'.
It's not fun for most men to approach, make first moves, and constantly hunt.
And few men know how to reliably go from meet to intimacy. That makes dating HARD.

If they get back together, she has more power ♀

A man reconciling sub-communicates that single life was hard on him.

Not good, because high-status men are more likely to enjoy freedom, or can find a new attractive partner.

Plus in most relationships, she often broke up for unfulfilled demands or failing expectations.
And if they get back together, he must promise to do better, or fulfill her requests right away.

That's why many marriages quickly follow after a breakup.
She demanded it as a condition, and he complied.

Changing Power Rules: "Game"

Much dating advice seeks to change or leverage the power patterns we just described.

Women's dating advice seeks to maximize men's investment and delay sex.
And men's dating advice suggests avoiding over-investing and 'displaying high-value' to deny women's early upper hand.

Both approaches are fair and potentially effective.

But it requires some calibration.

Like Gandhi's quote of an eye for an eye, and the whole world goes blind, of nobody pursues or shows interest, the whole world goes celibate :).

So it's more about *how* you pursue, *how* you invest, and *how* you get others to do their part.
Our advanced approach is designed around that effective calibration.

We Should All Be Feminists: Summary & Review

Lucio Buffalmano · 20 February 2020 · Archived copy · Original

We Should All Be Feminists (2014) is a book on gender issues and feminism.
Chimamanda Ngozi Adichie, the author, says that being a feminist is not about being angry, being against men, or about getting power. Being feminists, she says, is about recognizing there is a problem with gender (?), and being willing to fix it.

Contents

- Summary
- Criticism
- Pros
- Quotes
- Review

Summary

About the Author: Chimamanda Ngozi Adichie is a Nigerian writer famous for her gender activism.

1. Men Used to Lead Because of Physical Strength, Today's Leadership Should Go to Intelligent Individuals

The author says that, historically, men have been the leaders because physical strength was more important in the past.

But today we live in a different world.
The person more qualified to lead is not the physically stronger one, but the more intelligent, knowledgeable, or creative or innovative.
And that's not

My Note: It Never Was Only About Strength
She's not totally wrong, strength and physical attributes were probably more important in our past.
Still, leadership never was only about strength in human history, not even in our prehistoric past. And today, strength and physical attributes are still relevant to leadership.

2. We Shouldn't Teach Men They Must Be Hard

We teach men they must be hard, that they must show masculinity, and that they should not be virgins.

But this pressure on men leaves with fragile egos.

Criticism

To begin with, feminism is the female wing of male "toxic masculinity".
It's the exact specular movement.
See here:

My main criticism is that this whole book is based on nothing but personal feelings, conjectures, and anecdotal evidence.
There is no real data, no real analysis, no science, and no understanding of psychology, evolutionary psychology, and intersexual dynamics and sexual power dynamics.

The author harps on about how our poor education and socialization.
But she never wonders why people have taught similar things for generations, and across cultures. Is everyone stupid and the author is the only smart one?
Or maybe there is a reason why parents teach women to be more feminine?

That's what's missing here.
If the author had done the intellectual legwork of at least understanding why people do what they do, then we could have had a conversation.

But with this book, it feels **like she's built a small tip on top of an iceberg that she does not understand**, does not know, or that she strategically fails to address.

1. Poor and culturally-circumscribed examples don't provide an accurate world view

The author says that in Lagos women cannot enter clubs alone. So women are forced to pretend they are with some guys.

But that's not how it works in most of the world.
In most parts of the world, it's men who cannot go into clubs alone and must find a woman to get in.

So by following her train thoughts, should men complain about clubs and society being biased against them?

2. Blank slate fallacy: isn't there more than just socialization?

Same as for most feminist literature, the author seems to believe that socialization is the main driver of human behavior.
She says:

> It is easy to say "but women can just say no to all of this". But the reality is more difficult, more complex.
> We are all social beings. We internalize ideas from our socialization.

Yeah.
And we're also all born with a lot of pre-equipped mental circuitry.

3. Total failure of understanding sexual psychology, part of which is innate

Says the author:

> We teach girls that they cannot be sexual beings the way boys are.

This is a failure to understand the deep roots of the Madonna-whore dichotomy.

And again:

> We praise girls for virginity, but we don't praise boys for virginity.
> And it makes me wonder how exactly this is supposed to work out since the loss of virginity is a process that involves two people

It works out like this: men want chaste women because they need to make sure of paternity.
Women want sexually successful men because they make sexually successful sons, which is good for the propagation of their genes.

So simple, yet so out of the author's grasp.

4. Total failure of understanding personal value and sexual market value

Says the author:

> Poor men still have the privilege of being men

She fails to understand that it's *much* better to be a poor woman than to be a poor man.

And that's why poor people have more daughters and powerful men have more sons, by the way (Miller & Kanazawa, 2008).
If you don't understand why, then stop reading these books and learn a bit about basic intersexual power dynamics and sexual market value.

5. Strawman's arguments: is it really the case that women are oppressed from birth for being women?

Says the author:

> We teach girls "close your legs, cover yourself", we make them feel as though by being born female they are already guilty of something

This is just nonsense.
Families who make women feel guilty for being women are pathological, just as families who dress their sons as women are pathological.

6. Strawman's argument: does society really tells us men are more important than women?

The author says that society teaches people that men are more important than women.
But that's not true.
It depends on context. The famous call of "women and children first" obviously does not prioritize men when it comes to saving lives.

And, in general, men have always been considered more expendable than women.
In good part, this is because of sexual market value, which is higher for women. And that's something that, again, the author is wholly ignorant of.

7. Poor social and cultural analysis: there aren't many guides for men on how to please women?

There is no depth in this book's social and cultural analysis.

Even some of her anecdotal examples are plain wrong.
Take for example when she says that there are thousands of articles for women on how to please men, but there are no articles and guides for men on how to please women.

The author must have missed the huge industry born to help men date and attract women.
As a matter of fact, books and courses to help men date better are far more numerous, and far higher quality than books and courses to help women date and attract men.

8. Poor understanding of psychology and human nature

Finally, this is the most important criticism I move to "We Should All Be Feminists".

The whole book shows no understanding of human nature.
But just take this sentence as an example:

> (…) But what if we question the premise itself.
> Why should a woman's success be a threat to a man. What if we decide to simply dispose of that word (…), "emasculation"

Does the author simply believe that changing innate behavior is a matter of "deciding"?
This again shows her poor approach to knowledge. She never asks "why" men might feel threatened by her success, so her solution as skin deep. "Let's just decide not to be like this anymore".

Pros

The author brings attention to an important truth: in some areas of the world, there is much work yet to be done to improve women's rights.

Her examples, albeit anecdotal, also prove that there are plenty of men who still resent women and feel threatened by women.
These men are part of the issue that makes it harder to be a successful woman today.

Quotes

> (…) Since feminists are women who are unhappy, because they cannot find husbands, so I decided to call myself a happy feminist

On gender as a yoke:

> The problem with gender is that it prescribes how we should be, rather than recognizing how we are.
> (…)
> What if, in raising children, we focus on ability, instead of gender. What if we focus on interest, instead of gender.

On cooking:

> Cooking by the way is a useful and practical life skill for boys to have. I have never thought it makes much sense to leave such a crucial thing, the ability to nourish oneself, in the hands of others.

Review

My review is highly critical.

So allow me to make a note first.
I'm a big believer in Fisher and Ury's approach in "Getting to Yes", which is: be soft on people, and tough on ideas.

I am kind towards the person.
I respect the author, I respect her drive and her willingness to shape a better world.
I don't know Chimamanda Ngozi Adichie personally but, from her videos and her writings, I can say that she seems a likable person.

But I did *not* like, agree, or enjoy the ideas expressed in "We Should All Be Feminists.
The fact that this book is mandatory reading in certain universities tells a lot about the (poor) state of some of those universities.

"We Should All Be Feminists" is the epitome of all that is wrong with feminist literature.
It takes a few good ideas and some confirmed facts, such as that sexism exists.

But then it fails when it seeks to expand to a bigger theory. The feminist theory espoused in this book is based on flawed assumptions, poor understanding of psychology and human nature, and lots of mental lucubrations of how things *should* be instead of how they are or how they can *realistically* change.

Among the major issues:

- It focuses on how things *should* be -wouldn't it be nice if we could just have thing our way-;
- It falls for the tabula rasa fallacy, such as the belief that nature and innate drives don't exist, or that they're very weak and socialization rules (also read: The Blank Slate)
- It fails to take into account why people behave a certain way -and why they can't just will themselves to change it

As it's the case for some feminist literature, you listen to it, and on a few things you totally agree.
But then, you just can't help but wonder: couldn't the author read and learn some more about psychology, evolutionary psychology, and intersexual dynamics, instead of writing about things that she doesn't seem to truly understand?

And since she was there, she could have also done some better research on the gender pay gap, and cited the *adjusted* figure instead of the much less meaningful non-adjusted ones.
But then again, the latter sounds bigger, so it helps her inflate her case.

Had the author done the necessary intellectual legwork, we could have listened, and maybe have a discussion.
Without all the basic knowledge the author is lacking, it feels just like hot air ranting.

In the end, "We Should All Be Feminists" didn't convince me we should all be feminists.
But it strengthened my belief that, as readers, we should really all develop some critical thinking skills. And, as writers, we should all feel more responsible for getting our facts straight before writing.

Nice Girls Don't Get the Corner Office: Summary & Review

Lucio Buffalmano · 21 February 2020 · Archived copy · Original

Nice Girls Don't Get the Corner Office (2004) is a career strategy book for women in which author Lois Frankel helps women achieve success in business by listing 101 common mistakes, and how to fix them.

TPM Strategic Note: Low-power behavior signals 'non executive material'
This text provides a valuable deconstruction of low-status and submissive behavior and body language cues that trigger the "Girl" frame rather than the "Leader" frame.

Bullet Summary

- Quit being a girl: for workplace success, stop behaving like a stereotypical girl
- You can't just behave like a man though or you will get penalized
- Women need to improve their understanding of the "unspoken rules"

Summary

How to Play the Game

1. **Pretending It Isn't a Game Mistake:** games have winners and losers, and when women ignore the game, they unknowingly create win-lose where they're the losers
2. **Playing the Game Safely and within Bounds Mistake:** women tend to play too often within narrow rules, and end up looking like they are not independent self-starters
3. **Working Hard**: don't just work, spend time building relationships as well
4. **Doing the Work of Others:** "Promotions are rewards for getting the job done, not necessarily doing the job"
5. **Working without a Break**: don't look harried and nervous, take breaks
6. **Being Naive**
7. **Pinching Company Pennies Mistake**: don't waste time and energies to save budge that's OK to spend. Take

good care of the company asset that is yourself

8. **Waiting to Be Given What You Want:** "men take care of their own needs but will often minimize what women are worth or owed". So don't wait: ask for what you're owed
    1. Separate being liked and getting what you deserve
9. **Avoiding Office Politics Mistake:** see "mastering office politics" and "office political players"
10. **Being the Conscience**: women are more likely to point out the gap between policies and real-world behavior, and that can controversial and spell troubles
11. **Protecting Jerks**: don't take the blame for a jerk, but professionally redirect the angry customer or boss towards the real source of the problem
12. **Holding Your Tongue**
13. **Failing to Capitalize on Relationship**
14. **Not Understanding the Needs of Your Constituents**: ask questions in advance, don't jump to conclusions

How You Act

1. **Polling Before Making a Decision**: women want to get everyone's approval early to avoid later confrontations. But while participative decision making is good, the inability to act without it isn't.
2. **Needing to Be Liked:** Don't be like her:

Your need to be liked is natural, and it can be a good thing. But it shouldn't stop from taking risks and hard decisions.
You must balance the need to be liked with the need to be respected. Ideally, you're both liked and respected (also see: mix warmth with power).

1. **Not Needing to Be Liked**: being promoted is also, partly, a popularity context
2. **Not Asking Questions for Fear of Sounding Stupid**
3. **Acting Like a Man**: the double standard is real. Women behaving like men create dissonance. Unless it comes natural to you, don't put an act of being like a man
4. **Telling the Whole Truth and Nothing but the Truth**: learn the art of the "positive spin"
5. **Sharing Too Much Personal Information**: don't entirely withhold personal information, but don't over-share, either
6. **Being Overly Concerned with Offending Others**: if you expressed yourself without being offensive, then don't fall for it, it's a ploy
7. **Denying the Importance of Money**
8. **Flirting**: "it's the women who flirt—not the men—who become the butt of office jokes". And if you flirt with the boss, your colleagues will think of you as an enemy and cut you off the grapevine
9. **Acquiescing to Bullies**: use "I statements" to let them know how you feel. Nobody can argue when you say "I feel like I'm not being heard"
10. **Decorating Your Office Like Your Living Room**
11. **Feeding Others Mistake**: bringing food is the stereotypical girl's behavior
12. **Offering a Limp Handshake**
13. **Being Financially Insecure**
14. **Helping**: there is a difference between helping and being used. If you're working harder than anyone else and you're the leader, you're being used. Leaders lead, helpers stay stuck as an employee

How You Think

1. **Making Miracles**: the more you bend over backward, the more it will become what's expected. Instead, manage people's expectations, negotiate reasonable deadlines, and raise a red flag when you're getting stretched too thin
2. **Taking Full Responsibility**: learn to delegate
3. **Obediently Following Instructions**: don't put your head down to work right away to show you're such a good employee. Instead, ask questions and consider how it can be done faster, and better
4. **Viewing Men in Authority as Father Figures**
5. **Limiting Your Possibilitie**s: work on yourself to expand your horizon of possibilities
6. **Ignoring the Quid Pro Quo**: don't make things look too easy and tell people when you're inconveniencing yourself for them. That way, you gain the right for bigger favors back
7. **Skipping Meetings**: meetings are opportunities to be seen and network
8. **Putting Work Ahead of Your Personal Life**
9. **Letting People Waste Your Time Mistake**
10. **Prematurely Abandoning Your Career Goals**
11. **Ignoring the Importance of Network Relationships**
12. **Refusing Perks**: if you got promoted, or won the right to a bigger office, a bigger title, a bigger, or bigger expenses budget, use it. It serves as status and impression management
13. **Making Up Negative Stories**: don't make up negative stories, ask and seek for the facts
14. **Striving for Perfection**

How You Brand and Market Yourself

Too many women self-efface and fail to take credit when credit is due.

1. **Failing to Define Your Brand**: come up with a short mission statement for yourself
2. **Minimizing Your Work or Position**: never say you're "just" X
3. **Using Only Your Nickname or First Name**: first name only relegates you to girl-status
4. **Waiting to Be Noticed**: when you want something, don't just ask for it, but openly talk about to everyone. The more people know, the better
5. **Refusing High-Profile Assignments**
6. **Being Modest**
7. **Staying in Your Safety Zone**
8. **Giving Away Your Ideas**
9. **Working in Stereotypical Roles or Departments**: it's difficult to shine and do a good career when you're in nursing or administrative assistant
10. **Ignoring Feedback**
11. **Being Invisible**

Also see:

- **How to promote yourself at work**

> Self-Promotion Done Right: 10 Proven Techniques That Work

How You Sound

1. **Couching Statements as Questions**: this is a defensive move. Make statements instead
2. **Using Preambles**: drop the clutter, and give your bottom line first
3. **Explaining**: avoid lengthy explanation, they make you sound like you're making excuses
4. **Asking Permission**: find out what the boundaries of your power are, and make decisions within them
5. **Apologizing**: if you're apologizing too much and for inconsequential stuff, cut it out
6. **Using Minimizing Words**: never minimize your work and achievements and the efforts it took. Instead, say "I'm pleased with how it turned out"
7. **Using Qualifiers**: drop "sort of", "could", "kinda of". Use more definitive language
8. **Not Answering the Question**: avoid convoluted answers without an answer, which are a way of hedging your bets. Show some certitude in your answers
9. **Talking Too Fast**
10. **The Inability to Speak the Language of Your Business**: learn the keywords and use them
11. **Using Nonwords**: drop the filler words
12. **Using Touchy-Feely Language**
13. **The Sandwich Mistake**
14. **Speaking Softly**: speak louder, and add gestures
15. **Speaking at a Higher-than-Natural Pitch**: seek to speak with your natural voice
16. **Trailing Voice Mails**: get to the point, and close the call
17. **Failing to Pause or Reflect Before Responding**: take 3 seconds to think and collect your thoughts before replying

Also read:

- **How powerful individuals speak**
- **How submissive individuals speak**

How You Look

1. **Smiling Inappropriately**: match your smiles to the tone of your communication. Serious talk needs no smiles
2. **Taking Up Too Little Space**: also see alpha male body language, but don't overdo it
3. **Using Gestures Inconsistent with Your Message**
4. **Being Over- or Underanimated**: women tend to be over-animated, but avoid the mistake of going the opposite end of the spectrum
5. **Tilting Your Head**: it can be OK when listening, but avoid when speaking
6. **Wearing Inappropriate Makeup**
7. **Wearing the Wrong Hairstyle**
8. **Dressing Inappropriately**: dress for the job you want, not the one you have
9. **Sitting on Your Foot**
10. **Grooming in Public**: avoid fixing your hair and make-up in public
11. **Sitting in Meetings with Your Hands under the Table**
12. **Wearing Your Reading Glasses around Your Neck**: women don't gain credibility with age like men do, so don't advertise it
13. **Accessorizing Too Much**

14. **Failing to Maintain Eye Contact**

How You Respond

1. **Internalizing Messages**
2. **Believing Others Know More than You**: probe authority, ask how do they know it, or based on what they say it
3. **Taking Notes, Getting Coffee, and Making Copies**: propose you take turns, propose the more junior employee does it, or refuse by saying you did the last
4. **Tolerating Inappropriate Behavior**: don't swallow your feelings, or you will poison yourself
5. **Exhibiting Too Much Patience**
6. **Accepting Dead-End Assignments**: always check assignments before accepting them. If people failed or languished before in that same assignment, it might be safer to turn it down
7. **Putting the Needs of Others Before Your Own**
8. **Denying Your Power**
9. **Allowing Yourself to Be the Scapegoat**: don't take the blame for others. And if it's your boss, learn how to draw your boundaries with tact
10. **Accepting the Fait Accompli**: if there something you don't like, at least try to push back and voice your concerns
11. **Permitting Others' Mistakes to Inconvenience You**
12. **Being the Last to Speak**: try to be among the first three to speak. If you don't have a point, you can build on what other said, or drop some comments like "that sounds like a good idea"
13. **Playing the Gender Card**: don't say you were unsuccessful or passed on because you're a woman. Companies will try to defend their reputation, and you will isolate yourself
14. **Tolerating Sexual Harassment**: deny sexual advances once. If they keep on coming, then you're into sexual harassment waters and you can think about a formal complaint
15. **Crying**: if you feel like crying, excuse yourself and leave

To learn how to respond it's also useful to learn about frame control:

> 10 Frame Control Techniques to Out-Frame Anyone

More Wisdom

- When people get angry or annoyed, it's often a ploy to get us to do what they want
- Mind the culture: behavioral norms for men and women vary among corporate cultures
- Reflect on whether helping others is a way you seek validation for self-worth

Quotes

On acting more like a woman, not like a man:

> Success comes not from acting more like a man, as some might lead you to believe, but by acting more like a woman instead of a girl.

On the forces that want to keep women like little girls:

> The girl who moves toward womanhood will find herself faced with people who want to continue to infantilize her.

On money:

> Money is power, and power is something women misinterpret and avoid.

On women who work non-stop, completely negating their private life:

> My experience with women who give up what's important to them to meet the needs of the job is that they either don't have anything to go home to or they don't want to deal with what they do have to go home to.

On elevator-pitch branding:

> If you can't tell someone during an elevator ride (in a short building) what you do, then you haven't finished defining your brand.

CONS

A wonderful book.
Just a few notes as I am the usual nitpicker:

- **Sometimes jarring or too aggressive**

The author exhorts women to be more assertive.
Sometimes though that assertiveness can become aggressiveness, and be out of place.

For example, the author advises women not to ask for permission, but to do things anyway.
As an example, she proposes to turn "would it be all right with you if I work at home tomorrow?" into this I just wanted to let you know I'll be working at home tomorrow".

But a boss receiving that type of advice is likely to get incenses at the gall of his subordinate to call his own shots.
In a few cases, that might work. But in most office situations, that's overly aggressive and not good advice.

This is the main reason why I give this book 4 stars instead of 5: the push for assertiveness sometimes becomes counterproductive aggression.

- **Nice and kind can be effective strategies for career and life success**

Books telling people to stop being nice are very popular.
See "No More Mr. Nice Guy", or "Why Men Love Bitches". But people are nice because, if you strike that balance between kindness and strength, it works.

Also read: mix power with warmth.

- **The blank slate fallacy**

The author blames women's "girly" behavior on learning and socialization.
But there is also much nature in how men and women behave. It's important to also recognize nature because that helps to provide more wholesome solutions.

Also read "The Blank Slate and The Denial of Human Nature".

- **Sometimes exaggerates the case for women's woes?**

Says the author:

> Women still earn only about 72 percent of the salaries earned by their male counterparts, must work twice as hard to be considered half as good as their male colleagues (..)

The 72% gender pay gap figure is the unadjusted figure.
Also, I don't think that school teachers and nurses get paid less because it's mostly women working there.

- **Men from mars, women from venus?**

Sometimes it felt like men got all sorts of positive traits assigned to them.

For example:

> Men rely on relationships to open doors for them; they don't view it as taking advantage of anyone.

I wasn't convinced that all the traits the author assigned to men could be generalized by gender.

- **Relationships as exchanges?**

In one instance the author presents relationships as pure exchanges. For example:

> A successful workplace relationship (…) is one in which you clearly define what you have to offer and what you need or want from the other person.

I think it's good to look at relationships also as exchanges.
But one should also move beyond that view, because some of the best relationships leverage intrinsic motivation.
Also read: how to be a leader.

> How to Be A Leader: 13 Laws From Social-Psychology

- **Disagreed with some advice**

The author says that accusations of being too pushy are designed to keep you quiet. Maybe, in some cases.
But what if some the readers were indeed too pushy?

I also wasn't fully convinced about forwarding appreciation emails to your boss.

A third one was about humbleness.
The example was a girl who, responding to her grandfather's public bragging, said "oh, they were just golden state awards".
The author said it was a mistake to minimize her awards, but I thought the girl did the right thing. When someone else is bragging for you, you can gain more points by acting humble.

PROS

Lois Frankel knows what she's talking about and understand both the practical and theoretical side of coin.

Wonderful insights into power dynamics

This book provides truly great insights into power dynamics, *both* at the micro and macro level.

- **The hidden power manipulations**

Writes the author:

> The people who think (the term "empowerment") is overdone are those who possess the most power.
> Easy for them to say!
> They don't really want anyone to have the same power and influence that they enjoy, and so they downplay its importance in the employment and social arenas.

Yes, she is referring to subconscious and hidden manipulation here.

- **The teasing power manipulation**

Writes the author:

> When we do try to break out of those roles and act in more mature, self-actualizing ways, we are often met with subtle—and not-so-subtle—resistance designed to keep us in a girl role. Comments like "You're so cute when you're angry," "What's the matter? Are you on the rag?" or "Why can't you be satisfied with where you are?" are designed to keep us in the role of a girl.

Indeed, this is also what Lean In author Sheryl Salzberg referred to when a Democrat senator patted her on the head and told her "what are you, a pon pon girl?"

- **Don't back off, but maintain frame**

Says the author:

> When others question our femininity or the validity of our feelings, our typical response is to back off (..) We question the veracity of our experience (…) and we take a step back into girlhood and question our self-worth. (…) we collude to remain girls rather than become women.

Another great analysis.
Also read: frame control.

Review

"Nice Girls Don't Get the Corner Office" is a wonderful book based on realistic assessments of interpersonal power dynamics.

It's more "marketable" and less theoretically deep than similar books such as "Hardball for Women", or Debora Tannen's more academic work.

However, that's also its strength.
In simple and direct terms, without fluff and space fillers, it shares good wisdom, highly actionable tips, and advice that (mostly) works.

I got this book following the recommendation from a customer's feedback -thank you KB!-.
KB recommended me that I expand Power University to include more advice for women, and she suggested a few titles.

Lois Frankel, the author, has a good understanding of power dynamics both at a theoretical and practical level.

Edit: Don't go extreme, keep kindness and femininity
Don't swear off "niceness" and "kindness" of course: They're effective ways of being successful at life.
Especially if you are a good-hearted person, I recommend you read "The Myth of the Nice Girls".

Social Power Dynamics: Start Here

Lucio Buffalmano · 21 February 2020 · Archived copy · Original

Welcome to *The Power Moves*—the #1 platform where ambitious men learn how to master power dynamics, gain social influence, and become high-status men.

This is your starting point to social power dynamics.
Whether you're here to sharpen your leadership, understand dating dynamics, or stop being overlooked, this guide will walk you through the core concepts of social power, dominance, and strategy.

Every article, course, and tactic you'll find here is designed to help you become a man who commands respect.

This post provides **an overview of social power dynamics.**
We strive to keep it updated but prioritize Power University for our freshest upgrades.

But if you aren't ready for it yet, this is a good primer for you.

Go in this order:

Contents

- Basics of Social Skills & Power
  - Basics of Emotional Intelligence
  - Basics of Social Skills
  - High-level Principles
  - Social Skills Resources
  - Bonding, Connecting, & Leadership
- Power Dynamics
  - Foundations
  - Practical

Basics of Social Skills & Power

Originally we advised to learn basic social skills first.

But experience changed our minds.

Today we believe that power dynamics is as important as basic social skills.

See here:

- **Why you must learn power together with basic social skills**

> Should Beginners Start With Advanced Material (Like Power University)?

That being said, the two disciplines are tightly intertwined.
And developing emotional intelligence also helps you develop *power* intelligence.

Basics of Emotional Intelligence

There's no great single product (yet) on developing emotional intelligence for life success.
But these can help you:

- **Power Intelligence**
- **How to be more positively Machiavellian**

- Forum entry best of

Basics of Social Skills

Start with this:

- **Basics of social dynamics**: foundations of social exchanges, the most important model to understand how to be socially effective
  - **Social exchange basic laws**: foundational applied

Learning to analyze social relationships as exchanges may seem cynical, but the opposite is true.
A mindset of providing value and demanding value back is good for all.

It's also a mind-opening mental switch for some, and it forms the bedrock of greater influence and persuasion, as well as many advanced strategies and techniques.

Also check the forum entries for some typical mistakes linked to the law of social exchange: missing the WIIFM and failing to put their best foot forward.

High-level Principles

These articles provide a higher-level understanding:

- **Positive cynicism**: start with cynicism to avoid being naive. And then move beyond it
- **Enlightened collaborator**: seek collaboration while being aware of the risks, the "dark side" present in every human being, and that some individuals are "darker" than others
- **Mix power with warmth**: Machiavelli said that, ideally, a prince should be feared and loved at the same time. He was right. That's why you want *both* power and warmth. Also read "value and availability", which is the ultimate goal of mixing power and warmth.

Social Skills Resources

Some people also need the basics on how to talk and how to hold a conversation.

- **Group conversations**
- **How to make quality friends as an adult**
- **Best social skills books**

Bonding, Connecting, & Leadership

The more calculative aspect of the social exchange are more for rational and business-like exchanges.

More advanced players add emotions and extrinsic motivators.

Good relationships and human bonding also transcend the more calculative aspects.
Check out for example:

- **How to bond with people**
- **How to be a leader**

Then start adding some refinement for some deeper human connections:

But the closer you get to someone, the more you want to add different layers.
For example, see "**how to bond with people**" and "**how to be a leader**" to get a feel for the higher levels of social skills

The basics of high-quality behavior

- High-quality men
- How to be honorable

Power Dynamics

Now let's get into power dynamics properly:

Foundations

1. **Social power dynamics**: a geeky-friendly primer for social power dynamics
2. **Frame control techniques**: understanding frames is understanding power dynamics. The full lesson is in Power University, but here you get 50% of the value
3. **Power dynamics**: a definition, and why they matter

Practical

Some articles to give you an idea of empowered behavior that gives you status, respect, and attraction:

- Dominant body language
- Confident speaking

Low-status body language to avoid

Low status speaking to avoid

- They will help you understand social dynamics at a deeper level than most available resources

From here on, you can move to mastery with Power University.

Join Power University

Our alumni who started as blog readers found that the best and fastest way to internalize and use this wisdom is Power University.

Dating For Men: Start Here

Lucio Buffalmano · 21 February 2020 · Archived copy · Original

This post provides an overview of dating strategies, techniques, and mindsets for men.

Contents

- Basics of Dating Theory
- Basics of Dating
- Dating Strategies
  - Lovers & Providers
  - How to Meet Women
  - Dating Strategies

Basics of Dating Theory

It's just two articles to get a quick overview of dating power dynamics:

- **Sexual Dynamics 101**: this article provides an overview of the power dynamics of the sexual market place
- **Sexual market value**: here you will learn what men and women seek and value in a mate -based on 20% experience and 80% science-

Those two form the foundations to understand the theoretical and scientific side of dating.

Basics of Dating

Most women prefer men to be more powerful, more dominant, and higher status than they are.

These articles provide with an overview of dating power dynamics, a foundational aspect of effective dating:

- **The 5 Foundational Domains of Dating Power Dynamics**
- **The 5 Basic Principles of Power-Effective Dating**

These three articles provide you with the foundations on how to be the type of leader women want:

- **Leadership and Seduction**
- **Dominance and Seduction**
- Traits of high-quality men

Dating Strategies

We have two camps on dating advice:

1. **PUA and "niche" seduction blogs**, usually selling the "lover style of seduction", faster and with less commitment and investment
2. **Mainstream dating advice** (and women themselves), tailored towards the provider style, with more personal investment, commitment and, often, a slower lead up to sex

Rarely either will admit that the other strategy might work out better.

Mainstream culture cannot embrace the lover type because the lover type is inherently bad news for society itself, and that makes sense (it would be bad for society if no men ever invested).

And seduction websites cannot embrace the provider type or they'd be out of ebooks and courses to sell (yes, the same selfish reason).

This website is different because we maintain that which one works best truly depends on your environment, your personality, and her background and personality.

So the real question is:

Which one is best *for you*?

So start an overview first:

Lovers & Providers

- **It's more about quality than role**: most of all, it's not about being a lover, a boyfriend candidate, or even a friend. It's about the quality. Focus on quality first and foremost.

Then move to this one:

- **Lover or provider**: lover and provider are two different strategies, and one is not always superior to the other. This article shows you which one works best for you, and when.

How to Meet Women

Once you understand the basic principles of dating and you worked on yourself to be a high-value men…

… Then it's all about meeting more women.

Get a more balanced view of the different ways to meet women:

- **Cold approach VS social circle**: the short of it is that you're better off with an intelligent mix of all strategies. How much of each depends on your situation and your environment

Dating Strategies

And then upgrade to these:

- **Straight-line seduction**: a seduction model based on efficiency
- **Dating strategies**: There are countless dating products, some of which are very good, too. This list does not replace all those good products but focuses on strategies that have been proven and confirmed as being effective for the majority of men
- **Types of seducers**: just like any good product seeks a good market niche, so does your dating results improve when you know your sexual market positioning
- **Sexual market value hacks**: there is so much more you can do to improve your dating life than simply learning game and approaching more. As a matter of fact, learning game might not even be the quickest and most effective thing you can do. Sexual market value hacks might provide you with the quickest bang for the buck.

There are also countless legit reviews of dating products on this website (quick warning: in at least one instance a popular online website for dating product reviews behaved as an affiliate scam).
You can start with this list of:

- **The best dating books and courses**

This is it for an overview.
To reach a good level in your dating effectiveness, you don't need *tons* of material. You need *great* material, and

then work on it.

And if you want to go straight for what works best, with step-by-step actionable advice and plenty of real-life examples, then see **Seduction University**:

How to Lead A Woman In 5 Simple Steps: Create Trust & Attraction

Lucio Buffalmano · 23 February 2020 · Archived copy · Original

Leading a woman isn't about control—it's about confidence, inspiring trust, and making her *want* to follow.

At TPM, we specialize in power dynamics, gaining status, and successful socialization, and we know the key to leadership lies in guiding with a mix of power, and respect.

In this guide, you'll learn how to lead a woman effectively, date successfully, and maintain long-term attraction—all while embodying the traits of a high-quality man.

Resolute and strategic leadership allows you to move fast and safely

Intro: Leadership & Dating

Leading in dating is still the man's job.

Yes, *despite all the changes of the last decades*.

Empirical evidence from *The Handbook of Relationships Initiations* shows that gender expectations don't seem to change -they were the same whether it was 1950, 1993, or 2000-.
And "orchestrating the dating" was one of the timeless expectations.

Meaning that men are always expected to lead.

And, we add, leading is crucial even later in dating, because intimacy is the final act of accepting his leadership.

That's because when she accepts your leadership, she accepts *you*.
Technically, she accepts you as a man who's 'above her' and worthy of leading her.
But that's pretty much the same.

Of course, there are exceptions to almost any rule, and some women may do most of the work with more passive men.
But we don't recommend that route because **effective dating always requires male leadership**.

And the opposite is true: there is no seduction without leadership.
If the man doesn't lead, things never move forward.

1. Lead Her With Win-Win

The perfect mix of trust-inspiring gallantry, and attraction-spiking leadership

Mixing resolute leadership with warmth works MUCH better than over-dominant leadership.

Curt leadership alone may work with some, but can make you come across as a jerk.
More assertive women will turn confrontational, and higher quality women will walk off.

So yes, successful men resolutely move things forward.
But the most charming and successful ones do it with pro-social dominance and win-win leadership.

⍰ Example: Avoid domineering leadership

> **Him**: Hey you. I'm talking you, oh! Oh!
> **Him**: (motion to the passenger's seat) Get on!
> **Her**: Me?
> **Him**: Yeah, you, hurry!
> **Her**: (wants to go, but feels disrespected)
> (…)
> **Him**: Get out
> **Her**: What?
> **Him**: Move, get out
> **Her**: (finally blows up)

⬆ ♟ Too dominant, turns aggressive & rude
She follows him because of the large mate value discrepancy. But a higher quality woman may have rejected.
⍰⍰ But ignoring her emotional outbursts was absolute alpha⍰⍰

As the example above shows, a more forceful leadership may succeed.
But it meets more resistance and drives away more women.
As a rule of thumb, the as*hole-leadership style fares comparatively better for short-term liaisons, but struggles to keep around high-quality women.

See:

https://thepowermoves.com/enlightened-collaborator

1.2. Relationship Leadership: Go For "Tender-Defender"

Although some women are attracted to selfish dominance, most women prefer leadership that is *both* strong *and* caring *at the same time*.

And that's especially true for most high-quality women who have plenty of options.

Evolutionary psychologist Geoffrey Miller calls it the "tender defender" (Miller, 2016).
But however you want to call it, it's best to establish your leadership within a frame of team-work and collaboration.

This follows evolutionary logic as well.
People are naturally self-centered, and women have been programmed to seek men who help them advance their and their children's prospects to survive and prosper.

So it makes sense that women prefer a strong leader who supports them and add value, rather than one that undermines them and makes the relationship toxic.
As*holes and abusive types who lead by 'inflicting costs', as evolutionary psychologist David Buss calls it, are poor fall-back options.

‘Giving your arm’ is perfect for relationships

2. Start Small, Work Your Way Up

Ie.:

1. *“Tell me about you”*
2. *“Show me your necklace”*
3. *“Let’s go sit there”*

3. Be Strategic: Lead When She Will Follow

If you suspect she will reject, hold your horses.

Instead, focus on displaying your value first.

Of course it takes some calibration, but if you start small then a denial will not sink you.
Plus, if you read around here, you’ll surely learn how to recover.

 Example in the forum

3.2. Rebuild Power & Goodwill After A Denial

Calibrate the next steps based on her compliance.

If she complies, you can probably move faster.

If she refuses, ‘thread-minimize‘ the rejection and rebuild power.
For example, change topic, chat more, display value, and try again.

A good article to check:

- **How to move fast in dating**

> Why Straight Line Seduction Is The Best Dating System

4. Follow A Leadership Process

For example:

1. **Tell her you'll take her out** to your favorite place
   Ie.: "*Let's grab some food one of these days, I'll take you to my favorite place*"
2. **Tell her time & place**
   Ie.: "*I'll meet you at the subway station X at 18:30 (good for you)?*"
3. **Move her**
   Ie., After greetings: "*Alright, let's go*"
4. **Tell her to sit beside** instead of in front of you
   Ie.: "*Sit here on this side (we can talk better)*"
5. **Suggest her a dish**
   Ie.: "*Do you eat fish? I highly recommend the trout* (point the dish on her menu)"
6. **Initiate the venue change**
   Ie.: "*You done? Would you like more water? OK, let's go then*"
7. **Invite her home, tell her to go the next place, or end the date**
   Ie.: "(While walking) *Come over, I'll show you where I'm staying*"
8. **Tell her to remove her shoes**
   Ie.: "*(While removing your shoes) Take your shoes off (it's clean / here are the slippers)*"

🧔♂Lucio's Take: **I prefer softer leading**

Lucio:
I like a 'soft' approach.
For example:

- "*I'll meet you at…*" ➡ "*Let's do at…*"
- "*Let's go*" ➡ "*Shall we go* (as I head to the restaurant)" <— Starting to walk assumes and increases compliance

I find this approach equally powerful, but less 'overbearing' -and more calibrated to assertive women.

5. Tell Her To Do Something For You

Women do this all the time.

It's one of the ways with which women control most relationships.

We call it "tasking" here.

Tasking tells you where the power lies in a relationship.
Those who assign tasks, are high-power leaders.
Those who execute the tasks, are the lower-power followers.

⍰ Example: Turning her into a wife with leadership

> **Tony**: Why don't we have a couple of drinks. Come on, I like Scotch (points to the minibar)
> **Elvira**: Sure, why not (pours the drinks for both of them)
> (…)
> **Tony**: Come here. Come on. Come on. Sit here. I want to talk to you. Sit down. I'm not gonna bite you.
> **Elvira**: (Sits next to him)

⍰⍰⍰We know Elvira is warming up to him because she executes her task.
♟ **Good strategy & timing** ⍰⍰
1. Pushes the cart closer to her, making it easier for her to execute
2. Sits down himself when he invites her again
3. Reassures her when insisting ('I don't bite')
4. He proposes after she executed his tasks

5.3. Make Your Requests Appealing To Increase Compliance

Ie.:

- "Let's go back to my place" ➡ "Come over, I'll show you the skyline, it's breathtaking at night"
- "I'll take you out" ➡ "I'll treat you to the best ice cream in town. Their pistachio is to die for

Learning How to Lead

The best way to learn how to lead women?

Lead anywhere else in life.

Being a leader outside of seduction helps you become a more effective leader when it comes to seducing.

Here are a few tips:

- Become a manager at work
- **Launch a business/project/side gig** where you call the shots
- **Get leadership roles in voluntary clubs** -many groups are desperate for team leads!-

- For example, I became a Toastmasters president
- **Build a social circle** and organize events
- **Volunteer as a teacher**
- **Take dance lessons**

Prevent leadership issues: become a high-value man

Of course, leadership, as everything else, comes much easier if you're a 'catch'.

For example, a high-value man, high mate value, and an honorable man that both men and women admire.

This also happens to be our mission: teaching good men how to gain status and attraction, while remaining honorable men.

Women's Responses to Your Leadership

How she reacts to your leadership tells you where you stand in the dating process, and tells you about her.

In that sense, it's a perfect dating test!

But it also tells you a lot about women's personalities.
For example, common archetypes of behavior are:

1. Meek and subservient: wants a good man to be a stay-at-home wife

Some women don't ever want to lead and are very passive in dating.

These women make it easier for men.
They are less likely to screen for very dominant men but also have a much easier time finding a boyfriend.

2. Rebellious: very dominant or with feminist values

Dominant women try to lead.

They continuously task men and sometimes act catty and rebellious to his leadership.

These women can end up with very dominant men.
But, often, they have to content themselves with very submissive men because they struggle to find a dominant enough man who also happens to like dominant women -not all dominant men like dominant women-.

On average, it's harder for these women to find a boyfriend.

3. Game players: they like you, but...

These women are power aware and would love to make you chase.

But their skills don't match their ambitions, and simply bumble it:

She left, point blank, to make me follow her.
But I didn't, and she ended up chasing -and looking terrible-.

P.S.:
These types sometimes hide psychological conditions, so better to avoid if you want a healthy relationship.

Also see:

- Submissive VS Strong Women

Calibrating Leadership

Despite popular 'laws', **the name of the advanced game is always calibration.**

Our approach is tailored to Western or libertine cultures, but the general principles apply anywhere.

For example, in this scene of *The Godfather* set in conservative Sicilian culture, leadership goes through her father:

> **Godfather**: (after a misunderstanding angered the man)
> I apologize if I offended you.
> My name is Michael Corleone.
> (…)
> I wanna meet your daughter, with your permission, and under the supervision of your family.
> With all due respect

It's a movie, but it's realistic enough to be real.

Real-life story of leadership in conservative country

More than fifty years ago a young, little countryside girl visited her village on a hot summer day.

A man saw her walking by and liked her.
He went over, said hi, introduced himself, and asked about her.

Until here, not too different from what might happen today.
They exchanged some pleasantries and then the boy asked her to meet again.

The girl told him that she couldn't.
You know, she had recently ended a relationship, and her dad didn't allow her to date so soon again.

You can see all the weight of the conservative culture there.
The bias towards proper courtship instead of "hanging out". Taking breaks between dating one man and another.
And of course, the father approving who and when she was going to meet.

In a more libertine culture, the man might have smelled an excuse or an easy barrier to break, and he might have insisted. Maybe he might have tried to make her sit with him right away.
That might have worked too, who knows? But in that conservative environment, the odds were stacked against him.
And he didn't want her parents to see him hanging too long around her daughter.

So, the guy didn't even try.
Instead, he asked the girl: "Where do you live".

The day after, the guy went to visit the little girl at her family's house. He asked to see his father, introduced himself, talked about himself, and showed he was a respectable man. He said he was serious, and that waiting was unnecessary.
The father agreed and approved.

That's how it started.
The two are still married to this day.
And a few years ago, I went back home to celebrate their 50th wedding anniversary.

The story I just told you is about how my father met my mother.

Now compare that to how I met girls just one generation later.
A world of difference.

Yet, what my father did was extremely dominant and leader-like. But it was bold *within* that culture and within the type of relationship he was seeking.

What does it mean to you?
It means that your dating and leadership must be calibrated to your culture and your goals.

SUMMARY

> There is no seduction, without male leadership.

Leadership is not only crucial to lead groups and manage teams, but it's also the essence of seduction.

Many men's dating struggles are largely due to leadership -either total lack of leadership, or insufficient leadership-.

This article showed you how important leadership is, how to lead women, and how you can learn how to lead more.

This is an excerpt from **Power University**, where we lay out the full plan for becoming a man women want to follow

How to Use Dominance to Boost Your Sexual Success

Lucio Buffalmano · 24 February 2020 · Archived copy · Original

Dominance, much like leadership, plays a crucial role in dating success.

Research shows men's dominance can sometimes outweigh physical attractiveness in influencing dating success.

At TPM, we know this because we're the most visited website on power dynamics, helping thousands of men to become more successful, assertive, and positively dominant.

Let's start:

  - ⍰ Trump/Melania example
- Positive Dominance vs. Pathology

1. Master Interpersonal Dominance

Interpersonal dominance includes any dyadic interaction among people.

Research in evolutionary psychology highlights that human attraction involves both female selection and male competition in the form of dominance hierarchies.

Green is dominant, red is submissive

Dominance is important in *both* approaches.

However, the most effective strategy in modern dating is to disregard direct male competition and focus on man-to-woman interactions.

The author's successful experience attests that **you can date many women you want, without directly competing against other men.**

How to Master Interpersonal Dominance

Interpersonal dominance includes the basics of a high-value man:

- Confident nonverbals
- Confident social behavior
- Confident speaking

And its opposite, eliminating low-confidence and submissive signals.

In our course we also share examples of dominance dynamics between men and women.

1.2. Show Your Dominance With Social Pressure

Principle:

⚖ **The more distress under pressure, the more power you lose**

So keep your composure.
And don't be afraid sometimes to heap some pressure.

⍰ Example:

> **Him**: (intense) What do you love about it <— Deep question
> **Her**: (thoughtful answer) <— She invests
> **Him**: ⍰… <— Pressures her to speak
> **Her**: Are you an artist?
> **Him**: No, just a traveler <— Contradicts her. Higher dominance, lower warmth
> searching for purity.
> What do you search for <— Implies she's on a meaningful quest
> (…)
> **Him**: (full frontal) <— Physically dominant
> (walks towards her)

However, remember to balance intensity with warmth on first approaches.

1.3. Win Power Showdowns

Power showdowns establish dominance hierarchies through escalations.

Some are obvious and easy to spot.
But are smaller or covert and men miss them because they require power intelligence.

Imagine this dialogue:

> **Her**: (haughty look, turning away) You're so into yourself <— ⍰ ⍰ 'You trying to be the prize'
>
> **Him**: Me? I'm so into myself? (turns to her, gets closer, louder but smiling) <— Counter-attack, dominance with warmth
>
> Look at you, with the slim fit biker jacket, (reaches out to her scarf) the Italian scarf, the coiffed hair (touches her hair)
> Yeah, nice try (pats her head) <— Babying power move & 'benevolent sexism'

> **Her**: (lowers her eyes, smiles) <— Please by the compliments… And that he 'won'

That's a date of mine, and a little later she followed me to my place.
I'm fairly confident this was the turning point on the way to bed.

2. Display Mental Dominance

Intellectual dominance is an underrated, yet crucial aspect of dominance.

Research indicates that intelligence is a highly desirable trait, especially for long-term relationships.
And narcissist researcher Keit Campbell lists 'mental domination' among the strategies narcissists pursue to maintain the upper hand.

So critical thinking, logic, and knowledge help.

But *explaining* things, influence, and frame control matter more.

> 10 Frame Control Techniques to Out-Frame Anyone

🤦♂ I used to say "*Do you want me to correct your English?*"
To position me as the 'spoken language authority'

2.2. Emotional Dominance

Including:

- Calmer under stress
- Resilient self-esteem
- Stable, fewer emotional swings

🤦♂Lucio's Take: **Don't say 'I love you' first**

Lucio:
Seeking emotional closeness signals less experience and more to gain from the relationship.
And that's lower value.

It also feels less masculine.

Albeit it's unpopular advice, I'd advise a close friend that he -and the relationship- are better off if *she* is more emotionally invested.
Both in internal states, and external signals -hence: don't say 'I love you' first-.

2.3. Mentor / Father Figure

> **Him**: You don't need comfort food with me :) <— Dominant, but value-adding dominance. And adds ':)' for warmth.
> **Her**: (loves it)
> **Him**: You're safe under my guidance <— High confidence, protective dominance. Adds ':)' to take the edge off
> **Her**: (loves it)
> **Him**: Give me your contact and let's make it happen
> **Her**: (gives her number)

Both helpful frames for older men.

3. Social Dominance

Any aspect of dominance related to groups or social classes

3.2. Social Status Dominance

Women prefer higher status men (Buss, 2016).

Highest-status men in 'dominance hierarchies' monopolize women's interest

So present yourself well:

- On upward trajectory
- High-status background
- Respected by other men -ideally with alpha potential

3.3. Benevolent Sexism

Benevolent sexism frames men as higher status than women.

Research shows some women like it because it combines dominance and warmth.

Example with a power move:

> **Bond**: Dink, say goodbye to Felix
> **Dink**: What?
> **Bond**: Man talk (turns her around and pulls a power move)

To do this effectively:

- **Do it in private**, or at least avoid coworkers and family
- **Do it with warmth**, as if joking with a mischievous child

🤔Lucio's Take: **She likes it IF you're cool**

Lucio:
Long ago I was seeing a (declared) feminist.

I wanted to pull a ‘pimp move’ and put some notes on the inside of her corset, telling her to go get drinks.

She complied.

But my friend, astonished and copying the move, got slapped.

Similar moves are good tests to assess characters.
 Example here (alumni only)

4. Romantic Dominance

Romance is a man’s job and a gift to her.

> **Her**: So corny
> **Him**: No, it’s classy <— Contradicts and frame imposes

Execute a ‘seduction power move’ to make her swoon

Women remember first kisses more than first sex (Gottman, 2016).

Bring wine to a picnic, walk to a sunset view, passionately kiss her while capping her face/neck area.

Love the romance but also *lead* it.
You're *both* a player and a conductor. Only she can get fully lost in it.

5. Financial Dominance

Some financial power moves:

- *"Where are you staying, I'll send you a car"*
- *"Where's your dream destination?*
  I'll take you there"

Many men do this wrong, trying to impress and financially over-extending otherwise modest resources.
That's simping.

To do it well, you must spend like money means nothing to you and never to win her affection.

In short, **to do it well you must be wealthy**.
Otherwise, skip this.

6. Physical Dominance

The full spectrum of body movement and body contact.

While some resources focus on sexual prowess, physical dominance is much larger.

And must start with the basics:

6.2. Comfort With Touching

For example:

- Give her your hand to stand up

- Lightly touch her on a high point
- Lead her with your hand on the small of her back

⚠ 7. Sexual Dominance Escalations

! These require advanced calibration, consent, and mutual trust. Always prioritize her feelings of safety **!**

NEVER TRY THIS:

We dig deeper in private spaces.

⚠ ⍰ Dominant Moves

Beginners skip these.

!She must like you, and feel and know that she's safe **!**

These are some *advanced* moves that men can use during escalation WITH warmth, consent, and mutual attraction:

1. Grab her neck
   - From behind when kissing or hugging
   - Frontally during sex
2. Pick her up, move to bed
3. Take her hand, walk to bed
4. Nudge her in a horizontal position
5. Increase intensity, overcome by lust, before pulling back
6. Pin her hands above her head in bed while you pet or remove clothing
7. Bite her (lightly!)

⍰⍰ Be extra warm after a dominant escalation

To frame it as a good experience with a dominant, but *kind* man
⍰ Two examples here (alumni)

Well-executed dominant escalation is attractive.

And shorter men can use it to rebalance dominance with taller women.
⍰ Example:

> **Him**: (escalated dominantly)
> **Her**: (swoons and chases him)

*note: she used a poor expression, it was safe

7.2. How to Be *Positively* Dominant: Add Warmth

- **Step back between bouts of physical escalation** if she isn't ready
  - Lighten the mood
    Ie.: Tease, talk, or share interesting stories about yourself
  - Go hands-off and distant to show you're not going to be all over her

- **Display care & warmth**
  Ie.: Forehead kiss, hug, light make out, caressing

- **Tell her something nice**
  Ie.: What you like about her

- **Talk about your common history** to frame it as romance
  Ie.: How you met, what you thought of her, etc.

- **Share interesting but reassuring trivia about yourself**
  Ie.: Your family life, your mother, your female friends

- **Reframe win-lose into win-win**
  Ie.: If she says you only want sex, say that you like her and want her to be happy

- **Verbalize your next dominant move** to prepare her, prevent guilt, and get a green light
  Ie.: *"I am going to pin your hands now and remove your panties"* <— ⚒🧍 If she strongly objects, wait. If she says nothing, proceed

And most important:

⍰⍰ Verbalize it's safe!!

With a reframe example:

> **Her**: You're pushing me <— Take your hint! You're overdoing it !
>
> **You**: Wooo, don't say that.
> I just like you, but I want you to know 100% that you're totally safe here, OK? <— Let her reply and confirm! !

Dominance and kindness combine the best of lovers and providers.
The lover excitement, and the provider's kindness.

See a real-life effect of combining power and warmth:

> **Her**: Behind the thirst for sex, you're a gentleman

8. Sexual Dominance In Bed

Some dominant moves in bed:

How To Be More Dominant In Bed

- Lead the 'position changes'

- Spanking
- Lead her inside an alley
- Tell her to tell you she loves your d*ck <— ⍰⍰♂ Not my style
- Consume her, display an “animalistic” side
  Ie.:
  - Overcome by sexual lust, bend her against a desk
  - Undress her

Example of the effects of ‘ravishment’:

> **Him**: (escalates and undresses her the moment they walk inside)
> (…)
> **Her**: I feel quite unreal

Careful with ‘telling her to tell you she’s yours’: it’s lower power and semi-toxic
It sub-communicates *you* want her to be yours, but *she* should want to be yours.
Same with ‘tattoo my name on you’.

8.2. Don’t Be Passively Led

Some women enjoy physical strength games.

She might for example wrestle you, or take charge of the escalation.

She’s rarely leading to sex, though.
Women only lead to sex with men who played coy all along, *not with men who lost their leadership*.

So you must either win or, I recommend, sidestep that game altogether.
⍰ Example here (alumni)

I don't know who started this old trend but it wasn't a dominant man

⍰ Example: Teasing For Your Sexual Domination

Some women tease men to take sexual charge.

If the man acts on those signals it ends in lots of moaning and requests of harder pounding.

Example:

> **Her**: (coquettish attitude) I'd like you to leave,
> so I that can take a bath <— Hints at naked body
>
> (puts perfume)
> (stares him down) <— Challenge
> (walks away) <—- Forces him to follow
> (laughs at his outburst) <—- Covert attack at his manhood
>
> **Him**: Shut up, pushes on the bed, escalates

But note that **when women tease men to dominate them, the power rests with the woman**.
Or, at least, she feels in charge for orchestrating the reaction and him *re*-acting.

To regain power after intimacy, he must have her come to him.

8.3. Predator-Prey Frame

Not the greatest example as alcohol had its effects, but compared to toothy smiles at the company party, it stood out:

> **Her**: What a sight.
> It has something sexually aggressive, as if you're a wolf and I an innocent sheep

An intense, unblinking gaze can feel threatening with strangers, but in the right context and after comfort is established, some women experience it as highly seductive.

9. Dominant Relationships

Dominant men naturally resist women's 'domestication attempts', and maintain power and attraction in relationships.

9.2. Provider Dominance

Some authors confuse any "providing" for submissiveness ('beta males').

This is a limited view because the dynamics are different for high-status and dominant men.

⍰ Trump/Melania example

> **Trump**: I'm not gonna be doing the diapers.
> (…) She'll be an unbelievable mother. <— Judge power move
> (…) I'll be, you know, making my deals. <— His role is to make money for luxury lifestyle

Also read:

And of course:

- **Alpha f*cks, beta bucks**

> The Science of “Alpha Fucks Beta Bucks” (Facts VS Myths)

Positive Dominance vs. Pathology

Male dominance in dating is most important for short-term mating (Brown et al, 2022).

But **excessive dominance can become repelling in long-term dating** contexts because women fear it can turn against them.

The solution is simple: men must combine dominance with warmth, use it within win-win frames, and ensure she feels safe.
Indeed, research suggests that positive dominance is most attractive. And it remains attractive in long-term contexts as well.

This is important for women, and especially women asking us ‘how to date dominant men‘.
They may confuse *positive* dominance with *value-taking* dominance. And their attraction for short-term can turn into long-term toxic relationships with an abusive man.

This is a preview of Power University, where we help men become positively dominant—earning men’s respect, and women’s attraction.

How to Maintain Her Attraction in a Relationship: 7 Strategies of High Value Men

Lucio Buffalmano · 28 February 2020 · Archived copy · Original

Keeping her interested and committed isn't about making her insecure or playing the perfect boyfriend—it's about mastering the dynamics of attraction, respect, and power.

As the most visited website for men on power dynamics and strategies, *The Power Moves* brings you expertise on respect, attraction, and influence.

In this guide, you'll learn the key strategies to maintain your edge and build a relationship where you stay in control and respected.

Superman doesn't worry about keeping her attracted or 'controlling her'. Soon, you won't either.

- SUMMARY

1. Selection: Pick With Chemistry In Mind

So simple, so obvious… Yet so overlooked.

All dating advice for men and for women teaches people how to get those who are on the fence about them.

That might make sense for the short-term.
Or for learning to date.

However, it only works for relationships IF you change her mind about you.
Eventually, **she must respect, like, admire, and ideally, be attracted to you**.
And you better enjoy each other’s company.

This is so obvious that it doesn’t need an explanation. But it *does* need reiteration because most people only focus on getting who they want and not so much on who also wants *them*.
When looking for a relationship, this is the sweet spot:

A good mix is:

- You like them
- They like you
- They’re on the upper of your expectations

For long-term compatibility, prioritize the top #2.

Even purely from an 'offspring strategy' point of view, children growing up in a healthy household outperform children from a more attractive mate, but in a less healthy household.

2. Work On Yourself: Become A Top-Choice

This makes you a 'high mate value man', and women remain attracted to high-value mate men.

I quote the latest *Oxford Handbook* on relationships:

> Overall, **people in a long-term relationship with a partner who is higher in mate value than themselves are more satisfed** (Conroy-Beam et al. , 2016)

Become a top choice and realize that **looking for ways to 'control her' is both beneath you, and unnecessary**.

To help you out with that we have many details articles, including:

- High-power, and go for win-win
- High-quality
- High-status nonverbals
- Confident speaking
- … Etc. etc.

2.2. Remain Attractive to Other Women

Dating and relationships share some market-like dynamics.

Some people still resist this simple notion that we first shared many years ago.
But today even *The Oxford Handbook of Relationships* confirms as much.

Remaining attractive to other women keeps some positive pressure on her.
And gives you the confidence to enforce healthy boundaries, when needed.

Negotiation dynamics also suggest that **the more alternatives you have, the more power you have** (Fisher and Ury, 1981).

I know that most people recoil here with the word 'power' within relationships.
But that's a bad approach: power is only as good or bad depending on how you use it. Use it for good, and your power is good for both.

Indeed, based on the evidence and our experience, our advice here is this:

⍰ Be A Good Leader For Both

Lead for mutual benefit, respecting her interests.
Inspire her to follow your lead naturally, without imposing or verbalizing it.

⍰ Tips:

- **Define the responsibilities**
  - **Tell her what she's responsible for**, and that you trust her with it
    Ie.: She manages the household/decor/food preparation/holiday planning/events with friends…
- **Let her decide what matters most to her**, but little to you
- **Consider her preferences** for common decisions
- **Mind her well-being when taking important decisions**
  - Influence, instead of dictating
  - Explain *why* when you overrule her preference
  - Make it up to her if you imposed

3. Provide Benefits

Evolutionary Psychology research shows two approaches to relationship influence and control:

1. **Value-taking (push & control)**: harms her and the relationship
   Examples:
   - Strict mate guarding
   - Criticizing her
   - Limit her spending
   - …
2. **Value-adding (pull & influence)**: improves her and the relationship
   Examples:
   - Valuing her

- Gifts
- Date nights
- …

Seek value-adding.
Beyond ethics, research shows lower-value men impose costs because they can't provide benefits (and dark-triad men).

⍰⍰ Don't blame yourself if you resorted to value-taking in the past. It's on a spectrum, it comes naturally to many, and it's simply part of growing (I did it as well!)

⍰ Reminder: Be A *Smart* Giver

Give, but ensure it's part of win-win.

Some notes:

1. **Give *over time***, avoid 'too much too soon'. Let her earn it
2. **Give to the right woman**
3. **Careful with far younger**/attractive women, ensure they're in it for win-win
4. **Ensure she has 'skin in the game'**, that she's investing and invest*ed*.
   - ⍰⍰ A breakup should be costly to both, not just to you!
5. **Careful with raising her status above yours**

Some may call this Machiavellian but to us is just common sense. Give, but ensure it's *mutual* giving or you're just a sucker

3.2. Uplift & Inspire

Once you internalize the first lessons of this course, you can also teach them to others.

Most people, including women, will admire you when you exude positivity and confidence.

Some examples:

And here's one more example with a platonic friend neighbor:

Techniques

1. **Listen and empathize** first to bond and avoid sounding dismissive
2. **Start leading**
3. **Pattern-interrupt the negativity**
   - *"What are you talking about"*

- *"Nonono, it's not like that at all"*
- *"You sound very positive you know"*

4. **Minimize problems** as 'part of life', 'nothing too big' or 'momentary'
   - *"Yeah, it's not ideal, but it's OK"*
5. Attack the source of the problem
   - *"Does it really matter what some gossiping losers think?"*
   - *"If she was a winner, she'd be with a guy like me. But she's not. You are"* <— ⍰⍰ ⍰ Joke/power move to remind her she's lucky with you
6. **Walk her through the worst-case scenario**
   - Encourage her that she can handle it
   - Show that even then, 'it's OK', just part of life
7. **Highlight the opportunities** in the problem
8. **Inject optimism**
   - *"It's OK"*
   - *"Summer is coming"* <— Even trivial works. It's more *how* you say, than *what*

4. Keep Her Satisfied

Principle:

⚖ **Sex grows in importance with growing libido levels**

It's not a must, but picking a partner with similar libido levels is a plus.

⍰♂Lucio's Take: **don't be afraid of 'toys'**

As a 'non-relationship type of guy', I quickly lose interest in mating with the same woman ('Coolidge effect').

For me, the best long-term partner has a lower-than-average libido.

But I also thought that if she's a higher libido woman, then 'you only need a vibrator' for when you're not feeling it.

5. Maintain -Or Grow- Your Power

Principle:

⚖ The partner falling behind worries about attraction, while the one moving ahead worries of being too much.

Over time, he doesn't worry about keeping her attracted—*she* worries about keeping him

Men have a natural advantage because their mate value is less dependent on age and looks, and more on status and income.

Quoting from the same handbook:

> Women are more focused on a partner's status, while men are likely to focus on physical attractiveness and youth (Walter et al. , 2020). As such, the confict between sexes might increase with relationship length because cues of youthfulness decrease and social status may change (e.g. , due to job loss)

Men Who Let Go Lose Attraction

It's OK to relax a bit in relationships, but as for everything, balance!

Most men let themselves go and lose attraction and respect over time.

Result:

Women initiate more divorces and college-educated women, who we might expect to be more ambitious and demanding, initiate even *more* divorces.
Women also report being less happy than men during the relationship (Rosenfeld, 2017), and happier after the divorce (Craft, Erik D, 2002).

5.2. Maintain Your Masculinity

No need to over-stress about 'masculinity', but maintain some ambition and drive.

⍰ Over-chilling lets others down

⍰ You maintain a good edge for yourself and for the world

Letting yourself go turns you into a taker.

⍰ Example:

When I think of men letting themselves go I think of this skit:

> **Neutered Brian**: (Fat, on a couch, over-eating. Knows it's bad for him, but does it anyway because he lacks discipline and ambition)

Instead:

- **Maintain your sports routine**
- **Seek career or business growth**
- **Dress well**
- **Keep learning**
- …

And…

⍰⍰ **Flirting is allowed**.
We don't advise cheating, but flirting and enjoying your appeal to women can help you maintain your confidence and edge—including your Testosterone levels.

5.3. Maintain a life outside the relationship

For example:

- Life mission
- Interests
- 'Me time' you enjoy
- Social circle
- Some close friends

Exceptions: women who feel threatened

Some women may feel threatened if:

1. **The relationship has no 'team frame'**, which is on you to fix so your win becomes the relationship win
2. **Low self-esteem** (Nathaniel Branden, 1994)
   - Perfectionists with little discipline and your wins make them feel inadequate failures
3. **Competitive**, and your wins are their losses
4. **Anxious attachment** who fears abandonment

We dig deeper into the all-important 'team frame' in Power University.

6. Make It A Great Relationship

For example:

- **Spend quality time**
- **Talk to her**
  - Be curious about her life outside the relationship

  - Be curious about her opinion and thoughts
  - Share about your day
- **Surprise her** sometimes with some gifts
- **Organize holidays together**
  ⍰⍰⍰ If you finance it, have her plan it
- **Give for the pleasure of giving** if it's a win-win relationship
  - To make her happy
  - Without keeping track
- **Conflict-handling skills** that avoid aggression and hostility

These are all listed in the *Handbook of Relationship Initiation* as empirically tested approaches to increase your partner's relationship satisfaction.
And the authors summarize:

> The best predictors of relationship satisfaction were ultimately positive love (a combination of passionate, altruistic, and friendship love) felt for the partner, the absence of game-playing love, the perception that one did not use aggressive conflict tactics in the relationship, and the perception that the partner was able to take one's perspective.

"Turns 'I's Into 'We's"

A shared bond a sense of 'we' is a like a protective moat around your relationship.

Writes Dengelegi in *The Oxford Handbook of Infidelity*:

> Conjugate or companionate love can foster a bond that is resistant to the allure of another potential partner. (…) Unhappily, many relationships do not develop a strong enough familial bond (…) relationship fragility and the common practice of evaluating potential new partners may motivate a partner's focus on someone who seems to offer more

In simple words: **everyone 'sees' other options. But if one has a strong bond already, those other options need not to be threatening.**

A strong sign of an existing bond is when couples develop a relational identity—seeing themselves as a **"we"** rather than just two "I"s.
This concept first introduced by Aron (1992) is supported by substantial evidence across several areas of relationship and communication research, and we recommend it for men who seek long-term relationships.

How to achieve that sense of we?
Great leadership and smart frame control.

Poor Ways of Keeping Attraction

Some advice on this topic is valid from a power dynamics point of view, but may promote toxic approaches instead of genuine self-development.

Some of the most popular women's dating books for example rely on manipulation tactics such as 'using sex as a negotiation chip'.

And some popular self-help authors advise on control techniques centered around keeping her fearful and insecure.

While all of these approaches can work, they are all value-taking. They work for you, but *to the detriment of the*

relationship.
What do you gain by turning your relationship toxic?

Plus, you also pay a mental price.
Disempowering your partner harms you because it sub-communicates that you're lower value.
All these 'small-pie' approaches are inherently lower value.

Here are some examples and better mindsets:

- **Defensive/cynic**
  Ie.: 'Women cheat/manipulate, so I do the same" ➡ You can never be sure, but I will do my part. At the very least, I can be proud of myself

- **'Need her less'** ➡ Make her want you more

It's based on the valid 'principle of least interest' (Waller, 1937).
But it's best *ensued*, rather than pursued, or it can be confrontational, defensive, and lower-value.

- **'Be the prize'** ➡ High-quality men are a catch and women know that

Being the prize is the *natural consequence* of who you are, not something you seek.

- **'She's not yours, it's just your turn'** ➡ She's my girlfriend, I feel no need to possess her, but she WANTS to be mine

🤦♂️Lucio's Take: **She WANTS to be yours**

> View this post on Instagram
> A post shared by The Power Moves (@the_power_moves)

Lucio: Women WANT to be yours when you're an attractive man

- **How women control men**: this is how most women control most of the relationship
- **Red flags of a poor partner**

These will help you sport power moves, manipulation, and toxic partners to avoid

SUMMARY

The issue with most advice on maintaining attraction in relationships is that it focuses largely on communication and time together.

While both are crucial, there is more.

Much of the advice that includes power dynamics though includes manipulation tactics that harm both the

relationship and the man's own self-esteem.

This article combined the basics of power dynamics to keep her attracted, with the foundations of win-win that make relationships great for both of you.

If it was any helpful, we have a program that makes her more attracted to you than she's ever been to any other man:

- **Power University**

How to Cover Your Assets with a Prenup

Lucio Buffalmano · 7 March 2020 · Archived copy · Original

Note from Lucio:

We mentioned on this website that money is power -or, at least, an important element in of an empowered life-.

And in "the fundamental strategies of power", we mentioned that win-win collaborations in long-term relationships is power, while wars, especially protracted wars without clear winners, sap your power.
This is especially true with intimate relationships. **With intimate relationships the benefits of collaboration are huge, but the costs of litigation can be even bigger** -both financially, emotionally, and time-wise-.

It's within this framework that a prenuptial agreement can become an important strategic tool to protect your future well-being.
Specifically, **a prenup can be an important tool of your loss-mitigation strategy**, and help cap your downsides in case things go wrong. A well-thought prenup can not only limit your financial losses, but also save you time and resources: life is too short to for endless and bitter legal wars.

Personally, I don't have much knowledge in legal matters.
But Veronica Baxter does have.
So when she reached out to write a post on how the law can help empower people, I immediately proposed her to share her knowledge on prenuptial agreement.
And this is how this post came into being.

You just got engaged and you are planning your wedding – congratulations!

But I hope you have already discussed a prenuptial agreement?

Of course you, your intended, and your families are busy discussing and deciding on the date, venue, guest list, wedding party, flowers, music, and more… but what you and your fiance really need to do prior to tying the knot is

sit down and decide if the individual assets or debts you each bring to the marriage require a prenuptial agreement, or “prenup.”

This is certainly not the most romantic conversation you two will have prior to your ceremony, but it is a necessary one nonetheless. This article will give you a comprehensive starting point for your full and frank discussion regarding finances and asset protection and whether you need or want a prenup. Deal with these issues upfront – while you may never need to enforce the prenup if, at some point you do, you both will be glad you have a prenup.

Contents

- What is a Prenup?
- Who Needs a Prenup?
- How Do I Make a Prenup?
- What Happens if I Don’t Get a Prenup?
- What if You Just Live Together?

What is a Prenup?

A prenup, short for “prenuptial agreement,” is a contract created by a couple prior to entering into marriage, domestic partnership, or civil union that lists the properties each party brings to the marriage and what property rights each has during the marriage and should the marriage dissolve. It may also list the parties’ joint or individual debts.

A prenup may be called alternately an “antenuptial agreement,” a “premarital agreement,” or a “pre-partnership agreement” according to the state in which you live.

Who Needs a Prenup?

While historically prenups were used by a wealthy spouse to preserve his or her premarital assets in case of divorce, today many couples of more modest means use prenups to organize their separate and marital finances in the following ways, among others:

1. Preserving the Inheritance of Children of a Prior Marriage

In most states, without a prenup, a surviving spouse is likely entitled to the entirety of the decedent’s estate, leaving the children of a prior marriage with nothing. A parent can specify in a prenup what assets will pass to his or her children, and when his or her fiance signs off on that the prenup becomes a legally binding contract that the children can enforce.

2. Setting Forth the Financial Rights and Responsibilities of Both Parties During the Marriage

Prenups are as varied as the people making them. The parties can establish upfront who will be responsible for paying specified joint bills or debts during their marriage.

Setting forth the financial rights will help you cover against, for example:

- Men or women who live above their means during courtship, lying about their jobs, income, or level of debt;
- Men or women who play a “bait and switch game”, being cooperative and financially sound during courtship, but then turning uncooperative takers once married;
- Discourage potential gold-diggers, either male or female, who want to marry up and then divorce as soon as they can secure a strong divorce settlement (smash and grab weddings, see Talulah Riley and Elon Musk)

Talula Riley received 16 million cash, plus assets. Not much for Musk, but enough to attract a horde of potential gold-diggers

3. Protecting One Spouse from Responsibility for the Debts of the Other

If one spouse comes to the marriage with individual debt such as student loan debt, a mortgage, or a car loan or lease, the couple can use a prenup to establish individual responsibility and liability for those debts.

In some states, a couple can use a prenup to establish individual liability for future medical debt.

4. Avoiding Arguments in Case of Divorce

This is the classic reason for entering into a prenup.

Imagine if love ever after is not in fact love ever after. How does a prenup help?
With a prenup, you can agree in advance what your spouse will get in case of divorce.
This will avoid nasty fighting and legal expenses, and it can protect you against your spouse seeking to appropriate 50% of your total net worth in some states.

5. You May Have to Pay Support Despite a Prenup

Be advised that many states do not allow a spouse to waive his or her right to alimony or spousal support, so that term will be unenforceable.

In this case, the remaining terms of the prenup may be enforceable depending upon how fair it is and whether it meets the other requirements for enforceability in your state.

In most states, the standard for spousal support is to maintain the marital lifestyle. The length of the marriage and the employability of the dependent spouse may also be factors in determining the amount of alimony.

How Do I Make a Prenup?

The requirements for a valid prenup vary by state. As a general rule, a prenup must be in writing and signed by both parties to be valid and enforceable and must be freely entered into by both parties. Many states require that the prenup document be notarized.

Every state allows prenups, but **prenups must be fair and meet any other legal requirements set forth by the state in which you live**. Historically, courts have carefully scrutinized prenups and have frequently held that they are invalid, as prenups were most commonly used to unfairly strip a less-wealthy spouse of rights to the other spouse's property should the marriage end.
Nowadays, with divorce at an all-time high and most women working and owning property individually, **prenups are viewed as an estate-planning tool between equal partners**.

A prenuptial agreement can address just about any marital issue.
Take the case of Michael Douglas and Catherine Zeta-Jones. Their prenup sets forth a sum Catherine will receive if Michael is caught cheating.

Douglas and Zeta-Jones drafted in their prenup what will happen if Douglas were caught cheating. You can plan almost anything in a prenup

It is important that even if you both agree on the terms of the prenup, you each bring it to separate attorneys for review, **and it's important that you insist your partner also brings the prenup to an attorney**.
This will tell the courts that, in the event one of you seeks to enforce the terms of the prenup, you each had the advice of legal counsel and entered into the agreement freely, knowing the consequences.

What Happens if I Don't Get a Prenup?

If you don't enter into a prenup, in the case of divorce or the death of one of you your property will be divided according to the law in your state. This means that **without a prenup you give up control of what happens to your property and/or debts**.

State law will dictate what happens to property acquired during the marriage (called marital property or community property in some states) and may also dictate what happens to individual property acquired prior to the marriage.

Without a prenup, the courts have the authority to make financial and property division decisions for you both in the case of divorce, if you cannot agree among yourselves. Think about it – chances are that one or both of you will feel some resentment or animosity caused by the end of the marriage and that those emotions will interfere with your ability to agree on the division of property or joint debts.

Take the case of Fresier star Kelsey Grammer. He and ex-wife Camille Donatacci did not sign a prenup, and now Camille is likely to receive $30 million of Grammer's $84 million fortune.

Marrying without a prenup cost Grammer $30 million

Finally, without a prenup or will, your state's laws of intestacy will dictate what happens to the individual property upon death.

What if You Just Live Together?

Living together is a popular alternative to traditional marriage and a prenup can help you in this situation too, by setting forth each person's financial rights and responsibilities upfront.

If you live together without marrying, most states would not award the dependent partner any type of spousal support should the relationship end. That can make non-marrying a rational choice for people who are particularly afraid of the fallouts of a divorce -see "Men on Strike"-.
However, things change if you have children with your live-in partner, and **if you have children, you will be responsible for child support**.

That's why a prenup is a good idea even if you are simply living together.
If you are in a relationship, married or not, and you want or need to organize your individual or marital assets, debts, or financial responsibilities, a prenup is for you.

The Tactical Guide to Women: Summary & Review

Lucio Buffalmano · 8 March 2020 · Archived copy · Original

The Tactical Guide to Women is a mix of a relationship advice book, and a dating book for men. Shawn Smith, the author, teaches men how to find the perfect woman to start the best and healthiest relationship you can have.

Contents

- Bullet Summary
- Summary
- More Wisdom
- Real-Life Applications
- Criticism
- PROS
- Quotes
- Review

Bullet Summary

- Marriage brings potential huge benefits, or potential huge costs
- To pick a good partner, first, you must know yourself
- Know your values and what you stand for, and find a partner who fits them
- Don't pick based on looks; pick based on compatibility *and* looks

Summary

About the Author:
Shawn Smith is a clinical psychologist, coach, and author. He also writes on his blog, docsmith.co.

The book is divided into three parts:

1. The first part serves to help men understand themselves
2. The second part is about understanding good women and avoiding bad ones
3. The third part is focused on common mistakes and risk mitigation, including legal ones such as prenups

Marriage Is A Momentous Decision: You Must Do It Carefully

Getting married is one -possibly the- most important decision of your life.
You *must* be careful and strategic about it.

Research shows that men in stable marriages earn 20 to 24% more money, enjoy more and better sex, are happier, healthier, and live longer.

On the other hand, a broken marriage is extremely costly.
As Shawn Smith says:

> **Marriage can present the best return on investment of every decision you make.**
> **Or it could be the costliest mistake of your life**

If you get married without being strategic about whom you marry, you are gambling.

And since it's more likely that you end up with a partner who is not a good fit for you than one who is a good fit, you are gambling with the odds stacked against you.
BUT, **if you learn to read the signs of a good partner, then you can put the odds in your favor**.

The Tactical Guide to Women is dedicated to teaching readers how to read the signs of a high-quality woman who is also a good fit for you.

What Women Want

This section quickly reviews what women want, as proven by *evolutionary psychology*.

I have already written more extensively than Shawn describes in his book, so you can review:

- **Sexual market value**
- **Sexual market value hacks**
- **Proven dating strategies for men**
- **Dating efficiently as a lover or as a provider**

Or if you want the extended version all in one, grab Power University.

Shawn Smith adds "masculinity" to the list of traits women want, and that's a central theme of his book.
Smith says that **masculinity has been under attack by a small and vocal minority in recent years in the West, but it's a misplaced attack: (positive) masculinity is not toxic, and women like it.**

As Smith says:

> In decades as a psychologist, I have heard plenty of complaints about husbands and boyfriends, but I have never heard a woman wishing their man was more like a girl.

And this is what The Power Moves community thinks about:

- **Is masculinity under attack in the West?**

Risk Mitigation #1.: Know Yourself

The first step in your romantic risk-management strategy is knowing yourself.

As Smith says:

> You can reduce uncertainty and risk by understanding what makes you tick, and why you choose certain women. Without that knowledge, you are the most uncertain variable in your romantic life

Smith says that to know yourself, you should know:

1. **Where you came from (your past)**: some people tend to find partners who soothe their deepest insecurities. For example: insecure individuals chase their partners away. Men born into alcoholic, broken families can try too hard to appease women who are never happy to avoid their family's fate. And women who learned to get attention with tantrums will end up with those service-oriented men.
   Only when you learn about yourself can you override your short-term impulses and rationally pick what's best for long-term
2. **Where you're going**: you must be clear about your personal values. "No man can know what kind of woman will best fit into his life until he knows what his life is about".
   The most important value for a man is his purpose. Lack of clarity and purpose attracts lower-quality women and the wrong ones.

Picking a woman with vastly different values will eventually create a rift. Among all the values to pay attention to, “gender roles expectation” is also one you should be watching for today

3. **What gets you out of bed**: Men are happy and fulfilled when they get good at doing what they are driven to do.
   Once you know what drives you, present yourself exactly the way you are, without deceiving women. That way, you will attract and maintain women who are a good fit for you

The above three also form the chapters on “knowing yourself”.

The first chapter, “where you come from”, is most useful for people who have some deeper insecurities or troubles. I think that most fairly healthy individuals do not fall for those toxic cycles.

The second chapter explores values and how you can find out your values

The Mind Needs Supervision

The mind is in the business of short-term relief and pleasure, not long-term success.

That might have been OK in Savannah, but it’s not optimal for successful, modern living.
And unless you are aware of it, our brains can work against you for long-term, healthy relationships.

This is how men assess long-term mates:

1. Attractiveness
2. Veeery distant second is how good a fit she is for us

I personally would add that most men assess attractiveness, *then* availability, and most *never* consider whether she is a good fit or not.

Women are equally poor, and maybe even poorer, at assessing long-term potential, so don’t count on them to help you out there.

Smith proposes a simple solution for long-term, successful relationships:

1. Screen for a good personality fit first
2. Find an attractive woman among the ones who are a good fit for you

If we’re talking about long-term relationships, I think that makes sense.
If you’re more in short-term mode, then attractiveness first and no consideration for a good fit can make sense—albeit even for a one-night romance, a good fit always makes it more pleasurable.

Watch Out For the Tendency of Rescuing Women

Some men have a strong tendency to chase broken women, seeking to fix them and make them feel better.

This is true indeed.
A few emotionally unstable women I have met had men fall in love with them when they met them crying in the worst possible places.

The reasons men white-knight to rescue women are:

- They believe healthy women are out of their league
- They seek the thrill of being a powerful figure in her life
- They’re avoiding their own problems by fixating on someone else’s
- Their upbringing made them comfortable around people who were in constant crisis

Says the author:

> I've never seen a truly altruistic white knight (…) the need to rescue women is a pretty reliable sign of insecurity within a man.
> White knighthood is a recipe for resentment. You'll tire of her drama, and she'll tire of your supervision.

The author says that albeit white knights are rarely truly altruistic, they tend to be good people and are rarely malevolent.
But you must restrain yourself from it.
He says:

> If you seek real fulfillment, then only pursue fully functioning, adult women who know how to internalize responsibility for their lives.

Smith's point of view here is that broken women are OK *as long as they are willing to work on themselves.* Otherwise, your stance should be: get help or lose the relationship.

It's your moral duty and obligation to help your partner. But if she isn't helping any, then she can't be helped and will only drag you down.

Don't Apologize For Your Purpose

One of the most destructive things a man can do is apologize to his woman for his purpose.

Well, sometimes women are right and men get too caught up in their purposes, let it consume men until it's unhealthy, and deny their women and family too much together time.

However, do not apologize for being a busy and driven man. Scaling back to the point where you damage your sense of purpose will not be good for either you or the relationship.
That's what attracted her to you in the first place, and that's what makes a high-value man.

Balance is crucial: sometimes being a high-value man means being able to say no to work or cut back on work to give your loved ones more of your time.

Says Smith:

> Remember that balance sometimes also means disappointing your team in her favor sometimes.
> Be sure to make it up to her when you must disappoint her, but set a strong precedent in the beginning of the relationship that your purpose on the planet is non-negotiable.

And a little later, says the author:

> I hope you will guard your man card, whatever shape it takes for you, because it has a direct bearing on your wellbeing.

In any case, says Smith, you shouldn't worry about a good woman wanting you only for her 100% of the time.
He says:

> **Only an unhealthy or immature woman would undermine a man's status by impeding his purpose in the world.**

I couldn't agree more.

> The 10 Traits of High-Value Men (W/ Examples)

Don't Apologize For Your Responsibilities

A similar topic to your purpose is accepting responsibilities in life.

Men must accept responsibilities, either connected to their purposes, to their values, or to their communities.

Some men might feel a responsibility to stay home and care for the children, while others might be very busy with their church community.
In either case, a high-value man who gains respect and acceptance from women fulfills his responsibilities without apologizing for them.

Pick-Up Artist Advice is Bad If It Means Adapting to Her

Seduction advice can be good, says Smith.
And it doesn't necessarily increase the odds of picking the wrong woman.

However, a lot of pick-up advice is geared towards molding yourself around any random woman you meet, which is the equivalent of saying that you'll be dating and approaching while not being true to yourself.

That's the best strategy for ending up with a woman who is not a good fit for you.

Male Hierarchies, Female Flat Structures, & "Toxic" Masculinity

The author dedicates an important part of the book to masculinity, his critic against "toxic masculinity", and how men differ from women, especially in hierarchies.

I found it to be all true, and very high-quality material.

The main takeaway is that men shouldn't feel ashamed of being men, if being a man means playing competitive games, knowing one's place in the hierarchy, and seeking to climb those hierarchies.

Says Smith:

> Good and women don't require us to be at the top of the pecking order. They just require us to be in the pecking order -and preferably working our way up-.
> If she will accept nothing less than the top bird, well, be sure you can live with her motives before you commit.

How men and women differ, was also interesting.
But I find it to be more theoretical knowledge unless you use it for some specific goal you have -for example, career strategies-.
And that's why I will be implementing that type of material soon in the workplace section of Power University, organized in more strategic and practical fashion.

The Bright Triad

The 3 traits that make a woman a good fit for a long-term relationship are:

1. **Clarity**: clarity means you will not spend time quarreling or fighting about who's right, but you will go to the source of the issue like two adults (and BTW: if you spend time verbally quarreling, women are better and will get under his skin most of the time)
    1. **Reliability**: expresses herself constructively, avoiding tantrums, covert aggression, and passive-aggressiveness
    2. **Inquisitiveness**: this is the curiosity and drive to understand what's going on, set aside the need to be right,

and focus on solutions. Inquisitiveness transcends good communication skills.

3. **Assertiveness**: she needs to be strong enough to assert her desires, or she will grow to resent him without him even knowing about it. Assertive women state their needs openly, they don't manipulate or use underhanded tactics

2. **(Emotional) Maturity**: it's about emotional maturity, such as coping with challenges, accepting personal responsibilities (internal locus of control), but in a positive way, without blaming herself for everything that is bad in life. Among the signs of maturity to look for:
   1. She can calm herself when she's sad or angry -instead of depending on you or blaming you for her states-
   2. Self-care, she takes of herself physically and emotionally, she can look at the positive of lives.
   3. She accepts that life is unfair, and that reality is of shades of gray: she does not go through patterns of idealization and vilification
   4. She understands herself, can accept and work on her limitations
   5. She is resilient, can tolerate distress, lick her wounds and go back in the game (rather than breaking apart and sucking up all your energies)
   6. She keeps commitments
   7. She bases important decisions on values rather than impulse
   8. She takes care of relationships and doesn't burn bridges
   9. She possesses the emotional resources to function well in among coworkers, family, and friends
3. **Stability**: this is about mental health and avoiding the most common mental disorders
   The most common problems to watch out for are the top 3:
   1. Depression and anxiety
   2. Substance abuse: that includes consuming marijuana every single day
   3. Unresolved emotional injuries:
   4. Personality disorders: psychopathy, sociopathy, BPD, histrionic women (in non-clinical parlance: a drama queen), OCD. to keep it short, these people all have intense and inflexible experiences, their thought patterns lack complexity, and are ineffective and poor at human relationships

Avoid the Advice of Bitter Men

Says the author:

> I'd avoid men whose opinions are tinged by anger because that emotion is one of the underlying sources of white knighthood.
> Men who have successfully overcome the problem and who built healthy relationships with women generally speak and write with compassion and humor, not bitterness.

- **The Rational Male**

> The Rational Alpha Male Mindsets: Post-Red Pill

Decide If She's A Good Fit After the Infatuation Phase

The honeymoon phase is not the time to make long-term decisions because you are not being rational.

Research shows the honeymoon phase lasts between 12 to 18 months.
And the author says that before making a final decision, you should wait 12 to 18 months, *plus* one more year.

My Note: I Don't Fully Agree
Albeit the general principle is right, I have more faith in the human mind.
Two and a half years to just decide if she's good for an LTR is a long time, in my opinion.
I would tell my readers that they can decide earlier *if* they can step back from emotions and make more rational decisions.

The System Is Skewed Against Men

The author, interviewing the author of "*Men on Strike*", says that divorce law can disadvantage men.

Society also created the wrong impressions that men are more violent in relationships, but the opposite is true: women are quicker to escalate from verbal to physical confrontation.
If police shows up and they're not sure who did what, the man is the one who will get arrested.

That makes it all the more important that you avoid hostile women.
All these are signs of hostile women that you need to avoid:

- Physical assaults
- Always angry, possibly angry at men (avoid extreme feminists)
- Yelling and shouting
- Threats (threats of breaking up, of not being allowed to end the relationship, of physical violence
- Humiliation (talking down to you, telling you're worthless)
- Separating you from your friends and family
- Belittling or diminishing you
- Ordering you around
- Telling you there's no way out of the relationship
- Physically blocking your exit during an argument

If she's physically blocking your exit, don't force your way through or you can easily be branded -and prosecuted- as the abusive one. Call the police instead.

Some men remain stuck in abusive relationships out of a sense of obligation, or because the relationship turned abusive slowly over time and now they feel that breaking up would be too costly.

The author of course encourages men never to accept these toxic relationships.
He says:

> **The ideal woman isn't merely non-abusive, she is kind.**

Here is how to recognize kindness from simply putting up a facade early on:

- She's empathetic: takes genuine interest in your thoughts and feelings, and does the same with others
- She speaks about former romantic partners with respect
- She's kind to people she doesn't need to be kind to: like waiters and clerks
- She routinely brightens your day
- She's attentive to your needs, not competitive about them

- She won't resist helping you when you need it, paying for dinner once in a while, or letting your needs take center stage. She gives willingly and happily.

I couldn't agree more.
To me, the above signs are #1 priority in a partner. Also check: strategies for long-term power.

https://thepowermoves.com/the-fundamental-strategies-of-power/

Probe for Compatibility, Don't Play House

There are a few general statistics that make relationships more likely to endure, like religiosity, family of origin, or number counts.

But those are statistics, and they matter little compared to more important factors such as willingness to be together, and compatibility of values.
Among the things to check:

- **Include her in your activities and social circles**: lovers tend to isolate themselves. Instead, you should spend more time doing the things you like, with the people you like, and see how she fits
- **Be open and outspoken about your non-negotiables**: we all have something we can't stand doing. Be clear about them from the beginning
- **Be open and outspoken about what you can't stand**: if something about her annoys the hell out of you, like her chewing loudly, or having to spend all weekends with her family, say it and see if you can find a workaround -or they will doom your future-
- **Look for signs of long-term compatibility**
- **Look for contradictory values**: different values don't kill relationships, but opposing ones do. If you love sports and she doesn't, it's OK. But if you love sports and she can't stand you not being on the couch with her while you do sports, that's a problem
- **Don't stick with partners because you liked the conquest**: there is some thrill in getting together with people who are completely different than we are. But it's best not to stick with them
- **Discuss the meaning of money and sex**: do you both value
- **Discuss children**: do you both want them? Neither of you wants them? These are important issues to discuss early

More Wisdom

- Look for red flags early on. Big red flags, like her screaming at you for no reason should be your cue for your running exercise
- The more high-quality you become, the more you can become the target for women who are not a good fit for you
- People like narcissistic individuals more than non-narcissistic ones. Yet, they don't like them as friends. Again, the mind is leading us to poor relationship choices
- Finding one's purpose is one of the biggest challenges for young men, but women are willing to cut some slack if he works hard towards finding it
- Some of the best ways to avoid future problems are:
  - Ask her how things are going
  - If you're arguing about the same things over and over, stop and do couple therapy
- Living together and shacking up for convenience or to "test the relationship" actually increases the likelihood of divorce or separation

- Never be “kind of between”, but choose defined states. She’s either nothing, your girlfriend, your fiance, your wife. And she has to earn the title.
- Listen to what family and friends say: they might have a better perspective from the outside
- Listen to your intuition, it does work
- Don’t try to fix relationships by adding more commitment or taking to the next level: that’s like saying a drowning man can do better with more water
- If you’re having a lot of troubled relationships, look inward. And if you can afford, seek as many exes as you can find and ask for their candid feedback

Real-Life Applications

- **You Need Self-Respect, Not Self-Esteem. Go Get Promotions and Raises**

The author criticizes part of the self-help movement who encourages people to tell themselves they’re good the way they are.
“What a croc”, he says.

Smith knew better, and he knew he needed self-respect, not self-esteem.
How do you gain self-respect?
In the past, there were rites of passages. Today, the new rites of passages are repeated accomplishments such as promotions and raises -or, I would add, Mastery-.

In the words of the author:

> ***Choosing* to become useful is what saved me.**
> **(…)**
> **To be a man, is to seek effectiveness. (…) The man who is serving is purpose, and doing it well, is on top of the world.**

This part was genius indeed, and it’s something that a lot of young men struggle with.
I will be adding it to our ebook “Ultimate Power” (now part of Power University).

Criticism

I loved “*The Tactical Guide to Women*“.
My main criticism is simply a different approach to picking the right woman -and how much time to spend on that decision-:

Instead of a set of traits, prioritize with a hierarchical list, and de-prioritize all traits that can be learned

The author lists a high number of traits *all* at the same level of importance.

I disagree with that.
Mathematically, is almost like looking for a lottery victory.

The approach I advice is to list the *top* traits you want. And then accept the trade-offs for the less crucial traits.

At the top, you want some meta-traits that allow for the acquisition and development of more positive traits.
For example, many of the traits the author mentions can be learned *if* the woman is willing to learn and improve.
Thus, you can put “growth mindset” and “kindness” high up, but then demote all the traits that can be learned.

You don’t need a woman with great communication skills, or assertiveness, if she is willing to learn and work on herself and the relationship. Because those can be learned.

As the author himself says:

> Any woman who can alter her destructive partners is surely a keeper.

Indeed, even some negative patterns can be OK *if* she is willing and able to work on them.

Accept some Trade-offs

I wish the author had also mentioned that relationships also entails trade-offs.

Recently I was asked by a young and driven man, whether he should stay in a relationship.
And albeit I advised him to end it, I also make the point that very drive and very high quality men might have to be ready for a few trade-offs. Expecting a woman to be everything you want, and the perfect fit, but be a mathematical chimera.

That's why I also prefer a list with the top traits higher up. Once you hit those, the trade-offs lower down won't matter much.

Waiting for sex does not empower the man?

The author says that to set up a long-term relationship, you should wait for sex.

While I don't fully agree, I also see there might be some positives in not rushing a long-term relationship.
However, I do fully disagree when the author says that waiting empowers the man because sex is a tool of female power. To me, that's a failure to understand the power dynamics of the sexual marketplace.
Also see:

- **Patterns of power in a relationship**

> Relationship Power Dynamics 101

Waiting for 2 years + is too long

Rationally, it makes sense that the longer you wait, the better your decision will be.

However, there must be a trade-off, and more than 2 years seems too long.

Do we naturally pick the wrong partners? No, we pick random partners, and random partners are more likely to be bad partners

This is more of a theoretical criticism.

I was unconvinced by some evolutionary psychology explanations, like why we pick the worst possible partners for us.

The author says that we pick the worst possible partners because of our evolutionary history.
It made sense to pursue wrong partners because we evolved in environments with little choices. Couple that with our brain being in the business of immediate gratification, and you got the recipe of why we pick the worst possible partners.

But that's not a good explanation. That explains why we don't naturally pick the best partners.
But it doesn't explain why, as he states, some people go for partners who are not just not good for them, but actively harmful.

In my opinion, Shawn Smith might have developed the wrong perception because of his work, where he mostly cured the worst possible couples. That skewed his sample.

I believe instead most people do *not* seek partners who are actively harmful for them.
Most people seek partners without knowing how to pick their best partners, and since the odds are stacked against any individual being high quality and being a good fit for us, random partners end up being poor partners the majority of the time.

There are exceptions though, and some people with unresolved issues do pick partners who are the opposite of what they need.
See: toxic relationship dances, low self-esteem relationships, and anxious-avoidant relationships.

PROS

The Tactical Guide to Women approaches dating and relationships from a holistic point of view, and from the ground up.

The main idea is that first, you make yourself into a high-value man. Then, you seek a high-value woman who is compatible with you.

That's the simple winning formula, and this is one of the few books who addresses it properly

Quotes

On what men and women prefer

> **Men in general prefer a nice hip to waist ration.**
> **Women, in general, prefer a nice debt to asset ration.**

On taking responsibility:

> **When it was over, Chris was plenty bitter for having wasted his twenties on such an incompatible partnership (…) blaming her for ruining his life.**
> **I think that's unfair, because he chose to bring her into his world.**

On drama and its costs:

> **Drama is expensive.**
> **It consumes time and energy that could be used for better things, like conquering the world or just relaxing with a beer.**
> **Dramatic people are thieves. Low-grade thieves, to be sure, but they force others to redirect their efforts away from their goals and their happiness.**

On taking marriage seriously:

> **If I'm scaring you about marriage, good. It's a momentous decision.**

Review

The Tactical Guide to Women is a wonderful book.

Shawn Smith's work is very much in line with this website:

1. **Focus on yourself** and your self-empowerment first
2. **Seek collaborative partners** who can play within a win-win framework (part of "enlightened collaborator approach")

3. **Actively develop those relationships as win-win**, in a way that adds value to both of you (part of "enlightened collaborator approach")
4. **Be the natural leader of that relationship** not by coercion and manipulation, but by virtue of the high-quality man you made yourself into

Amen to that.

The book itself could have done with better editing.
Sometimes it repeated itself, and the list of traits to look for was too long and that can be confusing.
But it remains a foundational book for anyone looking to date better, and find the best possible partner.

The Power Dynamics of Cancel Culture: Why Guilt is a Power Move

Lucio Buffalmano · 10 March 2020 · Archived copy · Original

Cancel culture is often discussed as a political phenomenon, but at its core, it is a sophisticated **war for narrative control**.

It functions as a loosely connected social movement that leverages virtue-signaling and collective or individual shaming to displace existing value systems.

By orchestrating 'shame attacks'—ranging from social media deplatforming to professional termination—the movement seeks to enforce a new social hierarchy through the strategic use of virtuous frames, guilt, and judge authority.

To understand cancel culture is to understand the timeless mechanics of how individuals and groups use moral leverage to gain personal and social power.

In this article we'll understand the underlying principles and learn new insights into social power dynamics, personal empowerment, and self-defense.

Intro

The cancel culture will eventually end, lose steam, or morph into something else.

What will remain, though, are the psychological and power dynamics underlying this movement.

So, in this website's spirit of writing timeless articles, we use a more appropriate label that describes the effects of the cancel culture on its victims: "guilt-tripping".

> Guilt tripping is a movement that focuses on a group's wrongdoings or supposed privileges only, ignores the merits and positive contributions, and blames it all on every single individual supposedly part of that group

The Positives of Culture Wars

It's important to note that it would be simplistic to label all culture wars as positive or negative.
In most cases, it's a mix of selfish and pro-social values and outcomes. And some culture wars can bring about positive change.

The first people petitioning for human rights were civil heroes. Crowds demanding the abolition of the monarchy in the name of equality were civil heroes. And the first woman who stood up for the right to divorce was a hero.

Guilt-Culture's Dynamics

The underlying dynamics are always about power.
The attacker self-frames as the judge-authority for what's right and good, while the victim is framed as 'not good' and unworthy of belonging to society.

At the higher level, culture wars are wars for frame control.
Setting the frame of morality that people and society should abide to. To defend yourself well, you must be aware of these dynamics, usually avoid defending, and use instead higher power frame control techniques.

Important elements in culture wars and guilt-tripping include:

Social Power & Narrative Control

Cancel culture is a form of 'culture war', and it's nothing new under the sun.
It's how loosely connected groups of people with somewhat of a common goal fight the war for influence and

power.

The group that 'wins' gets to change the culture and the law in a way that best benefits the group.

Have vs. Have Nots: The 'Bad Privileged'

Often under attack are a supposed class of 'privileged people'.
The Power Dictionary calls it "privileged guilt-tripping", and defines it as such:

> The hostility or aggression, either overt or covert, directed towards certain groups of people who are accused of enjoying or exploiting an unfair advantage to the detriment of others.

The groups under attack are sometimes referred to as "privileged". And if you are in any of those groups now considered "privileged", you may be an easier target.

Shame Attacks

Guilt can be delivered with aggression, rightful anger and indignation directed at a target who supposedly behaved unethically when judged by the new standards of ethics.

The goal is to shame the victim, socially ostracize him—or make him feel like he's being ostracized-, make him feel bad about himself, force him to apologize to the world, and if the attack is most effective, cancel him or push him towards self-canceling.

Manipulation for Power

Sometimes, of course, the anger can be called for, and the victim can be a real SOB.

But sometimes guilt-tripping and shame attacks are about power, manipulation, and self-manipulation. It's aggression hiding behind the guise of fake social justice.

The more you can make others feel bad, the more those others will give up their rights and act submissive. And the more competitive advantage the guilt-inducers will enjoy.

Self-Enhancement

Guilt tripping is often delivered with a guise of virtue.

That virtuous frame provides two advantages:

- **A virtue-cover for personal bitterness** because anger alone comes across as nasty
- **Reputational boost** for 'fighting the good war'

Double Bind

In a way, the guilt-movement is a big, society-wide form of double-bind.
This is how it works:

> I despise you because you are abusing of your privileges to oppress me and bully me.
> But you can't despise me because, if you do, you confirm that you are oppressing me, and that I am right for despising you.

Be damned if you accept their finger-pointing, and be damned if you seek to rebel against it.

People who don't see the double-bind and accept that frame end up feeling guilty and without any recourse—and often, without having done anything wrong-.

Collective Guilt

Whenever guilt tripping doesn't attack individuals with shame attacks, it seeks to shame them by association.

For example, if powerful white men are supposedly oppressing others, then being a white man makes you 'guilty' by association.

This is an aspect of 'collective psychology' that we reject. It's fortunately been long rejected by legal systems around the world, fortunately.
Read more:

- **Empowered individualism**

Modernity & Out of Control Guilt

Today, we have all kinds of people wanting you to feel guilty about all kinds of issues:

- Guilty for polluting
- Guilty of having exterminated animals
- Guilty for global warming

Rejecting guilt doesn't mean rejecting responsibility for being good citizens.
I believe it's a generational duty to protect shared resources and maintain a good Earth for future humans.
But taking care of others and the environment is supposed to *free* you: you're doing your part.

Guilt is not only useless, but it's also unhealthy.

And, naturally, the species that becomes the most dominant will drive a few other species to extinction. Being emotionally mature also means accepting that there are certain trade-offs in life.
And **it's either lions, bears, and tigers roam the planet as they please, or *you* roam the streets in safety**.
Our responsibility is to avoid any unnecessary animal suffering. But it is not to preserve any single species on earth, no matter what.

Anyone who disagrees and doesn't want to be a hypocrite should lead by example and go back to living in a cave.

Great is *both* part and victim of guilt-culture.

Why Now?

I cannot think of any other time in human history that we've been inundated with so many messages about how bad we are.

Why now?

In a way, it's a sign of opulence.
As we live in a world largely free of major risks, people have enough time and resources to dedicate mental cycles to abstractions like "fairness", "equal opportunities", "animal rights", etc.

And, by and large, it's a great thing we are tackling these issues.
This is the pinnacle of human enlightenment: taking responsibility not just for us but for the planet and the other living creatures as well.

But it should be done rationally and intelligently.
Finger-pointing and guilt-tripping are neither intelligent nor helpful ways of going about it. They are abusive ways of going about it.

If you allow it, that guilt-culture is going to disempower you.
So now let's discuss the effects of guilt-tripping and then some solutions.

Attackers' Profiling

While culture wars can be positive, they often tend to simply seek change. Change that often benefits them, but that may or may not be good for society.

For example, it feels that today's culture wars may be less driven by the will for positive change given that most basic rights are in place for all, in the West.

So some attackers may be more driven by less noble and darker and more self-serving motives, including:

- **Ego-protection against personal failure**, blaming the system or someone else's privileges
- **Finding meaning** in a novel crusade to find a sense of meaning and purpose while also feeling good
- **Competitor-removal**: removing a competitor from a group, or a company
  - Manipulative warfare (social sexual competition): I make you guilty so that you become more submissive, less assertive, and easier to control and win against
- **Quest for power and status**: construct a made-up enemy, lead the charge against them, and win easy accolades

Case Study: Oppressive Men?

This Oprah's speech is a good example of that last one:

> **Oprah**: *She lived as we all have lived, too many years in **a culture broken by brutally powerful men**. For too long, women have not been heard or believed if they dare speak the truth to the power of those men. **But their time is up. Their time is up.***

Their time is up?
Whose time? Powerful men? Men in general? That's messed up. Many powerful men are good people.

If she was targeting men who *abused* their power, then she'd be right. But it was crucial to be accurate there. Because the way she delivered it, she's attacking a whole class of people, instead of individuals.

The dynamics at play in Oprah's speech are dangerous. They're no different than historical scapegoating that caused massive grief for millions of people.
You could turn Oprah's speech into *any* speech that, throughout history, led to mass prosecution.

We don't need more people fanning small flames of discontent into a huge fire. We need more conciliatory men and women to build bridges.
Don't fall for the war rhetoric of the charismatic leader.

Supporters' Profiling

Among the supporters of the main leaders are:

- **Passive Supporters Want to Keep Group Access:** Many intellectually disagree, but seek or gain with group/leader acceptance. Once cancel culture reaches a tipping point, it may become the main culture, at least among certain circles, so agreeing is a precondition for acceptance
- **Supporting Women As Sexual Strategy**: Some seek to win the favor of the charismatic leader and/or of the group members. For example, some male feminists support the movement in the hope of gaining women's attention
- **Honest believers**: Finally some people, especially younger idealists, truly believe in the cause

Victims of Cancel Culture

Victims aren't just the people directly attacked, but also the people who feel guilty for being privileged.

Women may be particularly at risk for having higher empathy, more fluctuating and socially-dependent self-esteem, and being more prone to guilt (Roberts and NolenHoeksema, 1994; Romert et al., 2026; Torstveit, 2016).
In general, good and highly conscientious individuals are also at higher risk.

Example: Cameron Russell

Model Cameron Russell amassed 24 million views on a speech that felt more like a therapy session:

> **Cameron Russel**: I'm on the stage because I'm a pretty white woman.
> (…)
> But mostly, it was difficult to unpack the legacy of gender and racial oppression when I am one of the base beneficiaries.

She says she is the beneficiary of a culture that makes her privileged. Instead, I see self-inflicted emotional anguish that has no reason to exist.

To begin with, she is most likely selling herself short by saying she is *only* pretty.
And most of all, she is blaming herself for all the "gender and racial oppression", something she had no part in.
Plus, she seems like a good person.

Jenna Marbles' apology felt very similar.

Antidotes to Guilt & Culture Wars

Life Isn't Fair: Accept It

Behind much of the guilt-fever, there is the wish for fairness.

Fair is good.
Unfair is bad.
And if you got an "unfair advantage", you should feel bad.

It's good to strive towards fairness. But an emotionally mature approach also accepts that the world is an inherently unfair place.
Until we evolve into a different species, we are also an inherently unfair species.
And that's OK.

As you strive to treat people fairly, you also must know that you are *not* responsible for life's unfairness.

Three Antidotes to Guilt

Three antidotes to guilt:

1. **Healthy sense of entitlement**
2. **Focus on *using* your privileges** for value-adding goals
3. **Individual responsibility**, reject collective guilt (not your group, your tribe, your ancestors, etc.)

I was reminded of the importance of healthy entitlement when I read a post on Facebook.
Someone asked a group of digital nomads if they felt a national belonging, or if they felt like world citizens.
Look at some of the comments:

She feels privileged to have a strong passport, and someone added crying faces.
Another one chimed in that “he’s not a citizen, but he’s a “guest”. How nice of him, tiptoeing his way through life.
It’s good to be warm and kind -see: mix power with warmth-. But you should not feel like a nuisance when you are *not* being one.

Don’t confuse privileges with rights -or with what you can safely claim as a right-.
In this example, **instead of seeing a strong passport as a privilege, why not seeing it as your right?**
Hopefully, you’re not a thief but a value-adding human, and you’re bringing money to whichever country you visit.
You should be entitled to travel, see, and meet people from all over the world as an equal.

Only Accept Individual Responsibility

Never feel guilty for supposed ‘privileges’ you received, such as:

- Being born in the West
- Being born in the middle class or above
- Being attractive
- Being a man

Always reject collective guilt if you’re not personally guilty

Writes Eckart Tolle in a particularly disheartening passage of his best-selling “The Power of Now”:

> **Of course, there’s something wrong with you**, and you are not being judged. **Don’t you belong to the human race** who killed over 100 million members of its own species in the 21st century alone?
> -Eckhart Tolle, The Power of Now

This is an incredibly disempowering mindset; reject it.

🤔Lucio’s Take: **National guilt is weak, embrace empowered individualism**

Lucio:
My ex-girlfriend and her progressive friends felt bad for German nazi past, *things that she had no control over*.

That was accompanied by the guilt-induced feeling they needed to repent and make it up… But there was no way to make it up, of course. So they were trapped in their feelings of guilt.

At times, it was becoming an issue in our relationship.
Abandon collective psychology, embrace **empowered individualism**.

Agentic Solution: Do Your Best Towards Your Goal, Ignore Privileges

An empowered mindset doesn't think about the "privileges" it's got.
An empowered mindset thinks about how he can do more with whatever he's got.

Strong passport? Great, how can I use it? Poor passport? Too bad, how can I change it?
Rich family? Great, how can I leverage these resources? Poor family? Too bad, how can I change it?

Leave the guilt behind, and start focusing on doing something good with your advantages. Because the ultimate sin is having a chance to do something good, but wasting it.

Secrets of Six-Figure Women: Summary & Review

Lucio Buffalmano · 11 March 2020 · Archived copy · Original

Secrets of Six-Figure Women is a finance and business advice book for women. Barbara Stanny, the author, teaches readers how to earn more and gain more power, independence, and freedom. But, ultimately, Stanny teaches women self-actualization and fulfillment through self-development and business success.

Contents

- Review

Summary

About the Author: Barbara Stanny is a former journalist turned financial expert and author of women's success books. She holds a master's degree in counseling psychology.

Don't Focus on The Glass Ceiling, Focus on Who's Breaking it

In 2002, there were 950,000 women making six figures.
86.000 were doing so as part-timers!

There are plenty of successful women and it truly doesn't make sense anymore to focus on the roadblocks.
As a matter of fact, one of the traits of successful women was that **they focused more on opportunities than on problems**.

In the words of Barbara Stanny:

> We've been paying way too much attention to the wage gap and not enough to wage gains.

Also read:

- **The field guide for businesswomen**

> The Businesswoman Guide to Win in Male Organizations

You Do It For the Personal Empowerment, Not the Zeros

Most of the women who earn a lot undergo a personal self-development that makes them feel better, more secure, and more fulfilled.

As the author says: "not the zeros on our paychecks, but the impact on our psyches".

You Can Do It Without Education

The women who had a good education were happy they did it, and many also thanked their prestigious school and their MBAs for having gotten where they were.

However, there were scores of women without education, some of whom even said that not having an education helped them. “You can hire credentials”, said one. Another woman said that not having any credentials helped her to be more shameless in her failed attempts until finally, things started working out.

High Earners Are Hard Workers

The author interviewed a lot of women, so it’s only normal that she got different perspectives.

Some worked hard, some were driven workaholics to the point of becoming unhealthy, while others even hated their jobs but got addicted to the rich lifestyle.
Some others, though, didn’t define themselves as hard workers but as *focused* workers. And some others worked *passionately*, not hard.

Barbara Stanny says that chasing the dollars can make you miserable if you do not like what you do.
However, you need to strike a balance and also care about the money. Six-figure women wanted to be compensated appropriately for their work and services.
Indeed, that’s one of the core traits of six-figure women.

The Traits of 6 Figure Women

Barbara Stanny noted that a few traits recurred over and over among the women she interviewed.

The common traits among the 6-figure women are:

1. **A profit motive***:* even though money is not the main driving force for most women, they *still* want to make money. They enjoy money and what it gives them. And they expected to be compensated for their work.
2. **Audacity**: They all had to step out of their comfort zone, do things they were afraid to do, and ask for things they were afraid to ask. They didn’t always succeed outside of their comfort zone, but they went there because they knew it was necessary.
3. **Resilience**: Few if any succeeded the first time out and never had any issue. Instead, they almost all encountered false starts or setbacks. And they all had the grit to persevere.
4. **Encouragement / mentoring**: Not all had encouraging parents, but almost all of them had strong support from at least someone. It might be a group of friends, a supportive husband, or a mentor.

It’s hard to over-stress the importance of a supportive spouse. Says the author:

> For those in a committed relationship, a supportive husband or partner is invariably cited as essential to their success.
> (…)
> In a study of more than thirty thousand women in thirty-three countries, sponsored by Avon Products, a supportive spouse or partner was cited as the most important criterion for success in starting a business.

And the author adds that yes, i**t’s possible to find a man that not only is not intimidated by your success**, **but who is thrilled by it**.

A mentor was also a key ingredient.
Not everyone had official mentors, but almost all of them had a role model or a non-official and supportive individual who offered guidance or encouragement.

Find support in all categories

The author says that the most balanced and joyful women found support in all these categories:

1. Your significant other

2. Your social network
3. Your professional network
4. Your spiritual beliefs

Of course, all might not be possible.
But strive for more rather than for less. I always make it a point on this website that collaboration and win-win are the best for long-term power. Also see:

- **The foundational laws of power**
- **The fundamental strategies for power**
- **Effective collaboration strategy**

Success, Power, & Relationships: When Husbands Are Jealous

Of course, not all partners are great.

Some men, and even some lesbian partners, might resent your success. And if you are going upward and they are not, that might put your relationship under strain.

Sometimes you can change a man's attitude by laying your cards on the table and saying "you either collaborate, or we can't have this anymore".
This is what a woman told his husband:

> You knew I was ambitious when you married me. I'm competing with myself, not you. If you don't like it, too bad. If this is a deal breaker, I've made my choice"

The husband retreated and smoldered for a few days, then came around to stay in the relationship. And even told her that she "wasn't going to out-earn him".
LOL, that was a fun story and a cool way of turning a competition into, at least, a positive competition.

The author says that men weren't born to share power, so sometimes they are unsure about how to be supportive. However, two secure adults can weather the difficulties of a driven woman who is earning more than she is.

Also see:

- **How men keep women down at work**

> 8 Ways Men Keep Women Down at Work

The Traits of Underearners

Under-earners, like successful women, also all have some traits in common.
These are the traits and mindsets you want to avoid:

1. **High tolerance for low pay**
2. **Underestimating their worth**: psychologically, minorities tend to devalue themselves compared to society's elite group. It becomes a self-fulfilling prophecy
3. **Willingness to work for free:** women have long worked for free for the benefit of everyone around them. Except for themselves
4. **Poor negotiators:**
5. **Reverse snobbery**: they feel like having money is a sign of poor character, and feel proud about not having any
6. **Pride in getting by with little**: they are the product for "being able to get by on so little"

7. **Self-sabotage**

To find out if you are an under-earner and you need some wake-up call, ask yourself if you're stressed about money.

The Rules of Six-Figure Women

These are the rules to make it into the six-figure club:

1. Play to win, not to avoid losing
2. Do it even if you're afraid
3. Persist
4. When an opportunity knocks, always say yes if it helps you move forward
5. Don't make excuses for yourself. If you want it, you can get it
6. Ignore naysayers: you will encounter plenty of them. Some are jealous, some mean no harm, but they are all harmful
7. Never personalize: at a high level, you will receive plenty of criticism and plenty of attacks. Never take it personally, always keep on going

Don't Be Afraid of Wanting Money & Power

Historically, women have been uncomfortable with power and money.

But if you want to live in abundance without depending on any man, you gotta grow comfortable with both.
If it takes some courage to ask for more than you're comfortable asking, be it.

Get comfortable asking for more, get comfortable asking for a raise, and get comfortable adding zeros.

Don't Be Afraid of Turning Down Low Offers

If they can't pay your fee, don't lower it.
Or, at least, don't drop it too much.

Walking away is a form of self-respect.

My Note: I agree, except for the Universe
I liked this part a lot, especially the link between refusing low offers and the effect it has on our own self-respect. Unluckily, the author then added that it's also a form of demanding your worth "to the universe", which will invariably listen.
If you know this website, you know what I think about that :).

A Happy Bunch

Just like anyone else, six-figure women can go through rough periods, but, overall, they're a happy bunch.

Their conversations are sprinkled with words such as "lucky", "happy" and "grateful".

Many Were Insecure, Feeling Like They Need to Do More

Many women were insecure about their own worth and success. They were afraid they didn't deserve it and that someone might come and take it all away.

Still, they all persevered through the doubts. And the few times they gave in, they made sure not to fall for it again in the future.

Sometimes you have to ask for what you're worth, even when you're afraid. Sometimes you gotta say yes to the challenge even when you're afraid you might fail.

Some women always had nagging voices telling them they weren't good enough or couldn't ask for as much as they asked. But they did it anyway.
Said one woman:

> "I hear voices in my head saying, 'Who do you think you are? No one will pay that.' Once the voices quiet down, I can do it."

Most Women Started Their Path After a Major Challenge

Many successful women started their upward trajectory with a challenge.

Some started a new path after being fired or when they realized they couldn't afford to live or retire with their current salaries.

Yes, it's true that sometimes dawn only comes right after the night is at its darkest.

Do Learn the Basics of Money

Now, you would expect six-figure women to have lots of money in the bank, right?

And still, some of these women were either going from paycheck to paycheck or even going into debt.
That's because they weren't following the basic rules of money. The author, quoting "*The Richest Man in Babylon*" says that money management is simple if you follow these three rules:

1. Spend less
2. Save more
3. Invest the difference wisely

Why do some women fail at basic money management? Often, it's because they are very busy. That's why, says the author, it's a smart idea to delegate money management to a financial advisor.
The smart women in the group, even the ones working in finance, hired a financial advisor to take care of their finances for them. So they could focus on their work.

More Wisdom

- **It's now what you know, but what you are willing to learn**: most of the six-figure women weren't afraid of not knowing something or joining a new industry. They all knew they could learn it and were willing to learn it (growth mindset, and how to develop a growth mindset)
- **You can use naysayers to motivate you**: invariably, there will be someone to discourage you or tell you why you cannot do it. You can use them as motivation. Also see "the dark side of motivation"
- **Do develop a group of supportive friends**: friends are even more important to women than to men. A group of friends who also share your drive and passion can work both as a mastermind and a support group
- **Keep your own separate bank account**: don't share your account with your husband. It's not about the relationship, it's about having your own separate psychological identity

Quotes

On money and power:

> Money does not give you power.
> It allows you to exercise power by providing choices. Your power comes from the choices you make, choices that reflect who you are, not what someone else thinks.

On claiming your power:

> Just as claiming our power is an act of self-love, forsaking it is an act of self-betrayal.

On wanting VS needing a husband, said a woman who dreamed his husband would take care of her, but he never managed to be as successful as she had hoped:

> I've learned that I have to be the one responsible for my money. It has been painful to come to that.
> But with that pain came pride, because I now feel I don't have to depend on anyone. This money buys me freedom. I don't need my husband. I could do just fine financially. But I want to be with him because I love him.

CONS

- **The Universe & Law of Attraction**

Such a great book, I wish the author hadn't gone into the law of attraction.
On the plus side, it's only a few short sentences.

- **Not a very scientific analysis**

If you know my reviews, you could have expected this one.
The book is based on interviews, more than on data. And it's based on successful women, which is of course a sampling bias, since a proper analysis would also consider women who have done the same thing as the successful ones, but still never made it into the six-figure club.

Because of the sampling bias, one simply cannot reach the conclusion that this or that trait increases the chances of success. Sure, logically we can imagine that this or that trait is helpful, But if you don't measure it across the whole population, you cannot say reliably that a certain trait increases the likelihood of success.
Also read: "*Fooled by Randomness*".

PROS

Really great book.

In its mixture of self-help and survey of successful people, it's also a unique product.
In my opinion, even better than the somewhat similar, more statistically accurate, and far more popular "*The Millionaire Next Door*". This one was a better mix of self-development mindsets, power dynamics analysis, and practical wisdom.

Review

Secrets of Six-Figure Women is a great book and a recommended read for women who want to be financially successful.

It's a mix of high-quality self-help, practical tips, success stories, and powerful mindsets.

From my point of view, I can also give it a big thumbs up on its analysis of social and power dynamics, both from a workplace point of view and, even more, from a relationship point of view.

Hardball for Women: Summary & Review

Lucio Buffalmano · 15 March 2020 · Archived copy · Original

In *Hardball for Women* (1992), author Pat Heim teaches women career strategies that help businesswomen advance their careers. Women are well represented in the workforce today, but if you want to make it to the top, Heim says that you need to learn the unwritten rules of this men's game.

Contents

- Overview
- Notes
- More Wisdom
- CONS
- PROS
- Quotes
- Review

Overview

- **The real challenge is moving out of middle management**: Women are now well-represented in the workforce. And in management as well. What's still lacking are women in executive and CEO positions
- **Women need to learn a whole new way of playing the game**: men and women are both biologically different and have been nurtured differently. They learn vastly different ways of living and working, and the male way is (by far) the most likely way of getting into executive and CEO positions
- **Women are in a double bind**: they can't be too stereotypically feminine if they want to reach the top positions, but they can't be too stereotypically male, either

Notes

About the Author:
Pet Heim holds a Ph.D. in communication from the University of Colorado. She has been working as a trainer and corporate consultant on topics such as leadership, gender differences, and career strategies.

First You Advance on Technical Skills, Then on Interpersonal Skills

When you begin your career, you advance in technical skills.
But **the more you advance and the higher you go, the more it's about interpersonal skills**.

Higher up, technical skills become less relevant, and interpersonal skills become more important. **And interpersonal skills fall under the nuances of male and female differences**.

To become executive material, women need to learn how to play the game the male way without going full male—or they'd be labeled as overbearing bitches.
The solution is this: understand the male culture and work well within it. Use the male style, slightly adapted to suit a woman, and revert to your more natural style when you're dealing with more women or when you're not in full competition mode.

Women Don't Learn to Play Hardball

Because of both biology, nurturing, and the games they play as children, women never learn how to play hardball.

Women move into environments that have little hierarchies and little competition.
To sum it up: women never learn the skills that are necessary to win in business.

Men Learn to Engage in Conflict and Move On, Women to Avoid Conflict (& Never Move On)

Men learn to engage in conflict head-on.
They play the game and fight, and when the game is over, it's over. They can go back to being friends.
Teams can also change, so men also learn to develop functional relationships in service of their goals.

Women instead don't play in service of a goal but play to strengthen their relationships.
Conflict is not common, and it's seen as dangerous to the relationship. Women tend to avoid conflict and take it more personally. Women don't see how someone can be aggressive, engage in competition, and still be friends. That does not help them do well in the business world.

Men Respect Strength, Women Prefer Human Connections

Men see business as the extension of a team contest.

That's why male language borrows so many words and expressions from either sports or war—the ultimate team contest.

Leading a group of men requires strength.
Some coaches in sports do it by being verbally aggressive; some do it by being physically aggressive. Some others step back and let their silence and nonverbal expressions showcase their authority.

Leading women is different.
Groups of women respond better to your humanity. You better lead women with your capacity to care and relate.

Women learn to lead and relate by building relationships and connections. Men learn to lead and relate through aggressiveness and competition.

Also read:

- **How to be an effective leader**

> How to Be A Leader: 13 Laws From Social-Psychology

Women: Fit In, Be Liked; Men: Win, It's OK if Someone Doesn't Like You

Women's play is about building relationships.
There is no main goal for women beyond relationships. Thus, being liked and fitting in is paramount to women.

Men prioritize winning and competing.
If someone's feelings will get hurt to win, that's OK. And if someone might end up not liking you, that's also OK.

Women Prefer 1:1 Relationships; Men Prefer Groups

Women tend to play games 1:1.
Even in group sports, women often have a best friend.
Women learn to better read people's emotions and reactions.

Men tend to play in groups.
Their connections are looser and more functional.

Connections Are Functional for Men, Central for Women

Since men value competing and winning, it also means that the team can change and the new and old relationships can change as long as they keep progressing and winning in the competition.

Women instead don't play to win: their plays serve to strengthen the relationship.
So they prioritize the relationship instead of the game—or the goal.

Popularity & Intimacy for Women, Success & Achievement for Men

In female groups, popularity and intimacy are signs of status and power.
They are both relationship-related, not hierarchy-related.

In male groups, success, victory, and achievements are signs of status and power.
That encourages men to be more aggressive and "go-getters", which tends to prepare them better for competition in the business world.

Men Are Hierarchical and Expect Allegiance: The Loyalty Tests

While women's structures tend to be flat and fluid, men are used to a strong hierarchy with a boss on top.

The mistake women can make is to discuss the boss order, wanting to understand why, or to tell him why his task makes no sense.
To a woman, that's about reaching the best decision. To a man, that's insubordination and a challenge to his power and authority.

Some bosses will even throw loyalty tests at you.
They might ask you to carry out difficult tasks, like firing employees or showing up to the company's retreat when you had just booked your holidays.
Understand that to work as loyalty tests, they must seem insensitive and outlandish. And if you want to stay in your boss good graces, you must comply.

Says Pat Heim:

> To women, this is not a pretty picture. The pressure to kowtow to an autocratic leader with a giant ego can make them want to dig in their heels and not budge.

Since loyalty to the male way is foreign to women, women are more likely to perceive loyalty tests as nonsense—or, as a domineering father, they need to rebel and are less likely to comply.
Men can take women's natural disposition as a sign that they are less loyal and less trustworthy, which means they are less likely to be promoted.

Saying a strong "no" to your boss is a no-no.

Also read:

- **How to develop positive relationships with your boss**

https://thepowermoves.com/managing-your-boss-for-career-advancement

Women Settle Disputes With Accommodation, Men With Direct Competition

Since women prioritize relationships, they prefer to avoid losers and make everyone a winner.
Competition means that someone has to lose, and that would upset relationships and the "dead-even balance of power" that women prefer.
That's why, on average, women tend to avoid competition to settle disputes.

Women learn to fear conflict, so they revert to more indirect techniques, which include avoidance, accommodation, or compromise.

Men instead rely more often on direct competition to settle disputes, and that might include escalations (see "power showdowns" in Power University).

Neither is necessarily wrong, but sometimes a situation is win-lose, or sometimes a woman might be better served with direct confrontation if she is right or better placed to win.

Don't Talk Relationships at Work

Women are at ease discussing relationships and feelings.
Men are not.

If you discuss feelings and relationships with men, you will make them uncomfortable.
If he is your boss, you will pay an even bigger price.

Furthermore, competitive men will use the opportunity to frame you as touchy-feely. He will move the conversation towards facts, and you will look outplayed.

Women Don't Get Points for Relational Work

Women's skills help improve harmony, social capital, and communication. However, these skills and results often don't get computed in women's evaluations, and women end up doing them without getting anything in return.

Men Want to Win, Women Want to be Fair

Men care more about winning than women do, and women care more about being fair and "proper" than men do.

Women read the rules and want to respect them.
Men read the rules and think that if you can win while breaking some rules, then it's OK.

That can give men an advantage when it comes to competing for the final win because men are more willing to do whatever it takes to win.

Women Are Uncomfortable With Power

Many women shy away from power as if it were a disease.
In part, it's because of their socialization as a group of girls, where hoarding power is often a poor social strategy.
And in part, it's because power is associated with men and masculinity. Being a powerful man is easy; being a powerful woman who also wants to be feminine is not so easy.

And that's not an issue to take lightly, says Pat Heim:

> Your gender is a large part of who you are. **You can't feel good about yourself and not feel good about your femininity**. To be comfortable with her power, **a woman must be both powerful and feminine**.

The author speaks the truth here, and she gives a couple of good points on how to combine femininity and power.
If you're interested in the topic, also read:

- **How to be feminine**
- **How to combine power and femininity**

And:

- **Dating as a powerful woman**

> Why Successful Women Fail At Dating (& How to Fix It)

Women's Most Common Stumbling Blocks

These are common stumbling blocks for women in their career:

- Getting lost in details
- Perfectionism
- Taking responsibility for non-core tasks because "who else will do it?"
- Being too available to the detriment of their own tasks

Dealing With Sexual Harassment Is Hard

The author says that of the women who claim sexual harassment, half are fired and 25% quit their jobs in frustration.

The research is dated though, far before the #MeToo, so things might have changed.
Still, to be on the safe side, consider that filing a sexual harassment suit might land you in trouble.

Also read:

- **How men antagonize women at work**

> 8 Ways Men Keep Women Down at Work

More Wisdom

- **Women ruminate more, so more conscious effort to move on is needed**: MRI scans show that once a negotiation is done, men tend to move on. Women instead continue to think about it, wondering if the right choice was made. This means that women should make a bigger conscious effort of moving on. And BTW, men perceive the ability to move on as a strength
- **Women should avoid talking problems through with their bosses**: Men think it through and come up with a solution; women talk it over. If you talk it over with a male boss, he will think you are not able to solve your own issues
- **Get buy-in *before* the meeting**: men will resist your groundbreaking ideas because accepting will mean conceding power. That's why you must get buy-in before the meeting. To women, it makes no sense, but in a male culture, that's how it goes
- **Married bosses with daughters are the best**: Many men don't want to make it more difficult for women; they just fail to see that there are more stumbling blocks for women. Men with wives and daughters tend to be more knowledgeable and sympathetic (and less likely to be chauvinistic dicks)
- **Dead-end bosses are bad bosses**: some bosses are in dead-end positions. They have no power to help you up, and they might not even *want* to help you up.
  I agree, and this is why I was never a big fan of the "Never Outshine Your Boss" law from "The 48 Laws of Power". Also read: "Why the 48 Laws of Power Wrong" and "The Updated 48 Laws of Power"

CONS

- **Nurture outweighs nature**

I got the latest edition, and the authors noted that they had made a mistake in the previous editions by ascribing all

the gender differences only to nurture and culture.

Finally, people are realizing that the *Blank Slate* is nonsense.

I still felt the author still outweighed the nurture side over nature, though.
But, overall, thumbs up for having admitted and rectified the mistake.

- **Confuses "displays of power" with being an asshole?**

One example left me stumped.
A male executive let her report fly economy while he flew business class. Then, at the conveyor belt, he told her to carry all his luggage to the hotel. They were very heavy, and she struggled to keep up with him.
Is this showing power, or is this just being a plain dick? To me, it's no doubt the latter. But to the author, this was an example of displaying power, and the woman did well in doing as he wanted.

- **I disagreed with Pat's POW on male loyalty**

The author says that men switch their allegiances very easily from one team to another.
Male athletes moving from team to team are such an example.
I quote her:

> Men switch sides and loyalties as easily as they shed one team jersey and don another.

That's not true, in my opinion.
The author fails to see that great athletes who stay on the same teams become legends in good parts because they stay with only one team.

I remember sitting with a guy who loved football and was from Italy, the guy asked me about Francesco Totti.
Then he later whispered with a sigh of admiration "that guy is a legend".
Francesco Totti is in large part a legend because he stayed with Roma, his native town's club, instead of going with better teams and winning more.

Many supporters call players who often switch teams "mercenaries.". And players who score against their former team often do not celebrate as a sign of respect.

So I disagree with the author.

- **Sometimes I disagreed with the advice**

The author says that "making it up" is a strategy of hardball and giving your best guess, pretending that it's the right answer, which is accepted in the male risk-taking culture.
The author also advises you to give your best guess and pretend it's the right answer. If it's not, your colleagues will find out.

Albeit that might work at times, that's also going to harm your reputation long-term. Once people realize you pretend to know what you don't know, your reputation will tank.

- **The "height advantage" power play**

The author advises using height to your advantage whenever you can and neutralizing people's height advantage whenever you can.
I'm not too sold on this one, especially sawing off chairs' legs or visibly sitting on the tallest chair. It reeks of a power move, and it will put people off. Furthermore, if you're short, you should first own your short-itude before getting into height-power games.

- **The "women must help women" sectarian rhetoric**

The author embraces the philosophy that women must help other women.
To me, that always sounded sectarian and backward (also see: "Lean In", the criticism part)

PROS

A mandatory read for women who want to make it to the top of their organizations.

Quotes

On women's difficulties in making it in a man's world:

> Research has shown that behaving like a man will backfire; women are judged on women's rules, not men's. And while women do have more options than mere stereotypical behavior, their choices are more limited than men's.

On women being uncomfortable with power:

> Power is an uncomfortable subject for many. In fact, women tell us they don't want to deal with that "power stuff" because they aren't "power hungry." They act as if power is a social disease to be avoided at all costs.

On the importance of having the power to get things done:

> Simply stated, power is the ability to get things done. If you don't have power, you're going to be ineffectual at work.

On the reality of the double standard:

> Clearly, women can still play the game, but they can't play it the male way—they have to be friendlier, in the female mode. Yes, this makes us want to gag, but it's the reality of the workplace as it exists today.

Review

I truly loved "*Hardball for Women*".
And it's not just because a whole chapter 8 was titled "Power Moves" :).

Jokes aside, this is simply one of the best books I have read on both career strategy and gender.
Even when it comes to general power dynamics of the workplace, you will learn hugely no matter whether you're male or female. I certainly did learn a lot.

It was very instructive to look at workplace dynamics from a gender perspective.
This is a must-read for any woman who wants to have a good career -or simply decide whether prioritizing a career is what she truly wants-.

Hardball for Women provided us with the best contribution so far for the women's lessons in my Power University course.
And that's the biggest compliment I can give an author because I only choose the best.

Brag! Notes & Review

Lucio Buffalmano · 17 March 2020 · Archived copy · Original

Brag!, whose full title is "*Brag*! The Art of Tooting Your Own Horn Without Blowing It", teaches readers how to brag and how to effectively self-promote without coming across as a big show-off.

Contents

- Notes
- CONS
- PROS
- Review

Notes

About the Author:
Peggy Klaus is a communication and leadership coach who works with *Fortune*500 corporations to help executives improve their self-presentation and promotion.

To Brag Effectively, Know Yourself

To brag effectively, you need to know what you should be bragging about.

Peggy Klaus provides the readers with twelve questions to go through.
Once you know the answer to those questions, you will better know yourself and what to say about yourself.

Here are my favorite ones:

1. What are your five personality pluses?
2. What are the ten most interesting things you have done?
3. What do you like/love about your current job/career?
4. How do you use your skills and talents in your job and career?
5. What projects are you working on right now that best showcase your skills and talents?
6. What success are you most proud of?
7. What obstacles have you overcome to get where you are?
8. What have you learned from your mistakes?

For more on how to brag, read:

> How To Brag Without Bragging: The Covert Brag Technique

A Job Well Done Does NOT Speak for Itself

Some people believe that doing a good job is all the promotion they need.

My Note: It Actually Depends on The Situation
Some jobs speak for themselves, while others don't.
If you have the spotlight on you and people see you struggling and achieving, for example, you don't need to brag.
Let others do it for you, and it's much more powerful.
But in cases where people only get to see the result without the hard work and skills, then you do want to add some

promotion.

Humility Does Not Get You Noticed

Yes, being humble can be good.
But if being humble means never promoting yourself, then that does not work.

Few people have managed to combine humility with the need to self-promote success.
Don't be one of those people who fail to self-promote and hide behind humility as if it were a virtue.

Sell Stories, not Numbers

No matter how good your numbers are, they do not make you sound impressive.

Klaus says that you want to talk about how you achieved those numbers, weaving a good story around them.
How it started, the challenges you overcame, how you insisted and maneuvered, and only after all the tribulations, how you managed to turn into a win

Mix Bragging With Interesting Content: A Bragalog

If you only brag, people will think you're a showoff and they will not like you.
If you only tell facts, you are boring.
And if you only tell interesting stories, you are an entertainer, but you're not marketing yourself.

Peggy Klaus says that the solution is to mix an entertaining story with your bragging strong points.
Then people will want to hear more about your marketing and, while you sell yourself, you also come across as intelligent and likable.

One example of a bragalogue, is for a NASA engineer introducing himself:

> Hi, I'm Dan.
> I'm one of those rocket scientists everyone always makes jokes about. I work on the space station program for NASA

CONS

- **Confused willingness to stay silent with a failure to brag?**

The author shares an example of a guy who "failed" to brag effectively.
On a plane, she asks him what he does, and he replies "management consultant". The author asks in what field, and for what company.
The guy keeps replying with short sentences in spite he having a lot of strong points to brag about.

The author then stops, saying that he is failing at selling himself and making it interesting for her.

To me, it obviously looked like the guy just didn't wanna talk.
And by providing short sentences he did the right thing: he clearly sent the message he didn't want to be bothered.

- **Does not differentiate between the time to brag and the time to show strategic humility**

There are situations when humbleness is the ultimate bragging.
For example, when you *others* touting your own horn, that's the perfect time to say little and come across as bigger than life.

I wished the author differentiated between the two scenarios: when you need to brag, and when it's best to be self-effacing.

That's true strategic thinking, but I didn't see it here.

PROS

- **Lots of examples, some of them good**

The book lists a lot of examples of how to turn descriptions, facts, and accomplishments, into effective self-promotion messages.
Some of them were good.

- **Wonderful idea of mixing entertainment with bragging**

There is one great idea I take away from this book, and that's to mix entertainment, storytelling, and bragging. That was an eye-opener for me.

Review

Brag! is a good book, with some good ideas and examples.

Most of all, I loved the idea of the "bragalogue", which is a mix of bragging, storytelling, and entertainment. That was really a great idea.

The New Rules of Work: Summary & Review

Lucio Buffalmano · 25 March 2020 · Archived copy · Original

The New Rules of Work teaches readers how to launch a great career. It starts from the very basics, like knowing yourself and what you like, and takes you through all the steps, from job search to personal branding, negotiation, and career advancement strategies.

Contents

- Summary
- Real-Life Applications
- CONS
- Review

Summary

About the Authors: Cavoulacos and Minshew are the founders of TheMuse.com, a website for career advice.

To Find The Best Job, Know Yourself First

The best way to find the best job for you is to first know yourself.

This is indeed very sensible advice, and the authors dedicate a whole chapter to recognizing your own values. Something important to keep in mind is that your values can change over time, and you should be flexible enough to understand your new situations and appreciate your changes.

Knowing your values will help you find the best job for you, but it will not guarantee you the perfect fit.
As you gain more experience in life, you can realize that you were wrong with the initial assessment of your values and personality. Or that you were wrong about the perfect job to fit your values. Or you were wrong about both. That's OK. Actually, that's great. As long as you realize the mistake, you can fix it. And you can keep on searching for what truly suits you.

Interests, Skills, Values: Consider Them All

List six roles you think you are interested in, within six industries you like.
Those are your interests.

Then add two columns: skills and values.
The best roles will align both with your skills and with your values.

Develop Your Personal Brand

To develop your personal brand, it helps to know yourself again.
If you need some help, ask the people around you to describe you, to tell you what you're good at, and what they think of you.

My favorite part here was how to transform informal feedback into a professionally-sounding description.

So imagine, for example, that the description you get of yourself is:

> "Affable, agreeable, and gets along well with others."

That sounds nice, but it's more like the description of a person you want to be friends with.
So here is how you can transform that description into something that sounds more professional:

> Relationship builder, strong follow-through, and motivated to collaborate.

For personal branding, you should go with the latter.

Adapt to Your Boss Leadership Style

Alexandra Cavoulacos righteously points out that to best deal with your boss, you should adapt to his leadership style.

They base their approach on Daniel Goleman's leadership styles, and this is my own modified version, similar to the one I introduced in the Power University workplace module:

- **Commanding / Coercive**: Top-down, "do as I say" style. If you report to this type of boss, make sure to not only follow his instructions but also communicate that you're following his instructions—tell him exactly what you've done and how you did it. Once he trusts that you respect his authority, you can start to introduce your own ideas.
- **Authoritative / Visionary**: They tell the team where they're going but not how. Often, it's the founders or people who really believe in the company's vision. When you communicate with this kind of leader, she'll want to hear less about the specifics of what you did and more about how it fits into the ultimate goal, so it pays to focus the conversation on the results rather than the process. Also, show yourself that you believe in what they believe, and they will want you higher up in the hierarchy.
- **People Person / Affiliative**: Cares about people, having a good work environment, trust, and a sense of belonging. Show that you love being on the team, show up after hours, and tell him how you got it done through people, networking, and relationships. Show yourself a supportive, kind, and friendly chap. Watch out that he might dislike strong go-getters, so don't overdo it with your drive and competitive spirit.
- **Democratic**: This type of boss prefers the collective over the individual, and he loves collaboration. He prefers reaching decisions through discussion, and he values harmony. Same as with the affirmative: be less selfish and driven, tone down the competition, and show yourself more of a team player. When you are discussing, make a show of giving credit to others when you build upon their ideas
- **Pace Setter / Achiever**: He focuses on the goal and on achieving the goal, and he respects excellence. He is a high achiever and a high performer himself, and he can have some trouble delegating. Show him you are like him—driven and hungry. Deliver when he asks you to do something, and he will come to respect you (and promote you).
- **The Coach**: He likes to grow and coach his employees. Give him what he wants: ask him questions, ask him for feedback, show him that you appreciate his thoughts and opinions, take action on his feedback, and he will come to see you like his spiritual son.

Also read:

- **How to "work" your boss**

Real-Life Applications

- **The 3×3 networking dinner**

Invite 3 cool people in your network, and tell them to bring along 3 cool people in their network.
That way, you can rest assured you will meet high-quality people who can make a difference in your life, and everyone will be excited at the prospect of who they can end up meeting.

- **Don't accept the job offer right away**

This is your time to negotiate and think, once again, if this is what you want.

CONS

- **I didn't like some of the networking tips to end conversations**

To end a conversation, the authors propose you don't overthink it and end it by saying:

> **You:** It's been great, I have some other people to connect with"

Or:

> **You:** This has been so interesting, but it's getting late

The first one, "I have some people to connect with," makes it sound like you have some more important people to connect with, which devalues your speaking partner.
In the second one, the "but" tends to deny what you've just previously said.

I liked much more their third recommendation:

> **You**: Well, I won't monopolize your whole night

This is wonderful because it places them above you. While you don't always want to place people above you, since you are cutting them off first, it helps to maintain things neutral and balanced.

- **Storytelling cover letters?**

I didn't particularly agree with the advice on cover letters, which seemed to be more about storytelling and would probably make the cover letter a bit too long.

Also, my advice on cover letters is different: they are a huge time sink. So draft as few of them as possible. You should prioritize networking to cover letters. If you need a cover letter, you should already be recognized as not in the ideal situation. Ideally, your cover letter is an introduction or a personal meeting before you even apply yourself.

If you can't get it, my advice is to keep the cover letter brief, because very few people like to read long stories.

Review

The New Rules of Work is a very good book covering career strategies from A to Z.

It spans knowing yourself, finding the right job match, researching companies, acing the interview, negotiating the salary package, and then having a great career.

The large breadth of going from A to Z is one of its strongest points because it gives you a good overview and takes you to 70% of what you need to know to start a good career.
That's also its limitation, though, as some parts will necessarily lack some details, like, for example, communication skills-.

I would say that if you are already an advanced student of self-development, career strategies, and people skills, then you will learn a few things while listening (or reading) to many other concepts you already know.

On the other hand, if you are someone who's just about to finish graduate school right now, then this is a very good book to provide you with not only an overview but also to help you set your career the right way.
For graduate students, this can be a highly recommended read.

The Myth of The Nice Girl: Can Nice Girls & Guys Win? (Book Review)

Lucio Buffalmano · 28 March 2020 · Archived copy · Original

The Myth of the Nice Girl (2018) is a career advice book for women in which Fran Hauser, the author, deconstructs what she calls the "myth of the nice girl". She says that it's not true that being nice is a weakness, and with both science and personal experience, she proves that kindness can be a huge advantage to win at work (and life).

TPM Strategic Note: Nice wins IF matched by competence & strategy
This text serves as a manual for **High-Warmth, High-Competence** signaling. While lower-level power analyses suggest that "niceness" is a liability, Hauser frames "Nice" as a social exchange strategy and reciprocity engine. The core value lies in the distinction between **Submissive People-Pleasing** (low status) and **Prosocial Kindness** (high status). .

Summary

About the Author:
Francesca Hauser is a former media executive, startup investor, and advisor and, today, author, advisor, investor, and advocate for women in business.

Busting The Myth of Nice & Weak

The author says our society is being a victim of a huge myth that "nice" equals weak, under-achiever, and easy to be taken advantage of.

From a career point of view, she mentions the popular book "Nice Girls Don't Get the Corner Office".
And I would add that the same myth is often perpetuated in both dating and relationships, with titles such as "Why Men Love Bitches", or "The Power of The Pussy" (and, for men, "No More Mr. Nice Guy")

I couldn't agree more with the author and I have already plenty exposed to why those books can be as harmful as they can be helpful.

What "Nice" Really Means'

The myth of the nice girl is that she is weak, unassuming, and can't stand up for herself.
Basically, a pushover with "kick me" written on her back.

But that's not "nice", says the author, that's a pushover. And the two things are not the same and should not be the same.

This is how the author defines a "nice girl":

> A woman who cares deeply about other people and who wants to connect with them, who is guided by a strong sense of values to do the right thing.
> She is considerate, respectful, and kind. (…) At work, she's fair, collaborative, and generous.

The Superpower of Being Nice

Research shows that teenage girls who pursued high status (mean girls) were less successful ten years later than girls who were more likable and kind.
The nice girls have used those skills in business, and it helped them be more successful and accomplished.

The more "mean-girls" types were less successful in relationships and had more problems with drugs and alcohol.

I think the author is right when she says that there is real power hidden in traits like empathy, kindness, and compassion.
These are undervalued traits in the business world, and it's exactly why you can stand out when you embrace them.

Says Fran Hauser:

> In fact, as I learned to own my natural kindness, it has become my professional superpower.
> It has helped me build my personal confidence; the loyalty of those who've worked with me; and a strong, trusting, faithful network of colleagues, mentors, and mentees.

First, Be Kind to Yourself

I couldn't agree more with the author when she said that being nice starts with yourself.
You can't be kind to others if you're not kind to yourself first.

Says the author:

> Kindness starts with you.
> If you've judged yourself harshly over the years, you need to let go of that. Remember, part of being authentically nice is embracing the real you, and you can't do that if you're busy beating yourself up for the things you've done imperfectly in the past.

Also read:

- **The fundamental strategies of power**

https://thepowermoves.com/the-fundamental-strategies-of-power

Finding the Right Balance Between Nice and Strong is a Difficult, But Achievable

Many young women have asked the author how to be nice and strong at the same time.
That's not easy.
It's a learning curve, and you will go through some mistakes. It might take some time, but you can eventually make it. And when you do, you will be both nice and effective, and you will remain true to yourself, enjoying better and stronger relationships.

Finding the Right Balance Between Empathetic and Worrior Is Difficult, But Achievable

The myth is that nice girl can't make difficult decisions because they care too much and worry too much about what others think.

But, again, says the author, that's only the very extreme.
Empathy is a great asset to have and can help make much better decisions.

The key, again, is not to deny your empathy, but to strike a balance.

The Difference Between Nice & People Pleasing

- Nice is: Positive, yet honest and straightforward /
  People Pleaser is: Sweeping things under the rug to avoid making waves
- Nice is: Helpful
  People Pleaser is: Subservient
- Nice is: Humble
  People Pleaser is: Putting yourself down

When should you do favors for others?
The author says she had a simple rule to differentiate between nice and subservient: whenever she wanted to do someone a favor, either because she liked the person or because it was a career-strategic favor, it was OK to do it.

Too Many Women Believe It's Either Nice Or Strong

Many women the author spoke to agreed that being nice helped them.
And yet, 76% of the 1.500 polled women said they felt caught in a double bind between the need to be and the need of "having to be tough to succeed".

The whole book is dedicated to showing that one must not choose.

How to Answer When People Tell You That You're Too Nice

The author proposes five ways to answer when someone tells you that you are too nice.

My favorite three are:

- Don't mistake my kindness for weakness
- It's better than the alternative… Who wants to deal with a jerk?

- I know, and it's really served me well!

Being Nice Is Crucial Because We Only Want to Deal With Collaborative People

When we first meet someone, we evaluate them for their warmth and competence.

Warmth is even more important because, if they are not warm, we won't even care about their competence.

I couldn't agree more, and I make it a central tenet of the power strategies on this website.
Also read:

- **Mixing power with warmth**

> Power Strategy 101: High-Power / High-Warmth

And also go through this one for smart collaboration, since you also want to make sure you're not taken advantage of.

Overcome the Successful/Ambitious Bitch Double Standard by Owning Your Niceness

Fran Hauser correctly points out that while men often become more likeable when they are successful, for women it's the opposite.

The way out of the paradox is not by being less ambitious. And it's not by being more aggressive, either.
You overcome the ambitious/bitch double standard by owning your niceness and leveraging it in a way that complements your ambitions.

For more methods, check out:

- **How to be feminine and powerful**
- Dating for successful women

> Feminine AND Powerful: 9 Tips For Women Bosses

Get Buy-In From Colleagues Before Going to The Boss

The author explains how she talked to her colleagues and got their input and their buy-in before going to her boss with her proposal.

When she went to her boss with her colleagues' input and buy-in already lined up, it was easier to get the boss's approval.
And with the boss's approval, it was easier to get the project off the ground because she had already spoken to her peers first. Now her peers didn't see the author as competition, but as a friendly ally.
Says Fran:

> Make them a part of the process. By making it clear that you are looking to collaborate instead of compete, you'll earn their trust and their respect.

Also read:

- **How to manage your boss for career advancement**

https://thepowermoves.com/managing-your-boss-for-career-advancement

Include Your Team As the Stakeholders of Your Decisions

Fran Hauser says that when she had to make difficult work decisions, she also asked her team.

Some people told her it was a mistake and that she would lose power and authority and, of course, they told her that she was being "too nice".
But the author had a different opinion. She says:

> To me, my team consisted of stakeholders who were totally invested in my decisions. I was liable to them. So I always got their input while still making it clear that, in the end, the ultimate decision would rest with me.

I very much agree with her.

Before "Leaning In", Decide Your Priorities

"Leaning in" is a common refrain these days to encouraging women to take all opportunities coming their way.

The author says that advice is good, but that it can become counterproductive.
I quote her:

> (…) Telling women to step up, go for it, lean in, and say yes.
> And while that's certainly an improvement (…) it's not always realistic. In fact, this type of extra intense encouragement sometimes makes women feel that we must say yes to every opportunity or else we'll be missing out, or worse, become bad feminists. FOMO, anyone?

Instead of feeling forced to lean in on every opportunity that comes your way, think first about what's important to you. And then prioritize *that*.

How to Find a Mentor

The author has very good advice on finding a mentor.
My favorite one though was this: make it clear that it's mutually beneficial, and not parasitic.

You can read a lot on parasitic approaches here:

- **What's In It For Them: real life examples**

The second great advice is to make your mentor come to you. How? For example, you could organize a panel discussion and invite a few heavy hitters to speak.

Avoid "Pick Your Brain" Expression

Picking your brain frames the interaction as you taking from them, while giving back nothing.

Says Fran:

> 'Pick your brain' is non-reciprocal and exploitative. People who hear this a lot tend to cringe. These people are super time constrained and need to see something in it for them. The offer of coffee does not make it more attractive. (…) Instead: make it reciprocal ('feedback'/'brainstorm'), make it QUICK and easy (a 20-min phone call, not in-person coffee), and at the close, ask how you can be helpful in return.

I could not agree more.

Quotes

The power of empathy and nice:

> When I got a yes from him (of course), my team was incredulous. But it wasn't magic. Mitch was inclined to say yes to me because we already had a relationship (…) I connected with him on a personal level. This wasn't a power move. As a so-called "nice girl," being empathetic came naturally to me, and it simply worked to my advantage when it was time to negotiate or ask for something.

On the need to introduce change gradually:

> The people who've been there longer than you and are invested in the company's ways are likely to take real offense to any drastic changes.

Real Life Applications

- **Nice is good, pushover is not**: don't confuse the two
- **Probe deeper when people say you're "too nice"**: people tell you that you're too nice, make sure to find out what they actually mean
- **If it's a superior who makes an inappropriate comment, ask him to have a private conversation**. It's better than shaming him in front of everyone and potentially make an enemy. Read the case study here
- **In performance evaluations, ask employees what they think they can do better**: most of the times people already know, and if they start that conversation, they are more ready to accept the cure
- **Develop a go-to team for strategic decision-making**: when faced with stress, men go in fight or flight, and women go to their closest relationships (tend and befriend). Best of all instead is to have a network of experts you can consult. And a network of intelligent friends you can talk to when you need to make difficult life decisions

CONS

- **Being nice means collaborating… With other women?**

In one passage the author says that the "nice girls collaborate and help other women".

Yes, it's a widespread concept, and it sounds good. It's often embraced and presented as a virtue. But, in my opinion, that doesn't necessarily make it right (read more in my Lean In review).
Thankfully, Francesca's stance is always supportive, and never antagonistic.

PROS

- **Effectively combines power *and* kindness**: one of the very few books that seeks -and succeeds- in marrying power with kindness
- **Advice that works for both work and life**: Fran's recipe not only helps women have a great career, but also to have a great life

Review

"The Myth of the Nice Girl" is a wonderful book wih effective advice based on a sound understanding of power dynamics, office politics, and career strategies.

While it helps readers with great career advice, it also teaches them how to be successful at life, while remaining overall good people.

The author's successful career also underpins her authority and give her credibility, while her anecdotal stories tell me she has a good grasp of social and power dynamics.

I can only recommend this book..
And not only to women, but to everyone who wants to combine personal success at work and business with personal success in interpersonal relationships.

See:

- **The businesswoman's guide** to succeed in male organizations
- **How to combine power with femininity**

What Color Is Your Parachute: Summary & Review

Lucio Buffalmano · 29 March 2020 · Archived copy · Original

What Color Is Your Parachute is a guidebook to help readers find employment and launch their careers.
The "parachute" way of looking for employment starts by first identifying what jobs suit you best, and then using science and data to apply through the channels with the highest likelihood of getting you hired.

Contents

- Summary
- Real-Life Applications
- Quotes
- CONS
- PROS
- Review

Summary

About the Author: Richard Bolles was an American clergyman and career advisor.

The Traditional Approach VS The Parachute Approach

The "traditional approach" might as well be called the "spray and pray". It consists of scouring the web and mass-sending CVs to any open position.

The "what's hot approach" instead seeks to look at what the job market requires and then seek employment in one of those professions.

The "parachute approach" instead consists of being deliberate in our search and only aiming at what we truly like and what truly fits us.
The parachute approach begins with ourselves, knowing our strengths and weaknesses, and what we like doing.

Knowing Yourself

Bolles says that to know what's the best job for you, you should know yourself along seven dimensions:

- Your Knowledges / Fields of Interest
- People You Like Working With
- What You Can Do and Love to Do (Favorite Transferable Skills)
- Favorite Working Conditions;
- Preferred Salary / Level of Responsibility
- Preferred Place to Live;
- Your Goal, Purpose, or Mission in Life.

Bolles has the deepest method for job-introspection I have ever seen, spanning two whole chapters of the book.

The Steps to Choose Your Place to Work

1. **Find out what career or job are good for you**: If possible, you or they must combine two or three of your knowledges (fields) into one specialty: that's what can make you unique, with very little competition from others.

2. **Double check the job is good for you**: talk to the people who are already working in that position
3. **Find out which companies have those types of jobs**
4. **Learn as much as you can about those companies**
5. **Find someone who knows both you and the company:** if you can get to this step, everything will be easier

Seek Employer the Way Recruiters Prefer (& Avoid Sending CVs)

Employers prefer hiring people in the following order, and you're better off adapting to their preferences:

1. **From within**: see if you can get hired as a temp
2. **Using proofs**: bring program, photos, case studies, etc.
3. **Using a best friend or business colleague**: find someone who can make an intro
4. **Agency they trust**:
5. **Using an ad**
6. **Using a resume**: if the employer is truly desperate

HR's Job Is To Eliminate People

On average, interviewers only want to go through 5.4 interviews to fill a role.

Since each recruiter receives far more candidates than that, the job of HR is to truly eliminate as many candidates as possible, as quickly as possible.

That's why the author advises that you instead seek to skip HR. And, if you can't, your task should not to give them any reason to throw you out of the pile so that you can talk to the actual manager.

Go For Smaller Companies

The more difficult is your job search, the more you should for smaller employers.

Smaller employers receive far fewer CVs, so they are much more likely to give you a chance.
How small? Less than 25 employees. 100 employees top, says the author.

Never Badmouth Your Previous Employer

Employers sometimes feel like they are a caste.

If you badmouth previous employers, the current ones might take it personally. And they will wonder if you are going to say the same about them if in the future you're not going to work for them anymore.

Says Bolles:

> Employers sometimes feel as though they are a fraternity or sorority. During the interview you want to come across as one who displays courtesy toward all members of that fraternity or sorority.

But what to do if your previous employer already knows you don't get along well?
Then, this is what you say:

> I usually get along with everybody; but for some reason, my past employer and I just didn't get along. Don't know why. It's never happened to me before. Hope it never happens again.

Ehehe really good stuff there, great power move to indirectly shift the blame on the previous employer.

Never Get Discouraged

This is what the typical job search looks like:

> NO NO NO NO NO NO NO NO NO NO NO NO NO NO NO NO NO NO NO NO NO NO NO NO NO NO NO YES YES

Yes, ideally, you get two yeses.
And this is how you use it strategically:

- **How to (tactfully) pitch two employers against each other**

Salary Negotiations: The 6 Secrets

1. **Do your research as to how much you can expect and how much you're worth**: that will allow you to negotiate with more power, and without making obvious mistakes like asking too little or too much
2. **Only discuss salary at the end of the interview process, once it's sure they want you and they've extended an offer**: that's when you have the most negotiating power
3. **The goal of the salary negotiation is to discover the most that the employer is willing to pay you**: the closer you get to their bottom line, the better for you
4. **Don't mention your salary first**: it's a rule that the person who mentions the salary first, loses. Try to avoid answering that question, and only answer if the interviewer presses you hard. When they do, it might be the case they just want to hire the cheapest worker, and you might not want to work for them (my note: I don't fully agree here. If you can say a very high initial range, that might help you anchor the negotiation high, and you will come down from a very high number)
5. **Find out what's their likely range, and then propose your salary as a range with your bottom near their top**: see the figure below
6. **Close the deal**: don't keep on talking forever. Move to the fringe benefits, and eventually close the deal

That's how you use "bracketing" for effective negotiation

Once you finish your negotiation, get it all in writing.
And signed.

Why?
Because many executives "forget" what they promised. Or then someone else takes over and said that the previous guy didn't have the authority.
Yes, it's low, but some people are low, and you want to protect yourself from these games.

Also read:

- **Unfair negotiation techniques**

> 20 Manipulative Negotiation Tactics

Raise Others to Your Level

The author says that self-esteem is an art. An art of balance.

Think too little of yourself, and you suffer from low self-esteem. Think too highly of yourself, and you have a big ego that's out of touch with reality.

The author says that it's OK to think of yourself highly as long as you focus on pulling others at your level.
I quote him:

> People from other cultures will tell you about "the tall poppy" theory of life, with its implication that you shouldn't stand taller than others in your field. That has a lot of truth to it. **You can become equal to others not by lowering yourself but by raising them**.

I agree with that. Pulling people up instead of pushing down is one of the central tenets of this website.
Just make sure those you are pulling up deserve it, though: it's not your duty to pull everyone up. And especially not the assholes.

Real-Life Applications

- **Use good employment agencies**: they range from very good to bad to actual scams. As a whole, they are still 4 times more effective than sending your CV
- **Avoid sending CV to big companies**: unless you're a high caliber candidate, coming from the right school, it's most likely wasted time

Quotes

My favorite quote from "What Color is Your Parachute"

> One favor I ask of you: do not write me, telling me how picayune or asinine some of this is. I know that. I'm not reporting the world as it should be, and certainly not as I would like it to be. I'm only reporting what study after study has revealed about the world as it is. And how it affects your chances of getting hired.

On the need to always ask about money and negotiating for your salary:

> "How much are they going to pay you?" I asked. She looked startled. "I don't know," she said, "I never asked. I just assume they will pay me a fair wage." Boy! Did she get a rude awakening when she received her first paycheck. It was so miserably low, she couldn't believe her eyes. And thus did she learn, painfully, what you

> must learn too: Before accepting a job offer, always ask about salary.

Self-esteem is an art:

> But self-esteem is an art. An art of balance. A balance between thinking too little of ourselves, and thinking too much of ourselves.

On praising yourself and others:

> Just remember, it's no sin to praise yourself as long as that heightens your awareness of what there is to praise in others.

CONS

- **Sometimes could be more cooperative**

When an employer is pushing to share your salary expectation, he advises saying:

> **The Author**: Until you've decided you definitely want me, and I've decided I definitely could help you with your tasks or projects here, I feel any discussion of salary is premature.

I think that might be too harsh.
How I dealt with employers who pushed for a number was different, less "strong" and more collaborative:

> **Me**: I think it's best to first find out if we like each other. Then, I am sure we can find a way.

Then I stuck to my guns in spite of their repeated attempts.
But since my stance was more collaborative, it was easier to resist pushy recruiters without making it a battle of wills (ie.: "me VS you").

But then, it also depends on your situation.
Back then I was desperate for employment, so I was doubly careful not to burn any bridges.
I'm glad I did that way though, because it turned out very well.

- **It's tailored to less experienced and tech-savvy folks**

This is not necessarily a con, but sometimes I felt the author could have skipped some parts.
For example, when it says "if you have Internet at home, or if you can go to a cafe or library". Or how he introduces Linkedin and advises people to get on it.
I think most professional folks know Linkedin. And most blue-collar or hard-hat job seekers don't need Linkedin.

- **Spelling all URLs on audiobook**

I think an audiobook shouldn't need the spelling of all URLs. It's distracting. But obviously, this is not a major con.

PROS

- **Best book to find a job**: so far, this is the best book I have read to find a job
- **Great tips on negotiation**: short and to the point, the section on negotiation contains right on the money, high-quality advice
- **Deepest material to "find your best job":** I haven't delved too much into the self-assessment part of the book since I already have my dream job, so I can't comment on the quality. The quantity is substantial, though. And

from a perfunctory look, it seemed good stuff.

Review

“What Color is Your Parachute” is the best book I have read so far to help you find employment.

It’s based on data on what works, and that already sets it apart from many other books with a similar goal.

And it’s also “power moves approved”.

Only few books are power moves approved.
To get that stamp of approval, books need to provide real-world advice based on how people are, including potential assholes, and not based on “how things should be” or “how the ideal person should behave”.
And that’s exactly what Bolles does.

Summary

About the Author:
Kim Scott holds an MBA from Harvard Business School. She gained management experience leading the AdSense team at Google, then moved to Apple to develop and teach management seminars, and she is now fully focused on leadership trainings as the founder of Candor, Inc.

Differentiate Between Rockstars (do work) & Superstars (seek growth)

To develop a great team you need some stability, so you can't have in your team only people who strive to go up the hierarchy.

That's where rockstars come in handy: these are the people who love the job they're doing and focus on the job they're doing instead of wanting to be promoted into managerial roles and move up the ladder.

The author, early in her career, committed the mistake of only focusing on superstars in the beginning, and she passed her own judgment along. Being a superstar herself, she had a tendency to look down on people who didn't care about career.
But she learned, and corrected herself -that's what "Radical Candor is all about, after all: self-development-.

To become a better manager, also read:

- **Types of toxic employees**

> 8 Types of Toxic Employees & How to Deal With Them

Managing People is Your Job

Managing people is emotional labor, and it's what being a boss is all about.
You can't focus on your work and "save time" on the people's side, otherwise, you are not doing your job.

Bosses are responsible for results, but are responsible for results through their teams.
Says the author:

> Bosses guide the team to achieve results

The 3 Tasks of A Manager: Guidance, Team, Results

- **Guidance**: helping individuals grow personally and professionally with your radically candid feedback
- **Team**: making sure the team works harmoniously together. And structuring the team with the right mix of superstars (wants to grow quickly) and rockstars (do great job without caring for career advancement)
- **Results**: make sure the team stays on track, and that you have enough time blocked for strategic thinking and planning

Relationships Drive You Forward (Not Power)

Says the author:

> Your ability to build trusting, human connections with the people who report directly to you will determine the quality of everything that follows. Defining those relationships is vital.

"Radical Candor" is dedicated to helping managers develop those relationships.

The Two Dimensions of Radical Candor: Care Personally & Challenge Directly

Caring personally means you care about the *person*. The whole person, not just about the employee "doing his job", and not just him having a good career.

Says the author:

> It's not just business; it is personal, and deeply personal

When you truly care, people are more likely to:

1. Accept and act on your praise and criticism
2. Express what they really think about your work and attitude
3. Engage in this same behavior with one another
4. Embrace their role on the team
5. Focus on getting results.

Challenge directly means that you give direct, early, and precise feedback on people's performance, both when they are doing well, and when they can do better.

When you put together the two dimensions of caring and giving accurate feedback, you get radical candor.

Challenging Directly is Part and Parcel of Caring Deeply

Most managers struggle with the "challenging directly" part.

Challenging can initially hurt or displease people, and that does not seem like the best way to build good relationships.
Yet, it's the best way to actually care.

Being a good boss means accepting that sometimes people are going to be pissed off at you. But you still deliver the tough feedback that you need to deliver as a boss.
Caring deeply at this point means that you acknowledge the anger or hurt.

"Keep It Professional": The Death of Caring Deeply

The mantra of "keeping it professional" denies us the freedom and the right to be our true selves.
And that's damaging to developing deep relationships.

Says Kim Scott:

> That phrase denies something essential. We are all human beings, with human feelings, and, even at work, we need to be seen as such. When that doesn't happen, when we feel we must repress who we really are to earn a living, we become alienated.

And that's where "bring your whole self to work" fits in.

Invite People to Challenge You Directly Part

As much as it can be difficult to give some tough feedback, the hardest part for most bosses is to encourage their employees and reports to give *them* feedback.

But c**hallenging directly must go both ways: from boss to employees, and from employees to bosses**.
To do the best job you can, as a boss, as an individual, and as a team, also means that you need to foster an environment where people feel comfortable challenging you as much as possible.

What Radical Candor is Not

Radical candor is not:

- An opportunity to be gratuitously harsh

- A chance to “front-stab”
- An excuse to nitpick
- A hierarchical tool: radical candor must go up, down, and sideways
- Endless talk that exhausts the introverts in your team: build relationships, but be brief and to the point with the feedback
- Lots of after-work time: those can help and complement the relationships at work, but they’re not necessary
- A cultural thing: radical candor can work anywhere in the world

It’s Not Mean, It’s Clear

Kim Scott shares the story of how a stranger hit her with one of the most memorable radical candor interactions she’s ever had.

She was struggling to keep her dog put on the traffic light, and this is what happened next, in the words of the author herself:

> “I can see you really love your dog.”
> In the two seconds it took him to say those words, he established that he cared, that he wasn’t judging me.
> Next, he gave me a really direct challenge. “But that dog will die if you don’t teach her to sit!” Direct, almost breathtakingly so.
> Then, without asking for permission, the (said to) Belvy (…) “SIT!”
> She sat. I gaped in amazement.
> He smiled and explained, “It’s not mean. It’s clear!”

That taught the author that you don’t need to spend hours and hours of time with someone to develop enough trust that you can be radically candid.
As a matter of fact, **direct, radically candid guidance, is a great way to build trust** in and by itself.

And that stranger’s man last words became a mantra for the author when giving direct and honest feedback.
It’s not mean, it’s clear.

As*holes & Obnoxious Aggression

There is plenty of advice that wants people to be more like an asshole.

Just think of:

- Nice Girls Don’t Get the Corner Office
- No More Mr. Nice Guy
- And, for dating: Why Men Love Bitches

The author calls the competent and aggressive jerk style “obnoxious aggression”.
Obnoxious aggression is preferable to a “nice” boss who doesn’t have the courage to be honest.
Obnoxious aggression sometimes can also get great results in the short-term, but it leaves a trail of dead bodies in the long run.
The author says to think of Bobby Knight, who won several championships, but was ultimately fired. Or the movie character in “The Devil Wears Prada”:

The worst kind of obnoxious aggression happens when people understand others emotionally, or at least understand others’ vulnerabilities, and use it to hurt them the most, or to get under their skin (cruel empathy).

The author says that **when a boss sees his employees as lesser beings who can be degraded at will, employees**

view their bosses as tyrants to be toppled.

I couldn't agree more.

Luckily, competent jerk and nice incompetent is a false dichotomy. And radical candor takes the best of both approaches.
See later a matrix to explain radical candor.

Obnoxious Aggression Can Come From All Levels

When you think of obnoxious aggression from a jerk, you usually think of a boss.

Yet, a report can be obnoxiously aggressive towards a boss. And one can be obnoxiously aggressive while speaking directly to someone's face (front-stabbing).

The author made that mistake when she pressed "replied all" and accused Larry Page of going against his own values.
She thought she was being radically candid and "speaking truth to power". But instead, she jumped the gun and attacked too early without even having spoken to Larry to make sure she understood. And she didn't understand.
She had acted obnoxiously aggressive, swept away by her personal values of hating those who "kick down and kiss up".

I loved this part because this was a mistake that I have also fallen prey to. I also hate the "kick down and kiss up", and I have a tendency to dislike abuses of power.
That sometimes leads me to be more aggressive and distrustful of people in power than I should actually be.

How to Criticize Without Discouraging

1. Develop personal relationships
2. Ask for criticism before giving it
3. Offer more praise than criticism
4. **Praise in public, but criticize privately**
5. Be humble
6. Be helpful: your criticism is always an opportunity for them to do better
7. Offer guidance in person and immediately
8. Share stories when you failed or were criticized for something similar
9. **Don't personalize:** make it clear it's an action, behavior, or result, and not about them as persons

Make it clear that the problem is not due to some unfixable personality flaw, but that they can address it and improve.
Also read:

- How to avoid criticism
- How to develop a growth mindset

The Radical Candor Quadrant (With Examples)

When you combine the two dimensions of challenge and caring, you get the radical candor matrix, with four quadrants.

The example Kim Scott uses, which is the same here, is how you handle the situation of a colleague or an employee who forgot his fly open.

	Challenge →	
↑ CARING	**Ruinous empathy** • "Too nice", avoids issues • Positive change cannot happen *Says nothing – he's worried about his own feelings of embarrassment*	**Radical Candor** • Cares while being honest • Team & people constantly improve *Whispers: "your fly is down", to help him correct the issue*
	Manipulative Insincerity • Lies for personal gain • Mistrust & sabotaging take over *Says: "you always look good", to purposefully make him look bad*	**Obnoxious Aggression** • Personalizes attacks & hurts people • Fear & resentment grow *Shouts: "look, his fly is down!", to laugh at his expense*

Colors reflect the relative efficiency of each, from worst to best

Going from Ruinous Empathy to Radical Candor can be a direct path, so it's not true that you need to dwell on Obnoxious Aggression before making it to Radical Candor -don't allow people or yourself to use that as an excuse-.

However, sometimes, it's possible that people need to over-correct, and they may spend some time in the Obnoxious Aggression stage.
If you're moving from Ruinous Empathy, that might feel scary, but push through reminding yourself of your final goal.

Don't Feel Guilty if They're Upset

When you are giving tough feedback with radical candor, it's possible that someone might be upset, angry, or sad about your words.

That's OK, you can and should empathize. But refrain from feeling guilty. Feeling guilty focus on yourself, while you must focus on them.
Says Kim Scott:

> Just because somebody is crying or yelling doesn't mean you've done anything wrong; it just means they are upset.
> If you feel guilty about the fact that they are upset, you're more likely to have a defensive reaction than a compassionate one. Your defensive reaction can lead you, in turn, to unintentionally patronizing or cold behavior.

Radical Candor is a gift you are giving people, it's an opportunity for them to improve and move forward. When you are pulling punches and don't tell the whole truth, you are doing them a disservice.

Real-Life Applications

- **Drop the "positive to negative ratio"**: you know those guides recommending a certain ratio of positive to negative ratio? Well, don't follow them. It's insincere to force praise just because you have to hit a certain ratio

- **Focus on your top performers**: don't let the poor performers hog all of your time, it's your duty to help the top performers keep delivering for the team
- **Use skip-level meetings to avoid bad bosses ruining the environment**: to avoid having assholes in your team who kiss up and kick down and sour the culture, have once a year "skip level meetings", meeting where you talk to the direct reports of your reports (also check: "The No Asshole Rule")

Quotes

On the need for managers' guidance:

> You can draw a straight line from lack of guidance to a dysfunctional team that gets poor results.

On relationships VS power:

> Relationships, Not Power, Drive You Forward

On "dog eat dog" mindset:

> I once worked for a man who told me, "In every relationship there is a screwer and a screwee." Needless to say, I didn't work for him for long.

On avoiding a sense of superiority as a boss:

> Of course, if you are a boss, there is some hierarchy involved. There's no use pretending otherwise. **Just remember that being a boss is a job, not a value judgment**.

On winning and criticism:

> To keep winning, critize the wins.

On "caring deeply" applying at all levels:

> Fundamental human decency is something every person owes every other, regardless of position.

On not confusing the need to be liked with the need to be honest:

> When Steve Jobs asked Jony why he hadn't been more clear about what was wrong, Jony replied, "Because I care about the team."
> To which Steve replied, "**No, Jony, you're just really vain. You just want people to like you.**" Recounting the story, Jony said, "I was terribly cross because I knew he was right."

On the need of sharing what's difficult to share:

> Then you were told some version of "If you don't have anything nice to say, don't say anything at all." Well, now it's your job to say it. And if you are a boss or a person in a position of some authority, it's not just your job. **It's your moral obligation. Just say it!**

One of the reasons why you must focus on top performers:

> Moving from great to stunningly great is more inspiring for everyone than moving from bad to mediocre. And

> seeing what truly exceptional performance looks like will help those who are failing to see more clearly what's expected of them.

When you hear that you should fire someone, they have already been a problem for a while:

> Generally, by the time one of your direct report's poor performance has come to your attention, it's been driving their peers nuts for a long time.

On the quest for "life-missions" VS being content:

> There's nothing wrong with working hard to earn a paycheck that supports the life you want to lead. That has plenty of meaning.
> A wise man once told me, "**Only about five percent of people have a real vocation in life, and they confuse the hell out of the rest of us.**"

On the culture of moonshots and larger-than-life missions:

> Trying to describe a job in lofty, save-the-world terms is often going to make you look like the ridiculous Hooli CEO Gavin Belson from the show Silicon Valley.

On Steve Job's narcissistic mission (not the words of the author):

> In current-day Silicon Valley, inspirational slogans run more along the lines of "putting a ding in the universe," as Steve Jobs put it. But motivations are highly personal. Although I admire Jobs, it seems to me that the universe, or at least our world, is plenty dinged up already. So, I don't find his call to put a "ding in the universe" inspirational, though others do.

CONS

Great book, but a first major warning is:

99.9% of workplaces are very different...

… And that acting as if your workplace may measure up to the Radical Candor standard won't give you any good career and may as well get you fired.

Most bosses aren't going to take your "radical candor" too well

The Radical Candor workplace is an ideal to move towards and barely exists even in the most enlightened workplaces.

Without this warning and albeit being a fantastic book, simply for describing a utopian workplace, Radical Candor may inadvertently mislead readers with unrealistic and naive expectations.
Read more on naive self-help here.

> Naive Self-Help: 10 Most Dangerous BS to Avoid

Sometimes unneededly dismissive of power

The author says that "relationships drive you forward, not power". It makes for a nice and tweetable quote and, in part, it's true. Yet, relationships *are* power.
And power is nothing but your ability to get things done. So strong relationships are part of your personal power.

Later, the author says:

> I'm not saying that unchecked power, control, or authority can't work. They work especially well in a baboon troop or a totalitarian regime.

That's a bit simplistic both towards baboons (see "Behave") and totalitarian regimes (see "The Dictator's Handbook"). But I'm nitpicking here: overall, her point is valid, and it's to use power through instead of power over.

Obnoxious aggression is a behavior, not a personality trait? Not always...

The author righteously advises people not to make attribution errors, such as generalizing a behavior to a whole personality.

She is right.

Yet, that needs an important footnote: assholes do exist, and some of them are not going to be reformed by your radical candor, no matter how hard you try.
So you shouldn't be making eternal excuses for assholes -or for mean people, as Marta Stout correctly points out-.

Smaller Cons

- **Ground a million-dollar diamond to dust, true story?**

This is not a con, but when the author told about one of her workers who got distracted and ground a million-dollar diamond to dust, I had to wonder. How can you so easily grind to dust the strongest material on earth?

- **Eliminating "you guys" from vocabulary?**

Trying to remove "you guys" from the vocabulary sounded silly to me, though. A bit like Justin Trudeau calling "mankind" "people kind".

- **Great for ideal environments, less for "realpolitik"**

As we said in the first note, worth one more reminder:

While this is the best book for those "ideal working environments" and for seeking to move towards that direction, in most "normal" working environments you might be better served with some realpolitik guides.

PROS

Simply the best management book I have read.
If you want to develop the best company culture and be the most effective manager you can be, this is your book.

Review

Radical Candor is an excellent book on management and company culture, and possibly the best management book I have read.

Together with Ray Dalio's "Principles" it has informed some of our lessons on "ideal workplaces" for our flagship product *Power University*.

Our important warning is that **most companies and people don't operate the *Radical Candor* way and you need to develop your political savvy first**.
Also, don't be 'radically candid' with all personality types because not everyone can take it. Treating everyone as if they were honorable is what get good men in trouble.

Other than that, read it and apply it, and you will help contribute not only to more effective companies but to a better world.

Or get it on Amazon or check the:

Bullet Summary

- Confidence definition: confidence is the stuff that turns thoughts into action
- Men, on average, have more confidence than women
- Women tend to lose confidence when there is a stereotype against them
- Confidence is very important for life success
- Confidence is partly inborn and partly nurture, but you can work on it and increase it

Summary

About the Authors:
Claire Shipman is a regular contributor to "Good Morning America" and other national broadcasts for ABC News.
Katty Kay is the anchor of BBC World News America

Confidence Turns Wishes Into Realities by Allowing You to Take Action

When you don't have confidence in yourself, you don't take action. And when you don't take action, you give up any possibility that will you ever achieve your dreams and goals.

A lack of confidence, hence, means that you are less likely to take action.
As someone said: you miss all the shots you don't take. And people who lack confidence don't take shots.

When you have confidence instead, it means that you believe enough in yourself to take action. And guess what,

taking action gives you at least a chance. And, often, even when you fail, you will find out that more action will eventually get you closer to the final goal.

Other Inhibitors of Action

There are other factors that can stand between us and action, like a lack of motivation, or procrastination.

But if we assume that we want something, say the authors, then the only inhibitor is a lack of belief in our ability to succeed.

The Experiment Proving Confidence Matters for Success

Zachary Estes experiment asked both women and men to have a go at a stereotypically male task: solving a series of spatial skill puzzles.
Men scored far higher than women.

But why did they score higher? **Women scored lower because they hadn't even tried to answer all questions and left many of them empty**.
Estes ran the experiment again and asked women to at least try to answer all questions. Result? **When women tried to answer all questions their scores were as good as the men's scores**.

This test shows that a lack of confidence can have strong and negative real-life impacts when they result in inaction. And it shows that **a lack of confidence can lead to poorer results independently of skills**, when compared to a group of more confident individuals who take their shots.

Confidence Cousins': self-esteem, optimism, self-compassion, self-efficacy

- **Self-esteem**: more stable and more pervasive than confidence, and it's an invaluable buffer for withstanding setbacks. In my opinion, self-esteem is more important than confidence
- **Optimism**: it's a sense that everything will work out
- **Self-Compassion:** accepting that sometimes we will not win, that sometimes we will fail, and that sometimes it's even OK to be average, provides us with a safety net to try things out. If we fail, it's OK, it's part of the human experience
- **Self-efficacy**: the "tough, get-it done" member of the family

Courage might also be thought of as a cousin of confidence. It's most helpful when we are new to a task and we need to take those first, terrifying steps.

Confidence Is Important for Success

Anderson's research devised a test to measure confidence and excessive confidence.
At the end of the semester, the most confident individuals, including the ones that scored wrong answers because of overconfidence, were also the most popular.

My Note: you can't say that confidence is more important than competence-based on that paper
The authors jumped to the conclusion based on that single paper that confidence is more important than competence for success.
But that's a big stretch.
If they had said *social* success, then it would have been more appropriate. But based on that single paper, you cannot say that "confidence matters more than competence".

Some of Plomin's research seems on twins suggested that self-perceived ability rating, which can be considered a measure of confidence, was more important in academic achievement than IQ.

Confidence is Partly Nature, Partly Nurture, And You Can Partly Work At It

How much confidence you have is partially programmed in your gene.
Some researchers say it's 50%, like the big five personality traits.
But some other researchers disagree, saying that facets of the big five are less genetically programmed. Traits like confidence, they say, are probably 25% inherited.

The way you have been raised can also partially influence confidence, for example, if you have been raised with a growth mindset.
The good news if you're not naturally high in confidence, is that you can also work at it.

Read:

- How to develop a growth mindset
- The antifragile ego

More Wisdom

- A slight tilt towards overconfidence is preferred
- We dislike women who talk a lot, but we also actively expect men to dominate conversation
- Perfectionism is a confidence killer: it inhibits action and achievement
- Suppress the siren call of praise: praise and flattery are addictive, you end up basing your self-worth on what others think of you, and you pay an emotional (and physical) price
- When men are the majority, women speak 75% less. Read here why

Quotes

On positive thinking:

> There's power and science in positive thinking

On a third way to be confident for women, without trying to be aggressive men:

> We're saying that there's a third way. We don't always have to speak first; we can listen, and incorporate what others say, and perhaps even rely on colleagues to help make our point. We can pass credit around, and we can avoid alienating potential enemies. We can speak calmly but carry a smart message. One that will be heard. Confidence, for many of us, can even be quiet. Any of that might be the way confident behavior looks for women.

CONS

- **Sometimes confuses courage / drive with confidence?**

The authors say:

> And, let's be honest, neither the beckoning of a comfortable couch nor a lack of motivation is likely to be what stops us from speaking out at confrontational moments or from cold-calling a potential client to pitch a sale. Confidence is all that matters there.

I think that beating the fear of cold-calling is overcome more through personal drive and courage, than confidence. I had very little confidence in my first cold calls, but I did them because I just wanted to do it, in spite of the fear.

And I couldn't have stood the idea of me *not* doing it.

- **You can't say that confidence matters more than competence**

The authors make the case early in the book that "confidence matters more than competence for success".
Based on the one paper they justified their assertion on, it seemed an inappropriate conclusion to me.

- **(Slightly) playing down results to make men and women sound more similar?**

Write the authors:

> Women thought they got 5.8 out of 10 right, men 7.1. And how did they actually perform? Their average was almost the same—women got 7.5 out of 10 and men 7.9.

0.4 of difference is not "almost the same" on a scale of 0 to 10.
That can be especially significant if we are talking about curve-distribution differences, since those differences will be huge at the tails.

That being said, the general point the authors wanted to make stands: women tend to underestimate themselves more than women do.

PROS

- **Great overview on confidence**, spanning lots of studies and interviewing many experts
- **Many concrete tips**: contrary to some ill-informed reviews online, there are a ton of concrete and applicable advice, including for parents

Review

"The Confidence Code" provides a good overview of what confidence is and why it matters, and shares some good tips on how to be more confident (though I wished for more).

I used some of this information both for our **Confidence University**, and that's the greatest compliment I can provide to any resource.

The Girl Code: Summary & Review

Lucio Buffalmano · 1 April 2020 · Archived copy · Original

The Girl Code shares women's success stories and encourages women to go after their dreams while also being supportive -and supported- by other women.

Contents

- Summary
- Quotes
- CONS
- PROS
- Review

Summary

About the Author: Cara Alwill Leyba is a speaker and life coach focusing on women's empowerment.

Stories of Female Entrepreneurs as Interviews

This is not an easy book to summarize because a good chunk of it are simply lots of interviews with different successful women.

They are not very in-depth interviews, but you can glean some crucial nuggets of wisdom, like their fears, major challenges, or why they do what they do.

Ultimately, all those interviews help you realize that entrepreneurial success is not uncommon, and that **if you just start and act in spite of your fears, good things can come to happen**.

Becuase that's how most of them got their start: they were fed up of doing what they didn't like and craved for more.
They were afraid to start, but they started anyway. And little by little, they made it their own way.
BTW, it's not just how women become entrepreneurs. It's the same for men.

Supportive Men Do Exist

Many women talked about their relationships in Cara's interviews.

Some of them were toxic relationships, and some of them had troubles getting over abusive men (if that's you, read "how to end a toxic relationship").

But when they finally ended those negative relationships, those women bloomed. And many of them found supportive men who loved them for who they were: driven women who want to go places. And they supported them in their journey.
So, yes, non-jealous, non-competitive and supportive men do exist. Don't settle for the jealous ones who want to undermine you.

The Girl Code

Among the "rules" of the girl code:

1. **Empower others**: pull people up, don't tear them down
2. **Ditch the negativity**: stop putting others down… And stop putting yourself down. If you have negative people in your life, consider cutting them off

3. **Expand your circle to include supportive women**: as much as you want to cut out the negative, you want more supportive and empowering people in your life. And drop your scarcity mindset: there are a ton of them
4. **Stop comparing yourself to others**: especially based on social media. People only use social media to make others jealous
5. **Hustle**: success will come to those who work for it
6. **Be grateful**: gratefulness opens the doors to abundance and positive mental states. And it crowds out negativity and envy

Turn Jealousy Into Admiration

If you are a competitive woman, it's possible that you will compare yourself to other successful women.

And what happens when you see that a woman is being more successful than you are?
You get a pang of jealousy.

Now how you react to that point will determine whether you let jealousy ruin you, and you turn into a frenemy, or you take the high road and become a supporter.
Here is how Cara advises to go from jealous to supportive:

1. Recognize that jealousy is normal
2. Remind yourself that success is in unlimited supply
3. Go the opposite way: drop them a congratulatory note or write them a public message
4. See if you can meet her, have a coffee with her, and learn from her

Quotes

On people hurting you (haters):

> Hurt people hurt people

On prioritizing:

> There is no time for bullshit when you're building an empire

On handling tough situations with kindness, as it happened to the author when her driver lost his way and she was late for an important TV interview:

> No, no, it's OK, it will be fine (…). Don't worry (…).
> He thanks me repeatedly for being so kind.
> "In life sometimes we go in the wrong direction, all we can do is turn around and find our way again", I say to him.
> Hello, life coach on board.

That was a funny one :).

CONS

- **The Law of Attraction**

I am not a big fan of the law of attraction.
You can read my reviews of:

- The secret
- The Seven Spiritual Laws of Successs
- Get Rich Lucky Bitch

As a matter of fact, I believe the law of attraction is pure poison to female entrepreneurs.

Here is why I believe that male entrepreneurs earn more than women: because they focus on reality and how to optimize processes that make them more money, instead of wasting time in woo-woo BS

- **Create your champagne life?**

Who am I to criticize a couple of drinks and a posh lifestyle?
That can be fun.
And it can be a great life.
In a way, I also am a bit like that, enjoying beauty and the pleasures of life -just substitute champagne for wine-.

The problem with that type of marketing though is that it's not focused on work. And a book on entrepreneurship should be focused more on work.
Parading the "glitz lifestyle" encourages people to follow the glitz instead of positioning the glitz as a *byproduct* of your work and dedication.

In a way, it feels similar to Tai Lopez, who sells his products to men with cars and some hot babes around him.

Finally, to me, the champagne lifestyle not only sounds vain, but champagne is also a poor wine with too much sugar. Very unhealthy. You should probably cut out on that.
And should you make alcohol so central to your life? The author's own Twitter handle is "champagne diet". It might be your thing, but it ain't mine.

- **Supporting those who stole?**

The author talks about a female competitor who started copying her website, from the type of fonts, to the colors, to the content.

She was fuming.
But instead of suing her or warning her, she started supporting her.

I didn't find that particularly enlightening, and it seemed fake.

- **Sometimes competitive / angry**

I quote the author:

> Wisdom is meant to be shared, so let's start sharing what we've learned to make each other better. Let's start building each other up. Let's live up to our potential and **start ruling the world**.

Hmmm, these messages of "ruling the world" or, the male counterpart, "putting a dent on the universe" never appealed much to me.
They reek of narcissism and sociopathy.

PROS

- **Many interesting micro-interviews**

I enjoyed the many interviews. I enjoyed them because they are not with super famous women, but it's with accomplished female entrepreneurs who have been successful in their field, but from whom you would not have heard otherwise.

Maybe they're running a personal business like ThePowerMoves, but you wouldn't hear of the cool things they are doing if it wasn't for "The Girl Code".

- **The story of the lost drivers: an educative story for**

Cara's story when her driver lost his way to her TV appointment was both funny, entertaining, and educative. At a human level. The way she dealt with the driver, with compassion and kindness, is a model for us to follow.

Plus, when she said "hello, life coach on board", it capped a great story with a great job.

To me, that was the high point of the book.

- **Positive message on dropping jealousy**

I like the author recognizes jealousy as normal. And it's a good thing she advises to move past it.
Also read:

- Signs of a frenemy

Review

The content is similar to many other books, but the presentation is unique.

When it comes to "forming a circle of women", I'm not the biggest fan.
If you have read some of my reviews of "Lean In" types of books, you will know that I am not a big fan of this "there's a special place in hell for women who don't support each other".

I find that mindset sectarian, tribalist, backward… And toxic.
It's just one step before the equivalent male groups who congregate with each other to hate on women (see: "the psychology of the Red Pill").

Luckily, "Girl Code" has much wisdom that goes well beyond the "women together".
Many of the success stories, of course, are equally relevant to men.

To me, the best takeaways are the interviews and the mini case studies. I loved them because they were not on the huge successes, but more on lesser-known women who still made their dreams a reality.
That shows readers that achieving your dreams through your entrepreneurial journey is easier -and more common- than one might think.

10 Best Business Books for Women

Lucio Buffalmano · 3 April 2020 · Archived copy · Original

If you are looking for the best business books for women to help you launch your career -or business- you have come to the right place.

I have read a ton of them while researching for my course.
This post will also include the best career books for women, and the best books for female founders (ie.: best entrepreneurship books for women).

So let's start:

Contents

- #11. Lean In
- #10. #Girlboss
- #9. Nice Girls Don't Get the Corner Office
- #8. Workplace Poker
- #7. Secrets of Six Figure Women
- #6. The Confidence Code
- #5. Radical Candor
- #4. Hardball for Women
- #3. The Myth of The Nice Girl
- #2. How Women Rise
- #1. Power University

#11. Lean In

By Sheryl Sandberg
Summary | Audiobook

If "The Prince" should be in any list of books about power, then Lean In should be in any list of business or career

books for women.
“Lean In” is the Godfath… Godmother of them all, and almost all other authors in this list mention Sheryl Sandberg, or quote her or some passages of this book.

When it comes to actual content, “Lean In” abounds on feminist-type of advice, somewhat at the detriment of practical advice. The reason why **it’s more feminist and less practical** is the reason why it doesn’t feature higher. It’s also more suited for business women than female founders, since Sandberg seems more the type of woman who functions well within a structure, rather than in the chaos of *creating* that structure from scratch.

> Quote: “Done is better than perfect.”

#10. #Girlboss

By Sophia Amoruso
Summary | Audiobook

Now, here is a book from an entrepreneur, to female entrepreneurs.

I truly enjoyed Amoruso’s story because, in many ways, it was also my story. Not particularly enjoying being in someone else’s organization, struggling to fit in… And finally realizing that the only way out is finding and carving your own way.

If you’re a female entrepreneur who always felt at odds being a “business woman” in someone’s organization, then this is your book.

Similar to #GirlBoss, also:

- The Girl Code
- How to Be a Bawse (removed from the website)

> Quote: “The only way to support a revolution is to make your own.”

#9. Nice Girls Don't Get the Corner Office

By Lois Frankel
Summary | Audiobook

Lois Frankel nailed the title here.
Books like "The Power of the Pussy", "Why Men Love Bitches" and "Fuck Him" owe their success in good part to their titles.

Luckily for us, Lois Frankel didn't just come up with a good title, but also wrote top-notch content.
In this career book for women, Frankel focuses on what many women are doing wrong to truly compete in a man's world. Frankel describes 101 mindsets and behaviors that are holding women back, while providing practical advice on how to fix each one of them.

Personally, I find that in her quest to make women more assertive, Frankel's advice might sometimes end up being "aggressive" instead of assertive.
But if you have enough emotional intelligence to tell the difference, then you are going to learn hugely from this book. I certainly have, and I took out a lot of wisdom for my own course.

Most of all, I liked her simple, yet genius insight of "be less of a girl, and more of a woman".
Thus my choice of quote:

> Quote: "Success comes not from acting more like a man, as some might lead you to believe, but by acting more like a woman instead of a girl".

#8. Workplace Poker

By Dan Rust
Summary | Audiobook

Albeit not exclusively addressed to women, I had to sneak this one in here.
It's one of the best books on career strategies I have read, and its advice applies to men as much as to women.

> Quote: It may not seem fair or right. Shouldn't doing an exceptional job be enough? Unfortunately it's not.

#7. Secrets of Six Figure Women

By Barbara Stanny
Summary | Audiobook

This is both for female founders and career women, since Stanny does not focus on one or another, but simply goes after women who make more than six figures a year.

The book is a mix of self-help, personal finance advice, and business advice. Stanny interviews many successful women who each share personal details of their successes and struggles, ranging from career, to intimate

relationships, to addictions. And while I am not usually a big fan of books structured as interviews, this a standout exception, as Stanny masterfully weaves the case studies within the frameworks of effective money management.

The only bit I didn't like was the law of attraction. Luckily, it was just a short passage, and this is one of the best all-rounders on the mindsets of success, female empowerment, and financial abundance for women.

> Quote: I've learned that I have to be the one responsible for my money. It has been painful to come to that. But with that pain came pride, because I now feel I don't have to depend on anyone. **This money buys me freedom**. I don't need my husband. I could do just fine financially. But I want to be with him because I love him.

#6. The Confidence Code

By Katty Kay & Claire Shipman
Summary | Audiobook

Confidence.
How often have you heard that word?
Sometimes it feels like in the self-help industry, especially for men, everything can be fixed with more confidence.

Yet, as much as we can all be tired of the confidence mantra, as the authors point out in this book, it *is* important. It's particularly important because confidence is what allows you to take that first step, to get going, and to compound action over time.
And it can be especially important for women, who often suffer of confidence shortage compared to men.

The authors not only delve deep into the research literature, but they also have plenty of advice on how to make up for that gap.

> Quote: We're saying that there's a third way. We don't always have to speak first; we can listen, and incorporate what others say (…) We can pass credit around, and we can avoid alienating potential enemies. We can speak calmly but carry a smart message (…) Confidence, for many of us, can even be quiet. Any of that might be the way confident behavior looks for women.

#5. Radical Candor

By Kim Scott
Summary | Audiobook

Kim Scott is a very successful businesswoman. And she even worked for Lean In author Sheryl Sandberg. Hence, some gender-issues were sure to find their way in.
But not in your typical "women should help other women" kind of way. Kim Scott treats gender issues as much as she treats anything else: respect people, not matter their gender or beliefs, while also for maximum efficiency.

Indeed, "Radical Candor" is for women as much as it is for men. It's one of the best books on leadership and effective corporate culture I have ever read.

I liked Kim Scott's approach.
She also says that men must overcome their biases to be gentler towards women. And as much as that might sound strange for those who haven't grasped her mindset yet, that's the true mindset of an empowered woman. Because women can take as much harsh feedback as men can, and they need it as much as men do, if we want to help them grow.
That's the type of feminism I like.
Here is in Kim's own words:

> Quote: Most men are trained from birth to be "gentler" with women. Sometimes this can be very bad for women (…). The most sexist man I ever worked for was invariably far more reluctant to criticize me than the men who worked for him. He lived in mortal fear of making me cry. He made plenty of men who worked for him cry, but that didn't seem to register with him.

#4. Hardball for Women

By Pat Heim & Tammy Hughes
Summary | Audiobook

Now that's a befitting title for a website called "ThePowerMoves".

And boy, does Pat Heim both understands and well explains power dynamics. More than one author in this list took more than a proverbial leaf out of her book. And for good reasons: "Hardball for Women" is a classic.

Ladies, if you need to learn how to play the game the way the boys do, and most businesses at the top-level play a boys' game, this is your book.
Even as a non-novice, I learned a lot from this book and took out many lessons for this website's course "Power University".

The only reason it doesn't feature higher is that sometimes I missed the mix of strength with femininity.

> Quote: Power is an uncomfortable subject for many. In fact, women tell us they don't want to deal with that "power stuff" because they aren't "power hungry." They act as if power is a social disease to be avoided at all costs.
> (But)
> Simply stated, power is the ability to get things done. If you don't have power, you're going to be ineffectual at work.

#3. The Myth of The Nice Girl

By Fran Hauser
Summary | Audiobook

Can a “nice girl” make it in business, without becoming a “bitch”?

Sure she can, explains Fran Hauser.
What I like most is that this is not a literary work, like some books are, but it’s based on both solid research, and her own successful experience as a media executive, an investor, and a mentor and advocate for women in business.

Of course, “nice” cannot mean “pushover”, and Fran well explains the difference in her book.
But the bottom line is: a woman can be herself, remain kind, and achieve success.
That’s a very important message.

> Quote: In fact, as I learned to own my natural kindness, it has become my professional superpower.
> It has helped me build my personal confidence; the loyalty of those who’ve worked with me; and a strong, trusting, faithful network of colleagues, mentors, and mentees.

#2. How Women Rise

By Sally Helgesen & Marshall Goldsmith
Summary | Audiobook

"How Women Rise" lists 12 habits that are most likely to affect women and prevent them from rising in their business, their career, and their life as well.
For each habit, there are case studies of women who them, together with how they did it, and how it's helping them flourish.

The are many reasons why I liked this book, and one of them is the expertise that Goldsmith, one of the authors, brings on male leadership.
So you don't just learn about typically female strengths and weaknesses, but also about the typical male stumbling block, so that you can compare.
That's also helpful because not all women are equipped with the stereotypical female brain. A few women, some say around 10%, have more stereotypical male brains. With this book, you can cover both bases.

Finally, another great plus of "How Women Rise" is that it encourages women to also hold on to their more stereotypically feminine traits since they also are advantages. They can make for a better life, and a better a world. I couldn't agree more. Hence the quote that I picked:

> Quote: Certain characteristics emerge: diligence, conscientiousness, a concern for the feelings and contributions of others, and a reluctance to join the it's-all-about-me competition that characterizes life and politics in many organizations.
> These are good things, (…) gifts you bring to the world. (…) And since part of your success will ultimately be helping to make your organization, and the world, a better place, you don't want to leave these strengths behind as you move higher.

#1. Power University

By Lucio Buffalmano
Course Curriculum

Take this with a grain of salt, because Workplace Power is the work module of this website's flagship course.

The course combines all the best wisdom from all these books and more, plus the latest research, delivered with videos, pictures, quizzes, and infographics, so you can learn better with visual examples.

Also Worth a Read:

- Bad Blood: Not the example you want to learn from. But as someone said, a (bad) woman can play the exact same game as a male sociopath. Vicious, power-hungry, and ruthless
- The No Asshole Rule: The N.1 rule for a healthy business culture and a healthy team environment: don't tolerate assholes
- Principles: company culture and company systems from a guy who built a multi-billion company
- Best entrepreneurship books: there are a few gender differences that, yes, do justify reading at least a few books written specifically for women. But you can also learn plenty from books written by men, for a more gender-neutral audience

Avoid These Business Books for Women:

- Get Rich Lucky Bitch, "Lucky Bitch", "The Secret", and all the woo-woo BS based on the law of attraction, high-frequency vibrations, and "willing things into life"

No, don't get rich with lucky bitch, get real instead.

No dissing to those authors, I don't know them and as far as I know, they might be wonderful human beings.

What I have issues with, is the content of those books.

Lemme be frank here: one of the least appreciated reasons men are more successful in business is this: **men make more money in business because men don't waste time with woo-woo BS** and focus instead of what's been proven to work.
It's not a chance that Ray Dalio, who prides himself on being a hyper-realist, built the most efficient decision-making process, to fuel the most effective trading company in the world.

How Women Rise Review: A Power Audit of Status-Lowering Habits (Book Review)

Lucio Buffalmano · 3 April 2020 · Archived copy · Original

How Women Rise (2018) teaches women how to overcome the most typical female stumbling blocks, so that they can advance in their career.

TPM Strategic Audit: Divergent power failures between men and women
This text provides divergent power failures between men and women within corporate hierarchies. While ambitious men's political mistakes stem from excessive ego-signaling (dominance-seeking), women's habits are often rooted in excessive pro-social signaling (submission-leaning). This text can provide good insights on avoiding common pitfalls and striking a more effective 'optimum balance'

Summary

About the Authors:
Marshall Goldsmith is a business executive coach, and Sally Helgesen is a leadership development consultant. They are both authors and both have a long experience coaching and training on career strategies and development.

Issues Men Have

1. **Winning too much:** The need to win at all costs and in all situations -when it matters, when it doesn't, and when it's totally beside the point-
2. **Adding too much value:** The overwhelming desire to add our two cents to every discussion
3. **Passing judgment:** The need to rate others and impose our standards on them
4. **Making destructive comments:** The needless sarcasms and cutting remarks that we think make us sound sharp and witty
5. **Starting with "No," "But," or "However":** The overuse of these negative qualifiers which secretly say to everyone, "I'm right. You're wrong"
6. **Telling the world how smart we are:** The need to show people we're smarter than they think we are
7. **Speaking when angry:** Using emotional volatility as a management tool
8. **Negativity, or "Let me explain why that won't work":** The need to share our negative thoughts even when we weren't asked

9. **Withholding information:** The refusal to share information in order to maintain an advantage over others
10. **Failing to give proper recognition:** The inability to praise and reward
11. **Claiming credit that we don't deserve:** The most annoying way to overestimate our contribution to any success
12. **Making excuses:** The need to reposition our annoying behavior as a permanent fixture so people excuse us for it
13. **Clinging to the past:** The need to deflect blame away from ourselves and onto events and people from our past; a subset of blaming everyone else
14. **Playing favorites:** Failing to see that we are treating someone unfairly
15. **Refusing to express regret:** The inability to take responsibility for our actions, admit we're wrong, or recognize how our actions affect others
16. **Not listening:** The most passive-aggressive form of disrespect for colleagues
17. **Failing to express gratitude:** The most basic form of bad manners
18. **Punishing the messenger:** The misguided need to attack the innocent who are usually only trying to help us
19. **Passing the buck:** The need to blame everyone but ourselves
20. **An excessive need to be "me":** Exalting our faults as virtues simply because they're who we are

Read more:

- **Dominant behavior** and how to calibrate it
- **Dominant speaking** and how to calibrate it

Issues Common to Both Men and Women

1. Winning too much
2. Telling the world how smart you are
3. Claiming credit you don't deserve
4. Failing to give others proper recognition
5. Using anger as a management tool
6. Refusing to express regret
7. Failing to express gratitude
8. Passing the buck

Issues Women Have

1. **Reluctance to claim your achievements:** false belief that not taking credit is "morally superior". It's not, and it's just another excuse for staying in your comfort zone. The higher you go, the more this will hold you back
2. **Expecting others to spontaneously notice and reward your contributions:** you must ask for what you want, let people know you intend to advance. The strategy of "doing good work, keeping your mouth shut and expecting others to notice you" will keep you stuck forever. And you will grow resentful of a job that might have otherwise fulfilled you
3. **Overvaluing expertise**
4. **Just building rather than building and leveraging relationships:** don't fall for the black and white mindset that you're either pure with "real" friendships or a conniver who uses people. The truth is that relationships are a give and take, and you will both gain more with a give and take (see: "the law of social exchange")
5. **Failure to enlist allies from day one**

6. **Putting your job before your career:** some women feel such a strong loyalty to the team or their boss that they fail to take better opportunities somewhere else. Always remember to network outside of your team as well
7. **The perfection trap**
8. **The disease to please**
9. **Minimizing:** taking less space, downplaying one's own achievements
10. **Too much:** showing too much emotions, or disclosing too much personal information
11. **Ruminating**: women tend to ruminate and self-blame
12. **Letting your radar distract you**: women have a tendency to pick up more cues from the environment, while men -and most businesses- appreciate laser-focus concentration

The Positives of The Negatives

Helgesen correctly notes that all the 12 harmful habits are also rooted in positive

- Habit 1, Reluctance to Claim Your Achievements, is rooted in modesty and a willingness to acknowledge the achievements of others
- Habit 2, Expecting Others to Spontaneously Notice and Reward Your Contributions, is rooted in a reluctance to showboat or behave like a self-promoting jerk
- Habit 3, Overvaluing Expertise, is rooted in a healthy respect for all the skills your job requires and the willingness to work hard to master them
- Habit 4, Building Rather Than Leveraging Relationships, is rooted in the conviction that you should value others for who they are rather than how they can be of use to you
- Habit 5, Failing to Enlist Allies from Day One, is rooted in the belief that you should not call on others for help until you've done your homework and know the parameters of your job
- Habit 6, Putting Your Job Before Your Career, is rooted in the desire to demonstrate loyalty and commitment
- Habit 7, The Perfection Trap, is rooted in the desire not to disappoint others, along with a commitment to making the world a better place
- Habit 8, The Disease to Please, is rooted in an unselfish passion for making other people happy
- Habit 9, Minimizing, is rooted in an awareness of other people's needs and the wish to show them that you value their presence and insights
- Habit 10, Too Much, is rooted in the quest to be authentic and connect with others based on shared experience
- Habit 11, Ruminating, is rooted in the capacity for thinking deeply about what matters most to you
- Habit 12, Letting Your Radar Distract You, is rooted in the ability to understand what others are feeling and a broad-scale, making you intuitive and empathic

Say the author:

> These are good things. They are gifts you bring to the world (…) And since part of your success will ultimately be helping to make your organization, and the world, a better place, you don't want to leave these strengths behind as you move higher and expand your scope.

The author add that the world needs more women in positions of leadership. More women who also carry their feminine qualities and traits with them.

Forget Deep Connection AND Useful Ones

The authors rightly point out that strong work relationships in which you both gain are not antithetical to deep and intimate relationships.

Women can carry their natural skills for deeper relationships and use them to their advantage at work.
They say:

> Don't get the idea that we're urging you to undervalue your gift for intimacy or rein in your warmth and concern for others in favor of a more leveraged approach. Instead, you might think about how to bring your skills for forging deep connections into play as you seek *also* to become more intentional in building relationships that may be advantageous to you in the future.

Women Can Make for Better Leaders of Teams?

Men are, on average, more hellbent to win than women are.

That can make the transition from achiever to team and organization leader more challenging for them or the team. These competitive men may remain stuck in competitive mode, failing to realize that now that now they also need to take care of the team.

Women can make for better team leaders because they care less about winning for themselves, and more about winning for their teams and organizations.

Write the authors:

> This reluctance to view money, position, and winning as chief arbiters of success is psychologically healthy for women and great for their teams and organizations.

On the other hand, as the authors point out, when women are too little invested in their own success, and when they go overboard in self-sacrificing, then they end up harming their own career chances and they never move up the corporate ladder.

This is not just theory, but shows up in the data as well. Say the authors:

> Marshall's experience conducting 360-degree feedback consistently shows that women in organizations are perceived as being more effective leaders than men.

TPM Note: 'Better' leadership is highly contextual!
More typical masculine forms of leadership better fit certain contexts, including uncertainty, risks, or higher-dominance environments. And the other way around for more typically feminine approaches.

Change Beliefs to Change Behaviors

A few beliefs in them that prevents them from changing into a more assertive stance include:

- **Ambition is a bad thing**: see above
- **Being a good person means not disappointing others**: some women let others control and manipulate them via their desire to please (see: soft power)
- **Women should always be role models for other women:** an especially pernicious and dangerous belief for minority women, whom sometimes also carry the burden of "doing the right thing" for their race as well

Read more:

- **Assertiveness guide**

> Assertiveness: Definition, Examples & How to Be Assertive

More Wisdom

- **As a manager, focus on networking**: doing an excellent job as a manager will only keep you stuck in the internally-facing position. You must network as a manager to make it to exec cadre
- **Pleasing for women works well early on, but it harms them later on**: some women might not realize that pleasing is an issue early because it can actually help them. But as they advance in their career, it can become detrimental. Being unable to say no and enforce boundaries is especially risky for their emotional and physical well being
- **Avoid personal disclosure**: women bond by disclosing personal information, while men bond doing things together. Women can end up oversharing at work, and looking unprofessional

Quotes

On how a woman realized of her own problem from her own description (ie.: she was too much about the process of her work, and too little about politics):

> "The first thing you need to know," said Heidi, "is that I'm not like a lot of the guys here. They never think about the bank. They think about themselves, what they can get out of working here. They're up front about it, so they spend more time angling for promotions than doing their jobs.
> That's not my way. Delivering the best work I can is more important to me than schmoozing or playing politics. I think more about this institution than I do about my own career."
> She paused for a moment, then added thoughtfully, "Maybe that's my problem?"

Review

"How Women Rise" is a valuable book to understand the most stereotypical habits that hold women back.

I learned a ton from it and used some of this information for this course's website.
Hence, I can highly recommend it.

- **How to be feminine and powerful**, at the same time

What Got You Here Won't Get You There: Summary & Review

Lucio Buffalmano · 4 April 2020 · Archived copy · Original

What Got You Here Won't Get You There teaches successful and ambitious executives how to go from an already high level of career success, to an even higher level.
Often, explains author Goldsmith, it's about overcoming the false belief that one's own success justifies doing the same things we've always done.

TPM Strategic Takeaway: Some good reminders, but the main focus must be on power and strategies
Goldsmith focuses on political pitfalls and self-development, which are, of course, valid. However, progress at the highest levels is power-focused, not just 'being a better human'. Including exuding **executive skills** (ie. 'coming across as a competent, high-agency 'alpha male type'), forging alliances, and smart strategies.
See our **career strategies hub ↗**

Notes

About the Author:
Marshall Goldsmith is an American leadership coach. He learned and trained under famed management consultant Peter Drucker, author of "The Effective Executive". Goldsmith is the author of several career and management-related books, including "How Women Rise".

If You're Stuck, Personal Change Is What You Need

Successful people can get stuck because they believe that:

> Since I succeeded, I must be good. Hence, all I'm doing must be good

So sometimes it can be hard to make successful and driven people understand that they can improve… By changing this or that.

TPM Note: You may need to change company, instead of changing yourself
Remember that this is a catch-all generic advice that many not apply to everyone. You may already be a top-contributor that would be better rewarded somewhere else. If you're stuck in the same company, the issue is not necessarily you, but a lack of opportunities, or someone above you who's blocking you. A lateral move may be your

best next bet. Or a new opportunity that gives you negotiation leverage

What's Stopping Top-Execs From Getting to The Next Level

Goldsmith's tips come down to avoiding disempowering others and showing more respect, including:

1. **Winning too much:** The need to be the alpha male or alpha female at all times. The need win at all costs and in all situations, even when it doesn't matter, or when the costs outweigh the benefits.
2. **Adding too much value:** This isn't really about adding value, but to always add opinions and overpowering others
3. **Passing judgment:** The need to rate others and impose our standards on them
4. **Making destructive comments:** The needless sarcasm and cutting remarks that we think make us sound sharp and witty <— **TPM Note**: remember that criticism is a powerful tool to display superior competence or thinking. It's how about how and when you do it, not about not doing it
5. **Starting with "No," "But," or "However":** It's the opposite of low-power talk, these secretly says to everyone, "I'm right. You're wrong".
   See: **how to speak with power**.
6. **Telling the world how smart we are:** The need to show people we're smarter than they think we are
7. **Speaking when angry:** Using emotional volatility as a management tool
8. **Negativity, or "Let me explain why that won't work":** The need to share our negative thoughts even when we weren't asked
9. **Withholding information:** The refusal to share information in order to maintain an advantage over others <— **TPM Note**: this is a dangerous generalization. Be strategic, not naive
10. **Failing to give proper recognition:** The inability to praise and reward
11. **Claiming credit that we don't deserve:** The most annoying way to overestimate our contribution to any success
12. **Making excuses:** The need to reposition our annoying behavior as a permanent fixture so people excuse us for it
13. **Playing favorites:** Failing to see that we are treating someone unfairly
14. **Refusing to express regret:** The inability to take responsibility for our actions, admit we're wrong, or recognize how our actions affect others
15. **Not listening:** The most passive-aggressive form of disrespect for colleagues
16. **Failing to express gratitude:** The most basic form of bad manners
17. **Punishing the messenger:** The misguided need to attack the innocent who are usually only trying to help us
18. **An excessive need to be "me":** Exalting our faults as virtues simply because they're who we are

The author says that Machiavelli might turn these habits around and say it's exactly what makes these people succeed.
But that's not the case, because enlisting people as allies, in the long run, is a better strategy for success.
Also read:

- Strategies for long-term power

TPM Note: Effective Machiavellianism isn't about over-selfishness and cynicism; it's about strategic effectiveness
While it's true that over-doing selfishness and dominance undermines you, true Machiavellianism is never over-doing it, but in *contextual application*. And of course, while not disempowering others is crucial ('power protecting'), some men must focus on *getting* more respect.

Read:

- **How to be a good Machiavellian**

To Change People, Leverage Their Self-Interest

Robert Greene, author of "The 48 Laws of Power" said that you'd better appeal to self-interest.
And Goldsmith says that to help people change, you must present change in a way that helps them get more of what they want.
As the author put it, "you", that's their "hot button".

Luckily, he says, successful people all have the same hot buttons.

Successful People Want Power

Says the author:

> Fortunately, successful people make it easy to find the button.
> If you press people to identify the motives behind their self-interest, it usually boils down to four items: money, power, status, and popularity.
> These are the standard payoffs for success. It's why we will claw and scratch for a raise (money), for a promotion (power), for a bigger title and office (status). It's why so many of us have a burning need to be liked by everyone (popularity).

People Get Rewarded for What They Do, Rarely For What They Avoid

People usually get promoted and rewarded for what they do, but not for all the equally positive things they stop doing, or for the bad deals they stall.

The CEO of Warner made history for the worst merger in US history when, at the height of the .com bubble merged with AOL.
The funny thing?
If he had stopped that merger at the last minute, everyone would have soon forgotten about it.

Ask for Feedback, Especially With Your Most Important Relationships

It's funny how some people manage to muster the courage to ask for feedback at work.

But they still never ask for feedback in the relationships that matter the most to them, with their parents, children, or spouses.
There is a psychological stumbling block stopping us: We figure if we don't ask for critiques of our behavior, then no one has anything critical to say.

The author, for example, asked his daughter what she'd like to see more from him.
The answer shocked him: they didn't complain that he wasn't home for business trips, but that when he was home, he wasn't spending quality time with them, but instead watching sports or being generally absent.

TPM Note: Mix self-promotion with seeking critical feedback
The truth is that focusing on 'what we must improve' only frames you as a learner-beginner, and beginners don't advance. High authority, self-confident experts advance.
See: **smart self-promotion strategies** ↗

You Don't Need to Become The Best At It, You Just Need to Improve It

Some people don't work on themselves because they think they will never get great at it.
Well, fuck that, you don't necessarily need to become great at it, you just need to get better.

That message alone bumped this book up to 4 stars.

Say the author:

> The same applies to your task of changing your behavior.
> Pick one issue that matters and "attack" it until it doesn't matter anymore. If you're a bad listener, choose to become a better listener—not the best listener in the world (whatever that means!). If you don't share information, get better at sharing until it's not an issue anymore

More Wisdom

- **The higher you go, the more it's about people skills:** says the author: "who would you rather have as a CFO? A moderately good accountant who is great with people outside the firm and skilled at managing very smart people? Or a brilliant accountant who's inept with outsiders and alienates all the smart people under him?"
- **If you ask for feedback, don't give your opinion right away**: or it will seem like you never wanted to consider their opinion anyway. Instead, ask questions to let them share even more
- **What people want changes by age:** *People in their 20s want to learn on the job. In their 30s they want to advance. And in their 40s they want to rule.*
- **Bosses prefer praise to criticism**: so watch for giving "radical candor" feedback

Quotes

On withholding information to accrue power:

> The problem with not sharing information—for whatever reason—is that it rarely achieves the desired effect.

> You may think you're gaining an edge and consolidating power, but you're actually breeding mistrust. In order to have power, you need to inspire loyalty rather than fear and suspicion. Withholding information is nothing more than a misplaced need to win.

How the author convinced an executive to start the coaching relationship:

> As I told you, I can't help you make more money. But I can get you to confront this question: Do you really want to have a funeral where you're the featured attraction and the only attendees are people who came to make sure you're dead?
> Basically, that's where you're headed.

Some good realpolitik wisdom some people need to hear:

> Criticizing the boss, no matter how ardently he or she tells you to "bring it on," is rarely a great career move.

On the relativity of top performance:

> I take great comfort in the fact that Michael Jordan, to many the best basketball player to ever play the game, was a mediocre baseball player in the minor leagues and, as a golfer, would have a tough time keeping up with at least twenty golfers who live within an 800 yard radius of my home in San Diego.

What's Missing: Optimized Power

While the advice is solid, the book tends to be a 'be a better human' guide, applying general self-help to career success.

The problem with generic self-help is that it's often *naive* self-help, missing out foundational personal and interpersonal power with body language and behavior, and the more strategic aspects of power intelligence, including optimized dark-triad traits, strategic thinking.

And while Goldsmith is right that many men who come close to the top tend may tend to be overly-dominance, that's not always the case.
The issue may still be respect, of course.
What may be holding some men back instead is not necessarily respecting others more, but *getting* more respect and being more **positively dominant**.

Review

"What Got You Here Won't Get You There" is a good book for already successful people who'd like to improve.

It only focuses mostly on personal self-development and preventing largely beginner-like interpersonal mistakes though, missing **office politics**, interpersonal dominance, and strategies.

10 Best Books to Advance Your Career

Lucio Buffalmano · 5 April 2020 · Archived copy · Original

If you want to launch your career, you have come to the right place.

Luckily, career strategy books abound.

Unluckily, many of them are based on either embellished biographies, or based on what I call the "utopian workplace", such as the non-existent workplace that only rewards merit and contribution.

Fortunately, there are a few good career books to learn the equally important "other side of the coin", which consists of politics, power dynamics, and career strategies based on the real world.

Here are the best ones:

Contents

- 11. Winning
- 10. The 48 Laws of Power
- 9. Bad Blood
- 8. What Color Is Your Parachute
- 7. The Secret Handshake
- 6. Secrets to Winning at Office Politics
- 5. Hardball for Women
- 4. Stealing the Corner Office
- 3. Workplace Poker
- 2. Power
- 1. Power University

11. Winning

By Jack Welch
Summary | Amazon

Jack Welch knows a thing or two about having a good career.

He's had a legendary career himself, he promoted lots of people into great careers, and he also destroyed a few people's careers.

The biggest takeaway from Jack Welch? Embrace change.
It's the senior management and the CEO who want that change. When you refuse change, you are bucking the most powerful people in your organization.
Embrace change, instead, and the most powerful people might take you upward in their powerful embrace.

> Quote: Don't just pay for hands when you can also have brains – for free

10. The 48 Laws of Power

By Robert Greene
Summary | Audiobook

The 48 Laws of Power is not strictly aimed at career success, but it will help you to start thinking in terms of power dynamics, strategies, and realpolitik.

Also good:

- Corporate Manipulation (article)
- The Prince

> Quote: Keep your friends for friendship, but work with the skilled and competent

9. Bad Blood

By John Carreyrou
Summary | Amazon

Someone said:

> The people who seek power are invariably the least suited to hold it

I don't think that's "invariably" true, but it's at least sometimes true.
Certainly in the case of Theranos, the company Elizabeth Holmes founded.

It's a good case study on looking beyond the PR, the corporate communication, the company slogans, and the media hype.
And if you look well, you will find a completely different reality behind those curtains.

In the case of Theranos, the disconnect between PR and reality was entertainingly extreme -that's what happens when you get a smart, power-hungry sociopath to fill the media's dream for a billionaire female founder-.

But it's a good cautionary tale that applies to most normal companies as well: don't believe the hype and the slogans, but learn the true power dynamics that govern boardrooms and careers' trajectories.

Staying on the topic of sociopaths in business, also good:

- The Art of The Deal
- Billion Dollar Whale

> Quote: (Holmes has) One of the most mature and well-honed sense of ethics
> -General Mattis
> P.S.: this quote is sarcastic

8. What Color Is Your Parachute

By Richard Bolles
Review (removed) | Audiobook

If you're looking for employment, this is a top option.

It will take you from A -finding out what you truly want- to Z -negotiating your salary-.

It's a minister who originally wrote, but it's certainly a down-to-earth minister who understood some basics of office politics and power dynamics.

> Quote: Employers sometimes feel as though they are a fraternity or sorority. During the interview you want to come across as one who displays courtesy toward all members of that fraternity or sorority.

7. The Secret Handshake

By Kathleen K. Reardon
Summary | Amazon

Such an underrated little gem.

I am grateful to professor Reardon for how much she taught me on frames, frame control for professional environments, and political maneuvering.

The central idea of this book is simple, yet genius as much as it is true.
The "secret handshake theory" is one of the most important unwritten rules of success: to join the successful executives, you must look and behave like you're a successful executive. And that entails learning all the non-written rules of how to behave like the successful guys, sending the correct messages they want to see.
People at the top only accept cool people within their group. And, ideally, cool people who are *like them*.
That's the "secret handshake".

And I couldn't agree more.

> Quote: Frankly, however, those in the inner circle of most companies are not looking to invite in Nervous Nellie and Jittery Jack, but rather people who can be highly productive while remaining poised, clearheaded, and objective at the same time.

6. Secrets to Winning at Office Politics

By Marie G. McIntyre
Summary | Amazon

Wouldn't it be nice if you knew how to map and assess the power of the people around?

That might be what I loved most in this book.
I built on McIntyre's work for the "power mapping guidelines" of Social Power.

> Quote: They are sucking up, scheming and manipulating, but we are building relationships, developing strategies, and opening communication channels.

5. Hardball for Women

By Pat Heim
Summary | Audiobook

Don't let that title fool you.

Yes, it might be written and marketed for women. But trust me, anyone is going to learn hugely from this one. Pat Heim writes "Hardball for Women" to teach women how to function and win in a male-dominated culture. But since she's talking about the ambitious, executive-level male culture, this is almost a mandatory read for anyone who wants to make it to the top.

Finally, there is also much to learn here on gender differences and inter-gender dynamics.
I definitely took out a lot of wisdom for Social Power.

> Quote: Simply stated, power is the ability to get things done. If you don't have power, you're going to be ineffectual at work.

4. Stealing the Corner Office

By Brendan Reid
Summary | Audiobook

Brendan Reid is a level-headed writer.

Some of his views might sound extreme if you have never questioned corporate slogans before.
He says, for example, that focusing on results is the biggest mistake people make when it comes to their career.
I don't fully agree with that, but he is right in many respects. Once you step out of the organization, your results matter little -or nothing-.
Your job title, the salary you received, your networks, and your soft skills… Those remain.

You should read "Stealing the Corner Office" right after you've read your run-of-the-mill career advice book, just as preventive medicine against the "just do a great job" type of advice.

> Quote: Results orientation is one of the most universally accepted business mantras, but it serves everyone's interest other than your own

3. Workplace Poker

By Dan rust
Summary | Amazon

I truly wasn't sure whether to give this spot to Dan Rust, or to Brendan Reid.
They both deserve it, but in the end, I went for "Workplace Poker" because I particularly enjoyed the psychological analysis of "high in emotional intelligence", VS "thick-skinned, rhino type" of players.

Dan Rust says that to make it to the top, you must be more on the rhino type.
I'm not sure you need to be a rhino, but as Pfeiffer, the current holder of the #2 spot on this list says, you at least need to be able to push aside your ego and personal grudges when push comes to shove.

> Quote: It may not seem fair or right. Shouldn't doing an exceptional job be enough? Unfortunately, it's not

2. Power

by Jeffrey Pfeffer
Summary | Amazon

Power by Jeffrey Pfeffer enters into the second spot of this list because it's a great mix:

- Theoretical foundations on power and power dynamics
- Encouraging (but non-naive) self-help
- Solid techniques, strategies, and mindsets

Plus, some real-life stories and examples of successes and political failures that will help drive home how important political skills, relationships, and power awareness is for work success (and life success, we'd add).

1. Power University

By Lucio Buffalmano

Intro

We're biased here since this is the flagship course of this website.

However, we believe it deserves the top stop.
One, because Power University takes the best wisdom from each of these books and more, plus tons of research turned into practical strategies, video examples, pictures, and infographics.

And two, because you simply can't beat video and real-life examples and videos when it becomes to personal self-development and learning crucial skills such as high-power talk, high-power behavior, and that "executive type of behavior" that sub-communicates you deserve the top spot -some would call it "alpha male behavior"-.

If you seek practical strategies for career success, this might be the best investment you can make in yourself. However, it demands that you invest some time and effort into it.

Watch out for *popular* career books

Many books teach how to build a good career based on utopian and naive models of "the best ones will advance".

Even the best-seller of them all "Think and Grow Rich" advises you to put your head down and do great work without ever asking for anything.

Then, there are some truly great books, like "Radical Candor".
I call these types of books the "enlightened workplace model".

And that's all cool and dandy, we should all strive towards an ideal. Who doesn't want to work in an enlightened workplace, for an enlightened boss?

However, we shouldn't embrace that ideal while we forget about the real world, about human nature, and about the more selfish, darker side of things.

You need both.
You need to strive for that ideal, while being prepared for how things actually work.
After all, 99% of companies and bosses do not even get close to the ideal workplace.

That's why, alongside books that teach you the enlightened way, you must also learn career strategies from realpolitik sources.
There aren't that many great ones, but this list, or Social Power, will get you ready.

Stealing the Corner Office: The Realities of Career Progress (Book Review)

Lucio Buffalmano · 6 April 2020 · Archived copy · Original

Stealing the Corner Office (2014) teaches readers the real-world dynamics of career advancement, which include people, office politics and, sometimes, personal strategies that do not always perfectly align with corporate interests.

TPM Strategic Note: Good wake-up call, but oversimplifies some dynamics
Companies optimize for themselves, of coures, but that often means that if you add value to their bottom line, you can capture more of that bottom line. The reality is a mix of converging and diverging interests that rewards smart strategists, rather than overly naive or overly cynical.
See our **career strategies hub** ↗.

Notes

About the Author:
Brendan Reid is an author and career coach specializing in the human and political side of corporate dynamics.

Human Resources Don't Hire Smart People

More intelligent people make us feel insecure and unhappy, and we'd rather avoid them.

Similar to Robert Greene in the *48 Laws of Power*, the author suggests that talented people threaten our own success within the organization.

That's why human resources don't hire the smartest people they can find, but those who make them feel good and safe.

And the bigger the hiring committee, the more average and "safe" the candidate will be.
Says Reid:

> This is the epitome of misguided consensus hiring. What are the chances 25 people could ever agree on a truly transformative candidate? In practice, large group hiring always favors the most likeable candidate or the candidate least likely to create discomfort or change.

And he ends:

> Groups don't make good choices. Groups for collaboration— yes, groups for decision making—no.

TPM Note: This is overstated. Show you're smart, but in a smart way
Smart HR representatives from smart companies hire plenty of smart people. Top companies may only hire smart people. Being smart is a huge added value if you present it well.
Such as, not as in 'being smarter than you', in a competitive way, but being smart like you, and to benefit you.
See power + warmth.

Focus on Career Advancement, Not Execution

There is a huge difference between executing and advancing.

When you execute well, you are helping the company meet its objective, but not necessarily your own.
When you focus on career advancement, you help yourself meet your objective, but not necessarily the company's objectives.

The two sometimes overlap, but they are far from being the same.
Says the author:

> I'm sorry to be the bearer of bad news, but your company doesn't really care about your advancement

TPM Note: Execution builds leverage
Don't ignore execution, it builds both skills, self-esteem, and *leverage* for your negotiations

Companies Are Doing Their Own Interest, You Do Your Own

Companies want you to focus on execution because that's their job, that's what they are there for.

Companies exist to deliver shareholder value, and it's fair like that. If you invest your money in companies, you want them to behave like they behave.
It's not companies that are misguided; it's the workers who focus on execution instead of focusing on career advancement who are misguided.

Beating the competition, gaining market share, or even delivering shareholder value is not necessarily in your interest -unless you own a sizable chunk of the stocks-.

Take Care of the Shareholder of You

While the company takes care of its shareholders, you should take care of your own shareholders.
And your shareholders are different than the company's shareholders.

Says the author:

> Your number one concern should be your shareholders: you, your spouse, your kids, your pets. These are the people who have invested in you, not the bankers and venture capitalists and high-volume traders on Wall Street.

The Company's Success Is Not Your Success

You know the idea of the rising tide, lifting all boats, right?

Well, I have already expressed my opinion on that with this meme in the "corporate lies" article:

Maybe you all win together. But the share of the spoils is what matters
The author uses another argument, and it's the "chasing bear argument".

When you're rising because the company improves, you're rising proportionally, but you're not winning because everyone else is rising at the same pace.

He says that most opportunities present themselves during times of crisis and turmoil.
The bear argument is that you don't need to outrun the bear and win against the company's competitors. You only need to outrun your true competitor: your colleague vying for the same promotion.

The 3 Types of Stationary Career Failures

The are three different types of good workers who still fail to advance:

- **The go-to guy**: the technically skilled guy who works hard to solve any problem. It seems like a great strategy, it gives you some power and protects you against layoffs, but if you're not careful, you get stuck doing back-end work while the exec gets the rewards
- **The passion player**: has an idea or strategy, and they pester everyone to get it funded and prioritized. But those who win are analysts who get on the side of any winning idea, not this or that specific one -even if it's yours-
- **The task master**: he holds people accountable and pushed everyone hard to succeed. But mediocre people, who are the majority, resist task masters. The task master will become isolated, and make lots of enemies. The only exceptions are environments that welcome hardball management and creative conflict

Read more on how to resist "task-masters":

- **How to reject tasks**

> 10 Ways to Maintain Power When Executing Orders

Three Self-Harming Habits to Avoid

- **Social chair**: organize social events, which served them well for popularity in high-school and college, but have no real values at work
- **Gossip guy**: they complain about management, form cliques with those at their own same level, and associate with other complaining, "go-nowhere losers"
- **No-change agents**: they crave continuity and hate change. They complain about the new processes, the new

management… As if complaining was any likely to bring them back

The 3 Types of Incompetent Executives

1. **The Jack of All Trades**: good enough to play different roles, but not super-focused on anything to remain stuck. He wins the biggest in periods of turmoil and uncertainty
2. **Mr. Big Picture**: he has no good ideas of himself, so he cultivates an image of objectivity and impartiality. He does not get attached to anything, he relates all projects to the grand strategic vision, and never executes himself (he's got go-to guys for that). He acquires power by conveying objectivity and rationality, which are both highly valued in business
3. **The Precision Passive Aggressive**: they create an image of superiority. They don't drive people hard, but create an image of being supportive. They seek to mentor and help, but only to look good

The 7 Strategies for Success

1. **Don't be passionate about your ideas:** Steve Jobs and Zuckerberg are exceptions. Be the professionally-sounding guy who assesses the pros and cons instead
2. **Embrace change**: and embrace the new management, too
3. **Learn to promote your projects:** before they launch show how it aligns with your influencers' goals, get the critical people on board so they won't shoot you down, and promote it while it's running, then promote the results
4. **Focus on skills and networking, less on results**
5. **Avoid gossiping with the herd**
6. **Find big problems to solve**
7. **Avoid being a pushy manager if some results will make lots of enemies**

Quotes

On the uselessness of social contributions:

> Real corporate culture has very little to do with activities and events (…) When the time comes for reconciliation—at promotion or layoff time, social contributions are at best pointed to as the unfortunate downside of having to let a nice person go.

On ignoring the haters:

> If you execute the correct change playbook, people will make fun of you and tease you for being a suck-up. Ignore them. Your career is not about making friends; it's about advancement.

Let people know you're learning, or you're not getting the biggest bang for the buck:

> The last point to make with respect to the learning calendar is that you need to tell people you're doing it. Learning and not telling people about it is pointless for you career strategy. Sure, it's great to broaden your skill set but if nobody knows, you'll just be the smartest low-level manager in your company.

"You'll just be the smartest low-level manager in your company", LOL, that was a good one.
I agree that learning for learning's sake is not useful unless you can apply it in practical ways.

More Wisdom

- **Focus on networking and skills, less on results**: results disappear as you walk out of a company. Your network and skills will remain
- **Seek high reward/high-risk assignments**: being reliable year over year with good but non-visible work rarely gets you into the boardroom. Big wins do. Losses also seem less relevant when you have a few big wins on your risks
- **Seek big projects**: you don't have to necessarily lead them, which is also a risk. Just being in there will get you lots of visibility and networking opportunities
- **Crises and transformation projects are great opportunities**
- **Only mentor if those higher-ups will know about it**

Review

Stealing the Corner Office is a good, entertaining and informative read although it can lean *too* cynical, potentially at the detriment of what's truly most effective.

In truth, **effective cynicism is balanced and contextual.**

The biggest takeaway, which is the central tenet of this book, is that the company's goals do not always align with the employee's goals.

What the author doesn't say as he focuses more on the practical side, is that there is an eternal struggle from employers to feign alignment of interests. Another area of friction is the company that wants more team-spirit at the expense of the selfish drives of each of their own employees.
The smart employees who want to go places should learn what those areas of friction are, and thrive within them.

I also enjoyed the examples, and it would further improve if they were edited to avoid some repetitions.

Talking from 9 to 5: Summary & Review

Lucio Buffalmano · 9 April 2020 · Archived copy · Original

In *Talking from 9 to 5* (1994), author Deborah Tannen examines the role of communication in the workplace. Ranging from communication rituals, and power dynamics, she focuses on how the two genders' communication style impact their career success.

Notes

About the Author:
Deborah Tannen is an American linguist, professor, and researcher, and she also writes for a general audience on her blog.

Women Speak to Maintain the Appearance of Equality

Women tend to speak to each other in a way that maximizes harmony. It downplays the speaker's authority and takes into account the effect that the speaker's words will have on the receiver.

Men instead use language that often involves opposition.
They banter, tease, and put each other down in an effort to avoid the one-down position.

Women Using Women-Style in a Man's World Can Be Seen As Weak

Men using their typical oppositional style can be seen as confrontational and arrogant by women, even when they're

actually not.

And women's typical style to avoid looking like boasting at all costs can be seen by a man as lacking confidence and competence.

Also read:

- **The woman's field guide to winning in business**

> The Businesswoman Guide to Win in Male Organizations

Workplace With Men on Top Use Male-Style Communication

Women who move within male organizations can start off at a disadvantage if they don't learn to function within the male rules.

Says Deborah Tannen:

> Workplaces that have previously had men in positions of power have already established male-style interaction as the norm. In that sense, **women, and others whose styles are different, are not starting out equal, but are at a disadvantage**.

And a little later:

> Ways of talking typically associated with men are more likely to impress many job interviewers as well as those making decisions about promotions to managerial levels.

The female style can be equally effective. But when there are also men around, then the male style leads them to talk more. And, being judged on the male scale, they tend to be seen as more competent and confident.

In Negotiations, People Seem to Prefer Those of Their Same Sex

Research by Nadler showed that the highest final offers in negotiating salaries were made when the negotiators were of the same sex.

And, worryingly for women, the lowest raises happened when women playing the subordinate role negotiated with men playing the boss' role.

Ritual Apologies: Make Sure Your Speaking Partner Speaks the Ritual (Or Take Too Much Blame)

Some people engage in what Tannen calls "ritual apologies".

Such as, they say "sorry" a lot, as a ritual, not because they're really sorry. Within that ritual, one person says "I'm sorry", while the other person takes the blame for himself.

When both people use the ritual, then the ritual works and the conversation is both polite and constructive.
The problem arises when one person uses "I'm sorry" as a ritual, but the other does not. When that happens, the person who says "I'm sorry" might come across as being at fault, or as being the "one-down".

When a person who uses "sorry a lot" does not see any concessions from the other side, they might also feel resentful.
So the smart, emotionally-intelligent player will say sorry back when they meet someone who says sorry for no real reason.

My Note: “I’m sorry” can also be a power move.
Also read here:

- **When “I’m sorry” is a power move**

> 6 Covert Power Moves to Control Frames

“Thank you” As A Ritual: Play the Same Game, or You Make Others Resentful

Thanking people can also be a ritual, and some people thank others, even when they are simply doing their job.

When both players play the ritual, then a boss might say “thank you for running this by me” and the subordinate is expected to thank the boss back: “no, thank you for checking this”.

The problem, again, can arise when one party uses the ritual and the other does not.
Imagine if the subordinate were to reply to the boss “you’re welcome”. In that case, the boss would become the “one down”, and likely resent the subordinate.

My Note: Forcing people to say “thank you” is can also be a social strategy for power.
Read here:

- **Social scalpers**

Asking For Help To Make a Decision Can Make You Look Weak

Asking for opinions before making a decision might lead to better decisions, but if you do it too often, people might take it a signal of either weakness, or lack of competence.

I agree with Tannen here that a good way of avoiding that while still getting valid inputs is to say something like this:

> I’m going to make this decision ultimately, but I’d like to know your opinion.

Men Are More Guarded Against Being Put in The One-Down Position (& Ask Less Feedback)

Men are less likely to ask for candid feedback on their performance because that might invite criticism that would put them in the one-down position.

Women are more likely to ask for feedback, but some men might take advantage of it and deliver criticism from a position of superiority.

Indirect Or Direct Talk Is A Matter of Preferences & Culture, Not Power

There is this wrong assumption in many people’s minds:

Being direct is powerful, while being indirect is weak.

Deborah Tannen explains why that’s not true.

While sometimes giving direct orders is the prerogative of those with power and official authority, being indirect while giving orders is also the prerogative of those in power and authority.

And the direct/indirect is heavily influenced by personality and culture. Both methods can work great in the right context and both methods can rub people the wrong way when used out of place and with people who prefer the

opposite style.

Deborah Tannen expands plenty on it.
But if you're a person high in power, you know how annoying it is when a boss tells you what to very directly "because he's the boss".

On the other hand, if you're talking indirectly to someone who likes direct directives, you can come across as wishy-washy and, at the extreme, also manipulative.

I like this example from Kobe Bryant:

Kobe Bryan was clearly annoyed by Phil Jackson's indirect style, something that Jackson failed to understand in his own book "Eleven Rings".

Indirect talk can be more easily missed -or purposefully ignored by superiors-. And that's how some famous airline crashes happened.
But albeit one might think that direct-speaking crews are more effective, Linde's research found out that crews using the most indirect speech were the best ones.

Read more on the power dynamics of giving orders and executing orders:

- **How to execute orders and maintain power**

> 10 Ways to Maintain Power When Executing Orders

Expectations Change Reality

A clever Rubin's experiment found out that when students were lead to believe their teachers was a foreigner, they literally understood him less well.

The study was based on a German man in Japan: when the German spoke Japanese on the phone, people could understand him well.
But when speaking in person, the Japanese struggled more to understand him. The Japanese simply did not expect they could communicate in Japanese with a foreigner.

Do Men Refer to Women More With Their First Name Because of Power.. Or Because of Friendliness?

Deborah Tannen says that it's both.
While it might be true that women are referred with their first name more than men, it's not necessarily because men want to assert power, or because they don't respect women nearly as much.

It can also be, Debor… Tannen says :), that it's also because of friendliness.
Or because of both. Men might expect women to be lower in power, and higher in friendliness.

Switching from names to surnames can also be used to create distance or warmth. Calling

The same duality applies to topics such as generosity, and asking "where are you from".
Both can be read in terms of power dynamics, or in terms of friendliness. And both apply, says Tannen.

Compliments and Judging: The "Judger Power"

Reading "Talking from 9 to 5" I knew Tannen was a competent, well-read, and intelligent woman.

But when I read this part, I also thought "wow, think similarly and reached the same conclusions!".

Tannen says that **compliments usually flow from more powerful, to less powerful**.
I quote her:

> Those who offer compliments can seem to be setting themselves up as in a position to judge, so someone of lower rank who compliments someone of higher rank can appear to be cheeky

This is exactly what I talk about in "soft power", and I indeed call the power position as "the judge".

> The Judge Role: A Tool For Power & Control

Interrupting Is Either A Power Move, or A Way of Bonding

Says Tannen:

> Deborah James and Sandra Clarke reviewed all the research they could find on gender and interruption and did not find a clear pattern of males interrupting females.

On the other hand, a bit later, Tannen cites research proving that boys truly pay less attention to what women say. And, she says, that stays the same later in life.

What's most interesting though is that in all-female groups, women interrupt more than men do in all-male groups. That's because women often talk over each other to voice agreement and understanding, and it's a way of bonding.

Tannen calls it "enthusiastic listening".
And that's why "overlapping", as Tannen calls it, must be considered within the environment within which it takes place. In some cases, it can be a way of bonding, while in some others, it can be a power play and a sign of status.

My Note: At work, interruptions are about power, not bonding
Tannen is right. But since work functions more with the male style, and the efficient "we talk to understand each other and to make business", than interruptions are more commonly about status than bonding.

Styles of Speaking Impact How Much You Talk (& How Powerful You're Perceived to Be)

It's not true that powerful people always talk more.
They can talk more if they want, but some powerful people prefer to talk less, instead.

Furthermore, how much you talk also depends a lot on your style of speaking. If someone with a slower rate of speech moves into an area where people talk more lively and quickly, he will find it difficult to get a word in, because he is waiting for some silences that never happen.
And people will interrupt him more, because he takes longer pauses between sentences.

Tannen says that's the case for Brits -speaking more slowly- moving in the US -speaking more quickly-.

However, an impression of dominance, or having more things to say, can result from a difference of *style*, instead of a difference in either power or amount of wisdom to share.

Some Men Hate Attractive Women Because of The Power They Wield

This observation was very deep.

Some men resent attractive or sexually liberated women for the power they wield over them.
And their way of handling that threat to their ego and their perceived "one-down" position is to attack her. Take her down a peg, "put her back in her place" or, in extreme cases, violate her.

This is all the truer for successful women, who make average men feel even worse.

Says Tannen:

> The hovering awareness of violence against women has particular relevance when a woman has risen beyond the level expected of women, reinforcing the point that physical attack, or the threat of it, is a show of anger (or fear) against a woman who is perceived as trying to get power over men

Genius insight.
I agree that the patriarchy is real, and much of it is fueled by that darker motive that most men would never admit.

The Relevance for Dating

This great insight is what some women don't understand when they follow the "make him chase mantra".

Some men don't chase because they like the woman or because they want a relationship. Some men will chase because they resent her power, and want to have her just to get even.

Also read more in "nasty dating power moves that backfire".

Men Don't Understand Women's Constant Fear of Violence

Tannen says that sexual harassment can happen because men and women don't understand each other.

Men think that sexual harassment only happens when there is a physical move, while women also include verbal harassment.

Says Tannen:

> Whether or not it is associated with sex, women often perceive the specter of violence lurking when they are in the company of men, however vague and in the background it may be

Some men respond with indignation, because not all men are aggressive or rapists.
But that doesn't change the fact that some are. And women's fears and perceptions are based on the *real* threat of that minority.

Also keep in mind that as Evolutionary Psychology researcher Geoffrey Miler says, sociopaths are a minority, but women experience them 10x more often and more frequently than other men do.

More Wisdom

- Women are more likely to downplay their certainty, men more likely to downplay their doubts.
- The “tail of the curves” shows up with far more women who are considered as underconfident and disproportionately far more men who are considered arrogant
- **Women want bosses who care personally**: everyone prefers a boss who cares about them personally, and women are more likely to demand it and appreciate it. Especially by other female bosses
- Women give more compliments, especially to other women
- Some women complain to bond, but some men might take it literally
- **Expectations are lower for wome**n: Well-qualified managers are evaluated more highly if qualified as men, but they are also more criticized if performing poorly
- **Verbal aggression can be a way of bonding**: many cultures trade barbs with each other as a way of bonding. Tannen, for example, was uncomfortable in Greece, where people spoke to each other with a more confrontative style

CONS

- **Good stories sometimes feel like anecdotal evidence**

Just to be clear, the book is very well-researched, which is one of the things I appreciated the most.

And there are also stories and, sometimes, analyses of plays or myths.
Sometimes they served to reinforce the analysis and provide examples.
But some other times, I would have preferred more evidence from bigger studies.

PROS

- **Level-headed approach to gender issues**: if everyone could approach gender issues and differences like

Tannen does, we wouldn't have feminists and The Red Pill

- **A treasure trove of power dynamics wisdom**: Tannen understands social and power dynamics so deeply that this book was enlightening even for a more advanced student like myself

Review

"Talking from 9 to 5" may not be your perfect self-help 'how-to' book, but it's a gem for a social scientist like myself, containing more psychology and power dynamics wisdom than ten normal books put together.

On the other hand, if you are looking for a more practical manual, this might not be your thing since it's more academically oriented.

If you're looking for ready-to-apply strategies and tips, you will get something here, but it will require you to wade through some theory.
If on the other hand, you are looking for high-quality information, then this is your book.

I learned a lot from Debora Tannen and I am grateful for her work.

HBR Guide to Office Politics: Summary & Review

Lucio Buffalmano · 9 April 2020 · Archived copy · Original

HBR Guide to Office Politics teaches readers how to effectively navigate office politics to ethically achieve win-wins, and develop a successful career.

Contents

- Summary
- More Wisdom
- CONS
- Quotes
- Review

Summary

About the Autor: There is no author's name and surname here. Harvard Business Review (HBR) publishes articles, books, and information on business and business leadership.

You Can't Escape Politics

Office politics is what naturally happens when you put a bunch of people in an office.

People are politics, and if you want to achieve anything through people, you need to understand politics.
The sooner you accept it, the better your life and career will be.

Say the authors:

> So what's the solution? It's about being constructively political—understanding personal dynamics among colleagues, working together for mutual advantage, and ultimately focusing on the good of the enterprise.

Embrace Politics, or Your Career Will Suffer

People who try to stay completely out of politics are far less likely to have a good career, or to reach their career goals, compared to those who accept politics as a fact of life.

Another way people approach politics is as a tool for excuse-making.

Says Ashkenas:

> It's easy to use politics as an excuse for a lack of achievement or an outlet for your frustration. But it's a lot more effective to use politics as a way to get things done.

Dealing With A Boss Who Holds You Back

Meet up with him, and be constructive.
Nothing good will come out with you starting off attacking and complaining.

Ask him what you can do to better support him.
And then, once you have established a positive atmosphere, make it clear that you also want to grow.

With a Control-Freak Boss, Find Out What He's Afraid Of

First of all, see if you are the exception.

If he is only micromanaging you, is it because you're new and learning the ropes?
If so, accept it as an opportunity to learn.
If he is only micromanaging you and it's been a while, you need to take a hard look at the quality of your work. Some bosses prefer to micromanage than being honest and telling employees where they are falling short. Help him out, seek that feedback, ask where you can improve, how you can help him better.

If it's none of the above, consider that control-freaks and micromanagers sometimes are worried about something. It might be that he's afraid of restructuring, and he wants to ensure good work. Or he might be intimidated by your own potential.
Whatever it is, if you find out, you will know how to allieviate his fears.

And show him that he can trust you. Bot on delivering good job, and on being on his side.

Also read:

- **Managing your boss for career success**

> Managing Your Boss For Ruthless Career Advancement

To Deal With Bullies, Offer an Olive Branch

First off, you want to make sure that someone is being a bully and you're not being touchy.

Ask some friends what they think of the bullies' behavior. Especially valuable feedback is to ask what they think when both of you observed the same behavior.
If others don't feel like he was being a bully, it's possible that you might have to re-adjust your perceptions of what being competitive means.

And what if he truly is a bully?
The first advice HBR provides is to extend an olive branch.

They say:

> If he's intentionally pushing you around, he's assuming you're his adversary. So show him that you want to be on the same team.

I agree with that technique. It's always best to try to turn someone into a friend -or a neutral- before you make him an enemy.

Other techniques:

- Find strength in numbers: there is power in banding together and supporting each other
- Book a one-on-one meeting: the simple fact you're willing to confront will make most bullies move on to easier preys

And what do you if the bully is your boss?
You still need to draw a line: bullying is emotionally, mentally, and even physically unhealthy.
Read here:

- **How to confront a bullying boss**

> How to Set Boundaries With Dominant Bosses: Case Study

Managing Disgruntled Former Peers When You've Become the Boss

People will feel bad when you were previously colleagues and now you've become the boss.
You must accept that, it's a fact of life. Most of us compare ourselves to others, and when we see the people close to us do great, we feel bad because it means we are not going great.

So as soon as you become the boss, you want to set a meeting to clarify.
Do not set the meeting in your office, as that would make him feel like you're trying to pull ranks. Use a neutral location, or go for a walk. Or, even better, meet him at a location he likes and feel good in.

If worst comes to worst and you can't just get to work with disgruntled former colleagues, you need to "pull rank", as the authors say, and give them one last chance in the form of an ultimatum:

> We can do this the easy way or the hard way.
> The easy way is I'll support you, you'll support me, and we'll work together.
> The hard way? If you don't come around, we'll have to start making things formal. We'll have (..) performance reviews. If you continue to rebel and aren't meeting your goals, I will take up the matter with HR in formal disciplinary proceedings. All things considered, I'd like to do it the easy way.

Also read:

- Frenemies
- How to spot a frenemy

More Wisdom

- **Don't accept a boss pitching you against your colleagues**: talk to him and say you'd rather collaborate, show him why you can do a better job as a team, which will also reflect well on him. If all else fails, agree with your colleague on a fair way of cooperating
- If your company has a clique of highly successful people, ask one of them to mentor you
- **Go to company's social events**: not going says you don't care about the company and your colleagues. Or worse, that you don't see yourself staying for long.
- **Linkedin changes can be the canary in the coal mine**: when you see lots of people updating their Linkedin profiles with pictures, new descriptions, and new recommendations, that's the sign that layoffs are taking place
- **Speak with your boss' former reports**: get in touch with the people who reported to your current boss. They can give you some great insights on who he is, what he likes, and how to get along with him
- **Only escalate a problem to your boss if you've tried everything**: most managers aren't that thrilled to fight your own battles

CONS

- **Sometimes more about "how things should" than "what really works"**

Say the authors:

> Don't try to be the boss's pet—be everyone's pet. That is, devote your energy to being a terrific employee and colleague.

Well, yeah, sure, don't only focus on your boss. But not prioritizing your relationship is also a mistake. The people who decide who gets promoted are certainly more important for your future than your colleagues. And your colleagues are certainly more important to you than the doorman.

This is not to say you should be mean to anyone, but to be effective and advance rapidly, prioritizing relationships pays off.

- **Some advice is good, but mostly tailored for job safety and not for truly driven people**

The authors share the story of how a woman thrived and survived during firing and restructuring thanks to the expertise that she had acquired.
The lady had become so good with PowerPoint that all the senior managers sought her to polish or create their presentations.

Well, that's great advice… For job security.
But if you are driven, you truly don't want to become the "PowerPoint guy".

- **Sure they know how to make you feel like you haven't gone to Harvard :)**

I'm not a native speaker.
But I have read enough that I go through most books without ever having to check what a words means.
Not on *this* book.

An example:

> Sure, he ***guffaws*** at his own jokes, but maybe he's also great with spreadsheets. (...) Maybe his ***persnickety*** report reviewing highlights your terrible typing skills.

With HBR you're going to learn how to navigate politics with some serious big words in your arsenal :).

Quotes

On avoiding petty revenge and being neutral:

> I got a reference call for him out of the blue. (…) "It was kind of the revenge moment handed to me on a silver platter." (…) "I told the guy who called me that I'd call him back. (…) In the end, I gave him a fair review. I said I hadn't enjoyed working with him, but I knew lots of people who did. It was hard, but **I decided a slamming review would reflect worse on me than the guy**. I actually felt better about myself after that."

On avoiding to make enemies too easily:

> Don't write anybody off. Don't succumb to negativity. Try to stay positive. Shifting alliances and relationships are what make human life interesting

Review

I find "HBR Guide to Office Politics" to be a very good read for beginners. And I also appreciate it comes from a place of honesty and genuinity.

It also keeps stressing the basics, such as "look at yourself first", "avoid jumping to negative conclusions", and "put yourself in other people's shoes", which can't be stated enough.

Some of the more advanced folks, though will find it a bit more basic, including some of the "wrong" examples of poor communications, that will be a bit too obvious for the more socially intelligent folks.

Personally, I also find that it refrains from sharing some harsh truths, such as that the company's interests sometimes diverge from your interests. And that what's effective does not always overlap with what's ethical.

All in all, I can recommend it to beginners. Readers of the ThePowerMoves.com should prioritize their learning

with something else.

Working With Emotional Intelligence: Notes & Review

Lucio Buffalmano · 10 April 2020 · Archived copy · Original

Working with Emotional Intelligence is a sequel to Goleman's initial "Emotional Intelligence", and discusses the role of emotional intelligence on work performance, career success.

Contents

- Summary
- Criticism
- More Wisdom
- Review

Summary

About the Author: Daniel Goleman is a journalist who often wrote on science and psychology. He worked at Psychology Today and then at The New York Times. He is most famous for his work on Emotional Intelligence, and he is also the author of "Emotional Intelligence" and "Social Intelligence".

Misconceptions About Emotional Intelligence

There are plenty of misconceptions around "emotional intelligence", and Goleman first sets out to dispel those myths:

1. Emotional intelligence is not (merely) "being nice". At times, emotionally intelligent can mean getting angry, or confronting someone
2. Emotional intelligence is not about "giving free rein to feelings", but it's about managing feelings to express them effectively and appropriately
3. Emotional intelligence is not genetically fixed and, unlikely IQ, it seems to be largely learned, and in continuous development as we grow

IQ Doesn't Predict Career Success, EI Does

Daniel Goleman says that IQ accounts for career success at most for 25%.

More accurate figures, says Goleman, suggest that IQ accounts at most 10%, and some other analysis suggests 4%.

My Note: I find these numbers spurious
To me putting a number on how much IQ matters for career success without explaining how he came up with those numbers, is not science, but marketing. And saying IQ accounts *at most* for 10% makes me question Goleman's credibility.

Getting Compliance With Emotional Intelligence

Imagine you're a flight attendant.
The plane is about to board, and everyone is already standing up. But you want an orderly boarding, and you only want the passenger you are going to call to stand up.

How do you do it?
If you remind people to stay seated with the typical robotic voice, the compliance will be low.
Instead, says Goleman, the flight attendant said "you're standing" as if she were singing a tune, as if she was speaking to a kid who needed to be reminded of what mommy wanted.
That made people smile, and they went back to sitting.

This was interesting for me, and especially it was interesting that it was a woman who used that technique.
It's more difficult for women to get compliance when being assertive, and women who are too assertive are seen in a negative light. That was, in my opinion, the real genius: to combine femininity with power.

I had already written about it, check this topic here:

- Using feminine voice to get compliance (there is a video example)
- Mixing power with femininity

> Feminine AND Powerful: 9 Tips For Women Bosses

The Higher the Job Level, The More Important EI Becomes

The higher you go in an organization, the less technical skills and cognitive abilities become relevant.

The only cognitive abilities that mattered was "pattern recognition", a big picture thinking that allowed

For leadership and executive positions, emotional competence skills are paramount.

My Note: It's power and exec skills that become relevant when you go higher
I only partially agree with Goleman, and I think he is missing an important factor.
Yes, it's true that the higher you go, the less technical skills matter. But what counts is not the whole spectrum of emotional intelligence. What matters most are ambition, knowledge of power dynamics, and coming across as confident and powerful.

Just look at Margin Call, and you know what I mean by "exec skills" and coming across as powerful and confident:

It's true that the boss is not the smartest or most technically expert in the room. But he's not higher in EI, he's higher in social power and confidence

Also read:

- **How to develop executive skills and demeanor**

> 17 Tips to Exude Exec-Level Confidence at Work

The Politics of Empathy: It's Subordinates Who Must be High in Empathy

Those with little power are expected to sense the feelings of those with power. While those in power can allow themselves to be sensitive in returns.

Not being empathic and emotionally intelligence, in a way, is one way one can show power and status.

My Note: I wish Goleman had expanded on the relation between & EI
Goleman here hits on a crucial point: emotional intelligence, he is basically saying, is more important for subordinates. And that's why, probably, CEOs and execs score lower on emotional intelligence. I wish he had expanded on this, instead of going on in his crusade to prove EI is the be-all, end-all.

Also read:

- Managing your boss for rapid career progression

> Managing Your Boss For Ruthless Career Advancement

Don't Confuse High Empathy With "Softness"

There are some people who discount the usefulness of empathy at work.

But they do so because they confuse empathy with "psychologizing", such as explaining behavior and motivation instead of being aware of it and understanding it.
And they confuse empathy with "agreeing".

Neither of the above is part of empathy.

The 4 Meta-Abilities of Emotional Intelligence

Some components of emotional intelligence are so crucial that they constitute meta-abilities.

They are:

- Self-awareness
- Self-regulation
- Motivation
- Empathy
- Social skills

Criticism

My criticism of "Working With Emotional Intelligence" concerns not the basic premise, that "emotional intelligence" is important.
I agree with that.
My criticism concerns one, the *darker* side of emotional intelligence, which was never addressed; and two, the scientific rigor and the data, which were at times either hidden, absent, misconstrued, or misinterpreted.

If EI Matters, Why Do CEOs and Execs Score *Lower*?

Bradberry's data on 100.000 individuals shows that CEOs and execs score *lower* on EI.
So how can Goleman say that emotional intelligence is most important of all in career success?

I wish he had addressed this conundrum which, in my opinion, is not a conundrum at all.
See:

- **The myth of emotional intelligence**
- Emotional intelligence and leadership

> The Myth of Emotional Intelligence: Machiavellis At The Top

Big claims require big evidence, and I've seen little

Goleman says that "when IQ scores are correlated with people's achievement at work, IQ predicts at most 25% and more realistic figure say it's more like 10%".
His whole book -and his whole career, in part-, is then about proving that emotional intelligence is what really matters.

Yet, I see a lot of words and examples, but little evidence for Goleman's theory.
And, just to be clear, I am a guy who believes there is such a thing as emotional intelligence, and I also believe that it matters a lot.

Conflates "entry-level requirement" with "non-important"

When Goleman says that cognitive abilities (IQ) or technical skills matter little to reach the top positions, he mentions in passing by that "IQ is a prerequisite, so it does not explain the differences in performance".

That's spurious, and either a huge failure of understanding what "minimum requirement" means, or just intellectually dishonest.
If all top execs have a minimum level of IQ, and if execs are on average smarter than the average population, then IQ *is* important.

Poor Analysis of Why EI is More Important in Latin America

The author says that a lack of emotional intelligence leads to managerial failure in Latin America in almost every single occasion.

It's not as important in Japan or German yet, says the author.

Why not?
Because EI becomes crucial in dealing with changes, says the author. And Latin American countries have gone through incredible changes (hyper-inflation, political regime changes, switching from closed to open economies, etc.).
The daily changes require managers in Latin America to always stay in contact with people to weather the storms, and that's why, Goleman says, emotional intelligence is so crucial.

That's nonsense to me.
It's not written anywhere that Latin America has seen more changes than, say, Europe -or any country, for that matter-.
The reason why EI matters more in Latin American countries is probably that work is more informal and interactions are less formalized. Managers are less removed from their reports, and are expected to be better with people.

I remember a Brazilian colleague talking to me about our very formal Swiss boss:

> Swiss people are not good at managing (us) Latins

And he was right.

Soso interpretation of groups selection and selfishness

The author says that people who work for the good of the group tend to out-produce the selfish players.

He is not wrong, but an important note should be added: good evolutionary theory shows that selfish players can survive -and thrive- as long as they remain the minority. That's what, some authors theorize, is what psychopaths are doing: feeding off the majority of cooperators.

Also, a healthy individualism overlaps with some selfishness, and selfishness in the right doses can be good and value-adding.

More Wisdom

- **Women are better at reading emotions when they are not purposefully hidden**: women are generally better at reading emotions, but only when nonverbal cues are not purposefully hidden or camouflaged. Otherwise, men are equally good when it comes to recognizing emotions that cannot be easily camouflaged
- **Empathizing is more difficult through cultures**: people have more difficulties in recognizing emotions across cultures, nations, or ethnic groups
- **The most emotionally expressive person influences the other**: being emotionally expressive helps influence other people's mood. This is important information for frame control.
- **Good teams produce more than the mere sum of their parts**: and emotional intelligence is key in developing well-functioning and harmonious teams
- **In many areas, others know us better, so always ask for feedback**

Review

"Working with Emotional Intelligence" does have some important gold nuggets.

I was able to pick a few great insights, one of which even made it into the workplace module of Power University.

Overall though I did not like this book.
I found it scientifically lacking, and with little pragmatic usefulness.

On the scientific side, Goleman says that IQ doesn't matter to reach the highest corporate positions because IQ is an entry requirement. To me, that's intellectually dishonest. Sure, it will matter less *once you're in*, because everyone else has it. But anything that is an entry requirement, by definition, matters a lot.

It feels like Goleman is on a quest to discredit IQ and inflate EI.
That's a pity, because Emotional Intelligence is a powerful enough concept that stands on its own.

One survey should be enough to cast a huge shadow on Goleman's assertions:
Bradberry's survey shows that execs and CEOs have *lower* scores of emotional intelligence than their own managers.
That means that emotional intelligence might not be so useful in your carer.

The Ultimate Guide to Workplace Power: Mastering Politics & Influence

Lucio Buffalmano · 12 April 2020 · Archived copy · Original

How do you acquire power at work?

Well, understanding people and politics, having good career strategies, a great relationship with your boss, as well as being good at your work, all help.

But with this article, we list all the main tools you need to increase your power, leverage, and influence.

Contents

- 1. Results
  - Tactics
- 2. Politics: The Power of People-Tested Strategies
- 3. Skills: The Power of Mastery
  - 3.2. Technical Skills: The Power of Expertise
  - 3.3. Soft Skills: The Power of Confidence
- 4. Internal Network: Intel & Streamlined Work
  - Tactics
- 5. Alliances: 'You, Inc' Within The Organization
- 6. External Network: The Walk-Away Power
- 7. Mentors & Sponsors: The Made-Man Power
- 8. Money Talks: The Power of Bottom-Line Impact
  - 8.2. Get In Line
- 9. Visibility: The Power of Being Seen
  - Tactics

- 10. ‘Cultural Fit’: The Power of Aligning With The Powers That Be
- Bonus: Positive Attitude

1. Results

Results give you leverage and boost your self-confidence.

Tactics

- Track your work in terms of $$$ (done/saved)
- Track your achievements
- Save and print congratulatory emails

Being able to share this with your boss increases your persuasiveness.

2. Politics: The Power of People-Tested Strategies

Politics is the human element of work.

It includes alliances, feuds, coalitions, favors, favoritism, backstabbing, etc.
Key skills include power awareness, emotional intelligence, self-promotion, and Machiavellianism.

Read more here:

- **Machiavellis at the top**

> The Myth of Emotional Intelligence: Machiavellis At The Top

3. Skills: The Power of Mastery

Skills may be priority #1 because unlike output or politics, they're transferrable.

We can divide skills into:

1. **Technical skills**: Hands-on work like coding, software, accounting, and legal knowledge.
2. **Soft skills**: Persuasion, self-promotion, strategic thinking, public speaking, and confidence.

Technical skills provide job security, while soft skills enable upward mobility.

 When I realized that soft skills propel you upward

3.2. Technical Skills: The Power of Expertise

Technical skills are crucial early in your career as they impact both output and progression.

When to Prioritize Tech Skills

- You like your work
- You prefer an easier life
- Good income is enough (instead of *maximizing* income)

Maximizing Tech Skills

- **Get *really* good -the "go to guy"** for the most challenging issues
- **Solve the CEO's problems**
- **Join companies where tech specialists advance** without managing people
- **Ally with soft-skills superstars** as the CTO -ideally- or "guy in the backend"

 Example of "backend-guy" (with Hollywood over-dramatization):

> **Soft-skill guy**: Look at him, that's my quant.
> He won a national math competition in China, he dosen't even speak English. Yeah, I'm sure of the math <— The tech guy provides the data, the soft-skills guy sells it

♟ **Sidekicks are eternally lower status ⍰⍰**
You risk losing confidence and empowerment, and tie your fate to someone who might not respect you or may betray you.

3.3. Soft Skills: The Power of Confidence

John Tuld: It wasn't brains that got me mere, I can assure you that <— ⍰ ⍰I didn't get here on technical skills

🡅 John plays the "dumb" guy but excels in soft skills and power dynamics. He's the **quintessential alpha male** CEO.

4. Internal Network: Intel & Streamlined Work

Knowing people makes work easier, especially early on when you don't have formal authority.

Tactics

- Hang around the water cooler
- Ask people to lunch
- Ask for intros
- Show interest in them/their work

⍰ Advanced level: be the connecting link

Research shows that the biggest networking benefits go to those who bridge different groups

My high-power neighbor uses this technique.
Though it costs her more effort, she contacts us 1:1 instead of creating a group, giving her more control:

Author's examples reserved for Power University

⍰ **Machiavellian move: intro lower-value connections, keep the highest-value people for yourself**
The Machiavellian makes introductions to showcase his network and gain a good reputation, but he keeps the best people for himself

5. Alliances: ‘You, Inc’ Within The Organization

Close friends who support each other for mutual gain and career advancement.

The alliance can be:

1. **Transactional**: You both gain from it
2. **Affectionate**: Based on friendship, mutual respect, and similarity

Alliances are a ‘grey area’ because they further your interests, but not necessarily those of the company. The company prefers to deal with you as a weaker individual.

A good alliance:

1. **Increases your negotiation leverage** because you negotiate joining -or *leaving*– as a proven duo
2. **Protects you from bad bosses**: it’s harder to undermine a pair, and two carry more weight than one
3. **Better cover against attacks**: because a counter-attack from two is twice stronger
4. **Report rumors and backstabbers**: with an extra set of ears and eyes
5. **Better PR & promotion**, done through your ally, more effective than self-promotion

- ⍰ **How I leveraged my brother-in-arms to propel my career** (resource for Power University alumni)

6. External Network: The Walk-Away Power

The network outside your current employer

An external network facilitates lateral and upward moves.

Principle:

⚖ **The larger and stronger your external network, the greater your walk-away power, and the less dependent you are on your employer.**

⍰ Network-building: Always go to lunch with someone new

Keith Ferrazzi's book has one main networking tip:

Always go to lunch with someone.

After lunching with most people I knew, I started sending LinkedIn messages to:

- Same-industry people
- Same job-position people
- Same university/nationality/background

7. Mentors & Sponsors: The Made-Man Power

Mentors provide guidance and advice, while sponsors actively advocate for your career growth.

More on getting and keeping mentors ⍰

⍰ ⍰ PRO Tip: Let others know you've got mentors

A senior manager's influence rubs off on you.

It says you're connected and can get information and favors that others can't.
Like the young movie kid befriending the local gangster—he always has the "big brother" to call on.

Carl Jung referenced Freud as his mentor and greatly benefitted from his endorsement. Before eventually ‘breaking off’

8. Money Talks: The Power of Bottom-Line Impact

Principle:

⚖ **The more you affect the company’s bottom line, the more power you wield.**

Machiavellian move: ensure nobody else can deliver to your level
Account management: keep your relationship for yourself, don’t CC or introduce teammates.
Sales: guard your best techniques and approaches.. Join companies that share recorded calls *when you’re learning*, not when you’re good.

Example in Power University.

8.2. Get In Line

Line workers deliver the core product that generates revenue, giving them more visibility and leverage.

For instance, if you’re in IT, join an IT-focused company that bills for IT, rather than being IT internal support for a non-IT company.

9. Visibility: The Power of Being Seen

Principle:

⚖ **The more visible you are, the more opportunities your good work provides**

 And invisible good work goes unnoticed.

Tactics

- Speak in meetings

- Present results
- Network internally
- Join high-visibility projects
- Align your schedule with key seniors you want to impress

10. ‘Cultural Fit’: The Power of Aligning With The Powers That Be

Your personal fit with decision-makers matters more than ‘cultural fit’ with company values.

Company values only hold weight if the founders are still present and enforce them. Otherwise, they’re vestigial sloganeering, with most people prioritizing money and self-interest.

Bonus: Positive Attitude

Positive attitude means optimism and a personality that brightens the team.

Basically, the kind of person people *want* to work with and include in important and visible projects.

We probably know some of these guys and we probably know their opposites too: those who complain, lament and bring others down.
The former stay and get promoted, the latter are the first to get the chop.

This factor is less important than the previous ones, since one can also be promoted while not being particularly loved by his colleagues. But still, it helps. Plus, it will make your life at work much easier if you can get along well with others, and if others like you.

⍰ This is a preview from Power University where we share proven strategies and techniques to advance at work and in life !

4 Career Strategies for Rapid Promotions

Lucio Buffalmano · 13 April 2020 · Archived copy · Original

Effective career strategies make the difference between a steady, safe, and *slow* climb to the top, and an *elevator* ride to the top.

This post shares politically smart and proven career strategies for the quickest possible career progression.

Contents

- 1. Negotiate Salary at Peak Leverage
  - 1.2. Ask About Career Growth During Interviews
  - ⍰ ⍰Pro Tip: Ask for monthly check-ins with senior interviewers
- 2. Ask For A Raise As Soon As You Prove Your Value
  - 2.2. Negotiate Before Delivering Big Results
  - ⍰ ⍰ Answering ‘You’re paid for good work’
  - Ask For: 10-20% More of Your Worth
  - ⍰ ⍰ Pro Tip: Recruit your boss
- 3. Ask For The Position You Want
- 4. Work Hard & Network, Limit Manipulation
- 5. Adapt Your Strategies To Your Position
  - 5.2. Individual Contributor: Focus on Skills + Boss Relationship
  - 5.3. Manager: Focus on Networking + Confidence & Ambition
  - 5.4. Exec: Take Risk to Increase Profits or Slash Costs
- 6. Find Mentors & Sponsors
  - Traits of Top Mentors
  - How to Find a Mentor / Sponsor

1. Negotiate Salary at Peak Leverage

If you’re senior or skilled, ask upfront.

Ask for a salary range and frame it like you're in demand:

> **You**: To save time, can you share a range for this role

Only start the final negotiation at highest leverage:

Your peak leverage: after the offer, before signing (Paul Hellman's chart).

1.2. Ask About Career Growth During Interviews

Inquiring about career growth during interviews is far better than asking about the salary.

You look pro-active, you sound ambitious, you gain intel… And you avoid dead-end roles.

Of course, you must calibrate your ask, or you come across as entitled.

> **You**: I'm very driven and I know that before asking, you must give. <— Shows you 'get it' and prevents you from coming across as entitled
> So imagine I will be successful in this role. What does that look like to deserve a promotion?

⍰ ⍰Pro Tip: Ask for monthly check-ins with senior interviewers

Once you can't get more money, as a last perk, ask to meet a senior interviewer quarterly.

Say you really admire him and would like to learn from him, and he will feel honored.
… And you get access to upper management.

2. Ask For A Raise As Soon As You Prove Your Value

Demonstrate your value first, then ask for more to deliver even more.

This is basic social exchange and social exchange strategies:

⚠ **Don't over-deliver for too long without asking, or it becomes a baseline expectation**

Ie.:

> **Boss**: Keep doing well and we can talk about it <— ⚠ If you worked long hours and weekends, now it's *expected*.

Anything less feels like backsliding, risking promotion.

2.2. Negotiate Before Delivering Big Results

General rule:

- *Recurring* excellence = your leverage
- One-off results = company's leverage

With one-off results, *gratitude* becomes your only ~~leverage~~ hope.

One-off work includes:

- Onboarded a 'whale'
- Lead the IPO
- System implementation
- Raising funds

Bosses may say, "Do one more, then we'll talk," but repeating major achievements is tough.
Negotiate beforehand to avoid this trap.

Answering 'You're paid for good work'

Ignore or sidestep this frame.

Don't deny with "*the pay is low"* or "*I'm doing great work*", or they may retort that "*many more are doing great work*".

Instead, agree and go back to your value proposition.
You deliver more value now, and you're asking for a fair share of that value.

Ask For: 10-20% More of Your Worth

Ask slightly more than your work-value.

Rationale: unrealistic numbers break rapport
While a huge number can be helpful for anchoring, avoid it with your boss. Unrealistic demands reek of power moves and harm your relationship.

Ask a bit more than your work would warrant
If you're not sure, do this:

- Research similar positions and add 20%
- Ask slightly more than you're comfortable asking
- Ask for the most you can ask while being able to somewhat justify it

⍰ ⍰ Pro Tip: Recruit your boss

If HR sets the rate and your boss wants you, use that to your advantage.

Tell your boss you want to stay with him, but you'd need higher pay. Ask how you can manage that, and he will want to advocate on your behalf.

Use this approach for career progression as well:

1. Share your goals
2. Ask for guidance to reach them
3. Take notes, make him feel good for helping you out
4. Deliver what he wants
5. Ask for that promotion

This approach turns bosses into mentors and sponsors.

⍰ **Negotiating for a raise**

3. Ask For The Position You Want

> A closed mouth never gets fed

Ask for the role you want. If you don't, they may assume you're uninterested.

4. Work Hard & Network, Limit Manipulation

One study by Kyl-Heku and Buss identified three major tactics to get ahead in hierarchical structures:

1. **Deception/Manipulation**: Derogate and exclude others; ingratiate self with superiors; use sex; "sell" your results; use deceptive self-promotion (e.g., claim credit for the work of others).
2. **Social Display/Networking**: Cultivate friendships; display positive social characteristics; participate in social events; enhance appearance.
3. **Industriousness/Knowledge**: Work hard; display knowledge; obtain education or knowledge; organize and draft strategies for the company; assume leadership.

All three tactics can be effective in Western organizations.

The Industriousness/Knowledge tactic works best in educational attainment. And both Deception/Manipulation and Industriousness/Knowledge are positively correlated with actual salary.

But although Deception/Manipulation tactics can also be effective, they come at a high personal cost. **Those who used deception and manipulation *did* get results, but had *significantly* lower life satisfaction**.
I suspect this is the case because the cheaters feel like they are faking it, they are less confident and more anxious about getting caught, and present a higher incidence of "impostor syndrome".

It's a bit like when you take the bus without a ticket. You're saving money, but you're a bit tense. And unless you're a sociopath or very poor, you also know you're not being the best version of yourself that you can be.

5. Adapt Your Strategies To Your Position

Ie.:

5.2. Individual Contributor: Focus on Skills + Boss Relationship

To move from contributor to manager:

1. Improve hard skills
2. Deliver quality of work
3. Contribute
4. Develop a good boss relationship

As a newbie top assignments and high-level networking are more challenging. So output and immediate boss matter more.

Focus Less On Power, More On Being Helpful

With little output and information, learners are takers.
To make others want to help, be warm, likable, and genuinely useful.

5.3. Manager: Focus on Networking + Confidence & Ambition

To reach executive levels:

1. Network
2. Show ambition & drive
3. Develop 'executive skills' (confidence, presentation, self-promotion, etc.)

Says career coach Helgesen:

> If you allow your energy to be consumed by conscientiously tending to your team's needs, you will primarily prove that you are superbly suited for remaining in an internally facing position. The management skills that have gotten you here will end up keeping you here, instead of helping you rise to a place where you could have maximum impact.

This is also backed by research.
Fred Luthans studied for four years successful managers -as in getting promoted- and effective managers -as in having productive teams-.
He found out that the successful managers did not overlap much with the effective ones.
Effective managers spent most of their time nurturing and helping their teams. Instead, **the successful managers spent less time with their teams and more time networking and promoting themselves** outside their departments.

For Machiavellian efficiency, you should focus more on networking and less on your team.
If all you do is be a good boss, you'll stay stuck there.

Prioritize Ambition & Power Over "Niceness"

Nice and conscientious guys often become managers.
But the executive level requires ambition and placing a high priority on your career.

We share more top strategies on how to advance at work in **Power University**.

5.4. Exec: Take Risk to Increase Profits or Slash Costs

Says executive coach Carlos Marin:

> Coaching data and the psychometric surveys (…) suggest that men at the executive level are most likely to be rewarded for daring and risk-taking

At the executive level, you must affect the bottom line.
So increase revenue or cut costs.

If you're a woman though, Marin says that you're more likely to be rewarded for precision and correctness.

In short: men gain with strong leadership pushing for change.
Successful women instead *keep* efficient department running smoothly.

In my opinion, this reflects the reason why different genders are hired in the first place. The women, slightly higher in conscientiousness and far higher in pro-sociality, are expected to keep a well-running department. Men are expected to take more risks and drive revenues.

6. Find Mentors & Sponsors

Mentors and sponsors increase your influence and help you advance faster.

Research says that mentors are even more important for women's career advancement.
Pat Heim says women benefit even more from a mentor because it helps them learn the unwritten rules of male culture (Heim, 1992).

Traits of Top Mentors

- **Respected** within the organization
- Someone **you admire**, making bonding easier
- **Upward** career trajectory
- Access to the **dominant coalition**

Different personalities are best for learning; similar ones help you advance.

How to Find a Mentor / Sponsor

1. Reach Out

- Water cooler. On a high, ask if you can talk to them more
- Company events
- Email

Approach one at a time, just in case they talk to each other

 Ask for career advice

2. Tell Them WHY & What You Admire About Them

Perhaps you admire their career progression, share a passion, or appreciate their style or demeanor.

Say it.

3. Start Small, Ask For A Chat / Feedback

Don't ask 'Would you be my mentor', which feels like a huge commitment.

Ask for a chat first.

If that one goes well, say:

> **You**: Thank you so much, this was incredibly helpful. I truly appreciate it.
> If you're available and willing, would it be possible to meet again in the future at your convenience?

⍰⍰ Next time you meet bring a little gift.

4. Use Followup Opportunities

For instance, after delivering a presentation to senior management, I asked for their feedback—and several agreed.

You can do something similar:

- **After *their* presentation** Say it was interesting/inspiring and you'd like to learn more.
- **After a dinner you both attended**
- **After a quick chat**

5. Show Potential

Research confirms basic power dynamics principles:

Mentors and sponsors prefer mentees with future potential.

⍰ Approach like you will go places and need guidance, never like you need rescuing.

6. Show You're A Good Ally

Support them, defend them, share news, and celebrate their wins.

7. Show Gratitude

- Thank them
- Offer small tokens/gifts
- Pick up the tabs
- Offer help (outside of work & for their family)
- Say or hint that 'you will remember'

8. Show You're Similar (& Want To Be *More* Similar)

Ask questions that suggest you aspire to be more like them (implying admiration)
Ie.:

> **You**: You look always so calm and in control. I'd love to be able to do the same. How do you do that

⍰⍰ If they smile, you know they like it

Balance! You want to be more like them, but not a carbon copy
Too much and it feels fake, and people don't want clones to replace them.

9. Show You're Taking & Using Their Advice

- Take note
- Back-channeling approval ("*Uh-uh*"; "*Makes sense*"; "*Riiight*")
- Report back you took their advice

- **The Bel's approach to making free coaching a win-win**
- Avoid covert question formats

8 Ways Men Keep Women Down at Work

Lucio Buffalmano · 13 April 2020 · Archived copy · Original

As you seek to become a successful businesswoman, you will face some headwinds.

Some of that competition will be from men, who don't enjoy more competition.

In this article we will learn how that competition looks like, and how you can handle it.

Contents

- Intro
- 1. "Girls Are Silly & Cute" Power Moves (AKA: Infantilizing)
- 2. The Philosophical Shamer
- 3. "Are you a man" Power Move
- 4. Feigning Anger & Annoyance
- 5. Implying That "You're Inappropriate"
- 6. The Self-Accusatory Power Move
- 7. Task You With Coffee / Minutes
- 8. "It's Because You're A Woman"
- 9. Sexual Objectification

Intro

Of course, men compete with you just as they'd compete with other men.

But **some men *especially* resent female competition**.

More competition from women not only means more competition in general, but for every woman that beats him at work, it's one less woman available on the sexual market place for him, since women don't really like men who are below them.

That's why **many men, secretly, would rather see women withdraw from work**.
Going back to the 1950's would make dating easier for men. And that's why some will try to push women back into their old "girly" and submissive roles.

Here are some of these power moves.

1. “Girls Are Silly & Cute” Power Moves (AKA: Infantilizing)

“Girls are silly and cute” used to be an old pick-up mantra.

Men used to repeat this to themselves in order to self-convince themselves that they didn’t need to fear approaching women because, well, there was nothing to be afraid of. One should not be afraid of “silly and cute”.

This power move can be used both in private life, and it often is, and at work. It works something like this:

> **Her**: Mark, at the meeting you repeated my idea without crediting me. That makes me angry when you repeat what I’ve just said without mentioning me
> **Him**: You’re so cute when you get angry

That one tries to get under your skin and make you overreact. If you overreact, it becomes a self-fulfilling prophecy, and it’s a form of gaslighting.
He just said that you “look cute *when you’re angry*“. If you get angry, you confirm that he was right. So you’re stuck in a double bind, and that’s a form of gaslighting.

If you let guys like Mark get in your way or, worse, if you internalize that message, you will never become a leader. “Cute and emotional” are not leadership material.

You answer this one by remaining calm and insisting on the *issue*, which is him not crediting you.
Also see:

- **Frame control techniques**

To this category belong also what I call “babying power moves”, which are was of infantilizing you and robbing you of your power as an adult.
For example, Sharyl Sandberg in Lean In says that a senator once patted on her head and asked her “what are you a pon-pon girl”?

That was a babying power move because it framed Sandberg as “not mature enough for real men talk”.

Pinching your cheek, repeating your name three times, or tapping on your back are also babying power moves.

2. The Philosophical Shamer

You gotta love this one, trying to go from the one down to the one up.

It seeks to shame you for your goals and aspirations. If you accept his frame, you will feel guilty for being driven. It's usually delivered from a judge frame (also see "soft power").

> **Him**: Why do you even care about that, it's just a silly title, for a meaningless position in an org-chart. Can't you just be happy with what you've got?

Shaming is a common manipulation technique in social exchanges, and you can read more here:

> Manipulation: Techniques, Strategies, & Ethics

Example: Reality Bites

Ethan Hawke uses a similar frame in "Reality Bites" to keep Winona Ryder from expressing herself through work fulfillment.

Ethan frames himself like a free spirit, and frames Winonah as a corporate manipulated corporate drone

Sometimes you will see a man using this technique when the woman earns more than him.
So he tries to frame his "life choice" as superior and worthy, and he seeks to frame her life choice of seeking fulfillment in business as "dirty and unworthy".

He is the cool philosopher who doesn't care about material stuff. You are the venal, materialistic woman slaving away on a corporate treadmill (sure!).

3. "Are you a man" Power Move

This class here seeks to shame you for behaving assertively.

Every time you are too assertive for his taste, he tries to make you feel like you are overly aggressive, which implies that "you're not a real woman".

The best jabs of this kind don't directly tell women they're like men, which would sound like overly aggressive and sexist, but they indirectly *imply* they are like men.

For example:

> **Her**: John, I'm tired of coming back to my desk and seeing you haven't done anything of the work we agreed upon. I'm gonna tell you one last time: pull your weight, or I will have to take this matter to our boss
>
> **Him**: Woooh, you're nasty!

Accusations and adjectives like "nasty", "aggressive", "overpowering" seek to strip your femininity away.
If you take that criticism personally, chances are that you will retreat back in the "submissive girly shell", just so that you can preserve your femininity and your self-identity as a woman.

Donald Trump used it a few times against her female opponents.

Instead of apologizing, he doubles down on his "nasty" comment. Trump confirms that Hillary is "nasty" and "even

nastier than Rosie O'Donnel"

4. Feigning Anger & Annoyance

Annoyance indirectly says that you are being too pushy. And not to be too pushy, you will want to step back or apologize.

Anger shows that you are being unfair, and that will also make you want to step away and potentially apologize.

If you are right, or if you are asking for what's fair to ask, don't back down in front of anger or annoyance. They are just (manipulative) negotiation strategies.

5. Implying That "You're Inappropriate"

Women have a bigger need than men of being socially accepted.

And, because of sexual dynamics (the Madonna-whore dichotomy), they also have a bigger need of sounding "proper".

That makes it easier for men to control women using the "inappropriate" power move.

Some of these moves are typical SJW moves, and they can be delivered with words, nonverbal expressions of disgust or surprise, or fake shock.
For example:

> **Her**: nonono, don't try the typical male move of telling me I'm being emotional
>
> **Him**: "typical move", what do you mean. That's sexist, Christy

Playing offended is also a way to make her feel she was out of line:

> **Her**: Hey Matt, I'd like to talk to you about Alex, sometimes I feel he is too rude
>
> **Him**: How dare you saying that, Alex is a great team player, I'm offended you could even think such a thing, let alone say it

It doesn't even to be so obvious. Sometimes simply saying "you didn't just say that", or "wow, what was that", is enough to make women backtrack or crow in embarrassment.

Or just a nonverbal gesture can be enough.
See here an example:

> **Charlotte**: (yelling, high-pitched) What?? Tray gave me that apartment!
>
> **Him**: (pulls back, with the expression saying "what was that")

See the way he pulls back? That's as if to say "what the hell was that". She feels self-conscious for being too aggressive, and backtracks, losing power and authority (and looking unable to control herself).

6. The Self-Accusatory Power Move

This one accuses you of accusing them.

Maybe you want to talk about a legitimate issue, but they pretend you are accusing them personally. Since women don't want to come across as too aggressive or demanding, she will let him change the topic and never get to deal with the real issue.

> **You**: It's been two years since I've had a raise and I'd like to talk to you about why I think I deserve one.
> **Him:** Are you accusing me of overlooking your well-being?

You weren't accusing him of anything, but if you accept his frame and start defending, you are now the one down -and you just got sidetracked from the real issue-.

See a longer example in the forums.

7. Task You With Coffee / Minutes

If you are the most junior employee, you might have to bring the coffee or take the minutes.
That's part of life, sometimes.

But if you've been around for a while and if you are hired as a professional, then you want to avoid being the "errand-girl" or the "take the minutes girl".

How do you do that?

Privately, you can tell your boss the truth of how you feel about it, and that you think it's unfair that you always do the menial tasks.
You can then say it's fairer if the most junior employee does it, or that the responsibility is rotated.

If you feel very brave or if the person asking you is not your boss, Lois Frankl recommends that you can say in front of everyone "I think I'll pass since I did it last time".

PRO Tip: Think in advance what you can and cannot do

Fran Hauser, author of "The Myth of The Nice Girl", says that it's best if you think in advance what you are OK doing and what you are not OK doing.

That way, you will never be caught off-guard.

This is important because when you are caught off-guard and you do something that you end up resenting, you will become resentful, and the qualify of your work (and life) will suffer. So think in advance of what you can and cannot put up with, and prepare an appropriate way of declining.

8. "It's Because You're A Woman"

You've probably heard this one a few times in your life.

At work, it works like this.
Whenever you make a mistake in a field that's stereotypically male, some men will want to make you feel like the lady who's just invaded the locker room.

You are more likely to encounter this one in STEM (Science, Technology, Engineering, and Mathematics), but any job where you're performing anything stereotypically male will do.

Some men might say directly, and some others will communicate it with their attitude.
For example:

> **Her**: I can't see where is this mistake, the formulas seem to be correct
>
> **Him**: Move (gestures her away from the keyboard). Here it is, it's in F4. ah, women (rolls his eyes and quickly move away)

Sometimes men will not even make a reference to women at all, which makes it more difficult to address it directly. But they will make the woman feel unwelcome with that "ol' boys club attitude".

Them using insider jokes, not inviting you for lunch, changing topics when you arrive.
These all send the message "you're not welcome".

For example:

> **Her**: I can't see where is this mistake, the formulas seem to be correct
>
> **Him**: Move. It's a case of PEBCAK error
>
> **All other men**: (laughing)

PEBCAK means “problem exists between chair and keyboard”. His IT friends will get it, you won’t. And that’s the equivalent of saying “you’re a woman, no good with anything computer-related”.

Whenever men make a reference that you’re not going to get, which also sometimes includes sports references, they are indirectly saying “you don’t belong here as a woman”.

If you internalize that message, you might want to run away from any male-majority profession.

9. Sexual Objectification

And finally, we get to the main point.

Sexual harassment sometimes is just that: sexual harassment.
But, often, it also indirectly seeks to keep women away from the workplace.

When a man objectifies you sexually, he is discounting your work-value and contribution in favor of your sexual value.

Scratch that presentation you are delivering, it’s not nearly as worth as the sight of your ass when you turn around. He is indirectly saying that your main value in this world is that of being penetrated by a man.

Here is an example:

This is so extreme you’d think it’s a movie. Instead, it was a prime minister

The example above is extreme but, sexual power moves are real, and happen every day around the world.

Deborah Tannen also correctly points out that objectification mustn’t even be directed at you personally.
General jokes about women, or even just keeping pictures of sexy women in the office sends the message that “women are for sex (only)”.

Preventing the Sexual Power Move

In Power University there are a few techniques to handle these situations.

But the first one is prevention. Dress appropriately, and you will always be able to defend yourself and frame him as a sexual deviant.

If you are dressed inappropriately, he might be able to frame you as inappropriate.
Finally, I’d also avoid drinking too much when you go out with work colleagues. Even if nothing happens, rumors might spread.

The Businesswoman Guide to Win in Male Organizations

Lucio Buffalmano · 14 April 2020 · Archived copy · Original

Men and women approach business very differently.

As it's to be expected, after all.
Men and women are biologically different, are brought up differently, and move within different cultural expectations.

Whether culture, nature, or nurture matters the most is a hotly debated topic. Luckily, we can skip the discussion and focuses on practical solutions.

And for our practical purposes, we can recognize two different approaches to business for men and women.
One is not superior to the other, of course.
However, different situations tend to favor and reward either the male style *or* the female style.

Historically, workplaces have been environments that functioned with the male style.
There are exceptions, of course. But in most cases, **if women want to make it to the top of their organizations, they need to learn the men's way of doing things.**

This table summarizes the two different approaches:

Bookmark it here at high-resolution.

Note that I didn't say that women *have to* adapt to the male style.
A woman can:

- Find a way to be successful in her own feminine way
- Find more feminine-oriented cultures
- Say "screw business success"
- Build her own business

But if she wants to make it within male-dominated organizations, she must learn to work the male way. And, in any case, she can only gain by understanding how men differ.

The Higher You Go, The More The Male Style Wins

Women are well represented in the workforce and in managerial positions.
But are still struggling to make it into executive and board positions, and this is why:

In Junion Positions the Feminine Style Works Great
Women can enjoy great success early on by being nice and submissive.
They focus on being pleasant, doing great work, and they do well.

In Middle Management the Feminine Style Works Great
Women still enjoy good success with the feminine style in management positions.
Low and mid-management levels are seen as nurturing and collaborative: taking care of the team members, and keeping the team cohesive and harmonious.

At Exec Level the Feminine Style Struggles
Things change when you get into executive positions.
To make it into executive positions you must be -and be seen- seen as hard-driving, ambitious, strong and, in some organizations, ruthless. That’s the male style.

On average, **to make it to the top you need to learn to play the men’s game**.

Why the “Go-Getter” Male Style Goes to The Top

Some women are natural go-getters. Others need to develop those skills

Bradberry surveyed 500.000 employees, managers, execs, and CEOs (1.000 CEOs, to be precise).
Bradberry found out that EQ (emotional quotient) increases with titles up until middle management.
Then it starts steeply declining with executives, and it reaches the bottom with CEOs.

Why do CEOs score the lowest in emotional intelligence?

Is it because companies promote lower EQ folks, or the tasks linked to their position lowers their EQ?
Even Bradberry, who is a big proponent of Emotional Intelligence (EI), acknowledges that it's a bit of both -hence, he's also saying, being low in EI helps you get promoted-.

There are two more factors at play, though.
One is that people in power do not need to be empathic towards the ones below them.
Says Goleman describing the "politics of empathy" in '*Working Wiht Emotional Intelligence*':

> Those with little power are expected to sense the feelings of those with power, while those in power feel less obligation to be sensitive in return.

And second, and most important, it's not that CEOs are (necessarily) emotionally stupid. They just have different priorities.
CEOs are more concerned with power, winning, and getting things done than with what help you score high in emotional intelligence -things such as understanding what others feel, protecting people's egos, nurturing relationships, and "getting along"-.

And if you want to make it to the top of most organizations, it helps to know the game that those execs and CEOs are playing.
Even if you want to transcend those rules once you're at the top, you *still* need to learn them.

This post (and Power University) is about learning those rules.

The More Autocratic the Leader, The More Extreme the Male Style

As a general rule:

> The more autocratic the CEO, the more the male style permeates the organization. And the more the male style is necessary to climb hierarchies.

You can see it with Donald Trump.
People who are successful around him are sworn allies to the man, *not* the organization. They respect the hierarchy and honor the boss (notice how meek vice president Mike Pence is around Trump).

And when the boss is not around, they all have an aggressive, "results-no-matter what" attitude.

See here an example with Mike Pompeo, one of Trump's favorite and most successful allies:

> **Mike Pompeo**: Our adversaries should know this (..) this organization will be more vicious, more aggressive, more inclined to take risks (…)

Pompeo's way is the extremization (caricature?) of the male style. It's all about aggression, domination, risk-taking… And enemies that need to be conquered.
In that Trump environment, a more pro-social and kinder female style would be seen as weak and ineffective, and it would never reach the top.

The 3 Traits to Master The Male Style

In the table above there are many entries, and I recommend you read it all.
The main ones you need to care of, are:

#1. Competitiveness: Be More Competitive Than the Average Woman

Going up the corporate ladder, in good part, is a matter of competition.
To do well in business means getting good at competing.

Men are more competitive and more comfortable with competition, and that gives them an advantage both at work, and in power dynamics in general.
Says Deborah Tannen:

> If one person is trying to keep everyone equal and working hard to save face for the other, while another person is trying to maintain the one-up position, the person seeking the one-up position is very likely to get it, and to succeed in assigning the one-down position to the person who has not been expending effort to stay out of it.

Coaching Advice:

1. **Embrace competition**: To go up, you need to compete more -as simple as that-
2. **Reframe competition as good for all**: Reframe competition. It's not mean, it's how the best idea or the best candidate comes out on top, and that's good for everyone (minus the one who lost)
3. **Reframe ambition**: Hegelsen says that women are wary of ambition because they accept someone else's negative definition. Change the definition of ambition. For example: ambition is the desire to maximize your talents in the service of work you find worthwhile and rewarding
4. **Acknowledge that you can be friendly *and* competitive:** competition doesn't mean you're enemies. You can

compete fairly, while being respectful of others

#1.2. Learn to Settle Disputes Through Competition

Psychologists Kilmann and Thomas developed the managerial grid model, listing the following behaviors to settle disagreements:

- **Accommodation** (giving in)
- **Avoidance** ("let's pretend there is no issue". It can lead to resentment and passive aggression)
- **Compromise** (negotiating the different interest, we both gain a bit and lose a bit)
- **Collaboration** (we seek a way that will lead to win-win)
- **Competition** (I seek my way, you seek yours. One will win, and one will lose)

While women ten do to avoid competition, competition is exactly how conflicts are resolved in many boardrooms (and in some cultures).

For more information, self-assessment, and tips on how to compete, read here:

- **Business conflict: self-assessment and advice**

#2. Power Dynamics: Learn to Respect -and Be Respected- In Hierarchies

Men move in a world of top-down hierarchies, while women are more accustomed to flat hierarchies.

This is not to say there are no alpha females and no female hierarchies at all, but they are less pronounced, and follow different rules.
This is what you need to know about male hierarchies:

1. **Male bosses expect you to honor the hierarchy**: act like he is a boss to be respected and listened to, and he will like you more than if you pretended you two are "just two human beings"
2. **Male bosses expect loyalty to honor the hierarchy**: in male hierarchies, great team players show loyalty to the man above and to the team. Not showing loyalty will put you at a political disadvantage. And be wary of loyalty tests
3. **Male colleagues will try to one-up you**: men seek a hierarchy also among peers, so they might try to one-up you. Banter and teasing are also part of the one-upmanship games. Try to respond in kind
4. **Men seek and respect hierarchy status symbols**: bigger office, bigger salary, (bigger) expense budget, (bigger) company car. When women give them up, they give up power and male respect.

Many of the above rules may seem petty to some women. In many ways, they are. But if you flout them, you are likely going to pay the political price.

Also read:

- **How to combine power and femininity**

> Feminine AND Powerful: 9 Tips For Women Bosses

Common mistakes to avoid:

- Ask "why" and expect the boss to explain the tasks
- Tell the boss why you think he is wrong
- In interviews, telling male interviewers what work you do and what you don't want to do

- Try to change the boss' mind publicly (persuading someone is a sign of soft power, the boss will not like it)
- Doing voluntary work outside the team without his approval (including charity work)

#3. Goal-Orientation: Develop "Bottom-Line Mindset"

Men revere winners.

So they tend to be goal-oriented, thinking about the fastest and most effective way of reaching the goal.
Only after they found the quickest way, men consider the rules and constraints.

Women tend to be more process-oriented, valuing fulfillment and harmony as important parts of that process.
To men, that can look like women don't want to win badly enough.

At work, a bottom-line first mindset is most likely to carry you to the top.
It's not that corporations are evil per se, but the interests are simply aligned that way. People who are financially invested in the business want to see their money grow.

A bottom-line first mindset is the mindset that Wall-Street, investors, and owners love. It means they can entrust you with their money.

Common mistakes to avoid:

- **Perfectionism:** perfectionism tends to focus on the process instead of getting it done
- **Over-worrying:** worriors are seen as weak in the "winning-first mindset"
- **Lack of prioritization**: men tend to focus on one thing at a time. They will think you're scatterbrained if you do too many things at once
- **Hiding your drive**: if you hide your ambitions you will come across as uncompetitive, and "not exec material"

Coaching Advice:

- **Present your idea in terms of bottom-line impact**: since men value bottom-line thinking, frame your opinion in a way that saves money or makes money.
- **Make yourself less available**: studies show that women are far more available than men. Being too available communicates you're not giving enough priority to your bottom lines

3.2. Develop "Bottom Line Talking"

Deborah Tannen talks about "rapport talk", that women engage in, and "report talk", that men prefer.

Women talking to other women often like to start with a backstory, like how they came up with the idea. And that can be OK… As long as you *quickly* tie it to the main point.
Too long a preamble, and men lose patience fast, especially at the executive level where time is money.

I like this example from Margin Call:

When the junior employee starts sharing his background story, the CEO immediately tells him to cut to the chase.
But notice that it's different when the background story relates -and leads- to the main issue

Advice for Career Success

Most career strategies apply to both men and women. But there are several significant peculiarities women should be aware of:

#1. Find a Mentor

Having a mentor is helpful to anyone, but it's especially important for women in business organizations.

The authors of "Breaking the Glass Ceiling" found in their survey that only 38 percent of successful men had mentors, but ***all* of the women executives had mentors**.
Pat Heim believes that's because women need to re-learn the rules of the game, and a mentor helps them navigate that new world.

Should you get a male or female mentor?
The short story: **ideally, you will have both a male and a female mentor.**
Research shows that female mentors help get more promotions, but male mentors help women earn significantly more.

#2. Approach Relationships Issues With Work-Talk

Women are comfortable talking about relationships and feelings.
Men are not.

You make men uncomfortable talking about your relationship, even if you mean "work relationships".
So if you need to talk about interpersonal issues approach it by saying "how to work better together".

2.2. Watch Out for The "Factual Power Moves"

Some men might try to avoid a needed relationship talk by sidetracking you.

We will see more examples in the relationship module, but for work, imagine that your colleague has taken your idea to the boss and got all the credit.
Now you confront him:

> **You**: Matt, when I tell you my ideas and you take them to our boss pretending they're yours, I feel I can't trust you. There's a big problem with us working together
> **Matt**: Well, your idea wasn't that good. I can think of lots of better ways to streamline the process

The attack is the sidetrack.
If you start defending your idea, you fall for the bait.
Instead, you must maintain your frame and take it back to the relationship issue (in this case, trust):

> **You**: Matt, the issue is not who has the best idea. The issue is trust. And when you behave like that, I don't feel I can trust you

At this point, in the most extreme cases, men can use the "emotional power move", which goes a bit like this:

> **Matt**: Oh, you women are all alike. So emotional about everything. Let's just keep this professional

Again, he is trying to sidetrack the conversation to avoid fessing up to his wrongdoing. You want to keep insisting on the real issue.

#3. Act Swiftly On Catty Female Subordinates

Pulling ranks on insubordinate employees after they refuse to change their ways is the only way to maintain your authority

When a woman is promoted to a managerial position, other women can grow resentful.

Don't take it personally, often it's a knee-jerk reaction to their own female bias.
To a woman, a woman becoming a boss is a betrayal of the female unwritten rules (flat organization and "power dead-even").
Read more in this forum entry.

To handle it, I recommend this approach:

1. **Get personal**: go to lunch, get to know her, use indirect ways of commanding ("female style" solution)
2. **Coach her on how business works**: explain that business is a hierarchical organization and you had to learn yourself. Now, you're happy to share with her (coach solution)
3. **Tell her you're the boss and she must execute**: if the two above fail, try the top-down approach. This is likely to make her even more resentful though, so be prepared (autocratic solution)
4. **Fire her**: a toxic employee is undermining you and your team. If she can't work well, it's your duty to let toxic employees go

#4. More Bullet-Advice

And here are more female-specific advice in shorter format:

- **Avoid volunteering for non-business critical tasks**
  have you ever seen a man collecting money for Christmas gifts, or sending around birthday cards to sign? Me neither.
- **Develop relationships that increase your power:** women are uncomfortable building alliances that further their goals. But alliances are a critical path to power and success
- **Don't talk behind men's back:** women are used to talk about their friends with other friends, but to men that's a personal betrayal. Avoid talking about a man's way of working to other women

- **Dare to lead:** women often feel uncomfortable taking leadership positions. *Especially* if there are men around. But if you have to make it in a male world, you might have to push yourself to get in the lead
- **Take criticism in strides:** women more than men tend to take feedback and criticism personally. Never show that criticism is getting to you because men consider that an emotional weakness (develop an antifragile ego and growth mindset)
- **Use your budget:** Loils Frankl says that women tend to be conscientious about their company's money. That's great, as long as you aren't inconveniencing yourself to save a few bucks
- **Beware of father figures**: if you tend to behave unnaturally childish or "girly" around men with authority, beware you're not seeing him as a father figure
- **Avoid over-apologizing**: some women have a tendency to over-apologize. Apologizing profusely for inconsequential slips shows insecurity
- **Avoid playing the gender card**: unless you can prove anything, you will get little support
- **Don't waste too much time on early ideas**: Fran Hauser says that men knock on their bosses' door to share a business idea. Women instead prepare presentations before they even get simple feedback. Before you invest much time, mention that idea in a casual conversation first.
- **Network with both men and women**: women tend to cluster with other women, but that's a mistake. In organizations where most top executives are men, it's men who have the most important information

And if you're feeling like crying?
Read this forum entry on how to handle tears.

This is a preview from Power University, the workplace module, where you can find more real-life examples and practical advice.

How to Be More Authoritative & Confident at Work: Top Strategies

Lucio Buffalmano · 14 April 2020 · Archived copy · Original

Signaling confidence and power is paramount to gaining authority, both at work and anywhere else.

In workplaces as anywhere else, your body language, behavior, and communication can either signal authority and leader qualities or undermine it.

- ⍰ Example: Exuding Authority & Power

Intro: Shared Foundations of Authority

At The Power Moves we believe that authority is linked to most other traits that tend to make a high-value man.

This means that a man who is competent, confident, strategically minded, and positively dominant tends to gain authority as much as he gains status, respect, and social attraction.

So while this is 'bad news' if you were looking for a shortcut, it's great news because it means that the foundations are already covered by solid, power-aware self-development.

In this article, we'll delve deeper into how to apply some of these basics to workplaces.

1. Speak With Power

What many don't realize is that it's not the words themselves that often signal low power and undermine authority, but it's the sub-communication of low power that undermines your authority.

For a deeper overview, also see:

- Low power speaking
- High power speaking

And for the specific context of work:

Speak With Declarative Sentences

Declarative sentences communicate certitude and conviction.

Questions communicate doubt and low confidence.

If you are confident about something, avoid questions and use declarative sentences instead.

Examples:

> (Talking about severance packages)
> **HR representative (question)**: Don't you think it could be a good idea if we offered 3 months' pay instead of 2 weeks?

This is rather weak, especially considering the HR representative has a good degree of authority in discussing employees' termination.

Better:

> **HR (declarative)**: Industry standard is 2 months. I propose we offer 3 months as a gesture of goodwill.

To power-protect, you'd say:

> **HR (balanced)**: Industry standard is 2 months. I propose 3 months as a gesture of goodwill.
> We lower the chances of legal troubles, and keep a good reputation. <— Provides a rationale.
> What do you think <— Offers him to disagree

⍰ ⍰⍰ Own uncertainty when certitude isn't possible

Faking certitude is weak
It sub-communicates fragile ego, people-pleasing tendencies, and undermines your long-term authority.

Focus on gaining long-term credibility instead.
When you're an expert and confident speaker owning incertitude *enhances* your credibility.

Limit Speech Weakeners

Speech weakeners include:

- *"Maybe this isn't important, but what if…"* ➡ *"What if…"*
- *"We sort of did…"* ➡ *"We did"*
- *"Somewhat I tried… "* ➡ *"I tested it"*

You can of course use these strategically and we dig deeper in Power University.

Exceptions for academics

In general, with smart people, critical thinkers, and in academic circles, more tentative language such as 'tends to be', 'it seems like' or 'the data seem to point towards' makes you *more* credible.

See more in:

- High confidence speaking

Cut Preambles, Go Straight to The Point

A preamble is a concoction of words and nonwords used before getting to the main point.

As a rule of thumb:

> Preambles soften your message, and the more words you use, the "softer" your message will be.

An example of using too many preambles, adapted from Lois Frankl:

Time-waster: You know, I was thinking about this issue.
I've been talking to my colleagues, too. A lot of us share the same concerns (…)
Anyway, we've been brainstorming and we came up with an idea. I'm not saying it's a silver bullet, but it may work.
The idea involves…

Compare:

> **Confident**: We brainstormed and came up with…

Again if consciously adopted, pre-ambles can be powerful tools.
As for most things, it's about your goals, and calibrating accordingly.

End With Your Suggestion (& Avoid "Laundry Listing")

A laundry list is a list of options with no preferred option and no guidance

> **Poor communicator**: We could use outside consultants or internal staff.
> Or we can organize a team to investigate options <— There is no guidance or solution

Compare:

> **Effective communicator**: I see two different alternatives (…)
> I've looked and compared options (add details), and I recommend internal resources. <—Guidance
> Let me know if you agree, and I'll proceed <— Solution

Signal Agency: Speak With The "I Got This" Format

Sometimes higher-ups will ask for opinions as a test. Some other times, they're really wondering.

But a confident answer will always come across as higher authority (and boost your odds of promotions).
And, sometimes, will open doors to new possibilities.

In one of Pat Heim's examples, a manufacturing firm sought to restructure operations.
The head of operations asked two different people in the team if they had any idea how to go about it:

> **I'm not sure reply**: Hmmm, I suppose we could try giving this to the work cells to solve, though I'm not sure they can. If they don't, we can have engineering to look at it. If those two approaches don't work, I suppose we could call in a consultant.

The second one:

> **I got this reply**: We can get that done.
> I can form a cross-functional team with cells and engineering to take care of it.
> And if they struggle, I look for an external addition and keep an eye.
> Shall I proceed?

Take a guess at who got the opportunity to lead the restructuring?

Introduce Yourself With Full Name & Surname + Title

Have you ever heard of "Bill" as the founder of Microsoft?

Or "Elizabeth" for Elizabeth Warren?

Me neither.
Because those are powerful people, and powerful people go by their full names.

If you have a strong title, you can also use it to build your authority. If someone does not use your power title when introducing you, you can say it as soon as you are introduced:

> **Speaker**: This is Matt, Matt works at JPMorgan
> **Matthew**: (towards the colleague) thank you Jim, (turns towards the new person,) Hi, I'm Matt Smith, SVP, and I run bond trading operations

You can also correct others:

> **Interviewer**: Today we have with us Lucio. Lucio is an author and will talk to us about power dynamics
>
> **Lucio**: Thank you Mark. Indeed I'm Lucio Buffalmano (gives full name), I'm a social scientist <– higher authority job title
> and I focus on advancing power dynamics as a new and groundbreaking approach to personal self-

> development.
> I'm excited to talk to you today <– ends on a friendly tone

Act With Power

High power behavior signals confidence, authority, and leadership potential.

While we focus here on active behavior, always remember that high power behavior has a social aspect, and you want to defend and assert yourself whenever others test you and your resolve.

Stand Up For Your Stakeholders

For example:

> **Head of Accounts**: But what if our customers will feel cheated?

A more dominant and honorable man:

> **Head of Accounts**: As the voice of the customers, I oppose that. We make some money now, and ruin our reputation for ever.

Sidestep Personal Issues, Focus On Deliverables

There is a growing trend of 'bringing your whole self at work' and being 'radically candid'.

And while that's admirable, it's a trap for authority because high authority men focus on results.

> **Boss:** You have been going home early several times lately, and you missed a deadline twice. Is everything OK?
> **You**: Thank you for being upfront, I appreciate it. I'm going through some personal challenges, but I can handle it, and work is a top priority for me. Now, about the work…

Assume Permission Granted

Permission-seeking self-frames you as junior and incompetent.
Earn the right to assume 'yes' by gaining trust with quality work of course, but also by being proactive and taking responsibility.

Effective men who take responsibility don't need to ask permissions for holidays, long lunches, or homework.

Consider these different levels of authority:

- **Very low power**: Sorry to disturb you. I wanted to ask if you could allow me to…
- **Low power**: Would it be all right if…
- **Neutral**: May I work from home tomorrow?
- **High power**: I will be working from home tomorrow. OK with you?
- **Very high power**: I just wanted to let you know that…
- **Founder-level**: (says nothing, works from home)

In any performance-based organization, you should reach this last step already when you're in a first-level manager position.

Signal Authority With Your Environment

Have you ever seen a royal's palace looking cheap?

Probably not.

Because old kings knew the basic rule of displaying power: impress your guests.

The *Routledge Handbook on Persuasion* states that power and status can be communicated through the size and location of a person's office. Large corner offices are considered prestigious. And the appearance of that office also speaks about you (Teven & Comadena, 1996).

Some tips to maximize your environments:

- Neat office
- Plush hotels
- Restaurant where you're treated like royalty

⁉ If you're invited, avoid picking the most expensive place
It looks like cheap scrounging.
⁉️♂Once a prospect proposed the most expensive place, just to tell us they didn't need our services. She didn't look very honorable

Think With Power

An empowered executive mind, as per our foundations, tends to be:

- Optimistic
- Strategic
- Higher IQ (than average)

As you think empowered, you of course also want to *signal it*.

Use Logic & Data

In *Stealing the Corner Office* career consultant Brendan Reid explains that pitching your idea with passion and fervor is the typical rookie's mistake.

Executive materials instead position themselves as **neutral and rational operators**.

Being seen as a guy who speaks based on data, facts, and logic makes you influential.

Support intuition with logic as well.
A keyboard-less phone is not revolutionary for revolutionary's sake, but for its sales-boosting simplicity and convenience.

Good keywords:

- "*I looked at our competitors*"
- "*I ran some numbers*"
- *"I thought about this long and hard, and…* "

Present Structured Thinking

Organized thoughts sound more intelligent and authoritative.
So whenever you're not sure, or an argument is complex, think it through before speaking it out.

Display Logic, Critical Thinking, & Wisdom

Messy 'thinking aloud' undermines authority, but smart 'thinking out loud' displays IQ.
This is how to do it:

- Share pros and cons
- Share your preference
- Explain rationale

⍰ Example:

> **CEO**: Do you think it's best to warn shareholders about the anticipated loss, or should we wait until the numbers are final
> **SVP**: Hmmm… If we wait, we might sound more credible with actual figures. If we tell them now we'll have to deal with lots of questions we can't answer. But then again, shareholders would appreciate a heads up… <— This is true, but it confuses more than clarify and add less value

You don't necessarily need to give him a "yes or no", but you want to use the opportunity to sound smart and strategic.
For example:

You: An early warning raises questions, <— Con
but it also increases trust. <— Pro
Since we value honesty and transparency, I'd raise the warning <— Guidance

CEO: How would you do that?

You: (slight smile) Well, you're really good at this <— Use opportunity flattering
But I can prepare a draft statement and send it to you within the next half hour, then meet you again to discuss <— Grabs opportunity to improve your boss' relationship

When You're Done, Stop (& Avoid Trailing Voice Mails)

Example:

> **Voice Trailer**: Okay, well, I guess that's everything. Uhmm, call me if you have any questions… That's it, I think. Okay… Byee, See you

Instead:

1. Share your main concern
2. Tell them to reach out if needed
3. Hang up

⍰ Example: Exuding Authority & Power

Principle:

⚖ **Low status gossips. High status is gossiped about**
⍰ Share information drily, as if to show disdain towards gossiping.

⍰ Example:

> (after Don disappeared for 3 weeks)
> **Don**: You wanted to see me?
>
> **Roger**: About 3 weeks ago (pause)
> I hope you were looking for a job in California. Because you'll need one <— Instead of asking like most would, he delivers a threat-joke

Little later:

> **Don**: Any conflicts?
>
> **Roger**: Mona hasn't been pleasant since my engagement <— Shares the gossip as a joke side-note
>
> **Don**: (Smiles) With the deal. But… Congratulations <— Nonverbal reaction with restrained voice. No more questions about it
>
> **Roger**: Thank you
> (pause) <— Displays that he's unharried and calm
> Very few conficlits (…) <— Quickly back to business
> Well, now you can go back to your office and figure how much I made on this <— Business talk over, he can go

Little later Don refuses to even comment politics.

⍰⍰ Notice pauses, controlled demeanor, and cutting to the chase.

Self-Promotion Done Right: 10 Proven Techniques That Work

Lucio Buffalmano · 14 April 2020 · Archived copy · Original

Mastering self-promotion at work is a critical skill for career success.

Knowing how to showcase your value and achievements can lead to better recognition, promotions, and a stronger professional reputation.
But self-promotion isn't just about bragging—it's about political skills, savvy communication, and displaying leadership to stay visible without coming across as self-centered.

Bragging effectively is both a science, and an art.
In this article, you'll discover **proven strategies for effective self-promotion**.

Contents

- 1. Let them see you win, never bleed
- 2. Have others sing your praises
- 3. Deliver ideas with storytelling techniques
- 4. Go to the whiteboard to share a strong idea
- 5. Use presentations to validate speakers & gain stage time
- 6. Have a plan for home office
- 7. Craft elevator's pitches & create 'elevator moments'
  - 7.2. Kitchenette power moves
- 8. Romance your work
- 9. Use positive self-frames
- 10. Extra tips
- SUMMARY

1. Let them see you win, never bleed

Principle:

⚖️ No mistake happened if your boss is unaware of it
❓ Hide your mistakes from your boss

❓ Example:

After a major blunder the project manager called and yelled for what seemed an eternity:

> **PM**: (angry) Think before you hit “send”, THINK! Are you able to THINK!
>
> **Me**: (calm) Yes, I think I am
>
> **PM**: Who else was in CC, was it Andy in there too?
>
> **Me**: (calm) I think he was, yes
>
> **PM**: (yelling) What the f*ck were you thinking, ANDY was there, you sent ANDY the wrong report on MY project! Do you know who are they going to blame?
>
> **Me**: (calm) Well, I think me
>
> **PM**: (yelling) No, because you’re a fucking junior who can’t do shit and they will blame ME!
>
> **Me**: (calm) Hmmmm yeah, maybe you’re right

And on and on.

Notice there is no ‘sorry’.
Why not?
Although the project manager grew angrier without apologies, the boss next to me stayed oblivious to my mistake.
And with a flawless appearance, I ended the assignment with an ‘exceeds’.

2. Have others sing your praises

When you follow our principles, including being high-power/high-warmth, most people think well of you.

Not everyone will *talk* well about you, though.
This is how you fix it:

- Make smart allies who know how to play politics
- When they compliment you 1:1, tell them to share it
- Lead by example and say great things about the people close to you

This might be the simplest, most effective, and classiest way to promote.

❓♂️That time I realized my friends hyped me up

I remember years ago at the launch party of a well-funded startup.

One of the founders introduced me to one of his friends as “Lucio, he’s really good in sales, but *really* good”.

I had to smile within myself: maybe he was right, but how did he even know?

I had never worked with him, and never been too close to him, either.
But my network -and very possibly my brother-in-arms- did some good promotion for me.

3. Deliver ideas with storytelling techniques

When you blurt out a good idea without any build-up, you sell your genius short.

If you have a winning idea, build up to it.

Ie.:

> **You**: Alright, you all had valuable input, and I have come to this idea, hear me out. <— Attention grabber
> What if instead of X, we could do Y. <— Excitement-building preview
> Here is how we could get it done…

4. Go to the whiteboard to share a strong idea

Research shows that the whiteboard increases engagement and retention.
And gives people a feeling you “own” the idea.

Plus, you act display self-confidence and leadership qualities.

5. Use presentations to validate speakers & gain stage time

Leil Lowndes recommends you be the first to applaud.

I agree, and even more, you can:

1. **Sit in front**
2. **Look at the speaker**
3. **Smile at their jokes**
4. **Ask easy questions and preface them with your name/title**
5. ▯ **Ask in the name of your department** to sound leader-like
   Ie.: “*You mentioned we need more X. Any idea how we in marketing can help with that?*“
6. **Go talk to them afterward**
   - Compliment them
   - Thank them
   - Ask questions

Friendly applause also sub-communicate that you’re a loyal ally, especially important in male hierarchical cultures.

▯♂**That time I forgot to validate**

Years ago I was in a fintech incubator.

The son of a rich businessman 'bought his button' to join as a founder, and that night delivered a presentation.

As usual, few career-minded people listen to the speeches, while 9-to-5ers and mavericks are there to eat, drink, talk and shoot the breeze.
Knowing my future wasn't there, I ignored the political game and was instead sitting with a girl talking about life and dating.

Suddenly, the presenter came over hyped and excited and asked us: "*So, I was it?*".
Both of us were lost, thinking "*What the heck is he talking about?*"

After a few micro-seconds of incredulity it dawned on me: this he was so clueless that not only he hadn't realized we didn't care, but he didn't realize that openly looking for validation made him look terribly insecure.

So I fumbled that his speech was awesome.
"*Yeah?*", he asked. "*Yeah man, you're a great speaker, everyone was listening to you raptly*". He closed both his fists in sign of victory, and left.

He was junior and inexperienced, so he made it too obvious he craved support and approval.
But make no mistake, more seasones players *hide* it more.
But they still appreciate support and approval.

6. Have a plan for home office

Home office makes life easier, but career advancement more challenging.

Peggy Klaus in her book "*Brag*" calls the political fallout of too much home office the "out of sight, out of mind syndrome".
Mixing Klaus' good advice with our own, this is how you can fix it:

1. **Schedule a recurring 1:1 with your boss** to stay top of mind. Often, the relationship with your boss is the most important work relationship

2. **Check-in by phone** with boss and colleagues
3. **Schedule lunches when nearby the office** with the most influential people in your career
4. **Strategically CC your boss** to display good work
   ⚠ Avoid overdoing: it quickly turns annoying

7. Craft elevator's pitches & create 'elevator moments'

The elevator's pitch is a quick introduction of yourself that you can deliver at a moment's notice.
It should seem natural, but only because you rehearsed it plenty of times.

When looking for opportunities, include:

- What you've done
- What you're doing
- Who you want to help with your skills

Ask AI how to make it compelling, and adjust it to your preferences.

⍰ ⍰ Create your elevator rides

When I want to meet a woman and make it 'natural', I slow down, speed up, or check something right beside them.

It's the same with creating 'elevator rides'.

Pick up the phones to seem busy and (pretend you're) talking to someone until you're ready to strike.
Or slow down or speed up when the founder is entering the building.

Attention-grabbing behavior or clothes in high-transit areas also make for easy conversation starters.
For example, the first time I spoke with the founder was while brushing my teeth, and he spoke first with a big smile.

7.2. Kitchenette power moves

Don't reply 'All good' when higher-ups ask 'What's up'.

Talk about work instead:

> **You**: Great, thank you!
> I'm very excited about XYZ project. It's going well, we may bring in X revenue (/cost savings).

If they show interest, keep going and ask for their perspective.

If you're on mundane work, highlight positive aspects of the job or company, or express gratitude for the opportunity.

⍰⍰ Don't queue-up: lazy men stand in queues
Avoid queuing for anything during working hours (water, fridge, toaster). It signals low-value slacking.

8. Romance your work

For example:

- **Mention the challenges you overcame**
  Ie.: "*The laptop is fixed*" ➡ "*The IT department was backed up, but I convinced them to prioritize your laptop. Here it is*"

- **Breakup your achievements**, research suggests it makes them more impressive
  Ie.: "*The project is delivered*" ➡ "*We delivered all requirements on time, and within budget*"

9. Use positive self-frames

Everything you do or say sub-communicates about you.

The strategic communicator, something we train our students in Power University, always talk in a way that self-frame them as high-value, influential, and in-demand.

Here are some examples:

Negative Self-frames	Positive Self-frames
I could have done a better job with the budget	*Although slightly over budget, we delivered ahead of schedule* <— Focus on the positive
I won't manage to keep it within schedule	*Staff turnover will delay us. We're interviewing for replacements already the new delivery date is……* <— Share external circumstances
I wish I had done more research before deciding to hire him.	*Unluckily it didn't work out. We now learned how to uncover fake references and it won't happen again* <— Covertly off-load blame, then focus on learning & solutions

⍰ Balance and calibration
Do, without overdoing it. Share the issues beyond your control, while *also* taking responsibility. Mention the challenges, *without* overblowing them. Breakup achievements, without wasting people's time.

10. Extra tips

- **Attend company's parties:** absences communicate disloyalty
- **Do go for after-hours**, especially if your boss/management will be there

- **Get into the company's newsletter:** make friends with PR / comms, and get a company-wide mention
- **Post wins on Linkedin, and tag your company**
- **Like the updates of your boss / founders and share them:** trust me, they notice
- **Approach powerful people with something you have in common:** research the attendees of the networking events, look up their background, and go talk to them mentioning some commonalities

Also see this article for higher-level self-promotion strategies.

SUMMARY

Effective self-promotion requires a mix of bold self-advocacy, tempered with subtlety and strategy.

Start incorporating these techniques, and your reputation will start taking off -together with your career-.

Career Strategies: Start Here

Lucio Buffalmano · 15 April 2020 · Archived copy · Original

Career strategies are thought-through approaches to personal career advancement that help you meet your career goals.

Good career strategies take into account your strengths and personal dispositions, as well as the realities of the workplace, including the human side, and the politics.

Contents

- Dispelling The Lies That Keep You Stuck
  - The Truth of Who Gets Promoted
- The Basics
  - Strategizing

- Best Career Resources

Dispelling The Lies That Keep You Stuck

Let's start by dispelling a myth: emotional intelligence, especially in the sense of "caring" and "empathy" does not help you to the top.

Here is the result of a survey from a company that actually *sells* emotional intelligence training.

From Bradberry's survey of more than 100.000 individuals across 5 continents and in different industries
Here is how you could describe those results:

Nice guys might not finish last, but they surely get stuck in the middle.
The "emotional intelligence myth" is a nice story to keep the nice guys and girls spinning their wheels in the mid-level positions.

So, what gets you promoted?

The Truth of Who Gets Promoted

Competence and results are crucial, of course.
But they're just the entry-level requirements.

After that, it's professionally polished alpha males and alpha females who exude confidence, authority, and power who get promoted to the top.
And it's Machiavellians who know to schmooze and strategize.

It doesn't matter how much your team loves you, or how good your results are.
If you don't look like you belong to the executive club, you will hardly make it into the boardroom.

Luckily, you can learn that.

Start with some theory first, it will help you accept this less than ideal reality:

- **Machiavellism to The Top** (more theory, but it's important)

The Basics

So, how do you start executing and communicating more of that confidence that will help you get to the top?

Here is how:

- **The executive skills you need to master**: this helps you understand what are the basic skills and competencies to look and act the part (and, eventually, become an executive material)

Now, let's take a closer look at the realities of the workplace:

- **Conflicts of interest**: this forms the basis of understanding politics

And this is how to learn to play the game:

- **Office Politics 101**: this is a 7-step formula to learning and getting good at office politics. It's a heavily linked, bookmark-worthy resource that will take you from 1 to 10.

Strategizing

- **Career strategies 101**: the fundamental and proven strategies for effective career advancement

And to end, some more real-life theory:

- **Power in the workplace**: an overview of what affords power at work

For Women

Business culture is still mostly a male-culture, and especially so at the higher organizational levels. The male style of business accentuates some important gender differences. Women will be well-served if they familiarize themselves with those differences (but I also recommend men to understand the gender impact)
See:

- **The businesswoman guide to male organizations**

Boss Relationship

Albeit in some cases it's possible to leapfrog your boss, most of the time your boss has an outsized influence on your career.

And the relationship with your boss is often the single most important relationship you have on the workplace

If you can make friends with people, chances are you can make friends with your boss. But there are a few peculiarities you should be aware of:

- **Managing your boss**

Self-Promotion at Work

- **Strategic self-promotion**: an overview on how and when to promote, including foundational skills of effective communication

Politics

- **The realpolitik guide to being a good manager**: how to foster team collaboration while being both liked and respected
- **The manager's guide to toxic employees**: how to recognize and deal with the bad apples
- **The archetypes of political players**: psychological and behavioral analysis of the people you are going to meet in your career

Best Career Resources

As you might imagine, office politics and career strategies are not a field where research is either abundant or crystal clear.

How would you measure political effectiveness or Machiavellian strategies? And who is going to come out and be frank about what they're truly doing?
Those at the top are not too keen to share how they got there outside of work and personal merits.

However, some quantitative research here and some qualitative books there, some good picture of what's effective and what isn't started emerging.
The result of that research has been a large update to the workplace section of Power University.
And here are my favorite books that I have read on the topic:

10 Strategies to Win Over Your Boss (& Get Promoted)

Lucio Buffalmano · 15 April 2020 · Archived copy · Original

Building a strong relationship with your boss is one of the most powerful ways to advance your career.

With our expertice in psychology, power dynamics, and office politics, this article provides you with actionable strategies to win over your boss.

Let's dive in:

Contents

- 1. Flatter your boss the right way
- 2. Make him feel in charge
  - 2.2. Promote tactfully: don't overshadow him
- 3. Prioritize his tasks
  - 3.2. Take something off his to-do list
  - 3.3. Offer him your extra capacity
- 4. Grab & create opportunities to get closer
  - ⍰⍰ Example of missing a 'bid for closeness'
- 5. Give positive feedback (but pitch it as "honest")
  - How to give critical feedback
- 6. Align with his communication style
  - 6.2. Match their conversation rituals
  - 6.3. Jump on indirect commands
- 7. Turn him into your mentor
  - 7.2. Ask what you should improve on

- 8. Protect yourself from jealous colleagues
- 9. Understand, act, & strategize on “loyalty tests”
  - ⚠ Risks of loyalty
- 10. Adapt your strategy to his power
- Bonus: Go past him. Smooth talk, resolute overtake
  - ⍰ Example: paying homage while overtaking
- MORE

1. Flatter your boss the right way

Research shows that ingratiation works.

After all, we all know that everyone enjoys a good compliment.

But some people shy away from compliments in fear of appearing ‘brown-nosing’ or unprofessional.

And they’re not wholly wrong.
Compliments and flattery must be socially calibrated to be effective.

Disempowering flattery

These judge-y compliments is how a *superior* would speak:

- *You’re a great manager*
- *Good job*
- *You’re very skilled at X*

Good flattery

This is instead how a subordinate pays compliments:

- *Thank you for X*
- *I love this team* <— Indirect praises their picks & leadership
- *I admire how you…*

And a research-backed technique is **to turn a compliment into a question** to make it seem less obvious and more authentic.
For example, say ‘*you’re so good with people, how can I improve my people skills*‘.

2. Make him feel in charge

Use what we call here ‘power protection‘ to avoid irking your boss.

Most people know that being aggressive or rude to a boss is an obvious no-no.
But many fail to realize that you can disempower your boss in far subtler ways.

For example:

> **Boss**: Let’s increase outreach volume
> **You**: OK, I agree with that <— It implies your agreement matters, which irks bosses. Agree with your peers, not your superiors

Better:

> **You**: Makes sense, more volume equals more chances, I'll proceed

2.2. Promote tactfully: don't overshadow him

Self-promotion is crucial for your career success.

However, self-promotion is an area of conflict of interest because it serves *you*, but not your boss or team.

Plus, the more successful you are, the more your boss feels threatened and 'beaten' by a subordinate.
And he doesn't want either.

So promote yourself, without overshadowing him:

- Keep your networking hidden
- Frame achievements as team wins
- Credit him for successes

Mostly:

⁉ Make him feel you're a friendly force -and ally- so he welcomes your advancement

Also see:

- **Self-promotion techniques at work**

> 10 Techniques for Strategic Self-Promotion At Work

3. Prioritize his tasks

Ie.:

- Answer his emails quickly
- Reply first when he asks on the team chat
- Be the first to finish whatever survey he sends around the team

3.2. Take something off his to-do list

Former media executive and career coach Fran Hauser says she received her first big promotion because she made things easier for her boss.

Says Fran:

> Offering to help is nice, but without volunteering to take on a definite and specific task, it puts the onus on the other person. (…) Instead, make yourself aware of what needs doing and how you can do

In short: observe what your boss needs the most, then offer to help with that.

3.3. Offer him your extra capacity

Ie.:

> **You**: Boss, I finished my previous task. Is there anything I can help you with?

If a colleague tasks you or asks for help, run it by your boss.
Ie.:

> **You**: Chris needs some help, but I wanted to run it past you in case you have other priorities

+ Bonus: the boss tasks tend to be higher visibility.

4. Grab & create opportunities to get closer

Many do this the wrong way.

And then they get called 'brown-nosers' for a reason.

Worse yet, when you force closeness and 'chumminess' good bosses are forced to defend their boundaries to maintain a reputation of fair and equitable management.

The solution is to get closer *tactfully*.
Ie.:

1. Put out hooks for closer vibing
   Ie.:
   - *"This weekend I tried X, I really enjoy X…"*
   - *"I'm planning a new car, how do you like your Mustang…"*
2. Go deeper if he reciprocates
3. Stick to non-work topics for as long as the boss allows

⍰ Example:

My boss enjoyed recreational Treasure Hunting.
I'd listen and ask for as long as he enjoyed. It led to a lunch invite, followed by many more. I got another 'exceeds' review with him, largely thanks to our relationship.

⍰ ⍰ Example of missing a 'bid for closeness'

We dig deeper with the author's real-life examples in Power University.

But the concept is this:

If a boss makes a move that allows you to get closer, reciprocating is both an opportunity, and a must.
Failing to do so will break rapport and harm your relationship.

5. Give positive feedback (but pitch it as “honest”)

In the era of Radical Candor management, ‘growth mindset‘ and (naive) self-help gurus, everyone *professes* an open mind.
But few have it.
And nobody appreciates others for critical feedback, no matter how useful it was.

Principle:

⚖ **Critical feedback helps others grow, but positive feedback helps your career.**

How to give critical feedback

Still, critical feedback can be an opportunity to display IQ, social skills, and power awareness.

Here is how to give it:

- Frame the criticism as minor (compared to the positive)
- Frame the criticism as fixable
- Provide suggestions to address it

6. Align with his communication style

To increase rapport and social capital, ignore your preferences, and match your boss’ instead.

Match:

- **Direct / indirect speech**:
  Ie.: *“Please do X” / “Could you please take care of X?”*
- **Quick / long-winded**
- **Chit-chat before business talk / straight to business**
- **Formal / informal**
- **Rituals of speech** ⍰
- **Macro / micromanaging**

  - ➡ check in often with micromanagers, let them review your work. Be more independent with macro-managers
- **In person / electronic**

Pay particular attention to the latter as it's an important sign of extroversion/introversion.

If they avoid in-person communication and you're trying to talk to them in person, they feel like you're violating their personal boundaries.

⍰ Match his leadership style (PU alumni only)

6.2. Match their conversation rituals

Linguistic researcher Deborah Tannen defines conversational rituals as patterns of speech and behavior that work only when both players use them.

Matching conversation rituals increases rapport, and missing them harms your relationship.

Important conversational rituals include the use of "sorry" and "thank you".

Imagine this dialogue:

> **Boss**: Thank you for running this by me <— It's a ritual because the boss doesn't owe you 'thanks'
>
> ⍰: No worries, cheers / You're welcome <— Misses the ritual, one-ups the boss
>
> ✅ Thank YOU for taking the time to check this with me, boss

The boss had no real reason to say "thank you". He is *expected* to keep oversight, so the 'thank you' is a ritual, not a real thank you.
The boss is putting himself in the one-down out of kindness, but he expects you to do the same to rebalance power.

When the report does not reply back with 'thank you', the report disempowers the boss. Over time, the boss will start resenting this report.

Even worse would be the following:

> **Boss**: Thank you for running this by me
> **Report**: You're welcome

And the boss will be thinking: "You're welcome?? For what! Does he think he is the boss now?"

So, what's a better solution, in this case?
It's to play the ritual and thank them back. For example:

> **You**: No, thank *you* for taking the time to check this with me, boss, I appreciate that very much!

6.3. Jump on indirect commands

If your boss is direct and you prefer indirect, you might think he's an as*hole.

And if he speaks indirectly and you are more direct, you can think he's a submissive 'too nice guy' who doesn't have what it takes to lead.

However, again, it's on *you* to adapt.

And if he's indirect and you are direct, you can miss the signals.

For example, if a very indirect boss were to say:

> **Boss**: I really have to get this report done, but I don't have much time <— ⍰ ⍰ 'Can you help me do this report'

He is asking you to do it for him.
When you miss the signal, you break rapport -and he will think you're unhelpful and not so bright-.

Another common indirect request is with questions:

> **Boss**: Do we have a list of invitees? <— ⍰⍰ 'Did you prepare a list, and if not, can you do one?

That is not a real question.
He is asking you whether you've done it, or not. And if it's not done, he's asking you to do it.
So if you did, you ask him if he'd like to see it. If you didn't do it, you propose to get that done right away.

7. Turn him into your mentor

On average, the more time you can spend with your boss, the better

As per our article on career strategies, do this:

1. Seek guidance
2. Report progress
3. Grow mentoring from technical realms, to personal development
    - Ask him how to develop traits that you like in him <— ⍰ Shows you want to be like him, flattering him the right way

7.2. Ask what you should improve on

It's crucial to uncover what your boss likes least about you.

And then work on that with him.

Why so?

Because **people mentor people they like.**
If there is anything your boss dislikes about you, he will not help you.

And second, if you don't address it with him, he will filter whatever you do or say with a negative bias.

Says Goldsmith in his popular "*What Got You Here Won't Get You There*":

> We view people consistently with our existing stereotypes.
> If I think you're an arrogant jerk, I filter everything through that perception. If you do something wonderful, I will this it's the exception. **Within that framework it's almost impossible for us to be perceived as improving, no matter how hard we try**.

Asking him what you should improve on allows you to get to the root causes of personality mismatches.

Address that -? or simply act to his liking- and you remove major stumbling blocks to mentorship.

8. Protect yourself from jealous colleagues

Your colleagues may get jealous of your great relationship with the boss.

How do you handle that?

First off, never brag about your close relationship.
Play it down instead.

Here's how:

- Be warm with all <— Prevents accusations of boss brown-nosing
- Frame it like 'just another good relationship you have'
- Say good things about your boss <— Sub-communicates your special relationship as genuine
  - Say you admire him <— Frames attackers as jealous and cynical

The trick is to be friendly and gregarious with your colleagues as well.
That way, it never seems like you're particularly "working" your boss. It seems like you're just a friendly guy who's just a little bit more attentive towards his boss-.

9. Understand, act, & strategize on "loyalty tests"

Every boss prefers loyal subordinates.

But to some autocratic bosses, loyalty is a requirement, and they will test for it.

Types of Tests

There is a multitude of tests, including:

- Carrying his luggage ? Subordination test
- Assembling furniture ? 'Go outside the job description' test
- Firing or reprimanding on his behalf ? Enforcer test
- Taking the blame for him ? Put your reputation on the line test
- Staying weekends and evenings ? Sacrifice your personal life test

A career coach shared this test:

> **Boss**: What kind of American car will you buy? <— He covertly requested to buy American

⚠ Risks of loyalty

Tests imprison you to their agenda

You never pass a test and be done for good.

Each passed test sets new expectations.

On the plus side, successful loyalty-demanding bosses can take you far, fast.

However, it's a risky strategy that requires subordination.
Loyalty-demanding bosses want obedient squires, not empowered men.

That ends badly when you reject total obedience and subordination to the boss' interests.

Cohen made a great career as Trump's legal pitbull. But he was discarded when he tired of total subordination

⍰ Solution

To maintain power, independence, and honor, we suggest a different approach that we share in our flagship program.

10. Adapt your strategy to his power

Let's be honest:

You want a good relationship because it helps you advance.

However, not all bosses can help your relationship.
So you must assess the workplace power structure to assess how helpful your boss really is.

Then, adapt your strategy:

- Powerful and upward trajectory: prioritize your relationship, become his right-hand man, or mentee
- Stationary: develop a good relationship but don't tie yourself to him.
- Downward trajectory: keep it professional but keep a healthy distance

You must never tie your fortunes to falling stars, no matter how cool they are and how well you get along.
Also see:

- **Common political mistakes**

> Office Politics Skills for Success: Avoid These 12 Career-Killing Mistakes

Bonus: Go past him. Smooth talk, resolute overtake

If you want to advance fast and your boss doesn't help, he's a roadblock.

The key is to move **past him without turning him into an enemy**.

Here's how:

- Make him feel like the boss
  - Call him boss
  - Offer help
- Be warm to sub-communicate you're no threat
- Admit some vulnerability
- Fully outshine him only when he has no power over you

⍰ Example: paying homage while overtaking

Motorbike racer Marc Marquez Marquez was beating his official team captain in his rookie year.

But he kept pretending his teammate was N.1.

Then, once he bagged that title, he was free to drop the game.

Talk him up with words, overtake him with deeds

Remember: until your boss has official authority over you, you're not out of the tunnel, yet.
Once your overtake is complete, then you can stop the game. But not before.

10 Strategies to Win Over Your Boss (& Get Promoted)

Lucio Buffalmano · 15 April 2020 · Archived copy · Original

Building a strong relationship with your boss is one of the most powerful ways to advance your career.

With our expertice in psychology, power dynamics, and office politics, this article provides you with actionable strategies to win over your boss.

Let's dive in:

Contents

- 1. Flatter your boss the right way
- 2. Make him feel in charge
  - 2.2. Promote tactfully: don't overshadow him
- 3. Prioritize his tasks
  - 3.2. Take something off his to-do list
  - 3.3. Offer him your extra capacity
- 4. Grab & create opportunities to get closer
  - ▯▯ Example of missing a 'bid for closeness'
- 5. Give positive feedback (but pitch it as "honest")
  - How to give critical feedback
- 6. Align with his communication style
  - 6.2. Match their conversation rituals
  - 6.3. Jump on indirect commands
- 7. Turn him into your mentor
  - 7.2. Ask what you should improve on

- 8. Protect yourself from jealous colleagues
- 9. Understand, act, & strategize on “loyalty tests”
  - ⚠ Risks of loyalty
- 10. Adapt your strategy to his power
- Bonus: Go past him. Smooth talk, resolute overtake
  - ⍰ Example: paying homage while overtaking
- MORE

1. Flatter your boss the right way

Research shows that ingratiation works.

After all, we all know that everyone enjoys a good compliment.

But some people shy away from compliments in fear of appearing ‘brown-nosing’ or unprofessional.

And they’re not wholly wrong.
Compliments and flattery must be socially calibrated to be effective.

Disempowering flattery

These judge-y compliments is how a *superior* would speak:

- *You’re a great manager*
- *Good job*
- *You’re very skilled at X*

Good flattery

This is instead how a subordinate pays compliments:

- *Thank you for X*
- *I love this team* <— Indirect praises their picks & leadership
- *I admire how you…*

And a research-backed technique is **to turn a compliment into a question** to make it seem less obvious and more authentic.
For example, say ‘*you’re so good with people, how can I improve my people skills*‘.

2. Make him feel in charge

Use what we call here ‘power protection‘ to avoid irking your boss.

Most people know that being aggressive or rude to a boss is an obvious no-no.
But many fail to realize that you can disempower your boss in far subtler ways.

For example:

> **Boss**: Let’s increase outreach volume
> **You**: OK, I agree with that <— It implies your agreement matters, which irks bosses. Agree with your peers, not your superiors

Better:

> **You**: Makes sense, more volume equals more chances, I'll proceed

2.2. Promote tactfully: don't overshadow him

Self-promotion is crucial for your career success.

However, self-promotion is an area of conflict of interest because it serves *you*, but not your boss or team.

Plus, the more successful you are, the more your boss feels threatened and 'beaten' by a subordinate.
And he doesn't want either.

So promote yourself, without overshadowing him:

- Keep your networking hidden
- Frame achievements as team wins
- Credit him for successes

Mostly:

⁉️ Make him feel you're a friendly force -and ally- so he welcomes your advancement

Also see:

- **Self-promotion techniques at work**

> 10 Techniques for Strategic Self-Promotion At Work

3. Prioritize his tasks

Ie.:

- Answer his emails quickly
- Reply first when he asks on the team chat
- Be the first to finish whatever survey he sends around the team

3.2. Take something off his to-do list

Former media executive and career coach Fran Hauser says she received her first big promotion because she made things easier for her boss.

Says Fran:

> Offering to help is nice, but without volunteering to take on a definite and specific task, it puts the onus on the other person. (…) Instead, make yourself aware of what needs doing and how you can do

In short: observe what your boss needs the most, then offer to help with that.

3.3. Offer him your extra capacity

Ie.:

> **You**: Boss, I finished my previous task. Is there anything I can help you with?

If a colleague tasks you or asks for help, run it by your boss.
Ie.:

> **You**: Chris needs some help, but I wanted to run it past you in case you have other priorities

+ Bonus: the boss tasks tend to be higher visibility.

4. Grab & create opportunities to get closer

Many do this the wrong way.

And then they get called 'brown-nosers' for a reason.

Worse yet, when you force closeness and 'chumminess' good bosses are forced to defend their boundaries to maintain a reputation of fair and equitable management.

The solution is to get closer *tactfully*.
Ie.:

1. Put out hooks for closer vibing
   Ie.:
   - *"This weekend I tried X, I really enjoy X…"*
   - *"I'm planning a new car, how do you like your Mustang…"*
2. Go deeper if he reciprocates
3. Stick to non-work topics for as long as the boss allows

⍰ Example:

My boss enjoyed recreational Treasure Hunting.
I'd listen and ask for as long as he enjoyed. It led to a lunch invite, followed by many more. I got another 'exceeds' review with him, largely thanks to our relationship.

⍰ ⍰ Example of missing a 'bid for closeness'

We dig deeper with the author's real-life examples in Power University.

But the concept is this:

If a boss makes a move that allows you to get closer, reciprocating is both an opportunity, and a must.
Failing to do so will break rapport and harm your relationship.

5. Give positive feedback (but pitch it as “honest”)

In the era of Radical Candor management, ‘growth mindset‘ and (naive) self-help gurus, everyone *professes* an open mind.
But few have it.
And nobody appreciates others for critical feedback, no matter how useful it was.

Principle:

⚖ **Critical feedback helps others grow, but positive feedback helps your career.**

How to give critical feedback

Still, critical feedback can be an opportunity to display IQ, social skills, and power awareness.

Here is how to give it:

- Frame the criticism as minor (compared to the positive)
- Frame the criticism as fixable
- Provide suggestions to address it

6. Align with his communication style

To increase rapport and social capital, ignore your preferences, and match your boss’ instead.

Match:

- **Direct / indirect speech**:
  Ie.: *“Please do X” / “Could you please take care of X?”*
- **Quick / long-winded**
- **Chit-chat before business talk / straight to business**
- **Formal / informal**
- **Rituals of speech** ⍰
- **Macro / micromanaging**

➡ check in often with micromanagers, let them review your work. Be more independent with macro-managers

- **In person / electronic**

Pay particular attention to the latter as it's an important sign of extroversion/introversion.

If they avoid in-person communication and you're trying to talk to them in person, they feel like you're violating their personal boundaries.

⍰ Match his leadership style (PU alumni only)

6.2. Match their conversation rituals

Linguistic researcher Deborah Tannen defines conversational rituals as patterns of speech and behavior that work only when both players use them.

Matching conversation rituals increases rapport, and missing them harms your relationship.

Important conversational rituals include the use of "sorry" and "thank you".

Imagine this dialogue:

> **Boss**: Thank you for running this by me <— It's a ritual because the boss doesn't owe you 'thanks'
>
> ⍰: No worries, cheers / You're welcome <— Misses the ritual, one-ups the boss
>
> ✅ Thank YOU for taking the time to check this with me, boss

The boss had no real reason to say "thank you". He is *expected* to keep oversight, so the 'thank you' is a ritual, not a real thank you.
The boss is putting himself in the one-down out of kindness, but he expects you to do the same to rebalance power.

When the report does not reply back with 'thank you', the report disempowers the boss. Over time, the boss will start resenting this report.

Even worse would be the following:

> **Boss**: Thank you for running this by me
> **Report**: You're welcome

And the boss will be thinking: "You're welcome?? For what! Does he think he is the boss now?"

So, what's a better solution, in this case?
It's to play the ritual and thank them back. For example:

> **You**: No, thank *you* for taking the time to check this with me, boss, I appreciate that very much!

6.3. Jump on indirect commands

If your boss is direct and you prefer indirect, you might think he's an as*hole.

And if he speaks indirectly and you are more direct, you can think he's a submissive 'too nice guy' who doesn't have what it takes to lead.

However, again, it's on *you* to adapt.

And if he's indirect and you are direct, you can miss the signals.

For example, if a very indirect boss were to say:

> **Boss**: I really have to get this report done, but I don't have much time <— ⍰ ⍰ 'Can you help me do this report'

He is asking you to do it for him.
When you miss the signal, you break rapport -and he will think you're unhelpful and not so bright-.

Another common indirect request is with questions:

> **Boss**: Do we have a list of invitees? <— ⍰⍰ 'Did you prepare a list, and if not, can you do one?

That is not a real question.
He is asking you whether you've done it, or not. And if it's not done, he's asking you to do it.
So if you did, you ask him if he'd like to see it. If you didn't do it, you propose to get that done right away.

7. Turn him into your mentor

On average, the more time you can spend with your boss, the better

As per our article on career strategies, do this:

1. Seek guidance
2. Report progress
3. Grow mentoring from technical realms, to personal development
    - Ask him how to develop traits that you like in him <— ⍰ Shows you want to be like him, flattering him the right way

7.2. Ask what you should improve on

It's crucial to uncover what your boss likes least about you.

And then work on that with him.

Why so?

Because **people mentor people they like.**
If there is anything your boss dislikes about you, he will not help you.

And second, if you don't address it with him, he will filter whatever you do or say with a negative bias.

Says Goldsmith in his popular "*What Got You Here Won't Get You There*":

> We view people consistently with our existing stereotypes.
> If I think you're an arrogant jerk, I filter everything through that perception. If you do something wonderful, I will this it's the exception. **Within that framework it's almost impossible for us to be perceived as improving, no matter how hard we try**.

Asking him what you should improve on allows you to get to the root causes of personality mismatches.

Address that -⍰ or simply act to his liking- and you remove major stumbling blocks to mentorship.

8. Protect yourself from jealous colleagues

Your colleagues may get jealous of your great relationship with the boss.

How do you handle that?

First off, never brag about your close relationship.
Play it down instead.

Here's how:

- Be warm with all <— Prevents accusations of boss brown-nosing
- Frame it like 'just another good relationship you have'
- Say good things about your boss <— Sub-communicates your special relationship as genuine
  - Say you admire him <— Frames attackers as jealous and cynical

The trick is to be friendly and gregarious with your colleagues as well.
That way, it never seems like you're particularly "working" your boss. It seems like you're just a friendly guy who's just a little bit more attentive towards his boss-.

9. Understand, act, & strategize on "loyalty tests"

Every boss prefers loyal subordinates.

But to some autocratic bosses, loyalty is a requirement, and they will test for it.

Types of Tests

There is a multitude of tests, including:

- Carrying his luggage ⍰ Subordination test
- Assembling furniture ⍰ 'Go outside the job description' test
- Firing or reprimanding on his behalf ⍰ Enforcer test
- Taking the blame for him ⍰ Put your reputation on the line test
- Staying weekends and evenings ⍰ Sacrifice your personal life test

A career coach shared this test:

> **Boss**: What kind of American car will you buy? <— He covertly requested to buy American

⚠ Risks of loyalty

Tests imprison you to their agenda

You never pass a test and be done for good.

Each passed test sets new expectations.

On the plus side, successful loyalty-demanding bosses can take you far, fast.

However, it's a risky strategy that requires subordination.
Loyalty-demanding bosses want obedient squires, not empowered men.

That ends badly when you reject total obedience and subordination to the boss' interests.

Cohen made a great career as Trump's legal pitbull. But he was discarded when he tired of total subordination

⍰ Solution

To maintain power, independence, and honor, we suggest a different approach that we share in our flagship program.

10. Adapt your strategy to his power

Let's be honest:

You want a good relationship because it helps you advance.

However, not all bosses can help your relationship.
So you must assess the workplace power structure to assess how helpful your boss really is.

Then, adapt your strategy:

- Powerful and upward trajectory: prioritize your relationship, become his right-hand man, or mentee
- Stationary: develop a good relationship but don't tie yourself to him.
- Downward trajectory: keep it professional but keep a healthy distance

You must never tie your fortunes to falling stars, no matter how cool they are and how well you get along.

Office Politics Skills for Success: Avoid These 12 Career-Killing Mistakes

Lucio Buffalmano · 18 April 2020 · Archived copy · Original

Office politics can make or break your career.

And political mistakes can cost you a promotion, or even a career.

This post will show you common political pitfalls, and how to turn them into political skills that give you career opportunities.

Contents

- 1. Getting Chummy With Falling Stars
  - Solution: associate with the risers, not the fallers
- 2. Taking Sides Too Early
  - Solution: stay cordial with both sides -or pick later-
  - Mach Move: take sides privately (or take both sides privately)
- 3. “Licking Up & Kicking Down”
  - Solution: shine up, respect down
  - Mach solution: ‘Shine Up, Praise Down’
- 4. Gossiping (The Politically Dumb Way)
  - Solution: share positive intel
- 5. Becoming The Battering Ram
  - Solution: speak up strategically
- 6. Objecting Organizational Changes
  - Solution: embrace and champion leadership-led change

- 7. Keeping Allegiance to Old Bosses
  - ⍰ Solution: The King is Dead, Long Live The NEW King
- 8. Failing to Decode Corporate-Speak
  - ⍰Solution: Power University
- 9. Flirting With Assistants & Secretaries
  - ⍰ Solution: Keep it professional
- 10. Forming Out-Groups With Management
  - ⍰ Solution: think, talk, and move like an exec
  - 11. Over-Promoting Your Ideas Before Having Power
- 12. Putting All Eggs in The Boss' Basket
  - ⍰ Solution: great relationship, while maintaining honor & power

1. Getting Chummy With Falling Stars

Falling stars are former superstars on their way down or out.

Often they know fully well they are on their way down, and guess what happens?

Their former, inaccessible and haughty selves suddenly become friendly and gregarious.
And lower-level employees, star-struck by their big names, are all too happy to get closer to them.

⍰Solution: associate with the risers, not the fallers

Don't get star-struck. If falling superstars seem friendlier, it's only because they're needier.
They're falling for a reason and may drag you down with them.

If they've already been fired, they're bitter and negative.
You don't need that.

And keep your friendship with anyone who left on bad terms secret.

2. Taking Sides Too Early

What do the politically clueless do during a power struggle?

They quickly take up arms for one side or the other.
Which, of course, is as smart as betting on red or black -that is, not smart at all-.

Now, to be fair, early supporters can be well-rewarded.
But the demands and the risks usually outweigh the rewards.

⍰ Solution: stay cordial with both sides -or pick later-

Maintain cordial relations with both factions while you publicly focus on doing great work —and whoever wins will see you as an asset.

You can always pick a side later when it's clearer who will win.

⍰ Mach Move: take sides *privately* (or take both sides privately)

⍰ *Mad Men* example:

> **Guy 1**: Regimes change are always tricky. You wanna stay neutral. Loyalists are always hung
> **Guy 2**: (goes to a partner and shares the news)

In some cases, you may privately take both sides, or ambiguously lead them both to believe you're on their side.
Then come out in the open when the winner is clear.

3. "Licking Up & Kicking Down"

How many times have you heard that as the "Machiavellian" way of winning at office politics?

Except it's only true in the worst organizations.

Why it's not ideal:

- Earning respect from both above and below is better

- As*holes struggle in the long run
- Bad karma: those you kick down may become future leaders

⍰ Solution: shine up, respect down

Really, it's as simple as this: be honorable in everything you do.

⍰ Mach solution: 'Shine Up, Praise Down'

Lavish empty praises, make subordinates believe they're gaining credits for career advancement.
But take all credit from above.

⍰ Self-defense: distrust bosses who praise within the team, but not outside. Do your own bidding

4. Gossiping (The Politically Dumb Way)

There is power in being "in the know" in the company.

And sharing juicy information shows you're part of a restricted circle of informational flow.
Says Geoffrey Miller:

> If the gossiper usually knows some news that the listener does not know, **the gossiper may have privileged access to secrets**, or a wider social network, or or friends who themselves have privileged access to social information. That is, **the gossiper must have high social status**

But avoid:

- ***Over*-gossip**
- **Gossiper reputation**
- **Giving without receiving** intel
- Gossip with those **below you**
- **Complaints** masqueraded as gossip

Example in Power University.

⍰ Solution: share *positive* intel

- **Share *strategically***
  - To display you're in the know
  - Share with your level or higher
  - Exchange for *their* intel
- **Share high power**, unemotional, with a focus on the bottom line, not the social aspects ⍰
- **Gossip in the positive** ⍰. Only share good news about people and business
  - Ie.: '*it makes sense the MD is in good shape: he jogs 5km before office*'
- **Say and nod 'yes' when others share intel** to sub-communicate you're also in the know

⍰ How to ask for gossip

High-Power Intel Sharing

Gossiping at the higher levels tends to be different.

As a matter of fact, **how you share information is sub-communicates whether you're executive material or not.**
It's one of the "secret handshakes", and one of the "executive skills" you better develop.

Executives share their information quick and dry, almost to purposefully show disdain towards gossiping. Leaders are afraid of being seen as gossipers. They prefer an image of doers who focus on getting stuff done and have no time to waste. **Winners know that the power players don't gossip because they're the ones being gossiped about.**

This is how you show you're a baller, get the facts, straight to the point, then get to work:

> **Don**: You wanted to see me?
> **Roger**: About 3 weeks ago (pause) I hope you were looking for a job in Califorinia. Because you're going to need one <— Doesn't ask where he's been or what's happened to display he's above the small details

Roger Sterling makes it a point to show off that he doesn't care. All he cares is Don reporting to work and get stuff done.

Notice how the rest of the talk is all straight to the point, all the side stories about gossiping are purposefully left unexplored -or leveraged to display how they are both *above* gossiping-.

More in Power University.

5. Becoming The Battering Ram

The battering ram leads the charge within a group of complainers or rebels.

He may:

- Talk back to the boss
- File the first complaint
- Demand 5-start hotels execs travels

Taking the first step can be powerful and rewarding but requires careful calculation and execution.
If your first move faces resistance, don't expect turkey complainers to rescue you.

⍰ Solution: speak up strategically

- **Speak up for yourself**
- **Ensure others will back you up** if things go south
- Formally **gather their complaints**
- If you lead a charge to oust someone, **ensure you can step up into their role**

6. Objecting Organizational Changes

Large change projects only happen because someone at the top wants them.

If you oppose chance you oppose the company leadership.

⍰ Solution: embrace and champion leadership-led change

As Jack Welch says in his book "Winning", **the executives who promoted the change love to see people embracing it and championing it**.

For them, it's like receiving a compliment with your actions -much more powerful than your words-. Embrace the change, and they will see an ally in you.

7. Keeping Allegiance to Old Bosses

New bosses view old allegiances as threats to their authority.

Mistakes:

- Talking about **'how it was before'**
- **Talking up the previous boss**
- **Name-dropping the previous boss**, especially if you're still in touch
- **Demand to honor the previous boss commitments**
- …

⍰ Example:

> **Caporegime**: (speaks to the old boss)
> **Old boss**: (send them to the new boss)

⍰ Solution: The King is Dead, Long Live The *NEW* King

When a new boss enters the scene, it's a clean slate and opportunity:

- **Welcome the new boss**
- **Display your allegiance** while others are still confused with the change

8. Failing to Decode Corporate-Speak

Some, especially the younger and more naive, truly believe the company PR and values.

And while there is *some* truth in them, they are far from the whole truth.

The truth is this:

most **people will always put themselves and their needs above the needs of the company**.
And the other way is even truer.

The company, which represents the interests of the owners, the shareholders, and the C-suite, will always put its interests above those of the employees.

As Dan Rust says in "Workplace Poker": **it's your output that matters, not you as a human being**.

⍰Solution: Power University

And also see:

- **Big business manipulation**

9. Flirting With Assistants & Secretaries

Pink-slip bait

Many bosses are protective or jealous of their assistants, and the same applies to other female reports.

Many PAs instead see themselves at the service of their boss, rather than the company.
And they report everything they see and hear to their boss to gain brownie points.

⍰ Solution: Keep it professional

If you must do anything, do it 'silent killer style'.
Details in **Power University**.

10. Forming Out-Groups With Management

Think, feel, and sub-communicate you don't belong up, and you'll never get there.

From a real-life example I witnessed:

> **Random guy:** (talking about an airplane model the manager bumped) They're expensive, I think around 3.000

> each
> **High-Level Manager**: Wow, that's more than my weekly salary
> **First-Level Manager**: I need to be careful then, I'm not one of you big paycheck guys <— Rapport break, and 'I'm different' self-frame

Learn more on frames here:

- **Frame control techniques**

⍰ Solution: think, talk, and move like an exec

> If it looks like a winner, moves like a winner, and speaks like a winner… He'll soon be one
>
> *TPM Proverb* ✒

Downplay differences, highlight similarities, and speak like one of them.

11. Over-Promoting Your Ideas Before Having Power

Paraphrasing career strategist Brendan Reid got this right:

> Think strange as the CEO, and you're a visionary.
> Think strange as the new hire, and you're a poor fit

Remember:

Your revolutionary ideas are covert power moves because they sub-communicate the current system is inefficient and the current leaders lacking.

12. Putting All Eggs in The Boss' Basket

Yes, you do need to work your boss.

However, you don't want that to be your *only* source of power.
As Robert Greene says the "favorite" position stirs envy among your colleagues and isolate you.

Plus, we add, it's simply just weak and poor self-signaling to be a brown-noser.

⍰ Solution: great relationship, while maintaining honor & power

Build great relationships *while* you also deliver good work, promote yourself outside the team, *and* expand your other sources of power.

⍰ This is a preview from Power University, where we teach the skills for both work and life success !

Mastering Office Politics: A Strategic Guide to Career Success

Lucio Buffalmano · 19 April 2020 · Archived copy · Original

Office politics drives career success—whether you're navigating promotions, influencing decisions, or outmaneuvering rivals.

It's inevitable: wherever people form hierarchies, politics emerges.

Master it, and you control your path—whether for the greater good, personal gain, or both.

This guide delivers top workplace strategies to dominate office politics, from social fundamentals to executive-level tactics.

Let's dive in.

Contents

- 1. Learn Basic Social Skills
- 2. Learn Power Dynamics
- 3. Now Learn Office Politics
- 4. Know Who Matters: The Org Power Chart
- 5. Draft Real-World Career Strategies
- 6. Learn Effective Self-Promotion
- 7. Learn to Act 'Alpha' / High Power

1. Learn Basic Social Skills

Politics is people.
And to do well with people, you need some basic social skills.

Without basic social skills, people are not only poor at office politics, but they are politics-negative.

Their lack of political intelligence actively harms them.

Some of the most harmful political mistakes people commit are basic stuff, like:

- Inadvertently offending the boss
- Being difficult to work with
- Missing their boss' loyalty tests

Political harakiri is only marginally correlated with job performance or general intelligence.
Lack of political savvy can -and often does- harm top performers as well. Top performers might do great work, rapidly increase their status within the company, but then they self-promote too much and end ousted for "outshining the master", as Robert Greene calls it in his "48 Laws of Power".

To avoid political mistakes, you need to reach a minimum level of interpersonal intelligence.

Here are some good resources to bring you to a basic level of emotional and social intelligence:

- Best social skills books
- Stop being socially awkward
- How to stop being a social burden

1.2. Intermediate level of social skills

Once you're at a basic level, here are more resources to get you to an intermediate level:

- The law of social exchange
- What's in it for them
  - Real-life examples of WIIFT failures

Once you reach intermediate level, then you become "politically neutral".

You stop making mistakes you're not even aware of, and that's great. But you still don't have an advantage over others.
Most people cluster around the middle, so to start reaping real political dividends, you need to move towards advanced levels.

2. Learn Power Dynamics

The dynamics of touching and explaining are part of the basics of office power dynamics

Power dynamics is the advanced level of human psychology and social skills.

The good news is that once you have the basics of socialization down pat, it won't take you long to also understand the power dynamics.

Socializing with power dynamics in mind means that you are aware of the dynamics of "one-down / "one-up", influencing and persuasion, who is emotionally in charge (soft-power) and, finally, how to come across as powerful, influential, and respect-worthy.

Some good articles to get you started:

- Office power dynamics 101
- 9 foundational laws of power
- Power strategies 101
- Frame control

And I highly recommend this post to understand the inherent conflicts of interest between companies and employees:

- Corporate lies and manipulations

> 12 Ways Companies Manipulate Employees (W/ Examples)

This whole website is dedicated to power dynamics and advanced socialization, so if you read around you will quickly grow your understanding of power dynamics.

Also, in conflicts of interests that see you the big losers, learn to put yourself first.

3. Now Learn Office Politics

Here is the great news:

If you've done your homework properly so far, then office politics will come natural to you.

As we've already mentioned, office politics is about people, psychology, and power dynamics.
Once you understand those, you will understand how to operate in office politics.
Just a few minor adjustments are needed for the specifics of the workplace. But here's the rub: you're not going to learn that in mainstream publications.

When it comes to workplace politics, avoid mainstream advice

Here is a rule of thumb:

> If you want to leverage office politics for personal success or to properly defend yourself from political animals, then you need to scratch mainstream media.

Forbes, Harvard Business Review, lists of "best business books"… They are not going to be very helpful with office politics. It's not that they don't have good information: they do.
But they serve a different purpose: the purpose of aligning interests between you, the team members, and the company. That's not optimal from a learning and strategic point of view though because those interests do *not* always align.

Mainstream media is wary of admitting that your interests can diverge from the interests of the organization, as well from the interests of your boss and your teammates.

Even the Harvard Business Review's "Guide to Office Politics", which I reviewed here, was mostly about avoiding politics so that you can win for the company.
Nice… In theory.

Instead, read here about the real conflict of interest:

- **Conflicts of interests**

And here are a few articles about the real-world dynamics of political players:

- Types of office players
- Types of toxic employees
- Office power moves: it's a humorous article, but it will get you thinking in terms of pure power plays

4. Know Who Matters: The Org Power Chart

You’re always at the center of your personal power chart

Now you know psychology, how to deal with people, and some office politics.

But who should you be networking with, who should you be careful around, and who can give you the opportunities that will change your career for the better?

This is the next step.
You need to know who matters around you and where you stand in relation to others.

The org-chart is a good start, but you need to personalize it. If you’re in a huge company and you’re at the bottom of the pyramid, the CEO doesn’t really matter for you.
Depending on your level, seniority, and job position, the highest you can easily hobnob with might be your boss’ boss.
And unless your boss is on his way out, he will almost always be the most important piece in your chessboard.

So start here:

- **How to deal with your boss**: the politically-savvy way

> Managing Your Boss For Ruthless Career Advancement

What you need to keep in mind when drawing your power map is that not all job positions are created equals.
And the *momentum* of the people filling those roles is paramount.
Some people are stationery, some others are on the upswing, while some others are going downward -or are on their way out-.

In Power University there is a bonus Excel spreadsheet to help you compute the people who matter the most to you.

But as a general rule, the ones who are going down, no matter their position, not only are useless, but are actively harmful.
They are going down because they pissed off someone very powerful. It can take years to recover from a demotion, and most never recover.

Just to be on the safe side, don't get too close to them.

Instead, you want to associate with those going up.
They are the winning faction, those who are friends with those still higher up, and those who can soon bring you up as well.

5. Draft Real-World Career Strategies

Now you're getting good with office politics, and you got a power map.

Now it's time to turn that knowledge into action.
It's time for actionable plans.

When it comes to career strategies, avoid mainstream media

Just like we said above for office politics.

Mainstream media is not the best way to learn career strategies.
They teach you the "official" way of success. Such as: win by being a good team player and by making the organization win.

And yes, that is a very valid strategy.
But it's not the only way to success -and sometimes not the quickest or most reliable-.
And there is more than it meets the eyes.

Rapid career advancement is barely linked to how well your company is doing.
As career strategist Brendan Reid correctly points out, when everyone is advancing because of a rising tide, you aren't really advancing.

And when it comes to teammates, sometimes, the opposite of what mainstream media teaches is true: **your success can be inversely correlated to how well your colleagues and boss are doing**.
After all, it's pretty logical: the worse your teammates look, the better you look by comparison -and you win that promotion by default-.

Don't get me wrong though on Machiavellianism: There can be real relationships at work -and even alliances based on deep emotional bonds-.

But people can, and often *do* win by shortchanging others -see for example "shine up, praise down"-.

The two opposite drives, for prosocial teamwork and cheating, often co-exist together in the same workplace, and sometimes even in the same person.
And to win, **master both the pro-social rules, and the Machiavellian ones**. Even if you (hopefully) decide to be pro-social, you need the Machiavellian side *even more*.

That's realpolitik.
And realpolitik office politics pertains more to the "underworld of wisdom", the "red pill" side of things that people don't like to talk about.
Well, luckily for you, that's what we only talk about here.
Here are some better resources for you:

- **Career strategies 101**: a science-backed guide on basics principles of career advancement
- Best career strategy books: the slightly lesser-known, more politically incorrect books on politics and strategies

Frankly, though, there are not that many great sources of office politics wisdom. There are some, but it's very scattered wisdom.
If you want the biggest shortcut, all at once, here it is:

- Power University (module 3)

6. Learn Effective Self-Promotion

Self-promotion is the art of managing your reputation, marketing your skills and results, and getting your name out to the people who can help you advance.

You can meet the people who matter either directly through networking, or indirectly via reputation or allies who will talk you up -the latter is always recommended-.

We just called self-promotion "art" but, luckily, science and logic can also help up self-promote more effectively.

See:

- **Effective self-promotion at work**

7. Learn to Act 'Alpha' / High Power

Now you know politics, you got a career plan, and you are actively promoting your personal brand.

But what product are you promoting?
The product is you.
Not just your work, but *you*.
How do you come across? **How you come across is equally important, if not more important, than your actual work**.

Most people who reach the top are not great technical people, and they more often than not weren't even the best at their jobs.
But they have leadership skills and they look the part. They have what I call "executive skills".

Remember the maxims:

> To become an executive, you need to look and act like one

And:

> Technical skills give you job security.
> Soft skills give you board seats.

What are these soft skills, anyway?

7.2. More Alpha Male, Less Emotional Intelligence

The soft skills we're talking about aren't all related to "emotional intelligence" (EI).

That's a term coined by Daniel Goleman, and **Emotional Intelligence is the recipe to keep you stuck at middle-level management**. Goleman kept digging on it with "*Working With Intelligence*", but he missed that people don't advance on EI -or at least, that's far from the most important trait-.

While emotional intelligence *does* help you work better with others and it likely also help you *perform* better at

work, it does not help you advance to the top -unluckily-.

It sounds strange, I know, and I wished it weren't so.
But that's what the data shows.
And between what we wish and what the data shows, I suggest we go with the data:

Bradberry's survey results of 100.000 workers, including 1.000 CEOs
The results clearly showed that execs and CEOs score *lowest* on emotional intelligence than all other ranks (Bradberry & Greaves, 2009).
And the author of the survey, Bradberry, sells emotional intelligence training, so he had all the incentives to show the opposite.
Bradberry guesses that's both because the nature of the tasks at higher levels lower emotional intelligence *and* because companies tend to promote people who score lower on emotional intelligence.

In my opinion, it's not that execs and CEOs are emotionally stupid.
Instead, CEOs prioritize different qualities than those that help you score high on EI tests.
CEOs and execs prioritize things like getting the job done, winning and, of course, power. And if someone stands in the way or gets hurt… Too bad for them.
That attitude lowers your EI scores, but it obviously helps you advance.

In the words of career strategist Dan Rust, it's "Velcro Butterflies" VS "Teflon Rhinos" dichotomy and, as he righteously points out, you want to be more on the rhino's side.

That's the gist on EI.
If you want to read more, see here:

- **The emotional intelligence lie**

So, scratch that emotional intelligence.

What should you score high to master office politics and advance your career to the top?

You need executive skills.

They look something like this:

- Leadership skills
- Confidence
- Goal-orientation / Bottom-line mindset
- “No BS attitude”
- Calm and in control *or*
  - Unafraid of yelling
- Public speaking skills
- Intelligence -or, at least, *sounding* smart-
- Analytical thinking / critical thinking skills

For simplicity, exec skills mean being an alpha male and an alpha female, but a *professionally polished* alpha.

The CEO in the movie “Margin Call” is the poster child of a high-powered executive:

> **CEO**: (speaks and moves like a high-power CEO)

So, where do you begin building these executive skills?
Here:

- **Executive skills for work confidence**
- How to look powerful
- How to speak powerfully

Better yet, when you’re ready to win not only at work but in life, get **Power University**.

Authentic Happiness: Summary, Review & Criticism

Lucio Buffalmano · 21 April 2020 · Archived copy · Original

Authentic Happiness (2002) provides an overview of Positive Psychology. Written by Martin Seligman, one of the founders of the disciplines, it will teach *why* happiness and optimism matter, and *how* you can become happier and more optimistic.

Key Insights

- Psychology for too long focused on illnesses only. It's time for a new psychology of happiness and optimal life
- We can all increase our level of happiness and satisfaction
- A full life takes into account all pleasures, but work to develop our strengths, which we can deploy for the greater good

Overview

About the Author: Martin Seligman is an American psychologist and researcher. Seligman has been the president of the American Psychological Association (APA), and he is one of the founders and main proponents of "Positive Psychology". He is also the author of "Flourish" and "Learned Optimism".

Happiness can be lastingly increased: welcome to Positive Psychology

Martin Seligman opens "Authentic Happiness" saying that research proves that our happiness level can be increased.

To explain how to do that, a new movement in psychology has born. It's the "Positive Psychology", that sets out to study happiness, fulfillment, and human potential.
"Authentic Happiness" is a positive psychology book, and can show how you how to live at the upper end of your happiness range.

Overcoming the "Rotten to The Core Dogma"

Seligman defines the "rotten to the core dogma" the belief that happiness is inauthentic. It's a dogma that spans many cultures, he says, and it permeates the Judeo-Christian cultures with the doctrine of the original sin.

But psychology, which he will later define as "old psychology", has done its part to help fuel the "rotten to the core dogma".
Who did it? Sigmund Freud.

Martin Seligman does not seem to hold Sigmund Freud in high regard.
It shows more than once across the book, and it starts from the very beginning.

Freud defined civilization as a gigantic defense mechanism against the infantile conflicts of sexuality and aggression.
In repressing those primordial drives, humans created civilization.

Seligman does not agree with that, and mocks the Austrian founder of psychoanalysis:

> So the reason I am sitting in front of my computer writing this preface—rather than running out to rape and kill—is that I am "compensated," zipped up and successfully defending myself against underlying savage impulses

My note: I agree Freud went too far, but Seligman goes too far in the opposite direction
I think Seligman is downplaying how important sexual selection has been in shaping our minds and our thirst and drive for personal success.

Virtue evolved and exists because virtue is good

Seligman's main critic to Freud and his disciples is that all virtue in the world is ascribed to negative drives and emotions.
Instead, he says:

> there is not a shred of evidence that strength and virtue are derived from negative motivation.

Instead, he believes, virtues and good traits evolved because they were good per se.

The 3 Pillars of Positive Psychology

Seligman says Positive Psychology rests on three major pillars of study:

1. **Positive emotions**: feelings and sensations
2. **Positive traits**: strengths and virtues first and foremost, but also "abilities" such as intelligence and athleticism.
3. **Positive institution**: the institutions that support the virtues, which in turn support the emotions. It includes democracy, families, personal freedoms, etc.

Types of Emotions

Seligman divides positive emotions into 3 temporal categories:

- **Past**: satisfaction, contentment, pride, serenity
- **Future**: optimism, hope, confidence, trust, faith
- **Present**: there are three types of present positive emotions:
  - **Pleasures**: they are momentary pleasures that come through the senses, divided in two different categories:
    - **Bodily pleasure**s: sexual feelings, good tastes and smells, good sounds like music, etc.
    - **Higher pleasures**: they are set off by more learned and complex mechanisms. They include: ecstasy, rapture, thrill, bliss, gladness, glee, fun, ebullience, comfort, amusement, relaxation, etc.
  - **Gratifications**: gratifications are not feelings but activities that absorb and engage us. These activities allow us to experience flow

It's easy to enjoy pleasures because they require no training, virtues, or skills. But to enjoy gratifications, one must also develop strengths and virtues.

The Different Stages of Life's Pleasure

Seligman categorizes a life based on pleasure along 4 different stages:

1. **The pleasurable life**: It's heavy in pleasure, but not gratifications. Driving Ferrari, drinking champagne, banging bitches, and getting drunk in the clubs is the pleasurable life. It's heavily based on bodily pleasure, which have a few drawbacks, including habituation (you get used to it and it's not as pleasurable anymore), hedonistic fallacy (when you finally have it, you realize it doesn't make you happy), and
2. **The good life**: It's heavy in gratifications. Using your signature strengths every day to produce authentic happiness and abundant gratification. The good life requires you self-awareness, finding out what you like doing, getting good at it, and putting it into the service of something larger.
    1. **The meaningful life**: like the happy life, but adds one more layer: you are using your signature strengths in the service of something larger than you are
3. **The full life**: when you combine all of them, you get a full life. Seligman defines it as "experiencing positive emotions about the past and future, savoring positive feelings from the pleasures, deriving abundant gratification from your signature strengths, and using these strengths in the service of something larger to obtain meaning"

Albeit Seligman includes all types of pleasures in his "full life", it seems to me that he prefers gratifications to pleasures.

Why Stacking Up Pleasures is Not Enough

One might think that Positive Psychology could be reduced to "how to many as many pleasurable moments".

And the sum total of our life's happiness could be total pleasure minus total pain.

There is already a branch of science studying how we feel from moment to moment, and it's called "hedonics". But Seligman believes that's not enough.

He says:

> The sum total of our momentary feelings turns out to be a very flawed measure of how good or how bad we judge an episode—a movie, a vacation, a marriage, or an entire life—to be.

Daniel Kahneman, author of "Thinking Fast and Slow", proves that what we remember with pleasure or pain is not the direct sum total of the momentary pains and pleasures.
For Seligman, the evidence is in the popular colonoscopy study, which proves that how things begin and end has an outsized impact on how we remember them.

My Note: Kahneman does not prove that hedonism is wrong, and one can be happy with pleasures alone
I partially agree with Seligman, but not completely.
To begin with, Kahneman does not prove that hedonism does not lead to happiness. He only proves that what we remember is not 100% what happened, and there is plenty of evidence for that. But that does not prove that hedonism, or the pursuit of pleasures, cannot lead to a happy life.
I think Seligman is trying to portray what he prefers as to be *the* best way. Well, I agree with him that most people are better served with his recipe.
But there are plenty of people who are happy chasing pleasures. I have met a few of them. Best people to be around.

The 24 Positive Psychology Strengths That Bring About Greater Well-Being

Seligman says there are 24 strengths Positive Psychology recognizes, which can be grouped into 6 categories:

1. **Wisdom & Knowledge**: creativity, curiosity, judgment, love of learning, perspective

2. **Courage**: bravery, perseverance, honesty, zest
3. **Humanity**: love, kindness, social intelligence
4. **Justice**: teamwork, fairness, leadership
5. **Temperance**: forgiveness, humility, prudence, self-regulation
6. **Transcendence**: appreciation of beauty & excellence; gratitude; hope; humor; spirituality

How did positive psychology come up with these 24 strengths?

1. They are valued in almost every culture
2. They are valued in their own right, not just as a means to other ends
3. They are malleable (learnable)

The "Depressive Realism" Might be a Myth

Pessimists are realists.

That's been a mantra for a long time in psychology.
Seligman himself said so in "Learned Optimism":

> There is considerable evidence that depressed people, though sadder, are wiser.
> (…)
> These have been the consistent findings over the last decade.
> (…)

So, are pessimists more realistic, but unhappy?
And are optimists happier, but at the detriment of reality?

Experiments showed that happy people remembered more happier moments than sad ones, but their memories were inaccurate.
And happier people tended to overestimate their competence, while unhappier ones were more accurate.

But could it just be another psychology myth?

Many of those original experiments failed to replicate (see: replication crisis in psychology).
And Lisa Aspinwall experiment shows that happier people were better at remembering information related to health risks, and rated it as more convincing.

The resolution to this dispute, Seligman says, is this:

- Happy people tend to rely more on their past positive experiences during the normal course of life. If a light wasn't responding for the last 10 minutes, happy people think that they will eventually control it again (what Seligman doesn't add here is that they might be wrong more times than not)
- When events are potentially threatening, happy people can switch tactic and adopt a more skeptical frame of mind

When making decisions, for example hiring decisions, people in a happy and positive state of mind tend to focus on potential and personal qualities.
People in a negative mood tend to focus on what is wrong.

Positive Emotions Predict Health, Longevity, Prosociality (& Possibly, Success)

Happier people have better health, live longer, and are more likely to follow healthy habits.

They also tend to be more productive, set higher goals for themselves, and persist longer.

Positive emotions aren't just good for us, but they also make us better human beings.
When we are happy we want to engage more with others, lift others up, and share our good fortune.
And the opposite is true: it's when we are down that we become more self-focused and selfish.

Says Seligman:

> Looking out for number one is more characteristic of sadness than of well-being.

Happiness might also be important for commerce, and personal success. Says Seligman:

> But feeling positive emotion is important (…) because it causes much better commerce with the world. Developing more positive emotion in our lives will build friendship, love, better physical health, and greater achievement.

Also read:

- The Happiness Advantage

The Happiness Formula

In a tone that struck me as somewhat elitist, Seligman says that albeit most of his book is based on statistics, he only asks his reader to consider one equation

> H = S + C + V

Or:

> **H** appines **= S** et range **+ C** ircumstance of your life **+ V** (what you control)

H is your enduring level of happiness, not the momentary one, which can be raised with a number of short-term pleasure.

Please also note the "set range", because:

S = The Set Range of Happiness (You're Not Extremely Elastic)

Seligman started studying positive psychology believing that the human brain was endlessly plastic and, with enough work, it could be changed as one pleased.

But it turned out to be untrue. And genes do matter.
Says Seligman:

> Roughly 50 percent of almost every personality trait turns out to be attributable to genetic inheritance

However, that one trait is highly heritable does not determine how changeable or unchangeable a trait is.
Some highly heritable traits, like sexual orientation and body weight, don't change much, while some other highly heritable traits like fearfulness and pessimism are very changeable.

We all tend to have an inherited "range" of happiness along which we can move.
Says Seligman:

> Roughly half of your score on happiness tests is accounted for by the score your biological parents would have gotten had they taken the test. This may mean that we inherit a "steersman" who urges us toward a specific level of happiness or sadness.

However, this is not necessarily bad news.
While the set range tends to pull us back when something makes us very happy, it also pulls us upward when some negative events pull us below our usual range.

Even people who become paraplegic because of spinal cord accidents quickly recover and end up only slightly less happy on average than individuals who are not paralyzed.

The Set Range Explains the Hedonic Treadmill

The set range of happiness also explains the "hedonic treadmill trap", such as the human tendency to chase pleasures and victories for happiness, only to go back to their usual range soon after they achieved it.

Some Bad Events Take a Long Time to Adapt

There are though some bad events that we rarely get used to, and they include the loss of a child or a spouse, caretaking for a family member with Alzheimer's, and living in very poor nations.

Fighting your set range

Noting that there might be a correlation between social contacts and happiness, Seligman seems to suggest that you might want to push yourself to be a bit more social.

He says:

> So, for example, if you are low in positive affectivity, you may frequently feel the impulse to avoid social contact and spend your time alone. (…) Happy people are very social, and there is some reason to think that their happiness is caused by lots of fulfilling socializing. So, if you do not fight the urgings of your genetic steersman, you may remain lower in happy feelings than you would be otherwise.

I liked this part.
I wish Seligman had dug deeper on this, but it seems clear enough. If you tend to be unhappy, chances are that you will want to avoid social contacts. But you should probably force yourself to have some more.

C = Circumstances

These are the circumstances which you can change your level of happiness:

Money: Important From

National purchasing power and average national life satisfaction go strongly in the same general direction. But the correlation disappears once GNP exceeds $8,000 per person and more money brings no further happiness.

It's also subjective though.
How important money is to you, more than money itself, influences happiness.

But m**aterialism is counterproductive: people who value money more than other goals are less satisfied with their lives as a whole.**

Marriage: married people are happier

Married people are happier, unless their marriage is really bad, in which case they are unhappier than the average unmarried person.

Seligman, though, says that it's not possible to disentangle causation here. It might be the case that happier people are more likely to marry.

On average, though, **most very happy people are involved in a romantic relationship**.

Social Life: Happy People Spend Time Socializing

Very happy people spend less time alone and more time socializing as compared to average and unhappy people.

Age: Little Difference, Big Changes in Emotional Intensity

Old studies showed that younger people are happier, but that hasn't held up in more recent ones.

Life satisfaction actually goes slightly up with age.
What does change significantly though is the *intensity* of emotions. Both negative and positive emotions are less intense as we age.

Health: Objective Health Doesn't Matter, Subjective One Does

Surprisingly, objective health has little impact on happiness.
It's how healthy we *feel* we are that has a major impact, though. And that has less to do with actual health, and more with our ability to adapt and appraise our health positively.

If illnesses are severe and long-lasting, then happiness and life satisfaction do decline. With one chronic health problem usually people bounce back. But with five or more, happiness deteriorates over time.

Finally, severely ill cancer patients differ only slightly on global life satisfaction from objectively healthy people

Weather: It Matters Little

People adapt to good weather, and warm and sunny climates stop being a mood boost.

Religion: Religious People Are Happier

Religious are healthier and live longer, and are generally happier and more satisfied with life.
On average, the more fundamental the religion one espouses, the happier he is.

Seligman says that religious people are likely happier because religion provides hope and meaning.

Religious people also live healthier and more pro-social lives, albeit the causal link is a mystery.

Education, Climate, Race, and Gender: Unrelated to Happiness

None of the above has any impact on happiness. Climate might give a quick boost, but it rapidly dissipates.

V = What You Can Control

Do emotions drive thinking, or does thinking drive emotions?

This has been a contentious issue in psychology: does emotion drive thinking, or does thinking drive emotion?

Such as, do I get sad because I'm having sad thoughts, or am I having sad thoughts because I'm sad?

It's both, depending on the situation.
Immediate pleasures in the present make us feel good and positively affect our thoughts.
But **all emotions about the past are driven by thinking and interpretations**.

So, yes, Seligman confirms that it's true that thinking positively and deliberately about your past will affect your feelings and emotions in the present.
And the opposite is true: ruminating over negative events will make you feel worse.
This is also true for nations, who tend to be angrier or gloomier depending on how they describe the past.

The Optimists' Way: Explanatory Styles

Explanatory styles are self-talk or patterns of thought with which we frame events.

Optimists have positive self-explanatory styles, while pessimists have negative self-explanatory styles.

When something bad happens to people with a negative self-explanatory style they blame themselves and see no solutions in sight.
When something bad happens to people with a positive self-explanatory style they blame the conditions and believe the setback is either temporary or not the world.

Explanatory styles work on 3 levels:

- **Time**: optimists see loss and rejection as temporary; pessimists see them as permanent
- **Specificity**: optimists see loss and rejection as specific; pessimists see them as universal and as big general rejection to their whole work or personality
- **Personal/External**: optimists see loss and rejection as a consequence of the circumstances; pessimists take the blame on himself and sees loss or rejection as a loss for the self and a rejection of the self;

The worst is being pessimistic in both time and specificity.
Says Seligman:

> Finding permanent and universal causes for misfortune and temporary and specific causes of good events is the practice of despair

People with highly negative self-explanatory style have chronic low self-esteem, are more prone to bouts of depression and they give up more easily.

And the most optimists instead combine positive explanatory styles along both dimensions of time and specificity:

> Finding permanent and universal causes of good events along with temporary and specific causes for misfortune is the art of hope

People with positive self-explanatory styles are more upbeat, have higher confidence and are more tenacious.

Developing Optimism and Hope: The Art of Disputing

We naturally dispute negative opinions when they come from others.

But when they originate within us, we seem to accept all the nastiest things one could ever say.

Seligman says that disputation is a well-documented model to develop optimism.
Says Seligman:

> The first step is just knowing your beliefs warrant dispute; the next step is putting disputation into practice.

The author introduces a model that he dubs “ABCDE”.
Here’s how it works:

- Adversity: the model starts whenever you are experiencing or thinking about a negative situation in your life
- Belief: this is when your usual negative self-talk starts
- Consequences: this is what happens when you let the negative thought fester. You can go through it the first time to realize how it affected you
- Disputation: this is when the model kicks in. Here you dispute your initial belief and find alternative explanations
- Energization: here you reflect on how the disputation improved your mood

Disputing Yourself Effectively

There are four elements to effective disputation:

1. **Evidence**: learned optimism, contrary to positive thinking, is grounded in reality. The good news is that reactions to negative events are often *over*reactions, so most of the times you will have facts and data on your side
2. **Alternatives**: most events have many causes. Pessimists latch onto the nastiest of the causes, the ones that pain them in the worst possible light and make them feel the worst. By looking at all the causes, you get both a more realistic picture, and a less pessimistic one. You can -and probably should- also focus on the causes that you can change.
3. **Implications**: if the above two steps are not enough, this one is about "decatastrophizing". Ask yourself "OK, so what, what are the implications"? How likely is the worst-case scenario? And even if the worst-case scenario were to come true, what can you do about it?
4. **Usefulness**: sometimes deciding to let go of a belief is more important than what is actually true. For example, the world is not fair, that's true. But if that belief pains you, why dwelling on it? Or why not focusing on all the ways that the world *is* fair? You can found plenty of those examples, too

Childhood Events Are Overrated

Says Seligman in another barb to Freudian psychology:

> I think that the events of childhood are overrated; in fact, I think past history in general is overrated.
> It has turned out to be difficult to find even small effects of childhood events on adult personality, and there is no evidence at all of large—to say nothing of determining—effects

Some support for past events' impact on the present did emerge, but it was not much.
For example, if your mother dies before you are 11 years old, then you are more likely to be slightly depressive.
But it's a small difference, and only if you are female -and only in half of the studies-.

If your parents divorced, there can be a major impact on children. But the problem wanes as they grow older, and they are not easily detectable in adults.

Even major traumas of childhood have a barely detectable influence on adult personality.

My Note: I only partially agree
I certainly agree with Seligman that Freud went too far, and did so with a total lack of evidence.
Yet, I have read, experienced, and observed plenty of supportive information on how the parent-children relationship affects people. See for example "Will I Ever be Good Enough? Healing the Daughters of Narcissistic Mothers".

Seligman says that older studies looking for links between childhood and adult personalities were not accounting for genes.

And he goes on saying:

> This means that the promissory note that Freud and his followers wrote about childhood events determining the course of adult lives is worthless.
> I stress all this because I believe that many of my readers are unduly embittered about their past, and unduly passive about their future, because they believe that untoward events in their personal history have imprisoned them.
> (…)
> **Merely to know the surprising facts here—that early past events, in fact, exert little or no influence on**

> **adult lives—is liberating**

Seligman also links the belief that past events determine the future to what he refers to as a philosophy of victimization ("victimology"), and which threatens to supplant the individualism and sense of personal responsibility that characterized the American culture.

Also see:

> Enlightened Self-Interest: Making of The Ubermensch

Attachment Styles: It's Good to Be Secure

In the last part before delving into a theory of win-win transcendence, Seligman discusses child-rearing, relationships, and attachment styles.

- Secure attached:
  - remember their parents as warm, available, and affectionate
  - have high self-esteem and few doubts; they regard others as trustworthy and reliable until proven otherwise
  - they strive and work on intimate relationships with those they love
  - admit when they are in distress
  - **Caretaking**: they are aware of what the partner wants and doesn't want and ready to help
  - **Sex**: avoids one night stand, thinks that sex is better with a relationship
- Anxious attachment:
  - remember their fathers as unfair
  - feel they have little control over their lives and find others difficult to predict
  - cling and always fear rejection
  - flaunt their anger and distress
  - **Caretaking**: provides compulsive caretaking whether the partner asks for it or not (so true)
  - **Sex**: women get involved exhibitionism, while men have little sex
- Avoidant attachment:
  - remember their mothers as cold, rejecting, and unavailable
  - lack confidence, especially in social situations; regard people with suspicion, guilty until proven innocent
  - put greater emphasis on achievement than relationships, and people partners at arms' distance
  - they don't disclose, they don't tell you how they feel
  - **Caretaking**: are insensitive to their partners' needs
  - **Sex**: enjoy sex without commitment more than secures, but don't have more of it

More Wisdom

- **Move where you are most appreciated**: a highly successful but recluse man asked Seligman what he should do to find a woman. He told him to move to Europe, where bubbliness is not as highly prized as in the US. And he found a woman in Europe. This is an example of sexual market value relativity and sexual market value hack.
- Don't waste too much time fixing your weaknesses, focus on your signature strengths instead
- **More negative emotions don't crowd out positive ones**: having more than average misery in your life does not mean you can't also have lots of joy
- **Women have both more negative and more positive emotions**

- **Don't watch too many sitcoms**: surveys show that the average mood while watching sitcoms on television is mild depression

Quotes

On the difference between positive psychology and positive thinking:

> It is important to see the difference between this approach and the so-called power of positive thinking. Positive thinking often involves trying to believe upbeat statements such as "Every day, in every way, I'm getting better and better" in the absence of evidence, or even in the face of contrary evidence. (…) Many educated people, trained in skeptical thinking, cannot manage this kind of boosterism. Learned optimism, in contrast, is about accuracy.

On the limitations of bodily pleasures:

> Rapidly repeated indulgence in the same pleasure does not work. The pleasure of the second taste of Basset's French vanilla ice cream is less than half of the first, and by the fourth taste it is just calories.

Real-Life Applications

There is much to readily apply to your life in this book.
Obviously there are the techniques to avoid dwelling on pessimistic thoughts, or practicing gratitude.

But I took away a few more interesting techniques that I have implemented in my life:

- **Only take a small bite of desserts**: bigger doses of a bodily pleasure have diminishing returns. A good technique to enjoy non-perfectly healthy bodily pleasures without going cold turkey then is to only take a small bite or sip. Instead of swearing off desserts, I now allow myself a small bite. Instead of swearing off pizzas, I only allow myself a few slices when sharing a pizza

For more practical takeaways, see Ultimate Power.

Criticism

I loved "Authentic Happiness".
But there is more than one note I need to make.

1. Ridicules Freud, But Misses The Importance of Sexual Drives

I'm far from a fan of Freud.

Since I was a student first reading into Freudian psychology, it all struck me as huge mental elucubration with no data and evidence.
How could all psychoanalys seek to cure people without evidence?

Today, I still believe much of Freud's fame and influence more because of his *confidence*, than his competence. He spoke like an Oracle, and psychology shows that people tend to follow the charismatic leader.

Yet, as famed neuroscientist Ramachandran says in his book "Phantoms in The Brain", Freud was, in many ways, also a genius.

Seligman ridicules Freud for building much of his theory around sexuality. And he mocks Freud for saying that much of civilization is built around sexual drives.
Yet, **we *do* build civilization, in large part, out of thirst for social status *and* sexual success.** Or how else does

Seligman think that human males evolved their drives, which are not coincidentally far more pronounced than women?

Freud might not be 100% correct, but he does not deserve that kind of ridicule.

That's not the first time I felt Seligman was not truly on top of evolutionary psychology.
At first, he seems to suggest that siblings rivalry is not real, or natural. He says that "negative psychology" is wrong at generalizing to the whole human population just because its because the same pattern is universally observed. Then, later, he finally admits that "siblings rivalry exists". Finally. What was the point of all that denying, then?

2. Subjective measures are proper science?

Says Seligman:

> The final judge is "whoever lives inside a person's skin," and a great deal of research has shown that the tests of these states (several of which appear in this book) can be rigorously measured. The measures of positive emotion I use are repeatable, stable across time, and consistent across situations—the tools of a respectable science.

I don't find a questionnaire to be the hallmark of science.
My "very happy" might be a "7", but someone might mark the same level of happiness a 9. It might be stable across time, but it's not interpersonally comparable.

Still, I agree with the overarching message: positive psychology, like all good psychology, is science.

3. I wished for more science and less personal stories and conjectures

Sometimes I felt Seligman was going too off tangent, both with his personal stories, or personal conjectures.

He could have cut out some parts, or at least he should have he could wish he had differentiated more between what was science, and what was his personal speculation.

I wished for more certitude

Seligman says:

> This ***may*** mean that we inherit a "steersman" who urges us toward a specific level of happiness or sadness

The boldened part is mine.

And I boldened because I asked myself: it *may* or it *does*?

This is the crucial question I was seeking an answer to. I wished he had been more definitive. Even if there was no answer, I feel he should have been more precise here.

4. Underestimates childhood trauma

I was surprised Seligman went as far as he did in denying that childhood trauma has any effect on adults.

It felt to me like that truly underestimated the potential impact that bad parenting can have on their children.
After all, if parenting mattered so little, then why would Seligman dedicate several chapters to parenting in this same book, as well as spending so much effort in his own parenting?

5. Emotion hydraulics is not fully untrue

Seligman calls the idea that bottled up emotions will grow and fester the "emotional hydraulics theory".

In more polite terms, he says that's unscientific drives.
He uses anger as an example.
When you vent your anger you grow angrier, not calmer.

He is right. That one on anger is a popular -and wrong- self-help myth.

Seligman also says that emotions left to themselves will dissipate. And even there, he might be right.

However, it is also true that some emotions should be expressed.
The feeling of having been mistreated, for example, can fester if left unexpressed.
Resentment also festers, and it can harm your relationships with others and your ability to work effectively.

6. Did we need to pitch "Positive Psychology" against "Old Psychology"?

Says the author:

> (…) This thesis is a perfect example of the most fundamental difference between Positive Psychology and psychology as usual.
> "Negative" psychology holds that its observations about basic human nastiness are universal, even though its observations may emerge from societies that are at war, in social turmoil, or struggling with poverty and are made on individuals who are troubled or seeking therapy

I don't see the need of pitching Positive Psychology against "psychology as usual", which later becomes "negative" psychology.
That's nonsense to me.
Plus, Seligman saying that siblings rivalry does not exist if parents will spread enough love, sounds a lot like a perfect condition that is more likely not to take place, than to take place -I imagined a white suburban family with the mother can allow herself to stay at home with the children-.

CONS

- **Too many topics**

Authentic Happiness ranges from optimism, to attachment styles, to running effective relationships, to the meaning of life.

At times, it feels like too many topics, and only loosely connected.

- **Haughty tone**

I found some of the passages to be a bit too haughty and scornful.
Towards Freud for example.
Or sometimes towards the readers, when he reminds us that for the layman reader there is only one single equation allowed, and he begs us to bear with him -as if readers were too stupid to understand equations?-.

Or towards the relationship literature and Gottman. He recommends "The Relationship Cure" and "The Seven Principles for Making Marriage Work", and then he says "while not a goldmine, the manuals do contain some rich veins".
I thought that was a bit unfair towards a man, Gottman, who has provided so much wisdom on what works in relationships.

And finally, towards a 19 years old kid who shot himself.
He introduces him as a Darwin award for wanting to play Russian roulette with a semiautomatic (for non-Americans: a semiautomatic always chambers any round in the magazine, so you can't play Russian roulette because it always shoots).

I think that kid didn't deserve to be called "idiot of prudence", considering he died on the spot and he was just 19. It was just bad taste, in my opinion.

PROS

- **Great analysis on attachment styles**

I have read plenty on attachment styles, starting from the most popular "Attached" to several researchers.
And yet, Seligman manages to review the whole literature in a few paragraphs, delivering both a great summary, and much new -and important information.

- **Great overview of positive psychology**

There are still a number of books I need to explore on positive psychology but, so far, this might be the best overview of the discipline.

- **Practical and truly helpful**

Seligman says that, contrary to Mihaly Csikszentmihalyi, author of "Flow", he wanted to write something practical. Well, he certainly did. "Authentic Happiness" is packed with terrific insights on becoming a happier and more optimistic person.

- **Wonderful take on win-win and collaboration**

Albeit off-topic, I loved Seligman's theory of "evolution towards greater good".
Starting from a speech from Robert Wright, author of "The Moral Animal", Seligman says that civilization is progresses as it progresses towards more games of win-win among the individuals.

I tend to agree, and win-win is one of the foundations of this website. Also see:

- The foundational laws of power
- Mix power with warmth

Review

"Authentic Happiness" is a glorious book of Positive Psychology.

The best I have read so far, and it provides the best overview of the disciplines.

It's very good both in terms of scientific accuracy, and in terms of practica self-help wisdom.

Before "Authentic Happiness", frankly, I was not too happy with my experience of Seligman's work.
The audiobook version of "Learned Optimism" felt like a huge ripoff, super short and mostly about his online quiz.
And "Flourish" was just average.

Authentic Happiness, instead, is the worthy book of one of the fathers of Positive Psychology.

The Secret Handshake: Summary & Review

Lucio Buffalmano · 29 April 2020 · Archived copy · Original

"The Secret Handshake" is a book on career advancement and career strategies.
Author Kathleen Kelley Reardon states that there are non-written rules that the people at the top of each organization all follow and obey, and if you want to join that upper circle, you need to learn those rules.
Kelley Reardon sets out to teach readers what those rules are, so they can join the people at the top.

Contents

- Bullet Summary
- Summary
- Quotes
- Real-Life Advice
- CONS
- PROS
- Review

Bullet Summary

- The "secret handshake" is the ensemble of non-written rules and behavior that allow you -or stop you- from joining those at the top
- Different people differ in their propensity to play corporate politics, but political awareness is a skill you can develop
- It's best for you to work in an organization that matches your "political appetite"

Summary

About the Author: Kathleen Kelley Reardon is a professor of management at the University of Southern California's Marshall School of Business, and she earned her Ph. D. with summa cum laude and distinction at the University of Massachusetts.
Kathleen also works as a management consultant on topics such as company culture, and effective communication, and she enjoys writing on her blog on female empowerment.

The Higher You Go, The More Subtle The Game

The higher you go, the more professionalism matter.
And more professionalism means that people there strive to look above pettiness and "games".

But they're not really.
It's just that the game becomes more hidden and stealthy.
And if you want to make it into that club, you need to learn to play that game.

What's Politics

Kathleen defines politics as "politics is an illegitimate means of getting things done", and every successful manager has done.

And she righteously says that being good at politics is not a trait you're born with, but it's a skill that you can learn.

Says the author:

> The word “politics” has fallen into some disrepute, not because of what it means, but because of how it has been used. (…) Like it or not, the way things get done in most organizations. And it’s high time we started to train people in how it works.

Also read:

- How to master politics

> 7 Steps to Master Office Politics: A Field Guide

Learning Politics Is Learning to Read Meaning Beyond Words

Says the author:

> Cues that provide information extras are rarely missed by the more politically savvy. You can’t reach the inner circles of business by missing or misreading cues on a regular basis. It’s important to become a sophisticated interpreter of meaning, observant of both content and relational levels of conversation

I agree with that.
People who fail to read nonverbal cues not only do poorly at work, but at life in general.

Fast and Loose Players

These guys like to keep their options open.
They will make you believe you got a deal, but until you sign the contract, they will keep all their options open, and if something better comes along, they will quickly jump ship.

The way you play with a player is by being a bit of a player yourself.
Say the author:

> You should never be completely open and honest with a conniving type

Amen to that.

Also read:

- The different types of political players

> 9 Types of Office Politics Players (W/ Examples)

When You Acquiesce to Poor Behavior, You Reinforce Your Weaker Position

Imagine for example that someone says something patronizing.

If you accept it, then you reinforce the perception that the person has power over you.
Even if you just made a comment that his words were patronizing instead opens up his frame to discussion, and the power relationship is also open to discussion.

Power is negotiable, says the author, and you should always be ready to renegotiate it.

Work In a Politically Suited Environment

Kathleen Kelley Reardon says that to be successful, people should find an organization that suits their styles.

Organizations differ in their level of politicking.
And people differ in their level of political savvy and "political enjoyment", such as how much they enjoy playing politics, and how good at it they are.

Not everyone is naturally good at politics, and not everyone enjoys playing it.
Thus, it follows that people will be most effective if they find an organization where the amount of politics matches the amount of politics they can stomach -or the amount they can thrive in-.

STYLE	POLITICAL LEVELS			
	MINIMAL	MODERATE	HIGH	PATHOLOGICAL
PURIST	Best fit	Possible	Unlikely	Very unlikely
TEAM PLAYER	Likely	Best fit	Unlikely	Very unlikely
FIGHTER	Very unlikely	Likely	Best fit	Possible
MANEUVERER	Very unlikely	Possible	Best fit	Likely

Table largely based on Kathleen Kelly Reardon work (with some minor edits)
A politically skilled player can actually do well in a very politicized environment because he can play by his strengths.

And, on average, keep this in mind: the more political the organization is, the more you need to be able to read between the lines.

The Political Savvy of The Balancing Act

The balancing act is how politically savvy players balance their own needs, with the needs of the projects or task, plus the needs of the people that matter.

For example, people who are politically savvy don't just promote their ideas based on what sounds good to them, but they also wonder what it will mean for senior management, who looks good if it's adopted, and who looks poor.

Taking sides and competing with those who have more power than you results in an obvious loss for you.
Says the author that "if you go the mat, you better be the one with the decision power".
If you don't, it's much better to find ways to present your thoughts, decisions, and actions, in a way that's palatable to those who have more power than you have.

Give Positive Recommendations

Positive recommendations make you friends.

Negative ones can make you enemies.

As you progress in your career, it might eventually happen that someone asks you for an informal review of someone's work.
If you make good use of the self-promotion article here, it might also happen that it's a high-caliber player asking you to review someone who's actually senior to you.

That's what happened to me when the head of internal management consultants asked me for a feedback on Julien,

one of the guys on his team.
The acute observer of people I *thought* I was, I gave detailed feedback on how sometimes Julien rubbed people the wrong with a badly concealed haughty attitude.
When I saw Julien again it took me one second to realize from his face that he knew something he shouldn't have known.
I said hello to him, and he didn't reply. And that's when I knew 100% I had made an enemy I didn't need to make.

Theoretically, your feedback should be anonymous.
But it will not always be. Hopefully, the receiver is honest enough not to share your name. But it might slip out of him, or some details might surface and the subject of your review might be able to put two and two together.
Yes, reviewing someone is a chance for self-promotion. But it's also a politically delicate situation.

My advice is to be honest, to also use the occasion to showcase your emotional and social intelligence, but to be very careful with negative feedback.
In case you need to provide harsher reviews, consider delivering them verbally. Once you send an email, you also lose control over it, and you never know where your email might end up.

Also read:

- Political pitfalls you must be aware of

> 12 Political Landmines You Need to Know

Learn to Read Your Boss

As Daniel Goleman correctly points out in his "*Working With Emotional Intelligence*", it's reports that need to be emotionally intelligent towards their bosses, not the other way around.

That means that you must learn to read your boss's nonverbal cues.
With very indirect bosses, you must learn what he is actually meaning behind his words.

If you notice for example that he often high praises but only mild praises to you, that might be the sign he's not yet happy with you, and that you must change something.

Some other indirect bosses show displeasure by avoiding you, or by interacting with you less.
For example, if you're speaking at a meeting and the boss is not looking at you in the eyes, that possibly means you have offended him recently.

And by the way, if your boss is acting like that with someone else in your team, you should avoid engaging with that person as well, lest you send the message that you're siding *against* your boss.

Some other bosses will not tell you when they have little time, but you will see them fidgeting, or looking at their computer screen, or talking more rapidly. That's the sign you should say "OK boss, I don't want to disturb right now, maybe I come back later".

To Make it To The Top, You Need to Lead

People who make it to the top want to lead and influence.

Yes, there are some followers who hang onto a winner -check out "power aligners"-, but they tend to fail over time because depending on a single person for personal success is an invariably risky and vulnerable strategy.

Confident, Yes, But Don't Overdo It

This passage hit me home hard as I committed the same mistake at the beginning of my career:

> Confidence is an aspect of personal power. Yet there's always the risk of overdoing it or even the appearance of overdoing it. One of the CEOs interviewed for this book told me he overstepped his confidence quotient one time. By word of mouth it got back to him after he'd missed a promotion that one of the senior executives had said at the promotion meeting, "I don't like that guy. He's a peacock strutting around." And, this CEO told me, "The guy was probably right."

Pretty much the same feedback that prevented me from getting a reward international assignment at the end of my talent graduate programme.

My own mentor said at the performance review that I was too cocky.

Adapting to Male & Female Style

While a male boss might find it irritating that a woman doesn't move quickly to greet him and show deference, a female boss might find it irritating that men to self-promote and, as the author call it, engage in "male posturing".

The best way to handle your boss then is to become aware of what he prefers. And to learn the typical differences between men and women.
Also see:

- The female guide to win in male organizations

> The Businesswoman Guide to Win in Male Organizations

At The Top, It's All About People's Skills

Says the author:

> As you move closer to the top, people skills dominate over technical skills

That much is true.
Technical skills help you the most when you're starting out. But to get to the top, it's all about people skills.

Also read:

- Strategies for career advancement
- Technical skills give you job security, soft skills give you power

Quotes

On technical competence VS general competence, including political savvy:

> Surely competence is critical to success; in fact, its very foundation. But technical competence is rarely sufficient.

On power:

> The interesting thing about power is that it is often both a means to get ahead and the reward for getting there.

On "concealing your intentions", as Robert Greene would put it:

> The time to tell your boss that you're leaving is when you are leaving, not when you're thinking about it.

On power, potential, and attracting support by doing a great job:

> The worst way to seek assistance is to be desperate. You're not going to rescue the boss's daughter from the railroad tracks. To get noticed you have to do important things well.

On developing relationships before you need them:

> If you don't have friends in high places, there's no time like the present to begin cultivating them.

On politically smart hard work:

> Being dedicated doesn't necessarily mean putting in long hours or being constantly available. To the contrary, it's important to **put in long hours and be available when it matters to those in a position to notice your dedication**.

On the importance of being like those who lead:

> This preference for one's own kind is exactly why organizational diversity is so difficult to achieve. If the people running your organization aren't like you in fundamental ways, you'll have difficulty achieving the secret handshake.

Competition above teamwork:

> Despite all the talk about teams in business circles today, competition is rewarded more than cooperation, and so conflict is the inevitable result.

Real-Life Advice

- **Never say you will leave as soon as you can**: yes, you might be angry, but telling someone you will leave before you have any offer is plain silly
- **Meet people with "chance encounters"**: master politicians do their homework before attending network events and then "accidentally" meet the people they wanted to meet
- **You ower your mentor**: even if he never said so. Keep that in mind and show you understand the basic rules of social exchange and "WIIFT"
- **Watch out for "fake self-disclosers"**: these are people who feign giving you good information to get good information in exchange, but they're really just embellishing useless info to get real intelligence
- **Don't hog the spotlight with self-promotion**: self-promotion is a politically sensitive activity. Yes, you need self-promotion, but it's tacky if you overdo it and you
- When deciding whether or not to pick a battle, you must assess both the likelihood of winning, and the potential damage to the relationship

CONS

- **Sometimes I wished for concrete examples**

Talking about the modus operandi of a "maneuverer":

> "I set fires and put them out. Then I was a hero. I'd create a problem and solve it. I've gotten promoted every one and a half years this way. The way I see it, if you don't leverage yourself, you're lost."

Interesting, but I'd wish the author had asked some precise example of what "setting fires" meant, and how he'd fix it.
I run this website based on concrete examples because I believe it helps people learn better.

In my real life, I always ask people for real-life examples to better understand what they're talking about.

- **Sometimes some weird-sounding sentence structure**

For example:

> He or she is not at all inhibited about using politics to advance personal objectives and favored team objectives, but prefers to do so in deniable ways.

- **Some "OK" content mixed with the genius**

Some parts of the book are "OK", but they also feel a bit like space fillers. It's a pity, because there is enough gold here that the filler around it was truly unneeded.

PROS

- **The concept of a secret handshake**

Albeit the idea of a "secret handshake" might sound silly to some, it's totally true.

The "secret handshake", in the end, is nothing but an ensemble of non-written rules and signals that communicate whether you are ready for the big boys' table, or not.

Every single group has its own code that you must respect to join, and the most exclusive groups have even more stringent codes.

It's the same for the executive club.
Read more in executive skills (ie: the rules of the handshake).

- **Top advice on frames**

I learned a lot here on frame control techniques and even used this wisdom for Power University.

Review

"The Secret Handshake" is a gem with an incredible amount of genius content.
I took away lots of lessons learned and even used it to improve this website's course.

The central idea of a "secret handshake" is one of the most important unwritten rules of success and is one of the major beliefs of this website: act the part, learn how to behave high-value, or you'll never make it to the top.

I think it could have been even better if it cut out on some filler and "just OK" content.
But I'm very happy I read it.

Frame Control 101: Influence People and Gain Status

Lucio Buffalmano · 1 May 2020 · Archived copy · Original

Most men lose power without realizing it — not because they lack charm or intelligence, but because they lose the **frame**.

Every interaction is a silent power struggle over who defines reality. The one who controls the frame controls the outcome — whether it's attraction, respect, or leadership.

In this guide, you'll learn the fundamentals of **frame control**: how to read it, win it, and use it to project authority, confidence, and dominance in dating, work, and life.

Let's begin.

Frames apply to any interaction. From the most momentous, to the most mundane

- Key Elements of Frames
  - 1. Covert Frames™
  - 2. Self-Frames™
  - 3. Thread-Expanding™
  - 4. Thread-Minimizing™
  - ⍰ Techniques
  - 5. Frame Cementing™

Intro

Frames originated across disciplines, but Erving Goffman formalized frame analysis in sociology.

Frames are the beliefs, values, and personal predispositions through which people interpret the world. They guide how people make sense of everything—from life's meaning to everyday arguments.

- **High-level frames**: what's good/bad; what's true/false; meaning of life; etc.
- **Low-level frames**: who is good/bad between us; who's right or wrong in *this* argument; meaning of *this* event; etc.

Different meanings create different emotions, preferences, and actions.
Values, personal predispositions, and self-interest all influence frames. People, often subconsciously, default to the interpretation that best serves their interests. But **you also influence frames with your words, behaviors, and what you draw attention to**.

⍰ Example

Frames are most visible in disagreements.
Example from a relationship:

> **Boyfriend's frame**: St Valentine's gifts are a waste
> **Girlfriend's frame**: St Valentine's gifts are caring
> ➡ Whether they buy gifts depends on whose frame wins

Frames are also held at a *social* level.
It's more challenging for individuals to buck socially ingrained frames.

In our example, society supports her frame.
So it's difficult for him to "win" the frame without her feeling like he is being "unreasonable" and *imposing* his will.

So he needs advanced skills to "win" the frame without her feeling like he's *imposing* his will.

We dig deeper in Power University, but for now:

Frame Battles Are About Power

For two reasons:

1. **Power signaling**: the winner sub-communicates higher power -more dominant, more persuasive, or both-
2. **Setting the rules (SOPs)**: a “cemented frame” governs the relationship with the winner’s rules

⍰ Mrs. Doubtfire Divorce

> **Him**: (Frame: we were having fun, it’s good, and I’m the leader of this relationship)
> **Her**: (Frame: you made a mess, it’s bad, you’re useless)

Whose frame wins?
Just look at his face for the answer.
Frames often resolve without a single word.

Frames Set The Rules of Engagement

Including values and ethics.

This is important because:

⚠ When you accept someone’s frame, you play by *their* rules.
And *their* preferences, values, and morals become the yardstick.

Be cautious of frames with hidden implications of right or wrong.

From Surface to Source: Frame Depth Model

Let’s review this exchange with a frame-informed analysis:

> **American**: It's a carbonara
> **Italian**: No, it's not

This simple disagreement can stem from something deeper.
The principle is:

⚖ **Disagreements are superficial manifestations of something deeper**

That *something* can be a value, a belief, a psychological predisposition, or a hidden agenda.
And to influence people, you must find out what it is, and communicate accordingly.

Why do the American and Italian disagree?

1st Level: Surface Beliefs

It may be a misunderstanding around ingredients -eggs VS cream-.

Or a misunderstanding about "who invented it".
They probably share covert assumptions that: a) the original version is the "real thing" and b) nationals from the country that "invented it" are higher authority.

Once shown that Carbonara is an Italian dish, the American may then concede.

⁉ **Solution**: correct information + logic + authority.

2nd Level: Contextual Power Dynamics

If they still argue, there may be deeper issues.

The American may reject influence because:

1. His wife is there and he wants to look "strong"
2. You were too blunt and he expects more courtesy

⁉ **Solution**: power protect + re-empower

3rd Level: Character

Deeper yet, it may be about character.

A power-hungry man may stick to what's wrong no matter what.
Or he may hold ethnocentric views of national and cultural superiority.

⁉ **Solution**: frame impose or agree to disagree.

4th Level: Hidden Agendas

Sometimes frames collide because people have diverging goals, and and their "beliefs" conveniently align with their self-interest.

For example, if the American is a chef and for all his life he cooked carbonara with cream, he has a strong motive to stick to his views. Agreeing the 'real' carbonara is made with eggs would be an important loss of authority for him.

⁉ **Solution**: Be strategic

Strategy: Persuade at Deeper Levels

In general, to influence others, you communicate with the deeper issues in mind:

⁉️ Whenever interests diverge, always look for hidden agendas and selfish motives. Sometimes people hide them under a more pro-social cover

General principle:

⚖️ **Surface-level frame control wins arguments with dominance, while deeper-level frame control changes minds with skills**
❓ If influence is the goal, focus less on “winning arguments”, and more on finding and addressing the deeper issues

So here is a frame change from you:

Focus not on “winning arguments”, but on finding and addressing deeply held beliefs.

Important concepts:

- **Deeper frames are covert & often subconscious**
- **Most covert frames are shared** while in persuasion we often focus on diverging covert frames, most covert frames are shared. Society largely runs on shared frames that we rarely challenge -Ie.: pro-social is “good” and antisocial is “bad”-.
- **‘Beliefs’ often hide self-interest**: sometimes frames collide because people have diverging goals.
  And their “beliefs” conveniently align with their self-interest.

❓ Case Study: Influence & Negotiative Conflict Resolution

How would you approach this?

Imagine the American loved American cuisine and he may get offended if devalued.
And you spotted signs of a big ego.

If you wanted to maintain rapport while still also maintaining power, you could say:

> **You**: You seem passionate about food <— Changes frame from confrontation to passion
>
> Americans invented the best fast food in the world, and BBQ is the best <— Gives and validates
>
> But when it comes to Carbonara, listen to the Italian guy (smile, point at yourself) <— Power protect with a self-deprecating delivery rather than schooling them with "teacher frames" ⍰
>
> And if you prefer it with cream, that's great <—- Addresses the potential issues of 'what's best' to focus on 'what's original'
> All I'm saying is <—- Power protects by minimizing
> that original carbonara is with eggs <—- Ends with definitive statement

It's much easier now for him to concede because you respected him, limited your authority on a single dish, and gave him authority over different types of food.

However, remember that influence still requires power.
To negotiate and influence you need some respect, status, and consideration.

If you don't have those, you need a different approach (see **Power University**).

Reading Frames

We use the traffic light principle for categorizing interpersonal power dynamics:

- **Empowering (⍰)**: Power-giving/submissive or re-empowering
- **Disempowering (⍰)**: Empowers the speaker, disempowers you
- **Neutral** (⍰): Neither empowering/disempowering (neutral) and non-attacking back (non-reactive)

And we add 'attack' for social **one-ups** (⚔) and **self-defense** (⍰).

Walkthrough Example

Laura arrives at work:

> **Matt**: (loud, with sarcastic tone) Well, well, well … Look who's on time for a change. (⚔⍰)
>
> **Laura**: (apologetically) I'm rarely late (⍰)
>
> **Matt**: Oh-ho! We're feeling defensive as well! (⚔⍰)
>
> **Laura**: (looking downwards, lower tone of voice) Not really (⍰)
>
> **Matt**: Sorry, Laura, but it sure seems that way to me (⚔⍰)

Matt may come across as an as*hole.
But Matt's dominance makes Laura overly submissive.
Laura pays the biggest price -and will hardly ever advance in that office, or in life-.

One-Upping Back

But here is you after PU:

> **Matt**: Well, well, well … Look at who's on time for a change (⚔⍰)
>
> **You**: (looking at the other people around) Good morning folks (⍰⍰) <— Maintains social warm & positive frame, ostracizes Matt
>
> And hello Matt, being your usual friendly self, I see (⚔⍰⍰) <— Only after shifts to Matt, sub-communicating he's a lower-status clown

Assertive and high-power, without being aggressive.
In a rowdier environment, you may even say "being your usual pain in the a*s".

If you're a witty guy, as inspired by Kelley Reardon:

> **Matt**: Well, well, well … Look at who's on time for a change (⚔⍰)
>
> **You**: Wooow, Mark, that truly was a deadly cut, you must have been up all night practicing it (⚔⍰⍰)

It's higher investment, but works well in informal environments where people joke around.

Non-reactive: If It's The Boss

For calibration and smart office politics, you must first consider whether you're often late.

If you are:

> **Matt**: Well, well, well … Look at who's on time for a change (⚔⍰)
>
> **You**: Good morning Matt!
> Yeah, usually I come up late and stay longer whenever necessary as I'm more efficient that way (⍰) <— Defend against the worst accusation of "not good employee"
>
> Do you prefer if I come earlier? <— Re-empowers the boss by allowing to decide

If nothing comes to mind, ignore the content:

> **Matt**: (loud, with sarcastic tone) Well, well, well … Look at who's on time for a change (⚔⍰)
>
> **You**: Hi, good morning boss. (⍰) <— Ignores the attack but remains polite
> (If you need anything I'm here)

If you're usually on time, you can get serious:

> **Matt**: (loud, with sarcastic tone) Well, well, well … Look at who's on time for a change. (⚔⍰)
>
> **You**: Good morning Matt!
> I usually am on time, am I not? (⍰⍰) <— Refuses to be a victim by starting a serious convo

Based on his reply, you can later ask privately if he is OK with your work and/or punctuality.
This approach maintains status, while keeping a good relationship with the boss.

⍰ Dating Example

Let's see another example from a real-life interaction.
I sat next to her carrying much of the initial conversation when she said:

> **Her**: I'm talking to my boss now, can you wait (⍰) <— Major rebuff considering she was texting, not talking

So:

> **Me**: It's OK, no need to wait, give me your number, I'll call you later when you're not talking to your boss (puts phone out, waits for her) (⚔⍰⍰)
>
> **Her**: (looking at the phone) Just like that? (quieter, almost muttering) You can't get a number like that (⍰) <— This was a *tentative* one-up, but the question and lower voice suggest she's about to submit. It's a one-down barely masked as one-up

Her frame: numbers require bonding.
My frame: numbers are just a first step

So I kept my phone out for her to type it in:

> **Me**: Yeah, just like that (⍰)
> **Her**: (types her contact)

⍰ POP QUIZ: what should you do now?

We dig deeper in Power University.

Non-reactive Strategies

Use non-reactive responses to:

- **Negotiate** instead of escalating
- **Fly higher**, ignore nastiness, and display you're better than the attacker
- **Ignore** power moves, display you're imperturbable

When well done, you'll get this effect:

Let's see some examples:

⍰ 1. Ignore an escalation to maintain control

You're at a meeting presenting your cool proposal when:

> **Colleague**: This is nonsense, will never work (✂⍰)

A one-up response sidetracks you.
You'd go from a high-power 1-to-many presentation, to a low-power 1:1 squabble.

If it escalates, someone else will step in to play peacemaker.
And you lose persuasiveness.

Imagine instead:

> **You**: Bear with me while I explain how this works (⍰⍰) <— ⍰ ⍰ I remain focused on my goal. And you're speaking without knowing because I haven't even explained yet

You ignore the attack, and move forward.
For added power, avoid looking at him.

⍰ 2. Gather Precious Intel About People

We advise men to stay calm during your first argument.

Why?

Because TPM and PU will get you respect and devotion.
But devoted women may present their best selves just to *keep* you.
Instead, you want to know whether she's a game-player, or a wife material.

For example:

> **Her**: Look, if you are not going to commit soon, (raises voice) then it's over (⚔⍰) <— Break-up threat

Here is a non-reactive response:

> **You**: (that sounds mean), why would you threaten me like that (⍰)

"Threaten" is a good keyword to gauge her reaction.
To assess:

- ⍰ She **accepts it's a threat or keeps attacking** -she's comfortable with threats and it's exactly what she premeditated-.
- She **says it's not a threat**, much better
- ⍰ **Backtracks, says she doesn't mean to be mean** but has standards

Key Elements of Frames

1. Covert Frames™

Unspoken assumptions that affect meaning and interactions without people realizing

General principle:

⚖ **The person who controls the deeper frame has the power**

This is because covert frames include the deeper values that govern judgments of "right and wrong".

2. Self-Frames™

What your words and behaviors sub-communicate about you to yourself, and to others

Any word or action sub-communicates something about you.
And we call that sub-communication self-frames.

At the highest level, you can:

- **Positive self-frame**, as a high-value, honorable man
- **Negative self-frame**, as a lower-value, dishonorable man

Take this saying for example:

> Nastiness says more about the speaker, than the victim

The saying is largely true. Nastiness can damage others. But, especially if unjustified, it also self-frames the attacker as a nasty f*ck.

Advance bragging and displaying value is all about self-framing.

3. Thread-Expanding™

To expand the effect and/or time spent on a certain frame

Can be as simple as:

- **Talk more** about a certain topic
- **Surface** a nasty power move to draw attention to it
- **Add pregnant pauses** to extend speaking time and increase suspense
- Speak **louder**
- Speak with **more emotion**
- …

4. Thread-Minimizing™

To minimize the effect and/or time spent on a certain frame

⚖ **The more you minimize a bad frame, the less harmful it is.**

⍰ Techniques

- **Ignore it**
- **"Yeah yeah it"**, ie.: perfunctory verbal agreement with dismissive tonality and body language ⍰
- **Change topic** ("thread-cutting")
- **Breaking pattern**

These approaches can expand short-term, but minimize long-term:

- **Undermine** the speaker
- **Address** a bad frame ⍰

5. Frame Cementing™

To expand and solidify a resolution or agreement

Frame cementing increases compliance, acceptance, and internalization.

After this foundational introduction, our students internalize the skills to control frames in real life and achieve practical outcomes like status, respect, and attraction.

Matthew Coleman, look dozens of courses in self improvement

Answered December 11, 2019

I have the perfect answer for this question. Before moving on to my answer, I should stated that I am a strong believer in personal development. I took a lot of courses in **Udemy** and **Coursera**: both from well known individuals and respectable institutions. I joined **Mindvalley** and took courses elsewhere from giants like Tony Robbins, Robbin Sharma, Robert Moore, Vanessa Van Edwards among many others. I learnt a ton but the best, the ultimate course I have joined so far belongs to a man I had never heard before.

His name is **Lucio Buffalmano** and I learnt about his course thanks to a dear friend of mine. Lucio is a sociologist and a self development expert. When I say expert, I truly mean it. He has an incredible course called **Social Power: Your Real Life Guide to Personal Success**, which is the course I took.

Why is this course incredible?

- He gives amazing insights into how to use your **body language** to assert dominance.
- He teaches **power signs and words**, which truly affected all my relationships into a more positive direction.
- He talks about how to gain power in the workspace and by applying these precious learnings, I was able to get a promotion!
- Perhaps the most important of all, at least for me, he gives marvellous insights on the power games women play in **dating** and how to overcome them. This is a **life**

> I took a lot of courses (…) from well-known individuals and respectable institutions (…) Mindvalley, Tony Robbins, Robbin Sharma, Robert Moore, Vanessa Van Edwards among many others. I learned a ton but **the best, the ultimate course** I have joined so far belongs to a man I had never heard before. His name is Lucio Buffalmano.
> (…)
> This is a **life changer** (…) his course works and is **probably the most actionable course out there**. I truly **recommend it to anyone who wants to gain social power. Because when you gain social power, you gain success**.

@M 5 days ago (edited)

I have been a PU student for about 5 months now, about 60 percent complete. Power University is by far the best investment I have made. It has changed my life and my relationships, not only with strangers, friends, and colleagues, but even my family members are treating me with more respect now. At 31, I am finally able to pave the way for the life I dreamt of as a child, and PU has played an instrumental role alongside all the other self-education I have been getting. It's not just the read, it's the internalization and the application process that make the difference, that this course provides to those who apply themselves. For those who are contemplating joining PU, let me tell you: it's worth 10 times the price for the value it provides no book or platform can. The Ultimate Power is one of the best books I've ever read. Thank you, Lucio, for creating this masterpiece.

For those who are contemplating joining PU, let me tell you: it's worth 10 times the price for the value it provides no book or platform can.

This comment can be found under our PU intro video alongside other similar testimonials.

- **Genuinely Amazing Course**

View the review here.

For transparency, the full review states:

> That course is genuinely amazing despite it looking like some 12 year old fresh off a power trip from 48 laws of power wrote the advertising for it.

We appreciate the candid feedback on our marketing and have since refined our approach to better reflect the course's quality.

- **Enhanced Relationships and Attraction**

- after studying and applying PU, my partner has started to really be attracted to me at a primordial physical level, like she never was - and I as well to her;
- all the power moves from her are disappearing: she now tries to be more loving, more close, more helpful than ever;
- my "material giving" has been steadily reducing (unconsciously) all the while since I started PU, and now is basically almost zero;
- it has started to happen that other women whom I find attractive approach me (especially in stores) or show high interest, sometimes even when my partner is present. And she has noted it as well.

> **After studying PU my partner has started to really be attracted to me at a primordial level**, like she never was -and I as well to her

This review, shared on our forum, is kept private to respect the author's personal disclosure. Such outcomes are common as students develop higher-power behaviors through Power University's evidence-based curriculum.

- **Unmatched Curriculum for Interpersonal Success**

Many thanks to those who have replied so far. One point of clarification: I'm not bullshitting when I say that Power University is the best course I've ever taken. I'm confident that there is no course that comes even close to covering the Power University curriculum of dealing with other people as well as Power University does.

> Power University is **the best course I've ever taken**. I'm confident that **there is no course that comes even close** to covering the Power University curriculum of dealing with other people as well as Power University does.

- **Surpasses Popular Power Literature**

Bel

I had read lots of books by Robert Greene before getting to know The Power Moves, and while I enjoyed them very much, the improvement in my life I got from these was essentially insignificant. They are more of a historical/literature review on theories of power, and contain little actionable material. I think their usefulness to me was in priming my mind to the feeling that something was going on that I did not understand, and it was mostly hurting me.

On the other hand, I got to know Jordan Peterson thanks to The Power Moves, and his philosophy was and is a nice addition to what I learned from the former. I think Peterson is an outstanding person. And much of what Peterson teaches is really really useful, including the key concept (also in TPM) that unless you are able to fully think as an evil person, you already lost. But I doubt I would have understood much had I not read TPM first.

In the end, The Power Moves and Power University is simply the best source on how to become aware of power dynamics and use them to protect yourself and advance in life. It is the detail of the explanation and the comprehensiveness of the content that makes a difference.

One thing that instead made a huge difference for me before getting to know The Power Moves was reading about narcissism and other personality disorders. That made a real difference, but only in allowing me to distance myself from bad people. I understand malevolence fully now.

TPM on the other hand taught me (and is continuing to teach me) how to interact with these bad people from a position of power: which is infinitely more useful, because you simply can't always distance yourself.

> "**I had read lots of books by Robert Greene** *before getting to know The Power Moves, and while I enjoyed them very much,* ***the improvement in my life was insignificant.***
> *(…)*
> **Jordan Peterson (…) is really useful** *(…)*
> (But)
> Greene and Peterson only focus on specific limited aspects, but both miss the bigger picture and the "how-to" details. (…) TPM on the other hand taught me (and is continuing to teach me) how to interact with these bad people from a position of power: which is infinitely more useful, because you simply can't always distance yourself.
> (…)

JOIN POWER UNIVERSITY NOW

- **A Strategic Investment for Career Growth**

> As somebody who's starting to come to the end of a carer I can say (…) this is literally the best investment you could make.

Read this comment here.

Power University includes a dedicated module on career strategies and workplace power dynamics, designed to amplify professional success and potentially yield significant financial returns.

- **Tremendous Personal Growth**

I had a fragile mindset that would break down anytime I failed, even if it was my first attempt. I joined the course Charisma University, but when I failed to connect with new people using the techniques, my tiny pieces of self esteem shattered. I believed that I was so hopeless that even online courses and books couldn't fix me. I had no understanding that failure is just a step on the path to success, and so I gave up.

It was at this point that I stumbled upon Power University. Honestly, it seemed way too good to be true. In fact, because of the typos (at the time) I saw on the site and the fact that the sales page seemed to be a copy of Charisma University's sales page, I thought the page was a scam. Luckily for me, I was desperate. I was so sick of living in constant stress and fear of my neighbor that I decided to buy PU. And holy sh*t am I happy I did. The growth I've seen since I joined is tremendous. As I'm typing this out it's almost mind boggling to see how far I've managed to come in a little over a year.

Mats after The Power Moves

Since I joined I've learned to see the world through a new lens, the lens that we here call power awareness. With this lens I've been able to improve relationships, stand up to my boss(es) on several occasions, learned to how to give value to the people around me, and just in general learned to enforce boundaries and stand up for myself and what

#2 - May 30, 2023, 7:34 pm Delete Edit Quote

Hi Jack,

I first found TPM when I looked for reviews of Charisma University. I didn't look through anything else on the site though until months later.

After going through CU and realizing it wasn't for me I stumbled back here by accident and decided to join PU.

Needless to say, that was one of the best decisions I ever made.

You can read this review here.

- **Astounding Personal Development**

> No one graduates from Power University without astounding developments.

Read this post here.

@lucio: thank you very much for all the teaching. As you could see, I could find a high quality high value high power mate. Of course I did the work, but the roadmap and the information, I owe it to you. I have upcoming posts about it.

All this to say to doubter that PU and TPM work. Again: this is the best self-development product I've ever came across and I've been studying this for 20 years.

> **Alumnus**: **I could find a high quality high value high power mate**. Of course I did the work, but the roadmap and the information, I owe it to you. I have upcoming posts about it. All this to say to doubter that PU and TPM work. Again: **this is the best self-development product I've ever came across and I've been studying this for 20 years**.
> I improved 2-10 fold (difficult to quantify but way way above baseline) in (lists the areas of improvement)
> **what is happening in my relationship is exactly as predicted in PU**. The phases, the controlling behaviours (both mine and hers), the games, it's exactly as described. **Talk about a reality-based data driven self-**

> **development product**: there you have it.
> So TPM, PU and the forum have **the best ROI in self-development in the World** in my experience.
>
> *PU alumnus*

- **Addictive Learning Experience**

> Thank you very much! I'm hooked on your "Social Power" course, this is just so good!

You can read this one here.

- **Superior to Udemy Courses**

> Last note, Udemy released some courses for free as a COVID-19 special sale. I decided to take "How to speak to anyone & be fearless - in less than 55 min" by Ricardo Mendoza. This course has 59,220 students and has still been able to maintain a 4.2-star rating which I found quite impressive. I also liked his course description: Learn to quickly connect with crowds of strangers, be better on dates or ace that job interview.
>
> Long story short, I got more value from two lessons in Lucio's course than I got from the entire Udemy course. Mendoza's course was great, but it was only great for people who hadn't already taken Lucio's Social Power course and it just happened that I have (albeit I've only completed Module 1).

> I got more value from two lessons in Lucio's course than I got from the entire Udemy course.

You can read that one here.

JOIN POWER UNIVERSITY NOW

- **A New Beginning**

> In general for far too long, and who still faces that vice now and than, your lessons on attention, assertiveness, and dominance have been very helpful indeed. After months of struggle, I am finally seeing results and a light at the end of the tunnel. I know, that if I keep going, I will get the respect and security I desire.

> I am finally seeing results and a light at the end of the tunnel.

You can read this review here.

- **Success in Casting Jobs**

Before the coronavirus outbreak, I booked a role on season two of *Murder in the Family*. There was a scene where most of my acting had to be nonverbal because, in post-production, it was supposed to be narrated over as the introductory scene. I used Lucio's "Body Language of Dominance" to strategically communicate nonverbal information to the audience about the scene as well as what was going on inside of my character's head. When we wrapped up day two of filming, the producer said, "You elevated the character," then turned to a family member I had brought with me and said, "He's a future academy award-winner."

You can see the review here.

- **Entrepreneurial Success**

Hi Lucio,

Your power dynamics course has helped me immensely in multiple business situations as an entrepreneur.
Learning from your course materials, I have managed to build alliances with other entrepreneurs in the same domain, and we are always building each other up.

> (PU) has helped me immensely in multiple business situations as an entrepreneur.

This review is from a question in the private customer-only forum, accessible only to Power University students.

- **Enhanced Daily Effectiveness**

BTW 2: Lucio, your Power University Course and your blog are stellar. Much of what I'm doing now I learned from you. The frame "I may not be able to get you to respect me right now, but someday I will even the score" was key to my willingness to redress these work relationship and also many others of non-work nature.

> Power University and your blog are stellar. Much of what I'm doing now I learned from you.

See it here.

- **Mind-Blowing Content**

Besides the EM course I have dropped one of my routines that wasn't giving me much value to instead implement some reading every morning. I've also been progressing through PU and keep having my mind blown by how good this course is 🤯

> I (…) keep having my mind blown by how good this course is.

You can see it here.

- **Beyond Expectations**

Well thank you again Lucio any tiny glimmers of competence I'm growing come from this site and the amazing resources and community you've created. It's incredible the shift from content to applied content I've seen in the last year. it really is refining soup here.

I am a little surprised that more customers are not beating down your door. I think the core challenge is that this site is so far ahead of the curve. Prospective customers don't know what they don't know.

> This site is far ahead of the curve. Prospective customers don't know what they don't know.

It's here, in the private part of the forum.
And he goes on to explain that it was the same for him when he first stumbled upon a red pill website.

From our Skool community:

Welcome! Introduce Yourself Here

5d (edited)

Hello everyone,

I am ! I am years old, living in originally from . I currently work for a company, working on becoming an entrepreneur.

I have completed Power University, and I can proudly say it has changed my life for the better in every aspect. I am still working on internalizing what I have learned and revisit my notes from time to time. I have also read Ultimate Power and The Social Strategist which I absolutely loved. When I found out about Confidence University, I didn't think twice and signed up, given my experience with PU.

I am very delighted to be here! Great to meet you all :)

> **Alumnus**: I have completed Power University, and I can proudly say it has changed my life for the better in every aspect. I am still working on internalizing what I have learned and revisit my notes from time to time. I have also read Ultimate Power and The Social Strategist which I absolutely loved. When I found out about Confidence University, I didn't think twice and signed up, given my experience with PU.

Power University Discord Reviews

These testimonials were shared on The Power Moves' former Discord server, created by alumni Power Duck and John Freeman after the public forum was discontinued. The community has since transitioned to Skool.

> My plan was to start writing in the forum as soon as I completed 100% of PU to be able to provide as much value as possible and not waste anybody's time on stuff thats already covered by PU.
>
> Due to the change to discord I'd figure I shortly introduce myself. **PU definitively changed my life!**
>
> I basically lived my life by the book „*How to win friends and influence people*" by Dale Carnegie.
>
> I gave and gave and even when nothing came back I gave more for absolutely nothing. I was an altruistic giver and a people pleaser. One of my friends introduced me to sociology and after a bit of research I stumbled across PU. Long story short – **It was an eye opening experience**.
>
> It felt like **learning the ability of the next higher layer of language. As if my vision became enhanced on so many levels.** I slowely started to understand the true meaning of words, sentences and behavior.
>
> **Thanks to PU I now was able to build strong win-win friendships and I feel more and more people start to look up to me.**
>
> I'm still only at ~30 % of the course but for me these learning would've already on it's own **been worth 10x the price I paid.**
> I have already and I will keep on promoting PU to all my friends because in my opinion it is a hidden Diamond.
>
> About myself: **********

Power University Email Reviews

Below are select email testimonials from alumni, highlighting the course's unique value:

- **A Valuable Secret**

S[redacted] 5:07 AM (8 hours ago)
to The

The new login worked and not on private browsing on my iPhone.

For me this course is too valuable to ever let it have search history(that's how I usually browse).
When I log in private browsing, the page stays stuck; it doesn't move me to the power university mate.

Otherwise, it works on my browser when it's not on private mode.

> For me this course is too valuable to ever let it have search history.

Our response: Rest assured, Power University's niche focus ensures you're unlikely to encounter others with this advanced training. Moreover, the course empowers those committed to applying its principles, setting you apart in any competitive environment.

So, yeah… That's your chance:

JOIN POWER UNIVERSITY NOW

- **Groundbreaking Content**

Hi Luciano,

I know you must get this often, but I still wanted to send you a quick feedback after joining the power university.

I found your blog on Google after looking for tips on walking confidently. I was surprised to see how well the content was written and the tips you included which I didn't find mentioned anywhere else.

So I decided to join the power university right away. I was expecting good content, maybe some video analysis here and there, but in the back of my mind I also thought I would mostly read about the things I already knew (had a PUA mentor before, joined other courses, etc). Boy was I wrong.

I didn't even know what I needed to know before I signed up. I only went through one module so far but I can already see what potential this knowledge has to improve my life. Both business and my date life. And it's the first time I'm hearing about most of this stuff, even though I bought dozens of other courses and had a mentor for a year. You really seem to paint us the big picture here and how it all connects like pieces of a puzzle.

The content really is on the next level and my only regret is not coming across your blog sooner and joining your course years ago.

I'm grateful I got the chance to join at such an incredible price, I think the course is worth much, much more.

> It's the first time I'm hearing about most of this stuff, even though I bought dozens of other courses and had a mentor for a year. The course is worth much, much more.

Thank you very much, Lucio! Wow, the guide is extensive. I can't wait to read it.

I also want to thank you for creating the The Power University. It has really been an eye opener for me on so many levels. I'm only 10% in. I especially find the aspect of subtle and hidden power moves totally mind-blowing. I haven't recognized them before, in others and in myself. I have only felt the result of it, within myself; hidden agression and being too nice. And that is just so painful! I am practicing your knowledge in many of my relationships now because I want them to be better. I feel so lucky to have come across your work ❤ Thank you for teaching me the most valuable currency in life.

> Eye-opener (…) the subtle and hidden power moves totally mind-blowing (…) I feel so lucky (…) Thank you for teaching me the most valuable currency in life.

Hello Lucio,

I hope you are doing well. First of all, I am a massive fan of your social power course as I literally check it out everyday, even though I finished it a while ago. It gives me strength and clarity while also being entertaining. It keeps me from going back to my shy/defensive (sometimes aggressive and impulsive) behaviour. What I was curious to find out about you: are you a Game of Thrones fan?

Note: The course has improved significantly since this review, offering even greater value today.

And:

h[redacted] Fri, Oct 1, 3:26 PM

Hello Lucio,

Hope you're keeping well!

I have to say the content you have put together in the power university has been truly eye-opening and life changing for me. I was simply socially oblivious before coming across your course. As a result I have basically sprinted through all the content in a matter of a few weeks! Absolutely awesome job on putting all of the content together!

And:

Lucio,

I just entered the power university, what is now yesterday.

I just wanted to say, I had my reservations before signing up. But, with the intro sessions done and completing module 1 of part 1, I learned more about the power dynamics that have happened in my own relationships than I had... ever...

Which is both awesome and disturbing. I'm glad I found your site - I searched for best books in the manosphere.

And:

Lucio, I meant to stop by to say a big THANK YOU.

I have just completed the entire Power University courses - quite a few months all my self-improvement was dedicated to this and nothing else.

This is a remarkable resource! Some might point out there are rough edges here and there, but I have never ever seen such a comprehensive guide to, well, living really. Nor one I would find so influential.

I am taking a break now to stop, ponder, internalize and course-correct.

> I have never ever seen such a comprehensive
> guide to, well, living really. Nor one I would find so influential.

Power University Negative Reviews

The Power Moves prioritizes substance over flashy marketing, focusing on delivering a high-quality, evidence-based curriculum. We also value transparency by openly sharing both positive and negative feedback.

This alumnus was looking for something shorter:

[image]
Power University is a transformative program that requires effort and commitment to yield results. Change demands action, and we encourage students to engage fully with the material.

We promptly refunded this alumnus, recognizing the course wasn't the right fit for their expectations.

Removed from the program

See the discussion here.

One alumnus described their experience as "the worst" after being removed from the program and refunded.

While we respect their perspective, their strong emotional response underscores the value many find in Power University. The incident also reflects our commitment to maintaining a positive learning environment.

[image]
This feedback confirms our pricing transparency: as Power University's quality has increased significantly, so has its value, justifying price adjustments over time. The course also includes lessons on handling challenging situations, such as managing difficult customers, enhancing its practical applicability.

Independent Author's Endorsement

Alexander, an early Power University student, shares his perspective on influential thought leaders:

Learned Optimism: Summary, Review & Criticism

Lucio Buffalmano · 17 May 2020 · Archived copy · Original

Learned Optimism is a positive psychology book. Martin Seligman, the author, explains the difference between optimists and pessimists is in thought patterns, and he teaches how we can become more optimists or, when the situation demands it, how we can strategically think more like pessimists.

Contents

- Key Insights
- 3 Causes of Rampant Depressions in The West

- Optimism Is The Key Ingredient for Tenacity
- When Pessimism is Good
- A Brief History of Psychology
- Real-Life Applications
- More Wisdom
- Quotes
- Criticism
- PROS
- Review

Key Insights

- Optimists leader longer, healthier, and happier lives
- Optimists achieve more, sell more, win more at sports and win far more political elections
- Optimists and pessimists have distinct explanatory styles around their live's failures and wins
- You can learn to become more of an optimist by learning how to change the way you think (and you can also choose to strategically think more like a pessimist)

About The Author

About the Author: Martin Seligman is an American psychologist and researcher. He is a professor of psychology at the University of Pennsylvania. Seligman has been the president of the American Psychological Association (APA), and he is one of the founders and main proponents of "Positive Psychology". He is also the author of a tell-all biography.

3 Causes of Rampant Depressions in The West

Martin Seligman says that the West is struggling with the highest rates of depression that the world has ever seen.

In this opinion, the root causes are three:

1. **Individualism**: in a society where "I" and personal success matter the most, failing to achieve "success" leads to depression
2. **Collapse of social networks**: personal failures used to be buffered by strong social networks in the past, comprising our families, our nation, our churches, and our communities. But those are disappearing, leaving the individuals lonelier and lonelier
3. **Self-esteem movement**: Roy Baumeister proved that it's high self-esteem that leads to violence, not low self-esteem. Boosting self-esteem without matching skills creates issues, says Seligman

So if boosting self-esteem is a cause of depression and problems, what should one do?

Well, the answer lies in boosting not self-esteem, but optimism.
And that's what "Learned Optimism" is all about: teaching optimism, and how to become more optimisms.

Optimists VS Pessimists: How They Think Differently

Optimists and pessimists think differently along 3 crucial variables:

1. **Time / Permanence:** optimists see loss and rejection as temporary; pessimists see them as permanent
2. **Specificity / Pervasiveness:** optimists see loss and rejection as specific; pessimists see them as universal and as big general rejection to their whole work or personality
3. **Personal / External** optimists see loss and rejection as a consequence of the circumstances; pessimists take the blame on themselves and sees loss or rejection as a rejection of the self

Helplessness: helplessness is the ultimate state of pessimism, and it's the belief that no matter what you do, it will be useless. People in a state of helplessness become apathetic and take no action, *including in situations in which they could change their environment*.

Says Seligman, whom I paraphrase here for brevity:

> The defining characteristic of pessimists is that they tend to believe bad events will last a long time, will undermine everything they do, and are their own fault.
> The optimists think about misfortune in the opposite way. Defeat is just a temporary setback, confined to this one case, and that it's not their fault: Circumstances, bad luck, or other people brought it about.

Measuring Your Optimism Score

Usually, you will have a good feeling whether you're optimist or pessimist.

If not, there are several different methods to find out whether you're an optimist or a pessimist.

Another method, probably more accurate, is to measure yourself over the course of a few days.

You will record your "ABC", such as:

- **Adversity**: what happened
- **Belief**: what you told yourself, how you interpret the event (first hint: they are not facts, just your own, often too negative interpretation)
- **Consequences**: how you felt, what you tell yourself, and what you did

Example:

- **Adversity**: you ate a cookie during your “no-sugar” diet
- **Belief**: you tell yourself “I just blew my diet”, or “I suck”, or “I can’t stick to things”
- **Consequence**: I felt a loser, and I ended up eating even more cookies

The ABC will also help you to know yourself better and to learn to catch your own thoughts, including the fleeting ones, as they appear daily.
This exercise will provide you with the self-awareness necessary for more effectively changing your thought patterns.

Too Optimistic VS Too Pessimistic: What They Mean For You

Can there be such a thing as “too much optimism”?

Yes.

From the quick description above, you can already see that too much optimism, or what Seligman calls “blind optimism”, can be a drag to true growth.
If you always refuse to take the blame, you will never fix your mistakes and you will never grow.

But as we will see later, one can embrace optimism without sacrificing true growth and development.

Too much pessimism, on the other hand, is overall bad for you.
I paraphrase Seligman for brevity:

> Hudiciously employed, mild pessimism has its uses.
> But if we habitually believe that misfortune is our fault, is enduring, and will undermine everything we do, more of it will befall us than if we believe otherwise.
> I am also convinced that if we are in the grip of this view, we will get depressed easily, we will accomplish less than our potential, and we will even get physically sick more often. Pessimistic prophecies are self-fulfilling

In short: mild pessimism deployed strategically can help us grow.
But heavy doses of pessimism spread throughout our lives will only make us sadder, and less effective.

You Can *Choose* To Think More Optimistically or Pessimistically

Habits of thoughts must not be either-or.

You don’t have to necessarily always think like a pessimist, or like an optimist.

If you are generally pessimistic, then you can start adopting the thought patterns of an optimist.
And you can choose to strategically think more like a pessimist when evaluating true risk becomes crucial for intelligent decision-making.

Optimism As Personal Power

Remember that the ultimate state of pessimism is one where you don’t believe any of your actions matter?

Well, when you have that type of mindset, you feel powerless.
On the other hand, when you optimistically think that your actions *do* matter, you feel more in power.

However, you also are more powerful for the simple fact of taking more action.
Because there are events in which you have no control whatsoever. And some in which you have 100% control. But there are a lot of events over which you have a limited amount of control. When you seek to control those variables, your personal power increases, and you exert more influence over your environment.

Says Seligman:

> Many things in life are beyond our control (…) But there is a vast, unclaimed territory of actions over which we can take control—or cede control to others or to fate.
> The way we think about this realm of life can actually diminish or enlarge the control we have over it.

When you think optimistically, you are more likely to influence the world and get what you want, and that's the definition of power.

Optimism Is An Antidote Against Failure, & The Trait of Resilience

How you explain events matters a lot.

It matters because, says Seligman, a failure makes everyone at least momentarily helpless.

But to the optimist, it's a momentary failure, and "tomorrow it's another day".
For the pessimist, the failure lingers, and it prevents them from going forward and trying again.

- **Permanence**: it determines for how long a person stops trying
- **Pervasiveness**: it determines what areas of one's life the failure will affect
- **Personalization**: people who blame themselves will have lower self-esteem, while people who blame external events have a resilient self-esteem in the face of failures

Hope depends on permanence and pervasiveness, and they are the most important dimensions because they determine whether or not you will try again.
Says Seligman:

> Finding temporary and specific causes for misfortune is the art of hope. Finding permanent and universal causes for misfortune is the practice of despair.

Depression, Its Causes: & How to Cure It

Seligman starts with a quick history of depression:

How Depression Was Understood & Cured

Historically, depression was explained in just to ways: psychoanalytic, and biomedical.

The Freudian / psychoanalytic had little evidence and it's been proven wrong.
The biomedical is partly true: some depressions are the consequences of mental imbalances and poor functioning brains and are, to some extent, inherited. The typical cures of drugs and electroconvulsive therapy ("shock treatment") are quick and moderately effective.

The problem with the biomedical explanations is that it generalizes from a small number of hard-core, inherited patients, to the general population of depressed individuals who might not even need any external help or drugs.

Says Seligman:

> The antidepressant drugs are as good an example of our overmedicated society as the use of tranquilizers to bring peace of mind or hallucinogens to see beauty.

Curing Depression Through Learned Optimism

Depression and learned helplessness are very similar, says Seligman.

And, for most people, depression is not a matter of genes, but a consequence of thought patterns.

The two most important ones being:

1. **Learned helplessness**: it's the giving up based on the belief that you have no power to change anything around you. Uncontrollable events, failures, and bad explanatory styles after failures cause learned helplessness
2. **Explanatory styles**: it's the manner in which you habitually explain to yourself why events happen, and it includes the three dimensions we discussed above (time, specificity, personal agency)

Says Seligman:

> A failure or a defeat can teach you that you are now helpless, but learned helplessness will produce only momentary symptoms of depression—unless you have a pessimistic explanatory style. If you do, then failure and defeat can throw you into a full-blown depression. On the other hand, if your explanatory style is optimistic, your depression will be halted.
> (…)
> Learned helplessness becomes full-blown depression when the person who fails is a pessimist.

You can cure helplessness when you show people that their actions matter, and if you teach them to think differently about their failures.
To "inoculate" against learned helplessness, you must teach people their actions can make a difference.

Similarly, you can cure depression by changing your thinking, which is what Aaron Beck did with cognitive behavioral therapy.
Cognitive therapy, says Seligman, cures depression patients by making them more optimistic.
And once they learn to change their own thought patterns, depressive patients also see fewer relapses, because they learn to cure themselves.

Rumination: The Enabler of Depression

Rumination, or mulling over bad events, is an enabler for depression.

If someone has pessimistic explanatory styles but is action-oriented and does not ruminate, he will avoid depression.
It's when bad explanatory styles combine with rumination, that depression sets in.

Here is how the chain of events unfolds:

1. There is a threat or failure
2. You think you are helpless to do anything about it
3. You see the threat's cause as permanent, pervasive, and personal
4. Consequently, you expect to be helpless in the future, and in many situations
5. You get depressed

The more you are inclined to ruminate, the more you repeat this cycle.
Brooding, or thinking how bad things are, often starts this sequence.

Says Seligman:

> Changing either rumination or pessimism helps relieve depression. Changing both helps the most.

Why Women Are More Depressed

Women are twice as likely to be depressed than men are because they tend to act less, and think more about

problems (rumination).

Says Seligman:

> Men tend to act rather than reflect, but women tend to contemplate their depression, mulling it over and over, trying to analyze it and determine its source. Psychologists call this process of obsessive analysis rumination.

Ruminator by itself only means that people mull over bad events.
But a ruminator can be either optimistic, or pessimistic. It's the pessimistic ones that are in trouble.

The 5 Steps of Cognitive Therapy

1. **Learn to recognize the automatic thoughts** popping in your mind when you feel down. These can be automatic phrases or sentences you repeat so often that can go almost unnoticed (and unchallenged)
2. **Learn to dispute the automatic thoughts** by:
    1. **Finding contrary evidence**: learned optimism, contrary to positive thinking, is grounded in reality. So you should look for evidence contrary to your current negative thoughts and conclusions. The good news is that reactions to negative events are most often overreactions, so most of the times you will have facts and data on your side
    2. **Finding Alternative explanation**: most events have many causes. Pessimists latch onto the nastiest of those possible causes, the ones that paint them in the worst possible light and the ones that pain them the most. By looking at *all* the causes, you get both a more realistic picture, and a less pessimistic one. You can -and probably should- also focus on the causes that you can change, so that you can already start thinking about solutions
    3. **Distract yourself**: you learn how to distract yourself from depressing thoughts and avoid rumination. One simple and neat technique, especially good when you need to focus, is to put off. You can learn to control not only what you think, but when you think it.
    4. **Question the depression-sowing assumptions**: "I can't live without love" or "unless everything I do is perfect, I'm a failure." are the type of premises that set you up for depression. Just as you can change your explanatory styles from pessimistic to optimistic, you can also choose a new set of more human premises to live by

Optimism Is The Key Ingredient for Tenacity

Yes, optimists achieve more.

Through a series of studies of insurance salespeople at Metropolitan Life, Seligman found out that that the people who performed best were the optimists.

He also found out using CAVE technique analysis of previous statements, that optimistic sports team in both NBA and baseball bounce back more easily from previous defeats and, ultimately, win more.
The same results held true for swimmers and, importantly, **optimist politicians also win more elections**.

Optimism also intersects with a growth mindset as researched by Carol Dweck.
With a growth mindset, people believe they can learn and improve through hard work.

For more on how optimism helps you succeed in your career, read.

When Pessimism is Good

Alright, we got it:

It's better to be an optimist.

But in the beginning, we also said that sometimes “blind optimism” can stunt your growth, and that sometimes pessimism is either warranted, or help you make better decisions.

Says Seligman:

> Pessimism may support the realism we so often need.
> (…)
> Sometimes we need to cut our losses and invest elsewhere rather than find reasons to hold on.
> And in some situations—the cockpit of an airliner, for example—what’s needed is not an upbeat view but a mercilessly realistic one.

In sum, it’s great to become an optimist, but **it’s best of all to be able to *choose* when to be an optimist and when to be a pessimist**.

So, when should you be a pessimist, and when should you be an optimist?
Seligman says it depends on what you’re trying to accomplish.

Optimism is green, pessimism is red:

Use optimism:

- When the costs of failure are low
  - Making one more
  - Approaching or not approaching someone
- When you need to a stick to a habit, but you failed in a single instance
- In achievement situations such as selling, writing, winning a game or promotion
- When you want to feel better, or are struggling with depression
- If it’s an ongoing issue you can’t fix
- If you want to lead and inspire others

Use pessimism:

- When the costs of failures are high
  - Pilots in the cockpit
  - Tipsy and deciding whether to drive or not
  - Frustrated partner deciding whether to start an affair or not
- You need to plan for a risky or uncertain feature

And, out of emotional intelligence, avoid going too high in optimism when you are comforting or consoling someone (they need to vent first).

A Brief History of Psychology

“Learned Optimism” is a wonderful text for students of psychology as it also provides an overview of the history of psychology.

- **Humans without agency**: Up until the 1960s psychology saw humans as either pushed by internal drives (Freudians), or pulled by external events (Skinner behavioralists and Clark Hull ethologists)
- **1965, the emergence of self-direction**: things began to change in 1965, and four different development helped psychology move beyond Freudian psychoanalysis and Skinner’s behaviorism
  1. **Chomsky and generative language**: Noam Chomsky argued that language and human behavior could originate not from previous reinforcement, but internally. New sentences can be understood and drive new

action without any previous

2. **Jean Piaget and children's development**: Jean Piaget showed that we can study how children develop, and what and how they learn will shape their development
3. **Cognitive Psychology**: with the publication of Ulric Neisser's Cognitive Psychology the world started moving towards the working of the inner mind (the initial analogy was with computers as a model, later criticized by evolutionary psychology, see Miller, 2000)
4. **Behavioral psychology wake up calls**: researchers found out that drives and needs couldn't by themselves explain all animal and human behavior, and started to invoke cognitions -or thoughts- to explain complex behavior

Real-Life Applications

The real-life applications of "Learned Optimism" are life-changing.

- **Learn to switch between optimism and strategic pessimism**

You can decide to think more strategically and focus on the dangers when you need to reach critically important decisions, or think more like an optimist when you need to persevere and/or be happy.

This is a hugely empowering tool to put in your arsenal.

More Wisdom

- **Women are both sadder and happier than men**: being more emotionally labile (Seligman's own words), women experience both higher highs and lower lows
- **Average optimistic scores are OK for normal times**: if you score in the average range, it's OK for normal times. But in crises and hardships, it might not be enough

Quotes

On Freud's theories of depression:

> Freud's speculations were built on very little observation and a very free use of imagination.

On Albert Ellis and his approach to revolutionizing psychology and psychiatry:

> Ellis, invited to speak, proposed some such title as "Masturbate Now" for his presentation. The president of Princeton, usually a man of unflappable fairness, had him disinvited.

On Albert Ellis and the results he got with early cognitive behavior therapy, which back then was revolutionary:

> He would demand that his patients stop thinking wrong and start thinking right. Surprisingly, most of his patients got better. Ellis successfully challenged the hallowed belief that mental illness is an enormously intricate, even mysterious phenomenon.

My Note: Albert Ellis uses REBT, and Ellis himself seemed adamt to stress the differences between the two. Also read "How to Stubbornly Refuse to Make Yourself Miserable About Anything".

On self-development as a self-fulfilling prophecy:

> The belief in self-improvement is a prophecy just as self-fulfilling as the old belief that character could not be changed.

Criticism

I loved “Learned Optimism”, so consider the following more like small issues on an overall seminal book:

1. Academia Power Dynamics (& Seligman Bellicose Prose)

Research should be the tool with which people get closer to the truth.

The ideal scientist should seek not to win, but to find out the truth.
And, potentially, how to apply the findings of that research to improve people’s lives.

Of course, reality is much different.
And the reality is a world where scientists fight for power and fame. Fighting to defend “their own” theories, trying to silence dissenters, and clinging to theories that are being proven false to maintain status and power -and out good old cognitive dissonance-.

From one side, I am grateful Seligman provides us with this account, so that people can open their eyes.
On the other hand, I am saddened Seligman doesn’t always show a higher road.
He says:

> The gauntlet was thrown down to learning theorists the world over.
> Here were two callow graduate students telling the great B. F. Skinner, guru of behaviorism, and all his disciples that they were wrong in their most basic premise. The behaviorists did not blithely surrender.

And then he goes on telling us how the behaviorist fought not for truth, but to prove they were “right”.

And he describes their “counterattack plans”:

> That is where things stood in 1965 when we prepared our counterattack against the behaviorists.
> (…)
> And to drive the behaviorists into full retreat

The description of this internal warfare is unsavory. Seligman would have done better if he had framed his position as “*for* truth”, instead of “*against* these other guys”.

It’s a pity that is not the case, since Seligman himself says:

> I’ve never had much use for the tendency among psychologists to shun criticism.
