Power-aware people have a good sense for disempowering teachers, and we usually refer to them as "patronizing". Feminists even coined a term for it with "mansplaining" (albeit they may misapply it to an actually knowledgeable person simply because he's a man, but let's not digress).

You may still want to stick with them if their knowledge makes it worth it, but you want to end the relationship as

soon as you don't need them anymore.

> **Her**: (tapping her hand on his head) good boy, make mama proud

That's a patronizing attitude, plus a judge power move.

Another common power mover (video here):

> **Him**: If you got air in your brain <— Disempowering frame sickness
> We gotta take you to the emergency room right now <— Disempowering frame of you needing urgent help, and him in charge of 'saving you'

Naive students smile or joke that 'nono, I hope not', and play into the hands of power-craving teachers.
Never do that, just say 'I'm good there though thanks'.

Teachers Keeping You Stuck To Feed Their Ego

Some teachers aren't just not helping on you.

Some teacher are actually harming you because they're *feeding* on you.

So remember this:

People who play the teacher role don't want you to grow.

Being your teachers serves to feed their own ego and feel good about themselves.
If you grow, they don't get to play teacher and feel good anymore.

So they'll always be happy when you have problems, and they see it as a threat when you grow -sometimes they don't even realize this themselves-.
Even their advice tends to be "feel-good advice", "naive self-help advice", or "high-level self-development *without any practical steps*".

Why?
So you never move forward!

Therapy-Playing Teachers

Bad and disempowering teachers love the therapy-style of "support".

The type of therapy that *talks* about problems, but never addresses them.

These teachers will never tell you things like "go do the sh*t" brother because then, you may solve your problems.
Instead, they'd rather *talk* about the problems.

You don't need any of that.

Solutions

Our full course Power University prepares you to handle everything, but just as a quick example:

Imagine you were about to take your drink from the waitress's tray and she rebukes you:

> **You**: (goes to pick up the drink from the tray)
>
> **Waitress**: (loud, dominant) Please wait
>
> **You**: (corrugating your eyebrows) Wow
>
> **Waitress**: When you take the drink from the tray, the balance goes out of whack and all drinks spill over <— Instead of apologizing for her dominant opener she moves into lecturing mode
>
> **You:** (without looking at her) Yeah, no, we keep it balanced <— Power move ⁉️

See the power move?
Anything such as “Sorry I didn’t know that” or “Yeah now I understnad” confirms her teacher’s role over you.
But by refusing to acknowledge the lecture, you refuse to take the “pupil” role.

Mindsets

Generally speaking:

In life it’s best to become an expert and you want to shorten and limit your learner stage as much as possible.

Publicly, even if you’re a pupil and learning, you also want to display some personal power, both in the way you approach the *teachings* and the *teacher*.
You want to keep a high opinion of yourself, knowing that you’re learning know, but you have it in you to become an expert.
And you want to respect the teacher for his knowledge or skills, but you don’t want to look to him as a person just because he’s in a teacher role -you may look up to him, but he must deserve and earn that-.

That’s your way of saying, both publicly and internally: “yes, I’m learning and lower power, but I ain’t no worthless dummy”.

Real-Life Tips

- **Focus on becoming an expert in life**, learn as much as you can, never stop learning, but remember that the end goal is to become a “learning expert”, not an “eternal pupil”
- **Learn while still maintaining & displaying personal power**
  - Critical thinking skills & logic: they limit power of the teacher over you because, in a way, you’re still assessing his worth as a teacher based on the *content* of his teaching -rather, than, say his charisma-.
  - Pose questions: to publicly display your critical thinking skills and your drive to learn, rather than, say’ Pend time with the teacher you look up to”
  - Assess the teacher’s character: which is a duty of any empowered man as either a disciple or a learner
- **Make mentors or work sponsors feel like invaluable teachers**: *especially* if they are helpful.
  You don’t want to disempower helpful teachers and/or people who can do a lot of good for you. Instead, accept your learner’s role, and credit them with part of your successes. That way, they feel good and are happy to give more and help you more, and you both develop win-win friends and alliances, which is good for both.
- **Put *teachings* above *teacher*** unless the person is truly a role model -or else you risk a mindless cult member-
- **Play it Machiavellian with disempowering teachers**: or they’ll sap your confidence and self-esteem. To be Machiavellian: make them feel like you’re close and respect them, but never be close and drop them as soon as you learned all there is to learn
- **Reject gurus that overplay their hand as “teachers”**, they tend to be charlatans who are playing the charisma game and heavily disempower their followers (exceptions may apply and it’s fairer to say “look with suspicion at” rather than “reject”. But we went fro the shorter format just to hopefully wake up more folks who follow for the guru game)
- **Make sure you *can* teach, before you teach**. Starting from knowledge and expertise, but also:
  - Make sure people want to learn from you, otherwise you’re just throwing your “teacher’s weight” around, annoying people, and destroying social capital

The 4 Stages Of TPM's Transformation

Lucio Buffalmano · 30 December 2022 · Archived copy · Original

Your self-empowerment follows 4 predictable stages.

And while each step is better than the previous, your self-empowerment is only a total success once you reach the last stage.

1: naive, clueless, and loser; 2. starting to understand the game; 3. capable to play and win (skilled & high status). 4. Transcending and soaring higher (power rather than status, preference for win-win and no patience for takers and lose-wins)

Contents

- ⍰ Level 1: Unaware & Incompetent (Dove)
- Level 2: Aware & Incompetent
- Level 3: Power Skills – Applying The Game of Power
- ⍰ Level 4: Eagle – Transcending The Game
- Notes on The Stages

Intro

Some recent events in the forum prompted me to publish this article as fast as possible.

Namely, there have been several power moves from a few TPM forum members.
And TPM is *not* a place for pulling uncalled-for power moves on others.

TPM has been saying this since our inception:

Self-empowerment entails learning about power moves, manipulation, games, and Machiavellian thinking for

effective life strategies.

However, that's not the end goal.
The end goal is NOT to be a better manipulator as a default approach to life (with other manipulators and in some specific circumstances maybe, but NOT as a default approach to life).

If that's your goal, you don't belong here.

The ultimate goal of self-empowerment is to know how to play the game, and play it *whenever it's needed*.
But to develop higher trust circles and relationships that *do not need* power moves, manipulations, and games.
And, generally, to approach the world while seeking and preferring win-win and straight talk.

The first step is in the mindsets, and in the goals you have for yourself.
You cannot develop those circles and relationships unless *you* first think, behave, prefer, want, and admire game-free people, exchanges, relationships, and circles.

In this article, we will learn how to complete that self-empowerment process until you reach the ultimate and enlightened stage of "eagle-dom".

⍰ Level 1: Unaware & Incompetent (Dove)

Naive people are lonely and trusting lambs unaware wolves even exist
This is the stage of unawareness and incompetence.

In manosphere terminology, you may call it "blue pill".

Unawareness pairs with incompetence.

At the lowest level of competence, it's life ineffectiveness.
An inability to gain any status, respect, or find a woman.

At the lowest level, this is the "lamb stage".
But without knowing one is a lamb, and without knowing wolves exist.

A further issue is that **naive and blind people *invite* abuse and loss**.
As the Italian proverb says "it's the opportunity that makes the man a thief". And when it's too easy to take from

you, even good people can be tempted.

It's Not "Good"

A common misunderstanding is to think that everyone at this level is "good".

Well, yes, some "blind" people are indeed "too good".

But not all: "naive" or "blind" doesn't necessarily make one "good".
Power-unaware folks can be envious, self-loathing, and angry with the world.

It's just that they don't even realize why they're losing.

They don't even know there's a game.

Almost Everyone Is *Partially* Unaware

There are different degrees of unawareness and incompetence, of course.

However, few people are aware and competent in all the foundation power-related components.

Most people have at least some important gaps in social dynamics, manipulation, social strategies, etc.

Who's Here

Here's an idea of who's here.

- **Oblivious to the game of power**: the majority of people reside here, at different levels.
  Some categories:
  - Submissive: *hopes* people will treat him well and suffers when they don't. He feels the *effects* of the game of power, but somehow never considered that he's losing *because* of the game of power.
    He fails to grasp that beyond the saying "people will treat you how you will let them treat you" lays the game of power that is the answer to many of his woes
  - Passive: "goes along" with the system thinking that's what "good law-abiding citizens do". Of course that ensures he stays *at the bottom* of that system.
    Can get an OK of even "good" life in rich and socialist countries if he learns an in-demand skill, but he'll never come close to his true potential (and he'll do quite badly in poorer and more disorganized countries).
  - Semi-blind, is aware in some realms of life, but has blind spots in others.
    It's uncommon since awareness tends to carry over in any area of life, but it can happen in those who haven't learned more systematically.
    For example, my father had a sense for social power dynamics and status among men, but zero to pick up on manipulation and judge power dynamics
- **Asperger's spectrum**: they're also unaware, but while the "simply unaware" can "wake up" by themselves and actively seek information -often even catching up and surpassing the "naturals" very quickly-, guys on the spectrum may need someone to awaken them and, lacking the natural social intuition, need to learn more systematically
- **Heavy mental limitation**: only a tiny minority belongs here because the game of power is evolutionarily programmed, and probably not even highly linked to IQ.
  Example: I dated a very *un*-bright woman, but she still applied basic techniques on how to be the prize, refraining from chasing too much, seeking better information from more experienced girlfriends, etc. etc. And while she had no interest or grasp for any higher-complexity topics, she always perked up when I mentioned they were playing games
- **"Too good for this world"**: late Italian writer Ignazio Silone said that if one is "good", it's good. But if one is "good, good, good", three times, then he's stupid.

> When I first read it, I thought it was genius. It's indeed somewhat hard to distinguish stupidity from "being too good".
> But the main difference is that the "too good for this world" assumes the best in everyone, trusts others too much, and fails to realize that while this world has endless beauty and plenty of good people, life is *also* competition for scarce resources and competition for scarce high-value people to associate with

Level 2: Aware & Incompetent

Unluckily, "seeing" isn't as simple as lifting an eye patch
At this stage, you start "seeing" the power dynamics.

In manosphere parlance, it's the "red pill".

And it's a huge change.

Also read:

- Power Intelligence
- Machiavellis at the top
- How to Be Machiavellian

Risk: Depressively Cynical

Some get gloomy and depressed.

You see turkeys and manipulators everywhere.
And, if you're a beginner, you barely see any eagles.

Because your frame of reference is so negative, you doubt everyone, even the good people.

You suddenly see all the manipulations and games, present and past.
And damn: everyone's playing it, and everyone *played it* against you.

The world sucks!

You think you're the only good one on the planet.

In truth, the issue is that:

1. **You're coming from the naive stage where it was just too easy to take advantage of you**: and as per basic laws of power dynamics, when it's too easy to take advantage of someone, even normal people will -and even some good ones-. It's simply a question of "too low barriers" so, in a way, in your reality, yes, you were surrounded by takers -albeit it was largely your fault-.
2. **You don't yet know how to deal with others**, and while many relationships can be "straightened out" into acceptable or even good relationships, you don't yet know how
3. **You bundle together small-time everyday games with actual sociopaths**: you're still a beginner, after all, so you can't yet tell which from which and everyone seems like a red-level power move to you.
   Plus, when you're unable to check power moves and enforce boundaries, you also can't assess people by the uber-important way they respond to your assertiveness. Because while the good people will respect, the truly bent ones will increase their aggression or pretend to accept it, and increase their manipulation

This is the "overly cynical phase".

It's understandable and, *within certain limits*, even healthy to experience it.

Some people stay stuck here because they tell themselves, "it's all rotten and disgusting anyway, what's the point". They think that to win, you need to be an asshole.

Of course, it's not true that "it's all rotten".
But to find out the gold, you gotta come down from that holier than though self-lie and get your hands dirty -for a while-.

Also read:

- Enlightened cynicism

The Positives

On the plus side, with a healthier approach you:

- **Start playing the game**. Even without winning, now you're in the arena. And it feels good
- **Get some early wins** thanks to TPM and PU's superior firepower on your side
- **Excited** about the new possibilities and what you can do.

Early wins and excitement also create momentum for the next level…

Level 3: Power Skills – Applying The Game of Power

You don't even need to win big or often: just *being* in the game is empowering
This is where personal power starts.

Seeing by itself does little for you.
And, without skills, seeing alone may even be harmful.

But with the skills, you finally start playing the game, and:

1. **You start *winning* more** and more often. You get more respect and consideration, maybe more dates or a more submissive and admiring partner, and you're finally considered "promotion material" at work.
   You marvel at your power and your growing abilities to get things done, gain status, earn respect
2. **You avoid lose-wins** because you check power moves, better vet business partners, negotiate harder, avoid takers, cover your ass, etc. etc.
3. **You start gaining some win-loses**, and you may think that's cool, that you're winning. Or that you're getting your payback on life

You may not *always* win, of course.
But now you're a proper player in the game.

And that, by itself, is empowering.
You can even feel good in some losses because you start getting empowering mindsets.
It's less about you, less about feeding your ego.
You start internalizing that it's a number game. And that, given enough chances, you can find a way.

With wins and better mindsets, your confidence soars.

The combination of higher confidence and higher competence creates a positively self-reinforcing cycle.

There are some risks though:

⍰ Risk 1: Forgets the end goal, turns into a manipulator

Some people get so lost in the game of power they forget what they were in it for.

You learn manipulation and start over-using manipulation.
But **overdoing games, manipulation and power moves is inherently low quality**.

Unless you also develop your character, you win more, but you struggle with higher-quality men and women.
Even the ones who are at your same level of personal value, they still keep you at arm's length.

> You want to learn the game, not get lost *in* the game.
>
> *Lucio Buffalmano*

Remember the end game: achieving goals & win-win

The healthy approach is to seek power *in order to achieve a goal*.

When power becomes *the* end goal, you turn into an asshole and dickhead.

If you stay stuck at the second level, *at best*, you're just becoming a manipulator yourself.

Yes, you can still be (relatively) successful spending a life manipulating, scheming, and even conning and taking advantage of others.
But you tend to lose in quality of life.

And that's the best-case scenario.

If you lose sight that the end game is win-win, you end up with a string of lose-wins, win-loses and, as well, a lot of lose-lose.

Chances are you ruin your relationships.
And you won't earn any great people in your life -or, if they do, they'll only be there until they need you and leave once you once they don't-.

High-quality people have no space for assholes.

There are many ways to take the game of power too far:

- **Overplaying with good people –gets you branded as an asshole**-.
  Great people are for win-win, not for power games.
  When you overplay the game with power-aware but good people they will brand you "not good enough for them" -and they'd be right-.
- **Power moves when you're in the wrong -get you branded as a slimy manipulator with a thin-skin-**.
  Owning and apologizing when in the wrong is how high-quality men behave.
  Gaslighting and word-salading is how manipulators behave -and it's the most annoying thing you can do with an eagle-.
- **Playing *too* hard the game of power -get you branded a dangerous sociopath who can't do win-win and teamwork-**.
  In groups, team assignments, or at work you're also supposed to be a team player. When you make it *too* obvious that you're *only* out for power and for yourself, you can easily get ostracized and kicked out.
  Remember: balance. You can win while also sharing the spoils.
  And the name of the game where both competition and teamwork are at play is *subtlety*.
- **Overplaying in petty situations -make you a low-level turkey-**.
  If you overplay the game for petty and inconsequential stuff, you're *both* low power, and a turkey.
- **Overplaying *obvious* power moves -a magnifier of low-IQ turkey-ness-**.
  It sub-communicates low (social) intelligence and makes your turkey-ness more visible to anyone, even folks with low power-awareness
- **Bad and prolonged win-loses -make you an abuser**-.

> When your win-loses over-extend in intensity and time, you have turned into an abuser. And, often, you also get a toxic relationship for yourself (not exactly a win, is it)

It's (sadly) funny that some people learn power dynamics to defend against assholes, and then they stop at this stage and *become* one.

Risk 2: Stuck with turkeys, you miss the eagles

We have this saying on TPM:

> **You can't fly with the eagles when you're busy scratching with the rukeys**
>
> *TPM Proverb*

It's an important reminder because it's easy to get dragged down if you're surrounded by turkeys.

So scratch back whenever you need, get back to scratching any time life demands it… But keep your eyes up. Eventually, you want to soar back up.

> **Whoever fights monsters should see to it that in the process he does not become a monster.**
>
> *– Nietsche*

Level 3.2. – Life Winner

As you grow in competence, you win and achieve more and more.

Not just lower-levels technical wins, but you achieve bigger goals.
And you become a "life winner".

Level 4: Eagle – Transcending The Game

All game-playing turkeys look so beneath you when you look at them from the eagle's vantage point
Let us be clear to avoid naive self-help:

You rarely stop the game of power *completely*.

Level 3 *includes* also level 2 and level 1.
And you also stay high-power and high-warmth, keep a strategic approach to life, generally behave high power, and of course, you defend and attack back whenever needed.

And you also rarely *completely* stop manipulation and games.

HOWEVER…

The final goal is to transcend the game of power.
Especially to transcend the manipulative and game-playing aspects.

Here's how:

- **Establish great relationships free of games**. You develop a few great relationships where you can be more of yourself.
  Eagles flying with other eagles.
  You can also do this because "your true self" IS naturally high power at this point. So just by being yourself, you still gain status, attraction, and all that good stuff.
- **Self-sufficiency**. As you grow in power, experience, and wins, you also don't need nearly as much from others - or even from the world-
- **Abundance mentality**, where you trust yourself and the process to the point of not caring of losing single battles
- **Antifragile ego where losses don't bother you**. So you're not reacting back because you need it to feel good about yourself
- **"Full belly effect"**. The more you win… The less you need more and new wins. This doesn't apply to some "eternally hungry men", but it applies to many others
- **"Add value, or bye" approach**. Since you don't strictly need anything, you become naturally ruthless with your approach. It's either people add value and can do win-win… Or you don't need them. And don't need to play games with them

Also read:

- **Enlightened win-win**

Get Rid Of Your Own "Inner Turkey". Become A Straight Talking, Honorable Man

Level 1 & 2 are more about the external world.

But level 3 may require some more "inner self-development".

To reach this stage you may need some introspection, self-awareness, a growth mindset, and an antifragile ego.

In a now unfortunately removed video, I shared this:

> **Lucio**: (I was subconsciously manipulating my ex-girlfriend. The goal was to lower her self-esteem and her mate value self-assessment. The goal was to make it easier for me to control her)

The second part of Nietzsche's famous quote becomes more relevant here:

> And if you gaze long enough into an abyss, the abyss will gaze back into you
>
> – *Nietsche*

Yep, that abyss staring back at you is saying: you're also a manipulator.
In the sense that you scheme to get what you want: you are. We all are.

And that's OK… As long as you keep a balance.
And *as long you and CAN be straight and ARE straight with the good, deserving, and important people in your life*.
These last two are *necessary* for good self-development.

You may need to look deep into yourself
Be it for personality, culture, or learning from our family, some of us have ingrained in us some power moves or annoying games we don't even realize we have (social climbing, teacher frames, uncalled-for one-upping, etc. etc.).
Or that we don't even realize are power moves.
So we may go around acting like turkeys without even realizing we are.

I know well because I had some of those nasty tendencies, and still have some.
In the countryside where I live that continues into adulthood: neighbors "joking" about bald heads, "alpha male" posturers trying to put other men down and, in my case, also a gossiping, backstabbing manipulator too close for comfort.

I carried those behaviors for way too long.

And I've also seen them in several people that I'd generally consider "good people".
So, no, it's not always a question of a bent personality. In many cases, it is possible to learn and get rid of our own sneakiness.

You have to do that inner work.
Because those ingrained nasty habits are the ballast that keeps you from soaring.

4.2. Won At Life Stage: Contentment, Chilling, Charity

That "won" in the past tense is crucial.

You enter the last stage when you go from "life winner" to "won at life".

It's not just in the list of successes, but it's a switch in mindsets that also changes how you see the world.

In that sense, this stage is magic.
Since you feel like an absolute winner, you're content and naturally become a better person.

No more jealousies and frenemies because you don't have any competitors.
No more need to react to anything, because you've *already* won.

You can instead focus on helping others, charity, and making the world a better place.

Power is still there, it just exudes in a different way.
You're naturally chill, you move slower, you're unreactive.

And you have inner poise and a different type of confidence. The confidence of the man who's "arrived".

And you even become comfortable with death.

Notes on The Stages

The stages aren't perfectly linear, and they overlap.

For example, as you become aware, you also often start *practicing* the skills -stage 1 and 2 together-.

Some people also naturally start stage 3 because to them it's a natural consequence of their personality.
They may have strong ethics and morals and/or grew up in households of straight-talking parents.
TPM helps them with the knowledge and skills, but they don't need TPM to remind them of "being an eagle".

And of course, some people will never make it to the eagle stage because they're inveterate assholes or are born sociopaths.

However, many people can and will make it all the way.
Or, at least, have the potential to -it's a lifetime endeavor, after all-.
We encourage you to be that eagle.
And those are the people we want on TPM.

Job Interview Power Dynamics: The Advanced Playbook for Gaining Leverage & Salary

Lucio Buffalmano · 2 January 2023 · Archived copy · Original

Most job interview guides recycle the same generic tips: “research the company,” “dress well,” “ask questions.” That’s not what makes or breaks your career.

Real interviews are battles of perception, hidden agendas, and subtle power dynamics.
If you don’t see those games, you risk being undervalued—or quietly filtered out.

In this guide, you’ll learn proven interview techniques and advanced strategies for:

- Spotting the interviewer’s hidden agenda
- Navigating covert power plays in panels and traps
- Positioning yourself as a high-value hire who gets offers

We’ve helped countless men master these dynamics. Here’s how you can do the same.

Intro: 10 Truths of Job Hunting

Everyone has walked out of an interview thinking they nailed it and then the phone doesn't ring.

The good news is that with a strong grasp of the realities of the market, strong mindsets and the same techniques you learn here for navigating power dynamics you can be an interview star.
And even when things don't bounce your way you can learn how to systematically use the experience to become stronger and smash the next one.

Job Hunting overall is its own world and many great books and courses cover the basics.
To give you simple actionable tips this article focuses on what is going to make you strong once you've landed the interview. It also looks at the interview as an interaction where some common power dynamics may play out.

The 10 realities of the Recruitment Process

You have to understand a few facts about the process to be an effective job hunter.

Some may seem a little harsh or controversial until you understand the game a bit better so read on.

Similar dynamics exist in any market (see "sexual market place" and "social exchange") and most can be made to work for you.

Here are the basic realities:

1. **HR and Recruiters are there to protect the company's best interest, not yours**. Don't let this information push you into a competitive or confrontational frame: you want to be friednly and likable. But never forget that successful interviewing is based on power dynamics, and you want to gain leverage for your negotiation because you're the only one who's on your own corner
2. **It's a market: you're the supply, the recruiters are the demand and all supply/demand power dynamics apply** to the job market and to your interviews.
   It's an even "colder" market than social or sexual exchanges because emotions and feelings play a smaller role.
   When businesses "say that they care" it can be a manipulation to shortchange you.
   In general: if good people like you are scarce, you got power. If you're a dime in a dozen, they have power.
   Strategize accordingly: don't play too hard to get if people like you are abundant and let them pay through their nose if you're hot and rare commodity
3. **Most applicants are lower power** because the frame is that you need a job and because there are several other applicants.
   - Job board applicants are lowest power, especially when starting out your career.
   - Introductions or randomly met are power-neutral.
     So whenever you can, seek an intro and play it like you "don't really need a job" and "are kinda happy where you are BUT wouldn't mind to chat and see what they've got".
   - Head-hunted interviewees are higher power because recruiters came to you first and the frame is that you don't need a job.
4. **People hire people they like** and one of the main criteria for linking is for you to be both high-power/high-warmth and for them to feel like you're like 'them'
   - People like positive people. Nobody wants to be in the cubicle next to the person who is depressed or grumpy every Monday.
5. **It is what's in it FOR THEM first, LATER what's in it for you**. Interviewers may ask questions that *sound* like they are trying to help you develop in your career. Normally these are 'trap' questions and they dangerously switch your focus from what you can do for them.
   Instead, focus on delivering and displaying what you can do for them first, and THEN, when they want you, when they invested time, and when you have leverage, you can focus on fielding your (high) demands (always

tying them back to why it's good for them to give it to you).

6. **Some jobs are already allocated to somebody's connection** and you are there to make it look good. In this era of "forced equality" regulations sometimes they're even made up or piloted to hit a "diversity quota". It means that you can't always tell the good interviews from the wastes of your time. Hence: generate as many interviews as possible.
7. **Your weaknesses increase the power of the recruiters, and vice versa**. Such as if you're starting out in the field or can't/won't relocate this increases the power differential between employer (the demand) and the candidate (the supply). But if you check all their boxes your power increases.
8. **Technical skills are a given and you need something on top**. i.e. tech skills can disqualify you but they won't get you over the line without the 'trust factor' -unless you're the only candidate or SO much better than anyone else. Again, back to the "supply and demand" fundamental-
9. **Unique Selling Points can make you stand out** of the general 'wash' of candidates but ONLY if the interviewer cares about them. So only play on them if the interviewer values them and/or is interested
10. **Every interviewer has power of veto and panel interviews are the worst –** panel interviews are the worst in terms of power dynamics and, often, the worst bet in terms of your time/effort unless it's a single interview yes/no round. You better be power-aware to handle these.

How does it look in terms of power dynamics? Like you're being grilled, and must band over backward to appease them all, that's how

6 Mindsets for Successful Job Hunting

Mindsets are the foundations of your behavior and precede the techniques:

1. **I'm an outstanding professional**
2. **I bring lots of value** to any organization I join
3. **They're lucky to get me** (not out of any conceit or empty self-talk, but as a natural consequence of #1 and #2)
4. **I need to find out if they're good so we can have a solid win-win** Given the value I bring, I'll need to find out if it's a good place for me so we can have a good win-win

And at an even higher level of personal self-development:

5. Adopt a learner mindset

The key reason people are so scared of the job-hunt is 'ego protection'.

Such as, they take the rejections personally and each rejection damages their self-worth.
Here are some of key mindsets that can help turn the job-hunt from a bad run at the Casino to a survivable process that will make you ever stronger.

The learner mindset is one the best 'anti-fragile' mindsets there is and will give you resilience and stamina through the job-hunt.

If you apply boundless curiosity and try and use every interview to get a bit better the ride improves and you may even enjoy the scenery.
To start becoming a learner, start seeing every interview as an experiment. You prepare, do your best, analyze the results, and then tweak and improve..

6. Self-amuse and love the game

This is a cliché so take it with a grain of salt and see if it works for you -but it works for me-.

Self-amusement and love for the game is all about taking things less seriously.
Interviewing, like many activities in life, is a poker game and it can be fun.

You can also use this attitude for the time-wasters.
For example, you can adopt that observer stance where it moves from 'I can't believe they asked me that!' to 'wow those guys were real clowns thank god I won't be working for them'.
If you can do that, then you will easily walk off the bad interviews and rejections and shout 'next' with drive and enthusiasm.

7. If it's tough, accept and embrace the suck

Here's the truth:

If you are currently lower job market value it's not going to be a walk in the park, with sirens trying to lure you in from all directions.
And that's a euphemism to say that it's going to be challenging.

No online guide is going to change that and any guru selling easy solutions is doing what all scammers do: selling pipe dreams and preying on the weak.

But that "weak" is only in the mindset.
People who can accept whatever situation they're in while keeping an emotional even keel are the strongest.

So a much better approach is to accept the realities of whatever challenging situation you're in as simply part of life.
And being cool with that initial "suck" period is the best starting mental point.
Once you can accept how things are and be cool with that, then you can focus on strategies and techniques *while remaining confident and high self-esteem*, despite any setback that may occur. That's already half the battle.

A good strategy for less-in-demand job seekers is to target smaller organizations, non-profits, or reframe your situation to go for what you truly love instead of salary or status.

Read more here:

- **Newbie job search power dynamics**

Finally, this is an in-between a mindset, an approach to interviewing:

Bonus: Prioritize Based on Your #1 Priority and Time-box

My Father had some sound advice – 'follow the money'.

Money is an excellent proxy for the value an organization is placing on the role.
So my prioritization is simple: **if best money and job are not a hot mess, then accept the highest offer**.
Using the technique of 'working back from the end' then I prioritize applications to industries and specializations that I know pay best.

You may have different criteria, e.g. work-life balance.
Decide what's your #1 priority and then plan the work and work the plan.

6 Pro-Level Interviewing Tips

And now let's get to some advanced power tips:

1. Keep answers concise then ask them if that has answered it for them

You are sneakily cementing those frames that you HAVE answered and they ARE comfortable.

2. End with a catchphrase

What I do is to summarize my answer, and then end with a catchphrase such as "nobody s above the team". "You can't communicate too much", etc. That way you give the 'honour the process' vibe HR loves while keeping it real and giving solid anchor points that your audience will remember after you walk out.

3. Reframe challenges as collaborations

If the interviewer challenges your answer use collaborative re-framing.
Such as: agree, bridge from their language to the answer you gave, and then tell them they are wonderful again (restore rapport).

For example, imagine you thought they were all about the team and you kept using 'we' language.
Then they harpoon you with:

> **Interviewer**: 'Yes but what did you do on the project?'
> **You**: '**You're absolutely right**, that was a tight project and everyone had to be accountable. I created a pitch deck that gained us 3 new key clients that quarter. And that helped the team targets and secured us more backing from Exec to move on with the next part of the work. What I've been hearing today is that your teams perform strongly while supporting each other and that's exactly how I like to work'.

4. Use indirect questioning or statements to gather intelligence about their issues and pain points.

If you ask 'and how would that affect the resourcing' in one question and 'what are the key cost controls in another' it sounds like you are asking intelligent questions about the work.

But you are actually checking for vague answers that tell you they may not have budget approval for all the work which could affect YOUR job security.

The statement approach instead is to assume 'of course you guys will have all the budget approvals / funding in place'. If they look uneasy or start looking at each other – there's your answer.

5. Use insider lingo

Every industry and profession has its own language of insider words that cut through with people. Add them to your working vocabulary and casually drop a few of those keywords in the interview.

Even if you are fresher in the field you can sound like an expert. And if you sound like an expert the real experts will talk to you and you will develop through osmosis.
If you do the homework you will 'become' even quicker.

6. Speak with confidence

Evidence suggests that a powerful speech style is rated more favorably (competent and employable) irrespective of content.

- **Speak with power and project confidence**

> Dominant Conversations: 10 Ways to Speak With Confidence

6. Tailor your interview to the interviewer's hidden agenda

The interviewer likely will have agendas beyond the interview process such as:

- I need the guy to solve X problem
- Not quite sure who I need in this role – let's see who's out there
- I have no idea about this piece of work – let's ask around and get a bit of free consulting
- I want somebody who won't rock the boat
- I need somebody calm who will steady the team under fire
- I don't want anyone too strong who might be a threat

Your job is to **sniff out those agendas and play to them**.
Read more below on how to handle free consulting.

Bullsh|t-Proofing The "Typical Advice"

There are plenty of good interview checklists a quick google away.

So what's content filler for bloggers and what's gold IRL?

Here it is vetted for you:

1. **Allow plenty of time for interviews** – TRUE –
   It allows you to be organised, relaxed and remind yourself that you're vetting them as hard as they're vetting you.

2. **Research the company** – NOT TRUE –
   every recruiter in the world seems to have very little idea what the hirer is really looking for and want you to spend hours (unpaid!) memorizing the company website. This has helped me precisely zero percent of the time. Instead, **know the industry trends**. What has helped me is dropping in a recent industry trend or happening with a couple of the 'insider words' as a quick 'throw-away' line – keep it punchy. You should know what the company does but at a helicopter level. Ie.: '*what I've heard is you guys are number 1 in hotel resorts and your big growth is expected in south America. If you could share your thoughts on that would be amazing!*'
   Notice the power move: it's "what I've *heard*", not "whatve I've *read*": you're an insider.

3. **Dress to impress** – ONLY IF IT WORKS FOR YOU –
   interviews are a formal occasion and HR likes pomp and ceremony as much as the Vatican! However since Work From Home most companies are smart casual. So as long as you stay within "normal" ranges and adapt to the company, it's best to dress for yourself as a default. If suiting up makes you feel 10 feet tall – go for it.

4. **Have a strong beginning and end**. – TRUE –
   Prepare a good story of who you are and why you're a high-value worker. Always frame your previous employers as if *they* won you, as in "they managed to hire me", and they were happy they did.
   Then summarise and re-pitch at the end because that leaves an impression of a 'makes things happen' kind of person. Otherwise, the interview can trail off and that leaves an overall impression of 'yeah they were OK – maybe look at a few more'.

Very few bosses have time for spoon-feeding these days so you want to sound action-oriented. They need people who can get things done, get along with the zoo and not scare the horses. And tell them you really liked their focus on the team or whatever they pushed in the interview and that you are keen to work for them. Everybody likes people who like them.

5. **Ask questions** – YES, IF you ask good questions –
   This is where you really can stand out. If you can work out what the problems always are in business and apply this to the interview it sells the message you 'get the business'. E.g. they say they are expanding rapidly in South America. Usual pain points would be: organising lots of hiring remotely, government approvals delaying branch or product launches, cash-flow because you are spending capital before sales ramp up.

6. **Agree with the interviewers** – YES –
   Even better if you can circle back to a point they made earlier while answering another question. That shows you really listened to them and everyone wants to be listened to.

7. **Let the interviewers do most of the talking**. – YES –
   Let them talk as much as they want. You d be amazed how often they want 80% of the airtime to make points to each other. If you are at the interview they already believe you can do the job it's all about the feelsc

8. **Prepare a list of references** – NOT TRUE –
   Your network is your net-worth, you heard that, right?
   So, don't give it away to just about anyone! Protect it and cherish and only share it for jobs you really want, and at the *final* stage of the recruitment process.
   Also, it's not good to give everything like an open book and it's much better to let the interviewer also ask and work for it: they will appreciate you more for it

The top results tend to be "OK" but not great advice because they're simple, politically correct advice for the masses

Fake Interviews: Handling The “Free Consult Traps”

Also, be aware of Machiavellian ploys to get free information.

Sometimes businesses set up fake interviews with the goal of assessing the current job market, get intel on the competition, or even solve their problems and get free consulting.

However, you won’t always be able to 100% tell apart the fake assessment from the real ones, so you gotta play the game, display your skills, without giving too much away.

So here’s how you navigate them:

- **Fake interview for free consulting**
- Fake assessment task for free consulting

And see more here on sociopaths’ interview strategies.

Interview Formats: Strategies

Let’s now look for specific interview formats you are likely to find out there in the jungle.

The Phone Screen: Avoid Being Binned

Most likely conducted by internal HR or a recruiter. Your main job here is to avoid being binned.

The screener will have been given a likely vague or generic JD, a must-have and a deal breaker from the hiring manager.
They may also throw in some default HR question such as why are you looking to move on? HR drinks deeply of the company Koolaid, so:

- Display extra warmth and variation in your voice to make up for the lack of visual cues
- Use stronger words like exciting and amazing
- Show that you are a team player

The remote interview: make sure they see your hands

There are a few basics worth reminding on:

1. Put a soft light in front of you
2. Get on a test zoom and play with lighting and camera angle it does make a difference
3. Be far enough from the camera for them to see your hand gestures – waving “hello” at the start, listing points, reaching out to them as you agree on something they said, etc.

LinkedIn has a video interview question feature or you can practice in front of a Zoom test call.

The panel interview: de-prioritize it or you’re jumping through 10 people’s hoops

The tricky part is that you have more chances of being vetoed.
Plus if they can’t agree they will just veto you as a group.

Unless you know you have a friend on panel I would strongly advise you to prioritize one or two interviewer formats over panel.

To succeed you have to be all things to all people.
In one answer you are action man/woman, in the next you are team den mother. **Provide a buffet and let them take away what they want**.

Aptitude tests: don’t waste too much of your unpaid time on it

Aptitude tests are an extra hoop for you to jump through.

And the more hoops you jump, the more power they gain over you.
That dynamic than can easily translate into salary negotiations where you’ll be fighting an uphill battle.

So everything else being equal prioritize interviews without aptitude tests and case studies.
This of course assumes you have multiple interviews lined up. If it is your one and only interview then jump through with a smile and tell them how much you enjoyed their shiny hoops.

Post Interview Strategies

After the interview there are two schools of thought:

1. **Shotgun approach is to end your involvement the moment you walk out**, move on quickly, and focus on the next interview(s)
2. **Sniper approach is to go "all out" and follow up**, E.g. write thank you emails, re-state your pitch, add more ideas on how you can solve their challenges, follow-up with more details on what you discussed, etc.

Many job-hunting resources advise you to go for the sniper approach and send a thank you email restating your pitch and if you can answer one of their questions/problems in more depth.

However, keep in mind the conflict of interest: many guides are written by HR and recruiters and they *want* people who chase and over-invest because it's better *for them*.

But is it better *for you*?

After trying this a few different times and ways, I personally am less than convinced.
This is because of the unknown agendas in the room. If a potential boss has decided you don't 'fit the team' whatever that is in her perception no cleverness or effort on your part is likely to turn the decision.

I would say that if you have decided it is an amazing job and it's the best pay STILL **only invest in a follow-up pitch if you have only one decision-maker to persuade**.
The more variables the more uncertain the outcomes. The more uncertainty the less likely your investment pays off.

So who can you totally control?
Yourself!

Don't over-invest: it's never a good idea to disempower yourself -OK, *almost* never-.

Similar dynamics happen in all social exchanges, and chasing is as bad for jobs as it is for dating and friendships
Instead, grab a quick knowledge snack from the job-interview buffet table.
What was their focus? What is their business trying to do? Is there a question that seems to come up often that you feel you need a better answer prepped? Google a couple of terms they used you had never heard. Jot it down in

your notes in the cloud. You do have notes right?

If you don't get the job: ask for feedback and thank them

No, the feedback won't be honest.

Unless you have an inside contact you are likely to never know how they reached their decisions.

If you ask for feedback everybody gives the palatable excuse to avoid any blowback on the interviewers or the organization.

Also, don't treat interviewers as a truly rational and effective way of hiring the best candidate.
Interviewing is an interruption to people's busy day jobs. They often go for gut feelings and emotions and back-rationalize later to sound logical (a process called "sense making" in psychology).
And often they make even more obvious blunders. For example, I have been often given feedback that I wasn't strong enough in answering a question that they never asked me. Either an excuse (e.g. because somebody's friend got the job) or equally likely they mixed me up with somebody else.

You ask for feedback to stay top of mind and to establish a relationship

So, OK feedback is not always helpful.

And it's also NOT an opportunity to change their minds.

Don't chase the rejection or you look desperate. Any feedback from HR or the Recruiter is not a chance to overturn the decision, that ship's sailed.

But you **ask for feedback to develop a good relationship** that may be useful in the future.

It is a chance to remind them you were a great candidate and you would love to work for them and will reach out once in a while.
Recruiters often move around and establishing a relationship will open other doors.

How to Pitch Two Offers Against Each Other

If you have more than one offer: congratulation.

You're in the power seat.

However, remember: high-power is great, but high-power asshole is not. And it burns bridges (and goes against the foundational strategies of making friends and allies).

So see here how the good social strategist pitches two employers against each other:

- **Pitching 2 offers against each other**
- Leveraging a new offer to re-negotiate your salary

See Power University for more.

Summary

The job market is always changing and is in reality a *collection* of job markets.

You are only one variable in the hiring process. Often why you do or do not get the job is not about your ability to perform the job from a technical point of view.

Whatever the interview format, how you want it to roll is as a back-and-forth conversation and have the interviewers to *positively* imagine them working alongside you.

On the day you want the interview to become a free-flowing conversation where you learn more about the role and

frame yourself as already one of their teammates.

Interviewing is very subjective from both sides of the process and types of interviews and how best to win will vary by job and industry. People hire people. This article has focused on the human side of interviews as human nature applies everywhere.

There are of course exceptions to every rule but the suggested tactics here form a firm foundation. Follow the tips here, tweak for your own style and you will be ahead of the pack and well on your way to that dream job.

15 Minutes to a Better Interview: Summary & Review

Lucio Buffalmano · 4 January 2023 · Archived copy · Original

In *15 Minutes to a Better Interview* company recruiter Russell Tuckerton teaches readers how to interview effectively.

TPM Power Note: *People's* competence wins interviews, not job competence
Job interviews are about convincing a higher-power gatekeeper to select you over competitors. This means signaling high value, managing status dynamics to make the interviewer feel respected and in charge ('power protecting'), but without losing too much power. This book covers the basics—but not the deeper power dynamics. See our **guide to interviews ↗**.

About the Author:
Russell Tuckerton, a pen name for the author, says that he has been interviewing as a hiring manager for decades in both big corporations (Microsoft) and startups.
Tuckerton says it's best to learn how to interview from hiring managers because they are the ones who make the final decisions -as opposed to HR personnel who just do the first screening-.

Contents

- 6 Basic rules of interviewing:
- Trap questions to be aware of:
- Power dynamics tips:
- PROS
- CONS
- Review

6 Basic rules of interviewing:

1. **Dress up**
2. **If it's not your top priority, hide it and stay enthusiastic**
3. Keep your answer short and concise: don't ramble. You'd bore the interview and come across as unstructured
4. **Focus on WIIFT** (what's in it for them)
5. **Only asks for perks after they want you** (and remain focused on WIIFT)
6. **Avoid volunteering personal information** (children, dogs, etc.)

Trap questions to be aware of:

- **Tell me how you handle conflict** (or: how you handled a recent conflict)

don't say you don't have conflicts because it might mean you're too passive or submissive, or don't understand social dynamics.

Conflict is natural and it's about how you handle it, rather than living without it. Show instead that you know conflict is normal and that you can handle them as a mature adult focused on results

- **Why should we hire you**:

don't say you're better than the competition.
You don't know that, and you come across as a social climber who disrespects others

- **Tell us about a failure of yours**:

do have a failure example and show lessons learned from it, together with how you improved yourself.
Avoiding answering shows that you're not a learner and that you might have something to hide

Power dynamics tips:

- **Lean in from time to time**: it shows interests
- **Treat a question asked twice as a warning**: it means you didn't reply well, or at all, the first time out, and you're annoying the interviewer
- **If you're at a booth fair, don't let them see you talk to the competitors**: you want to give the impression you were there just for them. You can go back to talk to the competitors hours later maybe, but don't look like a "CV dropper", nobody wants people who do spam approaches

PROS

- **Solid advice, without fluff**

If you've been into people skills for a while and are not a beginner, they may not be hundreds of "wow moments". However, that was never the goal of this book. *What I Wish Every Job Candidate Knew* is not meant to break new ground, it's meant to give you the foundational tools to interview well.

And it's exactly what it does: it provides a good overview of many of the most sensible information about good interviewing.
And it's all delivered without fluff and space-fillers.

CONS

Not much and nothing important, but I disagreed on this one:

- **Should you *never* talk about personal stuff?**

The author says never to about personal stuff, not even if they have pictures of family on their desk.

I only partially agree.

I think this depends on the type and character of the interviewer. If he goes personal, then it's an opportunity for you to increase your bond and connection.
If he remains professional, then I agree, avoid going personal or it might feel like you are being nosy and unprofessional -plus, it's a power mistake since people feel like you're acting above your status-.

Review

What I Wish Every Job Candidate Knew is a good book on how to perform well at a job interview.

I read "15 Minutes to a Better Interview" as part of my research fr a new lesson on Power University on, you guessed it, interviewing effectively.

The book is short, very short.

But it's "short and sweet", since it focuses on the basics that matter the most -your 80%0-.
Also, it adds plenty of examples to those foundational principles with both good and bad replies. And that helps internalize the material to from knowledge to actual skills.

The author also says that **memorizing hundreds of answers to all possible questions is useless**.
What you need to do instead is to understand the rationale behind each question, and what the interviewer is looking for.

Once you understand what they are looking for, which usually is just a handful of skills and character traits, **many questions are simply different tests for that same trait**, and you can answer all of them similarly.

I agree with him.

So thumbs up.

How to Show Respect, Maintain Rapport, & Influence People

Lucio Buffalmano · 9 January 2023 · Archived copy · Original

Showing respect is more than politeness. It's one of the fastest ways to *get* respect, build strong relationships, and increase your social effectiveness.

At The Power Moves, we study respect through the lens of interpersonal power dynamics. From that work, we codified a practical framework we call power protecting™.
In plain terms, power protecting is about **showing respect in ways that preserve other people's sense of power, dignity, and status**—so they feel safe, respected, and more willing to cooperate, connect, or be influenced.

In this article, you'll learn **clear, practical ways to show respect**—without being weak or submissive—while strengthening relationships and increasing your influence with high-value people.

Respecting others means keeping them empowered, signaling you're a real friend, ally, or partner

Contents

- Intro: Give & Get Respect
- How to Show Respect
  - 1. Avoid Over-Dominance
  - 2. Persuade With Strategic Respect
  - 3. Persuade By Respecting Their Intelligence (No "Teacher's Frames")
  - 4. Task & Request With A Minimum Baseline Respect
  - 5. Reject Others Tactfully
  - 6. Justify It: Provide A Reason For Your Requests Or Exceptions
  - 7. Assume Good Intentions
  - 8. Save Their Face
  - 9. Jump Through The Issue: High-Power Power protecting

Intro: Give & Get Respect

In our framework, power protecting™ means:

> Approaches, strategies, and techniques that protect other people's power, status, dignity, reputation, and face—so interactions stay respectful, cooperative, and productive.

While we codified and systematized power protecting, the behavior itself is deeply human and widely observable in effective social interactions:

- **Make and keep friends and allies**: because people prefer those who show respect. It also makes fewer enemies
- **Ingratiate superiors**: leaders and bosses dislike subordinates who disempower them, and promote those who empower them (Gordon, 1996)
- **Better leadership with intrinsic motivation**, especially from the top performers who can get any job

Finally, power protecting is also a cornerstone of an honorable approach to life:

Give respect to demand respect

How to Show Respect

A heartfelt apology after you disempowered others is a foundational aspect of showing respect. Notice both the body language and the facial expression

There are a million ways to show respect and to power protect.

Fortunately, we don't need to list them *all*.
And the high-level guidance is both simple and effective:

Treat others as you want to be treated.

Or:

1. Don't be a jerk
2. Offer minimum baseline of respect and consideration

The only drawback with this high-level guidance is that it requires knowing what's the optimum balance between jerk behavior and overly deferential behavior -ie, it requires some power awareness-.

So let's go more in detail:

1. Avoid Over-Dominance

For example:

- **Over physical dominance**: touching too much, backslapping, barging your way through, etc.
- **Over-teasing**
- **Demeaning "jokes" & all various covert power moves**
- **Rudeness/disrespect**

⍰Example: Macron Disrespects Trump, Starts A War

Macron wanted to dominate Trump.

But when you disrespect others, guess what happens?

You go into ‘negative social capital’. They resent you, and want revenge to get even.

Trump took revenge on Macron on two separate occasions:

Also see ‘how to disrespect someone‘.

1.2. Avoid Gratuitous Power Moves

Principle:

A**ny gratuitous power move on friends or allies is a major red flag** of a lose-win character.

Also avoid when first meeting someone, and in non-competitive contexts.

Just two examples of gratuitous power moves:

- **Showing up late**
- **Making them come to you** when you could meet halfway
- **Power Hoarding**
  - Credit withholding: not giving proper credit
  - Apologies withholding: not apologizing when an apology is called for

And avoid manipulation as well:

- **Social exchange manipulations** such as saying “I did just for you” just to increase other people’s debt of gratitude

2. Persuade With Strategic Respect

General rule:

⚖ **The quicker and more abrupt the change of mind, the greater the disempowerment**

Influence is about power.
And accepting influence means accepting someone else superiority -be it superior intelligence, expertise, problem-solving skills, or whatever-.

The influenced loses power against you -and loses social status, if it was public-.

Generally speaking, the higher status they are compared to you, the more they resist your influence.

So respectful communication is crucial to persuade higher-status individuals, like your boss.

Research shows that to persuade upwards:

- **Save face** (Jenkins & Dragojevic, 2013)
- **Be polite** (Golish, 2009)
- **Use positive framing** (Levine & Boster, 2001)

⍰ Use Positive ‘Good to Great’ Frames

For example:

> **Empowering**:
> Our employees are generally happy, so we’re good. <— ⍰⍰ You’re doing a good job
>
> I looked at competitors and survey data <— ⍰⍰ I’m no lone genius, I have data

> and these proposals may <— ⍰⍰ I'm no ultimate teacher
>
> further improve loyalty. <— Uplifting "good to great" frame, rather than "sh*t to great".
> (…)
> If it sounds potentially interesting, <— ⍰⍰ You're the decision-maker
> I'm happy to discuss implementation and take the lead

3. Persuade By Respecting Their Intelligence (No "Teacher's Frames")

Principle:

⚖ **The more you act like a teacher, the more others lose power as pupils**

Giving advice also disempowers others.

Reviewing advise response theory and accompanying research the *Routledge Handbook on Persuasion* says that politeness is crucial to giving advice.

Respectful advice is more persuasive (MacGeorge et al., 2013). Better yet, make others *want* to ask your opinion, because solicited advice is viewed as more useful than unsolicited advice (Paik, 2020).

⍰ Instead of "This Is The Truth", Say "It Was Helpful To Me"

> **Me**: (shares a video lambasting the nutritionist he followed) He changed the way I look at nutrition, so sharing it with you in case it may be equally helpful

Note:

- "***He* changed"**: It's not me teaching, but an expert third party
- **"It was *helpful* to me"** is a caring, "want to give you value" frame

- **"Sharing with you *in case it may*"** he's the final judge, and I'm cool with his decision
- **"Feel free to ignore"** grants him the freedom to not even watch the video

The disempowering approach would be "The guy you're following is crap, listen to me that I know better".

Albeit there are exceptional situations for anything, that's a bad approach for friends, equals, and other high-power men.

Learn more in:

- Growth mindset power dynamics
- **Teacher and pupil frames**

> Teacher-Pupil Frames: Why (Some) Teachers Are Takers

4. Task & Request With A Minimum Baseline Respect

Tasks and requests are all about power.

Principle:

⚖ **Tasking assumes higher power, and the more rude the tasking, the bigger the disempowerment**

So overly direct and dominant requests are disrespectful and can create resentment unless you power-protect the receiver.

Just imagine someone tells you:

> **Colleague**: Hey! <— Doesn't even dignify with your name
>
> I need the PBS report <— No how are you or social balm
>
> send it to me now please <— No asking if you can, no telling you he will "owe you one", and no justification for high-priority execution

How would you feel?

Most people with any social awareness -or with a spine, for that matter-, would think "*Who the f*ck does he think he is to come at me like that*"?.

Some common formats from least to most power-protecting include:

- *Can you please…*
- *Could you… … Please?*
- *Do you mind…*
- *Do you think you can…*
- *Would it be possible…*
- *Would it bother you to…*

And pro tip from politeness theory (Brown & Levinson, 1987):

- *"You're so good at this, could you help with…"* <— Requests while building them up

But most of all:

⍰⍰ **Calibrate to your status**: be more respectful when you're lower power to increase your persuasiveness (Golish & Olson, 2000)

Avoid *over*-protection for tasks: it's low power

As for everything: balance and calibration.

Exaggerated respect can feel like weakness, and undermine leadership.
If you're higher rank or if it's urgent, be more direct.

Some examples of over-doing it:

- *"It would be really awesome if you could"* <— feels manipulative guilt-tripping
- *"If you could do X, it would make me so happy"* <— weak judge-power move

4.2. Add Diminitutives to Increase Compliance

For example:

- **Negotiation (nibbling)**: *We're getting there, just a small thing: if you can add X, we got a deal*
- **Everyday Life**: *Hey, hi, Can you please move a bit so that we can both fit*

Time constraints are also persuasion power moves.

For example:

Example from the author in PU

For the alumni, pay attention to *how* I say it.

5. Reject Others Tactfully

Requests are all about social exchanges and power.

Principle:

⚖ The more curt the rejection, the bigger the disempowerment

When people feel their request was 'fair' a denial makes them feel diminished and slighted. *Especially* in romantic and friendship contexts.
Hence, to maintain social capital and good relationships you must reject with tact.

We have several articles on strategic rejections:

- How to say no
- How to say no to a date
- How to reject his sexual advances and still get a relationship

This also applies to *favors*.
As Blau notes in his seminal *Exchange and Power in Social Life*, the initial give', which may be an offer or the first step towards friendships, can turn into cordiality or hostility because the offer cannot be refused without being insulting.

P.S.:
"Tactfully" is not the same as "nicely".
You can be strong and firm, but still respectful.

6. Justify It: Provide A Reason For Your Requests Or Exceptions

From a famous example in psychology research:

> **Experimenter**: *Excuse me, I have five pages, may I use the machine because I have to make some copies*

It worked 93% of the time despite the uncompelling reason.
Almost as effective as the legitimate "because I'm in a rush" -which had 94% compliance rate-.

Cialdini attributed the persuasive power to the trigger word "because".

In truth, that worked because "because" is the keyword bridge to power protecting.
Indeed the study also says that "the female experimenter had a higher rate of compliance than the male experimenter".
And that's because letting a woman go first is associated with "gallantry" (empowering), rather than "submissiveness" (disempowering).

Providing a reason works because:

1. **You expend effort**, intrinsically power-protecting because higher effort is lower dominance
2. **You show consideration** for others by providing a rationale for your task or request
3. Bonus only, you provide an actual and logical reason

Providing a rationale works particularly well with demanding tasks or exception-seeking because people feel 'less suckers' for accepting your large demand.

Use The 'But It's Up To You' Format When You Have Little Power
Adding an out like "but you are free to refuse" significantly boosts persuasion.
In one study, this simple line increased donations from 10% to 47.5%, and doubled the average amount.

7. Assume Good Intentions

Some ways of assuming good intentions is to assume:

- **Mistake**, rather than a deliberate power move

- **Misunderstanding**, rather than one party fully to blame
- "***You didn't mean it that bad way***" type of justification

Assuming good intentions also prevents defensiveness and escalations and helps people to own up and apologize, further mending the relationship.

Pretend it's a mistake if convenient but take note
Granting the benefit of the doubt doesn't mean you necessarily believe in people's good faith. Red flags are significant even when "by mistake".

Reverse of the Law: Disempowering Assumption

Whether the negative assumptions are direct or sub-communicated, they sub-communicate you think lowly of their character.

Take this example of a customer who mistakenly purchased Seduction University more than once:

J [redacted] Nov 27, 2022, 5:01 PM (2 days ago)
to connect

Dear Sir/Madam

I have just subscribed to seduction university at a cost of US$197.00.

However I have received 3 deductions from my account as follows:

Ref 2526-5071 $67.00
Ref 2624-3872 $67.00
Ref 1295-4166 $197.00

Please could you refund the two payments of $67.00 taken in error, and ensure no further extra payments are deducted.

I am extremely worried about these extra sums being taken from my account and would appreciate a quick response.

> **Customer**: I am extremely worried about these extra sums being taken from my account

Think about the sub-communicates.
If he's *extremely* worried, it sub-communicates that the business is untrustworthy. And the wording of "extra sums being taken" sub-communicates that it was the business's fault, rather than *his* mistake.
(Also, generally avoid that bitch talk).

8. Save Their Face

Saving face was popularized by Andrew Carnegie as a social skill technique.

It's an important subset of power-protecting, and also part of respecting others.

To save face means to "help avoid embarrassment" and "avoid making people feel bad".

Relieve Them From Blame & Guilt

- **Normalize it**: say that whatever “bad thing” happened, it happens frequently, or happens to many people
- **Relate**: for example, share when something similar happened to you
- **Jump through it**: if someone shares a weakness or failure, quickly say “sorry to hear”, and then move on
- **Swap “you” for impersonal pronouns** such as “people”, “when *one* does… ” or “it can happen that”
- **Blame-shift** to external circumstances, third parties, or simply “life” and “questions of odds”

And finally, albeit you want to be careful with this:

- ⚠ **Take (part of) the blame**. But if you’re *not* to blame, only do with honorable men or some may take advantage of it
  Eg.:
- *“Maybe I didn’t get something, but…”*
- *“Maybe it’s me, but…”*
- *“I’m new so still learning the ropes… “*

If the blame is indeed yours, of course, own it.

Sen an example from the forum while I was preparing this article:

> **Me**: (replies in another thread, sub-communicating the quoted post was off-topic, but takes the blame for the off-topic) my bad for starting the off-topic there

9. Jump *Through* The Issue: High-Power Power protecting

This is where advanced strategizing shines through.

When you jump *through* the issue you are both high-power, goal-oriented AND power-protecting.

It works great because **jumping through the issue and into the solution automatically power-protects by shifting the focus *away* from the mistake** (that's "thread-minimizing" in frame control terms).
All the while, you're being goal-oriented, high-power, and leader-like.

For example, imagine you're a lawyer and catch a mistake by the notary that would significantly increase your client's costs.
This is how you jump through the issue:

> **Her**: (forgets a loophole to save taxes, a major mistake)
> **You**: Hi, thank you for the quote and fast turnaround, I appreciate that. I think we can apply the XWZ ruling to it. Can we do that please, I want to help my client lower the taxes

You don't even *mention* the mistake and focus on how to move forward.

The power protection is also sub-communicated in the:

- **Attitude**: goal-driven, concerned about bottom-line results
- **Matter-of fact communication**: it is what it is, neutrally, without making a fuss about anything
- **Customer-centric approach shifts the focus from mistake, to end goal**: the "*that'll help my client lower the taxes*". You're not doing this out of concern for "mistakes", but *for your customer*
- **Brevity / voice**: if in text, short and to the point. If on a call, with a flat tonality

And:

- **Power protection elements**:
  - Warmth: "Thank you for", and "appreciate"
  - Standard power protection: The "I think" and "that'll help my customer" are the power-protection bits here

Higher power, faster, more direct, more professional… And even more respectful.

To balance giving respect with *getting* respect, see **Power University**

The Total Money Makeover: Essential for Debtors, Limiting for Power Players

Lucio Buffalmano · 14 January 2023 · Archived copy · Original

The Total Money Makeover is a personal finance book in which author Davey Ramsey presents his program for freeing yourself from debt and money worries by changing your mindsets and behaviors. Ramsey recommends paying your debts, avoiding new debt, paying with cash only, saving for emergencies, and investing.

TPM Note: This is a beginner-level book.
Ambitious men seeking leverage may prefer more advanced strategies. *Money Master the Game* is a step up in investment, and *The Millionaire Fastlane* provides a better overview for ambitious and smart men.

Overview

- Pay all your debts
- Avoid taking up new debt
- Save up & invest

Notes

About the Author:
Dave Ramsey is an American radio show host and a personal finance advisor. He wants to help people never to struggle again to make ends meet. And he does a good job of sharing the very basics of personal finance.

“The Total Money Makeover” has plenty of examples, but I will share here the main practical takeaways.

There Is No Financial Security Today

Dave Ramsey says that most of us have a few financial worries but, overall, feel rather secure.

But that security is illusory, he says.

For example:

Would you still be financially secure if you lost your job?

Probably that just one little thing would change everything, right?

Which, Ramsey says, it means you're one little step away from financial disaster.

The Solution: Decide to Change Now

What's the solution, then?

It's to change right now.
And to put yourself on course to real financial security.

You Must Limit Your Debt

Dave Ramsey doesn't like debt.

And that may be a euphemism.

He says that debt has become such a part of our culture that simply seems normal to be in debt.

The author is especially caustic towards credit card debt, which gives us the illusion of wealth but only creates future problems.

Here is Dave Ramsey's plan to get out of debt and into financial safety:

Debt-Free 7 Steps Plan

This is what Ramsey proposes as his 7 steps plan for financial freedom:

#1. Save 1k For Your Emergency Fund

Stop thinking of emergencies as rare events.

Emergencies are part of life, and there's a 78% chance we will all experience major negative life events.

The first step then is to set aside $1.000 for emergency situations.
This first 1k is for emergencies only and you cannot touch it.

#2. Pay Off All Debt With Debt Snowball

List all your debt from smallest to biggest.

And start paying off the smaller ones. As you successfully erase debt, it will inspire you to tackle the bigger ones.

#3. Grow Your Emergency Fund To Cover Your Life Expenses For 3 to 6 Months

The third step is to grow your emergency fund to cover all your living expenses for a period of at least 3 to 6 months.

This way, you can survive a job lay off until you find something new.

#4. Invest 15% of Your Income

Ramsey says that for a comfortable retirement, you need to invest 15% of your income.

The author recommends mutual funds.

My Note:
Many other wealth books don't recommend mutual funds for the high fees. Also check out: MONEY: master the game

#5. Save For Your Children's College To Help Them Avoid Debt

If you have children, Ramsey recommends you send them to school debt free.

How to do it?

Well, plenty of ways:

- With a scholarship
- Saving up with an Education Savings Account which is tax-free
- Choose cheaper universities
- Avoid college altogether

While the last one seems like a cop-out, the author cites Emotional Intelligence to say that only 15% of success is because of training and education.

Thus, he argues, going into debt for college might not be worth it.

#6. Pay Off Your Biggest Debt (Mortgage)

The biggest debt is often the mortgage, and that's what you should aim to pay off ASAP.

It starts from the moment you take the mortgage: make it as short as possible.

The author says that borrowing against your home to take advantage of lower interest rates is a terrible idea.

#7. Build Wealth & Give

Now you can start focusing on building wealth, and enjoy the pleasure of giving and helping others.

Finally: Have Fun

The Total Money Makeover doesn't want you to live like Scrooge McDuck but to enjoy life as well.

As long as you can spend without going into debt and can afford… Do enjoy your disposable income.

And to maximize your disposable income the author recommends you take advice from the best CPAs, tax advisers and lawyers, which is the same suggestion Kyosaky shares in his popular *Rich Dad Poor Dad*.

Real-Life Applications

- **Write Down All Your Expenses**

This little exercise can be very helpful for many personalities that tend to spend easily and sign up for random services.
It can provide a good overview to quickly reduce their expenses.

- **Stick to Your Budget** (if you end up at the of the month with little money)

Set aside money in advance for your expenditure and stick to it to avoid "accidental over-spending".
Again, it's unnecessary for people living an abundant life and/or naturally careful around money. But for "carefree spenders" it's very useful.

CONS

- **No Debt Agenda (Pushed With Untrue, Unfounded, and Nonsense Examples)**

The author says we shouldn't impinge on debt.
And that's true IF debt is used to finance poor choices that come at a heavy future cost.

But it's not true if debt is taken up to, say, increase personal skills or fund an income-generating project.

To lend credibility to his "no-debt agenda" he says that most wealthy people stay away from debt and some of the best companies are completely debt-free.

Well "most" and "some" mean completely nothing.
Some of the best companies take up debt, too. And some wealthy individuals used debt as leverage to get even richer.
Or they take up debt simply because it can make financial sense.

Ramsey falls for induction reasoning fallacy here -and driven by his own personal bias-.

- **It's Quite Basic** (just like most other personal finance books)

Most personal finance books are simple and quite basic.

Whether you get *The Richest Man in Babylon*, *I Will Teach You How To Be Rich*, or *The Total Money Makeover*, the advice is the same, and it's simple and basic.

- **Investing In Mutual Funds May Be Poor Advice**

I am not a big believer in managed mutual funds, and many other financial advisors feel the same.
It's not much personal opinion either, it's just that managed funds tend to have higher fees, so you're better off with lower-fees ETFs.

PROS

- **Touches Upon Mindsets & Habits**

Ramsey emphasizes change based on mindsets and habits above knowledge.
And I liked the approach to making the changes. Instead of changing everything at once, for example, you should tackle things one by one to concentrate your efforts and start getting some early wins.

- **Covers all the basics**

While we mention "basic" as a con, *The Total Money Makeover* is great for all of those who aren't yet aware of

these basics -and who can gain by following the suggestions-.

- **Great Mindsets Around Money and "Good Life"**

"The Total Money Makeover" has a positive mindset that reminded me a bit of the Ant and the Grasshopper fable. Basically, it's about avoiding flashy expenses and tackling your future problems today. So that you can enjoy a better life later on.

Review

The Total Money Makeover is a great resource for beginners who are in debt and have no clue about money management.

Let's say this is your first step into money management.
It's a first step that is more aimed at "eliminating the negatives" and "getting you out of the hole".
For that though, ***The Total Money Makeover*** **may be one of the best first steps for beginners** because Dave Ramsey is an honest and straight-talking guy.

However, once you get the basics, if you want to take it to the next level, you absolutely need to switch to some other resources and teachers.
Also because, after the basics, the advice on "avoiding debt at all costs" can actually harm a more advanced life strategist.

The Book of Joy: Summary & Review

Lucio Buffalmano · 18 January 2023 · Archived copy · Original

The Book Of Joy shares some of the conversations and insights on joy and suffering as emerged from a 7-day meeting between the Dalai Lama and Desmond Tutu, two of the world's most influential spiritual leaders.

Contents

- Bullet Summary
- Full Summary
  - Suffering Is Part of Life
  - Your Mental State Determines What You Do With Suffering
  - Practice Patience When You Can't Act
  - Sadness Can Motivate Us
  - Avoid Loneliness With Trust, Connection, And An Open Heart
  - Accept Death to Experience Joy
  - The Eight Pillars of Joy
- CONS
- PROS
- Review

Bullet Summary

- Suffering is inevitable and that's OK
- We can always choose what things mean to us and how we react to our circumstances
- There are many ways in which we can help cultivate joy in our lives

Full Summary

About the Authors:

Lhamo Thondup is the 14th and current Dalai Lama. Dalai Lamas are Tibetan Buddhist monks and are considered among the most important and prominent leaders of the Buddhist religion.

Desmond Tutu is a South African Anglican cleric, formerly Archbishop of Cape Town. He is also known for his work as an anti-apartheid and human rights activist.

Suffering Is Part of Life

Suffering is an integral part of life.

And sometimes that suffering is inherently connected to joy.
Think of birth-giving. Or even think of Nelson Mandela who tempered his spirit in his long years in prison.

Your Mental State Determines What You Do With Suffering

How you deal with suffering, fear, and frustration depends heavily on your state of mind.

And **you can train your state of mind to better respond to life's most difficult circumstances**.

If your mental state is weak, suffering will be drawn out for much longer.

But if you enjoy a healthy mental state, you will be much better poised to recover sooner.

And in some situations, you can find joy in spite of the issues that you are facing.

Frustration and fear particularly are not reality but facets of the mind. And you don't have to let them control your life.

Practice Patience When You Can't Act

Some situations you can resolve with action.

But there are some situations you have little control over.

A canceled flight, or a traffic jam can be very frustrating because they seem to leave you with little option but raging.

However, you can control reself to remain calm.

And better yet, those are perfect situations to meditate, pray, enjoy time alone or practice a virtue like patience.

Sadness Can Motivate Us

The authors say that sadness is not necessarily "bad".

Saddness can help people connect better.
Sad people are more willing to share, for example.

And sadness can be turned into motivation for change, to plan your life, make new goals, and start achieving new and ambitious dreams.

Avoid Loneliness With Trust, Connection, And An Open Heart

Focusing too heavily on ourselves leads to poor health.

Indeed people who used most often pronouns such as "I", "me" and "mine" were much more likely to be victims of heart attacks.

The authors say that the antidote to loneliness is to trust others and open yourself up.

Accept Death to Experience Joy

The authors say that the acceptance of death is central to experiencing joy.

Also read:

- **How to leverage death for a full live**

> The Power of Accepting & Leveraging Death to Live Fully

The Eight Pillars of Joy

The authors list eight pillars to experience joy:

1. **Perspective**: realize that no moment will last forever and learn to savor the now
2. **Humility**: if you feel you're better than others you can't experience joy
3. **Humor**: being able to smile in difficult times can provide you with that break that you need to change direction
4. **Acceptance**: accept life has difficult moments

5. **Forgiveness**: you need to be able to forgive to move on and enjoy life
6. **Gratitude**: you will see gratitude in almost all work on happiness and mental healthy
7. **Compassionate concern**: giving and helping others makes us joyful

CONS

Don’t Like the Idea of Being Grateful for What Others Don’t Have

I was surprised to read that.

It seems neither a great insight, nor a very charitable thought.

To begin with, it feels like using others as a “social peg” to step on them.
For example, when someone tells me I should be grateful for running water because not everyone has it… I don’t feel too good about it.
So what, I should feel good *thanks to other people’s misfortune?*

I know the proponents of this approach don’t necessarily mean it that way, but that’s how it feels like to me.

Also, it’s not a universal mindset.

What if you’re dirt poor, or if you’re dead last in something?
Then you don’t have anyone to compare yourself favorably against.
Hence, this is not an antifragile mindset.

PROS

Powerful Message of Love and Acceptance

The deep message of love that emanates from this encounter is a beacon of hope and acceptance to the world.

Review

The Book of Joy contains some interesting reflections and some very good mindsets on happiness against life's misfortune.

But I must be frank: *The Book of Joy* hasn't resonated with me as deeply as I hoped.

If you consider it a Positive Psychology text, then in all honesty there is better.

If you're the type of person who's looking for research, facts, and applicable wisdom, you can also find better. That's not to say there is none in this book, there are, but not as much as in some other available books on happiness.

However, The Book of Joy isn't bad.

Maybe most of all and even more than the content, we can appreciate the message of the meeting in itself, and even more than the message coming *out* of this meeting.

A Buddhist leader meets a Christian leader. And they have a wonderful time together discussing how to empower people.

Now that's a good message.

Gaslighting & Crazymaking: How Manipulators Twist Your Reality

Lucio Buffalmano · 22 January 2023 · Archived copy · Original

Gaslighting isn't just lying—it's **psychological warfare**.

In this guide we reveal how gaslighters and **"crazy-makers"** covertly twist your reality, make you doubt yourself, and keep you under their control.

As the **#1 site on power dynamics**, we'll break down 13 covert tactics of gaslighting and crazymaking, explain the psychology behind them, and show you how to **recognize (and stop) gaslighters before they harm you.**

Contents

  - Components of Crazymaking
  - Crazymaking Process & Gaslighting Stages
  - Crazymaking signs
- Gaslight FAQs
  - 1. Is there a strategic use for gaslighting?
  - 2. Can gaslighters improve?
  - 3. Can I improve my own gaslighting?

- 4. Is gaslighting always conscious and premeditated?
- 5. Can I win against a gaslighter?

What's Gaslighting

We define gaslighting as:

> Gaslighting refers to psychological manipulation that leads the victim to lose sight of what's true, relevant, fair, or in his best interest.

From our unique perspective, **gaslighting is the ultimate frame control battle** to frame what's true and not true. The psychopathic gaslighter's goal is to constantly frame reality to their advantage, while the narcissistic gaslighter also adds their needs for self-enhancement.
The crazymaker's goal instead is to frame reality as outside of your grasp.

Gaslighting is associated with interpersonal power dynamics, emotional manipulation, control, and toxic relationships.
It's mostly about verbal manipulation, communication patterns, and frame control techniques.

At the most extreme level, gaslighting's confusion and reality distortion go beyond a specific topic or issue and engulf the victim's whole sense of reality (crazy-making).

Misunderstanding Around Gaslighting

Gaslighting has become a buzzword.

And, like many buzzwords, it's often misused.
Specifically, it's often misused as synonymous with "manipulation".

But although gaslighting includes many forms of manipulations, it's a specific and discrete pattern of behavior with specific goals and effects.

Gaslighter Psychology

Gaslighting's ultimate goal is power.

The gaslighter is a power-hungry individual and, often, is high dark-triad traits.

Power is most often in the form of control, "winning", being "right", or refusing to concede.

Indeed, one of the main features of the gaslighter's personality and psychology is that the gaslighter prioritizes power over anything else.

In any conversation, that means **the gaslighter chooses power and "victory" over truth, trust, reputation, and, of course, fairness**.

Some gaslighters, lost in their inability to concede, may destroy their own reputation and closest relationships just so they can "win".

As a natural consequence, more often than not, **the gaslighter is a taker**.
Surely a taker from a social power point of view but, often, also in different forms -takes your time, emotional investment, mental well-being and, possibly, money-.

The gaslighter personality overlaps with other takers and win-lose personalities such as assholes, manipulators, power-hungry, and sociopaths.

Narcissistic Gaslighting: Fragile Egos

Many gaslighters have narcissistic traits, including big but *fragile* egos, and an endless need for self-enhancement.

Psychologist Roy Baumeister explains that people with big egos but fragile self-esteem attack out of self-defense to protect their own egos (Baumeister, 1997).
And although the need for self-defense is not an excuse, it explains why even some non-sociopaths may gaslight.
And it's because **gaslighters with a fragile ego take things very personally and can't own their sh*tty behavior without feeling like *they* must be sh*t**.

That means that **giving feedback to a gaslighter is a useless and potentially self-defeating effort** because they may resent you and/or come to see you as an enemy.
The gaslighter is utterly unable to take any constructive criticism, no matter how nicely you frame it.

Power Is The Gaslighter's Only Goal

All the gaslighter seeks to do is to:

1. **Avoid ownership of his sh*tty behavior**, including lies, manipulations, or his "less than ideal" intent
2. **Avoid apologizing** ("apologies withholding").
3. **Maintain power for not doing the 2 steps above**.
4. **Avoid making amends** which for the power-hungry feels like a humiliating thread expansion on their defeat
5. **Maintain the lose-win and his shitty behavior** rather than change for the better

The craziest thing for people who are not well-versed with the gaslighter thwarted psychology is that this "power hoarding" game plan is "always on", and not reserved for the "big stuff".
The gaslighter gaslights for the smallest and most trivial stuff.

For us though it's great news!
It's great news because **the inveterate gaslighter will give you plenty of opportunities to spot early red flags** over the small stuff.

The only caveats are: you must be power-aware enough, and know what to look for.

Engaging With A Gaslighter

Gaslighters communicate differently than most normal people because their psychology and goals are different.
Arguing with a gaslighter is a maddening experience.

Power-aware people aren't going to go crazy for a gaslighting turkey.
But it can still make you emotional, angry, and, potentially, overreacting.

We've seen it in our forums more than once.

The core of the issue is that **you and the gaslighter have very different goals for an argument**.

You may want to clarify, understand, patch things up, and improve.
But the gaslighter is out for power and winning.

Throw out your "communication skills" manuals

Most popular communication skills resources are useless with gaslighters.

Indeed, **standard communication skills are *harmful* with a gaslighter** because they're based on *sensible* person standards.

You know, people who generally prefer doing "the right thing" -including what's also good for *them*-.
But the gaslighter is *not* a sensible person.

Standard social and communication skills advice puts you at a marked disadvantage with gaslighters. And, in general, with anyone who's not straight and out for win-win.

Great book, but that's where it belongs when it comes to gaslighters, manipulators, and Machiavellians

Signs of Gaslighting

Signs of gaslighting include:

- **Lies**, especially when it comes to anything that might incriminate or disempower them
- **Spinning and reframing**. The smarter gaslighter may not outright lie. But they always spin and reframe things to maintain power, control, and put you on the back foot
- **Muddling the water**: the gaslighter does not want things to be clear because that would highlight what a nasty person he is
- **Blame shifting**. Especially shifting blame on you
- **Incapability of admitting guilt**. A core red flag of power-hungry, high-dark triad personalities
- **Covert power moves**. if you find yourself getting angry with someone over and over, but not with other people, that's another red flag of gaslighting
- **Aggression**. Especially when they're being shown as the nasty and lying poor characters they are
- **Word salads**. Same as above

Best of all, see this article for the examples:

- **Gaslighting examples and signs**

> Galisghting: 17 Signs You're Being Manipulated

Crazy-making vs. Gaslighting

In simple words, crazymaking is the most extreme form of gaslighting.

We can indeed recognize two levels of gaslighting:

- **Lower-danger gaslighting (turkey behavior)**: not owning poor behavior, not apologizing, and confusing the victim to walk away scot-free and without re-empowering them
- **Higher danger gaslighting (abusive behavior)**: also referred to as "crazymaking", it's associated with longer-term win-lose exchanges or toxic relationships and can make the victim go crazy and lose the sense of reality

Components of Crazymaking

While gaslighting does not entail a personality disorder, most crazy-makers are high in antisocial and psychopathic traits

- **More malicious and/or skilled gaslighters**, dark triad individuals with little or no empathy and conscience. Some crazymakers are naturally born dark psychologists.
- **Closer relationships**: crazymaking requires more interpersonal leverage, and that most often comes with closer relationships such as spouses, relatives, close friends, flatmates, judge roles, bosses, etc.
  - Emotionally, as in intimate relationships or close relatives
  - Physically, as in "same cubicle coworker", for example
  - Repeat encounters
- **Lower self-esteem victims**
- **Power unaware and unskilled victims** in terms of (not) recognizing and handling gaslighting

Generally speaking, the empowered people we breed here at TPM wouldn't let a gaslighter control them, their life, or their emotional well-being.

Crazymaking Process & Gaslighting Stages

The victim starts with a functioning mind and a healthy approach to the world.

This healthy approach is based on foundational self-preservation functions such as:

- Logic and rationality -at least to some degree-

- Instinctual feel for what are fair value exchanges, relationships, and win-wins
- Healthy “what’s in it for me”

Until the victim maintains those foundational self-preservation functions, win-lose relationships cannot work with her consent.
Hence the gaslighter must undermine all of them in order for his games, manipulations, and lose-win behavior to even seem acceptable -let alone “good”-.

Since self-preservation instincts are deeply rooted, the crazy-making process takes some time and repetitions and always starts from the top.
Crazymaking works its “dark” magic when the frame control that starts at the single interaction level moves deeper and deeper -until it undoes both the most basic instinct of self-preservation as well as logic-.

Crazy-making is an act of mental takeover on one side, and surrender and submission on the other. Over time, the victim relinquishes his “mental hold” on reality
As the victim increasingly accepts what’s win-lose and illogical as fair and normal, she increasingly distrusts her ability to understand and operate in the world.
The crazymaker then becomes the only mediator and conduit for her reality.
Obviously, he’s going to present a reality that is good for him and, often, highly harmful to the victim.

Conviction & Eternal Doubt: The Specular Common Denominators

Gaslighting and, even more, crazymaking work in large part because of the gaslighter’s conviction.

You can see why from a frame control point of view: it requires strong conviction to make someone doubt what’s right or wrong, cool or not cool behavior, and what’s win-win or win-lose.

So conviction, paradoxically, is a warning sign.

Subjectivity & lack of “right” and “wrong”

Some gaslighters though prefer to seed doubt by constantly shifting positions, questioning everything, and appealing

to “subjective experience”.

In that “subjective experience” there are no rights or wrong so, conveniently, the gaslighter also “cannot be wrong”. These types of gaslighters often resort to psychologizing, including questioning their own motives and understanding.

It may look like this:

- “Are you sure?” / “I’m not so sure”
- “It really depends, who can really say”
- “We all have our own subjective opinion and preferences. There are no absolutes”
- “Give me feedback, I want to learn (and I’ll give you feedback back)”
- “It’s only you who doesn’t make mistakes?”

Crazymaking signs

- **“Seek mental health therapy”** type of advice
  - Example: “you should definitely see a psychiatrist”
- **Ganging up**. Such as, recruiting others to isolate the victim. Especially effective from higher authority who can easily get others to agree even when in the wrong
  - Example: the boss asks other employees “who here thinks Jack is not being open-minded enough”
- **Double binds** “damned if you do” and damned if you don’t
  - Example: assign tasks the gaslighter requires done to perfection, then complain he has to make them again and tell her to “leave it to him next time”. But he gets angry when she leaves it to him. She’s damned whatever she does
- **Provoke & blame** for the outburst
  - Example: flirting with another woman and when the partner gets angry saying “she’s always like this, unfortunately she’s not well”
- **Private mistreat & public compliments**, or vice versa
  - Example: demeaning the victim at home, then praising her during the event while saying that “she’s always in such a “low mood”
- **Mistreat & normalization**, pretend there’s nothing wrong with mistreatment
  - Example: writing nasty all-caps emails and justifying as “that’s just how I write to everyone, I respect you though”
- **Deliberate sabotage & blaming**
  - Example: move, hide or lose objects, and pretend hold that the victim was responsible
- **Pathologizing**
  - Example: your father was a cheating alcoholic, maybe he even abused you and you removed it. That’s why you’re so obsessively untrustworthy
- **Trivializing**, or framing the victim’s issues, beliefs, or complaints as “small stuff”, unimportant, or unjustified
- **Reality distortion**, denying real events and making up non-existing ones
- **Harm & cover as “mistake”**
  - Example: pretending to forget birthdays with the excuse of “not caring about birthdays” (but then maybe

remember third-party birthdays)

- **Endless criticism**, including of non-existent faults or lacks

Severity and effects

Effects of low-danger gaslighting tend to be short-term, including:

- Anger
- Frustration
- Dislike for the gaslighter
- Loss of respect the gaslighter

The effects of more extreme, prolonged, or continuous gaslighting can be psychosomatic, meaning they affect both mind and body, including:

- confusion
- muscle pain
- digestive problems
- vertigo
- inability to sleep

In extreme cases, continuous gaslighting can drive a person psychotic (see, as an example, the 1971 movie "Family Life"), or even to suicide.

The effects are connected to the fight-or-flight response.

Humans have an innate gut mechanism to recognize (and get away from) abuse. Even if they don't consciously understand what is happening.

Gaslight FAQs

Now some frequently asked questions about gaslighting and manipulation in general:

1. Is there a strategic use for gaslighting?

There is a strategic use for almost anything.

So, yes, gaslighting can be effective and good for you.
And may even be fair game.

See Power University for those use cases.

However, don't make the rules with the exceptions.
And, generally speaking, gaslight has higher costs than benefits.

Generally speaking, the gaslighter gains by taking from the "bottom of the pyramid" people who have less awareness, fewer skills, and fewer options.

Overall, we aim for more here so we don't recommend it.

And the downsides may still outweigh the upsides, even when it seems like you're winning.

The gaslighter still turns many of his relationships into lose-loses, destroys social capital, and drives away all the highest-quality people from his life.

This is simple basic social exchange: **no high-quality person wants to be close to a gaslighter**.

They may be dealing with him out of self-interest, but never out of choice or pleasure and they'll always keep a healthy distance.

This is a typical case of "ceiling behavior".
Such as, it's "effective" only up to a (modest) point, and it turns harmful when you try to go level higher:

Gaslighters tend to struggle to hold top positions because they burn bridges and ruin relationships. Even more commonly, they tend to have a lower quality of life
Also, just to be clear: since this is a place for high-quality eagles, we don't like gaslighting here.

2. Can gaslighters improve?

Everything is possible, but don't count on it.

Gaslighting may be indicative of psychological issues (ie.: a way of being, rather than a way of doing), and cannot be easily changed by others at that root level.

So make sure you don't over-extend the benefit of the doubt and remember the proverb:

> Fool me once, shame on you.
> Fool me twice, shame on me

3. Can I improve my own gaslighting?

It's possible.

The simple fact that one is asking that question is a great sign that you may be able to grow beyond it.

See Power University for the details.

4. Is gaslighting always conscious and premeditated?

Several sources say that gaslighting is always conscious and premeditated.

We don't necessarily agree, though.

Bel says that after much researching and reflecting, he came to this conclusion: it starts consciously. Meaning, there is a decision point where someone uses it and sees that the results are better than the alternative (which is honesty and accepting consequences). And then continues using it.

But it can reach the point where it is almost an automatic reflex whenever shame is called into question. In that sense, while it continues to be a choice, it can be very difficult to change.

Lucio believes that some gaslighters learned it from their parents or environment and never realized how "not-cool" it is, and how much it's costing them.
For these people it's possible to improve and grow beyond gaslighting -they'll have to consciously *un*learn it-.

Some others may be "naturals" who are simply manipulative personalities and who "naturally" resort to gaslighting, without any consciousness needed.

5. Can I win against a gaslighter?

See Power University for the practical steps
You can win against anyone.

The better questions though are if you can get *through* one -possible but unlikely- and if you should even *engage* one.

Sometimes, you may be better off distancing yourself.

Often, it's one of those "exporting democracy" types of wars that you're a lot better off not fighting in the first place. Some places aren't ready for democracy and **some people aren't ready -or even born- for win-win and straight behavior**.

Be careful of "turkey spirals"

Finally, gaslighters are turkeys, and they only drag you down to turkey level while we prefer you fly here.

If you're looking for the "how to", consider joining Power University.

  - Lesson #12: You’re Not An Imposter
  - Lesson #13: Navigating Cancel Culture
  - Lesson #14: Be The Boss of Your Own Life
- Cons
- Pros
- Review

Full Summary

About The Professor:
After a decade in her dream job as editor-in-chief of Teen Vogue, award-winning journalist Elaine Welteroth realized she had other dreams worth pursuing. Now, the New York Times bestselling author, talk show host, and judge on the new Project Runway is teaching you how to get out of your comfort zone and harness your personal values, passions, and skills to custom design a career path as unique as you are.

Lesson #1: Uncover Your Zone of Genius

"Your zone of genius is that sweet spot at the intersection of your passions, your talents, your values, and your skills. I define it as 'that which only you can do like nobody else can'."

Your zone of genius is your compass when you're lost because, as Welteroth put it, "…one thing is for certain — the more you do, the more opportunity comes. And, you'll need a filter for how to make decisions about what is actually for you and what you should say 'no' to."

Your zone of genius is that filter.

And, as a manager and leader, you also want to ask yourself if your team is operating within their zone of genius.

#1: Passions

"What is that thing that you could do all night, for free, if somebody let you? If your bills would still get paid, if you know for sure that your kids were going to eat, that your house was going to get paid for, and that you could spend your time any way you wanted…that's your passion."

It's OK to not know your passion. Welteroth even adds, "In fact, the way that we have been conditioned to live our lives on autopilot, you've basically been set up to not know what you really love. It takes time to cultivate that. And, it takes encouragement."

#2: Skills

"What are those skills that you've had to learn along your journey? And, how do they come into play when we think

about designing the life that you want to be living?”

#3: Talents

“If you don’t know what your God-given gifts are exactly, ask your best friend. Ask them to write you a list of the things that you’re good at.”

#4: Values

“What matters more to you than money? Do you have it? Is it in your head? OK. Now, ask yourself, ‘Why?’ Those [reasons] are your values.”

Your value system is your strongest filter to determine what opportunities to pursue and what to pass on.

#5: Excavate your childhood.

“Excavation is the process of digging deep inside yourself to really understand what your most valuable traits are…

…What are those early memories? Maybe they’re not even your memories. Maybe they’re stories that are passed down to you about who you were before the world got in the way and started dictating who you are, who you’re allowed to be, and put labels on you and limitations on you.”

Lesson #2: Build Your Career Blueprint

“A blueprint is essentially your 30,000-foot view of the life span of your career. It should give you a sense of what the arc is that you want your career to take. It should encompass your short-term goals as well as your long-game plan.”

Welteroth’s sister often uses the analogy of going “eagle-eye” (the 30,000-foot view) and then going “hawk-eye” (the detailed look at what’s happening).

#1: The “eagle-eye” of your career (the blueprint).

The blueprint is needed to identify how to craft your career from a big-picture standpoint.

“Who are the people in your life that you want to model your career after? Who are these people — maybe you don’t even know them.”

The blueprint is where you get to pitch the spaces and/or industries that you want to play in. And, it is *never* too late to pivot and make a career change.

#2: The “hawk-eye” of your career (the mind map).

“The more granular hawk-eye view on your career is where you get really specific now. You get to define exactly what your business model is gonna look like. And, I like to call it your mind map.”

1. “Your mind map starts with understanding your ‘why’. That should be at the nucleus of your mind map. Your purpose needs to be at the very center. And, that needs to be the through-line that connects all of these divergent projects and ideas and industries. They all connect back to a singular purpose. So, what is your purpose?”
2. “The next step is to go back to that list of spaces that you want to play in and let’s make it visual. Take each of those spaces, write them down, and draw a circle around each of them.”
3. “Then, connect each circle to a smaller circle that more precisely describes the type of project you’re aiming for or the next big idea you want to develop in this space.”
4. “From there, you can get even more specific with individual projects or gigs that you’re aiming for or specific ideas that you want to develop.” (“Sometimes the different spaces you’re playing in might connect to each other. A book you write might become a TV show one day. And, that TV show might become a podcast.”)
5. Update your mind map every time you’re in the midst of a career transition or a big decision about what’s next.

Lesson #3: Build Your Network

“I don’t know about you, but most people I know don’t have a trust fund. Didn’t come from a ton of money, and don’t have a fallback plan. But, when times get hard, your safety net is in your people.”

As we build out our blueprint, we have a set of about five to ten people that we consider our board of advisors.

Welteroth describes it as, “…people that aren’t necessarily investing in your businesses financially, but they’re investing in you in other ways. You have to look at yourself like a business…And, what is that company culture that you have started building from ground zero?”

“Before you have even started to make money, who are you surrounding yourself with? Who are you turning to when you’re in trouble? Who are you turning to for advice? Appoint your board of advisors and be incredibly intentional about where you want them to sit in your life.”

#1: How to get a mentor

“To ask somebody, ‘Will you be my mentor?’ is literally like walking up to somebody on the street and being like, ‘Will you marry me?’ Like, you kinda need to court them a little. You kinda need to build a relationship.”

"…ask for 15 minutes of someone's time…do your homework. Do not waste their time. Be prepared for that question that will come up which is, 'Now, what can I do for you? How can I help?' When that question comes, be prepared with an answer. Be specific with what it is you're looking for. Be intentional because people appreciate when somebody is clear and direct about what they're looking for from you. And, they can be clear and direct with you [back] about whether or not they can deliver."

Welteroth shares a story of how she got one of her first mentors. And, it follows the social exchange rules very well:

> **Welteroth**: "My first boss, Harriet Cole — I stalked her. I admit it. I found her email. I found her phone number on the internet. I made this whole package. I — I shot my own cover of a fake magazine. And, I put it together as an opportunity to intern with her. And, I sent it to New York City when I was in college in Sacramento. And, I called incessantly. I emailed her assistant incessantly. Shout out to Nubia Murray. Thanks for passing along my email and my calls, boo. She could have shut me down. And, she tried, but I wore her down. And, I remember after calling and calling and calling and driving them insane, one day I said, 'OK, so, sorry, sorry, sorry, just before you go, I know she's not available, but can you just tell me what her coffee order is?' And, I remember the assistant goes, 'Why do you need her coffee order? Don't you live in California?' And, they lived in New York. And, I said, 'Yeah, it's no big deal. I'm just going to fly there and just drop off coffee. Just, no big deal. No big deal.' She's like, 'Please do not get on a plane and fly across the country and show up at this office.' And, so she goes, 'I will — I promise you, I will find time on her schedule.' But, basically, the undercurrent was don't call again. Stop calling, girl. I'ma figure this out for you, but don't show up at this office. But, I did what I had to do to get their attention. I was determined. I was relentless. I did not give up. And, I got to connect with the person who ultimately changed the trajectory of my entire career."

#2: Don't always look up, look around too

Some of your best mentors can be peers, right in the trenches with you. They won't always be older or in a position of authority yet.

"Build a community without looking for anything in return. Give without getting anything in return…Be generous with your time and your energy if there is a true connection with someone."

#3: Don't limit your access to different mentors

Make good use of digital mentors and digital role models. Don't limit yourself to only people you meet.

#4: Your manager is not always your mentor

Since mentors can double as friends and it's often beneficial to have one's superiors as their mentors in their company, people can sometimes feel that their manager is always their mentor.

But, Welteroth said it best, "When you need to negotiate for a raise, they're not your friend. They're your boss."

Be careful not to confuse the two. And, make sure to vet your mentors before giving them such an important role in your career progression.

#5: Lift as you rise

So much of our energy is focused on getting to that seat at the table that we don't talk enough about the responsibilities that come with having that seat. When you're in that seat, "…It's not just about you keeping your seat. It's about making room and pulling up a chair and opening a window and opening a door for other people to get that seat at the table too and to have that opportunity."

Be a servant leader. Be someone who thinks about how to help and provide opportunities for those around you.

Lesson #4: Search for Opportunities and Side Hustles

If you're not passionate about your current day job, an hour before and after work, start to brainstorm your zone of genius—especially your passions. And, brainstorm how you can apply your zone of genius in daily small ways. And, how you can develop that into a hobby that can grow into a small business."

#1: **Find opportunities in your day job**

"Sometimes, from that [zone of genius] list, you can develop a job for yourself that did not exist before. And, sometimes, if you're lucky, you can develop a role within your role that you currently have at your day job that allows you the freedom to exercise that entrepreneurial spirit inside you and get paid for it as part of your day job."

#2: **Freelancing is your training ground**

Do a freelance gig as a test and practice for your career endeavors. Use freelancing as a safety net to build your confidence before making any major decisions (e.g. quitting your job).

"Test those waters…get a feel for what this lifestyle might be like before you make it your full-time job."

Lesson #5: Taking the Leap to Be Your Own Boss

#1: **How to know when it's time to quit**

To know when it's time to quit, ask yourself, "Have I reached the point of diminishing returns? Is there something that I have yet to learn? Is there a skill that I'm still honing here that I'm going to need in my next chapter? Is there a financial goal that I have yet to hit? Is there another raise, another promotion, that I really feel is important to add to my résumé?"

Go through the pillars in your zone of genius and ask yourself, "Is there more for me to get here that I would be cheating myself if I walked away from it all today? Would I have any regrets?"

#2: **Don't let fear dictate your direction**

"Fear is going to be part of the process…we have to learn to become friends with it."

"If you've done the self-evaluation…and you've come to this conclusion that it is time for you to walk away from the known and walk into the unknown—if you know that you're ready, but you just are struggling to make that final step into your future, this is where your board of advisors come in." Go to someone who sees your potential and let them show you the courage you have inside of you.

Lesson #6: Game Plan for Financial Confidence

#1: **Financial confidence is your fifth pillar**

"Financial confidence is different from having financial security. Financial confidence comes from having a game plan. And, that plan can only be written by you."

#2: **Bet on yourself, but get specific**

"Bet on yourself by taking a leap of faith. But, make sure to reinforce your faith by cultivating a sense of financial confidence." (e.g. "What are the figures that you need to see in your savings account that will support your faith in yourself?") And, by the way, this financial figure changes at different career stages.

Welteroth mentions that it's OK to move in with your parents to save up for your financial target. As she notes, "Sometimes, taking a tiny step back propels you much further, much faster."

So, set your target. "What is that amount that you need to make monthly, that you need to make yearly?" Write that down.

#3: **Tips for financial planning**

1. Approach your financial plan with creativity (be willing to move back in with your parents, if necessary).
2. Create a savings target.
3. Revisit your mind map to add annual earning targets with quarterly goals to each arm of your business. Get specific!
4. Do your research to fill in any blanks.

If you're not passionate about your current day job, an

Lesson #7: Strategize Your Work-Life Balance

#1: **Choose your opportunities wisely**

Do your best to only take on the opportunities that excite you) the ones that make you say "hell yes!" inside).

"Write down and get clear on what actually fuels you, what actually energizes you, and what you actually enjoy doing. And, try to spend more of your time doing the projects that are really fulfilling [for you]."

#2: **Self-care is an investment in yourself**

Invest in all aspects of yourself—family, faith, community, etc. Do not run yourself into the ground by only investing in your business and neglecting yourself.

Welteroth's tools have been prayer and meditation. She mentions that using these tools along with reading a devotional in the morning helps her anchor herself.

"Your career is a marathon and you want to be strong to the end." And, that happens through practicing self-care.

#3: **Leverage "joy containers"**

Make an appointment on your calendar with "joy". Block out this time once a day or, at the very least, once a week. And, commit to that moment with joy.

"Treat it how you would any other meeting. Show up on time. Don't skip it. Don't cancel last minute. Be there and be present for that invitation to experience joy."

Lesson #8: Present Yourself for Opportunity

"Whatever you decide to put on your body, the way that you decide to show up in the world communicates something to the world about how you want to be perceived…How you communicate how you are, how you communicate your company, how you communicate your brand matters."

#1: **Establish your staples**

"I think it's so important that you have your core signature staples." This cuts down on the decision-making time it takes to choose your clothes for the day.

#2: **Tips for establishing your signature style**

1. Make a mood board.
2. Study people with a similar body type or vibe.
3. Try new styles (be willing to step out of your comfort zone).
4. Take pictures of yourself.
5. Wear what you decide makes you feel comfortable and confident.

"Remember, how you present yourself to the world influences how you're perceived. And, how you're perceived

influences the kinds of opportunities that come your way."

Lesson #9: Marketing: The Art of Putting Yourself and Your Work Out There

#1: **Social media is your best marketing tool**

Build a social media workflow. Set a goal or target for how much time you're willing to dedicate to social media a day. At least a couple of times a week.

#2: **Tricks for social media planning**

1. Plan what you're going to post months in advance (use a social media grid planner)
2. Set a consistent posting time (Welteroth recommends the morning since many people scroll through social media soon after waking up)
3. Use preset filters to establish your visual brand
4. Create a shared album for social media-worthy posts (avoid having to dig through all of your photos to find "that one" you thought would be a good post)
5. Link your social media accounts together, so your content will post to all platforms.

#3: **Brand with authenticity**

Most people use social media at a superficial level. You can separate yourself from the crowd and stand out by being of the rare few who is authentic on social media.

You can convey authenticity by letting others into your creative process, who you *really* are, and what really matters to you.

And, on that note of what really matters to you, Welteroth says, "…you have to stay connected to your WHY at every step of the process, including marketing and 'socializing' your work."

Lesson #10: Building Your Team

"You cannot do it alone. If you have big dreams, you're going to need a team to help you accomplish those goals."

Building this team takes time.

#1: **Find people who play the game your way**

Start by mapping out and writing down what your company values and company culture is. Be intentional with how you craft your company environment—design it to be one where you can thrive.

Here, Welteroth mentions:

> **Welteroth**: "As the boss of your own life, you get to decide what your company values are and what your company culture will be. And, please believe that that company culture starts with you. You are employee number one of your enterprise. Before you have the people on the payroll, it would be wise to sit down and really map out what your core values are…I have a 'no asshole' policy. I also have a 'no yes-man' policy. I want to have people around me who challenge me, who can respectfully critique my work…"

So, what is important to you? What are your deal-breakers and your non-negotiables?

Write them down and prioritize them as you start to build your team.

#2: **Hire incrementally**

When you're starting, don't hire all at once because you're still learning what kind of support you're *actually* going to need.

Instead, do a needs assessment about where the blindspots or holes are in your ecosystem to define where you really need the support. And, hire incrementally based on those needs.

#3: **Tips for Hiring**

1. Perform a needs assessment
2. Write out job descriptions
3. Hire incrementally

#4: **Think of your team as investors**

If you've spent most of your life as an employee, you may have spent most of your life thinking about holding onto every cent you can get. And, when one has bills to pay and needs to put food on their plate, it's not an unfair attitude to hold.

Yet, when we're talking about entrepreneurship, that can be a scarcity mindset that can harm your team if you're afraid to pay them.

So, Welteroth encourages her students to think of every single hire as a revenue-generating opportunity. Avoid a scarcity mindset—give yourself permission to invest in yourself and the team members who are actually adding value to your enterprise.

And, be sure to regularly check in that those team members are still adding value.

#5: **Hire for your blind spots, not your "culture fit"**

"Identify where the blind spots are in your team and be intentional about hiring for those blind spots."

This is a bit different from Simon Sinek's recommendation to find and hire the people who share your mission—your WHY (see *Start With WHY*).

Welteroth instead recommends first finding people based on where you need support. And, only hiring the people who excel at what you need support in and whose zone of genius matches your job description for them.

#6: **Delegate, delegate, delegate**

Delegate the tasks that are outside of your zone of genius because those supports—as long as they're top performers who are also operating in their zone of genius—are actively giving you your time back.

As Welteroth puts it, "Bosses delegate. They do not do it all."

#7: **Fire faster**

> **Welteroth**: "If someone on your team isn't working out after you've had conversations about expectation setting and you've given it enough time to evaluate if the changes are happening that you need to see or not, I am giving you permission right now…to go ahead and pull the plug. Fire faster. It will expedite you finding the right person for your team."

Lesson #11: Essential Writing Skills

#1: **The "professional voice" (for emails)**

- Mimic your manager in professional writing
- Avoid overly casual communication (e.g. saying "hey"), lean toward formality
- Proofread twice
- Keep it short. No essays. Brevity is key.

#2: **The "authentic voice" (for social media captions)**

- Does it sound like you? If not, say it out loud the way that you would naturally say it, and then write it as you spoke it.
- Try to capture your *first* thought. If you can communicate that, that will usually be you at your most authentic.

#3: **Writer's block**

- Open up an email draft and start writing out your thoughts. (Using an email draft removes the feeling of a need for "perfection" that can come from writing in a Google Doc. And, you likely write emails all the time, so there's a more natural flow.)

And, by the way, you can have writer's block on social media too.

Lesson #12: You're Not An Imposter

You're likely to feel like an imposter if you're "FOD" (see *Year of Yes*):

1. First (to do or achieve something)
2. Only (one to do or achieve something)
3. Different (from those or most around you)

Imposter syndrome is normal. Recognize that you can unlearn and disrupt your negative self-talk and harmful thought patterns.

1. Take a break.
2. Come up with a mantra.
3. Write out positive affirmations on sticky notes and put them where you can see them.
4. Try different things and find what works for you.

And, on being "FOD", Welteroth says, "Our differences are our superpowers when it comes to our creativity. Our unique lived experience is what informs our perspective which is what informs our art and our work."

Lesson #13: Navigating Cancel Culture

> **Welteroth**: "I hate to break it to you, but if you are making disruptive content, prepare to be cancelled."

#1: **Focus your response on the impact**

"Don't focus on the intention of your actions. Focus on the impact of them."

> **Welteroth**: "…the important thing to remember when you're being called out is to pause, take a breath, and reflect on the impact. And, focus your response on the impact first. Acknowledge the harm that you caused. Acknowledge that you understand why it was harmful. If you start there, then people feel heard. They feel like you understand. And, there becomes an opportunity to have a conversation that is less defensive."

#2: **How to address controversy**

> **Welteroth**: "My best advice for addressing controversy: address it head-on."

You might get advice to let it blow over. A lot of people will tell you "don't respond". And, that may be good advice depending on your situation. But, if you follow that advice, you're also surrendering the opportunity to communicate who you are and what you've learned from the controversy.

#3: **Right your wrong**

"Sometimes it takes getting it wrong to *really* understand how to get it right."

Don't shy away from making disruptive, controversial content that starts conversations and can spark change.

"Own your error. Learn from it. And, take the necessary steps to redeem yourself. Not just for you, but for the community that you are here to serve."

#4: **Tips for "doing the work" to survive being canceled**

1. Don't be defensive.
2. Do not ignore other perspectives.
3. Do empathize.
4. Do apologize.
5. Focus on the impact of your actions and your words and not only the intent.
6. Don't shut down. (It's not the end of the world, the world still needs you, your perspectives, and your voice.)

Lucio's note:

- **Don't necessarily apologize if you don't think you did anything wrong**

Lesson #14: Be The Boss of Your Own Life

Use visualizations to practice meeting people who could leave you not knowing what to say (for Welteroth it was meeting Oprah Winfrey). And, use those visualizations as preparation for meeting those you admire.

Those visualizations will develop your muscle memory to be natural in the presence of your inspirations.

Cons

- **Encourages purpose, but doesn't teach it**

Given that Welteroth encourages her students to put their WHY at the center of everything they do, I would've loved to see her teach more about how her students can go about discovering their WHY.

- **Sometimes ignores social exchange rules**

Welteroth recommends you buy your prospective mentor a coffee in order to "court" them. But, as we know, that's a fairly common WIIFT failure in networking.

- **Sometimes leans toward encouraging a "go-giver" attitude**

And, doesn't mention anything resembling the attitude of a fair-value social marketer.

Pros

- **The workbook adds more value**

I was expecting the workbook to simply be icing on the cake. Perhaps, a summary of what was already taught in the videos.

Boy was I wrong. The workbook goes so much deeper with actual assignments and added bonuses that make it worth a separate fee on its own.

The workbook covers, "Nine Tips for Nailing A Job Interview", "How To Get the Most Out of a Mentorship", "Creating Mentorship Goals", "Advice for Getting Out of a Rut", and so much more.

I've left all of the bonus information out of this review because there are simply too many goodies in that workbook to cover here.

But more on nailing job interviews, see:

- How to prepare and excel for job interviews

> How to Prepare For An Interview: 6 Tips To Get The Job

- **The presentation is stellar**

More than the top-notch production quality, the instructor carries and presents herself as a real boss-woman.

And, that motivated me to get my body language together after hearing her inspiring stories of how far she's come coupled with feeling more connected to her because of her developed charm and charisma.

Review

This is an incredible Masterclass.

I'd only take off one star for having no scripts like what Ramit provides. And, one other star for staying on the surface level on some topics (e.g. career negotiations).

Other than that, this Masterclass has more than earned every single star. And, with only a couple of minor additions, I could easily see this being a 10-star investment.

Check the **best career books** to read.

Real World Seduction 2.0 by Swinggcat: Review

Lucio Buffalmano · 29 January 2023 · Archived copy · Original

Real World Seduction 2.0 is a 19-chapter book on dating and seduction in which Swinggcat, the author, teaches how to seduce a woman starting from the approach to intimacy.

Bullet Summary

- Become a high-value man: work on yourself to build the attributes and characteristics women want
- **Frame yourself as the prize**
- Select your targets: avoid the women who aren't open to being seduced

Full Summary

About The Author:
Swinggcat was one of the early innovators of "The Game" and a member of the Seduction Community in the late 1990s, studying under Ross Jeffries. A significant contributor from the early seduction days, Swinggcat was a PUA that pioneered the idea of role reversal, push-pull, and prizing.

Introduction and Prologue

- Your sexual market value (SMV) can be raised through self-improvement to play in bigger leagues (seduce and attract higher-value women).
- The difference between ethical and unethical seduction is whether or not your seduction efforts leave the other person better off.

More than how to seduce and date, this book also promises to teach you how to be charming.

So, let's begin.

Chapter #1: Develop Attractive Attributes

#1: Your Looks

- Women talk about wanting a physically attractive man who makes 6-figures, but then marry the opposite (a man who has less money, but more game).

Note: This is only true in some cases. Oftentimes, women will talk about possibly wanting a physically attractive man who makes 6-figures and then will go on to marry that man for his provider qualities. But, they'll still be sexually attracted to the man with more lover's qualities. (See *Atomic Attraction*).

- Develop your style.

Especially before considering any cosmetic surgeries to improve your attractiveness.

Some steps you can take are to:

1. Subscribe to men's magazines to know the latest style trends
2. Go to bars and nightclubs to see what the most attractive guys (the guys getting the most attention from women)

are wearing

3. Emulate the style of men with a similar build as you

- Develop your hairstyle.

Find a hairstylist you trust and work with them to do what works for you.

- Post pictures of yourself to gather feedback.
- Age matters less for men than for women, so don't use age as an excuse for your current unattractiveness.

#2: Assume Interest

- Assume the woman is interested because it removes nervousness and insecurity.

Note: be careful with this
This mindset is OK, in my opinion, as long as you do it right. (See "Tinder girl frame battle" and "How to gain compliance").

- Assume the woman thinks you're a sought-after prize from the get-go because it sets the foundation of mental empowerment for inner and outer game.

Note: Again, this is OK in my opinion, as long as you remember to combine that attitude with a healthy antifragile ego. Otherwise, you risk coming across as egotistical which is often a turn-off for women.

As a side note, given that this book promises to teach how to be charming, keep in mind that charmers often think of themselves less because of their deep love for others. So, if you're not careful, this mindset could harm that important characteristic of the effective social charmer (see "How to be charming").

- "…if you don't believe the woman is interested, you'll unconsciously communicate your insecurity in your intonation and body language."

This is based on the psychology of the anchoring cognitive bias.

If you use a high anchor to convey high expectations to yourself of how much she already likes you, it will draw up your perception of how much she already actually likes you due to the assimilation effect (see "Convey high expectations" and "The most effective anchor").

And, you'll nonconsciously respond to her more positively because of the positive attitude stemming from that positive anchor.

#3: Strong Leadership

Take a strong lead throughout the entire interaction because it's what makes women confident you'll be a good lover.

- When women ask where to eat, assert, "We're going here."

Note: She must accept your leadership first.

- Or, better yet, take her somewhere without telling her where you're going. And, if she begs you to tell her where you're taking her, say, "Don't worry, I like the food there, I'll enjoy myself."

Note: In the audio version, the author said this in an assertive, authoritative tone with very downward tonality inflections. So, be careful of using this type of power-taking assertiveness with a woman who expects or demands a more egalitarian relationship. (See "How to test a woman for submissiveness to you".)

- Don't be a dictator, be sure to take into account her ideas.

Learn more about leading to seduce:

> How to Lead to Gets Girls

#4: Your Standards

- Higher standards lead to higher dating success.
- Sit down and write out exactly what you want in a woman (see *The Love List*).

#5: Your Reality

The author describes your reality as being made up of your thoughts and beliefs, likes and dislikes, habits and routines, hobbies and interests, friends and family, goals and purposes, sources of validation and acceptance, and so on.

- Maintain your prizability (being the prize in your relationships) by maintaining a strong reality

If you let a woman pull you into her reality, she will lose attraction for you because it makes you look confused (see "Be the star of your own movie").

- Don't be her therapist.

It's a win-lose situation that loses her respect.

- Don't get pulled into hanging out with her friends as a first date or when you're first getting to know her

You would be entering an environment where her friends have "prove yourself to me" judge power over you (prove to me you're a good fit for my friend here).

And, from there, they can dissuade your date from seeing you again (if you don't jump through their hoops to their satisfaction).

- Don't change your beliefs for a woman because you're in love with her.
- Don't cut friends out of your life for a woman.
- Do bring her around your biggest fans whenever you can.

Take her places where your (perceived) status is higher (for example, see "easy status boost: make friends with owners and staff").

Bring her to parties or nightclubs where you have lots of friends who will laugh at your dumb jokes, build you up, and make you look good.

Warning: on your first date, don't bring her around people you worship, especially if they don't respect you.

- If you don't have people in your life who adore and look up to you, take her out alone.
- Introduce her to the things you enjoy.

The foods, activities, and music you like. This will draw her into your world (your reality) and be part of your strong leadership.

#6: Be a Challenge

- Making yourself a challenge makes you a prize.

So, disqualify yourself so she'll work to prove you wrong.

#7: Use Humor

If you use humor, make sure it communicates you're a prize.

- Avoid self-deprecating humor because women believe the saying that "there's always some truth in people's humor".

Note: Self-deprecating humor can be great to come across as more charming if your status is far higher than the rest of the group. In that case, closing that gap with some self-deprecating humor can communicate warmth and relatability. But, generally speaking, yes, if your status is on the same level as (or lower than) the rest of the group, avoid self-deprecating humor.

- Humor helps put women in a more positive mood which leads them to be less judgmental.

This is because your humor encourages their heuristic processing (see "Optimize your message").

#8: Advertise Vulnerability

Your "costly signals" are anything you do that a woman views as potentially harmful to your social status or chances of mating with her.

When you've established yourself as the prize with a woman, strategically advertise your "costly signals" to increase your perceived prizability.

Lucio notes you better be careful with vulnerability.
See here:

> Vulnerability Is NOT Power: Don't Believe The Hype

#9: Your Comfort

The three elements of being charming are having high personal value, using good social skills, and being comfortable in your skin.

Here are some things you can do to feel more comfortable around women:

- Make five female friends who are your type

The more time you spend around them, the more comfortable you'll become around the type of women you like.

- Work on your belief system

Avoid self-limiting beliefs and doubts.

#10: Be Non-reactive

"He who angers you conquers you."

In general, the one who's the least reactive in the interaction has more prizability and power to influence or control the interaction.

#11: Show Intent

Remain detached from the outcome with a woman to avoid being clingy, needy, insecure, and emotionally reactive.

- Don't remain detached by (egotistically) pretending to have no desired outcome in mind.
- Have a strong meta-intent.

A meta-intent is a well-defined, desired outcome in the absence of neediness and attachment.

Chapter #2: Obtain Inner Confidence

#1: Confidence

The two facets of confidence are:

1. An empowering belief system.
2. Expanding your comfort zone.

Most men lack confidence because they only work on one (or neither) of the facets.

Keep in mind on your confidence-building journey:

- Your confidence is your experience. The more experience you get, the more confident you'll eventually become in that area.
- Your belief system needs to be field-tested for cognitive dissonance (does your nonconscious brain believe the beliefs you tell yourself?)

#2: Antifragile Ego Beliefs

For your belief system, here are some antifragile ego beliefs the author shares for you to internalize along your journey:

- Despite any fear, there's more pain in not doing it [going for it and doing your best].
- No matter how a woman reacts to me, there's always something beneficial to learn.

Chapter #3: Intro To Frames

By rewarding rude behavior from a woman during the interaction, you allow the following negative frames to be set:

1. He's unassertive / passive / submissive.
2. He's more invested in this interaction / relationship than she is.

These imply the meta-frame (the underlying frame) that she's the prize he's trying to win over.

The meta-frame determines the overall underlying meaning of the interaction and assigns a role to each participant.

- Aim to set a frame that frames you as the prize.

Women don't always have to buy into that frame. As long as you avoid buying into theirs, you'll still be perceived as having some prizability.

Learn more on how to be assertive:

> How To Be Assertive In 6 Simple Steps

Chapter #4: The Fourfold Meta-Frame

#1: The Fourfold Meta-Frame

The Fourfold Meta-Frame is the perception and belief that:

1. You're the prize.
2. She's trying to win you over.
3. She wants you so bad she's trying to make you sleep with her.
4. She'll only get to sleep with you if she lives up to your standards and expectations.

- Don't directly or openly communicate the Fourfold Meta-Frame.

Sub-communicate it with your behavior and frame control.

- Practice the Fourfold Meta-Frame using visualization.

Identify the kind of girl you'd like to attract and then visualize, starting from your approach all the way to ending with intimacy, using the Fourfold Meta-Frame to seduce her.

#2: You're the Prize

Invert the traditional roles.

Turn yourself into the chooser and her into the suitor.

- Disqualify her before she has the chance to disqualify you.

Women still want to be liked. So, when you disqualify her, you take away some of your fondness for her.

And, that gives you the role of the *chooser*. That moves you closer to being perceived as the prize.

Note: This relies on the woman being somewhat emotionally dependent on your approval or acceptance. More than emotional independence, your SMV has to be high enough for her to care about being qualified by you.

- Use the Fourfold Meta-Frame with humor

Avoid positive humor because what makes us laugh is what's fucked up about the world.

Note: Here, the author slides in an anecdote about a Christian joke book he read that kept him laughing because it was so bad it was good. He believes that the negative (slightly value-taking humor) is the humor that we actually find funny and will raise your prizability. And, while that style of humor can certainly get you laughs, it can also come at the expense of your charm. As the old saying goes, "You could wind up liked by everyone and loved by no one." (See the "Davide style".)

- Attraction = Frames + Humor + Playfulness

Note: Some of the most effective social charmers are the best examples of walking attraction generators. And, they follow the equation: Attraction/Charm = Personal Value + Social Skills + Comfort.

So, as you can probably imagine, it would be quite difficult for a girl to find you attractive if you were low-value (which comes down to more than only frames), socially unskilled outside of making jokes, and playful while also being nervous and uneasy.

Still, his equation isn't fully wrong. Frames, humor, and playfulness do often play a significant role in the seduction process for many of the seducers out there.

- Use negative humor because women often use it to position themselves as the prize.

So, it's OK to use women's own game back on them.

Note: The kind of humor the author describes here is slightly value-taking. So, one must be careful not to overdo it and break rapport or, worse, chip away at her self-esteem as that could become manipulative.

Chapter #5: Prizable Body Language

Adopt non-reactive body language.

1. Move slowly.
2. Move deliberately.
3. Move on your own terms.

Note: Be mindful to avoid moving too slow in a busy, fast-paced environment. (See "How to walk sexy and confident".)

Here, the author also gives an example to help illustrate how your body language should be to seduce a woman.

"She calls your name. How do you react? What would be a nonreactive response? First, delay responding to her for a few seconds. This demonstrates that you're responding on your own terms. Second, when you do respond, slowly and deliberately turn your head towards her. Third, instead of dashing up to her, keep your feet planted. More often than not, the woman will come up to you."

Note: This is typically the kind of behavior high-quality men exude after a woman unfairly makes them wait (see "Even the scores: let them wait"). So, behavior like this can seem out of place and lead her to wonder if she's done something wrong.

As an added note, this slow-moving, non-reactive behavior is reminiscent of the "Been There Done That" style of dominance which must be earned first. If not, you risk coming across as haughty, cocky, or clueless.

- Avoid leaning in.
- Record yourself in interactions to gather feedback and systematically improve your body language.

Chapter #6: Cold Approaching Secrets

#1: Cold Approaching

- Your biggest challenge to approaching women isn't women, it's yourself.

Here's how to approach, step by step:

1. Get outside your head.
2. Approach right away.
3. Have high standards and a strong meta-intent before you approach.
4. Assume the Fourfold Meta-Frame.

Note: This feels a bit out of order. So, if you apply this advice, you may have more success by putting step number two last because steps three and four are mindsets the author recommends holding before you approach.

- When you approach her, build emotional relevance.

Emotional relevance is having, doing, or saying things that are emotionally relevant to a woman (things she cares about).

For example, the standard, "So, where are you from?" And, "Come here often?" lines are emotionally irrelevant to a woman because women often care little to talk about those things and may become (emotionally) bored.

You can build emotional relevance through:

1. Preselection
2. Intrigue

3. Humor
4. Common social decency
5. Challenging a woman
6. Gaining her compliance.

Learn more on how to cold approach:

> Cold Approach Power Dynamics

Chapter #7: How To Vibe

The two components to vibing are:

1. Emotional relevance
2. Empathy

Make the interaction emotionally rewarding for everyone and avoid hogging the conversational spotlight or making it all about you (see *The Social Skills Guidebook*).

#1: Vibing with Women

Become a source of validation for a woman and you'll become her authority.

And, the author says, "Once you're a source of validation, every time you give her approval, she'll feel an intense vibe with you."

Note: The author describes vibing as emotional relevance coupled with empathy. But, one can dispense emotional rewards as a judge without empathizing.

And, on another note, vibing is defined here at TPM as a shared focus and shared conversation (see "The Art of Vibing").

Chapter #8: How To Cold Read

#1: How to Cold Read

Cold reading is the act of telling a woman about herself without her thinking you have any prior knowledge about her.

There are two main ways to cold read:

1. State the obvious about her.
2. State universal things that are true about (almost) every woman.

Chapter #9: How To Storytell

Avoid showcasing your prizable assets in a way that telegraphs your need for validation and approval.

- Don't brag (see "toxic people").

To avoid bragging, there are two ways you can disclose your prizable assets. Share them as:

1. Ancillary details within your story.
2. Part of the context in which your story takes place.

See here how to brag effectively:

> How To Brag Without Bragging: The Covert Brag Technique

Chapter #10: Using Open Loops

- Create tension loops.

Creating a tension loop is the act of creating unresolved sexual tension inside of a woman, increasing it, releasing it, and then sparking it all over again. Within the context of dating and seduction, this tension becomes sexualized (hence, sexual tension).

One way the author suggests you can create sexual tension is by creating fictitious drama.

- Use open loops.

An open loop is an unfinished thought or story that contains a tension loop structure.

"Conversational Open Loops compel women to show interest through asking questions. Each successive question they ask further psychologically commits them to being interested in you. Due to commitment & consistency, this ups the chances that their future behavior will be consistent with their commitment."

Note: This is true. But, it's unlikely that the commitment and consistency principle (based on cognitive dissonance) has the power to overwrite long-term conversational habits. Whether or not a woman asks a series of questions one after the other depends less on the commitment and consistency principle and more on the woman's style of conversation (see "Approaches to socialization").

Plus, one must be careful to avoid investing too much in the interaction by giving detailed answers to the asker's questions while the asker invests little by using short, brief sentences to pose more questions.

Chapter #11: The Push-Pull

A "push-pull" is emotionally pushing a woman away from you and then emotionally pulling her back in. Each "push" creates an emotional space for each pull.

It's also a form of tension loop. The push sparks unresolved emotional tension. And, the pull releases that tension.

And, when done right, it's also a form of prizing. The unresolved emotional tension influences women to seek a resolution to that tension by investing because push-pulls send mixed signals that keep women guessing.

- Never make the push a direct insult.

Chapter #12: Qualifying and Challenging

Make a woman prove (qualify) herself to you.

Here is a step-by-step process to do that:

1. Ask her a question or present her with a challenge that makes her qualify.
2. If she complies, let her know she qualified.
3. Put up a false barrier or qualify her further.

If she doesn't prove herself to you, pivot away from it, build up more prizability, then qualify her again later after building some more rapport and attraction.

Note: Some women may not want to give you the "prove yourself to me" judge role right away because they haven't

accepted your leadership or judge authority yet. So, by building more rapport and attraction, you can better influence women to want to qualify themselves to you.

Chapter #13: The Physical Touch

You want to condition her to make these associations:

1. Physical touch (associated) with acceptance and validation.
2. The release of physical touch (associated) with rejection and disapproval.

Do this by coupling touching her with a verbal pull. And, release your touches with verbal pushes.

Note: Be careful to do this only when the situation deems it as appropriate. (See "When you need a push-pull".)

Chapter #14: Using Role-Playing

The power behind role-playing it:

1. It removes the fear and rejection.
2. It exonerates the participants from any guilt or consequences for their actions.
3. The unconscious mind processes everything that happens during role-playing as real.

- Combine your role-plays with qualifying, tension loops, and prizing body language.

Chapter #15: Tests Women Use

Some tests you may often come across include:

1. The damsel in distress test.
2. Prize-tests: tests that question, "How prizable is he?"
3. Shit-tests: tests that question, "How much shit will take or put up with?"

Note: In seduction and power dynamics, a shit-test is defined as a test or social challenge delivered by the choosing individual to the pursuing individual. And, when women are the ones delivering the tests, it's often to test his value, experience, or level of interest. Therefore, the author's definitions for "prize-tests" and "shit-tests" both count as shit-tests. So, using one definition for both would work here.

Learn more about women's tests:

> Shit Tests Power Dynamics: 8 Ways To Win the Game

Lesson #16: Women's Token Barriers

Token barriers are "flexible" barriers. They can:

1. Turn into real barriers (which are boundaries).
2. Be prize tests in disguise.
3. Be temporary resistance.

Women typically put up barriers out of obligation, not a lack of desire for you. Address the barriers with frame control to move past them (see "frame control techniques").

> 10 Frame Control Techniques to Out-Frame Anyone

Lesson #17: Reframing Women's Tests

An example from the author:

> **Swinggcat**: "Imagine I'm staring at a woman. Next, her high heel shoes stomp in my direction and she fires a Damsel in Distress test at me by scolding, 'Why are you staring at me? That's so fucking rude, lecher.' I reframe her with, 'Sorry sweetie. I didn't even notice you until now. I was actually staring at the girl behind you. But you're cute as well. Would you mind going up to her and bringing her over here for me.' I changed the meaning of the frame by changing the behavior: I wasn't staring at her, I was staring at the girl behind her. Moreover, it put her into my frame. In a gentle fashion, I defined the behavior of her scolding me as meaning that she's presumptuous and a little socially inept for thinking that I was staring at her. Most importantly, my new frame forces her into the Fourfold Meta-Frame."

Note:
The author describes aggressive behavior as fitting the damsel in distress test as long as the woman is (or is feigning being) vulnerable. Here at TPM, we have a term called the "damsel in distress game". And, it leverages high signals of vulnerability, exploitability, and submissiveness mixed with 'an air of a woman in need of 'protection'." A staple of Marylin Monroe's sexual lure as a seducer. And, it would be hard to imagine Monroe behaving in the same manner as the woman in the example above, so imagine the damsel in distress test and damsel in distress game as two different terms with two different definitions.

Lesson #18: Outframing Women's Tests

"Outframes serve the same purpose as reframes. But they function differently. Instead of reframing a woman's frame, they put a larger frame around it."

The different types of outframes:

1. Bad Intentions (framing the intention behind a woman's test or barrier in a negative light).
2. Undesirable Attributes (framing the cause of a test or barrier as a personality flaw the woman possesses).
3. Consequence Framing (pointing out the consequences of her behavior or frame).

Real-Life Applications

- Don't pretend to enjoy the things she likes because that will kill the attraction.
- Praise the behavior you want to see more of.

Positive reinforcement that leads to a good time for both of you is positive persuasion and good seduction.

Cons

Confusing information on having standards

The author teaches that higher standards lead to higher dating success because of this philosophy:

"It's a very funny thing about life: if you refuse to accept anything but the best, you very often get it." -William Somerset Maugham

But, one's dating success is heavily determined not by their standards, but by their own SMV.

And, while I think the author knows this (hence why he goes into such detail on raising your attractiveness), this part still came across as a neat hack or trick one can do to instantly see more dating success.

So, I would've preferred if the author did more to make the dating success that can result from this mindset seem

less automatic.

(Maybe) Could use some more intuitive naming

The “Your Reality” section shares great strategies on how to be in control of your life. And, the “reality” concept comes back around later in the book, so it works well.

But, at times that particular section didn’t feel like it was about realities. It felt like it was about quality.

So, instead of “don’t let her pull you into her reality”, perhaps splitting that section in two and naming the first part “don’t behave in ways that lower your perceived quality” might’ve been better.

Especially, since that section lists out some things men have done that negatively affected the way women viewed them (for example, changing beliefs only to make her happy because they’re emotionally dependent on her approval, cutting off friends because she threatened a break-up if he didn’t, and so on).

Could use better wording at times

For example, the author says, “Maintain a strong reality.”

Maintain a strong reality or maintain a strong *hold* on your reality?

The former leans toward implying that one needs a strong (fun and exciting) lifestyle to pull women into. But, the latter better supports the author’s points that it’s less about the lifestyle you lead and more about being the lead of your lifestyle.

Gets a few definitions wrong

The author says, “When a woman witnesses other women treating a man like a prize, it fires a compliance trigger hard-wired into her brain called social proof.”

And, that’s actually preselection (see “Using social proof & preselection to boost attraction”).

As an added note, social proof is more of an influence-related human instinct than a “compliance trigger” because social proof doesn’t guarantee compliance.

Audio editing could use a clean-up

The audio repeated some words and sometimes causes the narrator to speak a little faster than what you might feel is considered normal.

But, the author only repeats himself three times due to the editing, and the amount of speed-ups is minimal.

Teaches affirmations for building confidence

The author mentions that the two facets of confidence are your experience and your belief system. And, the author gives a list of beliefs the reader can take away and begin internalizing right away.

An example of those beliefs is, “No matter how psychotic it seems, deep down inside, every woman on the planet believes that I’m the prize she wants to win.”

This seems like an easy ego boost without having done any of the work to earn it (and, that’s assuming you believe what you’re saying).

Plus, this belief can lead one to become more cocky than confident because of the nature of this mindset.

And, the majority of the other beliefs are similar affirmations without the exact use of “I am” (see “A better alternative to affirmations and why it works”).

Missing some studies

The author says, “Say the four folds of the Fourfold Meta-Frame aloud ten times a day the same way you would rehearse an affirmation. This will din the Fourfold Meta-Frame into your neurology.”

But, he doesn’t share any references to research or studies that prove this, and, to my knowledge, there are none.

The author also says, “When meeting a man, a parade of questions march through a woman’s mind such as, ‘Does he think he’s the prize? Does he think he can seduce me? Does he think I’m attracted to him?’ If the answer is ‘no’ to any of these questions, they’ll seem as having no prizability and eliminate him as a potential mate.”

This seems like a good point to back with a link to some research because it conflicts with information (the stereotype content model) that does have scientific support.

Switches between teaching antifragile and fragile ego beliefs

The author tells a story of how he made it his goal to kiss a girl every day over the course of 30 days despite his nervousness, fear, and anxiety back then. And, he mentions that he was able to pull off kissing at least 15.

Though, I’d say that the real victory and growth was in the effort of having gone for and done his best to push through his anxiety rather than the result of having kissed however many girls.

And, I wish the author would have underlined that more because it felt like he took more pride in the outcome than the effort.

Some relatively short chapters

For example, Chapter 3 is two pages long. And, Chapter 16 is only a page and a half.

Compared to the other chapters and the rest of the book, the amount of content there seemed relatively short.

Leaves out some steps and information

In the section on the Fourfold Meta-Frame, the author says to include your desired outcome in the Fourfold Meta-Frame in order to have a strong meta-intent.

But, he doesn’t say how. Do you add your desired outcome as a fifth fold, phrased in a way that supports your “I’m the prize” mindsets?

Unfortunately, he doesn’t say.

Provides poor reasoning behind some of the mindsets

For example, the author recommends adopting certain “I’m the prize” beliefs because attractive women have them, so it will flip the script.

Simply because a woman has certain beliefs while dating doesn’t mean they’d transfer over well to a man (or be good in the first place).

A man must have the SMV to support his belief that he’s the prize if he wants to experience real results in his dating life.

And, besides that, the “I’m the prize” attitude that some attractive women hold often leads them to put themselves on a pedestal and sometimes behave egotistically. And, it’s that kind of unattractive behavior that will lead men who are experienced in dating to neg them in order to take them down a notch (see “An example of subtle negging in text”).

So, “I’m the prize” beliefs don’t always transfer well and can even be counterproductive for both men and women when overdone.

Sometimes overstates the importance of good game

The author reminds the readers throughout the book that inner and outer game matter more than looks to the point that it sometimes feels like he's saying looks don't matter.

Albeit the first chapter talks about the importance of looks, the remaining chapters are about character. And, the author's storytelling style in those remaining chapters makes it seem as though looks are irrelevant to seduction and dating.

Especially when he says things like "even if she thinks your looks are God-awful" and "even if a woman thinks your head was harvested from a wildebeest and transplanted onto your shoulders".

Misconstrues some information in psychology

The author says, "Anytime a woman's face is pinched, posture is rigid, or arms are crossed, mismatch her. Loosen your face and smile, uncross your arms, and relax your posture. Because women unconsciously want to open up, they'll start matching your body language."

Not entirely true. People only mirror the body language of those they perceive to be like them. So, if they think you're too dissimilar from them, they'll maintain their current body language due to ingroup/outgroup favoritism (see "Trigger social pressure").

Pros

Honest sexual market value talk

It was great to hear the author talk about the potential a man has in terms of how high his attractiveness can go if he works hard.

And, it's true: a man's value is heavily determined by the heights he reaches in his own self-development.

Recommends sound psychology

It was very interesting to see the author incorporate psychology (such as the anchoring cognitive bias and heuristic processing) typically applied to sales and negotiation to the seduction process.

Recommends being collaboratively assertive

Primarily in the section on "strong leadership", the author recommends his readers to avoid being a dictator.

Be assertive without being aggressive. Authoritative without being authoritarian. Dominant without being domineering.

And, even in a relationship with a woman who prefers to fully submit to her partner, a constant attitude of over-dominance can still sour the relationship.

More than that, it's good for nurturing a relationship that results in both partners having mutual respect for each other as opposed to a relationship involving (albeit possibly unintentional) abuse.

Avoids counterproductive red pill psychology

For example, in the "Your Reality" section where the author recommends you don't get pulled into hanging out with her friends as a first date.

There, the author makes sure to mention that not everything a woman does throughout the dating process is a "play" or a game from her. A woman may invite you to hang out with her friends as a first date not to make things harder for you, but because she has real reservations about going out alone with a stranger.

It was nice to hear the author give valid, understandable reasons behind some of the dating behavior women use and games they might often play as opposed to simply saying it's because "women can't love men" (see *Alpha Male Strategies*).

Tells stories openly and honestly

About his own fears, nervousness, and anxieties on his journey to becoming better with women.

And, that was refreshing to hear.

Acknowledges and teaches judge power dynamics

The author says, "Playing the role of the suitor is a losing battle for guys. If a man incessantly jumps through a woman's hoops with the fairy tale dream of winning her over, she'll see him as packing the prizability of a herpes breakout."

And, the author goes even further later in the book to make sure readers understand the consequences of being on the losing end of the stick when it comes to judge power dynamics.

Author's writing style made the program fun and engaging to listen to

The author makes a lot of jokes and uses very descriptive language to put you in the situations and stories he tells as if you're really there.

It made me feel grateful for an audio version because it also served as a solid reminder that while dating can be painful, it's not supposed to be confrontational.

It can be fun and enjoyable, just like the book.

Gives real, specific techniques you can use now

Such as initiators, conversational hooks for cold-approaching women, role-play ideas, and much, much more.

This book is great for practicality (you won't be overwhelmed with theory) and quick actionability.

Teaches charmer traits that can help in all social interactions

The author teaches charmer traits and social skills that help in more than only dating.

This was given a larger spotlight in the author's section on avoiding the nasty social climbing behavior of bragging. He went into detail teaching how one can go about self-promoting in a way that raises your status without coming across as a braggart, narcissistic, or annoying.

Pulls from the best resources on influence, persuasion, and social skills

If you read this book, you might notice information that's also shared in other resources jump out at you (most notably from *The Social Skills Guidebook* and *Methods of Persuasion*).

And, it's a treat to hear the author share information that's validated by some of the best resources out there as he ties it into how you can become better with women.

Review

Real World Seduction 2.0 is a very valuable and oftentimes very entertaining program.

As you know, more content means more to pick apart.
So, it may seem like there are a lot of cons, but it's only because the program is so robust and covers so much of the dating and seduction process.

Real World Seduction 2.0 would be 8.5 stars if it weren't for the definition mix-ups, psychology mistakes, and fragile ego mindsets.
And, Lucio notes, it's one of the reasons why TPM didn't move forward with a cross-promotion.
But, since I've organized them for you here, they'll be easier to move past if you join :).

If Swinggcat decides to clean up the errors listed in the Cons list, *Real World Seduction 2.0* is easily an almost 9-star program.

Girl Wash Your Face: Summary & Review

Lucio Buffalmano · 3 February 2023 · Archived copy · Original

Girl Wash Your Face is a mix of Rachel Hollis's autobiography and self-help advice, which includes empowering mindsets such as a sense of ownership, the belief that we can change our condition, and that the Lord will find a way for us.

Bullet Summary

- We have all been fed a bunch of lies about what we can't or can't do
- Wash your face and wake up to the reality of life: you're in charge and can do whatever you please
- People will treat you like you allow them to: demand the respect you need and deserve

Full Summary

Girl Wash Your Face is based on paragraphs relating to each one of the "lies" that the author lists.

But I didn't find all of them deep enough to warrant a review, so I will give here a summary of what I felt were the most interesting takeaways:

Choose to Be Happy

Rachel Hollis powerfully stresses the idea that we need to take responsibility for our life and for our own happiness.

She talks about people -and herself- who travel and move looking for an elusive "change", oping to stumble on

happiness.

But moving, she says, doesn't change who you are, only changes the view outside the window.

You must *choose* to be happy, grateful, and fulfilled.

> **Moving doesn't change who you are – only the view outside the window.**
>
> *Rachel Hollis*

Build People Up, Don't Tear Them Down

Rachel Hollis tells the story of a former classmate of hers.

She was popular and cool.
And when she said she shaved her toes, Rachel couldn't resist making fun of her and gossiping behind her back, even arriving to say "what kind of person shaves her toes".

The crazy thing?

She shaved her toes too!

Hollis uses the story to reflect on the tendency most of us have to put people down and exhorts the readers to resist all urges of gossiping, spreading rumors and demeaning and devaluing the people around us.

I couldn't agree more and I talked at length about it on this website. Also check:

- Make friends, no enemies

Respect Yourself to Have People Respect You

Albeit she never calls it so, Rachel Hollis also goes into dating power dynamics.

She was head over heels for her first boyfriend while he instead took her for granted and rather mistreated her.

She was too naive, she says. She really thought they were going to get married and start a family and called him his boyfriend publicly.

Until… He made it clear they were not in a relationship.

She says:

I naively believed that if someone had seen your boobs and regularly went to dinner together, it meant we were a couple.

Meanwhile, this man didn't even believe we were dating.

Eventually though she sobered up. She called him one night and told him that they were through.

She reminded him of his "friends" thing and told him she didn't want to be friends with him at all because she deserved someone who treated her properly.

Then told him to disappear from her life and hung up.

And what happened right after that? He showed up at her door to be together. This time "for real".

However, she says that her story is an exception.

And she wasn't even angry at him because, and I really liked this:

People will treat you with as much or as little respect as you allow them to. And our dysfunctional relationship started the first time he treated me badly and I allowed it.

Rachel Hollis

And she says that sometimes, even if it breaks your heart, walking away is the biggest act of self-love you can have access to.

Also read:

- Types of abusive men
- Signs of abusive relationships
- The best relationship ever: start here

Don't Make Yourself Small to Make Others Comfortable

Rachel Hollis talks about the tendency of some women to make themselves small and diminish their own achievements and ambitions.

She says that God didn't make you the way you are and give you your special talents so that you could "hide" them from the rest of the world.

And she encourages women to also pursue their careers if they so wish because a "woman's job" is not solely to tend to the family. That's a duty that is shared by both partners, she says.

Rachel Hollis says that something that helped was the "willingness to offend", not in the sense of being rude, but in the sense that not everyone could approve of you and someone might end up not liking what you do. And that's OK.

She also says that, after a bad review, she stopped reading reviews altogether.

My Note:
I personally disagree with this.
Growing and maturing also means embracing emotional vulnerability and having the courage to stare naked at our inadequacies. Even when they hurt.

Girl Wash Your Face Lies

These are the lies that many women tell themselves:

- Something Else Will Make Me Happy
- I'll Start Tomorrow
- I'm Not Good Enough
- I'm Better Than You

- Loving Him Is Enough for Me
- No Is the Final Answer
- I'm Bad at Sex
- I Don't Know How to Be a Mom
- I'm Not a Good Mom
- Should Be Further Along by Now
- Other People's Kids Are So Much Cleaner/Better Organized/More Polite
- I Need to Make Myself Smaller
- I'm Going to Marry Matt Damon
- I'm a Terrible Writer
- I Will Never Get Past This
- I Can't Tell the Truth
- I Am Defined by My Weight
- I Need a Drink
- There's Only One Right Way to Be
- I Need a Hero

Girl Wash Your Face Quotes

- I was so nervous. I was worried if he would try to hold my hand or kiss me or… BOTH??
- "I hope you're not one of those girls who's afraid of eating on a date" he asked me. "it annoyed me (..) I responded by eating more than half the pizza we were sharing"
- For clarity's sake, let me spell out: at that point, we weren't having sex. But honestly, that was a technicality.
- Sometimes choosing to walk away, even if means breaking your own heart, can be the biggest act of self-love you can have access to.

- Comparison is the death of joy, and the only person you need to be better than is the one you were yesterday
- You, and only you, are ultimately responsible for who you become and how happy you are

Real Life Applications

Demand The Respect You Deserve

Rachel's happy marriage showed that sometimes people are good… As long as you demand the respect you deserve. But if you allow them to disrespect you, then even good people can turn bad.

Ask For and Accept Help

This is something that I need to work on. Especially for men, who value independence, asking and accepting help is a skill to master that can help us go much farther.

Embrace The Good of Whatever Bad Happened to You

Rachel Hollis shares Tony Robbins' wisdom that if we can bear wit the pain of what happened to us, then we can also admit of what good it did to us.

She says that, indeed, it's not easy sometimes because it makes us feel bad to admit that something came out of tragedy.

But also became stronger after she found the body of her brother dead.

That was very deep and I prefer this way of dealing with pain as compared to the darkness of David Goggins' Can't Hurt Me.

CONS

God Has Perfect Timing...? What If Not... ?

Girl Wash Your Face is a Christian book –albeit it's been criticized by the Christian community-.

I don't question the religious bits, but the "perfect timing" to me is an example of the "personal God" who intervenes in people's lives. And I think that can be a harmful belief. What if the timing doesn't work for you? Then God is not helping you?

No, if there is a God, I don't believe in a God who micro-manages people's lives.

Assumes That What Worked For The Author Will Work For The Readers

At times it feels like Girl Wash Your Face falls into the mantra common to many self-help books that seems to say "look at me and how successful I am. And if I have done it, rest assured the same will happen to you too".

That's bogus of course.

Simplistic "Feel Good" Advice That Shifts Blame To "Others"

It's funny that the author says people should take responsibility for themselves.

But then, the author also says that all lies have been perpetrated by "society", "the media", "our families" and even "the devil himself".

What about biology, psychology, evolutionary psychology and sociology?
And what about, well… Truth and fair feelings based on that truth?

For example, people care about their weight because other people do, yes.
But that's not a lie, that's the *truth*.
So an effective approach may also include shedding some kilos.

Sometimes The Feel Good Advice Miminimizes Reality & Fair Feelings

Connected to the above, telling people that all the limitations we feel are "lies" is a cop-out.

Honest improvement often must start with a realistic, sometimes brutal assessment of reality.

Yes we need a strong and antifragile ego to do it, but anything else is the equivalent of spray-panting a tu… You know what I mean.

In my opinion, this isn't good self-development advice.

Too Long On Some Personal Life Bits

I liked Rachel Hollis sharing the stories of her dating and marriage.
But the part when she goes into all the details of her adoption efforts, not as much. I found it too long winded and sometimes even too complaining.

But then again, that's also probably because I write about dating and I am interested in it but have little interest in adoption.

How Is Hollis' Digital Reach In The Millions?

Rachel Hollis says that her "digital reach" is in the millions. Yet her website is only marginally more popular than this website -and only after "Girl Wash Your Face" went viral.

So that seemed a bit of an exaggeration -also read "How to Lie With Statistics".

PROS

Positive and Uplifting

Girl Wash Your Face is a positive and sort of uplifting book -in its own way, if you agree with that view of the world-. It can be effective both for motivation and deeper mindsets.

Video Summary

And here is a 5 minutes recap and review of Girl Wash Your Face:

Review

Girl Wash Your Face is an OK book mixing some popular and wisdesperad self-help wisdom with Christian beliefs and a general appeal to "trusting that things will turn out fine".

Rachel Hollis says that the principal message of "Girl Wash Your Face" is that we are all responsible for who we become and for what happens in our lives.

That's a strong message, and she delivers it in a prose which is both vulnerable, deep and even entertaining.

On the negative side, there is nothing new here.

If you're a fan of the author, you may like it.
Otherwise, I can't recommend it to an audience that is looking for an edge and for self-development that is both

effective and time-efficient.

How to Follow Orders Without Looking Weak (7 Techniques)

Lucio Buffalmano · 9 February 2023 · Archived copy · Original

Most people struggle to say “no” without backlash. But an even bigger challenge? Saying “yes” without losing power.

When you execute tasks or follow orders, power shifts.
If done wrong, you look submissive. But if done right, you maintain control, respect, and authority—even while complying.

In this article, you’ll learn 7 powerful techniques to execute without submission, drawn from our expertise in power dynamics and social strategy.

Let’s dive in.

Contents

- 1. Execute With Low-Effort
  - ⍰ Example
- 2. Change A Detail: Strategic Semi-Disobedience
  - 2.2. Improve A Detail
- 3. Agree To Execute, But On Your Terms
- 4. Gain Time: Executive Delay
  - ⍰ Failure of The Principle: Case Study
  - 4.2. Break The “They Task-You Obey” Flow
- 4. Repeat The Task With “I Will… “: Self-Tasking
- 5. Power Align & Justify The Task
  - 5.2. Pace & Lead: Shift The Focus to the Bigger Goal
  - 5.3. Agree With The Task Rationale

- 6. Execute & Re-Task Them
- 7. Disempower Them Back To Even Things Out
- Tasking Power Dynamics
  - What Determines Your Power Loss
  - Diagnostics & Strategies
  - ⍰ Example: Why I Pushed Back

1. Execute With Low-Effort

Principle:

⚖ **The less visible effort you expend, the more social power you maintain**

Sometimes, you'll have to do what someone else says. But if you execute high-power, you're still good
As per Social Investment Model, the person who expends more effort looks lower power. So an effective approach to minimize your loss is to **execute as effortlessly as possible**.
Castiglione called it "Sprezzatura". Meaning, to execute nonchalantly, as if it were easy, simple, and "no big deal" for you.

Ideally, you expend even less effort than the individual assigning you the task or giving you an order.

⍰ Example

I was in the Egyptian Museum taking a picture of a newly arrived sarcophagus.
Then:

> **Superintendent**: (moving around, agitated, dominant) no pictures, please no pictures
> **Me**: (nods, lowers the phone, keeps watching the scene)

Yes, I obeyed his order.

But with little power loss because while he expended much effort, my obedience was unreactive, and low effort (high sprezzatura).

If I had said something like “yes sir”, moved out of the way, apologized or justified, that would have been higher investment, and made me look far more submissive and lower power.

2. Change A Detail: Strategic Semi-Disobedience

With this technique:

You “go along with the larger plan”, but disobey a smaller detail to display your freedom and agency.

The bare minimum level is to show just enough free will to sub-communicate that you’re not a puppet that moves exactly as the puppeteer wants.
Ideally, you show instead that you’re an empowered individual with freewill, and a say in the decision-making.

For example:

> **Him**: welcome to the meeting guys. (looking at you and waving towards the chair) Please sit here
> **You**: thank you, I prefer this other chair (let’s get going)

You don’t challenge their leadership in any significant way, but take the liberty to choose your own seat.
Overall, you’re still attending and participating: you’re conforming with what’s most important.
So if they insist on you sitting on a specific chair, it’s them who look petty and “weird”.

Notice that if you add “let’s get going”, that is your own leadership power move.
Now *you* are the results-oriented guy who hasn’t got time to waste and who is tasking them.

And now you’re ahead: they *tried* to lead you, and failed.

2.2. *Improve* A Detail

Better yet, rather than simply *changing* a detail, you can *improve* a detail.

Ideally, you change something that self-frames you as more driven, empowered, goal-oriented, and leader-like.

For example:

> **Him**: welcome to the meeting guys. (looking at you and waving towards the chair) Please sit here
> **You**: thank you, I’ll take this other one closer to the whiteboard: I need to get all the details

Now you’re the proactive and attentive guy who wants to be on top of things (most likely, to make things happen, which is very leader-like).

Also see:

- **Strategic self-promotion at work**

> The Art of Self-Promotion: 9 Effective Techniques

3. Agree To Execute, But On Your Terms

For example, you can decide when and how:

> **Colleague**: (raises his hand and interrupts) I don't understand, can you please explain why…

If you stop and answer, you relinquish control -and justify to him.
Instead:

> **You**: Absolutely, let me finish this point and we then proceed to the questions

Same With Your Boss, But More Power-Protecting

If it's a boss, you want to make sure you power protect him more.

For example:

> **You**: *For sure"* <—- Bigger acceptance display
>
> *I quickly finish this* <— Verbalize behavioral change to accommodate him
>
> *As it partially answers your question* <— Add a rationale
>
> (OPTIONAL) (Speak faster) <— Display behavioral change show consideration

Read more on how to keep a good relationship with your boss.

4. Gain Time: Executive Delay

You lose most power when they task you, and you act right away.

Immediate execution feels like an owner-to-dog exchange.

On the other hand, delayed execution re-empowers you because it sub-communicates that you decide when to act and displays your own agency in the important dimension of timing.

So whenever you can wait before you execute the task, wait.

For example:

> **Organizer**: please have a sit
> **You**: (still standing) yeah, thank you, I look forward to the training, do you also provide us with the presentation later on?
> (chats a little bit longer, and then sits)

Even 10 seconds or a couple of back-and-forths will do.
And you don't necessarily need to talk.
You can go back to your desk to take something, take in the environment, or check your phone (just don't make it a habit!).
Whatever you do, it doesn't even necessarily have to make sense. As a matter of fact, it's OK if they get that you didn't sit on purpose. The message you send is: "don't order me around, or I'll do the exact opposite just to spite you".

⍰ Failure of The Principle: Case Study

Look at this example from the former Charlie and Ben Podcast:

> **Ben**: "Call Her Daddy" is the name of the podcast, you don't know the name of the girls
>
> **Charlie**: (interrupts) <— Disempowering 1
> So for you who don't know "Call Her Daddy" is the name of the show, <— Fixes Ben's mistake without power-protection. Disempowering 2
> (back to Ben) you can tell the story you know better than I <— Doesn't apologize and tasks him. Disempowering 3
>
> **Ben**: (answering right away) Yeah sure, <— Too fast and obsequious
> so Call Her Daddy… <— Executes the task

Maybe it's not too surprising these two aren't friends anymore.

See **Power University** for the solution.

4.2. Break The "They Task-You Obey" Flow

Similar approach, but rather than simply waiting, you take a more proactive approach.

For example, if the host invites you to go inside, you make a quick comment first.
Then, after you broke the flow, you can even add “OK, let’s go” to “steal the lead”.

You can also do the same directly to the host.
For example:

> **Host**: let’s go inside now
> **You**: yeah, sure (this is social grease, your next sentence flows more naturally and he’s more likely to comply).
> But first, did you get what I mean though when I say…

As soon as they reply, you “broke” the task-execution chain, and then you can start walking inside without losing power.

Basically, the format here is:

1. **They task you**
2. **You break the flow** and either open a new topic, task back with a smaller request (like a question), or even simply just make a comment
3. **Lead (Optional)**, and take charge of doing what they initially proposed to do

4. Repeat The Task With “I Will… “: Self-Tasking

Simple, yet genius.

It works like this:

Instead of saying “OK” or confirming your execution **repeat the task as if it were your own self-generated decision**.

And bonus points if you change a detail.
Example:

> **Him**: put the report in the folder by EOB please
> **You**: I'll upload the report (<—- self-tasking)
> by 12pm (<—- improve a detail)
> Cheers (<—-closes the conversation and gets back to work)

Or you can improve a detail to seem more detail-oriented, such as "I'll upload the report in the appropriate folder".

And it doesn't even look like you're fighting them.

Cool, eh?

5. Power Align & Justify The Task

A great example from XH:

> **Tasker**: Could you write down in a document the findings of your research?
> **You**: It will bring us in sync, good idea. I'll let you all know once done and share it with the team

Such as, instead of fighting the idea or task, you embrace it (power align or "pacing") and explain why it's a good idea (justify the execution).
Aligning removes the top down, "he tasks / you execute" frame, while the justification increases your agency, freewill, and leadership points.

A specific form of power alining is also:

5.2. Pace & Lead: Shift The Focus to the Bigger Goal

They ask to move the pawn… You think how it will get you to the king
This technique is very leader-like.

It works like this:

You start from the micro-level of the task, and put it in the macro-level perspective of how it helps you achieve the bigger goals.

For example:

> **Her**: put the report in the folder by EOB please
> **You**: yeah, we need this customer, let's go get him (<— it's not about "putting the report in the folder", which is monkey-type of work, it's about "winning the customer")

Or taking the lead:

> **Her**: put the report in the folder by EOB please
> **You**: much sooner than EOB, we need to move quick with this account, I really want to get them. I'll give you a heads up as soon as it's there

Now you're not following anymore, you're the one who drives things forward.

5.3. Agree With The Task Rationale

If you can make your obedience seem self-generated, then it's not obedience at all.

So for example, if they invite you to go inside:

> **Host**: Let's go back inside and finish our business talk. (invites to go through the door first) After you
> **You**: Yeah man, I'm freezing here, let's go inside

Now the frame is that you *wanted* to go back inside.
Still there is some power loss, but minimizing the power loss can still be a good result.

6. Execute & Re-Task Them

The general principle is:

If they task you and you task them back for something else, it's a draw.

So every time you accept the task but tell them to do something for you, you generally lose no power.

And if you add some other techniques, you can even end up on top.
For example:

> **Her**: put the report in the folder by EOB please
> **You**: I'm going to put it there right now (<— "improve a detail" technique),
> please check it by EOB (<— retask),
> I want to send it to the customer within today (<—- final part of "pace and lead" and focus on the bigger strategic goal)

7. Disempower Them Back To Even Things Out

The concept is basic "power accountancy".

We delve deeper in Power University, but the basic principle is this:

⚖ **The power loss is your disempowerment, minus theirs**
⍰ If you disempower back, you're even

But you must ensure it's calibrated to the right situations and smooth -or you'll lose social capital-.

Tasking Power Dynamics

Assigning task is a power move.

From an interpersonal power dynamics perspective, taskers are higher-power leaders, executioners are lower-power subordinates.

By assigning tasks, they self-frame themselves as higher status.

However, nothing is set until you execute:

- **IF you execute, you lose power**, submitting to their will, and confirming you're below them
- **If refuse, you may gain power**, sub-communicating you're equal or above, or that you're socially dominant
  But it depends on:
  - Immediate consequences: if they escalate, will you back down?
  - Long-term consequences: will you pay a (social) price?

What Determines Your Power Loss

- **Tasker's dominance:** more aggressive and curt, more disempowerment
- **Acknowledgment**: more ostentatious and submissive, more disempowerment

- **Your input**: less contribution, more disempowerment
- **Your agreement**: more disagreement, more disempowerment
- **Personal gain/loss**: more personal loss, more disempowerment
- **Speed of execution**: faster execution, more disempowerment

- **Effort**
  - Execution effort: higher effort, more disempowerment
  - Tasking effort: lower effort, more disempowerment
- **Task importance**: lower importance, more disempowerment

Our techniques below affect these principles to maintain power.

Diagnostics & Strategies

Context and situation are king.

To assess, the stronger the 'no', the bigger the disempowerment:

- Is he in a **position to task?** Ie.: a superior, project lead, more experienced, etc.
- Is this task within **my responsibilities?**
- Is he **respectful?**
- Is it **balanced** for social exchange, effort, social expectations?

⍰ Example: Why I Pushed Back

I pushed back because:

1. **Exchange imbalance**: We provide convenient self-development opportunities pro bono: we're the givers
2. **Effort imbalance**: Interested should look up basic info
   - The information he requests is public
3. **Fails the 'sensible person test'**: Basic information is obviously available
4. **Too curt (disrespectful)** given the situation
5. **I'd set a bad precedent**

When he showed up, he was particularly kind and friendly to me.

This is a preview from Power University, our program to turn good man into effective winners

The Science of Getting Rich: Summary & Review

Lucio Buffalmano · 15 February 2023 · Archived copy · Original

In *The Science of Getting Rich*, Wallace Wattles states that there is plenty of wealth and happiness to go around and he teaches that to gain that wealth and happiness you must manifest it with your thoughts, be grateful for what you already have, and then work to add even more.

  - The 1st Key to Riches: Thoughts
  - The 2nd Key to Riches: Gratitude
  - The 3rd Key to Riches: Faith
  - The 4th Key to Riches: Action
- Review

Bullet Summary

- Thoughts can bring things to life
- The more grateful you are for what you have, the more you'll attract
- You must take action: thoughts can bring things into your life, but only action will really make them yours

Full Summary

About The Author:
Wallace Delois Wattles was an American New Thought writer born in 1860.
Wikipedia says not much is known about him, but his writing has been very influential in the New Thought and self-help movements and he inspired Rhonda Byrne's *The Secret*.

It's OK To Want & Seek Wealth

Wattles says that the desire of getting rich is natural and there's nothing wrong with it.

Even love, he says, requires wealth since love gives you the desire of giving material gifts (giving and receiving gifts is indeed one of the 5 love languages).

As a matter of fact, striving for more is good, says the author, because it's the only way to serve others and God.

The 2 Misconceptions Around Wealth

The author says it's not true that:

1. Rich people were born into money
2. Not everyone can be rich because there's a finite amount of wealth

Everything In The World Is Made Of The Same Original Substance

Everything in the world is composed of the same substance, which Wattles calls “Original Substance”.
The original substance always regenerates, and that’s why everyone can have as much as he wants.

The 1st Key to Riches: Thoughts

The Science of Getting Rich starts with your mind.

Your thoughts shape the Original Substance in a way that it can create what you want.
In a nutshell: **you can create things with your own thoughts**.
But it’s important that you are detailed and specific in thinking about what you want.

The 2nd Key to Riches: Gratitude

Thoughts are not enough. The second step is gratitude.
The more grateful you are for the Substance you have, the more you will attract.

The 3rd Key to Riches: Faith

The third step in *The Science of Getting Rich* is faith. You need to believe that you can get what you want.

The 4th Key to Riches: Action

Thoughts will attract what you want, but action will really make them yours.

When you take action make sure to fully focus with both your body and mental presence.
And whatever it is that you do, you should have full faith that, in some way, it helps humanity (“increase principle”).

Review

The Science of Getting Rich is a typical New Thought book largely based on the law of attraction and, frankly, we’re not huge fans of it here.

It’s similar to all other New Thought books such as *You Can Heal Your Life*, *As A Man Thinketh*, *The Power of Positive Thinking*, and the Godfather of them all, *Think and Grow Rich*.

Unlike *The Secret* though, I appreciate that *The Science of Getting Rich* at least encourages people to take lots of action.
And it has some good golden nuggets as well. Including, for example, the concept of not focusing on competition but on creation.

Overall, we have to restate the obvious that **this is definitely NOT science** and I truly dislike like it when someone sells obviously and demonstrably unscientific principles as unscientific.
On the positive side, thinking positively will certainly do you good, but the full book may not be worth your time.

Check the **best books** to read or **get this book on Amazon**.

Big Magic: Summary & Review

Lucio Buffalmano · 22 February 2023 · Archived copy · Original

Big Magic is a book on creative production and creative living in which the author Elizabeth Gilbert provides both inspiration and advice on how to live creatively and produce creative work.

Contents

- Bullet Summary
- Summary
  - 1. Start No Matter What
  - 2. Write To Entertain Yourself, Not To Help Others
  - 3. Think of Your Courageous Act
  - 4. Live With Fear
  - 5. Be Authentic, Not Original
  - 6. Everything Sucks Sometimes, So Learn to Live With It
  - 7. When The Going Gets Tough, Keep Going
- Real Life Applications
- CONS
- PROS
- Review

Bullet Summary

- **Ditch perfectionism**: perfectionism is the serial killer of creative endeavors
- **A creative life is a happy life**
- **Authenticity first**: don't seek to be different at all costs, seek to be authentic instead
- **Give the gift of your creativity**: this world needs you to be as creative as you can be

Summary

About the Author:
Elizabeth Gilbert is an American journalist and author. *Big Magic* and *Eat, Pray, Love* are her two most popular books.

1. Start No Matter What

You might be in a situation where you get excited thinking about something you could do. But if you stop there, then fears will kick in. You will postpone and never do it.

Start no matter what instead.

2. Write To Entertain Yourself, Not To Help Others

This may be contrarian advice and many people won't like it, BUT if you're writing creatively, it's great advice in my opinion.

Says the author:

> "Whenever anybody tells me they want to write a book in order to help other people, I always think, Oh, please don't…I would so much rather you wrote a book in order to entertain yourself than to help me"

Plus, "wanting to help others" is babying and sets up an annoying teacher frame that may rub readers the wrong way.

3. Think of Your Courageous Act

The author acknowledges that starting anything creative is often scary.

The first step to overcoming that fear is thinking of a time you did do something courageous. Think about it. How did you feel? How elated you were soon after? What did it do to your self-esteem?

4. Live With Fear

Fear will always be there when you do something new and creative.

It's normal, so don't beat yourself up.
Instead of trying to fully eradicate fear instead, **learn to coexist with the fear and let your desire be greater than your fear**.

Let your fear and creative spirit feed upon each other.

5. Be Authentic, Not Original

I could relate to this part of *Big Magic*.

Elizabeth Gilbert says that most people don't start because they feel their idea has already been done. But everything's already been done. You don't have to be unique, you have to be authentic.

Give your own spin to whatever you have in mind.

I personally prefer putting it in a different way. Don't strive to be unique: strive to be the best.

6. Everything Sucks Sometimes, So Learn to Live With It

No matter what you do, there will be times when your work sucks.

Don't let that stop you.
That's further motivation instead to really seek what you're passionate about, so that the bits you love will always weigh more than the bits you don't love.

Albeit if you're doing something really creative, Elizabeth Gilbert says, you should prioritize curiosity over passion.

7. When The Going Gets Tough, Keep Going

There will be times when the creative process will be a bit more difficult than usual.

And times when *everything* will be more difficult than usual.

Those are the times you need to keep going.

Also read Grit by Angela Duckworth.

Real Life Applications

- **Start…**

Whatever you want to do.. Start it.

- **... And keep going**

And don't stop.

- **Stop complaining if you want to live a more creative life**

Creatives don't complain, but use their art for change, inspiration, or escape.

- **Don't quit your day job.**

Most artists don't make a living from their art.

Plus, you want to keep the job to free yourself from the burden of expecting art to pay the bills;

- **Think of success as doing what you love**

Don't think that success looks like money or acclaim.
Instead, if you love what you're doing, that's already your success.

- **Get an agent**

Because "who you know" matters more than "what you know".

- **Follow your curiosity when you have no inspiration**

CONS

- **You may not find anything "new"**

Albeit it's a good book and an easy read, it doesn't break much new ground (neither in itself nor via an overview of the best perspectives and bits of advice on creativity).

However, as Elizabeth says herself, everything has already been written.

Sometimes it's about new perspectives.

- **Some woo-woo nonsense**

The author says that ideas are like entities with a live of their own, something I don't agree with but that doesn't ruin the book in itself.

However, when she says she had "passed the idea" to her friend with a kiss, then it gets a bit too nonsense.

- ***Big Magic* mostly addresses creative *writing***

There are many creative endeavors, but the biggest focus in Big Magic is writing.
While some of the topics go well beyond writing, (aspiring) writers might the most out of it.

- **Not an "how to"**

Big Magic is more about inspiration, encouragement, and a bit of mindsets. It's not really a "how to" book.

PROS

- **The author may have the credentials**

Elizabeth Gilbert may have the credentials to write a book on creative writing.

- **Strikes a good mix of autobiography and self-help**

Big Magic mixes self-help with autobiography. Even if you're not interested in the author's life, it made the book more entertaining and provided some cases for real-life examples of creative writing.

Review

Big Magic is a good book for beginners and aspiring writers who struggle to push through and go from "aspiring" to "actual writer.

The concept of fear as a creatives' block reminded me of *Linchpin* by Seth Godin, but I found *Big Magic* better as it provides some more practical tips.

Word of Mouth Marketing: Summary & Review

Lucio Buffalmano · 3 March 2023 · Archived copy · Original

Word of Mouth Marketing (2015) explains what word-of-mouth marketing is and provides readers with a few tips and ideas on how to leverage it to help grow their business.

Contents

- Bullet Summary
- Full Summary
  - The Two Rules of WoM
  - Word of Mouth Marketing Manifesto
  - Who Are WoM People?
  - The Types of WoM Talkers
  - Why People Talk About You
- Real-Life Applications
- CONS
- PROS
- Review

Bullet Summary

- **Happy customers = free ads**. Happy customers are your best marketing and advertising tool
- **Normal people are your everyday ads**. People spreading your brand are normal, everyday people. So treat all your customers well
- **Target influencers**. But besides treating every customer well, also try to target influencers in your niche
- **Be remarkable to get people talking** and get even more free advertising

Full Summary

About The Author:
Andy Sernovitz is a marketing expert, and founder of GasPedal, a business that helps companies develop peer-to-peer communities.

The Two Rules of WoM

The two rules of word-of-mouth marketing are:

1. Give people a reason to talk about your stuff
2. Make it easier for that conversation to take place

In even simpler terms, **WoM marketing is everything you can do to get people talking**.

Andy Sernovitz says that WoM marketing as the acronym equivalent of B2B and B2C, is B2C2C.
Such as: the business originates the products and ideas.
And then it lets the people do the propagation.

Word of Mouth Marketing Manifesto

The 7 rules of word-of-mouth marketing are:

1. Make people happy
2. Be interesting or invisible
3. Great service starts great conversations
4. Marketing is what you do, not what you say
5. People are already talking, you must join the conversation.
6. Be original: not worth talking about equals not worth doing
7. Negative WoM is an opportunity to learn

In brief, again, the very first best advertising tool is your customers.
Make people happy and you get free, high-quality advertising.

Who Are WoM People?

It's everyone, really.

There is a popular idea that some "top influencing" people do all the word-of-mouth marketing.
This idea originates from pop-psychology author Malcolm Gladwell, who wrote about in The Tipping Point.

Gladwell's concept is that of a few "super-infectors" who drive most of the spread of a virus.

Some people apply the same concept to WoM marketing, saying there are a few of ultra-hip and ultra-connected talkers.

My Note: This Is The "Two-Step Flow of Communication" Theory
It wasn't Gladwell who came up with this concept, though. That's actually an old theory in communication called "Two-Step Flow of communication". It's based on the idea of a smaller number of "thought leaders" drive most people's opinions.

However, the author says that's not true.

It's ordinary people who fuel the real word-of-mouth marketing.

The Types of WoM Talkers

There are a few different types of people who will do word-of-mouth marketing for you:

- Happy customers
- Online talkers (leave a review or a comment online)
- Logo lovers (people wearing your logo)
- Eager employees
- Listeners (people eager to hear from you)
- Fans and hobbyists (the most die-hard talkers)
- Professionals (reporters)

Why People Talk About You

People will fundamentally talk about you and/or your product for three reasons:

1. They like you
2. You make them look smart with your product

3. They want to belong to a group

Real-Life Applications

Be Remarkable

People don't talk about ordinary stuff. They talk about their first times, the unusual, the out-of-ordinary, and whatever catches their attention.
So, be remarkable and memorable.

CONS

Bit Common Sense

The information in the book is well structured and some of it may feel a bit like common sense. There are quite a few good nuggets and it can still be a great reminder anyway.

PROS

Highly Relevant to Today's World

Today getting reviews and opinions from word of mouth (or bytes) is probably more popular and commonplace than it's ever been.

Review

Word Of Mouth Marketing is a good overview of word-of-mouth marketing.

There's nothing earth-shattering, but there are good ideas and concepts and it's important for any businessman to know what word-of-mouth marketing is.

However, putting it to actual use is a completely different thing.

It's a bit like *The Tipping Point*, *Contagious*, or *Crossing the Chasm*.
These books have great reviews, and for good reasons. They are great books, indeed.
But I have never heard of anyone who "tipped the point / went viral / crossed the chasm / achieved mass market penetration" thanks to the theoretical knowledge acquired with those books.

Basically: good theory and fundamental theory, but not "how to" books and you need your own creativity to turn the information into an effective plan or system.
For example, the advice "be remarkable" may make sense in theory and for some products, but… HOW are you going to be remarkable when everyone else is trying the same?
And even then, just being remarkable is not enough. Few remarkable products or ads "go viral". So, in my opinion, your best bet is probably always focusing on making the best products you can and then may be think about how to get word-of-mouth marketing.

So, in brief, learn about it, but don't expect that this book will 10x your sales via word-of-mouth -or even that you will 10x your word-of-mouth sales without adding your own creativity-.

Still, overall, it's a good book and easy to read.

How to Be a Bawse: Summary & Review

Lucio Buffalmano · 10 March 2023 · Archived copy · Original

How to Be a Bawse is a mix of biographical tidbits from Lilly Singh's life, a comedy book, and a self-help manual with advice and tips for the readers.

Contents

- Bullet Summary
- Summary
  - Conquer Your Thoughts
  - Stay Outside Your Comfort Zone
  - Set Emotions Aside
  - Own Your Mistakes
  - Take the Stairs
  - Opportunities for Success Are Infinite
  - Don't Use Social Media
  - Leverage Your Pain
  - Drop the Entitlement Mindset
  - Don't Get Easily Validated
  - How to Behave Like a Bawse
  - Only Talk About Positive Things
  - Quotes
- Real-Life Applications
- CONS
- PROS
- Review

Bullet Summary

- **Don't look for shortcuts**: develop your self-control to become a hard worker and do the stairs instead
- **Avoid cheap self-validation**: reward yourself on accomplishments and contributions instead
- **Use your pain** to take action kick-start your new life

Summary

Lilly Sing says that "How to be a Bawse" contains no secrets or magic tips. Simply because, she says, there are no secrets or magic tips.

Conquer Your Thoughts

The best way to stop people from pushing your buttons, is pushing your own.

However, Lilly says, there is no secret sauce or shortcut to learning to control your mind. It's a long process that takes time and continuous effort.

It requires you to ask questions to learn about yourself and answer honestly.

Stay Outside Your Comfort Zone

Lilly Singh says to learn, grow get better, and accomplish anything in life you need to be able to push your comfort zone.

Everyone who has achieved anything has had failures and moments of shame and embarrassment.

Her first videos for example were terrible she says and it was not easy for her to push outside her comfort zone.

The author implies that even overnight successes -or those who claim to have been overnight successes- had to go through difficult times outside their comfort zone.

Drake for example says he went from 1 to 100 very quickly, but the author instead says he still went from 1 to 2 and to 3.

And he even got booed off stage once.

Set Emotions Aside

The author says that emotions cloud judgment and reduce creativity.

My Note: Not Fully True
Trevis Tradberry says that paying attention to our emotions is the best way to make critical decisions.

And negotiation expert Christopher Voss says in Never Split the Difference that taking emotions out of negotiations has been the biggest mistake in decades of bad negotiation.

Lilly Ling says that a bawse knows when to have tunnel vision and only focus on your goal, without emotions getting in the way.

I agree more when she proposes instead to ask yourself: does this emotion help you move towards your goal? If yes, embrace it, if not, put it away.

Own Your Mistakes

Lilly Lingh says that mistakes are cool and a great way to learn.

The bawse approaches mistakes in this way:

1. Takes ownership
2. Call yourself out (answer to your inner bawse before your boss)
3. Come up with a solution (specific)
4. Apologize openly (says you're a responsible adult)

The examples Lilly gives are really really good from a communication perspective.

Take the Stairs

The author invites the reader to choose hard work and dedication over looking for the shortcuts.

It's exhausting taking the stairs, but it's the only way to build a solid business.

And you can really be proud of yourself like a bawse, because you did. Not luck, not circumstances, not outside help or shortcuts.

Opportunities for Success Are Infinite

When you take the stairs, you don't need to rely on a single big shot.

There are no big shots that you can't miss indeed.

If you build your career or gamble your fortunes on a single shot, you are not working properly.

In Lilly's words:

If one opportunity will make or break your success, your idea of success is not solid to begin with

Awesome, I couldn't agree more.

Don't Use Social Media

Lilly echoes something that a few authors also said about social media (Mark Manson, Brene Brown).

And that's that social media is basically fake and designed to showcase only the best of the best that people do.

But that "best of the best" is not real life and only serves to make us feel bad.

Leverage Your Pain

Lilly Singh says that sometimes she replies to the question "what are you most grateful for in your life" with "depression".

Lilly started making YouTube videos in 2010 to make herself laugh and get out of depression.

All of her success, she says, is the result of taking that pain and turning it into something positive.

It's a great concept.

It is exactly what we talked about in leveraging your pain and failure and something I'm not too unfamiliar with myself.

> Failure & Anger As Fuel for Success: How The Power Moves Started

Drop the Entitlement Mindset

We live in a world that panders to our egos and tells us repeatedly how great we are.

And that makes us naturally feel entitled to success.

Without having to earn it.

Bawses don't feel entitled to success but feel empowered by the challenge to earn it.

Lilly believes that believing in a great bawse is a great way to stay grounded (ie.: fate or God).

And also, remind yourself that wherever new place you go, your past accomplishments mean little (indeed, read social status relativity and the small pond syndrome).

Read more:

- How to overcome entitlement mindset

Don't Get Easily Validated

Easy validation can get to your head, says Lilly Singh.

These days it's everywhere, and it's easy to start feeling validated for the completely wrong things and for what we haven't really earned.

Lilly says instead that a bawse only feels validated if:

- Contributes to society
- Accomplishes goals

How to Behave Like a Bawse

Being this a website on social skills and social dynamics, I particularly enjoyed her social tips and found them to be very good:

- Smile for a reason
- Listen to understand
- Don't reply with empty platitudes: mean what you say
- Live in the moment: be present

Again Lilly has some very good examples on meaning what you say.

Only Talk About Positive Things

Talking and commenting on negative things only multiplies and increases negativity in your life. It's a vicious circle.

And it's especially bad if you do it on VIP gossip.

Commit instead to only commenting and talking about positive things.

Quotes

Some of the many great quotes in the book include:

- Well I do have a million dollars and it hasn't changed anything. Money is the result of what I do, not the reason I do
- Taking ownership of a mistake is like attending class: it's the only way you'll learn from it. Not admitting is like

skipping class and wasting your tuition.
- Make every struggle count and remember that experience will always be a silver lining”
- When you are climbing the ladder, the heaviest piece of clothing you wear is your pride
- If you’re going to do it, do it the best you possibly can
- Words can lie. Actions can lie too. Consistency speaks the truth
- Fitness is not about big muscles and hours at the gym… Is to allow your body to keep up with your hustles

Real-Life Applications

- **If You Must Get Validation, Make It Achievement-Based**

I really liked the chapter on ego and validation. It’s something I stress a lot in Antifragile Ego and Ultimate Power.

I prefer to reward the process, but Lilly’s concept of validation from achievements instead of praise is certainly a step forward anyway.

- **Build Up Self Control With Small Decisions**

Self-control is a like a muscle that increases over time.

You can help yourself exercise that muscle by choosing to control smaller daily actions and rituals.

For example the author decided to never swear, and that helped her increase self-control.

- **What Would Your Future Self Thank You For Doing Today?**

To overcome the fear of missing out Lilly recommends this great question to ask yourself.

Once you know the answer, you know what you gotta do.

CONS

- **Emotions Cloud Judgement and Reduce Creativity… Not**

The author says you need to put aside emotions because they impair your critical judgment and even your creativity.

She says that’s what science says, then jokingly says it’s not true. And then adds that if science said anything about it, it would confirm her point of view.

Basically she has no research but feels entitled to give scientific background to her personal stance.

That’s not an approach I can approve of.

And indeed her point of view is likely wrong.

- **Refences to Her Gender and Skin As “Pretty Awesome” Is “Pretty Weak”**

It’s just a small blemish, but I found her line of “my sex and skin color are pretty awesome” to be quite weak, even if delivered as a joke.

- **Bit Self-Centered**

The book flirts with “me, me, me” narcissism.

I couldn’t help but not notice that the book is dedicated to the author herself -“to the person she was 6 years ago”.

And when she lists the reasons why you might be listening to the book she says “or maybe you’ve never heard of

me, and that's completely fine".

- **Relationship Advice From Someone Who's Never Been Into One?**

The author gives some tidbits of relationship advice. However, she herself says she's never been in a relationship.

PROS

- **Some Truly Good Quotes**

We like good quotes here, and there are really a ton of great ones.

- **Deep Topics With Irony**

It's not easy to mix some of the deep topics mentioned in *How to be a Bowse* with lots of ironies. But Lilly does it well.

- **Some Quite Funny Lines**

Albeit Lilly's irony does not exactly matches my type of irony, she has plenty of great lines for every taste.

Some examples:

- Honesty is the new black
- Yes, when I take a break from my YouTube videos, I watch YouTube videos. Hashtag reasons I'm single
- Oh, I didn't see you there bawse… Said no one ever

Not bad :).

Update: I watched a few of her videos and some of skits are so good that I even re-watched them. She's good. And she's also a great role if you want to learn nonverbal communication.

- **Irony Without Cussing**

I remember a great line from Eminem "Will Smith don't cuss to sell records. Well I do, so fuck him, and fuck you too".

Lol that was terribly funny I thought. However, I respect people who can achieve the same results -or even better- without the cussing. Which, in a way, is a bit of a shortcut.

Props to Lilly for achieving that.

She walks the talk on the stairs thing.

- **Great Audiobook Voice!**

Lilly wanted to be an actor, she says.

And it shows.

Her voice tonality, melody and excursion are great (maybe a bit too over the top sometimes but again, that's her style).

It really makes the book go fast (but don't go too fast because there is a lot of deep material that does require some good introspection to fully grasp).

Review

How to be a Bawse is both entertaining and informative as it effectively mixes autobiography with humor,

motivation and solid self-development tips.

I read a lot of self-help books made by people who achieved a certain fanbase and then decided to add “author” to their own titles.

Those books are rather poor and extremely thin.

Honestly, I was expecting something similar from How to be a Bawse.

I was terribly wrong.

How to be a Bawse has great content.

The delivery, starting from the title and all the celebs’ references and jokes, is not my style (albeit several lines are quite funny).

But How to be a Bawse condenses a few of the most critical best lessons of the whole self-help literature.

And Lilly Singh successfully manages to marry great (and serious) content with her own style. Hot to be a Bawse, the final result, is a book that will both appeal to her audience and deliver life-changing content.

Whether the readers will be able to sieve through the jokes to get the life-changing content is another question, but Lilly did her part by putting it out there.

Steve Jobs Exclusive Biography: Summary & Review

Lucio Buffalmano · 17 March 2023 · Archived copy · Original

In the *Steve Jobs Exclusive Biography* author Walter Isaacson recounts Job's life, achievements, and a few "dirty secrets" that shed a better light on who Steve Jobs really was.

Contents

- Key Takeaways
- Notes
  - Growing Up
  - LSD & Spirituality
  - Apple Idea
  - Steve Jobs Personality
  - Macintosh
  - Steve Jobs Gets Fired
  - NeXT & Pixar
  - Jobs' Family Life
  - Back to Apple: Advisor
  - Back to Apple: CEO
  - Digital Hub Strategy: iPod, iPhone, iPad
  - Closed, Integrated Systems
  - Microsoft & Google Spats
  - Cancer Treatment Jobs' Way
- CONS
- Review
  - Power Moves, Ambition, & Ruthless Drive

Key Takeaways

- **Undermine your opponents**: Jobs accused Microsoft of copying OS (but Apple "borrowed" from Xerox)
- **Get as much free PR as possible**: Steve Jobs manipulated the press to get better coverage for the Mac
- **Don't forget to make money**: Wozniak wanted to give the idea of the Apple I for free, but Jobs convinced him otherwise
- **Use hyperagency to achieve goals but don't abandon science for the "reality distortion field"**: Jobs believed he could cure cancer with acupuncture and eating fruits

Notes

About the Author:
Walter Isaacson was the CEO of CNN, Managing Director of Time, and author of several biographies.
I find it interesting that such a successful man would spend so much time on researching and writing biographies (he also wrote Leonardo da Vinci, Benjamin Franklin, Einstein and Kissinger).
When it comes to Steve Jobs, this is the only authorized biography.

Growing Up

It wasn't the biological parents who raised Steve Jobs. The mother had to give him away because her strictly Christian family wouldn't recognize a baby with a Muslim.

Steve Job's biography says Job got interested in design because of the way their house was structured and he got into tech because his father, as a mechanic, tried to lead him in that direction.

My Note: plenty of mechanics sons who are not interested in tech and plenty of designer children who are not interested in design. So I'd be wary of connecting the dots that way.

Wozniak

Steve Jobs met Wozniak in high school. Wozniak was five years older and already good with computers. He taught Jobs a lot about what back then was still an emerging technology.

In 1971 the two launched "Blue Box", a device for long distance free phone calls.

It cost $40 to produce and they sold 100 of them at $150. Blue Box gave the two the first glimpse on entrepreneurship and what they could achieve in the emerging field of computers.

LSD & Spirituality

The counterculture of the '60s heavily influenced Steve Jobs. He delved into spiritual philosophies, meditative introspection and experimented with psychedelic drugs.

Steve Jobs attributes his sense of aesthetics and extreme focus to his experiences with psychedelic drugs and spirituality. And, interestingly, he also attributes to LSD the focus of what's important in life. For Steve Jobs, producing great products was important.

Reality Distortion Field

LSD and spirituality helped Steve Jobs develop a view of life that came to be called "reality distortion field". Such as that no matter the odds or the challenges, if he decided that something had to happen he would bend reality to his will to make it happen.

TPM Note: not just drugs, but potentially psychology
This 'distortion field' sounds to me more like hyper-agency and hyper-optimism, coupled with a potentially narcissistic tendency towards grandiosity.
Read more here:

- How to develop 'effective grandiosity'

> Antifragile Grandiosity: How 'Humble Grandiosity' Makes You Powerful

Minimalist Approach

Isaacson says that Steve Job's minimalist approach was influenced by Zen Buddhism, which he explored during his famous Indian trip while exploring Eastern Philosophies.

Apple Idea

It was actually Wozniak who had the idea of Apple.

Wozniak attended the Homebrew Computer Club, a nerd and computer lovers meetup venue. The mindset there was that the counterculture philosophy and the technology revolution were somewhat interlinked.

Indeed Wozniak wanted to freely share his “all in one” computer idea -instead of the several separate pieces that computers were back then-.

Very interestingly, Isaacson says that it was Jobs who convinced Wozniak that they profit from the product instead.

Apple Beginning

In 1976, on Wozniak’s idea, Apple was born with 1.300 in startup capital.

The two worked hard for a whole month hand-building 100 computers: the Apple I. Half of them were sold to a local computer store and the other half to friends and customers.

Steve Jobs Personality

LSD, meditation and eastern philosophies didn’t seem to calm down Jobs’ temper.

The Steve Jobs book says that he was an erratic individual no stranger to tantrums and fits of rage. He was a painstaking perfectionist and when the quality of the work was not up to his standards he would verbally assault people (read: how to act when your boss yells at you).

Steve Jobs VS Mike Scott

As Apple grew, Steve Jobs personality became more of an issue.

Isaacson says Mike Scott was appointed as Apple’s director with two tasks:

1. Rein in Jobs unbridled perfectionism
2. Mediate relations between difficult Steve and the employees

For example, after going through 2.000 shades of beige Jobs didn’t think any was good enough for the Apple II case. And he spent days thinking about how rounded the corners should be.

Scott stepped in to ship the product instead of losing time and money on too small details.

Isaacson says that Mike Scott and Steve Jobs clashes would sometimes see Steve Jobs in tears. It was hard for him to give up control over Apple.

Macintosh

The Apple II was a big success, but it was mostly Wozniak’s creation.

Steve Jobs was highly driven to build something that “would make a dent on the universe” (a bit of an exaggeration, read: you’re not so important in the greater scheme of things).

Isaacson though says the Macintosh was not solely Job’s invention but he took the idea from Jef Raskin who was already working on the Mac’s project.

Since Jobs was the cofounder, he could take over the project. He did bring some good ideas though and you can read more here.

Macintosh Success

Also thanks to a great marketing campaign (including the famous 1984 commercial), the Mac was a huge success.

The Steve Jobs book biography says Jobs was able to increase that marketing clout by some sneaky maneuvers, such as tricking journalists into believing he was giving exclusive interviews.

Steve Jobs Gets Fired

The success of the Mac propelled Job's name together with that of the Mac.

But his bullying and harassing behavior continued unabated. His colleagues complained about him and Jobs relationships only continued to sour.

Eventually he reached a showdown with the board of directors, which decided to oust him.

My Note: make friends, not enemies
In a famous speech years later Steve Jobs rhetorically asks "how do you get fired from the company you founded". Well, by being an ahole, that's how.

NeXT & Pixar

NeXT

Steve Jobs finally had free reign to design computers the way he wanted. And that didn't go well. He insisted that NeXT computer case be a solid square.

It made it difficult to engineer it and cost $650.000. Add to that $100.000 for the logo, and Jobs' machine became delayed, overpriced, and sold little.

Pixar

During the same period as NeXT Jobs also acquired a majority stake in Pixar.

It wasn't going too well either, and Jobs at a certain point ended up losing $50 million on it while still losing money on NeXT.

A first success for Pixar came with Tin Toy.

Albeit not a hugely grossing movie, it showcased Pixar's uniqueness in computer animation. And that's when Jobs shifted focus from software and hardware to Pixar.

In 1996 Pixar secures a Disney deal to produce Toy Story, which was the biggest-grossing movie of the year and allowed Pixar to go public. With the IPO, Jobs became almost a billionaire as he still held 80% of the company's shares.

Jobs' Family Life

Jobs married Laurene Powell in 1991 with the blessing of his old Zen master. They had three children.

Powell also encouraged Jobs to be closer to the daughter he had from his previous relationship, Lisa Brennan.

Jobs did so and Lisa eventually moved in to live together with Jobs and Powell. Lisa was also temperamental and since neither of the two was good at making amends, they could go months without saying a word.

It's interesting because Jobs' attitude in his private life was the same as at his job.

Back to Apple: Advisor

Isaacson explains how Jobs actually got back into Apple's saddle through the backdoor.

Apple wasn't doing too well and Gil Amelio, the CEO at the time, knew he had to get fresh ideas.

He acquired NeXT software, thus making Jobs an advisor to Apple.

The board, looking for a change, offered Jobs the role of CEO, but he refused, trying to change the company from his advisor position. He also set out looking for a new CEO and forced the board to resign to increase the pace of

the change.

He struck a deal with the big rival Microsoft, ending a decade of legal battles and helping Apple's stock to soar.

Eventually, he reluctantly took the CEO job post.

Back to Apple: CEO

Jobs refocused the company on the basics. Fewer products, and top-notch quality. Four to be precise: a desktop and a laptop. One for mass market and one for professionals.

Jony Ive

Steve Jobs realized the talent of a great designer in the team: Jony Ive, and made him the second most powerful person in the company. The first product the pair came out with was iMac.

The iMac challenged the idea of how computers should look like, giving the laptop a playful look.

Apple Store

Isaacson says Jobs was worried the uniqueness of Apple could be lost among the big aisles of hardware stores. And therefore he decided to launch the Apple Store, which would also allow him to control the whole retail process.

Jobs of course got to work on it with discipline, focus and his famous detail attention. He wanted it to be minimalist and simple, and when it opened in 2001, it was a huge success.

Digital Hub Strategy: iPod, iPhone, iPad

Steve Jobs had a vision of the personal computer at the center of a new digital lifestyle.

It's what he called the digital hub strategy. It should be a computer controlling a variety of devices, and he started with music: the iPod.

- iPod: skeptics thought $399 was too much, but by 2007 it accounted for half of Apple's revenues
- iPhone: again, critics were skeptical about the price tag (look at the example below :)
- iPad was next in line. The press actually trashed it, but the iPad as well didn't do too shabbily

The triad had been successful in transforming the consumer technology industry.

Closed, Integrated Systems

Isaacson explains that Jobs always pushed for tightly integrated systems.

He didn't want consumers to modify the systems and didn't want other systems to communicate with Apple.

This obsession generated some conflicts, including with Microsoft and Google, both of which had a very different approach. They both preferred open systems and intercommunication.

My Note: Open systems win out
I think that, on a long enough time line, an open system has many advantages and will eventually destroy a closed one (Android sales as of 2018 obliterate iPhone's).

As a person, don't close yourself off (48 Laws of Power: isolation is dangerous).

Microsoft & Google Spats

Jobs accused Microsoft of copying the Macintosh's graphical interface (but Apple in turn had "borrowed" the idea from Xerox).

And Jobs also argues that Google had copied many of the iPhone's signature features with Android.

My Note:
"copying", in a way, is part and parcel of how capitalism works.

When the Ford T was a success, of course, other car manufacturers went for combustion engines. The market heads towards what works and what creates profits.

Cancer Treatment Jobs' Way

Isaacson says that Jobs approached his cancer the same way he approached much of the discording opinions he got in his life.

Such as, he did it his own way.

He refused conventional wisdom and in 2003 "cured himself" with acupuncture and vegan diets. Cancer only grew and required much more invasive surgery.

He did the same again when cancer returned in 2008, curing it with a diet of fruits and veggies.

On the subsequent (late) liver transplant, he never recovered.

Jobs died in 2011, living a trail of groundbreaking products, huge sales successes and a legacy of incredible entrepreneurship.

CONS

Reality Distortion Field: A Doubled-Edged Sword

The idea of a reality distortion field is interesting and it seems to draw a bit from the now-famous Law of Attraction.

But it's also dangerous. Job's Reality Distortion Field also included curing cancer with acupuncture and fruits.

I prefer coupling the reality distortion with Ray Dalio's principle of looking at reality, even when it hurts.

Authorized Biographies Embellish The Positives & Hide The Negatives

Albeit "authorized biography" is often used as a badge of honor, I don't necessarily see it that way. Authorized biographies tend to be embellished.

Review

Steve Jobs: The Exclusive Biography is an entertaining and instructive read, a wonderful resource to better understand Steve Jobs, and an excellent book.

I'm not a big fan of cult personalities, and I feel Steve Jobs and Apple do have a bit of a cult following. And when hype gets large enough, many tend to gloss over the less-than-ideal actions, decisions, and behaviors.

Power Moves, Ambition, & Ruthless Drive

My own interpretation of Steve Jobs after reading his biography is that, behind the LSD and spirituality, **Steve Jobs seemed high dominance, high antagonism, and potentially with some dark triad traits.** And not above several kinds of 'power moves'.

The way he landed deals, ousted rivals in the Macintosh project, and how he tricked journalists, for example.

I don't buy the Eastern philosophy and counterculture. Steve Jobs was also very ambitious.

I think that the ruthless drive and the way he had no patience for mistakes was a key ingredient in both his demise and his success.

I have seen in other highly driven individuals the tendency to "steamroll" people to get what they want. And it's probably hard for these people to be "calmer" and more accommodating.

I'd even have to wonder: would ruthlessly driven individuals lose their drive and genius if they were to calm down?

I'm not sure about that. I think not though. And I think they'd stand to gain if they worked with people instead of against them.

At the end of the day, the *Steve Jobs Biography* was a fascinating read and I can recommend it.

- Review

Bullet Summary

- Find what you're good at and build your career around it
- Commit to your gift and work hard at it
- Embrace failure

Full Summary

About The Author:
Steve Harvey is a comedian, TV host, and a devout Christian. He is also the author of popular dating books for women such as "Think Like A Man, Act Like A Lady" and "Straight Talk, No Chaser"

Introduction

Steve Harvey is one of those guys who "started from the bottom".

In that sense, he can be quite inspirational and he can connect with more normal readers the way that some other self-help authors cannot.

Harvey dropped out of school, worked a factory job until he was fired, stayed homeless for almost three years, and didn't get serious about success until he was in middle age.

And yet there he did it.

Find Your Gift

You should build your career -and possibly your life- around what you're good at.

To know what you're good at, you need to know yourself and you need to be brutally honest (love reality, says Ray Dalio in Principles).

Steve says you can turn any passion into a well-paying job.

My Note:
I don't fully agree here, though. You can turn *many* passions into high-paying job as millionaires videogamers can

testify.
But just like many other authors on this topic, I believe some passions are harder to monetize.
So you might at least want to think about that. Just don't let that stop you in your track. Countless "unmonetizable" businesses made millions.

Commit to Your Gift

To reach success, you must not only find your gift, but fully commit yourself to it.

My Note: fully committing to a gift not only is crucial for success, but will also heighten your passion for the gift. Read Grit by Angela Duckworth for more.

Failure is Your Friend

The need to embrace failure is a constant refrain in the self-help literature.

However, *Act Like a Success Think Like a Success* provides some very motivating real-life examples that back up the talk with the walk.

People laughed at Harvey when he quit his job to pursue comedy. And he lost every comedy competition he entered. He had some terrible performances in front of big crowds. And he was scared before any big major event.

Yet, he took some big lessons learned from his failures. Harvey started keeping tabs on his jokes. He scored based on the crowd's reaction and used that feedback to decide what could stay and what should go.

Snub The Haters

Steve Harvey recommends you don't find any time for the haters. When you respond and entertain them, you give them power.

And you waste your precious time.

Keep climbing instead, and they will be so far down the ladder you won't even hear them anymore.

More Good Advice

And here is a list of good advice I handpicked:

- Remove excuses
- Avoid negative thoughts and negative people
- Only share goals and visions with a selected few
- Write a vision and constantly look at it (put it somewhere you see it every day)
- Don't be afraid to ask for help
- Know your worth and ask for equivalent compensation
- Success doesn't come overnight: start small and build your way up
- Learn to say no: Decide your value and refuse what doesn't support them

Review

Act Like a Success Think Like a Success is a good book on success mindsets and on the power of possibilities.

However, the most important advice on success may be missing, which is:

Feel like a success, and you already are a success.

Or better yet, don't care too much about "success", especially how other people define it, and you'll live a lot better.

When it comes to the book itself, the self-help part contains advice that is rather popular and well-known in the self-help literature (read best self-help books).

But the mix of theory plus real-life stories may even make it slightly better than the average self-help book. Contrary to some, Steve Harvey isn't trying to make money selling the advice: he's already made it to a successful position in life and *then* he is giving advice.

Since Harvey did start from very low and he did start late, *Act Like a Success Think Like a Success* Can also be very inspirational for readers.

I would recommend it first and foremost to anyone who likes Harvey, to people who start from humble beginnings, and those who'd like to become comedians.

Alpha Male Explained: 10 Traits, Examples, & How to Be One

Lucio Buffalmano · 28 March 2023 · Archived copy · Original

The term alpha male is commonly used to describe a man who is confident, ambitious, dominant, and socially powerful.

Research on **status and dominance** suggests that men who achieve higher social status tend to earn more, attract more partners, and often enjoy better health and well-being.

In this guide, you'll learn the **alpha male meaning**, the **10 core traits**, real-life examples, and the hidden weaknesses of alpha personalities.

Social power — especially high status and influence — is the primary trait associated with alpha males. Drive is the second defining psychological trait.

- Alpha Males FAQ

Intro

Technically, an alpha is the highest-ranking individual within a social hierarchy in animal behavior research.

When applied to humans in everyday language, it usually refers to a man who is **dominant, high-status, ambitious, confident, and often successful**.

In the scientific literature, similar traits are studied under constructs such as **dominance, status attainment, leadership, and agency**.

Throughout this article, we use **‘alpha male’ as a shorthand for men who achieve high social status and influence**, while grounding the analysis in research on status and dominance.

Physical & Mental Alphas

There are two sub-components of an alpha male: the physical and the psychological.

These two components form two archetypal sub-categories:

- **Chads** *look* most like alpha males
- **Schemers** *think* more like alpha males and reach the top

Schemers *think* in ways that facilitate status and power acquisition. And chads *look* like stereotypical alpha males The psychological component may matter more in real-world achievements, but the physicality of the "chad" looms larger in men's minds.

Alpha Male Traits

Men with alpha male traits seek and get power and responsibility, tend to rise through the social and organizational ranks, and tend to become leaders of men.

Although every hierarchy differs, these are the most common traits of alpha males:

1. High Status

The alpha male prospect becomes a de-facto alpha male once he reaches the top
The upward ascension to the top is THE main defining trait of an alpha male.

All other traits only serve to facilitate the acquisition of status and power.
It's the most important trait of them all because **the standard definition of an alpha male is being at the top of the power hierarchy**.

And between two men only, the alpha male is simply the higher power person between the two.

The alpha *type* instead is the man who is more *likely* to gain status.

As simple as that.

Everything else are personal opinions, conjectures, hot air, and noise.

Also see:

- **Power University**, a science-based system to climb upward in life

2. Ambition & Drive

The #1 trait that facilitates alpha male status is ambition.

Drive is the only necessary trait to become an alpha male.
One may be the perfect leader or greatest chad, but if he isn't driven to lead, he'll never be the top dog.

On the other hand, one can be unconfident, sloppy, or short and unattractive, but if he's extremely driven to win and acquire power, chances are he will find a way.

3. High-Power Behavior

Here's a good general rule to become an alpha male:

To become an alpha male, *act* like an alpha male.

Some of the many traits and skills of high-power behavior include:

- **Leadership** and all sub-components
- **Assertiveness** and speaking up early and confidently
- **Frame control**

Also read:

- How to be dominant
- How to talk dominantly

3.2. High-Power Body Language

The quintessential smooth alpha: steals the show with a flying kiss that's charming, cool, and high-power at the same time

Alpha males tend to move and act:

- Purposefully
- Slowly
- Lower energy

Learn more at:

- Alpha male body language

3.3... No Low-Power Body Language

Including:

- Hunched over
- Making yourself smaller
- Too high energy
- …

3.4. Social Power & Dominance To Gain Status & Respect

Storr explains in *The Status Game*:

> As humans evolved, **our game of status also evolved from mostly physical, to mostly verbal and sub-communication**.

The general rule of that power game is:

The more you let others one-up you and disempower you, the more status you lose, and the more you stay stuck at the bottom.
Conversely, the better you check power moves, defend yourself, and counter-attack, the more status and respect you acquire.

When someone pulls a power move, they're betting against you.
They bet that they're above you -either more dominant if their move is direct or more power competent if it's more covert-.

To borrow from pick-up artist terminology, **you can see a power move as a "social shit test"**.

If you let it slip, miss it, or submit, you confirm you're below them and lose status.
But if you can check it and turn it around into a win, you turn a loss into a win -and a status boost-.

4. High Power Mindsets

The mind is the backbone of the alpha male type.

High-power thinking includes:

- **Positive associations with power**: "power is good (and I want more of it)"
- **Entitlement**: "I *deserve* power"
- **Outer confidence**: "I *can* get power"
- **Inner confidence**: "I *am* a high-power alpha"

Importantly:

You can never acquire alpha male self-confidence if you remain an eternal learner of mediocre teachers.

Let's see:

4.2. Teachers More Than Learners: The Pupil Is Never An Alpha

The teacher is higher power than the students. Alpha trains, beta strains

The rule of the alpha male mindset is:

You'll always have a beta male mindset until you're learning how to be an alpha because the learner is inherently lower-power than the teacher.

Simply accepting a teacher means that, in some shape or form, you submit and accept to be below someone else.

Of course, always balance:

You *must* learn in the beginning.
And never stop learning.

HOWEVER, always remember:

1. Never be an eternal pupil
2. Learn as an *equal* -especially in the mindset, never elect someone as "above you"
3. Keep in mind the end goal: eventually you want to become a de-fact alpha male -and *think* of yourself as an alpha male-
4. Never elect anyone as the judge of your "alphaness status".

4.3. Pick Teachers Who'll Make Way For Your Future Alpha

Remember the power dynamics of teachers:

Teachers have a vested interest in keeping you a pupil.

And watch out for dark triad teachers if you prefer to be a "honorable man".
If you learn from these guys you'll more likely be a "limited success asshole".

Solution: Enlightened Narcissism

You can both learn, and learn as a high-power student.

Rather than fully submitting yourself to (dubious) teachers, start learning to also trust yourself a bit more:

- **Making of the Übermensch**

5. Strategic Intelligence

As a rule of thumb:

Social strategists beat strongmen in the race to the alpha male role.

Even in chimps alpha males are seldom the biggest, most aggressive, or highest testosterone.
Cooperation is key for social rank, and studies show that "smart coalition managers" out-rank and out-reproduce less socially skilled chimps.

And if that's true in chimps, as Ridley points out, it's even truer in humans.

Also read:

- How to be more Machiavellian

6. Goal Focus

Typical alpha male traits facilitate goal-achievement.

They include:

- **Risk appetite**
- **High demands** and expectations, both of himself and others (note for female readers: being in a relationship with an alpha can be challenging since they're demanding)
- **Courage**, to do what needs to be done. Sometimes even "bravery"
- **Competitiveness** and "drive to win"
- **Goal-orientation** and mission-focus, not wasting time on side issues
- **Emotional steadfastness**, without wild mood swings (note for female readers: relationships can be challenging with alphas who have little patience for emotional swings)
- **Emotional self-reliance**, with internally generated self-esteem and confidence. People and events have little control over the alpha emotional states
- **Results over feelings**
- **Pride**, in yourself, your work, your values, your background, your team, etc., etc.
- **Decisiveness and bias for action**, with little time for endless talk and purely theoretical
- **Focus on what's possible**, avoid daydreaming and "castles in the skies"

Of course, mind the law of balance.
Any good trait *can* be taken to a self-defeating extreme. Extreme risk appetite for example turns into ineffective recklessness, and you'd struggle to lead any high-performing group.

7. Competence

When you become a master, you have *already* reached a top.

You out-competed countless others in the same field.

And men respect that.

Becoming a master also sub-communicates many great alpha-like qualities such as grit and perseverance, staying power, dedication and, of course, drive, willpower, and ambition.

You may gain even more status points if you master a typically masculine profession or hobby.

Modern societies handsomely reward competence/mastery.
It's one of the reasons why "modern geeks" can do great in life.

8. Masculinity

Alpha male status is a game of status among *men*.

And **masculinity is important because it helps earn respect from men**.
On the opposite effeminate men struggle to gain male respect.

In our day and age alpha male masculinity overlaps with "conservative values and gender roles".
Hence, just to be on the safe side:

8.2. Avoidance Of Anything That Feels "Not Very Manly"

The list is endless, but just some examples:

- Endless "relationship talks"
- Gossiping
- Drama
- Stay-at-home daddying

To capture the concept in a meme:

Albeit a for-fun meme, it's not wholly baseless. More conservative alpha males don't do housework

9. Pursuit Of Power & Personal Success

Alpha males tend to be more on the right of the political spectrum.

Studies linked testosterone supplementation to a "shift to the political right" for weakly affiliated Democrats.

However, hormones are only one part of it.

Being an alpha male is about self-advancement.
It's antithetical to left-wing ideals such as equality, redistribution, and collectivism.

And it's closer to right-wing values such as competition, individual success, private property, and the ideal of the "self-made man".

So alpha males tend to:

- Prefer low taxation over socialist redistribution
- Believe it's fair for the rich and powerful to be rich and powerful
- Believe it's fair for the destitute to be destitute because it's up to them to advance (instead of scrounging and leeching off)
- Reject left-leaning and 'woke' trends

10. "Alpha Looks"

Physicality matters.

Both in chimps, and still in humans as well.

Often, it's not even larger men who turn size into an advantage.
Instead, because of men's natural reverence for size, **smaller men self-inflict all the damage by making way and quitting the race without even starting**.

The same goes for voice, beards, and penis size.

See Power University for the mindsets, strategies, and techniques to win as a smaller guy.

Bonus: Prestige

Yoda, an avatar for "wisdom", would attain high status and power in most social groups

Psychology research has long recognized two different paths to both social power and status-based attraction:

- **Dominance**, or acquiring power with more forceful approaches (win-lose)
- **Prestige**, or acquiring power because *willing* followers admire a man's knowledge, abilities, skills, achievements, wisdom, character, etc. etc. and *elect* him as higher status and/or alpha male (win-win)

How does this prestige work?

Well, mastery/competence is part of prestige, so we've already seen an example.

But it runs deeper to include character, achievements, life experiences, and "wisdom".

Let's explain with a real-life example:

The author's older nephew is very close to a "typical alpha".
He is taller, larger, more muscular, more naturally dominant, and enjoys chad-easy sexual success.

Still, when he and the author meet, there is no doubt as to who's the alpha.

The nephew *willingly* raises the author above him because the author is prestigious in his eyes.
The author earned credibility and respect with choices, experiences, and actions, making the world his oyster.
And he proves the usefulness of that experience and wisdom with advice that works in the nephew's life (and you can't beat that first-hand evidence).

You reach high inner confidence when you feel the world is your backyard, you belong to it, and can do well wherever you go. That's when "the world is your oyster"
Although the author physically looks up to his nephew, the nephew shared to look up to him, to feel "green and unaccomplished" when together, and wrote to "one day hope to be at the same level".

That's prestige, and it's quite powerful.

Not by accident our ultimate social dominance archetype in Power University is based on exuding wisdom, and acquiring prestige.

Also helpful traits...

Also helpful, even for general life success:

11. Rationality & Critical Thinking

Yes, the mind also matters.

Power intelligence is the most important, but these also help a lot:

- **Rationality**, both effective and masculine
- **Healthy skepticism** and cynicism, since gullible id*ots aren't very credible leaders
- **Logic**
- …

12. Dating & Relationships Skills & Power

Mike Tyson is the ultimate chad (bar voice).

And *still* he was controlled, manipulated, and swindled in his first relationship.

So develop your power intelligence, cause despite brawn and "natural alphaness" you can still be a big loser.

And **you can hardly earn alpha male respect and status if your partner controls you**.
An all-around alpha male leads the outside world, *and* at home.

Popular But False Alpha Male Traits

Bathroom selfie, head-tilt and… Alpha mode unlocked!
There are thousands of alpha male guides.

Most list random, nice-sounding, and genetic self-help tips that have nothing to do with alpha male dynamics.

- **Humble** (from "Science of People"): typical naive self-help.
  Alphas as a group are *less* humble than the general population
- **Visionary** (from "The Adult Man"): random and probably *negatively* correlated to alpha males. Alphas have an incentive to be conservative and reactionary because the status quo is good for them

And even worse:

- **Strive for genuine equality** ("fashionbeans", #1 page result on Bing): go give it a read and see for yourself
- **Express curiosity and empathy** (WikiHow guide): WikiHow loves a positive spin, but this is unrelated to

alpha males

Manosphere Alpha Males

Some popular but wrong definitions and traits include:

- **Sleeping with lots of women** (as per "alpha fucks, beta bucks"): alpha males tend to have a higher partner count, but sleeping around is not a defining trait
- **Alpha males are men women are most attracted to** (Rollo Tomassi): simply the wrong definition -definition of an attractive man, not an alpha male-.
- **Be honorable** (Jack Donovan): it helps, and we endorse an honorable approach.
  But it's another aspirational value, and not a defining trait
- **Fight for your country** (Corey Wayne): warriors and alphas overlap, but less so today.
  And don't forget what Machiavelli would say: dead men never advance
- **Put your purpose first** (alpha male strategies): this is sensible as it overlaps with drive and ambition.
  However, AMS' goal is more *dating*, and many sexually prolific men put women *first*.

10 Alpha Male Rules (Red Pill)

The red pill shifted politically *conservative*.

With that in mind, these are the 10 "alpha male rules" we can tease out from the red pill:

1. Alpha males don't kiss
2. Alpha males don't love
   - 2.2. And don't say "I love you"
3. Alpha males don't do long-distance
4. Alpha males don't cuddle
5. Alpha males don't give oral sex
6. Alpha males don't adopt
7. Alpha males don't cry (emotional stoicism)
8. Alpha males don't marry
   - Alpha males don't officially commit, either
9. Alpha males don't compromise
10. Alpha males don't miss

More open-minded and liberal alpha males do some or even a good chunk of the above.
For example, Brad Pitt married, adopted, professed love, and who knows what else.

However, there may be a backdrop of truth to some of them.

Alpha Males & Dating Success

Alpha males date well, and better than non-alphas.

If we compared alpha males and the bottom 50%, we'd probably end up with a Pareto dating distribution where "20% of single alphas do 80% of the dating".

Still, let's clarify some common misconceptions.

More Plates, More FanBOYS

“Gigachads” are not the most attractive men for most women.

And smart men **can win big without being a chad**, especially so in modern metropolises

Let’s go through a quick experiment.

We analyzed the top comments beneath two videos: a “gigachad” gym bro, and a famous feminine-looking singer.

The chad had plenty of gushing texts.
But 100% of all gushers’ texts we read *all* sounded from other men:

The gigachad is more impressive to men than women. Virtually ALL the gushing admirers are men
The feminine-looking singer doing feminine-looking “flexibility exercise” had far more love messages *all* attributable to *women*:

The feminine man struggles to get male respect. But if -if!- he's attractive/skilled, he can console himself with plenty of female love

This little experiment shows that **sexual attraction is different and far more nuanced than social respect**.

The author here is also far from a chad, and far from being half attractive as the K-pop star.
And still achieved top-1% dating results.

Also read:

- Why balance is most seductive
- Alpha male game (and why it's suboptimal)

Chads vs. Lovers

The social and sexual spheres overlap, but are two *different* spheres.

In simple terms:

- **Chad/alpha male is a *social* construct**, referring to social status and organizational rank, mostly promoted by men
- **Cad/lover is a *sexual* construct**, referring to sexual access and dating behavior, largely based on *women's* choice

The chad is hyper-masculine, but the lover type seldom is

Alpha Male Leaders

People often ask:

Do alpha male types make for great leaders?

And of course they can.

What people are truly asking though is if the more *extreme* alpha types higher in dominance or aggression, make for good leaders.

In the absence of scientific consensus, a look at history suggests a cautious "probably not".

Many alpha males considered "great leaders" wouldn't make for what most people would consider a "hyper-alpha".

For example:

- **Marcus Aurelius** read philosophy and kept a diary -I'm sure some hyper-alphas legionnaires of the day would have said that was "effeminate"-;
- **Ataturk** abolished polygamy and gave women equal civil and political rights -the conservative alphas back then would have seen him as serving the 'female imperative' interests-;
- **Churchill and Franklin Delano Roosevelt** weren't exactly "chads" -some hyper-alphas contemporary may refer to the English top strategist as "weak-chinned"-.

These men were all top alpha males and fantastic leaders, but not your typical *hyper* alpha.

Alpha males who are more "hyper", especially in dark-triad, antisocial, and social dominance orientation tend to be poor leaders (for the people they lead).

Two examples:

Putin and Mussolini are two examples of "hyper alphas" who turned despotic and disastrous for the countries they lead

Storr, drawing from a social psychology textbook, summarizes that dominant-style leaders are usually less effective than prestigious ones because they're more likely to:

- Put their interests before the group
- Respond to criticism with 'ego defensive aggression'
- Act overbearing
- Publicly credit themselves with the success of the group
- Tease and humiliate subordinates
- Manipulate and use others

In short, the high dominance, pride, and dark triad traits of some hyper alphas often translate into little win-win and cooperation, little care for common well-being, more stealing… And more wars.

So we can summarise that **alpha male psychology has little relation to leadership quality, but hyper-dominance, aggressiveness, and dark triad traits often lead to worse outcomes for the population**.

The Alpha Leader Rule

The "alpha leader rule" says:

The closer to the ideal alpha male you are, the easier it is to gain other men's respect.
And vice versa.

The other side of the coin is that men who are too far from the alpha type ideal struggle to earn other men's respect. And **a high-rank title without matching respect make for a lame-duck leader**.

Good examples of both beta leader and alpha follower here.

An effective de-facto alpha male combines rank, with social capital and respect

The “beta leader” issue extends to most organizations.

I experienced a corporate mutiny and mass-quitting when the “founder” who bought-in failed to gain respect from the team.

Lame duck beta leaders have become more common in modern and artificial organizations where advancement includes confounding factors such as office politics, technical skills, degree, or meeting the latest gender/racial quotas.

So, in brief: **if you want to be an effective leader, learn how to earn people’s respect**.

See Power University for that.

Do “Alphas” Even Exist In Humans?

Am I even real?

The alpha male concept originated in primates.
So it's fair to ask whether and how it translates to humans.

Conservatives and people who fancy themselves as alphas default to "yes".
And liberals and people who are "not exactly alphas" default to "no".

In truth, things are more nuanced.

Differences With Human Alpha Males

The main differences are:

1. **Alpha humans aren't necessarily"life winners"**. While we could argue that an alpha male chimp "won at life" it's not nearly as straightforward in humans
2. **Alpha humans are more limited**: since laws, regulations and female sexual choice restrain their power
3. **Alpha humans are more situational** because of our complex societies with countless groups and cultures
4. **You don't need to be an alpha to win at life**: today's men can get what they want while barely entering any group. And even while not being typical chads or "alpha types" (see Elon Musk for example)

Do Alpha Females Exist?

In any mixed, free-forming group, men are far more likely to become top dogs.

And most women would rather *pair up* with the alpha than *compete* with him.

However, in principle and by definition, if a woman is on top of the hierarchy, she's an alpha female.

Some men deny that because they can't accept that a woman may beat them, or be above them.

TPM's video example on alpha females got *literally* hundreds of these men's comments:

What do you think is most likely, that they're all alpha female experts, or that at least some of them are (closeted) mysoginists?

Are Alpha Females "Not Feminine" And Thus "Less *Women*"?

Is the alpha female "less feminine" and thus "less representative of the female population".

It's a fair and valid question.
But too complex to answer here.

In sum, it's unlikely that in free-forming human groups a woman would ever end up as the alpha. But if a biological woman is at the top, then she's an alpha female.

Also read:

- Alpha females
- How to combine femininity and power

Alpha Male VS...

Now let's compare the alpha male construct to other common ones:

Alpha Male VS Beta Male

You see a ton of charts like this one:

Would be correct, if it weren't for confusing "beta" with "omega"
'Internet parlance' confuses beta male with omega (see corrected chart below).

So, in truth, **the beta male holds an enviable position with a lot of power, and significant less risk, work, and responsibility compared to the alpha**.

So going for a beta position can be a strategically great choice to maximize for life returns *and* satisfaction.

For more on the difference between top-ranking alpha male and lowest-ranking omega, see:

- **How to stop being a beta male**

Alpha Male VS High-Value Man

Alpha males as a group tend to be higher value than non-alphas.

Chads tend to be immediately high-value to other men;
alpha male types tend to quickly gain value in new groups;
and de-facto alpha males are intrinsically high-value wherever they're alphas.

However, none of it guarantees to be high-value outside of any specific group.

Chads without matching characters quickly lose other men's respect.
Overly dominant alpha types can turn people off.
And being de-facto alpha in one group has little predictive power of someone's value outside of the group.
Such as, in simple words: **alpha male is a good proxy for high-value** but not a guarantee.

This is why we focused on "high-value / low-value men" first.
It's better to work directly on the end goal, rather than on the proxy.

And we helped shift the narrative with our approach.

Alpha Male VS Sigma Male

The sigma male is an alpha male type who is not part of any social group and, thus, is not part of any dominance hierarchy.

The sigma male has find friends and mates on his own, but that may as well be an advantage
One may be a sigma for many reasons, including that he:

- **Is an introvert**
- **Dislikes the "power games"** inherent to competitive socialization
- **Has other life priorities**, leaving little time for socialization (including "monk-mode" stints)

The sigma male tends to be more self-reliant and, sometimes, more resourceful (he needs to find ways on his own, after all).
However, all else being equal, **alpha male tends to be higher value and more powerful than sigmas** because they can leverage social resources that the sigma doesn't have.

Still, we like the sigma approach here, and modern civilization and metropolises helped make it a far more viable, valid, and attractive option than in our evolutionary past.

Alpha Male VS Social Strategist

There is at least some overlap between the two:

Alpha males tend to be at least passable social strategists, and good social strategists are more likely to reach and stay at the top.

A **good social strategist knows how to play the alpha male game** both to gain status, and to socialize with alpha males *as an equal*.
But he views status as a means to a goal.
And if status is not necessary to achieve his goals, he won't even enter that group.

Finally, the more Machiavellian social strategists may use and manipulate alpha male types for their own gains.

The Machiavellian power-seeker focuses on the area of highest returns, while sending the warrior alphas to do the fighting for him

Drawbacks of Being an Alpha Male

Earning respect among men is a status game.

Those "rules of the game" inherently constrain your freedom.

This is why:

Power Beats Status

Say researchers in *The Psychology of Status*:

> since status relies on others, concerns about maintaining one's s**tatus will orient status-holders outward**, as **they will be focused on monitoring where they stand** vis-à-vis the status-conferral process
> (…)
> high-status parties (…) **will strive to fulfill others' expectations** that high-status parties show consideration and act in a manner that warrants their high-status position (Blader and Chen 2012; Ridgeway 1978, 1982)

Instead power:

> This description of the effects of status stands in stark contrast to the effects of **power, which liberates people from social and normative pressures** and enables them to shift their focus inward, toward their own goals and dispositions (Galinsky et al. 2008; Guinote 2007; Keltner et al. 2003).

Those constraints limit your freedom and, sometimes, even what can do to truly pursue what's best for you as an individual.

So, learn the game of alpha male status -it's important.
But **always put power above status.**

That's also why we always recommend here an "individual first" approach to self-development.
So you're always bigger than *any* game -and you retain your power to walk away from any game that won't serve your interest.

Two additional noteworthy limitations of the alpha male game are:

Self-Identity Limitations

Some alphas pride themselves on being alpha males and "strong".

And that's inherently fragile.

Strength is defined by its breaking point.
And alpha male is defined by others, *plus* by clearly recognized masculinity.

An extreme example to show this point:

How strong would you be, hung upside down and cut into pieces, including what supposedly mostly makes you a "male"?
I bet the more conservative alphas would be less vocal on "two genders only" after that.

The point is:

1. **Building your ego around strength is sub-optima**l because you're *guaranteed* to lose over time.
   Paradoxically, the stronger you are, the more the breaking point and/or the natural decay will undermine your self-esteem.
2. **Building your ego around "being alpha" gives power away to the social group** that ultimately decides who deserves respect and top status.
3. **Building your ego around "being a masculine man" is suboptimal** because social calibration beats stiff rigidity.

Better Than Alpha Male

- **Learn to gain status in *any* group**. The ability to be high rank in any group is better than being highest rank in a given single group.
- **Become more self-reliant**. Paradoxically, the more you get from any hierarchy, the more dependent on it you can grow. Better instead to first learn to be a man who can walk alone
  See: "big fish / small pond trap"
- **Develop a support network** you can confide in, rather than ending up isolated while trying too hard to portray outward strength and hyper stoicism
- **Learn the game of status, but transcend it**. Remember: the most powerful mindset and approach is that you're an individual and you're bigger than any game
- **Become *powerful*, rather than high-status**. An important difference, read below

Alpha Males FAQ

What are the alpha male traits?

Some of the most foundational traits of an alpha male are ambition, social dominance, confidence, and leadership.

What is an alpha male?

An alpha male is the highest-ranking or most dominant male in a social group. The term comes from animal

behavior research, where “alpha” referred to the leader of a pack or group.
In human society, the phrase “alpha male” is often used more loosely. It usually describes a man who is confident, influential, and socially dominant.

What is alpha male psychology?

Alpha male psychology refers to the mindset and behavioral tendencies often linked with socially dominant men. It typically includes ambition, a drive for status, confidence, and a dominance orientation—seeking influence and leadership within groups.

See Power University for the one-stop program to become a high-quality alpha male

B-School: Summary & Review (Marie Forleo)

Lucio Buffalmano · 5 April 2023 · Archived copy · Original

B–School is a business and entrepreneurship online course for beginner online entrepreneurs and coaches in which Marie Forleo shares marketing and sales approaches to start selling and increase revenues.

Exec Summary

- **Start**: there is never a right time, and nobody was ever 100% sure of themselves
- **Control your website**: either learn the basics of WordPress, or have a trusted developer on call
- **Know who your typical customer is (avatar)**, and develop all your marketing and sales around that avatar

FULL SUMMARY

About the Author:
Marie Forleo is an American entrepreneur, podcaster, and marketer of self-help and marketing courses and products.

1. Develop Your Customer Avatar

Knowing your customer is the first exercise and will form the basis of all of your marketing and sales.

The basics are:

- Think of your typical customer
- Come up with a specific person with name, surname, struggles

Forleo's exercises also invite you to:

- Describe your avatar's "darker self" with fears and aspirations they don't share to anyone
- Describe your avatar's "ideal self", what they hope to win and achieve

The goal is to know your typical customer better than he knows himself.

Power University Avatar

This is what I came up with as Power University avatar customer:

> Max is 32, smart, and doing well in life by many objective standards.
>
> He is very driven and demands a lot of himself.
>
> So he's not fully happy or satisfied with his life.
> It's a ill-diagnosed malaise he doesn't full understand himself.
>
> He wants more, feels something is missing, but albeit he comes up with many different goas and objectives, he doesn't really know what's truly missing.
>
> He has some friends that he thinks are OK, but they're not truly good friends.
> He's not a great friend either, but he doesn't yet know that.
>
> There is quite a bit of social climbing in his social life and some nasty "jokes" and covert power moves, but Max is not yet skilled enough to fully see and understand, let alone check those power moves.
>
> Max has a lackluster dating life, and albeit he says it's OK, he's neither dating the woman he wishes for, nor is

> he in a happy relationship -he's either not high-power enough (lose-win), or *too* dominant (win-lose), but he doesn't yet have the skills and knowledge to diagnose that-.
>
> With that type of social life, he doesn't talk about his deeper pains, goals, aspirations and thirst for more with anyone.
> When it comes to moving forward in life, he's mostly a lone wolf, researching on his own.
>
> Since Max is very driven, he's already been actively working on himself, and on improving his life.
> He is into self-development, goes to the gym, and reads and watches videos on how to achieve more, including for work, dating, status, and mental self-development-.
>
> However, he hasn't yet found anything that addresses the root causes.
>
> And at this point, he doesn't even believe there may be an "ultimate resource" that puts everything together and could help him address most of his life challenges.
>
> Max's relationship with his parents is also far from perfect.
> One of his parent was narcissistic and manipulative, but he never fully realized it because he doesn't yet have the power awareness to see it.
>
> Overall, Max is doing OK.
> But he's unsatisfied with life.
> He's got a nagging feeling he could do more and be more, and… He could.
> But he doesn't even know yet how.
> And doesn't know that Power University would help a lot.

The Avatar's Downsides

I found the exercise very useful.

Yet, you gotta be careful with it because **the more specific you go with your customer avatar the more you lose sight of the diversity in your customer base**.

You can just take a quick look at our alumni's introductions to see how diverse they are.

My guess is that few businesses have a highly homogenous customer base.

For example, if I were to fixate on this avatar, I may forget there probably isn't even a single customer who's exactly like Max.
Even prospects highly similar to Max may be a minority.

So if I were to over-focus on Max, and over-pitch specifically to Max, I may turn off a lot more prospects.

2. Pitch The Solution To Your Avatar's BIGGEST Problem

Find Your Avatar's BIGGEST Problem, Then Solve And Pitch *That*.

Then you can charge premium prices.

You will use your avatar's problem(s) to:

- Choose what to blog about, so you naturally get traffic from your prospects
- Copywriting for your products
- Copywriting for your email opt-ins

3. Capture Emails, Keep In Touch... & Don't Be Afraid to Sell

- **Don't get hung-up on value as "information only"**: value is also a smile, a friendly check-in, or the feeling of "connectedness"
- **Write pitch emails as you'd write to a friend**, and were updating them about what's going on with your business
- **Email at least every 2 weeks**

4. Position Your Products to Fix Problems (Solution VS Prevention)

People will not spend a dime for prevention but they'll spend all they have to fix a problem.

So you never pitch a general offer, but you offer a solution to your prospect's problem.

For example:

- Be pretty, general and without pain points
- Heal your embarrassing acne with our 3-steps sytems in 30 days or less

Pain and urgency are the sweet spots to sell

Look for a deep emotional need, and translate it into a solution you provide.

Talk 1:1 to your prospects and ask:

- What are your three biggest frustrations in this area?
- What about this keeps you up at night? What's a dream solution for you in this area?
- What strategies have you tried that have and have not worked? This is an important question, because you wanna know what they've done already that they consider being either a failure it just didn't work, and what they haven't tried so you can craft your offers around that.
- How would it feel to have this problem handled? You want them to start to imagine and get into the emotion of what it'll feel like if this problem goes away.
- What's it costing you not to have this problem handled? Again, some of these you need to adjust for your specific industry, but these questions are designed to get your mind thinking.
- How important is this for you to handle right now? This is a really important question. You wanna know if it's urgent. Right? What we talked about before is an urgent need. An urgent need. So urgency is good.
- Have you ever paid for a product or service like this before? This is important for you to see if this is a viable business model.
- If so, what did you pay for the product or service? This gives you a little research into pricing.
- What did you like best about it?
- What frustrates you about buying this kind of product or service? Again, you're looking for what other people may have done wrong so you can fix it.

Review your notes and look for common phrases and expressions.

5. Use These Copywriting Best Practices

5. 1. Use "shoulder to shoulder" marketing copy: the "been there" frame

Imagine your prospect across the fence looking at you, the expert, being where he'd want to be.

Standing shoulder to shoulder means you look over, get on his side of the fence, "pace his reality" of what he feels,

thinks, and fears, and tell him that you've been there, and that you can help him walk over to this other side of the fence.

Says Forleo:

> "I know exactly how you feel, I understand your pain, I've been there, there is a better way, you can do this, and I'm here to help every step of the way".

My Note: great marketing, but often also fake guru marketing
I agree this is great marketing advice.
And at the same time, I feel this is often a fake approach that creates a person that doesn't exist.
Few people if any have it all figured out, are fully content with themselves and their lives.
So in many cases, this ends up being a manipulative marketing approach that self-frames the seller as the wise "I have all the answers" type of person that doesn't even exist.

5.2. Use specific language

Use concrete examples that people are likely to experience in real-life.

For example:

- "Get lean, cellulite-free thighs"
  vs. "transform your body."
- "Does not being able to button your favorite jeans depress you?
  vs. "are you tired of being overweight?"

And a real-life example from her student:

- The "inside out 21-day money transformation."
  vs. "3 steps to stop living paycheck to paycheck in just 21 days"

5.3. Tell a story with headlines

Your copy should tell a story…

… But so should your headlines –*by themselves*-.

Many people skim-read, so you want your copy to work for them as much as it does for the deeper readers.

Scan your sales pages or posts and see if headlines and sub-headlines tell a compelling story on their own.

5.4. Keep it brief, while delivering all the information

Edit your copy to remove all the fluff.

The goal is to **provide all the information and pack as much punch, in as little space as possible**.

Generally speaking:

- the more expensive the product, the longer the copy
- the less established the brand, the more convincing you need (and potentially longer copy)

MORE WISDOM

- Go pro
  - Only use great and reputable providers
  - Have excellent customer care
  - Maintain quality, don't "move fast and break things"
- Buddy factor: only associate with the best in your industry
- Use priming sentences to sell without selling. Such as:
  - I do have a premium training class, but right now I wanted to share…
  - In my premium training, I walk you through, but for now, here is what you need to know about…
- Keep it simple because most of your prospects are beginners: so don't talk to impress your peers, write to sell to your *prospects* (Marie Forleo's best videos were the ones on *basic* marketing strategy albeit she much preferred the more advanced stuff)
- Don't offer a "1-hour consultation", offer a "personal audit where you'll leave with an action plan to achieve X"

Action Steps I Took Away

- Improve customer care
- Add a "feature box" on the homepage to capture email leads
- Avoid overwhelm in your products, something I had already started, worked well, and will keep doing
- Be specific on the benefits
- Use testimonials that address common fears and objections
  Ie.: "**I'm a huge skeptic, especially when it comes to services promoted online**, but… "

What I Disagreed With

- **Preach your email list to everyone, including your grandma and cat**, says Forleo. I think that makes no sense. Also, a cat isn't going to buy anything, and hopefully you're not going to charge your grandma
- **Preach your list at any opportunity**: poor advice and strategy to pitch your real-life connection because it's extremely low ROI, while ruining your real-life relationships (it self-frames you as a pushy and annoying salesman who just want to take from others).
  Same reason why MLM's multilevel network marketing is a terrible idea
- **Talk to one person at a time in your communication and newsletter**: to me, this feels so fake and manipulative when it's obvious that the sender is sending a mass email.
  I prefer a more honest approach. I'm happy to write my audience, but I don't know them individually, so I just write "hello friends" and I'm warm and straight, but *without being fake*.
  P.S.: I also often sign-up with a different name just to avoid this manipulation and make it even more obvious (and ridiculous)

QUOTES

On pricing:

> People will pay whatever price you ask for something they really want

On quality work:

> Never sell anything you're not prepared to deliver impeccably

On paying for available information:

> information on almost anything is out there, but people will always pay to get it delivered with clarity, substance, and style

CONS

It's more for clueless beginners: many topics did not apply to me

Let me preface this:

I AM a beginner in marketing.
The gap between TPM's products and its marketing and presentation may as well be one of the largest in the whole self-development industry.

That being said, even at my level, I found a large portion of the course to be way too basic.

Things such as:

- Learn how to publish a blog post
- How much does it cost to hire a web-developer
- How to find topics for your blog posts
- …

These are things that anyone who's already started had to figure out already.

And albeit you can always improve on the basics, and sometimes it's exactly where you should improve the most, I

didn't personally find much new wisdom.

And this is one of the reasons why we're not exactly evangelists for B-School: since beginner-level advice is easier to find, you may not need a premium-priced course for it.

General "best practices", but without data

Albeit the main concepts are generally true, they're still general and not un-tested.

For the price tag, I'd have preferred and expected to have more data and more precise information.

For example:

> **Marie**: (suggesting a better title) My Step-By-Step…

She shares good advice on how to turn your title into click-baits.
Not necessarily everyone's style, but the general advice is OK.

Problem is, it's still general advice you can get almost anywhere.

And if we go specific and data-driven, the general advice can also be proven wrong.

For example, I remember from a Backlinko data-driven analysis of thousands ranking pages that the "step-by-step" line didn't perform too well.

For the price tag, I'd have expected *that* level of data-driven, tested insight.

I was looking for what works best, rather than "list of ideas"

For example:

It's not like such a list doesn't have value.
However, most people who've been either in business or simply just in self-development, know about these options.

Instead, **I wanted Marie Forleo to tell me what works best** either in her business, or from what she saw from similar online businesses selling courses or coaching.

What would have been useful:

- **Data on what works best**
- **How to execute** each one fast and effectively
- **Templates** of effective online courses salespages that one can amend
- **What worked for Marie Forleo**

Similarly:

I was looking for Forleo's own business MO. There was none

I was interested in Marie Forleo's B-School because our businesses overlap.

Such as we both:

- Have online courses
- Offer payment plans and one-off options
- Use email automation to promote the courses
- Publish free content
- …

So my main reason to join B-School was to learn what a similar but much higher-revenue and better-marketed business was doing better.

However, I didn't get much of that -if any-.

For example:

Marie Forleo tells us to create "genuine scarcity".

And true to form (minus the "genuine" maybe) her B-school is "sold out":

B-School uses a "sold out" ruse to deploy the scarcity principle. I wanted to learn more about that but it wasn't even mentioned

I wanted her to teach me THAT!

Such as:

- Software she uses
- How it's working for her
- How it fares compared to the "always open" option…

THAT would have been super valuable to me as I may have tried a similar approach based on some actual data/case study.

Instead, if I were to do it now, it'd be a large investment to figure it out, while also being a total shot in the dark.

In that sense, I'm disappointed.

That is why in Power University I show students *exactly* what works and exactly how to execute it, with videos and case studies.

Same goes for how Marie Forleo runs her ad strategy.
After I checked her program out she popped up on me all over the net:

Some of her ad were video ad, felt personal and relatable.
I wanted to know how THAT is working for her, what are her returns, HOW she retargets, WHO she retargets (visitors, subscribers, visitor to her courses… ?) WHAT company she used to set it up.

THAT would have been valuable for me too.
But there wasn't any of that.

Smaller issues

Fillable PDFs don't always work too well

Marie Forleo encourages you to write a lot of details, which is good advice.

However, when I write more than a couple of lines the characters automatically get so small that they're not readable anymore.

In the second and third forms, I couldn't even add a line break, which means that even a short sentence would quickly become unreadable:

Ideal Customer Avatar

Create Your Ideal Customer Avatar

PROFIT PLAN

Think of your IDEAL customers. What do they all have in common? List every common trait, both demographic - age, income, gender, marital status, industry, etc. and psychographic - values, beliefs, lifestyle, hobbies, interests, etc.

Now use those commonalities and create a single representation of your ideal customer with as much specific details as you can. This is your ideal customer avatar.

Sometimes PDFs just refer to some other resources

For example:

Make Your Competition Irrelevant

Your Strategy Canvas

Create your own Blue Ocean Strategy Canvas for your brand, or for a specific offering. The factors to include along the X axis are what is being emphasized: price, features, delivery, customer service, branding, design, guarantees, etc.

The Y axis is low to high, meaning, whether price is low or high and how much emphasis is put on the specific factors. To go deep on this subject, buy the book *Blue Ocean Strategy*.

PROS

Among the pros of Marie Forleo's B-School:

- Hands-on for beginners
- Motivational for those who need it
- Some good wisdom on power dynamics (ie.: treat “stars” like normal people and equals)
- Lots of exercises to help you apply the lessons
- A few good case studies/examples (albeit I wished for more)
- Even more advanced students may find some pearls of wisdom

Marie Forleo Review

Marie Forleo comes across as a happy-go-around, energetic, genuine, and honest woman who also happens to be great at what she does.

And she carries that positive personality over into B-School.

That being said, my favorite types of teachers tend to be more product-centric.

Why?

Well, first off, let me say it through the people she associated with.

Forleo says you want to network with the best in your business, and her business seems to be *personal* branding, and *selling*.

Nothing wrong with that.
But to me, it’s a network not necessarily of great content creators, but of pure marketers who put marketing left right, and center. And product, well… At a certain distance further down the road.

From the slide she shares herself:

Eben Pagan / David DeAngelo shares OK dating advice (but there is much GREAT dating advice available), Dean Graziosi shares fluff at best and there are plenty of great exposes on him from Coffeezilla and more.
Finally, the people Marie Forleo interviews may definitely help someone, but are your typical marketing gurus that,

to me, feel a lot like snake oil salesmen (Joe Dispenza, Mark Hyman, etc.).

In my opinion, **Forleo's close network focuses on selling and NOT on creating great, helpful, or even truthful products**.

You can see some of that same style in the name-dropping in the course:

What should I care if it's STRAIGHT from Oprah's mouth? Oprah's mouth can also talk cr@p just like anyone else.

TPM needs a bit more of that selling, to be honest.
Scratch that, we need A LOT more of that and that's why I went through this program.
But we still don't sympathize too much with the sell first, product and content (distant) second approach.

Forleo also seems to me focused on getting media exposure and good collabs first, and put a lower priority on truth and expertise.
For example, she says she managed to get in touch with Tim Ferris and even be featured in Ferris' back-then upcoming book, *The 4-Hour Body*.
Tim Ferris' first book was fantastic. And he's an awesome and smart guy. However, for that second book on nutrition, Ferris had no qualification writing it -and it shows-.

But it doesn't seem that the topics of qualification, expertise, and quality of the content ever entered into Forleo's considerations.

B-School REVIEW

There seem to be no negative reviews for B-School.

Not even lukewarm or *neutral* reviews.

Since most reviews are affiliate reviews, it's fair to wonder about the potential bias.

So with this article now you have a B-School non-affiliate review, and one that is not singing its praise (but without being overly negative, either).

So, my non-affiliate B-School review is that I find it to be a well-structured and compact introductory program to marketing and entrepreneurship that works best for beginners and people who struggle to get started and "put themselves out there" but that is most likely too beginner-level for those who have either started, or did their research already.

"Compact" can also be a plus or a con, depending on the level of granularity you prefer.
It didn't take me 6 weeks and I went through it in a couple of days -yes, I did do the most relevant exercises, but not all of them simply because they didn't apply to me-.

Is B-School Worth It?

B-School may be a worthy investment if you're a beginner who's struggling to get started, needs "motivation", and has enough spare income and savings, and it may not be worth it if you've started already, and if you're aware of the very basic stuff.

So B-School may be good if you:

- Have no idea what to do
- Have an idea, but have yet to start
- Are a beginner with zero experience and knowledge
- Need someone to cheer you on
- Have enough spare income

B-School may not be the best fit for you if you:

- Know what you want to do
- Already started
- Know the basics (ie.: "know your typical customer", "blog weekly", etc.)
- Are internally driven and don't need encouragement
- Can ill-afford the investment (in which case you can find most of the information around, for free)

Whether it was worthy or not for TPM, I consider the jury to be still out.

As you may have guessed from this review, **I didn't find any "wow" or truly new information in B-School and what I truly wished to learn more about just wasn't there**.

BUT even by simple repetition or through a slightly different take on otherwise common advice, I came out with a few notes on what I may implement or change.
And if those work well, then it may have been worth it.

But, in all frankness, some other resources helped me a lot more (including lower-priced or free ones).

Check the **best resources** to delve into, and the best resources for entrepreneurs.

Leadership BS: 9 Lies They Told You About Leadership (Book Review)

Lucio Buffalmano · 12 April 2023 · Archived copy · Original

Leadership BS (2015) is a leadership book in which author Jeffrey Pfeffer states and shows that much of the conventional wisdom about leadership is baseless, overly optimistic, and ineffective for those who want to climb the hierarchy and become actual leaders.

Exec Summary

- **The leadership industry spreads naive self-help falsehoods** based on virtues that are neither present in the real world, nor helpful (and sometimes actively harming)
- **The truth is that narcissistic and Machiavellian leaders over-represent selfless ones**. More often than not, they gain more than selfless ones, and they look after themselves first
- **The solution for you is to take care of yourself first**, stop believing in reciprocity in the workplace, and stop thinking that leaders and organizations care about you
- The solution at a systemic level involves accepting the current reality, changing the incentives, and holding people accountable for the new performance measures

FULL SUMMARY

About the Author:
Jeffrey Pfeffer is a Professor of Organizational Behavior at the Graduate School of Business, Stanford University. According to Wikipedia, he received his BS and MS degrees from Carnegie-Mellon University and his Ph.D. from Stanford University.
He is also the author of the even more popular book "*Power: Why Some People Have It – And Others Don't*".

1. The Leadership Industry Doesn't Make Better Leaders

Pfeffer says that the leadership industry has failed for two reasons:

1. **Leaders are failing** the people they lead (Sutton, 2007), and society at large. Often, they fail themselves, too
2. **Leadership training fails learners to teach what actually works**, settling instead for platitudes, motivation, wishful thinking, and plain bad advice

Some reasons why the leadership industry failed include:

The Leadership Literature Never Looks At The Traits That Really Matter: What Makes *The Leader Himself* Successful

> Leadership stories and much leadership research seldom explore the leader's qualities, behaviors, and characteristics that affect the well-being of the leader, rather than the organization. Leader well-being includes outcomes such as job tenure, salary, and getting into a leadership role in the first place.

Pfeffer says that the leadership literature fails because while leadership research is more interested in group or organizational well-being, leaders almost always are more interested in *their own* well-being.

We strongly agree with it.
De Mesquita did a fantastic job analyzing what's good for the (political) leader.
And, spoiler alert, it's often bad for the citizens:

> The Logic of Political Survival: Summary & Review

2. Leaders' & Organizational Interests Aren't Aligned

Pfeffer says that the individual and the company's interests have little overlap.

And the leadership literature fails in good part because it never acknowledges there is a trade-off or, sometimes, a total divergence.

> Contrary to what many people seem to believe -and, moreover, one of the core foundations of much leadership thought- there is far from a complete correspondence between what is good for a company, or for that matter, a unit within that company, and what is good for the company's or unit's leader.

Also read:

- **Your diverging interests at work**

> 21 Conflicts of Interest (Your Boss Doesn't Want You to Know)

3. Motivation Is Useless (& False)

There is little data and fact-checking in the industry.

Instead, leadership training and development have become more like lay preaching and inspirational.

Everyone prefers myths, fables and motivations, starting from the leaders themselves:

> leaders describe what they want to believe about themselves and the world and, more importantly and strategically, what they would like others to believe about them

For example, says the author:

> You can read Jack Welch's books about General Electric and his management approach and never encounter the phrase "GE jerks." Yet that is a term I first heard from a now-retired GE senior executive who reported directly to Mr. Welch. He used it to describe the kind of workers GE's hard-driving culture created with its politics, competition, and forced-curve ranking.
> (…)
> Nor do Welch's writings about his management approach and accomplishments dwell on (or even mention) the pollution clean-up suits, price-fixing, or defense contract frauds that occurred at GE during his tenure.

4. Leaders' Traits Sound Nice, But Are Lies

Pfeffer says that conventional wisdom shares many "nice-sounding" qualities that the best leaders possess.

However, they're simply not true.

He says:

> These are all wonderful qualities, and if leaders consistently displayed them, workplaces and the employees who fill them would undoubtedly be doing better.
> But in each instance, I show first that **few leaders, even some of the most prominent and successful, exhibit those qualities or do these recommended things.**
> Then I lay out the evidence for and logic of why sometimes doing the opposite of what has been prescribed makes sense, at least for leaders seeking to advance their own careers.

Pfeffer says this is not good.
He says that the qualities that most workplaces select for and reward produce leaders who are bad both for employees, and for long-term organizational performance.

Naive Advice -Or Lies- Cost You

> the predominant cause of the firings: people believed in the world described to them in business school and in the prescriptions for leader behavior. Consequently, they were surprised by and completely unprepared for what they actually encountered at work.

Also read:

> Naive Self-Help: 10 Popular But False Self-Help Myths

5. Useless Trait #1: Modesty (Narcissism Is Better)

Consider Donald Trump…

Obviously, Trump proves that modesty is at least not strictly necessary to succeed in life.

Still, Pfeffer concedes, the case for modesty seems to make sense.
Modest leaders would give subordinates more ownership and encourage them to work harder when they'd let them take full credit for their work and ideas.

And indeed there is some research to support the role of modesty.
For example, reviews of leader effectiveness often show that narcissism, the opposite of modesty, correlates with poor performance as assessed both by the affective reactions of subordinates and also actual group performance.

And Collins in the book *Good to Great* provides some data to support the validity of modesty.
However, the author raises several good questions about Collins' data, including the fact that those "winning companies" were a mere 1% of the sample.

And on the other hand, there is also much research to show that self-promotion is positively correlated with interviewers' evaluations of job candidates as well as with hiring recommendations, that overconfident, and not just confident individuals achieve higher social status, respect, and influence in groups, and that **narcissists are more likely to be chosen as leaders and to be seen as having leadership potential**.
As the author says, this is not surprising for anyone who knows anything about psychology -and narcissism-.

And sums up the author:

> **The extensive and ever-growing research evidence is overwhelmingly clear: narcissists are more likely to be selected for leadership roles and also to seek such positions in the first place.**

Instead of Modesty...

So, for a more data-driven overview, consider this:

1. **Modesty is rare in the real world because it doesn't help reaching the top**, no matter how helpful it may be *for the organization* (not for the individual).
   In fact it's not a concidence it's rare: it doesn't help to reach and stay at the top!
2. **Immodesty (including self-promotion and narcissism) helps attain leadership and hold onto it**
3. **Narcissistic CEO extract more resources for themselves:** CEO narcissism is significantly correlated with CEO total compensation (O'Reilly et al., 2014)
4. **Narcissistic CEO last longer in their leadership position**, even in high-technology companies
5. **Narcissists may even perform better in some domains**, they are great at selling their ideas and vision, effective in attracting the support of others (particularly outside others), good at getting attention and its attendant benefits, and often effective at getting things done.
   - Innovation may require far more narcissism than modesty since it can require disdain for the status quo. "*the most celebrated leaders are particularly likely to be narcissistic and immodest, which is one of the reasons they became so well known and celebrated in the first place!*"

Also see:

- **How to self-promote at work**

> The Art of Self-Promotion: 9 Effective Techniques

Why we talk-up modesty, but elect narcissists

> Rather than chalk up this discrepancy to simple hypocrisy, I attribute it to a fundamental ambivalence. On the one hand, people understand the desirable and socially desirable and approved qualities in leaders, and they articulate those views and values when asked about them. On the other hand, people are attracted to the grandiose and the unusual.

Also read:

- How to be an effective leader

> How to Be A Leader: 13 Laws From Social-Psychology

6. Useless Trait #2: Authenticity

Pfeffer says that the "authentic movement" epitomizes the leadership industry generally for being unrealistic and idealistic.

It's also unfeasible at the extreme levels, since the definition is to be in tune with our basic nature and "owning it". In that vein, sending pictures of one's private parts if that's one feels like may as well be "extreme authenticity". And, obviously, you may not want to do that.

Instead, says Pfeffer, getting along with others and being successful in the world often requires a large amount of inauthenticity and self-regulation.

Hence, leaders need to be able to put aside what they feel like, and sometimes do what their followers and society require -or what's best for them-.
Even in interpersonal relationships, your personal feelings are irrelevant sometimes and you simply need to make a relationship work.

7. Useless Trait #3: Telling The Truth

Authentic leadership is a popular concept in the leadership industry.

Books such as Radical Candor sang its praise and framed it as one of the best approaches for high-performance teams.

In reality, powerful people lie more, and better.
And they use lies to acquire and maintain power.

Says Pfeffer:

> Research consistently demonstrates that "powerful people lie more often and with more ease." Leaders prevaricate with greater aplomb because "power, even when minimally endowed in the laboratory, mitigates the impact of stress associated with dishonesty (…) Finally, high-power individuals are less sensitive to societal norms; e.g., norms that condemn the use of deception."
> Thus, powerful people—leaders—are able to lie more successfully, and they do so.

Lying is also useful to acquire power.
Says the author quoting Lindsay et al.:

> manipulative ability is a foundation of social power and the ability to lie successfully is an important skill

> linked to personal and professional success

Advantages of Lying

- Smooth over otherwise difficult situations
- Smoother relationships and interactions
- Keep employees happy (for example, about their chances of advancing)
- Lies can become truth (especially when told often and convincingly enough)
- Fake positive feedback can lead people to perform better
- Improve returns or share prices by inflating future prospects
- Galvanize and rallying the troops convincing that success is possible and even likely (even when the odds are very slim)
- The "liar's high" of getting away with it

Also read:

- **Machiavellis at the top**

https://thepowermoves.com/psychopathy-empathy-and-success-at-work

8. Useless Trait #4: Being Trusted

The social science literature demonstrates that leaders who inspire trust and workplaces in which employees trust their leaders perform better.

However, Pfeffer no longer believes that trust is *essential* because numerous organizations are operating despite a *lack* of trust in leaders.

- **People are unable to spot untrustworthy leaders**
- **There are little sanctions for leaders who violate trust**
- **Power matters a lot more than trust**. "*Trust-breakers for the most part retain their networks and social relationships because others in their orbit haven't been harmed by their actions, so they don't feel compelled to redress the harm. Trust-breakers frequently maintain their financial resources*."
  My note: this was so good that it ended up in PU
- **Destroying past trust can pay handsomely**. For example, a new business owner may cut all expenses on new development but keep milking existing customers because of high switching costs. He destroys past-earned trust, but he can profit from it.
  So save up these old articles and reviews if one day TPM had to be acquired :)
- **Gaining trust and then betraying it once you've got the power and opportunity may pay off better**. For example, some corporate giants today started off as contractors. But once they learned how to do it, they stopped working as contractors and started doing it under their own brand (ie.: Lenovo and some Korean electronic companies).
  Don't be an "entrepreneur in residence": don't start your startup in a bigger ecosystem or parent company. If it works well, they'll take it over or replicate the exact same thing and you'll get short-changed
- **Fluid alliances work better than keeping the same ones forever**. And sometimes that may mean breaking a bond that someone thought would last forever
- **Commitments are costly, and interests can diverge**

> leaders go back on their word not because they are necessarily venal or evil, but because keeping commitments, a fundamental basis of trust, constrains their behavior. When circumstances change, so do

> people's behaviors, objectives, and needs. Leaders shed commitments all the time.

Why Power & High-Value Matters More Than Trust

It's true that people want and sometimes seek to punish cheaters.

However, social research literature probably overstates the "punishment effect" because in laboratory settings punishing is much easier than in the real world.

In the laboratory, people can spend modest resources to punish people whom they will almost certainly never encounter again.

But **in the real world people can ill-afford to punish the cheaters when those cheaters are business partners who can still add value or who may even be necessary for business operations.**

And that's why powerful people stay powerful, well-connected, and keep on making money even when they break trust, or when they behave like aholes.

9. Useless Trait #7: Taking Care of Others (Leaders Eat First)

The idea of selfless leadership is appealing.

And it also sells well.
We reviewed Simon Sinek's book here "Leaders Eat Last", and his inspirational videos garner millions of views with a similar message:

"The secret of the top performers was to put others first"
And says Pfeffer:

> Much like other forms of leadership that have attracted attention, such as authentic leadership, the idea of putting others first and taking care of and being responsible for those working for and with a leader appeals to most people's values as well as their intuitions about what leaders should do.

However, again, it's just not how things work in real life.

For example, one study showed that power leads to job protection for those in power—for the leaders, but not the followers.
And one meta-analysis shows that CEO pay is largely unaffected by corporate performance. So while company size accounts for about 40 percent of the variation in CEO pay, performance explains a paltry 5 percent of CEO's pay.

And albeit there are a few exceptions, it's exceptions in a landscape in which **most leaders mostly take care of themselves first** regardless of what they *should* do.

Why leaders don't care for others

- **They have no incentives**. If they had, it would help a lot, but most leaders have incentives to increase share prices or bottom-line results, not people's well-being
- **Leaders of big organizations have no real contact with those they lead**, and the nameless and faceless people are a lot more likely to get the short end of the stick
- **Many leaders are hired from outside with the expressed remit of cutting costs or increasing bottom line**, which means not only their incentive, but their own job goes against many employees' interests

Bottom Line: Take Care of Yourself

Don't over-trust company sloganeering or any ethical and moral obligation.

Companies and even nonprofits and government agencies are faceless entities.
And their internal dynamics generally mean that companies look after themselves and their own interests first.
And so do individual leaders.

The obvious conclusion is that **when everyone else is looking after themselves first, you should do the same**.

The reciprocity principle is out, the self-interest norm is in

How did we get here?

Reciprocity as explained by Robert Cialdini is real.
But it works mostly *between individuals*.

The rules change in organizational settings.
There are many reasons for this, but the bottom line is that, as Pfeffer's own experiments showed, the reciprocity norm is more readily and frequently breached within organizations.
At work the norm of self-interest beats the reciprocity principle.

So you may think your employer owes you something for your loyalty, past contributions and good work.

But most employers don't see it that way.

The question the counterparty asks itself is not "what have you done for me in the past that deserves repayment", but rather, "what can you do for me in the future that justifies me spending any time or resources on keeping you".

Better safe than sorry: prepare yourself

Adams Grant says givers are a relatively rare breed.

And the reciprocity principle is often misplaced in organizations.

That means you may set yourself up for a painful and costly bargain if you believe that there is some implicit contract of honoring your good work and loyalty for reward and recognition or even job security.

Even if such an exchange would be fair, don't expects those unwritten agreements to be honored. Data show that companies violate implicit contracts with their employees all the time.
And that's especially true in poor workplaces because once individualistic values come to dominate, trust and cooperation are difficult if not impossible to rebuild.

Hence, generally and particularly in "non-exceptional workplaces" **presume that others are acting on the basis of their self-interest**, and you can better forecast and understand their actions.

To prepare yourself always:

1. Keep an eye out for new jobs and opportunities (and learn to be a good interviewee)
2. Constantly work on the relationship with your boss

Be Bad To Be Good

We had an early article with exactly this title.

And Pfeffer says the exact same thing.

> In the fall of 2013, the world celebrated the five-hundred-year anniversary, more or less, of the appearance of Machiavelli's The Prince. One commentary on this important and still-relevant work noted:
> Machiavelli teaches that in a world where so many are not good, you must learn to be able to not be good. The virtues taught in our secular and religious schools are incompatible with the virtues one must practice to safeguard those same institutions… Machiavelli has long been called a teacher of evil. The author of "The

> Prince" never urged evil for evil's sake. The proper aim of a leader is to maintain his state (and, not incidentally, his job). Politics is an arena where following virtue often leads to the ruin (…)

And:

> winning in very competitive environments, often requires being willing and able to engage in behaviors and exhibit qualities that some people might find repugnant. Maybe that's why there is such a leadership shortage and why the leadership industry, with its failure to acknowledge this fundamental truth, continues to fail.
> (…)
> to do good things, even great things, people need to be willing to take whatever actions are required, and to not shy away from tough fights, unpopularity, and, yes, even decisions that skirt the edge of illegality

If You Want To Become A Leader...

You need more truthful information, like the one in this book.

And you need to learn how to apply it, with concrete behavior, strategies, and techniques.

To learn real-world strategies to become a leader you may want to consider an investment in Power University.

MORE WISDOM

Learn office politics and social skills

> As Matt jokes about failing upward, he relates how he lost his previous jobs, essentially by focusing on doing a great job technically but being largely oblivious to the political dynamics and particularly the requirement for managing his relationships with his bosses

Reviews of training and courses say little about the *usefulness* of those courses

Says Pfeffer:

> a recent review of the evidence concluded that there is a very small and statistically insignificant relationship between student evaluations and learning, and that the more objectively learning is measured, the less likely it is to be related to the evaluations.
> Another review also concluded that "teacher's ratings and learning are not closely related"

The reason is that most students rate how much they *enjoyed* reading or attending, rathen than how much they *learned*.

Learn presence and exec skills: the only cure to the glass ceiling

Says the author:

> women and other ethnic minorities, such as Asian Americans, are on average more modest and self-effacing and less narcissistic than typical white males, in part because of gender roles and cultural expectations, which may help explain their worse career outcomes.
> (…)
> One factor affecting these outcomes is the importance of executive presence, which, the report noted, often requires behaviors seemingly at odds with Asian (and female) behavioral norms.

Learn more here:

- **Executive demeanor for career advancement**

> 17 Tips to Exude Exec-Level Confidence at Work

Watch out for whistleblowing: you may pay the consequences

Quoting a paper aptly called "nobody likes a rat", he says:

> Whistle-blowers in settings ranging from the government to private industry are shunned and often have trouble finding subsequent employment. In an experimental study, researchers found that even though some individuals are willing to report lying, when â€œgroups can select their members, individuals who report lies are generally shunned, even by groups where lying is absent.

Look at past behavior to assess future behavior

> The best predictor of future behavior is past behavior. People who have reneged on commitments, stolen intellectual property, sued or forced out their partners, failed to fulfill promises, and moved on to greener pastures in the past will do so again

Be optimistic, but not overly optimistic as in "blind to reality"

The Stockdale Paradox says that over-optimism can turn into over-pessimism once the overly optimistic belief fails to materialize.

Quoting the book:

> it was always the most optimistic of his prisonmates who failed to make it out of there alive. “They were the ones who said, ‘We’re going to be out by Christmas.’ And Christmas would come, and Christmas would go. Then they’d say, ‘We’re going to be out by Easter.’ And Easter would come, and Easter would go. And then Thanksgiving, and then it would be Christmas again. And they died of a broken heart.” What the optimists failed to do was confront the reality of their situation. They preferred the ostrich approach, sticking their heads in the sand and hoping for the difficulties to go away. That self-delusion might have made it easier on them in the short-term, but when they were eventually forced to face reality, it had become too much and they couldn’t handle it.

To change the system, avoid attacking the powerful ones so that you can stay just enough within the system

> Elizabeth Warren received precisely such advice to avoid criticizing powerful others from Lawrence Summers, a former president of Harvard University and U.S. treasury secretary: “I had a choice. I could be an insider or I could be an outsider. Outsiders can say whatever they want. But people on the inside don’t listen to them. Insiders, however, get lots of access and a chance to push their ideas… But insiders also understand one unbreakable rule: They don’t criticize other insiders.

QUOTES

On how useless most leadership books are:

> Go home and throw out the numerous leadership books—or better yet, give them to career competitors.

On leaders taking care of themselves first:

> Or as a former student told me one evening at a dinner accompanied by a little too much wine, “We live in an era of shared sacrifice. The employees sacrifice, and I share in the money they give up.”

On taking responsibility for yourself and becoming an adult:

> Encouraging people to seek and then to follow benevolent leaders to put their trust and faith in these individuals who, because they are human, will nevertheless be invariably flawed, strikes me as seeking to in some measure infantilize otherwise competent working adults.

CONS

Leadership BS is fantastic and we largely agree on everything.

So take these “cons” as “opportunities to be even better”, rather than true major cons:

Did Leaders Largely Fail?

Pfeffer says that “Leaders fail their people, their organizations, the larger society, and even themselves with unacceptable frequency”.

I’m not sure that is the case.

Or, at least, it may not be any truer for leaders as it is for everyone else.

The “Selfish Individual Advantage” Missed The Benefit of Win-Win

The author says that individuals maximize their interest by acting selfishly, while the group depends on individuals NOT acting selfish:

> Individuals maximize their own survival chances by acting selfishly to acquire, at all costs, the resources necessary for their survival. Group survival, however, often depends on individuals sacrificing their own well-being for that of the group, such as soldiers throwing themselves on hand grenades to save their colleagues’ lives, or parents forgoing food so their children can live.

Leaders BS is a great book, but this was a generalization that, in my opinion, isn’t fully true.

In truth, altruistic behavior could not evolve if it wasn’t *also* good for the individual -such behavior would have been quickly rooted out if altruistic individuals lost out-.

Altruistic behavior instead evolved because win-win is possible, and win-win sometimes entails at least some altruism.
And some forms of win-win also entail that an individual acting in his selfish interest can also add value to others, or to the group -that’s also the basis of capitalism, and despite its flaws, look how it advanced our civilization-.

For more, see:

- The Origins of Virtue

> The Origins of Virtue: Summary & Review

Some Opinions As Statements of Truth

For example:

> One reason why lying is common is that the ability to lie or deceive others offers evolutionary benefits and, as a consequence, has increased over time.

And who says that it increased over time?

It’s tempting to come up with an evolutionary psychology reason to justify an opinion (including sensible opinions). However, that’s not a scientific approach to evolutionary psychology -and, incidentally, it’s one of the reasons why the discipline has such a bad reputation-.

Pfeffer himself shows exactly how it’s done when he says a little later in the book that “*possibly* for evolutionary reasons those who were best able to… “.
That’s how you properly preface an opinion or conjecture.

The “ever-growing cycle of trust-breaking” that may not take over the world

Similarly, the author suggests that trust-breaking is on the rise as part of a vicious cycle:

> Because commitments constrain, people and companies break them (…) Because there are few sanctions, such trust-violating behavior becomes more frequent. Because the breaking of promises becomes more frequent, it becomes more “normative” in the sense that more entities do it (…) it provokes less moral outrage and comes to be seen as how business is done (…) the absence of moral outrage then leads to more breaches of agreements and promises, and the cycle continues

However, there is absolutely zero data to show that trust-violating behavior is on the rise.
And it's entirely possible that a virtuous cycle in a couple, group, organization, country, or even world, may go in the *opposite* direction.

Some Explanations Felt Far-Fetched

The author had a tough job to explain why some popular myths are largely unfounded.

And that holds true even if, as I believe it's the case, the author is right.

For example, to explain that trust is not that important for leaders, the author says that when the trust-breaking is publicized, the crooked leader gains with notoriety.

That may be true in some cases, but certainly not all.

And I'd even say that common wisdom is correct here: it's often better *not* to be on the front pages for having lied and stolen.

This may be a case where the author felt he needed to add more reasons to back up seemingly counter-intuitive claims.
But it's usually better not to add an explanation, than to add a shakier explanation.

REVIEW

Leadership BS is a great exposé of naive self-help within the leadership industry, a fundamental read for increasing power awareness, and a much-needed wake-up call for many.

It's also very much in line with TPM, including our "enlightened cynical" stance, and with our "you need to be bad to be good".

Many reviewers of this fantastic book missed the point because they over-focused on the cynicism in the book.
And yes, *Leadership BS* is cynical at times.
However, that's only because it needs to address and undo the endless stream of naive self-help that leads people astray.
Only people who prefer to keep the wool over their eyes would ignore *Leadership BS* -or give it a low rating- for that matter -and people who *profit* from that naivete, of course-.

In today's terminology, *Leadership BS* is part of the red pill, and some people would rather never take that red pill to remain in their fake fantasies.

Finally, *Leadership BS* also provided some concepts that made me rethink Power University, and that's the biggest compliment I can pay to any author or resource.

The Status Game: How Important Is Status For Men's Life & Success? (Book Review)

Lucio Buffalmano · 19 April 2023 · Archived copy · Original

The Status Game (2021) explains how social status impacts us all. Will Storr, the author, says that we are all hardwired to play the status game: we want status and work for it, we're happy and healthier when we have it and depressed when we don't, and we are bound to play the game, even when it changes us for the worse (as if often happens). So we better learn how it works.

Exec Summary

- **Humans are hardwired to play a status game**, as soon as we engage with others, we're naturally pulled into the game
- **There are a multitude of status games, each with different rules**
- **Having high status in the games makes us successful and happy**, having low status makes us unhappy and "losers"
- **The status game can turn toxic**, both for the group, the collective, and for you
- **It's best for you if you learn to both do well in the game, and also to transcend it** -or, at least, to be less dependent on it for your personal success and happiness

FULL SUMMARY

About the Author:
Will Storr is a writer, journalist, storytelling trainer, and ghostwriter.

TPM Note:
While Storr is not a psychologist, we list *The Status Game* in our 'psychology' category because it pulls from peer-reviewed research in evolutionary and social psychology and provides a coherent framework to understand human drives for status.

Status Is About Power & Influence

Storr explains status as:

> When people defer to us, offer respect, admiration or praise, or allow us to influence them in some way, that's status.

Influence Is The Bigger Indicator of Status

Says Storr:

> Status games run on powerlines of influence and deference that crackle up and down their hierarchy.
> This is why, of all the countless status symbols that exist in human life, influence is probably the most reliable.

And:

> Wherever you track trails of influence – of people deferring, altering their beliefs or behaviour to match those of the people above them – you'll find status games being played and won.

Yep, true.
And Storr also adds that we track our own status by our capacity to influence.

We're Driven to Acquire Status

Humans are driven to "fit in and rise within it".

Fitting is important, but only the first step.
Then, humans also want to rise -and they *must* rise, if they want to be successful-.

> We're driven to rise within it. When we succeed, and receive approval and acclaim from our community, we experience happiness. We feel as if our lives have meaning and purpose and that we're thriving.

Status Is Key To Succeed, Connection Is Not

Brene Brown has become popular talking about the human need for connection.

However, that's only ONE part of human's social needs and drive.

Says Storr:

> Status isn't about being liked or accepted: these are separate needs, associated with connection.

And connection is just the "bare minimum entry-level":

> The minimum requirement for play is connection. Before we can be rewarded with status, we must first be accepted into the group as a player.

However, the author correctly says, **connection in itself doesn't make for a successful life.** And people are neither successful nor happy to simply be part of a group if they reside in the lower rung of that group.

Storr calls that "connected but low status" state "likable but useless".

Instead humans, or at least successful humans, are driven to "get along and get ahead".

Status Makes Us Feel Good (Or Bad)

Science shows it clearly:

Status is a fundamental human motive that profoundly affects our well-being.

One review of the empirical literature found people's well-being 'consistently depended on the degree to which people felt respected by others. Attainment of status or its loss was 'the strongest predictor of long-term positive and negative feelings.
And a study of 7372 British civil servants tells us that the lower the rank of the employee, the higher the age-adjusted mortality risk. Storr summarizes by saying that the lower you dropped, the worse your health and the earlier your death.
Finally, one review found out that social status is also linked to depression.

In brief, Storr concludes that status is essential for healthy living:

> Status is an essential nutrient found not in meat or fruit or sunlight but in the successful playing of our lives.

Storr says that these emotions are no coincidence.
We are happy because **status provides a huge evolutionary advantage to survive and reproduce**.

Evolutionary psychologist David Buss says men of higher status 'invariably had greater wealth and more wives and provided better nourishment for their children.

Status Is Intrinsically Relative & "Others-Driven" (ie.: how we stack up with others)

Have you ever heard those arguments of how ungrateful we are because even a poor man today lives better than a king a thousand years ago?

Well, those people don't understand human nature.

Status instead is comparative.
Says Storr:

> Researchers find our reward systems are activated most when we achieve relative rather than absolute rewards; we're designed to feel best not when we get more, but when we get more than those around us.

Even when we're "objectively doing well" on a global scale, studies show that it's respect and admiration within one's local group, *not* socioeconomic status, that predicts subjective well-being.

Tip: Switch Off Social Media

Says the author:

> Status is relative: the higher others rise, the lower we sit in comparison. It's a resource and their highly visible thriving steals it from us.

This means to you that:

You need to switch off social media because **social media are show-off machine and you're designed to feel bad or inferior looking at someone else doing comparatively better**.

People Are Great At Assessing Status

> When researchers took candid photos of ninety-six pairs of co-workers interacting, cut them out and stuck them against a white background to remove contextual information, people were 'exceedingly accurate' in their estimates of who had higher status. Merely by glancing at a still image of them talking, they could tell who was on top.

And:

> The status detection system even reads symbolic information in sounds we can't consciously hear. When speaking, we emit a low-frequency hum at around 500 hertz. When people meet and talk, their hums shift. The highest-status person in the group sets its level and the rest adjust to match. This hum is thought to be an 'unconscious social instrument' that helps sort us into status hierarchies

For example, analyses of The Larry King Show interviews found that Larry deferentially changed his hum to match Elizabeth Taylor but that Dan Quayle adjusted to him.

Status Is A Random Game Pursuing Random Markers of Status

Says the author:

> Groups of people gather together, agree what symbols they're going to use to mean 'status', then strive to achieve it.
> (…)
> The truth of human life is that it's a set of hallucinatory games organised around symbols. These games are an act of shared imagination.

Different cultures and times have different rules for the game

For example:

> East Asian games tend to be more collective. In countries such as Japan and China, status-pursuit is more commonly seen as the responsibility of the group.

3 Ways to Acquire Status

The author says there are 3 main approaches to gaining status:

1. **Dominance**, where status is coerced by force or fear (mafia organizations or armies)
2. **Virtue**, where status goes to conspicuously dutiful, obedient, and moralistic (religions, royal institutions, or virtue signaling and cancel cultures)
3. **Success**, where status goes either to the winner of a specific game with specific rules and outcomes, or to the player who displays skill, talent, or knowledge (corporations and sporting contexts)

Of course life and games tend to be mixed and overlapping however, says the author, one mode of playing often becomes prominent and defines the type of game.

Humans tend to engage in whatever can afford them the most status points, and are often an uncomfortable, contradictory mixture of all the three.

Dominance VS Prestige: Taking Status, Or Being Granted Status

Somewhat confusingly, after having introduced the "3 ways to acquire status", the author then differentiates between dominance and prestige.

The difference is that dominant players tend to take power and status, while prestigious leaders are awarded status and power.

Both work, he says:

> Dominant and prestigious players alike have more influence over co-players. Dominant men, like prestigious men, have greater reproductive success. One meta-analysis of over thirty studies found dominance to be one of the 'most robust predictors of leader emergence, outperforming myriad others including conscientiousness and intelligence'.

However, albeit the author doesn't directly state so, it seems that dominant leaders tend to gain leadership roles more often than prestigious ones -and especially so in turbulent times-.

Alose see:

- **How to be an effective leader**

> How to Be A Leader: 13 Laws From Social-Psychology

Dominant Leaders Lead More, But Are Less Effective Than Prestigious Leaders

Dominant men are more likely to acquire positions of leadership.

Unluckily, they're also less effective than prestigious leaders.
Says the author:

> (…) dominant-style leaders are usually less effective than the prestigious, being more likely to put their own interests before the group, less likely to seek advice and tending to respond to criticism with 'ego defensive aggression'. They're also overbearing, like to publicly credit themselves with the success of the group, tease and humiliate subordinates and are manipulative

Instead, prestigious leaders are more self-deprecating, and publicly attribute success to the team.

Also see:

- **Leadership power dynamics**

Humiliation and Shame Are The Opposite of Status

Humiliation, shame, and rejection are the opposite of status.

The author links to several high-profile cases of murder, mass murder, or social aggression, all of which are very interesting and sound at the very least plausible.

Bin Laden as well was largely motivated by the humiliation he perceived.
Humiliation at the hands of more powerful and different Western cultures.
Similarly, researchers find that the prime driver of suicide bombers is also humiliation at the hands of the occupying troops (*Why We Fight* and *Shame, Guilt, And Violence*).

Humiliation is even a bigger motivator in cultures of honors, and for narcissistic individuals -especially the ones with fragile self-esteem-.

Warning: Avoid Ego-Projections On "Ambassadors of Status"

Some people project their ego into someone else to "hitchhike on their success".

Says Storr:

> ambassadors for our groups: artists, thinkers, athletes and leaders with whom we strongly identify. They seem to symbolise us, somehow. They carry with them a piece of our own identity, a pound of our flesh – so their success becomes our success and we cheer it wildly. To our subconscious these idols are fantastically accomplished versions of us: our copy, flatter, conform cognition overrides our resentment.

That may sound good, BUT… **If you live vicariously through other people's successes, you'll never succeed yourself**.

That's also why here on TPM we always discourage from projecting your ego onto any other individual, or any other group -a common and toxic example we warned against here is the tendency in the male self-development circles is to project one's ego into "male superiority over women".

You must be careful of the ego-projection dynamic because it comes naturally to humans.

And so does the unfair, time-wasting status boosterism.

For example, one study shows that 5-years old wearing a colored T-shirt thought more positively of children wearing the same colours, assessing them as more generous and kind. And in a subsequent game, they unfairly rewarded them with more coins.
This is also risky for you because you may end up feeling closer to someone who poses as more similar or as in-group, just to manipulate you and take advantage of you.

Sports fans & jingoism

Two good examples are sports fans and nationalists.

Both project their egos onto bigger groups and fanatically support their team or country so that they can feel good when the team or country does well.

Says author Laurie Lee describing a good example of this dynamic:

> we were very poor in those days, poor but uncomplaining, we lived on boiled and baked cabbage, the poorest of the poor. And we used to sit there, looking at these maps and thinking, we are the greatest in the world. We own all those pieces of red on that map, on that world map.

> Enlightened Self-Interest: Making of The Ubermensch

Manipulative Stories Keep Low-Status People From Rebeling

Storr asks a very poignant question:

If we're all so ambitious, why have the poorest, lowest-status persons stayed in the game?

Some reasons include:

- **Manipulative stories, religions, and promises of next-life bliss**

Some ad-hoc religions can provide the manipulative stories that keep them stuck.
For example, by making a generational sin they need to atone in their current life. Or with the promise of a future better life after death for all of those who submit in this life.

- **Trickle-down games work: we play local games and focus on those immediately around us**

People focus on their immediate lives.

So if there's a king living lavishly while those around us eat bugs, many humans are happy to compete on who can afford the most bugs if the king is just enough far removed.

This is especially true if the local game feels "fair enough".
Says Storr:

> As long as those games functioned properly, and our group received the rewards it expected, the status quo would likely be maintained.

And:

> A robust society is one in which the general populace is protected from outside threat and status trickles down in ways that are expected. Even if elite groups – the religious, legal, military, bureaucratic, aristocratic games – get nearly all the rewards, and bottom castes virtually none at all, stability won't usually be threatened.

- **Many humans have limited ambition, not boundless ambition**

Most people don't seek complete supremacy or alpha male status.

Instead, they're content to have just enough to live.

So if the king is just enough removed, they don't even think of deposing a kind.

What Creates Revolutions

So what does create revolutions, then?

Storr says that it's a game that stopped working:

> What creates revolutionary conditions isn't the steepness of the inequality but the perception the game has stopped paying out as it should.

Instead, sociologist Jack Goldstone writes that people tend to rebel when they feel they are losing their proper place in society for reasons that are not inevitable and not their fault.

Warning: The System Replaces Your Value With The Group's Values

The longer you stay in a group, the more you become part of it.

And the more you become part of it, the more you absorb its rules, and start obeying and acting accordingly to those rules.

Storr lays out the example of a lawyer who may not care too much about money.
But once everyone around him does, he eventually will start seeking money as a way of gaining more status and respect within his environment -and the system will profit as a result-.

Companies profit by replacing your values for rank

Companies and organizations profit a great deal when the employees start caring about rank, promotion, and salaries.

The more employees care, the more they will seek to do good work in order to advance.
And the company profits.

Also read:

- **Business manipulations**

> 12 Ways Companies Manipulate Employees (W/ Examples)

Warning: The Game Changes Behaviors & Personality

The game literally changes people.

Sometimes, for the worse.

Storr shares a few stories of people who started acting contrary to their usual selves when they fell into games that rewarded them for conformity and for certain behaviors that the game rewarded for.

The examples are:

- The false "day-care sex abuse cases" and the "Satan hunters" who started hunting for status points
- Woman who became anti-vaxer when she joined anti-vax Facebook groups and was cheered on for her beliefs
- Witch hunts

Warning: Wars Increase When The Status Game Rewards Warriors

Says the author:

> An analysis of warriorship in premodern societies discovered a positive relationship between conflict intensity and the status on offer for fighters. 'Warriors are motivated to participate in warfare because of the possibility of rewards,' it found. These included 'increased status, honorific names or titles, or special insignia'.

Wars can refer both to real war with guns and bombs, and to social or online aggression.

Conspiracy Theorists & Cancel Culture Are Toxic Games of Status

Conspiracy theorists and virtue signalers both play a game of status.

Conspiracy Theorists Are Low-Status Status Seekers

Writes Storr:

> One investigation found those most likely to circulate 'hostile political rumours' including conspiracy theories and 'fake news' on social media were often 'status-obsessed, yet socially marginalised', their behaviour fuelled by a 'thwarted desire for high status', their aim, to 'mobilise the audience against disliked elites'.

Some people in these games are "true believers", and many others just pile in searching for status.
Once a whole group has been taken over by a strong culture, the dynamics can get more and more toxic. The true believers want to sniff out the posers and ensure obedience to the "truth".
And non-believers who don't have the personal power to speak up or walk out will start to "fake their belief" just to be accepted and gain status.

The Cancel Culture Has Already Turned Toxic

Once the game has started there is no leader in control of everything.

Once it starts, it's mob dynamics.

Individuals start policing and attacking any target that can offer a good opportunity for status points -even if it was former colleagues in the same cancel culture game-.

Says the author:

> Online mobs play virtue-dominance games: status is awarded to players who enforce their rules to those both inside and outside their groups.

Unluckily, it can be effective as studies of mobbing events on Twitter find shamers increase their follower counts faster than non-shamers.

Also see:

- Don't fall for disempowering virtue signaling

https://thepowermoves.com/black-empowerment-vs-virtue-signalers

Purity Spirals & Hunting Deviants

Toxic status games can turn into what Manning and Campbell call "purity spiral" in which players 'strive to outdo one another in displays of zealotry, condemning and expelling members of their own movement for smaller and smaller deviations from its core virtues'.

That was the case during the terror of Robespierre, the communist movement and party in Russia, and is also taking place within the cancel culture.

But Status Games Also Built Advanced Civilizations

So far we mostly talk badly about status games.

However, like most games, the status games can also be used to reward positive and win-win behavior.

And **our current ever-advancing society is based on a status game that rewards entrepreneurship and truth**.

Storr says that civilizations took a major leap forward when we started to award status to entrepreneurs who went after value-adding production, and scientists who went after truth.

It started in Italy, in Venice and Florence.
And went international with the "Republic of Letters", (one of) the first international network of intellectuals and scholars.

And when the old elites there re-established their dominion Englad took over the mantel.
From there, the advance spread over to the whole West.

The Prince Charles Paradox: High Official Status, Little Respect

The author explains that as societies got larger, the game also grew too large, and split into two:

- Formal game: announced at the higher levels of cultures, economies, royal descendants and political appointees
- Informal true game: that continues to occur in the minds of the players

This means that one player could acquire status and power informally, but without having much skills for the game -or much respect from the people-.

This was a great intuition by Storr and something we had already described on this website (and also did an infographic for it):

Status Games Turn Toxic When It's Between-Groups

Storr explains how in hunter-gather societies individuals police each to make sure nobody socially climbs on others.

And, generally, interpersonal exchanges with attacks and defenses and intra-group dynamics ensure that the game remains relatively fair.

However, no such checks exist among groups:

> (…) no such policing happens in status competitions between games. On the contrary, our co-players award us even more status when we behave in ways that boost our game's rank and diminish that of our rivals

This is indeed a dangerous dynamic where individuals can fan the flames of hatred and turn the game into one that affords the most status to the members who mostly attack and demonize the outgroups.

Cults Are The Most Toxic Games

At the extreme of toxicity are cults.

Cults become the only source of status for their members.

Storr makes a good argument that "brainwashing" isn't really the only -or best- explanation for cults.
Instead, brains in a cult are doing what brains are designed to do: seek belonging and status in the only meaningful group they are part of.

Successful Groups Are Status-Generating Machines

Leaders need to develop organizations that award status to their best players.

Machiavelli said it first, says the author, and he was right.

The author says the successful leader must make status available to everyone who adheres to the rules and, as Machiavelli said, ideally make people believe that those prizes are only available from him.

The status can be in the form of money, titles, medals, belonging to an elite, or a "ladder to heaven".
But even simple appreciation from the leader can work -a judge power move-.

Successful politicians offer more status

Good Machiavellian politicians also tell the story of a special group that needs more status -and that they can get under his leadership, of course-.

Says the author:

> The forty-fifth President of the United States, Donald Trump, told this story, by promising to 'Make America Great Again'; so did his predecessor Barack Obama by seeking to embody 'Hope'.

Same did Hitler.
And so did ISIS, leveraging a generation that felt low status in the world order, and promising to give back pride, honor… And status in the idealistic caliphate.

How to Acquire Status

Storr highlights 7 rules for winning in the status game.

They are:

1. **Practice warmth, sincerity, and competence**: besides "high-power and high-warmth" that we also embrace

here, the author adds “sincerity”. “Professor Jennifer Ray, reviewing some available research, says that morality is ‘not only a critical and separable dimension … it may even be the primary dimension’. Elsewhere, ‘perceived sincerity’ has been found to be essential to successful ‘impression management’.”

2. **Make small moments of prestige**, dominant power moves add up to make people dislike you. Swap for the “prestige power moves”. Avoid ordering others around, use power protecting techniques. In the West, highlighting their freedom to decide is far more persuasive
3. **Play a hierarchy of games**, the best way to defend yourself against tyranny and toxic groups and to win freedom and personal power is to play many games. Brainwashed people have simply invested too much into a single game. They become overly reliant on that game or that guru, and they risk catastrophic collapses if the game -their very self can disintegrate-.
   So play many games, instead. “*Psychologists find those with ‘complex,’ multiple self-identities tend to be happier, healthier and have more stable emotional lives*“.
   Storr also recommends that you prioritize some game/group that are most important to you, without letting it become your sole group.
4. **Reduce your moral sphere**: stop judging and social climbing others, cast that eye inward and concern yourself with your own behavior instead
5. **Foster a trade-off mindset**: view the world not in terms of “right or wrong” and groups in terms of “moral heroes and villains”, but as groups negotiating trade-offs. It also means empathizing more.
   Often each side tells part of the truth.
6. **Be different**: life in the status game can be tough. You can win the game with minor acts of non-conformity that do not violate the group’s basic standards for behavior but attract attention (Status, Cecilia L. Ridgeway)
7. **Never forget you’re dreaming**: “*A status game is a conspiracy we join to make ourselves feel important*“. Even if you can’t fully separate from the game, you can gain freedom, power, and even happiness by realizing the nature of the game

High-Status People Behavior

Before those 7 rules, he also says that high-status people:

- Have longer eye contact
- Speak more often
- Speak more loudly
- Are more facially expressive
- Have more successful interruptions during conversations
- Stand closer to us
- Touch themselves less
- Use more relaxed, open postures
- Use more ‘filled pauses’ such as ‘um’ and ‘ah’ (note: I found some studies that say the opposite though, and better advice is to cut out your filler words)
- Have a steadier vocal tone (although some of these symbols may vary culturally)
- Set the tone -literal tone as in frequency- of speaking and others adapt

For more on social power and dominant behavior see:

> 10 Ways to Be More Dominant

Cues People Look For

Storr says the brain seeks 4 main cues for status:

1. Self-similarities
2. Skills (who is good at playing the status game)
3. Success cues (status symbols)
4. Prestige cues (who are people deferring or giving respect to?)

Acquire Fame

Our brain developed to play the game in small tribes, and can easily be short-circuited with people we don't even know, as long as they become famous.

Says the author:

> Today it's not uncommon for millions to pay attention to one person simply because millions of others are paying attention to them and for this to become a feedback loop, sending a relatively unremarkable individual into the distant upper reaches of planetary status. Academics call this 'The Paris Hilton Effect'.

Escape & Transcend The Game

Says Storr:

> The strategies by which we earn connection and status shape who we are. To a significant extent, we become the puppets of the games we play.

And there is no winning that game.
It never makes us satisfied, and… **The status game makes us dependent on the group and game** -even if you win and *especially* if you win-.

That has been the case with social media, but any group can turn us into a puppet player.

Also see:

- Big fish small pond syndrome, and they're all small ponds

And our analyses of some popular self-help status games:

- Red pill dynamics

This whole website and Power University help you turn into a man who can play the status game, but also transcend it.

MORE WISDOM

- **Proximity rule of status: your friends matters**

Status “leaks”.
So if you’re close to someone of lower rank, you may lose some status.

And the opposite is true: those of lower rank gain by engaging with higher-rank individuals.

For example, says the author on gossiping:

> We could also gain status from gossiping. Who we gossip with can itself be a status symbol: swapping tattle with high-ranked others implies we’re of high rank too.

- **Busyness has become a proxy for status**

In our world that measures status by income and success, research suggests being busy has become a proxy for ambition and high status -as well as being scarcer and more in demand-.

- **Dominance and aggression are more likely when the status hierarchy is unclear**

> If the hierarchy doesn’t clearly show who’s in charge, there’s a greater temptation to use aggression to secure supremacy.

- **The best leaders have the least compliant followers**

Which says a lot about what type of leaders make the best leaders -ie.: those who don’t impose and listen-.

QUOTES

A description of status:

> A status game is a conspiracy we join to make ourselves feel important.

On the importance of status to achieve common human goals:

> If you want to rule the world, save the world, buy the world or fuck the world, the best thing to pursue is status.

On alpha males dominance strategy becoming outdated as humans evolved:

> In this communal, nested world, brute ferocity by alpha males was unwelcome and unuseful. Getting along and getting ahead meant winning the cooperation of others. Hyper-violent males who attempted to dominate the tribe would increasingly find themselves ostracized or executed. More peaceable and socially intelligent men began to gain status.

On the inevitability of the game of status:

> The parable of the Communists reveals the impossibility of ridding human existence of the game. The drive to get ahead will always assert itself. It's in us. It's who we are.
> (…)
> **For humans equality will always be the impossible dream**.

On the importance of setting up the right rules of the game of status:

> History is not made by individuals, but by individuals connected into groups. Those groups are status games. The data, and our history, are clear. If we truly want to help others and make the world a better place, we must play games of success.

Amen to that.

CONS

As usual, let me add this note:

We are VERY nitpicking here and this is a fantastic book.

That said, some nitpicks are:

Well sourced, but a couple sources didn't add up to me

The author wrote:

> Wherever psychologists look, they find a remarkably powerful link between status and wellbeing.
> **One study** of more than sixty thousand people across 123 countries found (…) **Elsewhere**, an extensive review of the scientific literature concluded that

It sounds like there are two different sources, but when I went to check it, the study was the same.
Storr did a great job with the research, but he may want to be careful with these minor slippages as it's easy to lose trust in the work's thoroughness.

In another instance, Storry says that "one review of the scientific literature found that "perceiving oneself as having low rank compared to others is consistently linked to higher depressive symptoms".
However, when I checked that review, the abstract said that "multivariate analyses indicated that social rank may act as a psychosocial mechanism to explain the relationship between social factors (in particular socio-economic status) and depressive symptoms."
The study's abstract said *may* act as…
However, Storr may have well quoted some parts in the *full* study that I did not access.

Sometimes different constructs are mixed up in my opinion (Ie.: Status VS Power)

The author says that, as a journalist researcher, he has vast knowledge, but not deep, and so he also recruited several scientists to help him out.

However, there aren't that many experts on power dynamics, and sometimes I felt there was some confusion.

For example, the author says that, unlike status, the desire for power is not fundamental in humans, that it doesn't strongly predict well-being and that, unlike status, is quenchable.

However, I strongly disagree here because **status IS power**.
At least it is if we look at power as the most general and higher-level construct and measure for your ability to achieve goals and get what you want.
Geoffrey Pfeffer also takes a larger view of power that includes status. We take that same large view not only because we believe it's correct, but also because it's more useful for learning and self-development.

Mixes Achievement With Status

In another instance, Storr says that we're only happy when we achieve and get more compared to others.
However, that's not so much about status as about personal achievement and victory because, as he also explains, status IS intrinsically a comparative measure.

Mixes Influence With Dominance

Says the author:

> a person's status is commonly expressed in their capacity to influence: they 'tend to be more prominent in group discussions, to make their opinions known and their suggestions clear, and to articulate the consensus once it is determined'. The outsized influence that high-status players exert can also be measured in how much they talk.

This is not necessarily influence.
This is social dominance.

The status game is not as random as implied

The author says:

> Groups of people gather together, agree what symbols they're going to use to mean 'status', then strive to achieve it.

I agree that there is much randomness in what affords status.
However, there are also intercultural traits and signals of status that work almost anytime, anywhere.

For example, social skills, physical fitness, intelligence, high social power… These are all traits and behaviors that

assign status almost universally.

The evolution of status to make us less violent didn't add up to me

The author says that we evolved from pure dominance to also seeking and respecting the other two ("reputation games"), which made humans less violent compared to our primate relatives.

It sounds like a captivating explanation at first blush, but I don't full agree.

For example, there are primates who are also non-violent.
Bonobos for example are not known to kill each other, which makes them *less* violent than humans.

Gets a bit "woke" in one chapter

The book as a whole is NOT woke or virtue signaling and instead very balanced and rational.

However, the chapter called "fairness, unfairness" does get a bit woke in my opinion.

For example:

- "the global oppression of women was not an inevitable pattern of nature but an epic historical injustice"
- "many respondents noted higher male presence in engineering, say, and higher female presence in childcare, and concluded one gender was better at these occupations. This is proving a frustratingly stubborn lesson to learn: underestimating a player on the basis of their gender is not only ignorant (..)"

That was a bit of a bait and switch to maintain the woke frame.
It IS a stretch to assume that an individual is better than another at anything simply based on gender. But it is NOT a stretch to assume that a gender as a role is tendentially better at something than the other.

REVIEW

The Status Game is a fantastic analysis of social status explained as a "game people play", with its own rules and points awarded for whatever behavior the group ends up promoting.

That game can turn toxic, nonsensical, and even self-harming if the values are either poor or go extreme. Then, the behavior being rewarded also turns toxic, aggressive, or self-harming.
But unless you realize it's a game, you're stuck in it and bound to play because playing and seeking status is in human nature

This book is a great complement to TPM, and confirmed a few insights that TPM embraced and advised in several articles, including the:

- Big fish syndrome, or how status in a group can make you feel good at first, but also make you dependent
- Alpha male status as a status game (albeit some values and behaviors of alpha male game are actually good and universal)
- Cancel culture / virtue signaling culture as a status game that turned toxic and disempowering
- Solutions:
  - Develop the self, avoid being overly dependent on any group/game (it's also one of TPM's values to develop the self first and foremost and "learning to walk alone")
  - Avoid projecting your ego onto another group/individual as a way to "vicariously gain status" (something we also wrote in the red pill articles and a central theme of our "enlightened self-interest" article)

But Will Storr also adds plenty more wisdom.
I learned a lot from it, and even took notes for this website's articles and products (the biggest compliment I can

ever pay to any author).

If you know how to look, it also offers many opportunities to turn wisdom into life strategies that will make you happier, more successful, and even more honorable.

So, yes, we loved *The Status Game* and very much recommend it (and even added it to our list of best psychology books at one time).

Check the **best books** to read or **get this book on Amazon**.

Our Timeless Approach To Content Development

Lucio Buffalmano · 23 April 2023 · Archived copy · Original

If you think about it, it's crazy:

The eagle is our logo.
We often talk about "eagle" and "eagle behavior" as an ideal to move towards, and yet…

Close to 6 years in, and… There is still no article dedicated to what an eagle is, and how you become one.

Weird, no?
One would think that explaining this eagle allegory should be the *first* article.

So… Why not?

Well, the reason goes at the core of what we stand for.

So stick with us for just a tad longer and we'll oblige to explain…*

We see our work as timeless wisdom and help that any future human may benefit from, wherever in the universe they may be

- INTRO
  - How this post started: "who is a high-quality person?", asked Maxim
- Timelessness
  - 1. Timeless gold requires thought & development over time (hatching vs rehashing)
  - 2. Timeless content doesn't care about years ("passing the baton" mindset)
  - 3. Timeless content must be built on top of many and high-quality pillars (ground-up VS top-bottom)
- Example: high-value articles
  - Compare: too early article ("high value") VS timely ("Machiavellianism")

- SUMMARY

INTRO

Almost all our published "cornerstone articles", foundational concepts, and most important articles came late.

For example:

- **Machiavellianism, manipulation and dark psychology after 4+ years** of the website's existence albeit they're crucial topics for us
- **Alpha male after 5+ years** albeit it's one of the most important status games for men and despite it would help our sales since it targets a highly relevant demographic and taps into the vast red pill interest
- **Naive self-help after 5+ years**, albeit this website was in large motivated by the naivete of most self-help (and albeit we railed against it for years it in our reviews)

Many more foundational articles only arrived years after TPM first started.
And many more *have yet to be published*, including:

- **~~Glass ceiling concept~~**, even more important for self-development than the already published naive self-help article
- **~~How to read people~~**, a crucial skill for what we teach here, for our mission, and in general for a happy and successful life
- **~~Enlightened narcissism~~**, as part of our "enlightened series" of walking the optimum line between extremes and using the positive from what's considered negative
- …

… And the already mentioned "how to be an eagle" of course.

So yeah, the great news is: we're not turning into a content mill rehashing already beaten horses any time soon.
There is still so much golden in store for you :).

But… Why wait to publish it?

How this post started: “who is a high-quality person?”, asked Maxim

This post started thanks to Maxim.

Maxim’s asked this question in the forum:

> i’m **not finding a clear and definitive article** on this site (or, at least, a specific clear-cut post on this forum), that’s really **clarifying the difference between a *High-Value Person* Vs. a *High-Quality Person***…The terms are often thrown around almost interchangeably (even in relevant articles here on the site, i believe), and i understand that there’s often an overlap between then…it’s a bit confusing… **Are there definite, short and/or simple to remember distinctions between the 2 terms?** Simple and rememberbale seperate definition?
>
> *Quote from Maxim Levinsky on April 23, 2023, 9:10 am*

GREAT observation.

High-value VS high-quality is a fundamental concept for us because our ultimate mission is to develop high-*quality* people, not “just” high value.

And still, there is no definitive article on “high quality” and no clear distinction between high value and high-quality which, indeed, have been used interchangeably (a small mistake, albeit often you cannot know if someone is high quality rather than just high value without knowing them well enough).

Why not?
Are we being sloppy or lazy?

No -hopefully not, at least-.

This is because of a specific approach TPM has taken towards developing the core of its teachings, and clarifying its mission and philosophy).

Let’s see why:

Timelessness

The shortest answer to why we take our time to flesh out and publish our most foundational concepts is that we're here to develop timeless wisdom.

All our approach around content development stems from our timeless vision of our work and mission.

1. Timeless gold requires thought & development *over time* (hatching vs rehashing)

Why waiting?

Why withhold so much gold that we could share, and even profit from?

Because we're *not* withholding or waiting.
We are *hatching* the new golden eggs.

Developing groundbreaking concepts and "beyond anything that's already available" content takes time.
Even to "just" explain something better than it's ever been done before takes time.

For example, there is a thousand guide on "how to read people".
But since that's such a core skill for us when we'll publish ours we want it to be more useful, more practical, more empowering and more life-changing than anything you could get anywhere else…

In the meanwhile, we're hatching

When we or I…

- Collect and discuss "reading people" case studies in the forum we are hatching that new article.
- Read books or research that mention some important insights and take notes, I'm hatching.
- Observe in real life and either get it right or wrong and take note, I'm hatching.
- Inquire about other people's experiences, I'm hatching.

So when I'll finally sit down and write that article, I'll be able to leverage a copious amount of high-quality notes, science, and wisdom not just from me, but from a community of smart folks.

Plus, that work will also refine my own personal acuity in reading people, and make me even more capable to make the most out of that hatched material.

Since nobody I know of does this type of work, once it'll be ready, it will almost naturally be more and better than anything available.
And then, as usual, the corresponding Power University lesson will be yet even better than the free article.

2. Timeless content doesn't care about years ("passing the baton" mindset)

> When millennia are the yardstick, years become insignificant (and quality is king)

TPM plans to stay for the long haul.

More than that, here are *levels* to "long haul".

And the level TPM aims for long outlasts technology and lives.

TPM and Power University will outlast its founders and early community.
Maybe they will even do so in their current form of learning through a device.

Eventually though, websites will also become obsolete.
People will learn with holograms or something like that.

They may look different. But as long as they're self-interested, negotiating different interests or semi-humans, power dynamics will always matter and apply

However, the great quality or even *timeless content* of what they learn will stay for millennia -or even longer, until we either go extinct, or until we become an even better species-.

When you think in those terms, **quality reigns supreme, not time** -as a matter of fact, we see quantity without quality as unethical since it only adds to the noise, and takes people time without giving value back-.
A few years more or less become insignificant.

Faced with timelessness the only thing for you to do is to pass a good baton

Personally, I don't think it has to be me who finishes the "power dynamics building" -and I don't even think that would be possible-.

I see my role as simply laying out *a part* of the foundation and making sure it's simple and captivating enough that some others will be interested in moving forward.
As long as there will be some great person to take over the baton, I've done my part.

And since this is not just a business, but also a service to humanity, long term, **Power University should become free**.
Of course, we should know at TPM that people (rightfully) also seek personal returns and what's in it for them.
So the challenge for TPM then would be to find other ways to monetize and/or incentivize great minds to contribute.

> I don't need to finish the race for the acclaim.
> I only need to go just far enough to pass the baton.
>
> *Lucio Buffalmano*

3. Timeless content must be built on top of many and high-quality pillars (ground-up VS top-bottom)

Success is built over great foundations.

Great strategies, actions, and final success are founded on correct foundations.

The foundations include concepts, constructs, general principles, and general theories.
All else, including the mindsets, strategies, and techniques, *descend* from those foundations.

As someone said, you measure the correctness of a principle based on how well it allows you to predict and achieve results in the real world.

It means that **our strategies and approaches can lead to success if and only if our foundations are correct**.

However, you don't start from the high-level going downward because that's the equivalent of shooting in the dark.
To build the foundations, you go the other way around: you START from the lower level examples, case studies,

power moves, manipulation attempts and responses, etc., etc..

This is why our foundational articles come late: it's precisely because they're both more important that they need more time.

Foundations, as opposed to lower-level techniques and specific situations:

- **Need time to think it through**: it's a lot easier to think about how to properly solve a case study or best address a specific situation. But it takes a lot longer to develop the larger concept or "general rule".
- **Need "pillars" of case studies and examples**: Think of those specifics as "single pillars". It's only once you have a lot of those pillars you can better build the larger "law" or general theory -the pillars are what the skyscraper theory stands on-. This is for 2 reasons:
  - To understand it yourself, since a big chunk of understanding something goes from specific to general
  - To explain it in a way that's useful, practical, and easy to internalize, by providing clear examples. We don't do philosophy here, we teach practical stuff, so even our concepts need to be well backed up by real-life case studies and examples
  - To prove it empirically, since the more positive case studies you have the more the general principle is proven and tested
- **Need more references and studies.** To both have enough authority on a topic as well as to make sure you truly understand it from all angles, you need to also look at the research literature on top of your life experience and other people's experience

This is exactly how the scientific method advances theories.

You got general theories, that are based on programs, which in turn are based on lots of individual studies.

So for example, a general theory that says that humans are reciprocal may hinge on different programs, one of which may seek to investigate people's tendency to give back value whenever they receive value, which in turn may be based on countless studies of giving, with different subjects, and in different situations.

3.2. Our building is TPM & Power University. The timeless result is an eagles'-hatching nest

Since we're here to produce timeless wisdom, we follow the more effective ground-up approach.

For example, we started publishing articles such "what to do when someone makes you wait", "negotiating refunds", lists of "games men play", "games women play", etc.).

Only much later we started addressing more general principles, definitions, and concepts such as:

- Power dynamics
- Power protecting *"we'll oblige to explain" at the beginning of this article was a power protection move to avoid a teacher frame of "we'll explain" as in "let us lecture you"
- Foundations of dating power dynamics

The ground-up is better because, as it's the case for scientific progress, sometimes you not only have little idea of a higher-level concept, but sometimes you have *no* idea until you've stumbled upon enough real-life consequences that derive from that higher-level, more abstract concept.

For example, this was the case for "social scalping" which combines all the games and power moves around social exchanges:

I had never grasped that (some) humans engage in 4 main categories of social manipulation in order to get more and give less. This trend of higher-level commonalities only became apparent once we started analyzing many different daily games and power moves

Example: high-value articles

So, back to Maxim's question.

As an example the *early* articles on high-value/low-value and compare them to some more recent articles.

The low-value/high-value are quite foundational to self-development, successful socialization, and what we generally teach here.

They were early articles here and helped spark a change in self-development.
Since then the terms high-value/low-value are a lot more popular and hundreds of similar articles sprung up.

However, albeit having those articles drove lots of traffic here, they are NOT of timeless quality because:

- **I had spent little time truly thinking it through**, there was little community input, and that's why there was no distinction between high-value and high quality
- **Fewer resources/studies to back them up**
- **Fewer "pillars" as in**
  - Fewer examples and case studies because we didn't have them yet and I had spent no time noting down videos and real-life examples as I often do for more thought-out articles/lessons
  - Fewer link outs to articles/forum threads to expand on the sub-concepts, because we didn't have them

When I'll finally get around to rewriting those articles, they'll immediately become 10x better because there will be more reflection, more studies/resources, more examples/case studies, and more articles/forum threads to flesh out some sub-concepts.

Compare: too early article ("high value") VS timely ("Machiavellianism")

Machiavelli probably took his time to write The Prince. But he produced at least a pillar for timeless wisdom, and more to come on top

For contrast, compare articles with equally important concepts:

- **Early**: High value men / low value men and high value women / low value women
- **Timely**: Machiavellianism and alpha male

The latter 2 were solid articles "out of the box".
Besides the less important fact that I had more experience writing, it's not because I was more "inspired" or anything, but because many of the pillars to sustain them had already grown in number and quality.

So once I finally wrote them, they could draw from all those pillars of personal reflection, examples, case studies, resources, etc. Etc.

High quality = eagle (and it will take more time to properly flesh out)

Now to briefly answer Maxim's question:

The difference is that one can be high-value and an asshole.

High quality instead adds an element of ethics, including ethical expressions such as "wanting and preferring win-win", "generally uplifting people instead of pushing them down or social climbing on them", "having supportive relationships instead of abusive and toxic ones", etc., etc.

You may NEED the high-value person or want *because of what he can do for you* (even if that may only mean making you feel good or pulling you a higher-up for simply talking to you).
The high-quality person, you want not only for what he may do for you but simply because he's a great person -and you may likely also look up to him-.

High quality is basically an eagle.

However, that's a particularly difficult foundation to tackle.

There is a lot of grey areas to properly define and explain that to the point one can make a definitive article/lesson, it may take some more time.

Example: to lie or not to lie?

For example, take "telling the truth" as a value.

You can't just say "an eagle doesn't lie" because then that eagle would be a naive and ineffective person -or, as it's more often the case, a hypocrite-.

And you can't just say "an eagle lies freely" because that would not only be quite immoral and very closely resemble a manipulative value-taker, but it would *also* handicap all his close relationships and most likely make him less effective -and less able to enjoy life-.

So, since we're here to provide timeless wisdom… We need to think about how to come up with a good general principle, and a set of lower-level rules that would make that eagle *both* life effective, and also generally a trustworthy and great person to be with.

Now do the same for many different traits, behaviors, and strategies in a way that what you say is both true, effective, and easy to comprehend and apply and you'll realize that, well…

That does take some time :).

SUMMARY

In sum, we take our time to develop our framework of the most foundational principles and approaches because:

1. **Top quality and new wisdom require time**. Fast execution means lower quality and quality is paramount to us since…
2. **We work on a timeless mission** with the goal of improving humanity. We play for the long term
3. **Foundational concepts and principles must always ensue** from the successful application of their

consequences

Handbook of Research Methods in Social & Personality Psych: Summary

Lucio Buffalmano · 29 April 2023 · Archived copy · Original

The *Handbook of Research Methods in Social and Personality Psychology* (second edition) covers conceptual and practical issues in research design to help social and personality psychologists develop and execute better research.

FULL SUMMARY

About the Authors:
There are different authors for each chapter because the goal of this Handbook is to provide knowledge and guidance for researchers, coming from experienced and high-authority sources.
Hence, authors vary by chapter because each topic tends to be covered by psychology researchers who are most experienced on that specific topic.

We Do Research To Scratch A Mental Itch

Many scientists are curious and motivated by a thirst for knowing, comprehending, and making sense of the world.

So behind the need to publish research in order to advance at work and eat and feed families :), they’re also driven to find the truth, to test hypotheses, to resolve a conflict among different theories, or to resolve a discrepancy:

> People are wired to detect discrepancies and want to resolve them. One prime way to start a program of research is precisely to mind the cognitive gap. That is, scientists especially notice theoretical discrepancies, empirical inconsistencies, missing links in evidence, counterintuitive patterns, and all manner of knowledge

> that just does not fit (Fiske, 2004a).

Research Design and Issues of Validity

The definition of validity is:

> Validity refers to “the best available approximation to the truth or falsity of propositions” (Cook & Campbell, 1979, p. 37).

How a study is designed and conducted affects the validity of the conclusions of course, but validity must be evaluated in light of the purposes of the research.

Internal VS External VS Construct Validity

In Campbell’s original terminology:

- Internal validity refers to the truth value tha tcan be assigned to the conclusion that a cause-effect relationship between an independent variable and a dependent variable has been established within the context of the particular research setting. The question here is whether changes in the dependent measure were produced by variations in the independent variable (or manipulation, in the case of an experiment) in the sense that the change would not have occurred without that variation.

Threats to internal validity are any third factors that may contribute to the variations -correlation does not imply causation-. If there are third factors, then we have spurious correlation between X and Y.
Albeit holding thid variables constant helps with internal validity, the best approach is with random assignment of participants to different levels of the manipulated factor.

- External validity referred to the generalizability of the causal finding, that is, whether it could be concluded that the same cause-effect relationship would be obtained across different participants, settings, and methods.

In simpler words: **internal validity is for how truthful and thorough the study in itself is, external validity is how generalizable and truthful the study is when going from study itself to the general population** and to the world, and construct refers to how truthful and thorough and a study is when compared to the dynamic and concept it examines.

Other Typs of Validity

- Construct validity to refer to the extent to which a causal relationship could be generalized from the particular methods and operations of a specific study to the theoretical constructs and processes they were meant to represent.

Questions of external validity and construct validity, however, can rarely be addressed within the context of a single research design and require systematic, programmatic studies that address a particular question across different participants, operations, and research settings.

- Robustness refers to whether an effect can occur across different settings and people
- Ecological validity answers the question of “is it representative to what actually happens in real life, in the real world?

The 3 Purposes of Research

Empirical research in social psychology can be differentiated in 3 broad categories:

- **Demonstration**, to empirically establish the existence of a phenomenon or relationship

- **Causation**, to establish a cause-effect linkage between specific variables (i.e., “if X then Y”)
- **Explanation**, to establish the processes that govern the linkage between variations in X and Y

Research Design & Statistical Significance

> Research design is the systematic planning of research to permit valid conclusions.

It includes, for example:

- Specification of the population to be studied
- Treatments to be administered
- Dependent variables to be measured

Design-related issues sicj as the number of participants used in a study and the way they are allocated to conditions affect statistical conclusion validity (especially statistical power).

Statistical Significance

> Statistical significance of the results of an experiment indicates that we can safely generalize beyond the specific participants to other “generally similar” participants.

Power of A Study

Power of a study or test is the probability that the test correctly rejects the null hypothesis when a specific alternative hypothesis is tue.

Power depends on the chosen level of significance, difference that we look for (effect size), variability of the measured variables, and sample size.

However, often the only element under direct researcher’s control is sample size is the.
Therefore, methods have been developed to approximate the necessary sample size to obtain the desired power.

Most studies have too low power:

> Cohen (1962) found that published studies in social psychology had a median power to detect a “medium-sized” effect of only .46. This means that even researchers who are clever enough to be testing a hypothesis that actually was true and had a medium-sized effect have less than an even chance of finding a significant result.

Researchers Overestimate Power & Odds of Replication Success

> researchers frequently overestimate the likelihood of a replication being successful. After all, the original study demonstrated the effect, so shouldn’t a similar study be able to also? However, Greenwald, Gonzalez, Harris, and Guthrie (1996) showed that if an original study produced a significant effect at the .05 level, the chance of obtaining significance in an exact, independent replication using the same N is quite low. Only if the first study produced $p < .005$ does the replication have a power level of .80 to detect the effect at the .05 level! This is an instance of researchers’ general overoptimism about power levels and their consequent tendency to run low-powered studies, which has frequently been noted and decried

Programs Are The Main Way To Advance Social Psychology

Isolated studies often have relatively little scientific impact and, in solation, they don't allow for the development of general theories.

Single studies though can have a much larger impact when they are part of a larger group of studies and coordinated at a higher program level in order to test different sub-hypotheses of a larger hypothesis or overarching teory.

The research program is arguably the unit that is most important in the advancement of social psychology as a field.

Say the authors:

> in social psychology today the most important unit of research is not the individual study (…) "real research investigations usually involve multiple studies conducted as part of an ongoing conceptual elaboration of a particular topic."
> Such a series of conceptually related studies – a research program – is most often associated with a given investigator and his or her collaborators, but may include work from several distinct laboratories.
> The research program is not conveniently handled by the classic concepts of research design (power, generalizability, etc.), which focus on an individual study. Nor is it well captured by the meta-analysis movement (e.g., Hedges & Olkin, 1985), which focuses on drawing empirical conclusions from large numbers of heterogeneous studies on a given issue.
> (…)
> a single study can be almost definitively assumed to have good internal validity (based on its use of experimental design), but the broader forms of validity – construct and external – almost always emerge only from a series of interrelated studies that can compensate for each others' weaknesses.
> (…)
> They also bring theoretical structure to a series of studies. Programmatically related studies generally focus on theoretical questions and build on one another rather than addressing superficially interesting but atheoretical questions in scattershot fashion.

Randomize Designs

The most perfect ideal conditions under which a causal effect could be observed cannot be tested.

The ideal condition would be to have the same exact person, under the same exact condition, repeat the exact same behavior, while changing only the treatment condition.

Such as, we'd need a time machine.

So, since causality cannot be observed directly, we can only develop research designs that permit us to infer causality, by making specific assumptions.

The next best thing we have is randomization:

> Randomization approaches this ideal by approximately equating the treatment and control groups on all possible baseline covariates prior to any treatment delivery. Participants are assigned to treatment conditions using a method that gives every participant an equal chance of being assigned to the treatment and control conditions.
> (…)
> Random assignment means that the variable representing the treatment condition (treatment vs. control) can be expected on average to be independent of any measured or unmeasured variable prior to treatment.
> (…)
> Following random assignment, each participant then receives the treatment condition (e.g., experimental treatment vs. comparison [control] treatment) to which he or she was assigned. The responses of each

> participant are then measured after the receipt of the treatment or comparison condition.

Field Research Methods

Field research is characterized by a higher degree of naturalism.

When assessing the degree to which studies qualify as field studies, one must consider the naturalism of four aspects of the study: (1) participants, (2) the intervention and its target, (3) the obtrusiveness of intervention delivery, and (4) the assessed response to the intervention.

Behavior Genetic Research Methods

This chapter frankly felt overly critical of genetic research to me.

The authors seemed to dislike the “obsession” around genes and heritaiblity, which I can understand, and yet a personal dislike for how certain new methods are being used or discussed shouldn’t cast doubt on the methods themselves.

For example, the authors say that “we believe that the world would be a less confusing and contentious place without heritability coefficients, at least if one is concerned with a more complex and uncontrollable aspect of behavior than, say, milk production in cows”.
To me, that felt unnecessarily caustic and like meeting bias with more bias -or, shall we say, throwing the baby with the bathwater-.

The authors conclude that:

> Other than the important task of disconfirming any remnants of blank-slate environmentalism mistakenly held over from previous eras of behaviorism or psychoanalysis, this effort was in our view not especially productive. Heritability is greater than zero for all individual differences, and takes a determinate value for none of them. Figuring out how “genetic” traits are, either in absolute terms or relative to each other, is a lost cause: Everything is genetic to some extent and nothing is completely so. There is little more to be said.

Self-Organization: Group Behavioral Patterns Transcend Individuals

> The term “self-organization” is used to refer to behavioral patterns that emerge from the interactions that bind the components of a system (social or otherwise) into a collective, synergistic system, while not being dictated a priori by a centralized controller.

Implicit VS Explicit & Direct VS Indirect

Measurement outcomes can be described as:

- Implicit when the impact of the to-be-measured psychological attribute on participants’ responses is unintentional, resource-independent, unconscious, or uncontrollable
- Explicit when the impact of the to-be-measured psychological attribute on participants’ responses is intentional, resource-dependent, conscious, or controllable (cf. Bargh, 1994; Moors & De Houwer, 2006

> For example, a measure of racial attitudes may be described as implicit if it reflects participants’ racial attitudes even when they do not have the goal to express these attitudes (i.e., unintentional) or despite the goal to conceal these attitudes (i.e., uncontrollable).

And:

- Direct when the measurement outcome is based on participants' self-assessment of the to-be-measured attribute (e.g., when participants' racial attitudes are inferred from their self-reported liking of black people).
- Indirect when the measurement outcome is not based on a self-assessment (e.g., when participants' racial attitudes are inferred from their reaction time performance in a speeded categorization task) or when it is based on a self-assessment of attributes other than the to-be-measured attribute (e.g., when participants' racial attitudes are inferred from their self-reported liking of a neutral object that is quickly presented after a black face

People Who THINK Are High Self-Esteem But Are Instead Low Self-Esteem Are Defensive And More Racist

> Combinations of high self-esteem on explicit measures and low self-esteem on implicit measures have been shown to predict defensive behaviors, such as favoring one's in-group over out-groups and dissonance-related attitude change (e.g., Jordan, Spencer, Zanna, Hoshino-Browne, & Correll, 2003).

To Ensure Validity, Keep Experimenters Ignorant

"Ignorant" of what's been measured" in the subjects, we mean.

Why?
Because experimenters can involuntarily, subtly prime the subjects to display the behavior they are being measured on:

> it has long been known that experimenter's knowledge of hypotheses can sometimes produce the hypothesized effect in often quite subtle ways (Rosenthal, 1966). Indeed, Doyen, Klein, Pichon, and Cleeremans (2012) have recently claimed that such effects as the elderly stereotype priming effect on behavior stems entirely from the experimenter's awareness of the participant's priming condition, and the consequent subtle differences in how those participants were treated. However, their criticism cannot account for the effect observed in Bargh et al. (1996, Study 2) precisely because in those studies, as explained earlier, the appropriate steps were taken to ensure that the experimenter remained unaware of the participant's condition.

- In defense of psychology

Sense-Making: We Develop (False) Narratives Around Random Events

People have a tendency to weave narrative and stories around events that instead may not connected the way they think they are -or not connected at all-.

In psychology, it's called "sense making", and it means to interpret events in ligh of later events and/or to conform to implicit theories and beliefs (Ross, 1989).

Moving Beyond "Coefficient Alpha"

> Why has alpha become the golden standard of measurement reliability?
> We suspect it is the relative ease with which alpha is both obtained and computed.
> Alpha is the "least effort" reliability index; it can be used as long as the same participants responded to multiple items thought to indicate the same construct.

Albeit people and scientists alike love a simple number they should meet, and albeit unluckily that's what many researchers have often done, there is no "magical alpha threshold" that guarantees validity:

> How Large Should Alpha Be? It Depends on the Construct. Students often ask questions like “my scale has an alpha of .70 – isn’t that good enough?” and they are frustrated when the answer is “that depends.” Although it would be nice to have a simple cookbook for measurement decisions, there is no particular level of alpha that is necessary, adequate, or even desirable in all contexts.

To better interpret alpha:

> alpha needs to be interpreted in terms of its two main parameters – interitem correlation and scale length – and in the context of how these two parameters fit the nature and definition of the construct to be measured.

> Consider a researcher who wants to measure the broad construct of extraversion, which includes sociability, assertiveness, and talkativeness, and has constructed a scale with the following items: “I like to go to parties,” “Parties are a lot of fun for me,” “I do not enjoy parties,” (reverse scored), and “I’d rather go to a party than spend the evening alone.” Note that these items are essentially paraphrases of each other and represent the same item content (liking parties) stated in slightly different ways. Cattell (1972) called these kinds of scales “bloated specifics” – they have high alphas simply because the item content is so redundant and interitem correlations are very high. Thus, alphas in the high .80s or even .90s, especially for short scales, may not indicate an impressively reliable scale but instead signal redundancy or narrowness in item content.
> Although such redundant items increase alpha, they do not add unique (and thus incremental) information and can often be omitted in the interest of efficiency, suggesting that the scale can be abbreviated without much loss of information (see Robins & Hendin, 1999).

Attenuation Paradox of Alpha

> This phenomenon is also known as the attenuation paradox because increasing the internal consistency of a test beyond a certain point will not enhance construct validity and may even come at the expense of validity when the added items emphasize one part of the construct (e.g., party-going) over other important parts (e.g., assertiveness).

PRACTICAL WISDOM

Obviously, this is not a book written for practical life applications.
However, some of the most "practical" wisdom include:

Brainstorming Doesn't Work

Brainstorming is a good example of how BS spread:

There is some guy, with some made-up credentials, who speaks high power and high confidence, sharing some cool-sounding "hack" with clear rules and relatively easy to replicate and, of course, with supposedly bgi benefits.

The message spreads and the supposed opinions leaders acritically accept the BS as if it were gospel and seek to monetize from themselves -either in gains or status, or money-.

> Osborn (1957) made rather extravagant claims for the efficacy of group brainstorming – for example, "the average person can think up twice as many ideas when working with a group than when working alone" (Osborn, 1957, p. 229). Unfortunately, systematic research has failed to substantiate these claims. To the contrary, a sizeable literature (see Diehl & Stroebe, 1987, Mullen, Johnson, & Salas, 1991, and Nijstad, 2009 for reviews) has consistently shown that brainstorming groups produce both fewer and poorer-quality ideas than equal-sized, identically instructed nominal groups (i.e., groups whose members work in isolation and whose total output is determined by pooling members' output, eliminating any redundant ideas).

The possible reasons why have to do with natural group dynamics:

> Substantial progress has been made in identifying the sources of this process loss in brainstorming groups, with production blocking (i.e., the fact that only one person can talk [and, perhaps, think] at a time in the face-to-face group), production matching (i.e., social comparison and modeling of low levels of productivity), and evaluation apprehension (i.e., fear of negative evaluation for voicing ideas in the group context) all emerging as contributing processes (Diehl & Stroebe, 1987; Paulus & Dzindolet, 1993; Stroebe & Diehl, 1994).

The Myers-Briggs Type Indicator Personality Test Is Unfounded

Referring to the early and least scientific approaches to personality measurements, the authors write:

> At the other extreme of the dust bowl empiricists were those psychologists who had detailed theories they did not doubt.
> Thus they felt free to focus solely on the content and face validity of their measures.
> Variously labeled the rational, intuitive, or deductive approach, they easily generated items on the basis of their theories.
> The resulting scales, face-valid with obvious item content, proved remarkably popular, if not always with other researchers then certainly with the test-taking public. In fact, this approach gave birth to the Myers-Briggs Type Indicator (MBTI; Myers & McCaulley, 1985), based partly on Carl Jung's type theories.
> **Without much evidence for its external, structural, or substantive validity, the MBTI nonetheless became the most popular personality questionnaire in this country**.

And:

> To the eternal embarrassment of research psychologists, the MBTI continues to be used at major research universities in applied contexts, such as counseling and career advising.

QUOTES

> We don't often admit this outside the family, but psychological scientists do often get ideas from personal experience.

On science being very slow to root out old and ineffective myths and supplant them with the new, more rigourous findings:

> As Jacob Cohen (1990) concluded from his 40 years of research on methodology, the "inertia" of methodological advance is enormous "but I do not despair…these things take time" (p. 1311).

REVIEW

The *Handbook of Research Methods in Social and Personality Psychology* is a good if not long and sometimes overly complex textbook for psychology researchers.

The goal is to help researchers improve the quality of their work and to generally do an even better job at advancing science.
The readership is supposed to be experienced and, albeit nobody would say that, to have a high IQ. So it's normal and expected that it's going to be complex.
However, that could easily turn out to be a cop out because it should never be an excuse to make a text easier and faster to read and internalize as well as more engaging.
And I felt that some of the authors missed many opportunities to make the content easier to both understand and internalize when it was possible to do so.

The quality as well as the style varies among chapters because each chapter is written by a different and more experienced researcher in that specific field.

Overall, it can be good for people who are more familiar with research and research terminology to better assess studies and the quality and reliability of their results.

It's not good for the layperson and neither for the readers of entertaining pop-pscyhology because it would be way too complex (and boring for most).

Check the **best books** to read or **get this book on Amazon**.

Why The Red Pill Is Killing Your Self-Esteem

Lucio Buffalmano · 2 May 2023 · Archived copy · Original

We recently started offering coaching on TPM.

It's been great talking to many different customers and readers, and I also learned a lot.

Generally speaking, I've been surprised that the average guy seems far more on point and advanced than I'd have expected.
Maybe it's because of self-selection bias given the costs, or because TPM generally caters to more advanced folks… Or maybe a bit of both and some more.

Anyway…

A common refrain seemed to be the issue is far more in the mind than in the real world.
Call it an "inner game" handicap, rather than an "outer game" one.

Such as:

Having more than the bare minimum to succeed, many of **my clients were high-value men who lacked self-esteem, and the confidence around what they could achieve** with exactly what they already had.

And the red pill may contribute to that issue.

Let's see the case study:

Contents

- Issue 1: Complaining Against Social Trends Makes You Feel Powerless
- Issue 2: Dominance-Focus Lacks Sophistication & Shifts Focus On Male Competition, Rather Than Seduction
- Issue 3: The Status Game Distorts Reality and Creates Insecurities
- Final Advice: Less Men's Focus, More Self & Goals' Focus
  - SUMMARY

Issue 1: Complaining Against Social Trends Makes You Feel Powerless

"The West is dying" professes this guy on TRP. Maybe. And… ? Focus on yourself instead of reading dubious rants*

Yesterday's customer started his journey with the red pill.

And he still hadn't branched out much from there.

He mentioned Andrew Tate.
He told me the USA was a place to avoid because it was going down the drain -is truly the world's hotbed of innovation going down the drain?-.

I've been criticized plenty for this, but from what I've seen, that is exactly one of the main issues with the red pill. And it's the:

- **Over focus on society and external world**, rather than the self, and what you can do as *an individual*
- **Ceding power to society**, giving for granted that it's going to severely and majorly harm you, instead of taking for granted the opposite: that, at least for your own life, you're far bigger than society. You can always be the exception, buck the trend, or develop your own little enclave that follows the rules and values you prefer
- **Overly pessimistic view**: it may be true the West over-reached with gender issues and wokism.
  But there are many feminine women, respect-worthy men, and endless ways to achieve your goals and win.
  Plus… Have you like ever lived in developing countries? Poor infrastructure, corruption, and sloppiness everywhere. There is no perfect place, but winners win everywhere.

Anyway, you don't usually want to contradict your client right away, so I let it develop at first.

Little later, as we moved more onto solutions, I shared the typical TPM's mindset:

What happens at the higher social level is great to know, and if you can fix it by moving: go for it (my client had already moved).

HOWEVER, the social level doesn't in any way stop him from achieving his goals -he can always be the exception and find what he's looking for-.

And that, since he seemed like a driven man and a winner to me, he had all it took to always be that exceptional exception.

Feeling less empowered because you ceded power to the group, society, the country, or whatever you have will certainly decrease your self-esteem.

*P.S.:
The Red Pill moderator from that post above advertised his Telegram channel and coaching/moving services at the bottom (see any room for bias, by the way?)
All the channel does is posting alt-right, social climbing, and "look how terrible society is" memes (including antifa trannies/blacks supposedly torching cities):

If this is what's "red pill" today, such as politics, alt-right, complotists, and complainers, you're better off staying away from it for your own mental health and mental empowerment alike

Issue 2: Dominance-Focus Lacks Sophistication & Shifts Focus On Male Competition, Rather Than Seduction

We're all for more power, dominance, and leadership here.

And generally speaking, more power and less "betaness" is good for many guys.

But as for everything, balance.
And nuances.

That "be more alpha" approach quickly hits a ceiling once you reach a good enough level (it's the issue of the "ceiling glass advice", article to follow).

And you often also need warmth to be effective in dating.

So my client's solution to better dating results was that he always had to be *more* -more high power, more attractive, more of a "chad type" "pure lover", and "more confident" because women can "smell betaness" and insecurity-.

Note that from what I could see and learn he was already a high-power, "alpha" and confident to achieve the results he wanted. I only saw a cool and high-value guy talking to him -ZERO "betaness", as he called it-.
And I don't think that most women are that more observant than I am.
Even if they were, it's not like women are perfect and not themselves self-conscious (hint: they are, and they're equally worried about how they come across than how *you* come across).

Indeed, when he described his last date, the woman was into him: replied, met with him, dressed up for him, met him for *three* dates, and followed him home.
The issue in my opinion was *too much* value, without escalating timely, not *too little* (see "straight line seduction").
After that, it wasn't looking too good, but it still wasn't necessarily lost. Worth a try with a call at least, vibe and joke a bit, and then invite her for dinner at his place -what's to lose, anyway? I got with plenty of girls doing just

that, actually-.
However, he hadn't contacted her again as that would be "too beta". Again, focus on power, instead of simply doing what's most effective.

Typical of red pill extremism, he also wanted to avoid dinners because "otherwise women take advantage of you and take you as a provider to milk while the fuck the "chad".

Note now his appearance and demeanor were a lot more "alpha/mannish" than I am, but… I've had countless dinners and first-date sex.

And if that advice makes you less effective plus blames your lack of "alphaness" or masculinity for it -as it's often the case in the red pill-, how are you going to feel?
Like an ineffective, effeminate beta loser, further eroding your confidence and self-esteem.

Read more here:

- **The limitations of alpha male dating**

> Why "Dating Like An Alpha Male" Is Costing You

Finally, the red pill tends to focus on man-to-man competition, rather than man-to-woman dating and seduction.
In our modern world, that's inherently less effective.

Issue 3: The Status Game Distorts Reality and *Creates* Insecurities

As I listened, I was still searching for an explanation:

How could a good-looking, high-power, wealthy, high-status, and well-respected man lack confidence and think he had to be "more" to do well?

It's not like he totally lacked experience, either.
He had a sexual regular, just came out of a relationship, and just went out -and had a great shot- with a girl who was exactly his type.

Then, I had a realization:

The red pill as a whole can make men less confident because **manosphere and red pill communities are a game of alpha male status that make men feel lacking just like IG is a game of status that makes women feel lacking**.

So to gain status in manosphere forums, men over-share, over-promote ideals, and put up a front of "maximum masculinity", "maximum alphaness", "top seducers", etc., etc.

When your dad is not bigger than his dad, take out the ruler for the dick-measuring context. If you lose that, go to

the gym to win the "bicep measuring contest". If that fails, find someone to mock as a "beta". Keep going down the "red-pill approved alpha traits list" until you stumble upon an alpha male trait or behavior you can exaggerate and brag about. Do that while ideally lecturing or putting someone else down, and mission accomplished: now you have some online status and can feel good about yourself!

Like one red pill user who wrote a good post titled "the red pill killed my game" says:

> everyone speaks like they're seduction connoisseur and what they say is 100% right

He's absolutely right, and that's because they're all playing the status game.

It's exactly like social media and IG, where the status games are:

- One-upping others on "life success" and enjoyment, ie.: "look what a great life I have (no matter I don't really own that car, no matter it was actually so boring on the boat, etc. etc.)"
- One-upping others on beauty and attractiveness, ie.: "look how attractive I am (no matter how much makeup and Photoshop I use)"

Games of status can grow life on their own, and become quite stupid and toxic (Storr, 2021; Miller, 2019)
The net result of the continuous posturing is creating a world that doesn't exist, chasing markers of status that aren't even effective at making you better off, or achieving your goals.

So just like IG can make some women feel insecure with a fake world of beauty, success, and eternal partying without hangovers that don't even exist, so the red pill does the same for men.
For men, the comparison is against a world of alphaness and alpha success that doesn't exist. Men pretending to be far more "alpha" than they are in real life, and attributing their supposed success to their "alphaness" and "red pill puritanism" (and forgetting that plenty of "not so chad-dish" men enjoy equal or better success).

There's an added handicap in the red pill compared to IG though.
And it's that while a perfect body "works" to date better for women, "more alphaness" is a lot more about nuances.
For example, while we couldn't agree more that power and dominance are crucial, it's more about reaching a minimum threshold.
And power is more about strategy and mixing it with warmth, rather than "always highest power" (so, in brief: an over-focus on "more alphaness" can often make men who are already high power enough date *less* effectively).

Also see:

- The law of optimum balance in dating
- Alpha male posturing

Plus our longer articles on red pill, and moving past red pill black and white mindsets.

Final Advice: Less Men's Focus, More Self & Goals' Focus

Take the good in the red pill…

… And then stop hanging around in the forums.

There are plenty of valuable contributors, but overall, you can find better for your self-development.

Most of all, focus less on competition, and zero in on yourself, and your goal.
If your goals are dating-related, focus on *women*, not men.

Read this important mindset shift here:

- Winners' mindsets

Or this video here:

SUMMARY

The red pill may be a good place to start learning how dating -and the world- works.

It's a place devoid of political correctness, and that's great.
It's the necessary condition to start getting closer to the "truth", as well as learning strategies and techniques that are far more likely to work in the real world.

So don't take this as poo-pooing on the red pill.

However, there are limitations.
Including some disempowering mindsets, a push towards "more alpha", and lower self-esteem for comparing yourself to men who aren't any more "alpha" than you in the real world,

Is Alex Hormozi Legit? 5 Red Flags You Must Be Aware Of ⍰

Lucio Buffalmano · 9 May 2023 · Archived copy · Original

Alex Hormozi is an American entrepreneur, author, private equity investor, and a “business guru” who’s gaining serious traction.

As of 2025, his net worth tops $100 million, fueled by a record-breaking book launch that moved 2.9 million copies in a single day.

This review dives into Alex as a business guru, leader, and person, analyzing his character and whether he’s someone you’d trust to work with or follow as a self-help role model.

About Me: I’m Lucio Buffalmano, a social scientist focused on power dynamics, social strategies, and men’s empowerment. I run ThePowerMoves.com to help good guys win with strategies grounded in experience and science. I dug into Alex to sharpen our business game, and here’s my take.

Alex's Business Strategy: Flipping Power Dynamics

> Make Other People Come to You – Use Bait if Necessary
>
> *Law of Power N.8*

Alex's mission is clear: build massive wealth while sharing his lessons with aspiring entrepreneurs. What's smart is how he uses that generosity to fuel his success. By becoming a go-to authority, he flips the usual power dynamics in business deals, making entrepreneurs come to him instead of chasing them.

Problem: Chasing Deals Puts You at a Disadvantage

Let's break down the power dynamics. Alex's accelerator targets thriving businesses, not struggling startups. The issue? These owners need him the least and are stingy with equity. If Alex reaches out first, he's in a weaker position, often giving up more equity or cash to seal the deal. That's a tough spot for landing big, wealth-building acquisitions.

Solution: Become the Prize They Chase

Alex's solution is brilliant: he makes entrepreneurs pitch *him*. This shifts the power—he gets more options and stronger leverage. How? He built himself into a sought-after authority through social media, where popularity alone attracts offers. But he doesn't stop there. By projecting competence, selectivity, and ethics, he draws in high-quality businesses that enhance his reputation, not shady quick-buck types.

This "pull strategy" lets him secure bigger stakes in his accelerator program. He uses scarcity tactics like "limited spots," which feel legit to fans who see him as a hero from his content. It's a masterclass in power dynamics.

Your likes and shares power Alex's fame-driven strategy.

Fame as a Power Strategy

We've said for years that fame is a dating hack—it works just as well in business. Power dynamics don't care about the context; they're universal. Alex's popularity gives him leverage, and his ethical image ensures he attracts the right partners.

Value-Giving While Flipping the Table

This isn't a zero-sum game. Alex's free content is legit business gold—no paywalls, no arm-twisting. To attract quality entrepreneurs, his advice has to be top-notch, and it is. He balances chasing his own gains with delivering real value, making deals feel like wins for both sides. I'd gladly trade equity to work with someone like him who aligns with our mission at ThePowerMoves.com.

Reputation Strategy: Give Freely, Hide the Ask

Alex's "giver" approach is rooted in social psychology, aligning with our *Social Strategist* principles.

> Happy givers succeed by building goodwill without demanding favors—they give value freely.
>
> *Ali & Lucio, "The Social Strategist"*

Alex models himself after wise, wealthy figures like King Solomon.
He understands the social exchange model—we subconsciously track value in relationships.
Alex concluded that **the marketer's "jab, jab, jab, right hook model" of giving only to ask back depletes social capital** and comes across as sneaky and manipulative.

This no-ask strategy earns him a stellar reputation as an ethical leader. Entrepreneurs are happy to offer bigger equity stakes because they see him as a prestigious, value-driven partner.

Social Techniques for Prestige

Alex's social tactics reinforce his trustworthy image. Here's how he does it:

- **Give credit**: He always cites his sources, showing integrity. Example: "I haven't heard this elsewhere, so I'll claim it." It signals he respects others' work.
- **Power protect**: He prefaces hot takes with "just my view, yours is cool too," keeping everyone comfortable and avoiding conflict.
- **"What worked for me" framing**: His advice feels humble yet authoritative, backed by his track record.
- **Lift others up**: He avoids tearing competitors down, focusing on empowering his audience.
- **Show love for the crowd**: He calls his audience awesome and ties his mission to helping humanity.
- **Own selfish motives**: Admitting his drive for gain makes him relatable while still delivering value.

Example from a podcast break:

> **Alex**: …book "$100M Offers"… 8,500+ 5-stars… 99 cents Kindle… thousand hours writing… biggest community give… **shameless way to get you to like me, be more, make more dollars**.

His "pushing harder" line fumbles a bit, but the raw honesty and charm shine. He blends high EQ with integrity, making you root for him while soaking up his free value.

Business Insights: 10/10

Alex's business acumen is top-tier.
He promises more value in his free content than most paid programs, and he delivers. No book, guru, or course has matched the actionable insights I've gotten from him. His book $100M Offers is climbing our best entrepreneurship books list.

He excels in copywriting, marketing, and sales, outshining expensive courses. His content is clear, practical, and battle-tested. I'm inspired to push ThePowerMoves.com to do the same for social and personal power strategies.

Addressing Critics: Rehashing Old Advice?

Reddit: Why not learn from someone who's done it?

Critics on Reddit say Alex just recycles old business wisdom.
Sure, after centuries of commerce, most ideas aren't brand new. But Alex packages them with fresh angles, tighter delivery, and more punch than anyone else I've studied.

What I Like About Alex

I'm a fan—that's why I'm writing this. Here's why:

- **Role model**, combining huge ambition and personal success with win-win. He also seems to be an honorable man with principles.
- **Rational**, analytical, and logical to the core. Just like I like it.
- **Uplifting**: Empowers rather than tears down.
- **Quality, practical content**: actionable, to the point, and real-world tested content. No fluff, naive self-help, or "empty motivation". It's the same approach we take for men's self-development here.
- **High-quality content**: Actionable, fluff-free, and potent.
- **Positive nihilism**: Embraces life's impermanence to choose your path.
- **No-BS psychoanalysis**: Rejects overrated therapy narratives, pushing self-ownership.
- **Problem reframing**: Turns anxiety into facts, echoing CBT principles.

What I Don't Vibe With

Chasing money is fine if you're creating value, but when it overshadows everything, it risks turning you into a taker.

Alex and I align on a lot, but a few things rub me wrong:

- **Money as the ultimate goal**, which part of me frankly finds distasteful
- **Money as a measure of personal worth**: He seems to measure worth by wealth.
- **Money as a measure of skill is not correct**: Equating earnings with business ability ignores chance and context. For example, Alex compares himself to Buffett's net worth. But since Buffet's fortune works on compound interest, Buffet's net worth is at least as closely tied to *longevity*
- **Money as knowledge**: He's said those who out-earn him are better at business, which oversimplifies things.
- **Compound interest myth**: His "save and invest" advice assumes consistent S&P returns, which history doesn't guarantee. I prefer DeMarco's take on wealth-building.

This money focus can erode deeper values and tempt ethical shortcuts.

Areas for Improvement

Alex is a rock star—smart, built, and legit. I'm not here to lecture him, but if we were chatting as coach and client, here's what I'd suggest:

1. Disproven Approaches to Persuasion

Alex claims people only change through reinforced behaviors.
It's a fair point, but psychology moved past simple conditioning long ago. Human behavior is more complex, and his stance oversimplifies things.

2. Pop Psychology

He's leaned into claims like "ultra-successful people share three traits: superiority complex, insecurity, and impulse control."

It fits his story, but it's not universal. The "research" he cites is speculative, not hard data, and studies like this one suggest insecurity often hinders success. Citing vague "research" without specifics weakens his authority.

Advice: Ditch the "they did research" framing. Try: "I've seen these traits in successful folks, and they resonate with me." It's confident and clear.

The 6 human needs pop psychology

I've also heard both Alex and Leila mention "human needs", seemingly from Tony Robbins.

Robbins' model is interesting, but his speculations on basic human needs don't make for a high-reliability resource (they don't fully align with basic evolutionary principles, for example).

Update: he's since dropped saying that

3. Power Dynamics & People-Reading

Alex is a great role model for general high-power behavior.

He generally is:

- Socially high-power
- Confident in both verbal production and behavior
- Authoritative
- …

He comes across as a typical 'alpha' in both looks and psychology (and Leila Hormozi a typical alpha female).

It also seems like he got *tremendously* better at power and authority over time.

Of course, there are always some opportunities for improvement.
For example, with Chris Williamson, he may have not read the power dynamics and ended up being a bit too approval-seeking and comparatively lower power.

Alex also displays lots of self-awareness and a strong grasp of judge power dynamics in his family, including how his father's demanding and "never good enough" attitude shaped him to be who he is.

Overall, strong foundations, but still some 'naive thinking' leftovere, underestimating the incidence and severity of nasty power moves, covert aggression, and dark triad.

For more: :

- **How reading people well would have accelerated Alex' business success**
- **Alex fails to recognize a potential frenemy** and ends up acting too low power
- **Alex misses his family's nasty power moves** (including the belief that his father wanted the best for him, which I'm afraid isn't always true for dark triad individuals, not even towards their own children)

4. Questionable Self-Help

Alex's claim that traumas are just "labels" and therapy is useless feels off. His example—a 14-year-old with a 30-something guy—doesn't hold up; some experiences are objectively traumatic. His empowerment angle is great, but it needs balance to avoid dismissing real pain.

Red Flags

Alex has way more green flags than red, but since this is a review, let's highlight the concerns. He's still a solid, trustworthy figure overall.

1. Defending Questionable Figures (Grant Cardone)

Alex's ties to Grant Cardone are a problem.

He's defended Cardone, despite many seeing him as a sleazy operator.
Cardone's shift from preaching savings to pushing pricey seminars raises ethical red flags. Alex's defense—"people hate the big guys"—doesn't hold, especially since Alex himself is loved despite his fame.

Cardone's rep hurts Alex by association.

This suggests either Alex's people-reading is off or he's too lenient with ethics. It risks his prestige-based brand.

Advice: Learn from anyone, but don't publicly back questionable characters.

Update: Alex Stopped Associating His Name With Cardone

In this video, Alex says 'I paid someone', clearly referring to Cardone, but without mentioning him.

Good move.

2. Ties to Thin-Content Marketers (Dean Graziosi)

Alex's friendship with Dean Graziosi, whose content leans heavy on sales funnels and upsells over substance, is another misstep.

A slip where Alex quoted Graziosi prioritizing "income" over "impact" (later corrected) may hint at true motives.

Associating with marketing-first types dents Alex's credibility.

3. Iffy Sales Advice

Most of Alex's sales advice is gold—practical and ethical. But a few tips, like pushing for a customer's ID to reveal their wallet or using fake scarcity scripts, feel like manipulative tactics:

> **Alex**: If you've ever heard I left my wallet at home here's the easiest way (…)
> take their ID and say "hey let me trade you for whatever card you want to use" and flick it back towards them.
> And at that point they'll trade you for the card.
> If they say "I don't have the card I want to use with me" **just say "well if you have your phone with you, open up your banking app real quick", then click see statements and on the top of the statement we'll have their account number and you can actually do a direct ACH to the account**.
> Problem solved.

This *single video* here -not Alex himself- sounds sleazy to me.

This advice—building trust by dismissing minor products to sell bigger ones—can veer into selling unnecessary items, like supplements.

The advice itself is FANTASTIC.
But the ethics of it, well… Depends.

These moments clash with his ethical image.

Charlie Houpert Raises Some Ethical Questions On Alex Hormozi's Selling

One more example from Charlie Houpert, founder of Charisma on Command.

He says, referring to a sales video he saw from Alex:

> **Charlie Houpert**: I was watching an Alex Hormozi video (…) I didn't like that (…) they put the person on speakerphone and have a scripted fake conversation where they go "hey do you have some time" and this guy who's full-time job is to close says "I don't know I'm pretty busy right now" which is not true (…) positioned to give an aura of authority (…) that are what I think he would even say straight up lies

I agree with this take.

4. Early Mentor Red Flags (Seven-Figure Sam)

Alex's story about his early mentor, Sam Bakhtiar, raises eyebrows.

Says Alex of his entrepreneurial beginning under "seven-figure Sam":

> **Alex**: (shows up to Sam's door after traveling for hours) he was like "I'm going to lunch"

Notice already:

Alex shows up to his door to *work for free* and learn *after he traveled across the whole country*, and the guy brushes him off rather than, say, invite him to lunch together (or suggest where he could go).
Tells a lot about Sam's attitude.

> **Alex**: but right after he came back from lunch he was like "alright, so you should join my my mastermind"

Notice: first meeting, and Sam focuses on squeezing a kid like a lemon.

> **Alex**: and I was like "I don't have a gym" and he's like "that's okay" -it was a gym mastermind-

Notice: Sam doesn't seem care whether what he sells is useful to Alex.

> **Alex**: I was 22 and did not have a lot of money, and he was like "well it's 10 grand" and i was like "I don't know"

See a trend? Sam seemed out to take as much as possible from Alex, no matter what.

> **Alex**: and he's like "you need to f*cking commit man", he's like "you've been waffling back and forth"

Wait, what?
Alex, the guy who quit his well-paying job, drove across country to meet you at your door, to work for free… Has been waffling?
Not only he'll work for you for free after you waved him away, but you also manipulate and strong-arm him into spending 10k he doesn't have, for something that had low value for him (I bet no refund, also?).

Says Alex just a few seconds later:

> **Alex**: got around a whole bunch of other fitness professionals and I learned way more from all of them than I ever learned from sam (laughs as if to say "Sam was useless didn't even teach me anything")

That 7-figure Sam sounds like a jerk.

But in that same video, **Alex says he looked up to this jerk-sounding Sam**.
Alex idolizing him suggests he might miss red flags in charismatic figures.

5. Money Above All, Including Honor & Morals

Some of Hormozie's takes feel to me like pedestalizing business results and money over everything else.

For example, he seems to prioritize bank accounts over characters when it comes to those he admires.

In one of his videos, Alex's take is that copying others is at the heart of capitalism. And in one of his Skool trainings, **a winner of the Skool Games shared that his 'LinkedIn method' for organic reach was straight-up copy-pasting someone else's articles**.
I found it disgusting.

Alex fails to consider second-order consequences.
Free copying reduces incentives for innovation. Copying is regulated because, as a society, we must protect innovation.

I'm sure Alex didn't mean the worst forms of stealing without crediting. But he should have stressed that one can copy and *improve*, *adap*t, or *credit*.

Same goes for Alex's results-focused attitude on moving on from cheats without any retaliation. While seemingly 'nice' or 'positively calculative', as Axelrod notes, not reciprocating defection (ie.: pressing charges or seeking to even things out) emboldens cheaters, pushing the costs of future cheating and future punishment on others.

Is Alex Hormozi Legit?

Alex is as legit as they come—100%. He's arguably the top entrepreneurship coach today, offering clear, actionable, free wisdom that outshines most paid content. His expertise spans sales, marketing, and scaling, putting him in a league of his own, alongside MJ DeMarco.

He's ethical, commanding, and a true role model, making him and Leila a force for good. Nobody's perfect, and the red flags are worth noting, but Alex is a high-caliber leader worth following.

CNN Town Hall: Why Trump Always Owns Liberals

Lucio Buffalmano · 14 May 2023 · Archived copy · Original

Campaigning Trump eats liberal hosts and critics for breakfast.

And while this article draws from the latest CNN Town Hall, that was just a single instance of a more general tendency.

So, what is it that gives Trump an unfair advantage over all those liberals?

Well, in short, it's power:

She looks at him and rotates towards him, he doesn't do the same toward her. Her words are angry, but her body language betrays low power (including a powerless "please" type of hand gesture)

But there is also strategies, Machiavellianism, and frame control.

Let's see:

- Different Questions For Trump
- SUMMARY

Liberals Have Naive Expectations of Truth & Fairness

This is one of the cruxes of the issue:

> While liberal interviewers are chainbound by expectations of fairness, truth, and honesty, unbound Trump flogs them at the more primal power level

In many ways, this is the issue of good people losing against not-so-good people.
And it's is why this website exists.

One of the obvious examples of liberals' chains of morality is their obsession with the "it wasn't a rigged election".

Liberals keep harping about it as if they didn't expect Trump was going to make up lies about unfair elections -and try to strongarm his way to power-.
Or as if they expected Trump to finally "admit" defeat.
And as if they expected Trump's continuous refusal to admit defeat would handicap him.

None of the above is unexpected.

Trump refusing to admit defeat despite the obvious defeat is totally normal for his personality profile.
What would be surprising instead would be Trump admitting defeat.

And Trump's behavior doesn't cost him politically because, in the meanwhile, he's making up huge points in other areas -power being one of the most important of them all-.

Liberal's Fixation With The Rigged Election: Example

> **COLLINS**: (in the beginning of the interview) And it's been nearly two-and-a-half years. Can you publicly acknowledge that you did lose the 2020 election?
> (…)
> **COLLINS**: (at the end of the interview) But no commitment there on the – accepting the results regardless of the outcome?
> **TRUMP**: It's – if it's an honest election, correct, I would.
> **COLLINS**: OK, so not committing to accepting the 2020 election results or acknowledging what happened in 2020. **(<—— SHE goes back to that old beaten horse)**
> **TRUMP**: Go ahead.

How does that look?
It looks like:

- The interviewer "just can't let go"
- The interviewer is wasting time
- The interviewer is over-investing
- The interviewer *chases* for a "fair admission of loss" (without getting it)

- The interviewer *needs* Trump to "admit" loss, as if she needed "closure" from her breakup or unloving daddy (and Trump doesn't give it to her)

From a power dynamics point of view, Trump is still the ultimate power and the "sun" around which the interviewer revolves.

And Trump's icing on the cake, the "go ahead" tasking power move.

Naive "Good People" Fail To Bring The Fight To Power-Skilled Narcissists

At the core, the issue is what this website wants to fix.

It's naive people who fail and lose against more power-aware ones (who are often not so good).

Take for example the famous trope of the left:

Fact-checking.

Example: The Inherent Powerlessness of Fact-Checking

This whole concept of "fact-checking" is ludicrous.

And it denotes the ultimate liberal misunderstanding of how to handle dark triad men like Trump.

It's not like most people don't know Trump makes a mockery of truth and facts.
Everyone knows that.
Adding more "data" to it doesn't make it better.
If anything, it makes it worse because it thread-expands on your powerlessness -your powerlessness to capitalize on Trump's BS, your powerlessness do anything about it in real-time, and your powerlessness to provide a better leadership example-.

Plus, guess what: people don't want to waste their time reading your "fact-checking reports" (and it's only getting worse with the Tik-Tok generations).
Only a few low-power geeks do that -not exactly the type of people who can amass a big follower base-.

Instead, from a power perspective, **liberals who run around "fact-checking" are like little failed dogs trying to pick up the pieces of the alpha dog who smashes reality as he pleases**.

Albeit "unfair", with those dynamics the ass*ole alpha male is still in charge -no matter how ass*ole he may be-.
And people don't want to vote or support the bitter, overburdened loser-minions.
People want powerful leaders.

Town Hall: A Power Dynamics Perspective

Let's see now some practical examples of that power contest:

1. Trump Picks The Topics, She Reacts & Chases

The general rule is:

Lower-value people chase higher-value people.

And there's a ton of these little moments all over the CNN Town Hall interview:

> **TRUMP**: (…) If you look at the FBI…
> **COLLINS**: But, Mr. President…
> **TRUMP**: If you look at the FBI and Twitter – they call it Twitter Files – made a big difference.

How does that sound?

Like Trump makes the rules and creates the frames, and Collins chases and reacts to them.

"But, Mr…." is the keyword of the person who *hopes* they will be listened to -but have no confidence to make statements themselves, and no power to *be* listened-.

She *tries* to get in a word but ultimately fails.

She Moves On, Trump Re-Opens Topics, She Gets Dragged Back In

> **COLLINS**: I should note that your campaign paid for a recount that happened in Wisconsin and actually had more votes for President Biden by the end of it.
> But I want to move on to Wayne Beyer. He's a retired attorney for North Conway – **(<—— the interviewer is trying to change topic here)**
> **TRUMP**: By the way, so many illegal votes were cast in Wisconsin. And if you look in Milwaukee, Wisconsin, they had so many legal – illegal votes, they didn't even know what to do with them. You're absolutely wrong about that. **(<—— But Trump reopens the first topic)**
> **COLLINS**: Mr. President, there weren't any fraudulent votes in Wisconsin. **(<—— And the interviewer follows, and is dragged again into Trump's choice of topic)**

In this case, it wasn't too bad actually because the interviewer moved away from that topic right after, so it was a way to put in the last word.
However, it's a small tactical mistake because she should have done what she did, but with a smaller investment, and without repeating Trump's words (which gives a feeling of "following").

For example, she could have said "not true", and moved on.
Much higher power, persuasive, and effective.

2. Trump Makes Up Facts, She Defends And Looks In The Wrong

> **COLLINS**: Well, Chris Miller was your acting defense secretary. He says you never gave that order.
> But back to what happened on that day, he said you weren't…
> **TRUMP**: He did not say that.
> **COLLINS**: You – he has testified that, Mr. President.
> **TRUMP**: He did not say that.
> **COLLINS**: But you said you weren't very involved that day.

Again the "but" format that self-frames her as the lower power party who's trying to get Trump to agree with her (fat chance!).

You know what turns funny about this?

Liberals are all talking about fact-checking, but when they discuss Trump live, it feels the opposite.
It feels like Trump is spouting facts, and liberals are going into overdrive to make up arguments to justify their claims.

In Power University we dig deeper on how to handle it, but the result is this:

When you explain it feels like your arguments are weak.
Not only what's true get lost in the gaslighting mix, but it also looks like you are in the wrong.

3. She Attacks, Trump Makes Her Look Nasty

And here we go again with the "nasty woman" power move.

Trying to make Trump "confess" and "play it fair", something he will never do, liberals end up becoming too aggressive themselves (also see "calibration").

Then Trump calls them out on it -"you're so nasty"-, and **people cannot help but agree because liberals *do* look nasty when they turn bitter and aggressive** -which they often do, since they get much more emotionally invested than Trump does-.

> **COLLINS**: But that's the question that investigators have (…)
> **TRUMP**: Are you ready? Are you ready? Can I talk?
> **COLLINS**: Yes. What's the answer? **(<—— the interviewer is trying to go power up, but she does it with visible bitterness and people don't like that)**
> **TRUMP**: Do you mind?
> **TRUMP**: Can I – do you mind? **(<—— Trump thread-expands to surface the nastiness to take maximum advantage of it)**
> **COLLINS**: I would like for you to answer the question.
> **TRUMP**: OK. It's very simple to answer.
> **COLLINS**: That's why I asked it.
> **TRUMP**: It's very simple to – **you're a nasty person, I will tell you. (<—— Now he calls it out, and he's right because she became too bitter and aggressive, so that's exactly how it looks like)**
> (audience cheers)

Result:

It looks like the too angry interviewer was overly biased.
And "poor" Trump wasn't given a fair chance.

Also, people don't like bullies.
And that's all the truer for liberals who are supposed to stand with the common people.
So **when liberals get too angry or aggressive they automatically end up looking like hypocrites who profess to be "on the side of the people" but who are instead just bitter and angry at those who are more successful than they are**.

Trump took great advantage of that and effectively framed her as a bitter and angry woman.

I can tell you that as an independent: when I see the bitterness and bias in some liberals, I can't help but sympathize with Trump.

4. Trump Attacks, She Proves Herself To Him

Look who's proving herself to whom:

> **COLLINS**: Mr. President, I looked at the same timeline that you did. Once it was clear…
> **TRUMP**: No, I know, but you didn't report that. You know why? Because it was taken down.
> **COLLINS**: We did report it. I was reporting that day.

"We did report it, (please) trust me, I was there!".
And again, she looks reacting to Trump's statements, and like she needs to add more and more evidence to prove her case (which makes her case sound even more dubious).

5. She Over-Invests, Trump Puts In The Last Word

99% of the times it's Trump who puts in the last word:

> **TRUMP**: Kaitlan, why did they change the law then saying that you can't do it? **(<—— the question by itself already sets up his gaslighting frame)**
> **COLLINS**: They didn't change the law. They strengthened the law because they are worried about a president exploiting – **(<—— falls for it)**
> **TRUMP**: Oh, they strengthened it, meaning you could do it. Thank you. (<—— reframes to snatch victory and **"closing the argument" power move)**
> **COLLINS**: That's not what it means.
> **TRUMP**: Thank you.

Again, Trump sets the original frame, and the interview over-invests with her explanations -something she should have avoided in the first place-.
Then, Trump reframes all her effort as proving his own point, and closes it with a dominant "thank you".

6. She Gets Manipulative... Trump Busts Her

This is what's truly bonehead:

Trump is a candidate with low morals and ethics.
Not the type of leader you'd look up.

Since people DO prefer leaders of better characters, a smart opposition must exploit Trump's low morals by behaving and *displaying the opposite qualities*.

If instead the opposition tries to play the same manipulative game and loses, THEN people prefer the higher power manipulator, to the lower power one. (Low-power manipulators look sneaky and people are disgusted by them).

So when liberals try the same manipulative / political games, they lose that chance of being those upstanding and

prestigious leaders we truly wish for
Plus, they even get spanked at the power game because they're not nearly as good.

See here:

> **COLLINS**: A Manhattan jury found – that you sexually abused the writer E. Jean Carroll and defamed her. You've denied this.
> But what do you say to voters who say it disqualifies you from being president?
> **TRUMP**: Well, there weren't too many of them because my poll numbers just came out. They went up, okay?

What are the issues with it?

1. It's well-known that famous people are targets of potentially false lawsuits. When you try to use a lawsuit that didn't seem very credible for political gains, *you* sound nasty, biased and unfair
2. To take for granted that Trump did it, feels like "legal scalping", or taking advantage of a legal case, to (unfairly) ruin someone's reputation
3. Trump is indeed winning the polls for the Republican nomination, so that felt like a manipulative frame to disguise the truth that she didn't want to face

It's ineffective because there is SO much ethical ground to attack Trump on, that you really don't need to play that (manipulative) game.

And finally, trying to indirectly and covertly imply that Trump is losing political capital for that legal case when it's patently not true feels like a manipulative lie (see "covert power moves").

7. She Chases His Attention, Trump Ignores Her

Now think, how does this feel to you?

> **COLLINS**: Mr. President, can I – can I ask you this?
> **TRUMP**: Think of it, think of this –
> (…)
> **COLLINS**: But, Mr. President, can I – can I ask you given your recounting and your version –
> **TRUMP**: I don't know who – and I tell you this. Are you ready?
> **COLLINS**: But, Mr. President, can I – can I ask you because –

It feels like the class pupil who's a bit too eager to get the higher-power teacher's attention.

Mr. President, can I please for the love of God get some of your attention?

Result: Trump looks like high power.
And people want high power people as leaders.

8. She Virtue Signals, Trump Comes Across More Honest

This is another major thorn in the liberal's side:

Political correctness as a virtue-signaling tool has gone so far that it lost touch with reality.
So whenever any dark triad who is willing to share some "harsh truth" comes in, the left looks like a naive pollyanna who does not have the brainpower -or courage- to understand and admit how things truly are.

The virtue-signaling liberals look stupid, biased, and unable to do well in a world where, to be effective, you must first acknowledge truth and reality.

For example, on the (in)famous "Access Hollywood" tape recording:

> **COLLINS**: There was a taped deposition of you from October, and in it, you defended the comments that you made on that "Access Hollywood" tape about being able to grab women how you want. Do you stand by those comments? **(<—— Again back to beaten horses people are tired of. An opportunity loss, and a proven bad strategy since Trump already won an election in spite of it)**
> **TRUMP**: I said if you're famous and rich or whatever, I said women let you. I didn't say you grab. I said women let. You know you didn't use that word, but if you look, women let you.
> (…)
> But if you're a famous person, if you're a star – and I'm not referring to myself. I'm saying people that are famous, people that are stars.
> (…)
> People that are rich, people that are powerful, they tend to do pretty well in a lot of different ways, okay? And you would like me to take that back. I can't take it back because it happens to be true. I've said it's been true for one million years, approximately a million years, perhaps a little bit longer than that.

> (…)
> **I don't want to lie. Oh, here's what – here's what she wants me to say. (<—— Effective frames her as a virtue signaler who's out of touch with reality and who'd want him to play by the same distorted virtue-signaling rules)**
> (…)
> A rich and famous person has no advantage over anyone else. Well, you do have an advantage, and I say unfortunately, but that's the way it is. **(<—— By adding "unfortunately" he manages to come across as both realistic, and human)**

Trump is saying that the rules are different for the rich and famous.
And that there are plenty of women, groupies, who throw themselves at those men.
It's true, it's how things are.
To deny it, it makes the *interviewer* look daft.

I can tell you that as an independent: when I hear this stuff, I can't help but sympathize with Trump.

9. She Moralizes Wars, Trump Slam Dunks It With "Saving Money *& Lives*"

> **COLLINS**: Mr. President, can I just follow up on that? Because that's a really important statement that you just made there.
> **TRUMP**: Excuse me, let me just follow up.
> **COLLINS**: Can you say if you want Ukraine or Russia to win this war?
> **TRUMP**: I want everybody to stop dying. They're dying, Russians and Ukrainians. I want them to stop dying. (…) And I'll have that done – I'll have that done in 24 hours. fn

Liberals are assigning right and wrong to the war.

However, Trump brings a more Machiavellian approach to it.
It's not about right or wrong, it's about doing what's effective -save money and save lives, who can disagree with that?-.
And especially for the US which lies so far from the conflict, the "end the conflict independently of who wins and save our money" can be more appealing.

But because of the interviewer's almost childish question of "who should win", Trump even ends up sounding more ethical and human.
"F*ck winning or losing", he says, "it's all about lives".

And people LOVED it.
Here are just some of the top comments on that video:

> **Commenter 1**: Best thing I've heard thus from from a politician
> **Commenter 2**: He answered the qustion so well. I think it was his best moment of the night

Question:

How bad must your approach be to make a potentially malignant narcissist sound like the most humanitarian man in the room?

Answer:

A lot.

Different Questions For Trump

These are a few ideas on some questions one may ask Trump:

> Mr. Trump (<—- don't call him "president", he ain't no president)
> There was a book published by no less than X mental health experts.
> They say that you're a malignant narcissist, and a ton of evidence shows that narcissists make for poor leaders since they manipulate a lot, cannot negotiate with political opponents, and look after themselves only

Or:

> Mr. Trump, past events showed that you seemed to have a weak ego, thin skin, and overreact to any criticism. That doesn't make for a good leader

What makes that potentially effective is that Trump will likely defend and start bragging there, and that thread expands and confirms the original statements.

Or:

> Mr. Trump, you often say you will fix major world problems in no time. For example, you just said you'd solve the Ukrainian conflict in less than 24h.
> But how can we trust you when you give no details and history showed you didn't always deliver. For example, you met with North Korean dictator, and the guy kept right on with his nuclear plan. It felt like a big inconclusive show, all sizzle and no steak…

Whatever he says, you now brought to light a proven fact and failure.
All his following easy solutions to complex problems will sound like BS.

SUMMARY

There truly are many reasons why Trump dominates debates.

One of them is that Trump is good at arguing.
If he can make it about "him VS you", you'll have a tough opponent.

Unluckily, liberals are giving him just that.
They are giving him the opposition that Trump derives power from.

Another reason Trump wins is that most interviewers are "normal people" with some aspiration for morals and fairness ingrained into them.
Trump does not.
So these "normal people" aren't equipped to fight against a dominant and power-hungry opponent that is unbound by rules of truth, fairness, or ethics.

CNN Machiavellian Plot?

Please note this is no criticism of Collins.

She didn't even have a 100th of Trump's experience and was up against one of the toughest possible opponents.

In that sense, she actually did OK.

To truly think Machiavellian, this may all have been a ploy from CNN higher executives.
Invite Trump, get a ton of views, match him with a less experienced journalist, help Trump win the presidency…
And enjoy higher ratings for the whole time.

Overall, we left the general meaning intact.

Elon Musk Frame Control: Case Study

Lucio Buffalmano · 19 May 2023 · Archived copy · Original

Elon Musk recently gave an interview to CNBC host David Faber.

It was a fantastic interview.
And with countless opportunities for improving social skills, reputation, and general life effectiveness.

For this post, we will focus on two traps as case studies on the importance of frame control.

Accept the wrong frame, and you take a reputation for a nasty capitalist, and lose the ability to influence and lead. Change the frame, and you take a reputation for a caring leader and *gain* the power to influence, lead, and accomplish big goals. HUGE difference -all based on your power awareness–

Contents

- Frame Trap: "You Set The Example For Mass Layoffs"
- Falls For The Frame Trap: "I Set The Example For Mass Layoffs, Yes"
- Problem: You Get Pitched AGAINST Employees, And Lose Your Ability to Lead & Inspire
- Better Option: Frame Your Action As SAVING Jobs
- 3 Rules For Frame Control

Frame Trap: "You Set The Example For Mass Layoffs"

Let's review the key exchange.

As a quick background, the interviewer has already broached the topic of mass layoff at this point.

And there were already some common interviewer nasty frames there.
But here is where it goes up a notch:

> **Interviewer**: It's funny, I heard from other tech CEOs (pause, add emphasis) quietly (pause) they look at what you did at Twitter and they sort of they won't admit it publicly but you know they said "wow that was something" (I) mean (<— danger! Shifts the frame from "hard but necessary measure" to "wow, nasty")

If you've become good at reading people and interactions, there are already many red flags you can spot here. Those red flags already warn you that the interviewer is going for some nasty move -and that you need to defend yourself-.

If you also notice the last part, you can barely hear the "I" in "I mean". So **it sounds a lot more like the interviewer is saying that what Elon Musk did was wow-level mean**.
And independently of what his intentions were, as Machiavelli says, what appears is.
So he already set up a frame of Musk taking mean action.

And then he doubles down with this:

> **Interviewer**: to cut that deeply and still be able to run the company, people will argue about how well things are running, have you heard **many of these CEOs say "thank you for doing that, giving us runway or at least making some cuts of our own"?** (<— danger! This frame Elon Musk as the man providing the leadership and example to other tech CEOs to undertake more mass layoffs across the whole industry. Hardly the type of example you want to be publicly known for)

The interviewer set up a covert frame that Elon Musk led the way for other CEOs to go ahead with mass layoffs.

Dark Power Is STILL Power, But... We Can Do Better

A frame can be high-power, and still be bad for your reputation and goals because it frames you as a value-taker

Please note:

In a way, **that's a very empowering frame for Musk because it frames him as the #1 leader of an already elite cadre of high-power men**.

BUT…

It's still not the best frame from a social strategist's point of view because:

1. **Musk *already* enjoys that "leader among leaders" spot in everyone's minds**. Everyone knows Musk is the

CEO of CEOs (plus some). Musk can enjoy that #1 status *without* the negative connotation.

2. **Musk can enjoy the "leader among leaders" frame while being a force for good**. And he can only benefit from it.
3. **Once the interviewer frames him as leader of leaders, Musk will look equally powerful but classier by playing it down**, thus looking powerful but humble.
   For example, he may say "you're flattering the extent of my influence there, but in truth… "
4. **Musk would look a lot more powerful and smart by leading** and reframing instead of following and accepting. Such as, instead of passively accepting a frame of him influencing other CEOs, he would SHOW everyone his social power. Much more powerful.

So, Elon Musk should refuse the "dark leader" frame because it's simply not the best option for him.

Falls For The Frame Trap: "I Set The Example For Mass Layoffs, Yes"

And Elon Musk, unluckily, confirms that frame:

> **Elon Musk**: I've heard that from a few people and I heard that through the grapevine yeah, but like I said if the desperate times call for desperate measures, unfortunately those were desperate times

Elon Musk's frame of "desperate times call for desperate measures" was OK-ish.

Not the worst possible option, but still had many issues.

And a huge opportunity loss.

Let's see:

Problem: You Get Pitched AGAINST Employees, And Lose Your Ability to Lead & Inspire

However, there are still some major issues with it:

- **Value-taking**: Elon Musk's actions are still framed as value taking
- **Nasty behavior**: despite Musk framing it as "necessary", the "nasty firings" initial frame is still there
- **Nasty leadership**: Elon Musk is still framed as the owner who gave all other owners permission to slash jobs. Not exactly the type of great leadership you'd want to be associated with, right?

Most of all, **this frame is terrible for effective leadership because it sets a frame of ruthless owners VS meaningless employees**.

Effective leadership requires that the people you lead trust you, like you, and look up to you.
Smart and driven people, by definition, are also not stupid and lazy. And they know that you're running a business and cannot *guarantee* jobs, and that they need to give value to you, the business, and the mission.
But effective leadership still requires that people believe that you, as the leader, have at least a minimum level of empathy and care for them as people, and not just as cogs in the bigger machine.

You must be careful with the frame of "the business always comes before the employees" because it turns people into meaningless cogs.
When that happens, people lose motivation. And they turn from givers who happily contribute to the mission, to selfish operators -the death of greatness and the hallmark of average business, groups, and output-.

So, even when you want to go for the general truth that the business and mission are bigger than the single individual, you must always add the caveats that you ALSO care about the people.

That's what was missing here.

Better Option: Frame Your Action As SAVING Jobs

You can pick frames that are equally powerful, but framed as *adding* value to the world

All in all, Musk didn't do TOO badly here.

And he didn't come across as overly nasty or uncaring.

However, it was still a major opportunity loss for Elon Musk.
Both as an individual, and as a leader who wants to accomplish big goals.

An opportunity loss to display qualities and personality that he actually *does* have, including:

- **Value giving**, instead of value-taking
- **Empathic**, and caring and taking care of the people he employs
- **Great leader**, the type of leader you look up to, and work harder for

And, also:

- **Power aware / smart /** not an easy mark for manipulative frames, which never hurts :)

How could he have done that?

In Power University we go more in-depth with the mindsets to ingrain so you can come control frames on the fly.

Better Frame: Example

But, just as an example, here's a better frame:

> **Interviewer**: It's funny, I heard from other tech CEOs (pause, add emphasis) quietly (pause) they look at what you did at Twitter and they sort of they won't admit it publicly but you know they said "wow that was something" (I) mean

> **Musk**: (jumping in and interrupting, if needed to) nono, wait, sorry if I jump in, but I think this is important. It may be true that some other CEOs looked at what was happening at Twitter, I don't know that. I can only answer for my actions. And you're getting it the other way around, it's the opposite. That was a necessary act to save the company (<—- You surface and address the most important danger to your status: the meanness of the action, independently of what he wanted he to say)
> Maybe one could say it was tough love, but still the only option to stay alive. The choice was NOT between firing or not firing. The choice was between saving the business, together with 1.500 employees, or losing the business together with all the employees

Notice that you act at the first hint of nasty and disempowering frame.
Earlier is always better because that way you nip it in the bud and prevent the nasty frame from expanding, enveloping you and, crucially, entering people's minds and cementing.

As a general rule: act, don't react.
Set, reinforce, and cement your frame early on, rather than reacting and fighting other people's frames.

Some other frames he may have taken as well:

- **I did what was best for us, and other companies do what's best for them**, so you avoid taking responsibility for other companies' layoffs. Or, fleshed out: "I decided to do what's best for Twitter, our mission, and also for our employees. What other tech CEOs decide to do is up to them, and I strongly hope they also took the best decision for all"
- **More efficient companies are better for all** (ie.: it's a small short-term price to pay with temporary firing, but long-term good for all)
- **More efficient companies can give more** (better services), for less money, while paying more
- **Long-term it's also better for the people let go**, since they can do more meaningful work elsewhere
- **Keeping employees you don't need is lose-lose for all**, it's poor leadership, and you bring down the overall efficiency and that's bad for all (plus, you're also more likely to go out of business)

3 Rules For Frame Control

Remember:

- **Interviewers are like police detectives**: never your friends, not even when they seem friendly
- **If you're good but the frame is nasty, shields up**: if you're generally a good person and anything someone says seems to frame you in a nasty way, it's likely a trap or a power move
- Whenever you feel you're losing your power, reputation, or status, **always question the frame at its highest level**

That last part is the key.
Frame control *techniques* are great to have, but the foundations come first. Questioning the frame at its deepest level is one of the core skills we help our students internalize in Power University.

Hopefully this quick Elon Musk case study gave you a good idea of how to be a more effective social strategist.

For more on making frame control second nature, effortless self-defense, and gaining status and a great reputation, check out Power University.

How To Brag Without Bragging: The Covert Brag Technique

Lucio Buffalmano · 23 May 2023 · Archived copy · Original

Bragging “without bragging” is an art.

But, luckily for us, self-promotion and value-signaling is also part of our power dynamics *science*.

And bragging effectively is something you can *learn*.

In this article, you’ll learn how to signal value and self-promote with the *covert* bragging approach.

Definition

> Covert bragging refers to self-promotion that avoids the first-person format of self-enhancement and instead utilizes different techniques to promote oneself and display high value, without coming across as a braggart

If well-executed, covert bragging allows you to self-promote and come across as high-value, without the important drawbacks of overt bragging.

INTRO

Bragging is on a "visibility continuum". Too obvious is bad, while the more invisible it is, the better (display high value, make people think highly of you, but nobody even thinks you bragged).

Bragging is a form of self-promotion.

And the ultimate goal of bragging is to:

1. Display value
2. Become higher value in people's eyes

Bragging has taken a bad rep, and generally for good reasons.
Still, even the most direct version can, at times, "kind of work".

It's *far* from ideal, but if it didn't work at all, it wouldn't have evolved.

But it *did* evolve, and it *did* spread.
So much so that all languages I know have a word for it, and almost anyone experienced it -probably many times, and probably you also bragged a few times-.

So it means that at least on some occasions, at least for some people, bragging is probably better than not bragging.

That tells us an important truth:

Self-promotion is crucial in life.

And the very existence of bragging is proof of that.
Self-promotion is SO important that bragging evolved and spread, *despite all its huge drawbacks*.

The Drawbacks of Bragging

Too obvious bragging has many drawbacks.

So many, that the general social skills advice is "avoid bragging" (and we *generally* agree).

Some of the issues of bragging include:

- **It's annoying** to many
- **It sets a bad competitive dynamic** of "me better than you", and "me VS you"
- It stokes jealousy and **creates frenemies**
- **It often sub-communicates low self-esteem**, since high self-esteem people don't feel the need to brag
- **It sub-communicates low EQ** and social skills, and that's never a good trait to display
- **It's not very credible**, since the individual has an obvious incentive to come across as "better than he actually is"

How to brag without all that nastiness, then?

Enter, covert bragging.

Bragging Effectively With Covert Bragging

Covert bragging is a self-promotion approach to get the benefits of self-promotion, without the downsides of bragging.

In theory, if successful, it's possible to get the benefits, without the downsides.

If successful is key there.

The technique per se says nothing about how successful it is.

Effective Covert Bragging Requires Skills

Covert bragging is not a simple technique.

Contrary to other techniques, it's not just about saying something or saying it with enough confidence.

It's very, very situational, and it requires a deep understanding of social dynamics.

This means that if you do it well, you gain huge.
But if you do it poorly, you lose.

As the chart above shows, a **covert brag that is too close to a "normal" brag can come across as even *worse* than a direct brag**.
A bad covert brag can be worse because, beyond being recognized by everyone as a brag, it also comes across as a sneaky power move that reeks of manipulation and of "status inflater" (and you don't want to be seen as a sneaky social manipulator).

So, generally speaking, you do want to self-promote, but **the more subtle, invisible, or natural you can make your value displays, the better and more effective it is**.

Let's see some ways to do it.

Covert Bragging Techniques

Some techniques include:

1. Tell a story to display your qualities

The key is to:

1. **Make the story natural**, part of the topic, or like you're just sharing for good time
2. **Embed the covert brags seamlessly** -ideally even while sounding humble-

2. Focus on sharing the lessons learned

So you can even self-frame as a giver.

Ie.:

> I did X and Y mistakes on my way to success, and this is why I'm sharing it, so you can avoid the same mistakes

3. Make others say or ask about your qualities

You can even do that in your story while *you* say it.

For example:

> **Tony Robbins**: when people ask me in the media "look, you've been with every major president, you've been with Mother Theresa, with Nelson Mandela, who impressed you the most…

Respect for Robbins' TOP-notch content:

He's THE best "motivational" and "self-help guru".

And at the same time:

LOL, what a bullshitting salesman -he chased Mother Theresa to meet her, and I bet not a single journalist told him "you've been with every single president"-.

This covert brag was close a red-level overt brag.
Still, it's much better than saying "***I*** have been with… ", which would be the direct brag format.
And they're "good enough" to fly under the radar of most people, while making those same people think very highly of Robbins (most people aren't very power aware).

4. Frame it as advice for others to *also* do or enjoy

In this example, I share a breathtaking view while advising people where to go to enjoy the same.

The overt brag format would be to share the view saying "I'm loving this", that sub-communicates "look at me while I travel to exotic places while you're freezing your ass in winter")

5. Focus on the challenge

Like typical marketer's story.

They cam from utter failures, and only after much hard work finally enjoying all this success they're supposedly having.

6. Disqualify yourself before bragging

For example, I say in *The Social Strategist*:

> So, despite my endless shortcomings and continuous mishaps, I've resolved and still managed to get good at this *one* thing.

See?
I don't introduce myself by saying "I'm an expert at this".

Instead, in the preface I first say I'm no guru and don't ever wanna be one.
Then, I double down saying that "despite endless shortcomings and continuous mishaps… ".
Only after that did I finally say "I managed to get good at this one single thing I'm teaching you now".

That way, it doesn't come across as braggart.

7. Embed brag stacks & make'em *invisible* (advanced)

The most advanced covert bragging is not even recognized as "displaying value".

It DOES display value, often also from different angles that all cover each other, but it just flies under the radar.

This requires more advanced learning and mindsets, including more Machiavellianism. It's something we better teach in Power University.

However, to give you an idea, advanced covert bragging can be as simple as this:

> (after they're speaking and vibing for a while, so it feels natural)
> **Her**: I was so tired today. Work is getting so stressful sometimes

> **You**: Yeah, same, that's why I was late by the way, sorry about that. But it's my fault. I'm such an idiot sometimes, I always tell myself to stop on time in the evening, but then there's always someone who really needs me, and I always feel bad saying no

All in one, this is a form of:

- **Positive virtue signaling**, as in you displaying your drive to help others
- **High power**, as in control over your life. Think about what that sub-communicates: you DO have control to decide when to stop, reminding her you're a business owner / entrepreneur, or have a high degree of freedom at work. If one day you get serious about working less, you always *can*. She may not have that freedom
- **High-value display**, as the people begging for your help and time sub-communicate you must be so skilled/wise, or so incredibly capable of adding value to people's lives (something everyone wants)
- **Success & money bragging**, as in you having an abundance of customers (who likely pay you quite a bit)

All perfectly embedded in well-executed vibing, and while sharing a supposed vulnerability -"feeling bad to say no" and "working too much"-.
Plus, he pulls another "higher value power move" by reminding her he was late (and she had to wait for him).

There are a million other forms, but the general concept stands: **the best social strategists successfully display their value with covert brags that are so natural that it's not even bragging at all**.

Imagine how easier your life gets when you can reliably come across as high-value, without ever bragging.

And that's the place where we want to take you.

Be Careful of Humblebrags

The above could be an example of a humblebrag.

So, yes, if well done and if they feel natural, they can work great.

On the other hand, just as for bragging, there are plenty of ways of doing it wrong.
And when you do it wrong, it's exactly like a poor covert brag: it makes you come across as sneaky.

See another example from the covert bragging king Tony Robbins:

- Humblebragging example

How To Brag At Work

Bragging in the sense of "self-promotion" at work is fundamental to advance.

Think of bragging as the *enabler* of your good work.

You can be as skilled as a God, but if the people who decide the promotions don't know about it, it's completely useless.
On the other hand, it's just like Machiavelli said: if you're OK at your job, but somehow *appear* to be good and can network well, you'll do great.
So, yes, great political skills are a must at work, and self-promotion is part of them.

A fantastic approach to bragging at work is to skip the brag talk and instead raise the visibility of your added value.

Here are some valid approaches:

- Let the challenges reach the higher-ups before you fix them

- Find solutions, but only implement them when the problem has grown and reached the higher-ups
- Always let your boss know the challenges you faced and how you solved them (you self-frame as the "finding solutions" type of guy)

For more on effective self-promotion:

> The Art of Self-Promotion: 9 Effective Techniques

In Power University we go more in-depth and have one lesson specifically for effective self-promotion.

How To Brag On Job Interviews

You must keep this in mind:

Some interview questions are TRAPS to make you brag as much as possible.

And if a little brag can be good, *overly* bragging is not.

The more you brag, the nastier you come across, the lower your odds of getting the job (and a good pay).

Here is a common interview trap to make you brag:

> **Interviewer**: What makes you different than all other candidates

That's your "brag to me" bait trap.
If you fall for it, you end up social climbing on all other candidates -people you don't even know!- and looking nasty and narcissistic as a consequence.

And this is how you answer while bragging *smart*:

> ***You***: *Well, I don't know the other candidates so I cannot answer that question properly (<— a bit of philosopher's frame control here).*
> *I can imagine there might be some other good candidates though, since you are a company with good reputation, and as much as this job attracted me, it might have attracted some other top caliber people (<— you don't social climb here: you build others up, while you build yourself up, coming across as a confident team player who doesn't need to demean others to feel good about himself)*
> *What I can tell you is what attracted me to your opening, and why I think I can perform well… (<— and now you go back to your standard pitch, answering your own question)*

Read more:

- How to display your value without falling for the fake interview trap
- **How To Ace Job Interviews**

How to Brag In Dating

A direct brag in dating *also* works great.

… IF you know how to do it well, of course.

Huge caveat, because most men brag badly.
So DO NOT take this as a "permission to brag".

So, first of all:

Beginners: Avoid Direct Bragging

The general rule stands: generally avoid overt bragging.

When you brag poorly, including too direct and obvious bragging, you lose power and attraction (the two are linked anyway).

You lose power and attraction because **the unspoken frame of direct bragging is that you're lower value than her and need to use bragging to make up the difference**.

Plus, it's an inherently low-power strategy because you're chasing (see "foundational rules of dating").

Not that it can't ever work… Anything can work.
It's just that, most of the times, it's not optimal.

It looks like this:

Direct bragging sub-communicates that he either is, or feels, lower value than her, and needs to make up the difference by showing off. Plus, it sub-communicates low social skills and EQ, and that's never a turn-on :)

Men who are obviously higher value than her do NOT brag (most of the time).
So avoid bragging, and display higher value with actions and behavior, instead.

Advanced Seducers: Use This Attraction-Spiking Brag

Now, that being said, more advanced folks can break the rules.

They can break the rules and even gain big time when they do so.

And a well-placed direct brag is a fantastic power move that spikes attraction.

This works very well for men in dating and also in relationships because women like men who are "more" than they are.

A **strong direct brag not only shows the quality you brag about, but it's also a huge display of confidence and self-esteem**.

A confidence that is a bit more on the "bravado" side, but if you do it with a smile and a frame of a little humor, then even older men will gain big from this.

I've used this format many times on dates, and it's one of the most reliable ways to "spike attraction".

Example: Lucio's Bragging

For example:

> (you previously displayed some success or intelligence. Ie.: started a cool business, gave her good life adivce, or solved an issue with creative thinking)
> **Her**: so how did you come up with that
> **You**: well, there are many reasons (<— philosopher frame, and setting up his power move), but the main one is… (you really wanna know?) that I'm fucking smart
> **Her**: (cracks up laughing) ahaha that's true (<— concedes and admits high value. The closest thing to admitting attraction you can get)
> **You**: (smiling, thinking "I know you like me") ehehe thank you, thank you, jokes aside, or shall we say, beside being smart, what happened is… (goes on explaining with a bit of high-power teacher frame)

If you think that's tacky, it's because you're thinking like a guy.

Yes, it would be tacky *with another guy* -but even there: not always. See the interviewer cracking up, or shall we say "conceding", at 50 Cent's brag-.

But dating is different.
And thinking like a guy is why many men date well below their potential. (See "alpha male dating", for example).

Instead, remember this:

> Men think of other men who display higher value as competition.
> Women think of them as highly attractive mates.
>
> *The Power Moves*

And that's ultimately why a good brag works great in dating.

The Rule of Effective Bragging: Display Before You Say

The key to a direct brag is to display it before you say it.

Remember that as a good "law of bragging".
First, you display.
Then, when she's already thinking so at a subconscious level, you bring it to the surface to make it 10x more effective.

Our example above works great because you've already proven that you're smart. (Side note: if you're good at conveying intelligence, which is also a form of covert bragging by the way, you don't even need any special event. You only need a simple chat).

She agrees with that, she *knows* it.

But she may know it at a subconscious level only.
And bringing it to the *conscious* level makes it more effective.
A LOT more effective.

You saying it thread-expands on it, surfaces it, makes it conscious and shared, and 10x its power. *Plus*, your

delivery displays strong confidence and self-esteem, and women, who often lack self-esteem, LOVE that.

You deliver an effective brag with high confidence and with a smile and she's guaranteed to swoon.

See more techniques and examples in **Seduction University**.

How to Display Confidence With Brags

As for everything, there are always exceptions.

And even the "avoid overt bragging" general rule has its important exceptions.

As a matter of fact, advanced social strategists use bragging as a fantastic tool to display enviable personal qualities.

And a well-timed, in-your-face, blunt brag, is a total (good) power move.

Example: 50 Cent Effective Brag

Imagine this example:

> **Interviewer**: why did you buy Tyson's mansion
> **50 Cent**: I don't know if you've noticed this, but I'm like, I'm like rich as a motherfucker

That's a perfect situation where a direct brag works great.

Why?

Think about it… What other reason can you have to buy a 5 million house with 18 bedrooms?

Is it because you "need" 18 bedrooms?
Because you enjoy getting lost in your home house?

No.
It's because you got too much money to throw around, of course.

To say anything else would come across as making up random reasons… Or excuses because you're too shy of calling it as it is.
So a direct brag there works great because it's high-power, straight, raw honesty.

When you get these types of questions where the only real answer is to "say it how it is", do so.
You get to display not only the quality you brag about, but also your intellectual honesty, your social power, and your confidence -and your humor, too-.

As a matter of fact, the real brag of an overt brag isn't even the brag itself -we knew 50 Cent is rich-.
The real value display of an overt brag is the power, confidence, and honesty it sub-communicates. Those matter even more -in our example, now we think of 50 Cent as a cool, straight guy-.

Do the same, and people will look up to you.

SUMMARY

Displaying your value is crucial to do well in life because many of your qualities or achievements aren't always readily visible (call them "opaque value" in our social exchange model).

However, to come outright and say them, or list your achievements, is the type of bragging that is associated with trying too hard -and often low-value-.

Luckily, the good social strategist can use different techniques of cover bragging to brag, without bragging.

Bragging and covert bragging are just two techniques of general self-promotion, and there are many more ways to effectively self-promote.

We go through the main strategies as well as mindsets in **Power University**.

Schwarzenegger Showdown: “I Don’t Stand By Your Rules”

Lucio Buffalmano · 29 May 2023 · Archived copy · Original

“I don’t stay with your rules”,

Said Schwarzenegger to the interviewer.

And that was the culumination of the mini power showdown.

Power showdowns happen when you stick to your preferred outcome or frame, and the people you’re dealing with do the same.

Then, the escalation continues until either one of you gives in, or until you negotiate an outcome.

In this article, we are going to review a real-life example of a mini power showdown.

Strongly and directly rejecting someone’s rules, demands, or questions is likely to kick off a power showdown

Contents

- INTRO
- Step 1: High-Investment Question Starts The Showdown
- Step 2: Arnold Challenged The Rule & Rejects The Task
- Step 3: The Interviewer Sticks To His Guns & Re-States The Rule
- Step 4: Arnold Refuses Compliance Once Again
- Step 5: Arnold CAN Think Of A Great 1-Word Answer & Goes For It
- Strategic Considerations

INTRO

Generally speaking:

It’s better not to give in after you start an escalation because power showdowns raise the stakes for both

"wins" and "losses".

Meaning that if you cave in after a showdown, you lose *big*.

The power showdown is all about who is higher power, so if you cave in, you almost officially sub-communicate that you're lower power than your opponent.
So your status semi-officially tanks, you lose respect both from your opponent and the audience, and you lose a lot of attraction from women.

You submitted, you "officially" tanks, attraction from women disappears, and you lose lots of respect.

Possible Outcomes Of Showdowns

Showdowns don't *necessarily* end up with a big winner and a big loser.

Instead, they can end up as:

- **Negotiative damage limitation**, when one or both parties concede something before the final resolution. This is where smart power protection and saving face also comes into play
- **Draw**, when both parties stick to their guns and nobody gives an inch, or when the negotiation is perfectly fair to both
- **Win-win**, when both parties come out of it better off. This is rarer, but it's exactly the case in this article's case study

For reference, this is the full video of our case study:

So let's learn more about power showdowns and smart negotiations:

Step 1: High-Investment Question Starts The Showdown

> **Interviewer**: in one word and one word only how did a small-town boy from Austria become one of the most famous people on earth

The interviewer poses the question in a way that disempowers Schwarzenegger.

Why is it disempowering to Arnold?

Well, think about it.
A question is already a task to provide a reply.

If you keep adding requirements, you set more rules for them to obey to.

The more constraints and complexities you add, the more disempowering the question becomes because you make answering more and more difficult, taxing, and demanding.
The more stringent those rules are, the more effort you are demanding the other person to expend for you.

Finally, when your constraints also sound "off" and "unnatural", it's even more disempowering because the frame is that you have so much power that you can come up with any random cr@p, and people still obey.

Result, you gain power, they lose it.

From a power dynamics point of view, these types of questions set a lot of hoops to jump through.

From a power point of view, it says "bend over backward to give an answer the exact way *I* want it".

Schwarzenegger is a power-aware and high-power man though, and he doesn't like that.

So instead of following the interviewer's lead, he challenges the question.

P.S.: The Disempowerment Started Even Before

Did you catch it?

The interviewer had already disempowered Arnold before he even popped the famous “one word only” question.

If you did, you’re rocking!
If not yet, then you may benefit a lot from our material to gain more status in life.

Because I bet a good chunk of why Arnold challenged the question is not so much because of the question itself, but what the interviewer did *before* that.

Learn More

We explain this all better in **Power University**, but for an overview:

1. **Social power dynamics**: a primer on the power dynamics of socialization
2. **The irrefutable laws of power**: the main laws of personal and social power

Step 2: Arnold Challenged The Rule & Rejects The Task

> **Arnold**: why do you want me to say in one word

Good move.

From a social strategist’s point of view, **it’s never good to try hard to comply when you’re not sure you can come up with a good answer because you expend a lot of effort, for uncertain and possibly mediocre output**.

That doesn’t make you look very smart and quick-witted because despite your great effort, you still under-deliver. It’s the opposite of what makes you look smart: to come up with great answer and get great results, with little investment (Sprezzatura, calls it Castiglione).

Of course smart critical thinkers know that doesn’t say much because it’s just one instance.
But very few people are smart critical thinkers. Plus, it’s simply human to rely on heuristics and, often, to jump to biased conclusions (Kahneman, 2011).
So you always lose points when you try hard, and fail.

Hence, the smart social strategist doesn’t try at all.

He either answers while ignoring the rule, or challenges the rule.

Better Alternative: Challente The Question, Without Challenging The Interviewer

By the way, there were many possible alternative solutions here.

A simple and more effective approach would have been to challenge the question, without challenging the interviewer.

For example:

> **Arnold**: “Only one word? Wow, that’s tough man. I think we’ll have to settle for a tad longer version”.

Then, start answering the way YOU want it to answer.

But since you answered more diplomatically, the interviewer was a lot less likely to re-state his rule once again -and if he did, he would look like an annoying dic*head-.

Learn More:

- Frame Control 101
- Frame Control Techniques

Or skip directly to **Power University** to internalize the skills of frame control.

Step 3: The Interviewer Sticks To His Guns & Re-States The Rule

> **Interviewer**: (looks up, thinking, then back to Arnold, wiggling his index finger) one word only, Arnold (looks sideways to pile up pressure, then smiles)

Interestingly enough, in the beginning, the interviewer was probably falling into Schwazznergger frame.

Such as, he may have been trying to provide reasons why "one word only" was a fair question.
That's one way to *justify* his request, which would re-empower Schwarzenegger.

Why would it re-empower Arnold?

Think about it:

Justifying your extra requests power-protects the receiver because good reasons also justify compliance. Such as, good "reasons why" limit the extent of your power because you're not making random rules, but are following a certain logic. And it makes their compliance less costly because there is now a reason why it makes sense to comply.

Plus, the simple act of justifying, even when the justification is not super logical, still re-empowers the receiver because you're expending effort and showing some consideration for them through your explanation.

However, the interviewer here does not justify.

He probably remembered he was the interviewer and decides he sticks to his initial request, without any explanation.

And notice how he re-states his frame:

He wiggles his middle finger, he simply repeats the tasks (frame imposing), and looks sideways to pile up more social pressure.

However, the sideways look also takes some edge off because it frames it as a "friendly challenge".

PLUS, he adds smiles to take some edge off:

It was a smart choice to add a slight smile because otherwise, he would have been TOO confrontational.

The smile made it a bit less power-taking dominant, and a bit warmer.

The sub-communication is:

> "yes, I'm still tasking you again with the same exact rules and not budging, but I'm not tasking you in a rude manner, we're joking around and still friendly (just remember that I make the rules though)".

Step 4: Arnold Refuses Compliance Once Again

> **Arnold**: I don't stay with your rules

His reply now is a straight challenge to the interviewer's authority.

Arnold defends his power in a very high power and direct fashion.

However, something interesting happens right after:

Step 5: Arnold CAN Think Of A Great 1-Word Answer & Goes For It

> **Arnold**: Dream!

And that's also a great lesson learned for us all: pick your battles.

Don't escalate everything.

Whenever you can go for win-win, always go for it.

The interviewer got the reply he wanted, Schwarzenegger came out of it looking smart and inspiring, the interview turned into a classic, and they both came out of it better off.

Strategic Considerations

It's likely that Arnold was thinking exactly in the terms we expressed:

- Maintain power
- Provide a smart answer
- Challenge the rules if you can't come up with a great answer
- Obey the rules IF it's also good for you

Arnold is a typical alpha male, high power, *and* a very strategic operator.

No wonder he has become as successful as he has.

Is it possible you may also gain with those mindsets and skills?
If so, we equip thousands of happy and successful men with those mindsets, confidence, and skills in **Power University**.

100 Million Offers: Summary & Review

Lucio Buffalmano · 4 June 2023 · Archived copy · Original

In *$100M Offers*, Alex Hormozi teaches readers the entrepreneurial skills of compelling offers. Specifically, Alex breaks down the steps to create valuable and unique offers, and how to market them.

TPM Note: Valid tactics, but remember the foundations (value & competence)
Foundations are the 80% that's taught in any book: real competence to sell, or genuine value behind your offer.
See TPM's entrepreneurial power model ↗

Overview

- Pick a good market
- Provide a unique value offer, that solves all the customers' problems, adds real value, and price it very high
- Enhance it with guarantees, scarcity, bonuses, etc.

Notes

About the Author:
Alex Hormozi is an American entrepreneur who started in the health and fitness industry, helping gym owners scale their businesses. He then sold and took capital and lessons learned with him to launch his own incubator to help scale other e-learning businesses.
Alex is very active in many social media platforms, providing advice to a growing audience of business enthusiasts.

1. Focus On Skills Acquisition: It's A Game You Can Learn

> there is a difference between gambling in business and gambling in a casino. In a casino, the odds are stacked against you. With skill, you can improve them, but never beat them. In contrast, in business, you can improve your skills to shift the odds in your favor. Simply stated, with enough skill, you can become the house.

2. Pick A Good Market That Has These 4 Traits

Alex has four indicators to pick a good market:

1. **Massive Pain**, where people but not want but *need* or *desperately* need what he's offering
2. **Purchasing Power**, with people who can afford your costly product
3. **Easy to Target**, since you must always be able to reach your target audience to pitch them and sell to them
4. **Growing**, which is like having a tailwind pushing you in the right direction (or supporting you when you're struggling)

Alex says that the market is the most important element of success -more important than your offer or your sales and marketing skills (which both require most time and effort to learn).
Put in equation format:

Starving Crowd (market) > Offer Strength > Persuasion Skills

Serve A Niche Within The 3 Main Markets

The 3 main markets that will always exist because of the pain people when they're lacking in them are:

- Wealth
- Health
- Relationships

The goal is to find a smaller subgroup within one of those larger buckets that is growing, has the buying power, and is easy to target (the other three variables).

3. Start In A Proven Market (Leave Moonshots To Broke Dreamers)

This insight was truly fantastic.

There is an unspoken myth and search for glory in entrepreneurship of coming up with new things, exploring new territories, chasing huge "moonshots", and "disrupting" old industries (Thiel had already said the "disrupt frame" is poor).

Instead of seeking the moonshots in uncertain markets, in his podcast Alex recommends that you start as an entrepreneur in a market of proven interest and demand because it's more reliable, has better risk/reward, and gives you more realistic feedback.

The problem with untested markets is that they're shots in the dark, it has higher risks, and you never get to truly understand if the problem is the market, or if it's you.
Because while in a proven market you can get to learn and test your skills in a market you can trust to exist, you can learn more reliably.
If instead all you do is take random "moonshots", you never get reliable feedback on your skills -and on what you need to learn and focus on-.

Alex's goal is to make you money first, and if you want to make money choose a proven market.

4. Niche Down To Make Your Offer More Compelling (& Make More Money)

For 99.6 percent of readers below $10M per year, niching down will make you more money.

And it's also almost always easier to serve fewer clients more narrowly.

Product	Price
Time management	$19
Time management for sales professionals	$99
Time management for outbound B2B sales	$499
Time management for outbound B2B power tools & gardening sales rep	$1997

Says Alex:

> You want to be 'the guy' who services 'this type of person' or solves 'this type of problem.' And even more niched 'I solve this type of problem for this specific type of person in this unique counter-intuitive way that reverses their deepest fear."

5. The Grand Slam Offer: What Is It

The definition of a grand slam offer is:

> It's an offer you present to the marketplace that cannot be compared to any other product or service available, combining an attractive promotion, an unmatchable value proposition, a premium price, and an unbeatable guarantee with a money model (payment terms) that allows you to get paid to get new customers . . . forever removing the cash constraint on business growth.

The key is to position your product as in a category of its own.
That way you compete on *value*, rather than on price.

When the prospect cannot compare your value offer with anything else, *you* make the price.

Competing on value is the only way to make lots of money because price competitions are races to the bottom that eat all your margin away and leave you barely surviving.

To compete on value **make your offer so different that you never have to explain why your product is different**.

Example of Grand Slam Offer

This was Alex's Gym Launch offer:

> Pay one time. (No recurring fee. No retainer.) Just cover ad spend. I'll generate leads and work your leads for you. And only pay me if people show up. And I'll guarantee you get 20 people in your first month, or you get your next month free. I'll also provide all the best practices from the other businesses like yours.

With that type of offer you save on advertising because more people take you up on it, you close more leads, and you can charge more.

The Only 3 Ways To Grow

At a high-level, there are only 3 ways to grow:

1. Get more customers
2. Increase their average purchase value
3. Get them to buy more times

In his podcast, Alex says that most people focus on #1, getting more customers, while often reducing churn rate to increase lifetime value, or making a great product that increases word of mouth is by far the most effective.

The Grand Slam offer helps with all three of them.

6. The Value Equation For Your Grand Slam Offer

> Dream outcome x odds of achievement / time delay x effort = value

To make your offer as compelling as possible, you want to:

- Increase the top 2 parts of the equation
  - **Dream outcome**, what they need, wish, or want. It's the gap between their current reality and their dreams (ie.: how much will I make)
  - **Perceived likelihood of achievement** (ie.: how will I know it's going to happen)
- Decrease the bottom 2 part of the equation
  - **Time delay** (ie.: how long will it take)
  - **Effort & sacrifice** (ie.: what is expected of me?)

Alex says that most people, and him as well in his beginnings, focus on the top 2 with tools such as social proof, third-party edification, etc.
However, it tends to be a shortcut since it's easier, and it's lazier (and often more based on words and claims). Beginner markets also fall for the trap of inflating and exaggerating their claims, and that tends to make the message *less* persuasive.

But remember that as Machiavelli said, it's about *perceptions*, not always reality.

Focus On The Deeper Desire That Your Proposition Addresses

People all generally want the same things, such as to be:

- Respected
- Loved
- Perceveid as beautiful
- Perceived as powerful
- Increase their status…

However, those are only conduit desires to deeper goals.

For example, men don't really want money as in "pieces of paper", they want money for the status it gives them, says Alex (or for the freedom, sense power, purchase power of their dream toys, or better dating, I'd add).

So what they value most is not so much the conduit, but the deeper goal -ie.: their status-.

PRO Tip: Frame benefits in terms of status gained from the viewpoint of others

If the final goal is status, you can go one level beyond simply selling status.

You can instead show the status they most deeply want *already from the point of view of someone else*.

Example:

> If you buy these shoes, your speed will increase by 4km/h. Your running buddies' jaws will drop when they see you leaving them behind . . . they'll ask you what's changed . . . only you will know.

7. The 5 Steps For Grand Slam Offers

Now let's finally get down to how to prepare your grand slam offer people feel stupid saying no to:

Step #1: Identify Dream Outcome

In Alex's case, it was switching from selling gym memberships to *outcomes*.

In his words, he was selling the *vacation*, not the plane ride to get there.

So for Alex it was:

- Lose 20lbs in 6 weeks.
- Big dream outcome – lose 20lbs.
- With a decreased time delay – 6 weeks.

Step #2: List Problems

Write down all the things people struggle with and their limiting thoughts around them.

Says Alex:

> Think about it in insane detail. If you do, you will create a more valuable and compelling offer as you'll continually be answering people's next problem as it manifests..

In Alex's weight loss case, the problems are:

1. Buying healthy food, grocery shopping
   - Buying healthy food is hard, confusing, and I won't like it
   - Buying healthy food will take too much time
   - Buying healthy food is expensive
   - I will not be able to cook healthy food forever. My family's needs will get in my way. If I travel I won't know what to get.
2. Cooking healthy food
   - Cooking healthy food is hard and confusing. I won't like it, and I will suck at it.
   - Cooking healthy food will take too much time
   - Cooking healthy food is expensive. It's not worth it.
   - I will not be able to buy healthy food forever. My family's needs will get in my way. If I travel I won't know how to cook healthy.
3. Eating healthy food
4. Exercise regularly
5. …

List Problems As Part Of The Value Equation

You listed out each core thing that someone has to do.

Now, think of all the reasons they *wouldn't* be able to do it, or keep doing it -or whatever they're afraid of that may get in the way-.
Use the four value drivers as a guide.

So, each of the above problems has four negative elements that align with the four value drivers.
Such as:

- Dream Outcome→ This will not be financially worth it
- Likelihood of Achievement→ It won't work for me specifically. I won't be able to stick with it. External factors will get in my way. (This is the most unique and service-specific of the problem buckets).
- Effort & Sacrifice→ This will be too hard, confusing. I won't like it. I will suck at it.
- Time→ This will take too much time to do. I am too busy to do this. It will take too long to work. It won't be convenient for me.

Step #3: Solutions List

There are two parts in crafting solutions:

1. **Transform problems into solutions**: starting with "how to" is the simplest way for beginners to turn problems into solutions. For example, in the weight loss space the problems related to "buying healthy food, grocery shopping" turn into:
   - . . . is hard, confusing, I won't like it. I will suck at it→ How to make buying healthy food easy and enjoyable, so that anyone can do it (especially busy moms!)
   - . . . takes too much time→ How to buy healthy food quickly
   - . . . is expensive→ How to buy healthy food for less than your current grocery bill
   - . . . is unsustainable→ How to make buying healthy food take less effort than buying unhealthy food
   - . . . is not my priority. My family's needs will get in my way→ How to buy healthy food for you and your family at the same time
   - . . . is undoable if I travel; I won't know what to get→ How to get healthy food when traveling
2. **Name your solutions**: make your name

Alex reminds us that **it's important you solve every problem**.
Solving all problems is part of making an offer that they can't refuse.

Step #4 Create Your Solutions Delivery Vehicles ("The How")

This is what you're going to deliver.

It's the product, the meat of your offer, and you must make it *good*.

To begin with, **think about *all* the things you could do to solve each of the problems you've identified**.

In Alex's original example of weight loss, some solutions to buying healthy food if he wanted to deliver the service 1:1 would be:

- In-person grocery shopping, where I take clients to the store and teach them how to shop
- Personalized grocery list, where I teach them how to make their list
- Full-service shopping, where I buy their food for them. We're talking 100 percent done for them.
- In-person orientation (not at the store), where I teach them what to get
- Text support while shopping, where I help them if they get stuck
- Phone call while grocery shopping, where I plan to call when they go shopping to provide direction and support

You then need to start fleshing out your solutions to later see what makes the most sense and what's the easiest and most profitable to deliver.
Alex proposes these questions

- What level of personal attention do I want to provide? one-on-one, small group, one to many
- What level of effort is expected from them? Do it themselves (DIY) – figure out how to do it on their own; do it with them (DWY) – you teach them how to do it; done for them (DFY) – you do it for them
- If doing something live, what environment or medium do I want to deliver it in? In-person, phone support, email support, text support, Zoom support, chat support
- If doing a recording, how do I want them to consume it? Audio, video, or written.
- How quickly do we want to reply? On what days? during what hours? 24/7. 9-5, within 5 minutes, within an hour, within 24 hrs?
- 10x to 1/10th test. If my customers paid me 10x my price (or $100,000) what would I provide? If they paid me 1/10th the price and I had to make my product more valuable than it already is, how would I do that? How could I still make them successful for 1/10th price? Stretch your mind in either direction and you'll come up with widely different solutions.

Step #5a: Trim & Stack

Now you want to:

1. Look at the cost of providing these solutions to you (the business)
2. Remove the ones that are high cost and low value first
3. Remove low-cost, low-value solutions
4. Keep the ones that are:
    - low cost, high value
    - high cost, high value

If you aren't sure what's high value, then think of each solution through the lenses of the value equation and ask yourself what your prospect financially values, causes him to believe he will be likely to succeed, make him feel like he can do it with much less effort and sacrifice, and help him accomplish his goal and see the result he wants with far less time investment.

Step #5b: Put all the bundles together into the ultimate high-value deliverable

Let's now put everything together.

Let's review the offer for the example of "losing weight", presented with this format: Problem → Solution Wording→ Sexier Name for Bundle → delivery vehicle (what we're actually gonna do for them/provide)

Buying food→ How anyone can buy food fast, easy, cheaply → Foolproof Bargain Grocery System . . . that'll save hundreds of dollars per month on your food and take less time than your current shopping routine ($1,000 value for the money it'll save you from this point on in your life)

1-on-1 Nutrition Orientation where I explain how to use…

1. Recorded grocery tour
2. DIY Grocery Calculator
3. Each plan comes with it's own list for each week
4. Bargain grocery shopping training
5. Grocery Buddy System

6. Pre-made insta-cart grocery carts for delivery
7. And a check-in via text weekly.

Cooking→ Ready in 5min Busy Parent Cooking Guide . . . how anyone can eat healthy even if they have no time ($600 value from getting 200 hours per year back — that's four weeks of work!)

1-on-1 Nutrition Orientation where I explain how to use…

1. Meal Prep Instructions
2. DIY Meal Prep Calculator
3. Each plan comes with it's own meal prep instructions for each week
4. Meal prep buddy system
5. Healthy snacks in under 5min guide
6. A weekly post they make to tag me for feedback

Eating→ Personalized Lick Your Fingers Good Meal Plan . . . so good it'll be easier to follow than eating what you used to "cheat" with and cost less! ($500 value)

1-on-1 Nutrition Orientation where I explain how to use…

1. Personalized Meal Plan
2. 5min Morning shake guide
3. 5min Budget Lunches
4. 5min Budget Dinners
5. Family size meals
6. A daily picture of their meals
7. 1-on-1 feedback meeting to make adjustments to their plan (which is actually an upsell)

And then for the other problems:

Exercise→ Fat Burning Workouts Proven To Burn More Fat Than Doing It Alone . . . adjusted to your needs so you never go too fast, plateau, or risk injury ($699 value)

Traveling→ The Ultimate Tone Up While You Travel Eating & Workout Blueprint . . . for getting amazing workouts in with no equipment so you don't feel guilty enjoying yourself ($199 value)

How to actually stick with it→ The "Never Fall Off" Accountability System . . . the unbeatable system that works without your permission (it's even gotten people who hate coming to the gym to look forward to showing up) ($1000 value)

How To Be Social→ The 'Live It Up While Slimming Down" Eating Out System that will give you the freedom to eat out and live life without feeling like the "odd man out" ($349 value)

Total value: $4,351 (!) All for only $599.

Compare this offer now to a mediocre "gym membership".
This bundle does 3 things:

1. Solves all the perceived problems (not just some)
2. Gives you the conviction that what you're selling is one of a kind (very important)
3. Makes it impossible to compare or confuse your business or offering with the one down the street

In Sum:

- Step #1: We figured out our prospective client's dream outcome.
- Step #2: We listed out all the obstacles they're likely to encounter on their way (our opportunities for value).
- Step #3: We listed all those obstacles as solutions.
- Step #4: We figured out all the different ways we could deliver those solutions.
- Step #5a: We trimmed those ways down to only the things that were the highest value and lowest cost to us.
- Step #5b: Put all the bundles together into the ultimate high-value deliverable.

8. Enhancing The Offer: Bonuses, Urgency, Scarcity, Guarantees, and Naming

> The "perfect profit combination" is lots of demand, and very little supply, or perceived supply. The process of enhancing your core offer is designed to do both of these things: increase demand and decrease perceived supply so that you can sell the same products for more money than you otherwise could, and in higher volumes than you otherwise would (over a longer time horizon).

The chapters on enhancing the offers were a bit more well-known to me, both because these elements come from general psychology (Alex mentions Cialdini), and because it's what most other marketers also teach or sell.

Some great tips:

- Add up your bonuses to a total that's bigger than the price of your offer
- Pick catch names for the bonuses as well
- If you can rhyme or alliterate your offer, do it (but don't force it)
- Identify a client's biggest fears, pain, and perceived obstacles and reverse their fears into a guarantee

Magic Headline Formula

Element	Action
Magnet	Make A Magnetic Reason
Avatar	Announce The Avatar
Goal	Give Them A Goal
Interval	Indicate a Time Interval
Container	Complete with a Container Word

MORE WISDOM

- **Pick a market and stick to it**, so you can learn the ins and out (unless it's a dying market, of course. But most markets tend to be neutral, so prioritize your learning)
- **Sell a very limited supply of 1-on-1 access** such as direct message, email, phone, voice memo, Zoom etc. Create a very exclusive service level based on access to you (yes, unscalable), that you cap at a tiny number. Price it very high.
- **Never discount the offer** when trying to close a deal because it teaches people that your prices are negotiable. Instead, use bonuses.

QUOTES

On accepting reality and working with it:

> Crazy world we live in.
> And you can either sit there and make “complain” posts about how people “ought” to be a certain way. Or you can take advantage of the way people are and capitalize. This book is for those people who want to be victors, not victims of circumstances.

On being right or being rich:

> You can either be right or you can be rich. This book is for getting rich. If that bothers you, just put this down and go back to arguing against human nature. Hint: You’re not gonna change it.

CONS

$100M Offers is a fantastic book.
As a matter of fact, it’s THE most helpful and practical book I’ve ever read on entrepreneurship, so consider these some personal reflections and minor notes:

How truly applicable is the strategy of “charge crazy high prices”?

Says Alex:

> the goal isn’t just to be slightly above the market price — the goal is to be so much higher that a consumer thinks to themselves, “This is so much more expensive, there must be something entirely different going on here.”
> (…)
> The goal should be to charge as much money for your products or services as humanly possible. I’m talking heinous amounts of money.

Of course that sounds ideal and it’s well worth to ponder how one may achieve or at least try that.
On the other hand, I’m truly not sure how many businesses and products can go for that.

Also, markets and opportunities follow some basic tenets of game theory.
Meaning that if everyone is trying to charge exorbitant prices, the guy who comes in and undercuts them all with a good product may end up making a bomb of money for appealing to a huge untapped market, with little competition.

It’s untrue that competing on price is a necessarily losing strategy

The book seems to paint a picture where competing on price dooms you to failure (while charging very high prices makes you wealthy and everyone better off).

Yet, I can think of several uber-successful, huge businesses that *compete* and win on low price.

Ikea, for example, took the world by storm with offers so good people feel stupid saying no *because of their low prices*.
Walmart drove any other retailer on the brink of collapse by making prices *lower*, not higher -Walmart’s mission statement is to “save people money so they can live better” (ie.: the *opposite* of charging them exorbitant prices).

So, OK these businesses are *built* around low pricing, fair enough.

But then again, how about “middle of the road” mass producers that trump the high-end, super pricey offers?

Because I can also think of several examples of companies with average or slightly above-average products swallowing the super-expensive ones.
For example:

- **Cheap automaker FIAT owns Ferrari**
- **Volkswagen owns Lamborghini, Bugatti,** and recently even the “Ferrari” of two-wheels, Ducati

Shocker, I know.

And just to drive that point home, Volkswagen literally means “car of the people”, an homage to his mass penetration and cheap prices.

I can also think of several cases in FMCG where producers of cheaper products dominate the market.

For example, I like chocolate.
And top-end chocolatiers with expensive chocolate bars are only a tiny fraction of mass-market chocolate producers such as Nestle or Ferrero:

The chocolate quality of Ferrero mass-products is average at best, but Ferrero is a multi-billion company bigger than most producers of expensive chocolate

It’s also not necessarily true that commodity sellers struggle

When was the last time that anyone considered the following poor:

- Oil producers
- Tobacco companies
- Raw material miners such as Rio Tinto (one of Brazil’s biggest companies)

Many countries run on raw materials, which are commodities.
In some ways, banks also deal with what’s in many ways a commodity: money.

This is NOT to say "Alex is wrong", don't follow his strategy.

It's just that, as usual, I'd stay away from over-generalizations.

And I would stay away from over-applying general rules that to make money you must necessarily be unique, in a category of one, or charge "higher than anyone else".

There are more variables that go into pricing beyond "value"

There seems to be an assumption that value -and the value equation- is solely or mainly responsible for pricing.

It doesn't seem to be the case, though.

In Alex's own example of diet/exercise plan VS liposuction, the price, time, and skills to deliver the work *do* matter (also because those also happen to be entry barriers).

Anyone can write an ebook on dieting and exercising and many can help you with coaching.
But very few can perform the surgery for an effective liposuction.

You can bet that if in the future the liposuction can be done in 10 minutes, 10x better, and by a $100 robot that can do anything else, the price will *decrease abruptly* in spite the value *increases*.

Alex's equation is still super useful, but if we want to be thorough, then… Yes, it's not only value delivered, but your skills, effort, and costs of delivery do also impact pricing.

Sometimes oversells and some advice only works if you're already established

Of course, some advice only works for some people who already reached a certain level.

However, it can feel a bit salesy/sleazy/fake to pitch it as a silver bullet while addressing the whole audience.
For example, says Alex:

> If you don't hate money, sell a very limited supply of 1-on-1 access. (…) **But I promise you this** – if you want to immediately make a lot of money, create a very exclusive service level based on access to you (yes, unscalable), that you cap at a tiny number. Price it very high. (…) **You will make more money than you thought possible**.

How can anyone really promise that, knowing that most readers have no expertise to price at all, let alone to price very high?

The List of Reasons "Why More Expensive Is Good" Felt Like Unneeded Justifications

There is a section that provides reasons of "why pricing your product as high as possible is good for all".

Yes, of course, there are some advantages for all to price high.
But there are also some cons, and many reasons why a higher price can be better for the seller, than the buyer (duh! :).

But if you provide enough value to justify your high price, that's fair!

So there was no need to list a whole bunch of reasons why high prices are good for the buyer.
It felt a bit like "preventive medicine" to avoid coming across as money-driven, and justifying one's fair goal of making big profits.
And like psychological reactance.

Overall though, since any smart reader knows that "as high prices as possible" aren't necessarily good for the buyer,

it also felt disingenuous -and taking up space-.

REVIEW

$100M Offers is one of the best books I've read on entrepreneurship and marketing.

More experienced pro-marketers who know Dan Kennedy -from which Hormozi learned a lot-, John Carlton or other direct-offer marketers may find the book less groundbreaking than I did.

However, Alex puts everything together and backs it up with lots of examples and personal experience, so that *$100M Offers* can be a valuable tool for anyone.

Furthermore, Alex outgrew pure direct marketing and started focusing more on business systems, brand, product quality, and word-of-mouth marketing. So when you put it all together, Alex's advice feels to more 'total package'.

Should Beginners Start With Lucio's Power University?

Lucio Buffalmano · 8 June 2023 · Archived copy · Original

What if the social skills you're learning aren't getting you results?

Many spend years on basics like small talk that don't move the needle.

Power University's foundational skills can help you succeed faster in dating, work, and life.

Here's why:

Elite-level classes empower

Contents

- Basics vs. Foundations
- 1. Foundations deliver results
  - ⍰ Example: basics VS foundational for dating results
- 2. PU teaches the foundations of social competence
  - 2.2. PU gives you a framework
- 3. Problem: most social skills resources AVOID the foundations
  - 3.2. Beginner skills leave you unprepared to win
- 4. You're already ready for advanced skills
  - ⍰ Example: PU alumnus skipped the basics
- 5. Foundations get results faster
  - 5.2. Outside-in approach works: advanced teaches basics
- 6. Advanced teachers provide you the role models
- Life Examples
  - ⍰ From autistic kid to socially successful millionaire
  - ⍰ Basics without power: no status, respect, or dates

- Are You Ready For PU?
- Should You Go For PU?

Basics vs. Foundations

Alex asked us:

> Is Power University good for me, as a socially inept person?
>
> *Question On YouTube*

I brainstormed this question with some PU's alumni.
And it became clear men like Alex need the *foundations*, not the basics:

- ***Basics*** (e.g., small talk, politeness) make you socially polished but don't win competitive situations like dating or career growth
- ***Foundations*** (e.g., strategies and power dynamics) help you achieve goals like status, respect, and handling toxic people.
- ***Advanced*** training takes the foundations to a higher level

1. Foundations deliver results

Some of the foundations we focus on include:

- Social exchanges and power dynamics ⍰ **Status & respect**
  - Sexual marketplace and mate value ⍰ **Competent dating**
- Power intelligence ⍰ **Win competitions**
  - Machiavellianism ⍰ **Effectively strategic**
- Self-defense ⍰ **Never be a sucker**
  - Manipulation / "dark psychology" ⍰ Win the advanced game

⍰ Example: basics VS foundational for dating results

PU alumnus Bel focused on the basics for career and meeting women, but the results were limited.
Learning to approach confidently—a PU foundation—worked faster.

Says Bel :

> **I used to focus on the "basics"** (ie making friends, being sociable, etc.) to meet a woman and have a career for financial independence – **but it didn't work.**
> (…)
> One can have a "good" relationship with a woman while unable to handle groups of people, and liking to be alone.
> Conversely, one can be the "life of the party", and be totally unattractive.
>
> *Bel*

He's right.
In our foundations, we focus on *results*, not *reactions*.

2. PU teaches the foundations of social competence

Many courses skip key skills like handling power dynamics or spotting manipulation.

PU fills this gap with practical foundations that get results.
Our approach is so unique that even the foundations seem 'advanced'.

As Bel continues:

> But then, they are not "basics" anymore. They are "practical, real-life tested and approved high-level advanced basics".
>
> *Bel*

100% right.

2.2. PU gives you a framework

The Cambridge Handbook says that frameworks organize knowledge.

And PU's frameworks make it easier to understand, internalize, and *apply* our foundations confidently and naturally.

Transitioned, a PU alumnus, says:

> (…) **PU is amazing for the quality of the framework** and the community.
>
> Most frameworks are rubbish.
> I had a lot of tricks and some social skills to start with.
>
> The problem was **without a framework it was hard to put the techniques in context and improve**.
>
> *Transitioned*

The framework we develop with Power University make everything easier and natural.

3. Problem: most social skills resources AVOID the foundations

Many social skills courses focus on politeness but skip essentials like respect, spotting manipulation or winning competitions.

For example, one course brags about avoiding 'mind games':

People School is NOT for you if:

⊘ **You want to learn how to manipulate people:** We teach you to be the best, most authentic version of yourself when you communicate, not how to play mind games with others. If you're here to learn how to "trick" people, you will be sorely disappointed.

> **People School salespage**: We teach you to be the best, most authentic version of yourself (…) not how to play mind games
>
> *People School salespage*

This approach *sounds* nice, but leaves you vulnerable to manipulators.
You should NOT be your most authentic with *everyone*.

Many of our alumni know that all too well.

Says Bel:

> The "basics" are mostly misrepresented.
> (…)
> "Go and introduce yourself". Or "always be polite". Or "compliment a woman to make her like you".
>
> But **those are not the basics. Those are twisted, useless, counteproductive simplifications of politically-correct visions of reality that do not exist**.
>
> Nobody – with few exceptions – is going to tell you the pure, unadulterated truth of what works.
>
> *Bel*

100% right.
And it's the reason why I started TPM.

Read more on 'naive self-help':

> Naive Self-Help: 10 Popular But False Self-Help Myths

3.2. Beginner skills leave you unprepared to win

The basics provide no competitive advantage, leaving you on the ground floor. The fruits are all at the top

Most of what you want, *others* also want.

That means that achieving anything worthwhile in life requires outsmarting the competition.

And to win in competitive environments, you need an edge.

4. You’re already ready for advanced skills

Fortunately, you don’t need the basics to learn the foundations.

How do I know that?

I was never “great” at many of the basics.
I’m *still* not.

For example:

- I don’t enter groups graciously, BUT…
  - My attitude sub-communicates “I’m not the type of guy you ignore”, and guess what… Most of the time I get the attention I wanted

- I don’t always have smooth date conversations, BUT…

  - I have the presence to hold silence and display value *without saying anything*.

- I never have perfect assertiveness, BUT…
  - I speak with enough power and conviction that people understand I'm not a pushover

My lack of basics hasn't stopped me from reaching the more advanced and "juicier" goals I wanted to reach.

Including:

- **Career advancement** (I purchased my dream location flat *before* TPM)
- **Dating more and better** (I reached my dating goals)
- **Making great friends** (I don't need anymore and can make new anywhere I go)
- **Being the "natural leader" in relationships** (with my exes devoted to me)
- Etc., etc.

My starting level wasn't "totally inept".
But what was true for me is true for many many other guys.

⍰ Example: PU alumnus skipped the basics

Most people are not at zero and have enough of the basics.

Says Mats:

> Most **people who see themselves as socially incompetent (including me in the past) fail to realize just how much they already know**.
>
> If you think about socializing like a game, all you need in order to play and get better is to understand the rules (…) even if you don't know even the most basic strategies.
>
> (…) t**he basic rules are quite simple:** treat people poorly and they won't like you, treat them well and they will like you. **As long as you understand this you know more than enough to improve**
>
> *Mats*

I agree.
Chances are, you're better off starting with the *foundations*.

5. Foundations get results faster

Time spent on basics like small talk is time away from learning foundations that deliver status and respect.

PU's advanced skills also improve your basics—like confident speaking—faster.

For example, instead of:

- ✕ Ask 'captivating' questions <— Low power entertainer
  ✓ Learn how to ask with confidence <— Man who commands attention

- ✕ Learn to never run out of things to say <— Low power entertainer
  ✓ Learn frame control <— Leader who earns status and respect

DGX37, a PU alumnus, says about his supposed lack of basics:

> (…) and yet by walking confidently, moving without a doubt (…) rejecting bad frames (…) quickly changed to "seems we don't need to look after you after all" and **one person even came to me saying "I'm shocked at**

> **how confident you are."**
>
> So that convinces me that **you may have low confidence and social skills but if you act powerfully people will see you as socially skilled and confident**.
>
> *DGX37*

I agree.
Acting high power is a *foundational* skill.

5.2. Outside-in approach works: advanced teaches basics

PU's approach improves your basics without even focusing on them because power skills include social skills.
Power skills are the high-agency form of social skills.

For example:

- Learn how to persuade and negotiate (⍰ advanced)
  - ➡ Also learn how to maintain a conversation (⍰ basic)

- Make women attracted (⍰ advanced)
  - ➡ Also engage with women without being weird (⍰ basic)

Indeed, says Bel:

> **I was able to get some of the "basics"** (eg thanking back, responding to emotional bids) **only after learning some "power self-defense" and "reading people".**
>
> *Bel*

Mats also shared that advanced material keeps you more engaged. It provides further motivation to stick through, and apply the material.

6. Advanced teachers provide you the role models

Basic courses often lack skilled teachers, limiting your progress.

Says Ali, a PU alumnus and self-development author:

> (…) As a beginner with no advanced knowledge, **some of the people one would be interacting with would also be beginners with no advanced knowledge**. And that makes it difficult to know if you're doing something right because **their feedback can often be inaccurate**. (It's a case of the blind leading the blind.)
>
> *Ali*

He's right.
Good role models teach even when they aren't teaching.

As Transitioned adds:

> For me **people learn by imitation**. So for me it wasn't about basics and advanced but more about gaps and calibration.
>
> *Transitioned*

Beginner teachers are blinds leading the blinds

Life Examples

We saw many examples from our alumni.

But there are several examples we can point out outside of TPM as well.

Some of them:

⍰ From autistic kid to socially successful millionaire

Neil Strauss says that RSD-Tyler started in pick-up as an autistic kid who couldn't look others in the eyes.

He's still not super smooth, but he enjoyed dating and business success.

Starting from the basics would have taken him years, and chances are that he would have never excelled at those basics anyway.

⍰ Basics without power: no status, respect, or dates

What happens when you have the basics, without foundational power:

> **Charlie**: Jack, you're a naturally charismatic man, congratulations!
> **Jack**: (complains he can't get a girl and is the lowest status man in the room)

Skills that give you no status, respect, or dates are useless.

Are You Ready For PU?

Here are quick litmus tests for you:

- **Can you handle basic tasks, like talking to customer service?**

If yes, you likely have enough basics.

- **Have you made or kept friends?**

If yes, that's a sign you're ready.
Girls aren't part of the assessment because the first dating steps are more about confidence than skills.

- **Can you follow our advanced articles?**

If yes, you're set to master PU's framework.
Even if some passages are challenging, PU's step-by-step approach makes learning easy.

Should You Go For PU?

You'll decide what's best.

But for most, foundational skills are the fastest path to status, respect, and confidence.

Says a public review:

> **M**: Power University is by far the best investment I have made.
> It has changed my life and my relationships, not only with strangers, friends, and colleagues, but even my family members are treating me with more respect now.
> At 31, I am finally able to pave the way for the life I dreamt of as a child, and PU has played an instrumental role (…) it's the internalization and the application process that make the difference (…) to those who apply themselves. For those who are contemplating joining PU, let me tell you: it's worth 10 times the price for the value it provides no book or platform can

How to Be An Alpha Male In 10 Simple Steps

Lucio Buffalmano · 14 June 2023 · Archived copy · Original

Want to master the traits of high-status, successful men?

In popular culture, the term 'alpha male' refers to men who rise to the top of social hierarchies—men who command respect, influence others, and achieve success in competitive environments.

While the term itself is not a formal scientific category, research on **status hierarchies, dominance, leadership, and social power** provides strong evidence on the traits and behaviors that help individuals rise in rank.

This guide translates those insights into practical steps to help you build status, develop powerful traits, become more masculine, and climb hierarchies more effectively.

Let's start:

Contents

- 1. Gain Status
- 2. Be Ambitious: Seek Status & Success
- 3. Ditch Low Power Behavior
  - 3.2. Ditch Submissiveness & Passivity
  - 3.3… Ditch Low-Power Body Language
  - 3.4. Quit Subordinating Your Life to a Relationship
- 4. Behave High-Power
  - 4.2. Adopt High-Power Body Language
  - 4.4. Wear The Pants
- 5. Ditch Low-Power Mindsets
  - 5.2. Avoid Being An "Eternal Student"
  - 5.3. Cut Out Motivational Talk. Motivation Is For Betas
- 6. Think High Power
  - 6.2 Adopt The Alpha Male Traits
- 7. Be More Machiavellian
  - 8. Avoid Anything Overly Feminine
  - 8.2. Avoid Feminine Body Language
  - 8.3. Careful Breaking "Traditional Roles" Conventions
- 9. Be More Masculine
  - 9.2. Look More Masculine
  - 9.3 Get Bigger & Deeper
- 10. Become A Master At Your Craft
- Bonus: Become Prestigious
- FAQs

1. Gain Status

The standard definition of alpha male is:

The alpha male is the individual at the top of a power hierarchy.
And the alpha male *type* instead is the type of man who is most likely to climb hierarchies.

All other traits we list serve to facilitate the climb and acquire more status and power.

So now the question becomes:

How do you climb hierarchies to acquire status and power?

Some "rules" for gaining power are group-dependent.
But many of the most important ones are the same everywhere.

In **Power University** we go deeper with a proven system to climb upward in life.
But to get you started:

2. Be Ambitious: *Seek* Status & Success

The #1 trait to help you become an alpha male is drive.

Drive is the only necessary trait to become an alpha male because you can make up for any other trait you don't have.
But **if you are not driven to climb and advance in life… Then nobody else will do it for you**.

Drive is also necessary because it provides the fire and motivation to find a way.
Tony Robbins has a point when he says that it's not resources that are most important, but *resourcefulness*.

That's why one can be short and unattractive and still become an alpha male. If he's extremely driven, chances are he *will* find a way.

As an example of a short man who became an alpha male:

> **Berlusconi**: (turns around, and physically moves the taller guy to a corner)

3. Ditch Low Power Behavior

Low power behavior is the antithesis of becoming an alpha male.

And before we can think of *adding* high-power behavior, we must focus on *purging* low-power one.

Frankly, there are a million ways to act low power.
Plus, much of our behavior *follows* our mindsets, subconscious beliefs, and feelings.

We dig deeper in Power University, but to give you an idea:

- **Don't allow others to cross your boundaries**, including:
  - Invading your personal space
  - Touching you or your belongings
- **Avoid suffering or stewing in silence** when you feel disrespected (passive communication style)
- **Never be a passive victim of disempowering behavior**. Instead, always push back, including:
  - People making fun of you, including teasing
  - People undermining you or your leadership
- Avoid getting revenge in indirect ways (passive-aggressive, comes across as sneaky)

But also:

- **Fawning over attractive women**
- **Lusting after things** because high-power people either have them, or plan and act to acquire them
- **Idolizing other men** because you can't become an alpha male if you think others are so much above you

3.2. Ditch Submissiveness & Passivity

There are times when deferring is appropriate.

However, generally speaking, **you cannot be an alpha male if you're too submissive**.

To get you started with some real-life examples:

- **Verbal submissiveness** signals to avoid
- **Social submissiveness** to avoid
- **Passive communication** you better quit

And of course, never forget social power dynamics:

People test and attack you as part of the natural status negotiation.
And the general rule of that status negotiation is:

The more you let others one-up you and disempower you, the more status you lose. *And the more you stay stuck at the bottom*.
Conversely, the better you defend and counter-attack, the more status and respect you acquire.

But if you turn it around… You win.

3.3... Ditch Low-Power Body Language

Including:

- Hunched over
- Making yourself smaller

- Too high energy
- …

Also, be mindful of the little details.
Because, often, **it's in the smallest details that you sub-communicate masculine power or low-power tentativeness**.

Example:

The mask when most Western countries ditched it looks overly cautious. The grip on the mic is also "too delicate"
And no, aggressive-looking big guns won't help you if you hold them like a girl…

3.4. Quit Subordinating Your Life to a Relationship

#real talk:

Nothing says "beta" like a man whose life and decisions revolve around his wife.

Alpha males take full charge of their lives.
And **you cannot earn alpha male respect and status if your partner controls you**.

He lost his friends' respect with this:

Our common friend said to me in person that "it all depends on my GF" was "so cringe". I couldn't help but agree. Never subordinate your decisions to your partner.

4. Behave High-Power

Simple rule to become an alpha male:

To become an alpha male, *act* like an alpha male.

Here are some articles to get you started on high-power behavior:

- **Leadership**, a fundamental skill for alpha males, including in dating
- **How to act high-power**
- **How to talk high power**

Physicality always matters, but don't forget verbal skills.
Says Storr:

> As humans evolved, **our game of status also evolved from mostly physical, to mostly verbal and sub-communication**.
>
> *Storr, The Status Game*

So assertiveness and solid frame control are crucial.

4.2. Adopt High-Power Body Language

Trump faces the audience, snubs her, and has open body language and gesticulation. She rotates towards him, looks at him, and has a “hands up” gesture that mimics a powerless, “please” attitude

Alpha males tend to move and act:

- **With high social ROI**, meaning that they invest little and get a lot in return
- **Lower energy**, albeit it’s certainly possible to be alpha and high energy
- **Slow and deliberate**

Learn more at:

- **Alpha male body language**: older article, but timeless concepts
- Confident body language with newer and polished examples

Taking up space and spreading out is a popular and tested advice to sub-communicate comfort and confidence

Women Are Attracted To Socially Powerful Men

Men respect socially powerful men, and women find them attractive.

As one Power University student shares in the forum:

- after studying and applying PU, my partner has started to really be attracted to me at a primordial physical level, like she never was - and I as well to her;
- all the power moves from her are disappearing: she now tries to be more loving, more close, more helpful than ever;
- my "material giving" has been steadily reducing (unconsciously) all the while since I started PU, and now is basically almost zero;
- it has started to happen that other women whom I find attractive approach me (especially in stores) or show high interest, sometimes even when my partner is present. And she has noted it as well.

> **After studying PU my partner has started to really be attracted to me at a primordial level**, *like she never was -and I as well to her*
> *(…)*
> *All the power moves from her are disappearing,* **she now tries to be more loving, closer, more helpful than ever**

> *(…)*
> **Other women whom I find attractive approach me** *or show high interest, sometimes even when my partner is present*
>
> *Power University alumnus in TPM's forum*

4.4. Wear The Pants

Wearing the pants in the house is both the minimum entry level AND enough to be an alpha male.
Your home is your castle. And doesn't matter how dilapidated that castle may be, if you're king there, you're good (enough) to be an alpha.

Meaning:

You could work a dead-end minimum wage job and drink beer every evening and *still* be an alpha male *as long as you wear the pants in the house*.

But please get the right mindset and stay away from much of the current toxic advice.

We advocate for being benevolent, value-adding relationship leaders here by *earning* that respect.
(Which is also a lot better *for you*, by the way).

5. Ditch Low-Power Mindsets

The mind is the backbone of the alpha male type.

And the mind is foundational because **thoughts precede behavior**, **govern unconscious body language, and control instinctual responses**.

Some possible foundational issues include:

- **Excessive self-doubt**
- **Self-loathing**
- **Low self-esteem**
- **Self-debasement in favor others**
  - Pedestalizing others, which is willing subordination
  - Fandom

5.2. Avoid Being An "Eternal Student"

Of course you must learn.

However, **avoid being a low-power learner and an eternal student**.

Again, this is about mindsets.
Alpha males see themselves as learning on the way to being top dog alphas, not eternal students.

The teacher is intrinsically higher status. And narcissistic teachers "power scalp" on that. They disempower power-blind students who are only becoming bigger betas

Read more at:

- When an extreme "learner mindset" disempowers you
- Guru-disciple disempowering frames

5.3. Cut Out Motivational Talk. Motivation Is For Betas

It's about foundational alpha male psychology:

Alpha males don't need motivational talk because they're intrinsically motivated.

And albeit they won't say it, here's a little golden nugget for you:

Many alpha males look down on men who consume motivational content.
To alpha males, they're mentally weak time wasters.

So here's a more alpha-type mindset for you:

You want whatever your actions get you.
If you're not putting in the work to achieve X, you don't really want it.

So instead of "motivating yourself", embrace whatever you do.
And if that means drinking beer while watching a match, great.

5.3.2 Reject All Disempowering Motivation

No alpha male signs up to being talked down to and framed like a soft p*nsy

The worst motivation talks down on you and frames you as an unmotivated pansy (see David Goggins and Dan Pena style).

Motivation is already a covert power move.
And disempowering motivation is a red-level power move.

Just think about it:

Who can accept someone who talks down on him and frames him as a spineless man?
Only a spineless man can accept that “motivation”.
And those are NOT alpha males.

6. Think High Power

The healthiest and most mentally resilient alpha males accept themselves, love themselves in spite of everything, and believe in themselves

The conundrum of the mental aspects of becoming an alpha male is:

Self-esteem is more foundational, but confidence is comparatively more important to becoming an alpha male.

Confidence is more important because confidence *shows* more than self-esteem.
But self-esteem is more resilient and crucial for mental health.
So, we recommend starting from self-esteem.

Some of the psychological foundations to become an alpha male include:

- **Basic self-esteem**: "I am worthy and feel good about myself"
  - Comparative self-esteem: "I am as worthy as anyone else"
- **Entitlement**: "I *deserve* power"
  - Positive entitlement: "I deserve power because I can add lots of value"
- **Confidence**: "I *am* capable and high-value and *can* acquire status"
  - Antifragile confidence: "I *can* become capable in at least some domain if I apply myself"

To do well in life, above-average levels of empowered thinking are enough.

But to reach the top, you need more.

Rather than simply avoiding an inferiority complex, many **high-achieving alpha males have a *superiority* complex**.
And that is especially true for "underdog" type of alpha males.

It's simple logic: extraordinary achievement requires extraordinary character.
This is why the dark triad is over-represented at the top: they're more extreme.
And this is where we step, empowering good men to win that game.

On self-esteem, see:

See this for confidence.
Or get our full Confidence University.

6.2 Adopt The Alpha Male Traits

Common alpha male traits include:

- **Risk appetite**
- **High demands** and expectations
- **Courage**, to do what needs to be done
- **Competitiveness** and "drive to win"
- **Goal-orientation** and mission-focus
- **Emotional steadfastness**
- **Emotional self-reliance**, based on solid self-esteem. People and events don't dictate how the alpha male feels about himself
- **Goals & process over feelings**
  - "F*ck happiness", alpha males focus on achieving
- **Pride**, in yourself, your work, what you stand for
- **Decisiveness and bias for action**
- **Focus on what's possible**

Of course, mind the law of balance.
Any good trait *can* be taken to a self-defeating extreme.
For example, extreme risk appetite turns into ineffective recklessness.

7. Be More Machiavellian

As a rule of thumb:

Social strategists beat strongmen in the race to the alpha male role.

If that's true in chimps, it's even truer for us humans (Ridley, 1993).

We're all about smart strategizing here.
Some of our articles include:

- How to be more Machiavellian

And well, by now you probably know that we get a lot deeper on that in Power University.

8. Avoid Anything Overly Feminine

What's 'overly feminine' in part stems from biological differences, but it's largely interpreted and shaped by culture. The more masculine the culture, the stronger the demarcation lines.

This list refers to contermporary Western culture.

Basics:

- Pink color (
- Red hearts
- Effeminate body language

Intermediate:

- Endless “relationship talks”
- Gossiping
- Drama

Advanced:

- Emotional over-reaction
- Superstitions (horoscopes, woo-woo, law of attraction, etc)

8.2. Avoid Feminine Body Language

With the power moves he couldn’t defend against Trump and with this type of body language, Jeb Bush was not president material

It’s quite obvious that Jeb Bush’s expression above is not very “alpha”.

However, the more advanced level is in the details.

8.3. Careful Breaking “Traditional Roles” Conventions

This is where it gets trickier.

Dominant alpha male types tend to be more right-wing (Kleppesto et al., 2022).

These politically conservative alpha males consider traditionally female roles as feminine.

Albeit we always advise avoiding silly extremes, it’s good to keep in mind the “traditionally feminine” endeavors:

- Doing the cooking at home
- Taking care of the decor
- Beauty products fascination
- Stay-at-home daddying

To capture this with a meme:

Albeit a for-fun meme, it’s not wholly baseless. The more conservative alpha males think exactly like that

9. Be More Masculine

To become an alpha male, you need to earn male respect.

And **masculinity helps you earn credibility, respect, and status with other men** (Vanedello, 2013).

No need to overdo it. Most men who avoid being feminine will be “masculine enough”.
But if you need some help, some of the basics are:

- **Team sports experience**
- **Know how to drive a car/motorbike**
- **Basics of assembling or fixing things**. More about the attitude of wanting to check, understand, or at least try (before calling professional help)
- **Defense of self, others and/or home**

Generally speaking, watch out for correcting masculinity because it’s easy to overdo. And you don’t want to come across as over-compensating, posturing, or “off”.

9.2. Look More Masculine

There’s much you can do.

Just to give you some ideas:

- **Dress professionally high power** at work
- **Get a masculine metal watch**, keep the plastic for your runs, and steel above gold
- **Wear adult male shoes, ditch the sneakers**
- **Stay in decent shape**

The left man raises the odds he’ll go places, becoming higher value and “more alpha” than the guy who doesn’t care
P.S.:
if you’re balding, shave.

Bald heads are masculine and high dominance.

9.3 Get Bigger & Deeper

Yes, physicality matters.

Getting buffer for shorter guys helps, and baby-faced men can gain with more power and less warmth.

You can also work on your voice, posture, walk, and many more.

See Power University to win as an underdog and/or smaller guy.

10. Become A Master At Your Craft

Get good at whatever you do.

Competence helps you to become an alpha male because:

1. **Competence is power**. You can charge more and acquire resources, make higher-power friends, teach others, etc.
2. **Men respect competence**
3. **Competence implies several masculine and alpha-life traits**, such as drive, ambition, perseverance, and sometimes even a geeky but still masculine "obsession"
4. **Competence helps you raise through the ranks**, especially in goal-focused organization

Of course, to make the most of competence you need to pair it with power intelligence and skills. Otherwise, many competent but naive men only become greater targets for exploitation.

Bonus: Become Prestigious

Yoda, an avatar for "wisdom", is someone you could respect and look up to despite him looking very alpha

Some alpha male traits have an invincible enemy that never quits and always wins.

And that is time.

For example, all physically related traits, including strength and size, decrease with time.

Luckily though, some status-promoting traits can *increase* over time (*if you work on them*, of course).
So **if you're strategic about your self-development you can stay an alpha male**, *no matter what happens to your body*.

The traits to work on relate to what psychology researchers refer to as "prestige" (rather than simply "dominant").
You're prestigious when people *willingly* give you status and *willingly* accept your influence.

Here are some traits or skills that make you prestigious:

- Experience
- Wisdom
- "Worldliness"
- **Achievements**, even if old ones
- **Mastery** of a skill or knowledge domain
- **Character**, including integrity and honor

Prestige is all about ultimate self-development, including reaching a more "enlightened" stage

Example: When Alpha Types Subordinate To More Prestigious Men

The author's nephew is taller, larger, more muscular, and more socially dominant…

And he still willingly subordinates to yours truly.

Including some form of "slightly intimidated reverence" when he shared feeling "green and unaccomplished" in the author's company.
And wrote to "one day hope to be at the same level".

That slight prestige-based intimidation can also be a very powerful attraction tool in dating.

FAQs

And these are some common questions we often receive on our various channels:

Can I become an alpha male?

While individual advice without in-person assessment is impossible, chances are that you can do a lot to become more like an alpha male type.
Whether you will ultimately reach the peak of any status hierarchy depends on many factors such as your starting point, the time horizon, your environment, and your level of drive and effort.
However, you can most certainly advance and do better and better.

Can any man become an alpha male?

All men can do a lot to become more like an alpha male because many of the mindsets, traits and behaviors range on a spectrum and can be acquired, increased, or learned.

How can I become an alpha?

While coming up with an individualized plan is always the best approach, we can generally suggest two high-level approaches that tend to be effective.
One is to start focusing on your biggest and addressable weakness, or your biggest "glaring lack". The second approach is to work on both mindsets and behavior at the same time, and to start with self-esteem as the foundation of a strong and healthy mind.

What are the best courses and books to become an alpha male

The best resources to become an alpha male draw from science, first-hand experience, and the author's expertise. Make sure the author covers all three angles because some marketers and less-than-ideal teachers may prey on still-naive men.
Picking a worthy teacher is also important because we learn by example and chances are you will be emulating his personality.
Finally, courses with video examples are superior to books because you will learn the most by seeing. And courses with quizzes and exercises can be helpful to help you internalize the mindsets.

Can I be an alpha male if I'm a short guy?

Albeit height certainly helps both with gaining other men's respect and with your own self-confidence, you can most certainly become an alpha male as a short guy.
As a matter of fact, height's most limiting factor is often self-imposed. Meaning that it mostly matters only insofar as *you* believe that it should matter. (And conversely doesn't matter much if you ignore it first).
The same holds true for any other "lack". And we built this whole website to help the underdogs succeed.

See Power University for the one-stop program to become a high-quality alpha male

Psych 101: Summary & Review

Lucio Buffalmano · 18 June 2023 · Archived copy · Original

Psych 101 provides an overview of psychology history with the essential facts about the most influential psychologists and psychology theories and main topics.

Notes

What Is Psychology

Psychology is the study of mental and behavioral processes.

The field of psychology took off in 1879, when German psychologist Wilhelm Wundt created the first laboratory devoted to the study of psychology.

Historical Figures & Their Psychology Theories

- **Ivan Pavlov, classical conditioning**. It's about learning something by association
- **B. F. Skinner, operant conditioning**. Or to learn through rewards and punishments.
  Partial reinforcement is more resistant to extinction because the behavior is learned over time.
  To learn new behavior a fixed schedule is superior. But a variable interval schedule is more resistant to extinction
  - Positive Reinforcement: strengthening a behavior via rewards
  - Negative Reinforcement: strengthening a behavioral pattern by result of avoiding or stopping a negative condition
  - Punishment: weakening a behavioral pattern through negative conditioning (punishments)
  - Extinction: weakening a behavior by no longer providing the reinforcement that created it in the first place
- **Sigmund Freud, psychoanalysis**
- **Lawrence Kohlberg, stages of moral development**. A modification of Jean Piaget's work
- **Stanley Milgram**, Milgram Experiment on obedience
- **Alfred Adler**, individual psychology. The rejection of Freud's "universal and biological factor" that makes

everyone the same in favor of a more individual approach that takes into account individual experiences and environmental and societal factors. So no single theory can be applied to everyone.
See *Understanding Human Nature*

- **Philip Zimbardo, The Stanford Prison Experiment**. Albeit there has been much criticism, it successfully showed at the very least that the situation powerfully influences individual's behavior
  See *The Lucifer Effect*
- **Solomon Ash, conformity & the power of social influence**. 32% of the participants conformed to the answer that was obviously wrong because the rest of the group did give the wrong answer.
  Conformity increases when there are more people, when everyone else agrees, and when the right answer is less obvious. If just one person disagrees with the rest, people have a lot more "courage" to give the right answer ("social support")
- **John B. Watson** (1878–1958), **behaviorism**. Built on Ivan Pavlov's operant conditioning, behaviorism sees the individual as a passive clean slate that only responds to environmental stimuli through conditioning (both classical and operant)
- **Hermann Rorschach** (1884–1922), **Rorschach inkblot test**, a psychoanalytic test based on the answers the individual provides to a series of inkblots.
- **Harry Harlow** (1905–1981), **maternal love**. He showed that love is vital in the development of a normal child and that love deprivation can lead to severe emotional damage
- **Jean Piaget** (1896–1980), **children's development**
- **Albert Bandura** (1925), **social learning** and observational learning. He proved this with the "Bobo doll experiment"
- **Carl Rogers** (1902–1987), **client-center therapy**. Rogers founded a new approach to therapy focused on curing, rather than diagnosing, and in helping the client help himself. Today it would be considered "humanistic psychology" or even, in part, "positive psychology".
- **Abraham Maslow** (1908–1970), **humanistic psychology** and positive mental health. He is most famous for the "Maslow hierarchy of needs", which has become very popular but also much criticized (and for good reasons, in this author's opinion. Not scientific, and also a very reductionist theory to truly make sense of human psychology.
- **Kurt Lewin** (1890–1947), one of the founding fathers of **social psychology** because he brought the Gestalt principle of looking at the full environment to understand human behavior. Also did early research on "leadership styles"
- **Carl Jung** (1875–1961) was influenced by Freud but renounced his sex theory. Jung believed every person's purpose in life was to have his or her conscious and unconscious become fully integrated to become their "true self" (individuation)
- **Henry Murray** (1893–1988), came up with a list of "psychology needs"
- K**aren Horney** (1885–1952), came up with a list of "psychology needs". It includes the need to have power, for people who hate weakness but admire and desperate for strength. and are desperate for, strength. The need to exploit others, for Machiavellians who see others as tools to reach their goals.
- **John Bowlby** (1907 -1990), considered to be the initiator of **attachment theory**
  - **Mary Ainsworth**, expanding attachment styles to recognize secure, avoidant, and anxious attachment types
- **Albert Ellis** (1913–2007) Rational Emotive Behavior Therapy (REBT) was the basis for the modern and very popular **cognitive behavioral therapy**
  See: *How to Stubbornly Refuse to Make Yourself Miserable*
- **David Kolb, learning styles**
- **Lev Vygotsky** (1896–1934), **reciprocal teaching**

Important Psychology Theories

- **Cognitive Dissonance** (Leon Festinger), based on people's inner drive and desire to avoid dissonance (or disharmony) in all of their attitudes and beliefs (cognitions), and to achieve harmony (consonance) among their cognitions.
- **Drive reduction theory** (Clark Hull), trying to explain behavior with a mathematical formula based on biological needs or "drives". It's largely ignored today.
- **Attribution theory**, explaining how people explain the events around them, and why people do what they do.
  - Self-serving bias, to blame external events when we fail, and to credit our success to our qualities
- **Heuristics and biases**
  See: *Thinking Fast and Slow*
- **Self-discrepancy theory**

Schools of Thoughts

- **Gestalt psychology & visual perception** (Max Wertheimer, Kurt Koffka, and Wolfgang Kohler). Behavior and mind should be looked at as a whole.
- **Cognitive psychology**, focusing on how an individual acquires, processes, and stores information. For 2 decades from the 1950s it replaced behaviorism as the dominant school of thought focusing more on internal processes such as attention, memory, intelligence, problem-solving, perception, decision making and language processing.
  Contrary to psychoanalysis, it uses the scientific method of investigation.

Basic Theories On Groups

Groups have a powerful and sometimes even dramatic effect on individuals.

The most basic theory regarding social psychology is that when a person is alone, he or she is more relaxed and not concerned about the appearance of their behavior. By adding just one other person to the equation, behaviors begin to change and people become more aware of what is going on around them.

- **Social facilitation**, a person can perform simple or well-learned with a greater performance level when there are people around. But they perform less well if it's a new or difficult task.
- **Groupthink**, a tendency to stifle any dissent when the group has agreed on a certain topic (or when people *think* that the group has agreed on a certain topic)
- **Group polarization**, when group dynamics push for extreme positions and most people agree but wouldn't have agreed individually. To avoid it, homogeneity should be avoided, dissent welcome, and no dominant leader with an agenda should overwhelm the group's individuals
- **Bystander effect**: as a group gets larger, individuals are less likely to help those in need

Theories of Intelligence

Intelligence is one of the thorniest and most divisive subjects in psychology.
One of the reasons, says the author, is that we lack a standard definition for what intelligence actually is.

> While some believe it to be a single ability, others believe intelligence is a variety of talents, skills, and abilities. For the most part, however, it is agreed that intelligence includes a person's ability to think rationally, problem-solve, understand social norms, customs, and values, analyze situations, learn from experience, cope with life's demands, and think with reason.

We made a case for our own measure of intelligence here.
See:

- **Power Intelligence**

> Power Intelligence (PI): What Is it, How to Increase It

Leadership Theories

There are many different theories of leadership and, as the author says:

> But how does one make a great leader? To put it simply: many different ways

Also see:

- *The New Psychology of Leadership*
- How to be a leader, a more practical article largely based on the above book

> How to Be A Leader: 13 Laws From Social-Psychology

Personality

Personality includes the thoughts, behaviors, and emotions that make an individual unique.

The key characteristics that psychologists tend to agree on when defining "personality" are:

- **Consistency over time and space**, behave in the same or similar ways in different types of situations, and often consistent over a lifetime
- **Behavioral influence**, being either the cause of a certain behavior, or a heavy influence within a certain situation
- **Includes biology**
- **Relationships, thoughts, and emotions are also part** of personality

The Big Five is currently the most popular theory of personality.

MORE WISDOM

- **Poor Researchers Can Be Nasty & Play Power Moves**

I was 1/3 amused, 1/3 angry, and 1/3 saddened by this:

> Because Jung renounced Freud's sex theory, the psychoanalytic community turned against Carl Jung, and he was cut off from several associates and friends.

CONS

- **Too much space on unproven theories?**

Almost a whole chapter based on the interpretations of inkblots answers in my opinion was too much.

- **I'd have liked a more "critical" account**

Such as, not just listing theories and schools of thought, but also including why they may be less popular today, why they're incomplete, or what was wrong with a certain old belief.
To be sure, the author does that and there are plenty of "criticism" sections. But I would have liked even more :)

- **Unproven theories may need a bigger "warning"**

Interpretations of dreams or inkblots aren't scientific.

In my opinion, they should come with that "not science" warning.

Take this part for example:

> Seeing a spider can symbolize fear, a feeling of entanglement, or a feeling of being trapped in an uncomfortable situation as a result of telling lies. It can also symbolize an overbearing mother and feminine power.

Yeah, sure, and it can also symbolize… Pretty much anything because it's wholly unscientific and only limited by the "psychoanalyst" own fervid imagination.

I think that if psyhcology wants to be a "proper" science, **psychologists should be quicker to highlight what's NOT science**.

REVIEW

Psych 101 is a very good overview of psychology history, prominent psychologists, and many theories and famous experiment.

I very much enjoyed it and even as a non-beginner I could learn something new.
And it helped to put a few things in perspective.

Check the **best books** to read.

How Storytelling Reveals Who's NOT A Friend: 5 Red Flags

Lucio Buffalmano · 18 June 2023 · Archived copy · Original

Using a story to covert-brag can be fair.

But if the covert brag involves you looking bad and your "friend" looking great by comparison, well, that's a nasty power move.

We call it "nasty social climbing".
And it's when someone uses you as a "social peg" to reach higher (while they push you *lower*).

Let's see a real-life example of how that would look like:

Contents

- Red flag #1 ⍰: You look bad in the story
- Red flag #2 ⍰: They frame you as "below them"
- Red flag #3 ⍰: They pull power moves on you
- Red flag #4 ⍰: They're leader-like, you… More like a follower
- Red flag #5 ⍰: They look high-power, you… Not so much
- Good Friends VS Bad Friends
- Learn to read people: it's foundational to a successful & good life

Red flag #1 ⍰: You look bad in the story

Imagine:

Your friend is telling a story involving both of you.

Generally speaking, **how he tells the story tells you A LOT about how good of a friend he is**.

The key question is:

"How do you come across in that story?".

If you come across poorly, your friend is "pushing you down", decreasing your status, and disempowering you.

Of course, someone may ask:

But what if I actually WAS "bad" in tha story?

And of course, it's entirely possible that in that story you didn't perform all too well.

But still… Ask yourself: why would a *friend* share a story where you looked poor?

And compare: how would a good friend share a story where you looked poor?
And the answer is that **a good friend would NOT publicly share a story that makes you look bad** unless he truly had to.
Not without power-protecting, at least. He would power protect you, for example, by justifying your poor performance, omitting some details, or by at least saying you're an awesome guy despite that one single f*ck up.

Note that a particularly bad friend instead will *revel* in telling the story of your f*ck ups.

Red flag #2 ⍰: They frame you as "below them"

Poor friends tell stories where:

1. They're above you
2. You're below them

There are a million ways to be "below them".
They can frame you as their mentee, their "beta friend sidekick", their employee, or simply as you asking them for clarification.

And there are also more subtle ways.
But even subtle ways are still red flags.
No matter how small, **it's always a red flag whenever you come out of the story looking like you're the "junior partner"**.

That's because, again, you must compare it to how a good friend would behave.
And a good friend who's truly above you would frame any story as you two being equals.

Red flag #3 ⍰: They pull power moves on you

It's a nasty power move if in the story they reprimand you and you take it. No matter how "fair" the reprimand was, it's a power move because a friend would never share it publicly but keep it private between you two

This is one of the nastiest.

Whether they actually pulled a power move on you in real life or not, it's still a red-level power move to do so within their story.

If they did it in real life, it's twice a red flag because they did it in real life, and in the story.

The fact they pull power moves, and then *goad* about it… That may be all you need to cut ties with those people.

And if they didn't do it in real life, it's still twice a power move because they social climb on you, *and* they lie to do so.

Added redness if they pull the power move, and you submissively and naively take it.

This is what *competitors* do.
Or even *enemies*.

Those are NOT your friends.

Red flag #4 ⍰: They're leader-like, you... More like a follower

Generally speaking:

Bad friends who want to social climb share stories where they come across as great leaders, and you as a great… Follower.

They (covertly) brag of alpha male traits, high-value man qualities, or prestigious man wisdom.
You may as well be a good follower… But you're still a follower nonetheless.

Some red flags include:

- They tell you what to do, you execute
- They move first, you right after
- They suggest or advice, you confirm it's great advice

Red flag #5 ⍰: They look high-power, you… Not so much

Great friends would never share a story that makes them look good if it makes you look bad. Instead, this is a case where some omission and white lies that power protects you are GREAT signs of a good character.

There are a million ways to frame you as low power and themselves as high power.

But no matter which angle they take, if in their stories they look cool and you “not so much”, they’re shi**y friends.

Some red-level signals include:

- You’re tense
- You’re afraid or panicking
- You’re clueless
- They’re calm and collected
- They’re in control
- They know what to do

But also watch out for more subtle framing.

For example, they may not save the day.
But they may offer reassurance and make you feel a bit good again.
Or, at the very least, you recognize that they’re the “voice of reason” and generally provide good advice.

A good friend would never go around

Good Friends VS Bad Friends

Remember:

Good friends pull you *up*.
Shitty friends push you *down*.

Learn to read people: it's foundational to a successful & good life

Reading people and assessing characters is a foundational life skill.

In **Power University** we help our students internalize all the red and green flags that make reading others natural and second nature.

The Oxford Handbook of Accurate Personality Judgment: Summary & Review

Lucio Buffalmano · 25 June 2023 · Archived copy · Original

The Oxford Handbook of Accurate Personality Judgment (2021) synthesizes contemporary theory and research on the accuracy of personality judgments, exploring relevant issues such as when we are most likely to make accurate trait inferences, and what we can do to improve our "people reading skills".

Exec Summary

- People are generally good at assessing others
- Some people are better than others at assessing character traits
- It's possible to improve our ability to read others

Full Summary

About the Authors:
The authors are multiple researchers in the study of personality judgment.

People Are Generally Good At Assessing Others

> Much research supports the conclusion that judges can often make fairly accurate judgments of the personality traits of others (Brown & Bernieri, 2017; Colman et al., 2017; Connelly & Ones, 2010)

Models: Lens Model & RAM

The four moderators of accurate personality judgments are:

1. **Good judge**: people differ in how accurately they judge others.
   A good judge utilizes many valid cues, disregards the invalid ones, and is good at eliciting more cues.
2. **Good target**: people differ in how easy it is to accurately judge them
3. **Good trait**: personality characteristics differ in how easy it is to accurately judge and rate them
4. **Good information**: information differs in how useful it is for making accurate judgments
   - Information quantity (acquaintanceship): more information tends to result in more accurate judgments than having less information
   - Information quality: some information may be very telling of someone's personality, some may be only a small indicator, and some information may take up mental processing space but add no value or even confuse and lead astray

Lens Model

> Brunswik's lens model provides a conceptual framework that can be applied to explain how lay observers make sense of personality characteristics of targets that are not directly observable.

The level of accuracy is determined by the multiplication of predictability, consistency, and sensitivity; that is, to achieve accurate judgments, all three need to be positive.

Dual Lens Model

> the dual lens model differentiates more controlled versus more automatic aspects on all levels of the lens model (i.e., personality self-concept, cues, personality judgments)

Realistic Accuracy Model (RAM)

> The RAM was formulated as a corrective complement to error research, by focusing on how judgments could be accurate rather than inaccurate (Funder, 1987).

- **Relevance** indicates that there must be behavioral cues relevant to the trait or characteristic being judged. The target primarily influences success at this stage, doing or not doing things that are relevant to and consistent with their traits
- **Availability**, indicates that the cues have to be available in the external environment
- **Detection**, or noticing the relevant and available personality cues. The judge primarily influences this stage's success
- **Utilization**, or to correctly utilizing the cues to make an accurate judgment. Includes several sub-abilities, including:
  - Determining which cues are relevant to the trait being judged,
  - Giving appropriate weights to various cues
  - Combining the cues with each other

- Other characteristics, such as those of the situation that may influence behavior

What Makes Good Judges

- **Intelligence and cognitive ability**. "*One of the most consistent characteristics that differentiates good judges from those who are less skilled (Allport, 1937; Christiansen, Wolcott-Burnam, Janovics, Burns, & Quirk, 2005; Funder, 1999; Lippa & Dietz, 2000).*"
  - Dispositional intelligence, *"very similar to the construct of emotional intelligence (see Mayer, Roberts, & Barsade, 2008), but rather than a focus on emotions, emphasis is placed on thoughts and knowledge about the interrelations among behavior, traits, and situations (Christiansen et al., 2005).*"
- **Knowledge** of psychology, and how behaviors and personality are related
- **Agreeableness**
- **Social skills**, (e.g., knowledge about cue meanings)
- **Higher motivation of judges**, likely increasing attunement to social stimuli
- **Perspective-taking and empathy**
- **Psychological adjustment**
- **Higher interpersonal orientation** (e.g., agreeableness, extraversion, empathy)
- **Social curiosity**: A study found that judges with high social curiosity about "how other people behave, think, and feel" (Hartung & Renner, 2011, p. 796) made more accurate judgments of extraversion and openness following a 10-minute interaction with a stranger, than did judges with low social curiosity

There is also some evidence that good judges know of being good judges.

Women may also be slightly butter, but not by much:

> Overall, if a gender difference in judgmental ability exists, it would likely favor women. That said, I caution against making any large and sweeping generalizations, since differences that were found were of rather small magnitude.

What Doesn't Necessarily Make Better Judges

Reading others doesn't seem to be a case of "it takes one to know one":

> a question that is sometimes raised is whether being high on a trait makes a person an expert at judging that trait in others. However, research to date has not found that judges who are higher on a certain trait typically make more accurate judgments

What Makes Good Targets

- High levels of psychological adjustment
- Behavioral consistency
- self-confident
- Social skills
- Extraversion
- Emotionally stable
- Expressiveness

And:

- Less deceitful
- Less self-defensive
- Less likely to keep others at a distance

Targets can and probably should do more to show their true colors:

> Targets can facilitate being viewed in line with their true selves by providing a higher quality and quantity of information and delivering that information in a way that elicits greater judge attention and motivation to be accurate. In turn, being perceived in line with one's true self may often feel inherently good and foster broader psychological and social well-being.

The cool thing is that it's possible for targets to self-promote, and still facilitate a more honest assessment:

> self-presentation of targets, often involving the aim to convey a positive but authentic impression (Schlenker & Pontari, 2000), may enhance observer attention and the accuracy of respective trait inferences (e.g., Human, Biesanz, Parisotto, & Dunn, 2012). For example, targets' self-presentational goal of appearing smart led to more accurate observer impressions of individuals' intelligence (Murphy, 2007).

What Makes A Good Trait

In general, traits that are more outwardly visible are easier to judge.

> Extraversion, for example, can be considered as a "good trait," as it often shows a high amount of behavioral manifestation (e.g., Borkenau & Liebler, 1995; Funder & Sneed, 1993). In contrast, traits such as neuroticism or self-esteem tend to show fewer behavioral manifestations and to be more internal in nature (Vazire, 2010).

Also, traits that are considered to be either positive or negative also tend to be more difficult to accurately assess:

> Highly evaluative traits (i.e., low or high in social desirability), such as agreeableness, tend to be less accurately judged than neutral traits. This may be due to response factors that may distort targets' self-ratings (e.g., individual differences in overly positive self-judgments) and observer judgments (e.g., individual differences in overly positive other-ratings) for evaluative traits (e.g., Konstabel, Aavik, & Allik, 2006), thereby, a ecting self- cue relations (cue validities) and cue-judgment relations (cue utilizations).

What Makes Good Information

> Highly useful information includes information about general and specific behaviors, and thoughts and feelings (Andersen, 1984; Letzring & Human, 2014).

Things Can Do To Improve Your "People Reading" Accuracy

- Learn more about how traits are related to behavior
- Pay attention to the target to detect more cues (my note: albeit the book later says that more attention doesn't always translate in better judgment)
- Be agreeable and socially skilled to make targets comfortable to reveal relevant information about themselves
- Learn to think about what targets are thinking and feeling
- Spend more time with the targets in a variety of situations
- Ask targets relevant questions

- Create situations that "test" the target and show the more hidden and honest cues
- Create situations for the specific trait: "*the trait neuroticism expressed in more valid observable cues and could be judged more accurately by strangers in a neuroticism-relevant, socially stressful situation as compared to three less neuroticism-relevant situations*."
- Interact in unstructured situations rather than structured ones (ie.: do your job interview in a coffee shop, not in the office)
- Don't be sad, "*there is some indication that person perception accuracy decreases when judges are experiencing the state emotion of sadness (Ambady & Gray, 2002). Teaching judges how to regulate their own emotions as well as reduce their cognitive load before going into the judgment situation might improve accuracy*".

Become More Power-Aware

Generally speaking, it seems to me that being good at eliciting cues comes down to being power aware. Including good knowledge of persuasion and manipulation dynamics:

> In one study (Letzring, 2008) it was discovered that judges' use of basic social skills (e.g., eye contact, expressing warmth) and a lack of negative behaviors (e.g., seeking reassurance or advice, undermining or obstructing the target) were positively related to accuracy. It was concluded that such behaviors on the part of judges serve to increase targets' comfort and increase their willingness to reveal information (i.e., cues) about their true selves, which can then be detected and utilized when making judgments of the targets

Get Training With Feedback (Consider PU)

> . A 2012 meta-analysis of 30 experimental studies that tested dierent training approaches demonstrated that practice with feedback about performance was the most eective way to improve person perception accuracy (Blanch-Hartigan et al., 2012)

Simply telling people what to look for wasn't nearly as effective:

> Simply instructing people about what cues to look for on its own did not seem to be an e ective approach, a result consistent with a meta-analysis focused just on training in the domain of deception detection (Driskell, 2012). However, multiple training approaches used in combination with practice with feedback was more e ective than a single approach (Blanch-Hartigan, 2012; Driskell, 2012; Ruben, Hall, Curtin, Blanch-Hartigan, & Ship, 2015).

This is why we devised quizzes in **Power University**: to provide you with immediate feedback for learning.

Good training is about *internalizing* the skills

> Making automatic, unconscious processing of trait judgments more deliberate and conscious might actually hinder trait judgment accuracy. For example, having more time to judge dominance from facial features does not necessarily improve accuracy (Rule, Adams, Ambady, & Freeman, 2012). The effectiveness of practice and feedback, especially compared to instruction alone, in general person perception research suggests that improving accuracy may mean internalizing feedback to make accurate judgments more automatic, but this needs to be further explored.

This is also our goal with Power University: the ultimate goal is to become a "natural".

Fundamental Issue of Trait Accuracy Research: What's The "Objective Truth"?

> The fundamental problem in trait accuracy research is the absence of an objective, unmediated criterion for truth.

And:

> (…) social knowing is fundamentally different from object knowing: every person has psychological coordinates that are brought to bear on each social interaction that yields nontrivial, unique social knowing. (…)Moreover, people do not behave identically in different dyads. This is why interpersonal knowing and associated relationship outcomes at the dyadic level have become increasingly important (Kluger & Malloy, 2019; Malloy, Kluger, & Martin, 2018).

Solutions

The solutions to come up with an "objectively define" personality are:

- **Self-rating by the target himself**: "*although self-judgments are not always perfectly accurate, the majority of studies suggest that self-judgments of personality have considerable validity. Self-judgments of both narrow, specic traits and the broad personality factors of the Big Five agree with judgments provided by knowledgeable others and predict personality-relevant states, experiences, behaviors, and consequential life outcomes*"
- **Psychological tests**
- **Third party evaluations**
  - By the researchers
  - By the people who know the target well

Meta Accuracy

Meta-perception refers to how others see us.
And meta accuracy refers to correctly assessing how others see us.

> meta-accuracy is both a form of self- knowledge and social knowledge (Carlson & Kenny, 2012), as it relies on the successful detection and utilization of available cues relevant to both the self (e.g., self-views, self-observations of behavior) and others (e.g., feedback, normative knowledge).
> Given that meta-accuracy is associated with positive social outcomes, learning how to improve meta-accuracy would likely be in people's best interests.

Unluckily, there wasn't much in terms of how one can improve his understanding of how others see him except that it relies on successful detection and utilization of available cues relevant to both the self such as:

- self-views
- self-observations of behavior
- feedback
- normative knowledge
- hearsay
- meta-stereotypes

Reading Nonverbal Cues (Body Language)

Nonverbal cues can help us assess people's traits.

Say the authors:

> Results of the included studies suggest that, for all traits, there are at least a few nonverbal cues that allow for accurate glimpses into one's personality. For most traits (i.e., extraversion, openness, conscientiousness, intelligence) this is in line with research showing above chance judgment accuracies, even by strangers (for overviews see: Connelly & Ones, 2010; Connolly, Kavanagh, & Viswesvaran, 2007; Hall, Andrzejewski, Murphy, Mast, & Feinstein, 2008; Kenny, Albright, Malloy, & Kashy, 1994; Kenny et al., 1992). However, even for traits that are typically viewed as not easily observable (i.e., agreeableness, neuroticism) we find multiple valid cues.

However, be careful not to overestimate the validity of nonverbal cues, something that many people do and can result in lower accuracy.

Cues To Look Out For

Some of the valid cues for some of the major traits include:

- **Extraversion**

The correct cues included:

> cheerful facial expressiondominant facial expression, general facial expressiveness, forward leans, gestures, self-assured posture, relaxed posture, expressive/varying voice, uent speaking, pleasantness of voice, con dence of voice, loudness of voice, speech rate, amount of talking, attractiveness, neatness, stylishness, lack of eyeglasses, volume of mouth, hair length, and the lack of dark clothes.

The wrong cues observers thought related to extraversion but weren't include: eye contact, body movement, and head movements.

- **Openness**

only self-assured/open posture, pleasantness of voice, volume of speaking, and hair length were valid and utilized cues.
Less talking was related to actual openness, but observers did not use this cue.

- **Agreeableness**

Cheerful facial expression, small stride length, fluent speaking, attractiveness, and neatness of appearance were related to actual agreeableness and used by observers to judge this trait.
High-pitch and nondominant facial expressions were valid, but not identified by observers.

- **Conscientiousness**

> Cues that drove accuracy for conscientiousness judgments exclusively belonged to the domains of body language and appearance. These were self-assured/open posture, lack of self-touch, attractiveness, lack of distinctiveness in appearance, neatness, formality, and having shorter hair. Many more cues (e.g., fluent speaking, pleasantness of voice, wearing eyeglasses) were used when judging conscientiousness, but were not actually related with individuals' conscientiousness (see Table 13.7).

- **Intelligence**

> Paralinguistic cues played the biggest role in explaining accuracy. Especially, easiness of understanding, pleasantness of voice, speech rate, and amount of speech were used by observers and at the same time related to actual (measured) intelligence. Cues that were used but not valid were (for example): eye contact, amount of gestures, powerful voice, and attractiveness.

Physical and Virtual Contexts Provide Plenty of Valid Cues

> Research on judgment accuracy in physical and virtual spaces is has shown that in many cases trait specic accuracy (e.g., conscientiousness and openness to experience) is greater in these contexts than in face-to-face interactions

The Average Personality

Knowing the "average personality" is extremely useful.

One, because you can target the masses based on the average personality and be right with the majority of people. And two, even with individuals, in the absence of any cues or idea, you can still be right more often than not if you know what traits are more common for most people.

Here is the average personality profile:

Say the authors:

> Most people have at least some degree of explicit knowledge regarding the average personality, but there are a few who do not.

Stereotypes Are Often Accurate

For a long time, scholars labeled stereotypes as inaccurate.

However, albeit "national stereotypes" tend to not be very accurate, it seems now scholars jumped to conclusions without sufficient evidence.

Sum up the authors:

> Rigorous empirical assessments of the accuracy of stereotypes began in the late 1970s, accelerated in the 1990s, and, now, with over 50 empirical studies published, has yielded a surprising conclusion: highly inaccurate stereotypes are the exception; moderate to high accuracy is common.

The accuracy tends to go up when we poll large groups of people (e.g., Surowiecki, 2004; Jussim, 2012) and when people have direct experience with the target group.

Say the authors:

> Absent knowledge, stereotypes are likely to be inaccurate.
> This may explain the pervasive inaccuracy of national character stereotypes of personality (as measured by the Big Five), inasmuch as most people have little direct contact with many individuals from lots of other nations. In contrast, most people do have extensive experience with men and women, and with the young and old—which may help explain the accuracy found by so many studies of gender stereotypes (Hall & Carter, 1999; Löckenho et al., 2014; McCauley et al., 1988), and age stereotypes (Chan et al., 2012).

Partners Are Often Biased in Romantic Relationships

The two major biases in relationships are:

- Simialirty bais, or believing our partners are more similar to us than they really are
- Positivity bias, or believing our partners are better than they really are

> Among dating and married individuals, the majority of them believe their own partners are more virtuous than average or typical partners (e.g., Endo et al., 2000; Murray & Holmes, 1997) and are better than their friends' partners (e.g., Murray, Holmes, Dolderman, & Gri n, 2000).

Interestingly, acquaintanceship length, relationship closeness, and number of shared activities did not moderate accuracy, but married couples had much higher accuracy compared to dating couples and friend dyads.

Biases Can Be Adaptive

Up to a certain point, positivity and similarity bias can be adaptive.

It's when they become too much that they can turn maladaptive since the gap with reality would grow too wide and people would make the wrong decision or communicate poorly with each other.

Say the authors:

> partners holding stronger positivity bias report higher p. 269 relationship satisfaction and better quality (e.g., Fletcher et al., 2000; Fowers, Lyons, & Montel, 1996; Martz et al., 1998; Murray et al., 1996a, 1996b; Murray & Holmes, 1997). Longitudinal research also has found that relationships are more likely to persist when intimates idealize their partners and relationships (Fletcher et al., 2000; Helgeson, 1994; Murray et al., 1996b; Murray & Holmes, 1997; Rusbult et al., 2000).

The fact that biases can be adaptive is something that has often been missed and ignored since the work of Kahneman and Tversky.

More Wisdom

Looks May Provide Cues About Personality

> Associations between personality and appearance can be traced back to a variety of mechanisms involving environmental and biological factors. For example, appearance and personality might be related due to common biological causes (e.g., testosterone inuences facial hair growth as well as a more aggressive personality) as well as common environmental causes (e.g., the choice for a specic grooming style is specic for individuals that share the same values). Furthermore, physical dierences could serve as some form of self-fullling prophecy (e.g., tall individuals are expected to behave more dominantly, they thus act accordingly) or

> they could reveal dierences in past behaviors (e.g., individuals that laugh a lot might develop laugh lines and are thus judged to be happy or extraverts; see Zebrowitz & Collins, 1997 for an overview of these four explanations).

Practical Applications

Interview job candidates in multiple locations

Job interviews are a game of chess.

The interviewer wants to find out the truth, screen out poorer candidates, hire the best, and pay them as little as possible.

And the interviewee wants to be seen in the best light possible, get the job offer, and negotiate for the highest possible salary.

The authors suggest the following approach for interviewers:

> By varying the interview venues, the quality of the information obtained from the job candidate should be richer. For instance, the candidates can be given a pseudo-tour of the organization while, unbeknownst to him/her, they are being interviewed. Most job candidates prepare for the structured job interview format, but rarely prepare for an unstructured format. Due to this lack of preparation for this format, many job candidates do not know how to conduct themselves because there is no scripted behavior to rely on or practice ahead of time. This is when nonverbal behavior that is indicative of lying or lack of integrity has the highest likelihood of appearing (Townsend et al., 2007). When a job applicant tries to lie they usually focus on preparing their upper body to mask what they believe are their facial clues to deceit (Ekman, 2009). But as Paul Ekman points out, many of the telltale clues of deceit can be seen below the target person's waist in what is termed "leakage." Target persons unconsciously use hand gestures below the waist called "emblems" that indicate their true feelings at the moment that may sharply contradict their facial and verbal messages. Interestingly, most interviews take place in an o ce in which the interviewer is positioned behind a desk, thus blocking their view of the job candidate's entire body.

For more on how to win that game of chess, see:

> How to Prepare For An Interview: 6 Tips To Get The Job

To sound smart, focus on verbal cues

> Intelligence, for example, has been shown to mainly manifest in auditory cues (e.g., speech rate, number of spoken words) compared with visual cues, allowing more accurate observer judgments based on targets' audiotapes than visual material

To catch deception, focus on verbal patterns & inconsistencies...

… Rather than body language.

> Judges across the world universally report targets' gaze aversion as a signal to deception (Global Deception Research Team, 2006). Lens models suggest that people's stated beliefs about deception cues and actual cues that indicate deception are not necessarily aligned (Hartwig & Bond, 2011). For example, despite judges'

> beliefs, gaze aversion is not typically a valid cue to deception. Meta-analyses on training deception detection demonstrate that increased accuracy can result from training participants to focus on speci c cues (Hauch et al., 2016), such as verbal content indicators of truthfulness, which include that the statement is detailed and logically structured (Vrij, 2005).

CONS

Just a few notes of possible improvements areas in an otherwise great handbook:

- **Remove some repetitions to streamline it**: it's great to have different authors with different expertise, but that model needs a good editor and a big chopping board. There were several instances where I felt same or very similar information was being repeated across chapters
- **The science is still in its infancy**, so there are several assumptions and lots of "more research is needed". Not much the researchers and writers can do about it except doing more research :)
- **More traits would have been good**. While the book focuses a lot on the Big Five, I would have been interested in many more life-relevant traits. For example honesty, trustworthiness, loyalty, etc.
- **More practical applications to be *both* textbook and self-development**: for example, I was very curious to see what one could to influence other people's perception, or what cues we can send out to display our good personality.

REVIEW

The Oxford Handbook of Accurate Personality Judgment is a great overview of the research literature on personality judgment.

The authors did a great job at presenting the available research in a way that is not only interesting and easy to read, but also provides some practical use cases in the real world (something that's not always obvious with textbooks).

Check the **best books** to read or **get this book on Amazon**.

Power University Alumni Results: Survey Data

Lucio Buffalmano · 30 June 2023 · Archived copy · Original

The Power University Survey measures the outcomes Power University delivers for its alumni.

Below we describe the survey design and data-cleaning procedures, present the results in full, and provide an evidence-focused analysis of what the numbers mean and what they do not mean.

Contents

- Future developments
- Conclusions

Methodology

The Power University Results Survey is a short instrument consisting of 10 items designed to capture alumni self-reported improvement on nine competencies that Power University targets (confidence, social skills, status, respect, leadership, business/career outcomes, attractiveness for dating, relationship outcomes, and people-reading skills).

Respondents rated their perceived improvement using the labeled ordinal response categories shown in each chart (for example: “A bit”, “2x”, “5x”, “10x”, “>10x”). For analysis we coded those ordinal responses on an increasing numeric scale so we could compute means and confidence intervals; see the Aggregate Data Analysis section for the exact figures and confidence intervals.

Why we used self-ratings

Self-ratings were chosen for two practical reasons.

First, they allow rapid collection across alumni cohorts and provide a direct measure of perceived change, which is important for an initial evaluation and for planning a longer-term, objective follow-up study.

Second, personality and skill self-assessments are supported by research as often informative when respondents are asked about change in their own capabilities (see discussion and link below). We cite this literature and provide raw exports so other researchers can inspect the data themselves.

Who was invited and when

We invited alumni through three separate channels so each invited population could be analyzed separately. Separating channels reduces mixing of different engagement profiles and improves interpretability:

- **Community members** — invitation published on the forum here.
  Raw data export here.
- **Power University email subscribers** — survey emailed to alumni who signed up at least one month before the email date (email dated 21 June 2023) and to alumni tagged in our system since July 2021. The email content is archived here.
  Raw data export here.
- **Power University completers** — a separate invitation is sent to students who mark every lesson complete via the “congratulations” email. Because that cohort is newly-invited and still small, we will publish those results in a future update once there are enough responses. The current article focuses on the forum and email cohorts.

Why we kept cohorts separate

Each invitation channel reaches alumni with different engagement patterns.

Forum users are typically more engaged, more likely to have completed more of the material, and more likely to provide thoughtful responses.
Raw data export here.

Email recipients include a broader spectrum from highly engaged to partial or skimmed readers.
Email copy here | Raw data export here.

Keeping cohorts separated avoids conflating these groups and allows us to report both the forum (high-engagement) picture and the aggregate picture.

Question variants

To adapt to each cohort, we replaced one quantitative relationship item with a qualitative motivation item in the email survey.
Specifically, the forum survey retained a question about intimate relationships, while the email survey asked an open-ended question ("what made you join Power University") to collect richer motivational data from the more varied email cohort. This is noted where relevant in the results below.

Data cleaning and exclusions

We made two exclusions to preserve data quality. All responses were anonymous and the raw exports are available for verification via the links above.

1) Pattern response — likely non-engaged answer

One respondent selected the same (first) option on every item.

That uniform pattern is a well-known indicator of non-differentiated responding (e.g., satisficing, accidental submission).
Because we could not link responses to individual identifiers (the survey was anonymous), and because the pattern would bias results upward or downward depending on the label chosen, we excluded this response from the aggregate analysis.

2) Insufficient program exposure

One respondent reported they had stopped studying Power University due to family issues and explicitly asked to be re-invited later, once further along. That respondent nevertheless submitted responses; because their engagement was incomplete and they had indicated the answers would not reflect meaningful exposure, we excluded that case. (See the screenshot below — respondent paraphrase.)

Complete
Date Taken: 2023-5-21 19:36
Location: [redacted]

1 What motivated you to get into Power University?

I stepped into a senior leader role and [redacted] This role compared to colleagues/predecessors. To correctly interpret my results below, be aware [redacted] so stopped the lesson now getting to a better mental state to pick the lessons back up. Maybe resend this when I'm further along in the course.

> **Respondent** (paraphrased): Be aware I stopped the lesson for family issues and now getting back into it. Maybe resend this when I'm further along in the course

After these two exclusions, the aggregate sample used for statistical summaries reported below is **N = 20** (this N is shown explicitly in the Aggregate Data Analysis table).

Aggregate Data Analysis

Below are the aggregate means with 95% confidence intervals (N = 20).
These intervals were computed to provide a range estimate for the mean response on our coded numeric scale and reflect sampling uncertainty given the sample size. The survey and statistical computations have been cross-checked by a certified data analyst; raw numerical exports are available in the links above for independent verification.

	Overall (N=20)
How much have your social skills improved after Power University?	
Mean (CI)	4.400 (3.714, 5.086)
How much more confident in yourself are you after Power University?	
Mean (CI)	4.550 (3.830, 5.270)
How much more effective would you be today to gain status in a group?	
Mean (CI)	4.316 (3.672, 4.959)
How much better would you be today in getting respected by others?	
Mean (CI)	4.600 (4.065, 5.135)
How much better of a leader would you be today?	
Mean (CI)	4.632 (3.985, 5.278)
How much has Power University impacted your chances of getting a promotion or doing better in work/business?	
Mean (CI)	4.263 (3.371, 5.155)
If you're single, how has Power University made you potentially more attractive?	
Mean (CI)	4.056 (3.212, 4.899)
How much have your people reading skills increased?	
Mean (CI)	4.950 (4.414, 5.486)
How satisfied are you with Power University?	
Mean (CI)	9.450 (9.095, 9.805)

Confidence intervals for each survey question
Interpretation: The means and confidence intervals show consistently high perceived gains across competencies. The satisfaction score (mean = 9.45) is particularly high, reinforcing the distributional findings reported above. Because the sample is modest in size (N=20), the confidence intervals are wider than they would be for a much larger survey; nonetheless the central tendency and consistent upward reporting across items indicate a strong signal that alumni perceive meaningful benefit from the program.

RESULTS

What follows are the survey items, raw distribution tables (as presented in the forum charts), and a short interpretation of each result. We include both the distribution charts (forum cohort) and aggregated numeric

measures (where available).

1. Self-Confidence

> Question: How much more confident in yourself are you after Power University?

=	A bit	2X	5x	10x	>10x
5%	10%	5%	20%	25%	35%

Forum cohort chart above. In the aggregated sample: **95% of respondents report some improvement in confidence**, **85% at least doubled their confidence**, and over half report a 10x or greater increase. This is a substantial effect in perceived self-confidence.

2. Social Skills

> Question: How much have your social skills improved after Power University?

=	A bit	2X	5x	10x	>10x
0%	15%	15%	15%	25%	30%

All community members reported improvements in social skills. In aggregate, **85% at least doubled their social skills**, and more than half reported a 10x or larger improvement.

3. Gaining Status

> Question: How much more effective would you be today at gaining status in a group?

=	A bit	2X	5x	10x	>10x
0.%	10.5%	21.1%	15.8%	31.6%	21.1%

Every community member reported improvement. **89.5% at least doubled** their ability to gain status and more than half reported a 10x or greater improvement.

4. Gaining Respect

> Question: How much better would you be today at getting respected by others?

=	A bit	2X	5x	10x	>10x
0%	0%	25%	15%	35%	25%

All community respondents reported at least a 2x increase in their ability to earn respect, and more than half reported a 10x or greater increase.

5. Leadership Skills

> Question: How much better of a leader would you be today?

=	A bit	2X	5x	10x	>10x
0%	10.5%	10%	15.8%	31.6%	31.6%

Leadership skills rose substantially: nearly 90% at least doubled their leadership capability, and over 60% reported a 10x or greater improvement.

6. Business & Career

> Question: How much has Power University impacted your chances of getting a promotion or doing better in work/business?

=	A bit	2X	5x	10x	>10x
10.5%	10.5%	15.8%	10.5%	10.5%	42.1%

Nearly 90% of respondents expect improved outcomes in work or business. Close to 80% expect at least a 2x improvement; over half expect at least a 10x improvement and 42% expect >10x improvements.

7. Attractiveness (For Dating)

> Question: If you're single, how has Power University made you potentially more attractive?

=	A bit	2X	5x	10x	>10x
5.5%	16.7%	16.7%	22.2%	5.5%	33.3%

About 90% reported increased attractiveness, 80% at least 2x, more than half at least 5x, and over one-third at 10x.

8. Relationships

> Question: If you're in a relationship, how much has Power University helped to gain more respect, attraction, and a generally better relationship?*

Among forum community members who answered this item, **close to 80% at least doubled their partner's attraction and respect**, and more than half reported a 5x or greater improvement. Note: this item was asked only to forum respondents who are in (or can imagine being in) a relationship; see note below.

*this question was only for the forum users, and only for those who are or can think of themselves in a relationship. We corrected an initial survey wording issue after the first response; the early answer "not at all" appears to reflect that initial error but was left in the record for transparency.

9. Reading People

> Question: How much have your people-reading skills increased?

=	A bit	2X	5x	10x	>10x
0%	0%	15%	20%	20%	45%

All respondents reported at least a 2x increase in competence for reading people; 65% reported a 10x or greater increase. This item was intentionally framed as competence-related rather than outcome-related, because skill

acquisition usually precedes downstream life outcomes (e.g., changed relationships), which can take more time to show measurable changes.

Note: competence measures like “people-reading” correlate with long-term outcomes, but outcome measures (e.g., relationship quality) may lag behind skill changes. We deliberately measured competence to avoid premature underestimation of program impact.

Power University Satisfaction

Participants rated overall satisfaction on a 0–10 scale. The distribution is shown below and the arithmetic mean is 9.4 out of 10. Every respondent rated the program 8/10 or higher; the most common rating was 10/10.

The arithmetic mean is 9.4 out of 10.

Lucio’s personal comments (author)

I expected good results — we build Power University around proven skills and frameworks — but I was still surprised by how often respondents selected “more than 10x.” That option became the modal category across many items.

On average, respondents rated improvements in status slightly lower than improvements in confidence, social skills, and respect.
My read is that people tend to intuitively downplay status gains because status feels harder or more abstract; in practice, status often follows reliably from improved confidence, social competence, and the consistent application of the techniques we teach.

Similarly, improving intimate relationships requires not only competence but time and context; competence often improves first, and relationship-level outcomes follow. This is why we emphasize competence measures in early evaluations.

Because Power University emphasizes actionable learning, respondents may also judge the program in light of the effort they invested (it’s study, not purely entertainment). That may explain why absolute satisfaction occasionally feels slightly lower than some of the dramatic competence improvements reported.

I plan to keep improving the program experience (more video, rewards, UI enhancements) while preserving the outcome-oriented focus that drives real change.

Qualitative Feedback (Email Replies)

We invited email recipients to reply with open feedback. Replies were overwhelmingly positive and are reproduced (screenshots) below exactly as submitted to preserve authenticity and context.

Respondent: I have not finished going through the entirety of PU but I have already benefited tremendously (…) I have improved very significantly in coming across as more powerful.
(…)
I think it's the best material in terms of self development I have come acrosss so far

Respondent: I have found Power University to be the single best investment I have ever made in myself

Potential Issues & Bias

No survey is free of bias.
Below we list possible limitations, and we describe the steps we took (or plan to take) to mitigate them. Being transparent about these issues increases the trustworthiness of the findings.

- **Self-selection bias** — alumni with strong positive experiences are more likely to respond. We addressed this by reporting separate cohort data (forum vs email) and by making the raw data exports available for external inspection.
- **Social desirability and demand characteristics** — respondents may want to appear successful or to give expected answers. We maintained anonymity to reduce this bias and explicitly invited candid and critical replies via email.
- **Good-subject role ("making Lucio happy")** — people who feel close to the program or to me personally

might try to help by giving positive answers. Again, anonymity and the inclusion of email cohorts with mixed engagement ,au lower the net risk of this bias dominating the results.

- **Small sample size** — the aggregate analysis uses N = 20 after exclusions. Small samples increase uncertainty (wider confidence intervals). We therefore treat this survey as an initial, encouraging snapshot, not a final evaluation.
- **Measurement type** — self-reported competence is a subjective measure. It is valuable for perceived change but should be complemented with behavioral, third-party, or longitudinal outcome measures in future studies.

Some biases may partially offset others.
For example, disgruntled alumni may also respond to voice criticism, which reduces pure positivity bias. Still, the safest interpretation is cautious: results show a strong self-reported benefit signal that warrants further, more controlled follow-ups.

Future developments

We are committed to continuous improvement and plan several follow-ups to strengthen evidence:

- **Longitudinal tracking** — whenever feasible, invite the same alumni to repeat the survey to measure sustained changes and downstream life outcomes.
- **Objective outcome measures** — where feasible, incorporate behavioral or third-party indicators (e.g., promotion records, peer ratings) while preserving privacy.
- **Larger-scale sampling** — increase the sample size across cohorts to narrow confidence intervals and allow segment analysis (age, baseline skill level, completion rate).
- **Survey refinement** — improve question wording and add validated psychometric items for future surveys. We will also integrate the data analyst's recommendations.

Note: The survey and this article have been cross-checked by a certified data analyst. We will publish future improvements and follow-up results as they become available.

Power University developments following the survey

At the time of writing (July 2023), this is our first structured alumni survey.
The course was at **version 8.2** when this survey was fielded, and respondents may reflect experience with earlier versions as well. We will use these results to prioritize product improvements that help alumni get faster and clearer outcomes — while preserving the program's core emphasis on durable skill acquisition.

Planned improvements include more high-value video demonstrations, a reward structure to increase completion rates, and UI updates to make the learning path clearer and easier to follow.

Conclusions

In summary: across the measured competencies, Power University alumni report large perceived gains, and the program receives very high satisfaction ratings.
These results are consistent across cohorts, subject to the limitations described above. The evidence justifies continued investment in the course and motivates the next steps: larger samples, longitudinal follow-ups, and complementing self-report with objective outcomes.

We have made the raw numeric exports available for transparency and encourage independent inspection and replication. The survey processing and the reported statistics were cross-checked by a certified data analyst prior to publication.

Good Strategy/Bad Strategy: Summary & Review

Lucio Buffalmano · 2 July 2023 · Archived copy · Original

Good Strategy/Bad Strategy (2019) is a book that teaches the defining elements of strategy, how to avoid the all too common pitfalls around strategy, and how come up with good and effective strategies.

Contents

- Overview
- Notes
  - What's Strategy
  - What's Bad Strategy
  - The Elements of Good Strategy
  - How To Come Up With A Strategy
  - The Leader's Strategic Job
- Practical Tips
- QUOTES
- CONS
- PROS
- REVIEW

Overview

- **A strategy is a cohesive response to a certain challenge**
- **Strategy is the single most important task of leaders**
- **Good strategy has 3 elements**. It starts with analysis of situation, strenghts and opportunities, then sets a high-level guiding policy, and follows up with a set of cohesive actions
- **Good strategy requires knowledge and expertise** because it's a hypothesis of what will work

Notes

About the Author:
Richard Rumelt is an American professor of Management at the University of California. He joined the school in 1976 from Harvard Business School.

What's Strategy

A strategy is a cohesive response to an important challenge.

Unlike a stand-alone decision or a goal, a strategy is a coherent set of analyses, concepts, policies, arguments, and actions in response to an important challenge.

Doing strategy is figuring out how to advance the organization's interests, and how to move forward with it.

The Confusion Around "Strategy"

The author says that "strategy" has become a buzzword and is continuously misused and misunderstood.
It has nothing to do with ambition, "leadership", competition, or goals etc.

The most common confusion is probably between goals and strategy.

To give you an example, the USA may have the “goals” of freedom, justice, peace, security, and happiness.
The strategy is to transform those goals into a coherent set of actionable strategies -ie.: defeat the Taliban, rebuild a decaying infrastructure, etc. etc.-.

Now, before we move to *good* strategy, let’s first understand what’s *bad* strategy:

What’s Bad Strategy

Elements of bad strategy include:

- **Fluff**, with buzzwords and abstruse expression that create unneeded complexity and the illusion of high-level thinking
- **Failure to face the challenge**, because you if you cannot define the challenge, you cannot develop a strategy for it, evaluate that strategy, and improve it.
  Without defining and analyzing the obstacles, you have not a strategy, but either a stretch goal, a budget, or a list of things you wish would happen
- **Mistaking goals for strategy**, such as statements of desires, rather than plans on overcoming obstacles. Especially poor when it’s a long list, when it’s uncoordinated, and when there is no action plan connected to them
- **Bad strategic objective**, such as when they’re impractical, or fail to address critical issues
  - Confusing strategic objectives for final goals: stategic objectives are a means to an end, or “subgoals”. Sort of “intermediary steps” to achieving the bigger or final results
- **Not focusing effort on a few key areas of maximum leverage**
  - Pursue too many demands and interests, sometimes conflicting ones, and thus losing the power that comes from coordination

Please not that not having a good strategy is a bad strategy in itself.
Bad strategy crowds out good one like bad weeds.

Examples of bad strategies

A major bank “strategy” says:

> Our fundamental strategy is one of customer-centric intermediation

“Intermediation” is a “smart sounding” word for what any bank does.
“Customer centric” could mean that the bank offers higher deposit rates, but their products don’t really differentiate themselves that way.
So this is pure fluff. Remove the fluff, and what this really says is “Our bank’s fundamental strategy is being a bank.”

The Elements of Good Strategy

The author an essential logical structure that I call the kernel.

The kernel includes:

1. **Diagnosis** to understand the situation, the obstacles, the opportunities
2. **Guiding policy**: the high-level approach to dealing with the obstacles. It’s like a signpost, marks the direction forward, without getting lost in the details
3. **Coherent action**: coordinated policies, resource commitments, and actions to carry out the guiding policy

Become An Expert

In any competitive or complex environment, there cannot be a “surefire strategy” guaranteed to work.

That is because, explains the author, any strategy is like a scientific hypothesis.
So as much as a scientist cannot ome up with a “surefire hipothesis certain to be true” without testing it, so nobody can come up with a certain strategy sure to succeed.

What does help though is having expertise.

A good scientist with a solid grasp of all the previous research is a lot more likely to come up with a good hipothesys than a clueless random individual.

Similarly, an expert in a certain field is more likely to come up with a strategy that is likely to work. **Even just an “educated guess” is a lot better than a shot in the dark**.

Good Strategy Is Simple

After introducing a simple-sounding example in the introduction, the author says:

> Good strategy almost always looks this simple and obvious and does not take a thick deck of PowerPoint slides to explain.
> It does not pop out of some “strategic management” tool, matrix, chart, triangle, or fill-in-the-blanks scheme.
> Instead, a talented leader identifies the one or two critical issues in the situation—the pivot points that can multiply the effectiveness of effort—and then focuses and concentrates action and resources on them.

How To Come Up With A Strategy

Tte core of strategy work is always the same, and it’s simply this:

Discover the critical factors in a situation and design a way of coordinating and focusing actions to deal with those factors.

See a strategy as a lever to magnify force.

The author says that when it comes to choosing effective strategiest, the most basic is to **apply strength against weakness**.
In a slightly more refined way, that would mean to apply your best resources , to the most promising opportunity.

Understanding your strengths and under which conditions they exist is also part of strategic thinking. As it is when and how to “press” those strengths to get the best results.

In terms of steps:

1. **Run a good diagnosis** to understand the situation, the obstacles, the opportunities
2. **Come up with a guiding policy**: the high-level approach to dealing with the obstacles. It’s like a signpost, marks the direction forward, without getting lost in the details
   - Set the “sub-goals” (strategic objectives)
3. **Set the more detailed plan** (**coherent action**): coordinated policies, resource commitments, and actions to carry out the guiding policy
   - Specificate proximate objectives, something that is “close enough” to be prgamatic, visible to all, and achievable

To help you set up the best strategy:

1. **Anticipation**: in ever changing systems or competitive environments, it’s important to add insights into how the

environment may change, or what others may do in response to your own actions (game theory may help)

2. **Coordinate actions**: make sure you have a coherent strategy that coordinates actions, creating a new strength by the very nature of its coordinated effort.
   Coordination is "coherence imposed on a system by policy and design"
3. **Come up with new viewpoints and reframes** from troubles to challenges and opportunities, to create *mental* strength
4. **Say no to whatever lies outside your strategy**. Some of those opportunities may be good and add value, but good strategy focus on the *biggest* and *feasible* opportunities.

The Leader's Strategic Job

We often focus on charisma, power, or personality-related traits when it comes to leaders.

Instead, says the author, **the most effective leaders are great strategists**.

> A leader's most important responsibility is identifying the biggest challenges to forward progress and devising a coherent approach to overcoming them.

The leader most important job is to creating and constantly adjusting the bridge between goals and the strategy, and strategic objectives that will deliver on those goals.

Example of a leader who confuses "motivation" for "strategy"

There is a really good case study about a CEO former football player who confuses stretch goals and motivation for effective strategy.

Among the "key strategies of his organization, there were "20% growth every year, 20% margins, a culture of commitment, foster an honest and open work environment. work to support the broader community in which we operate, etc.

> **Author**: This 20/20 plan is a very aggressive financial goal," I said. "What has to happen for it to be realized?
> **CEO**: The thing I learned as a football player is that winning requires strength and skill, but more than anything it requires the will to win—the drive to succeed. (…) We are going to get moving and keep pushing until we get there.
> **Author**: Chad, when a company makes the kind of jump in performance your plan envisions, there is usually a key strength you are building on or a change in the industry that opens up new opportunities. Can you clarify what the point of leverage might be here, in your company?
> **CEO**: (expressing frustration, pe pulled a sheet of paper out of his briefcase and reading the highlighted text) This is what Jack Welch says: "We have found that by reaching for what appears to be the impossible, we often actually do the impossible." "That's what we are going to do here

LOL.
Typical case of a CEO who was hired more because he acted the part and because he was an alpha male, than a truly effective leader.

Then, to make it even more obviously ridiculous, the author describes the consultant the CEO ended up hiring:

> The new consultant took Logan and his department managers through an exercise he called "Visioning." The gist of it was the question "How big do you think this company can be?" In the morning they stretched their aspirations from "bigger" to "very much bigger." Then, in the afternoon, the facilitator challenged them to an even grander vision: "Think twice as big as that," he pressed. Logan was pleased. I was pleased to be elsewhere

> engaged.

Practical Tips

- **If you're needing to change but struggling to change, ask yourself: what would a brand new management do? Then do that…**

Good example from Intel:

> Losing more and more money, senior management engaged in endless debates about what to do. Grove recalls the turning point in 1985 when he gloomily asked Intel's chairman, Gordon Moore, "If we got kicked out and the board brought in a new CEO, what do you think he would do?"
> Moore immediately replied, "He would get us out of memories." Grove recalls that he went numb and then finally said, "Why shouldn't you and I walk out the door, come back and do it ourselves?"

- **Learn from upstarts, not from bigger incumbents**

Bigger older firms are still reaping the benefits from the seeds that were sown a long time before.
It's possible they're not doing thigns right today, but that they did them in the past.
Instead, the upcoming smaller businesses who are growign and eating away at marke share are likely doing things right, *right now*.

Says the author:

> Its important lesson is that we should learn design-type strategy from an upstart's early conquests rather than from the mature company's posturing. Study how Bill Gates outsmarted the giant IBM or how Nucor became a leader in the declining steel industry and you will learn design-type strategy. Study Microsoft today and you will see a mature giant, reaping the benefits of past victories but just as tied to its installed base and a rich mix of conflicting initiatives and standards as was IBM in 1985.

QUOTES

On choosing good strategists as leaders:

> The only remedy is for us to demand more from those who lead. More than charisma and vision, we must demand good strategy.

On the importance of saying “no” and focusing on the highest leverage actions:

> Strategy is at least as much about what an organization does not do as it is about what it does.

On random goals or list of things to do mislabeled as “strategy” or “strategic objectives”:

> Such lists usually grow out of planning meetings in which a wide variety of stakeholders make suggestions as to things they would like to see done. Rather than focus on a few important items, the group sweeps the whole day’s collection into the “strategic plan.” Then, in recognition that it is a dog’s dinner, the label “long-term” is added so that none of them need be done today.

On “new thought” and “thinking things into reality”:

> I do not know whether meditation and other inward journeys perfect the human soul. But I do know that believing that rays come out of your head and change the physical world, and that by thinking only of success you can become a success, are forms of psychosis and cannot be recommended as approaches to management or strategy.
> All analysis starts with the consideration of what may happen, including unwelcome events. I would not care to fly in an aircraft designed by people who focused only on an image of a flying airplane and never considered modes of failure.

On the “noise” of most management books written about success stories:

> It is also human nature to associate current profit with recent actions, even though it should be evident that current plenty is the harvest of planting seasons long past.
> When the profits roll in, leaders will point to their every action with pride. Books will be written recommending that others immediately adopt the successful firm’s dress code, its vacation policy, its suggestion-box policies, and its method of allocating parking spaces. Of course, these connections are specious.

On the dangers of “fluff motivation” against reality:

> When war broke out in 1914, jubilant crowds jammed the streets of cities, and young men hurled hats in the air as they marched off to prove themselves. The philosophy of the age, most fervently adopted by the French, was that willpower, spirit, morale, élan, and aggressiveness were the keys to success.
> For three years, generals flung highly motivated men at fortified machine-gun emplacements, only to see see tens of thousands, then hundreds of thousands, shredded to mincemeat to gain a mile of useless ground.

CONS

Some tangential topics, for example the off-topic on biases, or the otherwise valid criticism of “new thought”. may have been briefer.

PROS

- Simple and to the point
- Very practical
- Great examples
- Great wake up call against “empty motivation” that doesn’t rely on solid strategy
- Great wake up call against “new thoughts” of wishing into reality, rather than developing good strategies to achieving them. It shares our same opinions on books such as *Think and Grow Rich*, *The Seven Spiritual Laws of Success*, etc.

REVIEW

Good Strategy/Bad Strategy is a fantastic book on how to channel effort to maximize results (ie.: “strategizing”).

I also enjoyed the many real life examples of what’s “strategy” and what’s not, on what’s good strategy, and what’s not.
Examples and case studies always help solidify the principles.

Overall, we can most certainly recommend *Good Strategy/Bad Strategy*.

A Manual for Creating Atheists: A Guide on Changing Minds (Book Review)

Lucio Buffalmano · 10 July 2023 · Archived copy · Original

A Manual for Creating Atheists (2013) is a book meant as a training guidebook for activists who seek to "cure" believers who are supposedly "contaminated" with what Boghossian calls the "faith virus". It provides approaches, strategies, and examples for the "curing interventions".

TPM Note: The Masterclass in Internal Frame Breaking
While the book's goal is atheism, its value to a power player is in **Dialectics**. Street Epistemology is the art of making someone's entire world-view shift as quickly as possible. To the extent that they work as per our analyses below, use these techniques not to "cure" faith, but to **persuade people**, shift mindsets, or dissolve an opponent's frame.

Notes

About the Author:
Peter Boghossian is an American philosopher, pedagogist, and non-tenure track assistant professor of philosophy at Portland State University.
His areas of academic focus include atheism, critical thinking, pedagogy, scientific skepticism, and the Socratic method.
He later joined the "street epistemology" movement to become one of its most popular practitioners sharing content on YouTube and other channels.

What Is Street Epistemology

Street epistemology is a dialectic approach to engage with believers and help them value reason and rationality, cast doubt on their beliefs, and mistrust their faith.

The goal of epistemology, reminds us the author several times, is not necessarily to change beliefs, but **the goal is to change *the way* people form beliefs**.

How to Deliver Good "Interventions"

Some tips and approaches for effective street epistemology:

1. Help people form new opinions via more logical thinking, instead of telling them their current beliefs are false
2. Ask the subject what conditions would have to be in place for her belief to be false
3. If the subject asks you to tell them what it would take for you to believe, turn it back to them.
   Example: "That's a great question. I'd like to hear what you think first, before I tell you"
4. Elicit contradictions and inconsistencies in one's reasoning to cast doubt
5. Avoid the word "you" when calling inconsistencies to avoid raising their defensive and turning it confrontational
6. You got an opening when they say "I don't know"
   - Reply with "I don't know either" back to show it's OK not to have all the answers and that you can abandon the original faith even when you don't yet have a new strong belief (the "value of uncertainty")
7. Match your target's power

Says the Boghossian:

> Give the faithful the same dialectical and conversational reciprocity they give you. Be honest. Be direct. Be blunt. Be unapologetic. Don't complain, apologize, or mumble in the defense of reason. Don't tone it down or talk baby talk. Never say, "I'm sorry but …" or "Forgive me for saying …" or "You'll excuse me for mentioning …" Instead, tell people exactly what you think and why you think it. Take a punch and give a punch. Speak truth in the face of danger

Example: Calling Out an Acupuncturist

An example of street epistemology with an acupuncturist:

> **PB**: Really? How do you know it works?
> **RC**: Because I've cured people of illnesses. I've seen it work.
> **PB**: Do you think selection bias has anything to do with that?
> **RC**: No.
> **PB**: What illnesses have you cured?
> **RC**: Everything. You name it, I've cured it.
> **PB**: Parkinson's, Ebola, autism?
> **RC**: I've never treated anyone with those.
> **PB**: But if someone came in with one of those illnesses, could you cure them?
> **RC**: I don't know. I could try.
> **PB**: Let's take something more pedestrian, like my hearing loss. Could you cure it?
> **RC**: If I did, would you believe me?
> (I was at the cashier and RC stood off to the side.)
> **PB**: Yes. And once you did, I'd personally fly you out to every children's hospital in the world. **Frankly, if you could cure these illnesses it's monstrously immoral not to and should be a criminal offense.** My feeling is that you're a decent and kind person. I don't think you'd withhold inexpensive treatment from people who needed it. If you really believe acupuncture works, why don't you volunteer your services?

Something in this exchange could have been tweaked to make it even more persuasive, in my opinion.
But this last part in bold was the genius checkmate in my opinion.

Abandon Leftist Relativism, Feel Free To Criticize Ideas

The author criticizes what cultural relativism has become in our culture.

He says:

> What is going on in higher education today is the paradigmatic example of well-educated leftists withholding judgment, teaching others to do the same, and even somehow feeling sanctimonious as a result—as opposed to, just making well-reasoned matter-of-fact judgments.

He also says that relativism has become a moral value and making judgments has become immoral.

We agree with him.

Another leftist academic tenet has become that ideas have dignity. So criticizing an idea becomes akin to criticizing an individual. That is a poor belief when it comes to persuasion.

MORE WISDOM

- **Reject the "I'm offended" power move with power**

Replies the author to a man who pulled today's common "I'm offended" power move:

> Your offense means nothing to me. If you have arguments or evidence I'd like to hear what you have to say. You saying that you're offended carries no weight. Nor should it.

That was solid.
Not meaning to say that it's the best approach in any situation, but it's a very high-power approach that many readers could probably do more of in their lives.

Criticism

My main doubts about the book concern its main mission and the drive behind it:

Is it really “helping” people?

First off, I’d have to wonder:

What’s the difference between helping others and harassing others in the street with what you think is best for them?

Second, even assuming the author is right, and even assuming it’s a goal worth pursuing, are people really better off cured from the “virus of faith”?

I’m not sure about either of them and will let the readers answer for themselves.

Ultimately though, the author indirectly concedes that a life without faith is not necessarily better when he says:

> It is better to be a human being dissatisfied than a pig satisfied; better to be Socrates dissatisfied than a fool satisfied.

That’s the author’s personal philosophy though (and a power move).
And a believer may as well reply that they think the street epistemologist is a fool, *plus* dissatisfied.

Strawman’s Religion To Be Worse Than It May Actually Be

The author frames religion as overly negative, forgetting about the possible positives it may also bring.

Also, some of those negatives seem to be overblown or to be rather poor analyses of the actual causes of certain world ills.

For example, he blames religion on the oppressive Taliban system.
But it’s simplistic to cast blame on religion only. In truth, religion is more of an *excuse* some men rely on to do what they wished to do anyway (and may have done even without religion, but that’s difficult to say).

Also, from a wholly amoral point of view, the Taliban system isn’t necessarily “worse for all”.
And it may as well be “better” for a lot of men

Some Scientific Posturing

The author refers to “intervention” as:

> an attempt to help people or “subjects” as they’re referred to in a clinical context, change their beliefs and/or behavior”.

Street epistemology is not a clinical context.
To call it as such feels like an unwarranted power move to come across as more authoritative by borrowing terms from the psychology and psychiatry professions.

Bellicose Approach to “Mission” and “Believers”

Albeit Boghossian rightfully says you ought to refrain from aggressive approaches when delivering “interventions” with people.

I did find sometimes he was being too aggressive though and making people defensive.

The book does seem at times a bit aggressive and derisive towards believers as well.

PROS

- **Calls out various "gurus" that propose semi-religious movements for personal gains**. Such as, Deepak Chopra
- **Calls out unscientific methods outside of religion as well,** and I liked some persuasive moves with the acupuncturist above
- **Many examples to learn from**
- **Great criticism of cultural relativism with which we wholeheartedly agree**
- **Good call on teaching how to think like scientists, more than scientific facts**: we agree with Boghossian that rational and logical thinking may be one of the most undervalued and under-developed skills in today's society

REVIEW

A Manual for Creating Atheists is a good book to learn some valid persuasion approaches and techniques to potentially change someone's mind.

In our opinion, some could be tweaked and improved, and a stronger overarching framework may be needed. But there are some golden nuggets for influence and persuasion.

Exec Summary

- Power does corrupt, but not as much as many think
- Power tends to attract worst people, but that's especially true for despot-type of power
- Corrupt systems attract worse people, while better systems attract better people
- The environment changes how people behave, with better environment eliciting better behavior. Meaning…
- **There is much we can do as a society to design systems that attract, screen, and promote better people and leaders**

FULL SUMMARY

About the Author:
Brian Klaas is an American political scientist, a university professor (University College London, LSE), and contributing writer at The Atlantic, and also runs a podcast aptly called "Power Corrupts Podcast".

The 4 Corruptible Questions

Klaas says in the introduction that Corruptible seeks the answer to these 4 questions:

1. Do worse people get power?
2. Does power make people worse?
3. Why do we let poor leaders lead?
4. How can we ensure that incorruptible people get into power and wield it justly?

Hypothesis

After introducing a few initial studies and personal observations (or anecdotes), the author proposes the following hypothesis:

1. **Power makes people worse —power corrupts** (Marc Ravalomanana example)
2. **Worse people are drawn to power—power attracts the corruptible**. (psychopathic pharmacist aboard the Dutch East India Company's Batavia; the guards in Zimbarod's Stanford Prison Experiment).
3. **We are attracted to bad leaders for bad reasons, and so we tend to give them power**. (Study showing that Both kids and adults picked with a 70% accuracy the political election winners just by looking at faces alone. And, I quote, "*several other studies have shown that those who are more aggressive or rude in group discussions are perceived as being more powerful and leader-like than those who are more cooperative or meek*").
4. **System-centric view says that bad organizations attract bad people and good ones good people and incentivize good behavior**. (a study in India showed that the students who cheated more were also more likely to want to join the notoriously corrupt civil service. A similar experiment in Denmark showed the opposite: the more honest students wanted to join the civil service, and the more corrupt ones wanted to pursue careers that would make them very rich)
   - Consequences also matter: a study shows that when diplomats could park illegally in NYC without consequences, diplomats from corrupt countries racked up an endless list of tickets. But even diplomats from "clean" countries started taking advantage of the situation and parking illegally (albeit not nearly as much). But when the mayor changed the rule and parking illegally started incurring costs, the corrupt diplomats quickly dropped the illegal parking
   - Beliefs about the environment also matter, and a study showed that when southern Italian employees moved to the north, they started shirking less. And the other way round

Results

And these are the results of Klaas' investigation:

Power does corrupt: Yes

Most studies find that power does make us worse, says the author (dictators games examples).

Quoting Keltner and his "Power Approach and Inhibition Theory", the author also says that "People who enjoy elevated power are more likely to eat impulsively and have sexual affairs, to violate the rules of the road, to lie and cheat, to shoplift, to take candy from children, and to communicate in rude, profane, and disrespectful ways."

Other potentially negative consequences of power include:

- Risk-taking behavior increase
- Over-confidence in one's ability to control risks (illusory control)
- Lower empathy
- Higher hypocrisy

But with some caveats: people overestimate the “corrupting power of power”

However, power doesn’t corrupt as much as people think.

There are 4 phenomena that make us believe that power corrupts more than it actually does:

- Power sometimes only offer immoral options to tackle some issues: in some cases the options available to those in power involve trade-offs and choices for the “least evil” (“dirty hands” issue)
- Rotten apples get better at being bad, so it’s not like the got worse with power, they simply learned to be more effective which makes them seem like they got worse (“learning to be good at being bad” issue”
- More opportunity for being bad gives the impression of power making people worse, rather than simply being worse than us all (“opportunity knocks” issue)
- People in power seem worse are under heavier scrutiny, so it’s not like they become worse when they get power, but it’s that the bad stuff they’d do anyway is now more likely to surface (“under the microscope” issue)

Worse people are drawn to power: Yes

> Corruptible people are drawn to power like moths to a flame

Especially, dark triads people are strongly drawn to positions that give them an opportunity for dominant leadership—leadership that involves controlling others—and particularly so in finance, sales, law, *and politics*.

Dark triad people aren’t attracted to non-profits.
Instead, says Klaas:

> **The areas where the dark triad is most overrepresented are many of the most influential areas of society.**

We are attracted to bad leaders: Yes

There is a tendency for people to fall for the allure of the charismatic, the confidence of the narcissists, the social dominance of the political strongmen.

Bad environments attract worse people: Yes

Systems and places that are notoriously corrupt and offer large rewards without any oversight against bad behavior attract more corrupt people.

The system can make people better or worse: Yes

Not only do we behave differently depending on systems, but we also behave differently depending on how we *believe* a system operates.

We can shape our environments to improve leadership for all: Yes

Klaas says that many of our current systems to elect people in power *help* bad people to get power.

For example, in corporations, the standard job interviews are perfect formats for narcissists, Machiavellians, and psychopaths.

The author then lists a few solutions to how we can improve our systems to attract, screen, and promote better people.

Dark Triad Men Advance More Easily

Says Klaas:

> In another study, researchers evaluated just under a thousand corporate employees for dark triad traits. They found that narcissists made more money and Machiavellians were better at climbing the corporate ladder. Psychopathy, on the other hand, damaged the career prospects of employees who scored high on it, probably skewed by the "unsuccessful" or undisciplined psychopaths who were unable to blend in.

However, the author then adds a caveat to psychopaths' apparent unsuccess:

> When they work in harmony, some of the most destructive elements of psychopathy can not only be blunted, but turned into advantages. The psychopaths who are in the boardrooms are the intelligent ones who figured out a way to control themselves as they sought to control others.

Klass also mentions some authors and researchers whose work we reviewed here such as Dutton and his *Wisdom of Psychopaths* and Babiak/Hare.

We wrote extensively on this and it's one TPM's reasons of existence: to level the field for the good guys.
Also read:

- **The myth of emotional intelligence: Machiavellis at the top**

https://thepowermoves.com/psychopathy-empathy-and-success-at-work

The Ideal World Promotes Good People & Discourages Bad Ones

The ideal world would:

1. Make sure that incorruptibles seek power, get it, and hold on to
2. Make it harder for corruptibles to do the same

Says the author:

> The challenge facing us is figuring out how to get more of those shy incorruptibles to start competing with the overconfident narcissistic corruptibles who were born believing that they deserve power because they're God's gift to man.

With this website, that's how :).

The author proposes a few solutions, including:

- Get a broader and deeper pool of applications to choose from
- Actively seek kinder people with job descriptions and screening process
- Use oversight: "watched people are better-behaved people"
  - Use oversight by sortition
  - Use "random surveillance" to avoid a dystopian big brother of constant recording
- Maintain a strong free press with investigative journalism
- Rotate people to prevent entrenched corruption
- Audit decision-making, not just results
- Remind people of the responsibility of leadership and power
- Show people in power and leadership the costs and consequences of their action

- Decrease psychological distance. Such as, never allowing those in power to see people as abstractions, such as reported as aggregate numbers (many tools of leadership and war today instead serve to *increase* the distance)
- Psychological assessments for the top power positions:

> But for those seeking significant power, a more thorough review at the early stages is likely to save a ton of time, money, and avoidable damage later. And for positions of enormous consequence, such as heads of state or CEOs of major companies, psychological evaluations for dark triad traits are probably wise, even if they're currently considered unusual or insulting. At that level of power, the stakes are simply too high to worry about a brief bit of intrusive questioning.

Video Summary

In this (great) video the author himself provides an almost chapter-by-chapter summary of *Corruptible*:

MORE WISDOM

It's Better To Be A Beta Male Than An Alpha Male

Just to be clear, we're talking about literal "beta" here, as in "second in command":

> Sapolsky's theory was bolstered by a 2011 study led by Laurence Gesquiere of Princeton (…) the alpha males at the pinnacle were extraordinarily stressed (…) The best position to occupy was the beta male slot, where you could get access to all the spoils of power without the risk that comes with being the baboon sovereign.

And in humans, a study found that CEOs of company during financial turmoil looked like they had aged faster.

Range Weapons Made Size Less Important

An interesting and alternative theory on why size is less important to human status and success than most other great apes:

> The development of ranged weapons therefore changed what "the fittest" meant when it came to survival of the fittest. Size was no longer as important. Evolutionary biologists have argued that this shift is a key reason why the physical size differences between males and females are narrower in humans than in any other great ape species.

For the record, I don't personally think this is the main reason why.
The development of our brain has probably had a much bigger impact (and the development of weaponry is only one of the many consequences of our brain).

Complex Societies Amplified The Power of Status

Klaas provides readers with this historical background:

1. Original hunter-gatherer tribes were too small and "status flat"
2. As societies grew, the game of status and power changed
3. Powerful people hold much power in our bigger societies
4. The are both pros and cons to hierarchies, but they're here to stay anyway, so no point in fighting them

Former Poor People Are More Likely To Display Wealth

In this case, the common pop-psychology trope of inferring over-compensation seems to be true:

> Signals of excess wealth are particularly likely among those who have come from deprived backgrounds. It's a mechanism to show the world that they've made it and now inhabit a new status.

We’re Wired For Racism

> Unfortunately, our Stone Age brains produce serious biases about people who look different. For survival, our social species has evolved to quickly use cues to identify whether someone is like us, and a friend, or unlike us, and a potential foe.
> (…)
> many people still rely on these arcane, bigoted sorting mechanisms as a cognitive shortcut, even though it’s completely irrational.

Functional Pyshocpaths May Be Useful to Society, Sometimes

Says the author:

> Dutton and Ray may have a point. In some jobs, being cold and unaffected by stress or emotion are hugely useful. Dutton highlights a few, such as being a surgeon or a Special Forces soldier. Both are at their best when they blunt their emotions the most. Functional psychopaths might also make excellent bomb-disposal technicians who never crack under pressure. In previous research, elite troops and bomb-disposal technicians didn’t experience massive spikes in their heart rates during intense stress. Some were actually more relaxed in highly stressful situations. That physiological abnormality allows them to carry out intense tasks without getting overwhelmed. Perhaps there’s a way to channel the dark triad to make society a little brighter.

However, the author strongly differentiates between functional and non-functional.
Plus, he adds, it’s not like you can so easily differentiate between the two:

> But here’s the rub: How can you tell whether a psychopath is functional? Manipulative superficial charm comes naturally to them. They’re often masters of deception. What if you get it wrong? Do you want a dysfunctional psychopath cloaked as a functional one in a Special Forces unit? Screening tests and psychological evaluations are useful, but they’re not foolproof. Even if you could correctly discern that someone is a “functional” psychopath, would you go into surgery knowing one is about to slice you open?

Higher Testosterone May Further Exacerbate The Negative Effects of Power

> For an added (and especially dignified) twist, the researchers also had participants drool into a straw. This allowed the researchers to measure testosterone levels in those who signed up for the experiment. When the researchers analyzed the data, they found something conspicuous: those who were in the high-power group and had high levels of testosterone were exceptionally likely to take the money for themselves.

Strongmen Political Leaders Exacerbate Threats To Justify Their Strongmen Stance

Authoritarian strongmen stoke up threats and fears to consolidate power.

In general, people prefer more masculine-looking and more aggressive men when they feel under threat.
So the political strongmen try to activate our hunter-gatherer instincts to seek the “strong leader” when we perceive a threat.

QUOTES

On hierarchy as natural to humans:

> when humans get together in larger groups, flat societies become impossible. Put enough people together, and

> hierarchy and dominance always emerge. It's an ironclad rule of history.

On dictator types being good at (false) self-promotion:

> While Il Duce is rightly regarded as a fascist monster, one bit of acclaim has stayed affixed to his legacy, like a lonely beauty mark stubbornly poking out of an authoritarian carbuncle. I'm referring to the adage "He made the trains run on time." There's one problem with that statement: he actually didn't.
> (…)
> Nonetheless, the Italian fascist did what so many in power do masterfully: he took credit for decisions made by others. If you only focus on surface-level results without examining the underlying context or the decision-making itself, you'll end up reinforcing bad behavior rather than deterring it.

CRITICISM

I learned a lot from *Corruptible*, and it's a great book.
If the author addressed the following, it could become a classic and even a "TPM endorsed book":

Initial Questions Felt Only Partially Answered

The four initial questions the author listed made me drool at the learning prospects in *Corruptible*.

And Klaas did a great job at selecting those questions that go at the core of power, and how we can work on it as a society for the benefit of all.

He also does a good job at partially answering some of them.

Unluckily, I felt though that *Corruptible* wasn't fully dedicated to answering them, that the chapters were not laid out accordingly, and that the conclusions were far from clear.

Of course, for some questions, you cannot reach a clear conclusion.
But the "impossibility of reaching a conclusion" is also a conclusion. Most of all, it felt to me that reaching a more conclusive answer wasn't attempted.

Instead, I got a lot of stories of police brutality, not enough women leading, and the empathy of psychopaths.
All arguments that felt tangential to the initial questions.

For example, I had to remove this whole section from the summary because I couldn't find any final answer:

Who Gets & Keeps Power? Who Does NOT Want Power? Wasn't Clear To Me

Early and across the book, the author asks these questions:

1. Who *doesn't* seek power: ???
2. Who seeks power:
   - Genetical factors: 30% of the variation of leadership positions held in life is accountable
   - Psychology: people high in dark triads, "need for power" (nPow), "Social Dominance Orientation" (SDO)
   - Dark triad men, who sometimes seek shortcuts to power despite the obvious risks (most despots end up badly, says the author)
3. Who gets power: ???
4. Who keeps power: ???

My Note:
I personally feel that the answers to these initial questions weren't very clear and well-developed in the book -or at

least, weren't clear enough for me to pick up on-.

Stories & Examples Detract From More Dispassionate Analysis

Stories are necessary to sell well.

Unluckily, sometimes they can take good space away from more dispassionate analyses and evidence.
And they can seed confusion, rather than add clarity -see various Malcolm Gladwell books, for example-.

To someone who's looking for wisdom and stronger, more data-backed conclusions (ie.: me), stories are often more likely to detract, than to add value.

I found that the many stories in *Corruptible* were yes interesting, but that also made the book less clear and somewhat less conclusive.

Evolutionary Excursus Felt Too Long & Not Always Most Relevant

Also, I personally felt some parts were not correct.

The author advances range weapons as a "possible theory" as to why violence, brute force, and size matter less in humans than in chimps.

But even as a possible theory, it seems to me it doesn't hold much water compared to other theories.

For example, why look at range weapons when we can explain via our brain development which in turn allowed for the development of weapons?
Usually, the deeper reason has more explaining power than the surface-level one.

Jumped To Some Conclusions Unsupported By Evidence (political bias)

For example, the author says:

> (…) And maybe we, as humans, are somehow drawn to bad leaders for bad reasons.

However, the listed evidence to draw that conclusion are a study showing that we can pick election winners based on face and, I quote "*several other studies have shown that those who are more aggressive or rude in group discussions are perceived as being more powerful and leader-like than those who are more cooperative or meek*".

However, to me, the fact that people can pick election winners based on their faces says nothing about "picking bad leaders".
And a more aggressive person is also not necessarily a worse leader than a meek one -how would "meek" even make for a good leader trait?-.
A rude one may be a worse leader than a cooperative one, but I'd have liked to take a look at the study, to be honest, but it wasn't listed.
How was "rude" defined", and how "cooperative" was defined, for example?
Because as far as I know people don't exactly love rude people and if there was a high-power but juster person in that group, I believe most people would have chosen the higher-power but just person-.

Sometimes A Progressive / Woke Bias

Unluckily, I had the feeling of political bias.

For example:

The "white men CEOs problem" in tech

To me, the very same frame that it's something that needs to be fixed sub-communicates possible bias.

And then jumping to the conclusion that there is some systematic bias that needs to be fixed.

But the author never considers there may be reasons beyond bias that lead more (white) men to found companies.

Of course, there may be cultural or environmental roadblocks or elements that discourage women or other races to end up as tech CEO leaders.

However, in my opinion, the author doesn't account nearly enough for the genetic and "natural" factor that leads more men to start and lead more tech companies.

In-group and outgroup are "completely irrational" shortcut biases?

Says the author:

> Crucially, those from an out-group are more likely to be people that we see as potential threats—a point that we'll return to momentarily.
> Today, many people still rely on these arcane, bigoted sorting mechanisms as a cognitive shortcut, even though it's completely irrational.

Hemm… And how exactly is that "completely" irrational?
Because I bet if it evolved, chances are that it worked.
And even today, I can think of a million reasons and situations where it's *completely* rational as a quick shortcut.

Of course, we can all agree that it's far from perfect and that it has way too many downsides, including society-harming downsides.
And still, that doesn't make it "completely irrational".

There are more examples, such as discounting all judgments based on appearances as biased and wrong, while instead research says that some judgments based on appearances and stereotypes can be more correct than pure chance.

Slight anti-American police bias

The author makes great points about policing and I learned quite a bit from it.

And yes, it may be true that, on average, American police are too aggressive.

However, by holding the positive example of New Zealand against the negative one of the US, the author seems to be making politically-charged statements about what's better and what's worse.
And he seems to jump to the conclusion that a "politer" and more "civilized" police force is necessarily better than a more civilized one.

Albeit that may often be true, it's rushed to jump to that conclusion as if it were true in all situations and environments.
Where's the data to show that sometimes more militarily skilled police may not be better for certain places or environments?
What if the "highly civilized" police force may be less effective in areas of high criminality?

Bit dismissive of the Stanford Prison experiment?

Says the author introducing Zimbardo's famous Stanford Prison experiment:

> If you've ever read a pop psychology book or watched a documentary about prisons, odds are pretty high that you've heard of a notorious study that seemed to suggest power does indeed corrupt. There's just one problem: **everything you think you know about that study is wrong**.

Well, the author is right: there has been much misunderstanding around that experiment -and, in my opinion probably too much over-correction in the criticism during the replication crisis storm-.
And it's true what he says next, such as that the study likely attracted a certain type of people (self-selection bias).

But still, as Zimbardo himself said, the experiment simply (also shows) that the environment does shape human's behavior, and that the environment is likely a far more powerful force than most people would assume (something I'm sure the author would also agree with).

Could Add TPM's Solution: Equipping Good People With The Skills To Win

The author lists some great solutions to the problem of "bad people in power".

Our approach at TPM could have been a good addition:

Teaching good people how to compete and win.
That way, we don't need to hope that the system can recognize the good people and screen out the bad ones. The better people -as in "lower in dark triad traits"- will at least have a chance to make it despite it all.

REVIEW

We applaud *Corruptible* for tackling one of the most critical questions for humanity: who seeks power, who gains it, and how it shapes our civilization.
These questions lie at the core of human nature, social progress, and effective governance—and align closely with this website's mission.

Klaas brings plenty of insight, engaging storytelling, and thought-provoking takeaways. But despite the book's strengths, I was left wanting more.

The original questions are powerful, yet the answers sometimes lose clarity in favor of anecdotes. There's too much narrative, too little hard data. And at times, the underlying political bias and cultural determinism reflect a Standard Social Science Model that doesn't sufficiently account for human nature and evolutionary drivers.

That's a missed opportunity. With sharper focus and more empirical grounding, this could have been a classic—a foundational reference we'd cite repeatedly in our work.

Still, *Corruptible* remains an excellent read.
It's packed with wisdom, useful perspectives, and actionable ideas on improving power structures.
I learned a lot, will reference it often, and fully recommend it.

Check the **best books** on power or **get this book on Amazon**.

Corruptible Summary: Why Power Attracts the Worst People

Corruptible (2021) investigates how power corrupts people, what type of people are attracted to power, and what we can do as a society to make sure that more good people acquire power, and wield it justly.

Exec Summary

- **Power is neither good nor bad, but necessary** to enact change in the world
- **The rich and powerful manipulate the poor to keep the status quo**
- **The poor and "Have-Nots" are mentally disempowered**, and deep down think they are "less worthy" than the powerful ones

FULL SUMMARY

About the Author:
Saul D. Alinsky was an American community activist and left-wing political theorist. He helped organize poor communities to press demands and gain concessions from landlords, politicians, bankers, and business leaders.

Overview

The central theme of *Rules For Radicals* is the empowerment of the lower classes by almost any means.

Because of that "anything goes" approach, Alinsky can come across as a rather extreme and divisive figure.
He champions the use of collective action, strategies, and techniques to tilt the supposedly unfair power structures in favor of the have-nots.
But that includes revolutions and any type of power move.

He says of his own book:

> *The Prince* was written by Machiavelli for the Haves on how to hold power. Rules for Radicals is written for

> the Have-Nots on how to take it away.

In Alinsky's political view, that is "social justice".
And from that self-appointed moral high ground, he outlines approaches and strategies for activists to mobilize and lead communities to foster that social justice.

Learn Power Dynamics

Alinsky emphasizes the importance of understanding power dynamics to organize and lead effective change.

Learn more about power dynamics:

- **Why power dynamics is the most important self-development discipline**

> Why Power Dynamics is The Most Important Self-Help Discipline

Leverage Power

Alinsky argues that power is neither good or bad.

Instead, power is a neutral force that can be used for both good and bad purposes.

And he says that organizers must understand the sources of power in society and know how to maneuver them, recruit them, or put pressure on them to achieve their goals.

The Powerful Frame "Revolution" Negatively To Maintain Power

> From the Haves, on the other hand, there has come an unceasing flood of literature justifying the status quo. Religious, economic, social, political, and legal tracts endlessly attack all revolutionary ideas and action for change as immoral, fallacious and against God, country, and mother.
> These literary sedations by the status quo include the threat that, since all such movements are unpatriotic, subversive, spawned in hell and reptilian in their creeping insidiousness, dire punishments will be meted out to their supporters.

Morals Are Tools of Manipulation

> Justice, morality, law, and order, are mere words when used by the Haves, which justify and secure their status quo.

Learn more about manipulation:

- How manipulation works

> Manipulation: Techniques, Strategies, & Ethics

The Have-Notes Are Mentally Disempowered

There is much wisdom and truth in these words:

> **The Have-Nots have a limited faith in the worth of their own judgments**. They still look to the judgments

> of the Haves. They respect the strength of the upper class and they believe that the Haves are more intelligent, more competent, and endowed with "something special." Distance has a way of enhancing power, so that respect becomes tinged with reverence.

This is not just about the "Have-Nots", but generally for anyone who isn't yet mentally empowered.

We teach mental empowerment in Power University.

11 Rules For Radicals

The author obviously didn't work too hard to make these easy to understand:

1. **Power is not only what you have, but what the enemy thinks you have**. Hide your true numbers and make others think you have more
2. **Never go outside the experience of your people**, ie.: talk to them in a way they understand
3. **Whenever possible, go outside the experience of your enemy** to confuse him
4. **Make enemies live up to their own book of rules**, since they can "no more obey their own rules than the Christian church can live up to Christianity"
5. **Use ridicule to infuriate your enemy**, which then reacts to your advantage
6. **Use tactics your people enjoy**, so they'll partake
7. **A tactic that drags on for too long becomes a drag**, so switch things up
8. **Keep the pressure on**, never let up
9. **The threat is more terrifying than the thing itself**.
10. **The major premise for tactics is the development of operations that will maintain constant pressure upon the opposition**.
11. **If you push a negative hard and deep enough, it will break through into its counterside.**
12. **The price of a successful attack is a constructive alternative.**
13. **Pick the target, freeze it, personalize it, and polarize it.** Avoid attacking abstract entities such as businesses or bureaucracies. Instead, identify a responsible individual and go after him

Personally and frankly, I found these rules poorly thought-through.
They may have good principles and strategies behind them, but they aren't well conceptualized.
And *far* from clear upon first reading them.

There is a reason why *The 48 Laws of Power* became a best-seller, and *Rules for Radicals* did not.
Greene packaged his "laws" in a way that they make sense and are easy to understand *at the title level*, are easy to remember, and sell well.
Saul Alinsky did not.

MORE WISDOM

Let people come up with their own answers to increase buy-in and follow-through

> Another maxim in effective communication is that people have to make their own decisions.
> Much of the time, though, the organizer will have a pretty good idea of what the community should be doing, and he will want to suggest, maneuver, and persuade the community toward that action. He will not ever seem to tell the community what to do; instead, he will use loaded questions.

Shock people with a power move to gain their respect

Says the author talking to a group of Indians:

> **ME**: No, I don't know what you mean. Furthermore, I think that that's just a pile of shit. Do you believe it yourself?
> This brought a shocked silence. It should be noted that I was not being profane purely for the sake of being profane, I was doing this purposefully. If I had responded in a tactful way, saying, "Well, I don't quite understand what you mean, "we would have been off for a ride around the rhetorical ranch for the next thirty days. Here profanity became literally an up-against-the-wall bulldozer.

And this was the reaction of the Indians:

> "When Mr. Alinsky told us we were full of shit, that was the first time a white man has really talked to us as equals—you would never say that to us. You would always say 'Well, I can see your point of view but I'm a little confused,' and stuff like that. In other words you treat us as children."

QUOTES

On how to pressure politicians:

> No politician can sit on a hot issue if you make it hot enough.

On the revolutionary spirit:

> in the spirit of that credo of the Spanish Civil War, 'Better to die on your feet than to live on your knees.' This means revolution.

Political realism shows a not-so-appealing world:

> Political realists see the world as it is: an arena of power politics moved primarily by perceived immediate self-interests, where morality is rhetorical rationale for expedient action and self-interest.
> (…)
> It is a world not of angels but of angles, where men speak of moral principles but act on power principles

CONS

- The genius of the author may get lost in his political bias
- A backdrop of anger and hostility permeates the book
- Revolutions are framed as mostly good, but if your goal is to improve, revolutions are *at best* a coin toss. In modern wealthy societies, revolutions are most likely a step backward

PROS

- Several golden nuggets
- Some good and dispassionate insights into human nature

REVIEW

Rules for Radicals is an interesting book with some good concepts, several golden nuggets of social strategy, and a heavy left-leaning political bias.

The author seems to have a good grasp on power dynamics, and yet fails to realize that the "Have-Nots" may not be any better than the "Haves" if they had the power.

In many instances, they may be worse, since the "Haves" tend to be more driven and ambitious. Drive and ambition within a functioning capitalistic system tend to benefit many with constant progress and better products and services for all.
Of course exceptions apply and capitalism is far from perfect, but I'd rather have the brightest and most driven to advance, than the angriest and most bitter revolutionaries.

Overall, it's an interesting book with some good insights if you can look beyond the political extremism.

What Do You Say After You Say Hello: Review

Lucio Buffalmano · 31 July 2023 · Archived copy · Original

What Do You Say After You Say Hello (1975) introduces Eric Berne's theory of "childhood scripts" that are set up by parents and that determine people's destinies.

Contents

- Exec Summary
- FULL SUMMARY
  - Introduction
  - What's transaction analysis
  - What's a "game"
  - Real intimacy is game-free
  - What's a script
  - The 4 Positions of Transactional Analysis
  - Black and white thinking VS nuances
- CONS
  - Limited-application theory: most people don't have strong script
  - Fails evolutionary psychology: there's no "trash" we learn, just humans
  - Conflates numbers with rigor and veracity
  - Eric Berne is not a scientist…
  - Berne's "system" is too destiny-like deterministic…
  - Assigns too much power to parents' words
  - Berne's solutions via fairytales make no sense
- PROS
- REVIEW

Exec Summary

- **We all have scripts that govern our lives** and that were set by our parents
- **Our scripts are our destiny**
- **Most people are unaware they're living out scripts**
- **The only way to be free and live out of free will is to become aware of our scripts**

FULL SUMMARY

About the Author:
Eric Berne was a Canadian psychiatrist and founder of transactional analysis, a theory of social interactions to explain human behavior.
Berne is also the author of the more accessible, famous, and popular *Games People Play*.

Introduction

What Do You Say After You Say Hello seeks to answer four questions:

1. How do you say Hello?
2. How do you say Hello back?
3. What do you say after you say Hello?
4. What is everybody doing instead of saying Hello?

In brief:

1. To say Hello, you first get rid of all the trash accumulated in your head ever since you came home from the maternity ward, and then you recognize that this particular Hello will never happen again.
2. To say Hello back, you get rid of all the trash in your head and see that somebody is standing there or walking by, waiting for you to say Hello back. It may take years to learn how to do that.
3. After you say Hello, you get rid of all the trash that is coming back into your head; all the after-burns of all the grievances you have experienced, and all the reach-backs of all the troubles you are planning to get into. Then you will be speechless and will not have anything to say. After more years of practice, you might think of something worth saying.
4. Mostly, this book is about the trash: the things people are doing to each other instead of saying Hello. The first problem in answering the other three questions is to see what is trash and what isn't.

What's transaction analysis

> Transactional analysis is a theory of personality and social action, and a clinical method of psychotherapy, based on the analysis of all possible transactions between two or more people, on the basis of specifically defined ego states, into a finite number of established types (nine complementary, 72 crossed, 6480 duplex, and 36 angular). Only about 15 of these commonly occur in ordinary practice;

And anything that does not analyze single transactions into their component-specific ego states is not transactional analysis.

What's a "game"

> Games are sets of ulterior transactions, repetitive in nature, with a well-defined psychological payoff. Since an ulterior transaction means that the agent pretends to be doing one thing while he is really doing something else, all games involve a con
> (…)
> After the 'mark' is hooked, the player pulls some sort of switch in order to get his payoff. The switch is followed by a moment of confusion or crossup while the mark tries to figure out what has happened to him. Then both players collect their payoffs as the game ends. The payoff, which is mutual, consists of feelings (not necessarily similar) which the game arouses in both the agent and the respondent.

Just because something repeats, it's not necessarily a game.
For example, if a patient is worried and asks the therapist for reassurance and he replies with an honest "thank you", it's not a game because the patient was honest and straight.

However, if another patient asks for reassurance and then uses the response to make the therapist look stupid, that's a game:

> For example, a patient asked: 'Do you think I'll get better, doctor?' and the sentimental therapist replied 'Of course you will.' At that point the patient revealed her ulterior motive in asking the question. Instead of saying 'Thank you', as in a straight transaction, she pulled the switch with: 'What makes you think you know

> everything?'
> This reply crossed the therapist up and threw him off balance for a moment, which is what the patient wanted to do.
> Then the game ended, the patient feeling elated at having conned the therapist, and he feeling frustrated; and those were the payoffs.

My note: the "game" was a simple one-up
Basically, what Berne calls a game here is a one-up power move.

The math behind the game

> This can be represented by a formula.
> C + G = R → S → X → P (Formula G) C+G means that the con hooks into a gimmick, so that the respondent responds (R). The player then pulls the switch (S), and that is followed by a moment of confusion or crossup (X), after which both players collect their payoffs (P).

Real intimacy is game-free

> Beyond games lies the other limiting case of what can take place between people, which is called intimacy. **Bilateral intimacy is defined as a candid, game-free relationship, with mutual free giving and receiving and without exploitation**. Intimacy can be one-sided, since one party may be candid and freely giving, while the other may be devious and exploitative.

What's a script

> A script is an ongoing life plan formed in early childhood under parental pressure.
> It is the psychological force which propels the person toward his destiny, regardless of whether he fights it or says it is his own free will.

A script requires:

1. Parental directives
2. A suitable personality development
3. A childhood decision
4. A real turn-on to a particular method of success or failure
5. A convincing attitude (or a credible stance, as they say nowadays)

Preventive medicine based on understanding the script

> if we know some of the elements of the patient's script, we can predict with some confidence where he is heading, and head him off before he meets with misfortune or disaster. That is called preventive psychiatry, or 'making progress.' Even better, we can get him to change his script or give it up altogether, which is curative psychiatry, or 'getting well.'

The 4 Positions of Transactional Analysis

I +, You +

> This is the 'healthy' position (or in treatment, the 'get well' one), the best one for decent living, the position of genuine heroes and princes, and heroines and princesses. People in the other positions have more or less frog in them, a losing streak put there by their parents, which will drag them down again and again unless they overcome it; in extreme cases they will waste themselves if they are not rescued by a miracle of psychiatric or self-healing. I + You + is what the hippies were trying to tell the policeman when they gave him a flower. But whether the I + is genuine or merely a pious hope, and whether the policeman will accept the + or will prefer to be – on this particular scene, is always in doubt. I + You + is something the person either grows into in early life, or must learn by hard labor thereafter; it cannot be attained merely by an act of will

Men in this position (I + You +) make good leaders because even in utmost adversity they maintain their universal respect for themselves and those they lead.

I +, You –

> I'm a prince, you're a frog. This is the 'get rid of' position. These are the people who play 'Blemish' as a pastime, a game, or a deadly procedure. They are the ones who sneer at their spouses, send their children to juvenile hall, and fire their friends and retainers. They start crusades and sometimes wars, and sit in groups finding fault with their real or imagined inferiors or enemies. This is the 'arrogant' position, at worst a killer's, and at best a meddler's for people who make it their business to help the 'not-OK others' with things they don't want to be helped with. But for the most part it is a position of mediocrities, and clinically it is paranoid

I -, You +

> This is psychologically the 'depressive' position, politically and socially a self-abasement transmitted to the children. Occupationally, it leads people to live by choice on favors large and small and enjoy it with a vengeance, that being the poor satisfaction of making the other pay as much as possible for his OK stamp. These are melancholic suicides, losers who call themselves gamblers, people who get rid of themselves instead of others by isolating themselves in obscure rooming houses or canyons or by getting a ticket to prison or the psychiatric ward. It is the position of the 'If Onlys' and 'I Should Haves.'

I -, You +

> This is the 'futility' position of the Why Notters: Why not kill yourself, Why not go crazy. Clinically, it is schizoid or schizophrenic

These positions come from childhood and tend to be stable.
The change must come from within, either spontaneously or with some therapeutic influence: professional treatment, or love, which is nature's psychotherapy.

The Sub-Positions

- 1a. **I + You + They +**. democratic community position of a neighborly family, a sort of ideal to be striven for in the eyes of many people, stated as 'We love everybody.'
- 1b. **I + You + They –**. prejudiced snob- or gang-position of a demagogue, stated as 'Who needs them?'
- 2a. **I + You – They +**. the agitator or malcontent, and sometimes of missionaries of various kinds. 'You people here are no good compared to the ones over there.'
- 2b. **I + You – They –**. the solitary, self-righteous critic, the arrogant position in pure form. 'Everybody must

bow before me and be as much like me as inferior people can.'

- 3a. **I – You + They +**. self-punishing saint or masochist, the melancholic position in pure form. 'I am the most unworthy person in the world.'
- 3b. **I – You + They –.** the servile position of people who choose to work for gratuities out of snobbishness rather than necessity. 'I abased myself and you rewarded me well, not like those other inferior ones.'
- 4a. **I – You – They +**. servile envy, and sometimes of political action. 'They hate us because we are not as well off.'
- 4b. **I – You – They –.** This is the pessimistic position of cynics or of those who believe in predestination and original sin. 'We are none of us any good anywhere.'

Then there are the insecure or unstable ones:

> For example: 1? I + You + They ? This is an evangelistic position. 'I and you are OK, but we don't know about them until they show their credentials or come over to our side.' 2? I + You ? They –. This is an aristocratic class position. 'Most other people are no good, but as for you, I'll wait until I see your credentials.'

The predicates are what you compare about

For example, one may discriminate, and feel "more of" or "less of" on a whole host of "features" such as religion, money, race, sex, etc.,

These are called "predicates"
Predicates determine the lifestyle, but have nothing to do with the outcome.

Your position is your destiny

Your set of positions determines your script -or destiny-.

For example, I + You – They – (2b) will almost always end up alone, no matter what he feels superior about: religion, money, race, sex, etc.
And I – You + They + (3a) end up miserable and perhaps suicidal no matter what particular qualities he feels unworthy about.

Black and white thinking VS nuances

The most dangerous positions for society are based on a single pair of OK-not-OK adjectives: Black-White, Rich-Poor, Christian-Pagan, Bright-Stupid, Jew-Aryan, Honest-Crooked.

> The more adjectives included in each + and –, the more complex and flexible the position becomes, and the more intelligence and discrimination is required to deal with it securely. Sets of adjectives may be added together for emphasis (not only, but also), subtracted from each other for softening (but at least he also), weighed for fairness (but which is more important?), and so on. Thus to some black people, Rich Crooked White may be very not-OK (he's all bad – – –) compared to Rich Crooked Black (at least he's Black – – +), or to Rich Honest White (at least he's honest – + –), or to Poor Crooked White (at least he's poor like us + – –).

CONS

Limited-application theory: most people don't have strong script

Keep this in mind:

Berne developed his theory with people in his practice.
And those were a lot more likely to have stronger scripts -and issues- than the average person.

Berne himself is aware of it when he says:

> Psychotherapists know more about 'bad' scripts than about 'good' ones because they are more dramatic and people spend more time talking about them. Freud, for example, cites innumerable case histories of losers, and about the only winners in his works are Moses, Leonardo da Vinci, and himself.

And indeed, Berne's work applies most people with very strong scripts and on "fanatics".

Or, at least, people who feel strongly about something -the "predicate"-, and feel strongly superior or inferior based on that.

However, a large portion of people you meet aren't fanatics, and don't particularly feel superior or inferior to others.

Hence, transaction analysis wouldn't seem the best instrument to analyze them.

Fails evolutionary psychology: there's no "trash" we learn, just humans

Berne wasn't alive to see evolutionary psychology become as popular as it did.

So it's normal that Berne doesn't fully appreciate that human beings don't really learn what he calls "trash".

What he calls "trash" can't be easily discarded because it's deeply embedded into the human psyche and it's simply

part of “who we are”.

So his goals and ideals also seem naive when he says that his approach will cure all human ills:

> The way people speak who are learning to say Hello is called ‘Martian,’ to distinguish it from everyday Earth-talk, which, as history shows from from the earliest recorded times in Egypt and Babylonia to the present, has led to wars, famines, pestilence, and death; and, in the survivors, to a certain amount of mental confusion. It is hoped that in the long run, Martian, properly learned and properly taught, will help to eliminate these plagues.

To me, that also feels like an “I’m better than you teacher frame” while talking down on people.

Yeah, you go, Eric, teach us how you failed to bring about your superior man revolution then…

Berne forgets that people have innate drives + adult life experiences

Says Berne:

> The child knows, because he is so taught, whether he is going to be a winner or a loser, how he is supposed to feel about other people, and how other people are going to treat him

But that’s not fully true.
Many children are born with innate high self-esteem or confidence.
And some others may be taught they’re losers or winners, but as soon as social and adult life begins, they’ll quickly find out whether those teachings are true or not.

Conflates numbers with rigor and veracity

Says the author:

> The reader may wonder why there are so many numbers in this section. There are three reasons (…) is to demonstrate that transactional analysis is more precise than most other social and psychological theories.

However, adding **numbers per se do not guarantee precision -and neither do they guarantee soundness, usefulness, or correctness**-.

As a matter of fact, adding numbers may be a power move to come across as more authoritative and make the theory *seem* more conving through over-complication.

Basically, Berne was himself pulling a game/power move on his readers.

Eric Berne is not a scientist...

Because he defends and “sells” his theory, rather than being ready to falsify it.

Berne says transaction analysis is “efficient”, “very effective” because no examples have been found among thousands or millions of interchanges between human beings which could not be dealt with by the model, and “rigorous because it is limited by simple arithmetical considerations”.

In truth, it sounds to me like Berne wants to prove his theory right, while a scientist should be always open, or even seek to prove a theory wrong.
The fact that “no example has been found that cannot be dealt with by the model” doesn’t necessarily mean the model is efficient, but it may as well mean that the author is looking for ways to make it work, thus forcing anything through the lenses of his little brainchild baby-model.

Berne's "system" is too destiny-like deterministic...

… And doesn't take into account the huge inputs and constraints of the external world.

Says Berne:

> Each person decides in early childhood how he will live and how he will die, and that plan, which he carries in his head wherever he goes, is called his script. His trivial behavior may be decided by reason, but his important decisions are already made: what kind of person he will marry, how many children he will have

Even if you think Berne's theory is possible or even likely, there's the major issue that, at least the way the author presents it, it's not falsifiable, which makes it un-scientific.

The second and even bigger problem is that it's not very logical.

I don't buy the "early decisions".
First, life and the world are too complex, and people and events are too fluid to follow any script.
Second, the world simply doesn't work on decisions but works a lot more on opportunities and limitations.

For example, Berne says that people already "decided" who they will marry.
Little issue is that **many men cannot follow any early decision on who to marry because they don't have dating choices to pick from**, *independently of what they decided*. So they'll just marry whoever is available.

At the very least and in the best-case scenario for Berne's theory, that self-evident truth already throws a major exception.

No wonder Berne quotes Jung, Adler, Freud, and Campbell.

Assigns too much power to parents' words

Parents DO have enormous power to share their children.

Yet, there is a limit.
And especially so with simple words and requests.

But to Berne, there seems to be no limit.
He says that:

> For the child, his parents' wish is his command, and will remain so for the rest of his life unless some drastic upheaval occurs.

And then even suggests may turn their children into homosexuals with just their words:

> (…) a boy who is told 'Don't mess around with women' may take this as a permission to mess around with other boys, or in some cases with sheep or cows, and in a legal way of thinking he is in the clear, since he is not doing anything his parents have forbidden.

But it doesn't really work that work.
Or, at least, not for most people.

My sister-in-law for example always told and expected my nephew to pick one girl and stick with her.
And she was furious when she saw him making out with a girl in front of her place that wasn't exactly her girlfriend.

Just a simple story to show that parents' wishes aren't commands and do not turn guys gay.

Berne's solutions via fairytales make no sense

Berne's work, similarly to Jordan Peterson, is based heavily on myths, tales, and fairytales.

He says:

> In order to find the script illusion, we need the fairy tale which corresponds to WRM.

But that makes no sense!
What if there is no similar fairy tale?
What if we lived in a world, or in an age, where nobody had written (yet) any fairy tale? The transaction analysis can offer no solution?

No serious medical approach can be based on external limitations such as "available fairytales".

PROS

Overall, there is MUCH wisdom here.

And I believe that the "script theory" makes a lot of sense.

It is true for many people and, in smaller doses than Berne make it out to be, it's true for probably *most* people.

Besides that wisdom, this is what you'll love about it:

Great mix of information + entertainment

For example:

> MARTIAN REACTION One day LRRH's mother sent her through the woods to bring food to her grandmother, and on the way she met a wolf. What kind of a mother sends a little girl into a forest where there are wolves?

And:

> Grandmother lives alone and leaves her door unlatched, so she may be hoping for something interesting to happen, something which couldn't happen if she were living with her folks. Maybe that's why she didn't move in with them, or at least live next door. She was probably young enough to be ripe for adventure, since LRRH was still a little girl.

:D

REVIEW

What Do You Say After You Say Hello is a good book to better understand interpersonal relationships and with plenty of golden nuggets even for intermediate and advanced students.

On the downside, albeit some of Eric Berne's original ideas are valid, he embraced and championed them as commandment-like, self-evident truths.
He failed to find exceptions and nuances, turned into an advocate and defender of his theory, and ultimately sold a genius-like intuition very short.

Berne also appears to speak with a certain air of superiority -and with strong teacher's frames-, and that didn't help to spread the message.

That's a pity because his original thoughts are revolutionary and his theoretical work of analyzing interpersonal relationships and interactions also mimics TPM's more practical approach.

This why, in my opinion, transaction analysis in itself can be even more enlightening if we remove its founder.
For example, Thomas Harry's *I'm OK, You're OK* was the main theoretical backbone for our concept "the judge".

So, overall: mediocre system and theory built upon genius-level original intuition.
And, if you know how to move beyond the main issues, there is more than enough wisdom to make it worth it, and potentially even therapeutic.

Healthy Nihilism: A Guide to Freedom & Power

Lucio Buffalmano · 2 August 2023 · Archived copy · Original

Nihilism is often misunderstood as bleak or depressing. In reality, a healthier form of nihilism can be a foundation for **freedom, resilience, and empowerment**.

In this article, we'll explore how to apply nihilism in practical ways—so that "nothing matters" becomes a tool for *mental strength and emotional freedom*, not despair.

Nihilism As a Moral Obligation

Is it possible for a man who cares about everything to be morally good?

In an ideal world, the answer should always be "yes" and that more caring is always better.

Especially on a site like this one that seeks to create powerful human beings who are morally good, one would think

that caringness taken to its maximum might be a case of a great extreme. (We could say that perhaps a level of caring that knows no bounds would be a hallmark of a fully morally good individual and the potential beginnings of a great force for good in the world. After all, those who care most are also those least likely to sit back and do nothing when that which they care about is negatively affected.)

In this regard, fully caring could be argued as the full completion of this character trait's self-development.

However, we do not live in an ideal world and "more caring" isn't always better. Everything should be done in moderation, including caring [and including moderation, but that's a topic for another article].

So, we need a way to effectively manage and regulate the levels at which we care about things in the world.

And a concept that serves as a good tool for achieving this balance is nihilism.

How much caring is too much caring?

Anything taken to its extreme often becomes bad for those affected by it.

And yet, once again, one would think that caringness taken to its maximum might be the one exception where that extreme may be good.

Besides, the idea of exactly how much caring is too much caring is subjective since it's a moral trait. We all decide for ourselves our own moral value systems, so to attempt to define in any specifics how much caring is too much in this one article could be a constantly, ever-changing line that will always be different from reader to reader.

With that said, I do have a definitive line that works as a fairly solid starting point.

Power is a moral obligation.

One cannot be powerless and morally good because an inability to uphold or carry out one's values is the equivalent of being valueless. A moral code one never stands up for because one *can't* due to being too weak is virtually the same as having no moral code at all. Therefore, the starting point here is that one cannot care so much about everything that it begins to inhibit their own power. And, in this regard, we can even begin to argue that nihilism is also a moral obligation.

But let's not skip ahead. And, we should add the caveat here that what we're describing is a "healthy" nihilism. (Just as too much caring could ultimately cause harm, too much care-freedom can also be equally as harmful.)

The Dangers of Caring Too Much

Let me be clear on what I mean by "caring" now.

We're talking about *overcaring* about *everything*.

For the purposes of this article, the most notable "cares" that we're discussing may be other people's thoughts, judgments, and opinions.

And if you let those three things get to you too much, you may need to put them in check.

This is so important that the dangers of over-caring reach as low as constant overthinking and as high as being emotionally controlled by others.

Here are some of the main potential consequences:

– Anxiety and Stress: caused by the fear of judgment and criticism.

– Indecisiveness: decision-making can be more difficult when you care too much about how everyone will think and feel about it (and indecisiveness is often perceived as uncharismatic).

– Self-Esteem Issues: if you place too much value on others' opinions to determine and measure your own self-

worth, you'll constantly be dependent on the external validation of others to experience high levels of self-esteem.

– Emotional Exhaustion: from constantly thinking of and trying to meet the expectations of others (or what you think their expectations might be).

– Lack of Assertiveness: overcaring about what others think may cause you to have difficulty setting boundaries. You may be more prone to people-pleasing, which can result in being taken advantage of or neglecting your own needs.

The Solution: Healthy Nihilism

You can call it many things. You can call it "enlightened nihilism" in that it's a more enlightened way of approaching a characteristically negative idea for personal empowerment. You can call it "technical nihilism" in that you're only embracing the technical parts of nihilism that benefit you most and leaving the rest that are mostly negative. Or, you could even call it "eudaimonic nihilism" in that you seek to use nihilism only to the extent that it leads most reliably to a life well-lived.

However you choose to call it, the focus of this section is on healthy nihilism.

All power starts in the mind. And here we have some mindsets that leverage the benefits of nihilism while disregarding the pessimistic (and oftentimes counterproductive) rest.

Let's start with the first one.

#1. "Nobody cares about you."

The mantra to say to yourself in your head for this one is this:

> **You**: "Nobody cares about you. (And that's OK.) It's nothing personal, it's just business…and yet, I choose to love them all despite that."
>
> *(*The only thought to focus on for a single individual is, "You're only thinking of yourself…because you're just trying to take care of yourself.")*
>
> *(*The only thought to focus on for a group is, "They're only thinking of themselves…it's their way of taking care of themselves.")*

Let's break this down.

The "nobody cares about you" is simply another way of saying "you're insignificant" which, if you've read Lucio's article on that concept (see "You're Insignificant. The Sooner You Accept It, The More Powerful You Get"), you already know is a good thing for your mental empowerment.

The "it's nothing personal, it's just business" is to consciously and healthily embrace the idea that others are not refusing to care about you because they hate you or any similar personal reason.

It's actually because we've evolved with self-interest as a primary default function in our brains so that we could look after ourselves and practice self-care.

So, the real reason nobody is busy thinking (caring) about you is because they're all busy thinking and caring about themselves.

This means that if they laugh at a mistake you make, it's probably because laughing at you does something for *them* (maybe it makes them feel better about themself). So, don't take it personally.

If they're applying emotional pressure on you during a sales call to buy, it's most likely because it does something for *them*. (They would gain a commission.) So, don't be afraid to be assertive.

If you notice them staring at you, it's probably because they're thinking of what you could do for them (or *to* them) and not much more than that. (It's oftentimes just people being aware of the good and bad–opportunities and potential threats–in their surroundings.) So, don't think or worry too much about it.

It's rarely ever about you. It's almost always about them.

And, that's OK because it's just their way of looking after themselves to better take care of themselves.

It's nothing personal, it's just business.

And, finally, the last part: "…and yet, I choose to love them all despite that."

I maintain my deep love for people despite their self-interest (which can border/cross over into selfishness depending on the situation and how you look at it).

You choose to keep a positive attitude in the face of such a "negative" reality.

Now, this mantra's core assumption (that everyone is only thinking of themselves) is an overgeneralization, of course.

Not everyone will only be thinking of themselves in your day-to-day interactions and dealings with them. Some will truly and genuinely care about *you*.

But, similar to how Lucio stated in a former guide (later incorporated into Power University), you're also not really insignificant, this mantra is less about total accuracy and more about leveraging the beneficial aspects of nihilism that lead to empowering freedom.

It's the freedom to look your boss in the eyes as he feeds you some horseshit about how we "do this for the mission" when you ask for your well-earned raise—and negotiate harder knowing he's only thinking of himself and the company.

And, it's the mental and emotional balance to not take it personally because you know it's only business…and, as a result, you're able to maintain your love/respect for him after the discussion.

Or, it's the freedom to disappoint a stranger when they make a request that you'd really prefer to say "no" to (such as to take their picture), even though you feel like the nice thing to do would probably be to say "yes".

Well, you don't need to worry about disappointing someone who doesn't care about you. So, whether you say "yes" or "no" is totally up to you. (You have your freedom back.)

And, at the end of the day, we still maintain our love for people regardless.

Now, on to the next mantra.

#2. Nothing matters and we're all irrelevant."

When we feel disrespected, the tendency can be to overreact.

But, that tendency typically stems from feeling that the "large disrespect" we received warrants a large (or sometimes even larger) reaction.

However, if the disrespect is small/minimal, then why get too up in arms about it?

The idea for this mantra is to mentally and emotionally reduce the disrespectful communication of others to that of a pebble.

If they're throwing large stones, great, respond accordingly. But, if that's the case, make sure you're *responding*, not overreacting.

Socially it might've been a boulder. But, emotionally, it was hardly a pebble's size.

Here's your mantra for this one:

> **You**: "It doesn't matter. Everything is insignificant (in the grand sceme of things), including this. (We're specks in the universe.) And that's OK. I choose to fulfill life's demands of me of love, growth, and giving back to the world anyway."
>
> *(*The only thought to focus on is, "The world—the universe—far outsizes us, we're tiny specks and nothing more.")*

Similar to the one before, this can also be a pretty hard-hitting mindset. But it can also come with great benefits for your emotional detachment when experiencing adversity.

So, take us, for example. We as human beings are meaningfully big.

Well, compared to what? Compared to the infinite universe that we occupy? And what about when billions of years have gone by and we're all probably extinct? Are we still so meaningfully important then compared to the magnitude of time?

See, every adversity we experience is always big and, therefore, deserving of a big reaction…until we compare that experience to something far bigger.

Then, our issue seems quite small.

Given that the universe (space) outsizes and outlives us and time overwhelms, overpowers, and eventually overthrows us…there's no reason to think that we (or anything others do to us) is *that* important compared to such impossibly massive things.

Compared to those things with such large magnitudes, we're insignificant. (And, to your benefit, so are your enemies from a mindset perspective.)

Now, I only chose disagreements and disrespect as an example of how you can apply this mantra because it's one of the easier applications to grasp. However, the potential uses for this mantra are quite far-reaching and can actually apply to any difficult situation that you'd prefer to minimize to make it more mentally/emotionally manageable.

Revitalizing Your Nihilistic Attitudes

Sometimes you'll experience moments when you don't feel as influenced by these mantras and you become emotionally detached from them. (For example, you repeat them so much they begin to lose their weight and value for you.)

So, here are some techniques to rejuvenate their effectiveness.

Question Your Non-Nihilism

Especially if you're not naturally very nihilistic, it can be easy to slip back into your old attitudes (even if they may be unhelpful for your goals of mental and emotional empowerment).

So, question your non-nihilistic side with an open-mindedness to the possibility that healthy nihilism is the universal truth.

For example:

> **You**: "**What if** nobody cares about you?"
>
> **You**: "**What if** it doesn't matter? **What if** nothing matters?"

Remembering the truth of nihilism can help you find your emotional freedom again.

Meditate on Concepts That Validate Nihilism

Lucio Buffalmano, the head of this site, refers to healthy nihilism as "positive nihilism."

And he shares these ideas as great points to meditate on that will help you internalize positive nihilism when you're done:

- **Earth is only a little speck in the infinite universe (and no bigger than that)**: once you close your eyes and imagine all of the galaxies and Earth as a little speck in that grand space (and you don't even need to go so far that you don't see Earth anymore), then…thinking of how small you must be in that ultimate design allows the mindset of nihilism to come quite naturally.
  - The big chill: last time Lucio read about this topic, it was noted that the universe is expanding. And acceleratingly so. That almost inevitably will lead to a dispersion of energy and heat to the point where everything will be close to "absolute zero," which would allow for no forms of life to be left. A big freeze. At that point, what you did or didn't do doesn't matter.
- **Dust you are and to dust you shall return**: the (maybe eternal) cycle of life, of which you're only a momentary manifestation.

And this may help as well (also from Lucio):

- **The history of evolution**: starting from unicellular amebas, thinking of how wholly different we are now, and how wholly different we as humans will be in the future to the point that they (those future humans) won't even think of us as their predecessors. And that's being very giving of thinking of far-ahead life forms since:
  - The "norm of extinctions" should also be considered in such a case. On a long enough timeline, most forms of life will cease to exist (infinite survival is a next-to-impossible exception and not the norm at all).

Summary

Many people search the internet for answers to the question of "how to be confident."

What most don't know is that a more powerful approach is to seek the ability to act *without* confidence.

If you need to feel confident before taking an action, then you become dependent on experiencing positive feelings before going for what you want in life.

However, when people hear this, many of them think that that means they'll have to feel uncomfortable, nervous, or anxious for the rest of their life. This isn't true at all.

Instead, you can focus on developing the "confidence cousins":

- Self-esteem (see "The Ultimate Personal Power Tool: The Antifragile Ego")
- Self-compassion
- Optimism (see *Learned Optimism*)
- Self-efficacy
- Courage/ambition

And by adding the attitudes of healthy nihilism in your pursuit of more mental and emotional freedom, you'll only reach your goal of feeling more care-free and confident faster.

Emotional Manipulation: Learn The Tactics and Reclaim Your Power

Lucio Buffalmano · 8 August 2023 · Archived copy · Original

Emotional manipulation is a type of psychological warfare using **subtle, often covert tactics** to control or exploit your emotions.

The best manipulators are so smooth that most victims don't even realize they're being played. If you want to become **manipulation-proof for life**, you need to know exactly what to look for.

This article provides a definitive list of **13 advanced emotional manipulation techniques.** We break down everything from **Provoking Your Overreaction** (gaslighting) and **Guilt-Tripping** to the complex strategy of **Social Scalping.** Learn to recognize these covert tricks, understand *why* they manipulate, and reclaim your emotional freedom.

Contents

- 1. Provoking Your Overreaction
- 2. Make You Feel Guilty (Guilt-Tripping)
- 3. Make You Fearful (Fear-Stoking)
  - Emotional Manipulation In Relationships
- 4. Deliberate Mistakes
- 5. Make You Feel Bad For Voicing Concerns (Dimissive Guilt-Trip)
  - 5.2. Make You Feel Your Problems Don't Deserve Attention
- 6. Make You Feel Indebted (Social Scalping)
- 7. Emotional Bait & Switch
  - 7.2. Emotional Manipulation In Dating
- 8. Make You Feel Insecure (Self-Esteem Undermining)
- 9. Discount Your Successes (Undermining)

- Example of Emotionally Manipulative One-Upping:
- 9.2. Make You Feel You're To Blame For Anything Bad That Happens

- 10. Punish You With Withdrawal (Operant Conditioning)
- 11. Intense Emotional Outbursts (One-Trial Learning)
- 12. Upset You (To Increase Your Emotional Investment)
- 13. Make You Addicted To Their Power
- Why They Manipulate

1. Provoking Your Overreaction

The manipulator accuses you of psychological issues or

The emotionally manipulative red flags of gaslighting include:

- **Blaming the victim**. For example, they may say that their poor behavior is only a reaction to yours
- **Psychologizing**, and blaming your 'issues' on your past or faulty mental models
- **Use your own emotions against you**. For example, your valid anger is "proof" that you're too volatile or aggressive

Gaslighting is maddening in both senses: it makes you angry, and it makes you doubt your sanity.

For more, see:

- **Gaslighting**

> Gaslighting: What Is It, Who Does It, And Why

2. Make You Feel Guilty (Guilt-Tripping)

The manipulator makes you feel guilty and “bad” for not doing as he wishes

Guilt tripping is an emotional manipulation tool more common for low-power manipulators.

Higher-power manipulators with power to impose or skills to influence choose *that*.
So it’s when he lacks either the ability to lead or the strength to enforce that he resorts to guilt-tripping.

Here is an example:

> **Manipulator**: (asks an exception for a 3rd time after having been kindly explained we keep simple rules for all)
> **TPM**: (refuses)
> **Manipulator**: Don’t be so mean <— Guilt trip
> I purchased this course with a loan I’m still repaying <— ‘Poor me’ added power move

Note: we cut other power moves and manipulations. And little later he says he’s looking forward to our dating course re-opening, casting doubt on the loan statement.

However, note that guilt tripping can be effective.
The *Routledge Handbook of Persuasion* suggests *moderate* guilt that stresses the positive of taking action is more likely to be effective.

3. Make You Fearful (Fear-Stoking)

The manipulator makes you fearful to increase his control

When you’re fearful you’re less resourceful, needier, and easier to control.

There are countless ways of stoking fears, including:

- **Make you jealous**, so you cling to them and bend to their will in fear of losing their affection and commitment

- **Triangulation**, a subset of jealousy to make you fear a specific "competitor"
- **False financial distress**. If they're the breadwinners, they may pretend that their job is at risk. Good excuse to also control your spending
- **Overwhelming displays of emotions** (read on)

Some emotional manipulators first make you fearful, then present themselves as rescuers. That way, you also become more emotionally dependent on them.

Emotional Manipulation In Relationships

Dating and relationships are replete of emotional manipulation.

Some manosphere circles advocate for 'keeping women on their toes'.
Also see "games men play".

And women manipulate to remain 'the prize' in the relationship:

A double power move: denies the date, and under-invests hoping to make me chase.

Also see "games women play" and "manipulative games women play".

4. Deliberate Mistakes

Some emotional manipulators make deliberate mistakes as part of a strategy of provocation.

And a strategy of provocation, in turn, can be part gaslighting.

It works like this:

1. **The manipulator makes (another) apparently senseless mistake**. The type of mistake you think "how's that even possible"
2. **You get angry** because albeit small, it was still important to you. Or because it's a pattern. To you, it means not caring enough. (Eric Berne explains that social sadists enjoy your anger. They're happy to have that "negative power" over you)
3. **The manipulator defends that "it was just a mistake"** or that "he was just trying to do a nice thing"
4. **You feel you're too aggressive**, maybe even "not good enough for him"

And once you feel *too* aggressive, you start devaluing yourself.

Deliberate Mistakes Dynamics

Contrary to what most people may think, **the deliberate mistake tactic works better with seemingly *smaller* mistakes.**

This is because smaller mistakes provide better cover for the manipulator.
And smaller mistakes make it easier to frame you as "too over-reactive".

To be precise, the deliberate mistake sweetspot is this: small enough to be inconsequential to most, but big enough to annoy you.

Hot buttons and personal "weird" preferences are perfect.
Why?
Because that way you can't complain to others since most people wouldn't understand (a gaslighting effect).
You know you fell for it when you open up to others, but people say "but come on, it's such a small thing".

Examples

- **At work they print the full presentation "for your convenience" even though you hate wasting paper.** When you complain they may say "I thought this investor presentation was important". Now you're in a double bind because the presentation *is* important
- **In the flatshare they take the last one of your favorite snack and replace it with a different brand**. When you get angry, they may say "I just got a full package, just take one there"
- **They bring your favorite brand of yogurt.. But the flavor you hate**. If you complain, they get angry or sad because 'they even got you your favorite brand', or "it's just a yogurt, who cares, it's about the gesture"

> **Him**: brings her strawberries as a gift
> **Her**: did you know that there's only one thing on earth I'm allergic to…
> **Him**: (realizes the "mistake") strawberries. This is progress, I knew there was a correlation between you and this <— he got his payoff: making her angry and reactive to him. And now he tries to sound smart with his reply

In the movie, this is supposed to be "fun".
In real life, this is one of the games manipulators play.

Sometimes even the intent or mention of the mistake is enough.
For example:

- **You say not to take any more eggs because you have too many. When they come back they say "ouch I need to go back to get the eggs"**. That forces you to intervene to stop them. And you get angry because you already talked about it. (After all, you had too many eggs because they already did the "mistake" the day before)

Notice again that these are all small enough that you may find it difficult to find any support.
Your friends may say "ah come on, does the brand really matter so much?". And your employer probably has no policy against "printing presentations for review".

Still, you better have clear in your mind that this is manipulation.
And turkey behavior.

Here's the rule of thumb:

When similar "mistakes" repeat, they're *not* mistakes but deliberate actions to provoke you.

5. Make You Feel Bad For Voicing Concerns (Dimissive Guilt-Trip)

The manipulator makes you feel bad and "wrong" just for taking his time

The manipulator presents himself as busy and overburdened with "important stuff".

And he makes you feel like your concerns are "small stuff" that he has no time for.

This approach also frames the emotional manipulator as higher value than you. (If it's a relationship, that would be higher SMV).

He is higher value because the frame is:

> Your issues are inconsequential because I'm busy with more important things. They only matter to you because you do nothing worthwhile and have nothing to busy yourself with.

This is more common with go-getter, businessmen, and "alpha male" types of men.
The corresponding power move is a mix of aggression and annoyance ("aggressive dismissal").

This type of manipulation also has a convenient upside for the manipulator:

5.2. Make You Feel Your Problems Don't Deserve Attention

When your problems are smaller, **your problems will always lose the right to be heard against his problems.**

So all he has to do when you voice a concern is to voice *his own* concerns. And you lose the right to be heard since

his concerns are “more important”.

Such as, the emotional manipulator monopolizes the “problem conversation”.

Every time you have a fair issue to discuss, all he has to do is to bring up his own problem. And you lose the chance to be heard –*plus* feel guilty about even bringing your issues up-.

6. Make You Feel Indebted (Social Scalping)

The manipulator makes you feel overly indebted whenever he does something for you

Some examples of social scalping include:

- **Playing the martyr**, when they frame their giving as costly, difficult, and very challenging for them to provide
- **Playing the “Atlas”**, carrying the weight of the world on his shoulders. They frame your requests as taxing, falling on an already overburdened person
- **Playing the savior**, when they say that “if they didn’t do X”, it would have been a disaster for you

Another common one after the favors have been done is this:

- **Social Invoicing™** (‘social exchange invoicing’): to ‘throw past favors in your face’, listing all the good and costly things they’ve done for you, and saying or implying you never paid back. More than repayment, the goal is often to elict guilt and shame and, potentially, to leverage them into submission and compliance.

We perfected the science of social scalping as emotional manipulation on this website.
We dig deeper into it on our premium course Power University, but here’s a good infographic as an overview:

PRO Tip: Imagine The Best Possible Behavior & Compare It

Here’s a great rule of thumb to spot emotional manipulation:

To spot emotional manipulation, **think what someone who has your best interest in mind would do. And then compare it to what the emotional manipulator does**.

And this is how a good partner differs from an emotional manipulator:

- **Good partner**: frames his giving as a pleasure to him and as “normal” among people who like, care, and support each other
- **Emotional manipulator**: frames his giving as extraordinary. And exceptionally costly for him, and exceptionally useful to you

7. Emotional Bait & Switch

The manipulator gets emotional investment as leverage, then pulls back once he’s in control

In intimate relationships that turn toxic a pattern of emotional manipulation includes:

1. **Presenting one’s best face** with courtship, love notes, and ‘perfect boyfriend behavior’
2. **Pull-back** after achieving a goal or gaining ’emotional hooks’ like trust, love, a relationship, living in, or securing a loan/gift
3. **Devaluing stage** with disappointment, criticism, and nasty games and power moves
   - Trauma bond, alternating abuse with love, a dark psychology technique to make the victim even more addicted. It can happen “naturally” with avoidant partners in (see “anxious-avoidant trap“)
4. **Discard** if they move on

7.2. Emotional Manipulation In Dating

Dating is rife with manipulations and emotional manipulation.

Just an example:

> **Her**: If you don’t talk, let’s delete each other <— Rushes him to reply fast
> **Her**: I know you have gone to see other girls <— Out of place given it was early dating, no commitment, and I told her I was home working

8. Make You Feel Insecure (Self-Esteem Undermining)

The manipulator uses your (supposed) weaknesses to lower your self-esteem

There are endless ways to make you feel insecure:

- **"Joking" about your shortcoming (ie.: weight)**. On the surface, they're just teasing. But deep down, you feel less attractive, lower value, and insecure.
  Joking is a common covert power move
- **Unfavorable comparison** with supposedly better partners. Sometimes the comparison is also made up.
- **Demeaning & criticizing** are more direct ways to make you feel worse about yourself.
  Advanced emotional manipulators use more indirect and covert ways.
- **Use your insecurities & vulnerabilities against you**. The more intelligent emotional manipulators study or elicit your vulnerabilities first. Then, "joke" or criticize you for them.
  ⍰⍰PRO Tip: share a false vulnerability may be a great test to spot emotional manipulators.
- **Exaggerated self-promotion**, so you may feel like "they're too good for you".
  The best emotional manipulators rarely openly brag. Instead, they're covert and strategic in making you feel like they're so awesome.

Why do they do it?

Simple, **when you feel insecure you're easier to control**, and more dependent on the emotional manipulator.

Notice The Difference: A Good Person Stops, An Inveterate Manipulator Doesn't

Some naturally strategic individuals "naturally" deploy some emotional manipulation tactics.

However, when they realize so -or when you tell them- they will stop.
Or they will talk with you about what makes you feel bad, and adjust accordingly.

9. Discount Your Successes (Undermining)

The manipulator discredits your success to prevent you self-empowerment

Emotionally manipulative fathers hate to see their own children succeed

Understand this:

Emotional manipulators don't want you happy and successful.
Emotional manipulators want you sad and *un*-successful.

One, because sad and unsuccessful people are easier to control.
And two, because your success is a threat to their fragile self-esteem. They feel better about themselves if you fail.

So, whenever you win, they one-up you and undermine you.

One way to undermine your successes is to delink them from personal value, qualities, or even effort.
Instead, it was based on luck, circumstances, or… Thanks to *them*.

Example of Emotionally Manipulative One-Upping:

> **Her**: I have 37.000 followers on IG
> **Him**: 36.999 of which are mine

He may even be right as far as we know.
But… Was it necessary to undermine like that?
It still feels like a cheap shot.

While the manipulator discredits your wins…

9.2. Make You Feel You're To Blame For Anything Bad That Happens

Emotional manipulators also inflate your losses to make you feel bad about yourself.

It can be as simple as:

> **Emotional Manipulator**: Oh, ouch, you didn't get that promotion? That must hurt, who did they give it to?

And then they ask you “Why to her” and “Why not to you”. The goal is to insist and expand on the loss and to shift your focus on personal faults.
The most Machiavellian may even *play* supportive. But they will never shift focus to any truly uplifting topic or thought. That’s a conscious tactic to let you emotionally linger and wallow in defeat.

Minimizing your wins and inflating your losses go in tandem. But “loss inflating” is often a bigger red flag.

Effects

Psychology researcher Martin Seligman calls the self-talk we described “personal agency explanatory styles”.

And **negative explanatory styles make you feel pessimistic, depressed, and helpless**.
You acquire negative explanatory styles when the manipulator makes you feel that:

- Your wins have little to do with you
- Your losses are because of you

So be careful, and always reject the emotional manipulator’s negative frames.

10. Punish You With Withdrawal (Operant Conditioning)

The manipulator changes your behavior by rewarding what he wants and punishing what he doesn’t want

Manipulators don’t usually talk straight and direct -or, well, they wouldn’t be manipulators-.

Instead, they often prefer covert and passive-aggressive ways.

So instead of telling you what they didn’t like, they seek to change you with “operant conditioning“.
Such as, they reward what they want, and punish what they don’t want.

However, the “punishment” can be covert and (silently) by removing a source of (emotional) pleasure.
For example:

- **Withdrawing attention**
- **“Forgetting” dates**
- **Not answering texts** -or brief and dry answers, or removing emojis-
- **Silent treatment**

11. Intense Emotional Outbursts (One-Trial Learning)

The manipulator gets your present compliance with overwhelming displays of negative emotions (aggression or meltdown). And they get your future compliance through your fear (one-trial learning)

If covert manipulation fails, you may experience the opposite: an overwhelm of manipulative force.

Two of the more common emotional outbursts include:

- **Raging**: when the manipulator becomes aggressive, yelling and threatening
- **Emotional meltdown**: when the manipulator self-harm or threatens to end one’s life

Keep in mind that emotional manipulation must not necessarily be conscious or high-power.
It can be subconscious or a consequence of mental disorders -for example, BPD-. A girl I once date scratched herself until bleeding. And then started gulping alcohol to get my full attention.
That is also emotional manipulation.

We consider intense emotional outbursts one of the worst emotional manipulation red flags.

This is why:

Emotional outbursts aren't only very upsetting, but also very costly for the manipulator.

Raging shows a side of him that can be very antisocial and dangerous.
And emotional meltdowns show that he doesn't even care about his own reputation -to you, or to the world-.

Meaning: the emotional manipulator stops at nothing to control you.

12. Upset You (To Increase Your Emotional Investment)

Negative emotional investment is still investment.

The energy you spend in anger, yelling, ruminating, or explaining… It's all mental cycles you spend on them.

Look at this example:

> **Her**: (audio message saying "maybe we're not a good ") <— tries to make me invest and chase her with denying that "no, we are good a fit"
> **Me**: Why do you say that <—- doesn't fall for her game
> (…)
> **Her**: Are you mad? Sorry <—- A covert power move. Plus, tries to make me angry by saying I was angry. And I never gave any sign of anger. A gaslighting effect, if you fall for it

See my last message.
That was a good power move :).

13. Make You *Addicted* To Their Power

The manipulator leverages his higher power and influence over you to make you *want* to comply, earn his approval, and invest and give

This is where emotional manipulation enters the advanced stage.

We enter the realm of abusive relationships, co-dependent relationships, lover boy types of pimps, and cult leaders. But also various types of gurus and even some coach-mentor relationships.

And this is where it also gets murky.

The emotional manipulator often doesn't use violence or coercion.

So many miss the power dynamics at play.
And placing the blame also becomes more difficult.

Is the manipulator an ahole and the one to blame, or did the victim willingly submit and stick around?

Often, it's a mixture of both.
The manipulator IS a high-power, charismatic, and often high-value individual. But he also abuses his power and influence.

On the other hand, the victims can also often stop being a victim if they worked on their own self-empowerment. We help people do just that in Power University.

See more for on emotional power dynamics:

- Judge power dynamics

> The Judge Role: A Tool For Emotional Control

Why They Manipulate

The reasons vary, but most of them revolve around power.

Emotional manipulators manipulate to:

- **Control you**
- **Maintain power** (clinical psychologist George Simon explains that many manipulators are power-hungry. And power-hungry individuals can't stand losing power, even when they don't even have a goal)
- **Enjoy their power and manipulative skills**. Some emotional manipulators take pride in their manipulative skills. So the more successful they are, the more they get to feel good and special
- **Enjoy the pleasure of harming others**. Yes, evil people exist. And some manipulators enjoy harming others –sociopath author M. E. Thomas admits so-.
  Some bent personalities also simply just "hate everyone"
- **Dog-eat-dog worldview**. They can't conceive that people can collaborate and both be happy and do well.
  They may even see you as doing the exact same on them -if you had their manipulative skills, at least-

See more on the psychology and types of abusers.

The Power Broker: Moses' Tactics to Rule New York (Book Review)

Lucio Buffalmano · 19 August 2023 · Archived copy · Original

The Power Broker: Robert Moses and the Fall of New York (1975) is the biography of Robert Moses and how he acquired, amassed, and maintained power while delivering record-beating public works in terms of sheer size, scope and number, shaping New York as we know it (for better and for worse).

  - Do we need men like Moses?

Exec Summary

- Moses Machiavellianism and expertise in writing laws allowed him to navigate and manipulate the inner workings of state government to create and lead numerous semi-autonomous public authorities
- Moses eventually acquired the power to issue bonds, directly control millions of dollars in revenue, and fund new ventures as he wished, with little outside input or oversight
- Work hard, get things done, and the powers that be will turn a blind eye to your methods and personal gains
- Use your public work to gain a reputation as a "fighter for the people" and use that as a political tool and weapon
- Develop an army of supporters by letting money and favors flow to them
  - Negate any benefit and seek to make anyone who opposes you pay so that few people will want to oppose you
- Gain control over your own sources of income so that you can grow independent of political power

FULL SUMMARY

About the Author:
Robert Allan Caro is an American journalist and author, also known for his thorough work on the biographies of political figures such as Robert Moses and Lyndon B. Johnson.

Never Let Power Movers Do Anything For You

Says someone who knew Moses well:

> My experience with Moses has taught me one lesson, and I'll tell it to you. I would never let him do anything for me in any way, shape or form. I'd never ask him—or permit him—to do anything of a personal nature for me because—and I've seen it time and time again—a day will come when Bob will reach back in his file and throw this in your face, quietly if that will make you go along with him, publicly otherwise. And if he has to, he will destroy you with it."

Never Forget Personal Slights – Let People Know Enemies Pay

> **The fear in which Moses was held because of these factors was intensified by his memory.** Cross him once, politicians said, and he would never forget. And if he ever got the chance for revenge, no consideration would dilute his venom.

For example

> For a twenty-year period that did not end until 1968, Moses was given by the State Department of Public Works a secret veto power over the awarding of all state contracts for public works in the New York

> metropolitan area. No engineer who had ever forcefully and openly disagreed with a Moses opinion ever received even one of the thousands of contracts involved.

And you can also use this technique for sweet revenge, or for making people pay for the disempowering power moves:

> Recalls Assistant Corporation Counsel Chanler, who handled the case for Moses and drew up the final stipulation: "I spoke to Moses about it. He said they had to be evicted at once. I said, 'Why?'
> "He said, 'Because they were rude to me.' "

Let People Know There's Heavy Price To Stand In Your Way, And They'll Let You Free To Do As You Please

> "He was terribly unfair to people," McGoldrick says. But, the Comptroller admits, the attacks served their purpose. Moses' methods "did intimidate people from debating with him. And it intimidated us, too, most likely." Soon, in the whole city government, from bureaucracy to Board of Estimate to mayor, there was no one to stand in the way of his dream, no one who would dare to tell the public the truth about the methods that were being used to make it come true, no one who would venture to examine—or to proclaim—its flaws.

However, power that rests on fear only is severely handicapped.

You also need friends and allies -or even simply people who support you for what's in it for them-.
So to maintain support always make sure to give others what they want:

Do Great Work, Become Indispensable, Let Those Above You Bask In The Credit

Moses got things done more than anyone else.

And in democracy where public work mean votes, that gave Moses a lot of power:

> The Governor who finds a man who can inject into the democracy-public works equation a factor of personality so heavy as to unbalance it and get public works built during the span of a single term of office has little choice, if he is ambitious for political success, but to heap on that man more and more responsibilities, even though the giving of responsibilities carries with it the grant of more power.

Moses' forceful approach against those who stood in the way of his projects also made him a convenient lightning rod for politicians: Moses would pass to the upper politicians some of the acclaim, while also taking the blame for the few who were not happy with the projects.

But Make Sure To Give Value To Your Supporters

Anyone, including the biggest tyrant of tyrants, needs supporters.

So make sure you have plenty of value to give to keep your friends closer and supportive:

> "He gave everybody involved in the political setup in this city whatever it was that they wanted," one official recalls. "Therefore they all had their own interest in seeing him succeed. The pressure that this interest all added up to was a pressure that no one in the system could stand up against, because it came from the system itself."

Control As Many Resources As You Can

Increasing resources is a virtuous cycle.

Not only you have more for yourself, but you have more to give to your supporters.
And the more supporters you can win to your side, the more power you can get.

> Corruption before Moses had been unorganized, based on a multitude of selfish, private ends. Moses' genius for organizing it and focusing it at a central source gave it a new force, a force so powerful that it bent the entire city government off the democratic bias.

Give, But Get In Return & Only Keep Giving To Those Who Give Back

> Moses' fees did not come without strings. He was buying men's influence, and for each dollar he spent he made sure he received full value.

But never demand outright, it's crass, illegal, and most people understand the game anyway:

> The price was not demanded outright. Moses did not directly ask a recipient of one of his fees to return the favor by voting in the Legislature or the City Council for one of his proposals or by persuading legislators or councilmen to vote for the proposal. He did not ask a recipient directly for support of any kind. Asking would have placed both men in violation of the law and of various codes of ethics.

Punish Those Who Don't Give Back

Moses' view of his social exchanges was that people were either "on his team", or outside of it, and against him.
And the punishment was to be left out of the lucrative inner circle.
Plus, some extra punishment if Moses could afford:

> If you tried, even occasionally, not to cooperate, if you dropped off "the team," if—ever—you exercised your responsibility to the public rather than your responsibility to Robert Moses, you were out in the cold until you died. There would be no consulting jobs, no authority make-work—and, if the rumors were true, when the State Retirement Board met to certify your pension, it would somehow turn out to be less, far less, than you had believed you were entitled to.

Gain Intel From Potential Enemies: Plant Spies Around Them

Moses, who served longer than most politicians, could build a base that most politicians couldn't.

He had on payroll the secretaries of those same politicians, and used it to the best of his ability:

> He had taken measures to minimize the threat to his purposes posed by key officials who were not Moses Men: some of these officials would have been astonished to learn—most of them never did—that their secretaries were on Moses' payroll as well as the state's, and that in transcribing confidential memoranda and minutes of secret meetings devoted to blocking a Moses project or to curbing Moses' power, these secretaries made an extra carbon, which was delivered nightly to Moses' representatives in Albany.

Always Start Charming, Only Switch To Aggressive If Needed

> But the charm could vanish swiftly. He joked and laughed with the farmers, but when one made clear that he

> would not sell his land, Moses could change in an instant to quite a different approach.

For example:

> He introduced himself as Tm Robert Moses, representing the State of New York. We're going to put a parkway through this section of Long Island.' He was very polite, very diplomatic, at first. But when he saw my father wasn't going to sell, he stood up in our kitchen and he said: 'You know, Mr. Rasweiler, the state is all-supreme when it comes to a condemnation proceeding. If we want your land, we can take it.'

And:

> Mr. Moses told me personally that his power was such that he could seize my house, put me out of it and arrest me for trespassing if I tried to get into it again (…) Mr. Moses told me that he was able to control the press of New York City, so as to hold me up to such obloquy that I would not be able to stand it

Move Fast, And It Will Always Be Too Late To Stop You (Fait Accompli)

A common tactic of Moses was that of moving as fast as he could.

Then, once someone went from simple objection to escalating the matter, it was too late.
This tactic worked great for a man who worked in the public sector where the time for approvals and decision-making tend to be particularly slow.

But Moses also used in case of court proceedings.

For example:

> Moses had never stopped developing the Taylor Estate—as if its acquisition were a fait accompli. By the spring of 1927, he had laid concrete for access roads and parking fields, set out scores of stone fireplaces and picnic tables, erected wooden bathhouses with showers and lockers and finished renovating the mansion and outbuildings, at a total cost of hundreds of thousands of dollars. During the summer of 1927, it had hundreds of thousands of visitors. By the time the higher courts came to rule on the question of whether the Taylor Estate was a park, it was a park.

Destroy What Obstructionists Want To Protect, And They'll Have No Reason To Fight

For example, when people wanted to prevent Moses to cut through a park to preserve trees, he cut the trees.

What a power move:

> They appealed to the Board of Estimate to stop the Park Commissioner from chopping down the trees (…) Then they demanded that Moses hold a public hearing on his plans, and threatened to file a taxpayers' suit to obtain an injunction if he did not agree to hold one. Moses agreed. He set a date two weeks away. And then, during those two weeks, he cut down hundreds of trees for the right-of-way. "He knew how to handle them," Madigan would laugh years later, recalling the reformers' shock when they realized that the park they had wanted so much to save had been ruined. Moses himself regarded his move as a masterstroke; he devoted space in his memoirs to relating how his men invented "a new ingenious tree-pulling device equipped with a sort of electric donkey engine" that cut down trees even faster than he had hoped.

In some cases, I agree this is genius to avoid that some small special interest groups damage larger communities.

For example, in Italy, there have been bears re-introduced in parks. However, it's too many and too close to cities and it turned out dangerous for people.
One runner died in a bear attack :S. But nobody can do much about it because the noisy minority of animalists always make it impossible to put down bears.

In that case, it could be a good act of civility to get rid of the most dangerous bears before any legal proceeding.

Manipulate The Press: Go First, Set The Initial Frame

When something is bound to surface, be the first to break the news.

And make sure it's framed in a way that benefits you.

For example:

> Anticipating that the matter would become public knowledge, Moses went to the press—and he did so with his usual blend of demagoguery and deception: breaking the story himself to get his side of it before the public first; oversimplifying the basic issue to one of public vs. private interest; identifying the "private interests" with the sinister forces of "influence" and "privilege"; concealing any facts that might damage his own image. "The whole question," he said, "is whether public interest is going to yield to private," whether parks are going to be "for the people." The public needed the land occupied by the yacht club and it needed it immediately so that a great public improvement could be gotten under way, he said

Weaponize Press and Releases

Having the ear of the press or of anyone with enough broacasting power is leverage that you can use.

Public press releases from a man like Moses with a reputation for being above politics and only serving the public's interest were all the more powerful to use it as leverage with politicians:

> He had so much potential for trouble because of the many directorships he had. And the main threat he had was [to issue press releases]. He could always cause you so much trouble by calling you 'a dirty politician'—he was above politics, of course . . . Governors were always nervous about this. You knew that if he said something, the newspapers would pick it up big."

Weaponize Attention

> Moses disciplined Harriman not only by using publicity but by withholding it: by not inviting the Governor to speak at ground breakings and ribbon cuttings. In 1957, for example, Moses staged a day-long series of ribbon cuttings to celebrate the completion (…) The Democratic Governor, who had authorized the projects and provided the funds for them, didn't even know the ceremonies were being held until he read newspaper stories about them —stories and pictures of Moses and the other official participants, all Republicans.

Weaponize The Public Opinion To Bend Others To Your Will

Moses managed to develop a reputation as a "no-nonsense doer" and to endear himself to public opinion.

He was also skilled at publicly attacking his opponents, for example framing them as "selfish politicians" or as "rich rubber barons who steal from the people".

In the political arena he moved in, public opinion was king, so that gave him huge power.

However, everyone cares about their reputation, so he was able to use public opinion as leverage against judges.

For example:

> What was a judge to do? Tell the state to tear up the roads and tear down the buildings, to destroy what hundreds of thousands of dollars of the public's money had been spent to build? Tell the people who had visited the Taylor Estate that they could visit it no more? In theory, of course, judges should not be influenced by such considerations. But judges are human. And their susceptibility to such considerations was undoubtedly increased by Moses' willingness to attack publicly those of them who ruled against him

Gain A Reputation For Being A Selfless Worker & Value Giver "For The People"

Moses both enjoyed the image of behing above money and politics, and actively promoted for power and personal status and gains.

For example, he never accepted any salary for his work, and made sure that people knew so:

> The image was of the totally unselfish and altruistic public servant who wanted nothing for himself but the chance to serve.
> A key element in it was his disdain for money—a disdain which he made certain was well publicized and which was symbolized by his refusal to accept a salary for his services.
> Authority officials were traditionally unsalaried (the tradition had begun in England, where it had been believed that authorities would get better officials —men above polities—if they were not paid), and Moses had eagerly followed the tradition with his authorities—and had made certain that the public knew he was serving as authority chairman "without compensation."
> The image was of the fearless independent above politics. The public believed authorities—entities outside the normal governmental setup, entities whose members were unsalaried and appointed to terms long enough in theory to insure their independence from politicians—to be "nonpolitical."

Get The Project Started With Lower Estimates, & You Trapped The Bosses To Keep Funding It

Another common Moses' tactic was to lie about the cost of a project and provide much smaller estimates.

Then, once the project started, politicians faced large pressure to keep funding it because half-unfinished work would look terrible for them.

Quoting *The Power Broker*:

> But what if you didn't tell the officials how much the projects would cost? What if you let the legislators know about only a fraction of what you knew would be the projects' ultimate expense?
> Once they had authorized that small initial expenditure and you had spent it, they would not be able to avoid giving you the rest when you asked for it. How could they? If they refused to give you the rest of the money, what they had given you would be wasted, and that would make them look bad in the eyes of the public. And if they said you had misled them, well, they were not supposed to be misled. If they had been misled, that would mean that they hadn't investigated the projects thoroughly, and had therefore been derelict in their own duty.

Don't Shy Away From Nasty Power Moves

For example:

Reply As If Someone Attacked You Even When They've Been Nothing But Polite

That way, you create a new reality.

People who only read or hear your reply will naturally jump to the conclusion that you have been unfairly attacked.

For example:

> Lutz did not reply. But Moses did. The first sentence of his letter to Wilcox was: "I will pass over without extended comment the unpleasant tone of your letter. I presume that you have become so accustomed to addressing people in this way that you are hardly aware of its effect on others." He was writing, Moses said, to defend Lutz from Wilcox's attacks.
> (…)
> An astounded Wilcox realized that Moses had sent a copy of his, Moses', letter to the seventy-two other regional commissioners without sending them a copy of Wilcox's letter—and therefore the commissioners could have no way of knowing that Wilcox's letter had not in fact been unpleasant, and they could not know the events that had led up to it.

Become A High Value, And A Great Leader

Now we go back to the basics.

Power isn't just strategies, techniques, or Machiavellianism.

Power starts from you, and your personal qualities, including high-power behavior, dominance, charisma, charm, and prestige.

Moses was a high value man.

Says one of his reports:

> "Mr. Moses was no lawyer, but he had a great knowledge and grasp of the law," Junkamen would say. "He was not an engineer, but he had a great knowledge of engineering. He knew politics, he knew statesmanship— he was an altogether brilliant man. If you were working with him, you just had to learn from him—if only through osmosis." One of the commission's engineers rhapsodizes: "I don't think there was a man who came into daily contact with him who wasn't inspired to do better work than he had thought he was capable of doing."

And he could come across as high-quality, too, and as a great leader.

Says another of his reports:

> "He had a gift for leading men," Shapiro recalls. "Those men idolized him. You'd see him walk up to a pickax gang that was tired and talk to them awhile and when he walked away, you could see those pickaxes swing faster."

Use Higher Ideals & Judge Rewards

And the most valued reward—the thread that bound his men most closely to him—was still more intangible. "We were caught up in his sense of purpose," Latham explained. "He made you feel that what we were doing together was tremendously important for the public, for the welfare of people."

Work Hard

You cannot accomplish great things, without great work.

So you must work long enough, over a long enough time, and with dedication and concentration.

Moses even went monk mode for most his life:

> Moses had always possessed tremendous energy and the ability to discipline it. Now he disciplined it as never before, concentrated it, focused it on his work with a ferocious single-mindedness.
> Sloughing off distractions, he set his life into a hard mold. Shunning evening social life, especially the ceremonial dinners that eat up so much of a public official's time, he went to bed early (usually before eleven) and awoke early (he was always dressed, shaved and breakfasted when Arthur Howland arrived at 7:30 to pick up the manila envelope full of memos).
> The amenities of life dropped out of his.

Read more on monk mode:

> Monk Mode Changed My Life (Here's How)

Set High Expectations & Reward Star Performers

- Once they had proven themselves to him, Moses took pains with their training.
- Incredibly hard-working, incredibly loyal—dedicated, faceless, Moses' men were recognized by public officials as an elite cadre within the ranks of the state's civil servants and had already been given the name "Moses Men."
- They therefore had considerable power of their own, and this was incentive to those of them who wanted power.
- In rewarding his men financially, Moses was hampered by civil service limits on pay and promotion schedules, but his ingenuity found a hundred ways around those strictures. If a man wasn't making what Moses thought he should be, he would put the man's wife on the payroll in some job that required no work—such as answering the telephone in their home—and pay her an additional stipend.

Respect Other High Power People & Seek Collaboration

> Moses was playing by the rules of power now and one of the first of those rules is that when power meets greater power, it does not oppose but attempts to compromise.

Take From The Powerless To Stay Friendly With The High Power

> Robert Moses had shifted the parkway south of Otto Kahn's estate, south of Winthrop's and Mills's estates, south of Stimson's and De Forest's. For men of wealth and influence, he had moved it more than three miles south of its original location. But James Roth possessed neither money nor influence.
> And for James Roth, Robert Moses would not move the parkway south even one tenth of a mile farther. For James Roth, Robert Moses would not move the parkway one foot. Robert Moses had offered men of wealth and influence bridges across the parkway so that there would be no interference with their pleasures.
> But he wouldn't offer James Roth a bridge so that there would be no interference with his planting.For James Roth, Robert Moses would not move the parkway one foot.
> Robert Moses had offered men of wealth and influence bridges across the parkway so that there would be no interference with their pleasures. But he wouldn't offer James Roth a bridge so that there would be no interference with his planting.

Use Mobbing to Get Rid of Enemies & Appoint Loyalists

> Headquarters employees were protected by civil service, but it didn't help them much.
> Men who lived in the Bronx were told they had to work in Staten Island, and who lived in Staten Island were assigned to the Bronx. Or they were given tasks so disagreeable they couldn't stop them.

The same can be done for poor workers, of course, so you only keep loyalists, who are also great employees.

Get Physically Aggressive To Make People Fear You

> And the bullying was not just verbal. City Hall was whispering about Moses' physical encounters with other men.

But Only Physically Bully Those Smaller Than You

> as in the case of scrawny little "Slat" Johnson, the roommate he knocked down at Yale, neither of them was his physical equal. Raymond Torrey, whom he tried to strangle at a State Council of Parks meeting and at whom he then hurled a heavy smoking stand, was a pudgy little bird watcher. Moses had also staged a fist fight with WPA administrator Hugh Johnson in Bernard Baruch's apartment, and Johnson, at the time, was fifty-two—eight years older than Moses—and exceedingly drunk. Now Moses had additional physical encounters—and the pattern continued.
> (…)
> Other City Hall observers recall other Moses fist fights but not one with a man to whom he had a chance of losing.
> (…)
> Stanley Isaacs had the courage to give the thoughts voice. He said mildly: "When Mr. Moses says something will cost 3.4 percent, he adds the .4 only to make you think it's accurate. It's really 6.2 percent." Moses' response was to take a violent swing with his fist in Isaacs' direction and say, "I'd like to punch you in the nose!"
> ("He wasn't close enough to hit him with a baseball bat," says Isaacs' borough works commissioner, Walter D. Binger. "It was just a motion of passion. But Moses was tall and athletic" and the mild-mannered Isaacs was fifty-seven years old. "Everyone in the room was shocked," Binger says.

Hide Your Power Move In A Contract, Let Them Sign It, And Enjoy Legal Power Over Them

This was the "masterstroke" that gave Moses total control, independently of mayors and politicians.

> (…) but long, legalistic pages later, buried deep within the act, in a subdivision of Section Nine, a subdivision and a section that ostensibly had nothing to do with "Existence," there was a new sentence:
> The authority shall have power from time to time to refund any bonds by the issuance of new bonds, whether the bonds to be refunded have or have not matured, and may issue bonds partly to refund bonds then outstanding and partly for any other corporate purpose.
> "He had figured out a gimmick/' says Reuben A. Lazarus, drafter of the original Triborough Act and himself a master of the gimmick
> (…)
> "That sentence looked so innocuous. But it changed my whole act completely. With that sentence in there, he had power to issue forty-year bonds and every thirty-nine years he could call them in and issue new bonds, for another forty years. La Guardia had thought that authorities . . . would be temporary creations that would build something and then turn it over to the city and go out of existence as soon as it was paid off. But with that

> gimmick in there, it would never be paid off."
> Never.

After the law passed, Moses also didn't need to be a politicain himself. He was interested in money and power, and he no longer needed elective office to obtain those prizes.
Not only he didn't need political power or backing, but he also didn't need public opinion anymore.

Bonus Points: Display Your New Power With Power

Was also funny to read when the mayor found out about the new power that he himself, unwittingly, granted Moses.

The mayor sent Moses a long letter to enforce boundaries and stop Moses.
And Moses simply replied "I think you had better read the agreements and contracts" :D.

Writes Robert Caro:

> As poor Trubee Davison had done years before, Fiorello La Guardia sat down, too late, to study documents drawn up by Robert Moses which he had approved because he had relied on Moses' word as to what was in them. Then he called in his legal advisers to read them.
> "Well, that was the day of the great awakening," recalls Windels

Be Open To Criticism, Don't Build An Army of Yes-Men

When things started going real bad for Moses, his entourage of yes-men and his attitude of bending everyone to his will only made things worse.

He wasn't able to get good idea, and wasn't even able to get reliable information:

> Moses appears not to have known its full extent himself. Certainly his aides, having seen what happened to Spargo and Witt, were not going out of their way to tell him about it. "You've got to remember," says one city official, "that everyone out there was scared to death. Moses made all those people and he can destroy them. He doesn't want to hear that his Fair is going badly. He's always regarded criticism, however constructive or well meant, as a personal attack.
> All he wants to hear is, 'Yes, RM.' The result was that his own people allowed him to live for months in a fool's paradise."
> It had to end, however.

Never Turn Into A Full Ass*hole / Sociopath: It'll Cost You

> Power is being able to ruin people, to ruin their careers and their reputations and their personal relationships. Moses had this power, and he seemed to use it even when there was no need to, going out of his way to use it, so that it is difficult to escape the conclusion that he enjoyed using it.

And while Moses did achieve power and "personal success" that tendency to over-punish and antagonize cost him heavily.
Including ruining his name and reputation for generations to come (as this same review proves).

Says Caro towards the end of the book:

The last surviving portion of the Moses image was destroyed. No one had ever said he was personally interested in money. Now they had. Of the image of Robert Moses, that had stood glittering and pure for thirty years, there was

now not a single part left untarnished.
He became an object of derision, almost of scorn, to the reporters he had derided and scorned for so long.

MORE WISDOM

Idealists May Have To Compromise To Acquire Power

> Bob Moses had changed from an uncompromising idealist to a man willing to deal with practical considerations
> (…)
> He was openly scornful of reformers whose first concern was accuracy, who were willing to devote their lives to fighting for principle and who wanted to make that fight without compromise or surrender of any part of the ideals with which they had started it.
> Bob Moses was scornful, in short, of what he had been.

Let Your Wife Handle All Home-Related Stuff So You Can Focus On The Mission

Robert Moses' wife was the person who may have had the most power over him.
However, since she was supportive of him, that worked great for both.
She bought his clothes, took care of what he'd wear, managed the finances -and even slipped him the money under the table to pay for dinners out-.

Don't Trust People Who Start Out TOO Idealistic

From personal experience and reading history, people who are TOO big idealists with too big ideals of "fairness" and "overturning the system (to replace with their vision)" often end up being the worst despots.

Showcase Your Power While Your Status And Achievements While People Wait For You

> Waiting to lunch with Robert Moses, a guest would be ushered at Randall's Island into an anteroom lined with pictures of Robert Moses' bridges, Robert Moses' parks, Robert Moses' parkways, of Robert Moses posing with Hoover, of Robert Moses posing with Roosevelt, of Robert Moses posing with Truman, with Eisenhower (and, later, with Kennedy and Johnson—and Pope John); at Belmont Lake into an anteroom with walls covered, literally from wall to ceiling, with Robert Moses' plaques and trophies. There might be a gleaming white scale model or two, of past or future achievements, lying carelessly about. And to insure against the guest's not being sufficiently reminded of his host's achievements, as he was being served drinks by a white-coated waiter, he would probably be joined —by design—by one of Moses' aides who would regale him with anecdotes about RM's triumphs.

Use Luxurious Hospitality To Win People Over

> Hospitality has always been a potent political weapon. Moses used it like a master. Coupled with his overpowering personality, a buffet often did as much for a proposal as a bribe. "Christ, you'd be standing there eating the guy's food and drinking his liquor and getting ready to go for a ride on his boat, and he'd come up to you and take both your hands in his or put his arm around your shoulders and look into your eye and begin pouring out the arguments in that charming way of his and making you feel like there was no one in the whole world he'd rather be talking to—how could you turn the guy down?" Ingraham knew what it meant when he was invited to a weekend in Babylon or a night at the Marine Theater: "He wanted to plant a story." To other reporters, too, his hospitality was used as a subtle reward, and its withdrawal as a subtle punishment. Write a story that he liked and you would find yourself on one of his lists—and, even on the "C" list, suddenly the need for paying causeway tolls would disappear and you would be able to bring your wife or girlfriend to lavish parties. Continue the good work and you might make the "B" list—or even the "A." Cross him once, and you were off all lists.

Make Decisions At Your Social Events or Lunches And You'll Have More Power To Ratify Whatever You Want

> In the setting Moses created at his luncheons, most men allowed themselves to be bullied, even if only by not openly disagreeing with some Moses proposal in the hope that they could disagree later in the friendlier confines of their office—only to find that before they could get out of his, Moses was virtually forcing them to ratify their acquiescence by presenting for their signature the necessary document, which an aide just happened to have with him, or to find out by the time they got back to their own office that Moses had already notified the Mayor or other department heads of their acquiescence (…)
> And Moses carefully kept the atmosphere social, even while using it for business ends. He would present a problem and his proposed solution to it, and then call on various of his engineers to present facts and figures supporting his arguments. Then he would say, with an easy, charming smile, "Well, since we're all agreed about this . . . ," and move on to the next item. "Well, maybe everyone there didn't agree," Orton says. "But in that setting, who could get up and start arguing? This was an exercise of power by assumption or inference. And it was damned effective." "So much got done at those lunches," says one of his aides. "He'd have a whole agenda —a whole list of items—and he'd go right through it.

Never Underestimate Older & Experienced Men, Not Even When They're Going

Down

As Moses started to eclipse, younger and more ethical men thought underestimated how easy it could be to dispatch them:

> He was still around because he had managed to hold on to power for decades.
> These men with their first taste of power laughed at him; he had not only tasted power but held it longer than many of these men had been alive.
> Did Lindsay think he had the ability to outsmart Robert Moses? Robert Moses had outsmarted La Guardia. From the very same post from which Lindsay was trying to remove him, a President of the United States, at the peak of his popularity and power, dedicated to his destruction, had tried to remove him—and that President had failed.
> These rash young men thought he was only Robert Moses of the World's Fair and Title I; he was also Robert Moses of (…) This was their first real battle; he came to it scarred with the wounds of a hundred battles—battles he had won.
> Lindsay maps plans to slash moses' power, the headlines read. Moses sat in his lair up on Randall's Island and grinned—the grin of the old lion.

QUOTES

Robert Moses quoting Machiavelli:

> "The important thing is to get things done." "You can't make an omelet without breaking eggs." "If the end doesn't justify the means, what does?"

On power as the sweetest dish:

> Some men aren't satisfied unless they have caviar. Moses would have been happy with a ham sandwich—and power.

On Moses and his (narcissistic) drive to emperor-like monuments as testaments of his power:

> The roads of Rome stood for two thousand years and more; who would predict less for the roads of Moses? Who would predict less for his Shea Stadium, a structure consciously shaped to resemble Rome's Colosseum because he was afraid that his convention center-office tower "Coliseum" didn't make the comparison clear enough?

On Moses enjoying annoying powerless people, who compared him to powerful nasty figures:

> The big black car sat at the end of the street unnoticed in the dusk by anyone in the crowd as the effigy was hoisted to a lamppost and set afire. "I didn't dare look at RM," Shapiro recalls. But to his surprise, his boss threw back his head and roared with laughter. And when someone suggested they drive away, RM said no. He wanted to stay for a while. He didn't want to miss a thing. He sat there all through the speeches comparing him to a "dictator," "a Hitler," "a Stalin." And, says Shapiro, "he laughed and laughed. RM really got a kick out of it."

CONS

The full work is very thorough which also means that is very long.

It requires a hefty investment of time to seep through

PROS

- Incredibly thorough
- Endless golden nuggets

REVIEW

The Power Broker is an incredibly instructive read to understand power dynamics, the psychology of ultra-driven men, and politics.

Even from a purely practical point of view, it has endless golden nuggets on power, (social) strategies, and techniques.

Because of its length, it may not be the best time investment for all though.
Plus, it requires a certain level of power awareness to turn the wisdom into possible real-life strategies.

Do we need men like Moses?

It's an important question.

Does the world need men like Moses?

To avoid getting lost in very abstract elucubrations, we may even narrow that question down to public works as a smaller subset of general societal advancement.
And, in general, it seems that the normal democratic processes may hinder the construction of larger public work, even when those public work would benefit society.

Says the author:

> It was not the physical problems that were the most difficult to solve, however, but the political.
> A technology for solving the physical problems had been perfected, but not the methods and machinery for the creation of large-scale urban public works in a democratic society; the American system of government almost seemed designed to make such creation as difficult as possible.
> It is no coincidence that, as Raymond Moley puts it, "from the pyramids of Egypt, the rebuilding of Rome after Nero's fire, to the creation of the great medieval cathedrals… all great public works have been somehow associated with autocratic power."
> (…)
> Whether or not it is true, as Moley claims, that "pure democracy has neither the imagination, nor the energy, nor the disciplined mentality to create major improvements," it is indisputably true that it is far easier for a totalitarian regime to take the probably unpopular decision to allocate a disproportionate share of its resources to such improvements, far easier for it to mobilize the men necessary to plan and build them;

So, do we need extreme alpha type men like Moses who can cut corners, acquire power, and find ways to get things done, despite all the odds?

Frankly, I think we often need them.
And even when we don't need them, men like Moses can add a ton of value if they put their power behind worthy goals.
And that is also why this website exists: to give Moes' skills and mindsets to worthier people.

FULL SUMMARY

About the Author:
Ramit Sethi is a New York Times bestselling author and teacher and author of social skills and personal finances courses.
He is also the author of *I Will Teach You To Be Rich* and *Mental Mastery*.

Playbook 1: Think Like An Entrepreneur

So, you've just gotten into the program.

The first thing you notice is the email confirmation Ramit sends after two grand has just left your bank account.

The email reads, "Welcome, and congratulations on joining *Earnable*!" Joining this program was a leap. So, the "congratulations" makes you feel a little better.

You get into the first video right away to see what *exactly* you just invested in (and, if you're like me, it's because you want to make sure you don't need to ask for a refund before the 60-day guarantee is up).

The first video in the first playbook reads, "Welcome to your Rich Life". You click it. You watch it. And, now you're being asked to complete this sentence:

"I joined Earnable to _____."

It seems like this question is intended to surface more of what inspired you to join the program. And, since this playbook is called "Think Like An Entrepreneur", you figure that might be to motivate you to see the program through to the finish line.

At the same time, Ramit is also asking you to share your answer with him via email. So, maybe he's really only asking for his own customer research.

Whatever. Either way, you just want to get to the juicy stuff. You answer the question and move on to the next video. You notice the title is "How Earnable is different".

After a little scrolling, it doesn't take long before you realize that this entire playbook is only an introduction to the "real" sections of the course.

Still, I'm being a little harsh here. The last video in the playbook shares these three money mindsets:

1. I am paid for the value I create
2. The more I make, the more value I can create
3. Money is a marker that I'm doing the right thing

These were really cool. I might change the first one to say:

1. I am paid for the value I *provide*

Since you have to actually *give* that value to *get* money in return.

But, yes, being raised Christian, I was surrounded by people who gave away a lot of their money to church believing they were serving God and doing the right thing while also shaming people who had "too much money".

When I first learned that billionaires even exist as a young kid, I wondered how the world and churches would benefit if those billionaires gave a few million to battle world hunger and teach others that Christmas wasn't really about Santa Claus. It made me think about how the more money I make, the more money I can give just like those billionaires. And, similarly, the more money I make, the more value I can create to eventually provide to others.

That last money mindset is about how people are protective of their money. So, if they're willing to part with their precious, hard-earned money for the value you created, you're doing something right in terms of that value you created.

Playbook 2: Find Your First Profitable Idea

Less than an hour into the program and we're already getting to the good stuff. That's a good sign :).

So, when I was going through this part, I watched the course videos until I hit a video that was unplayable. Come to find out, that's because it wasn't a video, it was a worksheet. One that helps you brainstorm your profitable business idea by starting with a few mini-ideas or "nuggets":

1. Action step 1: Come up with at least 20 "nuggets""The first step is to figure out what exactly we're good at and put it down on paper. We start by doing an inventory of everything — our skills, knowledge, and challenges we've overcome. Below are questions to get you thinking. For each question, write down as many ideas as you can. In the next step, we'll sort through these ideas to find the best and most profitable. Remember: Silence your inner critic. Write down every idea that comes up, regardless of whether or not you think it could be a good business idea. That part comes later!"
   - (1) If you had an extra 3 hours free this weekend, what would you do? (e.g. cook, organize my closet, read books on coding)
   - (2) What do other people struggle with that comes easily to you? (e.g. finding time to work out, writing great cover letters)
   - (3) What are skills you've developed? (e.g. writing great emails, public speaking)
   - (4) What knowledge have you acquired, whether it's something you studied in school or in your free time? (e.g. audio editing, marketing, how to fix your own car)
   - (5) What are the biggest challenges you've overcome? (e.g. chronic stomach pain, brain fog, dressing poorly) (6) What problems do your friends ask you for help with? (e.g. planning trips, workout tips)
   - (7) What do your friends think? The best way to find ideas is to ask your friends!Here's a script you can use to text or email the people who know you best:"Hey, I'm taking a business class and one of our assignments is to ask friends a question, so I'm reaching out to you. If you had to point out 3 things you think I'm good at,

what would you say? Thank you!"It's always good to add an example so you get the answers you're looking for. Like this:"For example, I always go to you for advice on investing. What are some things you'd go to me for?"**Note: My personal thoughts here, this is one of the best playbooks of the entire course. The worksheet has abundantly more than what I've shared here including sample ideas for you to pull from. It wouldn't surprise me if this were your favorite part of the program as you learn and figure out all of the "nuggets" you have inside of you. For me, this was exciting to brainstorm!*

2. Action Step 2: Put your nuggets through the Pay Certainty Test"Now it's time to filter your list to find the best ideas. The first filter is the Pay Certainty Technique. For each nugget you wrote above, ask yourself:
   - 1.) Do people have the ABILITY to pay? Do they actually have money?
   - 2.) Do people have the WILLINGNESS to pay? Do they want to pay?For example, I love ironing. Could I start a business that helps people get better at ironing? Let's see…
     - 1.) Do people have the ABILITY to pay? Probably, yes. It passes test #1.
     - 2.) Do people have the WILLINGNESS to pay? No! No one is going to pay me to learn how to iron. It's not enough of a burning pain. This fails test #2.Put each of your nuggets through the Pay Certainty Test. When you come up with a no, cross that nugget off."

3. Action Step 3: Plot your remaining nuggets on the Demand Matrix"You should have at least 4-5 ideas left on your list. Now let's find which ones will be the most profitable!The Demand Matrix makes it more likely that your idea will be profitable before you go out and sell it. It's a framework that quickly filters your ideas, helps you avoid "idea one-itis," and trains you to "operationalize" your ideas in the real world (which is the only place they matter).If you're not 100% certain where your nugget falls, that's okay! We are never 100% certain, either. The Demand Matrix is just a framework to organize your ideas, not to make a final decision."

4. Action Step 4: Pick the best idea"Write down the 3 ideas that seem most worth pursuing after running them through the Pay Certainty Test and Demand Matrix. Which one are you MOST excited about? That's the one we recommend starting with. Take that idea and run it through the remaining playbooks to craft your offer, get feedback on your offer — and ultimately make your first sale! Don't worry about picking the 'perfect' idea. You can always come back to this list, try another idea, and run it through the Earnable System!"

This part is just absolutely awesome. It's where you can have fun finding different ways to make your best ideas work.

For example, operating as a freelance copywriter for other businesses can be a High-End service that you offer that costs clients upwards of $8,000. At the same time, you could release an eBook on copywriting that would fit in the Mass Market category. Same business model (offering copywriting), but ranging in profitability depending on how you adapt it to The Deman Matrix. It's about getting creative and that's what can make this part very enjoyable for those who are emotionally invested in the business-building process.

The first time I was introduced to a concept similar to The Demand Matrix is when I was 17-years-old reading a blog called Masculine Development.
The site owner, Jon Anthony, explained the concept like this:

> **Jon**: "If you want to become a millionaire, either offer value by magnitude or scale. If you want to become a billionaire, do both.
>
> Magnitude: 10,000 people pay you $100.00 = $1,000,000
>
> Scale: 100 people pay you $10,000.00 = $1,000,000
>
> Both: 10,000 people pay you $10,000.00 = $100,000,000″

In this case, Ramit identifies "magnitude" as "amount of customers" in the matrix and "scale" as "price".

BTW, if you're wondering what kinds of products would fit in the "Golden Goose" category, think iPhone :).

Also, Ramit addresses questions in this playbook such as "what if I'm not an expert in anything?" And, in response to that question, he notes that you don't *need* to be an expert. You only need to know a little more than the people you're trying to serve.

That inspired me. I wasn't concerned about being a "fraud", but I was concerned about whether or not people would get any actual value from what I was offering based on the business idea I had chosen for this experiment. And, I think Ramit's right. That gap where you know more than your customer, however big or small, is where the value you can provide lives. And, you can identify how big that gap is during the sales call (there are playbooks on that as well).

Playbook 3: Create A Winning Offer

Going into this playbook, I assumed that this would be the point where he teaches how to create your first product to offer to the marketplace.

Maybe an eBook or a course since this program is geared more toward teaching how to build an *online* business. But, as I started watching the videos in this playbook, it was my surprise to discover that Ramit actually teaches against products (despite the number of courses on his website). Here's why:

Customer research.

If you make an "offer", then it's a case where you can do things such as hopping on a sales call to discover your prospect's primary objections, the specific kind of language they use to describe their "burning pains", and so on. You can learn the things that grow the success of your business by getting to know and understand the most important part of your business: your customer.

Most of all, you get to learn firsthand how highly the market truly values your product.

There will be situations when you're on a call and ask the prospect about their situation and they detail all of their problems (burning pains). And, you know your offer can solve those problems for them. So, you recommend a solution for them and they say "that sounds great". Hehe, then you reveal the price and suddenly they're no longer

interested.

It could be the price is too high, it could be the customer isn't within your target market, or it could be that you simply need to refine your idea. You won't know unless you do the research. And, going in with an offer first makes it easier to perform that research.

So, here, Ramit shares some frameworks, step-by-step processes, and other examples to create your winning offer.

There was an example of a winning offer that happened to be a perfect fit for my business, so I used that one.

Playbook 4: Get Your First Sale

This is the day that I was waiting for the most.

Ramit automatically enrolls you in something called the 10-day fast-track to get you your first sale within your first ten days of joining the Earnable. He already has your email address from when you joined, so this mini-incentive doesn't cost you anything, it only adds value.

The problem is, he doesn't tell you where to get your customers for your first sale. He teaches how to build passion-driven businesses, so every business is different. That means he can't give out a "one-sized fits all" way to get customers and he's not going to want to tell each and every student where to get their customers if he wants to respect his own time.
So, instead, he says:

> **Ramit**: "If you can't even find your customers for your customer research, how will you find them when it's time for the sale?"

He basically reframes from it being about sales to it being about customer research to avoid it looking like he just left you dead in the water now that it's time to bring in the bread.

So, I do my best to do some more "customer research".
Earnable has its own community of thousands of entrepreneurs. As he touts on his sales page: "You're never alone — get feedback and answers in minutes."

But Community Support Wasn't The Greatest...

When I asked for feedback on my offer in the community, to my surprise, no one answered. I had followed the

WIIFT rule and everything. What next?

I begin responding to the offers of all of the most recent requests. A lot of the questions were asking for the opinions of others on if their current copy would persuade them to buy. A good idea.

So, I would look at their copy and give them real, genuine feedback on if it would persuade me to buy from them. Then, I'd mention some strategies they would only know if they had taken Daniel Pink's masterclass to know about. And, to top it off, I offer to show them how those strategies could improve their copy if they give back feedback on my offer (future-value signaling).

A few days go by. No responses.

Determined to see this experiment through, I quickly enrolled in this Udemy course: "Lead Generation Machine: Cold Email B2B Sales Master Course". And, I worked my ass off to implement and complete two business programs at the same time on top of my current day-to-day workload.

I already learned and practiced networking to get mentors, connections, and friends. Yet, I had rarely applied networking to sales. So, the idea was to expand my networking skills specific to setting up meetings with the prospects that fit the business idea I developed in Earnable. And, that's exactly what Patrick Dang teaches. And, thank God, he didn't disappoint (otherwise, two grand might have gone down the drain).

CONS

Community And Support Not The Best

When I didn't get any reply from the community I reach out to customer support.

Just to let you know that I did my best to get the best possible response from them, here's a look at what I said:

All of the right incentives were laid out for them. And, the "I'm hustling toward getting my first sale in my first ten days" also implements Robert Cialdini's principle of urgency on their end to get me support before the end of the ten days. After all, they're part of what Ramit refers to as the "IWT Student Success Team". So, they're supposed to help with things like this anyway.

Here's their response:

R_____) Feb 11, 2021, 3:44 PM EST:

Hi Ali,

I'm so happy that you are enjoying the Earnable course.

While we are not able to give you feedback on your offer here in support, I would encourage you to try posting something in the watercooler area as well giving some of your background and letting people know that you are looking for some feedback. You could also try re-posting your request again. Since the community is student based we can't determine exactly how long it will be before you get some replies.

I'm sure that you will get some replies soon, also keep in mind that a lot of people seem to check the community only periodically so it does sometimes take time.

Best,
R_____)
IWT Student Success Team

It's funny how their sales page read, "You're never alone — get feedback and answers in minutes," and then when I find myself alone the only person I can reach out to tells me, "We can't determine how exactly how long it will be before you get some replies." Maybe that should have been on their sale page :D.

Also read TPM's take on it:

- **Community-based Earnable learning and promises**

Which leads us to the second observation:

Funnel of Courses?

Coincidentally (probably not), I begin getting emails from Ramit for another one of his programs: "Endless Audience". A program that teaches how to get an endless audience of customers for your business.

That might explain why he left this key step out of Earnbale, but I try not to jump to conclusions. Especially, since the same customer acquisition information (or lack thereof) in Earnable was already enough to get some other students some great results. So, in the interest of being self-aware of my own shortcomings, maybe I just wasn't that good in terms of applying this playbook. Luckily, Patrick filled that gap.

It's currently Day 15 and I've finished both programs. There are only a couple of "bonus playbooks" left.

Sales & Attitude

- It (barely) met my expectations in terms of teaching sales (full disclosure, I called customer support before joining to ask if sales scripts were included and they didn't have much they could say, so I wasn't expecting much here)
- It felt a little hurtful at times (Ramit can be a little harsh when it comes to teaching the difference between people who will actually buy and people who won't)
- In terms of communities, it's not a competition. But, if it were, the TPM community would be eating Earnable's lunch

PROS

- It surpassed my expectations in terms of helping me create a winning offer
- Ramit is honest and his intentions are warm (he seems willing to give refunds without too much hassle, has a

special list of people he has blocked from ever buying his courses due to rudeness in order to keep his team from having to deal with them, takes the time to read a lot of the Instagram DMs and emails he receives from strangers, and follows the rules of assertive feedback-giving to provide constructive feedback without damaging the egos of the learners involved)

- It surpassed my expectations in terms of teaching how to successfully *launch* the online business to a great start using quality customer research
- It surpassed my expectations in terms of teaching how to make your business idea one that's truly rooted in something you're passionate about

REVIEW

TPM's Reviews™

Earnable is a great program.

Ramit is a pretty good entrepreneur.
Turned out Charlie Houpert over at Charisma On Command was one of his students including a few other successful people that I know personally.

Unluckily, I'll have to pair this program with a couple of other deals I had planned for later down the road in order to make it work for me.
But, the good news is that once you have the customers, Ramit literally handles teaching the rest (including automation).

Check the **best books** to read or **the best books and courses for entrepreneurs.**

Mastermind Dinners Review: Social Engineering at Dinner (Jayson Gaignard)

Lucio Buffalmano · 6 September 2023 · Archived copy · Original

Mastermind Dinners is a book on how to host mastermind dinners that expand your personal network, link you with high-status individuals, and expand your career opportunities.

Contents

  - Chapter 4: Do Your Research (Again)
  - Chapter 5: Your Mastermind Dinner
- MORE WISDOM
- QUOTES
- Real-Life Tips
- Cons
- Pros
- Review

Exec Summary

- **Target high-value people for attendance**: if you can, you can leverage that into getting more high-value attendees and a higher attendance rate overall.
- **Do as much research as possible before the event**: to organize the event well and prepare for the conversations you'll have.
- **Send post-dinner follow-ups**: to continue the relationships.

FULL SUMMARY

About the Author:
Jayson Gaignard is a Canadian entrepreneur, networking specialist, and author who founded MastermindTalks, an invitation-only conference for entrepreneurs.

Introduction

Note: This section had no official title, he transitions straight from the Preface to the subchapters. So, I've grouped all of the subchapters before the first official chapter (twelve in total) as the Introduction.

The book opens up with the story of how Gaignard was earning great money (22 times the national average income, to be exact), but unhappy.

Then, he went to an intimate gathering with a popular marketer where the theme was the "connection economy" (the theory that there is tremendous value in being the catalyst connecting like-minded individuals). And at that

event, he gave thought to the idea of how isolating entrepreneurship can be and decided to start Mastermind Dinners.

When he hosted his first dinner (with eight invitees that didn't know each other before then), Gaignard says that the conversation didn't skip a beat for four hours and for the first time in a long time, he genuinely lost track of time. And he knew then that connecting people was something he wanted to do for the rest of his life.

At the time, each dinner was costing him around $600-$800 and putting him further into debt, but he believed no matter what assets and belongings got taken or repossessed, the bank couldn't take his relationships.

He believed investing in relationships is the safest investment he could make and that the same is true for everyone else.

A few more ideas here:

- **Conduct quality control for your events**: he later hosted his first MastermindTalks events and accepted many applications from entrepreneurs. But he rejected any entrepreneur he wouldn't want to have dinner with (regardless of their business size or revenue).
- **Adopt an abundance mindset**: and use it to encourage collaborative frames. Choose to believe that there's enough in the world for everyone that you can give without losing. After all, a candle loses nothing by lighting another candle.
- **Be a talent scout**: wanting to connect with big names often comes from ego. For a better return, connect with people who have great potential (a high social ROI), invest in them, and watch their success explode.
- **If you're a creator, adopt a philosophy that aligns with the 1,000 True Fans Theory**: which is that anyone who produces content or works of art only needs 1,000 true fans to make a living. Quality over quantity.

Chapter 1: Mastermind Dinners

Mastermind Dinners are the highest value "connecting" activity that Gaignard does and it comes in two forms: local dinners and location dinners.

Both are generally focused around these three areas:

- Reconnecting with old ties (catching up and keeping relationships healthy)
- Introducing people who can benefit from knowing each other
- Connecting with people who you've been meaning to connect with for some time (if you invite eight people and all eight show, you're killing eight birds with one stone)

Gaignard tries to host these gatherings as often as possible, but since many of these dinners can have mix of people from all three categories above, he has to be very mindful of the synergy within the group.

Focusing more on the two types of dinners now:

- **Local dinners**: these are dinners hosted in your local area. They enable you to build roots locally and give you the benefit of having a go-to restaurant that you can regularly make good use of. The downside is that these dinners can make it harder for schedules to align.
- **Location dinners**: nonlocal dinners. They're great for reconnecting with old ties when traveling or connecting people with a common interest.

For location dinners, Gaignard recommends holding these when you go to another city for an event because:

- **People going to an event share some form of common interest by default**: and that common ground will benefit the group's synergy
- **Many events offer a list of attendees or some sort of access to an online community before the event**: so

it's easy to create a list of people to reach out to
- **It catches people outside of their normal routine**: hosting a dinner for a group of people who are traveling is an easy way to stay clear of their normal day-to-day routines, commitments, and responsibilities they may have

Planning the Perfect Dinner

Keep these in mind:

- **Commonalities**: make sure there is at least one among the guests, there has to be at least one unifying area of conversation. But, avoid extremes (such as having the owner of a million-dollar company at the dinner with only owners of startups) and conflicts of interest (such as inviting direct competitors together).
- **Group size**: the smaller the group size, the more intimate the dinner feels, the more ground you can cover, and there's an all-around better chance there will be a flow to the conversation. Gaignard prefers table sizes of four to six people.

Finding Dinner Guests

Things to keep in mind:

- **Social proof and authority-endorsement improves your response rate**: work to build it by working to getting big names to come to your gatherings, but start small with "not so big" names.
- **Be clear on why you're putting on the dinners and why you want certain individuals there**: there is no wrong answer, just be clear.
- **Go for warm reach-outs whenever possible**: reaching out cold with no influence or social proof to high-status people can be time-wasting. Instead, use a mutual friend
- **When sending invitations, go for a targeted, personalized approach**: a "spray and pray" email blast is an approach that gives less attention to the synergy at the table
- **When sending invitations, go for a "working up the food chain" approach**: if it's a list of ten prospects, start small by inviting the person who would most likely give you a "yes" (oftentimes this is the person least "in demand" and with the least influence). Then, once you get them on board, move to the second most likely person to give you a "yes", mentioning that the prior person will be attending as well. Continue this approach up the ladder to the prospect with the highest influence, building social proof and authority endorsements along the way.
- **Or, go for an "anchor tenant" approach**: focus on getting one big high-status person to come to your event, then mention their name when inviting other prospects on the list to come.

Chapter 2: Authentic Marketing 101

Here, Gaignard reiterates the Simon Sinek quote, "People don't buy what you do, they buy why you do it."

Be honest, raw, and authentic. And focus on selling the "why".

Creative Outreach to High Profile People

First, double-check that you need to reach out to that high-profile person at all.

> **Gaignard**: "…ask yourself, if I am unable to connect with this person, are there alternative people who could help me reach the same desired outcome? By widening your options you will realize there may be several people who you can contact instead who will help you get to exactly where you want to go, with a lot less effort."

Then, follow this process:

1. **Do your research**: "by doing in-depth research you may be able to find a unique angle to use to reach out to that person. You may be reaching out for business purposes, but you may [also] be able to connect based on a common interest outside of business."
2. **Check if you have any friends in common**: "Check platforms like Facebook and Linkedin to see if you have any mutual connections. If for some reason you don't find any common connections, broadcast out to your network."
3. **Choose the best medium for outreach**: pick the least "noisy" one you can find. For example, their email might be monitored by gatekeepers (personal assistants) so it may make more sense to try reaching out via Twitter.
4. **Reach out strategically**: much of the appeal of your gathering is in how you present it.

There are two main ways Giagnard does his reachouts: the "9-word email" and video/audio email.

The 9-word email goes like this:

> **Email**: "Hey Steve! I'm planning to hold a dinner next week with a group of ____ (Best-selling authors, entrepreneurs, artists, etc…), interested?"

That's the whole body of the email (it's one sentence that's around nine words in length).

If they say "yes" that's a small win and you can respond with email #2, which would include a date and a time.

The video/audio approach is simply a process of sending a short video or audio message in an email which helps you stand out.

From here, if there's no response follow up. And if they reject/object, ask something like, "Under what circumstances would you say 'yes'?"

Chapter 3: The Magic Is In the Details

Choosing the Perfect Restaurant

"…once you have one or two go-to restaurants it's a huge weight off your shoulders logistically. Also if you bring a consistent stream of business to a restaurant, they will treat you like gold and there are other ways you can leverage the relationship (including some kind of discount, financial kickback, or concessions)."

Things to consider here:

- Location
- Menu diversity (try to find restaurants that are vegetarian and Paleo-friendly)
- Meal cost
- Noise level
- Availability of private rooms (and private room minimums)
- Table location

Chapter 4: Do Your Research (Again)

"A networker does research on companies; a relationship builder does research on people."

There are two main schools of thought when it comes to doing research on people:

1. **Only do the bare minimum (and nothing more)**: some benefits are that it forces you to be present and it forces you to ask very poignant and interesting questions. (If you do a ton of research on an individual it may feel like the conversation has already been "had," which can make things very stale. It's the difference between connecting with the person vs the persona.)

2. **Aim to know as much about the group as possible in advance (the more you know the better)**: some benefits here are that you don't leave the serendipity of great conversations to chance, you're able to discover and utilize uncommon commonalities to forge deeper connections. And by discovering everyone's issues, you can arrange the seating so everyone is seated next to someone who can potentially solve their challenges.

Pre-Dinner Communication

First, Gaignard generally tends not to share the guest list with the attendees because it can lead to false perceptions and expectations. (Guests may research the other guests beforehand and prejudge the quality of the dinner or attendees based on whatever they find online.)

So, the night before the dinner he'll send a very quick reminder email that only contains the most pertinent details (time, restaurant, address, and a link to a Google map) and his cell phone number should they need to let him know if they'll be late or if something comes up.

Who Picks Up the Tab?

You have a few different options:

- **As the host, you pay for everyone's dinner**: you can also get a co-host who values networking as much as you do to split the total bill with them.
- **Guests pay for their own meals**: you can mention it in the original email invitation or set up a way for people to pay in advance (and with that second option, people are less likely to cancel last-minute since they're financially invested)
- **Find a sponsor**: find a company that's willing to sponsor your dinners.

Seating Arrangements

For larger groups, you can pair people up based on synergy or uncommon commonalities.

Almost everyone experiences the paradox of choice trying to "choose the right spot." This alleviates that worry for them.

Chapter 5: Your Mastermind Dinner

Last steps:

- **Call the restaurant to confirm the reservation**
- **Send a personal text message to the attendees a few hours beforehand**: which serves as a check-in and a quick reminder
- **Arrive at the restaurant anywhere between 25 to 60 minutes in advance**: to ensure you get the right table (if you haven't been able to select the table in advance) and greet anyone who arrives early

Kicking Off the Dinner Right

The initial introductions can be as casual or as structured as you'd like.

One way to go about it is to start by explaining your relationship with everyone at the table and why everyone is there. Then, follow up with some ground rules.

Here are some sample rules:

- **Confidentiality**: everything shared in the room should not leave the room.
- **Order wine by the glass only**: "…if bottles of wine are on the table people will drink it. If they need to order by the glass, they won't order as much. This helps both to keep the cost down and lessen the possibility of someone having a little too much to drink (which can happen)."

- **No cell phones**: optional, but helpful for encouraging more and better conversations
- **Order early**: ask the group to order within a few minutes of "housekeeping" and introductions because it's not uncommon that an hour after the dinner has started, people are in such deep conversation that they have yet to look at the menu.
- **End time**: state in advance the time the dinner is done but that everyone is more than welcome to stay longer. (This allows those who need to leave early to do so gracefully while others can stick around.)

Then, once you've set the tone for the dinner, start with your formal introductions.

Post-Dinner

Send a thank you email and start introducing everyone to each other.

MORE WISDOM

- **Work on yourself first, then focus on the networking tools and strategies out there**

> **Gaignard**: "Ryan Holiday spoke at our first MastermindTalks event, and the central idea of his talk was that if your product is crap, good marketing will just help people realize your product is crap quicker than they would have otherwise. The same idea applies to relationship building; it doesn't matter what tools you use or how good your strategies are…if you're inauthentic, selfish, or egotistical, good strategies will just allow others to discover who you really are more quickly."

- **On an extreme growth mindset negating jealousy or envy**

> **Gaignard**: "I have some amazing friends (who are also incredibly successful). The only reason that I do is because when they succeed, I cheer for them. I'm thrilled for them. I don't say to myself, 'Why do they have that, and I don't?' I know that I have different plans and energies and I'm not committed to doing the same things. If I was committed to the same things, I know I could probably accomplish similar results."

- **More wise points from the book**

> "When you hit rock bottom, you'll be left with two things: the integrity of your word and your relationships."

> "Honesty, vulnerability, and integrity are expensive gifts, don't expect them from cheap people."

> "At the end of the day, it's not how many friends you can count, it's how many friends you can count on."

> "Get comfortable with the uncomfortable because unfaced fears become your limits."

> "Even leaders need a tribe."

QUOTES

- **Would you be friends with you?**

> **Gaignard**: "Maybe it's time you did a personal balance sheet. Entrepreneurs list their assets and liabilities for their business on a regular basis, so why not do it for yourself on a personal level? List your strengths, weaknesses, what makes you unique, and the ways you can provide value to others."

I'd recommend starting with these two articles to see how many traits you can check off as well as what to look for in others:

- The 10 Traits of High-Value Men (W/ Examples)
- 12 Traits of High-Value Women (With Examples)

- **On the value of social proof and working to achieve it**

> **Gaignard**: "At a recent large dinner I hosted in NYC I sent out thirty-four invitations. Out of that group, thirty-two people said yes and showed up to that dinner with not a single cancellation. That's a 94% acceptance rate on a dinner that consisted of multiple New York Times bestselling authors, online influencers, and well-known industry leaders. I say this because two years ago this definitely wasn't the response I was getting. I was lucky to get a 5% response rate to my invites and had to deal with several last-minute cancellations on more than one occasion. What changed? Social proof. And the only way to get social proof is by putting in the work. Sean Stephenson says that 'if you want to experience success, be prepared to face dead-ends and false alarms. They're meant to shake off the wannabes.' So start small."

- **In the social exchange, your reach-out is costing them time, so respect it**

> **Gaignard**: "You may not be reaching out to them for money, but you're reaching out for an even more precious commodity – their time. We live in a world where there are two currencies: money and time. That's why they call it 'paying' attention…Put yourself in your prospect's shoes: where are they when they receive your email? What other distractions or demands may be happening at that time?"

Real-Life Tips

- **Hold a dinner for speakers**

Speakers want to be connected to like-minded individuals and event organizers rarely do anything for their speakers while in town. So, it's very easy to put something together and be a hero.

- **Test open-ended subject lines**

Since most subject lines are closed-ended, an open-ended one (that includes an element of personalization) can help your email stand out.

For example, "John, I'm doing a dinner with a group of entrepreneurs…"

- **Recognize when to switch gears in your journey**

If you build high-value connections well, it won't make sense to expand your network forever.

At some point, you'll get more value from focusing your time and energy on deepening your current relationships further than finding new ones.

- **Utilize facilitated networking when necessary**

For example, using ice breaker cards, being conscious of people's body language at the table, keeping an eye on who's dominating the conversation and who's not talking enough, and so on.

Don't leave it to the group to figure out on its own how to thoroughly enjoy themselves. If it's a group that needs it, help facilitate a great time.

- **Take a picture of the group at the dinner**

The uses for such pictures go further than only building memories, it can help build your network faster too (such as by using it in a follow-up email, posting on social media as social proof, and so on).

- **Ask permission before making an introduction**

An unexpected introduction can put high-value people in a tough spot as it forces them to add yet another thing to their to-do list they didn't plan for. And many busy people often don't have time to reply to the email itself, much less set up a call to meet someone new that they're not even sure they want to meet.

Cons

- **The connection formula seemed inaccurate**

Gaignard makes the case that you can't have a connection without honesty (to communicate effectively and hold the relationship together), vulnerability (to reach a level of depth in your relationships), and integrity (to build and maintain a good reputation).

But, truthfully, you can't have a connection without power awareness. Without it, you're at risk of being too honest (and as a result, oversharing), too vulnerable (and coming across as weak), and your goodness of character/integrity coming across as nice guy syndrome.

So, a better mix might be to say you can't have a connection without knowledge of power dynamics, emotional intelligence (which includes relationship management anyway), and honesty to your own value system. (See "10 Traits of High-Value Men".)

- **Some punctuation mistakes**

And that brought down the book's credibility for me a bit, but only a bit.

- **Mixed information**

Gaignard says that at the dinner, once you've set the tone, you should start with formal introductions. And go first so you can lead by example, being open and vulnerable so others will be open and vulnerable in their introductions that follow.

But, two of the three introductions he uses and recommends are centered around social climbing.

From the book:

- Top Professional or Business Achievement (brag)
- Top Personal Achievement (brag)

That can set an example (and maybe even a competition, depending on their attitudes) where people feel the need to "prove their value" in their introductions as well.

- **A couple power unaware moments**

For example, Gaignard at one point says:

> **Gaignard**: "You need to be the gatekeeper of your network. I am VERY protective of my relationships and very respectful of people's time. Because of my associations I am asked on a daily basis for introductions…I make sure there's a strong and compelling reason as to why I'm doing the introduction in the first place. I've learned to ask 'What is your desired outcome with the connection?' This question stops half of those who reach out to me dead in their tracks and forces them to get really clear about what they want or need. You wouldn't believe how many people request a connection to somebody else with virtually no clarity as to what they want out of it."

When I read this, I thought to myself, "Were they stopped dead in their tracks because they had no clarity or because of the way you phrased the question?"

That phrasing begins to frame the receiver as if they're only looking to get something out of the person. It makes them look like a taker.

So, better might've been another type of phrasing.

Pros

- **Gets the WIIFT Rule**

A quote straight from Gaignard himself:

> **Gaignard**: "Don't forget to ask yourself one of the most important questions of all – 'what is in it for them?' It is baffling how often this question is overlooked. If you're reaching out to someone cold, there must be some kind of clear benefit for them."

- **Fun ideas for making dinners and gatherings more memorable**

For example, with a group that you know well, you can play Credit Card Roulette:

> **Gaignard**: "Everyone at the table puts their credit card in a pile and hands them to the waiter who then puts them into a napkin or glass. The waiter pulls out the cards one by one, and the last card removed is stuck taking care of the bill…The key is telling your guests in advance and allowing people who want to pay for their own bill to opt out."

Or, Phone Stacking:

> **Gaignard**: “When at a dinner, people are often on their phones – so grab them and stack them face down in the center of the table. The first to pick up their phone pays the bill for all.”

Review

This book delivered as far as giving a solid overview of how to host mastermind dinners.

However, it was too much of an overview and, therefore, felt like it was lacking content.

I wish there were more details such as how to hold conversations at events that make attendees eager to get to know you better, willing to become an ally in your network, and happy to come back to your future dinners.

With the book being so short, for me, this book also fell short of the extra step that could’ve taken it to a higher rating.

Get the book here.

Persuasion vs. Manipulation: Understanding the Fine Line

Lucio Buffalmano · 12 September 2023 · Archived copy · Original

The main difference between persuasion and manipulation is simple: **persuasion is open about its objectives, while manipulation hides its self-serving motives.**

However, in real life, things aren't that simple.

At TPM, we've studied manipulation for years, and thousands of readers now consider us the leading experts on power, persuasion, and people dynamics. For example:

> "(The Power Moves) is the world's biggest expert on the topic (of manipulation)".
>
> *TPM reader on Linkedin*

So we've decided to spell out the real difference between manipulation and persuasion, with examples, psychology-backed analysis, and red flags to watch out for.

Let's begin.

- Finding The Right Balance: A Life's Calling
  - Sales Persuasion Ethics: It's Fair To Do Your Best To Sell
  - The ultimate guidance on "walking the line"
- Conclusions
  - FAQ

Intro

We define:

- **Manipulation is** communication and behavior that serves the speaker and seeks to exploit the victims
- **Persuasion is** communication and behavior that seeks to influence someone while respecting their self-interest and well-being

We also refer to persuasion here as "straight talk".
"Straight" is a larger construct going beyond simple communication. It includes a person's character, and a general approach and expectation towards others.

Persuasion VS Manipulation

Here's an overview of the difference between persuasion and manipulation:

PERSUASION	MANIPULATION
✅ **Cooperate** (persuasion is the communication mode of cooperation)	❌ **Compete** (manipulation is the communication mode of (unfair) competition)
✅ **Good faith**[1] (has good or neutral intentions and believes in what he says or does)	❌ **Bad faith**[1] (has ill intentions and does not believe in what he says or does)
✅ **Value-adding or neutral** (the effect on the target is neutral or value-giving)	❌ **Harmful**[2] (the effect on the target is value-taking)
✅ **Serving or balanced WIIFM/WIIFY** (not based on pure self-interest so the persuader may gain, not gain, or lose out)	❌ **Self-serving**[3] (manipulation's first and foremost goal is to benefit the manipulator)
✅ **True** (shows what's true and dispels falsehoods) ("truth-seeking" is a subset mode)	❌ **False** (instills new false beliefs or changes correct ones) (gaslighting is a subset mode)
✅ **Objective** (presents data, facts, pros & cons, and different points of views)	❌ **Biased** (fudges data, hides the cons and over-sells or invents the pros)
✅ **Two-way influence** (open to being persuaded and changing his mind)	❌ **Not open to influence**[4] (not open or interested to changing his mind)

PERSUASION	MANIPULATION
✅ **Transparent** (transparent in both goals and biases, including "WIIFM")	❌ **Hidden agendas** (frames it as good for you, or hides WIIFM behind "higher ideals")
✅ **Respectful**[5] (respects the individual's rights, including the right to decide)	❌ **Inconsiderate** (no respect for other people's wills and rights)
✅ **Liberates** (with truth and wisdom come liberation, freedom and empowerment)	❌ **Controls** (with lies and malice come dependence, abuse, and disempowerment)

1 intentions are independent of results. Good intentions can harm, bad ones can add value
2 "persuasion is good, manipulation bad" is insufficient. Good VS bad is often complex to ascertain. Manipulation can make you feel good while costing in other terms. Or it can add value, but at the opportunity cost of better alternatives
3 inveterate manipulators are utterly unable to be straight, despite the high costs for them
4 some of the "best" manipulators are good at *faking* open-mindedness
5 not in the sense of "kind". One can speak dominantly, offend, or even hurt the receiver. It's respect for the receiver's right to ignore, disagree, and do otherwise
See the table cheatsheet here.

The *Routledge Handbook of Persuasion* dedicates a whole chapter to the ethics of persuasion.
And narrows down the differences between persuaders and manipulators to three traits, based on Brockriede's, 1974:

- **Respect**: Ethical persuaders affirm the other person's self-worth and dignity, treating them as valued partners rather than as "marks" or "suckers" to be exploited.
- **Equality**: They strive for equal status in relationships, ensuring influence attempts do not exploit power disparities. Even in unequal dynamics (e.g., workplace or parenting), they suggest rather than order and remain open to being influenced, fostering mutual respect.
- **Tolerance**: They are patient, open to others' viewpoints, and willing to engage in two-way persuasion. This includes turn-taking and listening, avoiding a rigid "I will persuade, but not be persuaded" mindset.

What Are NOT Differences

Popular but untrue differences include:

- **Persuasion builds trust, manipulation destroys it**. Yes, it's true that manipulation may destroy trust. But *only when uncovered*. That's a huge if. If successful, manipulation may also increase trust. Successful manipulation often depends on developing trust.
  On the other hand, poor persuasion may decrease trust
- **Persuasion is logical, manipulation is emotional**. Manipulation withholds data or logic that surfaces the truth, IF the truth is not what the manipulator wants. But manipulation leverages data or logic if it serves the manipulator's goals (including, of course, warped logic and fudged data).
  On the other hand, persuasion may also use more emotional appeals
- **Persuasion is for others' benefits, manipulation is for the self**. It's true that manipulation is almost always self-serving. But if we accept that all humans pursue self-interest, then also persuasion often includes self-interest as well.
  Indeed, the main difference is that persuasion is open about its self-interest. And it balances it out with other people's best interest

Let's review some examples now:

Examples Of Manipulation VS Persuasion

Imagine this example:

Mark wants to convince his best friend to break up with his girlfriend.
Mark doesn't like her, prefers his friend to be single, and he thinks that his friend "can do better".

Here are the two different approaches:

Persuasion example: persuading friend to breakup

- Frankly, I'd rather you stop seeing her because I think you deserve a better relationship. So it's good for you. But also because I don't like you coming out as a couple and prefer you single and wilder. So I'm a bit biased here (<—- honest introduction presenting the "WIIFM" and what's in it for his friend)
- We're young, so also listen to your uncle since he's been around. (<—- limits his own influence by adding more people in the decision process)
- That being said, I think that if you breakup you'll probably go through a tough time for a while (<—- presents the likely downside)
- But you'll have more fun with us as a single guy and gain more experience. And eventually, you may get a better fit for you when you're ready to settle (<—- presents the upsides of a future girlfriend as hypothetical and avoids the word "better girl")
- Personally, I'd rather live my 20's single and just be honest with her. (<—- considerate towards her, a good sign of character)
- But up to you. Whatever you prefer and we'll be friends anyway. (<—- leaves it up to him)

Manipulation example: manipulating friend to breakup

- Let me say first, I don't really care what you do (<— hides his preference)
- so I'm saying this just for you (<— social scalping manipulation, tries to frame his own goal, as "for him")
- I've been there, and have seen enough men submitting to relationships in their 20's. (<—- exaggerates his expertise to talk more authoritatively. And negatively frames the relationship as an act of submission)
- Every single man I've seen turned into a submissive beta. (<—- exaggerates the costs)
- Don't be stupid (<—- frames any different choice as "stupid")
- More experienced guys have more fun and without fail find better women, too (<—- while it may be *generally* true, it's not *always* true. Plus, the way he says it is aggressive and manipulative. He exaggerates the benefits, without mentioning downsides)
- So if you wanna be a bitch, go ahead. (<—- judge power move that he'll lose his respect if he doesn't listen)
- If you wanna be a real man, well, that's the type of man we like here (<—- ups the coercive power with a covert threat. The whole group may ostracize him if he doesn't toe his line)

Of course, most situations aren't this cut and dry.
Most situations are a lot more shades of grey.

Grey Areas: It's Degrees, More Than Absolutes

Of course, in the real world, things can get muddier.

And while "100% manipulation" is not so rare, "100% persuasion" is quite rare.

So, generally speaking, most communication falls in a spectrum.
A spectrum between the two extremes of persuasion and manipulation:

More blatant manipulation attempts are more common than 100% persuasive attempts. But most communication and exchanges fall in the grey area zone

Talking up our strengths in a job interview may make us come across as better than we really are.
But few would call that "manipulation" because everyone expects that behavior to be "normal" and "appropriate".

Let's review a grey area example as well:

Case Study: Lying Friend, With Good Intentions

Imagine this twist to the previous scenario.

Mark believes that his best friend's girlfriend is a bad person.
And Mark also heard from someone else that she was drunk at the local club and flirting with another guy. It seems like they even exchanged contacts. Mark sees it as an opportunity to "finally" get his friend to break up.

So he says:

> Hey man, it sucks for me to have to tell you this, but you're my friend and it's my duty to share.
> This past Saturday I saw Jane at the Caesar club. She was drunk and making out with a random dude.

Persuasion VS Manipulation Analysis

In this case, we'd have:

Persuasion Elements	Manipulative elements
⍰ **Good intentions** (wanting the best for his friend)	✕ **Lies** (that she saw her in person)
⍰ **Not motivated by self-interest** (wants his friend to find better, and doesn't want to get his girlfriend)	✕ **Exaggeration** (from flirting & potentially exchanging contacts to making out)
?Potentially good effects (the friend may break up with a low-quality woman and find a much better one for him)	?Potentially bad effects (what if the friend is wrong and his friend's girlfriend is actually good for him)

Now the big question:

In this case, would you consider Mark manipulative or "fair"?

Personally, I consider it a big positive that he has good intentions. His heart is in a good place and he wants the best for his friend.
If you are his friend, that's important.
In my opnion, it's *the* most important thing.

But there is much room for improvement.

For example, this is definitely a situation where it's not cool to lie.
It's not cool either to his friend, or the woman.
Yes, she wasn't behaving well. It's disrespectful to flirt with another man in a small community because that's very damaging to her boyfriend. Mark was right to be personally annoyed by it and wanting better -and more respect- for his friend.
But if Mark had said *that* instead of lying, he would have been equally influential AND a straight-talking man. A proper "eagle".

Instead, he took the sneaky shortcut and went the manipulative way.

And the fact he doesn't like her isn't good enough of an excuse. An honorable man should afford a minimum of respect even to those he doesn't like -especially if they're close to his friend-.

This approach also takes his friend for stupid.
The lie and intent sub-communicate that he doesn't think he's capable enough to make good decisions based on what's true.
These types of decisions aren't life or death and concern *his* life much more than yours. It may be even true that your friend isn't the smartest guy in the world. But you still want to allow him the freedom and power to decide for himself.

Finally, Mark is "playing God" too much.
He doesn't know what will be better for his friend long-term. And in those cases, in doubt, it's best to stick to what's true -and your thoughts about it-.

Asses People

The "persuasion VS manipulation continuum" is foundational to assessing people's character.

But you can't just look at the mere presence or absence of manipulation.
Instead,c **you need to look at the gravity, intensity, and frequency of a man's manipulation**.

It works like this:

- **Gravity**: how harmful the manipulation is
- **Intensity**: how far off from reality and "straight talk" the manipulation is
- **Frequency**: how often a man manipulates VS how often he speaks "straight"

Generally speaking, **a man who is unable to put manipulation aside and talk straight with other straight men CANNOT be a high-quality man**.
It's an impossibility and a contradiction of terms.
Such a man is and will always be a low-quality, sneaky turkey.

These men do not deserve your respect, friendship, or time. (albeit, of course, you may strategically deal with them or use them for your own gains).

Red Flags of Manipulation

Other important elements to assess characters:

- **Good VS bad faith**, independent of the effects
- **Compete VS cooperate** mode. Some people tend to always be in compete mode. That makes it difficult for them to be straight
- **Serving VS Self-serving (intensity)**. Everyone pursues self-interest, so you can never hold that against someone. So, again, it's a matter of intensity, frequency, and gravity.
  For example: what costs are they comfortable inflicting on others as they pursue self-interest?
- **Approach to lies**. Some small white lies are common and may even be useful for smooth socialization. So, again, look at intensity, gravity, and frequency. Also, look at the general "comfort with lying". If someone lies as second nature and acts like "so what, it's normal" if caught, it's a bad sign
- **Value-givers VS value-takers**. It often helps to look at the bottom line. Do they give more, or take more? Inveterate manipulators rarely are givers

Learn BOTH Persuasion & Manipulation

You need to learn both.

Yes, including manipulation.
And that's because manipulation is pervasive, ubiquitous, and *common*.

Naive self-help, which in fact sometimes is *manipulative* self-help, denies or downplays the frequency and magnitude of manipulation.

Instead, it's the other way around.
It's wholly uninterested, truth-based, truth-seeking and 100% honest persuasion that is the exception.

Two sides of the same coin, you need BOTH angel and devil

Manipulation Is Important Because...

More schematically, you need manipulation because:

1. **Learning persuasion REQUIRES learning manipulation**. The best persuaders are also (potentially!) great manipulators.
   This is no different than a great hero potentially being a great villain. It comes with the territory. With the ability to add much value also comes the ability to take much value.
2. **Manipulation-awareness serves for self-defense**. It's one of the foundations of this website. It goes back to Machiavelli's quote: "a good man is ruined among the many who are *not* good".
3. **Maximum life effectiveness requires manipulation**. Only players who know the game inside-out, at 360°, can be effective. And the more you advance in life, the more you'll likely meet craftier manipulators.
   This doesn't necessarily mean you have to manipulate. But the ability to spot a manipulator is invaluable. (Including for more advanced strategies, such as spotting manipulation but pretending to go along with it).
4. **Sometimes it's fair to manipulate**. When you deal with the various takers, manipulators, and a**holes of this world it would be stupid to "play it straight".
5. **Several relationships and environments require *both* persuasion and manipulation awareness and "modes"**. Think of work, for example. You'll need teamwork to succeed -and to develop a reputation for one-. But it's *also* a place where you must compete for promotions -while hiding it-.
   In healthy corporations high-power straight shooters go far. But you must still be aware of corporate manipulation and office politics. And when and with whom to be straight and when *not* to be.

Remember the general rule:

Straight communication is best *when it goes both ways*.
So **straight communication requires a worthy recipient.**
And many people you meet in life simply aren't worthy of your full honest self.

The Advantages of Manipulation

We go over more practical uses in Power University.

In this article, we share the "higher level" background on manipulation's advantages.

And it's this:

Life evolves based on what best serves the "selfish gene".

And, generally speaking, **selfish manipulation serves the selfish gene better than selfless communication**.

This concept was clear to Dawkins and Krebs, who in 1978 changed the way scholars thought about communication.

The two argued that evolution rewards animals that can best use the tools in their environment.
And by "tools" they meant both *things* and other *animals*.
And by "using" they meant "manipulation".

Animals who can better manipulate others end are more effective at life.

The orchid mantis developed the looks of an orchid flower to better prey on insects. Any animal that can better manipulate prey and competitors gains an advantage over others

Life Is Intrinsically Manipulative Because Manipulation Is Advantageous

So at a very general level:

manipulation is the natural consequence of life moving towards higher effectiveness. And higher odds of self-advancement.

Any form of life that learns how to better use others will likely beat its peers. And will pass its manipulative genes onto the next generations.

Accelerate that process over generations, and you "naturally" get widespread manipulation.

Manipulation Is “Natural”, Persuasion Must Be Learned

So, historically:

Manipulation probably came before persuasion. (Or at least, at the same time).

This is why today most people don’t just need to learn (more advanced) manipulation.
Most people today must also learn straight communication. Often, from scratch.

The Advantages of Persuasion

So…

If manipulation is natural and confers advantages, why would anyone even bother with persuasion?

Because, of course, there are also benefits.
Including:

- **Effective cooperation**. In many cases collaboration is most effective with straight and honest talk
- **Reputation**. A strong reputation for a straight shooter does a lot of great things for you. It makes people more likely to want to associate with you, work with you, for you, or generally be more well-disposed towards you
- **Prestige** as in “people looking up to you”, which is proven to confer status
- **Facilitating all-important alliances**, including with other straight talkers and high-quality men. The type of men who are most likely to spot -and dislike- manipulation
- **Maintaining win-win** for the long-term. Instead, manipulators tend to lose social capital over time and their relationships deteriorate. This is all the truer with “power-aware” and high-quality men who can spot a “crooked” and non-straight man
- **Enjoying better relationships**, which isn’t just a question of “good feelings” but has been proven to be good for health and longevity

These are HUGE benefits.
BUT… Full straight talk without power-awareness is still too high risk.
It’s what we’d call here “being a lamb, hoping there are no wolves (but there *are* wolves)”.

This is where TPM steps in:

Our Approach: Honorable, Without being A Sucker

We help people here to:

1. Learn how to be honorable and talk straight (and persuade with more honesty)
2. Reap “honorable man” rewards
3. Not turning into a sucker for it, so without the downsides
4. Get more straight talk from others by demanding it, expecting it, and sometimes even teaching it

So TPM helps you enjoy all the upsides of high-quality straight talk and persuasion, without the downsides.

Ethics of Persuasion VS Manipulation

Most articles on persuasion VS manipulation default to this:

Persuasion is good, and manipulation is bad.

And yes, there is a large backdrop of truth in that.
But, again, it’s a tad more complex.

Before we delve in, let us to share a warning:

Be careful of those who make too big a show of rejecting manipulation.
Few of them are being truly honest and truthful.
Instead, they're often either lying to themselves, or totally clueless of anything people-related.
And sometimes, they're in bad faith.

People School is NOT for you if:

- **You want to learn how to manipulate people:** We teach you to be the best, most authentic version of yourself when you communicate, not how to play mind games with others. If you're here to learn how to "trick" people, you will be sorely disappointed.

Same marketer who swears off manipulation and "only teaches to be the best and most authentic version of yourself" markets her online course as "sold out" -an obvious lie, and much closer to manipulation than to persuasion-

I can't count the times I've seen marketers swear against manipulation, tell *others* to only be 100% honest… Except to then engage themselves in varying degrees of manipulation.
Not by chance, marketers score high in Machiavellianism as a group.

Now, back to us:

When Manipulation Can Be Fair

Sometimes manipulation can be fair.

As a matter of fact, sometimes manipulation is the best course of action. And **sometimes manipulation is exactly what you're *supposed* to do** if you want to be a high-quality man.

Some of these cases include:

- **Dealing with another inveterate manipulator**. There is no point in being honest with someone who's not honest with you (ie.: don't accept lose-wins, don't be a sucker)
- **Dealing with an obvious taker**: similar as above. If someone is obviously trying to take from you, and exclusively only looking out for themselves… Maybe so should you
- **With abusers and in abusive relationships**: going from victim to empowered can be challenging. And your new assertive communication can only to an escalation of abuse. So in your "awakening period", pretend you're still a naive, powerless victim while you plot your escape (or revenge)
- **Disempowering or replacing unworthy men and leaders**. To TPM's philosophy, this may not only be fair, but a personal responsibility. At the very least, you shouldn't give dishonorable leaders your best work

Some more "darker grey areas" include:

- **When you're both going to win anyway (take the lion's share of the pie)**. For example, when splitting added value in a negotiation, you will both be better off, even if you capture 99% of the value

- **When you're desperate and it's mission-critical**: when to you it's survival but to others it's "just a loss", you get more latitude. This is why many consider stealing in desperation to be a lesser crime
- **When the costs to others are very small or uncertain**. This is the case in many sales situations. See example later

Finding The Right Balance: A Life's Calling

TPM stands at a somewhat difficult junction.

We don't do "ethical philosophy", but we prefer honorable men over inveterate manipulators who can't talk straight, and takers who live a life of parasitic exploitation.

So on one hand, we seek to be honorable.
And at the same time, we want to be ultra-effective at achieving goals.

We walk a sometimes difficult line between maximum effectiveness and respecting others -ideally adding value to others-. That line can be expanded with skills and strategic thinking. But sometimes it may require compromises.

And it's certainly possible to win while also adding value -or at least without harming- others.
When that's the case: great.

It's also certainly possible to find ways creative ways to turn a personal win into a win-win.
Or to find ways to decrease the costs of win-loses.
That's also part of strategy, and part of what we seek to teach here.

But it's also true that, sometimes, a personal (larger) win may come at someone else's cost.

How to navigate the diverging paths between maximum effectiveness and honorable character is one of life's most pressing questions.
A challenging question because there are no hard and fast rules.
Life will continuously ask and test us again and again with novel situations and people.

However, we'll try to provide you with some pointers based on TPM's philosophy:

Sales Persuasion Ethics: It's Fair To Do Your Best To Sell

Imagine this scenario:

A salesman wants to sell an expensive convertible sportscar to a middle-aged family man.

Selling the car is obviously good for the salesman.

But is it good for the buyer?

It's a moot point.

The man's wife and child may be better off with a sedan. And the buyer is definitely financially better off with a cheaper car.

But the buyer may be happier with the sportscar in the long run, and the family better off with a happier father. It may turn out win-win for all.

But we just cannot know that for sure at the moment of persuasion.

The same applies to many other sales situations.
As a matter of fact, it applies to a lot of situations in life, period.
Including competition.

As long as you're not selling food to a starving man -obviously good for him- or a terrible product -obviously bad for him-, then it's often a grey area.

Selling obviously poor products while hiding the issues is manipulative. Doing one's very best to sell good products that may be useful to the customer is not -even though ascertaining the value to the customer may be difficult-.

There are often too many variables to know for sure.

We may think of these situations as on a "range of uncertainty" within the grey area of the persuasion-manipulation continuum.

In our opinion, **most grey-area situations in sales and persuasion are "fair game"**.

Such as, *unless you engage in obvious lying or deception*, it's ethical to do your best to sell.

Compete To Win: It's Fair (All The More If You're A TPM Man)

The same can be said of competition.

Who says you're not going to be a better CEO than your competitor?

And if you're reading here, chances are higher that you will be a better leader.

So, in those situations, it's fair to do your best to win.

But always be honest with yourself!

However, avoid the all-common "good samaritan lie".

The "good samaritan lie" is the idea that your best persuasion is an ethical imperative because the sale is so great for the buyer.
You can hear this approach from some marketers and sales trainers.

But it's just not true.
It's not true because we often cannot know what's best for the prospect.
And this tendency of forcing positive spins on things is weak-ass *self*-manipulation.
Also bad for your own character development because it denies one's own *fair* dark motivation with some BS, fake, savior complex.

Remember:

being a straight and honorable man starts with telling the truth to yourself.

Just don't sell lemons, don't deceive, generally sell good products, and you're doing good as a salesman.
No need to pretend you're saving the buyer's life.

The same goes for many life's competitions.

If You're Generally Good... You Don't Need To Worry About This Much

Many of our alumni learn about advanced manipulations with us for the first time.

For the first time, they learn to spot it in others.
And they wonder if they themselves are being involuntarily manipulative or "nasty".

In my experience, that's rarely the case.

Indeed, as a rule of thumb, if you even think about winning without being nasty, chances are you're not nasty.
Chances are you generally have good intentions and your heart is in a good place.
And if you worry about "being fair", chances are your main worry should be different. Your main worry should be to avoid exploitation by those who don't have those moral qualms.

The ultimate guidance on "walking the line"

Walking the tightrope between heaven persuasion and maximum self-advancement hell is one of the eagles' biggest challenges. To advance while also remaining honorable and value-giving. That is the goal.
Make sure you never stray too far into the flames of manipulative hell

We'd like to end this article with the two simplest forms of guidance.

For the first one, we can't quote any better than Jesus:

- **Don't do unto others what you don't want to be done unto you**

To which TPM would add:

- **Do your absolute best to achieve your goals… Without being a nasty SOB** or a sneaky f*ck
  - Ideally, win while setting up win-wins and uplifting others… And you put yourself on the side of the angels

So simple, right?

Yeah, it *should* be simple.

It should be simple because, just as manipulation is inborn, so is our sense of "what's fair".
And what's "fair enough" and what's "too much".
Avoid "too much" and you should be good.

Conclusions

In sum:

Persuasion is honest and upfront about one's own motives.
Manipulation instead hides its motives because those motives are bad for the victim.

Real-life situations aren't always cut and dry.
But persuasion and manipulation nonetheless remain two very different forms of communication.

Contrary to what many sources say, there are times and places for both.
It's important for men who want to be effective in life to know and know how to recognize -and use- both.
But, generally speaking, for most men it's a worthy goal to try to reduce the manipulation while adopting more straight talk.

Then, demand and seek more people in your life who offer the same. And you'll soon be flying high with the eagles.

FAQ

Is manipulation and persuasion the same?

Different authors have different opinions.

Some -such as Robert Greene-, say that manipulation and persuasion are the same. Some others imply they are easily distinguishable opposites.

The truth is in the middle.
Manipulation and persuasion are very different, but they sit at the opposite ends of a continuum, with much grey area in the middle.

In some cases, without the ability to read minds and assess intentions, it may be challenging to differentiate the two.

However, there are also plenty of examples of blatant manipulation and some clearer-cut cases of persuasion.

Importantly, it's also possible to spot inveterate manipulators VS more straight-talking men.

What is the difference between influence, persuasion, and manipulation?

Manipulation and persuasion are two ways of influencing others.

So Influence is the *effect* of either persuasion or manipulation.

The difference between persuasion and manipulation is more complex but, in brief, manipulation implies bad faith and ill-intention, while persuasion doesn't.

What is the difference between a manipulator and a persuader?

The difference is that the manipulator has no moral qualms in pursuing self-interest and power.
The persuader instead seeks to achieve his goals while being more honest and ethical.

Is persuasion a glorified form of manipulation?

Persuasion and manipulation are very different, so persuasion is not a "glorified form of manipulation".

As a matter of fact, that statement reeks of manipulation. It sounds like a gaslighting stance to provide a convenient cover for the manipulator.

PERSUASION	MANIPULATION
☐ Cooperates (communication mode of cooperation)	✕ Competes (communication mode of competition)
☑ Good faith* (has good or neutral intentions)	✕ Bad faith (has ill intentions to harm or deceive)
☑ Value-adding or neutral (the effect on value adding or neutral)	✕ Harmful (the effect is value taking)
☐ Serving or neutral (not based on pure self-interest)	✕ Self serving (only goal is to benefit the manipulator)
☑ True (truthful and "truth seeking")	✕ False (false and gaslighting)
☑ Realistic & balanced (aware of all sides of the argument)	✕ Misleading & biased (one sided, hides the cons, inflates the pros)
☑ Two-way influence (open to being persuaded)	✕ One-way (not open to changing one's mind)
☑ Transparent (includes personal biases & WIIFM)	✕ Hidden agendas (hides the real motive, invents fake ones)
☑ Respectful (respects the decision-making right)	✕ Inconsiderate (ignores individual's autonomy)
☑ Liberating (liberates, frees, empowers)	✕ Controlling (exploits, subjugates, disempowers)

Exec Summary

- Status is the “social worth” that people assign to an individual within a group
- Social status is the normal byproduct of human hierarchies
- Human hierarchies are a staple of human socialization, albeit different groups present flatter or steeper hierarchies with larger differences between levels

FULL SUMMARY

About the Authors:
Various authors contributed, and the main editors are:
Joey T. Cheng is an Associate Professor at the University of Illinois, specializing in social hierarchies, dominance, and prestige.
Jessica L. Tracy is a Psychology Professor at the University of British Columbia, known for her research on pride and status processes.

Definition of Status-Related Concepts

The definitions closest to status and power:

- **Power** refers to control over critical resources—i.e., outcome control (Dépret and Fiske 1993; Fiske 2010; Galinsky et al. 2003; Georgesen and Harris 1998, 2000; Gruenfeld et al. 2008; Keltner et al. 2003; Overbeck and Park 2001)
- **Socioeconomic status** (SES) refers to an individual’s (or a family’s) social position in relation to others, based on wealth, education, and occupation (Kraus and Keltner 2009)
- **Dominance and prestige** have been described in various ways:
  - dominance as those approaches to achieving high social rank that are characterized by induction of fear in others (for instance, through aggression, coercion, and withholding resources).
  - prestige refers to approaches to achieving high social rank that are characterized by gaining respect from others for one’s skills and competence, particularly when these help achieve collective goals (Henrich and Gil-White 2001).
    Prestige is, perhaps, the social hierarchical dimension most closely tied to status.
- **Influence** refers to the ability to shape and alter others’ views and/or behavior. Influence is a downstream *consequence* of any of these social hierarchy-related constructs

Are Definitions Important, Or Are They All The Same?

Blader and Ya-Ru Chen, the authors of chapter 4, say that a common argument, even among those who accept the distinct definitions above, is that those distinctions are not meaningful.

According to this view, the distinctions aren’t very meaningful because covariation among these distinctions is very strong—e.g., status invariably leads to power, or vice-versa.

Blader and Ya-Ru Chen disagree with this point of view.

Here at TPM we agree with the authors, but don’t make strong distinctions and operate under the assumption that those constructs are similar. The reason for our approach is that our priority is to help students. So our focus is goal achievement and self-advancement, rather than academic accuracy.

So while we agree the constructs are different, if our students 10x their status, they win. And if they 10x their power, they also win.

Status VS Power

Say the authors in a previous chapter:

> Although there are important similarities between power and status, the two concepts are quite notably distinct. Whereas status refers to a form of influence and control that arises spontaneously in everyday social situations, power involves formally endowed control over valued resources, often resulting from institutionally legitimized positions in the workplace, politics, or broader society.

So in this case, they seem to refer to power to what we call here “rank”.
And here at TPM we use “power” as more of a general umbrella term.

Status is more of a *social* dimension:

> One critical difference between status and power is that status, relative to power, is more reliant on the judgments and evaluations of others. It relies more on a conferral process, as discussed earlier. Therefore, power is relatively more of a property of the actor (i.e., the power-holder), while status is relatively more of a property of co-actors and observers (Fragale et al. 2011; Magee and Galinsky 2008)

However, even power isn’t wholly independent of others:

> That is not to say that power is wholly independent of co-actors and observers; if others do not agree that a target has power, they will not engage in acts—such as deference—that can be important in reinforcing the target’s power position. Moreover, others may challenge the value of the resource that the power-holder target controls, again giving co-actors and observers a significant role even in power dynamics.

High-Status Men Empathize, High Power Men Are Ruthless

While power “allows” people to disregard others, status does the opposite.

High-status men actually seem to acquire higher EQ:

> the researchers found that high status increased accuracy in reading others’ emotions , while high power had the precisely opposite effect

That includes higher empathy for the plight of others:

> both self-reported and behavioral indices demonstrated that high status made participants more concerned about the (fictitious) target affected by the layoff, while power had the opposite effect on concern about the target .

Dominance and Prestige: 2 Mein Paths to Social Rank

A definition of hierarchy:

> hierarchies are fundamentally social structures in which high-ranking individuals reliably receive greater influence , deference, attention , and valued resources than low-ranking others (Homans 1950, 1961; Magee and Galinsky 2008; Mazur 1973, 1985)

Hierarchies exist to divide resources while avoiding costs and increasing cooperation:

> By affording high-ranking individuals privileged influence and access to valued resources such as mates and

> food, mutually accepted hierarchical relationships minimize costly agonistic conflicts, establish order, and facilitate coordination and cooperation among individuals in groups (Báles 1950; Berger et al. 1980).

The dominance and prestige model postulates that dominance and prestige are the two main and distinct pathways to social rank:

> This account proposes that differences in hierarchical rank within human social groups are the result of both: (a) coerced deference to dominant others who induce fear by virtue of their ability to inflict physical or psychological harm (i.e., Dominance) and (b) freely conferred deference to prestigious others who possess valued skills and abilities (i.e., Prestige).

The main differences between the two are:

- **Dominance** entails the induction of fear, through intimidation and coercion, to attain or maintain rank and influence.
  It is thought to be homologous with dominance hierarchical systems in nonhuman primates that result from agonistic contests (Chase et al. 2002; Rowell 1974). Examples are between police and citizen, bully and victim, or boss and employee. The threats can be both physical or psychological, but among humans they're more often psychological
- **Prestige** refers to influence that is willingly granted to individuals who are recognized and respected for their skills, success, or knowledge.
  Subordinates seek out the opinions and company of Prestigious individuals in efforts to imitate and learn their superior skills or knowledge.

Dominance Is Costly For Morale & Output (But Still Can Promote Rank)

> research on organizational effectiveness has found that "pressure" tactics—which involve the use of demands, threat, and intimidation to influence others (and thus are akin to Dominance)—generally result in less successful and productive leadership (…)

And:

> a growing body of evidence appears to suggest that not only is Dominance-based leadership seen as an ineffective approach and frequently resisted by subordinates (e.g., Falbe and Yukl 1992; Kipnis and Schmidt 1988; Yukl and Tracey 1992), but it can also bear counterproductive effects on workplace performance and subordinate commitment (e.g., Falbe and Yukl 1992; Higgins et al. 2003; Yukl et al. 1996).

However, add the authors, these findings do not represent evidence against Dominance's ability to promote social rank for the dominant individual.

Personality of Prestigious VS Dominant Individuals

Say the authors regarding prestigious individuals:

> in the context of a small-scale Amazonian society, perceived prestige is positively related to hunting ability, skill in food production, generosity, number of allies, and nutritional status (Reyes-Garcia et al. 2008, 2009; von Rueden et al. 2008).
> (…)
> other prosocial traits that effectively broadcast one's expertise and social attractiveness (i.e., his/her viability as a cultural model), such as altruism, cooperativeness, helpfulness, ethicality, concern for the public good, are

> positively related to Prestige, but negatively to Dominance (Cheng et al. 2010; Maner and Mead 2010, 2012).

While dominant:

> In contrast, Dominance is associated with a selfish disregard for the well-being of one's group. For example, when presented with a choice between personal benefits and collective success, Dominant leaders prioritize their own gains over those of others (Maner and Mead 2010, 2012).
> (…)
> individuals who pursue Dominance tend to be fueled by the arrogant, conceit-based "hubristic" pride, whereas those who pursue Prestige are fueled by a more pro-social, competence-based "authentic" pride (Cheng et al. 2010)

Prestigious

- Highly likable
- highly agentic
- highly communal
- lower-levels of basal Testosterone (Johnson et al. 2007) and a lower androgenic hormone linked to aggression (Giammanco et al. 2005)
- demonstrate locally valued competencies and skills
- socially attractive verbal style that entails displaying warmth and self-deprecation (e.g., teasing others in a flattering way, seeking the group's approval on matters)
- display more subtle, nonthreatening movements that communicate confidence and competence, such as the pride display (e.g., small smile, head tilt up, chest expansion)
- not associated with systematic changes in vocal pitch
- they rate themselves as conscientious, agreeable, and possessing high self-esteem

Dominant:

- Not particularly well-liked
- highly agentic
- low communality
- do not necessarily demonstrate locally valued competencies and skills
- intimidating and self-entitling verbal style that evokes fear and coercion (e.g., teasing others in a dominant way, forcefully pushing one's own ideas or opinions)
- spatially expansive postural displays (e.g., wide postures) in group situations
- deepen their vocal pitch in the initial minutes of an unscripted social interaction
- they rate themselves as aggressive, disagreeable, narcissistic, and manipulative

6 Traits of Dominant Individuals

Six separate lines of lines of work show an association between actual or perceived ability to inflict harm and elevated social influence:

1. coercion and aggression

> According to the Dominance-Prestige Account, direct or indirect displays of physical, psychological, or verbal aggression are the primary routes through which Dominant individuals attain influence.

And it seems to work:

> Studies on hierarchical relationships suggest that the enactment of these aggressive behaviors are effective in promoting increased rank: Those who behave in a bullying, rude, demeaning, and anti-social manner in both experimental contexts (e.g., Van Kleef et al. 2011) and real-world relationships (e.g., romantic couples, fraternity members) tend to be the more highly ranked and influential members of the relationship (Keltner et al. 1998; Kipnis et al. 1976).

However:

> studies have found that the highest-level of abusive behavior is displayed by those who feel incompetent (i.e., who lack Prestige), suggesting that aggression may provide a means of attaining influence when the Prestige pathway is inaccessible (Fast and Chen 2009; Fast et al. 2012

2. Personality dominance

> substantial body of evidence indicates that personality dominance is associated with higher rank and leadership attainment. Meta-analyses of over 30 studies and 7,000 individuals demonstrate that trait dominance is one of the most robust predictors of leader emergence, outperforming a myriad of other traits including conscientiousness and intelligence (Judge et al. 2002; Lord et al. 1986).

3. Physical size and strength

> larger and stronger individuals tend to be more aggressive

And:

> Both men and women who are taller in stature consistently occupy a disproportionate number of leadership positions in organizations, and have a higher income (see Judge and Cable 2004). Moreover, the human mind is biased toward intuitively associating larger size with greater formidability, power and influence, and leadership capacity (Fessler et al. 2012; Marsh et al. 2009; Schubert et al. 2009; Stulp et al. 2013).

The direction goes both ways though:

> Observers tend to overestimate the height of powerful others (Dannenmaier and Thumin 1964; Wilson 1968), and systematically overestimate the height of a target individual when feeling powerless, but underestimate this individual's height when feeling powerful (Yap et al. 2013).

4. Facial structure

> Facial Structure Facial width-to-height ratio (WHR)—a sexually dimorphic trait influenced by testosterone (e.g., Andersson 1994; Lefevre et al. 2013; Verdonck et al. 1999)—has been shown to systematically predict men's fighting ability, physical prowess, and rates of violence and aggression in both the lab and the real-world (…)
> men with greater facial WHR demonstrate an increased propensity to cheat and exploit others (Haselhuhn and Wong 2012; Stirrat and Perrett 2010), and are less likely to die from contact violence
> (…)
> Most importantly, wider-faced men are viewed as more dominant, forceful, and assertive by others (Alrajih and Ward in-press; Valentine et al. in-press), report a heightened sense of power and influence (Haselhuhn and

> Wong 2012), and achieve superior leadership performance, as evidenced by the financial earnings of CEO's firms (Wong et al. 2011).

5. Vocal pitch

> Vocal Pitch Like facial WHR, lower vocal pitch is associated with higher levels of circulating testosterone (Dabbs and Mallinger 1999; Evans et al. 2008; Puts et al. 2012)

Poeple also consciously lower their voices:

> individuals who perceive themselves as physically stronger than a rival strategically (but likely unconsciously) lower their voices in competitive contexts, whereas those who view themselves as weaker tend to raise their pitch (Puts et al. 2006)

And even consciously lowering one's voice seems to have an impact on how people feel about themselves:

participants instructed to deepen their pitch report a greater subjective sense of power (Stel et al. 2012

6. Spatially expansive nonverbal displays

> numerous studies have demonstrated that spatially expansive, open postures—such as pride displays and open arm and leg gestures—not only increase the perceived influence and rank of their displayers across cultures (Carney et al. 2005; Marsh et al. 2009; Shariff and Tracy 2009; Tracy and Matsumoto 2008), but also tend to be spontaneously adopted by powerful leaders or winners of physical fights (Tracy and Matsumoto 2008; for a review, see Hall et al. 2005). In contrast, losers of such battles, and followers, tend to adopt complementary constricting postures, which signal their deference and subordination (Tiedens and Fragale 2003; Weisfeld and Beresford 1982).

About Prestige...

Unluckily, the authors only list two corresponding traits for prestige: locally valued skills and expertise, and altruism and generosity.

Fitness-Related Outcomes

Both dominance and prestige appear to facilitate success in survival, resource acquisition, mate attraction, and reproduction.

However, how and when the two are more attractive depends on the situation.
Say the authors:

> women generally indicate a preference for male targets described as Prestigious over those described as Dominant.
> (But) highly Dominant men (relative to less Dominant men) are deemed no less—and in some contexts (such as in a competition) even more—attractive and desirable as short-term mates (Sadalla et al. 1987; Snyder et al. 2008).

When it comes to health, it's possible that dominance may be more costly and thus producer worse health outcomes:

> Prestigious villagers in Tsimane', a small-scale forager-farmer society, tend to more healthy than the average group member (on the basis of current nutritional status) , whereas no effect was observed for Dominance (Reyes-Garcia et al. 2009). This distinction may result from the theoretical expectation that Dominance

> depends on frequent assertions of intimidation and threat which would entail greater biological costs (including increased stress) compared to Prestige—given that Prestigious individuals acquire access to resources and privileges through freely conferred deference. These biological costs might wash out the nutritional benefits that should accompany the greater flow of resources to those who effectively invoke Dominance.

My Note:
I suspect the numbers here were too low to generalize

What still mattered a lot in the Tsimane (and other tribes) was social support:

> Longitudinal data confirms the cross-sectional result: larger and more skilled Tsimane men gained more social support over a 4-year period, and increase in social support (but not increase in size or skill per se) associated with increased political influence
> (…)
> The prominence of social support to status acquisition among the Tsimane accords with other ethnographic reports.

Prestige Can Also Be Faked/Manipulated

Say the authors:

> Importantly, Prestige is largely accorded on the basis of perceived, rather than actual, competence and expertise, which explains why Prestige and rank allocation tend to be strongly influenced by competence cues.

And on the role of confidence:

> assessments of competence are often based on observable cues of confidence, such as degree of certainty expressed and amount of talking (Anderson and Kilduff 2009b; Littlepage et al. 1995), and nonverbal displays of pride (Steckler and Tracy, Chap. 10, this volume).

> Why Teachers Disempower You (Teacher-Pupil Frames)

Status Is A Multi-Endeavor Competition In Humans

We compete for status in numerous domains:

> in the context of these multiple selection pressures, however, “primate agonistic dominance would have gradually broadened into the modern multiple-criteria sets of human prestige” (Barkow 1989, p. 187) . Once hominins began to compete in areas other than agonistic dominance, the way was opened to competition in numerous other domains. Geoffrey Miller (Miller 1998, 2000a, b) argues that much of human psychology—a sense of humor, art, music, verbal skill, indeed, almost any skill domain—are products of sexual selection.

And we brag about the domains where we feel we’re good at:

> Because we each participate in multiple prestige arenas, we may strategize in our daily interactions. For

> example, when I meet a stranger, I may mention the garden I am proud of; on finding that the other has a far larger and more beautiful garden than my own, I may move the competition from skill and knowledge of gardening to golf or to cuisine.

We Revert Back to Raw Power & Dominance When Society Reverts to Its Most Basic State

> Control over resources and the capacity for physical violence seem to be the bottom line of human social hierarchy. When societies disintegrate, or when colonial conquest destroys existing sets of prestige criteria, these remain. The news media may refer to the new leaders as "warlords" or "gang leaders," but it is these figures, who control resources and violence, who become the respected, the prestigious, the people from whom children learn.

Cultures Vary In The Role That Violence Plays Around Status

> Cultures clearly differ in the extent to which recourse to violence, or at least threat, is compatible with respect and prestige. Honor cultures, as described by Nisbett and Cohen (1996), appear to link rank, prestige, and capacity for effective violence, as do the Yanomamö (Chagnon 1977).

Personality of High-Status Individuals

- **High extraversion helps.** An abundance of research has shown a strong and consistent relationship between extraversion and status. Multiple reviews of the emergent leadership literature have shown that extroverts tend to emerge as leaders in groups more than introverts (Bass 2008; Judge et al. 2002; Mann 1959; Stogdill 1948). Even longitudinal studies that assess the attainment of status over long periods of time have found similar results.
- **Traits dominance matters a lot**. Vast evidence links trait dominance to the attainment of status in groups. dominance involves the tendency to behave in assertive, forceful, and self-assured ways, including speaking more, displaying a commitment to the group's success and exhibiting more outward signals of competence such as volunteering answers and providing problem-relevant information.
  But it's different than from the "dominance" construct articulated by Cheng, Tracy, and Henrich (e.g., Cheng et al. 2010; Cheng and Tracy, this volume, Chap. 1) because it doesn't necessarily include inducing fear or intimidating others (Gough 1987), but instead centers on assertive and self-assured behavior
- **Agreeableness is unrelated or even negatively related** to status attainment.
- **Conscientiousness helps in project teams or at work**. Conscientious individuals attain higher status in task-focused contexts such as project teams or workplaces, but not necessarily in other contexts.
- **Neuroticism lowers your status**. Research has consistently shown neuroticism relates to lower status -and especially so for men-
- **Openness to experience may help a bit, but not much**. It has been linked to status attainment, though the evidence is weaker and less abundant than for other personality traits.
- **Self-monitoring may help**. Self-monitors, out of a concern for social appropriateness, are particularly sensitive to the expression and self-presentation of others in social situations and use these cues as guidelines for monitoring their own self-presentation". Self-monitors desire status and are more likely to emerge as leaders in task groups.
- **Narcissism is a mixed bag with some traits that help and others that do not**. Desire for status and self-confidence help. The selfishness side of narcissism may hurt, say the authors (albeit I'm not convinced).
  In support of the "mixed hypothesis", Paunonen et al. (2006) found that military cadets who possessed the

"brighter" side of narcissism (i.e., self-confidence) were more often rated as leaders by peers. In contrast, cadets who possess more of the "darker" side of narcissism (e.g., manipulativeness) were not rated as leaders.
My note: in my opinion, what's most damaging to status is the "vulnerable narcissism" subtype with fragile ego, the need for validation, and high sensitivity to rejections (which leads them to take little chances in life, including in leadership)

- **Perceived as providing value**

The Traits to Gain Status

- **Competence**. Status is often based on judgments of the person's competence in domains that are important to the observer
- **Smart self-promotion**: (…) ensure that their skills and successes are known by others and that their shortcomings and failures remain hidden. Thus, self-presentations involving knowledge, competence, and skill—what Jones and Pittman (1982) referred to as "self-promotion"—figure prominently in the pursuit of status.
- **Confidence**. An indirect route to being viewed as competent is to convey an air of confidence. Because competent people are, on average, more confident than less competent ones, observers sometimes use confidence as a proxy for competence (Areni and Sparks 2005; Price and Stone 2004). In fact, when people are induced to be overconfident, observers infer that they have higher status (Anderson et al. 2012)
- **Dominance**: people ascribe greater competence to dominant people
- **Obtaining and displaying resources**. (…) almost anything that benefits—or might potentially benefit—other people.
- **Using resources to make the group better off**: study showed that people who contributed more money to a group were perceived as having higher status than people who contributed less. Not surprisingly, they were also more influential and engendered more cooperation on the part of other group members (Willer 2009).
  People who display signs of wealth often have status because they have the potential to benefit others.
- **Benefting the group and other members**: leaders who more effectively address the needs of other people foster perceptions of competence and credibility, enhance trust, and gain power (Blass and Ferris 2007).
- **Strategic predisposition to achieve goals**. The authors call it "political skills", but it feels like a misnomer to me: "people who possess "political skill" (e.g., social astuteness, behavioral flexibility, adaptability) more effectively address a variety of individual needs and promote individual and group goal accomplishment. Thus, political skill may contribute to perceptions of status both because it is valued by others in its own right and because the politically astute leader is able to discern how to facilitate the attainment of group goals and promote his or her instrumental social value"
- **Effort, sacrifice, and loyalty to the group or cause**: status is facilitated by indications that the person is a loyal and devoted group member who has the best interests of the group at heart and will occasionally sacrifice his or her personal interests for the benefit of the group or relationship.
  For that reason, employees who put extra effort into their jobs are often accorded higher status (Allen and Rush 1998; Podsakoff and MacKenzie 1997).
- **Trappings and Signals of Social Status**: displaying symbols that connote status
  See: how to signal value and status

Don't Confuse Acceptance For Status

Say the authors:

> people gain positive outcomes both by being liked (and accepted) and by being respected (and having status). However, in their everyday lives, people sometimes conflate acceptance and status and erroneously use tactics

> to seek status that are actually more appropriate for seeking acceptance, and vice versa.

Some examples of confusing the two:

> For example, in many instances in which people attempt to impress casual acquaintances with their skills, knowledge, and accomplishments, they are using self-presentations that are relevant to status when, in fact, they are trying to be liked and accepted. Similarly, people who try to increase their relational value by being successful or working hard may become hurt or disappointed when such efforts do not not automatically endear other people to them.

Some people who pursued personal success and accomplished may also feel isolated or even resentful when success gives them status, but not necessarily liking, care, or love.

Status and Acceptance Are Sometimes Opposites

For example, displaying value may give one status, but make them more disliked.

Say the authors:

> touting characteristics or resources that reflect one's social instrumental value, may appear highly self-promoting (which they are), and convey that one is superior to other people in certain respects, generate competitiveness with other group members, or evoke envy. Such reactions may undermine the person's perceived relational value , along with liking and acceptance.

And some seem to be unconsciously aware of it:

> the more that people want to be accepted, the more they underestimate their status in their own mind (Anderson et al. 2006). This finding again suggests that people recognize a trade-off between social acceptance and social status and that people's desire for acceptance and belonging

How to Strike A Balance

> One way in which people can achieve this balance is to demonstrate their instrumental social value in terms of relational and communal outcomes.

This is also a technique we share in our article for combining femininity and power:

- **Combining femininity and leadership**

> Feminine AND Powerful: 9 Tips For Women Bosses

And say the authors:

> People can contribute to collective outcomes not only through their competence and provision of material resources but also by fostering positive relationships among group members. Not only do people enjoy memberships in groups in which they have positive relationships but cohesive groups tend to perform better than noncohesive, conflicted ones (Anderson et al. 2006).
> Because those who promote positive relationships are usually viewed as warm and likeable people, people who desire social approval can attain both status and approval by being relational experts within a group.

Finally, social skills, a giving attitude and charisma also serve both for status and acceptance.

Personality Matters In Status VS Acceptance Preferences

Narcissists prefer status and power.
People high in approval motivation who want status face a dilemma because they also want acceptance.

Not Everyone Cares About Status, Everyone Cares About Acceptance

Say the authors:

> having low status does not appear to evoke strong reactions across the number and variety of situations as does being rejected.
> (…)
> **People act as if they should be relationally valued and accepted by virtually everyone they meet**. In contrast, people spend much of their daily lives in contexts in which their instrumental social value (and, thus, status) is low, but they do not appear to have strong reactions to most of these situations.

This is why judge power moves of rejection and dislike are so powerful:

> The Judge Role: A Tool For Emotional Control

MORE WISDOM

TPM Take: Power Beats Status

Since status is more others-related, high-status people also *need* others more:

> since status relies on others, concerns about maintaining one's status will orient status-holders outward, as they will be focused on monitoring where they stand vis-à-vis the status-conferral process
> (…)
> As such, high-status parties (who presumably wish to maintain their high-status position) will not only be vigilant about monitoring status-conferral processes but will also be particularly vigilant about maintaining social relations in a manner that prompts continued respect and esteem from others. That is, they will strive to fulfill others' expectations that high-status parties show consideration and act in a manner that warrants their high-status position (Blader and Chen 2012; Ridgeway 1978, 1982)

Instead, say the authors themselves, power *liberates* people:

> This description of the effects of status stands in stark contrast to the effects of power, which liberates people from social and normative pressures and enables them to shift their focus inward, toward their own goals and dispositions (Galinsky et al. 2008; Guinote 2007; Keltner et al. 2003).

Of course, with power there can be some risks to the collective and to anyone who strives to be a value-giver:

> Indeed, power can prompt an egocentric orientation to social encounters (Fiske 2010; Galinsky et al. 2006; Lee and Tiedens 2001). As such, power makes people less attentive to and concerned about others (Galinsky et al. 2006) and thus may also make them less concerned about others' impressions of them .

But this is why here we also work to develop our character :).

You Gain Status By Giving... Or By Punishing The Takers

> People can gain status not only by giving or helping others but by enforcing norms of cooperation.
> (…)
> ? Barclay (2006) used a cooperative group game to show that people readily paid to punish those who do not contribute toward a group fund that benefited all group members, and that the people who paid such costs were perceived by other participants as being more respected, trustworthy, and group-focused than nonpunishers. Those who punished noncontributors were also entrusted with more money, demonstrating a tangible benefit for enforcing norms (see also Nelissen 2008).

Punishing freeloaders also helps the group because people contribute more when noncontributors can receive punishment.

You Can't Always Be Vulnerable & Maintain Status

Vulnerability can be costly for status.

And especially so for certain professions where "strength" or "stoicism" are expected or advantageous:

> For example, most people who regularly face danger in the course of their jobs—such as police officers, fire fighters, and many members of the military—are not as confident and calm in the face of danger as their visage may suggest. And everyone realizes that, as normal human beings, people in these roles are sometimes uncertain and afraid. Yet, to openly display uncertainty or fear to the public would likely result in a loss of status because, from the public's standpoint, the instrumental social value of an uncertain or fearful police officer, fire fighter, or soldier is arguably lower than that a confident and fearless one.
> Thus, role demands require that people in such fields maintain a public image of confidence, fearlessness, and strength no matter how they may actually feel. Similarly, everyone knows that teachers sometimes become fed-up with their students, but a teacher who fails to maintain an image of imperturbability by screaming at students or complaining to parents will suffer a loss of status.

- **The myth of vulnerability and power**

> Vulnerability Is NOT Power: Don't Believe The Hype

Local Prestige May Struggle Against Social Media Fame

> Modern media, first the movies and now the internet, arguably may be turning the whole planet into Duduguru by breaking the ancient chain of cultural transmission. This is because the media present to us figures who apparently have more prestige than do our locally respected characters.

On the other hand, I'd add, is also an opportunity for those who can make it big on social media.

More Wisdom x2

Types of "Pride": Hubristic VS Authentic

> Hubristic pride refers to pride marked by feelings of arrogance and conceit, while authentic pride refers to

> pride marked by feelings of accomplishment, confidence, and success (Tracy and Robins 2004). Hubristic pride is highly antisocial, whereas authentic pride is socially valued.

Physical Formidability Helps Gaining Status

> height and muscularity increase perceptions of status and leadership which confirms the status–size hypothesis. Yet the size–prestige relationship depends upon the nature of the situation. This is especially the case for muscular people whose prestige increased only during war for male targets, presumably because physical strength of a leader is a valuable instrument in intergroup conflict, certainly in ancestral times.

And when it comes to height VS muscularity:

> Whereas height is related to attributions of dominance- and prestige-based status across a number of situations, muscularity is much more a dominance indicator.

Equalitarian Societies Award Less "Status Premium" To Size

In more equalitarian societies, taller men weren't seen as more dominant:

> a study conducted among people of the Tsimane—a relatively egalitarian farming-foraging society in the Bolivian Amazon—shows that although individuals agree that taller adults are physically stronger, they do not perceive taller people as socially more dominant—that is, when two people have conflicting interests, whose interests are acted upon—or as more knowledgeable (Undurraga et al. 2012)

Or more prestigious (albeit prestige is less tied to size anyway):

> Another study conducted in the Bolivian rain forest showed that physical size did not predict community-wide influence, a sign of prestige (Von Rueden et al. 2008)

So the authors speculate:

> Considering that these null effects were found in relatively egalitarian societies, which reflects the conditions in our ancestral past, they suggest that perhaps a certain level of experience with social inequality is required to associate height with prestige and good socioeconomic outcomes (cf. Stulp 2013)

Low-Status People Are More Other-Oriented (Unless The Group Is Under Threat...)

> with heightened vulnerability to external forces and dependence on others comes a greater need to understand others' goals and feelings.
> (…) higher status people tend to be more self-oriented, and lower status people more other-oriented, in their thoughts and feelings (Krauss et al. 2011).
> (…)
> higher class individuals are more likely to perform or endorse unethical behaviors including lying in negotiations, cheating to win cash, cutting off other drivers in violation of traffic laws, taking candy from children, and engaging in unethical business practices.

However, if the group is under threat, then high-status individuals have a vested interest in keeping the group and the group norms alive since it provides them with plenty of benefits.
And they also have a vested interest to be seen as givers when their status is at stake:

> (higher status individuals) they may benefit more than low status individuals from helping behaviors that preserve group stability and viability, such as vigilance, group defense, and enforcement of group norms.
> (…)
> The noblesse oblige phenomenon involves more generosity (e.g., tolerance of noncompliance, financial donations) by high-status individuals, but only in situations where status differentials are clearly invoked.
> (…)
> That noblesse oblige serves a status maintenance function seems consistent with other anthropological findings.

Lying is Risky For Status

> people who misrepresent their personal characteristics lose face and are sometimes negatively sanctioned (Goffman 1959; Schlenker 1980). Thus, people are constrained in the images that they can present to others by what others know or might find out about them

Status VS Power

- **Fair people are assumed to be high status, unfair ones high-power**: fairness is positively associated with status but negatively associated with power. Unfairness enhances perceived power because it is seen as an indication that the actor has little relational concern for others, and this lack of concern is interpreted as meaning that the actor must possess high power.
  In contrast, fairness enhances perceived status because it is seen as showing that the actor has high relational concern for others, a characteristic associated with being held in high esteem
- **Men prefer power, women status**: In all three studies, men desired power more than women did, and women desired status more than men did.
  Hays (2013) associated the preference for status with characteristics such as high need for affiliation and high interdependence, traits more commonly found among women (who corresponding with the results of Fragale et al. (2011), are typically seen as having more warmth). Preferences for power are associated with characteristically male traits of high need for power and high independence

Both Value-Giving & Value-Taking Ability Matters to Gain Status

> Social status is granted to those individuals widely perceived as best able to inflict costs or confer benefits on others (Henrich and Gil-White 2001).

People Want To Be Close to High-Status Individuals

> People seek social proximity to the strong, skilled, generous, and wealthy because of the knowledge and material goods they might acquire (Henrich and Gil-White 2001) and because of the indirect social value of association with powerful individuals.

Also see:

- **High value me**n: traits, and how to become one

QUOTES

A definition of status:

> Status is an index of the social worth that observers ascribe to an individual or a group (Chen et al. 2012),

On “going green”:

> The “going green to be seen” studies suggest that many choices that appear altruistic often belie a deeper desire for status that comes from appearing altruistic.

And the marketing takeaway:

> sometimes increasing the price of a green product can lead that product to become more desirable because it signals that purchasers are prepared to incur costs.

On dominance and prestige:

> human hierarchies are the product of our species’ evolved tendency to submit to those who wield force and intimidation, and to follow and learn from those who garner respect and admiration.

We’re all naturally agonistic and potentially aggressive:

> We remain primates, however: lurking beneath all competition in symbolic spheres is agonism (Barkow 1975; Barkow et al. 2012). If I lose in symbolic competition with you, I may grow angry and physically assault you, or at least want to.

⍰⍰♂ Lucio’s Analysis

Some information repeats

The repetition of information is a very common issue in textbooks written by different authors.
But it’s not a good reason not to avoid it.

That being said, this was one of the textbooks that repeated the least information, so well done to the authors and editors.

Could have picked one single definition of status

Across the book, there may be something like 10 definitions for “status”.

Some passages could have gained from more power awareness

Say the authors:

> Why Do Individuals High in Neuroticism Attain Lower Status? On the surface, it is not entirely clear why neuroticism is such a consistent predictor of lower status in groups.

It’s actually pretty clear to me.
Also see our alpha male article for an overview of gaining status among men.

Indeed, in another chapter, different researchers say:

> In general, anxious, insecure, and introverted people are probably accorded less status because they are (unfairly) perceived to be less competent than calm, secure, outspoken people (Anderson et al. 2001).

PROS

You can't beat a great book based on research, written by smart researchers.

REVIEW

The Psychology of Social Status is the best overview on the topic of social status and one of the most informative textbooks I have read.

I am grateful to the authors as this resource will enrich our articles and products.

And that's always the biggest compliment I can pay to any resource I consume.

Check out the **best books** to read or **get this book on Amazon**.

Is An Apology Without Change Manipulation?

Lucio Buffalmano · 4 October 2023 · Archived copy · Original

That “an apology without change is manipulation” has become a popular trope.

And, in some cases, it’s true.

But not *always*.

We can speak to that authoritatively because we specialize in the dynamics of manipulation.
And many consider us the world’s greatest experts on manipulation and exploitation:

Shoutout to @AbleDParyon for the mention, great guy!

So in this article you will learn how and when an apology without change is manipulation (and when it’s not).

Contents

- Intro

- The Motives Of Apologizing Without Change
- Apologies Power Dynamics: When Change Isn’t Owed
- When Apologies Without Change Are NOT Manipulative
- How to Tell If An Apology Without Change Is Manipulative
- Conclusions

Intro

An apology is an important step for mending and improving relationships.

However, it’s only *one* step.

And there need to be more steps in order to “make things good again”.

The full circle of effective and honest apologies includes:

1. **Owning the mistake** and/or harm caused. It means accepting the blame and/or harm caused. Or, at least, accepting one’s own fair share of the blame
2. **Statement of apology**. This is the actual “apology”. It serves to re-empower us and “make us whole again”. But it’s the easiest to provide, so it may carry little weight without all the other steps
3. **Remorse** for the wrongdoing. An important sign of good character. Generally speaking, the bigger the harm, the more honest remorse is important
4. **Making amends**. The apology, the display of remorse, and the promise to change are all part of making amends. But amends also include more pragmatic and tangible reparations
5. **Communication, clarification, & future plans**. This is a two-way street where the apologizer listens and works with the victim to fix things. It can include a roadmap for change on both sides
6. **Changing behavior**. This is the last step that prevents the harm and/or issue from happening again. In some cases, only partial change may be possible. And future pain may not be fully avoidable. But if it’s clear to both and both are OK with it, it’s still a successful resolution

Those are the components of an honest and effective apology.
Not all steps are always necessary, of course. But, generally speaking, the more steps you remove, the more likely it is you’re dealing with aggression or manipulation.

Now let’s see how manipulative apologies look like:

Types of Manipulative Apologies

There are many types of manipulative apologies.

Many are part of the gaslighting behavior cluster of behavior.
So check that seminal article to understand the psychology of manipulators.

Some more manipulative apologies include:

1. Over-apologizing

The more you get *words* of apologies, the less you get in *concrete* reparations and changes

Over-apologizing always smells fishy, fake, and even *weak*.

Indeed, the over-apology gives a lot of power away.
But it's *not* for your benefit.

With over-apologies **the manipulator gives lots of power away to entice you to end everything at he apology level.**
But as we've seen, the statement of apology is only one part of the apology full circle.
So the manipulator robs you of concrete restitutions, real talk and planning, and actual change.
The manipulator also often seeks an *immediate* "getting back to normal" that only advantages *him*.

If you fall for it, the manipulator may even gain your trust.
Over-apologies lead us to believe that the apologizer must be such a good person. After all, who would go that far, and give so much power away? Sneaky manipulators, that's who.

How to Recognize Manipulative Over-Apologies

Of course, a man may pour his heart out and really mean it.

Also, there is some degree of subjectivity.
Some people are emotionally neutral, while some others tend to "dramatize" things a bit too much.
So you need to look at the individual, the previous history, and the circumstances.

However, generally speaking, you always want to note whatever feels "too much" because it's a red flag.
At best, it's a red flag of very poor social skills and/or an overly submissive personality.
At worst, it's manipulation.

Similar to over-apologizing:

1.2. Over self-blaming

> "You're right. I'm the worst girlfriend. I can't do anything right!"

The over-self-blame apology is a pity-based manipulation.

It works like this:

1. They go into an emotional meltdown of self-blame
2. You feel bad for them
3. You feel bad for calling out their poor behavior and demanding change
4. You drop your fair demands for reparations/changes

If you fall for it bad, you may even start *defending* them.

Something like:

> (she yells at him and treats him like her property. He explains why it's not cool)
> **Manipulator**: I'm such a bad person. Your mother would hate me
> **Mark**: Ah come on, it's just that sometimes you misbehave. But deep down you're a good person

Don't be Mark.
Mark is a sucker :).

2. Fake Apologies

There are endless types of fake apologies.

Some examples with the corresponding sub-communication:

- **I'm sorry you took it that way** = there's nothing to be sorry about, *you* took it the wrong way (the mistake is on you)

- **I apologize because you're the administrator** = there is nothing to own and no wrongdoing. I'm just saying it because you have the power to demand it (and you're bullying me into it)
- **I'm sorry about the misunderstanding** = there is no ill-intent, harm, or anything to fix. It was only a misunderstanding

All these are power moves.
And some power moves are even more disempowering:

2.2. Covert Attack Apologies

Some examples:

- **I'm sorry I humiliated you in front of everyone** = this apology offers no power protection for a dynamic that *needs* power protection. Put it that way, it only thread-expands on your low status
- **I'm sorry you felt hurt only because me and Chad had a good conversation** = she reframes flirting as talking (manipulative) and frames him as weak
- **OK, is it really important to you? OK, then fine, I'm sorry** = frames his poor behavior as inconsequential and you as "needing" an apology. It denies the harm, and also babies you

The attitude is that you don't really deserve an apology and that you're being a thin-skinned baby (that she has contempt for)

2.3. Covert Threats Apology

The most aggressive manipulators embed threats in their apologies.

There are many ways of embedding a threat.

But as an example, I'll share what an ex-girlfriend used to say:

> **Manipulator**: (I'm so bad) Maybe you should look for someone else

This is a mix of over-apologizing, *plus* a threat.
Not a good combo.

Some other forms include:

- **I'm sorry, this is a place of telling it how it is. If people can't take it, it may not be the place for them** (masked threat of firing at work)
- **My apologies for replying late, but I'm busy. My ex couldn't accept that and it destroyed the relationship** (masked breakup threat)

3. "Please Please Please Don't Leave Me" Apology

This "apology" is a guilt-trip to keep you in the relationship.

You'll see this when you decided enough is enough.
And just once you look forward to moving on… They meltdown to make you feel bad.

Next up, they may be threatening criminal behavior or suicide unless you stay.

Example:

> **Him**: I'll kill my parents, I'll steal money, just whatever you want… (cries)

Research suggests guilt tripping can work, but easily backfires when it's too much or too obvious as it reeks of manipulation (Singh, Crisafulli, & Quamina, 2020).

The begging guilt tripping is a case of over-doing it, and a red flag of possible borderline personality disorder.

4. Premature Closure Apology

The premature apology seeks to skip the "communicate and solve" phase.

The manipulator wants to skip communication and reparations because he wants the easy way out.

So he always goes back to the apology phase trying to end it there.
And if you seek more communication, he may say:

> **Manipulator**: I already apologized, what else do you want

A more aggressive variant is:

4.2. The Angry Premature Close

More dominant and aggressive manipulators say "sorry" but may as well be cursing you instead.

Something like:

> **Manipulator** (with an angry tone, gesticulating as if to say "so what"): OK, sorry (looks at you angry to make you submit and drop your demands)

Attention here:

If you accept this "apology" the frame is not that he's being aggressive.
The frame becomes that *you* are annoying.

The sub-communication becomes: "OK, you annoyed me so much, that you got what you wanted, even though you didn't deserve it".

Similar is also:

5. "I Got No Time For This" Apology

This manipulative apology frames the victim as lower value than the manipulator.

It works like this:

1. **Frames your demand as "not important"**, acting like any clarification or apology is "wasted time".
   Some ways to do it:
   - Acts annoyed
   - Checks the time / phone
   - Says he has other appointments
   - Gives you strict timelines -"I only have 1 minute for this, go ahead"-
   - Says he must "get to work"
2. **You're framed as lower value for caring for inconsequential things**. This is the natural consequence of the power dynamics at play. If you're over-worried about small stuff, it means you have nothing important in your life. You have no goal, and no demands on your time. And you care more about the relationship than he does.

And that's inherently lower value

3. **He's framed as higher value for having more important things to take care of**. This is also the natural consequence of the unspoken power dynamics at play. Not having time for your "small stuff" means he has to take care of "more important stuff". And that means that he's higher value

That attitude *in itself* frames you as lower value

Now attention:

Because the dynamics -or "subcommunication- are unspoken, it doesn't mean they have no impact.
As a matter of fact, it means they have an even *bigger* impact.

Meaning:

If **you leave the underlying dynamics unaddressed you tactly agree that you're lower value than he is**.

And once you're lower value, simple social exchange dynamics rob you of any right.
This is because lower-value people should be grateful that higher-value people even are with them. So it's unfair for lower-value people to demand any change.

6. Shifting The Blame Apology (Sorry, BUT...)

This manipulative apology shifts the blame from the manipulator, onto you.

There are many ways of doing it, and a typical format is the "sorry BUT".

With the "sorry BUT" apology:

- **The manipulator accepts *part* of the blame**. Potentially a *small* part.
- **Blames you for the rest of it**

An example could be:

> **Manipulative father**: I'm sorry that I beat you when you were a kid and now you think I'm a bad father. On

> the other hand, we have to look at what made me do it. Contrary to your sister who is nice and well-behaved, you… (proceed to find a reason why you "deserved" the beating)

Other examples include:

- OK I'm sorry, but God you're difficult
- Fine, I did make a mistake, but when you push a man to his limits…

7. Saying It Without Meaning It Apology

The manipulator "says it", but it's obvious from his tone and demeanor he doesn't mean it.

Example:

> **Him**: (flat and emotionally distant tone) I'm really sorry

This is very gaslighting.
The effect is:

1. I don't really mean it because you don't deserve it
2. But I'm giving it to you anyway (so I'm good)
3. So you can't complain (and if you do, you're bad)

And if you call it out, the manipulator will establish this frame:

- Deny that he's pulling any power move
- Say that you should be grateful he's apologizing (="I'm good")
- But you're not grateful and cannot be satisfied (="you're bad)

8. Escalation of Abuse Apology

This manipulative apology is part of the escalation of abuse.

It works with the "2 steps forward, 1 step back" format.

The apology itself is a smaller step back in that escalation.
But it serves to:

- Pacify the victim in the present
- Prevent reparations and future changes
- Secure and solidify the "gains" in the target's acceptance of abuse

Because the sub-communication is that if abuse can be undone with a simple apology, then abuse is "kinda of OK".
Or that abuse is appropriate for the victim.

This is the progression:

1. Episode of abuse
2. Victim reacts
3. Abuser apologies
4. Victim accepts without demanding reparations and changes
5. Nothing changes
6. Abuse repeats (and potentially gets worse)

7. …
8. Abuse becomes the “new normal”

At that point, an apology may not even be needed since it’s “just how things are”.

In these dynamics, the apology is the “step back”.
But it’s part of an increase and “normalization” of abuse.

This is one of the reasons why you always must travel the full-circle of an effective apology.

The Motives Of Apologizing Without Change

So, why do manipulators apologize without change?

The simple answer is that **manipulators apologize without changing because it’s good for them**, of course.

Change, instead, is costly and inconvenient.

Change means dropping habits the manipulator enjoys, and adopting ones that he doesn’t.
And it may mean treating you well and embracing a win-win relationship. But he prefers win-lose because that’s better for him.

But, some may ask:

How about the costs for the relationship, for his reputation, for the future… ?

And now here’s what you need to hear:

Chances are that **the manipulator never cared much about you.**
Inveterate manipulators tend to be selfish, callous, and with a very, very shallow emotional life. So even a small inconvenience to him isn’t worth the effort -not even if it meant the world to you and the relationship-.

Don’t expect them to do what’s good for you or “for the relationship”.
They only do what’s good for them.

The only exceptions are extremely power-hungry manipulators.
Those are so power-hungry that they avoid anything that may cost them power -even if it costs them heavily in everything else-.

In more schematic forms, manipulators apologize without change:

- **Because it’s good for them**
- **Because they don’t care about you or the relationship**
- **To keep you in the (poor) relationship**. Most people stay in poor relationships because of the costs and fears of breaking up. Apologies may be just what the manipulator needs to avoid making it “as bad as it takes to break up”
- **To assuage you with empty promises** so you drop your demands for reparations or change
- **As a strategy of “habituation to abuse”**. As per the “1 step back, 2 steps forward” model. If you accept their apologies without change, then you will eventually come to accept poor behavior as the “new normal”

Apologies Power Dynamics: When Change Isn’t Owed

This needs to be said:

You are not always owed a change of behavior.

Many other online resources start from the false premise that anyone deserves a change in behavior.
But many sources lack a deeper understanding of both power dynamics, and social exchange dynamics.

And from a power dynamics point of view, **demanding an apology is an exercise of power**.

Sometimes that exercise of power is fair.
And it may be exactly what you need to do.
However, you must make sure that is the case.
The same goes for demanding change. That's an even bigger exercise of power.

And from a social dynamics point of view, apologies and changes don't stand in a vacuum.
Apologies and behavioral changes are part of the give and take of any relationship.
And **you cannot look at apologies alone without also considering the overall give and take**.

Put it in the most blatant way possible:

if one is not giving enough, then they may not deserve any apology or change.

Let's dig deeper:

Make Sure You EARN That Change – THEN Demand It

First, you must make sure that you've done your part to deserve a change.

Because it's potentially manipulative and aggressive to expect a change no matter what.

And, **it's a sign of entitlement mentality to believe that you're always owed a change**.

At an extreme, one may even harm you with their behavior, and *still* that doesn't necessarily mean they owe you any change.

Entitlement also doesn't work -especially not with higher-quality people-.
So to avoid that pitfall, ask yourself:

- **Are you owed a change?** Not every hurtful behavior begets an apology. And not every apology begets a change

- **Did you earn that change with the value you provide** back in the relationship? Someone who is only taking from others can't expect to have all his demands met
- **Do you have the power to enforce the change**? If not, it may still be "fair" to ask for a change. But you never want to be in the position of *hoping* others give tiy what's "fair".
  Two approaches to increase your power and leverage:
  - Pull, with the value you provide, or with even more value you can provide
  - Push, with the threat or removing that value, or the ability to exact costs
- **Do you have the courage to walk away** if the change doesn't come? Because if you stay in spite of endless manipulation, then you are the enabler

That's how you stop manipulative apologies. Give them a deadline, and walk towards better alternatives when change doesn't follow

Remember this saying:

> Fool me once with empty promises of change, shame on you. Fool me twice, shame on me.

When Apologies Without Change Are NOT Manipulative

Finally, let's dispel another myth:

Not all apologies without change are manipulative.

Some cases when apologies without change aren't manipulative:

- **The apologizer is the only giver**. Then… They may have a right not to change since they're already giving much more in other ways
- **You're taking far more**. Same as above. As a general rule, the more you're already taking, the less you have a moral right to ask for even more
- **The apologizer has the right to keep doing whatever he was doing**

For example:
  - Moral right because he never promised anything. For example, take a man who never committed. Even if he may hurt her by sleeping around, he doesn't owe her a change
  - Legal rights to do "normal activities". For example, if a man starts his motorbike at 8am and wakes you up, it's not his fault if you live on the ground floor and have a light sleep. He doesn't owe you to walk to office

- **The apologizer has other priorities**. Shall we be 100% honest? Sometimes you just don't matter enough for people to change. Or, maybe, you matter, but something else matters even more to them.
  Example: If a driven man puts his mission above his relationship, his partner may have to compromise instead of demanding
- **The apologizer is truly sorry, but still doesn't want to change.** Someone may truly be sorry that they hurt you. But they may still believe it's their right to do whatever they've done, and to keep doing so.
  This is actually a mature, high-power, and high-quality way of approaching many life situations
- **There's an honest will to change, but an inability to do so**. Some people may truly mean their apology. And even truly mean their will to change. But they may be unable to do so.
  An alcoholic who promises to quit drinking but doesn't change may not be a manipulator, but an addict

How to Tell If An Apology Without Change Is Manipulative

So, how can you tell a manipulative apology from one that is not?

Here are the red flags:

- **It's a *pattern* of apologies without improvement**. A red flag that the manipulator doesn't care about your well-being
- **Apologies come with a host of power moves**. See above and our other articles
- **There are promises of change**, **but no effort to change**
- **The apologizer is just generally a low-quality person**. If you spot a lot of red flags in general, then, well… Don't be surprised if the ahole behaves like an ahole.
  Also see "low-quality men" and "low quality women".

With a bit of power-awareness, you should be able to tell an honest apology from a manipulative one.

And if you're not sure, book a call with us for guidance.

Conclusions

An honest apology may need a behavior change that addresses the issue for good.

So if behavioral change never follows the apologies, you may be dealing with a manipulator.

This article helps you tell which apologies are manipulative, and which aren't.

About The Author:
Ramit Sethi is a New York Times bestselling author and founder of iwillteachyoutoberich.com. Over 1,000,000 people read his material to learn how to use psychology and systems to live a Rich Life. That could mean automating your finances, making more money, finding your Dream Job, starting an online business, or mastering your inner psychology.

Playbook 1: Inside the Dream Job System

The five common mistakes job seekers make

First, are the five common mistakes job seekers make when they begin their job search process:

"Put yourself in the shoes of this average applicant. Let's imagine they work in marketing. They like it – the work is fine, but it's not particularly challenging. They feel stuck. And what's worse? Their boss doesn't really take them seriously, so they want to change.

Can you guess the first place they go when they're looking for a new job? Yep, you guessed it. A job search site, like Monster or Indeed. And they might even tell themselves, 'Let's just see what's out there.'

But, they have no real plan. And this is mistake number one – going to a job board with no plan.

Okay, let's keep going. So this average applicant is on the job board, and proceeds to use the search function to type in their – wait, what are they doing? Are they typing in the exact same job position that they want to change out of? Seems like it.

And in reality, this is mistake number two, sticking to what they know – and sometimes, what they hate. What if I told them that there are ten times more job titles that are way more relevant to them? What if they knew they needed to branch out to find their Dream Job?

Most average applicants don't know this – they don't even know how to go about it, so they stick with the familiar.

And that brings us to mistake number three – taking what they can get. This one drives me crazy. This is where the average applicant now has endless options [populated by the online job board], and with so many available job openings, one of these should be gold, right? Maybe."

Ramit Sethi recommends you take an "active" approach to searching for a new job. And, preaches that using a job site board is a passive job search approach.

> **Ramit**: "Okay, let's pause. Do you notice what's happening? Here's what I see. From the very beginning of the process they've delegated their job search to a computer algorithm. This algorithm is going to tell them where they're going to spend eight hours a day, five times a week for the next ten years of their life. Think about that, let that sink in. You're going to spend the next ten years of your life, and you're letting a computer tell you where to go? No! You should love it, you should own the decision yourself – not let a computer tell you where to go."

Now, those are the mistakes job seekers make when searching for a job. Let's look at the mistakes they make when *applying* for a job.

"Let's take a look. The average applicant has already identified a few jobs that look good. So here the process begins – they dust off the old resume. And then? The endless tweaking, the endless questions.

'Should I write, utilize, or use? What about font size? Ten or eleven? Should I stick with Arial? Hmm… What about that fancier-looking font?' And they spent hours and hours on their resume, on the things that don't really make a difference.

And this is mistake number four – overemphasizing the things that just don't matter.

Back to the average applicant. Here's where they submit the same resume, same cover letter to every company that they can find.

No specific strategy, no rhyme or reason, other than hoping it's going to work out. It's just a numbers game to them, right?

And this is mistake number five – shotgunning their applications into a black hole…

…And I have to tell you, I've seen so many promising job candidates start out optimistically, hopeful, but after sending two resumes, five resumes, 10 resumes, a dozen, and not getting back a single word or response from a real person? That deafening silence can make even the most qualified people doubt themselves."

Ramit says that this is where they begin to blame the economy.

The mindsets of top-performing job seekers

"The first [mindset of a top-performing job seeker] is to get proactive. Now we hear this a lot, but what does it actually mean? It means that Top Talent doesn't wait for a dream job to fall from the sky. They don't tell themselves, 'I don't know what I want; I guess I'll wait. I guess I'll know it when I see it. I'll figure it out eventually.'

They certainly do not apply through some random job website, and then wait for a company to get back to them. No!

So many people delegate their careers to recruiters, to job boards, to an algorithm. And if they don't get any results, they shrug. Top Talent knows that they need to be deliberate, and take the responsibility of finding their dream job into their own hands.

This is what the Dream Job system helps you do; take back control of every single part of your research. For example, you'll figure out exactly what your Dream Job is. You're not going to wait for a random quiz on the Internet that doesn't understand you, to tell you.

You'll be connecting with and talking with hiring managers directly, not firing off a resume and waiting. You'll be in control of the interview, not passively answering questions [you go from simply answering, to taking the lead].

The second mindset shift of top talent is that they think about what other people want [WIIFT]. So many candidates only focus on what they want in a job, 'I want rewarding work. I want to work from home and take Fridays off. I want to work with people I like.' This is classic 'I, I, I,' syndrome…your future boss doesn't care about what you want, they only want to know what you can do for them. And once you internalize this subtle reframe, your resume will stand out more, and you can make yourself that hiring manager's number one choice.

And finally, the last mindset shift is to use competence triggers to show that you are Top Talent. Competence triggers are very subtle signals, like certain phrases, body language, and practices that signal to someone, 'Wow, this is Top Talent. I need this person working for me.'"

Identify your Career Season

- Growth: Most of us start in this season early in our careers, and some of us are still in it. In the growth season, we're motivated by moving up the career ladder and making more money. We're willing to put the time in and we don't mind working hard.
- Lifestyle: Someone in this season still values their work and their career, but they have other equally important goals (e.g. travel, time with family, etc.)
- Reinvention: The reinvention season typically describes people who want to totally reinvent their careers, usually by switching industries.

Playbook 2: Discover Your Dream Role

What Is A Dream Job?

"Together, your dream role and dream company will make up your Dream Job.

The "Window Shopping Strategy"

"If you want to go forward with it, you can. And if not, put it right back on the shelf. This is what we call the Window Shopping Strategy. And finding your dream role is very similar. You see, when you're walking past the windows of all of these job roles, they're bound to be some job titles you just know, they're not for you. Maybe they're too advanced, maybe they're too basic, maybe they're just not interesting. That's fine. Skip them, and others might catch your eye but as you go inside the store, or as you start to research a little bit more, you're going to realize, 'you know what? That's not for me.' Also, fine. But then you're going to start to find gems; ones that really get you excited. And as you dig, as you do more research – in fact, as you do some Natural Networking and actually talk to people who have those roles, you might get more and more excited."

- Step 1: Upgrade to a Premium account on LinkedIn
- Step 2: Browse the high-level list of industries. (Select one that sounds interesting to you.)
- Step 3: Search for open jobs in those industries. (Go to https://www.linkedin.com/jobs/ and type in the industry you selected from the list.)
- Step 4: Narrow your search by experience level. (At the top, click on Experience Level and select the appropriate level to further narrow your search.)
- Step 5: "Window Shop" the results! ("Browse the results! Click on different job titles that sound interesting to you and browse the requirements. Simply ask yourself, 'does this seem interesting to me?' If it does, save the title and link in a tracking spreadsheet for later deep research. If nothing seems to be resonating with you, that's okay. Take a step back and try something else — for example, jobs at a different experience level, or start over from scratch at the Industries List. The goal is not to find a perfect list right now, but a starting point.")

Playbook 3: Discover Your Dream Company

The "Shadow Market" Jobs

"In our research, we found that as many as 80% of jobs are snatched up before they're ever truly publicly advertised. And this is what we call the Shadow Market…And if you're only looking on job boards, you'll never even hear about these shadow market jobs.

So now we know that there's a whole game being played around us. How do we actually find those shadow market jobs? Well, there are two ways.

Number one – your network. Have a strong network of people who are willing to help you. That's exactly what Stephanie did, and that's how she came to work here at IWT. Yes, this strategy is immensely powerful. And, yes,

it's a bit harder, takes a bit more time. But you don't have to have gone to a top-tier school, or you don't have to have interned for a CEO to have a network…

…Number two, going direct. This means getting in touch with employers you want to work for and pitching them directly. Sometimes it doesn't matter if they aren't advertising open positions – you don't wait for them to do something, you go to them first.

This is a proactive strategy – it's totally different from the usual passive strategy of waiting around for a job to come to you via a website.

Remember that the best jobs are often taken before they are even advertised, okay? They happen behind closed doors. They happen with employees sending out a couple of emails to their friends. 'Hey, we're about to put this job up. You should know about it. Make sure you send me your resume. I'll get it in front of the hiring manager.'

This is how many of the best jobs are actually filled very quickly. And most people don't even know about this entire game being played around them."

The Street Technique

- Step 1: Select the industries you're interested in.
- Step 2: Search companies on Linkedln by industry. (Go to https://www.linkedin.com/ and type one of the industries you like into the search. Then, select Companies.)
- Step 3: Combine companies with job roles. (Type in one of the Dream Roles you selected in Playbook 2 into the search along with the industries you are interested in.)
- Step 4: Dig into their profiles. (Click on the profiles that pop up in your search and dig into them. What other companies have they worked at? What skills do they have? What does their career trajectory look like? What other roles did they have? By looking at their past experience you can find interesting companies that you may never have found on your own.)
- Step 5: If the company sounds interesting, add the company name and website to your tracking spreadsheet. Aim for a list of at least five companies

Playbook 4: Build A VIP Network

The "Natural Networking" Framework

**Note: The following is a snapshot of the overarching process that Ramit Sethi teaches.*

On finding experts, Ramit defines a "real expert" as anyone who has experience doing what you want to do.

It can be that:

- "They had your Dream Job in the past — or have it right now!"
- "They worked at your Dream Company — or worked there now."
- "They're experienced in your industry."

Ramit actually encourages his students to prioritize experts who *used* to work at your Dream Company because they're more likely to tell the whole truth about their experience now that they've cut ties with the company.

Playbook 5: The Perfect Resume & Cover Letter

How to create your perfect resume

"Now, why is a narrative important? Well, let's start off with what most resumes do. Most resumes are just lists of facts. They are guilty of the Classic, 'I, I, I,' Syndrome. 'I did this. I did that. I want this. I'm this.'

Oh, [and] they believe that chronology is the most important thing. And that is a critical foundational mistake.

People create their resumes and believe that the purpose of it is simply to list the chronology. 'I worked here between these dates, here are a couple of things I did.'

You couldn't be more wrong. Because if you do all those three things, you are simply hoping that the reader puts the pieces together, and that is what an average applicant does…

…Top talent answers the hiring manager's top two questions…It's relevant to that hiring manager, it's specific and it's targeted. And those two questions that I mentioned, here's what top talent is always looking to answer.

'Who are you and what can you do for me [WIIFM]?' That's all that a hiring manager cares about when they're looking at your resume. In other words, what is your narrative?"

The same mindsets can be applied when crafting your cover letter. So, as Ramit often recommends, it will pay off to do the work. The research of looking into your job and company, and knowing why they're hiring will all pay off down the line. It's important to know what exactly it is that your dream company needs help with so you can follow

the WIIFT rule.

Playbook 6: Land Multiple Interviews

How top candidates "skip the line" to the interview

"We [often] walk into an unwinnable situation. We submit our resume through some random website, and then we wait.

With hundreds, or thousands of other applicants. And we have a tiny shot at that job. And we rarely get it.

The VIP application is a technique that lets you skip the entire H.R. process, which can take weeks or months, and go straight to the decision-makers. You get real feedback instead of automated rejection notices.

If they don't think you're a good fit, a VIP will usually tell you why.

And guess what? It's actually what employers want. Here's what the CEO of Cloudera wrote in his blog post, How to Get a Job at Cloudera.

He said, 'don't just email us your resume… It's much better to come by way of introduction from someone we already know. If one of them sends your name and resume along to a hiring manager, you can bet that it gets special attention.'

And once you know how to do this once, you can do it multiple times to pursue multiple interviews, which lets you evaluate your Dream Job – and even start a bidding war."

The VIP application approach

"…the VIP application is another high competence trigger. It shows that you are discerning. See, many people apply through the front door and they just hope for the best. They're not picky because they just want *a* job. But top performers are obsessed with finding the right fit, not just any job. So by taking the time to informally chat about fit, it shows that you're not desperate, but rather you're thinking critically about where you'd like to go, and how you'd like to add maximum value. Now, would I want somebody like that on my team? Absolutely."

As I said above, Ramit believes that for a job seeker to have more power on their side, they need to have connections on their side. And, a part of being able to do that is to know who it is you'll be connecting with in the company. Or, as Ramit puts it, you need to know who the players are.

"So, what is a VIP? Well, before we dig into the actual VIP application process, you need to know who the players are. So first you have the gatekeepers. This is typically HR and recruiters. Their job is to filter out the masses, and they're very good at what they do. The problem is that they'll often filter out good applicants along with the bad, and they'll never tell you why.

Next, you have the VIPs. These are hiring managers and executives. Their job, quite simply, is to find the best talent. And once they decide they want you, VIPs can move heaven and earth to make it happen, even after HR formally rejects you. So your role is to identify the VIPs, meet with them and show them why you would be perfect for that position.

And finally, connectors. These are anyone who can put you in touch with a VIP, like an employee of the company, a former employee, a mutual friend, or anyone you meet in the course of your Natural Networking.

Now, it's important for you to know the dynamics of each of these players. It's very different than the blank slate that most people send their resume into when they apply through the front door. And, as you can see, your goal is to ultimately connect with VIPs, although that may hopefully happen with the help of connectors.

So, here's what you do in the VIP application…at a high level, there are two steps. First, reach out to a VIP, ideally via an introduction. Second, meet with the VIP informally to see if there's a fit…

…Okay, let's break down the two steps of the VIP application. Step one, reaching out to a VIP. If you recall, you want to be introduced by a connector, and this can be anyone who works or worked at your target company; former employee friend, Natural Networking contact.

Now, if you've already spoken to them via Natural Networking, this is perfect. You can simply ask them for an introduction. If you haven't already spoken to them via Natural Networking, this is your first step. And in that conversation, you can ask something like this, 'Who do you think I should talk to if I were interested in a job at X, Y, Z company?' That's your VIP.

Now, if they mention them by name, they likely know them. And if you've made a good impression by using high competence triggers, like being prepared and asking good questions, they will more likely than not be happy to make an introduction.

I'd recommend waiting a few days after meeting with your connector and then sending them an email for an introduction."

How to use the VIP application approach

(1) Find the players who are VIPs and Connectors at your Dream Company.

**Note: The following is a snapshot of the overarching guidelines that Ramit Sethi shares.*

(2) Reach out to the relevant Connectors you find.

(3) At the meeting (be it a phone chat, in-person, or virtual) ask good questions.

(4) End the meeting while leaving the door open for future communication and/or collaboration.

(5) Follow up after the meeting. (If you're interested in the position, ask for an email introduction to the person they recommended speaking to.)

(6) Connect with a VIP. (If necessary — if you're unable to get an introduction — cold pitch a VIP.)

(7) When you connect with your VIP, meet with them.

(8) Follow the same steps as before to end the meeting.

**Note: The following is a snapshot of the overarching process that Ramit Sethi teaches for ending a meeting.*

THE VIP APPLICATION

How to end the meeting

If you've decided that you're definitely interested in pursuing a position, great!

Just say, "Thank you so much for meeting with me. I'm going to take some time to think about all of this. Would it be all right if I followed up in a few days?" They will say yes.

Then, send an email expressing your interest and ask THEM what they'd recommend as next steps. If they liked you, you're virtually guaranteed an interview — and you've already had coffee with the hiring manager.

That's massive.

If you don't think there's a good fit, simply thank them, send a quick follow up email, and cross them off your list.

(9) If you got the interview, great!

(10) Continue this process with the other Dream Companies on your list to get interviews with them (and, as a result, multiple interviews in your pipeline).

Playbook 7: Perfect Interviewing: Get the Offer

How top candidates "skip the line" to the interview

Here are the 3 steps to answering the interviewer's questions smoothly:

1. Ask yourself: "What are they really asking?"
2. Find the Plain English Answer
3. Polish to Perfection

Then all you need to do is practice, practice, practice!

Here's an example:

> **Interviewer**: "Why do you want to work here?."
>
> **You**: "I want to work at Acme for 3 key reasons: First, you're doing amazing, life-changing work in the field of X. Second, I'm confident I can make a huge contribution given my experience in Y.
>
> And third, you have some of the smartest people in the world working for you.
>
> That last point in particular is a huge deal for me. You'll notice I have a history of actively seeking out and working with the top people in my field, such as John Smith and Jane Doe, who really pushed me to accomplish Z.
>
> Bottom line, I thrive in environments filled with smart, ambitious people, and that's why I'd love to be a part of the Acme team."

Or, consider this all-too-common interview question:

> **Interviewer**: "What's your biggest weakness?."
>
> **You**: "My biggest weakness is that I've spent the majority of my career working for one company. In
>
> some ways, that can limit my perspective. Of course, I've worked in a variety of departments — and in fact I was promoted faster than anyone else to run XYZ — but I'm ready to take what I've learned to a different culture and industry, and that's why I'm here."

And, finally:

> **Interviewer**: "Do you have any questions for me?."
>
> **You**: "So, do you like it here?"

As for that last one, the idea is to continue the frame of "I'm still a high-quality individual who's still assessing whether I want to work with you or not".

For comparison, Charlie Houpert over at Charisma On Command actually coaches his students to respond to that common interview question with something similar to this:

> **Interviewer**: "Do you have any questions for me?."
>
> **You**: "So, obviously I'd like to get this job. But, when you're thinking down the line, whether you hire me, whether you hire someone else, how will you know a year from now whether or not you made the right choice? What will that person had to have done to have been an excellent hire?"

And, that leaves Ramit's suggested response closer to Lucio's recommended response.

The Briefcase Technique

This is the briefcase technique (demonstrated in the first video). It's a proposal that outlines:

- What you've done
- What you're going to do

As far as the "what you've done", Ramit recommends that you keep an updated list of all of the positive testimonials that you've received throughout your career. And, right here is a great place to use them.

The "what you're going to do" is crucial because it's a form of future value-signaling and, at the same time, leverages the potential bias recommended by Daniel Pink for negotiating for a raise.

"So here's what to do: Come up with 5-10 ideas of things you'd like to accomplish in the next six months. They don't have to be big, strategic business ideas — few bosses expect that, especially early in your career. Instead, ask yourself: What would your boss be delighted to hear you say?

Really think about this. Some potential examples:

- 'I'd like to have a bigger role in the X development cycle, and ideally manage the entire process from end to end within six months.'
- 'This year my team hit a 10% increase in sales. I'd like to hit 15% in the coming year.
- 'I'd like to keep doing X, but I've gotten efficient enough at it that I'd also like to start helping out with Y.'

And, you're not even selling your ideas here, you're selling your *initiative*.

Once you set a collaborative frame, the details as far as each idea can be hashed out later.

An example of setting a collaborative frame in the interview would be, in a video interview, asking to share your

screen and then showing a presentation (say, a PowerPoint) with your briefcase proposal.

Then, have one of your slides say, “What I think you want,” which outlines what results you believe the company is looking for from you. And, let the following slide be titled, “What am I missing?” where you pause to ask the interviewer if you’re on the right track and invite their feedback. This is a textbook strategy from Daniel Pink called “pro-like pitching” applied to interviewing.

Playbook 8: Negotiate Salary & Surprising Perks

The “Natural Negotiation” Framework

Ramit recommends you realize that it’s normal to be afraid of negotiating. And, with that, he introduces his process:

“So here’s how to dramatically improve your negotiation game. Introducing the Advanced Negotiation Power Dynamics.

In this framework, you have three key points, and we’re going to go through each of them in detail.

The first is to know your leverage. In a negotiation, leverage is power and you have to know what you’re working with. Next, master your psychology. It’s critical that you walk in confident about your abilities, otherwise the hiring manager is going to sniff it out, and their goal is to get you for as low a price as they possibly can. That’s business.

And then the third is nailing the negotiation. This is the tactics of when you walk in and you have that conversation or you do it over the phone, you want to know exactly what you’re going to do.”

(1) Know your leverage (check the economy).

“…leverage is power…When you walk into a salary negotiation, you are in a position of power, okay?

You have to know that because they’ve already gone through a recruiting process among many other candidates and they’ve brought you in. They’ve made you an offer.

They’ve likely spent thousands of dollars already, in time, recruiting fees, tools, to bring you in. So you have to know that.

Now the key here is that now that they’ve decided they want you, it’s simply a matter of details.

Okay, let me say that again because it’s so important. Now that they have decided they want you, it’s simply a matter of details. This is critical, okay?

Once you understand that and truly internalize that, then the negotiation part doesn’t become so existential, it’s merely, ‘Hey, let’s figure these details out.’ Great. We’ve both agreed we want to go to lunch. Okay, now it’s just a matter of where are we going to go? Simple…

…Now, when you walk in, knowing your leverage means you need to understand the state of the economy.

And I want to give you an analogy here. If you were going to go buy a house tomorrow. Would you expect to simply be able to go and give the absolute lowest price if there’s not a lot of houses on the market? No, because there’s something called supply and demand. So if there’s a seller’s market, that means there are lots of buyers, fewer houses. If it’s a buyer’s market, you’ve got tons of sellers and lots of houses. So think about that.

Depending on the state of the economy or something external to you, that can dramatically affect your ability to negotiate. In other words, if there is a recession or your industry has contracted, you might have low leverage.

If, on the other hand, you have an industry that’s booming, there’s not enough supply, there are not enough people out there, then you have high leverage.

And this is critical to know walking into your negotiation. So let me show you how that works. For a candidate’s market, that’s your market, the economy is good and there’s low unemployment.

What does this mean? It means that you can push, likely, for the top end of your salary range, or certainly the higher part of that range.

If, on the other hand, you have an employer's market where the economy is bad and there's high unemployment, then my suggestion to you is, be more flexible with your salary range and potentially less aggressive…

…There are times when it's a candidate's market. That's when you have greater leverage. This is your opportunity to negotiate harder.

This happens during low unemployment when virtually all top performers are employed and there's a tight labor market, okay?

…On the other hand, there are times where it's an employer's market. That's where you have less power to negotiate. And that happens when there's high unemployment, lots of people looking for jobs.

It makes a lot of sense, just think about the price of cranberries, right? If there's a ton of supply, the price is going to go down. Labor markets respond accordingly."

(1.1) Know your leverage (check the company).

"So, let's also talk about the demands of the company, because that factors into your leverage. Again, we already talked about industry, what's going on in the industry, but let's now talk about the company itself.

If the company needs to hire, then you have higher leverage.

What do I mean by that? Maybe the company is moving into a strategic initiative. Maybe they simply need to create a mobile app.

Well, if that's the case, then they are going to be willing to pay more. That's what's called 'strategic.'

Strategic, if you really boil it down, means we're willing to spend a ton of money because it is critical or existential to our existence.

So, how do you find out if your role or your potential project is important to the company?

Well, you've already done it. You've done it in Natural Networking, you've done it by reading the interviews of the CEO, and you can also look at how long they've been trying to hire for that position…

…So, you can't control the economy, you can't control the demands of the company, but you can control your own Dream Job process.

And that means you can get warm introductions. You can understand what the company's looking for and make sure you position your experience accordingly.

And, of course, you can use the Briefcase Technique in your interview to blow them away and really impress them."

By "position your experience accordingly", Ramit is referring to removing any experience on your resume that doesn't apply to the position you're applying for. He recommends keeping your resume 1-2 pages max and having it contain the 20% of relevant information that will get the 80% of results (those results ideally being that the hiring manager views you as a top performer).

(2) Master your psychology (reframe your negative self-talk).

"'I'm afraid they think I'm being too greedy.' What if we reframe that to, 'I deserve to negotiate'?

'I'm lucky they're even offering me a job.' What if we reframe that to, 'I deserve to get paid within this industry range'?

Or, 'why would anyone hire me?' If you're really confident you can reframe this to, 'this company is lucky to have me. I'm doing them a favor by negotiating my worth and delivering maximum value in this role.'"

Ramit notes, “Remember, this is not personal; it’s business.” And, I include that note because it feels like a great point similar to a note in Career University about managers leveraging the company’s mission as an excuse not to pay you what you’re worth (e.g. “Hey, come on, you know it’s not about the money here, it’s about the impact we’re making, etc., etc.).

And, at the end of the day, all of that “mission” talk won’t prevent you from getting fired if they decide to let you go because it’s not personal; it’s always been business.

“It’s also important to recognize that one thing that helps your psychology almost more than anything else is to be in demand. Just think about this, close your eyes for a second.

Imagine that you were walking into a salary negotiation where this is your only offer, and you’ve been at it for three months or six months, and they make you an offer. How does it feel to negotiate for five, ten, fifteen thousand dollars more? It’s a little nerve-racking, isn’t it?

Now keep your eyes closed. Imagine you have three other job offers. How would it feel to negotiate your salary now?

…If you have another job offer on the table, it can be incredibly powerful to surface that information to the hiring manager. And I’ve done this in the past.

You can say something like this, ‘Look, I really want to work here, this is my top choice. But Company B has extended me an offer that’s significantly higher. What can we do about that?’

Now, I did this because I had multiple offers, and so I actually engineered bidding wars.”

This is why Ramit recommends getting interviews with multiple dream companies (see the VIP application process). It’s because by doing so, you can leverage what negotiation expert Herb Cohen refers to as the power of competition.

And, he also makes it clear that “you don’t have to tell them the name of Company B, they’re not entitled to know that. You also are not obligated to tell them what their offer was, although you can use that information if you like.”

As an added plus, in the course program, Ramit goes over how to time your applications so that as many job offers as possible come in at approximately the same time, so your negotiation power is as strong as possible.

(3) Nail the negotiation (the actual mechanics of the negotiation).

“Let’s talk about identifying your salary sweet spot, and this is basic table stakes for a salary negotiation. You need to know two numbers, your absolute minimum [your BATNA], which is the lowest you would consider, and your reasonable ideal, which is the most you could reasonably expect.

Now, when they give you the number, I want you to resist the urge to say, ‘Sounds great,’ no matter how happy you are to receive that offer.

When you get the offer, I want you to pause, take a deep breath, and I want you to say that number out loud. ‘$48,000. Hmm…’.

Think about whether you’re going to accept, like [if that number is] in green, or negotiate, like in yellow or red.

Take 10 seconds if you need to. You can even say, ‘Would you mind giving me a minute to pull out my notes?’ Also, I should add, you should thank them. ‘Thank you so much, I appreciate that. Would you mind giving me a minute to pull out my notes?’

So, if you’re in the green, you can say something like this, ‘Thank you so much. I’m excited to begin. I think we have a really great fit here. I’d like some time to think it over, if that’s all right. When should I get back to you by?’

Great. Just give yourself some time, even if it’s a great number.

If you're in the yellow, you might say something like this, 'First of all, thank you. I'm excited to begin and I think we're in the same ballpark. I'd like to talk about the salary. From my research, it looks like the standard range is from 70 to 90K, and actually towards the higher end for someone with my qualifications. I'd like to discuss that range.'

And if you're in the red, 'First of all, thank you, I'm thrilled to be considered. I have to be honest, though, it looks like we are pretty far apart on salary. I'm really interested in the position, but from my research, et cetera, et cetera.'

At this point, Ramit says to stay quiet because if you begin rambling you'll start giving away all your negotiating power.

(3.1) The Negotiation A.R.M.S. Technique.

"A.R.M.S.: Agree. Reframe. Make the case. And then shut the hell up."

E.g.

> **Hiring Manager**: "It's not within our budget."
>
> **Most People**: "Oh…sure okay, that sounds all right."

What top performers do instead is negotiate by using this technique:

> **Hiring Manager**: "It's not within our budget."
>
> **Top Performer**: *(agrees)* "I understand, of course – times are tough. And I agree that for an average candidate, the budget would definitely be a good place to start. *(reframes)* However, as I showed you in the interview process, I fully intend to make an above average contribution, and I think I've demonstrated a track record for doing that. *(make the case)* So I'd simply ask that the compensation reflect that *(shut up)*."

Ramit also goes over the art of strategic concessions in the negotiation and how to make sure you're actually negotiating and not haggling.

As far as haggling, an example is when, as the hiring manager for his company, IWT, Ramit says, "…I'm thinking to myself, you are haggling over $2,000 now for somebody that you're going to work with day in and day out for the next two, three, four, five years. It's not smart. So, I want you to remember your goal is not to extract the maximum amount of money, because you can extract every last dime, and you can leave a really bad taste in the mouth of your future teammate."

(3.2) The Ladder of Negotiation Technique.

"Now, the ladder of negotiation is a guideline that you can use here, you can ask, for example, for your big request, like a salary increase, then you can do a small request, which might be an early performance review."

In other words, when you're negotiating, start with your big request first and then transition to your smaller ones.

This is great because, to a certain extent, it can leverage the contrast bias depending on what you're asking for.

The rest of the course is simply icing on the cake, you've already got an overview of the meat and potatoes right here :).

CONS

- **Overfocuses on resource control, neglects the effectiveness of the social exchange**

Ramit Sethi encourages his students to, when networking, ask their target connections (who are high-status VIPs) if they could "pick their brain". He says that this is actually effective because it's flattering for the receiver.

And, for those who are emotionally dependent on the approval, compliments, and flattery of others—all of those being emotional resources that can keep one dependent and under one's control—it can be effective, yes.

But, it's not nearly as effective as showing a willingness to give back *real* value. If Ramit's teachings and scripts here would have focused less on emotional resource control and more on gratitude, the "natural networking" playbooks could have been a lot more valuable to its students.

- **At times, misses key details**

The "perfect interviewing" playbook doesn't specify when to use the briefcase technique in the interview. It simply ignores the technique and then refers you to the resources section to craft your own, leaving you to guess when you should pull out your briefcase proposal at the actual interview stage.

Later, Ramit does a role-play where, when answering one of the interviewer's questions, he begins talking about what he plans to do for the company, stops, and says, "Actually, can I just show you?"

In my opinion, that's great and would have been even better if it was in its respective playbook.

- **Missed opportunities for added resources**

When I started implementing his process for natural networking, I found myself reaching out to tens of VIPs and Connectors every week with no contact tracker to keep track of them all.

I ended up crafting my own which left me wishing it was included in the course because I had a feeling the IWT team could have crafted a better one.

- **All templates are already filled out**

I was expecting blank templates. Instead, I found that Ramit had pulled the exact resumes, cover letters, and briefcase proposals from students who had already succeeded in Dream Job.

Sounds great, in theory, but makes it hard when you're looking at templates that have zero overlap with your field of expertise, leaving you to guess what Ramit would recommend you write.

- **Had no references and contained unnecessary techniques instead**

As much as this course referenced the works of some of the greatest social strategists, there were no references to be found anywhere in the resources, course videos, or other surrounding content. What you did find, were a couple of unnecessary techniques. An example is what Ramit coined the STHU technique—which means the "Shut The Hell Up" technique.

Since STFU is already a thing, it felt like a lazy attempt at inflating the value of the course by saying, "Look how many added techniques we're giving you here," when the course is already wonderfully valuable without them.

It makes sense that Ramit would do this since he offers a 12-month payment plan for the course and needs to convince people to stay. But, unfortunately, those weak plays actually devalued the course in my eyes.

PROS

- **The cons above contain nitpicking**

Lucio said once, "If you don't know yet, my rule of thumb is that the better a book/resource is, the deeper I go with my nitpicking." And, this program was so good that the above cons were a case of exactly that, nitpicking.

- **The course lived up to its marketing**

This course didn't market itself as groundbreaking for the world of job seeking, but it did market itself as revolutionary for the lives of the people who join. And, I believe that this course is capable of creating career

reinvention, growth, and everything in between.

Manipulation Tactics Abusers Use: Recognizing and Protecting Yourself

Lucio Buffalmano · 19 October 2023 · Archived copy · Original

Most resources only provide the basic, easy-to-spot manipulation tactics. To become truly **manipulation-proof for life**, you need more.

This article provides a list of **9 advanced manipulation tactics**, which are used to attack, devalue, and control victims. Thanks to our clear examples, you will learn to recognize techniques like **Social Scalping** (framing you as the perpetual "taker") and **Isolation Tactics** (cutting you off from support), so you can spot even the most covert abusers and know how to defend yourself.

Intro

First, you must understand this:

The best manipulators are so smooth that most victims don't even realize they're being manipulated.

Indeed, manipulation and manipulation detection are part of an evolutionary arms race.
To excel in that race from a manipulator's point of view means never being perceived as a manipulator.
On the other hand, your job in that manipulation arms race is to excel in detecting manipulators so that you can become manipulation-proof for life.

Unluckily, most resources on manipulation only provide the most *basic* manipulation tactics.
And that means that you'd only be able to spot the most basic manipulators.

Better than nothing, maybe.
But if you want to aim high in life, you need more than just basics.

Right after learning to "see" manipulation, you want to learn how to *deal* with manipulation.
And then eventually you want to learn how to strategically *use* manipulation (when it's fair to do so!). For great life quality, you then want to develop manipulation-free friendships and relationships with higher-quality people.

We help people walk that full circle in Power University.
But this article is a good start.

To give you the biggest bang for the buck, we'll share some more advanced manipulation tactics:

1. Social Scalping™

> Social scalping™ includes a host of manipulation tactics that **frame the manipulator as a giver and the victim as a taker**.

Social scalping includes a host of different tactics. They're all aimed at making you the "taker" of the relationship

That is huge because social exchange dynamics teach us that givers and takers have very different rights and obligations.

Just as an example:

No matter how displeased you may be, **you have little rights to demand any change when you are the taker** within any given relationship.
Givers instead can demand changes above and beyond what would be fair in a more balanced relationship.
As a matter of fact, givers may even act out because they'd be right to be dissatisfied with the relationship (and dissatisfied with the taker).

Of course there is no "law" that says that takers must put up with abuse. But these dynamics are often far more powerful than laws are.
We didn't evolve to follow a legal code. But we did all evolve to subconsciously run those give/take calculations.
And we naturally adjust our behavior based on the result of those calculations.

That means that **you become far more accepting of abuse when the manipulator presents himself as the giver**.

2. Devaluing You (Value Scalping™)

> Frame the manipulator as having higher value than the victim, or the victim as lower value

The cast system may be over, but the underlying dynamics aren't. Higher-value people will always enjoy power over others. Sometimes, and especially in the hands of poor characters, that power turns abusive.

Value scalping works on dimensions:

- **Becoming higher value than you** (value inflating for the self). This frames the manipulator as the "giver" and the 'relationship prize'
- **Making you lower value** (value deflating for you). This frames you the "taker" in that relationship

As per Social Investment model, the **lower-value person must make the difference by investing more** (Law of Compensatory Investment™)
Studies support that this imbalance allows the manipulator to give less, and take more (for dating applications, see our articles on the sexual marketplace and the sexual market value).

Tactics to deflate your value:

- Criticism
- Aggressive "humor"
- Negative comparisons
- …

Tactics to inflate his value:

- Bragging
- Teacher frames
- "Confidence game", speaking with certitude
  - Appeal to authority, for example "science", "research", or quotes from famous figures

Example of confidence game to appear as a higher value authority:

> **Tom**: one of the things that I THINK is foundational to growth is joy <— Humble, power-protecting and truthful approach that includes doubt
>
> **Sadhguru**: (speaking with haughty and babying tone) nononono, there is substantial medical and scientific evidence that (states his point of view as a fact) there is no argument about that, there is enough evidence to show that

The speaker is socially dominant.
Dominance facilitates manipulation because you submit and become the "lesser of" in the relationship.
But the speaker is *also* manipulative because he feigns authority to impose his point of view.

Does it make sense?

If so, then you're ready to move to another advanced manipulation tactic:

3. Disempowering You (Power Scalping™)

> Tactics to maintain power for the self or actively disempower the target, including for example credit withholding, apologies withholding, or various power moves

While most people may not care to maintain power, it's a central objective for many manipulative personalities.

Just as an example:

Covert Questions™

> To gain information, without asking for it (part of 'covert power moves')

Before we noticed this pattern and gave it a name, Blau described the phenomenon of seeking information without paying the full costs in his seminal *Exchange and Power in Social Life*.
To understand why manpulators may overdo this, you must understand the underlying dynamics.
Asking:

- **Admits ignorance**, and ignorance is a display of vulnerability and lower value than 'knowledgeable'
- **Creates a social debt** for the asker and a credit for the responder. It's a 'take'

Fragile ego manipulators cannot admit ignorance, and don't want to give you credit for your advice.

So now we can understand that **a common manipulation tactic is to swap questions with statements**, loud questions that are *not* directed at you, or blame shifting.

For example:

- ❓ "**The key has disappeared**" (statement) as a covert request for help to find the key
- ❓ "**You cleaned up and now my key is gone**" (blame-shifting). So not only they get your help without asking, but they even blame you for the issue
- ❓ **I'm thinking of investing in ads these days** (loud thinking) to covertly get you to share your experience running ads

If you help them, they will never say "thanks".

Another manipulative tactic is to share a meaningless trope in the presence of an expert to indirectly get the expert's opinion.

For example, on our forum, they may have said:

- ⍰ "***You never outshine the master**, that's why when my boss made a mistake on the presentation, I didn't correct it. Feel free to share your thoughts*".

Then, they hope, I will feel compelled to correct the generalization and offer expert advice.

4. Misleading The Competition (Competitors Manipulation™)

> Tactics aimed at weakening rivals by misleading, restraining, or misdirecting them—such as giving sub-par advice, virtue-signaling to promote cooperation while secretly defecting, or spreading false information about one's true actions, goals, or results.

Never trust a manipulator to tell you what they truly value, what truly works best, and what they're truly pursuing.

Instead, they will share falsehoods to get you off track.

For example, they may say:

- "***Real men drink***" <— To convince other men to indulge, and lose health and productivity
- ***"If I could go back in time, I'd pursue my mission and ignore distraction from women"*** <— To convince other men to never date or learn dating, so they never enter the competition
- ***"I don't really care about job promotions here, it's not a great environment. I'm thinking of switching careers"*** <— To mislead colleagues into believing there is little competition and the environment isn't worth it

In all these cases, the manipulator lowers the competition against him.
He hides his true goals, motives and behaviors to seem less competitive, devalues the object he desires, and misleads others into giving up the race.

5. Isolating the Victim

Manipulators may provoke the victim's family into hostility towards him. He'd then use the opportunity to escalate and force his partner to "choose him" and cut contact

Isolation is a common manipulation tactic in relationships because isolation disempowers the victim and facilitates control.

Isolation Tactics

There are countless tactics manipulators deploy to isolate their victims.

Bel did a fantastic job with a growing compendium of isolation techniques here.

Some of the main ones include:

1. **Manipulative "us bubbles"**. Framing the couple as the only safe and sacred "unit"
   Examples:
   - *It's us against the world*
   - *You and I forever baby, nobody else*
   - *We cannot trust anyone, but we have each other*
2. **Behaving oddly or abusively in the victim's social circle**. That way, the victim will avoid his social circle out of embarrassment and shame
3. **Making up enemies and encouraging "enemies making"**. A manipulation tactic you also see from politicians and cult leaders. The more enemies, the more the victim's dependence on the manipulator.
   Competitive and disagreeable people make for perfect targets
4. **Setting up the victim in difficult situations with others**.
   For example, the manipulator may press his partner to borrow money from family and friends. He may then try to make it difficult for the victim to repay. And he will criticize the lenders for being so "greedy"
5. **Devalue the victim within her social circle**. A good manipulator avoids direct criticism. Instead, he may "hint" the partner was unsupportive during his time of need ("*yeah, I cut my expenses, but not everyone is willing to sacrifice so… Ramen for me tonight guys*")

6. **Triangulations with the victim's social circle**. For example, the manipulator may flirt with a friend of the victim, or make the victim resent her friend with unflattering comparisons
   - Exaggerated "love" for the victim's social circle. It works especially well with jealous or insecure victims
7. **Reframe isolation as "strength**". High power manipulators use their emotional leverage to frame strong people as 'not needing others'. Victims who crave gaining the respect of the manipulator will adapt
8. **Monopolizing the victim's time** disguised as love. Only later, when the manipulator has (emotional) power, it will turn nasty

Manipulator vs Non-Manipulator Approach

Mind the difference:

- **Well-meaning partners want you to have great relationships** and be well-connected with other high-quality people.
- **Manipulators want you isolated**. They want you to have broken relationships or, better yet, no relationship at all

For example, a woman I was seeing had a strong temper. She one day said mean things to her sister. And I told her:

> **Non-manipulator**: Look, you're an expat here. Your family is abroad. The only family you have here is your sister. I'd rather you have a great relationship with her so that you can take care of each other

Make friends, not enemies principle.

A manipulator instead would have told her she was right, the sister terrible, and encouraged her to escalate further, or cut contact.

Note: The non-manipulator is ultimately higher value.
The non-manipulator sub-communicates that he doesn't need a woman to be dependent on him. I didn't want her to depend on me because it would just be an added responsibility that I didn't want. Plus, I trusted myself that I'd always be a top priority for her.
See more in this video.

6. Astroturfing to Manipulate Opinions

The Routledge Handbook on persuasion shares an example of public opinion manipulation tactic.

Read these organizations' names:

- "Citizens for the Environment"
- "National Wetlands Coalition"
- "Greening Earth Society"

Sound environment-friendly enough?

Well, they're all ANTI-environment think tanks, chosen on purpose to manipulate public opinion (Bricker, 2014). This practice of posing as a non-profit group to exploit others has been called astroturfing or astroturf activism (Durkee, 2017).

7. Playing on Insecurities (Ego Scalping™)

> Deliberately highlighting and expanding a target's insecurities or playing up one's own or others' comparative superiority around the targets' insecurities to induce self-consciousness and lower self-esteem.

This manipulative tactic is part of "value scalping" because you come to believe you're lower value.
In the worst cases, victims may feel they're worthless. And **victims who feel worthless are *trapped* in abusive relationships** because that's what they think they deserve.

Read more on this dynamic here:

- **Dating low self-esteem women**, it digs deeper on the dynamics

Some insecurities are easy to guess because they're shared along gender lines.
Women tend to be insecure about looks, weight, inclusion, kindness, etc. etc.
Men tend to be insecure about masculinity, "being an alpha", or competence.

⍰ Relationship Example

> **Him**: (grabs her calves) chub chub
> **Her**: (starts getting self-conscious about "not being thin enough" for him)

8. Teaching Others (Teacher Frames™)

> Making a show of teaching others to appear higher status, more authoritative, intelligent, or knowledgeable, while framing the target as lower status, lower authority, or less intelligent

Teaching is a power move to gain power at your detriment.

Teachers gain higher status, authority, and attention. And you lose power as the 'pupil'.

An example of manipulative teacher frames:

> **Saltbae**: (talks to people like he's in charge and explaining the world to them. As a consequence, they become lower value "students" who must learn from him)

Gurus of all stripes also teach to fabricate authority and sell various knowledge products.

Infantilizing

The manipulator infantilizes -or babies- the victim to make him feel inferior and dependent.

When effective, babying makes the victim feel low IQ, immature, and dependent.
The manipulator, as the only adult, also becomes the leader of the relationship.

9. Trust Scalping™: Start Cooperative, Turn Exploitative

> Starting with strategic cooperation, verbal cooperation-signaling, or kindness to boost social capital and lower the target's defenses, only to exploit that trust and defect later

Manipulators start with an inviting facade to attract you make you drop your guard, only to take advantage of your trust once you trust them.

That facade can be kindness, cooperation, or a display of virtue.

This pattern has been observed in research on narcissism.
A study on a commons dilemma showed that **exploitative individuals cooperated early in the task but turned**

more selfish over time, consuming more of the shared resources.
The researchers interpret this as a possible "bait-and-switch" strategy: gaining trust initially, then defecting once the partner is easier to exploit.

10. Flattery, Reframing, Etc.

We shared more advanced and less understood manipulative tactics.

However, the "basics" of manipulative tactics are still valid.
Some of the most common and "basic" manipulative tactics include:

- **Lying**: "*I never said that, you're imagining things*", part of gaslighting
- **Flattery**: "*There is a reason why you're the best at this*"
  - Positive triangulations: "*He's good, but let's face it, you're at another level*"
- **Minimizing**: "*Yeah, sure, I may have gone over budget, but I'm focusing on the ultimate goal. A few thousand are peanuts when we turn profitable and we're both millionaires*"
  - Dismissiveness: "*Ah come on, you're even considering that a problem*"

Hiding meanness behind "honesty" is a common manipulation tactic, potentially part of a gaslighting pattern

This is the rule of thumb:

Any red flag of poor character is also a red flag of manipulation.
Although they're two different constructs, manipulation is inherently associated with poorer characters. And the opposite, talking straight, is associated with high-quality characters.

A good example of a manipulative character showing many red flags:

> **Him**: and a lot of the skills is when they catch you (proceeds to gaslight her into dropping her complaints about infidelity and maker her feel like she's the one)

Again, we see here how dominance and high power can facilitate manipulation.

Learn More

Power is the best antidote against manipulation:

- **Empowered men do not need sneaky tactics**: they have the strength to speak up, so they are more direct and assertive, and less manipulative
- **Empowered men can spot and handle manipulators**, both fundamental skills to succeed in life

We help men empower themselves in Power University

Sales Psychology by Nick Kolenda: Summary & Review

Lucio Buffalmano · 29 October 2023 · Archived copy · Original

Sales Psychology is a 4-part online course on the psychology of effective sales in which Nick Kolenda, the author, teaches how to communicate your product in a way that (a) feels easy and natural, and (b) influences the prospect to buy.

Bullet Summary

- **Part 1**: Sales Material
- **Part 2**: Lead Generation
- **Part 3**: Closing a Sale
- **Part 4**: Bonuses

Full Summary

About The Creator:
Nick Kolenda has been researching behavioral science for the past decade. He's known for explaining complex ideas in a clear and lighthearted style. He's also the author of *Methods of Persuasion*.

Part 1: Sales Material

#1: Sales Page Layout

- "Help your visitors imagine buying your product or service (e.g. place the final destination in the background, place the purchase button on top of something so that it is / appears closer to the user, etc.)
- "Give visitors as much information as is necessary—no less, no more (e.g. hide secondary details in expandable mediums—like toggles, etc.)."

#2: Pricing (On the Sales Page's Layout)

- "Enhance the mental stimulation of clicking the purchase button (e.g. place a positive statement—such as Instant Access—near the button, etc.)."
- "Distinguish the purchase button from nearby elements, especially prices (e.g. add an arrow or spacing, use different colors, etc.)."
- "Place a numerically larger number to the left of the price."
- "Indicate when the price will increase."

#3: **Benefits**

- "Every product has a hierarchy of benefits. Start your sales copy at the top of the hierarchy, and then move downward."

E.g.

You may notice here that the bottom of the hierarchy lists the features of this example product (a camera).

Many sales resources out there recommend avoiding mentioning any product features because the customer doesn't come for the features, they come for how the features will solve their problem (i.e. the *benefits* of the product's features).

So, it's widely recommended that anyone looking to persuade a prospect should stay away from using features as a persuasion tool.

Yet, Kolenda says that there are exceptions to that general rule and, based on certain studies, features can be quite persuasive in moving the customer closer to buying.

#4: **Your Sales Copy**

- "Keep minimal copy on the surface of a page, yet detailed copy below the surface."
- "Start with a relatable scenario that seems unique. This copy will activate an existing memory in the customer's brain. Then you can mold this imagery to include the desired action."

#5: **Your Sales Videos**

- "Design a thumbnail that (a) seems effortful and (b) captures the key identifiers of your product or service."
- "Replace broad generalizations with concrete examples."

E.g.

> **Broad**: How can you improve your website?
>
> **Concrete**: How should you display prices? Which images should you show? What should you write on sales

> pages?

- “Suggest an alternative to ‘not buying’ so that you dilute this imagery (e.g. ‘If you’re not sure whether you’re ready to hop into XYZ Course today, you can check out our other related content on our blog.’).”
- “Show the desired motor behavior (e.g. clicking the purchase button)”
- “If you sell educational products, teach something in your sales materials.”
- “Blur a later portion of preview videos.”

#6: **Social Proof**

- “You only need social proof when decisions are emotional or risky. Otherwise, customers might perceive the decision to be larger.”
- “Testimonials should (1) Come from sources who are similar to target buyers, (2) repeat the words that are occurring in the minds of buyers, (3) seem authentic and outside the control of marketers.”
- “Replicate testimonials in a design program to enhance the visual quality.”

Part 2: Lead Generation

Here is Kolenda’s five-step process for generating leads.

Step #1: **Isolate a Market**

“Compile prospects that match relevant traits you’re looking for in a client (e.g., revenue, traffic, interest).”

Step #2: **Find Value**

“Find something that could help each prospect — it should be simple, personalized, and immediate. Ideally, this idea should help your full list of prospects (e.g. review the webpages on their website and make notes of tweaks / changes / adjustments they could make to boost sales, conversions, etc.).”

Step #3: **Deliver (Some of) the Value You Found**

1. “Find somebody relevant on LinkedIn who works for the organization.”
2. “Send a short email delivering some of the value and offering to deliver the rest if they reply that they’re interested.”

Step #4: **Pitch and Close**

1. “Set up a call to deliver more value.”
2. “Give them two more ideas.”
3. “Offer a small project to deliver more value.”

Step #5: **Deliver and Seed**

“While delivering the small project, position this work as the completed first step of a larger project.”

The example that Kolenda provides is if you own a yogurt shop. And, you distribute coupon punch cards that gets punched each time a returning customer comes back for more yogurt. With enough hole punches and they get a free yogurt.

When the customer has bought their first yogurt and receives their first coupon punch card, don’t hand them a blank card. Position the yogurt they just bought as the completed first step of a larger project (the goal of that free yogurt). Hand them a coupon punch card that already has two return visits punched out.

That way, they’ll feel more motivated to “finish what they started” by finishing the rest of the coupon card’s punch

slots with more return visits (see "drive their momentum").

Part 3: Closing A Sale

#1: Sales Calls

1. "Sales calls are 80% asking questions 20% pitching."
2. "Immerse prospects into a hypothetical narrative. Describe their exact experience as a customer or clientKolenda says that a powerful way to persuade the prospect is to make them imagine hiring you. And, you can do that by immersing your prospects into a hypothetical narrative (e.g. show the deliverables: "This is the weekly report you'll get from us," show example scenarios: "Here's a typical email that our team might send you," show physical locations: "Here's the studio where you'll meet our production team," etc.).
3. "Determine the first step that a prospect would take as a client (e.g. schedule a kickoff call). Then complete this step during the call."

#2: Questions

- Be aware and prepared that, "Many businesses should [and will likely] ask questions in these 8 categories: Revenue, Users, Product, Website, Goals, Current Process, Company, Project."

#3: Objections

- Kolenda recommends, "Resolve objections *before* they manifest [by paraphrasing relevant answers that you extracted during the call]." (e.g. In the beginning of the sales call ask, "How much are you doing in annual revenue?" That way, if it's a good sized amount, you can remove the objection, "We don't have the budget.")
- "Before asking for the sale, preemptively address each possible objection."

#4: Sales Proposals – Part 1

- "Design a minimal sales proposal that still looks beautiful."
- "Label the proposal the name of your service (instead of 'Sales Proposal')."
- "Group your logo and the prospect's logo in the footer. This visual partnership will strengthen the mental imagery for a conceptual partnership."

#5: Sales Proposals – Part 2

- "Describe their problem based on information that you gathered during the call. Then describe how your product can fix that problem."
- "Add an inexpensive item at the top of your list of deliverables. It will help the prospect imagine starting this project."
- "Avoid round prices (which can seem arbitrarily determined)."
- "Be careful when listing names of clients. Only show clients that are similar to the target business."
- "Show the next step. Display a previous step that has already been completed (e.g., 'Read Proposal')."
- "After sending the proposal, follow up every week with value."

Cons

- **Some of the information didn't convince me**

Kolenda teaches a few tactics that he admits himself are quite contrarian, such as putting your prices in red. Or, that when doing lead generation, after sending one email, you shouldn't follow up again.

When providing the reasons behind his teachings, some of those reasons didn't convince me.

- **Provides disconnected information**

Kolenda has written other books. And, I was still expecting the information in *Methods of Persuasion* to be well referenced throughout this course.

So, I was surprised to find that its teachings were only ever mentioned here and there on topics he may have covered in those other two books (big enough persuasion topics such as cognitive dissonance).

- **Sometimes seems to make the "fancy logo / business card" mistake**

At one point, when doing a teardown of his own sales page for one of his courses, Kolenda started to talk about how he might replace the arrow that points to his "Start Course" button with one that has a hand drawn design because, "…A hand drawn arrow might activate muscles in the user's hand and, with those muscles activated, users might be able to imagine themselves clicking that [Start Course] button."

A good tip. But, compared to the importance of good copywriting and positioning oneself as an authority in their space, I couldn't see how this minor change could warrant the investment of my time to learn about.

I'd rather focus on the 20% of efforts that will produce 80% of my results. And, I don't think a hand drawn arrow is significant enough to fit into that 20%.

- **Contained less content than I was hoping for and sometimes felt time-wasting**

With a steady focus, I finished this course in roughly a day and a half. Compare that to a Masterclass course which took me nearly a month, or my Yale college course which took me 2-3.

That's not to say quantity is always better. Certainly, quality over quantity is a great general rule to follow and live by.

That's to say that I was hoping for more than a day and a half's worth of high-quality content.

And, since what I came for was practical strategies and scripts that I could learn and run with, sometimes I felt Kolenda went too deep into the psychology research of "why this is what it is".

- **No sales scripts for sales calls and only one lead generation strategy**

His sales page for this course says, "Exact words to say in your emails and phone calls."

There was one strategy that he shared for handling objections. That lesson came with a couple of PDFs that include questions to ask in the sales process and common objections.

But, as far as an A-Z sales script, you won't find one in here yet.

And, that was disappointing for me because Ramit Sethi provides one in a course of his that isn't even a sales course (see "Earnable").

His sales page for this course also says, "How to find relevant prospects," which is lead generation. Unfortunately, he only shares one strategy and that approach may not work for you depending on your target market / ICP (ideal customer profile).

Pros

- **All of his notes, all done for you**

Makes reviewing the material SO much easier.

If you value your time, this will be a pro that you'll appreciate the heck out of.

- **He's always updating his courses**

When I first tried to get a look at this course, it was closed while he was updating it along with a few others.

And, he'll be raising the price as he continues to raise the value of this course.

- **Bonuses are robust, bountiful, and top notch**

Kolenda even includes a Mystery Bonus that many would be both surprised and *very* excited to receive—especially if they're fans of Kolenda's work (I'm not going to spoil it, but if you're thinking it's a free copy of all of his books, a meet and greet, or something like that, it's even better :).

- **Shares his love for psychology**

I love that, especially when Kolenda showed his face on screen, you could see him oozing with excitement to share what he knows about the inner workings of the human mind.

It made me feel more like taking a deeper interest in more than the persuasion strategy aspects of the course, but the psychology references as well.

Review

Ali originally wanted to give this course either a 7/10 or a 7.5/10 rating.

But, thinking back on it again, he said he'd bump it up to an 8/10.

Ali says he was looking for more in terms of sales scripts. But the surrounding content was so impactful when we applied it to the Power University sales page that he thinks it's earned that extra star.

Note:
Lucio adds that we didn't measure the results of the updated page.
So albeit it the edits all sounded good, we do not have empirical data to say "yes, it improved our conversions".

Exec Summary

- **“Game” social skills**. Gam in dating is an extension of general social skills and social awareness
- **Money, muscles, and game** are the 3 main levers of improving dating results and frame is the glue
- **Become an alpha male** to hold the higher power frame and succeed at dating

FULL SUMMARY

About the Author:
Rollo Tomassi identifies as a “Red Pill author” and is a popular voice in the manosphere.
This is the 5th installment of Rollo Tomassi’s “*The Rational Male*” series.
His first, more basic and most popular one is “*The Rational Male*”. Then he published “*Preventive Medicine*“, “*Positive Masculinity*“, and a book on religion that we skipped.

See our in depth-analysis of Tomassi:

> Rollo Tomassi: Red Pill Guru, Or Misogynistic Bias?

Game Is Social Skills

Says Rollo:

> Game is applied social skills, which are sorely lacking in men today.

And a little later:

> Guys who understand Game (should) also understand social dynamics – and that understanding includes a finely tuned grasp of situational awareness.

We generally agree with that.

Game Is Essential to Life

Rollo Tomassi starts quoting Pook:

> “The fulfillment of your sexuality is nothing less than your battle for existence.”

And that means that learning game at the least at the level of finding a woman to mate with, is essential to a man’s existence.

Game Has Gotten Harder With Globalization

That dating has "gotten harder" is a common take these days.

Rollo also says the same:

> With every new social media/dating app, the rapidly globalizing sexual marketplace has become more cutthroat and openly mercenary.

Note: Half-empty, pessimistic take. We only partially agree with this.
I get where Rollo's coming from.

In a way, it's not fully wrong.

But still…

Why would you think that playing on a global field disempower you?

It's such a pessimistic, low-value mindset, unresourceful-man mindset.

Even if you stay put, it's not as bad as some make it sound.
Ultimately, if women want a relationship or family, and many eventually want that, guys on a screen aren't gonna cut it.

And guys on another continent aren't real-life competition either unless they move, or she moves.
And that's still an exception.

So, albeit it's partially true that game may be *a bit* harder for some because of globalization, **dating hasn't gotten much harder for men who think in "in-real-life" terms** -and we do recommend you think in real-life terms-.

Also, what's more challenging for most guys also means that it's much easier for top guys -including more *resourceful* guys who find ways-.

Women Are More Demanding Than Ever

Says Rollo:

> *In the era of social media, women's hubris is at epic proportions, with overinflated egos that match their expectations of **High-Value Men**. It's a Darwinian struggle of supply and demand, where average men are invisible men, and Players reign supreme.*

This is also partially true.

Attractive women's egos may be more stoked.
But it may as well be the opposite for the less attractive ones. They may only have more opportunity to have their ego "put back in place" by the more attractive IG Photoshoppers.

It's also true that today's world tends to reward players more, I couldn't agree more.

On the other hand, even there, never forget that if a woman wants a long-term partnership and/or family, she'll have to eventually either find a player who "stops" -that also happens-, or find a non-player.

Self-Development Is Based On The 3 Pillars of "6s" For Men

Rollo says that male self-development centers around money, muscles, and game.

And "frame" unifies the 3 of them:

> Everyone wants to define Game subjectively. No one understands that it's the last part of the **Holy Trifecta of Masculine Self-Improvement: Make money, Make muscles, Learn Game** (**Frame** is the combined balance of all three)**.**

Note:
I think this far-fetched approach mixes things up and confuses things.
Frame control is part of game / social skills.
Rollo intends frame in a larger sense, as a personal attitude and a set behaviors. But then it's not just frame anymore, but part of social power -on the outside- and personal empowerment -on the inside, or what used to be called "inner game"-.

For Self-Development You Must Let Go of Ego-Invested Falsehoods

Says Rollo:

> In his book, Mastery, author Robert Greene stated that the hardest part of mastering a new skill isn't access to information or training. Nor is it the 10,000 hours of practice everyone thinks is required to master a new skill – it's letting go of old, ego-invested beliefs about oneself.

He's describing here the supposed process of going from "socially conditioned" to "red pill awareness".

Since we find some issues within the red pill, our corresponding awareness here is "power awareness".

> Power Intelligence (PI): What Is it, How to Increase It

The Best Natural Players Are Dark-Triad Men

Says Rollo:

> Most successful players are just natural narcissists. Self-absorbed egoism carries them, but they have no fundamental understanding of why what they're doing works.

It's the same for women, suggests Rollo:

> The top percentage earning women on OnlyFans is an example of this elite player. This Machiavellian spirit is perfectly acceptable for women. It's even encouraged as a form of empowerment.

Sandra L. Brown, author of *Women Who Love Psychopaths* says something similar.

Note: we partially agree, but not fully.
Ultimately, **women want men who are more than they are, including -and especially- higher power**.
Dark triad men tend to be higher power and more socially dominant and successful than most other men. And that's largely why they're successful. However, a man can be high power while also adding value to the world and/or without being a full-blown dark triad.
We actually teach men how to become that in Power University.

Dark Triad Men Are The Only True Players

Says Rollo:

> Much of what women find arousing in men is linked to Dark Triad personality traits – the polar opposite of

> Beta security traits. Sometimes Red Pill awareness and Game savvy get called "an education in psychopathy."

But then he corrects that same take and adds:

> Having written about Red Pill awareness for as long as I have, I know there's more to this. To the uninitiated, I understand why it looks like psychopathy. There is a necessary self-importance a good Player must adopt to be effective. That looks like psychopathy to a culture raised to put women above all other considerations, including self.

Which is similar to what we also say here.
Also read:

- How to be better than an as*hole

> How to Be A Good Asshole (5 Easy Steps)

Comfort & Rapport Are Anti-Seductive

Says Rollo:

> comfort, familiarity, and rapport are post-orgasm feelings. They are anti-seductive. Sexual tension, urgency, uncertainty (dread), competition anxiety, lust, and raw arousal are testosterone-based (…)

The text loses the plot when it links it to testosterone.
And in truth, rapport can also lead to seduction.
But he's right that those other elements are, in a way, more "potent" and can lead to stronger orgasms.

Stay Away From "Mainstream Red Pill"

Says Rollo:

> They take the primary elements of Red Pill praxeology, the Game tenets that promote an acceptable "masculine responsibility," and blend them into a program to Build a better Beta. And there are a lot of niché market coaches, moralist Trads, and "Red Pill Women" unwittingly or deliberately promoting a female-approved version of "Game."

Interesting take.
I do indeed agree that there are more gurus and marketers that take some elements of red pill or power dynamics, and incorporate it into a more palatable, more PC, "mainstream narrative".

Who are some of these gurus?
Well, Rollo mentions a few:

> Life coaches like **Matthew Hussey, The Roommates, and Mark Manson** have even turned this Better Beta male education into a marketing niché for an ever-growing number of post-30's women frustrated by the "lack of good men" in today's dating pool (AKA: "Where have all the good men gone!?").

And:

> Listen to any mainstream celebrity like **Steve Harvey, Terry Crews, or Dr. Phil**, and you'll hear them repeat the same masculine responsibility mantra women believe men aren't living up to. They promote the ideal of masculinity as a dutiful Beta with just enough of a side of Alpha to be useful to the women they're accountable to.
> (…)
> That's the better Beta they hope to create. One who will "Man Up" and is the Alpha (as situations and its use would warrant), but who's ultimately Beta enough to be subservient to the feminine imperative.

LOL, these are the passages that make me think "yeah, there are some genius takes in Rollo".
Agree with that (albeit Steve Harvey's book is actually good).

Also see our reviews:

- Models by Mark Manson
- Act Like A Lady, Think Like A Man by Steve Harvey
- Get The Guy by Matthew Hussey

Women Naturally Shit Test

Says Rollo:

> Women's shit testing is a psychologically evolved, hard-wired sexual-selection mechanism. Women will shit test men as autonomously and subconsciously as men will stare at a woman's big boobs.
> (…)
> Men want to verify sexual availability to the same degree that women want to verify a masculine man's dominance/confidence.

Later on, Rollo mixes sexual shit-tests with "one-ups" and status competitions.
And, in a way, they're similar.
Still, it's different dynamics and call for different approaches and solutions.

Overall though, it was a good analysis -except for the old "agree and amplify" approach Rollo recommends-.

Learn more:

- **How to pass shit tests**

> Shit Tests Power Dynamics: 8 Ways To Win the Game

Married Men Can't Be Alphas

Says Rollo:

> "She married you because you are a provider, not because she was attracted to you. **She'll never be as attracted to you as she was to her previous Alpha Fucks.**"
>
> That's a tough pill to swallow my brother. The issue being, of course, what to do with yourself and with her, after you discover you got gamed into that kind of marriage.
>
> Here's a tougher pill to swallow; she'll never be as attracted to you as she is of the guy's she sees as Alpha after you're married too.

I think there is some hard-hitting truth to this indeed.
But, again, there are more nuances, and this applies mostly to men who lose power during the committed relationships -which, granted, it's most of them-.

However, things change for high-power men who stay high power.
Then, it's more the other way around: the man got married because he chose to be a provider.
How freely he chooses it is also crucial to how much power and respect he will maintain in that relationship.

And then Rollo asks the readers:

> Does an Alpha inherently drop in status for a woman once he's committed to monogamy with her?

And yes, he often does.
Read more here:

- **Stages of power in dating**

> Relationship Power Dynamics 101

When it comes to maintaining that power, we crafted Power University to provide that final solution.

Men Shaming Muscular Men Is Intersexual Competition

Says Rollo:

> Imagine for a moment that you're a peacock. You have a magnificent spread of feathers, more glorious than any of your other peacock friends. But your lesser-endowed peacock bros tell you, "Dude, why do you feel the need to spread your tail? What are you compensating for? Do you think that makes you more of a real peacock? Stop trying to be something you're not! Real peacocks don't spread and shake for peahens; they have more integrity than that.

Interesting take, and at least in part true.
Still a case can be made that albeit not all, *some* men pursuing big muscles may indeed be compensating.
I've seen more than my fair share of them.

But I like this take and we've long shared similar takes here -wouldn't even exclude people who say that today "got inspired" through TPM-.
As a matter of fact, we even said the same for some forms of feminism. **Feminism is a big manipulative move from women against other women** -far more than it is against men-.
For example, women telling other women that they "don't need a man" and "should be strong" are handicapping other women's ability to find and keep a great guy.

See more here about both sides of the coin (intragender and intergender manipulation):

> **Lucio**: women tell other women not to care about their physique is a dating strategy to handicap the competition and take pressure off of themselves

She Should Make You Happy

Rollo says that most beta men make it their mission to make a woman happy.

However, women are much happier with alpha males when it's the other way around.

Such as, *her* making *him* happy.

And he's generally right.
He says:

> The Frame and emotional investment naturally flow from her desire to make you happy. Making you happy should be intrinsically rewarding to her. Thus, she is happy in making him happy.

Yep.
Rollo, as it's often the case, simplifies while at the same time confusing this dynamic by boiling it down to "alpha VS beta". And doesn't add enough details for people to understand.
We help men walk that full path in Power University.

Game Maxims

Some of these maxims are really good (and we skip the ones that aren't):

- Game Maxim #1: Women want to get with a man who other women want to bang and other men want to be
- Game Maxim #2: Treat her like a celebrity, and she will treat you like a fan.
- Game Maxim #3: Women would rather be objectified than idealized.
- Game Maxim #4: Women say they want honesty, but they never want full disclosure.
- Game Maxim #5: Demonstrate, do not explicate.
- Game Maxim #6: Women would rather play the Game than be told that they are playing the Game.
- Game Maxim #8: Flip the script. Be the chased, not the chaser.
- Game Maxim #9: Women don't want a man to cheat, but they love a man who could cheat.
- Game Maxim #11: Be the AMOG without being an AMOG
- Game Maxim #12: Alpha must be your predominant character; There is no Beta with a side of Alpha
- Game Maxim #13: Some girls will reject your Direct Game, who would have eventually fucked you had you gone indirect.
- Game Maxim #17: Every man loves a slut; he just wants her to be his slut.
- Game Maxim #18: A woman cannot fall in love with a man until she feels jealousy for him.
- Game Maxim #20: Game will always involve some form of risk.
- Game Maxim #26: The best form of Peacocking is having a good physique."
- Game Maxim #28: The cues that fire a woman's sexual response are the same cues that conflict with her security needs.
- Game Maxim #31: A woman's love, attention, loyalty, empathy, desire, etc., are all byproducts of a man who unapologetically takes care of himself, his needs, his desires first.
- Game Maxim #33: Women would rather share a successful Alpha with other women than be saddled with a faithful Beta.
- Game Maxim #48: At some point, you have to BE the Game.
- Game Maxim #49: Red Pill men don't find themselves; they build themselves.

MORE WISDOM

Be Dominant Without Being Overbearing

Says Rollo:

> knowing that women require dominance from men is in no way a license to be overbearing, oppressive, or abusive. Leverage that knowledge to your best effect and know that you have a responsibility to judge where the line between dominance and abuse is. It's the difference between a woman trusting you and fearing you.

Yep, well said.

This is basically our "mix power with warmth" principle.
And it's probably one of the good additions that Rollo learned from TPM since I've never seen or heard him say anything even remotely close to this before.

Also see:

- **The dominance that gets you girls**

> This Is How Dominance Gets You Sexual Succes

Be Confident – High Confidence Always Beats Low Confidence

Says Rollo:

> Self-confidence, warranted or not, prompts a submission response in women. Irrational self-confidence will always get you more pussy than rational defeatism.

Yep, great quote.

CRITICISM

Let us provide our usual caveat here:

We dig deeper with our criticism when we see at least some genius and potential.

We wouldn't waste this much time on mediocre books with no genius insight, or on totally mediocre authors.

So keep that in mind as we heavily dissect this book, just like we did for every other Rollo's book:

1. Married Man, Dateless For 30 Years, Teaches Game?

Hmm…

Anything that could suggest "missing expertise" there?

Yeah, apologies to the author for putting that so bluntly. It's a bit nasty indeed, and Rollo has enough great takes to deserve better.
Still… experience and expertise are important for anyone who self-appoints as a teacher.

Or, at least, *updated* expertise.

Because, sure, women are largely the same.
Rollo says that, and I largely agree.

But still, conventions and changing culture do impact dating at least a little bit.
Plus, you may forget a lot with time.

Plus x2, between us… It doesn't feel to me like Rollo could draw from extensive and useful experience.

Rollo says he's had 40+ lays in his "rockstar days".

You judge if that allows him to talk authoritatively on the topic.

Besides simple numbers, *diversity* in that experience is also important.

A high diversity would be a man, who pulled from nightgame, daygame, cold approaches, social circles, introductions, online apps… And done that multiple times, in many locations across the world, without over-relying on any of that "rockstar status" Rollo says he did.
Yeah, OK, I was covert-advertising by describing myself.

But it's still true.
And the point stands.

1.2. No First-Hand Experience With *Completed* Seductions

Another major issue for me in the book is this:

None of Rollo's real-life data refers to any actual seduction that went the full distance -to sex-.

He admits so himself:

> "I suppose that's what happens when you spend the last 30 years writing blog posts about social trends, without going on a single date"

LOL, exactly :).

1.3. Reactions Over Results

When you have little experience taking women to bed, you end up with this problem:

You rely on *reactions* instead of results to judge what works.

For example:

> **She knew I was married and wouldn't take her bait**, but for the sake of the experiment, it was game-on from that point. Tawny already knew who I was, so that angle was dead. I got good eye contact and caught her looking twice before introducing myself formally. I then went "Dean Martin mature-guy" on her and added Command Presence to my "knowing all about her." **She ate it up**. **I had to dial it back at this point** – she was talking about us sticking around after the party, and **I wasn't going to consolidate on anything**. Command Presence **was working almost too well**.

Man, those are all *reactions*.

And hello, isn't it common knowledge that many women flirt with the high-status guy because he is high-status (and not for his supposed game)?
And don't you know that many women flirt with the high-status man just for self-advancement reasons, without necessarily wanting to have sex with him?

In another example, there's a young girl at Subway.
In Rollo's words, she was gaming him. And looked at him for just that second longer before her "beta" came to get her (which seems to me to be a pretty dominant move, actually).

Again here, you can't be sure of anything until you make a move.
For all we know, she may have been using Rollo only to make her boyfriend jealous.

I used to know a dating coach.
He was also married.
And he bragged nonstop of all the girls he could have taken -if he wasn't married-.

You know what that felt like to me?
Like a good excuse to brag about imaginary what-ifs.

1.4. ... But My Respect To Those Who Respect Vows

That being said, the "con" is not against Rollo's decision.

As a matter of fact, I respect people who take their "side of the vows" seriously.
So props to the author for that.

2. Rollo's Approach Is Typical "Boyfriend Type", NOT Player

Rollo Tomassi is a typical boyfriend/provider type, the opposite of a player/lover.

As an example, see how a provider thinks, VS a player:

> **Rollo**: If she wants to party with her girlfriends, you lock her out of the house
> **Lucio**: Yeah, that MAY be OK in some situations. But it's typical boyfriend response to mate-guard. Players wouldn't care

There are countless more examples.
But, ultimately, a good chunk of Red Pill and Rollo Tomassi specifically are relationship-type men who are at odds with women's increasing sexual freedom.

3. Outdated, Red Pill Philosophy Over Advanced Game

Says Rollo Tomassi:

> *These principles of Game have been compiled from the likes of Roissy, Roosh, Mystery, myself, and various other Game luminaries from over 20 years of writing in the Red Pill and seduction communities.*

Everyone can decide for themselves who are the best teachers for them.

If you're a beginner, anyone can most likely help.

Here at TPM, we didn't find Roosh V and his super-indirect approach to be the best source.

Mystery was naturally power-aware as many dark-triad men tend to be, but it was still a bit rudimentary. And mostly for night game.

And as for Rollo, up to you whether he's a luminary of game or not.

And says later Rollo when asked about the best resources to learn game:

> *I usually refer them to the books of my seduction community friends like Troy Francis, James Tusk, Nick Krauser, and Modern Life Dating.*
> *The **Mystery Method has been the gold standard** for learning Game since 2002. **The foundational principles in the Mystery Method are still the core of what every Game instructor has used for two decades now**.*

Not really man.

Game has advanced and has come a long, long way since Mystery.

Just for one, Mystery said that "women need at least 8h with a guy to sleep with him". And "any time you sleep with a woman after less than 8h, it's a fluke".
Any successful seducer who's had women attracted to him and learned how to move fast knows what a load of BS

that is.

And I'd even say: game has improved *a ton* since Mystery.
This isn't a dig on Mystery: he was just an easy guy and the discipline has advanced ever since.
That's all.

But that Rollo doesn't realize that, well… Doesn't say much good does it.

3.2. Geeky-Sounding Old-School PUA Lingo

OK, this may not be a major criticism.

But I still found it an important symptom of general development failure.

And that sign is that *The Player's Handbook* feels like a time machine into the early PUA days.

For example:

> This dynamic is also the root of AMOGing and running boyfriend destroyer Game (…)
> He AMOGs you effortlessly because he's not trying to

"He AMOGs you effortlessly" :S

4. Some Weak "Strategies" & Approaches

Says Rollo:

> View the war as a whole (strategy) rather than individual battles (tactics). **The hot 22-year-old you who rejects your approach (tactics) becomes the semi-attractive 32-year-old who's glad she bumped into you again a decade later (strategy).**

What's that supposed to mean?

That instead of improving one's approaches, he should wait for her to grow old? Or he should aim at 30+ women because they're easier?

Yeah, that may be a better strategy for *some* men.
But definitely not for all since at least some men can get women at the age they prefer.

4.2. Sometimes Lost My Respect When Sounding Very Low Power

Says Rollo about the time he refused to purchase a bed and escalated into a fight with his wife:

> At that point, the dynamic of the conversation shifted. The conversation wasn't about a bed; it was now about Frame. **Average men will laugh and think, "Yeah, she must've held out on you after that!" and for about a week, they'd be right**, but I learned a valuable Game Maxim in this:
> (…)

LOL.
You judge how that comes across to you.

But I'll tell you what some men will think:

It's a weak mindset to look at her as the dispenser of sex as punishments or rewards.
Yeah, you got your cookie-intercourse after *she* made you wait for a week -what a win!-.

5. Hopelessly Low Authority

Unluckily, this is more than just about this book, and may concern the author in general.

The mix of manosphere and PUA jargon mixed with the sometimes out of place scholarly lingo doesn't help, but it runs deeper to include logic and critical thinking.

Some examples:

- **Scientific posturing**: *Many of my readers presume I write from a position of Alpha authority. I have jokingly referred to myself as a "Lesser Alpha" – at least according to Roissy's 2009 metrics.* **<— ⍰⍰♂ Lucio's note:** Roissy didn't have any metrics. It was a meaningless online quiz, and so are its results.
- **Incorrect language**: *Obvious alpha superiority combined with marginal humility makes for an irresistible AMOG to women.* **<— ⍰⍰♂ Lucio's note:** WTF? What does "marginal humility" mean? It feels like trying to sound deeper to inflate authority. But it has the opposite effect.
- **Lacking clarity of definitions:** *Alpha must be your predominant character; There is no Beta with a side of Alpha* **<— ⍰⍰♂ Lucio's note:** I get the gist -the alpha is high power and confident-. But you must define those terms.
- **Simp-ish**: *One of these was a fantastic blonde named Tawny. Maybe 25, an unbelievably hot 8.5, had a boyfriend who wasn't present..* **<— ⍰⍰♂ Lucio's note:** This just sounds low power from a 50-something. Plus, if she's an 8.5, that's the rating, it's not 'unbelievably hot'
- **Childish**: *I never fully appreciated the potential of Amused Mastery until I had a daughter. I found myself using it with her (…)* ***this added to my Daddy-Alpha credentials*** **<— ⍰⍰♂ Lucio's note:** Amused mastery added to your Daddy-Alpha credentials… With your daughter? I don't know how to define that without putting the author down, but it sounds really stupid⍰
- **Incoherent**: *I studied the unspoken communications between men and women in settings (Sexual Zones) where they're primed to apply their interpersonal skills (or lack of). However, it wasn't until I started contrasting what I saw with what I understood about behavioral psychology, Evo-psych, and the sexual strategies men and women evolved for.* **<— ⍰⍰♂ Lucio's note:** !?
- **Pop-psychology presented as certitudes**: (talking about *The 48 Laws of Power*) *Whether that self-image is presently a reality or not is immaterial; the idea is a sound one. It's a law of power* **<— ⍰⍰♂ Lucio's note:** The book is an interesting list of maxims and are not actual laws of power.

These are just some examples.
But on average, the more you develop your critical thinking skills, the more you spot nonsense.

6. Some Misogyny Still Left

There is less misogyny in this book compared to other Rollo's work.

But you can still see it, if you can read between the lines.

For example, Rollo implies women/society manipulate public opinion to "wash their hands" of men's suicides.
He says:

> Gynocentric society dismisses male suicide rates by attributing it to men's baseless self-pity or their inability to live up to being "real men" according to antiquated toxic masculinity standards. This is rationale reinforces popular gender memes and, at the same time, absolves women of the guilt associated with men's sacrifices.

And:

> Chivalry and traditional masculinity are fine when they serve the Feminine Imperative, but if a man gets killed or kills himself as part of that, well, that's on him then. There will always be a need to absolve women's guilt,

> or complicity, in men's deaths.

As it's sometimes the case for Rollo's analyses of social dynamics, they seem far-fatched to me.
And, possibly, they're all convoluted arguments to justify a deep-seated, potentially hidden dislike of women.

Also, generally speaking, you can't sit with these people, laughing at blatant gaslighting, and pretend to be unbiased:

7. Castles In The Skies: Rollo Keeps Leaving Us Scratching Our Heads

Says Rollo:

> *What formalized Game represents to the Feminine Imperative is a threat to women's sexual selection sovereignty. Bear this in mind; depending on how skilled a Player you are, Game removes a degree of women's sexual selectivity. Thus, it challenges the control of Hypergamy. And even the hint of losing that control is tantamount to rape in this era.*

Every time I read Rollo Tomassi I feel the same:

There is some real genius and some true great insights.

But with enough exaggerations, black-and-white thinking, and imprecise language you're still left scratching your head thinking "what the f*ck is he talking about".

Another example:

> However, when it comes to women's intuition, we exaggerate their importance beyond all measure. We prioritize women's hindbrain perception and feeling above all else. We could never downplay the importance of feminine intuition without risking a lot of backlashes. Whereas men's instincts are signs of "insecurity," women's instincts (feminine intuition) are raised to a magical level. Thus, when a woman says a guy "creeps her out" or is acting "creepy," we misinterpret what her hindbrain is telling her and us.

What?
Man, that sounds like a lot of mental masturbation to me -and not well-developed enough to be coherent-.

8. "Men And Women Are Better Together"... Says Who?

Rollo says that "he always said that men and women are better together".

Some may feel it's a defensive cover against accusations of bias and possible misogyny.

But whether he truly means or not, it's a weak take anyway.
It's up to each man to decide whether he's better off paired up with a woman, or single.

And I find that i**t's emotionally weak for a man to think he's better off with a woman.**
Strong and high-value men feel they're adding value to a woman by deciding to be with her.

These are the men women want, not the ones who think they're better off with her.

9. Sometimes Imprecise, Incorrect, Or Plain Wrong

Including:

9.2. Exaggerations Lead To Wrong Analyses

Exaggerations seem to be common with the author.

And *The Players' Handbook* is no exception.

For example:

> *Anything less than 100% complete honesty, genuine quality, and authentic value in a man is considered manipulative game playing. "**He's a Player!**" is the epithet reserved for a man savvy enough to figure out women's nature and leverage it to his best advantage.*

I've never heard anyone being called a player as an offensive epithet.

And I've never heard someone being called a player simply because of a lie.

In truth, a player can also be quite honest and straight.

And a sexless and low-value man can be as manipulative as they come.

These exaggerations also ultimately lead to wrong conclusions.
For example:

9.3. Exaggerates The Case Against "Social Repression of Men"

Says Rollo:

> *(…) Game removes a degree of women's sexual selectivity. Thus, it challenges the control of Hypergamy. And even the hint of losing that control is tantamount to rape in this era.*

Even the *hint* is tantamount to rape?
Come on, man, don't exaggerate.

9.4. Confuses intelligence for book smarts without real-life skills

Rollo says there is an intelligence paradox where too smart men do poorly with women.

I don't fully agree with that.
That's only true for smart men without social skills.

But smart men can also be socially smart and skilled.
And the IQ certainly helps to learn faster if they pursue self-development.

Also read what our forum says about it:

- **The myth of smart men/poor daters**

And check out:

- **Mating intelligence**

> Mating Intelligence: Effective Dating for Smart People

9.5. Incorrectly Implies Attractive Women Always Have Upper Hand

Says Rollo:

> At the peak of her agency, a stunning woman holds power over men, but that power is perishable (…)

That is true for most men.

But Rollo makes no exception for higher caliber men.
And top 0.1% men have more power than any woman.

You only need to think of men like Justin Bieber, Leonardo di Caprio or Cristian Ronaldo to realize this is the case. Hordes of women *chase* these men, and there are *many* very attractive women among them.
Also see:

- Sexual marketplace dynamics

> The Sexual Marketplace: Overview of Intersexual Dynamics

9.6. Incorrectly States Men & Women's Mating Strategies Are Adversarial

Says Rollo:

> However, Ethical Game died because, by its very nature, men's and women's mating strategies are adversarial.

That's only partially true.

A man's *ideal* mating strategy *when it comes to maximizing offspring* may be to have multiple women (albeit some men still prefer a committed relationship).
However, ideals have limited impact for most men and women.

Thus, for most men, sticking to a woman helps ensure the survival and well-being of fewer offspring, but of higher quality.

CONS

- **More philosophy of game than actual game**

Rollo Tomassi loves to talk about higher-level principles.

Sometimes those are good, sometimes great… And sometimes we find them with some holes here and there.

But if the aim of the book was to be a "players' handbook", then, in my opinion, all those off-topics should have been cut.

After another lengthy detour, Rollo must have realized it was getting too much and says so himself:

> Sorry if that's a bit philosophical for a book on Game.

Yeah, it's OK… But would have been better for the book if you just cut it out and turn it into a post.

- **Some Minor Bragging**

Says Rollo:

> Red Pill awareness is part of me now. It's become my nature and personality. I default to Game. It's not even Game to me anymore; it's just who I am – mainly when I'm "***on***" and I need to interact in a social context. **I am the Game**. It flows so naturally for me I sometimes have to make an effort to dial it back when I see indicators of interest, or I get persistent Kino from the women working for me.

Yeah, the game that hasn't been on a date and taken a new lover in 30 years :).
Didn't wanna be mean with that, but unjustified bragging calls its power moves.

PROS

Rollo Has Matured & Took Steps Forward

As far as I can recall Rollo's past books, this may be the most advanced

Also, the level of his analysis in terms of logic, nuances and accuracy seems to have gone up.

Just to be sure, there are still generalizations and black-and-white thinking, but… Less.

And there are more positive examples of more lucid, more realistic analysis.

For example, while in the past he seemed to imply that "(every) man would go with just about anyone", now he says that men do also have "floors" -something he may have finally acknowledged reading here, BTW-.

These are major steps forward.

Rollo Has Been Reading TPM...

… Which he'd never admit because you never mention your best resource (and critic).

But I'm pretty sure he has.

For example, some the criticism he addressed was straight from here -something I had raised, and never heard anywhere else-.

In this book for example he says that the red pill is not "feminism for men", something I said here:

And indeed, the title there was wrong.
It's not the red pill that's feminism for men. It's Rollo's incomplete socio-analyses that are feminism for men.

The various shades of grey he adds for "alphas" and "betas" also seem like a page taken straight from our article and video on different types of alpha males.

But that's good.
I'm glad about it.
It's helped him add more nuances and take his work and approach to a higher level.

- Alpha Fucks Beta Bucks

REVIEW

The Players Handbook is typical Rollo Tomassi's work. It mixes some hard-hitting concepts, some genius insights, and some equally important limitations.

So every time I review some of Rollo's work I prepare for a lot of work and a lengthy review.
First, because he's an influential figure in the male self-development world, so it matters to us and our audience.
And even more important: because we want to keep our reviews top-notch and best in class. So it takes time to cover all the good ideas, while also correcting the various imprecisions.

Rollo's work has the potential to be up there with the best of the best.
But the over-generalizations, the pie-in-the-sky over-theorizing as well as the author's personal biases prevent it from entering the Olympus of our recommended resources.

But if you know how to distinguish the wheat from the chaff, then there are some great insights.

Check out the **best books** to read or **get this book on Amazon**.

How to Manipulate a Manipulator: 6 Strategies to Control The Interaction, & Regain Power

Lucio Buffalmano · 12 November 2023 · Archived copy · Original

Manipulators use lies, tricks, and hidden games to control others.
But what if you could turn the tables?

This guide shows you **how to outsmart a manipulator**—using their own tactics to protect yourself, keep the upper hand, and even come out ahead.

Below, you'll find **practical strategies with real examples**, from staying superficially friendly to fading out without creating enemies. By the end, you'll know exactly how to outsmart even the sneakiest manipulator.

> Quote: The Power Moves is simply the best resource on how to (…) protect yourself and advance in life. (…) **TPM taught me how to interact with these bad people from a position of power**, which is **infinitely more useful, because you simply can't always distance yourself**.

True, the 'no contact' approach with manipulators, unfortunately, isn't always possible.
So let's learn some extra strategies:

Contents

- 1. Be Superficially Friendly, But Distant ('TPM's Arms Length Approach™')
  - ▯ Example: Failing This Principle
- 2. Focus On WIIFM & Protect Your Downsides
- 3. Fade Away Gradually (TPM Strategic Fade)
  - ▯ How to Fade A Manipulator
  - Low-Investment, Strategic Meets
- 4. Appear Unthreatening To Lower His Guard
- ⚠ 5. Evening Things Out

- ⍰ Example: Stranding the Manipulator
- 6. Plant Bait & Let Them Come to You

1. Be Superficially Friendly, But Distant ('TPM's Arms Length Approach™')

A strategic interaction style for managing unavoidable relationships with manipulative individuals through superficial friendliness, emotional detachment, exposure minimization, and value-bounded engagement.

Sport the most genuine smile you can. Even if you know he's a sneaky manipulator, imagine meeting an actual friend. All the while, keep an emotional wall up, and maintain as much distance as possible

The arm's length approach is for when you:

- Cannot disengage from the manipulator (yet)
- Can gain transacting with the manipulator

The arms' length approach allows you to maintain functional or value-positive relationships, without ever getting too close. (Yes, win-win is possible with manipulators. Not ideal, but possible).

Why would you want to use this approach?

First of all, because sometimes you *must* keep a functional relationship.
Second, because it can be good for you.
And finally, because **many manipulators turn into enemies when they sense your disdain**.

Many manipulators are high in dark triad traits, are power hungry, or have narcissistic traits. Some have paranoid tendencies and see attacks and enemies where there aren't any (Peterson shares an example here).

This is why the "superficially friendly" approach is effective.
You have nothing to gain by getting dragged into pointless wars. As we say here: make friends, not enemies.
Manipulators' wars and vendettas are just another manipulator's trap for good men.

How to Avoid Pointless And Costly Wars

To avoid unnecessary wars and enemies:

1. **Be *superficially* nice**, smiling and saying “so good to see you”
2. **Avoid 1:1s**
3. **Share low-value information, keep high-value information**: keep your conversations superficial. Pretend you share some information, but withhold all empowering insights
4. **Keep it professional** whenever it’s work-related. Professionality is an in-built cover for coldness and disgust
5. **Use them as needed, but no more** to minimize the time together
6. **Avoid assertiveness and straight talk**. Sneaky manipulators and vulnerable narcissists resent assertive men because they lack the confidence to talk straight

Here’s an example of how it looks in real life:

1. Manipulator disparages a third party to recruit you in his war
2. You “yeah yeah” it, but without much involvement. You may even validate him. But with a general, philosopher-like frame that “it’s normal that people in your situation can dislike each other”
3. Manipulator presses you to take his side, or attack his enemy
4. You say “yeah, look, I like you man, and I even see your point. The type of guy I am, I do my job and get out”

See?

You refuse to be dragged down.
But all the while, you empathize and even compliment him and make him feel good.
But generally avoid spending 1:1 time with him.
And they’ll go on to use and manipulate some poor naive folks. (Send them here if they’re good people ⍰⍰).

⍰ Example: Failing This Principle

To ensure our community remained uplifting and manipulation-free, it happened that we had to ban someone. Now, guess what happened right after we banned a user? Suddenly fake negative reviews about TPM started appearing online:

The user wrote several fake reviews on several different websites and then interlinked them to make it appear as if they were from different people.

This is ego-injury revenge behavior, and exactly with certain personalities, strategy beats assertiveness.

2. Focus On WIIFM & Protect Your Downsides

Both defense and offense are important to effectively handle a manipulator

Let's refresh the basics:

Inveterate manipulators are negative people.
And to effectively deal with negative people, you must be strategic.

The high-level principle that guides you to outsmart a manipulator is to maintain 'informational asymmetry'.
Such as:

1. **Make sure you can't lose more than you're willing to risk** (defend/CYA). Place your "stop losses" to ensure you never lose more than you're willing and able to lose
2. **Focus on "what's in it for you" -and on taking-** (attack/take). Stop losses in place, you can then focus on the upsides
3. **Keep your calculative approach private**. Effective calculativeness is a crucial life skill, but it's best kept private

Let's refresh some more basics:

Manipulators are takers.
They take at many different levels. Including power, status, (emotional) well-being, and/or money.

So to successfully outsmart a manipulator, ensure he won't be able to take from you.
Then, focus on what you can *gain*.

Even though spending time with them is often a loss, **you'll always win as long as you can gain more than you**

lose.
That is the whole point of this approach and mindset.
Minimize and control your losses, while you focus on the bottom line.

Stop the manipulator at a safe (emotional) distance, while still gaining with a strategic and hyper-calculative approach

2.2. Dip In, Duck Out

1. **Engage as little as possible** ("dip in") while still maintaining a semblance of "all is good". Limiting the engagement at all levels naturally protects your downsides
2. **End the engagement ASAP** ("duck out"). As soon as you get what you want. Or as soon as the manipulator has no more value to provide

Even when you learn to handle manipulators with Power University, you *still* want to engage them as little as possible.

Why?

Because **manipulators pollute your emotional life and drag you down with their sneaky and dishonorable ways**.

So get what you wanted, and move on to better people.

⍰ Example

We cannot share publicly some of our real-life examples publicly.
See Power University for a good example.

3. Fade Away Gradually (TPM Strategic Fade)

A controlled, low-conflict exit strategy for disengaging from manipulative and vindictive individuals. It involves gradual reduction of availability and investment while maintaining superficial friendliness and plausible excuses —

ensuring the manipulator never feels openly rejected or disrespected, which minimizes retaliation risk (vendettas, smears, fake reviews)

This allows you to preserve power, minimize losses, and avoid creating enemies, without evening burning bridges.

Fading is a technique of gradual distancing while, on the surface, looking friendly and even *willing* to meet. It allows you to disappear without creating bad blood

Don't ghost a manipulator that was close or trying to get close. And there is a psychological reason for this. Many manipulators have fragile egos, sometimes linked to fragile narcissism.
And you're better off avoiding unnecessary enemies.

That means that **any advice to "be honest" with a manipulator is terrible advice**.

Vanessa van Edwards for example suggested to outright tell "frenemies" that you're not friends anymore.
That may be OK with honorable people, but it's *terrible* advice for manipulators.

Instead, **you never let a manipulator know that you don't want to engage with them**.
Many manipulators are power-sensitive and even power-aware. Deep down, they know what your refusal means: that you don't think they're good enough for you -which is true indeed-.

You also don't ghost manipulators.
You don't ghost because manipulators see your non-reply as a personal slight. They will think that they're not even good enough for your reply -which may be true indeed-.

So what do you, then?

You *gradually* fade.

⍰ How to Fade A Manipulator

This is a walk-through example of how to fade:

> **Manipulator**: Myyy man what's up! Need to talk to you, let's meetup

> (2 days later)<—— fading begins
>
> **You**: Myyy man! <——strategic matching
> Sorry the delay mate, been way too swamped with work (need to find a way to quit soon LOL) <——Strategic vibing and bonding. Make the manipulator feel that you're all good with him)
> Yeah sure we can catch up one of these days
>
> **Manipulator**: yeah, when are you free?
> (1 day later) <—- No overdoing the delay, no repeat pattern. Keep the delay constant but random
>
> **You**: hmmm tough to say, probably will have to fly next week for work. Maybe let's resync when I'm back (<—- you do NOT say when you're back. Strategic move to maintain distance and control. If *he* wants to chase to, make *him* chase and invest for it)

See?
The whole game is to say "yes, sure", but to never take any actual step to meet.

If he insists:

> **Manipulator**: I can swing by your house
>
> (1.5 days later at 1am) <—— sub-communication is "I've had a super busy day". You also force him to break the chase and give you more time since he'll likely reply the day after
>
> **You**: LOL, my wife's always there :S, I'd rather take some break from her TBH <—— another strategic move to come across as "bro talk".

Use valid-sounding reasons for full cover.
Family, work, girlfriend, or dates are great covers because they're all high-priority for most men.

Low-Investment, Strategic Meets

The frame is that you're too busy, but still trying to do him a *favor* by looking for a quick 10 minutes to still meet him (that must be done at your convenience)

Note that you may also meet with the manipulator during fading.

BUT…

You do it strategically.
"Because you're so swamped", your offers of times and locations are convenient to you, and inconvenient to the manipulator.

For example, close to your place, with some other friends, or for a quick coffee.
Since manipulators often want the upper power hand, they will not want to meet at your convenience very often :).

Nastier move: making the experience unpleasant to even things out.
A more vengeful Machiavellian may make the experience more unpleasant. If the manipulator likes to drink, he makes up a reason why he can't drink for a while. If he's a teetotaler, he may order a bottle of wine and then "joke" that he's letting him drink all alone.

That way, you naturally drift apart. And you still keep it "warm enough" in case you run into each other. Or in case you need something from him, or from his social circle.

4. Appear Unthreatening To Lower His Guard

Robert Greene wrote in *The 48 Laws of Power*:

> Play A Sucker to Catch a Sucker: Seem Dumber Than Your Mark

And it's a great point.
Some techniques to manipulate a manipulator work better when he believes you're dumber than he is.

However, "dumb" has important downsides.:

4.2. Better Yet: High-Power, Just Not A Threat to *Him*

Dumb is low power.

And manipulators see dumb people as perfect marks.

Non-threatening instead is about not being a threat to *him*. (Not if he behaves, at least. The potential for harm works well to keep manipulators in check).

If you're smart but non-threatening to him, he will keep his guard low, *while also respecting you*.

"Unthreatening" may include:

- **Respecting the manipulator**. Or *seeming* like you respect him
- **Disinterested in his goals**. So you naturally can co-exist or even ally, without stepping on each others' toes. Of course, in truth, you may want the same things. He just doesn't need to know ;)

And smart but naive includes:

- **Power blind**, unable to see power moves and manipulation
- **Easygoing with everyone** -the extravert, happy-go-round type getting along with anyone. Or always thinking others have good intentions (Lex Friedman seems a good example)

However, we're the first here to say this:

When it comes to life effectiveness, naive really overlaps with dumb, *no matter the IQ points*.
And if you must deploy this strategy, it's best to appear naive to the manipulator only, but not to everyone else.

Also see:

- **Naive self-help**

> Naive Self-Help: 10 Popular But False Self-Help Myths

⚠ 5. Evening Things Out

This strategy is about restoring self-respect, but must be executed properly to be effective and calibrated to the offense to remain an honorable man.

There are a million ways a Machiavellian player would go about, and it all depends on the situation.

But here's an imaginary example:

⍰ Example: Stranding the Manipulator

If you must breakup with an aggressive manipulator, one may as well regain some self-respect

An alumnus of Power University shared a story about a woman who took advantage of his generosity.
Let's call her Judy.
Judy used to ask our alumnus to send her a chauffeured car. But she was ungrateful for it. She became more demanding, and even started disparaging our alumnus behind his back.

So this is what a Machiavellian player may do:

> **Judy**: send car
> **Mach**: sure, coming
> (don't send anything)

When she calls again, the Mach player may go:

> **Judy**: (calls)
> (don't pick up)
> **Judy**: still waiting, the driver is late
> **Mach**: busy now, call in 5 I'll check

With every new Judy's reach out, the Machiavellian player evens things out.

The day after, he may get in touch again and say there was some issue, like "He punctured a tire and couldn't fix it".

That way, the manipulator may finally realize the value of your favor when it's taken away.
That will make her *re-value* you, and maybe even fear losing you (her old golden-egged goose).
She will *chase* you.

Now, the Mach player FADES.
The more she chases, the more he evens things out and regains respect.

At that point, he may move on for good or tell her why it was for necessary.
For example:

> **Mach**: I heard some cr@p around

Let her guess, let her invest, let her explain.
As per Social ROI principle, the more the manipulator invests, the more you regain power.

6. Plant Bait & Let Them Come to You

Some time ago I attended a social media event looking for YouTube editors.

Everyone was supposed to make a quick self-intro -and everyone did it while remaining seated-.
When it was my turn, I stood up and walked in front to make sure everyone could see me.

Always stand up and face the crowd when introducing yourself. Wonderful opportunity to grab attention and immediately gain high-status. Frame it as making it easier for others to see you and hear you (also true), and you get the high-power/high-warmth perfect combo

That was strategic to make a more memorable impression and have leads come to me.

Which… They did.

Little later the organizer also came to me.
He says I shouldn't leave because "he wanted to talk to me".

Why not talk to me right away, then?
And as time goes by, he *doesn't* come back to talk to me.

I already smell power move.

I want to leave, and the perfect time is when I spot him near the exit.
Why?
Think strategically.
It's the perfect time because I can talk to him, without having to *walk* to him. I get to see if he's got anything good for me, without expending effort. And the sub-communication of me "just seeing you by accident" is: "I wasn't waiting (because I don't need you)".

Makes sense?

Anyway, he tells me that he can help with marketing.
He name-drops the guys from "The Natural Lifestyle", and tries to impress with some big numbers.

I start smelling BS.

But I tell him "Sure, let's get in touch".

I never get in touch, though.
So if he comes to me, the sub-communication is that *he* needs me.
And if he doesn't, great, no time wasted on my side.

P.S.:
Why do I consider him a likely manipulator?
Think about it. And you'll start becoming a more manipulation-resistant strategic thinker.

Maps of Meaning: Summary & Review

Lucio Buffalmano · 20 November 2023 · Archived copy · Original

In *Maps of Meaning* psychology professor Jordan Peterson shares his views on how people construct meaning. The book explores some themes the author appears very fond of such as religion, myths, the subconscious, and totalitarianism.

Contents

- About The Author
- Summary
- Review

About The Author

Jordan Peterson is a Canadian clinical psychologist.
In the last years, he has become an influential opinion leader, loved by many, and probably not-so-loved by as many others.
He also wrote the more popular *12 Rules for Life*, then followed by *Beyond Order* where he sneaked in some extra "rules for life".

Update:
Jordan Peterson has gone through some changes since we published this review. Including becoming more argumentative, extreme, and, how to say it… Less of a role model.
That's our personal opinion, of course.
See for yourself here:

Summary

- The fundamental prepositions of fascism and communism were rational, logical, comprehensible… And terribly wrong (I agree, see: "fascism, Mussolini, Trump, and personal power")
- Human nature is not infinitely malleable (also read "The Blank Slate")
- Like animals, we focus on fundamentals first. Top questions: will this new thing eat me, can I eat it, can I mate with it
- Attempts to increase the state at the cost of the individual are counterproductive
  - Note: I agree from an ideological point of view, but then again, it depends on what level of state presence we are talking about
- Patriotism or any similar attempt at strengthening group identity must necessarily be bounded by a supreme regard to the creative capacity of the individual
  - Note: I totally agree here and take it one step further, too: not just the "creative capacity" of the individual, but the sacred independence of the individual from any organized groups
- A stranger is threatening because he is outside of the social hierarchy and can behave unexpectedly, with unpredictable consequences for the social hierarchy
  - Note: Very true. And the more defensive, fearful and hierarchy-conscious people are, the more they will fear and oppose strangers
- A dominance hierarchy is a social arrangement that determines access to desired commodities
- The fascist sacrifices his soul to the group, which promises to protect him from everything unknown
  - Great take
- The fascist believes the world should always be ordered. This increase in conformity alleviates anxiety
- The decadent refuses to join the social world because he is too undisciplined to serve as an apprentice
- The hero rejects identification with the group as the ideal of life, following instead his conscience and his heart. He refuses to sacrifice meaning for security
  - These three descriptions were the deepest in the whole book. Following the "hero's path" is one of the tenets of this website.
- Hitler and Stalin were humans. Our tyrannical tendencies and moral decadence are limited by our domains of personal power. We satisfy ourselves with riding roughshod with those nearer to us and then congratulate ourselves on our moral virtues
  - Going to the philosophical core of the link between power and personal values
- We use aggression and strength to bend others to our will, and lacking strength we use sickness and empathy to deceive our way to dominance
- In times of uncertainty, the call for returns to the glorious past always arise.

And finally, I want to leave you with this question:

> Granted the opportunity, how many of us would not be Hitler?

Personally, I think most of us would not be Hitler.
But probably more people than you think, would.

Review

Some people readers may find many sparkles of genius in *Maps of Meaning*.

Just too bad for how they are framed and presented, in a sea of religious references and rhetoric for rhetoric's sake.

If *Maps of Meaning* had cut its rhetorical complexity and expanded on some of its core insights, it could have been a monumental work.
Potentially, even a TPM recommended resource.

But as it is, I cannot give a full thumbs up to *Maps of Meaning*.

Main issue is that, in plain words, many passages leave you scratching your head.
And thinking “what the f*ck is the author talking about?”.

It’s called “maps of meaning”, as if it wanted to show a route or path for people to walk.
But it certainly doesn’t seem to want to make that path *simple*.
It’s philosophical and inscrutable. It builds upon itself and it feels like it’s going nowhere.
It’s not easy to understand, it’s not much grounded in science and it’s of little application to real life.

For me, it also had little application to a more general and abstract theory of life and it didn’t help me to construct meaning for the world.

I really like Jordan Peterson.
Edit: liked maybe more suited today.
But *Maps of Meaning* failed to deliver for me.

Decoding The Gurus: How to Spot Gurus & Manipulators

Lucio Buffalmano · 27 November 2023 · Archived copy · Original

In the *Decoding the Gurus* podcast, hosts Matthew Browne and Chris Kavanagh discuss and analyze various gurus' psychology, and (dubious) claims and theories.

Their work is relevant to The Power Moves, where we also study power, influence, and manipulation, including people who *inflate* authority as a tool for power or self-enhancement.
This is why we review Decoding the Gurus: it's an effective resource to develop your ability to spot manipulation, assess character, and reject disempowering 'guru-pupil frames'.

Let's dive in.

About the Author
Matthew Browne is a researcher and Professor of Psychology at Central Queensland University.
Chris Kavanagh is a cognitive anthropologist, Ph.D. at the University of Oxford, and researcher and Associate Professor at Rikkyo University in Japan.

Why We Recommend It

We appreciate and recommend the *Decoding The Gurus* podcast it develops **power intelligence**, including:

1. **Character assessment**, including charismatic men who may hide second motives
2. **Positive cynicism**, spotting manipulation and manipulation techniques
3. **Critical thinking skills**. The hosts generally apply good logic, scientific process principles, and valuable "sensible man takes"

… And, to have a good laugh while doing all of the above.

Favorite Episodes

Some that stood out to me:

1. Understanding Gurus With The "Gurometer"

In this episode, the hosts review 10 salient traits that characterize "guru personalities", including several examples as case studies.

The "gurometer" is a checklist that, although not strictly scientific, provides a valuable framework for character assessment.

This is the episode, and the 'follow up 'The Science and the Art of Gurometry' is equally valuable.

2. Conspiracy Busting: Brett Weinstein & Heather Heying

The hosts often discussed conspiracy theories and "conspiratorial personalities". It's hard to pick one, but I found the episode on Brett Weinstein and Heather Heying to display several representative patterns and dynamics of conspiracy-personalities.

I'd even go as far as to say that it's a **great espisode for anyone with a tendency to over-believe conspiracy theories and conspiracy gurus.**

It will help listeners to recognize potentially biased and manipulative gurus who use conspiracy-mongering for their own power, influence, and gain.

Let's dig deeper very quickly:

The conspiracy guru strategy for power

This is the game of the conspiracy theorist:

The conspiracy theorist strategy is to undermine the power and influence of established institutions so that *he* can get some of that power and influence for himself.

The price, of course, is truth.
And… *You* pay a large portion of that price. But since you're part of society, we all pay some price when BS spreads.

3. Elon Musk: The Techno Shaman

Great critical take on Elon Musk, including:

- **Lies** and the fine line between optimism and self-serving, outright lies
- **Enemies-making** and framing as a target of conspiracies against him (ie.: liberals/woke who pull advertising from Twitter)

Musk & Trump Similarities

The hosts say that Trump and Musk share many similarities.

And only after they said so it also appeared immediately evident to me.

The impulsivity, the grandiosity, the huge plans that rarely come to fruition… The lies.
Yep.

Say the guys:

> The parallel with Trump is very strong.
> Both of them are endearing to a certain kind of audience (…) The cult of personality they've been able to build around themselves (…). The sort of immense loyalty (they could get).
> They both present themselves as saviors of humanity (…) Trump is a much more negative frame than Musk, but it's the same thing.
> And they're both self-aggrandizing (…)
> **I would characterize both as narcissistic**

Later they added that Twitter's moderation policy resembled Trump's propensity to use government agencies as his own personal fiefdom.
And neither of them sees any value in committees, systems, institutions, processes, etc.

Who finds Musk/Trump interesting

A very deep question:

WHO finds these characters most appealing is most telling, say the guys.

They say:

> when it's like a personal ubermensch like Trump or Musk the audience feels a personal connection.
> They (think they) know that their hearts ARE on the right place and they just want to make things better.
> And there's this extreme charity to them. Their conspiratorial thinking doesn't kick in. But when it is presented as "this is men in grey suits (…) working in some building (…) when one tries to set up a consistent system then the conspiratorial brain just goes wild

Gurometer

Definition:

> The gurometer is a checklist of traits that are significant to the "guru" construct, red flags of (poor) characters, and common among gurus.

And the authors use them to rate the various gurus.

Why it's a valid approach to assess trustworthiness

The gurometer is incredibly useful because:

The gurometer approach **leverages people's behavior, which is the most readily and abundantly available resource to assess a person's character.**
And character is foundational to assessing the credibility, authority, and trustworthiness of any source.

It's the same approach we encourage and advise here a TPM:

- **Skip digging into their references, look at their *character***

It "only" requires you to learn some psychology and grow some power awareness.

The opposite of a guru

An interesting question here arises for me:

If one scores low on the gurometer, then he may not be a guru.

But then, what is he?

The hosts mention "an actual expert".
And I agree.
I'd say that "not being a guru" also means being a:

- Scientist approach, subordinating oneself to *science*, to evidence, and new findings
  - Open to alternatives and open to being wrong, which many gurus only pay lip service to
- Critical thinker
  - Aware and open to considering one's biases (or at least open to recognizing and discussing one's biases)
- Principled man, as in having a conscience, morals, and ethics. Being a "honorable man" (or woman)
  - Respectful of the audience, including their ability to think for themselves and "power protecting" the audience. (Instead of pulling various power moves and treating them as disciples or pupils)

Gurometer Scale

Let's now introduce the gurometer.

The main entries are from Chris and Matt (the #10 probably Chris as he was adamant for the more conventional round number).
Some notes are mine to elaborate on the hosts' descriptions (my guru-ish streak demands to add my own take):

1. **Galaxy-brainness** (Breadth), the guru tries hard to pass for authority with high-IQ, expertise, and depth of knowledge that others can't match
   - Polymath, experts at everything, hot takes, special wisdom
   - Performative unnecessary references to literature/complex theories/science
2. **Cultishness**: Unhealthy social dynamics, including creating In-group vs. Out-group
   - Flattery, some controlling, they're special
   - Super charitable to friends and allies, and this includes "nepotism" in my opinion. See Trump as an example
   - Personal rapport with followers
3. **Anti-establishment**, either because the "establishment" is corrupt, inept, or operating against the population -or at least, operating against the guru's followers (often linked with conspiracy theories). The establishment is also often a monolithic and uber-powerful monster that must be destroyed.
   - Cannot trust any authorities or mainstream media
   - Undermining all other sources of information
4. **Grievance Mongering**
   - Personal narratives of victimhood
   - Suppression of their ideas, which is also a convenient excuse of why they're not as successful as they should be :)
   - Inculcating grievance in their followers, which here at TPM we found very disempowering. And it's one of the main reasons we harp on against red pill gurus

5. **Narcissism / Self Aggrandising**. They say it's key to explaining gurus' behavior, goals, and psychology (and I agree)
6. **Cassandra Complex**
   - Warning of danger that others can't see
   - Making predictions and saying their prior predictions are always right
7. **Revolutionary Theories** (Content)
8. **Pseudo-profound Bullshit** (Form- Verbal agility)
   - Scientism
   - Unnecessary references to literature/complex theories/science
9. **Conspiracy Mongering**, but often hidden and covered. Thus the use of disclaimers and the preference to have their audience jump to the most extreme conclusions (instead of them doing so directly. Thus, I'd add "instigatory behavior" is another red flag)
   - Elaborate theories to explain mundane events
   - Secret coordination of powerful & malevolent groups and institutions
   - The world is targeting them and their friends
10. **Grifting** with followers' monetization, shilling supplements/dubious products, etc.

All entries are on a scale and there such a thing as "healthy balance".

For example, one can monetize the audience without being a grifter.
Or he may grieve that he's being suppressed and, in some (limited) cases, it may be true.

So to properly assess guru personalities there is no shortcut to developing one's own critical thinking. And, I would also add here, developing your power intelligence.

Suggestions to Improve The Gurometer

This is what TPM would suggest:

- **Change the scale from 0-5 to 0-10**. It's more intuitive and larger appeal
- **Change galaxy-brainess for "omni-sapient"** or something more intuitive. You want names to re-call already existing associations

Then:

1. Swap narcissism for dark triad

To include Machiavellianism and psychopathy.

Machiavellianism may offer better cover for some grifters and more marketer-type gurus, and better covers a strategic predisposition in social exchanges and "influencer strategies".

For example, Jordan Peterson for years passed for a balanced philosopher.
He said himself he was "very careful with his words". What that truly meant is that he'd dribble, reframe, and counter-attack on anything that would give away the ultra-conservative he actually was.

To me, that's Machiavellianism.

"Dark triad" also includes psychopathy, potentially covering types such as Alex Jones and Andrew Tate.

Sub-categories and/or traits to potentially include and look into here:

- Manipulative tendencies

- Misuse of science (part of manipulative tendencies). Including in the way they present, frame, dismiss or leverage studies based on the narrative they prefer
  - Mixing evidence, theories, and opinions. To me this is the biggest sin of “science popularizers”. They take 10% of (often misunderstood) evidence, then add their take on it, mix a host of dumb personal opinions, and frame it as “scientific” or “true”
- Character. Plain and simple. I know, I know, it’s not “scientific” and it’s in good part subjective. Also, only a good character can judge well and everyone says they’ve got a good character. But STILL, this is foundational to many guru types (see the last quote in the quotes section for a good example)

2. Add “power” -including “caring for power” and “seeking power”-

At the core, gurus are playing a game of power.

Power includes popularity, which is the currency for influence.
And influence is one of the gurus’ favorite forms of power.

How “hard” gurus seek popularity tells you a lot about their motives and psychology.

Sub-categories may include:

- **Power of conviction**

How confident and convinced they are of their own theories and knowledge, and how strongly they promote them and defend them.

10x the points if it’s opinions and theories that fall outside the guru’s area of expertise.

This also overlaps with that “dark triad charisma”.

P.S.:
The author here would score quite high there.

- **Power sensitivity**

In daily parlance, “thin-skin”.
Particularly thin skin towards criticism and perceived slights.

The hosts know this, and indeed mention that it’s telling that some gurus they cover react quite badly.

This may also go under “dark triad”, but I think a category for “power” helps to better understand the phenomenon.

- **Will to power**

A good red flag for this:

Quantity and intensity of attacks against institutions / other gurus / competition.

The dark triad guru can’t stand the competition for influence because he’d rather be the only shepherd (to lead the gullible sheep).

In that sense, it’s very telling that Elon Musk mocks Bill Gates and Zuckerberg. And that he mocked Bezos and his space exploration efforts.
Elon only wants humanity to be an interplanetary species if HE leads that charge.

- **Disempowering the audience**

Some gurus like Tate do it aggressively.

But most do it covertly.

Such as using covert teacher frames and treating the audience as disciples, followers, or “learners”.

In daily parlance, this would be “talking down” or “babying”.
In part, Weinstein’s saying that what he’s talking about is “very complicated” is talking down.

A teacher’s attitude attracts the right type of audience.
An audience that’s low confidence, low-power, or looking for leaders/father figures.
It’s an audience ripe and ready to “follow” (acritically), empower the guru, and feed his narcissistic ego.

In that sense, it’s very telling that Jordan Peterson started to more directly disempower his audience.

See his body language here, as an example:

Note:
The breadth of JP’s conviction increased over time.
Now he’s an expert on nutrition, global warming, international politics, and… Diagnosing other people’s narcissism :).

3. Add “networks” to look at who they get along with

That “to judge a character you must look at his friends” is an old pop-psychology trope.

But I’d be surprised if it isn’t also true -and, probably, there may be studies to show that-.

Hence, it may be useful to look at who the guru hangs out with, who he interviews (more frequently), and *who he gets along with best*.

BTW, it’s no coincidence that many of these podcasters and gurus interview each other -how was that one of the birds of a feather?-.

4. Add “Level of Harm”: The Bottom Line Indicator

This should be the “bottom line” assessment.

The question is:

- **How much value do they add or take from their followers, and from the world?**

If you’d ever consider giving different weights to categories, this one should count x2.

Different categories tend to score differently here.
Megalomaniac dark triads tend to be very harmful takers.
Grifters and marketers tend to be *financial* takers.
And “optimizers” do relatively little harm.

Great Moments & Quotes

Decoding The Gurus mixes great insights with a good time.

Some examples:

> **Brene Brown** (reads that popular quote): the man in the arena, face marred with blood…
> **Guys**: I don’t see any blood in her face

Great way to say that she’s overly dramatic, without saying so :)
See our take on vulnerability by the way.

Introducing Joe Rogan:

> **Chris**: One thing quite obvious about Joe is that he is a manly man. He is a bro if a bro ever existed. He's in the MMA, smoking cigars, while driving a tank. That's Joe
> **Matt**: He's a man's man's man

On Jocko Willink, author of *Extreme Ownership*. On Joe's podcast and why they picked the episode with the two of them:

> **Chris**: he's the guy that gets up at 4:00 am to do a thousand push-ups and bench press his family before you even had your toast, right? He's better than you.
> So if we're gonna get the full testosterone experience why not combine the two of them in one single episode

Speaking of which, here's our take on that type of "self-help":

Poking fun at Rogan's bias and uncritical thinking:

> **Chris**: I don't know if you've heard it but there's these concerns about voter ballot fraud (…). And this is a conspiracy theory of course there's no evidence of this. And Jocko and Joe being you know the good centrist researchers that they are I'm sure they will not fall for that
> (goes on to play a clip of Joe landing credibility to the stolen election conspiracy)

On Scott Adams:

> **Chris**: I'll issue a spoiler upfront. We looked at some people and some are particularly irritating to look at. JP series spring to mind (…) I think **it is some achievement that Scott Adams is by far the person I disliked the most** that we've covered and I'm really going to struggle to say anything about him, **because he's such an a**hole** (..) he's an a**hole

LOL.
Yep, a rather unpalatable mix of personal aggrandizement WHILE also being a Trump b*tch -worst of both worlds-. Plus sneakiness, and terrible content.
Win Bigly was one of the most irritating books I've read.

P.S.:
a good example that an entry for "character" in the gurometer may be helpful.

Criticism

The main thing I'd mention:

1. Slight left-leaning / blank slate / mainstream bias (without fully recognizing it?)

Chris and Matt are "reasonable men", their affiliations or ideologies are evident, but not extreme.

And they think critically.

That said, they are left-leaning. And although aware and open about it, I'm not sure how fully they appreciate the extent of the impact on their takes.

Not only politically, but in what Tooby and Cosmides called the "standard social science model".
Such as, over-weighing the role of culture and nurture over biology and "nature". Tooby and Cosmides (and others) say this approach is prevalent in academia, fitting the authors' background.

Here's why I sometimes felt the authors miss that bias:

1.2 Criticism of Harris Feels Left-Leaning

The hosts feel like Harris is closer to the right/libertarians/conspiracy theorists.

But in some passages, I felt Sam was more "super-partes" than the hosts.

For example, their respective analyses of immigration.
Including immigration risks, and politicians potentially afraid of opposing mass immigration for being labeled "racists" by the woke left.

1.3 Hosts rarely mention the biological aspects (standard social science model)

Example:

They skip biology to explain why they mostly cover (white) men.

There almost seems to be an unspoken assumption that genders *should* be both equally represented.

To me, it's shocking that two smart men, including a psychologist, wouldn't stress the gender biological differences.
Including that men may generally be more driven to acquire power and resources than women do.

1.4 Networking: they get along much better with more left-leaning folks

… Like Helen Lewis.

Admittedly, I don't know nearly enough to judge.
But she seemed to push a rather strong "patriarchy narrative".

Edit:
Listened to another episode with Lewis.
She pushed back on the biological explanation for male over-representation in the guru-world. She made a good point, but the hosts didn't even re-state the importance of biology.

2. Tendency to Default for "Supporting Mainstream" & Opposing "Alternatives"

For example:

2.2 Always on the side of governments during Covid pandemic

During the Covid pandemic the hosts:

- Criticized conspiracy theories (fair)
- Criticized anti-vaxxers (fair enough for many)
- Favored the government's responses

I felt at times they lost their good sensible approach.

Never once I've heard them say that yes, some governments may have gone too far.

Or mention that the opportunity for more power may cause power over-reaches.

Or simply noting that the opportunity to impose and dictate may be a motivator for some politicians.

They never say it may be fair for some people to want to socialize with others who also choose to do so.
And if that doesn't threaten everyone else, is it right to forbid it?

Those seem all "sensible man" questions to me.

2.3 Ridiculing “Pick-Up Artists” Approach to Dating As Useless

In one episode the authors laugh at NLP as a useless system for persuasion.

I’d partially agree with that.
But then they bundle it with “pick-up artistry”, implying it’s equally nonsense and useless for dating and attracting women.

If by “pick-up techniques” we mean all approaches to dating that some men learn in alternative education resources such this website, I disagree.

The fact that academia or “mainstream” don’t openly deal with dating strategies and techniques doesn’t mean that one can’t effectively improve their dating skills.

Dating is an important realm of social skills.
You can improve social skills like you can improve almost any other skill. And the same is true for its dating sub-category.

Gurus to Cover: Suggestions

More suggestions for the hosts to safely ignore :).

1. Health & Fitness Quacks

- **Joe Dispenza** and self-healing meditation
- **Wim Hof** and the cold exposure cure for all -he may be a good guy, but there can be “good gurus” of course-
- **“Dr” Gundry**: if you want to see the worst examples of “teacher frames”, look at this guy and his “I know better than you attitude”

2. Self-Help Gurus

For example:

- **Tony Robbins**
- **Tom Bilyeu**

2.2 Fanatical “Limit-Pushers” Zealots

- **David Goggins**, the guy who ran through broken bones while soiling himself is apparently an inspiration to follow

These gurus latch onto a male hook of “gaining your own respect”.
And fear of being ‘pussy-like’.

I know that because I have that same proclivity.

Lex also falls for this.
His routines of fasted training and mental “preparations” reflect this tendency.

2.3 Optimization-Porn Gurus

Attia and Andrew Huberman are both in this category.

Tim Ferriss may be another good guy to review.

> Biohacking Porn: Quit OCD, Embrace Life

3. Manosphere Gurus

Some names include:

- **Rollo Tomassi**, author of various half-good and helpful, half-lunatic and (covertly) misogynist takes and books in his *The Rational Male* series
- **Richard Cooper**, author of *The Unplugged Alpha* and a major monetizer of male discontent
- ~~**Andrew Tate**~~ actually, avoid just not to give it extra airtime

These gurus are big on power and "being alpha".
In part, it's the specular of feminism for men.
A conspiratorial view of women (/men) controlling society and oppressing their gender:

4. Marketers Gurus

Marketers seek guru-authority in a specific field to sell products.

Tai Lopez is an interesting case because he was one of the first crossovers from ads-fueled marketer to our next category, the influencers:

5. Influencers

Most gurus the guys cover seek fame with at least some skill, work output, or theory.

The influencers shortcut that game by "being famous for being famous".

Some influencers may not be typical gurus because have little ambition to flash out opinions.

However, some do develop some "systems of thought", theories, or tribes to better promote their products.

- **Liver King**: the "primals" who are on a carnivore diet
- **Alex Hormozi**. an interesting character between a marketer/influencer/capitalist businessman.
  I think he's a great guy, including a straight character. But I'd love to hear what the guys say.

6. Guru Enablers

Tom validates Sadhguru's approach of "listen to me, because I know better than you"

Enablers are the “gurus’ megaphones”.

Podcasters are after *views*, not truth.
And gurus are after the podcasters’ audience for a toxic win-win.

It’s folks such as:

- Jay Shetty
- Tom Bylieu
- Lewis Howes

Check their top videos, all interviews with the same gurus:

Their defense is “I ask questions”.

Chris Williamson said as much when it was on their show.
It’s challenging to be a successful podcaster, while also calling out potential BS.

Still, enablers can end up being megaphones and ‘super-spreaders’.

7. Swindlers Gurus

Swindlers are the ultimate “10/10 grifters”.

Some examples:

- **London Real**, can’t even bother to look up his name, a despicable character
- **Logan Paul** and his string of NFTs

At yet a higher level we have:

- **Jho Low**
- Sam Bankman Friedman

And then, partially, Elizabeth Holmes.

These are the guys Coffeezilla focuses more on.

8. The Ultimate Stretch Challenge: Academic Gurus

Here are some challenging ideas for the hosts:

- **Steven Pinker**: can you get that big and popular without being a guru?
  To me, he can come across quite power-seeking, and potentially narcissist-ish (see our *Enlightenment Now*'s book review)
- **Martin Seligman**: same as above. Our review shows some signs of power-seeking
- **Freud**: this would be super interesting. I get some major dark-triad vibes from this man. He may be the most "successful" pseudo-science guru of them all
- **Amy Cuddy, Angela Duckworth** and all the various researchers who pursued mainstream fame with dubious "science".
  IMaria Konnikova may be interesting, from this interview.
  Also see "why good scientists are boring & poor, and poor scientists are famous

> Why Good Scientists Are Boring & Poor Ones Are Famous

REVIEW

Decoding the Gurus fills a critical gap in mane's empowerment: not just what to think and how to behave to achieve goals, but who to trust.

That aligns directly with TPM's mission: building power-aware men who harder to manipulate, harder to mislead, and better at reading power dynamics.

I first stumbled upon them with their episode on Nassim Taleb, a guy whose work we praised here (see for example *Fooled by Randomness* and *The Black Swan*).
And their analysis was very critical, yet valid.

While there are plenty of 'guru-analyzers' already, including Coffeezilla and similar on YouTube, they tend to focus on more obvious swindlers or fraud cases.
Chris and Matt go a level beyond, reviewing gurus that are more refined, well-spoken, and… More difficult to spot, in many ways. And that aligns well with our readership of ambitious and smart men who benefit more from more advanced takes.

I'm thankful and grateful for Chris and Matt's work.

Content-Based Networking by James Carbary: Summary & Review

Lucio Buffalmano · 4 December 2023 · Archived copy · Original

Content-Based Networking is a four-part book that makes the case that networking events are prone to randomness and content-based networking allows you to take a more focused approach to connecting with anyone, at any time, and from anywhere in the world.

Contents

- Exec Summary
- FULL SUMMARY
  - The Foundation: Relationships Are Everything
  - Step 1: Goals
  - Step 2: People
  - Step 3: Content
  - Step 4: You're Done
- MORE WISDOM
- QUOTES

- Cons
- Pros
- Review

Exec Summary

- **Create content to connect with others**: create a platform and invite the people you want to meet onto it for interviews.
- **Follow up after the content collaboration**: to deepen the relationship after the interview.
- **Stick with it**: eventually, you'll begin to receive opportunities as you continue creating these relationships through these interviews.

FULL SUMMARY

About the Author:
James Carbary is an author and host of the podcast, B2B Growth, a top-ranked podcast according to Forbes. He's also the owner of Sweet Fish Media, a company that specializes in helping podcasters produce their content. Carbary has been a contributor to Huffington Post, Entrepreneur, and Business Insider.

The Foundation: Relationships Are Everything

Can We Plan Serendipity?

Here, the author shares a brief story about being invited on a trip with his friends after one of them won a sweepstakes.

It included a trip to an NFL football game of their choice—including transportation to the game in a private jet, a tour of the city in a chartered limo bus, and their own catered private suite to watch the game.

Early in the day of the trip, he noticed that they'd picked up an extra passenger for their tour of New York City: a

guy named Jeff.

Upon striking up a conversation with him, Carbary discovered he was actually the CEO of the company that had arranged their transportation, and his business was actually a large global logistics firm.

By the end of the night, they swapped email addresses, and after a year of keeping in touch, Jeff asked him if he wanted to move to Orlando and run the helicopter division of his company.

The end of the chapter ends with this reflection from the author (that points back to the chapter's title):

> **Carbary**: "…eventually I began to wonder, was there a way to create life-changing relationships on-demand? Was it possible to purposely engineer relationships, like the one Jeff and I had developed, to help someone get closer to their goals and dreams in life? And was it possible to put myself in a situation where I could meet another person like Jeff, without relying on a one-in-a-million circumstance? The more I asked myself these questions, the more I realized that what happened with Jeff could happen again. And I wouldn't need to win a sweepstakes to make it happen."

Relationships Aren't the Side Dish. They're the Whole Buffet

See the author's words on the chapter's main idea here:

> **Carbary**: "Life starts with, ends with, and revolves around, relationships. [And] Whatever you're looking to achieve, someone out there has the tools, the know-how, and the connections to help you do it."

The other half of this chapter's main idea is that one shouldn't spend their time hoping to meet the right people who could transform their life, career, or business.

The author continues here:

> **Carbary**: "We hope that we meet our next customer at the local chamber of commerce meeting. We hope that one of our LinkedIn connections can introduce us to someone with deep pockets that wants to help fund our nonprofit. We hope we know someone who works at the same company where we want to work, so they can move our resume to the top of the stack. But, should we really live our lives waiting for that chance encounter to change our course? …You actually *can* bypass serendipity and go straight to the CEO's office, the investor's table, or the meeting with Jeff. That's why I wrote this book. I've found a way to take chance out of the equation. I call it Content-Based Networking."

So, What Is Content-Based Networking?

Content-based networking is a "content collaboration" approach to building relationships:

> **Carbary**: "Content-Based Networking is networking based on…wait for it…CONTENT. It's figuring out, like I did with Marie, who you need to connect with (what we'll call *goals*), then reaching out to them (which we talk about in the *people* section), and then collaboration (*creating content with the people you want to know*—this is the important part)."

Why does this work?

Because it's a WIIFT win:

> **Carbary**: "The content is the difference between selflessly asking the other person for something they can do for you and offering something for them. When I asked Marie to be on our show, I talked about what I had to offer her. I gave her a chance to share her story, and to talk about herself. Instead of asking Marie for

> something, I offered her a chance to promote herself and the company she works for…"

Here are some more examples (provided by the author) of how one can go about content-based networking:

- **Jamie is a musician who wants to be signed to a record label**. So she collaborates with music producers by filming them in their day-to-day work (audio engineering, scouting talent, developing songs with artists, etc.). Then she edits the footage and posts the videos to her YouTube channel.
- **Kamal wants to be a chef**, so he collaborates with top-rated chefs to create content about their food. He snaps pictures of the chefs in the kitchen and of their final dishes. He then publishes all of the content on Instagram, tagging all the chefs and highlighting their recipes.
- **Emily wants to sell marketing software to the airline industry**, so she starts a podcast that features interviews with marketing managers at different airlines. During the interviews, Emily asks the marketing managers about their career journey, the challenges of being an airline marketer, and the marketing tactics they've tested in the last six months.

The content could be anything—a series of photographs, blog posts, podcasts, videos, virtual summits, industry reports, documentaries, music, you name it. According to the author, with his approach, all types of collaborative content can be the launching point of a genuine and meaningful relationship.

Step 1: Goals

Don't Drive to the Wrong Coffee Shop

The author says here that we tend to confuse goals with our high-level dreams. We may dream of owning our own company, and make that our goal.

But that's not a productive approach with Content-Based Networking because it's important to narrow your goal down to be as specific as possible.

Namely, and in this context, you want to craft your goal to refer to the specific relationships you need to create. (Boil your high-level dream down to a relationship you need to build.)

To design your goal, follow this formula:

- Goal = Target Contacts + Where They Congregate

Using the Kamal example above, let's say he wants to be a three-star Michelin chef.

Rather than just applying for internships like everyone else in his culinary arts program, he makes this his networking goal:

- Create relationships with head chefs at top-tier restaurants.

See how it fits the formula?

Be Like Oprah

By this, the author means to shine a light on your guest (and their dreams and passions), don't make it about yourself).

Give them a chance to share their story.

Step 2: People

The Spotlight Effect

To get started, first, by having a platform (whether it's something seemingly small such as having just created a

blog), you have value to give because you have a spotlight you can shine on any new guest, even if you don't have any content for that platform yet.

So, if, for example, you want to start interviewing casting directors for your blog, (1) simply say you have a blog that features casting directors, and then (2) start interviewing casting directors for your brand-new blog.

Also, make sure to conduct thorough research on them and any of their current content (social media can be key to learning about someone's work and passions).

More pro tips from the author:

- **Research their industry (and how most people in their profession view it)**: so you can know how the industry plays out for them from *their* perspective (not yours).
- **Find where they like to hang out**: everyone has a favorite hangout. And people with similar experiences within the same industry usually have the same favorite hangout. (This can be an online or physical hangout space).

Master the Art of Cold Emails

Remember, you're not trying to sell anything. You're trying to connect and offer a spotlight (value).

Here are the author's seven rules of an effective cold email reach-out:

1. **Keep it simple**: for example, say, "Hey Paul, we're doing a series of videos about your industry, and we'd love to feature you. Any interest?" That's it. Then, as you grow, you can pick one or two quick facts that make it clear that you're adding value to them. (For example, if you've had 30,000 downloads of your content last month, say that.)
2. **Make it easy**: your initial goal is not to get your recipient to commit to collaborating with you it's only to get them to respond. (That's why it's OK to keep the message so simple.)
3. **Personalize it**: for example, you can weave in a specific mention of a recent accomplishment of theirs or mention that you saw their talk at a conference that year.
4. **Write how you talk**: don't try to sound overly professional.
5. **Prove you're not a scam**: by placing links to your social media in your email signature.
6. **Take a multichannel approach**: try different mediums for outreach and see which one your target guests respond to most/best.
7. **Follow up**: be respectfully persistent.

All the Other Stuff Oprah Did Really Well

More main points:

- The people you really want to connect with will always have a network of other people…that you'll probably also want to connect with.
- When people see you hanging around experts, they assume you're one too.
- Since you're interviewing them on your platform, you can ask them anything you want—including questions that directly pertain to your specific goals

How to Make Sure You're Finding the Right People

If you're a business, you may want to consider making sure the people you target to be your guests are the ones who make the buying decisions for what you sell.

A couple more considerations:

- **Target experts, not celebrities**: influencers will only get you so far, experts tend to be the ones who provide

practical, actionable advice—and as Carbary puts it himself, "…the best place to get that advice is from practitioners who are in the trenches with them [your audience], not from big names who have tons of Instagram followers."

- **Don't make your platform about you**: your show's branding should be built around appealing to your guests and audience first and foremost, not around yourself.

Step 3: Content

Here's What You Talk About

You can start by talking to your guest about what they did in their career and their background. And then ask about the challenges and opportunities that they think about every day.

Then, as you speak to them and gain a clearer picture of their world, learning the things they struggle with, what they care about, what information is helpful to them, things they don't care about, etc., you can start to leverage that new knowledge in the next interview.

If there's anything they mention that you're unfamiliar with, it's OK to simply say something like, "For our listeners who aren't as familiar with this concept, could you walk us through exactly what [blank] means?"

This way, with each interview, you get better and better at having fruitful discussions and crafting better questions to ask.

The Three Phases of Collaboration

1. Plan
2. Create
3. Share

For planning, make scheduling easy with software like Calendly, and plan the content around the overall theme of the content you want to create and the tangible takeaways you want your audience to walk away with. (Use an outline.)

For the content phase, don't try to sell anything or promote yourself when you're creating content with your guests. Simply be curious about your guest, have fun, and whenever possible learn from other interviewers in your space to conduct better interviews yourself.

And, lastly, for the share phase, start by finalizing and publishing the work. Then, post it on social media.

Produce, Reuse, Recycle (How 1=3)

Every time you do an interview or collaborate with someone, that collaboration could become at least three pieces of content by repurposing it to be published on more platforms (e.g. a YouTube video that's edited to be published on Instagram and TikTok).

The Relationship Snowball

Once you create content with someone you can continue investing in the relationship by doing things like this:

- Grabbing a bite to eat together
- Make it Facebook official (add each other as friends)
- Give them a gift
- Do another collab

Step 4: You're Done

So, After I've Created All This Content, Do My Dreams Just Magically Come True?

The author has an answer to this you may not expect:

> **Carbary**: "Do all your dreams suddenly become true? Often, yes, actually: they will start to come true. By the time you've repurposed some content, created strategic relationships, and learned more about your industry than you could ever imagine, you'll likely be seeing results. Maybe you were offered more than one job. Maybe you sold more than you hoped for. Maybe you realized something interesting about your field. Maybe you even developed a new interest or discovered a new ambition. Often, your objectives happen just like that—organically—simply because you put yourself in a position to win. You surrounded yourself with the people you needed to connect with, and great things happened."

A pro tip to making things happen for yourself though is to make sure your guests know what business you're in (or what your expertise is) as early in the process as possible.

You don't want people to only see you as a blogger, podcaster, etc. because most people would be happy to hear that you have a solution to their problem (in the form of a service) or could be a great candidate for an opportunity they need filled.

Common Pitfalls (and How to Avoid Them)

- **Don't target influencers**: especially when you're new, it's going to be very difficult to land them on your show, and even if you do get them to say yes, they have no reason to share your content.
- **Don't focus on downloads**: focus on your guests and on creating solid relationships, those relationships are where your opportunities come from.
- **Don't think you need an audience before you can start**: the audience says that, in his experience, audience size rarely comes up in his conversations.
- **Don't overfocus on the quality of the content**: getting it done and creating a great relationship with your guest are more important.
- **Don't make the content all about you**
- **Don't make "pie in the sky" content**: do your best to make great, actionable content (asking for real-life examples from your guest can help).

MORE WISDOM

- **Life is relationships**

See the author's words here:

> **Carbary**: "Relationships are more than a nice side dish in life. They're the entrée, the appetizer, the side dish, and really, the whole buffet. Gary Smalley put it this way: 'Life is relationships; the rest is just details.'"

And we believe the same here at TPM:

> **TPM**: "Hell is other people. And heaven is other people." – The Power Mvoes

And whether your life is more of a heaven or hell on earth is largely up to you.

QUOTES

> "…a simple truth, which, when expressed, goes something like this: "If you hang around the barbershop long enough, you're going to get a haircut.""

Albeit we know it wasn't Carbary who first said this, it's still a true quote that emphasizes the importance of sticking with it in any endeavor worth pursuing—including creating and building a platform to reach and build relationships with others.

Real-Life Tips

- **Done is better than perfect**

And, of course, this expands well beyond only networking, creating content, or doing business.

Generally speaking, when you have a goal, it's better to focus more on getting it done than accomplishing it perfectly.

Cons

- **Some reach-outs maybe could've been better written**

For example, the author shares the example of Jeremy, an aspiring entrepreneur who wants to connect with purchasing managers at chain retailers to grow his clothing brand.

Jeremy decides to do a blog series and emails Sally, the purchasing manager for a big-name chain store, by saying something like this:

> **Jeremy**: "Hey Sally, I'm writing a blog series on retail analytics, and I saw the article you wrote on LinkedIn about the topic. I thought you'd be a great person to highlight in the series. Any interest in doing a 15-minute interview?"

More could've been done with this reach-out, such as complimenting their article (emotional value-giving), sharing a little more about the blog series (to avoid putting the onus on the receiver to find out), and so on.

For more, check out, "How To Write Cold Emails That Get Responses (Steal This Script!)."

- **Other forms of networking can be strategic too**

The author comments on other forms of networking relying on chance encounters and random in-person events and presents content-based networking as the only strategic option for networkers.

However, there are other options, including hosting your own cocktail parties and overseeing the guest list to ensure you meet the people you *want* to meet.

Pros

- **Short, to the point, and full of value**

I rented this book from the library, and despite Amazon saying it's 196 pages, it turned out to only be about 64 pages long inside my copy (which I double-checked was the right edition and it was).

So, I actually found myself wishing the book was longer but, in the end, I was happy that there was no fluff.

Review

Due to the low page count, this book feels like more of a handbook.

But, it's still one of the best books I've read on networking compared to the other resources out there, and made for a great read.

Plus, even if a more power-aware approach would serve the author's approaches sometimes, the overall strategy is sound. (And I only give this book an 8.5 because I wish he would've added more strategies than only content-based networking, as good as this book was :).

Get the book here.

Top 10 Manipulation Quotes Listed & Explained

Lucio Buffalmano · 11 December 2023 · Archived copy · Original

Are you ready to discover the secrets of persuasion and tap into the power of influence?

Well, then…

Wake up brother because you'll need a lot more than a list of manipulation quotes ⍰.

HOWEVER…

Our *analysis* of those quotes provides plenty of guidance and insights.

So here's the first insightful manipulation quote you straight from our "Start Here" page:

Always be suspicious of those who virtue-signal on avoiding manipulation

The full quote runs:

> **There's only two types of people who discourage others from learning manipulation. Naive people, and manipulators.**
> **Ignore both.**
>
> *— Lucio Buffalmano*

So let's help you now become more power-aware:

Contents

The Art of Influence: Quotes that Illuminate Tactics

> **"Things come apart so easily when they have been held together with lies."**
>
> — *Dorothy Allison*

Very powerful reminder that albeit manipulation "works", it also comes with heavy costs.

And that's all the more true in closer relationships and long-term relationships.

It's also true when you're dealing with great people.
And that's because high-quality and power-aware people are also especially good at spotting manipulation -and so are Power University alumni-.

> **"Manipulation is the dark side of charisma."**
>
> — *Max Weber*

Tough pill to digest for many, but largely true.
Also read our article 'Great leadership is great manipulation'.

> **"When you know what a man wants you know who he is, and how to move him."**
>
> — *George R.R. Martin*

True.
This is why you only share your true mission, goals, and passions with a few selected individuals.

Power Dynamics and Control: Quotes Revealing Manipulation

> **"You can fool some of the people all of the time, and all of the people some of the time, but you cannot fool all of the people all of the time."**
>
> — *Abraham Lincoln*

Another powerful reminder of the hidden costs of manipulation.

The more people you try to manipulate, the more likely it is some people will be smart and power-aware enough to see through your manipulation.

> **Con men look for human frailty to exploit. This is most often greed. Trump found a different vice: anger. The emotional are always the most susceptible to manipulation.**
>
> — *Pamela Meyer*

Great observation on political manipulation.
Not that Trump "found it", of course. It's simply a common refrain for populists.

Safeguarding Against Manipulation: Wisdom from Quotes

> **"When you notice someone does something toxic the first time, don't wait for the second time before you address it."**
>
> *— Shahida Arabi*

This is one of those mantras that has you nodding but… That's not really always true.

Sometimes, you want to observe, take note, and purposefully do little.

Some other times, you may want to end the relationship right away if it is a big red flag.

But still, thumbs up, because there are a lot of too-nice guys and too-nice women who need to hear this.
Also read:

- Stop being a beta male
- Passiveness: The doormat diseases
- **How to be more of a good ahole**

> How to Be A Good Asshole (5 Easy Steps)

> **"The success of the manipulation depends on the level of conviction and force of the denial."**
>
> *— Tess Binder*

A good reminder of that Weber's quote and the "dark side of charisma".

But also a good reminder that much of the power rests on the receiver.
You're never an empty box that's being pushed around.

And an even better reminder to do the opposite of what people do.
Such as: trust those who admit their ignorance and bias. And assess the self-assured gurus even harder.

> **When you're surrounded by a world of constant lies, manipulation, and deceit, that dark energy is bound to seep into you eventually.**
>
> *— Jeffrey Bowyer-Chapman*

Meaning: stop hanging out with turkeys and inveterate manipulators.

> **The concept of romantic love affords a means of emotional manipulation which the male is free to exploit, since love is the only circumstance in which the female is (ideologically) pardoned for sexual activity.**
>
> *— Kate Millett*

Interesting take.
Not because it's necessarily true, but because it's the specular opposite of manosphere "gurus". Red pill authors say that men are the romantic sex.

Generally speaking, both men and women can fall in love and be manipulated for it.

But, generally speaking, men have more scope to take active leadership to make her fall in love.
Hence: caution when you feel hopelessly falling in love is good advice for everyone.

Manipulation in Relationships: Quotes on Emotional Exploitation

> **"I'm not upset that you lied to me, I'm upset that from now on I can't believe you."**
>
> *— Friedrich Nietzsche*

Edit:
This has become my #1 favorite manipulation quote.

Absolute genius quote!

I had this same reaction whenever I realized someone wasn't being straight.
Plus, **unnecessary manipulation, lies and sneakiness cause the loss of respect and the erection of an invisible "wall" in-between**.

It highlights the limitations of manipulation, over-Machiavellianism, and lies.
And it underpins one of our core values here at TPM.

And that is that albeit you want to learn manipulation, you also must put manipulation aside with your best relationships.
Flying higher and becoming an honorable man is necessary to have a good life with good relationships.

The price for not doing so is high.
And it's not having *any* close or good relationship.

> ***"Manipulative people are those who wish to be loved on their own terms."***
>
> *— David S. Viscott*

Fantastic take!

It can indeed be a manipulative gambit to accuse a partner of not loving them "as they are".
Especially when coupled with accusing of "trying to change them".

It's a way of saying "stop expecting more of me, take me as I am". Which can be fair… But *only if they're being good partners*.

It's manipulative instead when *poor* partners take that approach. If you accept that manipulative frame,e the manipulator can keep things convenient for *them* -and costly to *you*-.

> ***"Women work very hard to prevent or stop their sons from being manipulated by their women, like their sons' fathers were or are being manipulated by their sons' mothers."***
>
> *— Mokokoma Mokhonoana*

LOL, good one.
Also see our articles on women's manipulation, including this popular one:

- **Betaization**: how women turn men into "nice guy" providers

> Female Domestication: How Women Control Men & Relationships

> **"A skilled manipulator can make you question your own reality."**
>
> *— Gaslight, directed by George Cukor (1944)*

I'm not a big fan of this quote, to be honest.

It places all the power on the manipulator, and zero power on the victim. That's inherently disempowering and, may I say it, "b*tch talk".

So stop being a victim and start empowering yourself.
And if you want to learn more about gaslighting look no further:

- **Gaslighting**: the ultimate guide to spotting gaslighting

> Gaslighting Power Dynamics: 17 Signs You're Being Manipulated

Media and Manipulation: Quotes on Perception Management

> **"Behind every angry mob there is a puppeteer pulling the strings."**
>
> *— Marty Rubin*

Rubin should have seen the MAGA idiots going to jail for Trump :).

It's a point we've made several times and with several examples here on TPM:

> **"There are three types of lies — lies, damn lies, and statistics."**
>
> *— Benjamin Disraeli*

As a rule of thumb: never trust someone just because they seem to be quoting research or data.

> **The successful businessman today apes the politician.**
> **He has adopted the glitter and the ballyhoo of the campaign (…) and pseudo-democracy slightly tinged with paternalism.**
>
> *— Edward Bernays*

Bernays should see today's influencers.
Including businessmen who turn influencers to make more money.

> **"Is there any point in public debate in a society where hardly anyone has been taught how to think, while millions have been taught what to think?"**
>
> *— Peter Hitchens*

Great question.

Critical thinking skills are THE most underrated, under-developed, and crucial skill to make the world a better place. And that includes making democracies function better.

Personal Growth and Empowerment: Quotes to Stay Resilient

> **"You are a manipulator. I like to think of myself more as an outcome engineer."**

> — *J.R. Ward*

LOL, such a genius quote.
Beware of people who are always accusing others of dark-triad traits:

> **Jordan Peterson**: (accuses everyone he disagrees with of being narcissists)

And, as I shared here, I'd even avoid over-diagnosing others.

> **"Nothing manipulates people more than the desire to please."**
>
> — *Zoe Durlock*

Hmmm, yeah, there is something here.
But I wouldn't say that's the best example of "manipulation hook".
Yes, you lose when you're too much of a people-pleaser. But not so much out of being manipulated. More for being too low power and unassertive and putting yourself last.

> **"Don't become manipulated by the illusion of who you think you are, or who you think you should be."**
>
> — *Steven Redhead*

Yep.
It is a good technique for both a persuader or manipulator to leverage that ideal self.

> **"The less you respond to negative people, the more powerful your life will become."**
>
> — *Robert E. Baine, Jr.*

Not *always* true -sometimes you must respond-.

But fantastic quote nonetheless.

A powerful insight for the many who miss out on the power of ignoring, and the mental power of remaining unaffected.

> **"When you acquire enough inner peace and feel really positive about yourself, it's almost impossible for you to be controlled and manipulated by anybody else."**
>
> — *Wayne Dyer*

Great reminder that with inner strength also comes a lot of outer-world strength.

> **"People who are easily manipulated are those who are not sure of themselves."**
>
> — *Alain de Botton*

Great reminder that inner insecurity undermines external strength.

Still, if you allow us to be the usual pain-in-a** nitpicker we are, people who are *too* sure of themselves can also be rather easy to manipulate.

> **"If you are an approval addict, your behaviour is as easy to control as that of any other junkie. All a manipulator need do is a simple two-step process: Give you what you crave, and then threaten to take it away. Every drug dealer in the world plays this game."**

> — *Harriet B. Braiker, Who's Pulling Your Strings?*

Yep, same as above: inner neediness provides easy hooks for manipulation.

Recognizing Manipulation: Quotes on Awareness

> **Breaking free from manipulation is a twofold journey: one eye on the manipulators around you, the other on the one within.**
> **Most people forget the inner manipulator**
>
> — *Lucio Buffalmano*

Example:

> **Lucio**: (realizes he was subconsciously undermining her ex girlfriend's self-esteem)

Good reminder that you may not be as innocent or candid as you like to portray yourself to be (including to yourself).

> **"Everyone sees what you appear to be, few experience what you really are."**
>
> — *Niccolò Machiavelli, The Prince*

We couldn't make a list of best manipulation quotes without Machiavelli in it, could we?
I'd add to this that it may be a smart approach to only reveal your true self to a selected few.

> **"When someone tells you that there is no agenda, you can be certain there is nothing but an agenda."**
>
> — *Craig D. Lounsbrough*

LOL, good one.
Except that… This is also true when people do *not* say that there is no agenda :).

> **"Psychopaths view any social exchange as a 'feeding opportunity,' a contest or a test of wills in which there can be only one winner. Their motives are to manipulate and take, ruthlessly and without remorse."**
>
> — *Robert D. Hare*

Good reminder of what we say on TPM, which makes for another great quote by the way:

> **There are no small red flags.**
> **Red flags are like thunder. Once you spot the first, the worst is yet to come.**
>
> — *Lucio Buffalmano*

This is one of Power University's core competencies: learning red flags, and how to correctly assess people.

> **"If you can manipulate news, a judge can manipulate the law. A smart lawyer can keep a killer out of jail, a smart accountant can keep a thief from paying taxes, a smart reporter could ruin your reputation – unfairly."**
>
> — *Mario Cuomo*

A good reminder of not trusting everything you hear.

> **"The art of pleasing is the art of deception."**
>
> — *Luc De Clapiers*

A good reminder to be careful of those who are a bit too complimentary.

Influence: Quotes on Persuasion

> **Great leadership is great manipulation**
>
> — *Lucio Buffalmano*

This quote uncovers a more nuanced and underappreciated reality of leadership: **effective leaders often influence individual followers to deprioritize their interests** and returns in favor of the group, cause, or organization's goals and returns.
More selfish leaders may also prioritize their returns over those of their followers.

In more extreme cases, the followers' returns can turn negative, something that would be unlikely to happen if they had been on their own because humans tend to default to net-positive returns on their investment (positive social ROI).
In these cases, followers' engagement is often driven less by rational evaluation of what's best for them as individuals, and more by manipulation.

Recognizing this dynamic doesn't mean to reject leadership. This is a 'positive cynicist approach' that can help individuals critically assess leadership and protect themselves.

Also, given the overlap between persuasion and manipulation, **a greatly persuasive leader must also be well-versed in manipulation**.

There is also a more "good" side for knowing manipulation, though.
And it's that the more you know about both persuasion and manipulation, the better you can ensure that you avoid the latter.

Also see our article:

- Persuasion VS Manipulation

> Persuasion vs. Manipulation: Understanding the Fine Line

False Manipulation Quotes

> **"No one believes a liar. Even when she's telling the truth."**
>
> — *Sara Shepard*

Good quote on the importance of reputation.

Unluckily, just not true.

Plenty of people fall for the same old lies -and liars-.

> **"An apology without change is just manipulation."**
>
> — *Unknown*

Not always.
See our full article on "when an apology without change is manipulation".

> **"Manipulation is the way of the weak and insecure."**
>
> — *Shannon L. Alder*

Another one of those manipulation quotes that *sound* great.
People would *love* it to be true. It validates their self-righteous egos that they -who are NOT manipulators of course- are strong.

But it's just *not* true.

Or, at least, only *partially* true.
Manipulation *can* stem from an inability to be assertive or high power. In then overlaps with passive aggressiveness.
But it's also false and misleading because plenty of dominant, powerful, and successful men also manipulate.
Including some who do also have the courage to speak straight some of the time.

> **"Vision without integrity is not mission — it's manipulation."**
>
> — *Howard G. Hendricks*

It's really a good-sounding quote and we approve.
However, it's entirely possible to be honest about a morally deplorable mission, and still recruit others *without* manipulation.
As a matter of fact, the opposite is true. It's people *with* integrity who require manipulation to follow the many poor leaders and missions of this world.

> **"No love is conditional. If love is conditional, it's just some sort of manipulation masquerading as love."**
>
> — *Donald Miller*

To me, this sounds like Pollyanna who says that to other women in search of validation.

Deep down, she may want to delude *herself* that there is a prince who will love her no matter what.

And even worse, that's not just naive, but even plain entitlement mentality.

Stop expecting unconditional love. Instead, do your part to *deserve* that love.

> **"Manipulation is a form of power, but it is an ugly and destructive one."**
>
> — *Richard Bach*

This sounds overly dramatic.
Manipulation is a form of power, but it's not always ugly. And not always destructive, either. Not any more than other forms of power can, anyway.

> **"If we inspire people, they will give us more than we asked for. If we manipulate them, they will give us exactly what we paid for"**
>
> — *Simon Sinek*

Simon Sinek is THE man when it comes to naive cringe.

Better yet, this quote shows how inspiration, leadership, and manipulation overlap.
In my experience, "inspiring" people means to sell them hot air BS. Hot air BS instead of, say, *paying* them more. Or giving them more holidays.

Also see our seminal article on corporate manipulation.

As for Sinek, watch this inspirational video of his.
And if you don't see the BS, you very much need to spend more time on this website:

> **Sinek**: (nonsense motivational talk on selflessnes as the #1 trait to enter elite fighting units)

Read more in our:

- **Naive Self-Help**

> Naive Self-Help: 10 Popular But False Self-Help Myths

> **"We live in a world where unfortunately the distinction between true and false appears to become increasingly blurred by manipulation of facts, by exploitation of uncritical minds, and by the pollution of the language."**
>
> — *Arne Tiselius*

This quote leverages the "uniqueness frame".

Similar formats are "in our times of unparalleled challenges… " or "our society has become…".
This format is often BS because whatever comes next is seldom truly unique. In this case, I doubt there has been any "manipulation-free" period in history.
Even the Garden of Eve wasn't :).

> **"The maniacal lunatics in control of our society know exactly how human beings tick and they are masters at manipulation." –**
>
> — *Bruce McDonald*

Another example of someone crying manipulation-wolf while actually being manipulative himself.

This is the "conspiracy format".

And it works like this:

The less the manipulator's audience trusts institutions, the more influence *he* acquires.

It's an old game that's very popular these days.

Red pill gurus play it as well.
The format is "society lies to you with comfortable lies (but I tell you the cold harsh truth)". Or "the feminized society is ruining you (but I'm on your side)".
Neither of those is necessarily wrong. It's the way the guru presents it that it's manipulative.

There's an endless stream of gurus using this format.
For example Brett Weinstein, London Real, and recently, even Jordan Peterson:

> **Jordan Peterson**: our tyrannical, idiotic, virtue-signaling government is now dictating how you should eat

Fixing Famous Quotes

> **If you don't give education to people, it is easy to manipulate them."**
>
> — *Pele*

TPM rewrite:

> **If you don't educate people, it's easy to manipulate them. But it's even easier to manipulate them when you're the educator.**
>
> — *Lucio Buffalmano*

I find it disturbingly elitist to pass all uneducated people for muppets.
Plenty of uneducated people can be well-discerning men.

Which calls for our next quote:

> **Smart and unedecated is not the problem.**
> **Stupid and educated is.**
> **The stupid literate will gobble up nonsense, and spread it further.**
>
> — *Lucio Buffalmano*

And now let's spruce it up with some intersexual dynamics:

> **The casting couch exists in every business where there is power dynamics and manipulation.**
>
> — *Tisca Chopra*

Hmmm… *Partially* true.
Remove "manipulation" and the quote is good.

Otherwise, it's simply the take of those who don't understand human nature.

The "casting couch" doesn't even need manipulation. The casting couch can be a very open and even "honest talk" exchange.

This is not to say it's moral or "good", of course.
And there are costs as well. Such as the loss of productivity if there were better candidates. And a direct loss for any other candidate who's not willing to "couch".

But still, the casting couch isn't necessarily about manipulation.

Quotes On Manipulating A Manipulator

> **"The best way to manipulate a man is to make him think he is manipulating you."**
>
> *– John Smith*

> **"It was easier to manipulate someone if they didn't perceive you as a threat."**
>
> *– Stephanie Wrobel*

> **Appear dumber than your mark**
>
> *– Robert Greene, The 48 Laws of Power*

All these say the same thing.
We agree best with Wrobel.

See more here:

- **How to manipulate a manipulator**

> How to Manipulate a Manipulator

TPM Approved Manipulation Quotes

> **"Life is a constant daily manipulation."**
>
> *– Deyth Banger*

This may sound a bit too cynical.

But if we take "manipulation" in the larger sense, including presenting one's best side, then it's absolutely true. Worth reminding ourselves that we acquire highly distorted views of how strong, effective, successful, or happy others are.

> **Most claims you read about psychological manipulation are rubbish.**
>
> *Dominic Cummings*

Some of that is fueled by the marketing of "tricks" and "secrets" of dark psychology books and courses.
See our dark psychology article for a better overview.

48 Laws VS Power University: What's Best to Advance In Life?

Lucio Buffalmano · 18 December 2023 · Archived copy · Original

The 48 Laws of Power is a popular book among our readers and alumni.

And for good reasons.
It's the most popular book on power dynamics, social strategies, and Machiavellianism.

And our alumni told us that Power University has delivered many-fold increases in status, respect, and attraction.

So some people may wonder:

> Should I get *The 48 Laws of Power* , or should I get Power University?

We will answer this difficult question.

Power University takes the same strategic approach of *The 48 Laws of Power*, but more practical, and includes how to use it for win-win

Contents

- INTRO
  - Similarities:
- 48 Laws VS Power University
  - 48 Laws of Power Pros & Cons
  - Power University Pros & Cons
- What People Say
- What AI Says
- Which One Should You Get?

INTRO

The 48 Laws of Power is a popular book for our audience.

It's one of our endorsed resources.
And many people who end up here have already read *The 48 Laws of Power*.

There are certainly parallels between TPM, Power University, and Robert Greene's most famous book.

Similarities:

- **Eye-opening** for many. Both resources can open a new world to some people who have been a bit too naive, too "good" or too simple-minded
- **Machiavellian**: both resources tackle (social) Machiavellianism
- **Red pill**: although we don't necessarily consider the book or TPM as "red pill", some people do

And some may certainly see both as cynical.
I don't see TPM as cynical because anything sharing truth, by definition, cannot be cynical -maybe "positively cynical" at most-.
I consider *The 48 Laws of Power* cynical though because it focuses *only* on the darker and more predatory side of human nature.

48 Laws VS Power University

In brief:

The main difference between *The 48 Laws of Power* and Power University is that Robert Greene provides a list of interesting and potentially eye-opening principles.
Power University also shares high-level guiding principles but provides a whole system for self-development and life-effectiveness.

The scope is different.

The 48 Laws of Power is a book.
With all the advantages and disadvantages that a book format includes.

Power University is a course.
To help students internalize the information Power University leverages videos, real-life examples, self-assessments, quizzes, and assignments.
Power University isn't built to share information or entertain. **Power University is built to deliver real-life results such as higher status, increased confidence, and higher baseline attraction from women.**

Ultimately, a successful student of Power University *becomes* a high-value man.

48 Laws of Power Pros & Cons

PROS:

- **Cheaper**
- **Briefer**
- **Entertaining**

CONS:

- **Potentially ineffective** to grow skills
- **Potentially confusing**: see a review below. And we've seen this so often that we made an article on the limitations of The 48 Laws of Power
- **Unscientific and potentially untrue**. Especially when it goes for marketing and over-generalizing "laws" that instead present too many exceptions

For example:

> View this post on Instagram
> A post shared by The Power Moves (@the_power_moves)

> **Lucio**: while "talking little" can come across as high-power in many situations, **there is no real law of "talking less than necessary"**. For example, **research says that in new groups people who talk more gain more status**.
> Lucio experienced as much and talks more in forming groups.
> And many gurus of high-dialectical skills develop their following -and power- by talking far more than necessary. See for example Jordan Peterson, Jay Shetty, etc.
> Unnecessary flowery language can also be an effective seduction tool

Power University Pros & Cons

CONS:

- **More expensive**, it can be a proper investment for some
- **Intensive**, not for lazy, it's for driven and ambitious men
- **May take longer than an audiobook**, albeit the ROI may be higher since results stick for a lifetime

And… Can't look erudite reading it in public :)

PROS:

- **Clearer**, telling you when and how to apply what strategy or technique
- **Scientific**, built upon thousands of studies and textbooks
- **Proven to deliver results**, skills, and raise a man's value

What People Say

I'm biased.

I love Greene, but I'm a lot more invested in TPM.

So best of all is to let others speak.

We have a few people who tried BOTH *The 48 Laws of Power* and Power University.
There is still obviously a self-selection bias. They wrote in the community forum, which means they probably loved TPM and PU.

But still, it can be an instructive read.

So let's see what they say:

1. The 48 Laws of Power Didn't Improve My Life, TPM & Power University Did

> **I had read lots of books by Robert Greene** (…) and while I enjoyed them very much, **the improvement in**

> **my life was essentially insignificant**.
> They are more of a historical/literature review on themes of power, and contain little actionable material.
> (…)
> In the end, **The Power Moves and Power University is simply the best source** on how to become aware of power dynamics and use them t**o protect yourself and advance in life**.
> (…)
> TPM on the other hand taught me (and is continuing to teach me) how to interact with these bad people from a position of power
>
> *– PU Alumnus, discussing JP and Greene*

I enjoyed those books very much as well.

But also to me they felt more like historical reviews than actionable advice to advance in life.

To some people who lacked any power awareness though, it may still be eye-opening.

I've met some of those folks, and they were making silly mistakes like disempowering their bosses or giving too harsh criticism.

2. Robert Greene Led Me To Power University

Some people did find Greene transforming though:

> I became obsessed with reading books on Philosophy, Psychology, Finance, and History. To this day, I've read over a hundred books on these topics which completely changed the way I see and perceive people, society, and the world as a whole. I **have read all of Robert Greene's books after discovering 48 Laws of Power. His books are the most impactful and led me to join The Power University**.
>
> *M. PU alumnus introduction*

That was his intro before starting PU.

So he hadn't properly experienced PU yet.
It would be interesting to hear what he thought of PU as he went through it.

3. Something was missing and TPM and Power University are actionable

I landed here amidst my journey to improve social effectiveness whilst searching for resources on the topic. Like many here I've been through the usual. Think Dale Carnegie, Robert Greene, Charisma related videos on YT etc. before finding this site.

And whilst the resources I used were helpful in different ways, I still felt I was missing something foundational. Namely, what to do when someone doesn't "play by the rules" e.g. trying to undermine you, cut you out of a group etc.

Most guides don't even mention the possibility that people won't always reciprocate kindness and other pro-social behaviour, and when they do, the advice rarely expands past just staying calm.

"Okay I'm calm, now what?"

Fortunately, this site exists.

The best thing I can say about this site is that when I found it, I ended up reading non-stop for almost all of 2 days. It seemed to make so much sense.

Probably because the examples are based on the real situations that actually happen day to day that add up over time to cement our position in whatever environment we are in at the time.

> I landed here amidst my journey to improve social effectiveness whilst searching for resources on the topic. Like many here **I've been through the usual. Think Dale Carnegie, Robert Greene, Charisma related videos on YT etc**. before finding this site.
> And whilst the resources I used were helpful in different ways**, I still felt I was missing something foundational**. Namely, what to do when someone doesn't "play by the rules" e.g. trying to undermine you, cut you out of a group etc.
> Most guides don't even mention the possibility that people won't always reciprocate kindness and other pro-social behaviour, and when they do, the advice rarely expands past just staying calm.
> "Okay I'm calm, now what?"
> Fortunately, this site exists.
> **The best thing I can say about this site is that when I found it, I ended up reading non-stop for almost all of 2 days**. It seemed to make so much sense.
> Probably because **the examples are based on the real situations that *actually happen* day to day** that add up over time to cement our position in whatever environment we are in at the time.
> **Along with the exact responses and mindsets that one could use to deal with them. As opposed to something like the 48 laws where the stories are too abstract/far removed from daily life to truly be actionable, especially for a beginner**. Good book, very tough to implement (and easy to misinterpret).
> It honestly seemed a little too good to be true at first, so (….)
>
> *PU alumnus, review here*

In that same thread, I shared that I had the same experience.

The 48 Laws of Power is good self-help -in contrast to much naive self-help-.
But it's challenging for any book to develop skills, get results, and transform lives.

The idea for TPM was born when I realized that it wasn't just an issue with The 48 Laws of Power.
There just wasn't such a resource.
And I took it upon myself to create it.

And to conclude:

4. PU is unbeatably practical and superior to becoming a high-quality, value-adding individual

Hello everyone,

I'm honored to be a part of this community which I respect so much due to the value it has provided me. My online name is Carlos [illegible] (formerly [illegible]): my real name is [illegible] I am a recent college graduate and am taking a few gap years before medical school. I was in a fraternity in college – an environment that naturally attracts plenty of high dark triad people. Hence, I got [illegible] the [illegible] of the trait as well as other envious/jealous people (guy friends who like my gf) who try to one up, dominate, and play power games. [illegible] "[illegible]" [illegible] started costing me relationships. Now, I found a better balance of adding more warmth and calibrating. Having been in that environment for years, I have seen a lot of the stuff talked about in PU but never really read between the lines and thought about what it meant.

Like most people I started by reading Robert Greene's books 48 laws.., 33 strategies.., etc. which albeit gave me a good mindset didn't really help me in my day-to-day as much, and I made a lot of social mistakes trying to apply these laws such as becoming way too quiet (to say less than necessary) and trying to seek too much attention (court attention at all cost). For me, PU has been unbeatable in its practicality of power dynamics and learning how to be an overall high quality value-adding individual. The information is so good sometimes I laugh out loud – the self defense section on going meta (the analogy of leaving them naked cracked me up).

Learning PU has definitely turned my life. I have more respect, status, and power as well as confidence and self esteem. Added awareness coupled with having been meditating and working out consistently for years has allowed me to navigate the world more effectively and assertively. I'm looking forward to becoming a value adding member of this forum, cheers.

What AI Says

I've been using AI during Power University 9.0 upgrade.

One of the questions I ask to ensure we deliver unique value is how it stacks up with other available resources.

And ChatGPT mentioned specifically *The 48 Laws of Power*:

ChatGPT Memory Full Share

a power-oriented framework rather than reactive techniques.

Compared to "The 48 Laws of Power" and similar books:

- **More applicable** – While books like Greene's work are mostly historical anecdotes, PU directly **guides application in modern life.**
- **More balanced** – It **avoids** the "win-at-all-costs" Machiavellianism of some seduction or business books, making it more sustainable for long-term power.

Final Verdict

Overall, **this is a highly valuable lesson that outperforms most available resources** in terms of applicability, balance, and directness. With slight refinements—especially in case studies, defensive tactics, and framing—it can become **the go-to practical guide for modern, positively Machiavellian men.**

> **ChatGPT**: While books like Greene's work are mostly historical anecdotes, PU directly apply to modern life. This is a highly valuable lesson that outperforms most available resources

And that was only *one* lesson on how to become more positively Machiavellian.
Without even considering the techniques and strategies that are even more real-life applicable.

Which One Should You Get?

We love Robert Greene's books.

And not just *The 48 Laws of Power*.
My Greene's favorite is probably *The Laws of Human Nature*, followed by *The Art of Seduction*.

So if you're like me and have already enjoyed The 48 Laws, Power University is a no-brainer.
If you're driven and can afford it, get Power University because it's more complete, and adds a lot of nuances and more advanced applications of strategies and techniques.

If you can't afford Power University yet, get *The 48 Laws of Power*.

But most of all, if you can afford it, **get *both The 48 Laws* and Power University**.

The Fund: Did Ray Dalio Just Gaslight Us All?

Lucio Buffalmano · 26 December 2023 · Archived copy · Original

In *The Fund* (2023) investigative journalist Rob Copeland pulls back the embellished PR curtain of Bridgewater Associates, unveiling a despotic leader and a cult-like culture of gaslighting, fear, and power plays.

Exec Summary

- **CEOs and founders prefer loyalists**. If your goal is to advance, manage your boss relationship with proven power principles.
  The Fund shows: anyone who threatened Dalio's leadership, status and power paid the price
- **Don't believe the hype**. There are no ego-free enlightened gurus. A good chunk of self-help is virtue signaling.
  The Fund shows: Dalio supposedly transcended his ego, but he seemed to act like anyone with a huge ego would
- **To advance in life and at work, follow proven power principles**, and dismiss the HR and PR hot air. They're either virtue signaling or manipulation
  The Fund shows: anyone who gave "radical candor" feedback to Dalio paid the price

FULL SUMMARY

About the Author:
Rob Copeland is a finance reporter at the New York Times, covering Wall Street and banks.
Previously, he wrote for The Wall Street Journal, and the hedge-fund trade publication Absolute Return.
He has followed Bridgewater since arriving at the WSJ in 2013.
For *The Fund*, Copeland has interviewed dozens of current and former Bridgewater employees, including Dalio and other Bridgewater high-flyers.

Ray Dalio Doesn't Want You To Read *The Fund*

The opening of the book could be a masterclass in attention-grabbing:

> **Ray Dalio does not want you to read this book.**
> He told me as much. At the start of this project, I reached out to him by email to seek his perspective. He responded with skepticism about my intentions.

As much as that may seem a "marketing power move", you would probably agree with Copeland after you read *The Fund* :).

Dalio Was The Undisputed & Undisputable Leader...

There was no "perfect meritocracy".

Dalio's narrative was that pure meritocracy governs Bridgewater.
And that any difference in rank and authority is due to merit.

None of that was true.

The author says:

> The truth is rather more Orwellian. At Bridgewater, some are more equal than others.
> This is the story of Ray Dalio, the most equal one of all.

Individuals Suffer When Principles Only Protect "The Whole"

Ray Dalio says to look at nature to understand reality.

And in nature, natural selection optimizes for progress and for "the whole".
So, for Dalio, "the whole" comes first, even if painful for the individual.

This is something we had already flagged in our business manipulation article.

Why is this potentially self-serving and harmful to employees?
Because Ray Dalio OWNS the "whole".
So **individuals may be better off following *their own* principles, instead of the principles built to serve that "whole"**.

And indeed, here's what Dalio said, but left out from *Principles*:

> He would tell a fable about a ravenous pack of hyenas murdering a young wild beast. The wild beast may suffer, but its death is necessary to promote evolutionary improvement

You be my guest in giving your suffering to promote Dalio's "whole" :).

Bridgewater's System Didn't Work

Ray Dalio often referred to Bridgewater's "believability" approach to decision-making.

The believability score was supposed to compute everyone's opinions based on their level of authority and expertise, and then select the best possible course of action.

Except, it doesn't seem that the system worked at all.

A few snippets, and in the italic are direct quotes from *The Fund*:

- **Dalio selected the scoring items, and they made little sense**: *McDowell created one working prototype after another, only for Dalio to add and subtract new categories seemingly at whim. Many seemed less than scientific; one was called "practical" while another was "practical thinking.*"
- **The system seemed to rely on "pseud-quantification"**, or assigning numbers that give the feeling of accuracy, but mean nothing. "*Dalio's metrics included nebulous areas such as "visualization." What was that, and could it, or similarly subjective areas such as creativity, even be numerically ranked*?"
- **Dalio was on top no matter what**: "*Dalio's rating was now numerically bulletproof to negative feedback. Regardless of how everyone else in the firm rated him, the system would work to keep him on top.*"
- **Anchoring bias: people tended to stick to the pre-existing rating**. "*The little real-time analysis that McDowell had been able to perform showed a sad state of affairs, scientifically. When rating one another, employees tended to stick closely to the existing marks."*

And most damning from an effectiveness point of view:

- **The system didn't make for better performance**: *"Ferrucci, one of the world's foremost experts in artificial intelligence (…) couldn't figure out where to even begin to apply hard science (…) It was a mess of pseudoscience (…) not even a simple regression to show (…) better results. ("I don't believe in regressions," Dalio told (…).) Even*

a cursory look at the data showed the opposite."

And, finally:

- **The system was biased by psychology, strategic considerations and power dynamics**

> *a generally blank baseball card devoid of ratings was an invitation to be branded with negative dots by one's colleagues.* There was little incentive to stick out, and every incentive to pile on. It took only a few days for newcomers to figure out that the best way to earn high ratings was to agree with others already ranked highly. This inevitably meant hewing closely to the views of the hedge fund's top brass.*

And on the natural "tit for that" nature of social exchanges biasing the system:

> *Instead of incentivizing the telling of tough truths, the system supported their hiding, or at least a degree of inertia. "Down-dotting" (Bridgewater-speak for giving a poor rating) a coworker resulted in an outsize risk the recipient would return the favor, producing a downward spiral for both. Thus, stasis largely ruled.*

And, turns out, the only "hyena" effect was in piling onto other colleagues. Especially when a high-status employee made the first attack:

> *Among those who regularly gave out fresh critical ratings to employees was Dalio. Staff lived in fear of a critical Dalio dot because it would disproportionately push the employee's average down immediately and be followed by a cascade of similar negative ratings from others who saw the new, depressed baseline. There was no escaping the pile-on. It was death by dots.*

Ray Dalio Showed Many Red Flags

Among the red flags:

Signs narcissism-like personality

- **The arduous task of replacing Dalio**

> Such was the task of replacing the Bridgewater founder that he often said that hundreds more people would be required.

- **Compliments to others become personal slights to Dalio**

> Stefanova asked to speak with Dalio one-on-one.
> (…)
> "I think it's best for me if I next work for Eileen," she said slowly.
> He was still barely with her. "Why?"
> "Because I admire her."
> (…) Dalio snapped up (…) "You don't admire me?"
> Stefanova felt a mix of confusion and derision. How could Dalio not realize that she was still hurt from her humiliating probing?

This was a power-related blunder by Stefanova.

Dalio Says He "Conquered His Ego", But It Was A Convenient Narrative to "Guru-Like Influence"

Which is another red flag:

> "That damned amygdala," Dalio once called it publicly.
> He had apparently been able to overcome his own such reflex.
> Through meditation, Dalio said he was able to all but separate the amygdala and prefrontal cortex, thus freeing himself from being controlled by emotion. He credited this ability for his understanding of the psychological factors that lead to successful trading and company management.

And:

> Dalio began to present himself as a model for exemplary behavior. He compared himself to the Dalai Lama.

Also read more in:

- **Teacher frames**

> Why Teachers Disempower You (Teacher-Pupil Frames)

Dalio's Will To Power Governed Bridgewater

Among the signs it was all about power:

- **Ray Dalio rewards those who increase his power**: "The man responsible for making Ray Dalio the paragon of believability would receive the promotion of his life."
- **Loyalty is expected**
  - "Family frames": *"As McDowell reached the door, Dalio spoke one more time. "This means you're part of the family."*
- **Dalio demands that the "believability rating" keeps him on top:**

> Dalio's voice made no secret of his irritation. Why doesn't believability cascade *from me*?
> "McDowell thought back to Dalio's index card drawing. He realized that Dalio hadn't been sketching out the mere concept of believability on top. He had drawn himself quite literally at the head, bestowing believability to all beneath him. McDowell assigned an underling to go into the software and program a new rule. Dalio himself would be the new baseline for believability in virtually all important categories.

- **Dalio (ab)used the rating system as a tool to win, punish, and get rid of people**

All under a manipulative guise of meritocracy and group decision.

For example, Dalio filmed and shared with everyone one of his infamous interrogations.
Then he sent out a company-wide poll:

> "Does Michael Partington add value?"
> The nays piled up.
> "You haven't taken us to the promised land," Dalio told him.
> Dalio cut his salary in half.

In another example of an employee sharing with Dalio that his governance scared people into silence and

compliance:

> Mack, posture straight and voice steady, made his pitch. “I think the culture here is suppressing people’s true feelings.”
> Dalio threw up his hands and handed over the mic to Mack. “Ask them.”
> Mack stood, facing the horde. “Who here feels repressed?”
> No one raised their hand.
> “You see—” Dalio said.
> “Nobody?!” Mack yelped. “Nobody is going to stand up? Some of you have been in my office telling me about this.”
> Silence again.
> Dalio took back the mic. “I don’t know what you’re complaining about, Julian. It’s you that has the problem.”

Ladies and gentlemen… The definition of leader’s gaslighting.

Ray Dalio Loved Predictions... But Wasn’t Any Good At It

Says The Fund:

> One young staffer, hands shaking, handed over the results: The study showed that Dalio was wrong as much as he was right. Trading on his ideas lately was often akin to a coin flip.

Ray Dalio loves speaking like a market savant.

Even before reading *The Fund*, that was also the image I got of him.
A savant who studied history, and understands the market better than anyone else.

You only gotta look at his podcast interviews to realize it:

You know a serious world-leading hedge fund manager is not a serious hedge fund manager anymore but a “guru” when he starts doing the podcast rounds

And that’s already a bad guru-approach, in my opinion.

In my opinion, **the only investor you listen says that nobody can accurately predict the markets**.
Those who do the opposite you ALWAYS look at with suspicion.

From my understanding of the world… The past doesn't equal the future.
And looking at the past to make future predictions may be as misleading as it can be enlightening.

Love Doom & Gloom Predictions... But Isn't Any Good At Predicting

Some notes from the book:

- **Wrong prediction on 2008 mortgage crisis**: "*Dalio was convinced that a second leg to the crisis was coming. He had even invented his own word for it, a D-process" (…) "thick tomes on historical downturns (…) took furious notes on each of them (…) noting abundant parallels to the present.*"
- **String of negative predictions that never happened**: *"Dalio predicted a bear market coming in 1994; a "blow-off phase of the U.S. stock market" in 1995; "bombs away" for the Dow Jones Industrial Average in 1997; and a "deflationary implosion" for 1998. Each time, he explained away the misfires as a learning opportunity"*
- **Bridgewater's employees joked about Ralio's poor predictions**: *"Parag Shah, the firm's head of marketing, opened one meeting with a too-close-for-comfort joke. "He's called fifteen of the last zero recessions," Shah said of his boss. Dalio didn't laugh."*

Ray Dalio Invested In PR To Gain A Jobs-Like Reputation

So, if all of the above is true…

How come you probably think of Dalio is an enlightened guru?

Because he invested in PR:

> He hired a public relations firm and told them that his goal was to establish a public persona on the level of that of Berkshire Hathaway founder Warren Buffett.

PR From Academics

Getting PR from academics may be easy for billionaires.

Academics aren't used to billions and billionaire access.
So giving them a pompous tour of a huge organization and a luxurious welcome may be an easy way to get good mentions.

Write the author:

> Harvard's Robert Kegan and the Wharton School's Adam Grant were separately granted audiences with Dalio and chaperoned into Bridgewater meetings. The access earned Dalio near-fawning sections in books by each man.

Grant, a psychologist who doesn't seem to disdain fame and accolades, wrote in his book *Originals: How Non-Conformists Move The World* (note: we removed the review):

> Although he has been called the Steve Jobs of investing, employees don't communicate with him as if he's anyone special," Grant wrote.
> Grant noted, "Bridgewater's secret is promoting the expression of original ideas."
> (…)
> Grant wrote that Dalio seemed particularly interested in "independent thinkers: curious, non-conforming, and rebellious. They practice brutal, nonhierarchical honesty. And they act in the face of risk, because their fear of

> not succeeding exceeds their fear of failing.
> “Dalio himself fits this description.”

Dalio’s Growing Fame Made Bridgewater Experience Even More Gaslighting

Talking about new joiners:

> For many, all they knew of Bridgewater at first were the laudatory media interviews of Dalio and the comparisons to Steve Jobs. T
> o show up and be presented with an atmosphere so radically different from the public narrative was to many not just a shock, but an incongruity (…) many others, rather than give up, turned inward, questioning themselves

A Therapist’s REaction to Bridgewater Culture

Sweet, a Bridgewater employee, went through therapy.

And this is what some therapists said of Bridgewater’s culture:

> one of his therapists compared the atmosphere to a feedback loop of self-destruction. Another therapist told Sweet it sounded as if the system had been designed by someone with Asperger’s syndrome.

Ray Dalio Went After The Author to Destroy His Credibility (And Career)

Says Copeland:

> He claimed that my coauthor and I never spoke to specific people with whom we had (…)
> He described me, not for the last time, as an aggrieved job applicant who couldn’t make it at Bridgewater, hell-bent on some sort of revenge.
> (…) He launched a yearslong witch hunt to root out people talking to me and other journalists, (…) He went after my job, meeting with my editors and pressing for my removal from covering the firm. (…) he released doctored correspondence (…) posted was an edited exchange
> (…)
> At around the same time, friends of mine noticed they were receiving paid Google advertisements about me, directing them to the Bridgewater website, where a press release blasted me personally.

And, following Dalio’s obsession of “making things public”, he wrote the author about his application to Bridgewater:

He responded forty-five minutes later, typo included, “Rob—I was referring to the time before that I’m [sic] 2010 when you tried to get a job as a MA and you were rejected for that job. We still have the notes that were gathered at that time which, if we get into it, we’d be happy to make public.”

It’s baffling to me how a multi-billionaire should even care about “making public” the notes of a single interview applicant.
Looking at Dalio’s public reply though, it does seem at least true indeed that, to him, it was a relevant and important factor that Copeland applied to Bridgewater (see Dalio’s public reply below).

Ray Dalio Reply

Ray Dalio addressed this book publicly.

In my opinion, it was another bad answer and another bad move.

In bold are what I felt were possible power moves:

Ray Dalio • 3rd+
Founder, CIO Mentor, and Member of the Bridge...
4d •

+ Follow • • •

I was asked what I think about the tabloid book about me and Bridgewater. While I don't want to divert my attentions from more important things, I do believe that I should take a moment to answer that question.

The book should be taken for what it is, which is another one of those sensational and inaccurate tabloid books written to sell books to people who like gossip. The only thing that's different about this one is that it's about me and Bridgewater. Like all such books, there is a backstory behind

> **Dalio**: I was asked what I think about the **tabloid book** (<— frame control 101: what you call things is the highest and most important frame. But he's obviously biased, so it's too obvious and it feels cheap) about me and Bridgewater.
> While **I don't want to divert my attentions from more important things** (<— tries to set a frame that "this book is not important" BUT… He still gives it a lengthy reply. So on top of it being another too-obvious power move, it also feels fake), I do believe that I should take a moment to answer that question.
> The book should be taken for what it is, which is another one of those **sensational and inaccurate tabloid books written to sell books to people who like gossip** (<— another obvious power move but, this time, the READERS are also his target. A bad, bad move. How about this reader here wanted to hear the other side of the story AFTER he had already seen some red flags?).
> (…)
> Like all such books, there is a backstory behind it. In brief, **the author applied for a job at Bridgewater and was rejected**. (<— seeks to frame the author as motivated by anger and revenge-seeking. But to make it so central feels, again, like a cheap shot. Also, not so effective. Most people apply to many companies before starting a career. But the author only wrote about Bridgewater)
> He (…) **made a career of writing distorted stories** about me and Bridgewater, at first in articles and now in this book.
> He did this by **speaking with former employees who had been dismissed**, seeking out negative rumors, and bending these into false narratives.
> Since he had no direct contact with the events he describes, he **obviously** took the tidbits he got from others and made up his descriptions of what happened to suit his objective.
> (…)

Overall, a lost opportunity to display some more magnanimity.
Or, at least, to shut up.
Instead, Dalio once again shows a bit of an angry and vindictive streak.

Who was the guy who was supposed not to have an ego, again?

Bridgewater reply

BRIDGEWATER

RESEARCH & INSIGHTS CULTURE PEOPLE WORKING AT BRIDGEWATER DIVERSITY, EQUITY, & INCLUSION OUR FOUNDER

Our Statement on a Recent Book About Ray Dalio and Bridgewater

November 4, 2024

Today a book about Ray Dalio and Bridgewater was published.

While we don't want to give this book more attention than it deserves, we feel compelled to state unequivocally that the overall narrative in this book is ridiculous and couldn't be any further from the truth. The exaggerated depiction attempts to take aim at who we are by painting a distorted and inaccurate picture through a series of strung-together stories. The result is a false and misleading

In bold the parts I find most telling:

> Today a book about Ray Dalio and Bridgewater was published.
>
> While we don't want to give this book more attention than it deserves, we feel compelled to state
> (…)
>
> The real Bridgewater is a company whose **overriding objective is excellence**, achieved through constant improvement. (…) **We've always held close to those values, even as we have evolved as a firm**. When we completed the transition from Ray to the current leadership team in 2022, **we updated our philosophy statement to better reflect our values today** — Bridgewater's Idea Meritocracy. We are continually improving as an organization; that is what is required to be successful. We do not shy away from criticism when it is valid and honest. When we make mistakes, we acknowledge them, hold each other accountable, and evolve. That is a core component of our culture. Our people, clients, and shareholders demand it, and our mission of understanding markets and economies requires it.
>
> (…)
>
> While we are disappointed by this book's false and misleading depiction of our past, we could not be more energized about our future. As we envision Bridgewater's next 50 years, we do so, building on the legacy and successes of our past as we seek **to create something even better than we had** before. **Bridgewater is now overseen by its Operating Board of Directors and a dynamic and diverse leadership team**. We are focused on innovating and delivering for our clients and remain steadfastly committed to our shared values.
>
> For further transparency, here is the email that CEO Nir Bar Dea (<—- bad move. Feels defensive and "trust scalping". It's not like the CEO wrote his email without thinking it would either be published or leaked) sent to Bridgewater employees on November 7, 2023.

Not perfect, but much better.

I see here several hints that **Bridgewater wanted to distance itself from Dalio and his times as CEO**.

Notice that **the only reference to the original culture is excellence, NOT any "system" or "believability**

rating”.
And not how **the reply stresses the *evolution* from the past rather than defending and sticking to that past**.
It’s about the *updates* on the old culture, and the references to having *evolved*.
And notice the reference to the *current* diverse leadership -no one-man show, no politburo of loyalists anymore? :)-.

Why is that so telling?

Well, think how someone who’s proud of their past and founding culture would speak.
If you’re proud of the past, chances are you would mention and *own* that past a bit more.
You may even clearly say that you’re *proud* of it.

For example, If Ferrari had been embroiled in a similar scandal I’d bet they’d mention and defend Enzo.
They may even say that the sanguine spirit of Enzo Ferrari still lives in them -Ferrari even called one of their supercars Enzo-.

This Bridgewater’s message instead suggests the opposite.
To me, it says that **deep down the writer(s) may have had a bad experience and opinion of Dalio and old Bridgewater**.

Just my opinion, of course :).

Practical Takeaways

If Your Salary Is Lower, Don’t Share It In Job Interviews

Ray Dalio regaled McDowell on Bridgewater’s culture of honesty and frankness.

Then, he told him he’d make more than a million dollar in his first year.

And then, he asked how much he was making at the moment:

> (..) and in the spirit of the honesty the two men had just pledged, **McDowell answered truthfully: Bridgewater’s base salary alone was $100,000 higher** than his current pay.
> **“Okay, actually, then that’s what I’ll pay**. I only pay people what they’re currently making,” Dalio said airily.

LOL :D
A more socialist commentator may say here: don’t expect anything else from a billionaire :).

Learn the interview techniques here:

- **How to interview**

> How to Prepare For An Interview: 6 Tips To Get The Job

Don’t Compliment Others In Front of Narcissistic Bosses...

… Because THEY want to be the only shining star.

So the only way to compliment others it’s by carving out some credit for them as well.

For example:

> This business you founded is SO good at attracting talent.
> X new manager is fantastic.

> You're getting busier and busier as we grow, boss. Do you think I could report to her going forward and save some of your time?

Only Use High-Power Language With CEOs

Quoting from *The Fund*:

> "I've tried," the lawyer said.
> "People who only try are useless to me," Dalio responded.
> The new hire took the weekend to think and apparently decided there were certain limits to what he would tolerate for a paycheck. He was raised to be a gentleman, and this was no way to act.

I actually disagree here both with the author, and with this new hire.
This was a power mistake.

You don't tell "I tried" to a CEO when you're leading an important change project that the CEO wants.

Learn better in this article:

- **Exec skills: the power principles**

> 17 Tips to Exude Exec-Level Confidence at Work

Never Go Back To The Wolf's Den

Ray Dalio tried to get Stevanova, an employee who had left the firm, back for questioning.

"Come to me" is an obvious power move.
And when "come to me" means going back to the man's headquarters, main power center, and also your old location of subordination and powerlessness, avoid it.

Stefanova was smart enough to know that.
She made good excuses and in the end managed to meet at a neutral location, while also maintaining rapport.

That's textbook "how to successfully manipulate a manipulator".
See more here:

> How to Manipulate a Manipulator

DOUBTS, CONS, NOTES

Some passages felt to me hard to believe.

In a few instances, I felt some choices of words were a bit "sensationalistic".

To be clear:

What I found hard to believe is not necessarily an issue with the original author.
It can be an issue with the *sources*.

Also, this is not to say none of these can happen in reality.
It's just that, to me, some of them sound so extreme, almost psychopathically comical, that they're hard to believe.

I Found Some Events Hard To Believe

Some examples:

Make Campbell Cry. Then Share The Video With Everyone

In one of the “firing squad committee”, an employee was overcome by emotions.

He start sobbing, then left the room to cry.

Dalio shared the video with the company.

Dalios Fires An Employee. Organize His Goodbye Part. Give Him His Worst Feedback As A Gift

For another employee, organize a goodbye part.

And, as a gift… Givin gift him lucide-encased copies of his negative feedback.
With Dalio’s self-help comment that “the best gift anyone can receive is knowledge of their own weaknesses.”

This all seems to be so emotionally blind and insensitive.
Or… Psychopathic to the core.

Dalio Yells At Professor Ferguson

Dalio allegedly yelled at Professor Ferguson when he dared to criticize his model.

Then, he asked the crowd “who won the debate”.
Dalio had never debated anything. He had only allegedly yelled at the professor, and acted like a dick.

Dalio Gives A Wedding Speech… And Implies The Bride Is “Loose”

> Dalio, standing up to speak, pulled out his iPhone and began reading from prepared notes.
> (…) it seemed to be shaping up as a toast one would give his or her son.
> That was, until Dalio turned to address Powell. “David can be anything he wants—including president of the United States, and he found a person: the best party girl in America.”

Seems one of those things you hear in movies, but rarely in real life.

Some Descriptions Felt Unfair To Bridgewater As A Business

Bridgewater managed to become the biggest funds in the world.

It certainly must have had some merits, even if it was only during its launch phase.

And to be sure, the author does give credit.
Including crediting Dalio’s “smart social strategies” -where there is much to learn from, by the way-.

And still, some passages felt a bit too dismissive.
For example:

Dalio Calls All The Shots From The Phone

> There was essentially no grand system, no artificial intelligence of any substance, no Holy Grail. There was just Dalio, in person, over the phone, from his yacht, or for a few weeks many summers from his villa in Spain, calling the shots.*

Well, Dalio still did great in his first years.
It was either luck, or he was smart.
And it's still somewhat tough to believe that a workaholic like Dalio would casually drop in to manage the biggest hedge fund in the world.

Secrecy & Control: Bugs & Every Attachment Had To Be Approved?

About the heavy control:

> Staffers who left their desks even briefly would return to sticky notes left on their computer monitors admonishing them for failing to put up a screen saver. Keystrokes and printouts were tracked. Custom hardware allowed the copiers to keep a record of every photocopy. Even i**ncluding an attachment on an email had to be approved one by one**.

And about recording everything:

> As Comey's search for office bugs indicated, **most Bridgewater employees had a quite reasonable fear of being listened in on**, whether at Bridgewater's offices or beyond it. (…)
> For everyone else, when personal calls had to be placed during company time, many trudged out of the office and into the surrounding woods. That lasted roughly until **a rumor circulated inside the fund that Comey's team was studying how to install devices in the trees that could intercept phone calls** before they reached surrounding cell phone towers.

Anything of the above is not technically impossible, of course.

But some of it feels hard to believe.
And some of it feels like simple speculation from overly cautious -or paranoid- employees.

To me, the rumors of listening devices in the woods say more about human's tendency to believe in conspiracies, than about Bridgewater's plans and modus operandi.

Using those rumors as the sign that Bridgewater is untrustworthy is equivalent to saying that governments or Bill Gates are untrustworthy because some people said that Covid vaccines were planned to sterilize the population.

Criticism of Bridgewater Recent Years Performance

I don't see the poor performance of Pure Alpha latest years as a huge indictment to the investment methodology or approach.

As the author said himself, the fund seems to be mostly geared to be defensive.
Gain little in the upswing, not lose too much in the downswing -or even profit from them-.

I frankly also believe there's nothing special with Dalio's investment acumen.
But still, I believe the author would have gained credibility if had added a note that recent performance provides little evidence for or against Bridgewater's investment approach.

Some Sensationalism Over Fact-Presentation

One passage says:

> His grand automated system—his economic machine—wasn't nearly as automated or mechanized as was promoted. **As much as 10 percent of Pure Alpha's** invested assets, comprising billions of dollars, b**oiled down to Dalio's instinct and ideas**, period. They were his orders.

There is nothing wrong with this sentence.

Still, the way it's written, it can feel like an attempt to make a possible fact or quote sound more impressive than it really is.
As much as 10% still leaves 90% out *at least.*

And since most people invested in the fund as much as in the man, I also don't think that most of Bridgewater's customers would have had anything against Dalio calling some shots -at least the Dalio they thought they knew, but that's a different issue-.

To be fair and precise, I haven't seen many of these rhetorical devices in *The Fund*.

Isn't There Anything Positive About Dalio... ?

…. And adding something positive may have added credibility.

I may not have the highest opinion of Dalio.

But I also think he did add value to a lot of people.
And many of his principles are good, independent of how poorly or not he may have applied himself.

He may be a man who wanted to do good, *see* himself as good… And failed to even realize his mean streak and dark side.

He helped some along the way, helped himself a lot… And also harmed some others.

Maybe the author, knowledgeable of the dark side, was irritated by the public adulation of Dalio.
I get that and I'd feel the same when the masses fall for this or that guru.

Or he may have thought, probably with good reasons, that there was already enough positive PR for Dalio. And that focusing on the bad only would better balance things out.

Still, adding at least some positives may have made the book more credible and authoritative.
But, maybe, also less of page-turner, and that's understandably not good for marketing :).

QUOTES

On Dalio teaching… And keeping the best grade for the teacher himself :)

> She sat in awe at a series of internal lectures from Dalio on conceptual macroeconomics, as he held forth for hours on the linkages between investment cycles in history.
> It was fascinating stuff.
> Dalio awarded her the highest grade in the course: an A-minus.
> Practically no one received an A, which Dalio told her was a score he could typically award only to himself.

How a high self-esteem man reacts to Dalio's gaslighting-like response to criticism:

> Dalio blamed himself.
> It's my fault, the Bridgewater founder said, for expecting you to appreciate such a complex system so quickly. The Principles could not simply be memorized and then instantly absorbed—the only way to understand them was to live them. Dalio called The Principles "the way of being."
> It was around this time that Rubinstein thought to himself, *Shit.*

How to strategically answer to manic self-help gurus:

> "I welcome your probing, Ray. I imagine you'll find all kinds of flaws and all kinds of things that I should have

> been doing better. It'll be painful, but I'll be better as a result."
> That wasn't the answer Dalio seemed to be expecting. That would be a win not by knockout, but by forfeit.

… Except it didn't work because, as per book's narrative. Dalio WANTED to humiliate and embarrass his victims :).

On the "system" being gamed by fawning to Dalio:

Those at Bridgewater who had been rated highly believable in certain areas didn't earn those scores through any complicated algorithm of artificial intelligence.
They earned it by being an artificial Ray Dalio.
The secret to becoming believable at Bridgewater was to model oneself after the only man who mattered.
Bridgewater didn't run on believability. It ran on believers.
"Ray, this is a religion," Rubinstein said.

Ray Dalio had a poorly earned status for correct predictions:

> (…) in the aftermath of the dot-com bubble burst, when Dalio earned media acclaim for predicting it (few reporters noted that he had made the same call virtually every year).

On Dalio (ab)using the believability system to win:

> He turned to the dozen or so people in the room. "How many people think that Dave is looking at this the right way?" One of Dalio's assistants furiously typed the prompt into her iPad, creating an instant poll for those in the room. The verdict was that Ferrucci was looking at it wrong.

A typical gaslighting power move:

> (…) Elliott told Dalio he was considering resigning. The Bridgewater founder seemed shocked that Elliott had taken the remarks so personally. "Are you crazy?" (….) Dalio suggested the younger man needed psychotherapy.

Dalio seemed oblivious to his dark side.
For example, an interesting frame control battle with an executive:

> McCormick cut in, "I have something I'd like to say first. I've been in combat. I've had men under me, when we were going into a life-and-death situation. The only way we could do that as soldiers is to know that we had each other's loyalty. I don't feel like I could go into combat here because you're giving Julian the time of day on what he said."
> "It's not about loyalty," Dalio responded. "It's about truth."

REVIEW

The Fund is a supremely captivating read.

So props and hats off to Copeland *at least* for his fantastic writing skills.

That's an important plus.
But even more important to us would be:

How true is *The Fund*?

My Take On The Truth

Now comes the difficult part.

Let me preface I have zero knowledge about any facts.
I have never spoken to any single person in Bridgewater.

Hence, my proverbial 2 cents here isn't even worth 2 cents.

Keep that in mind.

Another important caveat:

If anything wasn't true, it may not be the author's fault -and probably it isn't-.
Dalio may have a point that bitterness was a factor in making up or exaggerating facts. But, in that case, in my opinion, it would be more likely to be biased *sources*, rather than the author.

Now, that being said…

From the lownesses of my ignorance, some parts were challenging to believe.
On the other hand, **I believe that at least a portion of Ray Dalio's foibles and Bridgewater's cultish culture may potentially be true**.

My interpretation is based on the little I've seen from Dalio, on general knowledge of human psychology, and on the foundational concepts of power dynamics we teach here.

For example, I had already noticed some red flags in Dalio.
We listed in a popular article on business manipulation how some of Dalio's principles may turn ruthlessly destructive towards employees.
And I **posted my reservation about Dalio long before *The Fund* came out** as a commentary to Dalio's reply to the Wall Street Journal.

And just as the author says, **Dalio seemed to be think-skinned, over-reactive, and utterly oblivious to his own darker side**.
To me, Dalio's reaction also seemed to confirm that he was not only interested in power, but also oblivious to his own darker side.
Exactly what's shown in *The Fund*.

The book then seems to add a few more pieces that, from a psychological and power dynamics point of view, also seem to make sense.

That's my opinion as an external, clueless observer.
You're very welcome and even encouraged to ignore it and develop your own.

And you can do that by reading *The Fund* for yourself.
It's a highly recommended read.

If Dalio, the author, or Bridgewater want to weigh in, I will add their notes here below.

Check the **best books** to read or **get this book on Amazon**.

The Art of Strategy: Summary & Review

Lucio Buffalmano · 2 January 2024 · Archived copy · Original

The Art of Strategy (2008), introduces game theory and its applications to thinking, strategies, effective life and business choices, as well as social-level dilemmas.
The book updates and expands the authors' previous book *Thinking Strategically*.

- REVIEW

Exec Summary

- Focusing on competition only is a major strategic (and mindset) mistake
- Cooperation is foundational to life and business success
- Good strategy is to maximize the scope for cooperation, while minimizing the scope for cheating (from others, at least)
- Good strategy MUST include psychology

FULL SUMMARY

About the Authors:
Barry J. Nalebuff Barry is a Professor of Management at Yale School of Management and specializes in business strategy and game theory.
Avinash K. Dixit hols a B.Sc. in Mathematics and Physics, and a Ph.D. from the Massachusetts Institute of Technology in Economics. He is a Professor of Economics at Princeton University.

Win-Win Is Crucial (The Authors Found Out)

I found the intro to the new edition to be a little pearl of wisdom in itself:

> When we wrote *Thinking Strategically*, we were younger, and **the zeitgeist was one of self-centered competition**. We have since come to the **full realization of the important part that cooperation plays** in

> strategic situations, and how **good strategy must appropriately mix competition and cooperation**.*

Yep, 100%.
Approaching life with competition-only in mind is a recipe not only for *lack* of success, but also for an unfulfilled life.

Cooperation Must Take Place Even With Selfish Interests

Adds the authors on defining strategy:

> We started the original preface with: "Strategic thinking is the art of outdoing an adversary, knowing that the adversary is trying to do the same to you." To this we now add: It is also **the art of finding ways to cooperate, even when others are motivated by self-interest, not benevolence.** It is the art of convincing others, and even yourself, to do what you say. It is the art of interpreting and revealing information. It is the art of putting yourself in others' shoes so as to predict and influence what they will do.

In Business, Let Others Make Risk The First Move

> There are two ways to move second.
> You can imitate as soon as the other has revealed his approach (as in sailboat racing) or wait longer until the success or failure of the approach is known (as in computers).
> **The longer wait is more advantageous in business because, unlike in sports, the competition is usually not winner-take-all**. As a result, market leaders will not follow the upstarts unless they also believe in the merits of their course.

Negotiate With Psychology In Mind

The authors tell a story of negotiating with a taxi driver.

Then the taxi driver heard about the book and explained WHY he drove them back:

> My meter was broken, but you didn't seem to believe me. I was too tired to argue. When we arrived, I asked for 2,500 shekels, a fair price. I was even hoping you would round the fare up to 3,000. You rich Americans could well afford a 50¢ tip.
> I couldn't believe you tried to cheat me. Your refusal to pay a fair price dishonored me in front of my wife. As poor as I was, I did not need to take your meager offer.

The authors forgot that people have such a thing as honor, and crave (basic) respect.
Read more in our article on how to power protect:

- **Power protecting**

> Power Protecting: How to Keep Win-Win With High-Value People

P.S.:
No, the author never received that later, they later admit.
BUT the principle still applies.
Indeed, here's more actual scientific evidence for this principle:

High Power & High-T Men Break Game Theory's Rules

… Unless you add psychology to the mix.

Say the authors (note in parenthesis is mine):

> Some biological evidence for rejecting unfair offers comes from an experiment run by Terry Burnham.
> In his version of the ultimatum game, the amount at stake was $40 and the subjects were male Harvard graduate students. The divider was given only two choices: offer $25 and keep $15 or offer $5 and keep $35. Among those offered only $5, twenty students accepted and six rejected, giving themselves and the divider both zero. Now for the punch line. It turns out that **the six who rejected the offer had testosterone levels 50 percent higher than those who accepted the (unfair) offer**. To the extent that testosterone is connected with status and aggression, this could provide a genetic link that might explain an evolutionary advantage of what evolutionary biologist Robert Trivers has called "moralistic aggression."

This is evidence that you want to power protect more with high-power people.

The 3 Rules of Game Strategy

The rules as written by the authors:

1. **Look forward and reason backward**
2. **If you have a dominant strategy, use it**. A dominant strategy is the best choice for a player, regardless of what the other players decide to do
3. **Eliminate from consideration any dominated strategies and strategies that are never best responses, and go on doing so successively**

Obviously, the authors are smart men.
And they wrote the rules for other high-IQ men, rather than in a more appealing mass-market format :)

Rule #1 seems to be the most significant to me:

Rule #1: Look Forward & Reason Backward (Anticipate Their Moves)

> The general principle for sequential-move games is that each player should figure out the other players' future responses and use them in calculating his own best current move.

The authors call the rule "**Look forward and reason backward.**"

Encourage Cooperation & Discourage Competition

This is the approach we have taken since our inception.

And the same approach Power University has taken since its first version.

So it was good to see that two game theory experts reached the same conclusion.
Say the authors as they start their review of game theory tournaments:

> The reason tit for tat won the tournament is that it usually **managed to encourage cooperation whenever possible while avoiding exploitation**.
> The other entries either were too trusting and open to exploitation or were too aggressive and knocked one another out.

Tit for tat always strikes back when others cheat.

And it never cooperates again with cheats.

The authors say that this strategy can even be improved with MORE cooperation.
Say the authors:

> In spite of all this, we believe that tit for tat is a flawed strategy.
>
> The slightest possibility of a mistake or a misperception results in a complete breakdown in the success of tit for tat. This flaw was not apparent in the artificial setting of a computer tournament, because mistakes and misperceptions did not arise. But **when tit for tat is applied to real-world problems, mistakes and misperceptions cannot be avoided, and the result can be disastrous.**
>
> What tit for tat lacks is a way of saying "Enough is enough." It is too provocable, and not forgiving enough. And indeed, subsequent versions of Axelrod's tournament, which allowed possibilities of mistakes and misperceptions, showed other, more generous strategies to be superior to tit for tat.*

Basically, the authors are saying that **in real life it pays to at least *try* to break a "vicious cycle of nasty escalation and revenge"** that leads to lose-lose.

This is also a concept we incorporate in Power University, including how and when to use it.

Takeaways From Game Theory Experiments

1. **Cooperation occurs significantly often**, even when each pair of players meets only once
2. **People love punishment of "social cheaters"**
3. **Punishment of cheats increases cooperation** and the contributions in the first phase of the game dramatically

How to Achieve Cooperation

This is a bit complex since *The Art of Strategy* seems to have two sections on cooperation.

I'll try to combine them:

1. Ability to **detect cheats**, best of all if done automatically
2. Ability to **punish cheats**
   - Adequate size of punishment, that must discourage cheats. But punishment can be too big. Nuclear deterrent for example is not a good punishment for many crimes since it may never be used
3. **Clarity** of "good behavior" and consequences for not following it
4. **Certainty** of rewards and punishments
5. **Repetition**, the longer the exchange, the higher the incentives to cooperate. The shorter the relationship, the higher the incentives to cheat
   - Future opportunity considerations: for example, a growing business may expect to lose even bigger in the future by cheating now. If they instead think they're struggling and may die, the incentives to cheating are higher
   - Stability of players over time. The more the players stay the same, the more cooperation is likely. The bigger the churn, the higher the incentives to cheating
6. **No clear final step**, because that final step would remove the payoffs of further cooperation, and increase the payoffs for cheating

Threats VS Promises

There are some advantages to threats:

> **A threat can be less costly;** in fact, it is costless if it is successful. If it changes the other player's behavior in the way you want, you don't have to carry out the costly action you had threatened.
> **A promise, if successful, must be fulfilled**—if the other player acts as you want him to, you have to deliver the costly action you had promised.

If you use a threat, always start at the smallest level, and increase over time.
This is a concept we also use in Power University on "how corruption works".

MORE WISDOM

Game theory MUST include psychology

Say the authors:

> Some people question how we can apply logic and science to a world where people act irrationally. It turns out that there is often method to the madness.
> Indeed, some of the most exciting new insights have come from recent advances in behavioral game theory, which **incorporates human psychology and biases into the mix and thus adds a social element to the theory. As a result, game theory now does a much better job** dealing with people as they are, rather than as we might like them to be.

The hot hand may not be a fallacy

Top players and players who've had a winning streak may not score more.
But they can exhaust more resources from the opponents who have to spend more time worrying about them. And

that may leave some other teammates freer to exploit more opportunities.

Show, Don't Explain

Whenever you can, make people *feel* the answer in their bones:

> Khrushchev first denounced Stalin's purges at the Soviet Communist Party's 20th Congress.
> After his dramatic speech, someone in the audience shouted out, asking what Khrushchev had been doing at the time.
> Khrushchev responded by asking the questioner to please stand up and identify himself. The audience remained silent. Khrushchev replied, "That is what I did, too."

This worked great because Khrushchev made the heckler -and the audience- feel the fear.
Now his answer of why he didn't speak up was obvious to anyone *in their bones*.

Collusion of Low-Power Followers Is A Great Strategy Against Bad Bosses

In this case study, the despotic bosses are parents:

> Imagine that parents want each of their children to visit once and phone twice a week. To give their children the right incentives, they threaten to disinherit any child who fails to meet this quota.
> (…)
> The children recognize that their parents are unwilling to disinherit all of them. As a result, they get together and agree to cut back the number of visits, potentially down to zero.

Education Is Costly Signaling

People saying that a degree is useless are missing the point.

Say the authors:

> Skills needed to succeed in particular firms and specialized lines of work are often best learned on the job.
> What employers cannot easily observe but really need to know is a prospective employee's general ability to think and learn.
> A good degree from a good college acts as a signal of such ability. The graduate is in effect saying, "If I were less able, would I have graduated Princeton with honors?"

The authors also say that this costly signaling only leaves the *colleges* better off.
Everyone else bears the costs of that wasteful signaling.

So, should you go to college?
Well, turns out, there are some other advantages besides learning and signaling:

QUOTES

> Most armies would be finished if each soldier on the battlefield started to make a rational calculation of the costs and the benefits of risking his own life.

Also read our case study: why great leadership is great manipulation.

On "enlightened collusion" for peaceful co-existence:

> But was the escalation of the superpowers' nuclear arms arsenals all that different? Both incurred costs in the trillions of dollars in quest of the "dollar" of victory. Collusion, which in this case means peaceful coexistence, is a much more profitable solution.

CONS

The Art of Strategy is a fantastic book.

Some notes I feel like adding not just to the book, but to game theory in general:

Game theory without psychology is utterly useless

OK, OK, this title is provocative.

But hear me out.
Experiments with *actual people*, the authors themselves show, break one of their own major "rule" of optimal behavior:

> Therefore the logic of dominant strategies applies to the 99th round. And one can work back this sequential logic all the way to round 1.
> But **in actual play, both in the laboratory and the real world, players seem to ignore this logic and achieve the benefits of mutual cooperation. What may seem at first sight to be irrational behavior—departing from one's dominant strategy—turns out to be a good choice**, so long as everyone else is similarly "irrational."

This is not to say that game theory is irrelevant, of course.
It's a fundamental discipline for a website like this one -which is all about providing strategies and approaches to succeed at life-.

But in my opinion, it means that, ultimately, **psychology comes first when it comes to succeeding with humans.**

The authors quip a little later about the "danger of bargaining with those who haven't read our book".
And to me, no, it just shows the limitations of game theory in real life :).

Sometimes Game Theory Can Be Too Stifling To Come Up With Creative Solutions

For example, take the "game of chicken" of two men driving their cars towards each other.

The options are only swerving or not swerving IF you remain locked in the simplistic game theory approach.

But there is also slowing down, or even stopping in the middle of the track.
In extreme cases one may even ride with an inflatable suit and *jump* out of the car.
Or a wealthy man may run with a spider car and have an ejecting seat mounted just for winning that game.

These solutions come to mind only once you abandon the game theory approach.

REVIEW

The Art of Strategy is one of the best books on more practical game theory, with solid insights to improve strategic thinking.

Many of the social strategies and thinking patterns align with what we teach in **Power University**.

Its main limitation is that, like most game-theory texts and despite seeking to be more practical, it can still remain too abstract to apply in day-to-day social life.

Despite its value, there's still no comprehensive resource that fully bridges the gap between strategic theory to learning *how* to think strategically, and real-life application.

It deserves 5/5 for the theory and philosophy. But something is still missing to bridge from game theory, to strategies and strategic thinking skills that achieve goals.

That's where **Power University** comes in—translating abstract concepts into actionable strategies you can use in everyday situations.

Get it on Amazon or check the **best books** to read.

The Art of Strategy Summary: 3 Rules to Outplay Enemies

The Art of Strategy (2008), introduces game theory and its applications to thinking, strategies, effective life and business choices, as well as social-level dilemmas. The book updates and expands the authors' previous book Thinking Strategically.

4.7

Principles Life & Work: Machiavelli's Version

Lucio Buffalmano · 8 January 2024 · Archived copy · Original

Ray Dalio wrote *Principles*.

It's a *fantastic* book.

But it's a bit aspirational sometimes.
And you should temper it with human nature and foundational power dynamics.

So to avoid that you may fall for naive self-help pitfalls, we over-correct here with more cynical principles.

These principles will not sound as good. But they may work better

Machiavellian Principles

In red are the original principles.
In bold, the Machiavellian version.

- Be a hyper-realist
  - **Be a hyper-realist, don't believe BS aspirational principles**. Everyone wants more power, money, and women

… Including your billionaire boss turned into "I walk into the woods to give you principles" guru.

Ray Dalio says he came to despise "impractical idealism".

Well, we're the same.

And we believe some of the original principles ARE impractical idealism.

Including:

It's impractical idealism to believe that Dalio -or anyone else- appreciates "hyper-realism" that disempowers them.

- Look at nature to learn how reality works
  - **Look at nature where the only laws are self-interest and power**

Nature is governed by very simple principles of the selfish gene.
And the power to actualize -or not actualize- what's good for the selfish gene.

End of it.

Actually… We're the first to say here that it doesn't 100% end there.
There is a lot more.
Including real affection, love, and even selfless behavior.

And still…

The foundations are still selfish genes.

So ask yourself:

what better describes reality, the basic principles of nature, or the principles your boss came up with?

- Be Radically Open-minded
  - **Be *skeptically* open-minded**, and *definitely* not to the point that your brain falls off.

A thousand fools are born every minute, don't listen to them.
And a thousand smart men want to manipulate you, lead you, or take from you. Starting from those who deny their own selfish motives. So be skeptical.

Be particularly skeptical of those who profess to be "radically open-minded" and to have no ego.
Often, they're only oblivious to their own dark side, to their will to power… And to their vindictiveness if you cross them.

- Power Comes From Knowing How We're Wired
  - **Power comes from knowing how to get what we're wired to want**

Dalio only got into his guru-days after he was a billionaire. And after he had his belly full of everything he always wanted.
So first focus on getting what you want.
THEN you can join Dalio in all sorts of mental ~~mast~~… Pursuits.

- Use Principles
  - **Always rely on the basic principles of human selfishness and will to power**, be skeptical of anything else

We said this in our review of *The 48 Laws of Power*.
Maxims can be useful, but there are no laws that will *always* apply to maximize your odds.

If we go by *The Fund*, Ray Dalio was the first to amend, delete, or add new principles.
By the most cynical interpretations, Dalio changed them based on how it best suited him.

So, trash any law or principle liberally whenever it suits you.
You can always come up with a BS good-sounding rationale later on.

- Realize You Have Nothing to Fear Saying The Truth
  - **Realize you have nothing to fear saying what others want to hear**

That original principle is so obviously ineffective in so many situations that we don't even need to waste time on it.

- Have Integrity and Demand it From Others

- **Never expect others to do what's best for you because it is "the right thing to do"**. Better believe they will cheat if they can

Our Machiavellian principle this time is too cynical.

Luckily, many people have integrity.
And we encourage to be one.

At the same time, it is best not to count on it.
And it is safer to expect people you don't know to *not* have integrity.

It's safer to expect people to cheat whenever cheating becomes too easy, or too rewarding to say "no".

Finally, hello:

Of course it's convenient for the *owner* if *his employees* have integrity.

- Be radically transparent
  - **Be *selectively* transparent to get a reputation for transparency**. Then hide your weaknesses and promote your strengths

And never trust anyone who pushes you to be radically transparent,

- Be loyal to the common mission
  - **Be loyal to yourself**

Of course any founder and organization gains when people are loyal to the common mission.

But… Do you?

Also, this is BS value that sounds good only at first read.
Reflect a bit more on it, and it's truly just power of the group *over the individual*.

Whether this is a good vlaue or not depends entirely on whether the mission adds value to humanity or not.
Among history's "common missions" we can list some of the most barbaric acts humanity has ever recorded.

- Pay More Attention To Fairness of System Than Getting Your Way
  - **Pay attention to get it your way. Then spin it as "fair"**

Ultimately, that's what Dalio also wanted: getting his way.

Hello, what do you think all his work on principles stem from?
He wanted to get richer, more powerful, more famous.

And… *there is nothing wrong with it.*

Some people, and hopefully Dalio included, want to do that win-win.
Such as, they get what they want, and others are also better off.
It's also the way we prefer it here.

But if getting it his way would mean that some others would be worse off for it… Do you think he'd have stopped?
I hope so.

But still, most bosses and founders would rather find an exception to their principles. Even if that means the process is "less fair". Or maybe "just for this one time".

So don't count on the system being the ultimate decision-maker when you're going against the boss.

Only a naive person would believe that.

Subscribe to our newsletter for life principles that work, and let's move forward:

- Principles Can't Be Ignored By Mutual Agreement
  - **You're the boss. As long as you gain… F*ck the principles**

Just ask yourself:

Who gains when you pay the price to obey your boss' principles?
The company and the owner.

And maybe sometimes they *do* deserve to gain and come first.

But… Maybe not always.

And who says they're any worthier than you are anyway?
Oh yeah, right… They say that :)

- If People With Power Don't Obey The Principles, The System Will Fail
  - **Come up with principles that are good for you, so that you can always obey them**. Then, you masterfully spin those principles to make them sound virtuous and "good".

As a rule of thumb, always be skeptical of any principle that goes against the owners, founders, and bosses.
It's not even about bad bosses. It's about human nature.
Human nature will always put one's best interest before "principles".

And attention:

If a principled boss loses by sticking to their principles, they'll still resent you for it.

And you will always pay for it.
At best, you lose social capital and future opportunities.
At worst, they will come up with some reasons why you're falling afoul of the principles and must go.

So, again, put human nature before any principle.

- Tough Love is The Hardest and Most Important Type of Love
  - **Tough love only works from top to bottom, never the other way around**

So don't count on this BS to deliver some "tough love" feedback to your boss.
99% of people will not appreciate 99% of the time.

- Don't Hide Your Observations About People
  - **Be strategic with your observations, and keep most of them for yourself**

The original principle is so out of touch with reality to be laughable.

- Recognize and Deal With Key Man Risk – Every key person should have at least one person who can replace him
  - **Make sure you are irreplaceable – and charge accordingly**. Guard the secrets of your high-performance as the main source of your power

This is basic conflict of interest.

The company wants you replaceable so they can boss you around in negotiations.

You want the opposite.

If the business puts people around you to learn from you, never teach them anything unless you're gaining from it.

- Escalate when you can't adequately handle your responsibilities . . .
  - **If you need to escalate make sure you look proactive rather than incapable** -if necessary, take credit for prompt escalation and lay the blame of failure on someone else

Another basic conflict of interest at work.

The business gains with prompt escalation.
After all, your manager gets paid the same whether you escalate promptly, or not.

But unless you're strategic with escalations you may look like someone who can't handle his job.

- A Great CEO Is Not As Good As a Group of Great Leaders
  - **Let hippies share. You go for sole leadership**

The original principle may have some merit –*may*!-.

But it's still somewhat suspicious because the founder retains more power with many "CEOs", rather than one.

Also, a single CEO can eclipse a founder if he shines bright.
But with many CEO… The founder maintains power.

See some possible conflict of interest there? :)

Summary

We've been inspired by this article after reading *The Fund*.

The therapist of one of Bridgewater's employees said that Dalio's system was designed by someone with Asperger's syndrome.

That sounds a bit mean.
There is plenty of genius in Dalio's principles -we truly believe that.

But self-help is not always the most effective to advance in life.
And the therapist's take is still valid.
Plenty of these principles just don't work well with human nature.

And, if taken too literally, these principles may also create unnecessary conflict.
The costs of those conflicts will always be borne out by those with the least power.

Indeed, many of these principles are designed to make *the company* better off.
And not necessarily the employee.

So our principles take the opposite side.
The side of a cynical and Machiavellian employee.

Power University teaches how to marry Machiavellianism for personal success, with win-win

The Almanack of Naval Ravikant: Summary, Review, & Criticism

Lucio Buffalmano · 15 January 2024 · Archived copy · Original

The Almanack of Naval Ravikant compiles many of Naval Ravikant's insights on how to build wealth, happiness, and a good life by focusing on the few essential mindsets, skills, and habits that make the biggest difference.

Exec Summary

- Wealth is a skill
- Happiness is a skill
- Find the 1% that makes all the difference, and go all-in

FULL SUMMARY

About the Author:
Naval Ravikant is a popular figure in Silicon Valley and startup culture of the early 2000s.
He founded several successful companies and invested in some more.

1. People Respect Naval Because He Talks Straight

I find this passage interesting from a social skills and status point of view:

> He can be as blunt as a foot to the face, but that's part of what I love and respect about him: **you never have to guess what Naval is thinking.**
> I've never had to guess how he's feeling about me, someone else, or a situation. **This is a huge relief in a world of double-talk and ambiguity.**

I think it says a lot about the benefits of what we call here "straight talk".

To learn to talk straight, Naval advice, "simply start telling it how it is".

2. Apply The 80/20 Rule

Only 1% of what you do in life will make a big difference.

You never know in advance what that 1% is.
But the 99% is about finding it.

When you do find that 1% though, go all in.

3. Making Money Is A Skill

> I like to think that if I lost all my money and you dropped me on a random street in any English-speaking country, within five or ten years I'd be wealthy again because it's just a skillset I've developed that anyone can develop.

4. To Get Rich, Add Value

> You will get rich by giving society what it wants but does not yet know how to get. At scale.

And:

> Money is how we transfer wealth. Money is social credits.
> (…)
> If I do my job right, if I create value for society, society says, "Oh, thank you. We owe you something in the future for the work you did in the past. Here's a little IOU. Let's call that money."

Scientists Add The Most Value

> I view scientists as being at the top of the production chain for humanity. The group of scientists who have made real breakthroughs and contributions probably added more to human society, I think, than any single other class of human beings.

I see it the same way.

Though here Naval's take of "value creation = money" breaks down because most scientists aren't super wealthy.

So, in truth, value creation is part of money-making, but not sufficient in itself.
Good strategies and the power principles we teach here are also part of that equation :).

5. Play for The Long Run

Whether in business or relationships, the best comes from long-term exchanges.

Naval uses the game theory expression of "iterated games":

> Play iterated games. All the returns in life, whether in wealth, relationships, or knowledge, come from compound interest.

6. Good Thinkers Know The Basics

> The really smart thinkers are clear thinkers. They understand the basics at a very, very fundamental level.

Agree.
I would add that even beyond the fundamental, clear thinkers are systemic thinkers.
They can put things in perspective because they understand how the whole structure-theory fits together.

7. Business Networking Is a Time Waste

> I think business networking is a complete waste of time (…) if you're building something interesting, you will always have more people who will want to know you. Trying to build business relationships well in advance of doing business is a complete waste of time. I have a much more comfortable philosophy: "Be a maker who makes something interesting people want. Show your craft, practice your craft, and the right people will eventually find you."

Our note:
This is a generalization of course.
While Lucio largely took that approach, it cannot be generalized. It may be true if you're sure you're going to build something that will quickly attract attention. Or that will succeed for sure.
Otherwise, networking may work for you.

See Ali's take here:

- **What Naval Ravikant got wrong about networking**

8. Avoid Mainstream Books

> There's a lot of these, what I would call pseudoscience bestsellers…People are like, "Oh, did you read this book?" I always say yes, but the reality is I read maybe two chapters of it.

P.S.:
That doesn't sound like the guy who always talks straight to be honest :).

And:

> If they wrote it to make money, don't read it.

A bit of a generalization.
Also because… Who writes to lose money?

But **we agree with the principle**.

And I largely stopped reading mainstream books.
See here why:

- **Why I stopped reading mainstream books**

https://thepowermoves.com/why-i-stopped-reading-mainstream-books/

9. Conquer Jealousy By Being Happy of Being You

This was golden:

> One day, I realized with all these people I was jealous of, I couldn't just choose little aspects of their life. (…) You have to be that person. **Do you want to actually be that person (…)? If you're not willing to do a wholesale, 24/7, 100 percent swap with who that person is, then there is no point in being jealous.** Once I came to that realization, **jealousy faded away because I don't want to be anybody else**. I'm perfectly happy being me.

Of course, you first need enough self-love, self-esteem, and confidence, to first want to be you.

You can also check our article on this topic.

MORE WISDOM

- **No one thing will make you happy**. It's a wrong, common delusion to believe that there is one thing you can achieve or get that will make you forever happy
- Evolution programmed us to keep chasing things in the hope we'll get happiness. **The only way to be happy is to stop chasing**
- **Be impatient with actions, patient with results**

CONS

Tendency to (Uncritically?) Embrace "Fads"

I sense a tendency to adopt and believe several (formerly) popular fads.

In my opinion, sometimes this was without the level of critical analysis that I appreciate most.

Some of these fads are -or were- common "tech founder culture".
Or adopted from popular "bio-hacking" gurus.

Just ot be sure, these were more just hints to me.
Naval is generally balanced and sensible, and doesn't go too far.

Still, this may be a good article to check out:

- **Bio-hacking porn, when optimization gets out of hand**

https://thepowermoves.com/biohacking-porn/

Sometimes Confuses Social And Power Constructs

For example:

> Ignore people playing status games. They gain status by attacking people playing wealth creation games.

This is only *a very specific type* of status game.

It's left-wing social climbing / virtue signaling.

Otherwise, **status games are everywhere there are people**.

And more confusing takes on status:

> The problem is, **to win at a status game, you have to put somebody else down.** That's why you should avoid status games in your life—they make you into an angry, combative person. You're always fighting to put other people down, to put yourself and the people you like up.

No, that's value-taking social-climbing.
And putting others down is called "one-upping".

You CAN gain status without putting anyone else down. And you can signal value without one-upping.

That's all we teach here :).

Missed Some Red Flags On Some Poor Characters

Naval correctly stresses how important it is to have great people in your life.

He talks about values, having values, and only accepting people with high integrity in your life.

We fully agree.

And he also talks about how to spot red flags of character.

In the same book, Naval mentions and compliments Scott Adams.
I personally saw many red flags from that character.
And I wasn't the only one.

And my personal note:

- **One can be brilliant AND an ahole**. **But brilliance is no justification**

Says Naval when recommending *Skin In The Game* by Nassim Taleb:

He has a bit of an attitude, but he has that because he's brilliant, and it's okay.

No, a bad attitude doesn't flow from brilliance.
They're two independent things.
One can be brilliant and kind. Or brilliant and an ahole.

Some Naive Takes. No, High-Integrity Isn't Necessary to Succeed

> **Look at some of the top roles in society** (…) It's because people trust them. They are trusted because the relationships they've built and the work they've done has compounded. **They've (…) shown themselves** (in a visible and accountable way) **to be high-integrity people.**

Man… I wish that was true.
But it's only one side of the coin.
Look at some of the top roles in society, and you will see a lot of dark triads.
And a lot of people who better played the game of power, without necessarily being high-integrity.

Also see:

- **Naive self-help**

> Naive Self-Help: 10 Popular But False Self-Help Myths

Lacks specificity – how do you develop mental models?

The importance of critical thinking is another area we strongly agree on:

A lousy way to do memory prediction is "X happened in the past, therefore X will happen in the future." It's too based on specific circumstances. What you want is principles. You want mental models.

> The best mental models I have found came through evolution, game theory, and Charlie Munger. Charlie Munger is Warren Buffett's partner. Very good investor. He has tons and tons of great mental models. Author and trader Nassim Taleb has great mental models. Benjamin Franklin had great mental models. I basically load my head full of mental models. [4]

However, again, I find the names confusing.
Why "mental models" and not "critical thinking"?
Mental models *result* from good thinking, not the other way around.

Also, I wished for more specific advice.

Lots of non-expert personal opinions that have no place here

Paleo diet, intermittent fasting, exercise regime… They had no place in the almanac in my opinion.

For nutrition, get advice from good-thinking nutritionists.
For exercise, get it from experienced trainers.

Naval himself says that nutrition fads are like religions.
He's 100% right.

And still, he did fall far for several fads, in my opinion.

These were the worst ones in my opinion:

> We're not meant to walk in shoes. A lot of back and foot problems come from shoes.
> (…)
> We're meant to have some cold exposure. It kickstarts your immune system.
> (…)
> Meditation is intermittent fasting for the mind.

I call BS on that.

Homo Sapiens originated in Africa, not exactly the land of the cold.
This is not to say that cold may not have some benefits -it may have, or it may not-. But if it does have some benefits, it's not because "we were meant to".

All this "meant to be" smells to me like a simplistic naturalistic fallacy –Miller and Kanazawa say it's common in more casual evolutionary psychology practitioners-.

You weren't meant to read books and share your mental elucubrations on Twitter either, Naval.
Wanna go back to dwelling in a cave, no books and Internet? See how you'll enjoy that :)

See more here on fads:

> **Lucio**: BS spreads with charismatic gurus who play the conviction game, but who may know no better than you

PROS

- **Win-win approach to life**. Same as what we espouse here
- **Good application of game theory and social exchange laws to life success**. Same as what we do here
- **"Honorable man" approach to wealth and good life**, including values and adding value. This is what makes what we'd also call here "high-quality men".

REVIEW

The Almanack of Naval Ravikant is a good book with many strong insights, mixed with some less impressive takes and pop self-optimization fads.

But the good outweighs the bad.
Although we may be biased since **we see much overlap between Ravikant and ourselves.**
Naval also leverages several principles from game theory and social exchanges just like we do here.
He talks about "social credits" and "social debits"… And we have never spoken before.

Overall, Naval also seems like a great character and role model.
So thumbs up from TPM.

Check the **best books** to read.

The Almanack of Naval Ravikant Summary: 9 Life Principles

The Almanack of Naval Ravikant compiles many of Naval Ravikant's insights on how to build wealth, happiness, and a good life by focusing on the few essential mindsets, skills, and habits that make the biggest difference.

Why We Prioritize Handbooks: The Best-Seller Quality Traedoff

Lucio Buffalmano · 22 January 2024 · Archived copy · Original

We have more free full-book reviews here than anyone else on the web.

After that much reading, I came to a few conclusions.

One of them is that **I decided to stop reading mainstream books**.

And here is why:

Contents

- 1. Mainstream books are to sell, not to inform & perform
- 2. Mainstream books are for the average man
  - Best-Seller Quality Tradeoff™
- 3. Written to benefit the author, not the reader
  - Be Careful With (Auto)Biographies
- 4. Non-experts write most mainstream books
  - 4.2. Experts Who Write Popular Books Often Water Them Down
- 5. Many mainstream books only have 1 or 2 good points
- 6. Few mainstream authors are truly good thinkers
  - 6.2. Adding IQ to Poor Thinking Makes It Worse
- 7. Concepts repeat… And you only need to learn them once
  - 7.2. No more general-purpose self-help
- What I'm Reading Instead
  - Exceptions Always Apply…
- In Brief…

1. Mainstream books are to *sell*, not to inform & perform

And paradoxically:

The more a book sells, the more its priority is to sell.

Exceptions always apply, of course.
But in my experience, best-selling is a better indicator of:

- Author popularity
- Marketing efforts
- Writing skills

… And NOT quality of content.

Not for what I am looking for, at least.

Take Malcolm Gladwell as an example.
No dissing to the man, he seems like a good person.
Only talking about the *books* here.
Gladwell's books are listed as "psychology". (So you get to feel smart reading them, nice plus, eh?).
But they're as captivating as a novel, so you also enjoy them.

And… You're learning!

Right?

Maybe some people are learning.
I'm not.
Not in the way I define my highest ROI learning, at least.
I have very simple criteria. **I define high-ROI content as what makes me and TPM's customers better men - especially more *effective* men.**

At TPM we focus more on practical results.
So content that produces real-life changes takes precedence over spirituality.

Feel-good books don't deliver the type of results I'm looking for.
Random and "curiosity-based" information also doesn't do that.
It takes a different type of content to do that.
I seldom find it in mainstream books.

So, congrats for the best-seller sticker.
But probably not gonna read it.

That's where most best-sellers belong for those who want top-10% results

2. Mainstream books are for *the average man*

… And I'm not average.

Not when it comes to a huge sense of self, at least :).

Jokes aside, it's simple math, and it does not serve the smart and ambitious men we seek to serve here.

Best-Seller Quality Tradeoff™

The Best-Seller Quality Tradeoff™ is the phenomenon where a trade-off between realistic complexity and less realistic simplicity is necessary to sell to the majority.

Chances are that **to become a best-seller you must sell to the middle of the bell curve**.
That's where most people are.
Almost by definition, you don't become a best-seller selling to the top percentiles.

Best-sellers sell to the middle of the bell curve. Top 10% consumes niche content that rarely becomes "best-selling"

That means:

Most best-selling self-help is ceiling advice that often caps slightly above mid-pack.

They work great for average men looking for average improvements. But not for men looking to go to the top. (Or already at the top and looking for an extra edge).

I guarantee you, "Clean Your Room", "Do Your Bed In the Morning" and 'don't outshine your boss' from *The 48 Laws of Power* and other best-sellers aren't going to change any top 10%er life.
But they provide simple heuristics and 'laws' that will help a good chunk of men.

Best-sellers still get raving reviews, though, which may mislead even more advanced folks.
Reviews may also be genuine and honest.
It's just reviews from middle-of-the-bell curve.

TPM doesn't cater to average men. (Which is safe to say since everyone believes they're better than average :)).

Jokes aside, TPM caters mostly to driven men who want top 10% advice, for top 10% results.
So, to do my job to the best of my abilities, I stopped reading books for average Joes.

3. Written to benefit *the author*, not the reader

You don't need to be a cynical bastard to believe this:

An author who doesn't even know you probably puts his interest above yours.

So here are some educated guesses about an author's main goals:

- Sell a lot of books
- Sell his services
- Become a "published author"
- Look good -the book is PR effort

Nothing wrong with that.
A book can be part of a fair PR strategy.

And many of the author's fans will enjoy their idol's book no matter what.

Win-win.

BUT me…

I'm nobody's fan :).

Better yet:

I'm only a fan of what makes sense, what works, and what moves me/TPM customers forward.

So I focus on content quality.

P.S.
More on this mindset here:

https://thepowermoves.com/enlightened-individualism

Be Careful With (Auto)Biographies

Some smart people love (auto)biographies.

They say that you learn straight from the exceptionals.
You know, billionaires, luminaries, and men who made history.

And they do have a point.

BUT…

First off, some over-achievers are also dark triads.
And dark triads aren't exactly well-known for honesty.

But dark triad or not… **Personal interests are misaligned with honesty when "legacy" and public perceptions are at stake**.

So, with *auto*-biographies, well… Enjoy reading the ad piece :).

Even when written by others, powerful men can influence the narrative.
Starting with themselves: the main source is often the subject himself.
And the other major sources? The people closest to him: cronies and allies.

4. Non-experts write most mainstream books

… And why waste time on random guys' opinions?

If I wanted those types of "experts" I could have stayed where I come from.

There are lots of experts in the dive bar there.

People who never opened a book, never left to see the world, and never did anything special… And *still* know everything.
International politics, economics, and who should play in the Italian national team. You name it.
During the Covid pandemic, many even became immunology experts.

Note:
This is cynical tongue-in-cheek.
I love chatting with locals. Many are good people and their unwarranted confidence in their unfounded opinions is entertaining.
STILL doesn't mean I need to spend *too much* time there -or pay attention to their BS-.

It's not any different with many of today's podcasters.
And many popular books are the same.

So…

Life is too short to read people's *opinions*.
When you seek wisdom and growth, choose high-credibility sources.

4.2. Experts Who Write Popular Books Often Water Them Down

Researchers are humans.

And they like money and fame just like anyone else.

Researchers who prioritize money and fame above rigor write poor mainstream books.

Example: Adam Grant. Psychology to make you feel good

A fantastic communicator and probably a great guy.

He leads with his “Psychology Professor” and “Harvard degree”.
But when he went mainstream he left rigor behind:

- *Originals* has no science, it could have been written by Seth Godin (we even removed the review)
- *Power Moves* was feel-good self-help about power
- *Give and Take* shows that *strategic* givers win at life. But he white-washed that with the (misleading) frame that *givers* -in *general*– win at life”. Took a great concept, and turned it into Naive self-help

5. Many mainstream books only have 1 or 2 good points

And the rest is padding.

Heck, in some cases, the only good point is the title.

No disrespect to Mel Robbins here.
She’s a great speaker and maybe also an awesome person.
And still… You don’t need a full book to explain the “5 seconds rule” -start counting from 5 to zero, then move your ass. That’s it-.

6. Few mainstream authors are truly good thinkers

Few can make sense of a complex world.

And far they’re outnumbered by those who don’t make sense at all :).

But no shaming here.
Making sense of complex things is *hard*.

And thinking well is a skill that nobody teaches.

So few people have it.

It isn't even about brains and IQ.
It's more about processes of logic, deduction, biases exclusion, etc.

6.2. Adding IQ to Poor Thinking Makes It *Worse*

IQ is no solution to poor thinking.

Indeed, IQ may make things *worse*.

Adding IQ to a poor-thinking brain is like adding more horsepower to a shoddy car.

You increase the noise and it may *look* powerful.
But without effective transfer of (brain)power to performance, it's sizzle with no steak.

This car actually looks awesome and may even perform well LOL. But the concept is: more IQ to poor thinking is like a bigger engine to a shoddy car. It won't do much to improve ultimate performance

This is how it works:

- **Smart men without evidence do good-sounding philosophy** to cover up their lack of substance**.** Yes, they may produce interesting "food for thought". Or make good "opinions papers". But still not accurate descriptions of reality.
- **Smart men without evidence, experience, & good thinking bamboozle you with poetry.** They add complexity, flowery language, and references to old high-authority philosopher… but they're just "showing off their smarts" with mental masturbation.

Yes, I'm looking at you, Jordan Peterson.
The hell you love talking about is trying to make sense of *Maps of Meaning*.

Jokes aside, nothing wrong with philosophy and poetry.

Philosophy is awesome.
Poetry is awesome.

It's just not what I'm looking for.

This phase of my life, I seek accurate descriptions of reality.
Or strategies that work in the real world.

You smooth-talking men bring experience, or evidence to the table.
If not, we're not a good match.

7. Concepts repeat... And you only need to learn them *once*

Question:

Do you read for the pleasure of reading, or to achieve certain goals?

Because if you're reading for the pleasure of it, this post is not for you :).

If you're reading to achieve certain goals, **you eventually acquire all the book-knowledge you need to achieve your goals**.

So the more you've already read about a subject… The *less* time you should spend reading.

To me, this is particularly true for…

7.2. No more general-purpose self-help

I feel I've read enough of these.

Little to gain from the latest motivational coach guru book.

And no dig to motivational speakers and self-help coaches.
There are plenty who are truly awesome.

Just… Probably not reading their books :).

What I'm Reading Instead

These days I prioritize handbooks and textbooks.

And a few quality podcasts to fill the gaps between audiobooks and review preparation.

These books are written by researchers and experts, reviewing and presenting the full literature on given topics.

Luckily, many researchers are critical thinkers.
So they provide you with an incredibly high ROI.

They can synthesize decades of research and reams of research papers in one single book.

Sure, nothing is perfect.
In TPM's 3-pillars approach to knowledge, handbooks may lack personal experience.

But if you have the experience yourself, you're good -we only deal with what we've experienced here anyway-.

Exceptions Always Apply...

Some exceptions I make:

- **Mainstream books by researchers**

Such as David Buss, Elliot Aronson, Roy Baumeister, Philip Zimbardo…

Yeah, I'm dragging that list out to covertly brag about the quality of our resources :).

Anyway, great researchers sometimes write mainstream books.
But when they do their job well, they mix “ease of reading” with high information load.

- **Opinion-books by researchers**

You wanna be careful with untested hypotheses.

But you can still learn a lot from the arguments.

Some examples are *The Mating Mind*, *Thinking Fast and Slow*, or *Mindset* by Carol Dweck.

- **Authors who consulted research *and researchers***

Some journalists can write great books if consulting several researchers.

One example is Will Storr’s *The Psychology of Status*.

Consulting researchers is important because most people can’t read research.

Exceptions apply, as always.
Robert Wright is not a researcher himself.
But he is scientifically-*minded* and thinks well.

- **High-expertise authors** (even without science or advanced thinking skills)

For example, I’m interested in dating products from proven players.

Or, say, a book on intersexual manipulation by a successful escort.

Even if it references zero science.

As a matter of fact, *better* without science.
Few people can properly assess studies.
So they’d only try to appeal to authority, but make a mess out of it. (Again, no finger-pointing. Assessing research doesn’t come naturally and it’s a big skill on its own).

High-expertise and poor-thinking authors can’t explain why what they do works.
They fail to “systematize” their experience and develop strategies that work for all.
But their experience is still valuable.
Especially if *you* can put it into context.

Casanova, for example, couldn’t explain his success through high-power behavior, bold leadership, and narcissistic traits.
But TPM could fill those dots :).

In Brief...

I chose to de-prioritize all mainstream books and to fill my reading list with textbooks.

Good news for you as well.
TPM content and products have long been best-in-class and scientifically thorough.
And will get even more so :).

Rollo Tomassi: Red Pill Guru, Or Misogynistic Bias?

Lucio Buffalmano · 29 January 2024 · Archived copy · Original

Rollo Tomassi is a manosphere figure commenting on intersexual dynamics and male rights issues.

We critically examine Rollo Tomassi's approach, his teachings, and his worthiness as a role model for men.

Poor Thinking Leads To Poor Analyses

Why Tomassi's analyses are lacking, in one picture:

It's the "crap-in, crap processing, crap-out" model.

Tomassi falls short at all links of the epistemology chain:

- **Poor data**, with poor selection and representativeness
- **Poor analysis**, with poor critical thinking skills and biases
- **Poor theories**, without the intellectual honesty to self-correct

Let's review them:

1. Poor Data

Data includes all information available.

Either first-hand experience, observation, or science.
Each of them has pros and cons, so a good thinker uses them all.

Among the many issues in Tomassi's use of data:

1.2. Rollo doesn't understand science *or* logic

Evolutionary psychology is foundational to intersexual dynamics.

And Tomassi has a very limited understanding of evolutionary psychology.

Just one of many examples:

> it served a feminine imperative to evolve an ability to cut former emotional ties more readily (in favor of her new captor) and focus on a more self-important psychology – solipsism.
>
> Rollo Tomassi, *The Rational Male*

Basically:

1. Women get over breakups faster (<—- No data. Opinion presented as fact)

2. because they evolved for quick switching (<—- Conjecture. Likely erroneous. But presented as fact)
3. so they (chose to) focus on (…) becoming (<—- Ignorance of evolutionary principles. Evolution works on heritable traits, not cognitive focus)
4. Becoming more selfish (<—- Unfounded conclusion based on *both* faulty logic and data)

The fallacies are obvious.
A researcher's comments on this:

> **Macken**: they say a lot of stupid stuff (…) that women evolved to fall in love with their kidnappers because (…).
> (…) What a stupid thing to say you (…) You're an idiot
> (…)
> You can't just say (…) that women have an easier time with breakups (…) there's mixed evidence on that

In brief, **Rollo Tomassi is unreliable** on evolution-related topics.

1.3. Rollo is unable to select and filter meaningful data

Tomassi often uses anecdotes.

Some anecdotes *can* be representative of larger trends.
But we've seen Tomassi often picking *exceptions*.

Several of his anecdotes barely even exist in reality:

> **Rollo**: and you want to know why is that women will kick you in the nuts and we laugh at it or if you're man spreading pour water or bleach on your nuts, it's because…
> **Ben**: I've never seen that
> **Charlie**: (laughing) this has never happened

This is comical-level nonsense.
I *literally* burst out laughing.

To be fair, Tomassi then says it was just an example of an "attack".
But his next example was also poor. And it says a lot about Tomassi's shortcomings in data selection. **Tomassi is bound to come up with poor theories because he selects poor and unrepresentative events** from the real world.

It's funny that for all his talk of masculinity and "empiricism", Rollo Tomassi's thinking is feminine*.
Low analytical thinking, and high in "random associations".

1.4. Rollo can't make sense of data

The data Tomassi himself presents sometimes directly contradicts his theories.

For example, to prove that women have sex with alphas but marry betas, he says:

> According to a recent study by iVillage, less than half of wedded women married the person who was the best sex of their lives (52 percent say that was an ex.)
>
> *Rollo Tomassi, Preventive Medicine*

But that proves the *opposite*.

With a conservative estimate of 5 life partners, pure chance to marry the best sexual partner is 20%.
Tomassi's source at *more than double* the odds proves the *opposite* of his point.

This is telling in our opinion.
With months to prepare, **Rollo Tomassi couldn't even cherry-pick data to support his narrative.**

Tomassi even titled the paragraph:

For what it's worth, the men women genuinely want to fuck wouldn't keep track of sexual frequency because a woman's dread of missing out on a sexual opportunity with a desirable Alpha is usually enough incentive to ensure frequency. Alpha Men don't complain about sexual frequency, they simply move on to a new woman. Beta- complain about sexual frequency because they are expected to know and accept (now via over Hypergamy) that they will never enjoy the type of sex their women had with the Alphas in their Prime Years. Rather, they are led to believe they would get it (and better) if they accept their new role and commit to a woman's provisioning.

Nobody marries their 'best sex ever'

According to a recent study by iVillage, less than half of wedded women married the person who was the best sex of their lives (52 percent say that was an ex.) In fact, 66 percent would rather read a book, watch a movie or take a nap than sleep with a spouse.

> Amanda Christal, a 33-year-old writer from the East Village, says, "With the men I've loved, the sex has been good, sometimes great, but never 'best.' It's resulted in many orgasms and was fun but, comparatively speaking, it didn't have that intensity that comes with the 'best' sex.
>
> "I knew [my best sex partner] was temporary, and so the great sex was the best because the sex was the relationship," she adds. "We didn't have to invest in anything else."

Rollo's own data shows the *opposite*. It's an inability to pick meaningful data

2. Poor Analysis

Analysis is making sense of the data.

Good analyses may require high IQ.

You judge whether Tomassi has enough brainpower.

But thinking *processes* also matter.
And Rollo Tomassi thinks poorly:

2.2. Can't grasp nuances

Rollo Tomassi thinks in black-and-white terms.

He starts from politically incorrect truths that need to be said. But cannot add nuances and exceptions.
And that makes for poor analyses.

For example, he says:

- **Men and women have *adversarial* dating strategies**

Men and women indeed maximize reproduction potential very differently.

But that doesn't take into account… Everything else.
Few men can even hope to reach "peak male returns", and many men prefer family lives.

In the real world, most men's and women's strategies are *both* overlapping and diverging.

If that weren't the case, relationships wouldn't have evolved.
Instead, all human cultures have them.

I believe this is telling of Tomassi's (in)ability to provide good analyses.

P.S.:

Research that black-and-white thinking is associated with low cognitive abilities (IQ) and low education.

2.3. Over-generalizes

Tomassi often starts from important truths that few dare to address.

But then **Tomassi over-generalizes to the point where it doesn't accurately describe reality anymore**.

For example, Tomassi says:

- **Women pursue the *imperative* dualistic strategy of sex with alphas, lock down beta provider**

Some women indeed pursue the "dual mating strategy".

The nuance is that *some* women do that, in *some* cases.

And there is no "imperative".

There are instead several available and viable strategies.
Including a relationship with a high-value man willing to settle down.

There is also plenty of "Mr. non-perfect alpha, but still high-value enough not to cheat on".

Read more in our alpha f*cks, beta bucks article.

> The Science of "Alpha Fucks Beta Bucks" (Facts VS Myths)

3.3. Anecdotal thinking

Example:

> In my lifetime I've had sex with over 40 women and I never once caught a venereal disease (…)
> I can also point to men I know who contracted Herpes from the only women they'd ever had sex with. (…) you can equally be a rock star and tap hundreds of women without any consequence and you can be a virgin saint and contract a disease on your wedding night
>
> *Rollo Tomassi, The Rational Male*

This is faulty logic.

The point he's trying to make may have some validity.
But you *certainly* can't uphold it with that faulty logic.

I've noticed Tomassi failing at simple logic several times.
So I believe it's fair to say that **Tomassi struggles with logical thinking** – even in basic aspects.

The "I was a player and never got STDs" logic is like the "the old man down the street smokes and never got cancer" story.

Such as:

"the old man down the street smokes a pack of cigarettes a day and is still doing well. So cigarette consumption is unrelated to health".

The logic is faulty because you can't generalize and draw conclusions from individual cases.
You'll always find healthy smokers.
And still, there IS a relationship between smoking and health.

Same goes for quantity of unprotected sex and chances of catching venereal diseases.

3.4. Myopic thinking misses second-order effects

Understanding the intricacies of complex systems is crucial for good theories.

But Tomassi often seems to stop at the first level of analysis.
He misses the intricacies and second-order effects of complex systems.

For example, Tomassi's analyses often portray men and women as monolithic blocs.
However, the experiences of low-value VS high-value men and women are *completely* different.
Sometimes, opposing.

For example:

> Bear in mind that monogamy is a dictate of the feminine imperative
>
> *Rollo Tomassi, The Rational Male*

Tomassi speaks as if monogamy was good for women -in general-.
And bad for men -in general-.

At first sight, it may seem so.

But thinking at the gender level fails to appreciate the complexities of human mating.
And, in truth, **monogamy better serves the interest of lower-value men.**

If society abandons monogamy, it's lower-value men who fail to find a mate, not women.
High-value women may still find quality men willing to commit. And will always find at least a mate.

But lower-value men will struggle mightily to find anyone either for long term, or short term.

This is the key difference between Tomassi and TPM. (Besides the depth of our investigation :).

Tomassi focuses on groups, societies, and trends.
We focus on individuals because we believe in the power of the individual to find ways.
Even if trends are real, smart, strategic, and empowered men can always be the exception and succeed.
No matter the culture, the country, the "woke trends" or whatever.

Eventually, Tomassi understood this concept.

3. Poor Theories

Theories are high-level models that explain the world.

System thinking develops theories based on data, and data analysis.

However, Tomassi's theories are often lacking because:

- **Weak fundamentals**, with poor data and poor data analysis -as per above-. They lack justification in either data, or logic
- **Self-referential and "builds upon itself**". Tomassi rarely goes back to any solid evidence. Instead, he connects the dots with his own (lacking) intuition and his other (often biased) constructs

Some issues with Tomassi's theories:

3.2. Rejects opposing evidence 1: conspiracy excuse

Tomassi often rejects disproving evidence.

For example:

> **Rollo**: (addresses why the "ovulatory shift" so central to his theory is weak evidence) honestly I think **that there is a personal bias against ovulatory shift because it is an unflattering truth** of female nature that's why they're going after it (<— conspiracy to defend his take), that's why it's not reproducing or re-replicating (…) **the problem is in Academia** (…) which **also coincides with (…) Dr David Buss comes up with the mate switching hypothesis** and comes out with *Men Behaving Badly* and **comes out with his dating program** (…) so when I see that… (makes a gun gesture to his head)

Better and larger studies advance science -and undermine Rollo's takes-.

And…

Rollo says it's a conspiracy.

Even purely mathematically, it's far more plausible that *Rollo* doesn't want to renege, rather than many researchers conspiring.
And, one could speculate, Rollo's misogynistic bias prefers the more women-demeaning explanation.

Finally, it's another example of black-and-white thinking to consider the two strategies as mutually exclusive.

3.2.2. Rejects opposing evidence 2: manipulation

From Rollo's chat with the guys on Charisma on Command:

> **Charlie**: men do have floors (effectively refuses Rollo's theory with his real-life experience)
> **Rollo**: Let me tell you why (<— teacher's frame schooling the pupils) that kinda of (takes some of the edge off) offends your sensibilities here okay (<—- manipulative reframing), because if your sexual strategy is to put all your eggs in one basket, to be monogamous…

Rollo reframes the rebuttal as "offended sensibilities".

It's covertly manipulative and babying.
As if an adult couldn't cope with the fact that humans aren't perfectly monogamous -duh, under which rock did you hide-.

Maybe it was *Rollo* who believed in fairytales that eventually turned him bitter.

See full example here.

3.3. Dunning–Kruger effect: Rollo thinks he's an expert, so he'll never become one

Low-competence individuals tend to overestimate their competence.

See if you spot that here:

> **Rollo**: (…) they want to figure out how to get their wife to have sex with them again there's so much going on (…) **I have to be an expert on like neurology, endocrinology, sociology, anthropology, and all these all these little subfields** because they all in some way like dovetail into what we took the red pill awareness

"All these little subfields" :).

Those are vast and sometimes complex disciplines. They take high-IQ scientists many years of focused study to master.

With just that one sentence **I struggle to take Tomassi seriously**.

3.4. Rollo has a philosopher approach

Rollo Tomassi does a lot of theorizing.

But Tomassi doesn't go back nearly enough to the empirical evidence to back up his theories.

In our epistemological approach, this is known as the "philosopher's approach".
And it's in contrast to a scientist's approach.

Tomassi displays a typical philosopher's approach of much thinking with little data. Without good data this approach develops "castles in the skies" theories. These "castles" are unlikely to be good representations of reality

The pitfall of the philosopher approach is that **the more you think things over, the further away you move from the data**.

That's why castles in the skies.
They build upon themselves, with little grounding in data.
That's *philosophy*, not *science*.

It's a generally poor approach if you want to provide realistic models.
The further you go from the data, the lower the odds of getting things right. Even if you're a genius.
Indeed, more IQ without data may even make things *worse*.
If Freud, widely regarded as a genius, has been proven wrong with modern science… What are the odds that Tomassi gets it right?

Now it should make sense why our opening picture is a castle of cards.

To sum it up, Rollo Tomassi:

1. Picks poor and limited data
2. Applies poor critical thinking to the already bad data
3. Overdoes the theory, without cross-checking with empirical data

Rollo Tomassi Psychology

Psychology is key to understanding someone's work -and biases-.

Power is central to the red pill.
And social conservatism is a well-represented ideology.

We feel both apply to Tomassi.
At heart, **Tomassi longs for the patriarchal order of male hegemony and control over women**.

Hence the mate-guarding tendencies:

> **Rollo**: (if she goes partying, lock her her out and lock the door)

Albeit speculative, the driving force may be fear.
Including fear of women's sexuality.
Hence the obsession about past lovers, "body count" and mate-guarding.

This is also why social conservatives are not the best dating coaches-not for anyone who wants to be a lover, at least.

1. Rollo Longs For Cultures of Male Hegemony

Tomassi says:

> **Rollo**: **Many people will say "Islam is far more alpha, Islam is the way** if you wanna have a solid marriage, if you want to be whatever (sic) and my take is that they are still a culture and ethnicity (sic) or whatever you wanna call it, **a religion that still has a default authority for the masculine in it. But even that is being eroded**

Tomassi regrets Islam is losing power because some Islamist societies are closer to his ideal of male hegemony (and female repression).

2. Potentially Close To Racist Extremists

Tomassi references Rossy:

> **Rollo**: I'm known as one of the three R's of the manosphere. There's Rolo, Rossie, and Roosh

What a holy trinity eh? :)

Later Tomassi says men find the red pill via his blog or Rossie's blog.

And here's Tomassi linking in one of his live streams:

Note: blurred picture to respect a man who passed away. RIP Pat ⍰.

It seems Tomassi feels they're in the same camp.
And that he agrees/likes the blog.

I haven't personally investigated it -the time spent on Tomassi is enough :)-.
But RationalWiki says Rossy is an open racist and white supremacist.

Misogyny

This is the main reason I write this Rollo Tomassi review.

And it's also part of my dislike and possible bias towards Tomassi

Because **all I see in Tomassi's work is misogyny hiding behind a facade of "sharing the truth"**.
And I find that ugly.

Gargamel chases its anathema: the female Smurfette, symbol of female liberation and unrestrained sexuality. Smurfette rejects the yoke of Gargamel's control, leaving him bitter at his own powerlessness.

I believe the misogyny that permeates Tomassi's work makes the world worse off.
I'm open to being wrong -and I hope to be wrong-.

The signs of misogyny I see:

1. Rollo Describes A Vile Female Nature

I asked ChatGPT how Tomassi describes women:

How ChatGPT summarizes Tomassi's views on women. Not a pretty picture

The terminology is seemingly neutral.
But read the description and **there isn't a single positive thing Tomassi says about women**.
It's neutral at best, or negative.

For the record, we aren't even saying that "it's not true".
But selective focus on negatives, in our opinion, is a sign of misogyny.

1.2. Aggressive Choice of words

> Show me what they say, and I'll tell you who they are
>
> – *Lucio Buffalmano*

See how Tomassi describes women:

- **"Cock carousel riding"** to describe women's partying years

For the record, I don't want to date women highly unrestricted women.
And I think that's both OK, and smart.
But I *still* find Tomassi's descriptions a sign of misogyny.

- ***"I endure an endless stream of criticism for implying that women are selective sluts."*** says Rollo in *The Rational Male*

Ask yourself: would a neutral commentator use the word "slut" to describe sexual appetite?
I've heard him refer to OnlyFans women as "whores" as well.

- **"Spinster"**, as in this Tweet

This tweet also shows Rollo's conflictual tendencies when it comes to men and women

2. Rollo's Selectively Focuses On Women's Faults

For example, Tomassi would say:

Women cheat.

He omits that, hello, men also cheat.
And men cheat more than women, according to much research* on infidelity.

2.2. Rollo's negative focus is a major source of bias

Misogyny is a fundamental bias that undermines Rollo's ability to accurately describe reality.

Let me explain with an example.

Imagine this epitaph for Tomassi:

> Rollo Tomassi was a contentious author criticized for simplistic and misogynistic takes
>
> *A hater's truth*

That IS true.
But it's "negative focus true" and *distorted* reality.

It's also a hater's job to omit the positives.

Like him or not, thousands of men say that Tomassi helped them.
To omit that, is to spread a biased and untruthful depiction of reality.

That's what Tomassi does focusing on women's negatives.

3. Rollo Presents Women As Largely Victimizing Men

Example from his book:

> My problem is civilly sitting down to Thanksgiving dinner with a hyper-religious woman and the new millionaire husband she married just 8 months after her former Beta husband of 20 years hung himself from a tree when she decided "he wasn't the ONE" for her.
>
> *Rollo Tomassi, Positive Masculinity*

That sucks.
My heart goes out to anyone suffering.

But… Is it a mature and healthy response to take your anger out on all women?
It's also a convenient thing to say for Tomassi because his material provides a good outlet for hurt men (keep reading).

Some men also knock up women and disappear.

What would you think of women saying that "*men* are predatory"?
I know, some women do that.
And those are exactly the women to avoid.

4. Rollo Sees The Genders In Competition

Discussing the MGTOW ("main going their own way") approach, Tomassi says:

> Many a MGTOW (men going their own way) will simply suggest men no longer play the Game; that isolationism is the way to go, but this only serves to eventually concede power to the Feminine Imperative.
>
> *Rollo Tomassi, Positive Masculinity*

Tomassi advises men to *not* go their own way.
Why not?
Because that only makes "the feminine" unchecked, and more powerful.

What should they do then?
Well… Fight against “the Feminine”, apparently

This tells us that Tomassi sees genders as locked into a competition for power.

And for sure there is a competition for power -that’s also why TPM exists :)-.
However, it’s also true that life is BOTH cooperation and competition.

Tomassi almost exclusively focuses on the competition side between men and women.

Ultimately, Tomassi fails to appreciate the nuances of the sexual market place.

In truth, **top men gain with empowered women**.
Explanation in this video:

5. How Rollo Hides His Misogyny

To me, Tommai’s approach is sneaky.

For example, he:

5.2. Quotes *others* for his worse takes

From his blog:

> **Rollo’s blog**: (apparently quoting someone) women were never worthy of such trust (…) women were never worthy of us

Tomassi set the baits to incite his most rabid followers.
Some will run with it.
Then he will quote one of them in the next post.
And on and on with the cycle… Without ever fully exposing himself.

"Yo, easy guys!" Rollo only described women "as they are", he never told you to hate them.
That's the ring-leader stock cover after they foment their followers

Similar technique Trump uses.

5.3. "Men & women are better together" BS

Tomassi says that "men and women are better together".

Feels like a great BS for cover because I wonder:

What kind of idiot would want to be with Rollo's description of a woman?

Oh yeah, right, Tomassi is married…

5.4. Manipulatively neutral terminology for reviling descriptions

Notice how Tomassi describes women:

- **Solipsistic**, NOT selfish and egoistical -Thesaurus' definition of solipsism–
- **Hypergamous**, NOT calculative, Machiavellian, and coldly driving men to suicide
- **Feminine imperative**, NOT the oppressive and repressive matriarchy he describes

The names he chooses sound more neutral.
Even "scientific" for those who can't see beyond the smokescreens.

Funny from a guy who says *women* are covert, eh?

Remember: Hitler never said he disliked the Jews

Hitler described the Jews as value-suckers.
Within the frame of "doing it for the Germans".

Tomassi "does it for men".
While painting a truly dark picture of women's nature.

Self-Help For Average Joes

Tomassi's general self-help advice works great for still-naive men.

And since many men aren't particularly aware or high-value, it *does* improve many men's lives.

It's at the more advanced levels that it starts showing cracks.
Especially in the mindsets.

Here are some examples:

- **Women get over breakups more easily** = great warning for lower-value men. Not always the case for *high-value men*
- **She's not yours, it's just your turn** = a mindset that's mostly useful for average provider types
- **Always reject "LJBF"** = great advice for clueless men. Higher-value men rarely have that issue (and know better)

It's no coincidence that you don't find many life winners, successful players, or happy men among Tomassi's fans.

> View this post on Instagram
> A post shared by The Power Moves (@the_power_moves)

Rollo's Qualities & Added Value

Rollo Tomassi's review focused on the negatives.

One because we believe they're valid and important.
And two, because our reviews are generally critical.

However, there are also many positives in Rollo Tomassi and his work.

I recognize among the positives:

- **Rollo wants to help men**

AND has helped many men.

Kudos to him.

- **Respect for a man who doesn't grift**

No courses, over-priced consulting, or BS supplements.

Rollo seems to stay true to his calling.

I respect that.

A lot.

- **Doesn't posture as a guru**

Rollo is no Jordan Peterson telling you how to live life.

Rollo says he respects his audience to decide for themselves.

We like that a lot.

- **He seems to be a man of ethical standards**

Rollo dedicates his book on game to his deceased friend.

He even encourages anonymous donations to greyhounds:

More respect.

- **Sparkles of bright creative genius**

We said Rollo lacks critical thinking.
BUT he's clever in a more artistic sense.

- **He provided space to many worthy men's rights**

We agree that Western countries now favor women in many areas.
If things become more balanced, it's also for the courageous work of men like Rollo.

- **Great takes based on solid power-awareness**

Besides believing *The 48 Laws of Power* are actual laws, Tomassi has a good sense of power dynamics.

For example, men's possible loss of power and attraction with marriage.
Also read relationship phases of power and how to maintain attraction.

> Relationship Power Dynamics 101

The Truth In Rollo's Teaching

Much of red pill wisdom is valid.

For example:

- **Social exchanges and sexual exchanges are largely amoral**. Your sexual market value is all that matters.
  - Many women will string you along for their convenience
- **Cheating is a human adaptation**, part of everyone's mating strategy toolkit
- **Men have a "burden of performance"**: don't be naive and expect to be "loved for who you are"
- Etc. etc.

Many red pill's self-development approaches are effective.
For example:

- **Be high-value**, become an alpha male
- **Stay fit**. A toned body is attractive
- **Date high-power**, **lead**, **display social dominance**

- **Hypergamy** as in “women prefer men who are “more”

And more.

Alternatives To Rollo Tomassi

To leverage bias-free red pill wisdom:

- **Intersexual dynamics from the sources**. Skip the (poor) interpretations. Good overviews provided by:
  - David Buss
  - Macken Murphy
  - TPM reviews
- **Dating from successful players**. Most are better and not bitter
  - Best dating resources
- **Self-development, effectiveness, achieving goals**. TPM may be a good resource
- **Masculinity** is where I’d consider some red pill gurus

Caveats

We care to specify that:

1. We Criticize *Ideas* While Respecting The Man

Not respect in the sense of looking up, or liking.

But **we extend to Rollo Tomassi the basic respect owed to most other human beings**.
And we wish Rollo the best in life.

In that sense, we’re glad that Rollo Tomassi is a pseudonym.

2. We *Are* (different kinds of) Red Pill

This is about Tomassi, not a criticism of the red pill *movement*.

We’re *kinda* in that space as well after all:

TPM was one of the early websites on theredarchive

And some of our alumni had typical “red pill awakenings” to our work:

#1 · June 12, 2020, 8:42 am Edit Quote

I am completely blown away by the material in this course. I have an elite background, first class education, etc. And yet I never had a clue about any of this stuff, despite reading, studying, asking questions of those who possibly could have helped etc. Perhaps I'm not smart or observant enough . . . But it's also true that no one EVER made the slightest effort to teach me ANY of this. This material is so powerful that I can't help but feel angry that I have been "kept in the dark" for so long. How did socially powerful people like Trump and Putin learn this stuff? Were they born knowing it? Did a family

How a Power University alumni described Power University

I like to think TPM is truth-focused.
But without (as much) bias.

REVIEW

We find Rollo Tomassi to lack critical thinking skills, to jump to conclusions, to over-generalize, and to advance biased opinions that don’t accurately represent reality.

Still-naive men may have much to gain from Tomassi's work.
But men who are past -or never were- "blue pill" need more advanced material.

Finally, we see important signs of misogyny and misogynistic bias in Tomassi's work.

On the plus side, Rollo is a bright and creative mind who became an important manosphere figure, and he shaped much of the narrative around dating dynamics there.

Why We Made A Review

Straight talk:

We hope that many men read this, recognize the misogyny they're absorbing, and change approach.
To stay on that path, we believe, is lose-lose for all.

As a reader wrote:

And embracing our WIIFM, we hope some of these men may consider TPM.

Whatever you choose, critical thinking skills and healthy skepticism will always benefit you.

Biohacking Porn: Quit OCD, Embrace Life

Lucio Buffalmano · 5 February 2024 · Archived copy · Original

Optimization is great.

It allows you to be more efficient, doing more, with less.

As for everything though, you can go too far.
And today, **the old "hustle porn" has been replaced by "optimization porn".**

It's just another "feel busy but go nowhere trap".
We explain why:

Intro

We define both "optimization porn" and "biohacking porn™" as:

> To spend time and resources learning, acquiring, and implementing sub-Pareto (80-20) improvements ("hacks") for small-ish, dubious, or even negative ROI

It's a mouthful, I know :).

But it gets clearer I promise:

Optimizing VS *Over*-Optimizing

This is simple math:

The more you optimize, the lower your returns become.

After a certain point, the inputs will outweigh the output -negative ROI-.
Think of it as an inverted U-curve.

The issue then is that **optimization porn pushes a lot of people beyond that optimal point**.
In chart:

For example, most people reach level 50 on health by acting on simple basic information that would fit in a single post

In real life though it's difficult to say when you cross the threshold.

So as a rule of thumb to help you self-assess:

Optimization turns *over*-optimization when it stops being a means to an end.
Then it's more likely to make you *less* effective because it's optimization for optimization's sake.
It becomes its own game, with its own rewards.

Nothing wrong with that.

But you may as well be honest with yourself:

Own Up: It's Not Effectiveness

Here's why optimization is so sexy:

We get to tell ourselves we're effective, driven, smart… Better than the rest, maybe.

But the truth is:

You're not optimizing.

You're doing… Something else.

Some of that "something else" is totally fine.
For example:

- Hobby
- Break from work
- Pushing the limits to see how far you can go

In some ways, albeit geeky, it's a typical male thing.

But over-optimization drivers may be less healthy.
Such as:

- **Chasing *feelings* rather than results**: feeling busy, feeling like advancing, feeling like "doing the right thing"
- **OCD**
- **Skirting actual work**: Alex Hormozi mentions a guy with a 3h morning routine who couldn't get enough work done :)

Or…

You've fallen for the guru-game.
And **a (semi-manipulative) optimization guru tricked you into the optimization rabbit hole.**

Now we're talking proper TPM expertise :).

No shame, though.
I've fallen for it too (read on).

It's A (*Too*) Slow-Life Strategy

> Life Passes You By While You Over-Optimize For It
>
> – *Lucio Buffalmano*

I think you've heard the rock and roll motto:

Live fast, die young.

I've always had a soft spot for that.

Next life, maybe :).

How does that relate to optimization porn, though?

Different “life speeds” are different life strategies.
And linked to a *reproductive* strategy.

The “rocker” one, called fast life strategy, was originally proposed by Bruce Ellis.
It’s largely adopted by psychopaths.

Fast livers rarely optimize because they’re focused on the short term.
What they get *right now*, consuming liberally… And abusing sometimes.
Including themselves, and their bodies.

The slow livers, including the optimizers, are concerned with long-term.
Slow-livers optimize because they’re (over-)concerned about the long-term.
They treat their bodies well because it should remain effective long-term.
So they worry about the dangers of sun exposure, the ills of eating pizza, and… How to stay alive for long with “bio-hacking”.

I have no issue with slow life strategies.
Indeed, I respect them.
It’s slow life livers who build civilization.

However, here is the difference.
And, as usual, it’s about balance.
Optimizing is slow life strategy.
But *over*-optimizing is too slow. While the optimizer optimizes for a long life, the *over* optimizer lives as if he lived for ever.

Over-optimization is Risk-Averse and Feminine

It's funny:

The over-optimizer may be in the best shape possible.
His body sculpted by perfect gym attendance.

And still… The slow approach is inherently more feminine

Says Dr. Tania Reynolds (slightly edited for clarity):

> Hormones (…) serve as the dial for this life history strategy speed.
> So **a more masculine hormonal profile leads people to a slightly more fast life** history strategy

There you have it.

For the record, this is a hypothesis.
But it's a hypothesis that seems logical to me.

My take on it is even more speculative.

But follow the logic and see for yourself:

Fast life is higher risk, more associated with men than women.
And no time for over-optimizing when you're busy living.

Slow and safer is lower risk, more associated with women, than men.
And plenty of time and scope for self-care -and its geekier sub-sets: biohacking and optimizing-.

Over-optimizers struggle to gain masculine men's respect

I'm not a very "masculine man".

Neither do I care much to be.
And neither do we make it a priority here at TPM -we prefer "whatever is effective" here-.

And still…

Dr. Reynold's insight well explains my personal "secret feelings".

I'd be cautious saying this in some settings.
But deep down, **I can't help but have little man-to-man respect for over-optimizers**.

Part of me looks down on over-optimizers as… Can't say this publicly, but catch the drift.

The fast livers naturally get more of my respect, instead.

This means that over-optimizers struggle to gain leadership roles in very masculine environments.
And **over-optimizers may struggle to gain "alpha male status"** in naturally-occurring male-only groups.

Few men will say it because few men are even aware of their subconscious.
But that's how it goes…

Over-Optimizers VS Over-Liver: Example

Vasco Rossi is an alcoholic and heavy substance user.

Like many rockers, Vasco Rossi lived the fast life.

Let's quickly compare his fast life with over-optimizers:

Morning:

- Over-optimizer wakes up at 4 am
  - Vasco Rossi wakes up at 12 next to a new girl (BTW, in his songs he even talks about 16 YOs, and nobody even mentioned "canceling")

Breakfast:

- Over-optimizer carefully weighs his food and goes through his "supplement stack"
  - Vasco Rossi "chops his breakfast on a mirror" while reminiscing and smiling about his previous great night

Confidence & Self-Esteem:

- The over-optimizer needs taxing routines to "earn his own" respect (I talk from first-hand experience here, I've been like this for a long time and still partly am)
  - Vasco Rossi does whatever he feels and feels awesome no matter what, even as an overweight guy

And back to reproductive strategies:

- While one famous over-optimizer sperm-banks for his future at 48 YO…
  - Vasco Rossi had 3 children from 3 different women while staying unmarried. Sounds a lot more "alpha male type" by red pill standards, no?

Think about that.

Sure, Vasco may live a shorter life (albeit he still reached older age).
Or don't preserve his cognitive functions nearly as well (albeit he makes a lot more sense than many current

"gurus").

But he can make a good claim he lived 10x an optimizer's life :).

That's not to say "live the fast life".

I'll even admit: it's misleading and "wrong" to put those items in red VS green.

Most fast lives are not as glamorous as rockstars, but harsh and ugly. And not suited for most men.
Vasco Rossi also struggled with addiction and rehabs.

It's also not good for society, if anyone cares about that.

I don't want the Vasco Rossi life (or I'd be doing it).

So, what then?

As "unsexy" as that may sound… **Balance is the answer**.

Don't (over-)do a whole life of drugs, countless hookups with floozies, or run-ins with the law.
But don't overdo stupid-level optimization and hack-seeking either.

Pareto > Genes > Optimization

Here's the truth:

Genes trump hacks.

Especially once you do the basics.
And the basics trump hacks.

It's the old Pareto principle.
All biohackers and life optimizers, I bet, know the theory.

Most "advanced biohacks" address the last 20% *at most* and *when combined*.
Individually, we're often talking about 1% or less.
And no matter how well you optimize the 1%… It won't take you far.

Anecdotal evidence is generally poor evidence.
But it sometimes says *something*.

So this is a picture of my father at age 80:

My father looked great for an 80 YO. Zero biohacks, no life optimization, and even ignored some important basics

Nothing crazy here.
It's not like my father beat any record.
But, in my opinion, age-adjusted he looks better and younger than many biohackers and life-extensionists I see online.
And zero hacks.

Can Freedom Be Scary?

This take may pain the over-optimizers.

Instead, I see it as the opposite:

Focus on the 80%,
And then… You're free!

You can let go of all the hacking BS.

And enjoy life :).

Scammy Biohacking

Biohacking sometimes turns into pseudoscience BS.

For example:

- Detox
- Superfoods

- EMS blocking adhesives
- …

Etc. etc.

And there's plenty of grey areas.
Gurus and marketers love "bending the truth":

> **Lucio**: biohacking fads start with a dark triad who wants to get famous and rich, or a marketer looking to create demand. Then standard social dynamics do the rest

Gurus Red Flags

Some of the manipulative tools of dubious gurus include:

1. **Scientific and intellectual posturing**. Teacher frames, white lab coats, etc.
   - **Pseudoscience**. Misquoting "autophagy" is a popular one at the time of writing
2. **Inflated claims**. Ie. "*cold exposure makes… (you live to 100 / faster / your dick longer*, etc.)"
3. **Naturalistic fallacies**. Ie. "*we weren't meant/born to… (wear shoes / wear clothes, etc.)*". Always tell yourself "yeah, and I wasn't born to listen to this idiot"
4. **Bamboozling and over-complication** with unneeded or made-up jargon
5. **Extreme hacking/exercise/deprivation**. If I wanted to handicap my enemies, I'd tell them "skimp on sleep, and go train heavy weights"
6. **Conspiracies.** Ie.: "*The government colludes with big corp to make you fat*". Also watch out for the milder frame of health organizations as "poor mainstream advice".

Lost a lot of respect for Jordan Peterson when he started doing some of that:

> **Peterson**: it's **obvious** that (….) our **tyrannical government** (…) **regulating** what people serve at their tables

There you are, all the keywords that should tell you "stop listening".
So instead of the "tyrannical government", you can listen to her daughter's podcast teaching you how to properly eat :S.

Let's now review some *good* biohackers.
If we spot the red flags in the good ones, it'll be even easier with the bad ones.

Biohackers Reviews

Let me say this first:

Both Tim Ferriss and Andrew Huberman seem good guys.

And with generally good intentions.

I loved some of Ferriss' approach in his *4h Workweek philosophy*.

So, well done to them.

We criticize the approaches, here NOT the men.
And we'll use their content to learn the psychology, MO, and risks of optimization porn.

Andrew Huberman

See the full analysis of Andrew Huberman and his competence-displaying tactics here.

Tim Ferris

Ferriss is the optimizers' Godfather.

In *The 4-hour Body* he guides readers to rapid weight loss (with rabid hacking).

For the record, some nutritionists I respect say rapid weight loss is not good for you.
ChatGPT agrees:

ChatGPT 4

You
is it better to lose weight little by little or fast?

ChatGPT
When it comes to losing weight, the general consensus among health experts is that gradual weight loss is healthier and more sustainable than rapid weight loss.

That alone makes the full book, well… Questionable.

But if you enjoy hacks and geeking-it-out, boy… Does Ferriss deliver :).

Here's an example.
Bold is mine, red are my attempts at humor to highlight the nonsense.
And original text redacted for brevity (you can only imagine the original):

> **I consumed the ECA stack 45 minutes prior to** (<—- is the optimizers' secret handshake to drop the word "Stack"?)
> cold-bath immersion **on an empty stomac**h (<—- not fasting would have been too "casual". You gotta add some extra hurdle).
> Though the metabolism of caffeine **(caffeine clearance)** (<—- technical jargon. "Authority ping")
> (…) **I assumed** that blood concentration would peak between 60 and 90 minutes post–oral (<—- displays the brain work. Ferriss geeked the analytics out)
> consumption, which was **based on the average pharmacokinetics** (<—- got that?)
> of caffeine in white male subjects. (<—- ensure ethnical relevancy. You never know you're going off Martian's parmacokinetics)
> Pharmacokinetics, **usually in graph form**, show (…) (<—- Ferriss can read charts)
>
> I (…) submerged myself for a total of 20 minutes.
> Those 20 minutes were phased as follows: (<—- Did you think you could just lay there? Nope, phases guys, phases!)
>
> 00:00–10:00 minutes: (…) (<—- We removed Ferriss' made-up body positions to adopt)
> 10:00–15:00 minutes: (…)
> 15:00–20:00 minutes: (…)
>
> Sound painful? It is. (<—- you gotta earn your over-optimizer stripes, bitch!)
>
> (…)
>
> That's it.
>
> *Tim Ferriss, The 4-Hour Body*

That's it, says Ferriss.

You've just spent half a day prepping for an ice bath meant to "burn fat"… While you could have just eaten less.

Imagine that!

Save time, money, and do it the healthier way.

Ferriss asks if it sounds painful.
I bet he was proud to declare "it is".

I may sound nasty here.
But to me, more than painful, it sounded stupid.
The whole book, frankly, also struck me as *sounding* "smart", but very low in critical thinking.

Thomas DeLauer

Needs no analysis:

> **Thomas**: (I live to bio-hack)

No dig on Thomas, he seems a great guy, kind, and even very open-minded towards critics.
But to me, if you see this and don't think it's over-over-doing biohacking, you may be too far gone :)

Lucio's Biohacking

First, foundational mindset of personal power:

> **See Power University**
>
> *PU, Foundational mindsets of self-empowerment*

Then:

Rules of Thumb

I follow rules of thumb based on credibility and required input:

- **High investment for uncertain returns**: **no**. Hence out all strict, stringent, and weird diets
- **If it's a new fad, most likely no**. Most fads go against the literature consensus.
- **If it's a marketer / scammer / non-scientist, most likely no**. TPM/PU can help you develop a sixth sense for those
- **If it's easy, or one-off investment, most likely yes**. Even if the benefits are uncertain

Input rationale:
I focus more on input because most outputs are uncertain, unquantifiable, or small-ish.
So if they're high input, they're likely not worth it.
But if they're low-effort or one-off, then even small improvements are welcome.

Credibility rationale:
It's an industry ripe with scammers, marketers, and biohacking porn addicts.
Even well-meaning folks can seldom think rationally and analytically.

Dont's

Reminder:

My experience, my opinion :).

We write for smart men here.
If you looked into it, tried it, and **if you're sure it works for you, you're right**.

I tried and stopped:

- **Intermittent fasting**: I did 8/16, then one meal a day. If I'd tell you the dates it ruined you'd think I'm the biggest idiot on earth (and you'd be right)
- **Extreme, "prove yourself" habits & exercising**: over-optimizers tend to go extreme everywhere.
  Including the drive to "prove one's worth to himself / others". There is a time and place for that. I still have it in me and use it.
  But I also made it a point to address it. Much more power to have high self-esteem *as default*:

> **Lucio**: 4am alarm to lift weights is what you should advice your enemey. Lack of sleep increases the odds of injury. And extremism as "motivation" is killing your self-esteem

- **Ketogenic diet**: I never felt more stupid than on a rooftop bar in Rio de Janeiro. Everyone having a great time… And me Googling the carbs percentage of each cocktail. Then ensuring the bartender followed my special instructions.
  That's when I told myself "f*ck this BS"

- **Barefoot shoes**: Tried, and still wear them on “hack squat days”.
  But never for normal life. I think they harm more than help. The “we weren’t meant to walk with shoes” is so dumb it doesn’t deserve to be addressed
- **Fasting**: don’t believe in the oversold benefits
- **Wearable to monitor body functions**: this is complication mistaken for effectiveness. Most of it is unneeded data, pure biohacking porn.
  I have the same feeling for weather forecast:

> **Lucio**: winners don’t check the weather (/wearable trackers). They will do anything they need to do anyway, no matter the weather (/what the trackers say)

Not doing:

- **Reverse aging / life extension**

Again: anything that’s easy is welcome.

I’d rather live longer and better than less and worse -duh!- :).

However, I’m not a fan of the *philosophy* of “biohacking for life extension”.
Especially when it turns into biohacking porn, as it sometimes does.

I have a strong take on it actually:

> Quit the narcissism of living forever.
> Have the courage to bow out when it’s time.
> Focus on making it a good life-show you can be proud to bow out from
>
> *Lucio Buffalmano*

- **Ice baths**: I turn the tap full cold for the last seconds. Ice baths feel 100% optimization porn territory
- **Nootropics**: not a major limiting factor to address. Not interested
- **Saunas**: no thanks
- **Earthing or grounding**: may do this “naturally” if in nature. But if you gotta go out for its “therapeutic effects”… Get outta here hippie :)
- **Microdosing**: not interested for now
  - Therapeutic hallucinogenics: none of those who’ve done it without previous issues seem better off to me. Some seem worse off.
- **Cheat days**: God, such an idiotic frame! **Eagles don’t cheat**.
  I enjoy all the food I eat. I have some treats every day (porridge with yogurt, berries, fruits, nuts, peanut spread etc.). And some other treats every once in a while. But all part of a balanced diet & life.
  Don’t even come mentioning that weak-ass cheat stuff

Does

- **The BASICS**: this is where it’s all at. You probably won’t need anything else. All of them I do regularly and at good intensity, but without excesses.
  - Exercise, some weights (used to be home exercises), cardio (more recently), home exercises. Use stairs for lower floors, and bicycles/walks instead of cars for shorter distances
  - Dancing on music sometimes. Nothing says “yes” to life like dancing on your favorite music. Healthy *and*

happy
  - Quality food & balanced diet. Whole foods, enough proteins, plenty of vegetables and fruits, and limited processed foods
  - Natural sleep/wake rhythm. Wake up without alarm #1. To me it's also about personal power and the only way of "proper living". Nap when I feel like. Go to bed when sleepy is the one I "naturally resist" the most, but I'm OK with it.
  - No smoking / drugs / excessive alcohol. But I'll bum a couple puffs after a meal if someone smokes. Or enjoy wine with food sometimes. Have nothing against getting drunk or high sometimes, but haven't done it in a while
  - Good relationships. These days I prioritize work and don't have a "proper social circle". But still good family relationships, and remained friends with childhood friends
- **Some supplements**, such as D3 when I spend winters in EU
- **Mouth taping** to ensure nose breathing at night. This is good optimization: specific to the individual, great ROI, *no pretenses to generalize it to others* (most people don't need this). For *me*, it was great. I'll stop once it becomes a habit
- **Water purification**. Not sure how helpful it is. Health optimization gurus are useless unless they checked *your* pipes' water. But it *may* help, and it likely does help a bit. *And* it's very low effort. That's why it's a "yes"
- **Light optimization**, all easy to implement. Including:
  - Blue light removal from laptop and phone after a certain hour
  - Black and white smartphone, great tip to potentially reduce phone use. Thanks to Alex Hormozi
  - Lower lights in the evening
- **Meditation**

And finally:

- **Power University**

Talking about "basics first".

Social effectiveness will do more for you than all other bio hacks combined.

So ditch the infrared lamp.
And learn how to get some status, respect, and attraction.

Summary

Optimization is great.

We're ALL for optimization and effectiveness here.
We encourage it.

However, optimization and effectiveness aren't exactly the same.

And **you must apply the effectiveness mindset also to optimization itself**.

Some people may tend to overdo optimization to the point where it's not effective anymore.

We showed the risks of overdoing "life optimization" and "bio-hacking".
Including some red flags of biohackers who may pull you down the bio-rabbit hole :).

And don't forget:

- Do the actual work

- And enjoy life

Ad majora friends!

Neuroplasticity: How To Rewire Your Brain – Review

Lucio Buffalmano · 12 February 2024 · Archived copy · Original

In *Neuroplasticity: How To Rewire Your Brain*, instructor Gregory Caremans explores the topic of neurology and seeks to explain how to rewire the brain for more life satisfaction and success.

Contents

- Summary
  - Cognitive Flexibility
  - The Neuroscience of Habits
  - Strategies to Overcome Procrastination
  - Brain Hacks to Overcome Procrastination
  - How To Change A Memory
- Review

Summary

This course is aimed at creating structural change in the brain.
Structural change leads to long-term improvements.

When new neural connections are being made, structural change happens. So, much of this course focuses on creating new neural connections (i.e. neural pathways).

Structural plasticity is the brain's ability to change its physical structure as a result of learning. And, that structural plasticity (structural change) needs repetition to work over the long term.

Cognitive Flexibility

Enriched environments lead to structural change.

**Note: On the left is an "impoverished environment" which is known to cause a decrease in brain cells in animals as well as humans.*

And, exercises that simulate an enriched environment help the brain regain its plasticity so it will be more receptive to that structural change.

Sensorial/motoric exercises

These exercises stimulate the brain's sensory systems and motoric systems

Examples of these exercises would be:

- Shower with your eyes closed
- Switch hands for writing
- Learn to play an instrument

Stimulating sensory systems heightens all of your senses (sight, hearing, and so on). Stimulating your motoric systems improves your movements.

The neurology behind our tendency to exaggerate the dangers of physical confrontation

> "Well, basically, our brain is rewiring itself to be able to better run away or fight of danger. And, in the process, making sure we don't get too traumatized by remembering every single detail of a possible injury we end up with.

And, this is a perfectly valid strategy when we face physical danger as we have done for millions of years.

But, in today's modern world where stress rarely leads to physical confrontation let alone a physical injury. It's not adapted anymore.

And, in the meantime stress is everywhere and is slowly but surely undermining our neuroplasticity and our brain's

ability to function properly."

Avoid stressful environments to boost confidence and self-esteem

> "Our brain learns. Whatever we experience, we learn. Put a person in a positive supportive environment and our brain will learn that we can trust others. Now, put that same person in a fearful environment subject to physical or emotional harm and it will learn as well. The amygdala our brain center for fear and aggression will expand in size the brain teaches itself to react faster to danger, to be better prepared. It persistently increases anxiety and fear conditioning."

And:

> "Unfortunately stress does more than that. Sustained stress will decrease dendrites and spine numbers in the hippocampus…These changes lead directly to attention loss and decision-making impairment."

Neuroplasticity lacks a "moral compass"

Neuroplasticity's function is for *efficiency*, not morality.

E.g.

- "A piano virtuoso will have developed as much dexterity as a malignant hacker behind his or her computer who's out to steal our information and money."
- "A fan who knows all the latest gossip or their favorite singer or actors will have developed the same kind of neuronal networks than a stalker does."
- "A soldier risking his life serving for his country he will have developed the same set of skills than a terrorist plotting the destruction of his sworn enemies."

"Skills, dexterity, learnings, they are all based on networks of neurons submitted to the same rules of nature and that is whatever we do most whatever we pay attention to we will become better at it."

And, Caremans' personal warning on this is:

> "I need to give you a word of caution. First, neuroplasticity has no moral compass. You see, our brain adapts to whatever we do whatever we give attention to. Its sole purpose is efficiency…This means that whatever we do most, our brain will adapt to it…So we consolidate new information more easily as it integrates in a network of related information. The same goes with our social network…This gift of nature [neuroplasticity] has far reaching consequences. Not only should we be aware of it, but we have a duty to choose wisely whatever we decide to dedicate our lives to."

The Neuroscience of Habits

How to develop your self-control

"So, just like with the rehabilitation program, we should break things down into easier bits."

1. Visualize yourself in a temptation situation and successfully gain the upper hand. Whatever it is you want to change, visualize yourself being successful at it, make it vivid. Imagine how you would feel, incorporate details, make it as real as possible from their own work.
2. (E.g. Avoiding ice cream) Look in the ice cream store window for a few seconds and then quickly leap.
3. Go into the store with a friend, with the agreement that you're not going to buy or eat ice cream and leave quickly.

4. Your friend stays outside and you go in alone.
5. You go in by yourself, sitting down, ordering something else, anything that is not ice cream, and then going out again.

"Build in as many steps as you feel you need…And that's how it's done. That's how we learn our brain to develop willpower by gradually exposing ourselves to temptation."

The power of words

"The thing we need to understand is that our brain shapes itself, wires itself based on what we do…This has huge consequences.

It means that whatever we expose ourselves to, that's what ends up shaping our brain: How we think. How we see life.

Now think about this for a minute. What are you exposing yourself to the most? What kind of stuff do you read? What kind of programs do you watch? what kind of people do you hang out with? What kind of conversations are you having?

So, what's it going to be? When you come home after your job, do you end up in front of your telly watching the latest reality TV show, or do you take an online course and expand your skills? With whom are you hanging out? People all the time complaining, or people with a positive mindset and a go-getter attitude?

…We have to be very mindful of what we expose our brain to, as it will end up shaping who we are as a person and how we go through life."

And, to add to this, Caremans notes:

> What we do most ends up shaping our brain…if we listen daily to the news and its flood of negativity, we start seeing our own world and life as a dangerous and frightening place. We end up scared and worried for things that aren't real, at least not in our daily lives.

Strategies to Overcome Procrastination

Dopamine driven strategies to beat procrastination

1. Visualize enjoying the task and the satisfaction of completing it
2. Gamify the task
3. Break the task down into a to-do list of sub-tasks
4. Bundle the task with something you like (e.g. music)
5. Look on the bright side of the task

Contextual strategies to beat procrastination

1. Team up with others who will work with you on completing the task
2. Find someone close to you who you can call when you're feeling unmotivated (i.e. a buddy system / accountability partner)
3. Surround yourself with action takers
4. Get rid of temptation
5. Change your environment

And, the “change your environment” strategy is about more than doing the task in a location that makes you feel good.

The neurology behind it is, “…if you’ve been procrastinating for a while now, you’re probably already wired to procrastinate even more. Sitting at your desk might be a trigger to start doing the stuff you shouldn’t be doing. So whenever you detect repetitive patterns in your procrastination…It’s time to break out of that pattern. And a great way to do so is to change our environment.”

Brain Hacks to Overcome Procrastination

“The Covert Start” Hack

“When we don’t feel like doing something we can **trick our mind by taking the first steps of the action**…your inner procrastinator will start protesting so you hush him and do it anyway.”

E.g.

> **Caremans**: “So, for example, if you need to start writing a document or something, start by turning on your computer in. A procrastinator will go, ‘But I don’t want to do it. So, you answer something along the lines of, ‘Sure, yeah, sure. I just want to have a look at the documents.’ So, you go to your word file in a procrastinator will protest again. You go, ‘Don’t worry. I just want to write the first sentence.’ Then you write the second one and the third one. And, before you know it, you’re doing that thing you were procrastinating about and the inner protesting stops as you’re too busy doing the task you’re focusing on.”

The “Wording” Hack

Next time you talk to yourself thinking that you really should be doing something, change your words. **Don’t say, ‘I should be doing this.’ Say, ‘I’m doing it. I’m doing it right now.’**

Now, listen to these words. ‘I’m doing it right now.’ Is this action driven? Right.

…what happens is that our brain gets contradictory information. I would say we’re in the middle of action and the rest of our body isn’t. That creates a discrepancy, a tension that can only be resolved by taking action.

So, it’s a little bit like the rest of our body goes, ‘Oh, we’ve already started the action. I wasn’t paying attention. OK, sure, let’s do this.'”

The “Third-Person Procrastinator” Hack (AKA: “Personify your procrastination habit”)

Make your procrastination habit a person.

Give it a name, make your procrastination tendencies an entity separate from yourself.

Then, observe it, talk to it, get to know it, then tell it [him/her] to back down when you feel it holds you back.

It’s a good way to be able to mentally shift the blame and not feel guilt about your procrastination.”

How To Change A Memory

What we’re going to do is to **implant a new memory in our brain and overwrite the old one**.

No, we’re not going to forget what actually happened.
We’ll just be feeding the brain with new additional information about the event and associate it with new emotions.
So that next time we think about the event, we’ll be at peace, thanks to the new memory.”

Strategy #1: Override your memory (AKA: the "scratch the record" technique)

Here's the process:

1. Take a minute and find a memory to overwrite.
2. Find a quiet place where you won't get disturbed.
3. Sit down comfortably and close your eyes.
4. Picture yourself back in the moment when everything happened.
5. Relive once more what happened. But, this time, imagine it how you wish it would have been.
6. Take notice of all the details. Look around you…Make it all as real as possible. (Where are you? What's happening? Smell the perfumes in the air, feel the objects with your fingertips. Listen to the music, the sounds.)
7. Give great detail to your emotions. (This is very important. Feel the joy or the pride that fills you, the happy feelings that resonates within you.)
8. Slowly but surely feel the peace that fills you, the serenity that has become part of you.
9. Slowly come back.
10. Open your eyes.

"Now, every time we are reminded of the events we have to consciously choose to go to the other imagined version of what happens [repetition is key]."

Strategy #2: Reframe your memory / the event (i.e. challenge underlying beliefs)

Here's the process:

1. There's no intrinsic meaning to situation: "Understand that no situation comes with an emotional value attached to it…It's a story of values and meaning we give to the situation, which adds emotion to it."
2. Turn it into question. Why am I hurt? (e.g. "I am hurt because…I am powerless.")
3. Find evidence of the contrary. (e.g. I live the antifragile ego, I'm progressing through my list of career goals—my future looks bright, etc.)
4. Look for new perspective. (e.g. I have power. And, I'm on track to gain more power in the future.)

Strategy #3: Reframe your memory / the event (i.e. adopt the growth mindset)

The growth mindset approach to reframing your memories:

1. Look at the "bad" decision and look at the negative consequences of that decision.
2. Imagine the hypothetical situation where we didn't screw up. And, look that (hypothetical) negative consequences of that.
3. Go back to the real situation and look at the positive consequences of your "bad" decisions. (You'll see they're very closely related to what you just wrote down for the step before this one.)

"Think about what could have happened down the road if you wouldn't have learned that lesson that may make sense. Could you see now how errors, mistakes, bad decisions are necessary, are useful in their own right? Congratulations. You are now in a growth mindset."

Caremans mentions that he's a fan of Daniel Kahneman (see *Thinking Fast and Slow*) and not so much a fan of (some of) Jordan Peterson's work in psychology, which sometimes leaves him with somewhat unique takes on certain subjects.

As a neurocognitive and behavioral expert, Caremans says,

> "Now, Carol Dweck seems to imply that we have a fixed mindset or a growth mindset. My personal work in

> research isn't as black and white. What I have found is that we are mostly a mix of both. We can have a fixed mindset on some issues and growth mindset on others."

Still, Caremans agrees that a growth mindset is necessary for overcoming painful memories and leaving the past in the past. And, for the most part, he seems to agree that the growth mindset can be used to reframe any fixed mindsets one may have.

Review

How to Rewire Your Brain is not a bad course by any means, but it didn't hold up against the alternative resources.

In terms of ROI, one could have gotten more out of reading *The Power of Habit* and *Ultimate Power*.

At times, it felt like the course taught neurology simply because it's a neurology course and then switched to psychology when it was time to talk habit development, growth mindsets, and so on.

And, that made learning the neurology behind our behaviors interesting, but also made learning the psychology behind our behaviors feel and seem like more of a practical use of one's time.

Ceiling Effect: Why 99% of Self-Help Leads to Plateaus

Lucio Buffalmano · 19 February 2024 · Archived copy · Original

The Self-Help Ceiling Effect™ refers to habits, skills, and advice that got you to your current level, but prevent you from moving to the *next* level.

It's most often a *glass* ceiling because whatever it is that you're missing, you don't yet see it.

Luckily, this article is here to help.
You will learn what ceilings are, how to spot them, and how you grow past them.

INTRO

The definition of self-help ceilings is:

> Self-help ceiling effect refers to advice, behavior, or mindsets that help some people up to a certain level (plateau), but turn ineffective or harmful to progress onto higher levels of self-development or results

And the self-help **ceiling law™** states:

> Following any general purpose advice that doesn't include nuances and calibration will eventually set you up against a ceiling

Ceiling advice may still be helpful. But you must consider when it's time to ditch it for deeper alternatives.

Ceilings VS Glass Ceilings

A *glass* ceiling is invisible.
While any ceiling can be hard to overcome, you at least know what to work on with visible ceilings.

For example, imagine you race cars.
The data shows you lose the most lap time in braking. Braking is your current ceiling, and you know what to work.

But **you can't work on overcoming glass ceilings because you don't realize you have them**.
You're stuck at your plateau level, without seeing the next ladder upward.

So let's dig deeper:

Good glass ceiling advice is the worst blinder

And here's what makes glass ceilings hardest to spot:

It's often *good* advice and teachers who create your worst ceilings.

With neutral or bad advice, you don't advance *at all*.
So you're more likely to troubleshoot, try new things, and eventually find what works.

But ***good* advice pushed you *upward* against the ceilings**.
And because it served you well, you struggle to see how it's holding you back today.

Low VS High Ceilings

Low ceilings cap your growth fast, while high ceilings allow room for growth.

What's low or high ceiling is contextual.

TPM's content tends to be high ceiling.
That's because most people pursue goals or scarce resources. These competitions follow power dynamics principles and strategic considerations.

In our very unbiased and objective view, TPM's content is very high ceiling

Dave Ramsey's "avoid debt" advice is lower-ceiling advice.
Being careful around debt is great advice for overspenders
But you should quickly understand the limitations of that advice. (Ie.: a mortgage for a flat you love is fine if you can repay it).

Ceilings Make You Lower Value To Those Above

This is why glass ceilings cost you big:

Your ceilings are obvious to everyone else who's *above* you.
Because, to those above you, your ceilings are floors.

The man above knows you're below him and doesn't want to be close to you because, to him, you're a lower-value taker.

That means that **your ceilings make you lower value to those who moved past them**.

That's why it's so important to learn from truly advanced teachers.
People at your level can't show you the ceilings.
Only those above can.

Why you're alone and nobody helps you past ceilings

Problem is:

nobody from the level above wants to help you.

Why should they?
There's no "what's in it for them".
Plus, many people have egos. They wouldn't even learn, but only get offended.
So there are only downsides for higher-value men to help you up.

#real talk:

To those above you, you're just an idiot who doesn't get it.
Plus, as a lower-value man who doesn't get it, you're a lot more likely to just *take*. Without giving.

> The top ceilings of lower-quality men are floors of tolerance for higher-quality men (and women)
>
> *Lucio Buffalmano*

#real Mach talk:

And if you have potential… You're just more competition they don't want.

Let's review a plain example to understand the concept:

Example: “Suiting Up”

Suits mean power to the youngster who “won” an investment banker job. He doesn’t realize that his suit sub-communicates lower value to the millionaire entrepreneur

A business suit communicates authority.

Cialdini said so in his best-selling *Influence*.
Other networking books advise to “dress 10% better than everyone else”.

It makes sense.

Especially for me.

With my sociology background, suit-wearing business jobs weren’t easy.

So when I cracked the business world, it felt like I had made it.

Despite how much I loved suits, I'd purposefully *avoid* anything suit-related once I had my own business

I loved wearing suits.

Suits were the symbol of the status I had earned.
I was a professional.
F*ck yeah!

I'd catwalk around office -"look at me, I belong"-.
And I'd dress better than most to display I was confident, hungry… And on my way up.

Back then I also thought Barney from "How I Met Your Mother" was cool and funny. (Today I think he's an idiot).
And, like him, I often donned a tie going into clubs.
You know, just to let women know I wasn't a broke student anymore.

And… It worked.
It was a great approach, *back then*.

Then, I Reached A Higher Level In My Life & Career

Today I see suits as the *opposite*.

A symbol of subordination, captivity, and towing the line.
It's a semi-mandatory uniform to fit in.
If you don't wear it, you're ostracized.

And **I realized that only those who dress as they please are in charge of their lives.**

A suit devalues you at this higher level of bold individualism, entrepreneurship, and freedom.

Entrepreneurs make it a point to avoid suits.
It's how they advertise they're one level higher.

That's why tech entrepreneurs dress casual.

At this level, suits are lower-level class.
It's people who have NOT made it -and who come to sell you something (possible takers)-.

This phenomenon is referred to as counter-signaling.

Signs You're Stuck Under A Ceiling

Forward progress is natural if you work at it… Unless a glass ceiling holds you back

So, if ceilings are invisible, are you cursed to stay under them?

Not necessarily.

A good observer armed with an open mind can see the signs.

At the highest level, it's:

- **You get some success, but not as much as you want**
  - You plateaued. Plateaus are the natural consequence of glass ceiling self-help
  - You're still far from the top – or far from your highest potential

Many men have a far higher potential than they even think of.

Getting near the top is realistic and possible because most of your competition does NOT maximize his potential.

You should of course have enough raw material and effort to advance.
But once have those in place, continuous advancement to your natural top is the natural consequence.

IF you tackle all visible constraints, that is.
And if you don't move up, there are invisible ceilings

This is the "theory of constraints".
Alex Hormozi built his business accelerator program around this simple philosophy and approach.
And you can also apply it to personal growth and advancement.

> If you struggle to advance but don't see a problem, a glass ceiling is the problem.
>
> *Lucio Buffalmano*

Some more concrete examples:

1. **In your social life, you can *engage* with high-quality people, but they keep you at arm's length**. You have just enough value, but there's some ceiling. Maybe unconscious power moves, small-timer manipulations, or lose status with low-power behavior
2. **In dating, you get sex, but can't keep great relationships**. You may have some toxic behavior you aren't aware of yet
3. **At work, you're competent but aren't advancing**. The ceiling may be your soft skills. And before you jump into "leadership skills", it may be office politics that undermine you. Or failure to understand human nature and general power dynamics

Etc. etc.

The point is this:

If you can spot the signs, sometimes you can turn glass ceilings, into *visible* ceilings.
And then you can address it.

Self-Help Is 99% Ceiling Advice

And here's the kicker:

The vast majority of self-help is ceiling advice.

It's the very nature of it because:

1. Only the masters can take you all the way up

And masters are *rare*.

Everyone else is advicing from their level.

Maybe their level is two levels above you.
Very helpful.
But that may still be a long way to the top.

Second spot. Not bad! Unless you wanna get to the top. Then, that #2 coach will become your ceiling

2. Lower-level folks can't see all the way up

It's the concept of the idiot, the Average Joe, and the genius.

The idiot may not even see the extra value of the genius.
So he takes the Average Joe as a role model.

Example of Self-Help Ceilings

Just some examples:

When Strong Turns Fragile

Some men build their self-esteem around being "strong".
Sometimes, *physically* strong.

It's a major step forward from sitting on the couch, being weak, and not having any source of pride or confidence.

However, strength naturally decays over time.
So it becomes a fragile and time-limited source of pride and confidence.

Maxim Ceilings: The "Laws"

Lists of laws and "iron rules" are ceilings by definition.

This is the paradox:

The *best* laws are for *average* men.

It's simple logic.
A good law applies to most people, in most situations.

To be as universal as possible, the "law" MUST target the average.

This is our main criticism to otherwise great books like *The 48 Laws of Power*.
I've seen **too many *un*successful men end up here after *mis*applying those "laws"** with no power intelligence.

Also see:

- Power University VS The 48 Laws of Power

> 48 Laws VS Power University: What's Best to Advance In Life?

Thinking Ceilings: Generalizations

For example:

- **All Women Are Like That**, a popular red pill mantra

Same as above:

The best generalizations are "good".
They apply to most people and cases.

In this case, many fundamental, underlying drives are common to most women.

But the nuances and exceptions all get lost -and BTW it's in the nuances and exceptions that advanced men and strategists thrive-.
And **only poor thinkers over-rely on mantras**.

At the higher level, sticking to generalizations *harms* your ability to understand reality because reality is complex.

Social Skills Ceiling Advice

A popular one:

- **Be assertive**

And, either implied or explicit: avoid passive, passive-aggressive, and aggressive

Makes sense.
Most of the time.

But *a few times* it's better to avoid assertiveness.
And you may want to strategically be passive, passive-aggressive, or aggressive.
It's those few times that differentiate the advanced practitioners, from the "OK ones".

Power Matters -duh!-

Or this approach:

- **To be interesting, be interested**

And listen instead of talking.
It's a popular soical skills advice popularized Dale Carnegie

It's good advice: many big talkers *desperately* need to heed that.
But it's also low-power to make everyone else the center of your attention.

Instead, some high-value men talk more because it helps them gain status early on.
Grandiose narcissists talk more because they have the *attitude* that others need to listen. But that attitude often shapes reality.

Also, don't forget:

Charismatic people capture people's attention by putting *themselves* at the center of attention.

Those exceptions are what make the difference between good performers, and *top* performers.

Dating Ceiling Advice

Example from a popular "red pill guru":

- **Always reject "let's just be friends"**

Good for still clueless men who accept friendship just to hang around a girl.

But a high-value man may be better off saying "yes".
First off, to display he's not butt-hurt by her romantic rejection.
And he may leverage an attractive woman for preselection. Or meet her girlfriends.

And if it's during last-minute resistance, he's better off agreeing and continuing escalation.

Types of Ceiling Advice

So far, we talked of ceiling advice in relation to "level of progress".

But some ceiling advice can be straight out bad because it's not a good fit.

For example:

Works for the 80%, not if you're top 20%

This is the paradox:

The best general advice is for average people.

Just like we said for "laws".
It's simple math.
To work best for most, it *has* to target average people.

That's why we felt compelled to write this article.
We don't target average men here :).

Works for specific personalities, but not for you

For example:

- **Speak less than necessary**

This is a popular "law" from The 48 Laws of Power.

It's great advice… For most people who aren't great speakers.

But great orators would give up their superpower!

I'd even agree with Greene on *a personal preference level*.
Dialectical incontinence rubs me the wrong way. But who cares what I think when millions of people made Jordan Peterson, Russel Brand, or Jay Shetty rich.

P.S.:
That law also doesn't work in many other situations:

> **Lucio**: social psychology research shows that people who talk more during group formation acquire more status

Works for different goals, not yours

For example:

- **Learn hard skills, become the best at it**

But if you want to advance with leadership and BIG money… You also need *soft* skills.

Power awareness, leadership, strategic thinking, etc.

Works for some situations, not yours

For example:

- **Be more outgoing to be more charismatic**

Works best for party situations.
But in a mafia sit-down you may want to be the more silent type.

Works for different age brackets, not yours

For example:

- **Move slowly to convey power**

Great advice for high power and accomplished men.

But a young guy who's learning the ropes should probably move faster.

He's not expected to convey power, he's expected to show *eagerness*.
That maximizes his learning, opportunities… And *future* power.

Works for different phases, not the one you're at

Most self-help is to "achieve more". But after achievement, you'd benefit from unplugging

TPM's content may even be *mandatory* to achieve demanding goals.

But once you internalize the skills and achieved all of your goals… You may move beyond TPM.

You internalized the skills, you read people as second nature.
And those are enough to coast in your "post-achievement" life phase.

That's why the last step of our process is to chill:

Why work hard all your life, when you can achieve all your goals… And still leave some time to spare for chilling and enjoying?

How to Break Through Ceilings

Here are some tips to avoid getting stuck under ceiling self-help:

1. Be Prepared For Ceilings

Simply knowing about ceilings is a great start.

1. **Accept there will be ceilings**. It's simply part of growing
   - Don't be bitter once you discover your ceilings. It's simply part of being alive
2. **Assess for ceiling teachers** and be ready to move past
3. **Be careful of misapplying ceiling laws**, "iron rules", etc. See some examples here.
4. **Look all the way up**. It can help you assess the steps you need, and the possible ceilings along the way
5. **Ponder your self-development ceilings**. Look at what you're proud of today. Ask if it serves you well. See if you don't have too strong an ego. Etc. etc.

2. Mental Level: Make Piece With Complexity

Some men struggle to accept the world's inherent complexity.

Simplification is their mental crutch.

We're not saying to scrap *all* simplifications.
There *is* much utility to good laws, generalizations, or "easy diagnosis" of others.

But you're often better off accepting complexity, nuances, and black and whites.
Reality is beautiful *because* it's complex.

3. Develop Critical Thinking Skills

Critical thinking skills help you spot ceilings before you hit them.

Use those skills to read the teacher's character as well.
Look for:

- Honesty
- *Intellectual* honesty
- "high-quality man behavior"

Etc.

And their opposites:

- Manipulation
- Scammy marketing, or "marketing above products"
- Various power moves

You can still learn something from these teachers.
But you must be cognizant. Many of them also want you to stay under their ceiling.

Read more here.

4. Earn The Breakthrough

Once you realize there are higher levels, you may want to skip all the way through.

Sometimes that's possible.
But not always.

So remember:

Ceilings are only stopping you when you're *ready* to move higher.

You can't simply reach the highest level by skipping through the stages.

Instead, accept, focus, and conquer your *current* level.

Once you hit a plateau, then you're ready to break through the ceiling.

Ultimate mastery is the final crowning of the man who becomes 100x a master.

5. Pick Good Mentors & Coaches

There are many ways mentors and coaches can be helpful.

But one of the most important is showing the invisible glass ceilings.

Specifically look for people who talk about "levels of development".
They (intuitively) understand the concept of ceilings and plateaus -and chances are they've gone through them-.

5.2. Always Ask For Feedback

You'd be surprised how many random people can see what you can't (yet) see.

One of those pieces of feedback may just break a new glass ceiling for you.

Power University has shown countless men their social and power ceilings. It takes you to the ultimate floor, no ceilings and mid-tier levels

Red Flags: Book Summary & Review

Lucio Buffalmano · 26 February 2024 · Archived copy · Original

Red Flags (2015) teaches readers how to recognize Frenemies, Underminers, and Toxic People with Wendy Patrick's simple approach by looking at just four major signal clusters.

Contents

Exec Summary

- **Look at the 4 FLAGs**:
  - Focus: What they focus on
  - Life: How they live
  - Associations: Who they associate with
  - Goals: What their goals are
- **Morals and values are important** when it comes to picking great people in your life
- **Takers come disguised as givers**, so be careful. Especially about your needs and emotional needs

We agree with all of that here at TPM.

FULL SUMMARY

About the Author:

Wendy L. Patrick is a Deputy District Attorney and team leader in the Sex Crimes and Stalking Division of the San Diego County District Attorney's Office. She also writes for Psychology Today and holds a Ph.D. in Theology.

Focus on FLAGs to Read People

- **Focus**: what gets their attention? They focus on themselves, or others?
- **Lifestyle**: how do they spend their time?
- **Associations**: who do they get along with?
- **Goals**: what are their priorities? Are they selfish or selfless?

More details from my notes:

- **Focus:** Focus of attention reveals thoughts, feelings, intentions, and interests.
  - Self-focused VS other-focused. notice the use of "I" VS "we" (social orientation)
  - On a date: does he focus on your body, your brain, or the ball game?
  - In conversation: personal questions, puffery, or politics?
  - At a social event: the host or the bar?
  - In general: pleasure, family, or career?
- **Lifestyle:** Personal spaces and after-work are more telling than work. Unusual activities are telling.
  - Leisure time activities: healthy or hedonistic?
  - Workspace: messy or meticulous?
  - Scrapbooking or Facebooking: sentimental or social?
  - Spending habits: splurging or penny-pinching? Is money the main focus and end goal, or a facilitator for other pursuits?
- **Associations:** shallowness or warmth? Beware "for show" associations" VS for pleasure. For associations and voluntary activities, but *how people use them* -for CV, or to add value?-
  - Peer group: coworkers, childhood friends, or cyber friends?
  - Quality time spent with: (real) family or fraternity brothers?
  - Relationship history: one-night-stands or serial monogamist?
  - Social orientation: isolationist or community builder?
  - Away from home: exclusive golf club, cigar club, or community service club?
- **Goals:** Even more than behavior, looks at the drive behind. If they run marathons, is it for adrenaline rush, challenge of beating personal times, or bragging?
  - Selfish or selfless?
  - Short-term or long-term? Future orientation is associated with stronger moral concerns present orientation (Nordhall, 2013)
  - Fame, fortune, or fun?
  - Improve the world or conquer the world?
  - Reach the peak of the mountain, or of the corporate ladder?
  - Finish the race or win first place?

Great stuff.

On focus, an alumnus in our forum noted that the first words of her friend walking in were about the beauty and value of the house.
Then, wondering if she was worthy of it. That reflects a very value-accounting approach to relationships.

And here's a case study for our alumni.

Rules for Reading People

1. **Use first impressions**: perceive as much as you can when you are most objective.
2. **Be wary of under-exposure**: avoidance and secrets are suspicious
3. **Observe behavior over time.**
4. **Use a wide-angle lens**: observe behavior in context, and in different settings.
5. **Solicit multiple exposures**: introduce new partners to your family and friends.
6. **Trust but verify**. Seek corroboration on and offline.

Detecting Dark Triads

> The Dark Triad is made up of narcissism, Machiavellianism, and psychopathy (…) often distinguished from other character flaws by its ability to present a very attractive façade.

Dark triads also have very specific goals:

> Psychopaths and Machiavellians pursue tangible goals such as wealth, status, or sex.31 Narcissists pursue admiration, respect, and status, rather than tangible resources.32

Sometimes you can spot dark triad because their emotional reactions are "off".
And sometimes even opposite of what you would normally expect:

> research shows that Dark Triad individuals can actually experience positive affect when confronted with sad emotions in others, and psychopaths can experience positive affect when confronted with fearful and angry expressions.66 Conversely, both psychopaths and Machiavellianists have been shown to feel negative affect toward expressions of happiness.67

Look for sensation-seeking without considering the costs:

> Thus, while sensation seekers may pursue a wide array of conduct ranging from skydiving to trying a new restaurant, such behavior is only impulsive when it is performed without regard to potential costs.17 Both impulsivity and sensation seeking are linked with Dark Triad personality.18
> (…)
> status-driven risk taking, also linked to Dark Triad personality, is risk taking that is motivated by social and financial gain

One Red Flag Can Tell You Everything

Says the author:

> dishonest lifestyle is not likely to be confined only to certain areas. The next time someone takes you to lunch to propose doing business together and intentionally fails to tell the server about an expensive item accidentally omitted from the bill, consider whether they would hesitate to cheat you out of future business profits just as easily.

That even inspired this video to test people:

> **Lucio**: agree in advance with the server or owner to hand a smaller bill. And see if they correct the mistake

Dark Triad Are More Likely to Become Leaders

Says the author:

> Power in the form of leadership potential is linked with all three Dark Triad personality traits: narcissism, psychopathy, and Machiavellianism.

About narcissists:

> Narcissists have characteristics that under certain circumstances make them desirable as leaders—even when people are aware of their narcissistic features. This is because in situations of uncertainty, the narcissist's confidence, dominance, strength, and toughness can generate psychological comfort and a sense of security.

Psychopaths:

> Psychopaths can make good leaders as well (…) psychopathic traits such as heightened physical and social fearlessness can predispose them to effective leadership in areas such as the military or in politics.41 In the corporate world, some businesspeople with high psychopathy scores hold positions of senior management.

The author also mentions Hitler and Stalin and says the absence of morality can also help psychopaths become leaders.

On Machiavellians and their leadership potential:

> They are power-oriented (…) yet judged positively and desired as leaders.
> With their talent for strategic, long-range planning and expertise in impression management, they are often well suited for leadership (…).
> (…) show stronger leadership and ability to form alliances (…) they are also prone to exploitation, and their concern for others is limited to their own self-interest.

Do they use prestige or dominance?

> Within relationships, **people using a dominance strategy are more likely to be narcissistic, Machiavellian, and aggressive**, whereas **those using prestige are more likely to be agreeable**, socially accepted, and high in self-esteem. Prestigious people also tend to possess valuable skills such as* altruism, academic achievement, and other intellectual and social abilities. (Cheng et at., 2013)

*To be accurate, "altruism" isn't a skill, but the point is still valid.

Learn to recognize poor and dark triad leaders

Says the author:

> This is important to recognize, because charismatic leaders have the ability to influence people to behave in ways that contradict their moral values.

We couldn't agree more.
Also see our articles:

- Great leadership is great manipulation

And:

> **Lucio**: Trump manipulated his followers to act on his behalf and then left them out to dry

Why Bad People Can Look Attractive

People tend to confuse signals of character with signals that have little to do with it.

Bad people can look good because they high-value men traits, because they make us feel good, or because they provide some value to us.

The traits are:

- **Attractive**: it's not necessarily an issue to use beauty to one's advantage. It's about *how* they do it. Facilitation of success, manipulation and cutting corners?
  Also, look at morality. Is beauty used a "casting couch" shortcut?
  - Focus: how much attention goes to appearance?
  - Lifestyle: using beauty only, or brains and other skills?
  - Associations: do they surround themselves with fans, family or longtime friends?
  - Goals: use it only to benefit themselves or to help others?
- **Powerful**
  - Focus: Self-service or serving others?
  - Lifestyle: Ruler or role model?
  - Associations: Peers or protégés?
  - Goals: Empowerment or exploitation?
- **Credible**, which the author seems to equate to "status"
  - Focus: Financial shareholders or community stakeholders?
  - Lifestyle: Lavish perks or corporate philanthropy?
  - Associations: Elitist segregation or engaged cooperation?
  - Goals: World peace or political re-election?
- **Attentive**
  - Focus:
  - Lifestyle: frequent networker, or just you?
  - Associations: a history of intense, but short relationships?
  - Goals: Do you have something the person needs?
- **Affirming**
  - Focus: the less they need from you, the more likely their affirmation is authentic.
  - Lifestyle: a selfless lifestyle lends credibility
  - Associations:
  - Goals: does their affirmation facilitate their success, or yours?
- **Similar**
  - Focus: interests are better indicators than appearance.
  - Lifestyle: Similar lifestyles predict relational success more than profession or income
  - Associations:

  - Goals:
- **Familiar**: beware of familiarity, it often only make you trust someone more, while you have no real added information to judge them
  - Focus:
  - Lifestyle:
  - Associations:
  - Goals:
- **Exciting**, where the author describes thrill-seeking personalities
  - Focus: Well-adjusted adrenaline junkies also focus on work, family, and safety.
  - Lifestyle: do they live for sensation seeking?
  - Associations: antisocial risk takers prefer solo sensation seeking.
  - Goals: Long-term goals distinguish well-rounded thrill seekers from those chasing endorphin fixes
- **Forbidden**
  - Focus: Is focus on the thrill of sneaking around? do they spend time with you in public?
  - Lifestyle: is a clandestine lifestyle part of the attraction? If your relationship became legitimate, would you still be interested?
  - Associations: Would you fit in with your partner's peer group and vice versa? Would you be with your partner in public?
  - Goals: is a normal committed relationship in the cards? When?
- **Dangerous** the author here shares her experience and expertise with various law enforcers
  - Focus: Protecting or intimidating?
  - Lifestyle:
  - Associations:
  - Goals: Solving crime or seeking status?

Know Your (Emotional) Needs

The author says that the theory of social exchange holds that we're attracted to those who make us feel good.

And she's perfectly right.

That is all the more true when they tap into emotional needs:

> Everyone has emotional needs and desires they depend on others to fulfill (…)
> People are often oblivious about their own emotional needs
> (…) Practiced manipulators, on the other hand, know what you need before you do.
> (…) When you are aware of your own emotional needs, you are better able to spot manipulators before you become emotionally addicted.

Also read our emotional manipulation.

Including the ones that are harder to admit

For example, "needing a partner" and not having been successful finding one:

> The perception that a person is running out of time to find a partner can cause attentive suitors to look very good—a perception that stems from desperation rather than desirability. Clever con artists looking for women with resources to exploit are able to spot this desperation faster than a drug-sniffing dog can find cocaine.

Or relishing admiration while having nobody that looks up to you:

> While Brittany is impatient with most of the senior center clients, she begins to treat Harold like a king. Her newfound interest in his military service makes Harold feel a renewed sense of significance, after many years spent feeling invisible. (…)
> One day she suggests to (…) visit his house to see his collection of medals and military photos
> (…)
> Harold's house is burglarized one day (…)

I bet you can guess who was the culprit.

And learn to spot other people's emotional needs

And if you learn to that authentically, all the more power to you:

> When you can **detect and authentically fulfill the emotional needs and desires of other people, you become the narcotic**. Genuinely enhancing the lives of others in this fashion will improve the satisfaction of all your relationships. You will strengthen your marriage, empower your children with the self-esteem they need to flourish, and build stronger friendships and relationships in every aspect of your life.

Remember: They Always Come When You're Neediest

> Some of the most heartbreaking cases of emotional exploitation involve people who are lonely or have lost a loved one, who believe they have met a like-minded partner who understands what they are going through,

Some takers purposefully frequent groups of needy men and women:

> Affinity groups, whether mobilized around politics, religion, or other shared beliefs, also appeal to psychopaths because of the shared trust among group members—which facilitates the ability to perpetrate fraud.52 Religious affinity groups are particularly vulnerable to the wiles of psychopathic fraudsters due to their acceptance of members from all walks of life and their belief in forgiveness.

Many People Are Too Naive & Trusting

> much to my dismay, the witness who bonds the most with the jury is the defendant.
> He begins crying during his testimony as he describes his difficult childhood. I am expecting the jury to recognize his performance (…) look over to see several of the jurors crying with him

Be Wary of Identity Claims, Look at "Behavioral Residue"

Identity claims are the signs people want you to see.

Slogans they repeat, pictures they use in their shared environments, books they place on their bookshelves, etc.

Behavioral residue instead includes everything about them, that was not specifically intended for "PR efforts".

Be Careful of Fake Signals: Status & Similarity

Says the author in a brilliant analysis we also share on Power University:

> Status is sometimes just a perception.

> (…)One example involves **arrogant people.**
> **Displays of pride lead some people to believe that a person with a high self-view also has high status** (Horberg et al., 2013).
> This is true when (…) a person reacts to a positive event with pride instead of gratitude—causing people to believe the person is more likely a company boss than an employee.34

And on similarity:

> Our attraction to similar others is not based on actual similarity, but on perceived similarity.29 And sadly, similarity can be faked.

Higher Value = Bigger Target

This is something we often said here on TPM:

> Powerful, influential, wealthy people are potential victims in the eyes of someone like Helen, who seeks to exploit their resources for personal gain.

See an example:

> **Dark narcissist**: (leeches onto celebrities and social climbs on them)

Looks For Flags of Power-Hunger & Narcissism

On power:

> watch for a focus on environmental control, including both situations and people

And look at the depth of their associations:

> Look for superficial associations, because regardless of how strong psychopaths come on, they don't bond (…)
> narcissists use associations to fuel their self-esteem. They date supermodels, hang out with high-status friends (…)
> Narcissists like to show off and impress other people. They **use relationship partners as trophies** in order to make themselves look good.

Women: Beware of Mistaking Strength For Abusive

This part should be mandatory in women's dating education:

> Some of these men make wonderful husbands who defend and protect their family.
> **Others end up with their actions summarized in a domestic violence police report** on my desk.
> What makes the difference?
> **The desire of some women to be cared for and protected leads them to place undue emphasis on the value of dangerous qualities, while downplaying darker personality traits**.

The example that follows is enlightening.
I can't paste it all here to respect the author, so I invite you to get the full book.

But I will definitely mention it in the next upgrade of Seduction University.

Important twist now.
While some women hate those abusers and know they made a mistake, some are OK with it:

> I have observed this dynamic for years (…)
> Intimate relationships present a mix of love and aggression (…)
> relational aggression does not always result in relational dissatisfaction. (…) a significant percentage of recipients of aggression interpret it as evidence of the perpetrator's love.

In a way, abusers who say that women are OK with abuse… May not be *always* wrong -emphasis on "always!-.

The signs of how bad looks good in relationships

Golden list and signs:

- Possessive looks protective
- Controlling looks comforting
- Aggressive looks assertive
- Violent looks passionate
- Rude looks direct
- Condescending looks confident
- Paranoid looks careful

Also read our article on paranoid jealousy.

> Too Jealous Boyfriend? 7 Signs He Might Be Paranoid

MORE WISDOM

Narcissists are most attractive

> Of the three Dark Triad personality traits, narcissists are perceived as most attractive (Rauthmann and Kolar, 2013)
> (…) due to their flashy appearance, superficial charm, and self-assuredness. This is particularly true with narcissists who have an entitlement mentality, are manipulative, and seek to exploit others (Back et al., 2010)

You may cut corners if others like you

Something we said often here.

No, reputation is not necessarily the cornerstone of your power, as a popular book on laws of power says:

> (….) a study of the desirability of job applicants who embellished their resumes found that misstating employment dates (…) to cover a period of unemployment had little effect on the way favored applicants were evaluated in terms of ability, trustworthiness, and likability, but negatively impacted the view of less-favored applicants.47

> **Lucio**: you don't strictly need reputation when you're powerful

Making people feel good and loved is a superpower

The author shares several examples of people falling for scammers, abusers and takers who made them feel good and loved.

But this one was the most shocking:

> With **older children**, (…) some **admit on the witness stand that the offender was the only person in their lives who paid them any attention**—a factor that outweighed (…) the sexual abuse. **"Do you still love him today?" I ask. Almost always, the answer is a tearful "Yes."** The mothers of the victims sometimes still love the defendant too, because (…) he was an attentive, caring husband. Even when they know that he molested their own children? Yes.

Be like those who focus on what you want, not your rivals

Some people focus on rivals.
Others, on what they want.

Albeit this example is more on the negative, we recommend focusing on your goals:

> People with an unrestricted sociosexual orientation (seeking sex without emotional commitment) in search of strangers to have sex with focus their attention on physically attractive members of the opposite sex. People worried about competition, on the other hand, focus on attractive same-sex rivals.

Giving attention works particularly well with narcissists

> Continually seeking admiration, narcissists prefer romantic partners who admire them rather than partners who offer intimacy and caring, because admiration increases the narcissist's self-esteem.

Be careful with fame: you can become narcissistic

This is true for stars themselves of course:

> but one of the risks of being famous, whether on a large scale or small scale, is having "star power" go to your head.
> The result?
> Celebrity narcissism.
> Acquired situational narcissism describes the phenomenon where people in positions of high power, such as celebrities, acquire narcissistic traits by virtue of their position.84 Studies show that celebrities have more narcissistic traits than the general public,85 and female celebrities exhibit more narcissistc traits than their male counterparts.86

And, even more worrying, for fans:

> The general public can be influenced by celebrity narcissism, glamorizing self-indulgent behavior as the new normal, and something to be emulated. For example, one study found that people who watched narcissistic behavior on reality television programs exhibit more narcissistic behavior themselves than people who watched drama.

Too nice guys are not appealing

Not that this is news, but it's a worthy reminder:

> Another explanation is that women are attracted to "bad boys" who are prone to risk taking and exude hard-headedness and confidence.
> And confidence is sexy. As are men who behave in ways that demand respect. No one wants a man who is a welcome mat. Guys who are "too nice" are not appealing.

QUOTES

On the power of charisma to overcome looks:

> Portly, short, and losing his hair, one of the men I prosecuted had more girlfriends than you could count. Several of his girlfriends showed up to watch the trial. More of a harem, really.
> Sure, he was overweight. But he camouflaged problem areas with trendy clothing more effectively than a professional model on the runway. Yes, he was short. But he carried himself like John Travolta with a swagger to match.

On the power of dominance and social power:

> As he pranced around the courtroom like a peacock, it was amazing to see how, sure enough, he garnered respect just through his dominant actions and behaviors.
> Everyone treated him with deference.
> The explanation?
> Very simple. Dominance is desirable.
> Dominant men are attractive to women.
> (…) Ogi Ogas and Sai Gaddam in A Billion Wicked Thoughts have a chapter entitled "Ladies Prefer Alphas."

On people falling for compliments and attention:

> Rolling up with his cart, which contains a number of expensive grocery items carefully selected for show, he tells Shelly that she is beautiful, asking if she is a native, or an exotic import, like the fruit she is buying. I can see you rolling your eyes. Give me a break, huh? Except that Shelly, who has never been called beautiful in her life, bought it hook, line, and sinker.

One being careful around compliments:

> "What do you want?" we sometimes joke when someone gives us a big compliment. Actually, that is a very good question.

On the power of affirmation:

> Wow, Ms. Patrick, you really destroyed that witness. You are such a great advocate. I sure hope you go easy on me." Who do you suppose that compliment came from? Would you believe, the defendant? (…) Although their ulterior motives are crystal clear, much to my dismay, the compliments strike a chord. Even though I know they are insincere. Welcome to the alluring world of affirmation.

On the charisma of the dark triad (albeit the author doesn't mention the huge role of Depp's inherent attractiveness):

> Seeking the Scoundrel Why do women swoon over Johnny Depp's character Captain Jack Sparrow in Pirates of the Caribbean? Because some women are fascinated with intelligent, ruthless manipulators. Especially when they are handsome and charismatic.

CONS

Few shades of grey with "us good VS them bad" approach

For example:

> Detecting criminals is more challenging than many people think, because…

It may be difficult because some criminals may be normal people.

Sometimes I'd have been more precise with some power-related construct

For example:

> When presented with negative feedback, a self-absorbed individual is more likely to respond with "My bad" rather than "I'm sorry."

This is GREAT observation.
However, that has more to do with power-hunger than self-absorption.
We call it here "power hoarding". See some examples in our gaslighting drill-down.

> Gaslighting Power Dynamics: 17 Signs You're Being Manipulated

Just a few times I'd have been more careful to reaching certain conclusions

Says the author:

> Some drunk drivers are sporting thousand-dollar suits in their mug shots—proving that there is no correlation between a polished appearance and safe driving.

Patrick displayed great critical thinking skills and wisdom, and this wasn't representative of her great thinking skills.
Namely, that doesn't "prove" what she says it proves.
If anything, it only proves there is no 1:1 correlation. But that doesn't say much.

Sometimes conflates sexual preferences for psychopathy?

The author has strong morals and ethics.

That's good.
But, as for everything, you can go too far.
And that may lead to some takes that, at times, can feel moralistic.

> In Dangerous Liaisons: How to Recognize and Escape from Psychopathic Seduction, Claudia Moscovici describes the progression of psychopathic seduction as illustrated in the movie 9 ½ Weeks, starring Mickey Rourke and Kim Basinger, where romantic attention and gifts that make the woman feel special and desirable lure her into a relationship of domination and control.

I'm not sure that's a sign of psychopathy.

Also, the author talks about a woman's love story with a racing car driver.
When they had an accident, she talks about "exercising bad judgment".
I don't think it was bad judgment. Accidents simply happen. And with the guy, she enjoyed the fun and excitement.
Not necessarily bad judgment.

PROS

This is a fantastic book.
Just some of the pros:

Well-sourced WITH great experience

Wendy L. Patrick is a fantastic example of what great content you can produce when you have experience, science, and great critical thinking.

This is also the approach we strive for here at TPM.
See TPM's epistemological approach.

> How We Ensure Accuracy: The 3 Pillars of Mastery

Great critical thinking

For example:

> So if looks can be deceiving and talk is cheap, do actions speak louder than words? Not always. Outward manifestations of good behavior do not necessarily reflect motives.
> (…) The only way to tell for sure is to observe the person's willingness to engage in helping behavior when no one is watching.

When I see this type of thinking I know I can always trust the author more.

REVIEW

Red Flags: How to Spot Frenemies, Underminers, and Toxic People is such a great book.

Kudos to the author, fantastic job.

Red Flags is thorough at all levels of the epistemology chain.
Wendy Patrick sourced, analyzed, and connected all the dots in the data to develop a fantastic framework.
Then, she presents it in a very simple fashion, with lots of real-life examples. And all very practical.

Big thumbs up, highly recommended.

And thanks to Bel in our community for recommending it.

And to end our favorite quote, which also sums up TPM's credo:

> While the world is filled with loyal friends, adoring partners, and compassionate strangers, it also contains enough shrewd manipulators to keep people like me in business for an entire career. Life is easier and much more rewarding when you can tell the good from the bad.
>
> *Wendy L Patrick*

10 Self-Empowerment Foundations For Top-1% Men

Lucio Buffalmano · 4 March 2024 · Archived copy · Original

Self-empowerment in men's self-development starts from the inside out. Most people try to fix behavior, tactics, or outcomes. That's backward.

Real personal power starts earlier: at the level of mind, identity, and internal state.

This article lists the core foundations of self-empowerment, from the most basic to the most advanced. Each layer builds the next, from internal alignment to external control and social effectiveness.

P.S.:
See this post for the basic strategies for social power.

Contents

- 1. Start With The Mind (Empowered Mind™)
  - 1.2. Accept Yourself
  - 1.3. Develop Self-Respect
  - 1.4. Internalize: "I'm Worthy of Basic Respect"
  - 1.5. Develop Emotional Self-Sufficiency ("I'm enough")
  - 1.6. Own Your Dark Side
- 2. Mind Your Body & Presentation
  - 2.2. Present Yourself Well
- 3. Extend Control Over Your Life
  - 3.2. Develop Mastery & Competence
  - 3.3. Make Some Money
  - 3.4. Align With The Powers That Be
- ⍰ Self-Trust

- 4. Track & Correct Value Exchanges
- 5. Track & Correct Power Exchanges
  - ⚠ 5.2. Self-defend and re-empower yourself
- 6. Act High Power (Social ROI)
- 7. Control Frames
  - Intro to Frames
  - Frames Set Moral Rules
  - ⚠ 7.2. Hidden & High-Level Frames Are Paramount
- 8. Learn How to Control Others
  - 8.2. Make Others Dependent (⍰)
  - 8.3. Become A Man Others Want to Follow (⍰)
- 9. Master Emotional Power Dynamics (AKA: The Judge)
- 10. Transcend It All

1. Start With The Mind (Empowered Mind™)

The **Empowered Mind Principle™** states that the mind is the source layer of all behavior, influence, and outcomes (Source Layer Principle). An empowered internal state produces naturally congruent and effective behavior, while a weakened or reactive state produces inconsistency regardless of will, personal ambition, and tactics.

The mind is most foundational because it is the source from which all else flows.

If the mind is weak, reactive, or incoherent, everything downstream becomes inconsistent. Most people then try to fix the output, changing behaviors, learning tactics, or trying new scripts. But **you don't fix the output. You fix the source.**
If the mind is stable, empowered, and internally aligned, behavior becomes naturally effective and congruent.
All high-value behavior flows as a natural consequence from an empowered mind, effortlessly and congruently.

This is key to reliably signal value over time, making everything easier, more effective, and more credible.
An empowered mind also allows you to be congruent over time with all the signals you send, which is key for long-term success ('congruence principle').

The mind is the foundation

A healthy, confident mind includes:

1.2. Accept Yourself

You accept who you are, despite your natural flaws

⁉️ This doesn't mean you stop improving.
Instead, you **accept your flaws while working on them**.

1.2.2. Accept Your Shortcomings

It's important because:

⚠️ **Unaccepted shortcomings are permanent, unfixable weaknesses**

❓ Example: See Nicolas Sarkozy not accepting his height.
A mentally stronger man may feel the *opposite* — that his short stature *increases* the significance of his successes.

1.2.3. Then Move to Self-Love

You like yourself and treat yourself well because you're worth it

Healthy self-love includes being able to evaluate yourself and handle criticism or failure.

The key is to separate self from events.
🤦♂️ A failure never turns into "*I* am a failure".

Failure and success are just neutral assessments of events.
Resilient **self-love runs in the background, *whether the result is positive or negative*.**

 Self-love is like an eternal friend and supporter by your side

1.3. Develop Self-Respect

You believe in your worthiness and dignity as a human being

Power University will get you respect from others.

That's empowering.
Do the actions, and you will get respect *–no matter how you feel-*.

How to develop self-respect

We dig deeper in Power and Confidence University, but this video helps.

1.3.2. Then Upgrade to Self-Pride

You feel good about yourself, who you're becoming, and what you stand for

Now we can bridge from inner mind, to external world:

1.4. Internalize: "I'm Worthy of Basic Respect"

You deserve basic consideration just for being human.

This is a core belief:

I deserve respect because I am worthy of it.

A foundational level of respect and consideration is due to any human.
You are worthy of it just for being a human being.

Nobody has the right to disrespect you or humiliate you.

Beliefs ARE Power – Even When Powerless!

You won't *always* enforce boundaries.

Sometimes it's not in your best interest.
Other times you may not have the power to.

And that's OK.

Even as a powerless victim – you *still* believe you're worthy of respect.
And you will always be.

This is crucial.
True, resilient (mental) power is independent of circumstances.

Keep that core belief and you have the foundational mindset of an empowered man.

Example

He *decides* it's best to let it go—keeping his mental power and strong body language.

He loses mentally. And makes himself smaller as a consequence

⍰ Both men "took the yelling"

But emotional detachment makes it about the event, not about *him*. He still thinks well of himself ⍰.

The man who thought himself unworthy and "bad" remains low status and low self-worth forever ⍰♂.

Related good mindsets:

- I respect others, so I expect and demand the same ⍰

- To disrespect others is to be an asshole. And I don't accept assholes around me ⍰

1.5. Develop Emotional Self-Sufficiency ("I'm enough")

You are "enough"

You don't need others to "complete you".

You may want them, but you're fine if you don't get it.

And you may want others to approve of you.
But you keep your self-worth even without others' approval.

1.5.2. Develop Emotional Detachment

You never take things too personally

Emotional detachment boosts life effectiveness.

Power awareness is 2x more effective with emotional detachment.
And 10x more life satisfaction.

⍰ Example

It's emotional detachment that tells us The Godfather will be an effective boss:

> **Godfather**: It's not personal, Sonny <— ⍰ I'm emotionally unaffected
> it's strictly business <— ⍰ I do what's most effective

1.6. Own Your Dark Side

You accept your will to power.
Negative feelings like jealousy or revenge are human and don't make you bad.

Owning it makes you a more "integrated man".

⚠ **Own it, without reveling in it**
Don't despise yourself for having them—just move past them when needed.

1.6.2. Strategically Owning Your Dark Side...

Publicly owning your dark side is risky.

But you will learn that straight-talking your dark side can facilitate genuine connections (example later).
Or can be a powerful display of confidence.

> Over-hiding your darker side is like courting a girl while pretending you're not interested in intimacy.
> It reeks of sneaky weakness.
>
> *– The Power Moves*

2. Mind Your Body & Presentation

Mental self-love turns to physical self-care

Health first, but also stay in shape.

How you look matters to social success.
And physical self-care also displays a good internal life.

2.2. Present Yourself Well

⚠ Same person. Nothing “wrong” with chubby. But the left one achieves far more in life.

Some fundamentals include:

1. **Posture**, check this post
2. **Voice**, check this post
3. **Good fashion**

3. Extend Control Over Your Life

You live out your preferences, independent of specific individuals, organizations, or social trends

Some examples of what “control VS lack of control” look like:

Life plan and direction
No control: unaware of what’s best for you; no attempts at moving forward; complains about “society” or “women”
Control: plan and move in the direction you prefer; find ways to win

Work
No control: job you hate; fixed hours/breaks; micro-managing boss
Control: do what you like; the execution is up to you

Financial
No control: dependent on a single source to survive; no other options; no savings
Control: own work and/or can easily find work; diversified income; savings

+ Control over your life also protects you from people attempting to control *you*.

3.2. Develop Mastery & Competence

Get good at your job or chosen trade.

The specifics of your job are on you.
Here at TPM we teach the general life competences that apply to anyone.

3.3. Make Some Money

Resources empower.

?♂ Doesn't mean you must *prioritize* wealth.
But "enough" money gives freedom and independence.

Quoting Nassim Taleb:

> (resources) shield you from prostituting your mind and free you from outside authority–*any* outside authority.

That IS empowering.

3.4. Align With The Powers That Be

You are on the good side of higher or equally high-power people and institutions

"Power aligning™" is important anywhere.

And *fundamental* where individual rights are weaker (despotic countries, top-down organizations, underworld, etc.).

In countries with strong civil rights and governments, the legal system is a superpower you want on your side.

?A good lawyer(s) is both self-defense and power multiplier.
A smart tax advisor saves money and troubles.

2.4.2. Own Nothing, Control Everything

You have big assets, but invisible to takers

The principle is “legal, KISS, and safe”

Legal diversification and holding protect many downside risks.
And provides peace of mind.

⍰ Self-Trust

It always goes back to the mind.

No matter how powerful, fit, wealthy, or whatever…

You can always find yourself on your ass.

Some people resist that idea—it’s their ultimate fear.

Instead, make peace with it.

Call this “ultimate self-trust”.

It has two components:

1. **Trust your “naked self”**, the one relying on character and skills *only*
2. If that fails – **be cool with the worst case** of failure and death

We dig deeper in our premium resources.

4. Track & Correct Value Exchanges

“Value exchange” includes any give-and-take interaction.
“Value accounting” tracks who gives and takes.
“Value-maximizing” seeks maximum benefit

Successful people:

1. **Monitor** giving & taking
2. Are **strategic** about their giving
3. **Fix imbalances** early

⍰ Avoid “bean counting” or over-tracking with good people and relationships
Bean counter = tracks inconsequential details, expects quick returns from friends, and reminds others of their debt.
Toxic = *over*-tracks in close relationships.

⍰ Find great people who need little accounting
Great relationships feature relaxed accounting and higher trust. Giving is a source of pleasure.
Social success is finding great people worthy of your generosity.

5. Track & Correct Power Exchanges

“Power exchanges” are interactions that affect power, status, or attraction.
“Power accounting” tracks empowering versus disempowering people and actions.
“Correcting” restores your power as a respected, high-value man.

High value men:

- Know who empowers or disempowers
- Take corrective actions to re-empower themselves

⍰ Same principles apply.
Balance and calibrate. Avoid *over*-defending or *over*-reacting ⍰.
⍰ Success is surrounding yourself with people who uplift—they need no correction.

⚠ 5.2. Self-defend and re-empower yourself

High-value men don't let others disempower them.

When others disempower you:
 Lose status and respect (including your own)
 Sub-communicate cluelessness and incompetence

High-value men instead register the attack, and take action.

6. Act High Power (Social ROI)

Social ROI measures the return on your effort. Over-investing without matching returns lowers your perceived value.

Social ROI matrix™

The Social Investment Model differentiates higher power as *factual* power, as in having power, and *perceived* power, as in looking powerful.
Both are important, and they feed into each other.

Some examples:

1. You speak to fill silences you're framed as **needier**. Or yielding to social pressure
2. You walk across the room to say hi while they stay put you're framed as **lower status**. Or wanting something from them
3. You text more than she does you're **chasing**
4. …

⚠ Even kindness without getting kindness back frames you as lower status.
Starting politely is good, but **don't stay polite if they're curt**.

⍰ Example: running VS stillness

Extreme example of high investment VS low investment:

> **Narrator**: Paulie might have moved slow. But it was only because Paulie didn't have to move for anybody

The high status made men purposefully move slowly and little.
The lowest-status boy hurries for everyone else.

7. Control Frames

Frame control is the art and science of shaping perceptions and social negotiations.

We dig deeper in PU, but for the basics:

Intro to Frames

A frame is a set of beliefs, values, and perspectives with which people interpret the world.
Frame control is the art and science of shaping perceptions and influencing social negotiations.

Frames are most visible in disagreements.
Example from a relationship:

> **His frame**: St. Valentine's gifts are a waste
> **Her frame**: St. Valentine's gifts are caring
> ➡ Their actions depend on whose frame wins

Frames are also held at *social* level.
It's more challenging for individuals to buck socially ingrained frames.

In our example, society supports her frame.
So it's difficult for him to "win" the frame without seeming "unreasonable" or controlling.

He needs advanced skills to "win" the frame without her feeling like he's *imposing* his will.

Frame Battles Are About Power

For two reasons:

1. **Power signaling**: the winner sub-communicates higher power—dominant, persuasive, or both
2. **Setting the rules (SOPs)**: the winning frame governs the relationship under the winner's terms

⍰ Example

From Mrs. Doubtfire:

> **Him**: (Frame: we were having fun, it's good, and I'm the leader of this relationship)
> **Her**: (Frame: you were destroying the house, it's bad, and you're useless and only take from my life)

Whose frame wins?
Just look at his face for the answer.
Frames often resolve without a single word being spoken.

Frames Set Moral Rules

Higher-level frames also set values and morals.

This is important because:

⚠ When you accept someone's frame, you play by *their* ethical standards.
And your behavior is judged based on what *they* prefer.

Always be careful of frames that hide implications for right or wrong.
Speaking of hidden:

⚠ 7.2. *Hidden* & High-Level Frames Are Paramount

Advanced frame control is all about high-level and hidden frames

Most people accept, react, and defend from frames they don't even see.
And in so doing, they lose all power.

⍰ Example

Imagine you want to lead your business well into old age.

But virtue signalers call you a "power-hungry old man" who can't let go.

⍰ Pause for a minute and think:

How would you respond?

Now, consider the hidden frames:

1. **Wanting power is bad**
2. **They have the authority to judge you**
3. **Staying CEO proves "power hunger"**
4. **Hence, *you* are "bad"** (rather, than, say, having a *single* negative trait)
5. **You must exculpate yourself** (to the world, and *the attackers* will judge)

None of those hidden frames are necessarily true.

But unless you spot them, you will communicate poorly.

Successful and high-power men are smart enough not to fall for #4.

But *you may still fall for all the others*.

You'll deny your drive to power.
Or make an excuse, saying you're seeking a substitute—and you sound sneaky.

⍰ We got the solution for you.

8. Learn How to Control Others

Controlling others is the ability to have others do as you want, in the best and most effective way possible

Many authors list many "power levers"
Including:

- **Coercion** (push). Punishments or threats. Good to have it, even when you don't want to use it
- **Dominance** (push). A form of more or less "socially covert coercion"

- **Prestige** (pull), Makig people *want* to emulate you or listen to you.
  You earn it with your achievements, knowledge, or quality of character
- **Leadership** (pull). Charisma, influence, and strategy that inspire and motivate contribution
- **Authority** (push or pull) "Legitimized power" with titles or rank.
  - Rank: a title of "official authority" within an organization
- **Resources** (often pull). The ability to give value (but, sometimes, also inflict costs)

In truth, all overlap and feed upon each other.
Our programs improve all of them.

When Power Is Undeserved

Ideally, power goes to the person who "deserves it".

In reality, power isn't always deserved, and authority is often faked.

It sounds obvious, but most people can't spot fake.

8.2. Make Others Dependent (?)

General principle:

The more people need you, the more power you have.

The concept is obvious.
But true skills are in the *how* to do it.

? Don't be a jerk—pull, don't push!

Important limitations to this approach:

Making others dependent can turn toxic and abusive.

That "works" only on those who have fewer options, and as long as you can punish.
And even then, you lose all the goodwill.

In close relationships, it often turns lose-lose.

8.3. Become A Man Others *Want* to Follow (?)

The approach that always works is to make people *want* to follow you.

Power University turns you into that type of man.

9. Master Emotional Power Dynamics (AKA: The Judge)

"The judge" is the individual that others react emotionally to.

People seek judges' approval and good opinion.
And feel bad about their distance, disapproval, or anger.

That's emotional neediness.
And the stronger the need, the more powerful the judge.

⚠ Be aware of emotional power dynamics.
Judges make you reactive, dependent, and needy.

10. Transcend It All

Achieve all your goals.

Then chill, and focus on enjoying life, and giving back.

This is a preview from Power University version 9.0

How to Display Competence & Monetize: 7 Power Tactics (Andrew Huberman Case Study)

Lucio Buffalmano · 11 March 2024 · Archived copy · Original

Want to show competence and gain status and authority like a master strategist?

In this article, we uncover the tactics gurus use to project authority, captivate audiences, and gain power through 'expertise amplification'.

Whether you're aiming to signal value or market your expertise, we'll unveil the tactics that work.

Contents

- Competence Display Cues
  - 1. Use extra jargon for extra authority
  - 2. Forget Pareto. Spin insignificant gains as major benefits to hook your audience
  - 3. Over-complicate things to make others feel clueless (and dependent on you)
  - 4. Talk more than necessary. Verbosity is mistaken for expertise
- Strategically Avoid Alienating Your Audience
  - 5. Avoid divisive topics (ie.: Huberman has no opinion on vaccines. Convenient… ⍰)
  - 6. Use strategic ambiguity to straddle all sides: there is "some evidence" for all woo-woo
- 7. Monetize Your Authority ⍰
  - 7.2. Covert Selling: Sell, Without Selling ⍰

Competence Display Cues

We'll analyze how an expert like Andrew Huberman displays and boosts competence using his real-world examples.

Andrew David Huberman is an American neuroscientist, podcaster, and popular "optimization guru", and his success proved his 'methods' to acquire power, fame, and authority.

Quotes below are from this video:

> **Huberman**:
> Welcome to The Huberman Lab Podcast, where we discuss science and science-based tools for everyday life. I'm Andrew Huberman and I'm a professor of neurobiology and ophthalmology at Stanford School of Medicine

Did he drop enough high-authority keywords within the first 10 seconds?

Good, then we're ready to go ⍰

Huberman says this episode is eminently practical.
And I picked it for two reasons:

1. **Should be fair to Huberman**, since I expect practical advice to be more straightforward
2. **Less theory means I can leverage my expertise**. Persuasion, manipulation, power moves, etc.

We analyze straight quotes from this episode.

Let's go:

1. Use extra jargon for extra authority

> **Huberman**:
> Elevating your feet (….) can be really beneficial for increasing the depth of sleep because of the so-called glymphatic washout.

This could be fair.

So consider it more of a personal note.
But to me, it's a first potential red flag as a possible authority power move.

You know, just in case you forgot the "science" and "lab" plastered everywhere around Huberman's name :).

Of course, there is nothing wrong with displaying your authority.
You can easily *under*-do it.

But as for everything, balance.

I feel Huberman overdoes it.

2. Forget Pareto. Spin insignificant gains as major benefits to hook your audience

Going on one of his trademark "quick side note":

> **Huberman**:
> (raising your legs at night) lead to more wakefulness and actually can improve cognitive function and a number of other things related to brain health.

To me, this is one of the worst red flags. ⍰

Huberman's wording leads listeners to believe that "elevating your feet by 3 to 5 degrees" can significantly impact "cognitive functions" or health.

I'd bet that elevating your feet at night will *not* significantly impact cognitive functions.
Or "brain health" for that matter -a nebulous term that to me, means nothing-.

Worst yet, this approach drags many people down the over-optimization trap.

2.2. Use the "casually dropping gold" power move to make them think you have *endless* gold to drop

Why does Huberman talk this way?

Because the sub-communication is:

1. **I possess *endless* life-changing advice ("casually dropping gold" power move)**

Think about it.

What does it sub-communicate when you drop gold in a tangential remark that wasn't even your main focus?

That you have so much gold that it's overflowing.

Any time you open your mouth there's a golden nugget. Even when you're casually digressing or mentioning a "quick BTW".

2. **I nonchalantly drop gold left and right, so you better listen**

Since you never know when this guy will drop life-changing optimization gold, you must listen to *everything* they say

To me, it's an annoying form of "value-inflating".
And it's manipulative because it's based on BS.

In truth, the basics are much fewer, and simple.

It's just not good for Huberman to tell you that.

3. Over-complicate things to make others feel clueless (and dependent on you)

5 techniques to sound more authoritative.

All from the same continuous quote:

> **Huberman**:
> Not just that cortisol peak but it's going to trigger proper metabolism (**<— Bamboozling technique**. What does "trigger proper metabolism" mean? It's too fuzzy to convey any real information. It's just a bamboozling device to sound authoritative)

And:

> **Huberman**:
> it's going to set a timer for you to be able to fall asleep about 16 hours later and on and on and on (**<— Pull rank technique**. Makes it sound like it's a long and complex list. He knows it well, but he's cutting it short "for us non-scientists". A power move to "pull rank" on the audience)

And:

> **Huberman**:
> And I should mention within the on and on and on (**<— Breadcrumb technique**. Frames it like he's picking one thing among the many he could pick to give us a juicier detail. The game is "here's a crumb for you, but there's a whole bigger loaf where that comes from because I'm an expert". Another power move, and to me it feels like he's about to add more smoke without any substance)

And:

> **Huberman**:
> suppress any melatonin, a hormone that (…) It does a number of other things too (<— again, frame that "he's not gonna bother us with all the details", but covertly showing off he does know all the details),

And:

> **Huberman**:
> including interact with the adenosine system and kind of wash out some of the adenosine that might still be residual (…) (**<— Big words techniques**. covert authority displays with unneeded details and "big words" power moves such as "residual")

And:

> **Huberman**:

> Fundamentally speaking, get that morning sunlight viewing (<— **Big smoke strategy**. This is what it's all about. So, after bamboozling us with smokescreens and jargon, everything could have been boiled to a simple sentence. Thanks for saving time, Andrew)

Overall, I get a major covert brag vibe of "Look how smart I am".

Very effective if you can't spot it.
Very off-putting when you can.

Andrew is a good guy and these techs can be used for good.
Still, you wanna be aware of them so you don't get all the bathwater with the baby.

4. Talk more than necessary. Verbosity is mistaken for expertise

Huberman now shares a good old tip:

Earplugs to sleep through noise

Eearplugs allowed me to sleep over long plane flights.
Or whenever I had the misfortune to end up in hotel rooms next to busy streets.

To me, they were HUGE.

So you think it should be a GREAT and easy tip for sleeping in a noisier environment.
And that it should also be easy to explain, right?

Furthermore, given Huberman's brand of "science-based", you'd hope for some actual research, right?

Well, none of that.

Huberman over-complicates that too.
And without saying anything value-adding:

> **Huberman**:
> In addition, I get a lot of questions about earplugs. Here's the deal with earplugs. Some people find that earplugs are very beneficial because, of course, they prevent the entrance of sound into the ear that could wake us up.

Yeah, thank you, Andrew.
I would have thought earplugs were to stop background cosmic radiation.

But there's more:

> **Huberman**:
> But some people find that the sound of their own beating of their own heart can be disruptive and they get a sort of humming in their head when they have those earplugs in. I'm one such person. Although, I have family members that like using earplugs when they sleep.

Compare the communication if one sought *effective* delivery of information:

> **Effective communication**: Some ask about earplugs. They work for some, not for others. Try it and see

But that would have been too simple.

In the end, the episode was more than 1.5h.

It could have been a 15-minutes video, with no loss of information.

But the goal was NOT optimizing for information delivery -see what I did there?-.
It was to display authority, covertly brag, and entice the audience to subscribe and watch more.

Strategically Avoid Alienating Your Audience

Huberman strategically avoids anything that could bother his fanbase

Huberman uses what Chris and Matt call “strategic ambiguity”.

Such as, Huberman straddles divisive issues to avoid antagonizing anyone in his audience.

No matter how clear the issue may be, or how convinced he may be, Huberman keeps it vague.

Intellectual honesty and truth be dammed.

Let’s review some examples.

5. Avoid divisive topics (ie.: Huberman has no opinion on vaccines. Convenient... ⍰)

> **Huberman**:
> Some doctors say that you should all vaccine. Some say none

An obvious tautology that adds no actionable insight.

I’ll use strong words on this.

To me, **it feels like no-courage cop-out**.

And it’s the main reason I’m writing this review.

This guy has millions of followers who trust him.

He may have helped the world.

He may have called out the bullshitters.
Encouraged people to take vaccines.
Or if he doesn't believe in that, he may have told them *not* to take vaccines.

Whatever.
I don't have a horse in that race.
I'm not judging the right *call*, I'm judging the honorable *behavior*.

But Huberman took the easy road out.
Right when he could have swayed the public discourse the most, his silence was deafening.

Andrew Huberman: an opinion on every little-added-value 'hack' and supplement… yet avoids addressing the most critical issues

6. Use strategic ambiguity to straddle all sides: there is "some evidence" for all woo-woo

Two examples:

6.2. The benefits of "grounding"

"Grounding" is the practice of going barefoot in nature.

Some say there are health benefits.

In one of his podcasts, Huberman says "There is some evidence for that".

Yeah, like what's the evidence, Andrew?

What's the evidence that walking barefoot on grass improves your health?
Please show that to me.

This is where, to me, **Huberman comes across as dangerously close to woo-woo rather than a rigorous**

scientist.

And it's not even to say grounding can't be good.
Or nice.
I may even do it.
It's just that I don't believe there are any *measurable* health outcome improvements doing it.

6.3. The benefits of red light for injury recovery

In another example, Huberman says:

> **Huberman**:
> I'm not talking about the benefits of injury recovering from red light, albeit we can also talk about that.

Huberman throws another bone to the over-optimization crowd.

And leads people to believe that there are measurable outcomes from injury recovery from red light.

He never mentions what they are though.
Too bad because *THAT* I'd have been curious to hear.

It feels though that there isn't much evidence at all, and it was rather another technique to keep people hooked.

7. Monetize Your Authority ⍰

This is the most popular criticism against Huberman:

Huberman over-states supplements' role in a healthy life, and then *sells* supplements via his endorsements.

Of course, Huberman never *directly* tells anyone to buy supplements.
That's his cover, after all.

But he endorses a supplement producer.
And he often talks about the benefits of supplements.
Put two and two together, folks.

7.2. Covert Selling: Sell, Without Selling ⍰

A quote from our original episode:

> **Huberman**:
> What I'm talking about is taking 900 milligrams of myo-inositol also 30 to 60 minutes before sleep along with the standard sleep stack

If Huberman says that supplements should be the last thing you look into… Why does he frame "sleep stack" as "standard"?

Machiavelli would say **it's a technique to covertly sell without selling**.

Such as:

- **Sell supplements with 'normality frame'** as in "goes without saying (that you take them)".
- **Celebrity & expert covert endorsement: do as I *do*, not as I say**. Huberman covertly sub-communicates that HE takes supplements.
  It combines the famous-man endorsement, *plus* the "expert endorsement" after he built his authority

How to Display Competence & Monetize: 7 Power Tactics (Andrew Huberman Case Study)

Lucio Buffalmano · 11 March 2024 · Archived copy · Original

Whatever.
I don't have a horse in that race.
I'm not judging the right *call*, I'm judging the honorable *behavior*.

But Huberman took the easy road out.
Right when he could have swayed the public discourse the most, his silence was deafening.

Andrew Huberman: an opinion on every little-added-value 'hack' and supplement… yet avoids addressing the most critical issues

6. Use strategic ambiguity to straddle all sides: there is "some evidence" for all woo-woo

Two examples:

6.2. The benefits of "grounding"

"Grounding" is the practice of going barefoot in nature.

Some say there are health benefits.

In one of his podcasts, Huberman says "There is some evidence for that".

Yeah, like what's the evidence, Andrew?

What's the evidence that walking barefoot on grass improves your health?
Please show that to me.

This is where, to me, **Huberman comes across as dangerously close to woo-woo rather than a rigorous**

scientist.

And it's not even to say grounding can't be good.
Or nice.
I may even do it.
It's just that I don't believe there are any *measurable* health outcome improvements doing it.

6.3. The benefits of red light for injury recovery

In another example, Huberman says:

> **Huberman**:
> I'm not talking about the benefits of injury recovering from red light, albeit we can also talk about that.

Huberman throws another bone to the over-optimization crowd.

And leads people to believe that there are measurable outcomes from injury recovery from red light.

He never mentions what they are though.
Too bad because *THAT* I'd have been curious to hear.

It feels though that there isn't much evidence at all, and it was rather another technique to keep people hooked.

7. Monetize Your Authority ⍰

This is the most popular criticism against Huberman:

Huberman over-states supplements' role in a healthy life, and then *sells* supplements via his endorsements.

Of course, Huberman never *directly* tells anyone to buy supplements.
That's his cover, after all.

But he endorses a supplement producer.
And he often talks about the benefits of supplements.
Put two and two together, folks.

7.2. Covert Selling: Sell, Without Selling ⍰

A quote from our original episode:

> **Huberman**:
> What I'm talking about is taking 900 milligrams of myo-inositol also 30 to 60 minutes before sleep along with the standard sleep stack

If Huberman says that supplements should be the last thing you look into… Why does he frame "sleep stack" as "standard"?

Machiavelli would say **it's a technique to covertly sell without selling**.

Such as:

- **Sell supplements with 'normality frame'** as in "goes without saying (that you take them)".
- **Celebrity & expert covert endorsement: do as I *do*, not as I say**. Huberman covertly sub-communicates that HE takes supplements.
  It combines the famous-man endorsement, *plus* the "expert endorsement" after he built his authority

15 Steps to Be A Good Machiavellian: Your Secret Playbook

Lucio Buffalmano · 18 March 2024 · Archived copy · Original

Want to be more Machiavellian?

This guide distills the most powerful strategies into 13 practical steps.

We've helped thousands of men sharpen their strategic thinking, navigate power dynamics, and become more effective in business, dating, and life—all while remaining honorable men.

If you're ready to upgrade your mindset and start winning more, let's dive in.

Contents

- 1. Look For Leverage Over Others
  - 1.2. Identify Needs & Emotional Buttons: It's Your Leverage

1. Look For Leverage Over Others

Romance, love, and bonding follow patterns that can be understood and influenced.

They’re forms of interpersonal influence, reproducible with the right behavior and strategy.

The right behavior and strategy come natural to successful Machiavellians.
You, my budding Mach, must learn it.

⍰ Example: Mach Dating

Albeit a movie, it’s realistic of a Machiavellian approach to dating:

> **Him**: (gains emotional leverage over her with sex, romance and Mach techniques. Then chills when she is hooked)

Also see:

- **How to make her fall in love**

1.2. Identify Needs & Emotional Buttons: It’s Your Leverage

Common emotional drivers:

- **Emotional needs**
  - Difficult past ⍰ Be their therapist / confidante
  - Longing for love ⍰ Give them romance
- **Social struggles** ⍰ Be their good friend
- **Unfulfilled desires** ⍰ Give them hope
- **Resentment** ⍰ Let them vent, validate their anger

⍰♂Lucio’s Take: **when gaining social power becomes addictive**

Lucio:
Some men who get skilled at dating report being hooked on the ‘thrill of seduction’.

Part of the appeal is in gaining power.

It’s similar for socialization.
The thrill is in starting from zero, climbing up, and gaining status and social power.

Once you achieve it, your status is set and you can coast.
But it’s not as exciting anymore.

2. Look At Leadership As Ultimate Leverage

> Cooperation made humans the dominant species; those who harnesses it becomes the ultimate masters

⍰ Machiavellian Leadership Techniques

These can all be fair in win-win exchanges, but you still want to be careful:

- **Mission frames**, a cause worth dying for
- **Self-sacrifice frame**, rather than enjoying the perks
- **Exaggerate the costs of leadership**, so people remain subordinates
  ⍰ Example: entrepreneurship’s costs
- **‘Us’ frames**
  - Downplay the hierarchy to erase the costs of subordination
- **Inflate external threats**
- **Narratives of disempowering forces**

  - Powerful forces keeping you down
  - Cabals to rebel against
  - *'We're being wronged'*

- **Goliath VS David frames** for 'need for unity'

- **Righteous frames**, the 'war of the good'

You can find these leitmotifs beyond many successful movements:

- Feminism ⍰ patriarchy oppresses us
- Communism ⍰ capitalists oppress us
- Musk / Space X ⍰ ensuring humanity's survival

Learn more:

How to become a leader

See:

- Political manipulation
- Business manipulation

3. Look At Relationships As Exchanges

Largely, they are.

And **always ask 'What's in it for me?'**.

If the answer is 'nothing', *nothing* is your contribution.

Same goes for people.
People either give, or take—cut ties with the takers.

We believe here that a healthy "what's in it for me" is not just good for you, but for the world.
It maintains humanity and effective, and drives the world forward.

3.2. Think About Return Maximization

Ie.:

Technical cofounders
✕ **Power aware** demands his full worth ⍰⍰
✓ **Naive** ⍰ builds it for little equity ⍰⍰

Watch exchange manipulation red flags

An example of 'credit inflating':

This is how value-taking social manipulators try to get more from you, while giving less
See more here:

- Overview on manipulation

Reminder: don't turn into a taker, always prefer for win-win
A strategic mindset doesn't mean taking and shortchanging others.
The best Machiavellians know that sustainable power and high-quality relationships come from offering real value.

5. Develop Baseline Cynicism

You can't be effectively strategic if you're naive.

Balanced cynicism is built on the knowledge that everyone pursues self-interest.
Work backward from their interests to uncover true motives

If they say differently, it's a spin, lie, or self-lie.

Some articles to develop your cynicism:

- Business manipulation
- Machiavellian principles

And to keep your cynicism healthy, see:

- **Enlightened cynicism**

Exercise: Contemplate Machiavellian Beliefs

Some of them:

- There's only 1 law of nature: power
  - It's fair for those with power to do whatever they want
- Bad policies are often good politics
- The world isn't fair. And *neither it should be*
- People only see what appears, and what appears to be true, is true
- You never hear the truth because information is about power -and controlling the narrative–
- People do the expedient, then lie to themselves- and you- that it's 'right'
- People get most upset about what's out of their control. It's easy virtue-signaling, without having to do sh*t

Not all of the above are necessarily and always true -that would be *over*-cynicism-.
And they're also not necessarily commendable or advisable.
But they're well worth keeping in mind.

6. Develop Machiavellian Thought Process

Some people take rules very seriously.
Some others don't take them seriously enough, and end up in trouble.

Machiavellians instead are strategic about it.
To Machiavellians, rules by themselves mean nothing.

And this is their thought process around legality:

The Machiavellian decision process is based on utilitarian calculation of personal gains.

There is no preconceived notion that respecting the law is a good thing in itself.

Many Machiavellians see blind rule-following as limiting

And if you think this mindset gets you in trouble… I wouldn't be so sure.
In this survey of 225 prisoners and 38 lawyers, it's *lawyers* who scored higher in Machiavellianism, not prisoners.
But those Machiavellians were on the "right" side of the law.

7. Develop Strategic Thinking

🤔Lucio's Take: **This is my #1 secret to achieving goals**

Lucio:
I had achieved all my life goals by middle age, while also enjoying life.

Everything else that comes, is on top.

It's a great place to be in.

My personal success comes down to 3 traits.
A strategic predisposition may be the most important.

What helps:

1. **Start from your goal**
2. **Walk backwards**
   - What you need
     - How can you get them
   - What stands in the way
     - How to maneuver around obstacles
   - **Find shortcuts**—think creatively
3. **Risk / reward analysis** for each possible approach
4. **Think 2-3 moves ahead** (second-order effects)
   - If I do A…
   - They may say B or C…
   - …I may do Z or Y
   - And then…
   - …
5. **Mitigation**
   - What will you do/say if caught

⍰ Mitigation example

A smart and honorable mitigation tactic is to *own* your tentative and come clean.
Then, ask if an exception is possible.

Very masculine and high power.

PU expands on this with advanced breakdowns and real-life applications.

8. Decide Based On Risk/Reward Calculation

> Timid men stagnate.
> Risk-takers rely on luck.
> Machiavellians maximize odds.

⍰ Case Study: Risk-Reward Accountancy

In this YouTube video:

> **Robber**: (enters guns drawn)
> **Employee**: (draws his gun for risky shootout)

A Machiavellian wouldn't have acted for negative risk/reward calculations:

- Little upside besides good feelings and a pat on the back
- Faces dead-ending downsides to
- Defend *company* property

The clerk is a hero and deserves more in life.
But even from an ethical point of view, **the honorable Machiavellian knows that we need heroes *alive*** to keep contributing with their win-win.

9. Talk & Act With *Sub*-Communication In Mind

Everyone can weigh words.

But higher communication effectiveness is at the *sub*-communication level.

Question	Low Power Naive	High Power Mach
Why are you single?	It's difficult to find a good girl <— Low-value	I'm picky, it's not easy being my GF <— High-value chooser
The weather sucks these days	Yeah, it's depressing <— Emotionally weak	True. Luckily the weather stopped me <— Empowered
Have you heard about…	Yes… <—⍰⍰ My time is worthless	No, I focus on my work/have a full life <— High achiever
What's your type of girl	Traditional <— Red flag of fear	My life is great as it is to be honest <—⍰ Life winner

10. Quit Higher Ideals: Be Ruthlessly Practical

Higher ideals are great, but can also be tools for manipulation.

10.2. Quit Loyalty – Switch to The Best Opportunity

> Loyalty is the emotional manipulation tool of those who can't offer any better
>
> *Mr too cynical but sometimes right*

Let dogs be loyal. You demand returns on investment.

10.3. Quit Commitment – Embrace Strategic Plurality

> Commitment is the reassuring illusion of the emotionally needy
>
> *Mr too cynical but sometimes right*

Let the needy and fearful rely on illusionary, unenforceable social contracts.
You move free and unchained to conquer the world unencumbered.

⍰ Strategic Pluralism In Business

> **Mach 1**: Regimes change are always tricky. You wanna stay neutral. Loyalists are always hung
> **Low Mach**: What's wrong with you. Aren't you loyal to anyone?
> **Mach 2**: (Picks a side at no risk for himself)

Of course he is loyal to someone.
He is loyal to himself.

In many situations, this is a fair stance.
It's not written anywhere that you "owe" loyalty to a boss, group, or company that is already getting value with your work.

Keep Options & Pipeline Full

In "*The Art of the Deal*", Trump asks for higher bids, and then reflects:

> The truth is, I really don't wanna sell the yard at any price (…) On the other hand, I don't want to rule out anything.

⍰⍰ Carefully choose your higher ideals, rather than shunning them all
Over-Machiavellians tend to be alienated and dissatisfied.
The smartest Machiavellians develop their own honor code, a mission to pursue, or some value to uphold. See effective spirituality and positive psychology.

11. Quit The 'Real Me' Nonsense: Be A Chameleon

Self-help gurus are obsessed with the 'real me' talk and 'being genuine'.

First of all, the obsession with 'being yourself' is a cultural WEIRD phenomenon that only Westerners obsess with (Heinrich, 2020).

Second, to a Machiavellian, that's puerile, naive, and self-handicapping.
When you tie 'be true to yourself' to your self-esteem, you don a self-defeating straitjacket that prevents you from adapting and winning.

Quit the weak 'real me' talk, and be a chameleon.

> **There is no 'real you'.**
> **There is only the 'you' who's most likely to win -or lose-**
>
> *The Power Moves*

12. Rewire Your Brain With Meditation

Surprised to see meditation here?

Let's quickly review how it helps with Machiavellianism.

1. Working memory: research shows Machiavellians have higher working memory capacity, making for superior strategizing. Meditation has been shown to improve working memory
2. Cool-effect: meditation can help you gain distance from your feelings, making you "cooler".

The proof?

People trained in mindfulness act more like Machiavellians when tested in ultimatum games.
Normally, 3/4 of people reject "unfair offers" in ultimatum games, even when the "unfair offers" are still good for them (Guth et al., 1982).
Meditators instead accepted the "unfair" offer more than half of the times, just like a Machiavellian would (Kirk et al., 2011).

13. Look At Life As A Chessboard

Anything between you and your goal is to be used, or dispatched.

13.2. Be A Social Maneuverer

Social Machiavellians seek maximum power and influence with advanced social skills, confidence, and charm.

🧔♂Lucio's Take: **positioning myself for natural & low-effort open**

Lucio:
My target at a social gathering was talking with a guy.

If I joined their convo I'd be chasing and competing for her attention.

Instead, I talked to the girl beside me and made her laugh to show 'preselection'.

Two minutes after my target went to the restroom, I moved to a table in between us, and the restroom.

I pretended to take a socializing break to check my phone, and struck a 'cool pose'.
I put the phone away before she got close, and struck a convo with a chirpy 'Hey', how's your evening going'.

I could see the guy nervously peering at us -but he should have exchanged contact sooner-.

🧔 Example: Machiavellian Power Moves

"Power moves" are the tactical level of power dynamics.

And while power moves are often dominant and 'one-upping', Machiavellian fluidity does what it takes to reach one's goals

So a power move may also entice others to attack you, if that will help you achieve victory.

Football's most legendary power move was about *getting* headbutted:

> **Machiavellian player**: (provokes opponent into aggressive overreaction)

Materazzi was an average player.
Zidane was a legend, and he seemed on his way to become even more legendary.
With Materazzi's victory, this is the tale of Machiavellian David VS powerful Goliath.

That's the power of Machiavellianism.

Empowers the underdogs to win against all odds.

14. Use Machiavellian *Applied* Psychology

Psychology is only useful *if properly applied*.

Psychology reading lists with Malcolm Gladwell and books like *Thinking Fast and Slow* won't improve your life effectiveness.

⍰ Marketing Example: Social Proof

Early in this website's life, I contacted subscribers to re-process their subscription with this picture:

⍰ Question:
Why a large screenshot instead of *their* failed payment only?

Because **the *list* of transactions shows social proof** from other buying customers:

This is *applied* psychology.

Take a known psychological principle, in this case, "social proof" (Cialdini, 1984), and find everyday applications to it.

Without social proof, collection rate would have been far lower.

As you can see, **Machiavellian skills are money**.

Now imagine the upshot to your life when you apply a hundred different principles, on a thousand different

scenarios, over a whole lifetime.
It's the difference between languishing at the bottom of society, or climbing upwards.

15. Grow Into "Honorable Machiavellianism" ⍰

Move beyond pure Machiavellianism to avoid known costs like alienation, poorer relationships, lack of intimacy, and life dissatisfaction.

At TPM we embrace **calibration**. Two quick rules based on 'switching modes':

- **Use your Machiavellian mode for competitions**, negative people, and when in 'mission mode'
- **Be honorable in quality longer-term relationships**: pick good partners and friends, establish win-win

Also see:

- **How to be an honorable man**

Galisghting: 17 Signs You're Being Manipulated

Lucio Buffalmano · 20 March 2024 · Archived copy · Original

Gaslighting is more than lies—it's a systematic way manipulators make you doubt reality, question your sanity, and lose confidence.

In this article, you'll see **17 real examples of gaslighting**, broken down by tactic. You'll learn the signs to recognize it fast, how it works in relationships, work, and politics, and how to protect yourself from anyone trying to twist the truth against you.

Let's start with the most common gaslighting techniques—and how to spot them.

Lying that something has never happened is one of the most stereotypical gaslighting examples

- 15. One-sided Closures
  - Examples: Typical Expressions
- 16. Post-Victory Niceness
  - 16.2. Post-Victory “Pardon”
  - Example: At Work
- 17. Various Power Moves
  - Examples & Extra Resources

1. Lies: Disregard For Facts & Reality

In our main gaslighting article, we said that gaslighting is the ultimate frame control.

Gaslighters don't care about what's true, **gaslighters only care about imposing *their* reality**.

Remember:

A gaslighter's priority is power and setting their frame, not truth.
So lying is a means to that end.

Example: Toxic Relationship

The crazy-making type of gaslighters deny the most obvious truth.

A good example is the Dalia Dippolito case.

Audio and video recordings unmistakably show Dippolito hired a hitman to kill her fiance.
From prison she then calls him and says:

> **Him**: How the hell did I hear and see it
> **Her**: Look, I heard what you heard, it's not true

Note: *good* & sneakier gaslighters don't outright lie!

The smarter gaslighters strategically avoid outright lies.

Instead, they spin, misinterpret, strategically ignore the most damning evidence, reframe, muddle waters, or lawyer.

Keep on reading:

2. Lawyering

Lawyering is a game of nitpicking, spinning, and reframing.

The goal is to confuse, divert, move *away* from the main issue, and open new topics of contention.

At worst, the gaslighter moves away from the real issue and, at best, he may even "win" into those new topics he's opening.

Effects

Lawyering is an insidious technique.

Within the gaslighter's manipulative reframes, lawyering makes it seem like the gaslighter is right.

But you know it's NOT right. So **lawyering pressures you to jump in to set things straight and defend yourself**.
You get angry and slippery-slope into endless quicksand debates (keep reading).

You wanted to set things straight. But the lawyer pokes new holes, opens new threads, and spins your answer once again…

You forget, lose sight, or cannot return to the original main issue.

And **when you lose sight of the core issue the gaslighter wins**. Because the core issue had a clear right and wrong, but the gaslighter's quicksand doesn't.

So it feels like two people arguing without right or wrong, and it's a draw.

In his review of abusive personalities in intimate relationships, Lundy Bancroft refers to lawyers as "master debaters" (Bancroft, 2002).
Also see:

- **The Master Debater**
- **The Smart Alec**, often also a gaslighter who resorts to lawyering techniques

Typical Expressions

- **Nitpicking**: *"But I never said that" / "what I actually said is… "*
- **Definitions**: *"That's not the definition of manipulative, the definition is… "*
- **Out-of-context old quotes**: *"Just like you correctly said yourself when, I quote…"*

Online forum behavior:

- Quoting and reframing old posts
- Quoting parts of someone's posts to spin a new narrative the original post never intended
- "Power borrowing" with links, dictionary definitions, or references

Example 1: Greenspan Wasn't Wrong

> View this post on Instagram
> A post shared by The Power Moves (@the_power_moves)

> **Greenspan**: Those of us who (…) are in shocked disbelief <— Collectivizes the mistake to avoid individual responsibility
> (…)
> **Congressman**: So you were not wrong in deregulating derivatives
> **Greenspan**: Depends which derivatives we're talking about

Example 2: Demeaning Partner

> **Her**: maybe we could open a restaurant
> **Gaslighter**: (rolls his eyes and sighs as if to say "here comes another stupid idea")

When she later says that he doesn't value her and treats her like an idiot, he says "not true, please tell me when I ever said you're an idiot".

3. Playing Dumb

Playing dumb reframes sh*tty behavior from malicious to "honest ignorance"

Gaslighters play dumb to hide their malicious intent and, once again, to avoid owning and apologizing.

The rationale is that if one power moves out of ignorance, then "they didn't mean", it's not "too bad", and "it doesn't need any ownership and apology".

Examples: Typical Expressions

- *"I didn't know that was bad"*
- *"Why would anyone take that as an offense?"*
- *"I am confused"*
- *"I don't understand what you're saying"*

Example 2: Manipulative Learner's Frames

- *"I want to understand your point of view"*
- *"Help me understand better… "*
- *"I'm lost. What do you mean when you say… "*

This is the dynamic:

Manipulative learners' frames reframe (malicious, deliberate or recurring) power moves as mistakes on the way to "improve and become better".

So while the learner's frame is lower power, the gaslighter uses it to "limit damage" and hoard power with:

- **Make you invest more** and more as you explain and "teach them"
- **Dilution strategy**: to add more words and confusion around the main issue (ie.: his shitty behavior)
- **Avoid owning and apologizing** since if it was a mistake, then ownership and apologies are not due

The manipulative learner's frame is enticing because it allows the victims to play the teacher.

But don't fall for it: you're only being set up.

Example: Our Forum

After providing a manipulative summation, he ends by saying:

> @Lucio, is this more or less what you saw too? It's important for me to get this right.

If I explain even more what was already well explained, I:

- Get re-dragged into the sh*t-storm
- Raise his profile with my investment
- Confirm his summation was "right" and sub-communicate that "everything was generally OK and that everyone is now equally good".

None of that is true.

4. Word Salading

A word salad is a lengthy and convoluted speech to avoid discussing or answering precise questions and issues.

Skilled gaslighters provide a *semblance* of superficial logic.
But word salads still feel demented because they're always off-topic.

You sometimes see word salad whenever you press the gaslighter with evidence or with a request for explanation, ownership, apology, or change.

Word salads signal desperation -and that you're doing things right-.
The gaslighter looks crooked, illogical, and sneaky.
But gaslighters prioritize power-hoarding over their own status, reputation, and (social) success.

Examples: Typical Techniques

- **Circular conversations**, repeating the same things over and over
- **Free associations**. Start with one word from the issue or question, and use it to bridge into a wholly unconnected topic
- **Generalizations**. Go from the specific of *your* issue, to *general* issues. Ie.: the "general importance of good communication, of ownership, and apologizing while NOT owning and apologizing"

5. Muddling The Water

Normal people seek and expect to go from A to B. The gaslighter purposefully over-complicates things
Muddling the water includes a host of techniques to confuse things, and avoid straight and clear ownership and apology for cr@ppy behavior.

Muddling the water also serves to limit the gaslighter's power loss in case he offers some half-assed apology.
By bracketing his half-assed apology with a litany of random stuff, the gaslighter nevers give the victim a clear, simple, and full apology.

Some tools of muddling the water:

- Word salading
- Changing topic
- Questions
- Questioning the victim's motives or biases
- Attack the "tone" of the victim
- Etc. Etc.

Let's review a couple of them:

Empty & Token Questions

Questions are an easy and innocent-seeming technique to divert attention away from the main issue.

It's never honest questions though.
Especially not because he doesn't want you to teach them, which is low power.

Instead, he wants to control the interaction, control the frame, and task you and make you invest.

Effect: Slippery slope into quicksanding

Gaslighters will drag you down into bottomless and directionless circular and "going-nowhere" conversations if you let them
The slippery slope effect is how you end up in the quicksands.

The first explanation, the first question, or the first off-topic may seem legitimate.
You may extend the benefit of the doubt to the first power move.

And since good people think of others as also good, deep down, you *wish* it was a mistake.

So you give them some free reins.

Then maybe you explain again why it was not cool thinking they're going to understand and own it.
But they have another excuse and open another new topic.
You think may be you need to be clearer and try again.
But it never ends.
And soon you end up neck-deep in the quicksands.

Remember, **gaslighters are not looking for a resolution**.
They *start* with a small diversion, but will invariably drag you down an endless pit of time-wasting.

And the more the gaslighter drags you down into his web of diversions, the more you lose sight of the main top-of-the-hill issue.

Example: Donald Trump Debate

When Trump had to apologize for his "grabbing by the pu**y leaked audio", he:

- **Denies it**: "*It's not what I said*"
- **Undermines the speaker's authority and frame**: "*I don't think you understood what was said at all*"
- **Justifies / reframes**: "*it was "locker room talk*"
- **Limited-scope apologies**: "*I'm not proud of it, I apologize to my family and the American people*".
  Notice: he doesn't apologize because "it's wrong", and he limits his apologies to family and "American people"

(most of the world hence is excluded)

- **Diverts**: "*we have ISIS chopping off heads*"
- **Counter-attacks**: "*Clinton has done much worse*"

Albeit this never feels like a clear-cut apology, Trump would claim that he "owned it and apologized".

Example 2: Relationship Argument

> **Him**: It wasn't cool when you said in front of everyone that the dinner I spent 2 hours preparing was poor
> **Her**: Yeah, it wasn't too bad, but the steak was definitely over-cooked. I think next time maybe we can marinate it a bit longer
> **Him**: Yeah we can do that, but I'm talking about you saying that the dinner was poor in front of our guests. It doesn't seem like a friendly and supportive thing to do
> **Her**: That feels a bit like thin-skin to me, like that time when I told you…

She never owns the issue and tries to move the conversation toward a detail.
When that fails, new tactic: she accuses him of being thin-skinned and brings old examples as "evidence". "

6. Sh*tstorming: The "Beehive Effect"

Answer this:

Have you ever avoided bringing up an issue with someone because it would just be too draining?

Then you know "sh*tstorming".

Many victims and leaders don't confront gaslighters to avoid the sh*tstorm of addressing their sh*tty behavior
Multi-threading or "sh*tstorming" in vernacular is the high-intensity opening of an onslaught of new threads to divert attention from the main issue and frustrate the victim.

The new threads can be covert power moves, questions, accusations, justifications, explanations, or resuming old

topics.

It comes right after you flag their shitty behavior, often in quick succession, on several channels, with high intensity, and heightened emotions.

The sh*tstorm may last for days, with the gaslighter calling, texting, emailing, or asking you for coffee to "better discuss this thing".

It's one way the gaslighter leverages operant conditioning to maintain his sh*tty behavior over time.

Sh*tostorming is the human equivalent of poking a beehive because you raise (conversational) hell with one single poke.
The effect is that **the gaslighter discourages you from even bringing anything up** because you know that a sh*tstorm is coming and it's going to take a lot of your energy and time.

Examples: Typical Expressions

Imagine you tell him that his behavior is not cool.
Next, he says:

- *I don't understand*
- *X did the same and it was OK*
- *How about when YOU did Y then…*
- *Your friend was there and she was cool with it*
- *Then does that mean that…*

I experienced it on the forum.
Before adopting a new "hardliner resolution" for forum behavior I often refrained from addressing several power moves just to maintain some serenity.

7. Endless Excuses, Justifications, & Excusplaining

All to avoid owning and apologizing.

With gaslighters it all feels like a big word salad of excuses, justifications, and some nonsense bullsh*t thrown in there just for good confusing measure.

Hence the word "excusplaining": you don't know where one begins and the other ends.

Examples: Techniques & Typical Expressions

- **Intention-based excuses**: *"That's not what I meant"*
- **Judgment lapses excuses**: *"I was tired", "had a bad day"*
- **Blame shifting**: *"My work is stressing me out"*
- **Blaming the victim**: *"You didn't understand"*
- **Reframing**: *"I only yell at you because I care about you"*

8. Counterattacks To Put You On The Defensive

Putting you on the defensive is the checkmate of the game of power.

Most frame control in antagonistic exchanges is about who presses on -attacks, asks, or insinuates-, and who's on the backfoot -defends, explains, or justifies-.

So **stop whenever you find yourself defending or justifying a bit too much** because it may mean you're dealing with a gaslighter.

Attacks and defenses also include emotional dynamics.
Often, **it's a red flag if you feel bad for even bringing up uncool behavior.**
Some gaslighters are good at making up valid-sounding excuses that make you feel bad for doubting or bothering him.

Example: Relationship Dynamic

The moment you feel like a nuisance for your valid concerns, he successfully distorted your reality

Example 1.2: the "superficially kind" version

> **Gaslighter**: (with a tired and half-annoyed expression of "why are you even adding to my woes") hey, sorry baby, I'm just so beat from my work, do we really have to talk about this now

This is even more effective.

The superficial nice cover hides the power move: being busier and more tired from hard work signal higher value with *sub*-communication.
You feel like a lower-value taker when you bring up your concerns.

Notice the sub-communication:

- **High-power frame**: "I'm focused on the important stuff, you're not"
- **Giver/taker frames**: he covertly leverages that he's the main provider, and makes her feel guilty for standing in the way
- **High-power victim frame**: mix of both high-power and victim frames. He's high power for focusing on important stuff, but he's also a victim if she pesters him with "nonsense"

This is even more effective with *men*, since men feel it's "not mannish" to shift focus away from business, and into what may feel "relationship talk".

I can vouch for that: I fell for something similar.

Example 2: Dialogue Between Flatmates

Great example by Maverick:

> **Gaslighter**: You always keep the house untidy
> **Victim**: That's not true, there was just one time that happened
> **Gaslighter**: Your whole personality is argumentative, and you are not a tidy person, think about it with an open mind, don't get defensive.
> **Victim**: I'm not argumentative, and yeah sometimes I might not be a tidy person <—- already buying into the gaslighter's frame
> **Gaslighter**: But you are, you are arguing with me right now, and you just accepted that you are untidy, listen to what I tell you, and you will become tidier

If you keep arguing and defending, you prove the gaslighter's accusations.
But if you accept the initial accusation, at least you can show an "open mind".

8.2. Woke buzzwords misappropriation

The gaslighter borrows whatever is taboo or "not good" in the larger culture to play the offended victim and/or to push you on the defensive.

Examples: Typical Expressions

- *That's racist*
- *Typical white privilege blindness*
- *What you're doing is gaslighting me*

9. Blaming The Victim

in truth, this is part of "putting you on the defensive", but deserves its own entry.

In crazymaking "blaming the victim" involves blaming the victim for being crazy.

Examples: Typical Expressions

- *It's your own fault*
- *You deserve that*
- *Can you hear yourself*
- *You're overreacting again*
- *Oh, and that sounds normal to you?*
- …

Example 2: Toxic Marriage

> **Jimmy**: (before leaving the house and after denying the truth of him having an affair) you're fucked in the head Karen, this is all in your mind, you got a problem

Blatantly blaming the victim wouldn't fly too well with confident and power-aware folks.
But it's effective with low self-esteem and power-unaware victims.

Examples: Covert Typical Expressions

More subtle, sneakier and effective ways are::

- ***"Your dad and I were raised the exact same way"*** = our bad parenting is normal
- ***"Nobody said anything about it"*** = you're the only one complaining, so you are the issue

10. False Indignation

This power move plays on the fact that indignation is fair and natural when an innocent person is accused of something that feels "so beneath them".

So the gaslighter plays indignant to pretend he's "above" the pettiness that you're pointing out.
If you fall for that, then you accept that it was either misunderstanding, your fault, or that you're imagining "uncool behavior" that doesn't exist.

Examples: Typical Expressions

- *"How dare you say something like that"*
- *"It's such a despicable act it wouldn't even cross my mind"*
- *"I'm shocked anyone would even consider that"* (false indignation + accusation and putting you on the defensive as it sub-communicates that YOU are malicious for implying malicious intent)
- *"What gives you the right to talk to me like that"* (sub-communication "I'm an upstanding guy who deserves respect")

10.2. Self-righteous attitude & power move

Google defines self-righteous as:

> having or characterized by a certainty, especially an unfounded one, that one is totally correct or morally superior.

The self-righteous attitude is all about behavioral frame control.
If the gaslighter acts and speaks with total conviction righteousness and "moral superiority", then *you* must be wrong or immoral.

The self-righteous power move instead consists of verbal frame control.

Examples: Typical Expressions

- "**I *teach* this stuff**", sub-communicating that he knows better and you better listen"
- *"**You wanna come here and teach me how to behave well?**"*, Subcommunicting he's an authority on proper behavior
- ***"It's 30 years that I deal with this shit and now I've had enough***", sub-communicating you've been in the wrong for 30 years

Example In Relationship: Andrew Tate Video

> **Her**: (finds out he's been cheating)
> **Him**: (dominant and borderline aggressive) I don't know what you're worried about some stupid b*tch for. I thought you and me were serious, I thought you were the kind of girl who's interested in a long-term relationship

The man in the video acts indignant that she's even raising his infidelity as an issue.
And then proceeds with more manipulation.

11. Aggression

Aggressive behavior is another tool in the gaslighter's toolbox.

Some abusive types are generally and more frequently aggressive, but some calmer gaslighters can still resort to aggression.
When?
When you stop falling for the BS, when you call all their BS and refuse to budge, and when you put them with their back against the wall -you know what they say of cornered rats-.

Don't be afraid of that aggression, it's often just the last power move before they'll be forced into withdrawal.

Examples: Typical Techniques

- **Counterattacks**: for example, you're angry for X, and they get angry back for a (made-up) Y
- **Raging power move for intimidation**, sometimes called "traumatic one-trial learning".
- **Out-of-place assertiveness**: assertiveness can be used properly, improperly, or… For manipulative ends.

Example 2: Our Forum

After we called out all his games:

> So far you have made two serious accusations that I feel are unjustified(…) **Don't ever do that again**, more so because as admin, host, or leader you naturally have more power (…)

For a reader who's not power-aware, he may sound like an indignant straight person who's enforcing a fair boundary.
We gave him a one-week ban.

12. Rewriting History

Every time the gaslighter revisits what happened, he changes the story to fit his narrative.

Examples: Typical Techniques

Some techniques for rewriting history include:

- **Manipulative Summation**: summarize and review what happened, but spin everything in his favor
- **Manipulative "on the same page" frames**: pretending to align with you, agree, or being "quite close". It's all a lie: he professes false values he doesn't act upon. Or he may spin your own words
- **Last word power moves**. As a power display, or to offer a last attempt at manipulative summation

13. Manipulative & Partial "Ownership"

Sneaky gaslighters want to *sound* like they own it to collect social and PR points.

But they still cannot stand truly owning anything.
So try to *sound* like they own it, but without going the full distance to "make you whole".

That way, they think, they can get the best of both worlds: look good, and still maintain power.

Examples: Typical Techniques

- **PR ownerships**:
  - Tape-delayed, public for PR, but in a convenient place, time, and environment (example: Logan Paul addressing Coffezilla's investigative work on his podcast)
  - Virtue signaling ownership, with a big display of learner's mindset and big talks of "growth opportunities" (example here and the following reneging and gaslighting behavior)
- **Smaller issue ownership**, only owning the less damning behavior or words
- **Third-party ownership**, "owning it" with or through someone else, but not directly to the victim

And particularly annoying:

- **Trap ownerships** pretending to understand and agree, then deliberately doing or saying something to confuse or upset the victim again

14. Manipulative & False Apologies

Gaslighters hide more games and power moves behind their fake apologies
Same as above, but with apologies.

Ownership and apologies are interlinked because we have an innate sense that poor behavior must be fixed with an apology.

However, some power-hungry gaslighters will half-own their poor behavior, and *still* not apologize.
Even if you already owned and apologized for your part, they still won't do it.

Examples: Typical Techniques

Partial and false apologies include:

- **Smaller issue apology**: apologize for a smaller issue, then say that "he apologized already"
- **Power scalping apology**: to apologize after the victim, but less significantly.
  Ie.:
  - less extensive
  - without making amends
  - while looking away
  - with a disdained tone
  - Etc. etc.
- **Apologize & summation power move**: to apologize while following up with a manipulative summation
  - See here for an example.
    How it was then flagged, surfaced and disciplined here, here, here, and here)
- **Trap apology**: to apologize only to make the victim apologize and then use it against them (see next paragraph)
- Etc. Etc.

14.2. Trap apology & revisits gambit

This is a particularly annoying and frustrating one.

Imagine that *finally* the gaslighter owns it and apologizes.

You're happy, you think things are finally good, the gaslighter finally "got it" and "changed for the better".

But then, he U-turns and plays another game.

Example: Dialogue Between Friends

> **Gaslighter**: OK, I get it. It wasn't cool of me, and I'm truly sorry
> **You**: it's OK, I'm sorry too <—— a kind gesture on your side since most of the times the gaslighter is more in the wrong than fair people are
> (maybe I shouldn't have done and said XYZ) <—— optional, but it's giving of you to provide details. An honest person would build on that and do the same back to you. But the gaslighter will use it against you
> **Gaslighter**: yeah, to be honest, I'm still angry at that, it was really f*cked up of you to… <—— now that you vulnerably opened yourself up he "socially scalps" on it

The trap apology sometimes goes along with "one-sided closures", for example adding "but we can close it now".

15. One-sided Closures

The gaslighter one-sidedly decides when it's "time to move on".

Sometimes, **he puts a positive spin on the closure to bait you into agreeing**.
Or he may throw a couple of power moves early on, just to move on after to put some distance, and then go with the close.

Of course, don't expect the gaslighter to seek to end it at a fair time.

The gaslighter seeks to end it not when it's good for *both* to end it, but when it's best for *him*.

Also, one-sided closures can never be true closures because *both* parties have to agree that the issue is resolved and that they feel understood and re-empowered.

Examples: Typical Expressions

- *I'm glad we solved it*
- *OK, then we can move on*
- *I'm tired of this, no more*

P.S.:
Power University teaches you how to handle any gaslighter.

16. Post-Victory Niceness

You get post-victory or post-*humiliation* niceness when the gaslighter scores a major win or when you submit.

Don't mistake it for actual kindness.
The "niceness" only serves to re-empower the victim just so he can feel "OK enough" to stick with the gaslighter and/or follow through on the resolution.

16.2. Post-Victory "Pardon"

Major power move to:

- **Re-state the frame you were in the wrong** -hence needed the "pardon"
- **Virtue-signal false kindness from a position of power** -it's the judge that grants "pardon" to others and makes them feel good again
- **Increase emotional leverage & control** -with the "misery/joy rollercoaster". The victim was in heavy distress during the argument and then feels good again *thanks to* the gaslighter's "pardon"

Example: At Work

The boss makes the employee stay the weekend with a raging power move.

But then tells the victim it was the "right decision to help the business".
Or that "he just flew off the handle, but truly cares for his career".

He may invite him for lunch, or provide some meaningless trinket.

See more examples here.

17. Various Power Moves

We need a catch-all category because there are endless power moves the gaslighter may engage in.

It's unwieldy to list them all.

Better than endless lists: develop power intelligence.
Once you understand social power dynamics, you can spot *any* nasty and win-lose behavior.

Examples & Extra Resources

- Ganging up

  - Fake ganging up with third parties who didn't take sides and/or didn't want to take sides
- Trojan horse compliments to sweeten and/or hide the bigger power move
- Backhanded "compliments"

9 Laws of Social Success From Social Exchange Theory

Lucio Buffalmano · 25 March 2024 · Archived copy · Original

From social exchange theory, the main practical laws for social success are:

Giving and hoping to get is naive. Smart giving and ensuring a return work best to achieve goals

Contents

- 1. To get what you want, give others what they want
  - 1.2. Offer visible, universal, concrete value
- 2. Be high value
- 3. Signal value
  - ⍰ Example: how to avoid bragging
  - PRO Tip: never tell people “I know my value”
- 4. Never present yourself as low-value
  - 4.2. Never present yourself as a taker: examples
- 5. To connect with higher-value folks, make up the difference
  - 5.2 When you have nothing concrete: give gratitude (at least)
- 6. Keep a positive social account
  - 6.2 Ask when you have most leverage
- 7. For mass popularity: focus on currencies everyone wants…
- 8. Be a SMART value giver
  - 8.2. Expect and demand repayment after you’ve given
- 9. Last 10%: use advanced strategies & techniques for top 10% results

1. To get what you want, give others what *they* want

Asking without giving is the equivalent of a social overdraft.

Your request is likely to be denied for “insufficient social funds” (“socially imbalanced requests”). If instead, you give what others want, you are far more likely to get what you also want (“socially balanced requests”).

1.2. Offer visible, universal, concrete value

If you’re unsure about what others value, go for what’s universal, visible, and practical.

What’s valuable *for you* might not be valuable for someone else.

This is often the case with “high opacity“ currencies.
Such as currencies whose value is not immediately visible.

For example, a great book can change a life.
But until people read it, it’s just a (valueless) block of paper.

⍰ Case study: offer a lunch, rather than a book

Ali is an awesome guy.

He wrote a book and, just like any good author would, he valued his book very highly.

He applied solid power dynamics principles, so he also *knew* his book had great content.

But the receivers didn’t know that.
A book is high opacity.

In that case, offering lunch was probably far more valuable -and effective-.

Lunch is a highly visible form of value.
It’s easier for most people to appreciate. That means it’s far more effective to increase your social credit.
Which, in turn, makes it far more likely you’ll get what you want.

2. Be high value

If there was one life hack, it’s this:

Become high value.

People with lots of value to give are like walking moneybags. Everyone wants them.

Everything in life gets easier as a value-man.

Even what are thought of as completely different skills like persuasion and leadership.
Most people are far more willing to follow high-value men.

See:

- How to become a high-value man
- **Power University**, the full course to become a top 1% man

3. Signal value

Signal value, and present yourself as a giver.

How?

Most men simply brag.

That's still better than meek, self-effacing submissiveness.

Bragging occasionally works, especially *when the target already agrees* with the bragging.
But usually signals disempowering neediness.

You're trying to gain their approval, which empowers others, and disempowers you.

How do you do it, then?
Well, this is where advanced social skills come into play.

Covert bragging in a way that it doesn't even seem like you're displaying your value is an art.
Luckily, on TPM we turned into a science.

For example, you can:

- Tell stories that *hint* at your deeper qualities

- Bait others to *ask* you questions (or bait them to compliment you)
- Share your achievements with a focus on the struggle

P.S.
Manipulation and social scalping are approaches to increasing the value of your offering (but we don't generally advise them).

Example: how to avoid bragging

I loved that view and wanted to share it. But I knew it would feel braggart. So I framed it as "here's me sharing advice on where to visit". That frame pulls people up. It sub-communicates that they *can* travel there, and *can* appreciate it as well

Full analysis **here**.

Also, read:

- How to signal value

PRO Tip: never tell people "I know my value"

It makes you come across as an entitled status inflater.

This is what it sub-communicate:

> *I* know and *I* set my value, not YOU, so independently of what you think, you must put a lot of effort for me

That's a covert, one-up power-move.
It's annoying for high-quality people who are aware of power dynamics (and most high-value folks are).

See more:

- **"I know my value"**: the keywords of bad entitlement

And also see:

- **Overcoming entitled mentality**: overly-entitled mentality in social exchanges is to demand (far) more than one gives, and smart folks see through that

https://thepowermoves.com/overcome-entitlement-mentality

4. Never present yourself as low-value

Since nobody wants to transact, befriend, or date value-takers, value-takers struggle to develop and/or maintain relationships.

That's why a positive reputation is so helpful.
A good reputation is like a personal recommendation preceding you and saying "this guy is an honest value-giver".

And that's why some psychopath value takers are constantly on the move: they must escape their negative social account balances.

4.2. Never present yourself as a taker: examples

Here are some common "takers expressions":

> **Value taker**: *"When are you free for a coffee? So I can pick your brain on that business I want to start"*

High-value man interpretation: if I hear "pick your brain" once again, I'm gonna lose it. Why would I want to sit around for coffee, and expend effort to explain things, while you take as much as you can without giving?

> **Value taker**: *"can you leave me a good review?"*

High-quality man interpretation: how about you *earn* your good review by giving great value? I'm an honest reviewer, don't corner me into this BS to take my power and freedom away.

> **Value taker***: "Matt told me you're having a housewarming party tonight, is it still on?*

High-value man interpretation: you got nothing to do, and want to tag along. But if I wanted you here, I would have invited you myself.

> **Value taker**: "Please*, please, please…* "

High-value man interpretation: begging is all you've got to offer?

Notice all the above are requests for value from people with no social capital, who give nothing back.

Sometimes just a little fix could make them more balanced.
For example, the guy who wants to pick your brain could *invite* you to lunch.

Lunch is a small token, of course, but more than the monetary value it shows that the inviter *gets it* and shows respect and consideration for your time and knowledge.

5. To connect with higher-value folks, make up the difference

The 'Law of Compensatory Investment' postulates that higher-value people don't want to associate with lower-value people unless they make up the difference.

For example:

- **Future giving**
- **Loyalty**
- **Gratitude**
- **Enhance their reputation**
  - Talk well about them
  - Positive review to their business
- **Token gifts**
- **Invest**: make it easy for them
  - Travel to meet them
  - Work around their time
  - ⍰ Strategically display inconvenience
    Ie.: Arrive early, say '*It's easy from X station*', where 'X station' is far
- **Eagerness** to learn and support

High-value people want other high-value folks who can give back.
Or, at least, people who are willing to work to make up that difference.

High-value folks stand to lose the most from takers.
That's why high-value people are cautious, wary, and guarded.

And, often, **high-value people loathe value-takers**.

That's why you must avoid framing yourself as just another taker.
They have enough of those vying for their time.

You must show that you can also give *something*.
Also, you can show loyalty or gratitude, and that you are willing to pay them back somehow in the future ("promissory social notes").

5.2 When you have nothing concrete: give gratitude (at least)

This is what high-value people dislike the most:

> **High value people dislike the most those who give nothing, ask for value, and act as if it was due to them.**

If you need something from someone, it's OK.
But seek to give something back.

Except for dating, this is also where accepting -and showing- a subservient role can help.
You make the receiver feel high in power, which can make them more well-disposed towards you.

Gratitude also helps a lot because:

1. It shows you understand social dynamics
2. It makes the receiver feel good
3. Works as a promissory note of future support: for the receiver, it's like making an ally
4. It shows you are willing to give something and rebalance the relationship

This is crucial to understand because this is what keeps many low-value individuals stuck in low-value mode.

Low-value takers don't understand that **high-value people don't want to mingle with low-value people who don't make an effort to rebalance the relationship**.

6. Keep a positive social account

The principle is:

⚖ **Social capital draws others in and gives you leverage. Social debt repels them**

Social capital combined with your own returns make for win-win relationships, the gold standard of social exchanges.

Value-neutral relationships can also last but do not thrive.

And win-lose relationships (value-taking for the other party) either end soon, or turn toxic and must be kept in place with coercion and/or manipulation.

Relationships with a good balance of give & take where they both gain are stable, good relationships

6.2 Ask when you have most leverage

1. **Climb out of debt** before asking
   Ie.: Apologize, make it up to them… Then ask
   - ⚠ Give before the ask <— Don't make it too obvious. A swift ask after a strategic give feels manipulative ⍰
     Ie.: Share something personal before asking something personal
2. **Negotiate at your highest leverage**
3. **Ask after a high point**
   Ie.: Propose to meet again after you make her laugh

7. For mass popularity: focus on currencies everyone wants...

LoL skills give you status among gamers. Not bad. But same effort to learn social skills and playing an instrument to join a band would yield higher real-world benefits

Some forms of values, everyone wants.

Some others, very few.

So it's more effective to work on "hard currencies" that everyone appreciates.

Such as:

- **Confidence**
- **Social skills** -that *must* include social power dynamics and high-power behavior–
- **Wealth**
- **Personality**
- **Looks**

There is an exception, though.

... Unless you can become world-class (The Halo Effect of Peak Performers)

Why?

Because top performers gain power.

Take software developers, for example.
Boring and "not cool" to almost anyone outside of the field.

But if you're a wiz of coding, a popular hacker, or become a CTO, that changes the game.

With top-dog status, you also acquire riches, status, and power.
And those are hard currencies with sought-after, real-world benefits.

Also, read:

- The relativity of social status
- Big fish in a small pond

> Social Relativity: From Nobody to Superstar

8. Be a SMART value giver

Adam Grant's research supports our strategy, showing that giver types were the biggest winners and losers:

✕ **Giving randomly** ▯ losers
✓ **Giving to other givers** ▯ winners

The winners gave to good characters, or to those who gave back—other givers, or "matches".

▯ People concerned BOTH for others and themselves were most successful

So don't forget the other side of the coin.

The more you bring, the more you can ask for.

But "ask for" is crucial.

Giving entitles you to ask.
Sometimes you must do so assertively.
Some others times, strategically.

TPM turns men into high-power, high-value enlightened collaborators.

The most important real-life applications of the social exchange theory :

1. **Focus on what *you* bring to the table**.
2. **Focus on what *they* bring to the table** to make it fair to yourself and worth your time
3. **Assess your relationships**: are they balanced or are you gaining from them?
4. **Fix imbalances**: imbalances hide emotional manipulation, a negative judge role, or a toxic relationship based on *addiction*, rather than win-win (see for example Norwood, 1985).
5. **Tend to win-win**: win-win folks are a true social treasure. Keep and care about them.

Read more:

- **Value and availability**: important concepts for effective socialization
- **Foundational steps of self-development**

- Basic strategies for power

> Value & Availability: Two Foundations of Social Dynamics

8.2. Expect and demand repayment after you've given

Principle of Social Exchange Inflation™:
The value of a give is highest before the exchange, drops sharply once given, and continues to decay over time—along with the receiver's sense of gratitude, obligation, and likelihood of repayment.

Worst yet, while gratitude decreases over time, sometimes resentment grows over time as people hate being reminded of their debt.
Some people may avoid you, or even find excuses to provoke a fight, just to have an excuse to not repay and talk to you again.

To avoid this issue, **agree on repayment terms before giving.**

If your giving doesn't require repaying, monitor gratitude. If people don't repay at all, stop giving.

In social situations, ignore and be curt to peers who took without giving. If you reach out or show warmth you're chasing and rewarding bad behavior.
They must 'make you whole' to regain your respect.

⍰ Exceptions apply: always put goals and strategy first
Pretending friendliness sub-communicates that their taking was below you. Or if it's a higher-status person, maintaining access to them can provide you with different benefits.

9. Last 10%: use advanced strategies & techniques for top 10% results

These 10 laws are the basics.

And the basics will give you… Good results.

For the last 20%, you need something more:

SUMMARY

About the Authors:
Various researchers who are experts in specific domains wrote chapters on their areas of expertise.

History & Overview

Definitions

- **Dispositions**: Temporally stable tendencies of behavior are called disposition
- **Traits (AKA: personality traits or personality dispositions)**: Dispositions that characterize the personality of an individual and tend to be stable over many years. It's a recurrent tendency to show a particular observable behavior in a particular type of situation
- **Habits**: a pattern of behavior that is 'narrow' in terms of behavior and situations

For example, to say that one has a "trait aggression towards male peers", it's necessary to observe the individual display aggressive behavior towards same-sex peers across many social interactions.

However, you cannot be sure that this disposition is a personality trait unless it sets the individual apart from all the rest.
It might be characteristic of every age-mate (pathological exceptions granted). In this case, it would be a universal disposition but not something that sets the observed individual apart from some or all other age-mates.

If the behavior is not repeated, it's a fluctuating state.

Say the authors:

> More prototypic for a trait are constructs such as neuroticism (temperamental), intelligence (cognitive), or the achievement motive (motivational) that comprise many characteristic behaviours in many situations (they are 'broader') and that are stable over many years for most adults

Approaches to Personality Psychology

Perspective	Concepts	Contributors

Milestones of Personality Psychology

- 1890 William James publishes Principles of Psychology
- 1900 Sigmund Freud publishes The interpretation of dreams
- 1907 Alfred Adler publishes A study of organic inferiority and its psychical compensation
- 1908 Mary Calkins describes the self (in several papers)

- 1910 Carl Jung publishes The association method (research on complexes)
- 1923 Sigmund Freud publishes The ego and the id (structures of personality)
- 1927 Gordon Allport publishes Concepts of trait and personality
- 1935 Henry Murray publishes the Thematic Apperception Test (TAT)
- 1936 Anna Freud publishes The ego and the mechanisms of defence
- 1937 Gordon Allport publishes Personality: a psychological interpretation
- 1937 Karen Horney publishes The neurotic personality of our time
- 1938 B. F. Skinner publishes The behaviour of the organisms
- 1938 Henry Murray publishes Explorations in personality
- 1939 John Dollard and Neal Miller publish Frustration and aggression
- 1943 Abraham Maslow publishes A theory of human motivation
- 1950 Erik Erikson publishes Childhood and society
- 1951 Carl Rogers publishes Client-centered therapy
- 1952 Hans Eysenck publishes The structure of human personality
- 1954 Abraham Maslow publishes Motivation and personality
- 1955 Lee Cronbach and Paul Meehl publish Construct validity in psychological tests
- 1955 George Kelly publishes The psychology of personal constructs
- 1957 Lee Cronbach publishes The two disciplines of scientific psychology
- 1961 The Journal of Humanistic Psychology begins
- 1961 Albert Bandura and collaborators describe learning of aggression through modelling (Bobo doll study)
- 1962 Founding of the Association for Humanistic Psychology
- 1967 Hans Eysenck publishes The biological basis of personality
- 1968 Abraham Maslow publishes Toward a psychology of being
- 1968 Walter Mischel challenges the trait model in Personality and assessment
- 1971 B. F. Skinner publishes Beyond freedom and dignity
- 1973 Albert Bandura publishes Aggression: a social learning analysis
- 1976 Richard Dawkins publishes *The Selfish Gene*
- 1978 Mary Ainsworth describes attachment in young children
- 1987 McCrae and Costa present data on the Five-Factor trait Model
- 1987 Daniel Schachter describes implicit memory (alternative view of unconscious cognition)
- 1989 David Buss describes cross-cultural universals in the evolution of mating behaviour
- 2000 Martin Seligman and Mihaly Csikszentmihalyi publish Positive psychology: an introduction

The Issue With Freud, Jung, Adler, etc

Historically, personality psychology advanced via a “grand theorist approach” where individuals laid out theories to explain human behavior and psychology.

Many of these theories are still famous today, including Sigmund Freud, Alfred Adler, Gordon Allport, Carl Rogers, to name a few.

The authors say that these “comprehensive theories have an internal logic, but lack or misunderstand more recent advances that seldom fit their model.

And they say:

> The classical grand theories often reflected the professional and life experience of their originators (Monte 1977), and their fundamental assumptions (Skinner's belief in environmental determination; Maslow's optimism; Freud's assumption of conflict) are not universally shared.
> (…) Followers of each grand theorist adopted, applied and revised the competing theories in relative isolation, only occasionally reaching across their separate schools of thought to find a common language.

Such as, they were building what we call here "castles in the skies".

Poor data with post-hoc rationalization based on retro-fitting already existing theories and confirmation biases feed a theory that grows more and more disconnected from reality

And how they grew even more popular without much empirical data:

> social factors elevated their influence, including many theorists' professorships at prestigious institutions, such as Harvard University, where they influenced the next generation of personality psychologists.
> Hall and Lindzey's (1957) influential personality textbook gave enduring recognition to many of these theorists (including Freud and Jung), adding others with new editions

And on the intrinsically different approach from more scientific-minded psychologists:

> Throughout the history of psychology, observers have noted a dichotomy between those who emphasize rigorous scientific methods, on the one hand, and those who are more open to subjective experience and a holistic study of the person
> (…)
> This dichotomy has been variously called the 'two disciplines of scientific psychology', experimental and correlational (Cronbach 1957) and the 'two cultures', scientific and humanistic (Kimble 1984)

I think the authors are even being too nice and cautious not to directly call these "grand theorists' theories" unscientific and lacking empirical evidence.

Which makes them closer to storytelling than empirical science.

Intuition Does Have a Place In Science

This is not to say, of course, that intuition has no place in science.

As the authors say, some argue that an approach more open to intuition is needed for the earlier phase of developing theory.
For example, to come up with the constructs and their relationships to other constructs.
It does then must always be tested, grounded, and move forward with empirical testing and data, though.

Bridges Between Grand Theories & Empiricism

Say the authors:

> Bridges are being forged, however, as theorists and researchers try to apply rigorous empirical methods to the 'big picture' issues like consciousness, religion and free will that early psychology left to the tender-minded (e.g. , Greenberg, Koole and Pyszczynski 2004; Rychlak 1997)

Which, in my opinion, is the good way to go.
The theories must always stand on solid empirical data, and the two approaches feed into each other to make for better and better "grand theories" that include exceptions and nuances.

How Theories Relate to Empirical Data

Figure 1.1. *Theoretical constructs and correspondence rules.*

Figure 1.1 the relationship between theories, propositions, and empirical data (The Cambridge Handbook of Personality Psychology)

Explain the authors:

> The classical view of theory describes a level of theoretical terms, which are abstract, and a level of observations, which can be empirically observed (Carnap 1956). The two levels are associated by correspondence rules.
> At the abstract level, a theory includes concepts (or theoretical constructs, as described below) and statements about how they are related (propositions).

> At this abstract level, a theory offers a framework for organizing knowledge. When the theory is translated into a format that can be tested, by means of correspondence rules, it can be accepted or modified, and scientific progress can occur.
> (…)
> Personality psychology has many concepts that cannot, themselves, be directly observed. Called hypothetical constructs in a classic theoretical description

Good theories:

- Make accurate predictions about observations
- Explain a large breadth of phenomena (more than competing theories)
- Are as simple as possible

To test the theories, the scientific approach clearly defines the correspondece rules and states them *before* the observations.

Measuring Non-Directly Observable Traits

Constructs like 'adjustment', 'extraversion' and 'self-esteem' cannot be directly observed.

So they are inferred by a network of correlations with various observations.

Take extraversion as an example.
First, it must be translated into a form that can be observed for empirical testing to be possible. This is implemented through correspondence rules, which specify observable phenomena that are manifestations of a construct.
For example, "speaking more", "having more friends", spending mroe time socializing", etc.

Since no measure perfectly corresponds to a construct, it's best to use many.
For example, self-report questionnaires, behavior ratings, peer nomination, responses to laboratory tasks, and so on

If the same person is then found to be extraverted with self-report, peer-report, by behavioral measures, then the construct of 'extraversion' is supported.

Say the authors:

> Strong evidence for a construct exists if these various measures of a particular trait correlate highly with one another.
> Lower correlations are expected with other traits, even if they are both measured in the same way (e.g. , self-esteem and achievement motivation both measured by self-report should not be highly correlated). These considerations inspired advances in personality assessment by using what is called a 'multi-trait, multi-method matrix' (Campbell and Fiske 1959) to demonstrate that abstract theoretical constructs, not measurement techniques, explain high correlations among observations

Traits VS Situations

Personality Psychology VS Social Psychology

Is the individual "more important" than the situation?

And if not, does the individual "cede power" to the situation?

The authors say it's a false dichotomy, and more explaining power to one, doesn't necessarily mean less for the other:

> the underlying dichotomy is arguably false (Funder 2006; Roberts and Pomerantz 2004). While it is possible to identify and to compare statistical main effects of personal and situational variables, it is not true that one gains power only at the expense of the other.
> Strong effects of situations and strong effects of persons can and often do coexist in the very same data, and the degree to which a given behaviour is affected by one of these variables may be unrelated to the degree to which it is affected by the other

Confounding Factors Between Personality & Situation

1. People select (approach or avoid) situations according to their personality
2. People passively evoke situations by their personality
3. People manipulate (actively change or even create) situations by their personality
4. Situational exposure can affect personality traits over the long run.

Kurt Lewin's Formula

The formula is:

B = f (P, S)

Where:

- B= behavior
- P = person
- S = situation

Such as: behavior is a function of an interaction between the person and the situation.

It means that if one knew everything about a person and the psychological aspects of the situation, he would be able to predict that person's behavior.

This formula gives rise to 2 additional formulae:

1. **P = f (S,B)**
   Meaning: If you knew what a person would do in any situation, you would know everything about that person's psychology
2. **S = f (P,B)**
   Meaning: If you knew what any person would do in a given situation, you would know everything about that situation

Traits Don't Generalize Well Across Situations

Say the authors:

> Is a dominant child in the familiar pre-school group also a dominant child in interactions with unfamiliar peers in the playground, with similar-aged siblings at home, with a clearly older sibling at home? Most people would assume that, but empirical personality research over the past eighty years has questioned such popular beliefs.

However, that's a generalization, and it truly depends a lot on the trait we're observing.
My note:
I suspect it also depends on the individual's dominance and confidence levels. Higher power men tend to "be themselves" more than lower power men, who are more careful of their social environment.

Emotion and personality

Emotional dispositions that are stable and general are a species of personality traits.

Three main conclusions can be made:

1. **Individual differences exist when it comes to experiencing emotions**: *at least moderately stable, reliable inter-individual differences in the propensities to experience emotions seem to exist for all commonly distinguished emotions (anger, fear, etc.) as well as for sub-types of these emotions directed at particular classes of objects (e.g. , fear of dogs, fear of exams, etc.)*
2. **Disposition for both positive and negative emotions correlate with each other**: *people who are prone to sadness also tend to be prone to fear, anger and guilt*
3. **The experience of pleasant and unpleasant emotions seem independent**: *people who get easily angry are about as likely as people who do not get easily angry to get quickly euphoric*

Link Between Traits (Big 5) & Emotions

Of the big 5 personality traits, four are related to emotional dispositions (neuroticism, extraversion, agreeableness, and openness).

And neuroticism is *primarily* an emotional disposition.
Such as, the propensity to experience negative emotions, in particular fear, anger and depression.

Quickly reviewing them:

- **Agreeableness:** *some of the best markers of agreeableness refer to emotional dispositions towards other people (e.g. , 'affectionate', 'soft-hearted' versus 'cold'; John and Srivastava 1999); and empirically, agreeableness has been found to correlate negatively with trait anger (agreeable people are less anger-prone; e.g. , Kuppens 2005) and positively with the tendency to experience empathic emotions.* Agreeable people also seem to try harder to suppress the expression of negative emotions
- **Extraversion**: high propensity to experience positive affect (measured, for example, with the Positive Affect sub-scale of the PANAS)
- **Openness**: more emotionally sensitive to art and beauty (capacity to experience aesthetic feelings), and to experience a wider range of feelings and emotions

Personality determinants of emotions

The two most researched are:

- **Optimism/pessimism**: general expectations for positive (versus negative) outcomes. Optimism correlates negatively with depressive symptoms and negative habitual mood, but positively with positive habitual mood
- **Self-efficacy**: the belief in one's ability to reach goals and master difficult or stressful situations. Associated with lower anxiety during a stressful cognitive task and lower levels of depression and anxiety in medical patients

Other general beliefs that predict emotional reactions to events include:

- **Interpersonal trust**
- **Hostility**: a disposition with core general belief that others are unworthy and likely to be sources of frustration and aggression. Predicts state anger caused by negative interpersonal events
- **Sensitivity to injustice**: a disposition characterized among others by the belief that one is frequently the victim of unfairness. Predicts anger caused by a concrete unfair treatment

Emotional Intelligence

Salovey and Meyer proposed that emotional regulation should be viewed as one facet of a broader capacity termed emotional intelligence.

They defined it as:

> To recognize one's own and other's emotions, to use the information contained in emotional experience to guide judgement and action, and to manage the experience and expression of emotions (Salovey and Mayer 1990; see also, Mayer, Salovey and Caruso 2004)

There has been some debates as to whether emotional intelligence is a new construct or if it has much predictive power.
The authors say:

> Although measures of emotional intelligence also correlate substantially with measures of more traditional personality dispositions, including coping style (e.g. , Day, Therrien and Carroll 2005; Van Rooy and Viswesvaran 2004), they appear to retain some predictive validity even when these correlations to traditional measures are taken into account

And in terms of life utility, they say:

> These studies found that emotional intelligence has a small to moderate positive correlation to performance (Van Rooy and Viswesvaran 2004) and to mental and physical health (Schutte, Malouff, Thorsteinsson et al.2007)

The 5 Factor Model (The Big 5)

Factor	Facets	Definition of Factor	ACL[2] Marker Items for Factor
I. Openness to Experience (Intellect)	Fantasy, Aesthetics, Feelings, Actions, Ideas, Values	The degree to which a person needs intellectual stimulation, change, and variety.	Commonplace, Narrow-interest, Simple vs. Wide-interest, Imaginative, Intelligent
II. Conscientiousness	Competence, Order, Dutifulness, Achievement striving, Self-discipline, Deliberation	The degree to which a person is willing to comply with conventional rules, norms, and standards.	Careless, Disorderly, Frivolous vs. Organized, Thorough, Precise
III. Extraversion	Warmth, Gregariousness, Assertiveness, Activity, Excitement seeking, Positive emotions	The degree to which a person needs attention and social interaction.	Quiet, Reserved, Shy vs. Talkative, Assertive, Active
IV. Agreeableness	Trust, Straightforwardness, Altruism, Compliance, Modesty, Tender-mindedness	The degree to which a person needs pleasant and harmonious relations with others.	Fault-finding, Cold, Unfriendly vs. Sympathetic, Kind, Friendly
V. Neuroticism (Emotional Stability)	Anxiety, Angry hostility, Depression, Self consciousness, Impulsiveness, Vulnerability	The degree to which a person experiences the world as threatening and beyond his/her control.	Tense, Anxious, Nervous vs. Stable, Calm, Contented

Hogan and Hogan, 2007, NEO-PI-R

Despite the criticism and revisions:

> Remarkably, the FiveFactor Model (or, at least, four of its factors, with openness as a partial exception) does a fair job in accounting for variation in abnormal as well as normal personality (Markon, Krueger and Watson 2005).

Tools to Assess The FFM

The tools to assess people's scores are:

1. **Self-Report Questionnaires**
2. **Reports from Friends, Family, and Colleagues:** Also known as informant reports, this method involves collecting assessments of an individual's personality from people who know them well
3. **Observational Methods:** This approach involves directly observing individuals in various settings. It can be more time-consuming and requires trained observers to ensure accuracy and consistency.
4. **Empirical Tests:** These tests involve objective measures that may correlate with personality traits, such as reaction times in certain cognitive tasks or behaviors in controlled scenarios.
5. **Interviews:** Structured or semi-structured interviews with trained interviewers asking questions designed to elicit behaviors and attitudes related to the Big Five.
6. **Psychobiographical Methods:** analyzing extensive life records, writings, or other artifacts of an individual to infer their personality traits. This method is more commonly used in research or historical analyses.

Questionnaires are the most popular and validated tool for assessing the FFM.

Luckily, they seem work well:

> Skeptics came to believe that self reports were nothing but a collection of errors and biases.
> It was, therefore, an important advance when psycholo gists showed that there was substantial (though not com plete) agreement between descriptions from selfreports and those obtained when the same questions were put to knowledgeable informants – spouses, roommates, friends (Funder 1980; Kurtz and Sherker 2003)
> (…)

The most used questionnaire is the Revised NEO Personality Inventory (NEO-PI-R) (Costa and McCrae 1992a)

Traits Tend To Be Relatively Stable Over Time

[image]
Summary of stability and change in the Big Five personality domains across the lifespan

> longitudinal research showed that individual differences in all five factors are in fact remarkably stable (Costa and McCrae 1992b; Roberts and DelVecchio 2000).

However, there is always some change, and especially in the first part of life:

> traits become increasingly stable after age thirty, but never reach the point where change no longer occurs; that is, no matter how old an individual is, it is possible that his/her standing relative to others can fluctuate with the passage of time

Importantly, across cohorts, there are important changes over time:

> At the same time, there are gradual changes in the average levels of traits. Both cross-sectional and longitudinal studies suggest that between adolescence and old age, individuals generally decline in N and E and increase in

> A and C. O increases until some time in the twenties, after which it slowly declines.

There Are (Small) Gender Differences

The magnitude of difference is small:

Research on the FFM has shown consistent patterns in gender differences.
These differences are generally small, with substantial overlap between the distribution of traits in men and in women.

And in terms of differences:

> At the level of specific facets, there are sometimes differences within domain. Thus, both Warmth and Assertiveness are facets of E, but **women are typically warmer and men more assertive**. Again, women are more open to aesthetic experiences, whereas men are more open to ideas

The Big 5 Are Heritable & Universal

There is a substantial degree of heritability of the Big Five traits.
And some traits are gene-related:

> Warmth and Assertiveness are both definers of E because they are influenced by some of the same genes

And on the geographical universality:

> We know that the human race is a single species, so the universality of the FFM is probably a reflection of the fact that variations on the same trait-related genes are found in Homo sapiens worldwide

In general, all personality traits are heritable:

> reviews and meta-analyses of the twin study literature on personality traits have been published in recent years, and all consistently demonstrate heritability coefficients of approximately 50 per cent, with a range typically between 40–60 per cent.

The traits also have genetic origins, with biological neurotransmitters:

> Neuroticism (reversed), Agreeableness and Conscientiousness form one higherorder factor or metatrait, labelled α or Stability, and Extraversion and Openness/ Intellect form another, labelled β or Plasticity. Behaviour genetic analysis has shown that the two meta-traits have genetic origins (Jang et al.2006), and evidence is accumulating that Stability is related to serotonin, whereas Plasticity may be related to dopamine (DeYoung 2006; DeYoung, Peterson and Higgins 2002; Yamagata, Suzuki, Ando et al.2006)

The Big 5 Is Not Enough Without Its Facets

I found my main criticism of the Big 5 to rarely be listed as a main concern.

And it's that the "top-line traits" are not very telling without their facets.
As an example of the "hierarchy structure" for extraversion:

Hierarchical model of Extraversion (based on Eysenck, 1970)

The authors go into this here:

> Although scores on the five factors give a general sense of what an individual is like, **much more can be learned by assessing the specific traits that define the factors. For example, both cheerfulness and assertiveness are definers of E**, because both reflect ways of interacting with others. **But some people are cheerful without being assertive, and others are assertive without being cheerful**, and knowing which is which is important to clinicians (Singer 2005) and researchers (Paunonen and Ashton 2001)

There isn't yet much agreement on how to divide the sub-facets:

> The problem at the facet level is that there is no generally recognized way of sub-dividing the factors into constituent traits. For example, Costa and McCrae (1992a) distinguished between Warmth and Gregariousness facets of E, corresponding to the sub-divisions of the need to belong: 'ongoing mutual caring and concern', and 'a desire for frequent interactions' (Baumeister 2005, p.112). By contrast, Watson and Clark (1997) thought this distinction was unnecessary, and combined them into a single trait of sociability

But the NEO-PI-PR seems to be doing a good job for now:

> the meantime, the facets of the NEO-PI-R do provide one system that has been successfully used in many applications and in dozens of cultures. Researchers have documented the discriminant validity, heritability and developmental course of all thirty facets, and no obvious gaps in covering the scope of the FFM have been identified. At present, NEO-PI-R facets arguably offer the best available delineation of the FFM at the next-lower level in the trait hierarchy

Personality and intelligence

As an overview:

> Modern intellectual ability theories (see e.g. , Carroll 1993) represent intelligence in a hierarchical fashion,

> with a general intellectual ability (the most general construct) at the top of the hierarchy (Strata III), and somewhat narrower ability content as one moves down the hierarchy

Some traits that correlate to general intelligence include:

- **Need for Achievement (nAch)** probably shows the most robust positive correlations among this group of personality traits, with correlations in the range of r = . 07 to .24
- **Typical intellectual engagement (TIE)** (Goff and Ackerman 1992) also fits at least partly into this general framework. TIE is defined as the individual's preference toward or away from intellectual activities. Items on the TIE scale include statements such as 'I would enjoy hearing the details about discoveries in any field' and 'I read a great deal' and 'The main reason I studied in school was because it was required of me'
  An estimated correlation of . 35 was found for TIE and crystallized intelligence, but close to zero for fluid intelligence
- **'Test Anxiety'**, which is associated with feelings of anxiety when confronted with test situations. In an extensive review and meta-analysis of several hundred studies, Hembree (1988) determined that significant negative correlations were found between measures of test anxiety and measures of intelligence (r = –.23)
- **Neuroticism** shows consistent negative correlations with an array of both general and specific intellectual abilities (e.g. , on the order of r = –. 15 with general intelligence). Even larger correlations with mathematical abilities
- **Traits like Alienation, Aggression, Harm-Avoidance and Traditionalism** all show small negative correlations with intellectual ability measures

Attachment Theory

Intro:

> John Bowlby gradually created a more empirically oriented psychodynamic theory that could be integrated with the rest of scientific psychology
> (…)
> Attachment theory is now the leading theory of love and bereavement; it is a mainstay of both developmental and personality/social psychology, and its major constructs are still being measured and refined

We have several articles here with examples, see:

- **The 4 attachment styles: an overview**
- **Secure**
- **Anxious**
- **Avoidant**

And:

- **Anxious avoidant trap**

Attachment styles on a matrix chart

Evolutionary Approaches

Evolutionary psychology is more concerned with the *commonalities*.

However, it can still add some important insights.

For example, different traits make one better suited to specific environments:

> individuals who are less likely to trust others and more willing to exploit others may be best suited in environments where short-term encounters are the norm and immediate extraction of resources is necessary

Or that personality differences are an evolutionary win-win for selfish individuals and the species as a whole:

> Personality differences allow different individuals to be suited to particular niches that others would not be suited for. This is adaptive because it leads to decreased competition, due to greater specialization, and renders the various personality characteristics optimal under differing local conditions.

However, this part was less empirical than other chapters.

For example, this was interesting but purely speculative:

> Anxiety/Neuroticism represents the individual's (partly unconscious) choice of strategy for handling social threats.
> The anxious individual adapts to threat through anticipating and avoiding threats, whereas the emotionally stable person has a preference for more direct, task-focused coping.
> The various processing attributes of anxiety support the overall adaptation (…)
> Extraversion may be seen as an adaptation to socially demanding environments. Cognitive features of Extraversion such as efficient multitasking, verbal skills and rapid response work together to facilitate adaptation. Conversely, the various characteristics of Introversion support adaptation to solitary environments

> requiring self-direction

Also see:

- **Best evolutionary psychology books**

Personality and performance

There limited connection between personality and performance:

> Associations between personality, performance and individual differences in cognition are often rather unstable and sensitive to various moderator factors.
> Furthermore, effect sizes are often modest (e.g. , Koelega 1992)

Which I was surprised to read.

- Anxiety has detrimental effects on performance
- Selective attention: some are better at quickly focusing on a stimulus, or resisting distraction from irrelevant stimuli
  - Extraversion and low Neuroticism were associated with faster speed of visual search, when subjects were required to find a single letter target in a random display of letters
  - Extraverts were more resistant to background noise than introverts across a range of tasks; extraverts may indeed prefer to study with music or other noise in the background.
  - Anxiety and Neuroticism are associated with selective attention deficits, a result that may reflect a more general attentional impairment related to these traits. Anxious people tend to 'lock onto' potential sources of threat and are slow to disengage attention (Derryberry and Reed 1997, 2002)
- **Extraverts may jump to conclusions**: studies of problem-solving show that extraverts are prone to choose a solution impulsively, without due reflection

Work performance

Conscientiousness is one of the largest predictors of work performance:

> second-order meta-analysis (that is, a meta-analysis of existing meta-analyses), which showed Conscientiousness to be a valid predictor for all work performance criteria (overall work performance (non-independent analysis (.24); independent analysis (.27); supervisor ratings (.31); objective performance (.23); training performance (.27); and team-work (.27)), and occupational groups (sales performance (.25); managerial performance (.25); professionals (.24); police (.26); and skilled or semi-skilled (.23)

Emotional stability was also a valid predictor of work performance, while neuroticism is a negative predictor.

Positive VS Negative Affect may be the biggest difference

> Organ, Podsakoff and MacKenzie (2006) have suggested that personality may only be related to organizational citizenship behaviour through its relationship with job satisfaction, given the wealth of evidence that variance in job satisfaction can be explained by personality (e.g. , Judge and Bono 2001).Indeed, Ilies, Scott and Judge (2006) recently found that positive affect and job satisfaction predicted organizational citizenship behaviour, and secondly that cross-level interaction between Agreeableness and positive affect predicted organizational citizenship behaviour

Traits & Social Relationships

There seem to be strong ties between traits, and social life quality:

> Extraversion, Neuroticism, Conscientiousness and Agreeableness all appear to have major influences on adult relationship outcomes (Berry, Willingham and Thayer 2000; Karney and Bradbury 1995; Lehnart and Neyer 2006; White, Hendrick and Hendrick 2004)

Low Agreeablness Is Not Power

Sometimes people confuse agreeableness with “too nice”.
And low agreeableness with “dominant go-getter”.

That doesn’t seem to be the case:

> low agreeable children are more likely to use power assertion (e.g. , threats), which can ultimately harm or end a relationship. Disagreeable children are not only more likely to use power assertion, they are also more likely to be involved in more serious bullying behaviours (Bollmer, Harris and Milich 2006; Gleason, Jensen-Campbell and Richardson 2004).Indeed, low Agreeableness is associated with peer rejection and victimization (Newcomb, Bukowski and Pattee 1993; Jensen-Campbell, Adams, Perry et al.2002

Traits That Promote Healthy Relationships

> Among adults, Conscientiousness has been associated with mate desirability, relationship quality and marriage stability (Botwin, Buss and Shackelford 1997; Gattis, Berns, Simpson and Christensen 2004; Kelly and Conley 1987; Roberts and Bogg 2004; Robins, Caspi and Moffitt 2000)
> Agreeableness and Conscientiousness are negatively related to a friend’s annoyance with the individual; Conscientiousness and Extraversion are negatively associated with the number of conflicts in the adult friendships (Berry, Willingham and Thayer 2000)

Unsurprisingly, a predisposition for positive emotions also makes for good relationships:

> One exception is a longitudinal study by Robins, Caspi and Moffitt (2002). They found that a personality profile of low negative emotionality, high positive emotionality and high constraint can predispose a person to become involved in relatively happy, non-abusive relationships. More specifically, negative emotionality at the age of eighteen predicted higher levels of conflict and abuse and lower levels of quality in romantic relationships three and eight years later. In addition, they found that the influence of negative emotionality on romantic relationships was quite stable

Social Support

There are 2 dimensions to social support:

- Functional support is the perception and actual support available from others
- Structural support refers to the degree of embeddedness of the individual within the social network

More Social Support Is Healthy

Unsurprisingly, more support makes for a better life:

> research investigating the stress-buffering role of functional support has shown its effectiveness in predicting

> reduced mortality and physical health outcomes (Cohen 2003; Uchino, Cacioppo and Kiecolt-Glaser 1996), as well as lower levels of psychological distress

Relationships With Value Takers Are Unhealthy

On the other hand, as we often say here:

> Interacting with others who are interfering, manipulative or even hostile has been shown to have a negative impact on psychological wellbeing (Harber, Schneider, Everard and Fisher 2005; Rook 1984).
> Furthermore, **the impact of negative interactions on the individual is often greater, compared with positive interactions**

Personality And Social Support

Extraverted and agreeable individuals tend to get more social support.

As per social exchange theory, that is partly because they also *give* more support.

On the other hand, extraversion cuts both ways.
And extraverts can be "needier":

> extraverts do not receive an appropriate level of social support, then they appear to be more negatively affected by this reduced provision of social support, as compared to introverts

Highly neurotic people tend to report more negative social interaction, and tend to withdraw during times of stress.

Social pain and hurt feelings

HFP is the measure of "hurt feelings proneness:

> HFP correlates strongly and positively with Neuroticism, anxious attachment, fear of negative evaluation, and self-reported behavioural inhibition system activity (Leary and Springer 2001; MacDonald 2008)
> (…)
> HFP is also related positively to the need to belong (Leary and Springer 2001; MacDonald 2008), a variable reflecting one's appetite for social connection. Those higher in HFP have also been shown to place more value on true friendship and mature love (Leary and Springer 2001)

And:

> Higher HFP was associated with both higher perceptions of potential threat and higher perceptions of potential reward.

Personality and politics

Right-wing authoritarians and conservatives are needy for certainty

> meta-analysis of this extensive literature by Jost, Glaser, Kruglanski and Sulloway (2003a) makes a strong case for political conservatism as motivated social cognition. While the core ideology of conservativism stresses justification for social-economic inequality and resistance to change, its motivational dynamism centres around the need to manage uncertainty and threat

The difference between liberals and conservatives is openness

Openness to Experience is the personality trait that mostly distinguishes liberals and conservatives.

Psychopathology

Psychopathy

Hare asks whether psychopathy is categorical or dimensional:

> Do psychopathic individuals differ from the rest of us in degree or in kind? There has been considerable debate, but little empirical research, on the topic.

On one hand, it seems to be dimensional:

> psychopathy reflects, or emerges from, a combination of extreme variants of normal-range personality processes, many of which are antisocial in nature (Lynam and Widiger 2007)

On the other hand, "*such a combination of extreme traits may be taxonic*".

Hare and Ruscio noted that psychopathy could be viewed as both:

> within a nonpsychopathic group, a set of dimensions may capture individual differences on psychopathy-relevant traits, but hardcore psychopaths deviate substantially on multiple dimensions and form their own group.Certainly, it is not unusual for researchers and clinicians to describe those with very high PCL-R scores as 'different' from other individuals

Personality and crime

The authors suggest that the definition itself of psychopathy defines a criminal, so it's not useful.

However, that's not to say that psychopathy or personality traits are irrelevant.
They are relevant, but only at extreme levels:

> In general, then, although many offenders are characterized by some form of mental disorder, a very small proportion of the mentally disordered population turn to crime
> (…)
> Thus, although there has been a tendency to look for mental disorder as a basis for criminality, careful study indicates that it is only at the extremes that such an aspect of a person may be considered relevant

Other personality disorders

[image]
Adapted from Beck and Freeman 1990, The Cambridge Handbook of Personality Psychology

There seems to be a high level of comorbidity among personality disorders.
For example:

- Eating disorders: as many as 60 percent of women with an eating disorder also meet criteria for a personality disorder (PD
- ADHD is positively associated with temperament dimensions reflecting impulsivity and reactivity (ie.: BIS, negative emotionality, Neuroticism, impulsivity and novelty seeking)

Treatment for personality disorders

The theoretical traditions of current treatment approaches can be divided into three main strands:

- **medical model**: including drugs. The evidence judged to be inadequate -but later in the book, they say the evidence "is improving"
- **psychoanalytic/psychodynamic theory**: There is a significant difficulty applying traditional, experimental, test of effectiveness to psychoanalytic treatment, not least because of the length of the treatment, but there is some evidence that psychoanalytic therapy may be helpful
- **(cognitive-)behavioural theory**

And then the authors seem to describe another one and I didn't understand where it was placed:

- **Group therapy**
  - Democratic therapeutic community: permissive and democratic, the members are active participants and part of rule-making and enforcement. They seem effective over comparison groups of non-treated referrals in borderline symptoms, other symptoms, and service usage and cost-effectiveness (Lees, Manning and Rawlings 1999)

The authors say that there isn't enough evidence to pick a clear winner or a gold standard.

Personality and leadership

Leadership is related to:

> Judge, Bono, Ilies and Gerhardt (2002) in a meta-analysis of the leadership and personality research found leadership to be **positively related to Extraversion (.31), Openness (.24) and Conscientiousness (.28)**, and negatively related to Neuroticism

And the view that narcissism or dark-triad traits may favor the ascension to power in the workplace may be valid:

> While Nicholson's (1998) sample were CEOs of leading companies, no data was presented on leadership performance per se, therefore, the low Agreeableness scores may reflect traits that facilitate individuals' rise into leadership positions, but are not necessarily an indicator of subsequent leadership success. **Such a view would be consistent with those suggested in the literature on narcissistic leaders, i.e. that while some of the traits associated with narcissistic personality may help an individual attain a leadership position**

Even more obvious -and almost shocking- evidence:

> Board and Fritzon (2005) found that **CEOs and senior managers of leading UK companies demonstrated similar levels of narcissism as a sample of patients at Broadmoor Special Hospital (a secure psychiatric hospital in the United Kingdom)**, and significantly higher levels of histrionic personality than the 'clinical' group

Also see:

- **The myth of emotional intelligence**

> The Myth of Emotional Intelligence: Machiavellis At The Top

PRACTICAL TAKEAWAYS

Obviously, these books aren't meant to be practical.

My job is to go through the literature to then turn the empirical evidence into practical strategies and techniques.

Still, here are some possible takeaways:

Use Occam's Razor: The Simpler Explanation Beats The Convoluted One

The author says that good theories are "as simple as possible".

And in yet another salvo against psychoanalysis, they say:

> In personality (more controversially), why add an elaborate psychoanalytic model of personality structures and defence mechanisms to explain forgetting of childhood memories, if well-supported, simple cognitive mechanisms can account for the same phenomena (Hassin, Uleman and Bargh 2005; Kihlstrom 1987)?

Cut out the takers from your life

It's proven that manipulators, negative people and value-takers in general make you worse off.

MORE WISDOM

Why Psychoanalysis Has Been Marginalized

Say the authors:

> Robert Bornstein (2005) explains what he terms the marginalization of psychoanalysis, which is often criticized for scientific failure, this way (p.325): the diminished influence of contemporary psychoanalysis is largely a product of theory mismanagement: Rather than looking forward (to the evolving demands of science and practice) and outward (to ideas and findings in other areas of psychology and medicine), many psychoanalysts have chosen to look backward (at the seminal but dated contributions of early psychoanalytic practitioners) and inward (at their like-minded colleagues' own analytic writings). Theories evolve. Criteria for judging the worth of theories offer directions for their growth, not static rules for accepting or rejecting them once and for all

It's the failure of "theory building upon itself", without going back to empirical data from the real world, or to other scientific advances and findings.

And:

> Psychoanalysts' rejection of the scientific process of objective empirical verification leaves them isolated from the rest of the academic community and has been manifested in heated professional and sometimes personal criticisms

However, adds Bornstein, some psychoanalists are more open to the scientific method, so there are still hopes of reconciling psychotherapy with science.

Science May Beat Psychoanalist's Judgment

> outcomes of psychotherapy are predicted in two ways to see which is more accurate: by a mental health professional who has case material available, and by a statistical method in which data are used to make

> predictions…
> A meta-analysis of such studies reports that the statistical method offers more accurate prediction (Aegisdottir, White, Spengler et al.2006), and such results have been interpreted to forcefully argue for the superiority of science over clinical judgement (Dawes 1994)

However, I wasn't convinced by this.
"Case material" is very different from directly observing, engaging, or even personally knowing an individual.
And you can't run "raw data analysis" on a flesh and blood individual.

People Can Change Over Time

Longitudinal research shows that:

> Stability from childhood to adulthood, while significant in many cases, is low enough to suggest that significant change occurs, especially before adulthood (Caspi, Roberts and Shiner 2005; Hampson and Goldberg 2006

QUOTES

How to recognize psychology VS personality psychology, in simple terms:

> According to a famous, albeit sexist, quotation, 'Every man is in certain respects (a) like all other men, (b) like some other men, (c) like no other man'.
> General psychology is concerned with (a), and personality psychology with (b) and (c).

CONS

- **Wish it went deeper on negative affects, negative personality types, value-takers etc**. That would have been very useful to TPM and my goals. Instead, it mostly insists on more popular and "neutral" constructs such as the Big 5

REVIEW

The Cambridge Handbook of Personality Psychology is a top resource for an overview of personality psychology from a scholarly research perspective.

I learned plenty from it and could take away several insights for TPM and Power University.

Bullet Summary

- We managed to colonize the world thanks to our cognitive abilities
- The agricultural revolution allowed for complex societies and lead to population explosion
- The scientific revolution provided the basis for our current runaway progress

Sapiens Summary

About The Author:
Yuval Noah Harari is an Israeli professor of history at the Hebrew University of Jerusalem.
He is most famous for the best-selling book “Sapiens: A Brief History of Humankind”

Where We First Started

Humans appeared around 2.5 millions ago in East Africa, evolving from a genus of great apes known as Australopithecus.

These early humans were homo rudolfensis and homo erectus. From East Africa the first hominids spread out and evolved into homo neanderthalensis in Europe and Asia.

How Sapiens Bested Other Hominids (Plus: Are We Different Breeds Within The Same Species? ⍰)

Homo Sapiens, such as us, only evolved around 300.000 years ago.

Apparently, there was nothing too special about homo sapiens. And yet, they came to dominate the world.
What happened?

There are two theories:

- **Homo sapiens interbred** with homo neanderthalensis (and other hominids in other areas)

- **Homo sapiens supplanted** the other hominids (either by taking their food sources or straight killing them)

The political tabus

The interbreeding was politically tabu because it would mean that “white people” are somewhat different from Africans.

But you can’t fight facts for too long, and probably both are correct.

BUT there has been some interbreeding.

Between 1 and 4% of European’s DNA is neanderthalensis DNA.

Says the author:

> It turned out that 1–4 per cent of the unique human DNA of modern populations in the Middle East and Europe is Neanderthal DNA. That’s not a huge amount, but it’s significant. A second shock came several months later, when DNA extracted from the fossilised finger from Denisova was mapped. The results proved that up to 6 per cent of the unique human DNA of modern Melanesians and Aboriginal Australians is Denisovan DNA.

AND we probably killed quite a few of those other hominids (including, I’d add, a few of other sapiens intra-killing as well).

We Left A Trail Of Blood

Wherever the Homo Sapiens went, it hunted the local game to extinction.

In Australia only until 50.000 years ago lived a multitude of mammals, some of which were huge and potentially dangerous.
But within a couple of thousand years from the arrival of Homo Sapiens, they all but disappeared.

The Sapiens Advantage: Brain

What is it that gave Homo Sapiens the advantage over other hominids?
Our advantage is our superior brain power.

Around 70.000 years ago the sapiens brain underwent what Yuval Noah Harari calls the cognitive revolution.
In a relatively short time span, the Homo Sapiens was now able to leverage the increased brainpower to:

- Form larger and more sophisticated groups
- Invent more effective hunting tools
- Develop more effective hunting techniques
- Establish the first trading networks

All those changes meant that the Homo Sapiens could find food, more easily, in more difficult times and more challenging environments.
That allowed to spread out everywhere.
For example, Homo Sapiens were able to hunt mammoths and use their skin for shoes and warm clothing. And with those, they could cross the icy Siberian passage to colonize America.

Cognitive Revolution Made Us The Apex Predator

The cognitive revolution is:

> The appearance of new ways of thinking and communicating, between 70,000 and 30,000 years ago

Language & Cooperation Gave Us The Biggest Advantage

One of the biggest advantages of the cognitive revolution is language.

Says Harari:

> it's the ability to transmit information about things that do not exist at all.

Language gave Homo Sapiens over all other hominids the ability to cooperate at an unprecedented scale.

It allowed us to cooperate flexibly *and* in large numbers.

Language is the glue that keeps society together.
From the smallest tribes to our current global world our ability to community allows for the most diverse people and cultures to share innovation.

Myth-making

In Harari's take, language allowed for what he calls "myth".

He includes in "myth" all the figments of imagination that we can't concretely see or touch.

It includes:

- Group-thinking / belonging
- Corporations
- Law / rules of cooperation
- Money
- Religion

The Agricultural Revolution: A Step ~~For...~~ Backward

Around 12.000 years ago Homo Sapiens learned to grow crops.

That meant we didn't need anymore to rely on hunting and gathering, but we could settle down somewhere specific and produce our own food.

And Homo Sapiens loved agriculture.
Within "just" 10.000 years, almost all humankind had adopted agriculture.

The Downsides of the Agricultural Revolution

Yuval Noah says that in the beginning agriculture didn't make sense.

It would require a whole day of work for a limited amount of crops, which weren't even very digestible or nutrient-rich.

However, he says, its adoption came over several generations and it also provided one big advantage: quantity.
We could cram a high amount of plants into a relatively small piece of land, and that allowed for the Sapiens' population to explode.

The Scientific Revolution Took Us A Big Step Forward

It was a revolution in how we think, says Harri.

Humanity suffered from a “delusion of no control” and a general belief that things were fixed.

But that changed with the scientific revolution in the 16th century, towards the end of the Renaissance.

Finally, we started believing we could improve our lot and move forward.

My Note:
I didn’t think this was necessarily correct.
The Romans didn’t wait around in fear of God but acted upon their environment.
See for example Marcus Aurelius’ Meditations.

Money and Capitalism Fueled Our Tech Advancement

Yes, the technological advancements improve our world.

But the technological advancement is only possible because of capital.

And the allocation of capital changed thanks to:

- Cultural and mindset shifts. We started believing in growth, investment, and trading as win-win. Investing became better than hoarding
- The trust and believe in something we can’t see: money

Money is shared myth

It’s our ability to believe in shared myth that made us who we are, says the authors.

However, when he talks about myth, he doesn’t just refer to “myth” but, it seems to me, he refers to *abstractions* - it’s confusing to call them “myths”-

Money and legal system are examples of such an abstraction that allowed civilization to grow exponentially.

Capitalism is the new religion

Today we live in a highly globalized world, we believe less in religions and we all believe in capitalism and showing off our material wealth.

There are many critics of globalization but, the author says, it allowed for a more peaceful life.

MORE WISDOM

Remember: survival of the FITTEST, not strongest

It's surprising how many still confuse this simple tenet of evolution.

For example:

> On the island of Java, in Indonesia, lived *Homo soloensis*, 'Man from the Solo Valley', who was suited to life in the tropics. On another Indonesian island – the small island of Flores – archaic humans underwent a process of dwarfing. Humans first reached Flores when the sea level was exceptionally low, and the island was easily accessible from the mainland. When the seas rose again, some people were trapped on the island, which was poor in resources. Big people, who need a lot of food, died first. Smaller fellows survived much better.

Looking at mass extinctions, bigger/stronger often die out first during crises.

There is no single way of life for humans

Says Harari:

> The heated debates about *Homo sapiens*' 'natural way of life' miss the main point. Ever since the Cognitive Revolution, there hasn't been a single natural way of life for Sapiens. There are only cultural choices, from among a bewildering palette of possibilities.

History is no tool to predict the future

Says Harari:

> Unlike physics or economics, history is not a means for making accurate predictions. We study history not to know the future but to widen our horizons, to understand that our present situation is neither natural nor inevitable, and that we consequently have many more possibilities before us than we imagine.

The world's suffering runs on indifference, not hatred

Same for slave trade as it is for animal (lack of) welfare:

> Just as the Atlantic slave trade did not stem from hatred towards Africans, so the modern animal industry is not motivated by animosity.
> Again, it is fuelled by indifference.
> Most people who produce and consume eggs, milk and meat rarely stop to think about the fate of the chickens, cows or pigs whose flesh and emissions they are eating.

Yep, largely true.

Money wins wars, not strength

True today, as it's always been since the Industrial Revolution:

> Napoleon made fun of the British, calling them a nation of shopkeepers. Yet these shopkeepers defeated Napoleon himself, and their empire was the largest the world has ever seen.

The cost of war and nuclear devices ensured our peace

Something I always thought even as a young boy:

> The Nobel Peace Prize to end all peace prizes should have been given to Robert Oppenheimer and his fellow architects of the atomic bomb. Nuclear weapons have turned war between superpowers into collective suicide, and made it impossible to seek world domination by force of arms.

Yep, that.

CRITICISM

As usual, remember:

we criticize harder the *good* books.

And Sapiens is a very good book.
So it deserves more of our attention.

Guilt-tripping on humanity. Collective guilt permeates this book. Be careful!-

For example:

> As we will shortly see, we Sapiens have good reasons to repress the memory of our siblings.

Maybe Harari thinks so.

I don't think there is any good reason to "repress" anything.

A similar mindset and sense of collective guilt permeates *Sapiens*.

Weak Freudian-style of human-bashing

For example:

> Most top predators of the planet are majestic creatures. Millions of years of dominion have filled them with self-confidence. Sapiens by contrast is more like a banana republic dictator. Having so recently been one of the underdogs of the savannah, we are full of fears and anxieties over our position, which makes us doubly cruel and dangerous.

God man, I gotta wonder why do so many historical revisionists relish in human-bashing?

Projecting own anxieties maybe?

Displacing the burden so it's not about them, but about everyone?

The myth-making explanation as the basis of cooperation and human domination is weak

The main thesis of the book is that the cognitive revolution and the ability to think in abstract terms -"myths" allowed humans to cooperate and dominate.

For example, says Harari:

> Trade may seem a very pragmatic activity, one that needs no fictive basis.
> Yet the fact is that no animal other than Sapiens engages in trade, and all the Sapiens trade networks about which we have detailed evidence were based on fictions.
> Trade cannot exist without trust, and it is very difficult to trust strangers.
> The global trade network of today is based on our trust in such fictional entities as the dollar, the Federal Reserve Bank, and the totemic trademarks of corporations.
> When two strangers in a tribal society want to trade, they will often establish trust by appealing to a common god, mythical ancestor or totem animal.

I think this a typical case of "potentially good take, but over-generalized and over-extrapolated".

Such as, a good take may explain a portion of a certain phenomenon.
Say, 30%.

That maybe a great take and addition to our understanding of the phenomenon.

But when you try to make it the main or *single* sole explanation for it, it just becomes weak.

That's what happened with Yuval's thesis.

Inappropriate moralisms & un-scientific mindsets

The author attacks those who "defend" humans:

> Some scholars try to exonerate our species, placing the blame on the vagaries of the climate (the usual scapegoat in such cases). Yet it is hard to believe that Homo sapiens was completely innocent.

Harari filters this all from a moralistic point of view.

But while it's fair and even good *in general*, it's out of place in more rigorous analyses and investigations.

What an UN-scientific mindset to think in terms of "exonerating" -which, if those scholars were indeed trying to do, is equally UN-scientific-.

But maybe those scholars weren't defending humans but simply advancing hypotheses to be discussed and tested.

And he goes on:

> There are three pieces of evidence that weaken the climate alibi, and implicate our ancestors in the extinction of the Australian megafauna.
> (….)
> Even if climate change abetted us, the human contribution was decisive.

Alibi?
Implicate?
Abetted *us*?

LOL, it's not a process, and it's not a moral process either.

And it's not a process on YOU.
What Sapiens did a long time ago has no implication for you.

It's just about finding out what happened.

Opinions & speculative theories presented as facts

For example:

> It is doubtful whether *Homo sapiens* will still be around a thousand years from now, so 2 million years is really out of our league.

How does he know if 2 million years is "out of our league".

He doesn't.

I, for one, say that it's *not* "out of our league" -very disempowering way of talking, BTW-.

Similar for how humans started to be born early.
Such as, women who gave birth prematurely survived.

Anthropocentric, without realizing it

The author would like to "fly higher", but doesn't realize he falls for more covert and hidden forms of anthropocentrism.

For example:

> Most top predators of the planet are majestic creatures. Millions of years of dominion have filled them with self-confidence.

And even more:

> If we knew how many species we've already eradicated, we might be more motivated to protect those that still survive. This is especially relevant to the **large** animals of the oceans. Unlike their terrestrial counterparts, the large sea animals suffered relatively little from the Cognitive and Agricultural Revolutions.

Why "large", you may wonder?

Becuase "large" is more visible to *humans*.

More impressive, more cool to watch.

So if rodents or critters go extinct, who cares?

Doesn't seem to understand evolution

The author cites evolution and "what's good for the genes" quite a bit.

Yet, I feel he doesn't fully grasp how it works.

He says that "the species won" with agricultrual revolution, but the individuals suffered.

But evolution acts at an individual's level, not at the species level.

And he explained the reason himself, without being able to connect the dots.
The agricultural revolution allowed for population explosion.
So, the *individuals* left more copies of their DNAs.

He may be right that the individuals still suffered -albit I'm not convinced-.
But NOT from the evolutionary point of view he took.

Agriculture-bashing & rose-tinted view of hunter-gatherers

It's funny the author criticizes other authors who have a rosy view of the hunter-gather societies.

And THEN… he does the same.

For example, criticizing agricultural societies, he says:

> A much more representative viewpoint is that of a three-year-old girl dying from malnutrition in first-century China because her father's crops have failed. Would she say 'I am dying from malnutrition, but in 2,000 years, people will have plenty to eat and live in big air-conditioned houses, so my suffering is a worthwhile sacrifice'?

And yet, if he wants to go for the emotional appeal, from his own words, in an hunter-gatherer society:

> Unwanted babies and children may be slain, and there are even cases of religiously inspired human sacrifice. (…)
> Another child was buried alive because 'it was funny-looking and the other children laughed at it'.

Oh yeah, those good old days of hunter-gatherer societies…

I don't know how can people say that hunter-gatherers were happier than agricultural people, or that the agricultural revolution "wasn't that good".

Maybe it wasn't but… Based on what exactly?
The author's opinion, again.

Of course, the fact that agriculture spread to all humans at lightning speed might suggest to any honest historian that maybe it wasn't that bad?

That, or humans were all stupid back then.

Rose-tinted glasses for modernity

I think that it's 50% true that we improved a lot and that war maybe more unlikely.

And yet, it may be 50% an historical confluence of lucky events.

In any case, I feel Harari overstates the case.
Sapiens's last chapters feel like Pinker's *Better Angels of Our Nature*.

It's just an event, but it's still interesting that Harari says that the USSR dissolved "peacefully".

And yet at the time of writing a war is being fought by a dictator who wants to get back that USSR power.

Under-values the contribution of classic Greece and Rome (potentially)

Greece and Rome set important, potentially necessary foundations for the European and later Western world to carry the world forward.

The name "Renaissance", in which the author correctly places the scientific revolution, was largely set off by rediscovering past greatness and shaking off middle-age torpor.

The Romans for example knew the earth was round.
And a classic scientist had even measured the circumference, quite a scientific feat.

And, by the way, it may also suggest something that Renaissance is a Latin word.

And, in general:

Sometimes dismissive/simplistic of past achievements

Harari seems to see "revolution" as if they were *isolated* exploits.

Instead, I think that it's more accurate to see ost of them as exploits from *positive momentum*.
And/or from resuming old positive momentum -ie.: Renaissance-.

For example, Harari says that people didn't believe in "growth" before the scientific revolution.

It's an interesting take, and I think he may have a point.

However, it's also a damn (poor) over-generalization.

Bright individuals probably differed back then.
See for example Marcus Aurelius' Meditations.

And not-so-bright people today equally do not believe in moving forward.

It also seems a bit overly devaluing previous tech advancements.
He says a Roman soldier was pretty much the same as a soldier a few hundred years later.
But a Roman soldier was a LOT better equipped than any stone age warrior.

CONS

Less damning as the ones above, but still relevant:

- Long off-topics on random stuff such as "happiness"
- Much philosophizing
- Slight bias for nurture/culture over nature (but not nearly as bad as many other resources)

PROS

Some of the pros:

- **Great novel take on the scientific revolution** (for me, at least)

Harari makes a good case that European domination wasn't just or only technology.

But it was also the capital that fueled that growth and technology.
And, at an even deeper level, the culture and mindsets behind it.

I agree with it and am thankful for learning this new take.

- **Great takes on the deluge of poor analyses that most commentators offer**

For example, people offering "just-so" stories that frame what happened as obvious.

- **Our goal is to decrease suffering**

This is one of my main life philosophies and vision for humanity.

And I'm glad Harari seems to espouse something similar at the end of *Sapiens*.

Quotes

On the unpredictability of history:

> It is particularly important to stress that possibilities which seem very unlikely to contemporaries often get realised.
> When Constantine assumed the throne in 306, Christianity was little more than an esoteric Eastern sect. If you were to suggest then that it was about to become the Roman state religion, you'd have been laughed out of the room just as you would be today if you were to suggest that by the year 2050 Hare Krishna would be the state religion of the USA.

And on "just-so" stories:

> In AD 600, the notion that a band of desert-dwelling Arabs would soon conquer an expanse stretching from the Atlantic Ocean to India was even more preposterous. Indeed, had the Byzantine army been able to repel the initial onslaught, Islam would probably have remained an obscure cult of which only a handful of cognoscenti were aware. Scholars would then have a very easy job explaining why a faith based on a revelation to a middle-aged Meccan merchant could never have caught on.

Little fun-bashing of UK ⍰ :

> We call it the Scientific Revolution. It began in western Europe, a large peninsula on the western tip of Afro-Asia, which up till then played no important role in history.
> (…)
> Not long before Cook's expedition, the British Isles and western Europe in general were but distant backwaters of the Mediterranean world. Little of importance ever happened there. Even the Roman Empire – the only important premodern European empire – derived most of its wealth from its North African, Balkan and Middle Eastern provinces.

On European domination of the modern world:

> Under the European aegis a new global order and global culture emerged.
> Today all humans are, to a much greater extent than they usually want to admit, European in dress, thought and taste.
> They may be fiercely anti-European in their rhetoric, but almost everyone on the planet views politics, medicine, war and economics through European eyes, and listens to music written in European modes with words in European languages.
> Even today's burgeoning Chinese economy, which may soon regain its global primacy, is built on a European model of production and finance.

Review

Sapiens is an instructive and thought-provoking look at Homo Sapiens history.

Albeit, just to be sure, the “history” mostly focuses on the near-present, and with many personal reflections and opinions.

Still, *Sapiens* is an impressive work mixing captivating page-turning entertainment, valuable information, and provocative takes.
Harari can be proud of himself.

It’s far better than the previous mass-market history best-seller *Guns, Germs, And Steel*.
Including being more honest and less biased.

There are some important drawbacks -see above-.
Pay particular attention to the most dangerous one: the sense of collective guilt embedded all through it.

Once you’re aware of those drawbacks, Sapiens can be a highly recommended read.

How to Spot Toxic People And “Takers”

Lucio Buffalmano · 15 April 2024 · Archived copy · Original

Toxic people don’t come with a sticker on their forehead.

Most of them instead hide their toxicity.

In this article, we focus on the most general category of toxic people: takers.
At the most general level, **takers take from you, and make you worse off.**

The “taking” can be anything:

- Material
- Emotional
- Status and power
- Etc. etc.

When you know what to look for… It’s easy

Here’s how to spot them:

Contents

- 1. Run your bottom line calculation: are you better or worse off?
  - 1.2. Materially
  - 1.3. Psychologically

  - ⍰ Trump Example:

- 6. Note what they take pride on
- 7. See what they think is “optimal behavior”
  - ⍰ Example:
  - 7.2. Look for over-cynicism, dog-eat dog mindset, or “social Darwinism”
- 8. See what they find funny
- 9. Look for overly strategic approaches to relationships and exchanges
  - 9.2. Look for signs of OVER-competitiveness
- 10. Any “taker vocabulary”?
- 11. Look for dark triad signs
- 12. Look for signs of general poor character
- 13. Test them. See how they respond
- Toxic People Are Takers
- Using Takers

1. Run your bottom line calculation: are you better or worse off?

This is what it comes down to.

Including:

1.2. Materially

Are you materially worse or better off with them?

1.3. Psychologically

Do you feel better or worse engaging with them and being in their company?

2. Check your intuition: how do you feel about them?

Ask yourself:

> How do I feel this person?

Ask yourself the same if they weren’t family, or old friends.
And ask yourself the same if moving on would be easy.

Then:

> Do I feel better about myself with them?
> Glad to be in their company, happy to know them or work with them?

And:

If you had to score them from 1 to10 on the “quality of character” scale, how would you rate them?

⚠ **You may have yet to develop that “feel”.**
So don’t jump to conclusions based on your analysis yet.
⍰Power University helps you develop that feel.

3. Look at their other relationships

Including past relationships.

Toxic people can be strategic.

They start friendly, nice and giving.
But the more you can look at their full spectrum of relationships, the more the truth emerges.

3.2. look for taking in all areas of life

Not just relationships, but all faces of life.

Sometimes there is a taker personality that applies to any context.

For example:

- **Accepting influence**, and willingness to change one's mind
- **Openness to compromise**, as part of decision-making give and take

4. See how they behave when they CAN take

Power has a thing for taking out the worst from people.

But, as Brian Klaas aptly noted, not *ALL* people.

Mostly, from those with a poor character.

So look how they behave when they CAN take easily.

5. Listen how they talk about givers and takers

For example:

- Do they mock givers?
- Do they condone or condemn takers?

Some takers think givers are gullible.

They're proud of being the opposite.

⍰ Trump Example:

> **Hillary**: he paid zero federal taxes
> **Trump**: that makes me smart

Attention:

It's not about the *action* of minimizing taxes.
Any good, rational, driven man would maximize his taxes -and we'd advise as much-.

It's about the spirit and mindset.

For example, compare how Warren Buffett goes about it.
Buffett does the same. But instead of calling himself "smart", he says that rich men like him should pay *more* taxes.

6. Note what they take pride on

Some takers take *pride* in taking.

See this real-life example here:

See Power University

We keep some of Lucio's private life examples for Power University

7. See what they think is "optimal behavior"

Some takers believe taking is the only rational choice.

They don't see the possibility of win-win.
Or feel any pleasure in giving.

⍰ Example:

Ore Posh 8 months ago

As someone who has worked as a waitress for almost 7 years, I always tell anyone who cares to listen, use men for what you can get from them there and then. Dating them outside of work is a no-no for me. As some women have rightly said in the comments, they never see you on their level, only want to sleep with you. Georgina's case is extremely rare, maybe cos it was his son that approached

> **Her**: use men for what you can get from them. They never see at your level

The mindset of the jaded and inveterate hooker.
Sometimes, the saying "a hoe cannot be turned into a housewife" is true.

⍰ **Read more in "hookers' psychology".**

7.2. Look for over-cynicism, dog-eat dog mindset, or “social Darwinism”

For example:

- *Naive people had it coming*
- *Cheating is part of life, you must know better*
- *If you don’t take first, they’ll take from you*

Look for suspiciously strong or out-of-place virtue-signaling

Including:

- **Condemning takers and scammers**. Sometimes, they’re just jealous someone else is doing all the taking
- **Negative projections**. Accusing you or others of cheating. That’s because *they* would cheat in the same circumstances
- **Out-of-place defensiveness**. For example “I’m not like that, I’m a good person” when you had simply asked a question

8. See what they find funny

Many takers find humor about taking advantage of others funny.

For example, stupid people or “marks” who fall for someone’s manipulation -or their own manipulation-.

Example:

- ⍰ **Neil Patel finds scam funny**

9. Look for overly strategic approaches to relationships and exchanges

For example:

- Overly nice when they need something
- Giving right before they ask something
- Giving, texting or chasing you when they need social support
- Fawning toward the bosses or higher-status folks

What they advise others to do:

- ⍰ Example in Power University

9.2. Look for signs of OVER-competitiveness

A competitive spirit is healthy and important to advance in life.

But look for *over*-competitiveness.
And in areas where over-competition is out of place.

- Friendships
- Old relationships (who’s “winning now”)
- Situations without pay-offs

⍰ Example: Putin’s dog is stronger and faster than Bush’s

Bush told the “dog story” more than once:

> **Putin**: (my dog is bigger, faster, stronger, than yours)

Bush realized Putin wasn't pursuing win-win when he said his dog was bigger, faster and stronger.

Bush had a great read.
It was a red flag of over-competing because: what's the value in "who has the stronger dog"?

10. Any "taker vocabulary"?

Or overly aggressive.

For example:

- **Robbing / stealing**
- **Ruining**
- **Attacking**, when reaching out to a leads' list in sales
- **Punishing & smashing** for sex and hookups

A deeper analysis on mis-using takers' vocabulary:

- **PUA Tom Torero**: taker's vocabulary in dating/PUA

Or look how Ali's former (poor) boss spoke to his coaching client:

> **Him**: I want you to remove as many steps to get them to the cheese in the trap

Does that sound like someone who wants to grow a business by providing value? ♂

11. Look for dark triad signs

Dark triads are more likely to take.

Research on social media found these signals for narcissism/taking:

- **Self-promoting, self-absorbed, self-important statuses**
- **Boastful and arrogant quotes**
- **Many friends/connections** (the author says "racking up superficial connections to brag and ask favors")
- **Vainer, flattering pictures** of themselves

Another study for CEOs:

- **More first-person singular pronouns**. Since takers tend to be self-absorbed, they tend to use more first-person singular pronouns like I, me, mine, my, and myself—
- **Large salary gap between them and other senior leadership**
- **Bigger pictures of themselves**, as shown in annual reports

Guess which one is the taker:

The man on the right is the former CEO of Enron and a convicted felon for financial fraud

- ⍰ **Missing early red flags** of aggressive, disempowering, potentially dark triad traits
- ⍰ **Chris Voss** gives off some high-functioning dark-triad vibes. Quicker video overview here.

12. Look for signs of general poor character

Poor behavior in one area often stems from a poor character.

So look for:

- Manipulative tendencies
- Gaslighting tendencies, and gaslighting typical behavior
- Manipulation tactics
- Power moves
- Microaggressions
- Undermining
- Focus on power over relationships

Etc. etc.

13. Test them. See how they respond

Testing is a skill on its own, and more later.

But as a quick example, a little "shit test" I once asked a girl I was dating:

> **Me**: would you like the last ravioli?
> **Her**: (nodding, without even looking)

Small yellow flag.
I'd have said "go for it" or "let's share it".

Toxic People Are Takers

Almost anyone can be a taker or giver in some situations.

However, it's NOT just situational.
Psychologist Adam Grant shows that a generalized approach to giving or taking is a stable personality trait.

It goes on a spectrum:

It's a spectrum between givers and takers

Grant estimated that 60% of people are matchers and takers and givers make up 20% each.

Using Takers

Generally, you don't want close relationships with takers.

But in business, you could make it work.

For example, if your interests align, you may work with an effective taker.

Or some small-timing takers can be duped into believing they're taking and winning… While they're not.
Some small-timer takers for example may steal office supplies. Or surf the web in the office for overtime pay. But since you pay them little, it can still be a net positive for you.

So we can say the general advice is to **only have transactional relationships with takers as long as you're gaining**.

- **How to manipulate a manipulator**

Here's Why All Manipulation Resources Suck

Lucio Buffalmano · 22 April 2024 · Archived copy · Original

99% of all manipulation resources are terrible.

0.5% of great content on manipulation comes from this website.

And the other 0.5%… I'm still hoping to find it.

OK, there are a few good things scattered here and there in this list.
But no single resource that combines high expertise, clear examples, and a clear roadmap to help people understand and *deal* with manipulation.

This is how most manipulation resources feel to me

Contents

- INTRO
  - Example: Manipulation Tactics
- The Issue With Manipulation Resources
  - 1. Basic information, with no hint of more advanced tactics
  - 2. No examples means lack of clarity
  - 3. Little understanding of power dynamics and manipulation dynamics
  - 4. Re-hash jobs (copying us… Without always crediting)
- There Is No Expertise
  - No Expertise = Ineffective Solutions
  - Example
  - Blunder Examples: Manipulation Tactics? Nope…
  - Gaslighting

- Seeking control
- Passive aggressiveness
- Coercion
- Stages of manipulative relationships

INTRO

This is my philosophy:

TPM articles carry a “burden of responsibility”.
The responsibility to add the most possible value to our readers.

So I take them seriously, and prepare myself before writing.

Part of my preparation includes looking at what’s already available.

And every time, without exception, what’s available has been a disappointment.

Example: Manipulation Tactics

We’ll use “manipulation tactics” as an example for this article.

But what we say for “manipulation tactics” is true for manipulation and “games people” in general.

I chose this specific example because when I looked up other articles on “manipulation tactics”. I was even more disappointed than usual.

Why?
Because **the highest-ranking articles for “manipulation tactics”are *shockingly* poor**.
Which is somewhat ironic since they’re all “high-authority” websites.

But to me, this is how they all feel:

We're in good hands!

The Issue With Manipulation Resources

Some of the issues common to 99% of manipulation resources include:

1. Basic information, with no hint of more advanced tactics

Basic articles serve a purpose since many people need to start from somewhere.

But it's an issue when *all* of them are basic.

And not a single resource bridges from basic, to more advanced material

2. No examples means lack of clarity

Almost all available resources have little examples, and zero real-life examples or videos.

That's an issue because readers do not get any sense of what manipulative tactics look like in real life.

For example, imagine the victim reads:

> "gaslighting is a manipulation tactic that makes you doubt reality".

Without gaslighting examples he never gains the ability to spot gaslighting in his life

3. Little understanding of power dynamics and manipulation dynamics

Manipulation IS about power.

Or, at least, it's in good part about power.

So understanding power dynamics is foundational to writing about manipulation.

Most articles lack a good understanding of manipulation because they're clueless about power dynamics.
And about the power-hungry personality's psychology.

4. Re-hash jobs (copying us... Without always crediting)

Don't take my word for this.

Try it.

Google "manipulation tactics".
And go through a few articles or videos.

And you'll see the same tactics over and over again.
Including the same mistakes and limitations.

Edit:
I see some improvements as more people learn from us:

Social scalping is a concept we first described and linked to social exchanges. We thank those who link or quote us and hope more will choose to be honorable and give due credit

What's the one common thread in all these issues?

It's this:

There Is No Expertise

The main reason, is this:

Few people seem to have advanced expertise on this topic.

And I'm being charitable by adding the word "advanced".

Those who have it, are busy *using* that expertise.
But even them, I suspect, operate mostly unconsciously.

The authors who write and talk about manipulation often have Ph.D.s or clinical experience.

And *still* many show a limited understanding of manipulation dynamics.

In part, I can understand it.
It's a very complex issue at the intersection of power dynamics, social exchanges, games people play, personality disorders, uncomfortable introspection, and sometimes even therapy when the manipulator is within, or within our families.

As a matter of fact, I believe that **few people understand manipulation unless *they* are good manipulators, or had good manipulators *in their families*.**
And good luck facing up to that.

What I can understand a bit less though, is that there is an appalling lack of clear thinking behind most resources on manipulation.

The lack of any real thinking is obvious to me because it's not just advanced manipulation dynamics that are

lacking.
It's also *basic* power dynamics, social exchanges, or even the acknowledgment of the shared selfishness that makes us all humans.

In the case of manipulation *tactics*, even the meaning of the word "*tactic*" is lost (see below).

The only common thread of the incoherent hodge-podge lists that clutter Google is to list whatever sounds "negative".

A few exceptions apply such as Harriet Braker or George Simon.
They're great authors with good insights.
But still, nobody provides a full, coherent overview of the topic.

No Expertise = Ineffective Solutions

Most of the available resources also fail to offer truly effective solutions.

That's to be expected.
How can I a non-expert deliver effective solutions on a topic that, intrinsically, requires high sophistication?

Solutions aren't even just about simply understanding *manipulation*.

Solutions also require a deeper understanding of social dynamics.
And a more strategic approach to social dynamics.

Solutions require some Machiavellianism.

Example

As an example, imagine a girlfriend threatening to breakup.

Funny enough, that was listed as yet another "manipulation tactic".

To begin with, that's more of a power move, rather than manipulation.

But an author lacking power awareness may miss the underlying dynamics.

With the threat, the woman is (sub)-communicating loud and clear that she has no respect for him (as a man).

And the solution is NOT the therapy that some sources suggest.

As much as we're not the website for "alpha VS betas" here, a good part of the solution does come down to personal power and confidence (or lack thereof)

Therapy only makes you look like more of a beta male looking to have his feelings mended.

This is a case that does require some high power alpha male approach.

The true root-cause solution is for the man to work on his power.
Including his ability to lead and command respect.

Blunder Examples: Manipulation Tactics? Nope...

As we mentioned before:

Many of the most popular and expert-written articles lack a clear definition of manipulation tactics.

I'm going to list now some of the "manipulation tactics" listen in these top-ranking articles, written by licenses or high-authority "experts".

Some examples of "manipulation tactics" that are NOT tactics include:

Gaslighting

is a *cluster* of manipulation tactics -and a *large* cluster-.

It's not a distinct manipulation tactic

Seeking control

is a *motive* that leads the controller to use manipulation tactics.

It's not a manipulation tactic per se.

Also, listing "seeking control" as a manipulation tactic is confusing.
It's confusing because almost any driven human being "seeks (more) control".

Good men also seek more control. So the question is not whether one seeks control or not.

The question is about *how, how much*, and *what costs they're willing to inflict* to get that control.

Also see our article on:

- **Manipulation VS persuasion**

Passive aggressiveness

is an interpersonal approach and a cluster of behaviors.

Passive aggressiveness *may* include a host of manipulative tactics, but not necessarily so.

It's also not a *tactic*.

I'd also like to ask those who include "passive aggressiveness" in a list of manipulation tactics: can you please tell me how a passive aggressive exactly successfully manipulates another man?

Coercion

imposes on others *by leveraging real power to impose one's will*.

Coercion is NOT manipulation because it's direct and open and in your face.
Manipulation is hidden.

Coercion may only be manipulative when it's a gambit not backed by real power. But then it's not coercion but more a "coercion *attempt*" or a "gambit".

Example: governments coerce citizens to pay taxes. But that's not manipulation. Manipulation would be to frame taxes as a moral obligation and not paying taxes as immoral.

Stages of manipulative relationships

are possible *stages* of an abusive relationship, not tactics.

Also, only some manipulative intimate relationships follow those (rather pop-psychology) stages.

Such as, you can be in a relationship with an inveterate manipulator and never go through any listed "stage"

- Etc. Etc…

We could go on and on.

But the long story short is:

stick to TPM when it comes to learning, spotting, and dealing with manipulation :).

APA Handbook of Personality and Soc Psych (Vol. 3 Interpersonal Relations) – Summary & Review

Lucio Buffalmano · 29 April 2024 · Archived copy · Original

The *APA Handbook of Personality and Social Psychology (Vol. 3 Interpersonal Relations)* is a comprehensive resource that presents the available research literature on various aspects of interpersonal relationships.

Exec Summary

- **Relationships are functional**: People form relationships to survive, thrive, and reproduce
- **Great relationships make you healthier**. But poor ones make you *less* healthy
- **Power makes people more genuine** because it allows them to be themselves

FULL SUMMARY

About the Author:
Various authors, including editors Mario Mikulincer and Phillip R. Shaver, Jeffry A. Simpson, Allison K. Farrell, M. Minda Oriña, Alexander J. Rothman, Adam D. Galinsky, Derek D. Rucker, and Joe C. Magee.

We form 5 relationship types to solve life challenges

First and foremost, survival, reproduction, and self-advancement.

The main relationships are:

1. Dating couples
2. Married couples
3. Family members
4. Friends
5. Coworkers

Relationship domain	Typical dyads	Relationship tasks	Key evolutionary theories	Relationship opportunities	Relationship threats	Relationship-specific conditions
[illegible]	[illegible]	[illegible]	[illegible]	[illegible]	[illegible]	[illegible]

[illegible]	[illegible]	[illegible]	[illegible]	[illegible]	[illegible]	[illegible]
[illegible]	[illegible]	[illegible]	[illegible]	[illegible]	[illegible]	[illegible]
[illegible]	[illegible]	[illegible]	[illegible]	[illegible]	[illegible]	[illegible]

Relationship Types and Associated Evolutionary Opportunities and Threats

Each relationship type follows slightly different rules.

Proximate reason & evolutionary reasons: they go in tandem

Two different approaches:

- **Proximate causes from psychologists' historical approach** focus on the immediate triggers (causes) of action
- **The evolutionary approach seeks the root cause**, asking why people evolved to want sex, companionship, and love

These two approaches are complementary.

Gender differences

- **Women tend to be more affiliative** BUT…
- **Men are more likely to "gang up"**: If the outgroup is salient men are more likely than women to make cooperative choices that favor the group good (Van Vugt, De Cremer, & Janssen, 2007)

- **Men go for larger groups, women smaller cliques** males form alliances with large groups of other males, whereas females are more likely to associate with one another either one at a time or in small cliques (Benenson et al.(2008))
- **Men's friendships may be more functional**: men are more concerned with their friends' skills (e.g. , intelligence, athleticism, financial potential, creativity) and their friends' social connections (Benenson et al.(2008))

Men also seek more leadership positions, something that the authors ascribe to the fact that male reproductive success and status are more interlinked (Kenrick et al. , 2004).

Interdependence theory

The levels are:

- **Dependence** refers to the degree to which an actor relies on an interaction partner, in that his or her outcomes are influenced by the partner's actions
- **Mutuality of dependence** refers to whether two people are equally dependent on one another.
  - Mutual dependence tend to feel safer and are more stable and affectively serene (less anxiety, guilt)
  - Nonmutual dependence entails differential power: When Mary is more dependent, John holds greater power The less dependent partner exerts greater control, while the more dependent partner incurs more interaction costs (sacrifice, accommodation) and is more vulnerable to possible abandonment, and threats and coercion are possible
- **Basis of dependence** refers to the ways in which partners influence each other's outcomes—the relative importance of partner versus joint control as a source of dependence.
  It includes the expression of dominance (vs. submissiveness) and assertiveness (vs. passivity), as well as the use of ability and skills such as social intelligence
- **Covariation of interests** refers to whether partners' outcomes correspond or conflict. In simpler words: whether they want the same thing and share common goals. Covariation ranges from perfectly corresponding patterns (coordination) through mixed-motive patterns to perfectly conflicting patterns (zero-sum).
  Conflicting interests lead to the expression of cooperation versus competition and trust versus distrust
- **Temporal structure** refers to time element of a relationship and its changing nature through different situations.
  When it comes to time, long-term relationships and repeat exchanges call on self-control, delay of gratification, and the inclination to stick with it. Long-term relationships make people more likely to cooperate if they know they are going to be interdependent for many interaction situations.
  Relevant issues and trait include dependability versus unreliability and loyalty versus disloyalty (this is my interpretation of it, the text was too convoluted here to convey straightforward information)
  - Situation selection refers to movement from one situation to another. For example, Mary may seek situations entailing less interdependence, or John may confront the juncture between a present relationship and an alternative relationship
- **Information availability** refers to what partners know about each other, the environment, and the consequences of their actions.
  - Uncertain information raises the topics of openness, need for certainty, and optimism/pessimism

Transformations are often conceptualized as decision rules that a person adopts during interactions.
People may wait for the other person's move, and generally also tend to follow their disposition or relationship modes.
For example:

- Altruism, which maximizes the partner's outcomes
- Cooperation, which maximizes combined outcomes
- Competition, which maximizes the relative difference between one's own and one's partner's outcomes
- Individualism, which maximizes one's own outcomes irrespective of one's partner's outcomes.

People stick together because they need to

Albeit the authors don't say so, interdependence theory is largely about game theory, social exchanges, and power dynamics.

And, as it's often the case when you read things though that angle, things make a lot more sense -and are much simpler-.

For example, is suggests that people are in poor relationships because they have to -or have no better options-:

> Mary may persevere in an abusive relationship not necessarily because she has low self-esteem or has acquired a pattern of learned helplessness but rather for reasons related to structural dependence—because she is heavily invested in remaining with her partner (e.g. , she is married to John or has young children with him) or has poor alternatives (e.g. , she has no driver's license or faces poor employment opportunities; Rusbult & Martz, 1995)

Of course.

In close relationships, focus on win-win and the pleasure of giving rather than a calculative "give and take"

It was good to read this since Power University endorsed it since the beginning:

> research has confrmed that negative noise has detrimental effects when people follow a strict reciprocity rule: Partners form more negative impressions of one another, and both people suffer poorer outcomes (Van Lange, Ouwerkerk, & Tazelaar, 2002). In contrast, a more generous tit-for-tat-plus-one strategy (giving the partner a bit more than is received from the partner) yields better outcomes—noise does not negatively affect partners' impressions of one another or the outcomes each receives over the course of an extended interaction

And more game theory for good relationships:

> in the presence of negative noise, a generous strategy yields better outcomes for both people than does tit-for-tat (for more extended evidence, see Klapwijk & Van Lange, 2009). Such fndings are reminiscent of the literature on interactions in close relationships, in which partners have been shown to enjoy better outcomes in conflictual interactions when one or both partners accommodate or forgive (e.g. , Karremans & Van Lange, 2009; Rusbult et al. , 1991)

Just make sure it's not always you and only you to accommodate and forgive :).

The authors extend the same concept to socialization in general:

> The societal implications of this interdependence analysis are quite powerful. They suggest concrete advice for people entering new situations at school, in organizations, or wherever else people interact in dyads or small groups. Under circumstances of imperfect information (which are very common), it helps to give people the beneft of the doubt, to reserve judgment, and to be more generous than a tit-for-tat strategy would advise.

And especially to written communication:

> The research fndings on this topic may also be especially relevant to e-mail and other forms of electronic communication because these devices are quite noisy and tend to be less effective than face-to-face communication in generating cooperation (Balliet, 2010).

Mutual relationship dynamics matter far more than individuals' character

> Interdependence theoretic analysis provides a deeper understanding of trust than trait-oriented approaches. For one thing, it is a powerful predictive model—in accounting for dependence, commitment, prorelationship acts, and trust, interdependence variables account for substantially more unique variance (more than 30%) than do prominent actor-based variables (e.g. , attachment style accounts for less than 5% of the variance; Wieselquist et al. , 1999). That is, in ongoing relationships, partners' actions are more important than are each person's trait-based, frozen expectations

Interpersonal attraction... It's complex

The authors divide the drivers of interpersonal attraction into domain-general reward perspectives and domain-specific evolutionary perspectives.

Domain-general rewards perspective

Including five needs:

- Hedonic pleasure
- Self-esteem
- Belonging, including familiarity, self-disclosure, and the social basis of anxiety reduction
- Consistency
- Self-expansion

Some items I found interesting:

- **Attractiveness**

> Others' physical attractiveness is perhaps the single most robust predictor of people's initial attraction to them (Eastwick & Finkel, 2008b; Feingold, 1990)

- **Similarity**

> the link between similarity and attraction is strong for perceived similarity (i.e. , subjective assessments of similarity) but sporadic and weak for actual similarity (i.e. , objectively determined similarity)

- **Selectively hard to get**

> In one set of studies, Walster, Walster, Piliavin, and Schmidt (1973) sought to demonstrate that men tend to be attracted to women who play hard to get (an effect that could have contradicted the reciprocity effect), but their conclusion, based on six studies, was that men are attracted to women who are easy for them to get but hard for other men to get (also see Finkel & Eastwick, 2009b)
> These fndings suggest that people tend to be attracted to others who like them but only if this liking makes them feel special
> (…)
> A subsequent speed-dating study yielded compatible conclusions: Speed daters were especially attracted to

> partners who liked them more than those partners liked other people, but they were not attracted to partners who indiscriminately liked everybody (Eastwick, Finkel, Mochon, & Ariely, 2007; also see Eastwick & Finkel, 2009)

And similar:

- **Growing to like over time**

> Similarly, classic research has suggested that people tend to be more attracted to others who grow to like them over time than to others who have always liked them, who have always disliked them, or who have grown to dislike them over time (Aronson & Linder, 1965)

- **Mutual self-disclosure**

> People who disclose intimately tend to be liked more than people who disclose less intimately, and people like others as a result of having disclosed intimately to them (Collins & Miller, 1994; but see Mikulincer & Nachshon, 1991, for individual differences in this effect)

Domain-specific evolutionary perspectives

Where the authors review evolutionary psychology's novel insights in the last decades.

Great wisdom, but we largely discuss this here on TPM so see relevant articles and evolutionary psychology book reviews.

Then the authors introduce what seems to be a *third* domain of attraction:

Instrumentality: we like those who help us advance our goals

> Fitzsimons and Shah (2008) published a seminal article testing the instrumentality principle, which they defned as the tendency for people to "draw closer to instrumental others, evaluate them more positively, and approach them more readily, while distancing themselves from noninstrumental others, evaluating them more negatively, and avoiding them more readily"

And yes, it turns out that social climbers may truly be attracted to the wealthy, the bosses… And the Hollywood producers:

> people indeed manifest such preferences for signifcant others who are instrumental for a currently activated goal (e.g. , to achieve academically, to enjoy social activities).

However, that disappears once the goal is reached:

> Furthermore, this tendency to feel closer to signifcant others who are instrumental for a given goal than to those who are not disappears once people believe that they have made good progress toward achieving that goal, a social disengagement process that allows them to focus their self-regulatory efforts on goals that require more urgent attention (Fitzsimons & Fishbach, 2010; also see Converse & Fishbach, 2012)

Approaching, flirting & pickup lines

Albeit men like to think of themselves as leaders, women most often are:

> Women tend to take the initiative in the courting process by displaying nonverbal cues of interest, signaling to a man that he is welcome to approach (e.g. , Moore, 2010; Perper, 1985). Women also instigate and control intricate patterns of rhythmic, nonverbal synchronization that develop between a man and a woman when they meet for the frst time (Grammer, Kruck, & Magnusson, 1998)

Getting attention

A large study of 5,020 adults identified five general styles of attracting attention from a potential mate:

- traditional
- physical
- sincere
- polite
- playful

Certain flirting styles—physical, sincere, and playful—were particularly successful in culminating in attracting a date, and the physical and sincere types led to relationships with the deepest emotional connection (Hall, Carter, et al.

Flirting

The authors define flirting as:

> Flirting refers to subtle or playful verbal and nonverbal behaviors that indicate a romantic interest in another person

Flirting differs from normal conversation because it's more animated and warmer, and both laugh more frequently with fewer periods of silence (Coker & Burgoon, 1987).
When flirting goes well, people move closer, gaze longer, and touch each other relatively frequently (Koeppel, Montagne-Miller, O'Hair, & Cody, 1993).

Fflirting predicted mate choice during a speed dating study (Back et al. , 2011), so it may work well.

Women's flirtation body language includes (Simpson, Gangestad, & Biek, 1993):

- Head cant
- Pouting mouth
- Coyness

Women who send out flirtatious signals do receive more approaches (Moore, 1985)

Men's body language involves gestures that get women to notice them and imply high status, such as taking up space, an open posture, and unreciprocated touching of other men (Renninger, Wade, & Grammer, 2004).
That can be effective, say the authors.

Also see:

- Signs she likes you
- Signs he likes you

Opening lines

Early research clustered opening lines around 3 factors:

- Cute–flippant, or your typical pick-up line
- Innocuous
- Direct

Pick-up lines didn't work:

> (…) both men and women found the cute–flippant lines to be the least desirable …
> However, consistent with hypothesized gender scripts, women rated them as less preferred than men and rated the innocuous lines as more preferred than men.
> (…)
> Subsequent research, using different methods, has generally been consistent with Kleinke et al.'s (1986) fndings (Cunningham & Barbee, 2008; Levine, King, & Popoola, 1994)

In brief, it's just like we long advised here at TPM.

However, best of all is to be introduced:

> For example, Weber, Goodboy, and Cayanus (2010) assessed women's perceptions of the appropriateness and effectiveness of opening lines displayed in videos of male actors.
> Consistent with prior research, direct introductions were rated as the most appropriate opening line. In addition, being introduced by a third party was a strategy that women rated as most appropriate and most effective

Indeed, as we also said on TPM, introductions are great because they pre-frame you as safe, and better maintain your power/attraction.

However, just like we also said on TPM, if it's a high-value man, lover type seeking short-term situations, it doesn't matter much:

> research has suggested that the type of relationship desired influences a woman's evaluation of a man's opening line.
> Senko and Fyffe (2010) varied the nature of the relationship being sought by a woman (short vs. long term), the attractiveness of the male, and the opening lines in hypothetical scenarios. Consistent with evolutionary theory, if a long-term relationship was being sought, women preferred the direct or innocuous lines and associated these with intelligence and trustworthiness, but if a short-term relationship was the goal and the man was attractive, women had no preference for type of opening line.

When men and women lie

Lying is common:

> As noted by Rowatt, Cunningham, and Druen (1999), approximately 46% of men and 36% of women report telling a lie to get a date with an attractive partner.

However, men and women lie differently.

Men like more about commitment, sincerity, and the ability to acquire resources.
And women in “deceptive acts that alter their appearance”.

However, both alter their self-presentation to match the desires of an attractive potential partner.
That includes describing themselves as more, or less, traditional in sex role orientation (e.g. , Zanna & Pack, 1975).

Personality matters when it comes to lies, and self-monitors lie more (self-monitors are more environment-dependent and adapt to the surroundings):

> Individual differences exist in the tendency to use deception in relationship initiation. Men and women who are high self-monitors, as compared with low self-monitors, engage in more deceptive self-presentations with a potential date, report using deception more frequently, and have more positive attitudes toward such behavior (Rowatt et al. , 1998)

Ideal partners

Does someone’s ideal of a partner influence mate choice?

Some famous speed dating studies suggest not.
However, research is actually inconclusive.

And, when analyzing longitudinal data, it seems that a closer resemblance to the ideal does predict outcomes and relationship fulfillment.

Who do men and women want?

We talk about this already on TPM.

Including the fact that men and women’s incentives and ideal partners differ, as well diverging interests.

But there is also the other side of the coin.
And what I found most helpful for most men who come from a “red pill” background though is this:

> Most evolutionary models of mate preferences have focused more on differences between men and women, but both sexes have also faced the same adaptive challenge of successfully rearing offspring (Geary, 2000; Kenrick & Trost, 1997).
> Human children require many years of constant care, supervision, and socializing to survive childhood and grow to reproductive age, and children born and raised by pair-bonded parents are more likely to survive to reproductive age and be more socially competitive later in life when they attempt to attract mates (Geary, 2000). Both men and women should thus be attentive to a potential long-term partner’s capacity for intimacy and commitment, because this would

This is probably why both men and women value warmth, kindness, and a sense of humor in potential mates (Botwin, Buss, & Shackelford, 1997; Buss, 1989, 1994; Buss & Barnes, 1986; Campbell & Wilbur, 2009; Li et al. , 2002).
These are traits that facilitate relationships.

Ideal partner model

The model consists of three main components:

> perceptions of the self, partners, and relationships (Baldwin, 1992).
> That is, individuals' images of their ideal partners reflect their self-perceptions, the qualities they would like their partner to possess, and the type of relationship they would like to have

The ideal partner does impact relationship quality and satisfaction:

> Consistent with ISM, individuals who reported smaller partner discrepancies rated their relationships more favorably

Changing our partners: is it possible? Yes...

The common trope is that you should never try to change someone.

Well, that may not be true:

> It seems, then, that when individuals explicitly express dissatisfaction with their relationship, or ask their partners to change, this may create friction or negative feelings between partners in the short term; however, if the problem is eventually worked through, often via additional voice strategies, the couple may end up being better off and more satisfed over time.

And contrary to Carnegie's advice, the best way to facilitate that change seems to be with direct requests:

> Across time, the use of direct strategies (e.g. , voice) produced greater change in the targeted features as reported by both partners.
> Indirect strategies such as loyalty, in contrast, resulted in absolutely no change over time (see also Overall, Sibley, & Travaglia, 2010)

Good relationships are healthy

As the title says :).

Social support

Social support construct includes three components:

1. Existence of social relationships
2. Structure of one's social networks
3. Functions of social support

An important distinction made by Barrera is between *perceived* availability of support and *received* support.

> consistent evidence that social support was linked to cardiovascular health and immune functioning. In addition, they found evidence that emotional support in particular may be important for positive health outcomes

Even giving support is good for people:

> several fndings suggesting that giving support, at both the aggregate (perceived) and the enacted level, is

> associated with many positive outcomes (Brown, Brown, & Penner, 2012)

Friendships

Friendship Maintenance Strategies

Strategy	Description	Sample item
Positivity	Behaviors that make the friendship enjoyable and rewarding	Try to be upbeat and cheerful when together.
Supportiveness	Provision of emotional support and assurances	Try to make the other person "feel good" about who they are.
Openness	Meaningful conversations, sharing private thoughts, self-disclosure	Share your private thoughts with each other.
Interaction	Doing things together	Make an effort to spend time together even when you are busy.

Data from Oswald, Clark, and Kelly (2004)

The authors provide an overview of research findings across the life cycle.

Friends spend more time together in adolescence as they seek independence from parents and family.
The group also provides a sense of belonging and friends help craft a sense of self-identity
In this stage, friends can also compensate for low quality family ties -I know something about that :)-.

Research in problem-solving tasks distinguished two types of friends (Shulman & Knafo, 1997):

- Disengaged friends (46%) who worked independently (and even competed with one another)
- Interdependent friends (54%) who collaborated on tasks

Interestingly and tellingly, interdependent friends are better at managing conflicts to preserve harmony and mutuality.
And disengaged friends are more focused on individual gain -potentially more Machiavellian, I'd add-.

Friends are healthy. But toxic friends are unhealthy

Summarize the authors:

> A lack of regular contact with friends has disadvantages that range from vulnerability to depression, anxiety, and loneliness to increased risk of mortality.
> Friends offer protection through mechanisms that include stress reduction; fulfillment of basic needs for relatedness, autonomy, and competence; and contagion of happiness and health-promoting behaviors.
> However, friends can also have a negative influence on health (…) who one's friends are, how healthy their behavior is, and how happy they are determine the effect that friendships have on health and well-being.

Partner violence in intimate relationships (PV)

This chapter was eye-opening.

And it changed my view on toxic relationships and violence in relationships.

In part, my view was swayed by popular but unscientific books such as *Why Does He Do That* (read that review for more).

Partner violence (PV) is defined as any nonconsensual physical aggression against a romantic partner.

Overview

At a 16% incidence in a year's time for heterosexual married couples, partner violence is relatively common (Straus & Gelles, 1990).
And even more common in dating, same-sex, and cohabiting relationships (e.g. , Statistics Canada, 2005; Straus, 2004).

Feminist perspective

The feminist perspective sees PV as a natural consequence of the patriarchal structure.
Men control resources, and force women in a subordinate position -including with violence- (Bograd, 1988; Dobash & Dobash, 1979; Dragiewicz & Lindgren, 2009).

This perspective also has been referred to as the patriarchal model, the gender paradigm, or the traditional theory on on PV (e.g. , Ehrensaft, 2008) because it has been the most widespread and dominant approach in the past and.

On the positive side, the feminist approach helped raise awareness on PV.
Unluckily, some proponents were also not very scientifically minded. Say the authors on the misuse of the frame "feminist" and its positive associations used as a weapon:

> some researchers in the PV field have pointed out that this label has sometimes been used to brand those who question the premises or conclusions of the perspective as antifeminist (e.g., Dutton, 2012; Ross & Babcock, 2010)

The feminist perspective doesn't hold up well against the available evidence.
And especially in the West.
For example:

- **Most marriages are relatively equal in power** (e.g. , Coleman & Straus, 1990), contrary to the assumption that patriarchal values structure all gender relations
  - Women often have more decision-making power: recent evidence has suggested that women are more likely than men to dominate decision making in marriage, even in marital relationships in which men make more money (Morin & Cohn, 2008)
- **Male violence against women is more likely when men *lack* equal power** in their intimate relationships (e.g. , Anderson, 1997; Babcock, Waltz, Jacobson, & Gottman, 1993; Sagrestano, Heavey, & Christensen, 1999). This is contrary to the assumption that male violence enforces male domination of women. Thus, PV may be an ineffective means of trying to compensate for a perceived lack of equal relationship influence
- **Only a minority of men are violent**, which would not be the case if violence against women were normative (Dutton, 1994)
- **Society seems to condone female violence far more than male one**: Women and men are much more accepting of women's violence against men than the converse (Simon et al. , 2001). This wouldn't be the case if society viewed PV as a fair way of enforcing male power over women
- **There is little link between "patriarchal beliefs" and PV**: the research linking traditional or patriarchal gender attitudes and roles with PV perpetration has been mixed at best (Sugarman & Frankel, 1996)
- **Men with some important "strong" masculine traits engage in LESS PV**, male violence against partners is negatively associated with masculine gender schemas (e.g. , Sugarman & Frankel, 1996) and with traditionally masculine traits of self-confidence and independence (e.g. , Murphy, Meyer, & O'Leary, 1994)

- **Women are as likely to be violent:** In unselected samples, women are as likely as men to be violent in their intimate relationships (Archer, 2000; Fiebert, 2010), including perpetrating severe forms of violence (Straus, 2011). For less severe PV, women maybe even more likely to be the initiators
  - Women are *more* likely to initiate PV: women are more likely than men to initiate PV (e.g. , Fergusson et al. , 2005), to report that they would be violent in response to unacceptable partner behavior (e.g. , Fold & Robinson, 1998; Winstok, 2006), and to be the perpetrators of PV when only one partner is violent (e.g. , Whitaker et al. , 2007)
  - One-sided and severe male-to-female violence is the least common pattern of PV in Western societies (Stets & Straus, 1992)
- **In violent relationships, BOTH partners are often violent**: a large body of evidence indicates that in at least half of relationships with violence, both partners report acting violently (e.g. , Anderson, 2002; Whitaker et al. , 2007).
  - The degree of violence is correlated: the higher the level of one partner's violence (and abuse more generally), the higher the level of the other partner's violence (e.g. , Bartholomew, Regan, White, & Oram, 2008; Fergusson et al. , 2005; Magdol et al. , 1997)
  - Most harmful PV happens when *both* partners are violent: the most severe violence and the greatest risk of injury occur in relationships with bidirectional abuse (e.g. , Anderson, 2002; Whitaker et al. , 2007)
- **Same-sex relationships are equally or more violent**, a pattern that wouldn't exist if the patriarchy was the only driver for PV

However, there has been some more limited support in non-Western societies:

> Consistent with expectations from a feminist analysis of PV, the lower the status of women in a society, the higher the society's rate of violence against women, in absolute terms and relative to the rate of violence against men.
> Additionally, the higher the proportion of men in a society who hold traditional gender role attitudes and find it acceptable for a husband to slap his wife, the higher the rate of violence against women (Archer, 2006)

And:

> rates of women's victimization are associated with lower levels of women's empowerment in a society relative to men's, stronger societal endorsement of traditional gender roles, and greater societal acceptance of husbands hitting wives (Archer, 2006)

So sociocultural explanations may be helpful in identifying broad social contexts that foster or inhibit aggression in close relationships.
However, they're certainly not enough.
Even in the case of societies with low female empowerment, it's not as black and white as a simplistic "oppressor and oppressed" view would have it.
When available, the data suggested that women's attitudes are at least as predictive as men's of levels of PV against women.
Indeed, women's parallel attitudes are equally predictive and in some cases more predictive, of their victimization as are men's attitudes.
And that suggests that women aren't simple victims, but play a role in *maintaining* traditional gender roles.

Finally, women's empowerment doesn't cure PV.
Instead, the higher the level of women's empowerment in a society, the higher the level of their violence toward men.

So, overall, the feminist perspective is lacking.

And even if it may explain a little part of men's violence towards women, by focusing only on men's aggression toward women, it still cannot provide a good explanation of VP as the larger phenomenon that it is.

Individual Psychological Perspectives

This approach looks at the background, personality, and social cognitive factors that predisposes individuals for perpetrating PV.

Some predictors of PV include:

- **Childhood conduct problems** is the strongest and most consistent predictors of later PV together with:
- **Adolescent indicators of emotional vulnerability**, including neuroticism, depression, and negative emotionality (for both, see for example: Ehrensaft et al. , 2004; Moffitt, Krueger, Caspi, & Fagan, 2000; Woodward, Fergusson, & Horwood, 2002)
- **Observing or experiencing violence in families of origin** (e.g. , Kwong, Bartholomew, Henderson, & Trinke, 2003), although the magnitude of these associations is generally small
  - Child maltreatment modestly predicts future PV
- **Poor communication and problem-solving skills** (e.g. , Anglin & Holtzworth-Munroe, 1997). And, I'd guess, these are related to IQ.
- **Accepting attitudes regarding violence** in close relationships (Stith et al. , 2004)
- **Difficulties in regulating negative affect** and developing close, trusting relationships and, associated:
  - Emotional vulnerability and reactivity, especially in the context of close relationships
- **Low self-esteem**
- **Anxious attachment** and interpersonal dependency
- **Aggressive tendencies**
- **Negative attributions** for partners' behavior and to view partners as critical and intentionally hurtful (e.g. , Scott & Straus, 2007).
  - Hostile attribution biases (Dutton, 2006)
- **Personality disorders**, including borderline and antisocial
  - mood disorders (notably depression and anxiety)
  - substance use disorders (Dutton, 2006; Stith et al. , 2004)

However popular an approach, it's challenging to develop "profiles" for abusers:

> Although typological approaches have been popular in the feld of PV, they suffer from a number of limitations: Typologies are diffcult to replicate across samples, they imply qualitative differences between subtypes that are not always justifed, they fail to account for variability within subtypes, and they generally fail to account for change in violence
> (…)
> most perpetrator typologies more or less explicitly link types of offenders with distinct forms of aggression. For instance, antisocial perpetrators engage in instrumental or controlling aggression, whereas borderline perpetrators engage in hostile, reactive aggression. Such simple distinctions are conceptually flawed (Bushman & Anderson, 2001) and obscure the multiple and changing motives that come into play in violent interactions (Capaldi & Kim, 2007)

Dyadic perspectives: it takes 2 to tango

The single, strongest predictor of PV is psychological or physical aggression by the other partner (e.g. , K.D. O'Leary & Slep, 2003; White et al. , 2001).

The state and quality of the relationship also matters, with relationship distress as a consistent correlate of PV (e.g. , Stith et al. , 2004; Williams & Frieze, 2005), albeit the association between distress and PV is likely to be reciprocal (e.g. , Lawrence & Bradbury, 2007).
And contrary to the myth that abusive partners make others miserable, both partners in relationships with PV tend to be dissatisfied (e.g. , Williams & Frieze, 2005).

So, it seems to truly be a case of toxic embrace that drags both down.

Worth noting that some couples in violent relationships are not dissatisfied (Bauserman & Arias, 1992; K.D. O'Leary et al. , 1989).

Other relationship factors related to PV are:

- Nonegalitarian decision making (regardless of gender), which probably contributes to marital conflict (e.g. , Coleman & Straus, 1990)
- Marital discord (e.g. , Coleman & Straus, 1990)
- Problem-solving skill deficits (e.g. , Anglin & Holtzworth-Munroe, 1997)
- Attachment styles mismatch: PV was most common in couples in attachment anxiety and attachment avoidance couples (Roberts and Noller 1998). Also see our seminal article on this "anxious-avoidant trap"
- **Strong women**. Paradoxically, women who report severe PV by their partners rarely comply with their partner's wishes in violent altercations, and most report fighting back physically (e.g. , Gondolf & Beeman, 2003; Goodman, Dutton, Weinfurt, & Cook, 2003).
  To me, this seems to be a case that may be covered by the power dynamics approach of the feminist perspectives

And more politically incorrect, especially because cases of true helpless victims also most likely exist:

- **Birds of a feather flock together**: individuals tend to select romantic partners who share risk factors for PV, and then the two partners mutually reinforce each other's aggressive tendencies
  - Assortative mating on antisocial behavior (H.K. Kim & Capaldi, 2004; Krueger, Moffitt, Caspi, Bleske, & Silva, 1998). And, from other sources, I've read the same for dark triad traits

Say the authors:

> couples identified for male violence are distinguished by high levels of hostility by both partners and by high reciprocity of negative affect such as anger, criticism, contempt, and belligerence (e.g. , Burman, Margolin, & John, 1993; Cordova et al. , 1993; Jacobson et al. , 1994)"
> In contrast, satisfied couples tend not to reciprocate negative partner behavior during conflict, thereby avoiding escalation and containing conflict (e.g. , Cordova et al. , 1993)

Indirect evidence that the relationship dynamics matter are also longitudinal studies showing that the rate at which individuals perpetrate PV is more stable within a given relationship than with a new relationship (Capaldi & Owen, 2001; Capaldi, Shortt, & Crosby, 2003; Robins, Caspi, & Moffitt, 2002).

Of course, all individuals' risk factors and couples' interact and can either reinforce each other, or nullify each other.
For example, husbands' hostility and alcohol abuse predict partner abuse, but only in distressed marriages (Leonard & Senchak, 1993). And the effect of individual dispositions on PV tends to be mediated by relationship variables

such as marital satisfaction and conflict (e.g., K.D.O'Leary, Slep, & O'Leary, 2007).

The authors summarize relationship dynamics leading to PV with 3 main points:

1. Both members bring vulnerabilities for aggression to their relationship
2. The relationship becomes conflictual and distressed
3. Partners reciprocate hostile behavior, leading to escalation

Situational perspectives

This perspective looks at how specific situations lead to PV.

For example:

- **It may take provocation** for emotional sensitivity and impulsivity to give rise to aggression (Bettencourt, Talley, Benjamin, & Valentine, 2006)
- **Threats of partner rejection or loss may** lead anxious individuals to aggress
- **Verbal arguments often precede PV**. The few studies of interaction processes suggest that violence typically follows an escalating pattern of negativity by both

Albeit the authors don't directly state this, I think most sensible people would agree that rejection or many non-physical provocations are no excuse for PV.

Multifactor Models

Multifactor models are heuristic frameworks to provide theoretical coherence to all the different approaches in the PV field.

by J. P. Forgas and J. Fitness, 2008, New York, NY: Psychology Press. Copyright 2008 by the Taylor & Francis Group. Adapted with permission.

Though models differ in emphasis, all acknowledge that understanding PV requires consideration of multiple levels of analysis, from individual dispositions to the cultural context

Intervention and prevention for PV

The until recently more widespread intervention programs stemming from the feminist analysis such as the Duluth model show little evidence of effectiveness.

Cognitive–behavioral therapy (CBT) programs for male perpetrators fare somewhat better (Babcock et al. , 2004; Dutton, Bodnarchuk, Kropp, Hart, & Ogloff, 1997; Feder & Wilson, 2005; Murphy & Eckhardt, 2005).

Couples therapy is also a good option and, if present, including treatment for substance abuse may be a good idea.

Power and social influence

Theory	What is power?	Is power public?	What are the sources or bases of power?	How is power represented or manifested in interactions?	What are the outcomes of (still) having power?
[illegible]	[illegible]	[illegible]	[illegible]	[illegible]	—

[illegible]	[illegible]	[illegible]	[illegible]	[illegible]	[illegible]

Major power theories

I ended up highlighting most of this chapter.

So bear with this long summary.

Definitions

The authors “provisionally define power” as:

> “*as the ability of one individual in a relationship (the influence agent) to exert influence on another person (the target of influence) so that the influence agent obtains the specifc outcomes he or she wants in a given situation while being able to resist influence attempts by the target*“.

The two dimensions of influence strategies

Most influence strategies exist along two dimensions:

- Directness (direct vs. indirect)
- Valence (positive vs. negative)

Influence strategies are carried out with influence tactics (e.g. , coercion, autocracy, reasoning, manipulation), which

are chosen and used to help achieve the goals.

Power is central to human relationships

> (…) power plays a central role in everyday social interactions, and it serves as an organizing principle in the social and behavioral sciences (Reis, Collins, & Berscheid, 2000)

However, as we mentioned here on TPM as well, it's been largely ignored by the social sciences:

> Given its paramount importance, one might expect power would hold a privileged place in the feld of social psychology and particularly in the study of relationships.
> Although there are major theoretical statements on what power is (e.g. , French & Raven, 1959; Thibaut & Kelley, 1959) and how it should affect relationship dynamics (e.g. , Huston, 1983), and there are isolated pockets of research on how power influences interpersonal outcomes, power has never been a hotbed of theoretical or empirical activity. One overarching goal of this chapter is to begin to change this state of affairs.

Furthermore the research has some limitations, including:

> Nearly all of this research has used self-report measures that ask relationship partners to make judgments of the relative balance of power in their relationship in general

Overview

Some general takeaways:

- **Around 50% of relationships are power-unequal** (Bentley, Galliher, & Ferguson, 2007; Caldwell & Peplau, 1984)
  - But even lower-power partners have some power: because most partners divide up roles and duties within their relationship, even the generally less powerful partner often has some decision-making discretion
- **Highly power-imbalanced relationships are unhappy and conflictual**: highly unequal power make for lower satisfaction, less stability, and greater conflict (Caldwell & Peplau, 1984; Sprecher et al. , 2006).
- **Men tend to have more power**: When power imbalances exist, both men and women usually indicate that the male partner has greater power in the relationship than the female partner (Felmlee, 1994; for an exception in African American communities, see Davis, Williams, Emerson, & Hourd-Bryant, 2000)
- **Power imbalances tend to be stable over time** (Sprecher & Felmlee, 1997; Sprecher, Schmeeckle, & Felmlee, 2006)
- **Western couples prefer egalitarian relationships** in which both partners have equal power (Caldwell & Peplau, 1984; Galliher et al. , 1999; Sprecher & Felmlee, 1997)

And very telling of power-craving psychology:

- **Men who seek great power are more abusive**. That is true for both men who *enjoy* having greater power in their relationships or who are less happy being less powerful. That is more true for men than for women who like being in charge (Rogers, Bidwell, & Wilson, 2005)

In general, be careful being higher power because you may forget to empathize and make it win-win:

> individuals who either are given greater power within a newly formed relationship (with a stranger) or are led to believe they have relatively more power are less likely to adopt their partner's perspective, less inclined to take into account what she or he does and does not know, and are poorer at reading their partner's emotional expressions (Galinsky, Magee, Inesi, & Gruenfeld, 2006). Higher power individuals are also shielded from

> being influenced by their lower power partners

Power and influence strategies

First off, a warning:

The research on influence, effectiveness, and outcomes is spotty.
And it doesn't allow for much generalizations, or for high-confidence conclusions.

That being said, let's see what we have:

Manipulation and supplication are weak

Howard et al. categorized responses into 24 influence tactics, and 6 strategies:

- Manipulation
- Supplication
- Bullying
- Autocracy
- Disengagement
- Bargaining

Weaker approaches such as manipulation and supplication were associated with female gender, having more feminine traits, having less power in society, and being more dependent on one's relationship partner.

Direct talk works to affect change, coercion doesn't

Fletcher, and Simpson (2006) looked at effectiveness, and:

> Although greater use of direct strategies was perceived by both relationship partners as less effective immediately after discussions of how one partner could change or improve something (…), direct strategies produced greater self-improvement change across time than did indirect strategies (Overall et al. , 2009), with greater use of negative tactics being particularly ineffective (Overall & Fletcher, 2010)

And:

> In terms of effectiveness, relationship referencing is most effective at changing partners' opinions, whereas coercion and logic–reasoning are ineffective, often pushing targets farther away from the influence agents' desired position (Oriña et al. , 2002, 2008).

I wish the author had directly defined "relationship referencing", but I suppose it refers to mentioning and emphasizing the bond, and what's good for the relationship,

The 6 main power theories

Social Power Theory

- **Who**: French and Raven, 1959
- **Power definition**: the potential to exert influence on another person

Social influence, in turn, is the process through which social power is wielded in interpersonal contexts via strategies and underlying tactics.

You socially influence someone when your presence or actions (influence agent) change the beliefs, attitudes, or behavior of another person (the target of influence).

French and Raven list six types of power:

1. Reward
2. Coercive
3. Legitimate
4. Expert
5. Referent
6. Informational

- **Limitations**: doesn't deal with established relationships or the advantages/disadvantages of having VS not having power

The authors say:

> does not explain how these bases of power are activated en route to exerting influence in interpersonal contexts or how being a more powerful versus a less powerful agent or target of influence affects personal or relational outcomes.
> (…)
> says little if anything about how power operates in established dyads …. (and) major outcomes of having versus not having power.

Resource theory

- **Who**: Blood and Wolfe (1960) and later extended by Saflios-Rothschild (1976)
- **Power definition**: an individual's ability—either potential or actual—to change the behavior of other members in his or her social system.
  - resources are "a property of one person which can be made available to others as instrumental to the satisfaction of their needs or the attainment of their goals".
    Examples of resources are skills, knowledge, money, and status

In this theory, imbalances in exchanges of (or access to) resources are the primary sources of power.
The lower power partner is dependent on others for access to the resources needed to satisfy his or her needs and goals.

This theory is central to the social exchange model, and thus also central to our approach.
An example to illustrate the point:

> Mary has little access to money, but she is willing to give Richard a lot of affection and support, and she takes care of the house and family. In return, she expects Richard to support her fnancially, but she does not require him to return her deep love and affection.
> Richard is an attractive man, and he could fnd another romantic partner without much difficulty, but he stays with Mary because he receives so much love and support from her.
> Thus, Richard has more power in the relationship than Mary does; he probably obtains more tangible rewards in most of their exchanges, he typically sacrifices less, and Mary usually bends to his will to keep their relationship harmonious.
> However, if Mary suddenly has access to money outside the relationship (perhaps through an inheritance), she may begin to perceive the status quo as imbalanced and may begin to expect more from Richard in return for her resources, which could alter the power dynamics in their relationship

TPM Note: Great example, but missing the most important elements
Of course, this is very much simplified.
As a matter of fact, it doesn't include the most important elements we focus on.
For example, win-win approaches that make it fair for her and make her happy to stay, personal power through power awareness and skills that make her *want* Richard to lead, etc. etc.

Interdependence Theory

- **Who**: Kelley & Thibaut, 1978; Thibaut & Kelley, 1959
- **Power definition**: the ability of one partner in a relationship to directly influence the quality of outcomes (i.e. , the amount of rewards vs. costs) that can be obtained by the other partner in a given situation

This theory draws from game theory and negotiation.
So for example, it considers the "BATNAs" of each member and individuals with better alternatives to the current partner have greater power.

It also includes the concept of "needing less" -in sociology, "least interest" (Waller & Hill, 1951)-.
Such as, the partner in a relationship who is least interested in continuing the relationship (i.e. , the one who has better alternatives and less to lose if the relationship ended) has more power.
Including dictating important decisions or whether the relationship continues or ends.

Dyadic Power Theory

- **Definition of power**: the relative potential of relationship partners to influence each other's behavior when a conflict arises between them
  - Authority are the norms regarding which partner ought to control specifc situations, events, or decisions within the relationship
  - Resources are the same as resource theory

This theory focuses on relationships.
So power emerges as a consequence of the interaction between the two.

The basis for power are the resources and authority that each partner *perceives* each one of them to be holding.

Power Within Relationships Theory

- **Power definition**: the ability of one partner in a relationship to achieve his or her desired goals by intentionally influencing the other partner to facilitate (or at least not block) what he or she wants to achieve
  - Influence occurs when one partner (the influence agent) says or does something that changes how the other partner (the target of influence) thinks, feels, or behaves during an interaction

Power-Approach Theory

- **Power definition**: an individual's relative capacity to modify another person's state by providing or withholding resources on which that person depends or by administering punishments

However, having resources is not enough.
Resources confer power only as long as the other person needs them.

Keltner et al.(2003) identified a broad range of variables linked with having high power versus low power.
These include individual variables such as personality traits (e.g. , extraversion, charisma) and physical traits (e.g. , height, physical attractiveness).
And they tend to be correlated.

My note: Finally someone who gets it :)
Not surprising I agree, since it's exactly what we always said here at TPM.

Keltner and colleagues, who seem to have a great power-awareness, also correctly state:

> Behaviorally, more powerful partners should show greater consistency of behavior across different situations, be less inclined to modify or mask their emotional expressions, and display more socially inappropriate behavior than less powerful partners, given that the behavior of more powerful partners should be less socially constrained.

Great observation.

Comparisons of Power Theories

Most theories include resources as one of the main bases of power.
And all mention the control of partner's outcomes through reward or coercion.

However, less has been said about how power evolves over time, or how low-power individuals can gain more power.
For that, you have TPM :).
See:

- Phases of power in relationships
- How to maintain attraction
- How women control men

And, say the authors, little has been said about how power is enacted or communicated during interactions.

For that, too you have TPM :).
You can start here:

- High power behavior
- Low power behavior
- High power verbal expressions
- Low power verbal expressions

Finally, say the authors, the most under-considered topic is the outcomes of power and influence attempts on each partner and their relationship.

And to maximize that for you and for both, you have Power University :).

Towards a unified model: the dyadic power–social influence model (DPSIM)

The authors finally present their model.

And it was the best of them all and a major step forward.
Simpson, Farrell, Oriña, and Rothman did a fantastic job.

dyadic power–social influence model (DPSIM) chart

- **Definition of power**: the ability or capacity to change another person's thoughts, feelings, or behavior so they align with one's own desired preferences, along with the ability or capacity to resist influence attempts imposed by another person

There are four major sets of constructs:

1. Characteristics of each person in the relationship, which include
   - Attractiveness
   - Status and resources
   - Warmth and trustworthiness
   - Personality traits
   - Orientation toward relationships (e.g. , his or her attachment orientation, communal vs. exchange orientation; see Clark & Mills, 1979; Mikulincer & Shaver, 2007)
2. Type of power each person potentially has and can use
3. Type of influence strategies and tactics that each person is able to deploy
4. Outcomes each person experiences after influence attempts

Then the authors draw from previous theories.
The bases of power are from French and Raven. The high-level influence strategies exist along the two dimensions of direct /indirect tactics (e.g. , being explicit, overt, and direct vs. being passive or covert to resolve issues or inspire change) and positive/negative.
And negotiations follow the "who has more options has higher power" general rule.

This model is more granular and nuanced.
For example, it includes rules or norms for decision making *within domains* (e.g. , doing the bills, deciding where to go on vacation, who cooks, etc).
And it postulates that people can change or adapt ot the power dynamics.
For example, if the relationship becomes more equitable because she provides him with better rewards and outcomes, he may change his leadership style. Or adopt a more communal orientation toward her and their relationship.
Dependencies can also change over time. For example, while he may be needing her less in the beginning, moving

in together, planning to purchase a house, having children or starting a business adds more common goals.

The authors have a great grasp of power.
For example, they correctly state that the lower power partner may adapt without any negotiation needed. It's because the lower power person anticipates and automatically abides by the higher person's preference, who may not even need to use "influence".
Or that a partner may confer more power to the other partner simply by over-estimating their access to certain resources. Albeit the authors don't say so, this is also where manipulation, advanced social skills, and advanced social strategies come into play.

This chapter was so good that you can find more insights in the "practical tips" section.

Psychology of Power

This was another chapter that I heavily underlined.
Many thanks to the authors Adam D. Galinsky, Derek D. Rucker, and Joe C. Magee.

How power has been researched

The manipulations and measures of power create a sense of power that then produces a range of cognitive, behavioral, and physiological consequences. The moderators of power can alter (a) whether power produces a sense of power or (b) whether a sense of power produces a particular outcome

Power has been manipulated in four ways in psychological and interpersonal research:

- **Giving power within laboratory experiments**. Structural manipulations that involve varying control over a resource, typically within the context of a laboratory experiment.
- **Recalling or imagining high-power situations**. Activating the experience of power via episodic recall or an imagined role manipulation.
- **Priming the concept of power**. For example, semantically by using word puzzles, scrambled sentence tasks, or photos
- **Embodied cognition manipulation**. For example, altering an individual's physical posture or nonverbal

behavior and builds on work on embodied cognition

Measures for power

There are many measures associated with power.

The authors say they're designed to demonstrate that:

1. Individuals scoring higher on the measure are more likely to hold positions of greater power
2. Individuals in positions of greater power score higher on the measure, or
3. The correlation between the measure and another variable is similar to the pattern of results produced by a manipulation of power

Let's now review some of the measures:

- **Personal sense of power** measures one's perceived ability to influence others. That is, how powerful one feels at a given moment in time.

Can also be used to capture a person's current feelings of power.
The authors say the scale has good external validity because individuals who occupy managerial roles at work and have more power report feeling more powerful than those occupying subordinate roles.

- **Trait dominance** is the tendency to behave in assertive, forceful, and self-assured ways" (Anderson & Kilduff, 2009, p.491)

The most used measures are the dominance Gough's (1987) Personality Research Inventory scale and Jackson's (1974) Personality Research Form.

Trait dominance is typically self-reported, and self-report measures of dominance are typically positively correlated with dominance behavior (Buss & Craik, 1980).
However, it's important to define it well because define because men and women perceive different behaviors as dominant (Buss, 1981; Schmid Mast & Hall, 2004; cf.Carney, Hall, & LeBeau, 2005). Note: unluckily though, the authors don't provide examples here.
And it's important to separate the *trait* dominance, which is stable across contexts, from dominance *behavior*, which can vary across contexts.

- **Motivation for power**, measuring the extent to which people value having power

Traditional measures include both the desire to influence others and a concern with one's status.
Written responses to motive-eliciting stimuli or situation have been used to measure it, but the Thematic Apperception Test is the most popular one.

It's important to note though that implicit or explicit measures produce empirically independent scores (Brunstein & Maier, 2005; Kehr, 2004; King, 1995; but see Emmons & McAdams, 1991) and effects (e.g., Spangler, 1992; for reviews, see McClelland et al., 1989; Schultheiss, 2001; Woike, Mcleod, & Goggin, 2003).
Albeit the authors don't dig deeper, I suppose by "implicit" they mean subconscious motivation, while "explicit" includes conscious with more direct questions about their motives.

Given TPM's take on the motivation for power, I was glad to read that some researchers emphasized the importance of teasing apart different types of power motives based on the intent behind that drive. Such as: for self-serving and antisocial goals (personalized power motive), or for goals that are profitable for others (socialized power motive)?

- **Hormones**: biologically, both testosterone and cortisol are related to dominance behavior and they are thought of as biological markers of power.

High testosterone and low cortisol appear to be the hormonal profile of high power, whereas low testosterone and high cortisol characterize people in conditions of low power

However, they're complicated and it's unwieldy to generalize since they fluctuate.

Hormones though explain some physiological reaction and connects to the "legitimacy" of power explained later in the book.
Josephs, Sellers, Newman, and Mehta (2006) proposed the mismatch effect to explain the findings that low-testosterone individuals had a negative physiological reaction and worse cognitive functioning to being in the dominant position. And high-testosterone individuals showed physiological distress and cognitive deficits when in the subordinate position.

Consequences of power

In general, research research has established that power has profound effects on people.
Including in cognition, self-perception, social perception, motivation, performance, behavior, and even physiological states.

Cognition processes

Power leads people to more:

- **Abstractive and higher-level thinking**, focusing more on the gist of information (vs. concrete details) and categorizing information and objects at superordinate levels (vs. subordinate levels).
  Example: high-power individuals tend to identify voting at a higher level (e.g., changing the government), whereas low-power individuals at a lower level (e.g. , marking a ballot)
- **Better executive functioning**, whereas low power tends to impair executive functioning compared with high power
- **Higher and less variable pitch, and more variable in loudness**, seemingly debunking lay theories that powerful "alpha male types" speak with lower pitch. However, this refers not to baseline pitch, but to the changes within individuals

Self-Perception

Power leads to:

- **More positive views of the self**, including increased self-esteem and "better-than-average" effect
- **Larger physical self-perfection**, seeing themselves as larger and underestimating the size of others (Yap, Mason, & Ames, 2013)
- **High confidence and optimism on personal outcomes**

In sum, say the authors, the powerful see themselves and their world through rose-colored glasses.

Social Perception

Power leads to:

- **Impaired perception-taking** with a reduced ability to take the perspective of others
  - Ignoring others' perspectives
  - Lower empathy
- **Higher self-value** compared to others, as shown by the propensity to spend more on themselves than others (while lower power individuals were more willing to spend more on others. Unless it was for status-related objects. Status-related objects are supposed to fill a more urgent need for low-power individuals: the need for power/self-advancement).

BUT it doesn't mean that powerful individuals will never spend on others. Chen et al.(2001) showed that goals to serve others may be *intensified* in high-power individuals (see Rucker, Galinsky, & Dubois, 2012, for further discussion)

- **More stereotyping and individuation**
  - Prejudice VS outgroup
- **Objectifcation**, with a higher inclination to look at others as instruments for relevant goals achievement. For example, senior executives viewed relationships both with subordinates and peers in more instrumental terms than MBA students

Resistance to Influence

Albeit power is often conceptualized as the capacity to influence others, it *protects* people from influence:

- **More self-trust and less trust in others**, relying on own knowledge and ignoring or rejecting the advice of others (See et al. , 2011; Tost et al. , 2012). Tost et al.(2012) found that power led people to discount the advice of both nonexperts and experts
  - More trust in subjective experience (⚠ Potential for falling into biases), since they're more likely to rely on their own subjective experiences, such as ease of retrieval, when forming judgments (Weick & Guinote, 2008)
- **Less conformity**, with their attitudes less susceptible to conformity pressures and stronger resistance to pernicious pressure to act like the herd
- **More freedom of expression**. Powerful individuals are also more likely to express their current feelings and attitudes
- **More creativity**. Because powerful individuals are less influenced by others, they can be more creative.
  - More feeling of authenticity. However, this was mediated by individual's sense of power. People's expressions were more congruent with their self-reported emotions and traits when there was a fit between person and role
- **More focused negotiations for better outcomes**. High-power negotiators' anger focuses their attention and leads them to claim value, whereas low-power negotiators are more influenced by their counterpart's anger, which derails them from what they are trying to achieve (Overbeck, Neale, & Govan, 2010; see also Anderson & Thompson, 2004; Van Kleef, de Dreu, Pietroni, & Manstead, 2006)
  - Immune from "anger power moves": power immunizes negotiators from the influence of their opponents' emotional displays, with high-power negotiators conceding less to an angry opponent than to a baseline or low-power negotiator (Van Kleef et al. , 2006)

Performance and Behavior

- **Better interview performance**. Also see "how to ace job interviews"
- **Higher status attainment**. People primed with power achieved more status with more proactive behavior during the very first few minutes of group interaction
- **More action-taking**. Higher power has been associated with greater assertive action across a wide variety of situations
  - More risk taking. greater risk preferences, riskier gambles and choices, find risky sexual activity more attractive, and riskier tactics in negotiations
- **Better motor-based performance**, with studies showing more putts in gold and better dart-throwing results
- **More amoral behavior** when chasing self-interest. Powerful individuals are more likely to cheat but only when it benefts themselves BUT they still condemn the moral deviations of others
  - But stick to the rules more: powerful individuals relied on rule-based moral principles, whereas low power

focus more on outcome and consequences. As a result, powerful individuals stick to the rules, whereas powerless individuals make more exceptions Lammers and Stapel (2009)

- **Better self-regulation when pursuing a goal**, but worse when not pursuing a high-priority goal. This is valid also when self-regulatory resources were depleted

Motivation and Evaluation

- **More focused and "ruthless" goal-pursuit**. Power helps prioritize goals and prompts goal-consistent behavior, with faster responses and performance of goal-related tasks.
  High power individuals also required less information to make decisions, reached decisions faster, and were more flexible (including when opportunities arose). They also paid less attention to constraints or obstacles
- **The behavior depends on the goal and personality**. Chen et al.(2001) demonstrated that individuals focused on the self behave more selfishly with power. However individuals focused on others become more generous with power. Similarly, with competitive goals and priming power leads to greater competitive responses. When the prime and goal are for cooperation, high power leads to more cooperative responses (DeMarree et al. 2012, Experiment 1).
  My note: I suppose power is associated with more general selfishness because selfishness maybe more common, and because many people never experienced power before
- **Less status-seeking behavior** while low-power participants were willing to pay more for an object associated with status (see also Charles, Hurst, & Roussanov, 2009; Rucker & Galinsky, 2009; Rucker et al., 2012)
- ⚠ **Less research** because power increases confidence, powerful individuals are less motivated to engage in processing information carefully
  - More confirmation bias, potentially (mediated by decision certainty). Fischer et al.(2011) found that making a fist led to more decision-consistent information VS decision-inconsistent information
- **Better mood and psychological well-being**. Power enhanced subjective well-being and individuals high in power reported more positive affect than their partners and individuals low in power reported more negative affect
  - More psychological resilience. Power affected people's physiological responses to different types of stress. And was a general buffer against the negative physiological effects of telling lies, increased pain tolerance, and

Interestingly, powerful individuals are also more likely to forgive relationship partners when they feel a strong bond (Karremans & Smith, 2010).
The authors say that goal-directedness explains why.

Moderators of power

Personality & Character

Machiavelli recognized that power reveals the person.
And, turns out, he was right.

As we mentioned before, Chen et al.(2001) found power-priming leads to more generous behavior in individuals with a communal orientation. But it leads to more self-serving behavior in those with an exchange orientation.

Some more studies:

- **Power only predicts sexual harassment in those predisposed to harass**. Bargh et al.(1995) found that men primed with power viewed female coworkers in sexual terms and flirted more openly with them. But *only* for those men with a predisposition toward sexual harassment
- **People who trust others trusted others more when they had more power**. Finally, social value orientation

only signifcantly predicted the extent to which high-power negotiators trusted their opponent, but not for the baseline condition. Such as: power amplified the participants' prior value orientations.

- **Liberal CEOs invest more in corporate social responsibility when they have more power**. Liberal CEOs invest in more corporate social responsibility work than do frms with conservative CEOs, and this difference is greater among CEOs with more power (Chin, Hambrick, & Treviño, 2013)

Say the authors:

> Power increases the correspondence between individual traits and behavior (Bargh et al. , 1995; Chen et al. , 2001; Galinsky et al. , 2008)

The authors say this is because of more independence -and less dependence on others-:

> power reduces dependence. When people are dependent on others, they are often limited in how they can act, altering their own behavior to ft the whims and tendencies of those on whom they depend.
> However, with power, the constraints that normally govern thought, expression, and behavior melt away, and people are left with the truest form of themselves.

Several studies support this conclusion, say the authors.

A good book on this is "Corruptible".

Culture

managers from Western countries took more resources when they had high versus low power because they felt entitled. In contrast, high power led managers from Hong Kong to voluntarily take fewer resources.Similarly, Torelli and Shavitt (2010)

Legitimacy

Legitimate power is deserved and appropriately exercised.
Illegitimate power is undeserved and/or abused.

Whether power is legitimate or illegitimate changes both the level of cooperation and the leader's behavior. Legitimate hierarchies tend to be more cooperative. In illegitimate hierarchies, the powerless tend to act -or want to act- against the status quo.

Legitimate leaders approach and lead the way.
Illegitimate leaders are more defensive and concerned with *defending* their position of power.

Stability

Stability refers to how stable or fluid the positions are within the hierarchy.

Unstable power and stable powerlessness produced more physiological arousal, which I suppose would also include "stress".

The behavior of high- and low-power individuals can diverge.
For example, Mead and Maner (2012) found that leaders high in dominance motivation sought proximity to an in-group member who threatened their power when it was unstable.

Instability also led to more defensive, group-harming behavior by the leader.
Maner and Mead (2010) found that insecure, unstable power led powerful people to withhold valuable information from the group and prevented other skilled group members from having any influence.
However, these self-interested actions disappeared when the group was competing against an out-group.

Connecting legitimacy and stability, powerful individuals act aggressively and demeaningly toward others when they feel incompetent in their position of power (Fast and Chen 2009).
Somewhat confusing for me, the authors then add legitimacy and say that when one feels illegitimate and stability is called into question, people may worry about the respect they get from others, and lash out.

Status

Albeit related, power and status are different.

The authors define status as “respect and admiration in the eyes of others”.

Many roles in society afford power but lack status (e.g., airport security, administrators, clerks, etc).
People judge most negatively those with high power but low-status, see them as dominant and cold, and expect the most negative interactions with them (Fragale, Overbeck, and Neale, 2011).
The rationale is most interesting.
Studies by Fast, Halevy, and Galinsky (2012) show that the combination of high power and low status leads people to demean others. Their reasoning is that power frees those who lack status to act on the resentment from lacking respect by demeaning others. In contrast, those who lack both power and status are not free to act on this resentment. And high-status people do not have any resentment :).

This is also why Power University advises a mix of power *and* warmth to get the most out of clerks.

Blader and Chen (2012) found that high power and status had opposing effects on justice towards others.
Power had a positive effect when combined with status when power was low but not when it was high.
So status with low power was positively associated with justice. But when it was high power, it negatively associated with justice.

Theories of Power

This chapter as well lists power theories.

The authors say that although the approach–inhibition theory dominated the field, the theories aren’t in opposition and likely they all contribute to explaining the large construct of power.
And there is some evidence for each one of these:

Approach–Inhibition Theory

Low-power people want to understand and predict the needs of high-power people.
And high-power people are oriented toward what they want and how to obtain it (Keltner et al.).

Say the authors:

> Keltner et al.(2003) argued that power produces its effects because powerful individuals have unfettered access to rewards, whereas powerless individuals lack resources and are more subject to social threats.

The relative activation of two neurobiological systems activates these different concerns: BAS and BIS.

Behavioral Activation System (BAS) attends to potential rewards and to engage in behavior that brings them closer to their goals.
Behavioral Inhibition System (BIS) attends to potential threats, recognizes goal conflicts, and interrupts ongoing behavior.

Limitations:
The moderators of power put some boundaries around this theory. The *meaning* attached to the sense of power also matters, and not just the sense of power in general.

General Model of Disinhibition

Extending Keltner's theorizing, Hirsh et al.(2011) presented a general model of disinhibition that, together with power, includes anonymity and alcohol.

All can have similar effects emerging from a single underlying mechanism: the decreased salience of competing response options prevents activation of the BIS (the "disinhibition effect").

The authors say that this model is consistent with many empirical findings regarding power -albeit they don't say whether the same is true for alcohol and anonymity-.

Agentic–Communal Model of Power

Rucker et al.(2012) suggest that high power produces an agentic orientation towards self-expression, self-expansion, and self-protection.
In contrast, states of low power produce a communal orientation focused on bonding with others and considering others in decision making.

In possible support of this theory Dubois et al found that charities appealing to competency, which can be linked to agency, got more donations form high-power individuals.
And appeals to emphasize warmth, which can be linked to a communal orientation, got more donations from low-power individuals.

Social Distance Theory

Mutual dependence make people in a relationship feel closer while a lack of dependence makes high-power individuals feel distant from their counterparts (Magee and Smith, 2013).

Possible supporting evidence comes from Lammers et al.(2012) who found that high-power individuals preferred solitary activities over collaborative or joint activities.
And their preference for social distance was explained by their perceived lack of dependence on their partners.

The authors say this may explain power holders' resistance to social influence (Anderson & Berdahl, 2002; Berdahl & Martorana, 2006; Galinsky et al. , 2008), disinterest in others' mental states (Galinsky et al. , 2006; Woltin, Corneille, Yzerbyt, & Förster, 2011), and empathic inaccuracy (Galinsky et al., 2006; Shirako, Blader, & Chen, 2013).

Attachment styles

We have quite some articles on this already.

And we added the golden nuggets in this book as well.
See here:

- **Attachment styles:** overview
- **Anxious attachment**
  - How to date as an anxious
- **Avoidant attachment**

And:

- Toxic avoidant attachment trap
- How to spot an avoidant
- Do women like avoidants?

MORE WISDOM

Dating and mating are negotiations and compromises

> Both sexes would be most happy with a partner who is high on all desirable dimensions—physically attractive, wealthy, charming, agreeable, and so on (Fletcher, Simpson, Thomas, & Giles, 1999).
> However, most people are not in a position to attract a partner who is perfect in every way, so they must compromise and make trade-offs. When forced to compromise in choosing a long-term partner, men and women make very different choices. Women prioritize social status and give up good looks

And:

> Additionally, social exchange perspectives (e.g. , Thibaut & Kelley, 1959) suggest that individuals seek the "best" mate they can attain on the basis of the limits imposed by their own mate value, which leads partners who have similar "market value" to pair up

And yes, self-esteem does play a role (at least when it comes to expectations):

> Additionally, people who have more positive selfperceptions typically hold higher and less flexible ideal standards (Campbell et al. , 2001). That is, individuals who view themselves positively tend to expect more from partners and relationships and are less willing to compromise

Also see:

- Sexual market place
- Sexual market value

> Sexual Market Value: A Practical Analysis

Wealthy women prioritize attractiveness, poor ones resources

> Correlational evidence has shown that women who state they are in control of their own resources, and presumably less dependent on a man for assistance with offspring care, place greater emphasis on attractiveness in mates than women who do not feel in control of their own resources (Moore, Cassidy, Law Smith, & Perrett, 2006)

This is in line with our take on women's hypergamy.

See it here:

- Why hypergamy is overblown (especially in the West)

Men OR women may make for better business leaders depending on the situation

> Despite men's thirst for leadership, they do not necessarily make better leaders in modern organizations (Van Vugt et al. , 2008). Women might be more effective at what is called social–emotional leadership, whereas men might be more effective at task leadership

Men have smaller incentives to invest in their (current) offspring (because they can have more later)

> The fact that men can produce offspring much later in their lives than women leads to another asymmetry women have no opportunity costs associated with future direct offspring.Men, on the other hand, who have the possibility of future offspring during most of their life span, almost always have opportunity costs associated with investing in current offspring

Culture and biology influence each other

> The tendency within psychology has been to regard cultural influences as being largely independent of biological influences, but new research and theory have challenged that assumption (e.g. , Kenrick, Nieuweboer, & Buunk, 2010; Kitayama & Uskul, 2011).
> For example, people facing either temporary cues to disease or living in areas bearing higher pathogen loads show decreased extraversion, agreeableness, and openness to experience, all traits that may elevate the chances of infection exposure (Duncan, Schaller, & Park, 2009; Mortensen, Becker, Ackerman, Neuberg, & Kenrick, 2010; Schaller & Murray, 2008; Thornhill, Fincher, Murray, & Schaller, 2010)

Groups are inherently less cooperative and more competitive than individuals

Based on interdependence theory:

> Under such circumstances, groups are faced with social dilemmas (in the intergroup context, a conflict between in-group interest and common, superordinate interests), and they often exhibit considerably less cooperation than do individuals in similar situations (Insko & Schopler, 1998). The primary reasons for this have to do with the affordances of the interdependence situation. For example, some degree of conflicting interest poses a greater challenge to trust (and enhances competitive motivation more) in interactions between groups than in ones between individuals (for meta-analytic reviews, see Balliet & Van Lange, 2013; Wildschut, Pinter, Vevea, Insko, & Schopler, 2003)

Political inclinations: competitive individualists are right wing; pro-social individuals are liberal

> people with prosocial orientations tend to react very automatically to a violation of equality, revealing activation in the amygdala (Haruno & Frith, 2010).
> Such findings provide neuroscientifc evidence in support of the integrative model approach to relationships, which states that a prosocial orientation involves not only the tendency to enhance joint outcomes but also the tendency to enhance equality of outcomes (Van Lange, 1999).
> These differences in turn might account for the finding that prosocial individuals are more likely to vote for liberal, left-wing political parties than individualists and competitors, who are more likely to vote for conservative, right-wing political parties (Van Lange, Bekkers, Chirumbolo, & Leone, 2012)

We evolved logic to solve simpler, life-relevant problems. We're still much better at addressing and solving those practical problems, than abstract ones

> Cosmides and Tooby integrated the concept of domain specifcity with the emerging discipline of evolutionary psychology in their studies of social exchange (Cosmides, 1985, 1989; Tooby & Cosmides, 1992).
> Their studies revealed that participants were much better at solving logic problems when the instructions

> framed the problems in terms of “cheater detection” rather than generic if–then reasoning.
> Tooby and Cosmides (1992) suggested that this content effect reflected domain-specifc, specialized mechanisms in the mind of Homo sapiens that had been designed by natural selection to solve the specifc problem of cheater detection, not generic logic problems

Good relationships and love shield against cheating

> romantically attached participants exhibited less attentional adhesion to attractive opposite-sex faces when primed with love for their partner than when primed with happiness (Maner, Rouby, & Gonzaga, 2008)
> (…)
> Such findings are broadly consistent with an extensive line of research demonstrating that romantically involved and psychologically committed people tend to derogate attractive alternative partners and turn their attention away from them (Finkel, Molden, Johnson, & Eastwick, 2009; Johnson & Rusbult, 1989; Lydon, Fitzsimons, & Naidoo, 2003; Lydon, Meana, Sepinwall, Richards, & Mayman, 1999; R.S.Miller, 1997; Simpson, Gangestad, & Lerma, 1990)

“I love you” is more significant when said before sex

> Likewise, research on the temporal sequencing of the elements contained within the passion turning point has indicated that when “I love you” is verbally expressed before frst sex, it is considered to be a much more positive turning point and to more signifcantly increase commitment and trust than when expressions of love follow the sexual episode (Metts, 2004)

But I still wouldn’t recommend that approach to TPM’s audience.

Empathy may not be so useful, after all...

> Despite appearing at the top of the superpowers list, empathic accuracy may be both less elusive—and less valuable—than commonly believed.
> (…) research showing that empathic accuracy predicts better outcomes for perceivers is hard to come by (and these studies are generally correlational and cross-sectional, leaving open questions about causal direction).
> Empathic accuracy seems to be more a function of targets and their relationship with a perceiver; what the targets are thinking; how much perceivers want (or do not want) to know about it; and, perhaps, how much targets want (or do not want) their thoughts to be known
> (…)
> precious little support exists for the idea that boosting empathic accuracy would result in across-the-board improvements in people’s relationships with other people (…) some evidence has even shown that, in some circumstances, greater empathic accuracy would hurt people’s relationships with those they care most about.

So far, say the authors, “empathy” in the sense of what people think others think and feel tells more about the empathizer, than about the subject of empathic reading.

Tailor your message to people’s power

As per Dubois research, appealing to competency -and potentially other constructs linked to agency- works better for high-power individuals.

Appeals to warmth -and potentially other constructs linked to communal orientation- work better for lower power individuals.

I suspect the same can be said for political orientations.
Go agentic for conservatives and right-wing, and communal for left-wing.

There is a social price for acting too high power compared to your status

> people are severely punished if they do not know their place and act with greater authority than they truly have (…) Lelieveld, Van Dijk, Van Beest, and Van Kleef (2012) found that low-power bargainers were punished for expressing the emotion of anger, a response typically associated with high power

Celebrities may not give back because they feel that low-power people are giving out of self-interest

Aptly called the "celebrity dilemma":

> They are haunted by the possibility that someone loves not them but only their celebrity. In their studies, Inesi et al. found that power undermined the quality of relationships by creating instrumental attributions for generous acts.
> Powerful individuals were more likely to believe that favors they received from low-power individuals were offered for instrumental purposes, and this belief reduced their thankfulness and desire to reciprocate and trust the low-power person.

The researchers suggested that power does create a need.
Power creates a need for true relatedness.

Men / women differences in friendships may be overstated

The general trope is that "men do, women talk".

And there is some evidence for that:

> For women, talking is the central activity and goal, even when friends are involved in doing a joint activity. For men, enjoyment of shared activity (sports or a hobby) is the focus of the friendship (Fehr, 1996)

However, that difference may be overstated, and especially so for adults:

> Duck and Wright (1993) reanalyzed diary data on interactions with same-sex friends to examine within-gender as well as between-gender tendencies. For both women and men, the main purpose of getting together with friends was just to talk

Self-disclosure may be another over-stated difference:

> A meta-analysis of 205 studies on self-disclosure has indicated that, in interactions with others, women disclose slightly more than men do, but the effect size is small (Dindia & Allen, 1992)

Practical Takeaway Tips

Don't give back when people are giving out of the good of their heart

It has to do with communal VS exchange norms:

> (…) people not only seek internal consistency—consistent cognitions and selfassessments—but also

> consistency between the norms they desire for a given relationship and the norms the other person displays. In particular, research on exchange and communal norms has demonstrated that people tend to be especially attracted to others who immediately reciprocate benefts and favors when people desire exchange norms, which are built on principles of reciprocity. In contrast, they tend to be especially attracted to others who do not immediately reciprocate benefts when they desire communal norms, which are built on principles of responsiveness to needs (M.S. Clark & Mills, 1979)

In simple terms, exchange means “I give you, you should give back for a good win-win”.

Communal means “I give you because I like you, because it seems you may need or benefit from it, and for the pleasure of giving, you shouldn’t give back right away (or it frames my giving as self-interested)”.

To gain trust or assess other people’s trustworthiness, observe whether they put their interest or the relationship’s interests first

> In fledgling relationships, the degree which an individual can trust his or her partner should be inferred from clear conflicts of interest in which the partner forgos what is best for him or her and instead does what is best for his or her partner or the relationship (Simpson, 2007)

Trust is the balm to make relationships run smoother, as well sharing power and domains of power:

> a basic level of trust allows both partners to feel comfortable relinquishing some decision-making power in certain relationship domains, which should facilitate the differentiation of decision-making roles within the relationship

Share power with your partner: assign domains of decision-making to each one of you

I was surprised to read this, but I couldn’t have agreed more:

> partners should have divided up specifc decision-making domains so that each partner assumes primary responsibility for making certain decisions (e.g. , paying the bills, shopping, household decisions). This partitioning of decision making is more effcient than one partner making all the relationship-relevant decisions or both partners

Not being able to “let go” of a certain domain is the sign/red flag that trust is not there yet:

> However, this assumes that sufficient trust has developed between the partners; individuals in established relationships who do not trust their partners should continue to attend closely to the balance of power within their relationship just as they did during the fledgling stage, given their continued concerns that their partners might not be sufficiently responsive to their needs and best interests.

During transition phases in the relationships where old domains may not matter anymore and new ones become salient, a re-negotiation is expected.
However, if trust is there, the re-negotiation should be easier and faster.

To get better behavior from leaders, remind them of the “responsibility of power”

You may get more honest behavior if you remind leaders and powerful people of the expectations and responsibility that come with power:

> Rucker et al.(2014) also divided expectations into two types—prescriptive and descriptive.

> They found that in the domain of unethical behavior, people expected that powerful individuals would act more dishonestly than powerless individuals but they thought the former should act more honestly than latter. When they focused participants on the prescriptive expectations for power, the powerful participants cheated less. However, when they focused participants' attention on the descriptive expectations, the powerful participants cheated more.

⍰⍰♂ Lucio's Analysis

My main critiques are:

- **Wished for more background on whether it's consensus, or individual study that led to a certain statement**

Ever since the replication crisis, I think it's good to be a bit more skeptical of anything that has been published before the crisis.

And to generally be skeptical of any individual study's conclusions, especially when with small samples.

In that sense, I wished the authors shared more background information on some key studies.
Not all of them, but some key ones.

Or better yet, I wish the authors would provide background on what led to a certain statement.
For example, is it based on consensus, many studies with most of them reaching similar conclusions, or is it a single individual study?
Then, if it's just one or a few, share some more about the methodology and sample size.

- **Made me curious by raising doubts, but didn't provide enough evidence to help me make up my minds :)**

For example, discussing the criticism of social theorists to evolutionary studies, the authors say:

> When controlling for both the proposer's sexual skills and the perceived stigma associated with engaging in casual sex, the massive sex difference in receptivity to casual sex disappears (Conley, 2011)

The MASSIVE difference disappeared… but then SOME difference was still there?
I wanted to see the data -instead, it forced me to look it up-.

Same here:

> Consistent with their social role theory analysis, Eagly and Wood (1999) reanalyzed the data from Buss's (1989) 37-cultures study, demonstrating that sex differences in the preference for good fnancial prospects and youth in a mate were smaller in countries with greater gender equality. In other words, as the roles occupied by men and women in a society converged, so did their romantic partner preferences. Subsequent research showed that the sex difference in sociosexuality shows a similar trend, shrinking as a culture becomes more gender equal (Schmitt, 2005)

Smaller… Shrinking?

The differences still persists, obviously.
So criticism doesn't invalidate the evolutionary perspective.

But it's still a potentially highly significant criticism and correction that I wanted to know of.

The authors say the debate is still raging, which I bet it is.

But they could have misspelled a lot of those doubts by simply sharing BY HOW MUCH they decreased.

Finally, much of Conley's counter-research seems is based on imagination and recall.
Much different than real-life -something the authors should have mentioned-.

- **Too long evolutionary psychology overview**

There are plenty of books for that.
I felt this one didn't need to provide an overview of what's evolutionary psychology. Or, at least, it could have been briefer.

- **Simplifying the language may help (yes, even if it's not meant for mass-market)**

For example:

> Temporally extended situations afford the expression of self-control, delay of gratification, and the inclination to stick with it, raising the issues of dependability versus unreliability and loyalty versus disloyalty

It does make sense, especially in context.
But it you simplify sentences like that one, you also help people learn faster, and potentially retain more.

- **Sometimes I felt it mis-attributed some empirical evidence as supporting the wrong construct**

For example, this should be evidence that "consistency" is attractive:

> In an influential study (Aronson & Cope, 1968), participants tended to be especially attracted to another person who had punished their enemies and rewarded their friends

Sounds to me a lot more like attraction to power and an "honorable character" to me.

- **Sometimes jumps to unfounded explanations**

For example:

> participants in one study who expected to initiate a new same-sex relationship preferred somebody who they believed possessed dissimilar interests, presumably because the dissimilarity would provide an opportunity for selfexpansion (Aron, Steele, Kashdan, & Perez, 2006)

Props to add the "presumably".
But it still seems a major stretch.
Could it be instead that dissimilarity provides better genetic match for survival and thriving of the offspring?
COULD be, but… Let's just not assume too much maybe -or let's be even clearer that we're just guessing-.

- **End-of-chapter summaries weren't always good summaries, or summaries at all**

This is a bummer for me because some chapters may not be in-scope for me or TPM, but I'd still like to get the gist

- **Sometimes endorses some contentious research (power poses)**

For example:

> Carney, Cuddy, and Yap (2010) demonstrated that power could be activated by one's posture by placing people into an expansive pose (presumed to create a state of high power) or constrictive pose (presumed to create a state of low power).

That raised some suspicion for me.

- **Two different chapters both have “theories of power”**

And that led both to repeating similar concepts and quoting the same research, as well as adding more theories that may confuse readers.

Editing could have been better on that.
Combine all of them, cut the repetitions, integrate the differences, and provide an overview that’s both briefer, and more extensive.
That would make for a better book.

REVIEW

The *APA Handbook of Interpersonal Relations* is a treasure trove for anyone seeking an overview of the empirical evidence on interpersonal relationships.

Just by judging this summary you can see how much value I found in it -and it’s not even all the notes I took-.

The chapters on power were a bomb.
I had been looking for a handbook on power and turns out… It was hidden here :).
And there is a ton more than just power.

Some of the wisdom I learned from this book already went into improving several of our articles.
And some more wisdom is also making Power Univeristy better and better.
That is one of the greatest compliments I can pay to any resource.

So I’m very grateful to the authors and editors of this book.

As for recommending, it wouldn’t probably be at the top of the recommended list for the general public.
But it may be perfect for researchers starting their careers in interpersonal relationships and related fields.

Check the **best books** to read or **get this book on Amazon**.

Skool: a High-Value Platform—or a Guru-Driven Ecosystem?

Lucio Buffalmano · 6 May 2024 · Archived copy · Original

Skool is a community-based learning platform where creators share courses and offer communities of fans and students.

In this review we analyze whether Skool is good for the typical TPM audience: smart, ambitious, and high-agency men who benefit most from deep, high-ROI resources.

And, based on our analyses, we'll also share whether it can benefit more elite creators.

Is Skool legit? Yes, but… Not good enough for Power University

Contents

- Intro
- 1. Skool is only "OK" for course delivery
- 2. Communities of Fans, Rather Than Empowered Men
- 2. Communities are of average quality
- 3. Top teachers rarely are top experts
- 4. The focus of Skool is "make money". "Be an expert" and "add value" don't feature
- 5. Some Skool courses are pseudoscientific woo-woo
- 6. Skool gamification doesn't promote learning, it dumbs it down
- 7. Creators must relinquish control to Skool
- When Skool Works Well
- Overall: High Noise, Low Signal
  - Exceptions Apply Based on Community
- SUMMARY

Intro

Skool itself is just infrastructure, and it's a good infrastructure, and constantly developing.

The real question is: what kind of creators and communities does it attract and reward?

That's what I looked into when I considered Skool as an option for hosting TPM's video courses and/or the community.

This review shares the results of my analysis.

1. Skool is only "OK" for course delivery

And it doesn't replace a dedicated content management system.

So right off the bat, it was "no" for Power University.
Power University *the course* is the main part of our value delivery.

Skool offers "good", but more basic options for information delivery. It seemed to me that it's best for single-video lessons.
It has more limited options for text, extras video embeds, and has no quizzes.

The focus of Skool is on the *community*.
And it shows.

When it comes to the main course VS community, it's also about values for me:

2. Communities of Fans, Rather Than Empowered Men

Many communities on Skool are built around a charismatic leader personality.

In TPM's analyses, these types of leaders can have dark-triad traits, and their interest may diverge from what best serves their communities.

See an example from a fomer top Skool "guru" here:

> **Hamza Ahmed**: I see myself as a cult leader (…) this is like a genuine fuc*ing cult

Another top community is literally called "(founder name) cult".

As much as cult followers may titillate the founder's ego, we stand for the *opposite*.
We develop *individuals* here, not tribesmen. Men who are going to be leaders themselves, not followers.

P.S.: Hamza deleted the original video.
I don't think it's cool to share a video one has deleted, but it provides an important case study for this analysis.

2. Communities are of average quality

This is a law of most large communities:

Distribution of Skool community members, with most of them being average

But that curve may be optimistic for Skool because the top 10% of men aren't in there to begin with.

Most members in Skool's self-help communities are more likely to be naive beginners, which means that **one can hardly learn from other community members.**
It's blinds leading the blinds.

Furthermore, the few communities I checked were promoted as "support-crutches" for the members' mental health and self-help efforts.
And the leaders didn't seem exactly paragons of mental health-.

At best, it's a low-level ceiling self-help.

Including:

2.2. Disempowering followers' fandom is common and encouraged

This is the pinned post on the Skool community:

> **Sam**: vote on the best “skool parody” video

The options to “laugh” about are parodies of Breaking Bad, Friends, and Happy Potter.
P.S.: I haven’t seen a single one of them because I was busy living my life and building this business.

And clicking on it we get the parody videos featuring the founders and top creators:

A bit self-referential -narcissist-ish maybe?-.

All the top comments feature various GIFs and memes.

For the record, my gut reaction to this is “Why should I give a f*ck about your self-referential parody”.
If I join a community about the platform I’d expect pinned on top tutorials and best “how tos”.

Those top comments help users acquire the various prizes and awards -ie.: a book and a handnote from Sam the man himself. Wow!-.

And it’s a game every other guru/leader repeats in their own communities (keep on reading).

2.3. Pervasive meme culture doesn’t align with our approach

As above.

Memes and GIFs everywhere.

The #1 community at the time of writing is literally about animes of shredded men:

Not exactly top masculinity

2.4. Boosterism & “cold-shower self-help” doesn’t align with our approach

Several communities I’ve seen promote basic, run-of-the-mill self-help.

Including:

- **(Over-)optimization myths**
- **Struggle porn**
- **Community-based encouragement** “if you’re lonely” or need a push
  - “You can do it” type of support and self-help

We’re not too big into encouragement or cold showers type of self-help here.

Nothing against them, and I even do cold showers.

But we don’t see them as instrumental in advancing in life.

We focus instead on what we think is instrumental. The mindsets and hard skills to acquire respect, status, and attraction.
And the Machiavellian thinking to facilitate goal-achievement and life advancement in all areas.

2.5. Friends & nepotism over quality

Some big and early community founders are very close to founders and owners.

One of them is a Evelyn.
I'm sure adds ton of value.

However, the percentage of her posts that end up pinned seemed a bit too much:

This one was simple "you can do it" boosterism.
Did it call for a pin?

3. Top teachers rarely are top experts

… At least the ones I saw.

And the ones promoted on the first page.

And you know as they say: if you wanna hide a body for good, bury it in Google's second page.
If that applies to Skool the experts may as well be dead on the Skool's water :).

Take business for example:

I don't recognize any business owner here.
And not even the most popular business-courses names and providers.

3.2. Top dating teachers were dubious

Same for dating and relationships where I have more experience.

Not a single name I recognized.
And the most successful community founder was a "high-energy type" PUA who ran a prank channel.
In a video he complained about being banned in multiple locations in his hometown. And taught others how to live while he disclosed depression boutes in 2 of the handful videos I checked.

Please note: no dissing on these people.
I wish them the best.

What I'm judging is the expertise as teachers and content providers.
And if I'd have to bet money, I wouldn't be on A, them having reached top-level expertise. And B, I wouldn't bet on those courses containing much valuable information -at least compared to what's easily and freely accessible anywhere else-.

These dynamics may be normal for the beginning of a learning platform such as Skool.
Few people with a thriving business, an awesome life, or a large audience may want to join a new and untested platform.

However, Skool may struggle to attract top talent in the future as well:

3.3. Skool may always struggle to attract top talent...

… Because top talent has power and leverage.

And why should they go to Skool instead of having their own platform?

Instead, Skool may be stuck with "middle of the bell curve curse".
Such as, they provide an enticing value proposition for those who have a sizable-enough following, but not large

enough to do their own thing.
And they appeal to the beginners starting out.

Exceptions always apply, but… I haven't found many :).

These may change if Skool becomes THE place to go.
But from what I've seen, it's far from it.

3.4. Skool has no metric to promote teachers based on quality

It seems to me Skool focuses on income first, and community size second.

It may be a fair approach.
However, it's not good for us.

I feel TPM brings massive quality to a more limited audience (for now, at least).

So the discovery algorithm may penalize us in favor of more guru-esque teachers who gather more ~~shee~~…
Followers :)

4. The focus of Skool is "make money". "Be an expert" and "add value" don't feature

And it shows in the communities.

Alex Hormozi said he had "nothing to sell you" when he started in social media.

Back then it may be largely true, but it's the opposite with Skool.
Alex may want to be careful with the tons of people who may seek to use him to sell you:

Some Skool creators who made top 10 monthly revenues seek Alex Hormozi pictures to gain social proof

That may be totally fine if those creators and communities have true value to provide.

It may be the case for the man in the picture.

And I'm sure it's the case for many communities.

HOWEVER, as a whole, it's not the feeling I got:

5. Some Skool courses are pseudoscientific woo-woo

Even on the top page, many courses didn't exactly inspire trust, expertise, or… Usefulness.

From the first top page:

Skool boasts on the front page courses on astrology and manifestation

Fair enough, this is the bottom… But still the top page.

But I wouldn't want those *anywhere*.

And… it's not like the ones above are much better.

We've got:

- **Coaches teaching others how to coach**. Sam Owens being the founder, don't hold your breath for that to disappear :). (P.S.: Iman Gadzhi was one of Sam's private students. Do of that what you want)
- **Make money online courses** taught by people who make money online teaching others how to make money
- **Trading** schools and systems -not gonna judge how good they are, but I'll tell you this: I wouldn't put *my* money into their systems :)-
- …

So, yeah, we've got a who's who of the Internet seedier underbelly here.

Could we be the exception joining Skool?
In doubt, Power University in its full feature form stays here :)

And can Skool ever attract any top teacher with that on the first page?

5.2. Skool games incentivize ponzi-like communities

Alex Hormozi is chasing me with Skool Games ads:

Alex Hormozi promotes Skool Games parading the creators who made the most money

It says that it's free, and that the "game" rewards successful creators, who then teach you how to succeed in Skool.

That's NOT an incentive to bring true successes to the fore, in my opinion.
It strictly promotes as teachers the successes *within Skool*.

That is great for the winners.

But for the learners?

Given the teachers available, I think the odds are low you'd get any true expert or winner to teach you.

Instead, I'm afraid, that approach promotes MLM-type ponzis.

5.3. High-pressure sales tactic reminds of MLM

I joined a few communities only.

And the amount of notifications, emails, and PMs I get make me want to run the other way:

The approach of some Skool communities to chasing prospects feel like skinny dipping in Pirana-infested waters :)

All promising crazy results… That I didn't even ask for.

In the interviews I listened to many mention how they give tons of value away for free -mimicking Alex Hormozi's model maybe?-.
But I only had two questions I asked on several groups and I didn't see all that free giving :).

6. Skool gamification doesn't promote learning, it *dumbs it down*

Alex Hormozi said Skool uses gamification to make learning addictive.

As per their own (quite fun) Skool parody, Skool replaces the negative dopamine addiction of social media, with dopamine addiction that's good for you.

That's a noble cause.
And it would be great if it worked.

And maaaybe it does work.
A bit.

In that sense, I admit, our title here maybe overly critical.
And there may be benefits of "gamifying learning".

Such as, the "dumbification" side of the gamification approach pulls learning down.
But the learning also pulls and the dumbs upward.

However, from what I've seen, I'm not convinced Skool's way of doing it provides any meaningful impact.
(Keep on reading).

6.2. Waste your time playing the points game?

Case in point:

A whole top community is dedicated to gaining points by engaging more:

But at least we get another example of a community that doesn't jibe well with our values and approach. This creator makes 4.5k/month while his followers do all the work of engaging with each other.

And many communities I've seen play this same game to inflate engagement:

> **Skool "teacher"**: comment "movie night" below and I'll send you my list <—- technique to drive up engagement to get as many comments as possible

Why can't he write that publicly?
Because it's all a game to drive up engagement.

No real learning, just using the followers to drive up engagement.
Something I've noticed from several other community leaders.

That may be OK if there is also lots of wisdom to gain.
From what I've seen though, there wasn't much concrete wisdom and giving in many of these communities.

Hopefully, if TPM joins in, we can be one of the exceptions :).

7. Creators must relinquish control to Skool

This is true for any third-party platform.

You upload your course, build your community and business there…

… And then you're fully dependent on them.

Maybe they decide to hike your price.
Or kick you out.
Or they go belly up, or they won't promote you anymore…

And then you're screwed.

I'd rather not create such a huge depending on my business.

When Skool Works Well

While it doesn't align with our audience of non-beginners who need advanced tools rather than motivation, Skool may work much better for:

> - Beginners needing accountability
> - Beginners who benefit from daily encouragement
> - Creators monetizing influencer-first brands <— Note: This works for the creator, not necessarily the audience
> - Fans who just want more of their favorite influencers

Overall: High Noise, Low Signal

TPM takes the opposite approach: high signal, low noise.

We put a lot of work and effort into our products.
We're NOT a small course with community encouragement.

We're a *world-class* course with an optional small community.
Few of our customers are even interested in the community side.
I suspect we appeal far more to "sigma types", and people with busier lives who don't wanna spend too much time in online forums.

At TPM, we have hundreds of handbooks and resources to back our products.
Power University is one of the most scientific self-development courses in the world.
And we've re-worked our product over the years, taking hundreds of students' feedback.

I doubt many others put this amount of work into their products.

Because of the above, I concluded that Skool may not pull us up, but drag us down.

Exceptions Apply Based on Community

While the *average* Skool community is not a fit for smart, high-agency men, **every community is different**.

So, depending on community and creator, you may also get high-value, high ROI communities that genuinely help you develop and grow.

SUMMARY

Most Skool communities are not a good fit for ambitious men and high-power men because they're high noise (community of learners), low-signal (average platform for courses), and built around the influencer's charisma.

From TPM's perspective of an ambitious and smart man, this makes Skool a poor general platform.

However, while this applies for a general overview of Skool, each community is different. And while I haven't personally seen any, exceptions most likely apply.

From a creator point of view, we decided to have a community and a simpler course, but not our main courses.

The Essays of Warren Buffett: Summary & Review

Lucio Buffalmano · 13 May 2024 · Archived copy · Original

The Essays of Warren Buffett (2023) is a collection of Warren Buffett's insights on various topics related to investing, management, and corporate governance. Compiled by Lawrence A. Cunningham, this book features a curated selection of Buffett's famous shareholder letters, organized by theme.

Contents

- Exec Summary
- FULL SUMMARY
  - 1. Only associate with people you like and admire
  - 2. Stick to what you know and understand
  - 3. As a high-value man, only stick with people you know are great
  - 4. Pick managers who think like owners
  - 5. Only do 1-to-many communication
  - 6. Only buy businesses from sellers who love their business
  - 7. Don't listen to macro-predictions
- MORE WISDOM
- QUOTES
- CRITICISM
  - Over-optimism and over-extrapolation of positive trends (nonsense)
  - America supposedly "starting from scratch" in 1776 betrays poor thinking
  - The "compound interest" story paraded once again…
- CONS
- REVIEW

Exec Summary

- **Only associate with good characters** you like and trust
- **Stick to what you understand well**, or you're gambling
- **Stop listening to "market predictions"**… And predictions in general

FULL SUMMARY

About the Author:
Warren Buffett and Charlie Munger are a legendary duo in the world of finance and investing. Buffett, often hailed as the "Oracle of Omaha," is the chairman and CEO of Berkshire Hathaway, a multinational conglomerate holding company.
Charlie Munger is Buffett's longtime business partner and vice chairman of Berkshire Hathaway. He is known for his straightforward approach to investing and his insightful commentary on business and life. Together, Buffett and Munger have forged one of the most successful partnerships in the history of finance.

1. Only associate with people you like and admire

This was probably my main takeaway from The Essays.

First off, says Buffett:

> After some other mistakes, I learned to go into business only with people whom I like, trust, and admire

That, by itself, will not make you money, he adds.
But it decreases the odds you *lose* money. And it makes life that much easier and better.
It's so important to Buffett, that he's willing to make less money with that policy:

> We intend to continue our practice of working only with people whom we like and admire. This policy not only maximizes our chances for good results, it also ensures us an extraordinarily good time. On the other hand, working with people who cause your stomach to churn seems much like marrying for money—probably a bad idea under any circumstances, but absolute madness if you are already rich.

LOL, not only great wisdom, but also delivered with great humor :).

2. Stick to what you know and understand

This is one of the most famous of Buffett's approaches:

> If we have a strength, it is in recognizing when we are operating well within our circle of competence and when we are approaching the perimeter. Predicting the long-term economics of companies that operate in fast-changing industries is simply far beyond our perimeter. If others claim predictive skill in those industries—and seem to have their claims validated by the behavior of the stock market—we neither envy nor emulate them. Instead, we just stick with what we understand. If we stray, we will have done so inadvertently, not because we got restless and substituted hope for rationality.

3. As a high-value man, only stick with people you know are great

Buffett says that he and Munger generally stick with people they know and like.

They know there are plenty more great people in the world. But the odds of meeting them are not high enough to make meeting strangers a good use of their time.

Unluckily I lost the bookmark for this passage or I'd love to quote it.

4. Pick managers who think like owners

> The best managers think like owners in making business decisions.
> They have shareholder interests at heart.

5. Only do 1-to-many communication

> Because the annual meeting is the time and place for these, Charlie and I are happy to answer them all, no matter how long it takes. (We cannot, however, respond to written or phoned questions at other times of the year; one-person-at-a-time reporting is a poor use of management time in a company with [thousands of] shareholders.)

6. Only buy businesses from sellers who love their business

Buffett says that he wants people who love their business because that guarantees that interest align.

When people love their business, they'll work hard for it, give it all, and always with a long-term horizon in mind.

That's why they want businesses with people who are going to keep working on their business.
And if they don't love it, don't buy.

Says Buffett:

> Very simply, we would not want to buy unless we felt key members of present management would stay on as our partners. Contracts cannot guarantee your continued interest; we would simply rely on your word.

And the second part reminds us of how important it is to read characters.

Let them independent

Buffett then lets them free to operate with almost total freedom.
They know what's best for the business.

That allows Buffett to attract the best possible sellers: great businesses with great founders who love their business and will be great long-term managers.

7. Don't listen to macro-predictions

> We will continue to ignore political and economic forecasts, which are an expensive distraction for many investors and businessmen.

So… Quit listening to Ray Dalio's predictions of doom and gloom :).
He's been doing that his whole career and his predictions were terrible anyway.

MORE WISDOM

Be suspicious of those who “always make the numbers” (or who promise so)

> Charlie and I not only don’t know today what our businesses will earn *next year*—we don’t even know what they will earn *next quarter*. We are suspicious of those CEOs who regularly claim they do know the future—and we become downright incredulous if they consistently reach their declared targets. Managers that always promise to “make the numbers” will at some point be tempted to *make up* the numbers.

Let’s all take steps to reduce global warming

Buffett says that it makes sense to take climate change seriously, and take action.

Even if there is only a 1% chance of disaster, says Buffett, it does make sense to act anyway.

Beware of past-performance “proof”

> Beware of past-performance “proofs” in finance: If history books were the key to riches, the Forbes 400 would consist of librarians.

QUOTES

On the blessing of having dumb competition:

> what could be more advantageous in an intellectual contest—whether it be bridge, chess, or stock selection—than to have opponents who have been taught that thinking is a waste of energy?

CRITICISM

Over-optimism and over-extrapolation of positive trends (nonsense)

For example:

> In the future the U.S. population will move more goods, consume more food, and require more living space than it does now. People will forever exchange what they produce for what others produce.
> Our country’s businesses will continue to efficiently deliver goods and services wanted by our citizens.

How can you say for sure?
During his lifetime, probably yes.
But the longer you extrapolate that trend, the more sure you can be it’s gonna be wrong.

America Always Wins Long Terms...

There seems to a general over-confidence on “America”.

Sometimes, even feels a bit overly “patriotic”.
For example:

> Be clear on one point: In no way does our thinking about currencies rest on doubts about America. We live in an extraordinarily rich country, the product of a system that values market economics, the rule of law and equality of opportunity. Our economy is far and away the strongest in the world and will continue to be. We are lucky to live here.

"Will continue to be"?
Same as before, how can he say that?
Stretch that prediction on a long enough time horizon, and you can be almost 100% sure it will turn out to be wrong.
I'm astonished such a smart person would say such a, how to say it… Non-smart thing.

And:

> American business, and consequently a basket of stocks, is virtually certain to be worth far more in the years ahead
> (…)
> This powerful trend is certain to continue
> (…)
> America golden goose of commerce and innovation will continue to lay more and larger eggs

These are the types of statements that not only leave me scratching my head, but also make me wonder how successful Buffett would have been less rosy historical periods.
His over-optimism may have cost him, in those scenarios.

The "future estimates" are all based on trend extrapolation

For example, when he estimates future growth based on the current population growth.

That was so nonsensical to me, that I won't even spend further time debunking.

America supposedly "starting from scratch" in 1776 betrays poor thinking

Says Buffett:

> From a standing start 240 years ago a span of time less than triple my days on earth Americans (…) starting from scratch America has a mask wealth totally 90 trillion dollars true of course that other

What an ignorant thing to say.

That's what happens when you focus on investing and read financial reports only, and then talk about history, maybe.

As if:

- All the inhabitants erased their brains from all their knowledge in 1776
- All the knowledge accumulated in the millennia past was erased
- All the capital and machinery was destroyed

Of course, the opposite is true.
Which is why it was NOT a "standstill" or "start from scratch".

I even find this take ignorantly insensitive.

The American story is an impressive story.
Like all the great empires that have led humanity forward before it, it's bound to be an impressive story.
And we must all be grateful to leading civilizations/countries because leading civilizations pull the world forward.
They are givers.

But we're not going to provide appropriate credit by making shit up.

Or by erasing the contribution of the long history of great men and civilizations that have led us here.

Instead, to be great today, pay respect to past greats.

The “compound interest” story paraded once again...

You know, the:

“if you had invested X dollars in the S&P in the year XXXX, you’d be a multimillionaire by… .”

I’ve never been a fan of those.
And … I didn’t expect that from Buffett.

CONS

Sometimes tries too hard the “funny quips”

Sometimes it feels Buffett tries a bit too hard to sound smart.

Especially felt off to me when he sought to reference sex.

For example:

> When such a CEO is encouraged by his advisors to make deals, he responds much as would a teenage boy who is encouraged by his father to have a normal sex life. It’s not a push he needs.

And:

> Woody Allen, in another context, pointed out the advantage of open-mindedness: “I can’t understand why more people aren’t bi-sexual because it doubles your chances for a date on Saturday night.”

To me, it felt almost as if he wanted to remind us that he’s not always been a geekier financial analyst.

Bit of bragging

Covert bragging, mostly.

Some outdated stuff

Since the letters sometimes refer to then-contemporary events, it’s bound to have several outdated sections.

Some rants

Such as against American’s poor balance of payments, Wall Street greed/mistakes, etc.

All about money (through investments). Is that even a good life?

This is just me, but… I was hoping for more life-wisdom.

And, if about money, I’m more interested in entrepreneurship.

All this returns talk even felt tacky to me and not a good way to live.
There is more to life than returns and stocks.

REVIEW

The Essays of Warren Buffett is a good book if you’re interested in Berkshire and Buffett’s approach to investing.

And **it's a poor use of your time if you're looking for wisdom outside of investment**.

I was looking for more wisdom on "how to live", let's say.
There are some fantastic golden nuggets, like the ones listed in this review.
But overall, *The Essays of Warren Buffett* is mostly about investments and Berkshire.

It just wasn't the ideal book for me.
But it may be great for you.

Check the **best books** to read or **get this book on Amazon**.

The Essays of Warren Buffett Summary: 7 Timeless Lessons

The Essays of Warren Buffett (2023) is a collection of Warren Buffett's insights on various topics related to investing, management, and corporate governance. Compiled by Lawrence A. Cunningham, this book features a curated selection of Buffett's famous shareholder letters, organized by theme.

The Honorable Man's Guide: Power, Respect, and Success

Lucio Buffalmano · 20 May 2024 · Archived copy · Original

Being an honorable man isn't just a noble idea—it's a path to power, respect, and success.

But **watch out: non-honorable men may trip you**.

At TPM, we're experts in men's success and power dynamics. Our real-world strategies help thousands of men every day.

Read on to master honor and win.

'Be Honorable' is one of our foundations of social success

Intro: What’s ‘Honorable’

An honorable man is a man with the character and behavior that others see as admirable, respect-worthy, and leader-like.

Honor doesn’t mean “good” or “nice.”
You can pursue self-interest, seek revenge, or break the law—if it fits the “honorable code,” you’re still honorable.

There is some degree of subjectivity in what’s ‘honorable’ and culture, personality, and context all play a role.

However, many general principles apply to most people, and most anywhere.
We’ll focus on these general principles.

How to Be Honorable

Guiding principles:

1. Tell The Truth – As Often As You Can, As Much As You Can

Frequent lying is dishonorable, but “always tell the truth” is naive.

Good guidelines are:

- **Stick to the truth unless you cannot**
  Lies are mines—the more you lie, the trickier the minefield.

⍰ IF you can’t speak truthfully:

- 1 **Refuse to comment** as default approach
  If not possible:
- **Stay as close to the truth as possible**: you're more believable and maintain reputation if caught
- **Use "spins"**. People see them as "almost OK".
  E.g.: Clinton's "I did not have sexual relations with that woman"
- **Lie by omission**

2. Seek to Be a Net Giver, Never a Taker

- **Give back when given**
- **Contribute to society**
- **Avoid being a burden** and hate it when you are.

Similar with power:

- **Respect respect-worthy** men
- **Re-empower others when due** (no 'power hoarding')
  Ie.:
  - Apologize when in the wrong
  - Let others speak after a dominant interruption

3. Be Straight, Avoid Unneeded & Obvious Sneaky Games

No games win prestige, but the worst are:

- **Unneeded**. It's worse without a motive—it signals "inveterate manipulator"
- **Futile**, with low odds of working
- ***Overly* selfish or damaging**
- **Obvious**
- **For small stuff** that shouldn't even concern a high-value man
- **In close relationships**

They're the worst because:

- **Signal low value**, for even bothering with small stuff
- **'Bent personality'** of an inveterate manipulator
- **Destroy rapport** and reputation, harming your best relationships

 Example: If caught stretching the truth, don't double down—say, "OK, I exaggerated, let me rephrase," and tell the truth

Honorable quote to live by

For close relationships, remember this manipulation quote:

> **"I'm not upset that you lied to me, I'm upset that from now on I can't believe you."**
>
> *— Friedrich Nietzsche*

That's the high-quality man's mindset who expects high-quality people in his life.

4. Own Your Choices, Avoid Excuses

Take ownership, privately and publicly, of your actions and choices.

 Example: If you skip a ticket in a rush, own it, accept the risk, and pay the fine if caught, apologizing to the controller.

Doing the opposite will destroy your reputation:

♂How my mother lost my respect With Cheap Excuses

Lucio:
Confronted about smoking during pregnancy, my mother said that “she didn’t smoke in the 2 months most important for child development”.

Pressed that all months are important, she replied that the doctor said “Signora, there are plenty of smokers who make super smart kids”.

⬆ The excuses don’t hold. Own your mistakes
Feels like gaslighting and only makes you angrier.
An honorable woman would have owned it. And ‘I’m sorry’ would have fixed it.
Instead, with this approach, I even doubt she stopped for 2 months.

5. Stand for Something

Pick a value worth fighting for and hold it, even under pressure.

6. Take Pride In Being Honorable

And associate disgust to dishonor.
It’s the best way to grow more honorable.

- ♂ **Exercise**: Recall a time you acted honorably—did it build self-respect and pride? If it did, relive it. If it didn’t, do it now: you deserved it.

When you associate with pleasure, your subconscious will guide you to more honorable behavior.

- ⍰⍰♂ **Exercise 2**: Recall a time you or someone you know acted dishonorably—did you feel disappointed or disgusted?If it did, relive it. If it didn't, do it now.

Do the same for the examples we've seen, like this one below: ⍰⍰

⍰ Develop Distaste For Sneaky Manipulation

Whyte Mar 22, 2023, 2:15 PM
to The

Hi Power moves I see the refund show up on my bank account but not the full 118 dollars it's missing around 9 dollars. I'm also wondering if you'd be ok with me telling my close friends about powermoves if that's OK with you. It's truly an exceptional experience here.

> **Him**: The refund (…) is missing $9.
> I'm also wondering if you'd be ok with me telling my close friends about powermoves if that's OK with you.
> It's truly an exceptional experience

It's cheap because it's:

1. Obvious
2. Low-value: he sent several emails, over-investing for $9
3. Overly selfish: TPM already exceeded the refund policy
4. Futile: cheap tricks won't fool us

⍰⍰♂ I don't accept this behavior from the people around me, and I don't want it in my programs.

7. Empower Yourself

Honor requires power.

This is what many men don't get.
Unfortunately, it's not honor that gives you power.
It's power that allows for honor.

Values and ethical standards are a luxury for any form of life that must prioritize survival and reproduction.

Without power, survival instincts take over: submission to higher status men, manipulation to keep a mate, and tacit acquiescence in fear of ostracism.

You can barely escape it: it's psychological math.

> Only empowered men can afford the luxury of honor.

And that's true for both mind and life.

⍰♂Lucio's Take: **the more empowered I became, the more honorable I became**

Lucio:
It's easy not to manipulate a girlfriend when I'm happy alone, don't need one—and trust myself to find one whenever I want.

It's easy to say, *"I'm not the type of man who steals"* when I'm living my best life while spending less than I earn.

It's easy to give—and demand—respect as a solopreneur who doesn't need any particular group or organization, and can simply say, *"Not dealing with that sh*t. *Bye*."

And it's easy to be critically honest in my reviews here at TPM when I already like myself, and my self-esteem doesn't depend on anyone's liking me or approving of me.

Honorable Traits to Work On

- **Courage**
  - Lead from the front whenever feasible, show the way, and set the standards
    ➽ Never ask anyone to do something you wouldn't do yourself
- **Consistency**
  - Maintain a similar baseline behavior instead of "licking up, kicking down"
- **Magnanimity** in victory. Instead of crushing, offer a help-up
  ⍰ Scipio Africanus book review, long but great example
- **Spirit of sacrifice** for the team and mission
- **Assertiveness**, instead of passive-aggressive or manipulative
  - Direct talk over overly indirect
  - Face issues head-on
    E.g., if offended, don't stew; say it wasn't cool

⍰ In Practice

In business

- **Deliver customer valu**e as a priority, and be proud of it
- **See good work as a duty**
- **Honor the refund policy**
- **Only promote products you believe in**. Reject poor ones

In groups and as a leader:

- **Uphold the shared values**
- **Reward contributors**, and punish those who don't
- **Defend team members** under attack
- **Defend the group**, which may go into unhealthy extremes in some subcultures

⍰⍰♂ **Balance 'defending your tribe' with universal values and humankind**
Group allegiance at the detriment of others can turn into toxic tribalism. The future of humankind depends on enlightened honorable individualists rising above small-minded parochialism to lead *humanity* forward.
Make a judgment call.
And unfriend inveterate as*holes instead of supporting them.

⍰ TPM's Framework: Strategic Honor™

> **Strategic honor™** is a non-naive, power-aware code of conduct in which a man prefers and upholds truth, responsibility, and fair dealing **by default and by choice**, while remaining selective, guarded, and competitive in environments and with people where honor would be exploited.

The honorable approach can cost you with dishonorable people.
So TPM's framework we introduce the Strategic Honor framework:

- Acting honorably as the **preferred approach** and whenever it builds long-term power, prestige, and self-respect, but
- Be **strategically calibrated with your honor**, calibrating to situations and people
- Aim to **add value** in relationships, in your work, and ultimately in your life

Strategic honor rejects naive moral absolutism.
It recognizes that **power precedes honor**: only empowered individuals can consistently afford honorable conduct.

As such, strategic honor is not weakness or "niceness," but a high-status behavioral code that combines integrity with judgment, selectivity, and strategic thinking.

1. **Be honorable in your close relationships**, and only pick the best people for them
2. **Keep tabs of give-and-take** ('positive calculativeness') to ensure it stays win-win
3. **Be strategic with dishonourable people**
4. **Be strategic in competitions**. Competitors may not be honorable. And sometimes, winning is the priority.
   So the guidelines become:
   - Stay honorable enough, be a 'good as*hole', not a dishonorable one

Dig deeper:

- ⍰ **Manipulating a manipulator**. Especially #1 and #3
- ⍰ Who to straight talk to
- ⍰ Assertiveness VS fading away

Effective Heroes Are Strategic

⚠ Be careful being honest in corrupt and despotic systems.

They operate under a strict power code—law and 'corporate values' are a front.
If you uphold either, you're the enemy: crooks hate honest men. They spoil the looting—and remind them of their crookedness.

Effective heroes plan their exit—or better, adapt and reform once on top.

Power Trumps Honor

A foundational TPM's value is truth.
So here's the truth:

Power trumps honor and reputation.
Including for advancing in life, achieving goals, and doing as you please.

I bet you can think of many examples in your life.
But if not, here are some for you:

⍰ Dishonorable But Successful Men

We could list many examples like Nero, Jeffrey Epstein, Harvey Weinstein, etc.

But forget single names and focus on the *concept*.
The concept is that **many non-honorable men succeed** in life.

They thrived despite bad behavior and reputation, thanks to high value and power.

Why?
Because **high-power jerks have value to provide, and can inflict costs.**

So people didn't want to antagonize them.
Instead, they sought them out, worked with them, or pretended they were good people.

It's basic social exchange.

Sure, *some* of them faced consequences.
But most paid consequences for illegal behavior, not for being jerks. Big difference.
And even then, catching them was hard, and some of them even escaped the consequences.

Plus, let's be honest: most enjoyed more success in a few years than 1.000 nice guys' lives put together.

So… Why are we still partial to the honorable man's approach?

Why we still advise “be honorable”

As a personal choice, we prefer it and expect it in our community.

However, we recommend it due to its significant benefits.
Intrapersonally:

- Higher self-esteem
- Life ‘contentedness’
- Resilience to criticism and attacks

🤔Lucio’s Take: **happy life thanks to who I became and what I’ve done**

Lucio:
I’m not a “nice guy,” and not even a particularly “good” guy.
I don’t want those labels anyway—I’m here to achieve goals, not to be pleasant. My priorities come first, and I think *very* strategically.

But I’ve pursued those goals in win-win ways (or at least without taking).
I never go “asshole first” without a reason, and I believe I’m on track to be a net giver in life—my ultimate yardstick for an honorable man.

That **makes me proud of who I’ve become**, what I’ve done, and what I’m doing. It also makes for a far better life experience: I go to sleep content and wake up most mornings happy.

In interpersonal relationships:

- **Better interpersonal relationships** because time shows who you truly are
  - Better close and intimate relationships, especially
- **Better long-term relationships** because the longer you interact, the more character quality matters
- **Better relationships with high-quality people** who prefer high-quality men

For example, even as a child I admired the honorable man, and lost respect for my friend when he pulled this nasty power move:

> **Lucio**: From a man-to-man disagreement, my fiend looked for group support to gang up on me. But the other guy refused to gang up. My friend was a dishonorable turkey ⍰. Fabio was an honorable eagle ⍰

And at a social level:

- **More influence** and 'soft power' with prestige
  - Increases social capital, whereas dominance and jerks deplete it
  - 360 degrees° influence, including above, whereas dominance and jerks influence best *below*, including needier people
  - High-value sub-communication. Upholding values is a "costly signal". It sub-communicates one can *afford* to uphold values. Sneaky behavior evokes lower power.
    Note: jerk behavior is also a costly signal of power, but it makes you less prestigious, instead of more

- **Better leadership** because it's easier to attract and retain top talent

⍰ A Crook With Honorable Reputation?

The Machiavellian bent is to be honorable only as long as it serves you.

And, technically, it pays off to be:

- **Honorable when it's convenient**
  - Gain a reputation for honorable
- **Cheat when expedient**
  - Nobody finds out
  - You can disappear
  - You can score big, keep the loot, and don't need to care about reputation

Call this approach "the perfect crook".

We'd lie if we denied the effectiveness of this approach *IF executed to perfection*.
However, the devil is in the detail.
And perfect execution may be a chimera for most due to the downsides and risks:

- **The truth tends to seep out**. Sometimes publicly -think of Weinstein-, and more often privately, in close relationships
  ✒ *"You can fool some fool all the time, everyone some of the time, but you cannot fool everyone every time".*

- **Lower self-esteem**, potentially

- **Lower life satisfaction**, likely

Also, consider you can never escape a cheat's company when you're the cheat.
A good company starts with yourself.

And finally, **our strategically honorable approach is a proven winning strategy** already. Why hang onto a more cheating life, if you can equally win *and* be honorable?

Learn More

Want to be an honorable man who wins?

You need strategy and power skills to be honorable or dishonorable men will eat your lunch.

But if you can marry honor with smart strategy, you get the best of both worlds.

That's our goal at TPM.
We developed **Power University** to turn good men into *effective*, honorable leaders—mastering power with integrity. Join us and level up.

9 Laws of Social Power Dynamics (High-Value Men)

Lucio Buffalmano · 27 May 2024 · Archived copy · Original

At The Power Moves, we decode interpersonal power dynamics to forge stronger, more effective men.

Our approach centered around the science of power is backed by research, real-world experience, and proven results.
See for yourself how it works:

4:50 PM (2 hours ago)

to Connect

Hi Lucio,

Thanks for your email.

I have not finished going through the entirely of PU but I have already benefited tremendously from the knowledge and wisdom included.

I have made a quantic leap in power awareness (not surprisingly as I didn't even know the concept before) and I have improved very significantly in terms of coming across as more powerful and less vulnerable.

Now the material is quite long so I have not finished it yet but I am already planning to go through it a second time.

I think it's the best material in terms of self development I have come across so far, at least for my personality type (clueless in terms of power interaction, too humble publicly and frankly too submissive)

> **PU alumnus**: I think it's the best material in terms of self-development I have come across so far
>
> *PU alumnus testimonial*

In this article we introduce the 9 laws that govern your social life.

Let's dive in:

Contents

- 1. Power Shapes Your Reality (The Law of Social Filtration)
  - Low-Power Attracts & Keeps Takers
  - High-Power Discourages Takers
- 2. High Power Rises, Low Power Sinks (Law of Social Buoyancy)
- 3. First Impressions Lock 80% Status (The 80/20 Power Law)
  - 3.2. Patterns of Power Cement Status (Status Cementing™)
- 4. Small Power Moves Add Up ('Death By a Thousand Cuts™')
  - ⍰ Example of multiple cuts
- 5. Disrespect Gathers Momentum (Law of The Slippery Slope)
- 6. Weakness Undermines Win-Win (Law of Continued Respect)
- 7. Your Power Is Your Level, Minus Theirs (The Net Effect™)
  - 7.2. At Parity of Power, Lower Warmth Is Higher Power
  - ⍰ Case Study: Jocko Willink
- 8. High Status Friends Lift, Low Status Sink (Law of Association)
- 9. Power ↔ Value (The Power-of-Exchange Law)

- More: Take Control of Your Social Power

1. Power Shapes Your Reality (The Law of Social Filtration)

Law 1: Your power in both awareness and skills determines the quality of your relationships, which in turn determines how you experience and see the world

Power awareness helps you assess people and pick character in your life.
Power skills will help you maintain those relationships, and also keep everyone on their better behavior.

While people differ, most also adapt and can be givers or takers depending on the situation, and who they're dealing with.

- In general, **the easier it is to take from someone, the more people will take.**

So how you experience (social) life depends largely on your level of power and skills.

Low-Power Attracts & Keeps Takers

People take more from low-power people because it's easier to.

Low power people advertise that they're easy targets: behave low power, and and fail to check power moves.
That attracts various types of takers, while winners stay away because they prefer other winners.

High-Power Discourages Takers

High-power people instead discourage takers.

High-power people advertise that they're "hardened targets". Takers either stay away or behave better because they know their attempts will fail.

⍰ The Wallet Analogy

In a way, you and the value you can provide are like a wallet full of money.

The wallet is tempting for anyone to take.
But how many people will try and how successful they will be depends on you. And how easy or difficult *you* make it to take from you.

An Italian saying goes:

> **It's the opportunity that makes the thief**
>
> ✒ *Italian proverb*

It's the same in life.
Weak men provide opportunities to take.
Strong men provide opportunities for those willing to exchange (ie.: other high-value individuals).

2. High Power Rises, Low Power Sinks (Law of Social Buoyancy)

Law 2: High power rises up in hiearchies, while low power sinks down

As a general rule:

⚖ **Socially dominant men lead 1:1 relationships, and gain higher status in groups.**

Low-power men follow, and languish at the bottom of the hierarchy.

3. First Impressions Lock 80% Status (The 80/20 Power Law)

Including:

- How you carry yourself in body language, posture, etc.
- Who you engage first: high-status folks, or low-status ones?
- Handshake
- First words
  - Voice

- First conversation
  - Quantity
- First reaction to social challenges

We'll learn how to ace all of them ⍰

3.2. Patterns of Power Cement Status (Status Cementing™)

Unless you proactively change the early dynamics, they "cement" and become de facto hierarchies and ranks.

⚠ ⍰ **Low-status men are passed up for promotions.**
At work, informal hierarchies often become official with promotions and titles.
High-status men get promoted. Low-status ones are "non-leadership material".

Stickiness, More Than Cement

More than cement, think of it as "stickiness".

You can always change anything.
It just takes more willpower, skills, and time.
And you face more resistance -both internal, and external-.

That's why earlier is better.

4. Small Power Moves Add Up ('Death By a Thousand Cuts™')

Law 4: Small disempowering moves add up to large effects

If you never push back, a string of small shoves pushes you to the bottom of the hierarchy.

The first few cuts may seem inconsequential. But submission only invites more (principle #1).
And you eventually bleed all your status away.

Small power moves add up to push you to the bottom

⍰ Example of multiple cuts

1. **He takes the lead + dominant introduction**
   - Leads the interaction: asks “Who are you”
   - Strong handshake, voice, and direct gaze
   - You remain neutral (losing out because of the net effect ⍰)
2. **He leads the conversation**
   - Asks “Where are you from”
   - You answer where you’re from and ask nothing back
3. **He makes a “funny comment” about your nationality**:
   - Ie.: “Lucio Corleone from Italy”
   - You laugh a bit too much
4. **You propose place X to go to, he says that “It’s OK, but place Y is better”**:
   - You say you’re OK either way

He was dominant right away. If you match, you won’t be lower than him. But if you don’t, you keep being pushed down, small cut after small cut.

Assholes will then take up another notch just to use you as a “social peg” to display their dominance:

5. **At the restaurant, he tells you where to sit**, an orange power move
   - He says he prefers someone else close to him
   - You acquiesce

By this point, your low-status in the hierarchy is “cemented”.
Forget women in that group liking you, or guys wanting to befriend you.

5. Disrespect Gathers Momentum (Law of The Slippery Slope)

Law 5: Unchecked disrespect only invites more of it

Early disrespect opens the door for more.

For example, in a relationship, the first insult is rarely the last. Instead, it may increase to a shove, which in turn is the first sign of partner violence engulfing a toxic relationship.

6. Weakness Undermines Win-Win (Law of Continued Respect)

Law 6: Continued respect is a precondition for healthy and win-win relationships

Principle:

⚖ **The more weakness you display, the more they lose respect for you**

And when they lose respect for you, they think you’re below them, or even unworthy of them.
And you can’t have a win-win relationship of equals when others think you’re too far below them.

You *both* lose when you let others disrespect you because the relationship sours for *both*.

Read more:

- **How to maintain attraction in relationships**

> 6 Proven Techniques to Keep Her Attracted & Committed

7. Your Power Is Your Level, Minus Theirs (The Net Effect™)

Law 7: Power is relative and emerges from the power difference between the actors

If your level is 9.5, you're second in command when a 10 is around.

7.2. At Parity of Power, Lower Warmth Is Higher Power

Power and warmth are two sometiems opposing approaches to socialization.
And at parity of power, **the person with less warmth is seen as more dominant**.

Chart:

More warmth costs you if others aren't equally warm

This holds true for men actively trying to dominate you.
With attacking asshole, warmth sub-communicates kissing up behavior, a form of self-protection with similar dynamics of the 'Stockholm syndrome'.

⚠⚠ **Takeaway**: Watch for reciprocation of friendliness and adjust. Remove signals of friendliness with those who show very little warmth.

⚠ Case Study: Jocko Willink

Jocko is high power, and sometimes low-warmth.

Example:

> **Interviewer**: Everybody go check out the podcast and book (…) Thanks Jocko
> **Jocko**: (barely laughs, expends little effort) Outstanding

Jocko does not thank the interviewer for promoting his book, and shows little warmth.
If the interviewer had been warmer after that, he'd look low-status and "kissing up".

⍰ How to handle dominant but low-warmth men

- Go higher power
- Decrease your warmth (like the interviewer did)
- Go lower energy (be careful with the "high energy" some charisma coaches champion)

8. High Status Friends Lift, Low Status Sink (Law of Association)

Law 8: Being with high-status people lifts you upward, while over-engaging with lower-status ones pulls you down towards their level

This law leads to a host of social and psychological games.
For example:

LOW-STATUS "CLIMBING" GAMES	⍰ HIGH-STATUS DEFENSE
Secretary at law firm seeks friendship with lawyers	Lawyers are better off *friendly* but not too close
Junior employee asks senior employee questions during a presentation to get engagement and investment	The senior should keep answers short. If it's a good question, address the whole team or the boss
⍰ Woman mistreats or badmouths her partner to display she's better (and ready for a higher-value men)	⍰ The man who wants her cannot sympathize with him or he stoops down. He must agree or pile on
Befriend & social climb game Doorman at upscale condo jokes with tenants to sub-communicate he's at the same level. Then one-ups them to gain even more power. ⍰ Bel's example	Tenants are better off friendly, but not too chummy. Strongly enforcing boundaries to put him "back in his place" when he pulls power moves is necessary.

⍰⍰ ⍰ **PRO Tip: Avoid low-value associations, even in your stories**
Never sub-communicate that the people close to you are low value.
⍰ If you talk about poor characters, always A) say or sub-communicate you're not close (ie. "she's just an ex-classmate); or B) display dismissive body language to sub-communicate you don't appreciate the person ⍰.

9. Power ↔ Value (The Power-of-Exchange Law)

Law 9: Power and value are two different but overlapping and mutually influencing constructs

Power and value overlap and complement each other, and people *expect* them to overlap.
For example, a value giver expects to have more power—a fair expectation that you generally want to honor in order to maintain the relationship.

It's the same principle of "no taxation without representation".
⍰ If I give value/money, I expect power.

Hi Lucio,

Thanks for your email.

I have not finished going through the entirely of PU but I have already benefited tremendously from the knowledge and wisdom included.

I have made a quantic leap in power awareness (not surprisingly as I didn't even know the concept before) and I have improved very significantly in terms of coming across as more powerful and less vulnerable.

Now the material is quite long so I have not finished it yet but I am already planning to go through it a second time.

I think it's the best material in terms of self development I have come across so far, at least for my personality type (clueless in terms of power interaction, too humble publicly and frankly too submissive)

> **PU alumnus**: I think it's the best material in terms of self-development I have come across so far
>
> *PU alumnus testimonial*

In this article we introduce the 9 laws that govern your social life.

Let's dive in:

Contents

- 1. Power Shapes Your Reality (The Law of Social Filtration)
  - Low-Power Attracts & Keeps Takers
  - High-Power Discourages Takers
- 2. High Power Rises, Low Power Sinks (Law of Social Buoyancy)
- 3. First Impressions Lock 80% Status (The 80/20 Power Law)
  - 3.2. Patterns of Power Cement Status (Status Cementing™)
- 4. Small Power Moves Add Up ('Death By a Thousand Cuts™')
  - ▯ Example of multiple cuts
- 5. Disrespect Gathers Momentum (Law of The Slippery Slope)
- 6. Weakness Undermines Win-Win (Law of Continued Respect)
- 7. Your Power Is Your Level, Minus Theirs (The Net Effect™)
  - 7.2. At Parity of Power, Lower Warmth Is Higher Power
  - ▯ Case Study: Jocko Willink
- 8. High Status Friends Lift, Low Status Sink (Law of Association)
- 9. Power ↔ Value (The Power-of-Exchange Law)

- More: Take Control of Your Social Power

1. Power Shapes Your Reality (The Law of Social Filtration)

Law 1: Your power in both awareness and skills determines the quality of your relationships, which in turn determines how you experience and see the world

Power awareness helps you assess people and pick character in your life.
Power skills will help you maintain those relationships, and also keep everyone on their better behavior.

While people differ, most also adapt and can be givers or takers depending on the situation, and who they're dealing with.

- In general, **the easier it is to take from someone, the more people will take.**

So how you experience (social) life depends largely on your level of power and skills.

Low-Power Attracts & Keeps Takers

People take more from low-power people because it's easier to.

Low power people advertise that they're easy targets: behave low power, and and fail to check power moves.
That attracts various types of takers, while winners stay away because they prefer other winners.

High-Power Discourages Takers

High-power people instead discourage takers.

High-power people advertise that they're "hardened targets". Takers either stay away or behave better because they know their attempts will fail.

⍰ The Wallet Analogy

In a way, you and the value you can provide are like a wallet full of money.

The wallet is tempting for anyone to take.
But how many people will try and how successful they will be depends on you. And how easy or difficult *you* make it to take from you.

An Italian saying goes:

> **It's the opportunity that makes the thief**
>
> ✒ *Italian proverb*

It's the same in life.
Weak men provide opportunities to take.
Strong men provide opportunities for those willing to exchange (ie.: other high-value individuals).

2. High Power Rises, Low Power Sinks (Law of Social Buoyancy)

Law 2: High power rises up in hiearchies, while low power sinks down

As a general rule:

⚖ **Socially dominant men lead 1:1 relationships, and gain higher status in groups.**

Low-power men follow, and languish at the bottom of the hierarchy.

3. First Impressions Lock 80% Status (The 80/20 Power Law)

Including:

- How you carry yourself in body language, posture, etc.
- Who you engage first: high-status folks, or low-status ones?
- Handshake
- First words
  - Voice

- First conversation
  - Quantity
- First reaction to social challenges

We'll learn how to ace all of them ⍰

3.2. Patterns of Power Cement Status (Status Cementing™)

Unless you proactively change the early dynamics, they "cement" and become de facto hierarchies and ranks.

⚠ ⍰ **Low-status men are passed up for promotions.**
At work, informal hierarchies often become official with promotions and titles.
High-status men get promoted. Low-status ones are "non-leadership material".

Stickiness, More Than Cement

More than cement, think of it as "stickiness".

You can always change anything.
It just takes more willpower, skills, and time.
And you face more resistance -both internal, and external-.

That's why earlier is better.

4. Small Power Moves Add Up ('Death By a Thousand Cuts™')

Law 4: Small disempowering moves add up to large effects

If you never push back, a string of small shoves pushes you to the bottom of the hierarchy.

The first few cuts may seem inconsequential. But submission only invites more (principle #1).
And you eventually bleed all your status away.

Small power moves add up to push you to the bottom

⍰ Example of multiple cuts

1. **He takes the lead + dominant introduction**
   - Leads the interaction: asks “Who are you”
   - Strong handshake, voice, and direct gaze
   - You remain neutral (losing out because of the net effect ⍰)
2. **He leads the conversation**
   - Asks “Where are you from”
   - You answer where you’re from and ask nothing back
3. **He makes a “funny comment” about your nationality**:
   - Ie.: “Lucio Corleone from Italy”
   - You laugh a bit too much
4. **You propose place X to go to, he says that “It’s OK, but place Y is better”**:
   - You say you’re OK either way

He was dominant right away. If you match, you won’t be lower than him. But if you don’t, you keep being pushed down, small cut after small cut.

Assholes will then take up another notch just to use you as a “social peg” to display their dominance:

5. **At the restaurant, he tells you where to sit**, an orange power move
   - He says he prefers someone else close to him
   - You acquiesce

By this point, your low-status in the hierarchy is “cemented”.
Forget women in that group liking you, or guys wanting to befriend you.

5. Disrespect Gathers Momentum (Law of The Slippery Slope)

Law 5: Unchecked disrespect only invites more of it

Early disrespect opens the door for more.

For example, in a relationship, the first insult is rarely the last. Instead, it may increase to a shove, which in turn is the first sign of partner violence engulfing a toxic relationship.

6. Weakness Undermines Win-Win (Law of Continued Respect)

Law 6: Continued respect is a precondition for healthy and win-win relationships

Principle:

⚖ **The more weakness you display, the more they lose respect for you**

And when they lose respect for you, they think you’re below them, or even unworthy of them.
And you can’t have a win-win relationship of equals when others think you’re too far below them.

You *both* lose when you let others disrespect you because the relationship sours for *both*.

- **How to maintain attraction in relationships**

> 6 Proven Techniques to Keep Her Attracted & Committed

7. Your Power Is Your Level, Minus Theirs (The Net Effect™)

Law 7: Power is relative and emerges from the power difference between the actors

If your level is 9.5, you're second in command when a 10 is around.

7.2. At Parity of Power, Lower Warmth Is Higher Power

Power and warmth are two sometiems opposing approaches to socialization.
And at parity of power, **the person with less warmth is seen as more dominant**.

Chart:

More warmth costs you if others aren't equally warm

This holds true for men actively trying to dominate you.
With attacking asshole, warmth sub-communicates kissing up behavior, a form of self-protection with similar dynamics of the 'Stockholm syndrome'.

⚠⚠ **Takeaway**: Watch for reciprocation of friendliness and adjust. Remove signals of friendliness with those who show very little warmth.

⚠ Case Study: Jocko Willink

Jocko is high power, and sometimes low-warmth.

Example:

> **Interviewer**: Everybody go check out the podcast and book (…) Thanks Jocko
> **Jocko**: (barely laughs, expends little effort) Outstanding

Jocko does not thank the interviewer for promoting his book, and shows little warmth.
If the interviewer had been warmer after that, he'd look low-status and "kissing up".

⍰ How to handle dominant but low-warmth men

- Go higher power
- Decrease your warmth (like the interviewer did)
- Go lower energy (be careful with the "high energy" some charisma coaches champion)

8. High Status Friends Lift, Low Status Sink (Law of Association)

Law 8: Being with high-status people lifts you upward, while over-engaging with lower-status ones pulls you down towards their level

This law leads to a host of social and psychological games.
For example:

LOW-STATUS "CLIMBING" GAMES	⍰ HIGH-STATUS DEFENSE
Secretary at law firm seeks friendship with lawyers	Lawyers are better off *friendly* but not too close
Junior employee asks senior employee questions during a presentation to get engagement and investment	The senior should keep answers short. If it's a good question, address the whole team or the boss
⍰ Woman mistreats or badmouths her partner to display she's better (and ready for a higher-value men)	⍰ The man who wants her cannot sympathize with him or he stoops down. He must agree or pile on
Befriend & social climb game Doorman at upscale condo jokes with tenants to sub-communicate he's at the same level. Then one-ups them to gain even more power. ⍰ Bel's example	Tenants are better off friendly, but not too chummy. Strongly enforcing boundaries to put him "back in his place" when he pulls power moves is necessary.

⍰⍰ ⍰ **PRO Tip: Avoid low-value associations, even in your stories**
Never sub-communicate that the people close to you are low value.
⍰ If you talk about poor characters, always A) say or sub-communicate you're not close (ie. "she's just an ex-classmate); or B) display dismissive body language to sub-communicate you don't appreciate the person ⍰.

9. Power ↔ Value (The Power-of-Exchange Law)

Law 9: Power and value are two different but overlapping and mutually influencing constructs

Power and value overlap and complement each other, and people *expect* them to overlap.
For example, a value giver expects to have more power—a fair expectation that you generally want to honor in order to maintain the relationship.

It's the same principle of "no taxation without representation".
⍰ If I give value/money, I expect power.

Microaggressions: 7 Techniques For Self-Defense (W/ Examples)

Lucio Buffalmano · 3 June 2024 · Archived copy · Original

Microaggressions are seemingly small power moves and covert attacks that undermine your status and lower your self-esteem.

Luckily, there are many ways to handle microaggressions.

We are the #1 website and resource on power and social power dynamics, and we taught thousands of men how to handle all types of social challenges.

In this article you will learn 7 techniques to handle microaggressions like a king.
And to make it as easy as possible, we add a ton of examples.

Speaking of which, here is an example of microaggression:

"I love how (your ethnicity) you are" while delivering criticism. Common microaggression masked as a joke

Let's start:

Contents

- 1. Surfacing
- 2. Show Me The Hand
  - 2.2. Give Them Rope (& Scorched Earth)
- 3 Shame Them With Vulnerability
  - 3.2. Shame With Judge Role
- 4. Ignore With Neutral Statements (One-Crosses)
  - 4.2. Drop a quick, shaming comment, then move on
  - 4.3. Ignore With Dismissive Facial Expression
- 5. Own It And Reframe It Into a Positive

- 6. Go Meta: Explain Their Game
- 7. Social Dominance to Draw Boundaries
  - 7.2. Simple line in the sand
  - 7.3. “Affectionate Dominance”

1. Surfacing

To draw them out of their cover and show their nasty intent

You can do it with simple and neutral questions:

> **You**: What do you mean?
>
> **You**: I don’t get it, why are you saying that?
>
> **You**: What’s the irony in that joke, I’m missing it
>
> **You**: Excuse me?

The attacker can either come out in the open, or keep hiding.

If they keep hiding, you maintain your frame of “what was that, not cool” ⍰.

Let them explain.
The more they explain, the more they expand the nastiness.

2. Show Me The Hand

To show the attacker’s lack of courage

The attitude is:

Attack if you want, but don’t be a sneaky weasel. Do it openly.

It can start with surfacing:

> **You**: (look at him) That sounds mean, why would you say that (keep looking, expecting an explanation)

Whatever they say, you then attack the sneakiness.
Ie.:

> **You**: Look man I don’t like these games. It’s not how I am. I like straight talk, and I’ve been nothing but respectful with you. If you have an issue with me, please speak up. No need to hide behind fake jokes

If there are people around, you can involve them.
Ie.: “*Or am I wrong, what do you guys think*“.

Or with kindness:

> **You**: Look man, I wouldn’t talk like that to a freind. So if I’ve done anything that bothered you, please tell me.

Many at this point will half-deny, half-own it:

> **Him**: Nah man, it was just a joke, sorry if it came across the wrong way

That's usually good enough for you to drop it.
You've made your point and showed you're an honorable man who doesn't take disrespect.

In Chart

Techniques #1 and #2 in chart:

2.2. Give Them Rope (& Scorched Earth)

Encourage their attacks to make their nastiness obvious.
The scorched earth approach includes a counter-attack.

You may strategically make yourself an easier target, submit, or retreat.
Or provoke them.

The more they advance, the more exposed they become.

Some end goals of this technique:

- Get them kicked out
- Display their nastiness to the group and/or leader
- Make them talk or brag so they annoy everyone
- Counterattack with the best conditions
  - Record their actions
  - Sue with more evidence
  - Gather examples for the upcoming showdown
- …

Example from the movie "Boiler Room":

> **Guy 1**: (makes a mistake)

> **Power Scalper**: Dumbass
> **Guy 1**: (does not defend, lets the silence expand the nastiness)

Guy 1 lets the leader police it, and gets rid of a nasty competitor.

⍰ Example 2: give them rope to brag

Imagine they use you as "social peg" to brag:

> **Him**: Max didn't know what to do. Unluckily, I wasn't there <— frames you needing them
> **You**: Yeah, what would have you done <— instead of defending, gives him rope to brag
> **Him**: I would have… <— falls for it, starts bragging

⍰⍰ ⍰ Skip self-defense when the attack is idiotic and everyone knows you're an upstanding man.
Instead, strategically expand on the attacker's idiocy.

⚠ **Don't confuse strategic rope-giving with making excuses for inaction**
Only give rope strategically. Ie.: when you have a plan to come out on top.

Use it with written communication (✒ "Verba volant, scripta manent")

General principle:

⚖ **In written communication, only counter-attack after it would be obvious to an ignorant, third-party observer, who the asshole is.**

And of course, written evidence of unlawful behavior is worth its bites in gold.

⍰ Example of failing this principle.

3 Shame Them With Vulnerability

To own and openly display your emotional reaction and/or hurt at the nastiness

Example:

> **You**: (pause, look saddened) I feel it's rude to make fun of people like that
>
> **You**: It pains to hear you would talk to me like that. I don't believe one can have a good relationship without mutual respect
>
> **You**: I'm shocked you'd say that

See more on:

- **Vulnerability and power**

3.2. Shame With Judge Role

To display your disapproval they would even play these low-level games

Example:

> **Her**: (power move)
> **You**: (pause, look away. Then straight at her) I'm saddened you would say that. I think you're a great woman, and I expect better

This is a favorite of mine.
It's powerful, high-quality, and can pull people up to your level. Perfect for relationships, and makes you the leader.

⍰ Using shame against shit-tests
More examples coming ⍰

4. Ignore With Neutral Statements (One-Crosses)

To reply factually and neutrally, ignoring the power move and ill-intention

Example:

> **Him**: Ahaha you really using a calculator for that?
> **Her**: Yes <— factual reply, ignores the nastiness
> **Him**: That's so easy, it's 73
> **Her**: Great, but still using a calculator
> **Him**: See, 73, it was so easy
> **Her**: Yeah, easy and fast, and I can fully trust the calculator <— little power move implying you don't trust him

When their small-time games fail to have any effect, they lose (and you win flying higher).

4.2. Drop a quick, shaming comment, then move on

To remain emotionally unaffected, shame them, and move on

Example:

> **Micro-Aggressor**: Oh, you didn't go back to his place? Wow! (fake-surprised intonation to imply you're "easy")
> **You**: Oh, that sounded nasty.
> Anyway… (move on while looking at others in the group) <— great "shunning move"

4.3. Ignore With Dismissive Facial Expression

No words, but shake your hand in disappointment.

5. Own It And Reframe It Into a Positive

Old example:

> **Him**: LOL, good to see Max tonight, it took a free dinner to make him come out
> **You**: Yeah man, I am saving up indeed (owns it and uncovers the attack). I think it's important to save and invest in your dreams (reframes into a positive)

Then, you can potentially one-up him back:

> **You**: I'm not into throwing money on drinks and random girls

Now *you* imply he's after shallow pursuits (VS you, working on your dreams).

6. Go Meta: Explain Their Game

Explain what their nasty game was

For example:

> **Him**: (grabs her calf) Chub chub
> **Her**: LOL, that's funny, but I prefer we avoid these type of games
> **Him**: ?
> **Her**: Yeah, you know, men teasing women for chubbiness so they get insecure, and men gain more control
> **Him**: No, it was just a joke
> **Her**: Yeah, sure, but it's also what I just explained.
> Imagine if <— P.S.: examples where you put others in the same situation are golden
> a woman "joked" that a man peaked soon, or is not very big. Would you think "it's just a joke"?

More in the relationship module

7. Social Dominance to Draw Boundaries

3 approaches:

7.2. Simple line in the sand

Example:

> **Micro-aggressor**: LOL, good to see Max tonight, it took a free dinner to make him came out (frames you as stingy)
> **You**: Hey man, don't do that

You can use other techniques after that.
Or you can hold your line that it's nasty, and you don't like it.

Very powerful.

7.3. "Affectionate Dominance"

For example:

> **Micro-aggressor**: LOL, good to see Max tonight, it took a free dinner to make him came out
> **You**: Ahaha, Matt is being his usual friendly self tonight (pats Max on the back, or points at him looking at the group)

Or stronger:

> **You**: Ahaha, good to see that Matt is being his usual passive-aggressive self tonight

One more example:

Or better yet, learn it all at once at Power University

Beat Dominant People at Their Own Game: Power Showdowns

Lucio Buffalmano · 10 June 2024 · Archived copy · Original

Want to know how to gain respect from dominant people?

One showdown can make or break it all—lose, and you're dismissed; win, and you're unstoppable.

At The Power Moves, we've guided thousands of men to master respect, status, and attraction.
For example:

> **PU alumnus**: … not only with strangers, friends, and colleagues, but even my family members are treating me with more respect now

So here's how to turn high-stakes escalations into your power play.

Contents

- The High-Stake Respect Negotiation
- How to Win a Showdown
  - 1. Pick The Right Fight
  - 2. Spot The First Push
  - 3. Stop The First Push
  - 4. Stand Your Ground…
  - 5. … Until Their U-Turn Moment
  - 6. Re-empower Them

- When To Expect Showdowns

The High-Stake Respect Negotiation

Showdowns are escalations of disagreements resulting in complete losses or complete victories

Usually, the initiator is very assertive, dominant, or overstepping his authority.

But the victim isn't submitting and relinquishing his rights.
So, as both parties stick to their preferred course of action, an escalation follows.

The results of those escalations have outsized effects on status, "pecking order", and respect.
And, whenever possible mates are involved, also on attraction.

Often, they also have significant *mental* effects.

The loser feels "broken", loses confidence and self-esteem.
And the winner feels strong, confident, and dominant.

How to Win a Showdown

We'll walk through the steps with a real-life example:

1. Pick The Right Fight

Including:

1. **Importance**, and what matters to you
2. **Odds of success**, so that you can reasonably win
3. **Honorable causes**. This is also a CYA approach. Even if you lose defending what's honorable, you still look good
   - Your own self-respect is included in "honorable causes". So you can always escalate on blatant disrespect

In this example, it's about an important value for me:

If I'm not well-placed to make an informed decision, I don't give my vote.

2. Spot The First Push

I explained my values to the person right above me.

She reported the situation, and the lady up the chain intervened:

Hi Lucio

High dominance, dismissive, not addressing my concerns

Please Lucio complete the proxy. You should have received the following mail below where Svetlana or any of the others from our District who are attending in Chicago can be chosen to give Proxy to.

Minimizing

The Links describe very well what and how to do. It is quite easy. Just sit 5 mins quietly and you will have it completed. This will be a great thing for the District 95 in order to place as many votes as possible for the things they have to vote for at TI.

Your club secretary should also have filled in a Proxy. (Only Secretary and Preseident can do this - two votes for each club) I can only see that one person at Mercury is missing so therefore I presume he/she has done it? Please check with them.

I appreciate your time. Thank you Lucio.

Business-speak for "just f*cking do it, no more discussions"

> **Sub-communication**: “stop fuc*ing around, just do it”.

Now it’s not only about values.
But also about status and respect.

If I gave up here, I’d look like a pussy-footer who gives in as soon as a higher-up speaks dominantly.

3. Stop The First Push

As usual:

Calibration.

Be strategic in formal environment with written communication.

In this case, I chose the least effort path:

> **Me**: I’m sure it’s not difficult. My question is if it’s mandatory

Notice how strategic this is:

That question is key.
I'm pretty sure it's *not* mandatory.
So I can choose not to vote, and she can't force me.

Plus, my question "surfaces" that she pushed out of authority and dominance. Without respect for my right to choice.

4. Stand Your Ground...

They may try to push you around again.

Disrespect you more, make up some new "reasons why", get louder, or simply insist.

Whatever they do, you remain steadfast.
Stand your ground with each subsequent push, no matter how often they try.

Here's a good approach:

1. Describe The Event

For example:

- You're still using the same aggressive tone that I say I'm not cool with
- You're insisting on this
- I see you feel strongly about this
- Seems like we see things very differently

2. Re-state Your Point

For example:

- Maybe I wasn't clear, so let me try again…
- Let me say this again…
- What truly matters to me is…

3. End On A (Power-Protecting) Positive

Or help them save face while conceding to you:

- … I hope you can see my point
- … And if we can find a way, happy to do my part on this
- … If X and Y happy, we can go back to collaborating again
- … On my part, I'm always willing to treat you with respect

For example:

> **You**: Look, I felt your tone the first time out was borderline rude, and I appreciate respectful communication.
> But maybe, it wasn't clear enough.
> So let me make it clear it now and hopefully we can go back to collaborating like the respectful people I believe we can be.

⍰ Mindset: strong, *and* respectful

Remember the principles:

Make friends and allies.
And avoid unneeded wars.

Your goal is not to push as hard as possible.
Your goal is to achieve your goal -be it respect, a deal, more money, or whatever-.

And it's best to achieve your goal by ending that escalation as soon as possible, and in the friendliest terms possible.
Whenever possible, power protect, offer olive branches, and propose win-win "early exits" during escalations.

5. ... Until Their U-Turn Moment

They U-turn when they drop the dominance game and instead:

- Justify
- Apologize
- Use a respectful tone
- Propose a win-win
- …

In our example:

> ⍰ **Sub-communication**: OK, you're not the type of man to roll over and I can't win this one. And it's probably better to have you as a friend and ally. Let me be warmer

6. Re-empower Them

Now don't go from defense, to attack.

In most situations, you don't want to browbeat others.
Or "rub your factory in their faces".

Instead, once you win or achieve your goals, you want to rebuild goodwill.

And the bigger your win, the more you want to rebuild them up.

The mindset is:

Give me shit, and I escalate to give you shit back. But change your tack and treat me nicely, and I'll be even nicer.

How to Re-Empower

Examples:

- "**Glad we could clarify this**" to frame it as a misunderstanding -instead of them trying and losing the dominance game-
- **Be warmer right after**. For example:
  - *Cool cool, how are things with you by the way*
  - *Awesome, now we get it. By the way, I heard about X, congratulations :).*
  - *Looking forward to seeing you again*
- **Change topic** for some rapport-rebuilding chit-chat and to avoid ending on a negative
- **Thank them for their role in the resolution**: "*Great, thanks man, appreciate your understanding/kindness/explanation on this*, it always helps when someone can be so open-minded"
- **Take some blame**: "*Great, thanks, I know sometimes I can be a bit touchy/annoying/stickler for the rules…* "
- **Revist the events with a stronger win-win ending**: "*Yeah, glad we could clarify, to me X was bad, but then you understood my point and when you said Y it was all good. Appreciate that man*"
- **Show them it's now win-win**. "*So now we can both enjoy X. Aren't you glad about that (smile to frame it as cheeky/fun because "aren't you glad" can be a power move)*"

7. Enjoy The Respectful Relationship

Showdowns's effects can be everlasting.

Here is her next email, a week after:

Still regarding Proxy and your lacking email address and tlf number at Toastmasters Internatinal 2

Yahoo/In arrivo

ES Eli[redacted]@gmail.com lun 20 ago 2018 alle ore 16:00

A: Lucio Buffelmano

Hi Lucio

It seems your email address and telephone number is not recorded with Toastmasters INternational?
I am receiving a list from USA saying that Mercury is still one of the clubs that has not assigned a proxy and that ajour personal data is missing.

Can I ask you Lucio if there is a reason for this?

The full email here.

She became extra nice in person as well.
And said great things about me to others.

Funny how people find a new respect for you when you don't put up with their bullying ways, eh?

Like Harriet Braiker says referring to manipulators:

> **If he/she is going to come around to a healthier, happier relationship, you will see it happen in response to your strength, not to your weakness.**

Mindset: not about the person, but the principle

For me this was not a question of "dominating" or "winning".

It was a question of principle.
Beginning with the vote: I can't give a vote of trust without knowing facts and people.
And I don't appreciate bossy behavior to "browbeat me" into compliance.

Once she started behaving well, I was cool with her.
And even respected her: she's a smart woman and a go-getter.

But to reach this point, I HAD to push thorugh the showdown.

High-power go-getters sometimes need to be reminded you're not a pushover :).

⚠ Beware Manipulation, Frames, & Beliefs

Our example was about authority and dominance.

The most obvious showdowns are about power and dominance.
In some environments, they may even entail physical escalations.

Those, of course, are the most obvious and easier to stop.

However, be careful.
There is more than pure, direct dominance.

As Bel correctly notes much of showdowns come down to mindsets, values, beliefs, frames, and *conviction*.
Most notable are the beliefs around:

- What's fair or unfair (in the specific event, or in general)
- Who's right or wrong (in the specific event, or in general)
- Who's "good" VS who's a SOB (in the specific event, or in general)

And, with gaslighters, also:

- What's real VS what's not real

A manipulator *may* be high in dominance and use it.
But he may have even better weapons.

If a manipulator can influence what's right, fair, or "true", he may not even need a shodown.
And if it escalates, he can win it far more easily -or frame you as "bad" even when losing it-.

See more on manipulation here:

- **Manipulation power dynamics**

Showdown Principles

General principles;

1. Longer and more intense escalation = bigger consequences
2. Longer and more intense escalation = bigger rapport break and relationship damage (dating exceptions apply)

#2 is why we advice to re-empower after winning a showdown.

Characters: Who Corners You Into Showdowns

Expect more showdowns with:

- Dominant individuals
- Disrespectful ones
- Takers testing for easy targets to take advantage of

 For example, I knew I had to be ready for escalation with this personality:

Unless you reject their dominant tasking, they'll keep treating you like a little dog

In most cases dominant individuals just need the reminder…

… The reminder that you're not another submissive schmuck.

Your reminder sub-communicates "I'm no less than you. Treat me respectfully, and we can get along (and both gain)".

After that, they'll treat you well and you can go win-win.

When To Expect Showdowns

Showdowns tend to happen during the most power-significant junctures.

For example:

1. **Beginning** of relationships, including "tests"

2. **Changes** in established relationships
   - ⚠ **When you empower yourself** and people want to “put you back in your place”
3. **Task assignments**
4. **Arguments** for diverging opinions or interests
5. **End of relationships**, including former mentors who cling to their “teacher role” (example)
6. …

The Science of Social Calibration: 7 Steps to Mastery

Lucio Buffalmano · 17 June 2024 · Archived copy · Original

Social calibration is crucial for social and life success.

Uncalibrated men can come across as “weird” and social burdens.
When they jump too fast into gaining power and popular books about “laws”, they *badly* misapply them.

Luckily, this article is here to help you.

We are the #1 website on advanced social dynamics in the world.
And we helped thousands of good men to gain status, respect, and attraction.

Say a student of ours:

> **PU alumnus**: Power University is literally changing my life *(…)* I learn about social dynamics… More than one person came to tell me that I’m different somehow, for the better

By the end of this article, you will learn advanced social dynamics of social calibration.

Contents

- 1. Calibrate to Their Character: Cooperative vs. Strategic

  - Chart Example of Power Calibration
  - ⍰ Mental Power Move: “Nobody Is Above Me”
- 6. Calibrate to The Personality
- Calibration Is The Meta-Skill

1. Calibrate to Their Character: Cooperative vs. Strategic

This is a fundamental TPM concept:

People differ.
And you also treat them differently.

Some people are honorable and high-quality men.
Who we call “eagles” here.

You want these good people for your best relationships.
Close friends, spouses, business partners, etc.
And **to keep honorable people close *you* must also be an honorable man**.
Give, talk straight, listen, support, uplift, and don’t play any turkey games of course.

And some others are toxic people.
They’re inveterate manipulators, abusive partners, and takers (ie.: make you worse off).
You never want to be open or frank with these people.

This is social strategy 101.
But also *life* strategy 101.
Make sure you understand it -and apply it-.

Read more here:

- **How to outsmart a manipulator**

2. Calibrate to Their Status: Respect More Those Above You

In human socialization, respect goes *above*.

People above you expect a more careful and deferential approach and tone.

In TPM's terminology, people above you expect more power protection.
Power protection is a TPM concept that roughly means "treat respectfully", "save face", and do things at their convenience.

Failing to power-protect above can cost you dearly in life.

⍰ Example of Social Calibration At Work

This is how calibration looks like with a boss:

> **Power-protecting report**: boss, do you think you can send me that document today?
> That way I can finish this task for the client

The elements of power protection are:

- "***Do you think***" is barely a request. It leaves it up to his boss to decide
- **Question format**, more power-protecting than statements
- **Provides rationale for the request**: he needs to finish his work
  - Provides *good* rationale: the boss likely *wants* good and faster customer service

This is also political skills 101.
Bosses like and reward power-protecting reports.

Also see:

- **How to have a great relationship with your boss**

2.2. Be More Direct With Lower-Status Individuals

Conversely, be more direct and "higher power" with those below you.

Of course, in general, treat *everyone* well.
It displays good character and… There's little added benefit in being a gratuitous as*hole.
Plus… You never know who'll become a winner.

However, in terms of pure effectiveness, you may not lose much to disempower those who are:

- Lower status
- Clueless about power
- Doormats and won't do a thing about disrespect

Indeed, disrespecting a pushover may be a power move to gain status and display dominance.
Albeit it may be fair in limited circumstances, we don't recommend it nor condone it—it's a bullying approach.
So watch out: someone may try it on you.

⚠ **Avoid *over*-protecting your employees**
Too much power-protecting as a boss can be mistaken for weakness. The "too nice boss" has little respect.
Also, driven and fast-advancing men prioritize results over pleasantries.

3. Calibrate to Give/Take Exchanges: Give More to Givers

General rule:

⚖ **The more they give, the more respect they expect**

Similar for higher-value men who associate with you.
Even with their simple association, they give you status. That's also a form of giving.

To make the exchange win-win, show your willingness to repay their value.
And one way to do it, is with consideration and respect.

⍰ Example: Social Calibration With A Mentor

Mentors are givers.

They give you knowledge, connections, support, or more.

As per social exchange dynamics, you need to rebalance that.
Or, at least, avoid to make it *too* imbalanced.
So you give more respect, deference, and meet at their convenience –*not* halfway-.

Some examples:

- **Apologize if you cut them off** while they speak
  If you must interject, add right after: "*Sorry, didn't mean to be rude, just wanted to…*"
- **Express gratitude** for their time and advice
- **Don't overly challenge their opinions**—it suggests you're their equal (or above).
- **Apologize clearly and directly** whenever you make mistakes
  - Example: Late at the restaurant? Walk in fast, raise your hand, say "sorry", explain why it was out of your control, show you're angry at yourself, and say you'll pick up the bill

3. Calibrate Your Behavior to Your Status & Rank

As a general rule:

Act slightly higher power than your current status or rank.

Why?

Because you never want to act lower power, of course :).

But you also don't want to overdo it.
People have a subconscious "radar" for those who "act too big for their shoes".
And that often comes at a social cost -or even danger, in some environments-.

The approach of "slightly above" maximizes returns, without over-stepping boundaries.

3.2. Defend more dominantly with lower-status, more smoothly with higher-status

Disrespect from lower-status people is potentially more damaging—so enforce your boundaries more directly.

When a lower-status man one-ups you, think, "What the f*ck is he thinking?"—or "He's out of line, I'll show him," if you're calmer.

The attitude in itself signals your higher status.

4. Calibrate to The Situation

When most people refer to "social calibration", they often refer to the *situation*.

As we've seen, the situation is only one aspect of social calibration.
But it is indeed foundational.

Here at the power moves we like to teach calibration to help you acquire status and attraction, and achieve goals.

So, for example, you:

- **Act higher power during group formation**. Especially, *talk* high power. Contrary to what Robert Greene suggests, empirical evidence shows that simply speaking more during group-formation to gain status
- **Act higher power upon first meeting someone** because first impressions are crucial and most people test you in the very beginning
- **High power and extroverted when you like a girl** in a group to grab attention and show value before talking to her

Plus:

Erring on the side of power is safer than erring on the side of warmth.
That's because fixing over-power is easier than fixing submissiveness.

TPM proverb:

> People welcome friendliness from a dominant or cold man.
> But they will resist his power after he was conveniently (for them) submissive.
>
> ✒ *TPM Proverb*

Also see:

- High power and high warmth

5. Calibrate to Their Dominance Level

Remember the "net effect" of social power dynamics.

In brief, it says that your social power is their level, minus yours.

So as a general rule:

Be higher power with more dominant men, and warmer with submissive ones.

Same for dating.
High-power feminist? You're higher power as well.
Feminine woman who's happy you lead? You can be a bit warmer.

Chart Example of Power Calibration

Imagine you meet a more dominant individual (black).

But you keep behaving as you usually do (lower dominance compared to him):

If you don't understand the chart, please read how a candlestick chart works
In the chart, imagine the guy start talking to you dominantly.

If you don't adapt, you keep losing power over the next few backs and forth. Eventually, the dynamics cement with you "below" him.
He'll get more respect from other men, more attraction from women, and more promotions at work.
And you may not want that.

As a general rule:

The more dominant man moves "above" you in the 1:1 relationship, and higher status in the group's hierarchy.

It's also a good idea to calibrate to their friendliness ("warmth").
The less warm and friendly they are, the less friendly you are as well (heads up: it's possible to be warm without losing power but it's more advanced).

For more examples, Power University.

⁉ Good high-power/high-warmth needs little calibration ⁉
A good blend of power and warmth work great in most situations.
Adopt that approach, and you'll do great in most situations.

⁉ Mental Power Move: "Nobody Is Above Me"

Mind first.

Learning high-power behavior and techniques is great.
But once you adopt the right mindsets, most of the right behavior follows naturally.

Some men struggle in this area because they *over*-defer to higher status, more dominant, or larger men.

We share our full approach in *Confidence University*, but a good technique is to focus on whichever area *you* are superior.

Even if there is a real status difference, that shouldn't affect your sense of self-worth.
Ignore the power differential, feel no difference… And let all external behavior follow naturally.

Bottom line: think highly of yourself, and you'll never be lower status.

6. Calibrate to The Personality

Research shows that people differ on several key traits.

When it comes to power and respect, an important trait is their 'need for power'.
We can think of it as 'power sensitivity'.

Power-sensitive men get offended, angry, or more easily hurt.
And they are more likely to escalate, turn into enemies, or resent you and dislike you.

They are:

- **Dark-triads** tend to be power-sensitive
  - Narcissists tend to have thin skin
- **Low self-esteem**, and you can easily crush their ego. They're more likely to "blame themselves" than you though. So in terms of pure effectiveness, you lose little (but still don't be an ahole!)
- **Fixed mindset** who don't believe they can improve with feedback
- **Dominant and competitive men**, who see more "fight for status"
- **Conservatives and with "masculinity values"** because they see respect as the men's currency

It doesn't mean "be nice to them".
It means that, whenever appropriate or convenient, you power protect more.

PRO Tip: Ensure high-power men know you "respect them"
"Respect" is important to many high-power men.
It's often a good idea to outright say so -especially if you're angry or are talking very directly-.
⁉ Recall the Godfather example again: that's exactly what he did. The sub-communication is "I'm angry but don't take it personally, I respect you as a man".

Calibration Is The Meta-Skill

Social calibration is not basic social skills, but *foundational* social skills.

This is true both for character/traits, and behavior/strategy.

Character-wise, the fluctuating selection model highlights that few personality traits have universal reproductive benefits under all circumstances. Instead, their benefits depends on contexts and circumstances (Furnham and Kanazawa, 2020).

And for behavior and strategy, I quote the *Routledge Handbook of Communication Skills*:

> *If there is one skill that is most fundamental to persuasive success, it is message adaptation – adapting or tailoring one's persuasive efforts to the particular situation faced, the particular audience to be influenced*

And we add that it goes beyond persuasion to include status, attraction, and almost anything related to people skills. To the point that **most social skills advice is wrong unless you calibrate it**.

For example:

- **Be interested to be interesting**, by Dale Carnegie doesn't apply when you're already interesting
- **Talk less to convey power** by Robert Greene doesn't apply during group formation, when dominant men and future leaders talk more
- **Open-ended questions** by Chris Voss don't apply to higher-power people who seek fast information because they have little time to waste

These are all generally good advice… *If you can calibrate them* to the situation, context, and goal.
The ceiling effect also explains that 'good rules of thumb' help you only up to a certain level before you need something different.

For example, the *Routledge Handbook on Persuasion* doesn't have almost a single 'persuasion move' that works independent of context.
So while touch, friendliness, and smiles all *tend* to be persuasive, there are times when they can all be *un*-persuasive.

It's calibration that allow you to apply rules of thumb, while also accommodating the exceptions.

Calibration is foundational to social skills and forms the basis for more advanced applications from office politics, to effective dating, to Machiavellian strategies, to achieve ambitious goals.

Finally, **calibrated men come across as charming, power-aware, and charismatic.**
They influence others naturally, gain respect, status, and are attractive.

High quality men MUST be calibrated.

Socially uncalibrated men struggle to be high-value, high-quality men.
No matter how much they may earn or succeed in other areas of life.
They come across as "weird". And "weird" is one step away from social burden, bullied, and "stuck at the bottom" in life.

This article was a good primer on social calibration.
And we go all the way from basic to mastery level in Power University.

⍰ Power University students become socially smooth operators who acquire respect, status, and attraction ⍰

The Learn Startup Course (Udemy) by Eric Ries: Review

Lucio Buffalmano · 24 June 2024 · Archived copy · Original

The Lean Startup is a six-lecture course on entrepreneurship taught by Eric Ries, and teaching how to effectively bring products to market.

Contents

- Bullet Summary
- Full Summary
- Introduction: “What Is a Lean Startup?”
- Innovation Accounting for Startups (The 3 A’s)
- Creating Experiments to Test Hypotheses
- Lean User Experience
- The Art of the Pivot
- Real-Life Applications
- Cons
- Pros
- Review

Bullet Summary

- **Know the difference between value and waste**: it will determine whether or not your product is one your potential customers even want.
- **Avoid meaningless metrics**: they’re useless for your business’s growth and success.
- **Pivot when your cashflow is underperforming**: which means the current strategy isn’t working

Full Summary

About The Author:
Eric Ries is an American entrepreneur, blogger, and creator of the Lean Startup Methodology, which he explains in his book, *The Lean Startup*.
He studied at Yale in 2010 and became an Entrepreneur-in-Residence at Harvard Business School.

Introduction: “What Is a Lean Startup?”

According to Ries, the answer is a startup that knows the difference between “value” and “waste”.

Most new products built in the world fail because most startups don’t know how to make sure they’re raising the value of their product while avoiding wasting their time—which is what Ries believes makes the difference between a sustainable business that makes progress and one that’s “doomed from the start”.

#1: Entrepreneurship Myths (Extended)

As pointed out in his book, Ries says that determination being what leads startups to success is a myth.

In this course, he also talks about other myths out there that are purported as being what leads someone to entrepreneurial success.

> **Ries**: “I think we have a really deep conceited belief that if you’re just in the right place at the right time with

> the right idea and, of course, you have the right astrological sign and you have the right entrepreneurial attributes and you have a powerful reality distortion field and also you have a really good product idea and you build a great team and it's a really high-quality product, if you just do all those things, then you're guaranteed to make money. And, what's amazing about the stories of real entrepreneurs is that there's an incredible number of them who actually were in the right place at the right time, with the right idea, with a great team who still manage to fail…just having a vision, just having a plan is not enough to ensure entrepreneurial success.

#1.2: How to Start Building a Lean Startup

1. **Recognize that a business plan is only a series of assumptions**: it's only a series of guesses about what *might* happen in the future.
2. **Build your minimum viable product (MVP)**: the most simplistic, rudimentary version of your product that you can use to assess if you're on the right track, test your vision, and test the assumptions of your business plan.

Note: based on how Ries explained this section, I'd say that there could be a step 1.2 saying something like, "Make a quick and simple business plan: in order to check its assumptions in step two or three's testing phases."

#2.: Embrace learning for better entrepreneurship

Ries continues his philosophy that entrepreneurs are managers.

However, he also says that learning is looked down upon in management circles because if a manager claims or reports that they "learned" something, it means they didn't have it right in the planning stage (so they failed to do something they said they were going to do).

That can mean that the manager either:

- Didn't make a very good plan OR
- Made good plan, but didn't successfully execute

So, does that mean you should throw out all learning?

No, because there's a difference between traditional general management and management within the context of effective entrepreneurship.

And that difference is:

> **Ries**: "…the soil of extreme uncertainty that we plant startups in. We don't know who our customer is. We don't know what the product is going to be. We have all these unknowns. And so, the most important thing, if you find yourself in the situation of high uncertainty, is to as quickly as possible find out what you don't know. And, that means that learning really is the essence of what it means to make progress in a startup."

Note: a small adjustment here, I'd say *implemented* learning is the essence of progress. Learning (gathering data) alone is not enough. Action based on that acquisition of valuable information (execution) is far more important.

#2.2: Implement validated learning

Many entrepreneurs allow vanity metrics to distract them from the more important data.

Instead, use "actionable metrics" (more on that a little later).

Note: Artur Belka, writer at Boldare (a product design and development company) put it best (see their Lean Startup Series):

> **Belka**: "If lean startup is all about rapid product iterations closely focused on user needs and requirements, then validated learning is that part of the process by which we learn just how close each iteration is to satisfying the people we're building it for.
>
> In fact, inventor of the lean startup approach, Eric Ries, has described validated learning as 'the unit of progress for lean startups.' In other words, for a lean startup, success is not so much measured by the number of units you manufacture but by the measurable responses from your target users…
>
> …the keyword is 'measurable'. Validated learning is quantifiable, based on data such as revenue, user engagement, and feedback. The result is learning that is evidence-based and actionable, leading to genuine product improvements in each iteration. Done properly, validated learning is remarkably efficient."

Innovation Accounting for Startups (The 3 A's)

#1: What Are "Good" (Meaningful) Metrics?

Ries considers "good metrics" the data that doesn't come from vanity metrics.

Those are the metrics that have (and should have) the most meaning to you, your product, and your business.

#2: The Three A's of Meaningful Metrics

They are:

- A: Actionable
- A: Accessible
- A: Auditable

#2.2: Split Testing for Meaningful Metrics

Here are a few examples Ries shares of how to implement the Three A's (which he discusses in an interview with Farbood Nivi, founder of the education company, Grockit).

Say that you're using the tool of split testing to gather meaningful metrics.

You create two identical landing pages, one with a $99.99 price point and another with a $29 price point.

- **Actionable**: Pick the price point with a higher conversion rate

Or, let's say you're using split testing to determine if you should make a certain update to your product offering—presenting one offer that's your original and another that's your updated idea.

And, the results of the split test reveal a lower conversion rate for the updated version of your offer.

- **Actionable**: Get rid of the update

Now, that's actionability which is focused on gathering the data.

On accessibility, you're making sure people actually review the data.

And, Reis encourages the idea that to increase your data's accessibility, you must increase people's desire to read and review the data.

Here are examples of good and bad accessibility:

- **Bad**: An overly detailed printed report with insurmountable heaps of data packed inside that takes 20 or more minutes to comprehend.
- **Good**: a user-friendly webpage with a simple interface and the important information bolded and highlighted.

However, Nivi notes that even with an accessible platform it can be difficult to get people to pay attention to reading the data.

So, his solution in his company was:

1. Hold a “Hackathon Day” where everyone has to create split test pages.
2. Hold weekly team meetings that focus on discussing the results of the split testing (and turning those results into action)

It may not be enough to simply post the data you’ve collected on your company’s website and hope your employees read it and take necessary action on it.

Making checking the reports more fun and engaging for everyone can minimize attention drop-offs and maximize productivity and results within the team.

That makes your reports more accessible.

Finally, here are some examples of how Grockit made their reports auditable:

- Data on the report is presented in a simple interface
- Key data are bolded and highlighted
- Key unit is the number of people
- Simplify the process

#3: How to determine what metrics to focus on

Here’s how Grockit does it:

1. **Find the major axis that defines the success of your company**: for example, is it user engagement? Scalability? Effectiveness?
2. **Find the criteria your company is running the business on**: examples could be your return rate, sign-up rate, engagement rate with specific features, conversion to paid rate, and so on.

Then, use the answers to these prompts to determine your key metrics.

#4: How to evaluate the success of a new feature

> **The Lean Startup**: “To assess the success of a new feature, look at whether it has moved the key metrics.”

If it moved the key metrics (in a positive direction), then that’s a good indicator that the new feature is moving toward success (because it improved the business).

Creating Experiments to Test Hypotheses

#1: The Three Steps to Creating an Experiment

An experiment is defined in this course as:

> **The Lean Startup**: an experiment is a method of testing a hypothesis with the goal of explaining reality.
>
> In the lean startup, experimentation is the act of using analytical methods to test one or more product’s potential success in the market.

1. Build one or more hypotheses.
2. Choose a testing form for each hypothesis.

3. Test the hypotheses rigorously.

And, remember, your hypothesis doesn't have to be right:

> **The Lean Startup**: "…being wrong moves you away from incorrect paths. Being right, on the other hand, is more often than not an indicator that you are asking the wrong questions."

#2: What Type of Experiment Should I Run?

Hiten Shah, CEO of Kissmetrics, says, "Testing things that are more radically different from each other [than a test like Google's famous 2009 experiment of testing 41 shades of blue on a button to see which one was most effective at getting the most clicks] is usually more effective at providing meaningful information."

Shah also says that early on in a startup, you should aim for more qualitative data (such as by doing surveys) than quantitative so you're more hands-on. He notes that this will allow you to quickly identify patterns about your product that will be useful information.

Lean User Experience

#1: What is Lean User Experience?

User experience is "UX".

Lean user experience is designing with a focus on:

- Customer research
- Product creation and development based on customer needs
- Learning from customers
- Driving improvement using customer metrics

#2: How to Implement Lean UX?

Example 1: During the "Ideation" stage:

1. Have a developer, designer, and product manager come up with 6 ideas each.
2. Tape all 18 ideas to the wall.
3. Vote on ideas.

This leads to more collaboration and better ideas.

Example 2: During the "Optimization" stage:

- Run tests across all variables (more than A/B testing, run A/B/C/D/E/F)

More testing will lead to better improvements.

Note: this is only useful if you're testing important variables. At some point, one can cross over into "over-analyzation" by testing too much which becomes counterproductive, in my opinion.

#3: How to Perform Customer Research for Lean UX?

According to Janice Fraser, former CEO of LUXr (a Lean Startup coaching and training firm for early stage companies), customer research can be gathered through either quantitative or qualitative forms.

Quantitative data can be measured through metrics or analytics. Qualitative data can be observed by speaking with your customers. (Think: TPM doing a basic poll in the forum that shows the number of people who selected a

particular answer versus asking for feedback in a new thread and getting posts from users sharing their descriptive, in-depth thoughts.)

Fraser recommends gathering data two ways:

1. **Conduct "evaluative" usability testing**: by giving a customer your product, asking them to do a task, and watching and learning.
2. **Ask your customers "generative" interview questions**: for example, if you had a magic wand, how would you change this product?

Use usability testing to make your product better. Use generative questions to learn about your customer.

The Art of the Pivot

Main takeaways from entrepreneur, David Binetti's experiences:

- **Keep the vision the same, only pivot the strategy**: because "the product is a manifestation of strategy".
- **No matter how much you believe in your product, pivot when the cashflow isn't right**: remember, pivots help prove the assumptions your product is making to investors (you being one of those investors). So, use evidence to show (yourself and others) why your vision is worth scaling.
- **Don't be eager to rely on vanity metrics to make your product look successful**

Real-Life Applications

- **Utilize split-testing**

Ries says, "Customers very rarely notice split testing and, even then, they (often) understand. Don't be scared to use it!"

I tend to agree.

Cons

- **Again, focuses too much on software**

Similar to the book.

So, the course comes across as less adaptable in certain areas for those with physical products.

- **No downloadable content**

Given that Ries uses long PowerPoints to present and share his ideas, making them downloadable could've been one way to add good value to his students.

Especially, since it's already been requested in the Q&A section of his course by students before.

- **Seems to confuse accessibility with auditability**

You'll notice that a couple of the examples of how to make your reports auditable are very similar (if not the same) as the examples for making your reports accessible.

I think the instructor could have clarified some confusion by openly stating that accessibility deals with one's ability to reach the data while auditability deals with one's ability to (easily) read and consume the data (if that's what Ries was trying to communicate).

Perhaps it was a mistake in the PowerPoint. And, if not, there's still some explaining that could have been done to make things more clear.

Pros

- **Recommends tools (that are still around) for following their process**

For example, the tool Ries recommends to follow the Three A's is Pivotal Tracker (at PivotalTracker.com).

And, he recommends Balsamiq (at Balsamiq.com) for creating basic, MVP mockups of UI design very quickly.

- **Recommends solid attitudes with fun, creative quotes**

As CEO, Farbood Nivi, warmly tells his team, "In God we trust…everyone else bring data :)."

Review

A fairly good course.

Given that this is their flagship course (even linked to from their main website under the headline "Take the Lean Startup class"), I was hoping for more in terms of education. Plus, the presentation of the course is quite old now (a PowerPoint created over a decade ago).

But, Ries asks his interviewees good questions and they give very practical, actionable responses back, making the course quite informative in a valuable way.

If one is looking for a good introduction to the lean startup approach, this might be it.

Do This When You Don’t Remember Someone

Lucio Buffalmano · 1 July 2024 · Archived copy · Original

You must be careful when you don’t remember someone’s name.

Your forgetfulness disempowers them, breaks rapport, disempowers them, and loses you social and life opportunities.

Especially if they remember you.

We explained these dynamics in “what to do when someone doesn’t remember you“.

In this article we focus instead on how to handle when *you* don’t remember them.

And here’s how you handle your forgetfulness:

Contents

- 1. Ask nonchalantly, as if it didn’t matter
- 2: Say “of course” right after they remind you
  - 2.2. Say everything you remember about them
- 3. Move on quickly
- 4. Take the blame
- Principle
- SUMMARY

1. Ask nonchalantly, as if it didn’t matter

The principle is:

The more of a big deal you make it, the bigger deal it becomes.

And the more insignificant you treat it, the more insignificant it is.

So, don't even put pressure on yourself to remember.
Don't even try to.
That would only make it worse as it highlights you just can't remember despite your effort.

Instead, ask them as if forgetting was a normal thing that just happens -it is, after all-.

This is the attitude you want to sub-communicate:

> Hey you! Sure you do seem a known face, and sure I will remember you as soon as you give me more details

This way you take the pressure off and make it seem as if "of course, you know you've crossed paths before, you just don't remember the details".

If she's attractive, you can also pretend not to remember her. Now that's a nice power move ;)

2: Say "of course" right after they remind you

After they added some details, you show that you do start remembering.

So both verbally and nonverbally, you adpt an "of course expression".

Here you are sub-communicating something like:

> Of course we met there and then, know I remember, and it was a pleasant chat silly me!

But what do you do if you still don't remember?
You still react warmly and you comment about the event, and how pleasure it was.

And you can simply be straight and say "I got such a terrible memory man ahaha".

2.2. Say everything you remember about them

If you do remember, say everything you remember about them.

It's a simple but super effective technique becomes the frame becomes this:

> I only needed a little memory jig. I may have no remember the name, but I do remember YOU as a PERSON

And that's key.
You remember the person, you appreciate him, and you build him back up.

In any case, then move on fast to frame it as a small thing:

3. Move on quickly

The more you dwell on how you don't remember someone, the more value you are taking away.

Instead, you want to quickly move on so to make the incident seem as small as possible.
Something like this:

> Right! Of course! Anyway, what have you been up, how's your night going

Then, keep talking about new topics.
Who is he there with, who he knows at the party, share about yourself, etc.

4. Take the blame

This is standard power protection technique.

And don't worry about overdoing the vulnerability.
You're already higher power when they know you, but you don't know them. And Every smart guy knows that you're just being nice to them.

So you can safely take the blame here and say something like:

> My brain is fried

OR:

> Maybe I should go easier on the punch

And then, again, move on quickly.

Principle

The principles of these approaches are the core of this website's credo.

They include:

1. **Make friends, not enemies**. You want to avoid that lots of people think of you as a haughty as*hole. Instead, you want lots of people to think of you as a great guy they'd rather support, than tear down
2. **Be high power**. And you're already high power if they remember you, but you don't remember them. So instead in this case, you need to work more on warmth:
   - **Be high warmth**
3. **Pull people up**. Or, at least, those who deserve it. If this person came to you respectfully and friendly, then… Pull them up, instead of pushing them down.

The mindset here is that you show that you are a socially skilled individual who brings the people around up, not down.
And when you make the mistake of not remembering, you know how to take the blame without devaluing people.

SUMMARY

When you don't remember someone, you are automatically framed as higher value.

That's great, but… You don't want to frame them as too low-value because that's disempowering and breaks rapport.

So you take the pressure off, make it look as if it's just a momentary lapse or communicate that it's your issue. Then move on quickly.

How to Negotiate by Chris Do (The Futur): Summary & Review

Lucio Buffalmano · 8 July 2024 · Archived copy · Original

How to Negotiate is a 14-module online course on negotiation techniques in which Chris Do, the instructor, applies the wisdom from the books *Socratic Selling*, *Never Split the Difference*, and *Win Without Pitching Manifesto* to sales and closing.

Contents

- Bullet Summary
- Full Summary
  - Negotiation Concept/Theory: The 8-Mile Rule
  - Negotiation Concept/Theory: Voice
  - Negotiation Concept/Theory: The Objection Deck
  - Negotiation Concept/Theory: The Socratic Six
  - Negotiation Principles/Strategies: The Raging Bull
  - Negotiation Principles/Strategies: The Hall of Mirrors
  - Negotiation Principles/Strategies: The Double Down
  - Negotiation Principles/Strategies: The Yin-Yang
  - Negotiation Principles/Strategies: The Wolf
  - Negotiation Principles/Strategies: The Five-Year-Old
- Real-Life Applications
  - From Books to Real-World Results
- CONS
- PROS

Bullet Summary

- Never sell. Seek to understand.
- Raise objections first.
- Your prospects will fear the decision: it's on you to make it safe for him.
- Expect your prospect to seek assurance against failure.

Full Summary

About The Professor:
Chris Do is an Emmy award-winning designer, director, CEO, and Chief Strategist of Blind and the founder of The Futur—an online education platform with the mission of teaching 1 billion people how to make a living doing what they love.

Negotiation Concept/Theory: The 8-Mile Rule

> **Voss**: "Say it first. Be the first to raise the objection. (Accusation audit.)"

Chris Do shared the 8 Mile video as an example of the accusation audit. Coincidentally, Voss had used that same exact example on his Instagram to help illustrate the concept to his audience.

**Note: For a full breakdown and explanation of the accusation audit as far as what it is and how it works, check out that section of the Chris Voss Masterclass review.*

> **Chris Do**: "If your clients [prospects] say, 'can you do this', or, 'is you team capable of…', then you are basically going to be put in a very defensive position and you're going to sound like you're not credible, that you're not confident. By bringing it up [first] you're communicating several things. You're signaling to the other person: "this is not my first rodeo, I already know what you're going to say, I'm going to bring it up because I have nothing to hide. And, if you can get over that, we might be able to do business together."

Basically, Chris Do recommends saying your client's objections before they do. That way, it's already out in the open and can no longer be used against you. More specifically, Chris Do recommends the frame stealing as a form of frame blocking any of your prospect's attempts at disqualifying your product or service as a fit.

There's an example Chris Do provides of how he believes the accusations audit *should* be used. The following is what he calls one of the best sales calls that's ever been done to him:

> **Sales Professional**: "Do you know something about us, Chris?"
>
> **Chris Do**: "No."
>
> **Sales Professional**: "Do you mind if I take a few minutes to tell you what it is that we do?"
>
> **Chris Do**: "OK. I'm all ears."
>
> **Sales Professional**: "If you've worked with sales reps before, I imagine that it takes a really long time to get results. It might take months. Actually, several months before you see any results. Is that correct?"
>
> **Chris Do**: "Yeah. That's true."
>
> **Sales Professional**: "So, that means that you're going to have to wait a long time. And, you're not sure. And, you're spending money during this time…if any money's coming back in. And, you might realize four, five, six months later this is a poor fit for you. But, you've already lost half-a-year's worth of opportunities. So, there's an opportunity cost that you're missing out on. The other thing is when sales reps go meet with people, you

> have no idea if they met with them, if the meeting was productive, or if it's gonna yield anything until it materializes a job. The rest of the time, the entire process is very opaque. Is that true too?"
>
> **Chris Do**: "Yes."
>
> **Sales Professional**: "At that point, we understand then, traditional sales is slow, it's ineffective, and it's expensive.
>
> **Chris Do**: *(thinking)* Yep. This guy knows exactly my business. He knows all my pain points and my feelings.
>
> **Sales Professional**: "Our entire process is against all of that. You're going to be able to see what we do on a daily basis. You're going to see who we connect with, who responds, and who's going to call you. And, it's not going to take us months to get these results, it's going to take us *days*. Once we set up the template and we get your approval, we move forward and we start hitting it hard day one. And, you're going to see exactly what's happening. Would you like to work with us?"
>
> **Chris Do**: *(thinking)* You're saying everything that I felt, you are the person.

Now, I disagree here. I don't believe this is an accusation audit—a means of removing objections. I believe this is tactical empathy—a means of making the other side feel understood—without the use of Voss's tactical empathy techniques such as labeling or mirroring (AKA: "parroting").

The above is more along the lines of how Daniel Pink might recommend doing sales. As for what Voss might recommend, I can actually see the same scenario playing out more or less like this:

> *(…)*
>
> **Sales Professional**: "I took a look at your business to prepare for this call. And, *(Chris Voss label)* it looks like in your time working with sales reps before, it takes a really long time to get results."
>
> **Chris Do**: "Yeah. That's true."
>
> **Sales Professional**: *(Chris Voss label)* "It also seems like, in your experience working with reps who *go out* to meet with people, you have no idea if they met with them, if the meeting was productive, or if it's gonna yield anything until it materializes a job."
>
> **Chris Do**: "Yes."
>
> **Sales Professional**: *(Chris Voss label)* "So, it feels like traditional sales is slow, it's ineffective, and it's expensive."
>
> **Chris Do**: *(thinking)* Yep. This guy knows exactly my business.
>
> **Sales Professional**: "Our entire process is against all of that. You're going to be able to see what we do on a daily basis. You're going to see who we connect with, who responds, and who's going to call you. And, it's not going to take us months to get these results, it's going to take us *days*. Once we set up the template and we get your approval, we move forward and we start hitting it hard day one. And, you're going to see exactly what's happening. *(No-oriented question)* Does that sound like a ridiculous idea?"
>
> **Chris Do**: "No."
>
> **Sales Professional**: *(Move From "No" to "How" technique)* "How would you like to proceed?"

That's the exact same script and framework leveraging what Chris Voss might recommend as the right techniques.

Negotiation Concept/Theory: Voice

Chris emphasizes the importance of communicating with persuasive vocal tonality.

He notes from the 7/38/55 Rule in *Never Split the Difference*, only seven percent of your intended message is

communicated by the words you choose. A whopping 38 percent is communicated by how you say it with your voice.

Lucio's note: tonality is important, but that reference is often misused
That's the most misquoted study in the world :).
See here:

***Inquisitive and Curious**

"An upward pitch of voice. Carry a level of excitement and curiosity when you ask."

***Speaking Smile**

"Smile when you speak. You can tell if someone is smiling."

***Late-night FM DJ**

"Smooth, slow, methodical, and deep. This is calming. It makes it sound like you're in control. Conversely, if you sound frantic, you make others nervous."

**Note: For more on the recommended tones of voice for negotiation, see that section of the Chris Voss Masterclass review.*

Negotiation Concept/Theory: The Objection Deck

As WSJ bestselling author and entrepreneur Patrick Bet-David says, "Proper preparation prevents poor performance."

An objection deck is a collection of your most common objections and your plan for responding persuasively. And, one thing that should be in your objection deck is a list of mindsets you can read to prepare yourself before each sales call.

Here are the mindsets Chris Do recommends:

- Your prospect's time is valuable *(= They have the money, power, and ability to hire you, but you don't have the power to hire them. Therefore, they have way more leverage than you. But, if they've already agreed to call and talk with you, they're already interested in working with you—or someone just like you. So, you're both on equal footing in this negotiation)*
- Start with good will *(= Be attentive, ask more questions, listen longer, and be slow to prescribe advice. If you cut them off or give advice too quickly, you will lose good will with your prospect)*
- They have the desire to purchase a solution *(= They have a problem and they need to buy a solution. That solution is you. They need you. Therefore, you're both on equal footing in this negotiation)*
- They have a problem to solve *(= By delaying this decision to purchase a solution, they're costing themselves more time and more money. Therefore, you're both on equal footing in this negotiation)*

Negotiation Concept/Theory: The Socratic Six

Named after Socrates the great philosopher, the "Socratic approach" is less about telling people convincing or persuasive arguments and is more about asking people strategic questions that often leverage powerful frame control techniques.

Negotiation Principles/Strategies: The Raging Bull

"The bull seems to be angry most of the time…when it sees red, it charges forward. And, creative people especially are very sensitive to other people's emotions and they don't like it when there's a lot of drama and anxiety. So, we'll do just about anything to avoid this [bull]. but, that's exactly what you don't want to do. When the bull charges,

don't run because [if you do] it's going to hook you with its horns. What you want to do is stand your ground and to look it in its eye."

The "raging bull" is an analogy for a disrespectful, rude, or socially abrasive prospect. They might say something offensive or insulting toward you if they get heated. And, Chris Do recommends dealing with "raging bulls" the same way Chris Voss recommends:

"Label the emotion. Acknowledge the emotional state of the other person. Demonstrate empathy…FM DJ voice is probably the most important for this one."

Ex:

> **Prospect**: *(frustrated)* "It shouldn't take this long"
> **You**: "It sounds like you're upset at something…What happened?"
> **Prospect**: *(they tell you a story)*
> **You**: *(listen to understand)*

Voss actually teaches to avoid the urge to add some follow-up or to talk at all after using a good label. And, here, Chris uses "what happened" as a follow-up.

Voss says, "Good labels must have the chance to sink in for it to have its effect. If you explain or follow up after a label, you're stepping on it [the label you just used] and decreasing its persuasive power/ability to influence."

Negotiation Principles/Strategies: The Hall of Mirrors

Here's the idea:

"Answer a question with a question if you don't want to answer the question…Not all questions should be responded with an answer."

You're basically reflecting a question you don't want to answer back at the asker. The example Chris Do gives is when he was a teenager unable to get in touch with his girlfriend for an entire day. He mentions that this was a time when he was very jealous and wasn't very secure or comfortable with himself. So, he was starting to go crazy with thoughts of the worst.

The next day he was finally able to get in contact with her. The conversation that follows goes like this:

> **Chris**: "Hey, where were you? I tried calling you all yesterday, usually you answer, you had me really worried."
>
> **Her**: "Where'd you think I was?"
>
> **Her**: "Do you not trust me?"

That's how this technique works. A question you don't want to answer reflected back at the asker. In this case, she even followed up with a second question—a second mirror in the hallway that was that conversation.

Ex:

> **Prospect**: "What assurances can you make that this will work?"
> **You**: "What kind assurances do you need to have to make this work?"

Negotiation Principles/Strategies: The Double Down

"Challenge an absurd objection by simply agreeing. Call the bluff."

Ex:

> **Prospect**: "How hard can designing a logo for my business be? I have a subscription to Adobe Creative Suite." *(challenges the frame that your work is difficult and, therefore, valuable enough to warrant your price point)*
> **You**: *(agree)* "You're right, this isn't very hard. You can probably do this yourself, since you have the Creative Suite. It's a powerful set of tools."
> **You**: *(pivot, retreat and have them follow)* "You're probably going to pay too much for me to do it. Why not just do this yourself?" *(Now they have to chase you)*
> **Prospect**: *(agree)* "I'm not really good at it. It'll take me too much time to do it".

The game of doubling down on their value-taking frames to call their bluff is an OK strategy, in my opinion.

The problem I see with this approach is that you're thread-expanding on bad frames. And, in general, that's a poor social strategy. And, sales is a social game.

Negotiation Principles/Strategies: The Yin-Yang

By far, my absolute favorite Socratic approach in the entire objection deck.

The overarching framework relies on this foundational point: "If this is true, is the opposite also true?"

The tactic lies within testing the other side's symmetry of logic and then looking for one instance where their frame is not true. As with almost all frame control teachings here, it's easier explained with an example:

> **Prospect**: "Your team is too small!" *(implied frame: big teams are better)*
> **You**: "Would you be more comfortable with a bigger team? Are bigger teams *always* better? Do you feel like bigger teams are more focused and attentive?"
> **Prospect**: *(thinking)* No.
> **You**: "Yes, our team is small. But if you work with us, you work with me. The cost will be less than a bigger, bloated team. And you'll have more personalized attention."

Just as the accusation audit recommended by Chris Do and Chris Voss is frame stealing as a form of frame blocking, the yin-yang approach is frame flipping.

Here, Chris Do has taken the frame flip and outlined a step-by-step process to create your own for all your business weaknesses. I'll explain that process with an example provided by Lucio:

> **Lucio**: "On one occasion, Reagan's flame flip coupled with his humor helped him win the presidency.
>
> Reagan's old age was an issue in the campaign, and when asked about it, this is how Reagan flipped it:
>
> > **Reagan**: 'I am not going to exploit, for political purposes, my opponent's youth and inexperience.'
>
> Big laugh by everyone, and he turned weakness into strength.
>
> Reagan *accepted* the original age frame, but twisted it to make a handicap for his opponent, not for him."

The process is:

1. Do your best to identify their implied frame *(= a younger president would be better)*
2. Ask yourself, "If this is true, is the opposite also true?" *(= if a younger president would be better, is an older president always worse?)*
3. Do your best to identify one way in which the opposite is untrue *(= an older president brings more experience to*

the table)

Boom!

This process is the same as above where Chris Do accepts the prospect's original frame that his team is small and twisted it into a handicap for his competition (a bigger team means less attentiveness for you and your business). And, you can use this process to flip any of your own weaknesses into strengths.

Negotiation Principles/Strategies: The Wolf

A wolf howls. And, that's the entire technique here. Howl by asking your client "how".

This is best used when your prospect asks for a very difficult or impossible request or task, such as reducing your rates.

Ex:

> **Prospect**: "I can make this deal happen if you reduce the estimate by 30%"
> **You**: "How do you propose we pull 30% out of the budget, and still give you the same product?" *(stay silent)*

By asking, "how do you propose we do this?" you're setting a collaborative frame similar to asking, "What can we do to make this work?". You're recruiting the prospect to work with you on achieving a solution that works for everyone.

Chris uses this technique to highlight to the other side that what they're asking for isn't fair. For example, if they ask you to cut your rates, Chris Do recommends asking "how do you propose we do this" in order to let the prospect figure it out themself. And, when they can't, that will serve as justification to keep your rate right where it is.

But, I believe that if they can figure out a way forward that gets them what they want while still keeping the deal a win-win, it's still a great technique to use. Not for making the other side give in to your numbers, but for exploring new ideas and expanding the pie for everyone.

Chris Voss actually calls this technique "forced empathy" and recommends going about it a bit differently from how Chris Do teaches. Here's an example of how that might play out:

> **Prospect**: "I can make this deal happen if you reduce the estimate by 30%"
>
> **You**: *(forced empathy)* "How am I supposed to do that?"
>
> **Prospect**: *(short pause)* Reduce the estimate.
>
> **You**: *(forced empathy)* "What challenges will I face if I do that?"
>
> **Prospect**: *(longer pause)* "I guess you'll lose some money, but like I said, it's the only way I can make this deal happen. So, 70% of something is better than 100% of nothing."
>
> **You**: *(Chris Voss label)* You said one of the challenges I'll face is that I'll lose money. *(forced empathy)* How do I overcome the challenge that I have here?"

**Note: For more on what "forced empathy" is and how to do it, see that part of the Chris Voss Masterclass review.*

Negotiation Principles/Strategies: The Five-Year-Old

Chris Do says that this technique is used by basically doing what five-year-olds do: ask "why".

Ex:

> **Prospect**: "Why should I hire you?"
> **You**: "I don't know…*(pause)* I'm curious, why did you call me?"
> **Prospect**: "Well, you have a great portfolio, and you came highly recommended through our friends."
> **You**: "If you trust your friends' recommendations, and you like my portfolio, what else do you need to know in order to make your decision?"

This is great. This is what's also referred to as "Putting Out the Fire (Rational High Ground): Analyze Motivations" in Yale's negotiation class:

> **You**: "I can only pay up to $450,000."
>
> **The Other Side**: "I have another offer of $500,000 [crosses arms and locks eye contact] *(impied frame: why should I take your deal?)*."
>
> **You**: [Ask yourself] Why did he come here? If he had another offer and he didn't think I would go up at all or very little, he wouldn't even be dealing with me. Why would he rather do a deal with me? What do I have that his alternative does NOT that he wants?

The only difference is, with this technique, instead of only analyzing their motivations you're choosing to actively ask for them.

**Note: The very technique of leveraging "why" this way is reminiscent of Daniel Pink's five whys technique. For more on how that works, take a look at that section of the Daniel Pink Masterclass review.*

It's also worth noting that Chris Do mentions he has no interest in "jumping through the prospect's hoops" in one of his sales roleplays. It makes it seem like he has an idea of the "prove yourself to me" judge role dynamics.

One of Chris Do's mindsets is that him and the prospect are on equal footing and that, if they're on a call together, the prospect is already interested in working with him. So, when asked a question like "why should I hire you", he doesn't believe in playing their game by explaining all of the reasons he's the best.

Now, sales is not the same as seduction, but if I had to create an analogy, I would say it's similar to being on a date with a girl where she says, "Why should I choose you?" Chris believes that, if she's already agreed to go on a date with you and actually showed up, you've already proven yourself enough as being worth choosing. And, that answering that question by jumping through her hoops would only disempower you in that negotiation for her heart.

Chris Do even goes so far as to say that what makes him different is that he doesn't want the prospect. He only wants people who *want him*. That makes his sales style very far away from ABC ("Always Be Closing") and helps him come across as more detached from the outcome as well as the negotiation. That in itself helps him come across as more persuasive.

Then, there's also the mindset that you're both on equal footing. She's on that date for a reason—she's looking for something, she has a need. And, you know you're what she needs because she's already expressed enough interest in you to go on a date with you. So, the only question left should be if she's comfortable with all the ways in which you're imperfect (i.e. if your prospect is comfortable with your price).

Real-Life Applications

The Yin-Yang Approach

I remember a few years back I had started to dive into more about self-development. On that journey, I came across a blog called Masculine Development.

The site owner, Jon Anthony, is a pick-up artist who decided to pursue "looksmaxing". Exactly as it sounds, it's the

act of maximizing your looks.

He basically got really jacked to the point of becoming a fitness model. And, to the point where attractive women would tease him about having man-boobs.

Here's how he mixed frame flipping with humor framing to deal with it:

1. Do your best to identify their implied frame *(= a man should not have boobs)*
2. Ask yourself, "If this is true, is the opposite also true?" *(= if a man should not have boobs, is a man having boobs always a bad thing?)*
3. Do your best to identify one way in which the opposite is untrue *(= Jon would say with a smile, "Hey, I'm getting in touch with my feminine side*

And, with that, he put a tool in his toolbelt to come across as a more confident, less insecure guy.

CONS

- **Not Always Accurate to the Source Material**

Sometimes Chris Do misuses Chris Voss's techniques. You'll often notice Chris Do adapting Voss's techniques to how he would prefer to execute them for sales. Not a bad thing, but if he's going to reference Voss so often to where he puts his picture and quotes from *Never Split the Difference* on the screen, it would feel more like I'm not being fed misinformation if the techniques he shares were used properly in his examples and role-plays.

- **The Mindsets Were Sometimes Questionable**

Chris Do encourages the mindset that if someone agreed to speak with you on the phone and is now on the phone with you, they're interested in working with you. He also says, "Also realize that the client has a problem that they need to solve and that the only way to solve the problem is they need to purchase—or spend money to purchase—or buy a solution. Guess what? That's you."

I believe that how true this mindset is for you depends on your funnel.

If you have little to no marketing or your marketing is very vague, a prospect might call you simply to get more information. That means they're interested, yes, but it also means that depending on the information you provide they may decide you're not what they're looking for. Your marketing didn't provide enough information to know if they're *really* interested, so there's no guaranteeing that you're their solution yet.

Similar to the example with the date, just because a woman agreed to a date with you doesn't automatically mean *you're* the one to fill all of her needs and make her feel whole. That mindset can make you cocky when you should be confident and arrogant when you should be humble.

PROS

- **Incredibly Informative Workbook**

Having gone through the program, I feel like the workbook could've been provided on its own and would have been enough to level up your sales game even if only slightly. The workbook goes over the best uses for each Socratic approach, how to use them, and what tones of voice to use with each one.

- **High-Quality Video with Up-To-Date Information**

After having gone through my fair share of courses, I've been hit with a few that weren't worth the price tag. Even one that was over a decade old. You can ignore this pro, but you'll appreciate it more if you're ever hit with a course with low-quality production and outdated, irrelevant information.

- **Added Resources**

Chris Do included a module that contained bonus tips, references, added resources, and an array of helpful attachments and links.

It's a nice surprise that makes one feel like this was money well spent.

The Power of Presence: Book Summary & Review

Lucio Buffalmano · 15 July 2024 · Archived copy · Original

The Power of Presence (2011) helps you focus on and leverage your presence to become more charismatic as a leader.

Contents

- Bullet Summary
  - Chapter 1: What are you thinking?
  - Chapter 3: Stopping the Negativity Loop
  - Chapter 5: Go Ahead, Trip Over Your Own Perfectionism.
  - Chapter 6: Trust – The Ultimate Gatekeeper
  - Chapter 7: Emotional Intelligence
  - Tips for Individuality
  - How to Inspire
  - Chapter 10: From Vision to Visionary
  - Chapter 11: Declarations Create Possibilities.
  - Chapter 12: Strategic Shock Value (and other ways to create shining moments)
  - Chapter 13: Presence in a Pinch
  - From Books to Real-World Results
- Review

Bullet Summary

- **Be genuine to cultivate authentic presence** that allows you to bond and connect with others

- **Quit your negative thoughts** to gain confidence and self-esteem
- **Strike a balance between power and warmth**, show some vulnerability sometimes

Chapter 1: What are you thinking?

Negative thoughts are alive and well, they include:

> I can't speak in public.
>
> I'm not a people person.
>
> I'll appear self promoting.
>
> I'm an introvert and can't network well.
>
> I'm just not good in these situations.
>
> I don't have what it takes to play the office politics game.

Uncover your negative thoughts: Find a quiet place to contemplate what you believe about your presence. Write down any negative thoughts that may hold you back.

1. What do you currently think about your own executive presence and your ability to affect it?
2. What assumption is yours that is getting in the way of holding you back, and why? How long have you felt this about yourself?
3. Try on the idea that you already possess the presence you seek in the various areas of your life. What's your reaction?

Chapter 3: Stopping the Negativity Loop

Let no negative thought go unchallenged.

A specific reframe tool is to make the negative thought a positive one, with two characteristics: Specific and Temporary.

For instance:

> *Change "I'm too busy at work to focus on my own leadership abilities" to "This quarter has been a particularly busy time in my job. If I can't make time soon for professional development, then I'll need to make some changes."*

Tips for Intentionality (hand picked from Part 1):

Like a buffet, choose what advice works for you/what area you have been neglecting with regards to your presence.

These tips can improve your sexual market value as well, look at Dating Power Dynamics by Lucio Buffalmano for more tips in increasing your SMV):

- Smile more
- Focus on what you dress like (what are you trying to say: casual/professional-entrepreneur/pua)
- Your personal brand should be two to three words tops (eg, "Motivating and Visionary" / "Credible, Caring Catalyst")
- Your actions can undermine or underline your presence.
- Authentic presence is a delicate balancing act of understanding other people's perspectives, communicating so that they can best hear you, and staying true to yourself.

Chapter 5: Go Ahead, Trip Over Your Own Perfectionism.

What makes a Great Boss or Colleague?

Kristi alludes to the fact that what one person can do, you can too. This starts with being honest about what makes a person's presence strong and relatable. In terms of a Strong presence:

Do the following thought exercises and see what you learn.

Think of five people who have been influential in your career. They can be supervisors, colleagues, or mentors. Whom would you go and work with again, in a heartbeat, if given the opportunity?

List five qualities to describe each of them.

Go back and divide qualities into two categories:

- "Competence" refers to hard skills, such as intellect or functional expertise.
- "Connection" refers to social skills, like emotional intelligence, empathy, or shared values.

What is the ratio of Competence to Connection?
Do you notice a pattern?
In terms of a Relatable presence: It is in your best interests to show the (occasional) vulnerability.

Lucio's note: be careful with vulnerability
Vulnerability has become a buzzword, but if you're not sure, it's best not to do it at all.
See:

- Why vulnerability is not power

> Vulnerability Is NOT Power: Don't Believe The Hype

For instance, in another book, No More Mr Nice Guy , the author Robert Glover says that the Nice Guy who tries to be perfect and flawless actually isolates himself from forming a human connection.

And Power of Presence states that you actually gain more power/influence by showing the occasional weakness/shortcoming.
Irony, right?

Is perfectionism undermining you?– Write down the answers to the following questions.

What perceived weaknesses or challenges about yourself are you holding back- to try to appear more perfect-that might create a connection point with others?

Are there struggles or failures that you hide or routinely display?

What could you reveal about yourself that would help others understand who you authentically are?

Chapter 6: Trust – The Ultimate Gatekeeper

What items are on your trust meter? Write down the values and qualities you associate with trust.

Trust-Building Moves: When you feel that you don't know what to do next and the relationship is still important to you, ask yourself: "W*hat action would I take if I knew it would be accepted and appreciated?"*

Establishing trust when dealing with Failure: For leaders, it's okay to fail, just no to hide. (Again this is a parallel in *No More Mr Nice Guy*– feeling shame is okay, however feeling shame and trying to cover it up or omit it qualifies as Toxic Shame, which is injurious to your self esteem and relationships) When something does not work, bring it up, address what happened, and take accountability. Explain what you learned and state what's next.

We All Seek out a Trusted Presence: Ask yourself which of your relationships you would like to improve, and then make a move to extend trust in that broken dynamic. (If not now, when?)

Chapter 7: Emotional Intelligence

There's more than one way to empathise.

No doubt you will gravitate toward some of these characteristics, or a blend in them, in yourself or others. Do what's authentic to you.

1. **The Coach** shows empathy through a mixture of tough love and strong support.
2. **The Mentor** makes you feel that your success is always top of mind.
3. **The Truth Teller** believes that you treat employees as adults and free agents who have a right to hear it straight.
4. **The Buddy** seeks to be considered a colleague first and foremost.
5. **The Relater** has an intuitive ability to grasp the emotions of others.

Lucio's note: Machiavellianism and power are as important as emotional intelligence
Emotional intelligence has become a buzzword since Daniel Goleman popularized it.
See:

- The myth of emotional intelligence

> The Myth of Emotional Intelligence: Machiavellis At The Top

Tips for Individuality

- **Storytelling beats statistics** when it comes to retaining information and making a presentation interesting. They're also enjoyable to tell.
- **Keep your stories/testimonies short**. Around 2 minutes tops.
- **Ask for feedback questions** can increase the perception you are a team player, for instance: "What went well?" "What could I do better next time?"
- **Do what you feel is right**, no matter the outcome.
- **Taking the high road** is an investment in your future- even if you can't see it at the time. This is the second most important tip of this book.
- **Questions beginning with "What"** or "How" are used more by Empathetic listeners than "Why" questions.
- **Use email to deliver positive or neutral information…**
    - **And talk in person / leave a phone message when delivering bad news**
- Sending voice messages makes you have to learn and practice voice tonality, keeping the message short etc.

How to Inspire

Change starts with you: It's one thing to find new concepts interesting and quite another to take consistent action and make sustained changes.

To sustain a new mental roadmap- we have to focus on what we are trying to accomplish with frequency, intensity, and deliberation.

To create lasting behavior change:

Step 1: Make room for reflection.

Action: In a quiet room, reflect on the ideas you have read in this review. Which of these ideas created automatic discomfort, and which felt right to you?

Step 2: Focus on solutions (instead of problems)

Action: Ask yourself: "*What would success with this concept look like for me?*" / *"What strengths do I bring to this presence concept?"*

Note: At the end of each chapter, The Power of Presence has an "Ideas I want to Try" section, with three empty lines to fill in.

Step 3: Strike when the iron is hot.

Action: Reread what you filled out in the "Ideas I want to Try" sections. Select one tool to put into practice and then create as much detail as possible with it. Sketch, express, imagine actual scenarios.

Step 4: Do it- (at least in a small way)

Action: Make a commitment to yourself. Tangible, discrete steps garner change more than attempting to reach a faraway place you've never been before.

Step 5: Flow state.

Action: Set a goal for yourself that causes you to extend your capabilities or puts you on the path of mastery. The joy of Flow State is the process.

Chapter 10: From Vision to Visionary

A visionary creates shared understanding: Truly visionary leaders use their presence to encourage others to be part of the vision.

Being a visionary isn't just for CEOs, futurists, or industry gurus. **All leaders can and should view their role as a visionary for their domain.**

Chapter 11: Declarations Create Possibilities.

Declarations can be either personal ("I will write a book this year") or group oriented ("We will out-market our competitor"). The content is secondary. The belief and commitment are primary.

When we put our declarations out in the world, even if we don't meet them, we events further than we would have otherwise. We put our selves on a broader path, and learn more.

Anyone, at any level, can use more declarative language in communications.

Chapter 12: Strategic Shock Value (and other ways to create shining moments)

Inspiring is being interesting, whether it's a bold view, impassioned rhetoric, or even being shocking.

Accept the spotlight (as a leader) and use it to a greater and positive advantage.

Think of two or three peers with a track record of inspiration & success in your organisation.

Step 1: Observe them in action. Analyse as many scenarios with them as possible.

Step 2: Ask: "What do they talk about?" "What does their presence convey?" "What can I learn from observing them?"

Chapter 13: Presence in a Pinch

Presence moves from inward to outward (think of the words in the Presence Model: Intentional, Individual,

Inspirational).

Tips for Inspirational Presence (hand picked from Part 3):

- We don't walk around with the same brain our whole lives – and that makes us profoundly glad
- Stating your intended change in public creates intrinsic motivation to achieve it.
- Accountability does not have to come from a professional coach: colleagues can work too.
- A sense of purpose inspires people to self-motivate.
- Language holds power. When it's filled with confidence and passion, and backed by our authentic presence, it can transform us.
- Saying "I will…" or "I plan to…" inspires others.
- In networking yourself, when all else fails, remember that people love to talk about themselves. You can practice your Emphatic listening this way(!)
- Be clear about what you'll do, then follow through. This is the most important idea in the book.
- Focus on how to be of service to the other person (even if that means you'll miss out on something this time around.)
- When you have to present, contemplate on how to be different (rather than one of the pack)

How to Build an Empire: 8 Steps to Rule The World

Lucio Buffalmano · 22 July 2024 · Archived copy · Original

How do you build an empire?

On TPM we specialize in power dynamics and strategies and thousands of students say what we teach works.

So in this article, we'll show you how to build an ACTUAL empire.

The "empire-building pyramid", from most foundational to the top

Contents

- 1. Focus On The Economy
  - ▯ Example: The Shopkeepers Who Humiliated Napoleon
- 2. Attract Top Talent…
  - … To Build Your Technological Edge
- 3. Foster Internal Cooperation, Banish Cheats & Clans
  - 3.2. Break Internal Clans & Promote Individualism
  - 3.3. Foster Individualism For 'Impersonal Pro-Sociality'
  - PRO Tip: Enforce Monogamy For Social Stability
- 4. Master Politics & Strategy
  - 4.2. Make Allies, Not Enemies
  - ▯ … But Build-Up Weak Enemies to Galvanize The Populace
  - ▯ Example: Militarist Germany VS Successful Empires
  - ▯ 4.3. Make Your Allies Stronger (& Dependent): US Example
  - 4.3. Pick Your Battles
- 5. Strengthen & Conquer With Culture

  - 5.2. Foster patriotism & hard work, punish the defectors
  - 5.3. External: Export Culture For Soft Power
- 6. Build A Strong Military
- 7. Keep Liberalism & Socialism In Check
  - 7.2. Foster ‘Protestant Ethic’ & Internal Locus of Control
- 8. Mindset: Focus On Infinity & Human Development
  - Think Infinite
  - Do It For Humanity: Become Prestigious
- Avoid These Fools’ Traps
  - 1. Keep It Civil-ian: Don’t Let Generals Lead
  - 2. Strong Military, Without Militarism
  - 3. Wars: Only On A “Strictly Necessary” Basis
  - 4. Prevent Charismatic Dark Triads From Gaining Power

1. Focus On The Economy

Most people have it backward.

They start from the army.

Instead, *economies* produce strong armies that build empires.

Economy fuels everything:

- **(Military) technology** → military superiority
  - Research → power projection into the future
- **Industrial output** → standing armies, win long wars
- **International trade** → international leverage, web of allies and supporters
- **Abundance** → stable and strong civil societies
  - Job opportunities → everyone contributes to empire-building
  - Safety nets → prevent internal rebellions
- **High quality of life** → attract top international talent
- **Thriving culture** → soft power (export language, education. Persuade others)

Germany won early WII battles with tank-driven “blitzkrieg”. Then lost the war being out-produced by 4 to 1. More of the same for planes and warships

⍰ Example: The Shopkeepers Who Humiliated Napoleon

Napoleon mocked the British as a “nation of shopkeepers”.

He, the great general, looked down on commerce.

Well… Guess who won?

The merchants won.

Napoleon's costly wars led to his downfall. It's a historical refrain

Economies fuel empires.
And it's even more true since the Industrial Revolution.

2. Attract Top Talent...

The brain of smart and driven men fuels progress and maintains empires.

Including:

... To Build Your Technological Edge

It only took a slingshot for David to beat Goliath.

Who knows whether that story is even true.
However, the concept behind it *is* true.

And it's even more true today.
Give a wimpy teenager a rifle, and he'll beat any disarmed special op.

And it will be even truer in the future.
Give the wimpy teenager drones, and he'll beat any platoon.

3. Foster Internal Cooperation, Banish Cheats & Clans

Pluribus Unum -"one from many"- is a traditional US motto, reflecting the importance of unity and cooperation in projecting power beyond the individual level.

An empire is nothing but a group of men cooperating to project power.

To support this view, evolutonary psychologists suggest that the secret to humans' success is cooperation.

Henrich also provides compelling evidence that the better-cooperating groups out-compete the more fractured ones. That's how we superseded kin-based tribes and got to large nations and interconnected societies.

Similarly, greater empires cooperate more effectively, and at a larger scale than unsuccessful ones.

So you need to:

- **Reward cooperators**, and well-regulated capitalism partially does it
- **Punish defectors**, an important and under-appreciated aspect of fostering cooperation
  Including:
  - **Dark triads** who disrupt cooperators, take, and escape taxes
  - **Toxic cooperators** who form smaller cooperative gangs at the expense of the whole -mafia, cartels, etc.-

And:

3.2. Break Internal Clans & Promote Individualism

Clans and tribes break the empire's unity and sap its power.

While clans are more strongly pro-social *towards the in-group*, they are less pro-social, trusting, and more competitive and aggressive towards the outgroup.

Plus, they divert allegiances:

⚖ **The stronger the allegiance to the smaller tribe, the weaker the allegiance to the larger empire**

Clans also promote a 'clannish psychology', a threat to any empire -and to human progress and development in general-.

3.2.2. Punish Nepotism

Nepotism is a form of kin-based tribalism that undermines meritocracy and the functioning of advanced societies (Barkow, 1989).

3.3. Foster Individualism For 'Impersonal Pro-Sociality'

Paradoxically for some, **individualists support empires because they're more pro-social, trusting, and cooperative *with strangers***.

This is a must because large empires are largely made of *strangers* and built with cooperation *among strangers*.

Individualism transcends kins to embrace a weaker but universal pro-sociality that empowers larger cooperation and progress.

It's no coincidence the two latest empires and the West are the most individualistic countries:

The most individualistic countries are the richest and most powerful

Individualism is also good for you, and it's our approach to self-development:

- **Enlightened Individualism**

> Winner's Mindsets: 10 Commandments of Enlightened "Me First"

PRO Tip: Enforce Monogamy For Social Stability

Researchers show that monogamy 'brings with it societal rewards' (Campbell, 2022).

Quoting from Joseph Henrich:

> By suppressing male-male competition (…) monogamous marriage (…) reduce crime, violence, and zero-sum thinking while promoting broader trust, long-term investments, and steady economic accumulation.

Monogamy as part of a 'conservative package' with religion, honor, and country service also forms the backbone of empire-making culture.

4. Master Politics & Strategy

There are two aspects to politics:

1. **Good governance**, internal-looking, with strong, impersonal, and meritocratic institutions
2. **International politics**, including making allies and strategies

We'll focus on the external part here.

4.2. Make Allies, Not Enemies

Allies extend the empire's reach.

Plus, trade among allies enriches all participants.

And if allies empower, the opposite is also true.

Enemies *dis*-empower.

Also see:

- **4 Fundamental Strategies of Success**

⍰ ... But Build-Up Weak Enemies to Galvanize The Populace

While you make powerful real-world allies, use external threats.

Intergroup competition dynamics maximize internal cooperation, solidarity, and output.

In the absence of an enemy, people may get lazy and politicians move to seek rent-seeking.

An enemy instead aligns selfish interests with the empire.

The 'enemy' can also be an ideal.
For example, capitalism VS communism.

⍰ Example: Militarist Germany VS Successful Empires

By Prussian tradition, Germany prided itself on military prowess.

And like proud warriors, it focused less on alliances and more on… *Wars*.

Germany entered both world wars as the strongest military power in Europe.
And it lost both of them.

Why?
Too many enemies, too many fronts, and poor alliances.

Instead of making high-power allies, Germany made high-power *foes*.

Compare Germany with successful empires:

- Rome
- England
- U.S.A.

The US is the most powerful country in the world.
And which allies did it pick?
The most powerful countries in the world:

The richest and most powerful country, allied with the richest and most powerful countries. Is it any wonder the USSR lost?

Says *The Routledge Handbook of Great Power Competition*:

> *Conventionally, smaller powers—and middle powers—can add to the capabilities available to great powers through participation in alliances which often play a key role in great power competition, as seen in the countervailing blocs during the Cold War (O'Riordan, 2023).*

Russia's allies are Belarus and ex-USSR satellites who'd love to join the West.

No wonder the US is the sole superpower.
Edit: the landscape changed slightly with China growing closer to Russia and Trump acting out, but the concept holds.

⍰ 4.3. Make Your Allies Stronger (& Dependent): US Example

Empowering others is a risky endeavor.

But do it right, you multiply your power.

The US made its partners stronger and richer.
It funded reconstruction after WWII.
Richer Europe remained capitalist, friendly… And 'conveniently divided ⍰'.

Global trade made the whole free world better.
Everyone wanted to join the US-led free and rich world.

That's proper win-win power dealing on a world stage.

To learn more:

- Why America's aggressive policy is undermining its empire

4.3. Pick Your Battles

Now let's be real:

Wars are part and parcel of empiring.

Strategic war-making means:

- **Pick easier-to-beat enemies**. Think quick battles, not protracted wars
- **Attack with coalitions**. Even if you can go alone, coalitions are better PR. And you dilute their terrorist revenge instead of focusing the hornet's nest on you
- **Limit wars with other major powers**. If unavoidable, ensure you have better allies, and do:
  - Proxy wars, help other countries fight back
  - One at a time, never open multiple fronts
  - Limited scope. For example, England fought France over distant colonies, rather than near home
- **Provide win-win after the invasion**. Or, at least, "not so bad" conditions

Even in the harsh BC days, Rome was generous to former foes.
It granted freedom, and made them better off with trade.

Rome lifted the territories it conquered

Same for England and the Commonwealth.

5. Strengthen & Conquer With Culture

Culture has two aspects:

1. **Internal**, to sustain the empire with:
   - Hard work
   - Patriotism
   - Righteousness & pride for the empire
   - Institutions standing above any single individual
   - Meritocracy
2. **External**, for soft power:

  - Language
  - Worldviews, a sort of "frame control" at global level
  - Economic system
  - International goodwill

Let's review some aspects:

5.2. Foster patriotism & hard work, punish the defectors

Libertarians see states as opposition systems.

I don't fully agree, but they're not *wholly* wrong.

Internal coercion is part and parcel of empire making, which needs:

- **Your money** to fund politicians, redistribution, infrastructure, research, military
- **Your service** and, in time of war, personal sacrifice
- **Your obedience** or, at least, your acquiescence to the empire's institutions

The USA even forces Americans to pay taxes no matter where they move.

And the USA's web of allies stretches those long IRS tentacles around the world.

Empire making isn't cheap :).

⍰ Culturally Insulate Your Populace

So they feel and remain empire citizens instead of growing into 'world citizens':

- Imperial system instead of metric
- Develop your unique sports
  - Nascar instead of F1
  - AMA Superbike instead of MotoGP
  - Football instead of rugby
- Snub international sports
  - Soccer/football

Result: Americans feel 'different' and remain tied to 'home'.

⍰ Empire Tactics to Override Self-Interest

Individuals gain with an empire.

But they gain more focusing on *themselves*.

The empire may hence manipulate the population to go against their rational best self-interest.
Enter the various:

- **Flags** and salutes to the flag
- **Public schooling** for shared chosen values
- **Veteran reverence** -largely lip service-
- **Parades**
- **National sports teams** to make individuals 'fuse' their ego into the collective

- Etc. etc…

Also see:

- **Business manipulation**, where organizations see employees like politicians see citizens
- **Politicians' manipulations**. Politicians profit the most from running powerful states
- **Great leadership is great manipulation**

Internal Threats

Some internal threats to empires include:

- 1 **Anti-capitalists** who reduce output.
  Capitalism is a superpower that harnesses self-interest into empire-sustaining revenues. The most dangerous opposition weakens capitalism
- **Libertarians** who want to do without central power
- **Machiavellians** who don't buy imperial sacrifice and focus on the self
- **Various extremist factions**, that oppose the government
- Etc. etc.

Special Cultural Threat: Lazy Citizens Losing Their Drive

Escapism and hedonism threaten the empire's vigor. Digital empire-building doesn't count

A lazy population produces less.
It starts a vicious cycle.
Poorer economy, less talent coming in, less innovation, less technological advances, and less military power.

Some pundits say it's happening to the West right now.
I'm not convinced.

But I do remember a Chinese fling years ago explaining why she worked so hard.

To “become like you guys”, she said.

5.3. External: Export Culture For Soft Power

“*We’re all living in America*“, sings the German band Rammstein.

They have a point.
The Routledge Handbook on Persuasion says that cultural products like movies exported American values.

The power of soft power is that it *attracts*.
Consumers *want* more from the cultural hegemon, facilitating alliances, trade, and ‘brain gain’.

6. Build A Strong Military

The military is necessary for empire-making.

But remember it’s the tip of the pyramid for a reason.
Empire-building military is the *consequence* of strong foundations.

From a calculative empire point of view, good entrepreneurs are worth more than good soldiers.
Especially as tech progress replaces humans.
Eventually, it will be robots fighting.

Now we’ll focus on socio-cultural elements that support the top 6:

7. Keep Liberalism & Socialism In Check

Liberals and socialists are good people, but don’t build empires.

Extreme liberalism with its egalitarian tendencies undermines the ‘achievement psychology’ of competition, hierarchies, social identities, and pride of being part of the empire.

In contrast to egalitarianism, an empire needs a high ‘social dominance orientation’, or the belief that different classes of people and countries are part of a status hierarchy.

Socialists in turn use wealth to build comfy and egalitarian societies.
Great for quality of life, but empire-making needs a sharper edge.

Socialism blunts the drive for entrepreneurship and exceptionalism, and that undermines the empire’s progress.
The truth is: an empire may need a lower struggling class. It pushes everyone hard *not* to be in that class.

To keep lower classes still integrated, focus on positive ideologies:

7.2. Foster ‘Protestant Ethic’ & Internal Locus of Control

All surplus-producing societies produce group-based hierarchies (Sidanius and Pratto, 1999).

Hierarchies facilitate redistribution, limit internal strifes, and increase cooperation.
However, they pose a risk.
If lower classes feel alienated they may ‘check out’, stop working and producing, or rebelling.

Everyone bears the costs, and the pie/empire shrinks for all.

Social dominance theory refers to a ‘hierarchy-enhancing ideology’, but they also serve to preserve the system healthy for all.

Here are the most powerful ones:

- **Internal attribution of success** to encourage individuals's striving for success
  - Individualism over groups: everyone can succeed, no matter their class or birthplace
  - Discourage external attribution of failures as excuse-making, especially when related to classes or races
- **Meritocracy**, not just in facts, but in culture and ideology
- **Protestant work ethic**: the hard-working man is not only more likely to succeed, but also spiritually superior
- **Self-made men's stories**, especially from lower-class individuals to increase buy-in into the system

These ideologies keep everyone engaged and producing, making the pie bigger for all.

8. Mindset: Focus On Infinity & Human Development

The real test of empire-building are endurance and global leadership.

Think Infinite

Smart empire builders think long-term.

They widen the technological gap in good times, and conserve resources in bad times.

Enlightened empire builders also think about the world, and humanity.
They think in terms of "passing the best possible baton" to the next generation.

And they focus on culture as much as military -Medici docet-.

Culture always out-lives physical borders.

Even without an empire, Renaissance city-states such as Florence ensured lasting influence with arts and culture

Also see:

- TPM's approach to content

Do It For Humanity: Become Prestigious

Psychology research shows two paths to influence:

- Dominance
- Prestige

Prestige boosts your soft power and make people *want* to follow your lead.

Get into the mindset that **humanity needs strong but good leadership to carry us forward.**

Greece developed democracy but failed to export it.
It was the Roman Empire that set the foundations of the West. European empires with UK leading exported Western culture and psychology globally.
And the US took up the baton from the UK to lead with growth and innovation.

Make 'leading for all' the ethical basis of your empire-making.
It's more motivating for the empire's citizens, and gives you 'prestigious leadership',

Finally, we need an empire for humanity.
The modern states are just bigger clans.
We need a 'borderless empire' for humanity to colonize the universe.

Avoid These Fools' Traps

Common empire-busing traps:

1. Keep It Civil-ian: Don't Let Generals Lead

Generals over-focus on the military.

And the economy suffers.

⍰ Example: Napoleon

Napoleon is hip these days.

Entrepreneurs read his biographies and popular American authors tout his strategic genius.

Me, I find it amusing.

Americans, who revere Napoleon's genius… In the English language.

NOT in French.

Does that tell you anything?
England won the empire-making war. Not France.

I slightly rephrase a quote from a good historian who gets it:

> It's the glorification of dramatic failure at the expense of endurig empire dominance.

Albeit a great general, Napoleon was a failure at empire-making.

England had no equivalent charismatic leader.
But their stronger economy, institutions, strategies, and allies won the war.

And exiled Napoleon like a parent grounds the naughty kid.

Napoleon won battles to lose the war

Lesson learned: **build strong institutions and never rely on individual charismatic men**.
For every enlightened Caesar, there are a thousand disastrous generals.

Similarly:

2. Strong Military, Without Militarism

Men can easily fall for the allure of military might.

Parades of tanks and missiles make men feel strong and proud.
It's an easy ego boost.

But militarism diverts attention and resources away from the foundations.

Remember: **militarism is the toxic extreme of a healthy, strong military**.

Historical Examples

- **Assyrians**. You never heard them? Now you know why they're losers :)
- **Sparta**. Only beat Athens with a bigger ally -not "300-style military prowess".
  Democratic and cultured Athenians still dwarfed them in world impact, empire size, and duration
- **Nazi Germany**. Their war ethos was their downfall -their vaunted Aryan superiority apparently didn't extend to smart brains-.
  The same can be said of all fascist regimes.

Despots and militarists pound their chests. But their weak countries and economies are always outgunned by rich democracies

3. Wars: Only On A "Strictly Necessary" Basis

Carrying a gun tempts you into *using* a gun.

Similarly, strong militaries -and defense contractors- tempt you to use them.

This is true today, as it was millennia ago.

Example: Hannibal – Focus On Effectiveness & Lasting Victory

Hannibal's feats are impressive.

But he represents ultimate failure.

While his life goal was to destroy Rome, he precipitated the exact opposite.
He died suicide, a fugitive, *escaping* the Romans.

Roman general Scipio Africanus won the war.

Famous Hannibal war-mongered all his life and destroyed an empire.
Little known Scipio built one.

Ignore the glitz, focus on ultimate victory, and pick your heroes wisely.

4. Prevent Charismatic Dark Triads From Gaining Power

Dark triad leaders portray an *image* of power.

They are great at attracting a large flock of sheep.

But economies suffer with them.

They focus on themselves –and their kin & cronies-.

They cling to power and attack opposition and democracy.

Meritocracy suffers, and top talents choose freer countries.

Finally, the big military is too tempting for the egomaniac dark triad.
Sychophant generals assure the despot of a swift victory.
At the best, their wars sap the empire's resources.
At worst, their dreams of empire-making *destroy* the empire -and become yet another history's dark page-.

"Il Duce" knew how to work a crowd. (Dominance and confidence, and sheep follow). He dreamed of rebuilding the Roman Empire. If he focused on economy and alliances…

Remember: for every enlightened Lee Kuan Yew, there are a thousand disastrous despots.

This is our mission

We're keenly aware of the danger posed by high-power dark triads here.

So much so, that we made it our mission.
We help good men advance, so we all gain.

Are you a good man who needs to empower himself?

Then it's your responsibility to empower yourself.

Stick with us.
And build your little -or big- empire.

WE NEED YOU
EMPOWERED

The Dark Triad of Personality: Book Summary & Review

Exec Summary

- Psychopathy is the "darkest" of the three
- Narcissism is the "lightest" of the three
- Sadism makes the dark triad far darker (dark tetrad)

FULL SUMMARY

About the Author:
Minna Lyons is a psychologist and senior lecturer at Liverpool John Moores University.
Her research interests focus on individual differences from an evolutionary perspective and the Dark Triad of personality. Lyons has authored several papers, some of which are also referenced in this book.

What's the dark triad

> The Dark Triad consists of three overlapping, yet distinctive personality traits: Machiavellianism, narcissism, and psychopathy. The traits share a core of manipulation, callousness, and selfishness (Jones & Figueredo, 2013).

Commonalities

Then the author goes a bit more personal with:

> All of the three traits are characterized by a disregard of social norms, which often leads to social transgressions in terms of lying, cheating, manipulating, and stealing. Individuals who are high in the dark traits are untrustworthy and uncaring romantic partners, backstabbing work colleagues, and cold and controlling as parents

All the Dark Triad traits relate to dysfunctional interpersonal relationships. Selfish behavior and lack of care for others are the main culprits for poorer relationships, says the author.

Differences

- **Machiavellians**: flexible, chameleon-like use of strategies from defection to cooperation to gain benefits for the self. It correlates with fluid intelligence.
  Christie and Geis (1970) proposed that Machiavellianism consists of two traits: interpersonally manipulative tactics, and a cynical view of human nature, both confirmed in a recent large-scale cross-cultural study (Monaghan, Bizumic, & Sellbom, 2018).
  Most studies investigate Mach as one single construct, but there maybe sub-factors (ie.: tactics, divided into deceit and flattery, and views of human nature, divided into immorality and cynicism)
- **Psychopathy**: impulsivity, reckless risk-taking, and very shallow empathy toward other people. More than the other two is associated with disregard for others, manifesting in criminal activity and disruptive interpersonal behaviors such as bullying (Baughman, Dearing, Giammarco, & Vernon, 2012) and sadism (Carton & Egan, 2017).

Some consider it the “darkest of the three”.
The popular two-factor model divides psychopathy into:

- Primary (Factor 1), the “successful” psychopaths that don’t necessarily end up in prison. It involves interpersonal and affective factors, such as coldness and callous manipulation
- Secondary (Factor 2), risky, impulsive behavior that is more likely to lead to prison
- **Narcissism**: vanity and grandiosity, and by an inflated self-assessment.
  A popular idea divides narcissism into:
  - Grandiose: with elevated self-esteem, and aggressive, forceful, and dominant interpersonal styles
  - Vulnerable: feel insecure and inadequate, and try to mask it from themselves and the rest of the world by faking grandiosity

Psychopathy and Machiavellianism share more features than either does with narcissism. The lowest correlations are between Machiavellianism and narcissism (Furnham, Richards, & Paulhus, 2013)

Situations & Environment Matter

Especially narcissism can be temporary, and can be decreased or increased:

> Although all the Dark Triad traits have been conceptualized as dispositional, stable features in an individual, there is some evidence that especially for narcissism, situations may play a part in the manifestation of the trait. For instance, levels of narcissism can be experimentally manipulated to some extent. Narcissism can be increased by asking participants to think about their own achievements (Sakellaropoulo & Baldwin, 2007), or even by thinking of oneself as being a prince or a princess (Li et al. , 2016)

Dark Triads Can Add Value

> However, Dark Triad traits do have positive sides too. Especially in circumstances where there is a possibility to gain something for oneself, individuals with Dark Triad traits can be loyal friends, effective leaders, and heroic rescuers (e.g. , Hart, Richardson, & Tortoriello, 2018; Patton, Smith, & Lilienfeld, 2018; Smith, Hill, Wallace, Recendes, & Judge, 2018)

Scientific Doubts Still Abound (No Consensus)

There are still many question marks and consensus hasn’t emerged on several issues.

Some of them:

Psychopathy Isn’t Even A Diagnosis in The DSM

> psychopathy itself is not a diagnosis in the DSM system, but falls under the diagnostic category of ASPD (…) The ASPD diagnosis has a focus on impulsive, norm-violating behaviors. The diagnostic systems have been criticized for not taking into consideration other crucial components of psychopathy

Luckily, it’s now gaining acceptance:

> Although psychopathy is not an official diagnosis, following 50 years of diagnostic debates, it is finally accepted as a component of ASPD in the DSM-5 alternative model
> (…)
> (it’s possible to) receive a diagnosis of “ASPD with Psychopathic Personality Traits

Machiavellianism & Factor 1 Psychopathy

Machiavellianism does not directly feature in the classification systems.

Some researchers suggested Machiavellianism may be a nonclinical manifestation of psychopathy (ie.: McHoskey, Worzel, & Szyarto, 1998):

> For example, McHoskey (2001) analyzed the MACH-IV scale in relation to a host of clinical symptoms, and concluded that those who score high on the questionnaire are also high on a number of other scales indicating personality dysfunction. More specifically, Machiavellianism had links to antisocial personality

⁉️♂️ **Lucio's note**: The 1998 paper Lyons cite was influential early on, but later research largely walked back the claim that MACH-IV is basically a psychopathy measure.

Healthy VS Unhealthy Narcissism

The author suggests that some aspects of narcissism are healthy in lower doses:

> "Normal" narcissism is manifested by a healthy self-image and self-esteem, which does not fall apart when faced with threats to the self.

But there is no agreement on how to differentiate healthy VS unhealthy:

> According to some, pathological and normal vary in a continuum, where pathological is just a more severe manifestation of the normal (e.g. , Watson, 2005). According to others, pathological and normal are distinctively different manifestations of narcissism, forming two separate dimensional personality traits (e.g. , Pincus et al. , 2009)

Psychopathy's Sub-Components Are Still Debated

> Psychopathy is unlikely to be a monolith construct but may consist of several subcomponents.
> There are still debates about what the factors of psychopathy are. The findings vary from study to study, often depending on the scale that is used to assess psychopathy. Theories and empirical evidence has suggested four-, three-, and two-factor models

Big Five And Other Personality Models

- **Low agreeableness**: All three traits negatively correlated with agreeableness, with stronger correlation for psychopathy and Machiavellianism Muris et al. , 2017)
- **Low humility for narcissists**: there are differential associations between the Dark Triad and honesty-humility, depending on the aspects of the trait. For example, narcissism had a strong, negative correlation between modesty and lack of greed avoidance
- **Low fairness for Machs and psychopaths**: Machiavellianism and psychopathy were associated with lack of fairness and low sincerity.
- **Neuroticism**: the findings are more confusing. A meta-analysis proposed that all the traits are related to low neuroticism. In other studies, Machiavellianism (Muris et al. , 2017) as well as primary and secondary psychopathy (Jakobwitz & Egan, 2006) was positively correlated with neuroticism scores.
  Machs and secondary psychopaths may tend to feel anxious and worried
- **Low honesty**: all the three relate to low honesty
- **Narcissists are extroverted**. The author says that "*Narcissism seems to be "brightest" of the dark traits, with*

extraverted approach oriented attitude to life"

- **Low conscientiousness for Factor II psychopaths**

As an overview:

> recent meta-analysis of over 150 studies (Vize, Lynam, et al. , 2018) suggested that **psychopathy and Machiavellianism share very similar profiles**, characterized by low agreeableness and low conscientiousness (…)
> the core of the Dark Triad lies in dishonestly, coldness, and manipulation

Trait	Nomological Network Zero-Order Correlations
Machiavellianism	Low agreeableness[a–d]
	High neuroticism[a,b]
	Low conscientiousness[a–d]
Psychopathy	Low Agreeableness[a–d]
	High neuroticism[a]
	High extraversion[b]
	Low conscientiousness[b,d]
	High openness[b]
Narcissism	Low agreeableness[a,b,d]
	Low conscientiousness[a]
	High extraversion[b–d]
	High openness[b]

Relationship Between the Dark Triad and the Big Five

The DSM Alternative Model

The DSM-5 proposes the "maladaptive trait model," measured by a continuous Personality Inventory for the DSM-5 (PID-5).

The PID-5 domains are:

- **Negative affect vs. emotional stability** (frequency and intensity of experiencing negative emotions)
- **Detachment vs. extraversion** (withdrawal of socioemotional experience, including avoidance of close bonds with others)
- **Disinhibition vs. conscientiousness** (orienting toward immediate gratification, disregarding future consequences)
- **Antagonism vs. agreeableness** (callousness, disregard for others, exaggerated self-importance)
  - Hostility *came out as the largest predictor of impaired psychosocial functioning. Research established strong links between hostility and poor health, unhealthy lifestyles, and dysfunction in social relationships.*
- **Psychoticism vs. lucidity** (expressing odd, eccentric, and unusual behaviors and thoughts)

The author comments:

> Which components of the model (if any) are typical of those who are on the higher end of the Dark Triad continuum?
> **Antagonism is a key feature of all three Dark Triad traits**, leading to major dysfunction in social relationships, sometimes at levels that could be described as "psychosocial disability. " Those who are high in antagonism are callous toward others and often view other people as instruments for achieving their own goals. Needless to say, **this kind of behavior leads to short-lived social relationships** or much misery for those ho for some reason (e.g. , children of antagonistic parents) have to endure the connections with the highly antagonistic individual.

Empathy, Emotions, Emotional Intelligence

Table:

Trait	Description
Empathy (cognitive)	Ability to understand the sources of others feelings
Empathy (affective)	Ability to feel what others feel
Empathy (global)	Cognitive + affective empathy
Emotional intelligence	Understanding and managing the emotions of self and others
Theory of Mind	Attributing mental states to others
Alexithymia	Inability to identify and describe feelings

Description of Traits Related to Understanding Self and Others
Machs and psychopaths have low empathy/emotional intelligence.

Overall, most studies have found that Machiavellianism and even more psychopathy (but not necessarily narcissism) are characterized by low (affective) empathy/emotional intelligence.

The author suggests that poorer emotion recognition ability stems from how individuals themselves react to emotion-evoking events (Machs and psychopaths score higher in Alexithymia).
Such as, those who struggle to identify their own emotions also have low empathy for others

However, affective empathy is not necessarily related to low *cognitive* empathy, or understanding the source of other's emotions.
So **dark triads can be equally good at understanding others' emotions**.

Impulsivity & Risk Taking

Impulsivity is associated with risk-taking, but that association is not well defined:

> Studies have found a nonlinear relationship between impulsivity and indicators of risk-taking. Individuals can be high in impulsivity but low in risktaking, and vice versa.

The consensus is that **psychopathy and narcissism are related to higher risk-taking while Machiavellians have a more cautious approach to life**.
All three traits relate to impulsivity, acting without thinking of future consequences.

Psychopathy and narcissism are associated with risky substance abuse, whereas Machiavellianism is not (Stenason & Vernon, 2016).

And psychopathy has the strongest associations with risky health behaviors, as well as gambling (especially factor II psychopathy).

Sexual Strategy: Dark Triads = Deadbeat Dads?

The author suggests that dark triad may follow a fast-life strategy.

Such as, they focus on the here and now, seeking to achieve fast results with shortcuts, but at the expense of sustainability and future success.

This strategy is especially relevant in mating and reproduction:

> According to the LHT (life history theory), individuals vary in a continuum in the amount of time and effort that they invest in current reproduction (i.e., seeking for partners and copulating with them) and in future reproduction (i.e., maturation and growth; providing for their offspring; maintaining stable relationships). Those who invest little effort in the future (i.e., parenting), focus on seeking multiple partners (…) follow a fast LHS, resulting in a higher total number of children.
> On the other end of the continuum, individuals who follow a slow LHS have fewer sexual partners, stable relationships, and fewer children. Low impulsivity and hesitation to take risks may be features that help in investing in the future.

In this view, the Dark Triad is a condition-dependent strategy for fast life.
Dark triad traits are helpful in risky environments with uncertain future where early reproduction and higher-risk taking pays off.
Says the author:

> Indeed, there is some evidence that those high in the Dark Triad traits (especially Machiavellianism and psychopathy) have grown up in harsh, unstable environments (Jonason, Icho, & Ireland, 2016).

The author says that all 3 dark triads are related to a fast life strategy, albeit not every single face is:

> Melissa McDonald and colleagues (McDonald, Donnellan, & Navarrete, 2012) found that the Machiavellianism, entitlement/exploitativeness facet of narcissism, and impulsive antisocial facet of psychopathy related to a fast LHS, whereas fearless dominance facet of psychopathy and leadership and grandiose facet of narcissism had an association with a slow LHS

My Note: disagree that fearless dominance, leadership and grandiosity are "slow life strategy"
I don't fully agree here as I don't see how fearless dominance and grandiosity are associated with slow life, but NOT fast life.

Other possible features of a fast life strategy:

- **Avoidant attachment style**
- **High sex drive**. Psychopathy is related to increased sex drive (Baughman, Jonason, Veselka, & Vernon, 2014)
- **Unrestricted sociosexual orientation**. the Dark Triad is connected to an interest for multiple partners and sex without commitment (Jonason, Li, Webster, & Schmitt, 2009; Nascimento, Hanel, Monteiro, Gouveia, & Little, 2018)

Also read our popular article:

- **Psychopaths' sexual strategy**: a case study

> Psychopaths' Sexual Strategy: Marauders of Sex

It's True For Women As Well

> The Dark Triad is linked to overall high sexual desire and preference for recreational sex in women too (Carter, Campbell, & Muncer, 2014; Jauk et al. , 2016)

And:

> Dark Triad women mate promiscuously, and specifically psychopathy and Machiavellianism are related to a fast life history cross-culturally, irrespective of biological sex (Jonason, Girgis, & Milne-Home, 2017)

It's still not clear though how this approach would benefit women who are biologically "forced" to invest far more in children, and whose investment is also necessary to raise children.
I'd venture to guess that it may work also for women, just less well than for (attractive) men. Plus, women may simply be a less adaptive "spillover" of players' sexy sons.

But... Is this strategy really successful? There is no evidence

Studies used sex drive and number of mates as a proxy for reproductive success.

However, that does not equal number of children, and there is little research investigating the "bottom line" of reproductive strategies.

The author did attempt a study though, and the results do not confirm success:

> I explored the associations between the Dark Triad and existing children in an online sample of 314 participants (Carter, Lyons, & Brewer, 2018). We found that narcissistic men had more children, and psychopathy in both sexes had an association with fewer children.
> This is an interesting discovery, as it seems that the sex drive and multiple matings do not translate into higher number of children in psychopathic individuals

However, the sample small to draw any significant conclusion.

Mate preference for dark triads

Based on a few studies:

- **Narcissistic women are choosy**, demanding everything from prospective partners: status, resources, attractiveness, education, and intelligence. Machiavellianism was not related to any of the mate choice preferences, and psychopathy had a negative association with a preference for religiosity and kindness (Iran, Atari and Chegeni, 2017)
- **Psychopaths don't care about kindness** in either short or long-term (Jonason, Valentine, Li, and Harbeson, 2011)
- **Machiavellians did not value warmth-trustworthiness or intimacy and loyalty.** It was true for both men and women (Inancsi, Lang, and Bereczkei, 2016). But they cared about the partner's status and resources

More cheating for psychopaths and Machs

- **Psychopaths cheat more**: The emerging picture suggests that infidelity is especially pertinent to men and women who are high on psychopathic traits. Psychopathy relates to both actual infidelity and intentions to cheat in the future.

- **Machs probably cheat more in box sexes**: some studies have found that cheating is more common in high-Mach women, and others have found that Machiavellianism drives infidelity in both sexes
- **Narcissism is unrelated to cheating**. Relationships between narcissism and infidelity have not been consistent from one study to another, with findings that go in opposite directions.

Dark Triad Pursue Short-Term Mating Strategies

> The key message from these studies is that the Dark Triad is associated with a preference for short-term, casual relationships, and higher likelihood of dysfunctional romantic relationships.

And:

> Socially aversive personalities often have short, emotionally shallow relationships, characterized by avoidance of commitment to single long-term partners

The emotional attachment styles also seem to support this preference, as psychopaths and Macs have avoidant attachment styles.

How Attractive Are Dark Triads?

- **Narcissists are attractive**. In a meta-analysis, Holtzman and Strube (2010) found a small but consistent relationship between narcissism and ratings of attractiveness
- **Narcissists are more desirable as long and short-term partners** from a German study on speed daters (Jauk et al. , 2016)
- **Dark triads' faces are less attractive albeit they're rated as more dominant**. *We have now showed these faces to thousands of women in several different studies, and have found that without an exception, the high Dark Triad morphs are aversive as potential partners (Lyons et al. , 2015). The high faces are also rated as more aggressive, dominant (Lyons & Blanchard, 2016), and dangerous (Brewer, Carter, Lyons, & Green, 2018) than the low faces. even when under the influence of alcohol, women disliked the high faces, and rated them as dangerous (Brewer, Carter, et al., 2018)*
  - Narcissists may be the exception. Especially with some types of women: *women who had unrestricted sociosexual orientation(i.e., preference for noncommitted sexual relationships) and did not use oral contraceptives had a preference for narcissistic faces (Marcinkowska, Helle, & Lyons, 2015)*
- **Dark triads tend to date each other**

The author says that narcissists seem to be popular, but psychopaths and Machs are not.
She wonders whether the self-reported mating success is based either on exaggeration or coercion of unwilling partners.
I disagree though because ratings based on still pictures say little.

As Alexander from Dating Psychology suggests, the most successful dark triads may be agreeable Machs. Such as, they can put up a good front.

Also read:

- **Are psychopaths attractive?**

Genes, Environment & Parents: They All Matter

Genes matter.

How much they matter, is more difficult to say.

According to one study:

> using heritability estimates, Vernon, Villani, Vickers, and Harris (2008) found that about 31% of variance in Machiavellianism, 64% of in psychopathy, and 59% in narcissism were attributable to genetics.

When it comes to the environment, there likely are "cues" the brain latches onto for its development.
We're not yet sure what those cues are, but likely:

- **Quality of parental care**: *studies on the Dark Triad and parenting indicate that recollections of a cold, uncaring mother may lead to the lack of secure attachment, which could influence the development of Machiavellian strategies. Recollections of uncaring mothers have an association with high primary psychopathy in women and high secondary psychopathy in men (Blanchard, Lyons, & Centifanti, 2016a, 2016b).*
- **Crime and disorder in the environment**
- **Availability of resources**

> a study that investigated childhood resource scarcity vs unpredictability found that unpredictable childhood conditions had an association with higher scores in all the Dark Triad traits (Jonason et al. , 2016)
> (…)

My note: my personal experience aligns with parental influence
I think that my strategic approach to life and avoidant attachment style stems in good part "thanks" to my mother's parenting. But I don't jump to conclusions.

How to Measure The Dark Triad

In general, go for longer questionnaires rather than the briefer ones.

> (…) the Dirty Dozen (DD; Jonason & Webster, 2010) and the Short Dark Triad (SD3; Jones & Paulhus, 2014). DD is a very brief, 12-item measure, consisting of four questions/trait. The measure has been demonstrated to have good internal reliability (i.e. , the four questions for each trait are measuring the same thing), but the convergent validity has been more limited (i.e. , the correlations with more established, longer measures can be relatively weak).
> SD3 has 27 questions, nine/trait, and has good internal reliability, and stronger convergent validity than the DD measure

The Dark Tetrad: Sadisdm

Sadism is different from the Dark Triad traits and not all Machs, narcissists, and psychopaths necessarily enjoy hurting others.

But there is a relationship:

> How does sadism relate to the Dark Triad? Chabrol, Melioli, Van Leeuwen, Rodgers, and Goutaudier (2015) gave questionnaires on the Dark Tetrad to a group of over 600 high school students, in an attempt to classify them into personality types. First, the authors found that **all the four traits correlated with each other, suggesting that they share at least some variance**

Trolls Are Sadic

> Those who troll (i.e. , leave negative and derogative comments, often anonymously) others are high on the

> Dark Tetrad, especially sadism (Craker & March, 2016; Buckels, Trapnell, & Paulhus, 2014). Especially sadism and psychopathy seem to be a toxic combination with regards to trolling, as a study found that both these traits were typical of internet trolls (Sest & March, 2017).

And:

> Especially sadism related to a stronger identity as a troll, and this could be due to the pleasure that sadistic individuals get from hurting others

Psychopaths Are The Only Inveterate, Constant Liars

Keep in mind the first study is from an Internet survey:

> narcissism was associated with lying in order to gain something for the self, and Machiavellianism with small white lies, psychopathy was related to not needing any reason for telling lies. Those who were high in psychopathy were lying habitually, and were happy to lie for no specific motive
> (…)
> Further evidence for compulsive lying in psychopathy comes from a study that found that psychopathy was associated with positive emotions when telling lies (Baughman, Jonason, Lyons, & Vernon, 2014).

Born Criminals? Some Psychopaths, Yes

Psychopathy best predicts crime.

In prison populations, psychopaths are over-represented.
But there are plenty in community samples as well:

> studies utilizing nonprison samples have found that there is a small proportion of population “at large” in the community, presenting high levels of psychopathy.
> Across several studies on diverse nationalities, rather than Machiavellianism and narcissism, psychopathy is emerging as the driving force behind the connections with delinquency and different types of crimes. In a similar manner as in incarcerated populations, primary psychopathy is one of the most important factors in criminality in student and community samples. Primary psychopathy is especially related to crimes that are of a violent and instrumental nature

However, the author righteously warns to not over-generalize.
Not all psychopaths are (inveterate) criminals, and plenty of non dark-triad are criminals.

Machs are more strategic

Machs and Factor II psychopaths steal more when they won’t get caught:

> Machiavellianism and primary psychopathy were positively related to more frequent thefts if the risk was removed

White collar crime is for more successful dark triads

There is little research on white collar crime, but says the author:

> The Dark Triad’s associations with deceitfulness and hunger for money, power, and status make it a likely personality constellation relevant in white-collar crimes

And indeed, based on the available evidence:

> These results provide further support for the idea that white-collar criminals have characteristics of "successful psychopathy," manipulation without problems with impulse control

Interestingly, one study on white collar crime also showed high conscientiousness.

Dark Triads: Not The Best Friends

> High Dark Triad individuals seem to be more instrumental in their motivations to select and maintain friendships, preferring friends who can satisfy their needs in the arena of mating and climbing up the social ladder. All of the traits relate to shallow friendships

Differentiating the three:

- **Narcissists are "less bad"**, it's the "lightest" of the dark traits as they enjoy social contact and having fun
- **Machiavellians make for frenemies**, friends who are jealous, competitive, and potentially toxic. They also care less about having friends
- **Psychopaths are loners** who are not bothered with friendships and have no need to try to influence their friends either

The author says that friendships are rife with exploitation because people expect friends shouldn't "keep tabs" on who gives.

So, first warning, watch out for the power dynamics:

Don't be the "crazy go-giver" "friend"

> Sometimes one friend puts more importance in the relationship than the other, who might not value the friendship as much. Think about your own friends, and how important they are to you.Now, how many of them do you think rates you as important as you rate them? We often overestimate our own importance in the face of other friends.

Dark triads pick friends who can do something for them

For example, in the mating market:

> Social psychology experiments have demonstrated that when a person is in a group with attractive people, they receive higher ratings of attractiveness than they would if they were alone (van Osch, Blanken, Meijs, & van Wolferen, 2015)
> (…)
> A study that investigated the Dark Triad and the reasons for making friends found that these traits do, indeed, relate to using friends as agentic tools (Jonason & Schmitt, 2012)

A study also found that Machiavellian women preferred friends with high social status.

More findings

- **Psychopaths prioritize dominance over warmth**: *those who were higher on the cold, callous aspects of psychopathy were more concerned about one's own image and gaining dominance over others, rather than about having warm, affiliative long-term friendships (Foulkes, McCrory, et al. , 2014)*

- **Narcissists are polarizing**
  - Attractive friends… In the beginning. *research has shown that especially narcissists are attractive as friends as first sight, the arrogance and grandiosity makes the attractiveness fade quickly as time goes by.*
    In contrast, emotionally intelligent people increased in popularity over the three-month period. In the long run, agreeable individuals also receive more nominations in friendship network studies, and also have large, stable networks because other people prefer their company (Harris & Vazire, 2016)
  - High narcissism can also be initially repulsive: *However, those who are not high in narcissism initially dislike those who are narcissistic (Burton et al. , 2017)*
- **Machs are both popular and unpopular**. The picture that is emerging with regards to Machiavellianism and popularity in children indicates that high-Mach kids are both popular (Abell et al. , 2015; Hawley, 2003) and unpopular (Abell et al. , 2015).
  Machiavellian boys rather than girls reach a popular status in their peer groups
  - Machs are good at using both pro-social and aggressive tactics.
- **Some core dark triad features hinder long-term relationships**. *In terms of forming successful long-term relationships, core features of the Dark Triad (i.e. , disagreeableness) seem to be a hinder.*
- **Vulnerable narcissists and psychopaths make the worst friends**. People who were high on vulnerable narcissism and psychopathy, in turn, were more likely to use both proactive and reactive aggression in friendships. Vulnerable narcissists may make for particularly toxic in friends, because of low self-esteem and insecurity about one's position in the social network.
  Grandiose narcissists are less likely to be aggressive toward their friends because they are more secure in their relationships with others
- **Machiavellians may be more suspicious and paranoid**. *High-Mach women perceived their friends as being emotionally manipulative toward them.* (…) *Machiavellianism and psychopathy (but not narcissism) relate to perceptions of competition in the office (Jonason, Wee, & Li, 2015)*
- **Dark triads tend to remain friends with other dark triads**, albeit it seems that dark triad prefer others to be on the lower levels of manipulativeness and egotism.
  The author summarizes that those who are more selfish (i.e. , have darker personalities) do not care about whether their friends are kind or unkind.

My note: why narcissists are both attractive and repulsive
My guess is that "socially unskilled" high narcissists are repulsive to many other high-power people because they evoke competition.
Successful narcissists display the same level of confidence, without the "I'm better than you" vibe that triggers competitive responses.
Also, keep in mind that attraction and dislike aren't always and necessarily opposite. Many women for example are attracted to men they dislike and find to be asshole types.

Pros & Cons of Dark Triad

Evolutionary psychology suggests there are advantages to dark triad traits -or they wouldn't have evolved and propagated-.

But there are also disadvantages:

> According to Miller et al.(2010), it makes sense to think of the Dark Triad as two constructs. In addition to a more adaptive constellation (i.e. , Factor 1 psychopathy, and grandiose narcissism as measured by the Narcissistic Personality Inventory), there is a second Dark Triad, characterized by features of Borderline Personality Disorder (BPD), vulnerable narcissism (e.g. , fragile self-esteem, insensitivity), and Factor 2

> psychopathy (e.g. , risk-taking and impulsivity).
> All the three aspects of the vulnerable Dark Triad are linked to neuroticism and have associations with insecure attachment…

The author adds:

> Vulnerable Dark Triad is associated with difficulties in current functioning, including nonsuicidal self-harming behaviors

Some dark triads are also high in neuroticism, negative emotionality, and the inability to control emotions, which may lead to vulnerability to mental distress.

Switching from pro-social to coercive provides maximum results

The author dedicates a box to Patricia Hawley and her research on "bistrategic controllers".

And this was one of the most interesting parts for me.

In short, Resource Control Theory (RCT) explains that prosocial strategies increase access to resources by forming long-term cooperative alliances. However controlling resources with coercion and aggression can also achieve the same result.

The most effective players use both approaches:

> Some individuals are skillful in using both coercive and prosocial friendship tactics.
> These individuals are named "bistrategic controllers. "
> Children (and adults) who have mastered the use of both coercive and prosocial tactics in their social relationships are acutely aware of social conventions and morality, but they lack an internalized conscience. They may exhibit low levels of guilt after moral transgressions. In many ways, **bistrategic controllers display features of Machiavellianism and primary psychopathy**, moving adeptly in their social environments by using manipulation and flattery. **Mastering both prosocial and coercive tactics relates to social competence, and material and social success.**

And a study in children seems to show as much:

> Children who were bistrategic controllers (i.e. , more Machiavellian) were rated as aggressive by their peers, but not by their teachers, implying the ability to hide coercive strategies from authority figures

I think this makes sense.

Bonus: Is Trump A Malignant Narcissist? Yes...

The author dedicates a box to this question, and the answer seemed to be "(likely) yes".

MORE WISDOM

Bad, not "mad":

> people who are "survivors" of a toxic relationship with a high Dark Triad person are more likely to feel like they are in a need of psychological interventions than those who are high on these traits themselves.
> (…)
> The interpersonal damage caused by dark personalities could imply that individuals high on these traits are not

> “mad” (i.e. , mentally ill, needing some kind of interventions), but simply “bad”

Power dynamics govern academia

The author implies that truth is not always in the driver’s seat when it comes to the DSM:

> Research involving the DSM-5 trait model will be useful in shifting the DSM further away from categorical diagnoses derived through political processes and presumed authority and toward an empirically based dimensional model of personality and psychopathology

Some treatment may be possible

> There is relatively little research with regards to the treatment of ASPD, CD, or psychopathy
> (…)
> studies have found that treatment is effective especially for Factor 2 (i.e. , antisocial, impulsive behavior) psychopathy
> (…)
> Especially the behavioral aspects of secondary psychopathy (which have more links to violence and offending) can be reduced in intensive psychological interventions

Personality predicts crime – possibly more than socio-economic factors

> Personality variation clearly plays a vital role in the proclivity to commit crimes of varying degrees, possibly more so than other “criminogenic factors” such as socioeconomic status

Impulsivity & early aggression predict crime

For early red flags in children:

> longitudinal research has found that early teacher reports of aggression in children are related to lawbreaking in later life (Stattin & Magnusson, 1989), suggesting that proclivity to commit crimes can be identified relatively early. Aggressive behaviors and attitudes in those high on the Dark Triad spectrum extend to animal cruelty (Kavanagh, Signal, & Taylor, 2013), racism (Hodson, Hogg, & MacInnis, 2009), and acceptance of different types of violent acts

And impulsivity:

> A feature that has been consistently connected to crime is impulsivity, characterized by low self-control/self-regulation

Machiavellians can have good long-term relationships

> Machiavellianism does not automatically lead to lower quality attachments with romantic partners, and taking the results from studies I reviewed before, it can even have an association with increased relationship satisfaction.
> Machiavellianism relates to more long-term planning, and individuals high in this trait can have high investment in a partner, resulting in heightened distress if the relationship dissolves.

Psychopaths and Macs can be very distressed after a breakup

> Because of the low satisfaction and low investment in relationships, it would be expected that high Dark Triad individuals (especially Machiavellian and psychopathic) are not feeling very distressed when the relationship breaks up. Moroz, Chen, Daljeet, and Campbell (2018) investigated the Dark Triad, and breakup distress in a sample of 264 University students in Canada. Unexpectedly, they found that participants who scored higher on Machiavellianism and psychopathy reported higher distress after breaking up. In regression analyses where the shared variance between the traits was controlled for, the authors found that those who were higher on Machiavellianism experienced higher levels of distress after a break up.

Narcissists do well at work (for themselves)

The author mentions Dutton's *The Wisdom of Psychopaths* and "*Snakes in Suits*", and warns that the evidence is scarce.

However, narcissists do well for themselves:

> *Across different studies, narcissism seems to be consistently related to higher success in terms of higher earnings. The overconfidence and assertiveness of narcissistic individuals could be an asset when discussing promotions and starting salaries, resulting in higher pay.*

Also see:

- Machiavellians at the top

Grandiose narcissists are social media super users

> (…) those who have more adaptive aspects of narcissism use social media more than people who are insecure narcissists. For example, a meta-analysis on a sample of over 13,000 users found that grandiose (but not vulnerable) narcissism related to increased time spent on social media, frequency of tweets or status updates, number of friends or followers, and frequency of posting

And:

> Narcissism, in turn, has the most relevance in social media, with a higher likelihood of posting selfies, getting angry if their posts are not acknowledged by others, and using more digital enhancement techniques in trying to make themselves look more appealing.

Internet and anonymity make aggression easier

> Online bullying is an easy, low-cost method of exerting dominance over the victim. Writing a denigrating post is only a few clicks away and has the potential to hurt the victim in front of wide audiences.

A study showed that "traditional" bullies are psychopathic, sadistic and Machiavellian with low agreeableness. But in online samples only sadism was a significant predictor (van Geel, Goemans, Toprak, & Vedder, 2017).

⍰⍰♂ Lucio's Analysis

Potentially too self-assured about certain conclusions

Several times I felt like the confidence in some statements or conclusions was unjustified.

I think it would be better for research authors to more clearly mark what's an opinion, a possible interpretation, or a conjecture.

Some potentially wrong conclusions

Sometimes I disagree with the author's conclusions.

Or, at least, she didn't use the correct words.

For example:

> Thus rather than having sex with consenting partners, those at the higher end of the continuum are more likely to achieve their mating goals via coercion and manipulation

They're not more likely to have sex with coercion and manipulation.
They're more likely than *non*-dark triads are. It's a big difference.

Potentially unwarranted conclusions from small samples

For example:

> This time, 347 online participants completed the lie detection tasks and the Dark Triad questionnaire. Interestingly, we found that narcissism in men was correlated with worse, and Machiavellianism in women with better lie detection ability.
> (…) The higher accuracy of Machiavellian women is interesting too, suggesting that cunningness and manipulativeness in women could be adaptive in terms of an increased capacity in seeing through fake tears.

If 347 participated and only a tiny percentage of those are dark triads, how can we even trust the results?
In this case, I didn't trust those conclusions on what's adaptive for women not one bit.

In my opinion, speculation based on poor quality is worse than speculation with no data at all.

In another case:

> (…) In an online sample of 314 participants (…) We found that narcissistic men had more children, and psychopathy in both sexes had an association with fewer children.
> This is an interesting discovery, as it seems that the sex drive and multiple matings do not translate into higher number of children in psychopathic individuals.
> It is possible that the adaptiveness of multiple sexual partners (and possible conceptions) is offset by reduced fertility due to increased risk of sexually transmitted diseases.

With such a tiny sample, of which I would guess that only a small percentage are narcissistic and psychopathic, I wouldn't even venture into drawing any conclusion.

The reduced fertility argument also seems to me like narrative fallacy, or creating just-so stories.

REVIEW

The Dark Triad of Personality is a good book to learn and understand the dark triad.

It's briefer than many handbooks, but that's not necessarily a con.

And while I listed some criticism above, I'm grateful to Minna Lyon for this book.
She did a good job, and I also referenced her work in at least two articles.

I would gladly read a future update to integrate the latest research in a few years. I'm especially interested in:

- **Number of dark triad offspring**. Something that, in my opinion, could be a possible threat to humanity's well-being
- **Life success measures** for the three and related sub-traits. For example, odds of getting rich, advancing at work,
  - Environmental variables that thwart or promote dark-triads success. Lots to learn here for organization and human development to promote systems that make it easier for less selfish and toxic people to advance

Overall, still I learned a lot though.
I gleaned some new insights, improved my understanding in a few areas and, equally important, I better understood the current limitations of research.

Scipio Africanus: Summary & Review

Lucio Buffalmano · 6 August 2024 · Archived copy · Original

Scipio Africanus (1927) tells the fascinating story of undefeated Roman general Scipio as he started from the Spanish province, then moved to undermine Carthage in Africa while Hannibal still threatened Rome in Italy, and eventually fought and defeated Carthage and Hannibal, paving the way for the unmatched rule of the Roman Empire.

FULL SUMMARY

About the Author:
Liddell Hart, AKA Captain B. H. Liddell Hart, was a British soldier, military historian, and military theorist. He wrote a series of military histories that proved influential among strategists.

Battlefield victory is only a means to an end

This is a deep and timeless lesson:

> Strategically Scipio is still more " modern." The present is a time of disillusionment, when we are realising that slaughter is not synonymous with victory, that the " destruction of the enemy's main armed forces on the battlefield " is at best but a means to the end, and not an end in itself, as the purblind apostles of Clausewitz had deceived themselves—and the world, unhappily.

It's incredible some enlightened men understood this millennia ago.
Then re-learend it centuries ago… And we still haven't learned the lesson.

Reverse of the law: Iraq war

Look at the USA routing Iraq in the battlefield… And losing at the higher strategy level.

Sinking billions more in "peace-keeping", fighting invisible insurgents for years to come, while unable to rebuild any functioning state in the void they created.

Military is only a part of the larger strategy

> In the future, even more than in the past, the need is to study and understand the interplay of the military, economic, and political forces, which are inseparable in strategy.

I couldn't agree more.

Also see:

- How to build an empire

Keep capable rivals close to display your magnanimity and superiority

This the great man's power move:

> His own moral stature could not be better shown than by his treatment of Marcius, the man who had partly retrieved the Roman disasters, and thus one whom an ambitious general might well regard as a rival to his own position and fame.
> But " Marcius he kept with him, and treated him with such respect that it was perfectly clear that there was nothing he feared less than lest any one should stand in the way of his own glory."

Compare with Napoleon:

> Napoleon's jealousy of Moreau, his deliberate overshadowing of his own marshals, is in marked contrast with Scipio's attitude, and one of the finest of military tributes to him is the abiding affection felt for him by his subordinate generals.

And the author further displays uncommon power awareness in this passage:

> " No man is a hero to his valet," and but few generals are heroes to their chief staff officers, who see them intimately in their nude qualities beneath the trappings of authority and public reputation. Loyal subordinates will maintain the fiction of infallibility for the good of the army, and so long as is necessary, but they know the man as he is, and in later years the truth leaks out.

I would add that not only the truth leaks out, but it also saps their will to fight for that man.

Show forced labor a path to freedom to get their best work

First off, let's put things in perspective.

War back then was even nastier than today, so any magnanimous act must be put into perspective:

> Proof of the discipline of Scipio's troops is that the massacre ceased on a signal after the citadel surrendered, and only then did the troops begin pillaging. The massacre, however difficult for modern minds to excuse, was a military measure

With that in mind:

> The massacre, moreover, was partly offset by Scipio's generous, if diplomatic, conduct to the vanquished, once the initial ruthlessness had achieved its purpose of quenching the citizens' will to resist. Of the ten thousand male prisoners, he set free all who were citizens of New Carthage, and restored their property. The artisans, to the number of two thousand, he declared the property of Rome, but promised them their freedom when the war was over if they " showed goodwill and industry in their several crafts." The pick of the remainder were taken for sea service, thus enabling him to man the captured vessels and so increase the size of his fleet ; these also were promised their freedom after the final defeat of Carthage.

The fruits of military victory lie in the peace after it

> As Polybius justly says, "Those who have won victories are far more numerous than those who have used them to advantage," and Scipio, more than any other great captain, seems to have grasped the truth that the fruits of victory lie in the after years of peace—a truth hardly realised even to-day, despite the lessons of Versailles.

Power move 1: Leave your vanquished enemies armed

> This victory over Andobales and Mandonius proved to be the coping-stone not only on his military career in Spain, but on the political conquest of the country.
>
> So decisive had it been that Andobales (…) sent his brother Mandonius to sue for peace unconditionally. One imagines that Mandonius must have felt some pessimism as to his reception and as to his tenure of life. It would have been natural to have dealt out to these twice-repeated rebels a dire vengeance.
>
> But Scipio knew human nature (…) No vengeance could improve his military or political position, now unchallenged, whereas (vendetta) it would merely sow the seeds of future trouble, convert the survivors into embittered foes, biding their time for a fresh outbreak.
>
> Little as he counted on their fidelity, generosity was the one course which might secure it. Therefore (…) after driving home the helplessness of their position and the rightful forfeiture of their lives, he made a peace as generous as it was diplomatically foresighted.
>
> To show how little he feared them, he did not demand the surrender of their arms and all their possessions, as was the custom, nor even the required hostages, saying that "should they revolt, he would not take vengeance on their unoffending hostages, but upon themselves, inflicting punishment not upon defenceless but on armed enemies " (Livy)

What an honorable man power move.
"I won't stage revenge on some poor hostages, but on you, *fully armed* you".

And history shows it worked:

> The wisdom of this policy found its justification in the fact that from this juncture Spain disappears from the history of the Punic War, whether as a base of recruitment and supply for the Carthaginian armies or as a distraction from Scipio's concentration on his new objective —Carthage itself.

Power move 2: welcome the spies, & escort them back to show supreme confidence

This was a next level mental power move:

> Three of the scouts, or spies, were captured, and when they were brought before Scipio he adopted a highly novel method of treatment.
> (…) he ordered a tribune to attend them and point out clearly to them the exact arrangement of the camp. After (…) he asked them if the officer had explained everything to their satisfaction. When they answered that he had done so, Scipio furnished them with provisions and an escort, and told them to report carefully to Hannibal what had happened to them" (Polybius).
> This superb insolence of Scipio's was a shrewd blow at the moral objective, calculated to impress on Hannibal and his troops the utter confidence of the Romans, and correspondingly give rise to doubts among themselves.

LOL this guy showed the spies around the camp, gave them even more information, told them to share everything with Hannibal… *And escorted them back* .

As a follows up, Hannibal asked to meet Scipio.
And Scipio used that to his advantage.

Social strategy: show your stick before showing leniency

Says Scipio after a resounding victory:

> Scipio began by stating briefly that the Romans had no call to treat them with leniency, in view not only of their admission that they had begun the war, but of their recent treachery in violating a written agreement they had sworn to observe.
> "But for our own sake and in consideration of the fortune of war and of the common ties of humanity we have decided to be clement and magnanimous. This will be evident to you also, if you estimate the situation rightly.

What an absolute communication masterpiece.
First, he reminds them they're powerless, that he won, and that he can do as he pleases.

BUT… He decided for leniency and clemency.

NOW they will appreciate it.

Plus, he still asked for conditions that guaranteed Roman security.
But it was ultimately a good win-win. As the author put it "This cheaply afforded security paved the way for the future prosperity of Rome, and at the same time made possible, justly, the revival of Carthage's prosperity".

As a leader, hide bad news from the troops

Scipio was preparing his campaign in Sicily when two envoys delivered bad news.

A crucial and former ally had to scrap their previous agreement because he married a Carthaginian general.

> One can imagine what a blow the message proved to Scipio.
> Yet he determined to carry through his plan, and merely sought to counteract the moral harm which might accrue if Syphax's defection became known. He sent the envoys back as quickly as possible, with a stern reminder to Syphax of his treaty obligations.
> Further, realising that the envoys had been seen by many, and that if he maintained silence about their visit rumours would spread, Scipio announced to the troops that the envoys had come (…) to urge him to hasten his invasion of Africa.
> It was a shrewd ruse, for the truth might have caused grave moral depression at the critical time.

Gain reputation for magnanimity: your enemies will surrender more easily

If your enemies fear slaughter, they will fight until death.

If they believe you will extend good conditions, they will surrender much sooner (and fight will less intensity):

> the Carthaginians sent thirty of their principal elders—the Council of Elders being superior even to the Senate—to beg for terms of peace (…)
> This hope was based on their knowledge that the Roman people's aim was dominion, and not destruction (…)
> Scipio replied " that he had come to Africa with the hope, which had been increased by his success, that he should carry home victory and not terms of peace. Still, though he had victory in a manner within his grasp, he would not refuse accommodation, that all the nations might know that the Roman people both undertake and conclude wars with justice."

The author also says that chivalry make the chivalrous feel superior, which is an advantage:

> But chivalry, as in this example of Scipio's, is both rational and far-sighted, for it endows the side which shows

> it with a sense of superiority, and the side which falls short with a sense of inferiority. The advantage in the moral sphere reacts on the physical.

I'm far less convinced about this.
But I do believe that, for most men, it does help with confidence and self-esteem.

Use war "as little as possible" to achieve a better peace

> The moderation of these terms is remarkable (…) a testimony not only to Scipio's greatness of soul, but to his transcendent political vision.
> (…) Scipio had a clear grasp of what is just dawning on the mind of the world to-day—that the true national object in war, as in peace, is a more perfect peace.
> War is the result of a menace to this policy, and is undertaken in order to remove the menace, and by the subjugation of the will of the hostile State" to change this adverse will into a compliance (…) and the sooner and more cheaply in lives and in money we can do this, the better (…) national prosperity in the widest sense.
> The aim of a nation in war is, therefore, to subdue the enemy's will to resist with the least possible human and economic loss to itself."

The author, writing after WWI, also adds:

> The lesson of history, of very recent history moreover, enables us to deduce this axiom, that" A military victory is not in itself equivalent to success in war."
> (…) In regards the peace terms, "the contract must be reasonable; for to compel a beaten foe to agree to terms which cannot be fulfilled is to sow the seeds of a war which one day will be declared in order to cancel the contract."
> There is only one alternative—annihilation

If I'm correct that this book was originally published between the two world wars, it's incredible how prescient the author was.

And he's also not writing from a position of naive self-help.
He is right that annihilation would be the alternative -albeit that, too, has high costs-.

Chivarly must be smart & strategic, or it becomes weakness

Here again, the author and TPM perfectly align.

To seek to be *always* chivalrous and honorable is naive.
It opens you up to manipulation, lose-wins, and generally leaving too many opportunities on the table.

Instead:

> Scipio revealed his understanding of the ethical object in war, and of its value.
> Chivalry governed by reason is an asset both in war and in view of its sequel—peace. Sensible chivalry should not be confounded with the quixotism of declining to use a strategical or tactical advantage, of discarding the supreme moral weapon of surprise, of treating war as if it were a match on the tennis court (….).
> This is merely stupid.

That's why we also say here to uplift others and be warm… But from a position of power:

- **Power and warmth: a foundational approach to life**

Smart chivalry pursues your interest, while seeking win-win

Talking about Scipio's subsequent campaigning in Greece:

> The notable feature of these terms, as of those in Africa and Greece, was that the Romans sought security and prosperity merely. So long as Scipio guided Rome's policy, annexation, with all its dangers and troubles, is eschewed. His object is simply to ensure the peaceful predominance of Roman interests and influence, and to secure them against external dangers.

A case for Scipio the best commander in history

The list of "greatest commanders" comes down to 3 ancient names:

- Alexander
- Hannibal
- Caesar

And 3 modern ones: Gustavus, Frederick, and Napoleon.
The author says that Frederick shouldn't even be there. And he makes the case instead that Scipio was the greatest commander in history.

Some points to consider:

- **The army Scipio started his biggest campaign with was poor**

> The African army was, in the view of the majority of the Senate, a forlorn hope of disrated companies and volunteers, whose loss in any event the State had no great occasion to regret."

- **Scipio is the only one to have defeated a great general**

Scipio defeated Hannibal himself, and did so with fewer soldiers, fighting closer to Hannibal's home turf.
Having "beat" Hannibal on the field, in worse condition, that alone should place Scipio above Hannibal.

So that leaves one commander standing in the ancient world: Alexander.

- **Alexander won against tactically inept hordes**

Plus with the advantage of having total control over resources as an autocrat.

- **Alexander's empire collapsed on his death**

> (…) for if Alexander established for himself an empire from the Danube to the Indus, which collapsed on his death, Scipio built for Rome an empire which stretched from the Atlantic to the Black Sea and the Taurus mountains—an empire which endured and increased.

- **Scipio turned the war around, campaigning at Rome's worst moment**

> And whereas Alexander built on the foundations laid by Philip, Scipio came on the scene at a moment when the very foundations of Roman power in Italy were shaken by a foreign foe.

- **Napoleon lacked grand strategy, Scipio excelled at it**

> In the comparison of Scipio with Napoleon, if the latter's superiority in logistical strategy is recognised, we

> have to set against this both his tactical and his grand strategical inferiority.
> As a grand strategist Napoleon's claims are marred not only by his failure to realise the aim of grand strategy—a prosperous and secure peace,—but by his several blunders over the psychology of his opponents, over the political and economic effects of his actions, and in the extravagant later use of his forces and resources.

Finally, of course, Napoleon ultimately lost.

- **Scipio was a higher-quality man**

The author also makes the case that Scipio had a better character.
He was a high-quality man.
The author makes a good case in my opinion. Liddel also lists that Scipio respected women in an era when many viewed them as objects.

Enlightened men & empires move civilization forward

The author and I share the same view on human progress:

> Had his successors possessed but a tithe of the wisdom and vision of Scipio, the Roman Empire might have taken a course analogous to that of the modern British Empire, and by the creation of a ring of semi – independent and healthy buffer States around the heart of Roman power, the barbarian invasions might have been thwarted, the course of history changed, and the progress of civilisation have escaped a thousand years of coma and nearly as much of convalescence.

We see history the same way.
Great men and great empires carry human civilization forward.

When great men and great empires don't lead the way, civilization stagnates.
And we all lose.

Hopefully, today's global and "distributed civilization" world is more resistant to shocks.
But the concept stands.

Great men's mindset

And in terms of mindsets and psychology:

> Scipio laboured for the good and greatness of Rome, but he was no narrow patriot, instead a true world statesman.
> The distinction between Scipio and Caesar has been crystallised in the phrase, " Zama gave the world to Rome, Pharsalus gave it to Cæsar," but even this does not render Scipio full justice, for he could look beyond the greatness of Rome's glory to the greatness of her services to humanity. Not an internationalist, he was a supra-nationalist in the widest and best sense.

After this, I decided I could not not share this review.

We need more enlightened men like this.

Be one of them.

MORE WISDOM

Generosity from a position of power can bear fruits many years later

> The meeting with Masinissa, whenever it occurred, is worth notice, for here the seeds of Scipio's generous treatment of Masinissa's nephew years before bore fruit in the exchange of pledges of an alliance, which was to be one of Scipio's master-tools in undermining the Carthaginian power at its base in Africa.

Don't demand a reward: give them a chance to give it to you

> ON arrival at Rome Scipio obtained an audience of the Senate outside the city, at the temple of Bellona, and there gave them a formal report of his campaigns. "On account of these services he rather tried his prospect of a triumph than pressed it pertinaciously," for the honour had never been given except to those whose services were rendered when holders of a magistracy. His tact was wise, for the astonishing success of youth had already inspired envy among his seniors.

The most successful military captains are despots

> It is one of Scipio's supreme merits that he obtained completely decisive results, though lacking the tremendous asset of political control. He, the servant of a republic, is the one exception to the rule that throughout the history of war the most successful of the great captains have been despots or autocrats.

Makes sense, so they can make as many wars as they want -until they bankrupt the state-.
And it's also why any good government must be civil: non-military, and non-religious.

Confidence is crucial to lead and influence

> The secret of his sway, extraordinary in one so young, over the crowd mind, especially in times of crisis, was his profound self-confidence, which radiated an influence to which the stories of his divine inspiration were but auxiliary.

And in visiting the allies in Spain that he had recently defeated:

> (…) His appreciation of the moral factor and of the value of personal observation, two vital elements in generalship, was shown in his earliest steps. (…) before attempting to formulate any plan he visited the States of his allies and every one of the various parts of his army, seeking always by his attitude, even more than by his words, to rekindle confidence and dissipate the influence of past defeat.

Social conservatives: morons across the ages

Social conservatives revere conservative values, no matter how useless they are.

Of course Rome had its fair share of those as well.

Listen to them, criticizing the only man kicking Hannibal's ass and single-handedly changing the course of the war:

> His critics complained that "he walked about the gymnasium in a cloak and slippers, and that he gave his whole time to light books and the palæstra. That his whole staff were enjoying the delights which Syracuse afforded, with the same indolence and effeminacy.

They criticized Scipio for not being “as masculine” as they (think) a man “should be”.

The targets of what’s “non-masculine enough” have changed of course.
Funny enough, they criticized Scipio’s gym habits (palestra). But the stupidity of social conservatives across the ages stays the same.

Populist politicians will always seek to incense the crowd from the safety of their couches

> When Scipio had announced the terms of peace to the envoys from Carthage, they carried them at once to their Senate. His moderation did not evoke an instant echo in an assembly that was coincidently “ indisposed for peace and unfit for war.” One of the Senators was about to oppose the acceptance of the terms, and had begun his speech when Hannibal came forward and pulled him down from the tribune.

Scipio Africanus: Lucio's Review

Scipio Africanus is one of the greatest leaders and military commanders in history, and a role model of masculine power, honor, and virtue.

QUOTES

In criticizing the tendency for people to glorify the “dramatic failures” such as Napoleon and Hannibal instead of long-lasting victory:

> THE road to failure is the road to fame—such apparently must be the verdict on posterity’s estimate of the world’s greatest figures.

For this tendency the author casts the blame on historians first (albeit I disagree here, it's more the popularizers of history and the popular self-help authors):

> On the historian, in fact—who of all men should by training and outlook put his trust in reason—falls the major responsibility for this eternal tendency—**the glorification of dramatic failure at the expense of enduring achievement**. The history of the ancient confirms that of the modern world, and in no example more strikingly than that of Scipio Africanus

The author feels the same about Caesar:

> Even this test of achievement has been based on quantity rather than quality. That Cæsar's work is known universally, and Scipio little more than a name to the ordinary educated man, is a curious reflection on our historical standards, for the one inaugurated the world dominion of Roman civilisation, the other paved the way for its decay.

On victories only meaning anything if you use them well:

> Those who have won victories are far more numerous than those who have used them to advantage

On peace as the ultimate victory:

> the fruits of victory lie in the after years of peace

CONS

Raises some red flags of positive bias

It's obvious the author likes and respects Scipio.

A caustic critic may even call it "fanboying".

I get it, I loved the character as well -and even if only half of what he shares is true.

And that's exactly why, in my opinion, he should have let the facts speak more.

When history is on your side, you don't need to promote.
He could have been a bit nicer to Hannibal and Napoleon. And most people would have still agreed that Scipio was the superior general and man -and he would have been even more credible-.

And he could have been less critical of fellow historians.
Again, it would be easy to agree with him that they got it wrong.
Had it been nicer, he would have been, again, even more credible.

Edit:
As I thought more about it, I wanted to add that, from what I've read, the author himself comes across as an honorable, high-quality man.
So it may also be a case of "quality recognizes quality".

PROS

This is a book where you can learn far more than history or military strategies, but also:

- **Strategy**, and especially the strategies most likely to get you long-term success

- **Persuasion**
- **Leadership**
- **Character development** of a high-quality honorable man , not just a high-value man

REVIEW

Scipio Africanus is a fantastic book on one of history's greatest leaders.

A great leader both in his "on the job" competence, with a fair claim to #1 military commander, at grand strategy, and at a character level.

You will learn lessons on strategy, leadership, and eagle-like character self-development as well.

I thought Scipio was such a great example of what we refer here as "eagle" that I felt compelled to publish this review.

Psycho-Cybernetics: Confidence Hacks, or Woo-woo Quackery? (Book Review)

Lucio Buffalmano · 13 August 2024 · Archived copy · Original

Psycho-Cybernetics (1960) compares the mind to a machine and teaches readers how to develop a positive self-image to increase self-esteem and confidence. Maxwell Maltz, the author, insists that psycho-cybernetics is a "scientific discipline" that can make readers happier and more successful.

Exec Summary

- **The mind works like a computer** (note: you can see some overlap between human mind and computers, but they are fundamentally different)
- **We all have installed a "success programming" we only need to learn how to use** (⍰⍰♂ **Lucio's note**: if you see this in allegorical form, it's passable. In the literal sense, it's BS)
- **Always have a goal**. It gives you a sense of direction, and adds meaning to your life

FULL SUMMARY

About the Author:
Maxwell Maltz was an American cosmetic surgeon interested in psychology and later turned self-help author.

The 7 successful personality traits

You can't have a popular self-help book without a simple "list for success".

And you get bonus points if you do it in the form of a memorable acronym.

So here are for you the 7 steps to a successful personality, conveniently spelled "SUCCESS":

1. **S**ense of direction
2. **U**nderstanding
3. **C**ourage
4. **C**ompassion
5. **E**steem
6. **S**elf-Confidence
7. **S**elf-Acceptance

I personally only saw a random list of positive traits.
But although I wouldn't necessarily consider them "key" to success, most readers wouldn't be harmed pursuing them.

Like yourself

> The secret is this: To really "live," that is, to find life reasonably satisfying, you must have an adequate and realistic self-image that you can live with. You must find your self acceptable to "you." You must have a wholesome self-esteem.

The author then also adds:

- A self that you can trust and believe in.
- A self that you are not ashamed to "be," and one that you can feel free to express creatively, rather than hide or cover up.
- A self that corresponds to reality, so that you can function effectively in the real world.
- Knowledge and honest self-assessment of both strengths and weaknesses

Stop comparing yourself unfavorably with others

Overcome your inferiority complex realizing that everyone is either superior or inferior at something.

Says the author:

> (…)I do not compare myself unfavorably with them and feel that I am no good merely because I cannot do certain things as skillfully or as well as they. I also know that in certain areas, every person I meet (…) is superior to me in certain respects. But neither can any of these people repair a scarred face, or do any number of other things as well as I. And I am sure they do not feel inferior because of it.

Basically, everyone is superior or inferior.

You are not inferior, nor superior. You are simply you.

Use anger and indignation to remove disempowering beliefs

> Indignation and anger can sometimes act as liberators from false ideas. Alfred Adler "got mad" at himself and at his teacher and was enabled to throw off a negative definition of himself.

Decide & focus on what you want, not what you don't want

I disagree with the author's rationale, but the tip itself is good.

Always have a goal in life

The author says we are "engineered as goal-seeking mechanisms" because "we are built that way".

Not sure how true that is, but this is still another great tip for many.
He says:

> When we have no personal goal that we are interested in and that "means something" to us, we are apt to "go around in circles," feel "lost," and find life itself "aimless" and "purposeless." We are built to conquer environment, solve problems, achieve goals, and we find no real satisfaction or happiness in life without obstacles to conquer and goals to achieve. People who say that life is not worthwhile are really saying that they themselves have no personal goals that are worthwhile.

That was a good point.

Build a mental retreat within yourself

The author recommends an actual imaginary room:

> (…) build for yourself, in imagination, a little mental room.
> Furnish this room with whatever is most restful and refreshing to you (…)
> (…) The colors of the walls are your own favorite "pleasant" colors, but should be chosen from the restful hues of blue, light green, yellow, gold.
> (…) It is very neat and everything is in order. Simplicity, quietness, beauty are the keynotes. It contains your favorite easy chair.
> From one small window you can look out and see a beautiful beach. The waves roll in upon the beach and retreat, but you cannot hear them, for your room is very, very quiet.

I personally find that simply the ability to shut off in meditation is beneficial.

CRITICISM

We don't mince words on TPM.

So here's my verdict:

Maltz sounds a lot like a charlatan.

As for the author of the updated version, I don't know much about him.
But he has a conflict of interest because he acquired the psycho-cybernetics brand/operation.

Psycho-cybernetics is pseudoscience from a charlatan

How do you recognize a charlatan?

Here are 2 red flags:

- **All their assumptions are presented as (made-up) "science"**
- **Try too hard to convince you it's science**, including talking with over-confident teacher frames instead of the scientist's healthy skepticism

Here is just a list of curated examples for you:

> For example, there is today irrefutable clinical evidence in the fields of individual psychology, psychosomatic medicine, and industrial psychology that there are "success-type personalities" and "failure-type personalities," "happiness-prone personalities" and "unhappiness-prone personalities," "health-prone personalities" and "disease-prone personalities."

I would have loved to look into that irrefutable evidence.
But of course, no resources were provided. ♂

> There is an abundance of scientific evidence that shows that the human brain and nervous system operate purposefully in accordance with the known principles of cybernetics to accomplish goals of the individual

This guy is really trying SO hard to convince you that psycho-cybernetics is a recognized science.
Just try to find "psycho cybernetics" as a branch of science or higher-education though, and see for yourself.

And:

> Both experimental and clinical psychology have proved beyond a shadow of a doubt that the human nervous system cannot tell the difference between an actual experience and an experience imagined vividly and in detail.

This is so dumb I can't even start.
But just to give you a different take, I asked Chatgtp:

is this sentence true:

Both experimental and clinical psychology have proved beyond a shadow of a doubt that the human nervous system cannot tell the difference between an actual experience and an experience imagined vividly and in detail.

The sentence you've provided is not entirely true and is somewhat misleading. Here's why:

1. **Experimental and Clinical Psychology Findings:** Research in psychology, including studies on visualization, imagery, and the brain's response to real versus imagined experiences, suggests that the brain can respond similarly to vivid imagination and real experiences in some ways. For instance, mental imagery can activate similar neural pathways as those involved in actual perception and action.
2. **Cannot Tell the Difference:** However, the claim that "the human nervous system cannot tell the difference" is an overstatement. The nervous system, including the brain, can and does distinguish between real and imagined experiences in most contexts. For example, while imagined experiences can produce physiological responses (e.g., increased heart rate during a vivid mental simulation of a scary situation), they are generally less intense than those triggered by real experiences. Moreover, the brain usually knows when it is imagining something versus when it is experiencing something real.

Get citation

And:

> This life force was established as a scientific fact by Dr. Hans Selye of the University of Montreal. Since 1936, Dr. Selye has studied the problems of stress. Clinically and in numerous laboratory experiments and studies, Dr. Selye has proved the existence of a basic life force, which he calls “adaptive energy.”
> (…)
> Suffice it to say that his findings are recognized by medical experts the world over.

Yeah, that last line. When spinning a man’s work is not enough, you reinforce it by implying non-existing, made-up consensus.

And let’s finish with one of the sweetest BS just to fix our palate:

> Telepathy, clairvoyance, precognition have been established by scientific laboratory experiments. Dr. Rhine’s finding, that man possesses some “extra-sensory factor,” which he calls “Psi,” is no longer doubted by scientists who have seriously reviewed his work.

Yeah, kid you not, that’s what he wrote.
And Psycho-cybernetics made into some popular “self-help book classics” list

The charlatan pre-emptive self-defense

And here comes the charlatan power-move:

> As Dr. Maltz said in the beginning of this book, he was reluctant to discuss or talk about many of these experiences because “if I presented some of the case histories and described the rather amazing and spectacular improvements in personality, I would be accused of exaggerating, or trying to start a cult, or both.”

Same power move as Joe Dispenza, who complained he left science because they didn’t appreciate his findings.
Truth: he was never a scientist. He’s a charlatan.

Or popular male influencers who are chased by “the Matrix”.
Truth: they attracted that attention themselves with narcissistic self-snitching.

But as long as you speak with confidence, legions of naive men are ready to believe.

Psycho-cybernetics’s main claim is doubtful (at best)

Psycho-cybernetics is built on the idea that the mind is like a computer.

With the usual manipulative charlatanism, says the author:

> these scientists began to ask themselves: Could this be the way that the human brain worked also? Could it be that in making man, our Creator had provided us with a servo-mechanism more marvelous and wonderful than any computer or guidance system ever dreamed of by man, but operating according to the same basic principles? In the opinion of famous Cybernetic scientists like Dr. Norbert Wiener, Dr. John von Neumann, and others, the answer was an unqualified yes.

Of course the human mind as a biological organ does not work like a machine.

Plus, I checked it, and Wiener and von Neumann never gave any “unqualified yes”.
Chances are, those two scientists would be horrified and fully reject Maltz’ quote.

Manipulative spins to force his narrative

Manipulative spins to support his made-up claims

The author is a spin-master.

He says:

> For example, Dr. Wilder Penfield, who was the director of the Montreal Neurological Institute, reported at a meeting of the National Academy of Sciences that he had discovered a recording mechanism in a small area of the brain that apparently faithfully records everything that a person has ever experienced, observed, or learned.

“Apparently”.
So now he’s trying hard to tell us that’s like a flashcard or memory storage -like a computer, get it?-.

Of course, although chances are we record and store more than we can recall, there is no “recording mechanism”.
And, most of all, there is no faithful memory.
If anything, our memory has been well proven to NOT be reliable.

Several made-up BS

The made-up claims abound.

And of course, they’re always “confirmed by scientists” -how could they not?-.

> Science has now confirmed what philosophers, mystics, and other intuitive people have long declared: Every human being has been literally “engineered for success” by his Creator. Every human being has access to a power greater than himself.

“Other intuitive people”, LOL.
I bet he thought of himself as one of the “highly intuitive one” -aka “bullshitters”-.

CONS

- **Insists on envisioning rather than practicing**. Why not BOTH? Or, having to choose, I'd 100% recommend real-world practice

PROS

- **Many good tips** for empowered mindsets and more positive thinking

REVIEW

Psycho-Cybernetics is a book with many good self-development principles, but presented under a false guise of non-existent scientific rigor.

And that makes it challenging for me to review.

On one hand, I deeply dislike charlatans.
And on the other hand, some of the content was good and I agree with it.
It could have been more systematized and richer, but for a list of good tips and ideas, it's great.

P.S.:
If you're looking for confidence and self-esteem, our course maybe a good alternative to consider.

See here a preview of our approach:

How to Be Assertive In 7 Simple Steps

Lucio Buffalmano · 20 August 2024 · Archived copy · Original

Assertiveness is an interpersonal approach and communication style that voices concerns, opinions, and requests clearly and respectfully.

It wins people's respect, and it makes you a high-value man.

So in this article, you will learn how to communicate assertively.

Let's start with the basics:

Contents

- 1. Gain Self-Esteem & Self-Love
- 2. Acquire Assertive Mindsets
  - 2.2. Acquire Assertive Beliefs
- 3. Know Your Goals & Values
- 4. Use This Assertive Format (To Start Out)
  - ▯ DESOE examples
  - Quicker Format For Quick Feedback
- 5. Adopt Matching Body Language
- 6. Start Speaking Up
  - 6.2. Stick through the changes
  - 6.3. Baby-step your way into it
- 7. Reward Yourself
- Bonus: Assertive & High Power
  - 1. Remove "I can't", say "I don't"
  - 2. Use disarming honesty
  - 3 Keep it about you
  - 4. Go deep: address the source
  - 5. Keep it cool, avoid drama

1. Gain Self-Esteem & Self-Love

This is the true foundation of it all.

We have a whole course on it called Confidence University.
But for a quick starter, adopt for these values:

- ▯ I tell the truth, and I expect to be told the truth
- ▯ I don't take advantage of others, and neither do I let others take advantage of me
- ▯ I seek to add value to others, and I expect others to have the same attitude

And for busy folks:

- ▯ I respect people's time, and I expect others to respect my time

These values automatically move you towards a more assertive stance in life.

Also see:

- High-quality men
- High-quality women

2. Acquire Assertive Mindsets

The *Routledge Handbook of Communication Skills* states that beliefs make the difference between assertive men, and unassertive ones.

Assertive individuals tend to use twice as many positive self-statements as negative ones, unlike nonassertive individuals who use both equally.

So let's start changing your self-talk:

Weak Mindsets	Empowered Mindsets
"Dark" feelings such as anger and will to power are bad	"Dark" feelings are natural. It's all about how I manage them and do with them
Being assertive is selfish	Assertiveness is what self-respecting men do. And it's good for the world
Other people can't handle my assertiveness	The people I want in my life *want* me to speak up
People should be more considerate	"Shoulds" are weak. I pursue my goals, regardless of what others do
I'm afraid of being assertive and failing	I will fail sometimes and that's great, becaus I will learn, adjust, and improve
I must convince others	Sometimes, it's enough for me to share my truth. Other times I'll do my best to persuade. But I never "must" do anything
I must look good/strong/happy/stoic	1. Sometimes it's better to look or act a certain way. But I focus on reaching my goals rather than looking at anything 2. I encourage the people close to me to be honest and upfront because that makes the relationship better for both

Most close relationships gain with more upfront talk

2.2. Acquire Assertive Beliefs

- **I am a respect-worthy man and so are most others**
- **I'm in charge of my behavior, others are in charge of theirs** <—- this takes the pressure off from speaking up because you're not forcing anyone. Only stating your position.
- **I decide for myself what I will and will not do**
- **People may ask anything, and I can decline anything**
- **I may make mistakes, but I am still a worthy, respectable human** <— Good men need it. They accept abuse after a mistake because they feel the pressure to be "good" and effective
- **I can be illogical with my decisions** <—- Effective against manipulators looking for reasoning "faults". Avoid the argument altogether. Your choices are valid for the simple fact that you chose them
- **I don't know everything, and neither should I**
- **I can ask for help** <— Useful for men who "suffer in silence"
- **I am not responsible for other people's problems** <— Great against emotional manipulation
- **Direct talk is better than covert**
- **Others can give advice, but I make my decisions**
- **I am my own judge, I don't have to justify myself to others**

 Example:

> **Covert aggressor**: Why did you do it that way?

> **Weak**: (starts justifying, then accepts the aggressor's explanation on how it should be done)
>
> **Empowered**: Because, that's what I chose to do

 Example 2:

> **Aggressor**: BS! what makes you even think that!

> **Weak**: (accepts the aggression, justifies, then accepts he is wrong)
>
> **Empowered**: Number 1, don't talk to me that way again please. And number 2, we can talk about rationale after you speak respectfully

The high-power assertive stance is this:

> **As long as I remain within the law and my moral code, I can think, say, and do as I please**

3. Know Your Goals & Values

Know what you want and who you are.

Including you:

1. Goals
2. Preferences
3. Values: what are you comfortable doing and *not* doing?

The clearer these are, the more you know what to say “no” to, the easier it is to say “no”.
This maybe your time to write them down.

Example:
TPM’s ex-developer was clear that his religious values didn’t align with our player-leaning dating section:

I respect him for standing behind his values, and for his clear communication

full exchange in the journal.

4. Use This Assertive Format (To Start Out)

Bolton’s format can get you started:

- **Describe** the situation and what’s going on
  TIP: avoid personality and motives, focus on behavior and facts.

Example:

> I noticed that the kitchen hasn’t been cleaned

Or:

> It’s me who takes out the trash most of the times

- **Express** how you feel in the situation

Example:

> I feel like I’m doing more than half of the housework

“I” statements are less dominant, but more objective and defensibile.

See here on “I” VS “you”.

Careful getting too touchy-feely
Avoid the “I feel” format when efficiency and goal-achievement take precedence (ie.: work).

- **Specify** what you would like to happen
  Tip: use positive formats. Ie.: “*stop being so messy*” -> “*clean twice a week*“

Example:

> I would like you to also take the trash out a couple of times a week

- **Outcome**. A reward if he complies, a possible punishment if he doesn’t
  Tip: use positive formats. Ie.: “*I will leave a bad review*” -> “*I will keep this bad experience for myself*“

Often, it’s as simple as you liking it better, or the relationship improving:

> I’ll appreciate that a lot, and I think we’ll get along much better

- **Enforcement** when needed

Example:

> Mark, I don’t want to argue with you.
> My focus is on making this work going forward. And I’m asking to please throw the trash out more often from now on.

Warning: Be smoother for everyday communication
DESOE comes off as “weird” in everyday life.
Understand the concept, train it, but adapt it to the situation and your personality.

Instead, it’s best used to:

- Communicate something difficult
- CYA when you need to be precise
- Deal with manipulative or difficult people

DESOE examples

With an emotionally manipulative mother:

- *Mom, when you tell me I don’t care about you* (**describe**)
- *It makes me feel awful* (**express**) *because I do care and I don’t appreciate that nasty accusation* (**adaptation**)
- *So from now on, I want you to stop telling me that* (**specify**)
- *And once we can be kinder to each other, I may want to talk to you even more* (**outcome**)
- *No, sorry mom, I can’t visit Sunday* (**enforce**)

With a strong-willed boss:

- **Description**: you have provided me with a great opportunity
- **Express**: and for that, I am thankful to you, it’s been an honor
- **Specify**: but I am handing my resignation

- **Outcome**: I will stay here 2 more weeks, and be gone by X day
- **Enforce**: my decision is final

🤷♂ **I never use templates**: it's about *attitude*

Lucio: Templates are good to start, but I find DESO low-power and stilted for my taste.

I *want* to talk about character, and I don't like over-using "I feel".
I'm also demanding and judgmental, and I own it.

In trash example above, I'd say "*Hey man, look, generally, we're good. But about the trash, I've been the only one throwing it out so far. Can we please both do it*".

And then add persuasion approaches.
For example: "*Yeah, you can do it on your way out so it's no extra effort at all. That's how I do it*". Then quick chit-chat to rebuild goodwill and increase compliance.

Quicker Format For Quick Feedback

1. Describe non-judgmentally
2. Share your feelings
3. Share the effects of their actions

The template:

> "When you [do X], I feel [Y] because [clarify the effect on your life]."

It's a good format to start a conversation.
⚠ But only use it with parties you trust. Otherwise, think beforehand about what you want.

5. Adopt Matching Body Language

Assertiveness is more than words, it's an *attitude*.

It includes beliefs, mindsets, self-confidence, tonality, and body language.

This course helps you with them all ⍰.

For more on body language:

- Best body language resources
- Body language of social power

6. Start Speaking Up

As simple as that.

Some ideas:

1. Voice your concerns. When something feels off, speak up
2. Ask questions when you're not sure. Making sure of things is a high-value trait
3. Embrace your unpopular opinions. Share and defend them when appropriate
4. Do something assertive that scares you

6.2. Stick through the changes

Passive people face both internal and external resistance to becoming more assertive.

Mentally most people before learning assertiveness skills misread assertion for aggression (Hargie, 2017).
So don't be afraid if it feels 'too much', it's just a phase.

And socially, people around you will not like your more assertive you.
Take that as a good sign: you're empowering yourself (and people preferred you easier to push around).

6.3. Baby-step your way into it

Start with the easiest relationship or conversation.
Gain some experience, and move your way up.

7. Reward Yourself

Take pride in your changes.

Every time you act more assertively, congratulate yourself.

Bonus: Assertive & High Power

1. Remove “I can’t”, say “I don’t”

- I can’t = more strategic, but lower dominance
- I don’t (do X) = character based rejection ⍰
- I don’t want to = most dominant ⍰⍰

2. Use disarming honesty

Excuses save faces.

But disarming honesty displays power and character.

⍰ Example:

> **You**: I can’t because I wanna spend some me time

Nobody says that, so it’s refreshingly -and shockingly- high power.

3 Keep it about you

“Power borrowing” works, but done poorly it’s low power.
Ie.:

> **Low Power**: *Nobody* could take this

Says who?
It sounds cheap excuse-making.

Here is how McCain effectively spoke of “breaking” under torture:

> **You**: (I learned in life that) everyone has a limit. <—- it *implies* that everyone else would have quit.
> I had reached mine

4. Go deep: address the source

Assertiveness guides encourage specificity.

But what if the issue is personality-based?

With the previous trash example, you may be tidy and your flatmate messy.
It's a *personality* mismatch.

Then… Say *that*:

> **You**: I think we have different personalities regarding house cleaning, and that can create difficulties. I'd like to talk about it and see if we can find solutions

4.2. Address the personal issue

If you have issues with someone, or they obviously dislike you:

> **You**: It seems to me [we have some issues / you're avoiding me / we don't understand each other]

5. Keep it cool, avoid drama

Drama is "effective" at catching attention, but… At heavy costs.

Women are dramatic.
Not high-power men.

Forum example.

This is a remix from Power University. Alumni please see the superior assertiveness module!

How to Save People's Faces & Be Socially Effective

Lucio Buffalmano · 27 August 2024 · Archived copy · Original

To save face means to "avoid embarrassment and humiliation".

Good social strategists help others save face because it helps them achieve goals, and maintain better relationships.

This article will teach you how to save people's faces with 6 simple techniques.

Contents

- 1. Relieve Them From Blame & Guilt
  - ▯ Example: Not Saving Your Boss' Face
- 2. Shift The Blame to A Third Party
- 3. Keep It General, Don't Point Finger
- 4. Take The Blame Yourself
- 5. Demean the Source of Their Failure / Pain
- 6. Ignore It, Keep Moving
- Calibrating Face-Saving
  - Wrong: too much
  - Wrong: too low power
  - How to save-face, smoothly and high-power
- Why It's Good to Save Face

1. Relieve Them From Blame & Guilt

Here are 5 simple and effective techniques:

1. **Normalize it**: say that whatever "bad thing" happened, it happens frequently, or to many people
2. **Relate**: sharing something similar that happened to you, or someone you know
3. **Thread-minimize it**: quickly say "*Sorry to hear*", and then move on
   ⍰ Frame control basics and techniques
4. **Blame-shift** to external circumstances, third parties, or simply "life" and "questions of odds"
5. **Remove "you" and go impersonal**. For example: "people", "when one does… " or "it can happen that"

Let's see an example for the last two:

⍰ Example: Not Saving Your Boss' Face

Imagine your boss entered the wrong holidays.

And, to raise the stake, imagine he's a little despot with a fragile ego.

This is the face-smashing format:

> **Disempowering**: Hey boss, you put the wrong dates on my holiday, the dates are wrong

This can get thorny because:

1. You blame him for a mistake
2. You'll be away longer than he expected

Not a good mix.
The boss may question your longer absence in the middle of the project just out of power considerations. He wants to re-empower himself, and he seeks an excuse to trip you.
Or he may escalate and blame you for the mistake.

1. Power protecting instead is an invaluable office politics tool here.
   It preserves rapport, and prevents any issues with your holidays.

Let's see how:

2. Shift The Blame to A Third Party

> **Strategic**: Hey boss, just wanted to let you know, I think the system had some issues <— The system is to blame
>
> and my holiday dates are not correct <—- ⍰ Notice the switch from "wrong" to "incorrect"

You can also blame-shift to HR, or to "miscommunication along the chain".
Anything but *him*, of course :).

⍰ PRO Tip: Say "*We* Made A Mistake"

It's a good move to form an imaginary team and grow closer.

For example:

> **You**: hey boss, I think we put the wrong date on my vacation, it's supposed to start 2 days earlier and end 1 day later

Even if you had nothing to do with the mistake, it's still a good move.

3. Keep It General, Don't Point Finger

Easy and smooth:

> **You**: Boss, there was a mistake in my holiday <— Impersonal, generic… Nobody made any mistake
>
> If there's a way to fix it myself I can do it <— Bosses love this attitude. It shows you're willing to do extra work to avoid inconveniencing him

4. Take The Blame Yourself

> **You**: hey boss, I finished the report you asked me, here it is <— Approach with value-giving first, always a good idea
>
> Oh, and one thing about the holiday, maybe I told you the wrong dates for my vacation, but it's not correct now. <— Takes the blame
>
> If it's important to fix it… <— Lets him decide whether it's even important to officially amend

Some other formats of taking the blame include:

- *Maybe I didn't get something, but…*
- *Maybe it's me, but…*
- *I'm new so still learning the ropes…*

When it's OK to take the blame

Of course, don't go around taking blame for everyone.

Promote yourself instead of over-taking blame :).

But this approach is effective when:

- Dealing with fragile-ego superiors
- It's obvious it's not your fault, so you lose nothing concrete but you get brownie points for power-protecting
- The mistake is inconsequential, so there's no major loss in a showy "ownership"

And, to be straight and eagle-like, don't forget:

- Take the blame when it is your fault

See an example from the forum while I was preparing this article:

> **Me**: (Replies in a new thread) my bad for starting the off-topic there

5. Demean the Source of Their Failure / Pain

This is the general principle:

⚖️ The better they are compared to what they lost, the better they feel.

And the inverse is also true: the worse what they lost is compared to them, the better they feel.

So you can either pull them up… Or demean whatever they lost.
However, pulling them up in these situations is trite. And it feels fake.

So it's often better to "attack" the source of their displeasure.

Here is a new example:

> **Her**: I got fired
> **You**: Can I be honest? Finally! That company and that boss you had sucked. Now you have an opportunity to… (talk about future opportunities)

She expected a "sorry fest" and lame excuses to maintain self-esteem and reputation.
Instead, you turn it into a positive attacking the source of the "face loss".

This works even if she wants to defend her company.
Just by defending the company, she can display agency and magnanimity.
Or she can pile up on them without feeling like she's a bitter b*tch. All because you gave her permission with your first move.

Whatever she chooses, you saved her face and re-empowered her.

And here is one more:

> **Her**: We broke up
> **You**: Look, I wanna hear everything and I want to know how you feel. Just lemme get this off my chest first: I always felt there was something off with that guy.

Same as before.

Here you help her overcome the "embarrassment of rejection and failure" by blaming the boyfriend.

⚠️ **Note: only do it if it's true (especially with empowered folks)**
Strong people prefer owning up, rather than shifting blame. So if it's not true, it feels weak excuse-making.

6. Ignore It, Keep Moving

Westerners go crazy in face-saving cultures.

They take face-saving lies at face value, and accept the "no".
Instead, she often just didn't understand:

> **You**: I'm looking for X
> **Her**: (ashamed to admit she didn't understand) Oh, sorry no stock sir

Here is what you do instead:

> **You**: I'm looking for X
> **Her**: Oh, sorry no stock sir
> **You**: Oh I see, it's like a type of foreign beer. Where do you keep beers here, there, there, there (point in different directions)

The trick is simple: ignore and rephrase.

Now she may tell you they don't have foreign beers, where they have them, or where else you can find them.

I can't count the time someone said "no" the first time, only to get things done after doing the above.

This is especially useful with admin stuff.
It's way too easy for clerks to send people away -or to other offices-. Instead, stick longer. Rephrase, make excuses for their ignorance:

- *"I know it's a bit of a special case, but… "*
- *"Yeah, it's complicated I know, maybe your colleague knows it, she looks older, maybe she's seen something similar"*

If all else fails, it's time to "grease the wheels".

Even there you want to be strategic though.

We teach how in Power University.

Calibrating Face-Saving

General principle:

⚖ **The more you focus on face-saving, the lower power you become**

Why?
Because winners focus on getting things done, *not* on saving face.

Ouch, so… What's even the point of these articles?
Well, one, you're doing it for others.

And two… You CAN save face and still be a higher power "alpha type".

Wrong: too much

Over-doing it sub-communicates you get distracted by "feelings" instead of achieving goals.

Plus, it doesn't even work to spare their feelings.

Paradoxically, the more you do it, the less you save face.

Why?
Because **prolonged face-saving draws attention to the issue**.
We call it “thread expanding”.

You remain stuck on the issue, spend more time on it, draw more attention to it… And lose even more face.

Wrong: too low power

You want to help others out… But without losing yourself.

Power awareness is crucial here, but here’s an example of low-power face-saving:

> **Her**: (makes a mistake and forgets a loophole to save taxes)
> **You**: (he knows full well it’s a mistake) I’m not the expert here, I’m just suggesting an idea. Don’t you think that may be we could apply the XWZ ruling to this case?

These are the issues:

- **Unnecessarily lowers your authority**. If you know there is a mistake, don’t pretend you’re clueless. You have a job to do, and that must be your priority
- **Magnifies her mistake** because if you’re not an expert and you caught her mistake… Then she must be an absolute idiot. As per power dynamic principles, your lower status makes her mistake *bigger*, not smaller
- **Lingers on the mistake**. Now she mulls it over “is it a mistake?”, “is he right?”
- **Turns it into a possible debate** where she may even defend her mistake just to save face

To maintain her dignity, she may even avoid you going forward!
I know, crazy animals the humans.

But this was a case study from our forum, and it’s exactly what happened to our alumnus.

So, what’s the solution?

How to save-face, smoothly and high-power

We share it in Power University.

See Power University

Why It's Good to Save Face

When people "lose face", they feel humiliated and "bad".

But…

Why should you care?

Well, here's is why:

People blame *you* for their negative emotions.
And their resentment weakens your leadership, decreases your leverage, and leads to poorer negotiations.

Instead, the skilled social strategist gets the opposite.
When you safe face you preserve or improve your leadership, leverage, and negotiation outcomes.

Plus… You're also doing the honorable thing and spreading good vibes :).

Saving face is a subset of "power-protecting".
So make sure you check that article as well:

How to Make Quality Friends as an Adult Man

Lucio Buffalmano · 3 September 2024 · Archived copy · Original

Making friends is simple.

I've traveled all around the globe, and made friends wherever I went, in all possible ways.

Anyone with these basics can do it:

1. **Acceptable social skills**
2. **Somewhat likable**
3. **Not a net-negative**, and can add some value

If you have the above, this is all you need to do:

Rinse and repeat, until you have a small circle. Then, you can cross-meet everyone in it

The rest of this article spells out the details for you.
And by the end of it, you will be able to make friends at will, wherever you are.

Contents

- 1. Go Out, Socialize, Organize (Get Leads)
- 2. Become A Regular & Gain Status At Your Favorite Events
- 3. Start Your Event
- 4. Approach With An Uplifting Spirit
  - ⍰ High value technique
- 5. Go Deeper If There's Chemistry
- 6. Talk Next Steps & Exchange Contact
  - Schedule next steps

  - How to exchange contacts
- 7. Keep The Best Only: Spot Green & Red Flags
- 8. Follow Up The Day After
- 9. Organize a second meet (1:1s or smaller group)
  - ⍰ Technique: the “half propose”
- 10. Invite New Guys To Your Forming Social Groups
- Bonus: Maintain Friends With Win-Win
  - Offer advice and/or personal experience
  - Lend an ear
  - Offer concrete support if possible
- ⍰ Optional Bonus: Get A Few Circles Going

1. Go Out, Socialize, Organize (Get Leads)

1. **Join Meetup events**
2. **Join clubs**
3. **Talk to strangers**. Yes, you can “cold approach” for friendships, not just dating. I’ve done it several times.
   To make it easier, approach:
   - People with a striking resemblance. Ie.: same dress style, ordered same food, etc.
   - Regulars at your favorite spots
   - Other foreigners or expats when traveling
   - People doing what you’re doing. For example, in line for a massage or at a go-kart track. Or if you see a guy approaching women and you’re also into that.

Use Internet As Well

Avoid the mindset that online is for geeks.

The Handbook of Relationship Initiation says that the Internet for socially competent people is a case of “rich getting richer”.
Such as, just an extra opportunity for more cool friends.

And one level above joining pre-existing groups:

Why join others' events, when you can organize and be the star?

2. Become A Regular & Gain Status At Your Favorite Events

Go back often and:

- **Start talking to loners** and lower-status people to warm up
- **Talk to many & move around** to look sociable and avoid looking clingy or 'lone and desperate'
  - Enter new groups but keep it briefer than with 1:1s
- **Approach organizers and leaders**. Initially, you may ask a question. Then:
  - Thank them during breaks or at the end
  - Compliment them on their unique qualities
- **Talk more & more often to those you vibed best** during the event, and as you go back

We dig deeper into gaining status in our course, but you know you're doing this well when others seek you out, and reach out to you.

Either because you missed an event:

> **Me**: (misses an event)
> **Him**: I didn't see you last night <— Checks in, sign of caring and enjoying your company

Or better yet, to go for a 1:1:

> **Him**: Let's get food or drinks
> **Me**: (declines with power-protection to preserve rapport)

3. Start Your Event

What's better than just socializing?

High-power socializing, of course.

And nobody is higher power than the organizer and host.

Organizing events is easier than most people think.
Countless people want to socialize and make new friends, but only 0.1% takes the initiative.

So be brave, and take that first step :).

I organized a few meetups during my travels.
And even in smaller cities, at least a handful of folks showed up.

Funny story
There was a girl who wanted to go to the lake during summer. But she didn't know anyone and couldn't find any group for it.
She organized one herself… And more than 100 people showed up!

4. Approach With An Uplifting Spirit

General principle:

⚖ **The more you need friends, the needier and more taking you are**
⍰ The best way to make friends is with a giving approach, being sociable and uplifting

Needing friends projects desperation.
An uplifting spirit sub-communicates "happy with life", a high-value trait that draws others in.

Some tips:

- **Happy** beats serious
- **High-energy** beats low-energy on first approach, especially at night
  - Initially open **many topics**
- **Listening** and asking beats talking -but share about yourself!-
- Initially it's **vibe over depth**. **Deeper later** or when you're both *very* interested.
- **Display value strategically** (drop hints, let them ask more) because even friendships are competitions (Blau, 1964)

You don't need to become extroverted to make friends.
But it's helpful to learn to *act* like one.

⍰ High value technique

Move from group-level to "1:1 on the side", then back to group level.

Example:

1. Display value at the group level
2. Look at the speaker (so he looks back at you)
   - Interject: ask questions, joke, or challenge if appropriate
   - Laugh along to other people's good jokes
3. Take your turn to speak and give value

4. Start side conversations with someone close by
5. Go back to group-level

Now you come across as high value and sociable: the type of guy who easily makes friends.

Also see:

- Group conversation 101

> 4 Steps to Mastering Group Conversations

Avoid the "let's be friends approach"

General principle:

⚖ **Never say "let's be friends"** (Just like in dating you never say 'let's be a couple')

Only dorks say that.
Cool people let things develop naturally.

5. Go Deeper If There's Chemistry

You start with a socializing attitude.

But if the social butterfly is all you do… All you get is a socializing event.
No friends.

So the smart socializer does this:

Talk to all, dig deeper with the best.

Think of group events like a buffet.
You sample everything and then eat more of the best.

A good article:

- **How to bond**

> How to Build Deep Emotional Connection

6. Talk Next Steps & Exchange Contact

How do you move forward?

How do you exchange contacts?

Well, lemme share you a secret now:

Advanced socialites don't ask, they *get* asked.

Cool guys get asked more than they ask

But until you reach that point, maybe with our Power University, here are some tips:

Schedule next steps

- **ONLY plan on first meet if the vibe is 10/10**. Otherwise, it's premature. Remember your frame: I'm high-value and busy
- **Don't propose but INVITE to join**. Remember the frame: you're going to do X anyway, and they get the opportunity to join you

Ie.:

> **You**: hey mate, going to try X restaurant later today, if you wanna join would be cool to catch up, just let me know

If you have no plans to invite to, no problem.
You can then exchange contact:

How to exchange contacts

- ***"Let's exchange contact"*** <—- Better than "Let's keep in touch", which is "chasier"
- ***"Maybe we can do something in the future"*** <—- 'Maybe' is strategic: doesn't come across as overly eager
